Participant: **Grace Gu**, *Boston College*

Ecosystems are groups of independent firms linked through non-generic complementarities that work together to create a customer value proposition. Given the tentative consensus on the definition of ecosystems, research is now shifting to studying an interplay between ecosystem structure and performance. As a field, we wish to know where firms' positions in ecosystems and interdependencies among firms, which underpin ecosystems in the first place, could come from. This symposium unites papers from some of the leading scholars in this emerging field that take a dynamic perspective of how various types of actors (e.g., orchestrators, complementors, component producers, government, and university research centres) shape ecosystem structure and affect firms' performance. We will begin with looking at how ecosystem orchestrators overcome challenges associated with collaborations and investments in innovative start-ups, then take a graph theoretic approach to map patterns of interdependencies that drive acquisition choices by ecosystem members, and subsequently examine the emergence of an ecosystem from a technological discovery to commercialization. Next, we explore strategies complementors deploy as they join platform-based ecosystems and take a closer look at value co-creation and capture between a platform owner and complementors. The (brief) presentations are followed by extensive discussion, between presenters and co-authors, and by moderated Q&A with the audience. Our collective aim is to improve our understanding of the temporal dynamics shaping ecosystem structure and their link to ecosystems' and firms' performance.

ENT: Social Desirability of Entrepreneurship and Internationalization: The Role of Economic Freedom  

Author: **Chao Zhang**, *Autonomous U. of Barcelona*
Author: **Joan-Lluís Capelleras**, *U. Autònoma de Barcelona*
Author: **Victor Martin-Sanchez**, *King's College London*

This study investigates the influence of the domestic social desirability of entrepreneurship on the internationalization of early-stage firms. We also consider the moderating role of the home country economic freedom. Moreover, we study 45,454 early-stage entrepreneurs from the Global Entrepreneurship Monitor (GEM) survey from 2005-2016 and 48 countries. We employ a hierarchical modeling analysis, and the empirical results demonstrate in home country contexts of lower social desirability of entrepreneurship, individuals with higher entrepreneurial intentions are more likely to be pushed out for international markets. Interaction effects also indicate that a strong economic freedom context helps attenuate the negative effect of domestic social desirability on early-stage entrepreneurs' internationalization. As well, the supplementary analysis also confirms the same interaction effects of each economic freedom's pillar. This study fills the scant literature gap and extends the related field in institutional theory and international business, providing new empirical findings and implications in practice.

ENT: Does the Community Reinvestment Act (CRA) Promote Small Business Growth in Lower-Income Neighborhood

Author: **Mee Jung Kim**, *Sejong U.*

In this paper, I estimate the impact of the Community Reinvestment Act (CRA) on small business growth in "Low- and Moderate-Income" (LMI) neighborhoods in the United States. Using rich firm-level panel data on every U.S. employer, I use two principle identification strategies to estimate the effects on business employment. First, I exploit the sharp threshold cutoff for CRA eligibility based on median family income to use a regression discontinuity design (RDD) in an optimal bandwidth around the cutoff. Second, I exploit changes in CRA eligibility over time using difference-in-differences (DID) with firm fixed effects. Using both RDD and DID, I find that the firms located in the CRA eligible areas increase employment by about 0.8 percent compared to firms in non-CRA areas. The CRA effects are larger for young firms and firms in minority neighborhoods, which potentially face higher barriers to access to credit, increasing employment by about 1.5 and 1.9 percent, respectively. I also find that increases in lending in the CRA areas are related to the number of banks, implying that the channel is greater access to finance.

 **ENT: Populist Discourse and Entrepreneurial Action: The Role of Political Ideology and Institutions**

Author: **Daniel L. Bennett**, *U. of Louisville*
Author: **Chris Boudreaux**, *Florida Atlantic U.*
Author: **Boris Nikolaev**, *Baylor U.*

Populism is on the rise globally and is likely to remain a vital political force for the foreseeable future. Despite growing interest in this phenomenon, populism is still poorly understood and we know very little about its consequences for business. We develop a multi-disciplinary framework grounded in the ideation approach to populism, new institutional economic theory, and the judgment-based approach to entrepreneurship to theorize about how populist discourse by a nation's political leader influences entrepreneurial action in a comparative international context. Specifically, we hypothesize that populist discourse creates regime uncertainty concerning the future stability of pro-market institutions, which can significantly impede entrepreneurial judgments and discourage new venture creation. Because populism almost always appears attached to other host ideologies (e.g., socialism, nationalism), we explore which sub-types of populism and under what institutional conditions populist discourse can have a negative or positive impact on entrepreneurial action. Specifically, we argue and find that the political ideology of the populist leader, as well as the strength of the pro-market and political institutional environments moderate the effect of populism on entrepreneurship. We test our hypotheses using a multi-level design and a dataset comprised of more than 564,000 individuals in 31 countries over the period 2002-2012.

ENT: Intellectual Property Rights & New Venture Performance: Empirical Evidence from a Natural Experiment   

Author: **Seyed Hooman Seyed Abootorabi**, *Syracuse U.*
Author: **Wei Yu**, *National U. of Singapore (NUS)*

Different intellectual property right (IPR) protection regimes exist across countries and over time, and it is likely that these regimes influence commercialization of inventions. There has been much debate regarding the appropriate IPR for IP developed at universities. Two fundamentally different regimes have been in place, one attributing ownership to the individual inventor, and the other to the institution where the inventor works. Both regimes have their proponents. Yet, evidence concerning the effectiveness of these two IPR regimes has remained limited. In 2003, the IPR regime in Norway was transferred from one model to the other. This change created an opportunity to investigate the influence of these two IPR regimes on the performance of new ventures established. In this paper, adopting a natural experiment design and using a longitudinal sample of nearly the whole population of academic spin-offs in Norway from 1999 to 2014, we test the impact of the IPR regimes on different performance metrics of new firms. We also examine how firm-specific contingencies affect this relationship.

Flexible Work Arrangements

Digital Session Chair: **Ehsan Samimi**, *Freie U. Berlin*

HR: Project Guests: Temporal Employment Modes in Project-based Organizations

Author: **Ehsan Samimi**, *Freie U. Berlin*

Employment practices are mostly studied in permanent organizations. This includes temporary and permanent forms of employment. How employment arrangements are formed and managed in semi-temporary organizational forms such as project-based organizations (PBOs) is less well understood. Although project management research highlights the role of HRM practices in project performance and project success, employment practices in the project-based organizations remains under-researched. This research aims to fill this gap by exploring temporal employment modes in PBOs and, more importantly, by investigating how these modes of employment are formed in conjunction with structural properties of the project and dominant HRM strategies in this organizational form. Adopting a practice-based perspective and drawing on multiple case studies in four project-based firms in the Scottish and Iranian oil and gas industries, the findings present four employment modes that go beyond the traditional temporary-permanent employment dichotomy and elucidates how temporal employment practices are formed in PBOs by the interplay of structure and agency in a dynamic context. The research findings allow developing a typology of employment in PBOs concerning different types of projects and HRM strategies.

HR: Why and When Telecommuting Is Detrimental to Individual Performance Outcomes

Author: **Qing Lu**, *Zhongnan U. of Economics and Law*
Author: **Liping JIN**, *Zhongnan U. of Economics and Law*
Author: **Shuhong Wang**, -
Author: **Miao Li**, *Zhongnan U. of Economics and Law*
Author: **Su Cui**, *Zhongnan U. of Economics and Law*

Telecommuting, an alternative work arrangement by working away from central offices, has been widely used during the coronavirus epidemic. Although telecommuting elevates individual performance outcomes, its potential negative influence has been surprisingly and largely neglected. With the aim to fully capture this “dark” side of telecommuting, this study uncovers why and when telecommuting is detrimental to individual task and contextual performance. Drawing on boundary theory, we hypothesize that telecommuting decreases individual task and contextual performance by increasing the family-to-work conflict, and that this negative, indirect effect decreases when telecommuters prefer integrating work–family roles or enjoy higher job autonomy. A sample of 481 individuals teleworking during the pandemic fully supports our hypotheses. Theoretical and practical implications, limitations, and future directions are discussed.

HR: Consequences of Remote Work Use and Intensity: A Meta-Analysis

Author: **Ravi Shanker Gajendran**, *Florida International U.*
Author: **Anoop Javalagi**, *U. of Illinois at Urbana-Champaign*
Author: **Chen Wang**, *Western Michigan U.*
Author: **Ajay Rama Ponnappalli**, *Wayne State U.*

The large-scale shift to remote work on the heels of the COVID-19 has led to a realization by many organizations that remote work could be a long-term arrangement for their employees. Yet, we have an incomplete understanding about the consequences of remote work for employees. A prior meta-analysis (Gajendran & Harrison, 2007) conducted over a decade ago surveyed only 46 studies and hence was limited in its scope. Since then, the corpus of literature on remote work has grown significantly. We conducted a meta-analysis on remote work that includes 111 studies ($k = 114$, $N = 303,449$). This meta-analysis seeks to provide a more comprehensive understanding of the consequences of remote work by focusing on not only remote work use (remote workers compared to office-based workers) but also remote work intensity (extensiveness of remote working). We find that remote workers (versus office-based workers) have higher perceived autonomy, supervisor-rated performance, job satisfaction, organizational commitment, and engagement, while also having lower turnover intentions. Further, remote work intensity enhances perceived autonomy and supervisor-rated performance, and improves job and life satisfaction. In terms of mechanisms, the effects of both remote work use and remote work intensity on work- and nonwork-related outcomes come about via perceived autonomy. In contrast to prior theorizing, we find no evidence that remote work leads to impoverished workplace relationships. Likewise, it had no effects on work-family conflict. Overall, our study clarifies the nature of relationships linking remote work to important individual and organizational outcomes, enhancing our understanding of this work arrangement.

HR: Workplace Flexibility Triggering Employee Alienation: Evidence from Mixed Method Research

Author: **Anjali Bansal**, *MICA, Ahmedabad*

The present research builds a theory regarding how flexible work options (FWOs) affect an individual's alienation feeling. This study used a grounded theory approach to investigate the impact of FWOs like flex-place and flex-schedule on employee outcomes of alienation by integrating the interpersonal, self-congruence, and signaling theories. Hence, based on qualitative in-depth interview data collected from the Indian IT (Information Technology) professionals ($n=35$), this research built a detailed research model with four factors viz. unmet interpersonal needs, infrastructure implications, individual-level constraints, and work-family impediments. These led employees to experience social isolation, powerlessness, and nomlessness in the absence of interaction and support they were deprived of by not taking part in the traditional workforce. This research further validates the qualitative research findings through a quantitative empirical investigation of 235 participants who availed FWOs. The research findings also revealed a more significant impact of flex-place on employee feeling of alienation than flex-schedule.

Author: **Hongxia Peng**, *Rouen U.*

The recent amplification of remote work evidences how the spatiotemporal dimension of work may evolve through its interaction with information and communication technologies (ICT). In the continuity of exiting studies dealing separately or dynamically with the spatial dimension and the temporal dimension of this evolution, this conceptualizing paper proposes to consider spatiotemporal dynamics of work as structured and structuring components of the workuniverse—term used in this study to emphasize new spatiotemporal characteristics of work dealing with ICT and proposes a framework, based on a systemic-cognitive approach, to analyze spatiotemporal dynamics of work. It identifies three types of temporal dynamics, two categories of spatiotemporal configurations of work (spatiotemporal transition and spatiotemporal ambidexterity) and formulates three analytical proposals. Potential human resource management (HRM) implications of spatiotemporal dynamics of work are then explored through the baselines defined by the proposed framework and in the continuity of existing studies on eHRM. Keywords: Work; ICT; Spatiotemporal dynamics; Workplace, Workspace, Workuniverse; Telework; Systemic-cognitive approach; Cognition; System.

Global Strategy Issues in International Management

Digital Session Chair: **Jon Jungbien Moon**, *Korea U.*

The papers in this session address issues related to global strategy. These include studies examining what we know about multinational enterprises' internationalization process and innovation, politician turnover and outward FDI of emerging economy firms, and the roles of embeddedness and organizational structures in influencing autonomy and MNE support for Initiatives.

IM: What Do We Know About Multinational Enterprises' Internationalization Process and Innovation?

Author: **Jian Du**, *Zhejiang U.*
Author: **Shan Zhu**, *School of management, Zhejiang U.*
Author: **Wen Helena Li**, *U. of Technology, Sydney*

This study reviews research from 1989 through 2019 on whether and how multinational enterprises (MNEs) augment their innovation capabilities throughout the entire internationalization process. To identify the current state of knowledge of this research, we review the literature using bibliometric and qualitative content analyses covering leading journals. We categorize existing studies into three key stages: (1) preinternationalization stage, (2) internationalization entry stage, and (3) internationalization operation stage. Further, we review how different internationalization strategies in the internationalization process, country institutions, and MNE characteristics jointly influence MNEs' innovation behaviors and innovation outcomes. Finally, we highlight key questions and challenges in the extant literature and provide suggestions for future research to advance the developments of this domain, including (1) deepening discussions on international diversity and innovation, (2) emphasizing the impact of MNEs' network attribute and dual embeddedness on innovation, and (3) extending the role of institutions in MNEs' innovation.

IM: Politician Turnover and Outward FDI of Emerging Economy Firms

Author: **Fanshu Li**, *School of Economics & Management, Tongji U.*
Author: **En Xie**, *Tongji U.*

This study examines how political turnover in home countries affects OFDI made by EEFs with heterogeneous cash flows. Empirical results obtained from 1,176 publicly-listed firms in Chinese manufacturing sectors show that politician turnover triggers EEFs with rich operating cash flows to increase OFDI. However, EEFs' state ownership, their charitable donations, and executives' positions in governments weaken the effect. Substantial studies have discussed how the institutional environment in home countries affects EEFs' OFDI, while they are debating on whether EEFs' OFDI is a move to leverage the supportive environment or an escaping response to the detrimental environment. Because politician turnover in home countries brings EEFs an uncertain institutional environment in which new politicians may divert firms' resources to pursue political or social goals, our findings indicate that OFDI would be a move made by EEFs having rich operating cash flows to deal with uncertainty in home countries' institutional environment.

IM: Autonomy and MNE Support for Initiatives: Roles of Embeddedness and Organizational Structures

Author: **Muhammad Mustafa Raziq**, *National U. of Sciences and Technology (NUST)*

In this study we examine the relationship between subsidiary autonomy and the initiative resource support a subsidiary requests and receives from the MNE. Drawing on resource dependence, social exchange and organizational theoretical perspectives, we propose some underlying mechanisms as external embeddedness, reverse knowledge transfers, and MNE organizational structures to explain the relationship between subsidiary autonomy and MNE subsidiary initiative collaboration. We draw on survey data from 429 foreign-owned subsidiaries in New Zealand and employ structural equation modelling. Results show that the direct relationship between subsidiary autonomy and the receipt of MNE resource support for initiatives is negative and this is more likely the case where the subsidiary is managed under simple structures (i.e. subsidiary reports to corporate headquarters, regional headquarters, or mandated units) rather than complex structures (i.e. matrix or network). Furthermore, an increase in subsidiary autonomy positively influences MNE initiative resource-seeking and this is more likely the case where the subsidiary is less embedded externally. Subsidiary initiative resource-seeking from the MNE is positively associated with the subsidiary initiative resource-receipt from the MNE, and this is more likely the case where the subsidiary is engaged in reverse knowledge transfers. This study contributes by extending the research on subsidiary autonomy, dual embeddedness, organizational structures, and subsidiary initiatives. It contributes by showing how dual embeddedness, and the complexity of organizational structures determine the relationship between subsidiary autonomy and MNE subsidiary initiative collaboration.

MSR Morning Meditation *MSR Morning Meditation*

Chair: **Richard Peregoy**, *U. of Dallas, Satish & Yasmin Gupta College of Business*

The practice of meditation (either individual or collective) has the common objective to still/silence the mind and allow the unconscious reality to emerge, open and unfold. Many variations of meditation exist. In this conference five different forms will be introduced--a different form will be introduced each day during the conference. The idea is for those new to meditation to sample, and for those who find a familiar meditation to expand their experience. These five meditations can be accomplished in a few minutes or longer as you wish.

Impression Management and Perfectionism

Digital Session Chair: **Chiyin Chen**, *Donghua U.*

OB: How to Make Me Included: Incorporating Impression Management into Person-Organization Fit Framework 

Author: **Chiyin Chen**, *Donghua U.*

Author: **Ningyu Tang Ningyu Tang**, *Shanghai Jiao Tong U.*

Scholars are curious about factors that make employees included in the workplace. Yet our knowledge on antecedents of perceived inclusion limits in employee demographic backgrounds and workplace contextual factors from social identity theory or exchange theory, neglecting the fact that inclusion perceptions develop from the interaction between the individual employee and the environment. This study wishes to offer a new account based on the person-environment interaction perspective. With a two-wave data of 306 employees, we found that both person-organization supplementary fit and complementary fit were positively associated with employee inclusion perceptions. Furthermore, self-promotion and ingratiation strategies in impression management moderated these two main effects separately. These conclusions enrich the literature on perceived workplace inclusion from the perspectives of person-environment interaction and motivational behaviors.

Paper is Available to Meeting Registrants Only.

OB: Seeking acceptance: Adopting impression management tactics when experiencing workplace ostracism 

Author: **Xinyan Mu**, *Southwestern U. of Finance and Economics*

Workplace ostracism is defined as the perception of being ignored and excluded by others in the workplace. Drawing on tenets of belongingness theory, we contend that ostracism may motivate victims to manage their impressions on others with the aim to seek acceptance. Findings from a two-wave survey study indicate that workplace ostracism is positively associated with impression management tactics (e.g., ingratiation, self-promotion, exemplification) through the mediating role of need for approval. In addition, this indirect relationship is more salient for victims who have high concerns for self-face. Theoretical and practical implications as well as future research directions are also discussed.

Paper is NOT Available. Please contact the author(s).

OB: Being Bad But Wanting To Look Good? How Withholding Work Effort Leads To Positive Behaviors

Author: **Yingli Deng**, *Oklahoma State U.*

Author: **Lindsey Greco**, *Oklahoma State U.*

Author: **Qiang Fu**, *Oklahoma State U.*

Employees may feel guilty after withholding effort on their jobs, yet explanations of when employees feel guilty and how this guilt motivates positive behaviors are lacking. Drawing on the theory of planned behavior, we found support for a moderated, serial mediation model in which withholding work effort positively relates to guilt which, in turn relates to next day performance pressure and two behavioral outcomes: proficiency and self-promotion behaviors. Based on competing hypotheses, we also found that low task interdependence amplifies the effects of withholding work effort on feelings of guilt. The theoretical and practical implications of the model are discussed.

Paper is Available to Meeting Registrants Only.

OB: Perfectionism and Conflict: The Role of Leader Conflict Interventions 

Author: **Yuwen Liu**, *National Tsing Hua U.*

Author: **Kenneth Rice**, *Georgia State U.*

Author: **Robert T Keller**, *U. of Houston*

This study examined how perfectionism asymmetry, such as adaptive and maladaptive perfectionism, influences task and relationship conflict. We further investigated how leader's conflict interventions moderate the relationships between perfectionism asymmetry and conflict from a multilevel perspective. Data was collected from 495 employees comprising 128 project teams. Results showed that adaptive perfectionism asymmetry is negatively related to task conflict and that maladaptive perfectionism asymmetry is positively related to task and relationship conflict. We further examined moderation effects to understand how leader mediational and autocratic conflict interventions can enhance or constrain the effects of perfectionism asymmetry on employees' conflict.

Green Innovation

Digital Session Chair: **Bastian Krieger**, *Centre for European Economic Research (ZEW)*

TIM: Does Green Public Procurement Trigger Environmental Innovation?  

Author: **Bastian Krieger**, *Centre for European Economic Research (ZEW)*
Author: **Vera Zipperer**, *German Ministry of Finance*

This paper provides first empirical insights on the relationship between green public procurement and firms' environmental innovation outputs. Considering that the public sector is a large buyer in the economy, strategic public procurement can work as demand-pull factor for new products and processes. Green public procurement aims at contributing to more sustainable production and consumption. Using a novel firm-level dataset, this paper analyses within a difference-in-differences setup whether green public procurement is able to trigger environmental innovations or not. Our results support a demand-pull effect of green public procurement on the probability of introducing environmental product innovations: The probability of introducing a new and more environmentally friendly product is on average around 19 percentage points higher for firms receiving a green public procurement contract. We find no significant relationship between green public procurement and the probability of introducing new and more environmentally friendly production processes.

Paper is Available to Meeting Registrants Only.

TIM: The Impact of Innovation Vouchers on Green Innovation Efficiency 

Author: **Ruirui Zhao**, *Shandong U.*
Author: **Agnieszka Radziwon**, *U. of California, Berkeley & Aarhus U.*

Innovation vouchers are part of the demand-side innovation policies that support innovation development in small and medium-sized enterprises (SMEs) by encouraging them to collaborate with universities and organisations offering knowledge-intensive services (KIS). Based on data from 353 high-tech SMEs in China, we explore the impact of innovation vouchers on green innovation efficiency. Our findings show that innovation vouchers can facilitate green innovation by 1) increasing senior managers' risk-taking propensity, 2) reducing financial risk and 3) increasing knowledge sharing. When local governments pursue sustainable development and firms face regulatory changes, innovation vouchers could help to promote green innovation. Furthermore, our green innovation efficiency indicator shows that innovation vouchers could also increase green innovation efficiency at the enterprise level. Our research extends innovation theory by deepening our understanding of how demand-side policies influence organisations' innovation activities and provide practical implications for how policymakers can design policies to encourage sustainability.

TIM: The determinants of eco-innovation at the country level. An analysis for OECD countries.

Author: **Silvia Donis**, *U. of La Rioja*
Author: **Jaime Gomez**, *U. de La Rioja*
Author: **Idana Salazar**, *U. de La Rioja*

The main object of this paper is to study the determinants of eco-innovations worldwide. The rising world's temperature and the increase of natural disasters occurred in most recent years have increased the concerns about the sustainability of the economic activity. In this regard, ecological innovation has been gaining a special relevance in the past years. Despite this, countries are heterogeneous in terms of producing green innovations. This provides us with an opportunity to understand its determinants and to offer a guidance on how to act for both, companies and governments. The study moves into this direction and tries to understand the institutional factors that would explain differences between countries regarding the number of eco-innovations. We test our hypotheses on data collected from PATSTAT. In particular, the study focuses on the production of green patents in countries belonging to the OECD for the period 2007-2015. The emphasis is placed on institutional factors and the results show that intellectual property rights, the effectiveness of the judicial system and protectionism are determining factors of eco-innovations.

TIM: What Comes First, Technology or Science? Clues from the Field of Energy Conversion Technology

Author: **Dmitry Smirnov**, *Skolkovo Institute of Science and Technology*
Author: **Kelvin Willoughby**, *Skolkovo Institute of Science and Technology*

"Technological innovation" has become a catch phrase of contemporary policy making for governments, corporations and academic organizations. For many it has become an article of faith that technological innovation is the key to solving economic, social and environmental problems, but the formula for success is not obvious. The phrase "science and technology" rolls off the tongues of policy makers, managers and researchers spontaneously, as if this is the natural order of things, but why is the converse phrase "technology and science" so rarely encountered? The orthodox view appears to be that technology is applied science, or that technological change flows naturally from scientific progress. However, what if popular preconceptions about the relationship between science and technology are misplaced? This paper addresses the question of the fundamental relationship between technology and science by first reviewing pertinent literature from the field of science, technology and society (STS) studies and by then investigating empirically the nature of the relationship in the field of energy conversion technology. It draws policy-making implications for investment in technology and science. We propose the theory of technology-conditioned science as a plausible and credible counterweight to extant commonplace presumptions that science is the precursor of technology.

Scholarship with Impact in Management Education

Digital Session Chair: **Maria Aluchna**, *Warsaw School of Economics*

MED: Smoke, Mirrors and Impact Factor: How Management Scholars Undermine a Managerial Metric

Author: **Maria Aluchna**, *Warsaw School of Economics*
Author: **Benson Honig**, *McMaster U.*

We analyze leading management journals of the Academy of Management (AMJ;AMR;AMLE;AMP;AMD as well as JOM), collecting and analyzing information on the managerial research assessment tool of impact factor (IF) during two time periods – 1997-2005 and 2006-2019. We capture the changing nature of journal strategies, examining number of references, self-citation, and citation cartel performance. Our study shows that one outcome of the recent focus on IF metrics is a general increase in the number of references used, resulting in a corresponding IF gain not predicated on academic merit. In essence, editors and authors are responding to the growing importance of IF by ‘gaming’ the system thus undermining the impact of institutional attempts to measure academic research performance.

MED: Reputation and the MBA Program Portfolio

Author: **Aparna Vashisht Rota**, *Grenoble Ecole de Management*
Author: **Isabel-Maria Bodas-Freitas**, *Grenoble Ecole de Management*
Author: **Vidya Oruganti**, *Grenoble Ecole de Management*

This study examines the within-niche product proliferation of Masters in Business Administration (MBA) programs. Building on the resource-based view and on the product proliferation literature, we conceptualize business schools’ MBA portfolio offers as dependent on their reputation, and the market segment in which they and their university operate. We test our hypotheses using data on the portfolio of MBA programs offered by the 200 U.S. universities whose full-time MBA programs are listed in the 2015 U.S. News and World Report (USNWR). For the 96 unranked universities, the decision to offer an MBA program seems to be a reflection of the intention to exploit their economies of scale and graduate specialization. Among 104 ranked universities, there seem to be two different rationales. Among the top ranked universities, MBA program portfolio decisions tend to reflect efforts to maintain a high rankings and a research focus; while for lower ranked universities, the decision seems to be based on reputation and graduate specialization. Our results suggest that top ranked compared to lower ranked and unranked universities are less likely to offer online and part-time MBAs and that executive MBA is exclusive to ranked universities. We discuss the implications on the literature and for university deans and administrators.

MED: Predicting the Scholarly Impact of Former Ph.D. Candidates Using Personality Scales

Author: **Tom Junker**, *Erasmus U. Rotterdam*
Author: **Marise Ph. Born**, *Erasmus U. Rotterdam*
Author: **Rene Butter**, *Erasmus U.*

The present research operationalized a pluralist conceptualization of scholarly impact in predicting the performance of 329 former Ph.D. candidates, who completed the “Ph.D. personality questionnaire” (PPQ) during their doctoral studies in between 2007 and 2010. The PPQ measures could be matched to scholarly impact data obtained from Elsevier’s SciVal database for 180 participants in 2019. In addition, for 170 participants it could be verified whether they actually completed their doctoral degree. Results of multiple linear regression analyses indicated that impact inside academia as indicated by higher h-indices, the field-weighted citation impact, and percentage of publications in top journals was best predicted by “research drive” – the context-specific enactment of achievement striving. Impact beyond academia, as indicated by academic-corporate collaboration was predicted by networking – the context-specific enactment of extraversion. Lastly, it appeared that both traits acted as “double-edged swords” as they simultaneously related to a lower chance of actually obtaining the doctoral degree in logistic regression analyses on degree status.

Emotions and Well-Being

Digital Session Chair: **Hermella Girmay Tekle**, *George Washington U.*

 **MSR: How Emotional Labor Harms Employee's Performance: Unleashing the Missing Links**  

Author: **Shazia Nauman**, *Riphah International U.*
Author: **Sania Zahra Malik**, *U. of the Punjab*
Author: **Farida Saleem**, *Prince Sultan U., Saudi Arab*

Employing conservation of resources (COR) theory, this research examined how emotional labor influences employees' job performance by testing a serial mediation moderation model. We propose job anxiety and quality of work-life (QoWL) as explanatory mechanisms in the emotional labor—job performance relationship, and Islamic work ethic as a coping mechanism between job-related anxiety and quality of work-life. To test our proposed hypotheses, the data was collected from 211 service sector supervisor-subordinate dyads in a three waved time-lagged study. Results elaborate that service employees who suffer from resource depletion due to emotional labor and job-related anxiety can still enjoy a better quality of work-life and deliver well at their workplace when they possess a stronger Islamic work ethic.

MSR: Workplace Incivility and Employees' Psychological Well-being: The Moderating Role of Religiosity  

Author: **Ahmad Sayel Abualigah**, *Al Falah U.*
Author: **Tamer Koburtay**, *Assistant professor U. of Petra*
Author: **Jawad Syed**, *Lahore U. of Management Sciences*

Based on the job demands-resources (JD-R) theory, this study contextually examines the relationship between workplace incivility and employees' psychological well-being, and the moderating effect of religiosity on this relationship. Drawing on a sample of 199 employees from different industries in Jordan, such as hospitality, banks, healthcare and education, the findings suggest that workplace incivility negatively affects employees' well-being, and religiosity buffers this adverse effect. Our study brings to fore the concept of religiosity, an important yet neglected personal resource, and therefore expands the evidence on personal resources in the workplace. The findings extend the notion of JD-R theory through capturing the linkages between workplace incivility, religiosity, and psychology.

MSR: Mindfulness and Burnout: An Effort-Reward Imbalance Approach Across Cultures 

Author: **Ghulam Murtaza**, *Kedge Business School, France*
Author: **Jean Pierre Neveu**, *U. de pau et des pays de l'Adour*
Author: **Rahman Khan**, *Ghulam Ishaq Khan Institute of Engineering Sciences and Technology (GIKI)*
Author: **Qurat Ul Ain Talpur**, *ESSCA School of Management*

This research explores the moderating effects of mindfulness on the relationships between work effort-reward imbalance (ERI) and job-burnout (JBO). On the basis of a cross-lagged longitudinal research design across two different countries, e.g. Pakistan (T1, n= 338; T2, n= 191) and France (T1, n= 277, T2, n=146), results support mindfulness as a moderator of the relationship between ERI and JBO. Two separate studies using structural equation modeling yield similar results in both France and Pakistan. We suggest that mindfulness serves as a personal resource, as it helps employees to achieve psychological balance when facing low rewards and high efforts. Altogether, these findings help reconcile divergent perspectives of traditional Buddhists and modern philosophers on mindfulness interventions.

Bringing the Leader Back to Practice: The Role of (Non-)Executives Shaping Organizational Strategy *Bringing the Leader Back to Practice*

Digital Session Chair: **Georg Reischauer**, *WU Vienna & JKU Linz*

SAP: **Prosocial Imprint: CEO Childhood Famine Experience and Corporate Philanthropic Donation**   

Author: **Yu Han**, *School of Economics and Management Tsinghua U.*

Author: **Wei Chi**, *Tsinghua U.*

Author: **Jinyi Zhou**, *U. of Science and Technology Beijing*

The influence of CEOs' early-life experience on their strategic decisions has attracted considerable research attention. However, existing studies have limited understanding about its influence on firms' corporate social responsibility (CSR) activities. In this study, based on imprinting and upper echelon theories, we proposed that CEOs who have experienced the Great Famine in the childhood are more likely to lead their firm to make a higher level of philanthropic donation. Furthermore, we investigated boundary conditions that facilitate or impede the relationship between CEO childhood famine experience and philanthropic donation according to the person-situation interaction perspective. We tested our theoretical model using the sample of publicly listed firms in China. By conducting difference-in-difference analyses, we found that CEOs who have experienced the famine in the childhood between 7 and 11 years old tend to increase their firms' donation level and that this positive relationship will be amplified when the firm is relatively large and weakened when CEO is female. Implications and limitations are also discussed.

SAP: **Sustainable Income at Retirement and UK Pension Fund Investment Oversight: a Practice Perspective (WITHDRAWN)** 

Author: **Anna Tilba**, *Durham U. Business School*

Author: **Michelle Baddeley**, *U. of Technology, Sydney*

Using practice theorizing, this paper sheds more fresh light into pension fund investment oversight and how trustees make strategic investment decisions in the complex institutional context. Using the insights from 22 in-depth interviews of pension fund trustees and pensions experts, we reveal that pension fund governance has been 'ritualised' in embedded and self-perpetuating practices. Specifically, the process of pension fund investment is dominated by a variety of contextual and internal constraints that often lead to a loss of value within pension fund investments, which is not in the long-term best interests of pension fund savers. Theoretically, our study raises important questions about the appearance rather than substance of governance and the principal role of pension fund trustees as non-executives in this process. We highlight the conflicting intersections around trustees as socially legitimate, trustworthy, independent social actors, as well as the challenges of working across social processes and structures in the effort to achieve fairer and more sustainable financial institutions. This has significant implications for policy and practice.

 SAP: **We Get Them Running Through Walls: Strategizing Via an Indignation-Based Moral Battery**

Author: **Matthew James Hurst**, *Warwick Business School*

Author: **Davide Nicolini**, *U. of Warwick*

Author: **Rene Wiedner**, *Warwick Business School*

SAP Pushing the Boundary Award

Based on 18 months of multi-method ethnographic research, and drawing from the social movement literature, we theorize a process model of how complex emotions are harnessed through organization-level strategizing in careful sequence and combination to form an indignation-based moral battery. The strategizing process is found to generate a negative emotional pole around the status quo in an organization which repels executives and managers; and a positive emotional pole around the possible future for the organization which attracts them. The feeling of tension and indeterminacy between the two poles forms an indignation gap which, if sizeable, mobilizes commitment and action towards macro-organization phenomena, such as change. This indignation-based moral battery is first formed with executives and replicated with managers to promote organization-wide acceptance and buy-in. Lastly, we identify that rather than individual charismatic leaders maneuvering emotions, the theorized process takes temporal and logical precedent with leaders becoming the carriers of the process in line with a practice-based perspective of strategy.

SAP: **The Career Imprint of the CEOs' Previous Work Environment in Earnings Management Decisions** 

Author: **Zagdbazar Davaadorj**, *U. of Wisconsin Parkside*

Author: **Bolortuya Enkhtaivan**, *Western Michigan U.*

Author: **Wei Ning**, *Jacksonville State U.*

Author: **Albi Alikaj**, *Jacksonville State U.*

This paper examines how CEOs' prior work experiences involving earnings management decisions continue to influence their financial reporting decisions despite their change of employers. Based on insights from the career imprint theory, we propose that firms are more likely to engage in earnings management when their newly appointed CEOs come from firms that were also involved in such practices. Empirical support was found by analyzing a dataset that tracks 855 CEO transitions. Additionally, we find that the strength of this effect is influenced by a number of factors such as the officers' age when they joined the previous firm, the tenure length of the officers at their previous employers, the officers' former firm size, as well as the strength of the officers' current firm's corporate governance. Furthermore, our results are robust after addressing for large sample, omitted variable and the self-selection biases.

Influences on CSR

Digital Session Chair: **Emily Rachael Lean**, *Austin Peay State U.*

SIM: Pull up Your Own Bootstraps: How PWE Influences Interpretations of Corporate Social Responsibility

Author: **Emily Rachael Lean**, *Austin Peay State U.*

This paper discusses the degree to which the Protestant work ethic of company leaders may influence interpretations of their corporate social responsibility through the lens of stakeholder theory. The model presented here details how leaders may determine which stakeholder groups to invest in or avoid based on how the leader evaluates the worth of a stakeholder group. This model takes into consideration the impact of a leader's PWE along with the amount of power a leader has to explain how a leader determines a stakeholder group's worth. Additionally, attention is paid to how stakeholder groups may react to being overlooked for CSR investment especially in comparison to other stakeholder groups who do receive funding. Practical implications and avenues for future research are discussed.

SIM: The Power of Informal Institutions: Social Trust and Corporate Environmental Responsibility

Author: **Daxin Sun**, *Shanghai Jiao Tong U.*

Author: **Yaxin Zhang**, *Nanjing U. of Finance and Economics*

Informal institutions can significantly shape the behaviors of various economic organizations within a society by creating unique business infrastructure and value orientation. While the existing literature pays more attention to the financial consequences, little known about their environmental impacts. By linking institutional theory with environmentalism literature, this study develops a theoretical framework and empirically tests how social trust, one dimension of informal institutions, influences corporate environmental responsibility. Using a longitudinal dataset of Chinese listed firms from 2006 to 2015, we find support that firms located in regions with higher level of social trust engage in more environmental responsibility activities. Furthermore, we show that this result is more pronounced when local environmental protests are fewer and information transparency is less. Our findings highlight the importance of social trust for environmental behaviors, provide evidence of two unexplored substitution mechanisms, and show how firms from emerging economies respond to environmental concerns.

SIM: Doing Good and Doing No Harm: The Differential Effects of Founders' Regulatory Focus on CSR

Author: **Paul Sanchez Ruiz**, *DePaul U. Kellstadt Graduate School of Management*

Author: **Ileana Maldonado-Bautista**, *Baylor U.*

Author: **Kendall Artz**, *Baylor U.*

Corporate social responsibility (CSR) represents a constellation of volitional choices that reflect the motivations and strategic goals of founders. We propose that the founders' regulatory focus—promotion focus and prevention focus—will influence their entrepreneurial firms' CSR profiles. We advance this perspective by locating founders and empirically testing that (1) promotion focus will be positively related to CSR strengths; (2) prevention focus will be negatively related to CSR concerns; and (3) these associations will be amplified when founders act on the relative power they possess. Moreover, we explore the interactions between founders' regulatory focus and CSR and their effects on firm performance (sales and market). We test our ideas with a sample of 315 founders, resulting in 945 firm-year observations. Results indicate that the promotion focus of founders is manifested in their preferences for "doing good" and the prevention focus of founders is manifested in their preferences for "doing no harm." We further found that CSR influences entrepreneurial firm performance in complex ways.

SIM: All Aboard? Discretionary Work by Agents of Access

Author: **Rose Ntondumu Bote**, *Grenoble Ecole de Management*

Author: **Tao Wang**, *Kyoto U.*

This paper examines how local agents of access exercise discretion to determine who gets access to essential resources that have bearing on societal welfare, when they face the dilemma of taking into account organizational and community interests simultaneously. Using an inductive study of loans officers of the largest microfinance organization in Cameroon, we investigate how they distinguish between members that are worthy/unworthy of loans. Findings show that a combination of enabling and required factors from both the community and organization guide agents' discretionary work. The community presents a variety of contexts that enable agents' creativity to develop simplified decision-making alternatives to choose among clients. The organization empowers agents to legitimize their actions and gain credibility in their dealings with the community. Strong relational ties between the agents and clients condition the discretionary work of controlling community members' access to organizational resources.

Social Origin, Social Class and Social Status

Digital Session Chair: **Maïke Andresen**, *U. of Bamberg*

CAR: Like Father, Like Son? The Relationship between Social Origin and Career Success – A SLR

Author: **Julia Stapf**, *U. of Bamberg*

Author: **Maïke Andresen**, *U. of Bamberg*

Research on the transmission of social disadvantages between generations shows consistently that access to higher education is still highly stratified. However, less is known about the relationship between social origin and career success, and whether inequalities can be offset within the occupational context. Based on a systematic review of 59 studies, we present prevailing patterns of relationships between social origin and career success, and identify factors that explain them. We find that employees from less privileged families experience significant disadvantages in achieving objective career success (monetary success, occupational status, hierarchical rank). Studies also show that the first two factors persist or worsen over the course of their careers. Conversely, subjective career success proves to be less affected by social origin, although few studies are available on this. Persisting disadvantageous social origin/career success relationships result from the individuals themselves (e.g. due to lower career aspirations) and discriminatory practices in organizations (e.g. lower provision of career support and access to social resources).

CAR: Flight Attendant Career and Social Class, Gender and Sexuality (Im)Mobilities

Author: **ALINE MENDONÇA FRAGA**, *UFRGS - Federal U. of Rio Grande do Sul - BRAZIL*

Author: **Sidinei Rocha De Oliveira**, *UFRGS - Federal U. of Rio Grande do Sul - BRAZIL*

Flight attendant careers are genuinely mobile and traditionally feminine, an unusual combination that produces and reproduces gender and sexuality stereotypes. They are also careers that, in the Brazilian context, allow financial rise with a little study, which makes possible the entry of lower-class people. The article discusses the limited freedom experienced by men in a historically female profession based on the hierarchized and gendered space of the airplane. Drawing on qualitative research, oriented by symbolic interactionism, we tell three life stories, using narrative analysis and ethnographic inspirations. The paper aims to analyze the intersections of social class, gender, and sexuality (im)mobilities in the career of these gay male flight attendants. The construction of different mobilities within aviation linked to such inequality social markers and the relationships between the intersections of social, geographical, gender, and sexuality mobility are outstanding contributions.

CAR: Relational Competence, Social Status, and Humor: Evidence from Two Experiments

Author: **Agnes Bäker**, *U. of Zurich*

Author: **Jennifer Hofmann**, *U. of Zurich*

Author: **Mario Mechtel**, *Leuphana U. Lüneburg*

We investigate the relationship between relational competence and social status at work. As a potential means of increasing individual social status, we analyze the effects of humor use for relational competence and status as perceived by others. The first study is a video vignette experiment in which the participants rate medical doctors' presentations. We exogenously vary whether the videos include humor use or not. The second study consists of a randomized controlled trial that was embedded in a continuous education program in cardiac surgery and interventional cardiology. One randomly assigned group of medical doctors participated in a humor training program, while the second group received a control training. Both studies reveal a statistically significant relationship between relational competence and other-rated social status. We do not find statistically significant differences in perceived workplace status between the humor and control conditions in the two studies. However, mediation analysis suggests that humor use might increase social status via indicating relational competence. Furthermore, the perception of successful humor use seems to be an important factor of humor use increasing other-perceived status (via relational competence).

Building Community around Self-care: Restorative Spaces and Faculty Well-being

Building Community around Self-care: Restorative S

Participant: **Sarah Robinson**, *U. of Glasgow*
Participant: **Linda MSama**, *St. John's U.*
Participant: **David Jones**, *Newcastle U. Business School*
Participant: **Nicholas Rhew**, *Coastal Carolina U.*
Participant: **Victor Friedman**, *Max Stern Jezreel Valley College*
Participant: **Mark Egan**, *The York Management School*

In 2019 Smith and Ulus asked 'who cares for academics?' The rather brutal answer is that in the neoliberal university, we have been left largely to look after ourselves, even while the nature of academic work in recent decades has resulted in a sharp increase in mental health issues and a general decline in well-being among faculty. Well-being provisions from universities have been superficial, placing the onus squarely on already over-burdened academics to manage their own well-being. Collective action is vital in expressing our need for institutionally-sanctioned restorative space. In this PDW, we propose providing a safe zone for an inclusive community of scholars from across the Academy to discuss restorative space as a coping mechanism. This is in itself an act of activism and solidarity as faculty members may frequently conceal their restorative spaces in fear of how our time spent in them may be criticized. We propose opening our discussion by sharing our restorative space narratives, and then encouraging participants to share their own stories of restoration – whether it be through story-telling, pictures, collage, skits, poetry, or any other medium that conveys the impact that restoration has on their professional and personal lives. This innovative workshop session guides us to a refreshed, professional perspective with renewed energy and clarity, the outcome of which would be a collection of narratives and sense-making around the concept of restorative spaces to facilitate discussion with other colleagues, unions and employers as to how our wellbeing might be better supported.

Corporate entrepreneurship

Digital Session Chair: **Gabriel Akel Abrahão**, *FGV EAESP*

ENT: The Individual Agency of Corporate Entrepreneurship

Author: **Gabriel Akel Abrahão**, *FGV EAESP*
Author: **Paulo Arvate**, *FGV-EAESP*
Author: **Marcus Alexandre Yshikawa Salusse**, *EAESP - FGV/SP*

Corporate entrepreneurship (CE) is often understood to be a firm-based process, with little (or no) acknowledgment of the individual agency of the employee-entrepreneur. Understanding individual agency, however, is crucial to properly implementing a successful corporate entrepreneurship strategy, because individuals may opt to become independent entrepreneurs rather than corporate entrepreneurs. We help solve this puzzle by expanding the integrative model of corporate entrepreneurship, as suggested by Ireland (Ireland et. al. 2009). We use game theory to analyze the employee-entrepreneur trade-offs involved in the CE process and to model theoretical propositions. The game theory model allows us to evaluate the different paths and provide a formal way of analyzing the cooperative or competitive interactions between the firm and individuals. Our study contributes to the development of formal hypotheses that are supported by game-theory propositions, where equilibrium is reached when, due to asymmetric information, the employee engages in independent entrepreneurship and the firm interacts afterwards by way of marketing.

ENT: How do team members' perceptions of autonomy and control impact corporate entrepreneurship projects?

Author: **Johannes Rosenberger**, *TUM School of Management, Technische U. München*
Author: **Holger Patzelt**, *TUM School of Management, Technische U. München*
Author: **Alexandra Mittermaier**, *TUM School of Management, Technische U. München*

Successful corporate entrepreneurship requires that firms provide their teams with the autonomy needed for recognizing and exploiting new business opportunities. At the same time, also the firms standardize processes to facilitate coordination and realize synergies about projects. These opposing demands give rise to a prevalent, yet poorly understood paradox of autonomy and control in corporate entrepreneurship. Drawing on a qualitative, longitudinal study of seven teams working on entrepreneurial projects within the same large organization, we explore how team members perceive and respond to the autonomy-control paradox. Data from 200 interviews, which we collected over the timeframe of five months, in combination with observational and archival data show that teams differ in their attention to autonomy vs. control, which initiates divergence, competition, and negotiation processes within the team. These different processes determine how effectively teams cope with the autonomy-control paradox and the outcome of their projects. Our inductive model offers three contributions to the literature on corporate entrepreneurship.

Paper is Available to Meeting Registrants Only.

ENT: Spanning Two Worlds? Corporate Accelerators and Corporate Venture Capital in Innovation Portfolios

Author: **Sheryl Winston Smith**, *BI Norwegian Business School*

This paper tackles a crucial problem in the theory and practice of global innovation strategy: In the face of technological and business model disruptions, often originating in innovative startups, how do companies respond with entrepreneurial ideas? Specifically, how do established companies use entrepreneurial approaches to facilitate access to startup innovation? This research examines the roles of corporate accelerators and corporate venture capital investing. Using a sample of companies with both corporate accelerators and corporate venture capital arms, this study provides preliminary descriptive evidence of the role of both types of external knowledge partnerships with startups. Specifically, the paper points to greater experimentation in CVC portfolios in terms of startup focus and industry distribution relative to corporate accelerator portfolios. At the same time corporate accelerators may provide access to greater geographic distribution in their portfolio companies. A novel algorithmic approach based on natural language processing and machine learning is used to characterize the distributions of portfolio companies. The paper raises questions for further study addressing the potential for complementarity and substitution amongst these two forms of corporate innovation in partnership with startups.

ENT: A Chip Off the Old Block? The Genesis of Geographic Diversification Strategies in New Ventures

Author: **Giuseppe Criaco**, *Erasmus U. Rotterdam*
Author: **Lucia Naldi**, *Jonkoping International Business School*

We advance research on geographic diversification by joining insights from imprinting theory in organizations to offer a novel theory of new venture diversification strategies. We propose that geographic diversification strategies of new ventures resemble those of their founders' prior employers, reinforcing the central imprinting role that founders' prior employment plays for new ventures. Furthermore, we hypothesize that founders' position at their prior employers reinforces, while new venture's age weakens, the prior employer-led geographic diversification effect. We test our hypotheses using a longitudinal dataset of Swedish new ventures that exports early in their lifecycle.

Identity 3   

Digital Session Chair: **Chenjian Zhang**, *U. of Bath*

ENT: Entrepreneurs' Networking Styles and Normative Underpinnings 

Author: **Chenjian Zhang**, *U. of Bath*

Author: **Tao Wang**, *Kyoto U.*

Author: **David Ahlstrom**, *Chinese U. of Hong Kong*

Existing network research has mainly adopted functional and structural approaches to study instrumental goals behind entrepreneurs' networking and the influence of position on resource access and venturing performance. The variety of entrepreneurs' networking styles and the normative underpinnings has been insufficiently explored. Contextualized this study in China, this paper asks: What are the entrepreneurs' networking styles during the market-oriented transition? How does entrepreneurs' understanding of social norms shape their networking styles? Through our inductive comparison, we identify three networking styles: guanxi-oriented networking, market-based networking, and mixed networking. We theorizing three types of social norms in shaping these styles: market inferred norms, dyadically formed norms, and identity induced norms. Our exploratory study provides new insights in understanding Chinese entrepreneurs' distinctive networking styles and their normative underpinnings. Our study further offers implications for studying entrepreneurs' networking behaviors in transitional economies.

Paper is Available to Meeting Registrants Only.

ENT: How Does the Status of Entrepreneur Drive Firm's Innovation Investments? - Evidence from China  

Author: **Yang Yu**, *Victoria U. of Wellington*

Author: **Wen Helena Li**, *U. of Technology, Sydney*

Author: **Wei Liu**, *The U. of Sydney*

Author: **Andreas Rauch**, *U. of Sydney Business School*

The study seeks to establish a link between an entrepreneur's individual status and firm strategy. Integrating thoroughly the entrepreneurship literature and status literature in sociology and social psychology, we argue that a strategy which can enhance firm performance will help entrepreneurs to gain socioeconomic status, and from this perspective, we predict that entrepreneurs who already possess higher socioeconomic status are more likely to undertake innovation because of their greater self-assurance in the strategy and stronger motive to maintain or improve the current status. Then, we examine whether this relationship can be mitigated by entrepreneur's political status and how the moderation effect is further subject to firm's surrounding institutional environment. The analysis of a national survey of Chinese private enterprises shows support for our model.

Paper is Available to Meeting Registrants Only.

ENT: Start-Up Legitimation through Behavioral Ambidexterity: The Burden of Organizational Identity 

Author: **Emilia Karpinskaia**, *National Research U. Higher School of Economics*

Author: **Galina Shirokova**, *National Research U. Higher School of Economics*

Author: **Tatiana S. Manolova**, *Bentley U.*

Start-ups in the high tech sector often find themselves trapped into continuing experimentation that threatens their legitimation prospects. In this study, we take a behavioral logic lens, coupled with an organizational identification perspective, in order to explore how new ventures in the high tech sector achieve a balance between flexibility and focus and how this balance, in turn, affect the process of their legitimation. Applying a longitudinal multi-case approach, and using rich data from interviews with new venture founders, we tracks the decisions and actions of ten Russian high-tech start-ups. We identify two different tracks of start-up development depending on the integrative relationship between organizational identification and applied behavioral logic (effectuation/causation). Further, we highlight the mediating role of organizational identity work in the relationship between behavioral ambidexterity and start-up legitimation. Theoretical and practitioner implications are discussed.

Paper is Available to Meeting Registrants Only.

ENT: "I Am an Entrepreneur!": A Project of the Aspired Self towards Changed Code of Honor in China  

Author: **Gabriel Z. Chiu**, *Harvard U.*

While identity has been demonstrated to exert a motivational effect for individuals to pursue a career in entrepreneurship, the current emphasis is on entrepreneurs imprinting the business venture with their preexisting social identity. This paper draws on a dynamic and future-oriented concept of the self to examine what it means to be an entrepreneur in China. Through in-depth interviews with 50 founders of technology startups and 11 subject experts during 9-month fieldwork in Beijing, I identify four identity types distinct from their Western counterparts. Rather than driven to entrepreneurship out of concern for others, these identity types are best viewed as biographic projects of the self. On the one hand, entrepreneurship in China is pragmatically perceived as providing the means to realizing a desired future. On the other hand, rather than imprinting the business venture with meanings, founders also derive symbolic values from the occupational meaning of entrepreneurship in order to curate a desired identity. These identity projects are themselves embedded in the changing national code of honor due to China's post-1979 reforms. This paper investigates the meaningfulness of work and career calling, contributes to an identity approach to entrepreneurship, and enriches the social embeddedness of work and career.

ENT: How entrepreneurial business model design influences disruptive and adoptive product innovation 

Author: **Leven Jianwen Zheng**, *U. of Liverpool*

The blockchain technology has the great potential to drive product innovation in various industries. This makes such an emerging technology play as an important enabler that drives the generation of new venture. Our study examines the effects of business model designs of blockchain-based entrepreneurial firms on the scope of product newness: disruptive innovation and adoptive innovation. To test such a relationship, we conduct a survey to collect data from 159 blockchain-based ventures. The findings indicate that the novel business model strongly entices disruptive innovation, but it does not influence blockchain-based adoptive product innovation. The results also indicate that the efficient business model strongly encourages blockchain-based product adoptive innovation, but it strongly discourages blockchain-based disruptive product innovation. Further, our analysis shows that the firm's disruptive technological capability strengthens the positive relationship between the novel business model and disruptive product innovation, but it weakens the positive relationship among the design efficiency and adoptive innovation. Additionally, we found that the disruptive technological capability strongly entices blockchain-based entrepreneurial firms to favor disruptive product innovation over adoptive product innovation.

ENT: Sensemaking beyond the customer: An analysis of entrepreneurs' market orientation development 

Author: **Gabi Anja Kaffka**, *U. Medical Center Utrecht*
Author: **Jeroen Kraaijenbrink**, *Amsterdam Business School, U. of Amsterdam*
Author: **Aard J. Groen**, *U. of Groningen center of entrepreneurship*
Author: **Norris F. Krueger**, *Entrepreneurship Northwest*

This study examines cognitive origins of a market orientation among individual entrepreneurs. Taking a grounded theory approach, we analyze entrepreneurs' sensemaking processes during a 12-months business incubation/acceleration program. The results show that entrepreneurs use distinctive market-oriented mental schemas during opportunity development that predominantly reflect the development of a broader stakeholder orientation and vastly lack competitor orientation. We also find that novice entrepreneurs with less than five years of start-up experience develop more activity-related mental models, while experience entrepreneurs develop more generic market orientation mental schemas. Our findings contribute to a better understanding of socially situated cognitive foundations of individuals' market orientation.

ENT: On the Ontology of Opportunities: Developing the Design Perspective of Entrepreneurship

Author: **Henrik Berglund**, *Chalmers U. of Technology*
Author: **Dimo P. Dimov**, *U. of Bath*

This paper seeks to reconnect entrepreneurship research with the reality of practicing entrepreneurs. It extends the design perspective of entrepreneurship by focusing on the generative role of the opportunities-as-artifacts that are designed at the interface between entrepreneurs and their environments. We do this by drawing on relevant contributions by Knorr Cetina (on epistemic objects), Schön (on practices of design), and Spinoza, Flores and Dreyfus (on world disclosing).

ENT: Theorizing Lean Startup Principles: An Action Regulation Theory Perspective   

Author: **Katharina Sielski**, *ESCP Business School*
Author: **Christoph Seckler**, *ESCP Business School*

The principles of the lean startup approach are increasingly gaining relevance in theory and practice. At the same time, key principles such as 'pivoting' and the 'build-measure-learn cycle' remain under-theorized. This hurts the clarity of these concepts and it hinders more effective use of them in practice. We tackle both of these issues in this article. First, we draw on action regulation theory to theorize both 'pivoting,' as well as the 'build-measure-learn cycle.' Subsequently, we build on this theorizing to develop theoretically grounded design principles. This article contributes to both theory and practice. First, theorizing the lean startup principles improves the clarity of the focal concepts and helps to understand why, for whom, and when they work. Second, the developed design principles contribute to the increasing body of design knowledge which provides scientifically grounded guidance for entrepreneurs and entrepreneurship educators.

Digital Session Chair: **Carlotta Benedetti**, *Free U. of Bozen, Bozen*

ENT: **Stakeholder Salience and Firm Responses to Stakeholder Claims: Insights from Family Firms**

Author: **Carlotta Benedetti**, *Free U. of Bozen, Bozen*
Author: **Alfredo De Massis**, *Free U. Bozen, Bolzano and Lancaster U.*
Author: **Evelyn Rita Micelotta**, *Telfer School of Management, U. of Ottawa*
Author: **Josip Kotlar**, *Politecnico di Milano School of Management*

Addressing the claims of multiple and diverse stakeholders is a critical managerial task, which involves trade-offs and compromises. Drawing on the application of stakeholder theory to family businesses, our study provides insights on the attributes and cognitive mechanisms that affect perceptions of stakeholders salience in these unique type of organizations. Building on the key tenet that the coexistence of family and business systems creates a unique stakeholder setting, we offer a typology of response scenarios to stakeholder claims that bridges relational (i.e., stakeholder-firm relationship) and cognitive (i.e., goals) elements. Our study yields a novel perspective which illuminates the mechanisms that drive family firms' response to stakeholder claims.

ENT: **Strategic orientations and radical innovation in Chinese SMEs: The role of network ties**

Author: **Ataullah Kiani**, *U. of Science and Technology of China*
Author: **Jiayu Wang**, *Anhui U.*

The primary purpose of this article is to examine how entrepreneurial orientation and market orientation affect radical innovation and assess how such effects are conditional on two types of network ties (i.e., social network ties and business network ties). A survey of 171 small and medium firms in China shows that both entrepreneurial and market orientation facilitates the development of radical innovation. Further, both social ties and business ties enhance the effect of strategic factors on radical innovation.

ENT: **Intra-cohort social network structure and cohort performance**

Author: **Sean Evan Wise**, *Ryerson U.*
Author: **Sepideh Yeganegi**, *Wilfrid Laurier U.*
Author: **Andre O. Laplume**, *Ted Rogers School of Management, Ryerson U.*

We investigate the social network relationships between startups in the same accelerator. We use network theory to explain and predict peer effects in the form of social capital, leading to cohort-level performance. We hypothesize and find that higher performing cohorts have fewer unconnected startups than underperforming cohorts. Consistent with the 'network closure' and 'structural holes' arguments, we also hypothesize an inverse curvilinear relationship between cohort network density and cohort performance. We quantify the intra-cohort social network structures of 1537 startups comprising 154 Techstars cohorts using their activity on Twitter. We find that there exists an upper limit to the impact of cohort network density on performance, after which any further increase becomes negative. We contribute to theory on peer effects in accelerator cohorts by demonstrating the importance of intra-cohort social networks. Our study has implications for stakeholders in accelerators and for the startups that join them.

ENT: Inducements for Resource Redeployment in Portfolio Entrepreneurship  

Author: **Jenna Rodrigues**, *U. of Connecticut*
Author: **Timothy B. Folta**, *U. of Connecticut*
Author: **Cheryl Beck**, *U. of Connecticut*

This paper investigates which factors serve as inducements to prompt portfolio entrepreneurs to redeploy their own time across ventures within their portfolios. While the corporate strategy literature assumes that portfolio managers take a rational approach to redeployment in attempt to maximize joint profits, we find that individual preferences and biases influence the redeployment decision when the unit of analysis is the individual entrepreneur. Through utilizing a descriptive phenomenological approach, we explore whether prior findings surrounding inducements to redeployment in corporate portfolios hold when studied in the context of portfolio entrepreneurship and discover several additional inducements that arise when the phenomenon is applied to the entrepreneurial context. We also shed light on the process through which time redeployment physically occurs and the requirements that must be in place in order for the entrepreneur to have the capacity to activate the option to redeploy when an inducement prompts the desire to do so.

ENT: Reconfiguration and new firm survival

Author: **Alessandro Lucini Paioni**, *School of Management, U. of Bath*
Author: **Orietta Marsili**, *U. of Bath*
Author: **Panos Desyllas**, *School of Management, U. of Bath*
Author: **Elena Cefis**, *U. of Bergamo*

While scholars have well investigated the importance of reconfiguration as a means for established companies to adapt to changing competitive environments, we know little about the process of configuration and transformation by which new firms give shape to their resource base in their early, formative years when survival is most at risk. Drawing on entrepreneurship and strategy research, we explore how the reconfiguration process by which new firms change the structure and direction of their resource base influence their likelihood of survival. Using data from the Dutch General Business Register, we observe longitudinally a cohort of 19,523 private firms set up in the Netherlands in 2011, over the 8 years after entry. We apply novel event-history analysis techniques to study how reconfiguration activity and its temporality affect survival. We find that firms undertaking reconfiguration benefit from a survival premium. However, reconfiguring sooner after entry lowers the likelihood of survival compared to doing so at a later time. Our findings contribute to the entrepreneurial process literature by offering a dynamic perspective on new firm survival through resource reconfiguration, as part of the process of learning and experimentation by new firms.

ENT: Why Do Some Entrepreneurs Develop Venture Portfolios? And how do they Do So? A Meso-Level Analysis

Author: **Tobias Kutzewski**, *Vrije U. Amsterdam*
Author: **Marc Bahlmann**, *Vrije U. Amsterdam*
Author: **Wouter Stam**, *Vrije U. Amsterdam*

The question how decisions made by entrepreneurs affect their individual business ventures is essential to research in entrepreneurship. While knowledge on the role of entrepreneurial learning and habits (Aldrich and Yang 2014), the influence of uncertainty on organizing entrepreneurial activities (Alvarez and Barney 2005) and the role of past career practices on entrepreneurial decision making (Engel, van Burg, Kleijn and Khapova 2017) is widely established, yet little is known on how this applies to entrepreneurs “simultaneously owning and engaging in a portfolio of entrepreneurial interests” (Carter and Ram 2003, p. 374). As such, portfolio entrepreneurs are a distinctive group of habitual entrepreneurs whom received increased and sustained scholarly attention over the recent years (Wiklund and Shepherd 2003 and 2008, Baert, Meuleman, Debruyne and Wright 2016, Lechner, Kirschenhofer and Dowling 2016, and Cruz and Justo 2017). However, yet little empirical evidence exists to explain variation within this group of entrepreneurs (Kutzewski, Bahlmann and Stam 2020); nor do we know how and through which practices the formation of business portfolios is affected. We conducted research asking why, how and with what effect, portfolio entrepreneurs engage in their activities. To answer these questions, a comparative multi-case study design was chosen. The research unit comprised management decisions made by individual portfolio entrepreneurs. Based on a case sample comprising the explorative and exploitative activities of 21 portfolio-entrepreneurs with a combined portfolio of 129 companies, this research found ample evidence that various forms of intention (Why?), decision making and coordination (How?) exist simultaneously within the same portfolio (With what effect?). The result of this research contributes to our understanding of how entrepreneurial principles through which portfolio-entrepreneurs organize their activities affect the structure of venture portfolios.

ENT: Unequal for success? Initial equity split in new ventures, team entry, and new venture performance 

Author: **Elisabeth Mueller**, *IESEG School of Management*
Author: **Maria Hennicke**, *Frankfurt School of Finance and Management*

When starting a firm, the founding team needs to decide whether to choose an unequal or equal equity split. Within our framework of two ownership archetypes, we hypothesize and find empirical evidence that teams with an unequal equity split show higher performance, that they are more likely to accept new team members, and that team entry positively mediates the relationship between equity split and performance. Our results reveal how the preferences of founders with respect to social relations in the team, impregnate the future strategic decision-making in firms and explain why both types of equity split are observed in practice.

ENT: Domestic Migrant Entrepreneurs And Returned Entrepreneurs Differ On Their Mental Health

Author: **Jiaqi Yan**, *Northeastern U.*
Author: **Weimei Huo**, *Shanghai U.*

Domestic migrant entrepreneurship has become a widespread phenomenon, with a large proportion of entrepreneurs either starting business in migration or returned from migrations. However, domestic migrant or returned entrepreneurs have not been investigated much in terms of their differences. We develop and test a theoretical model that domestic migrant entrepreneur and returned entrepreneurs (entrepreneurs who return to their hometown to start businesses) differ in their health conditions from the perspective of the business-family interface. We test our model empirically with three-wave surveys of 219 entrepreneurs, including 117 migrant entrepreneurs and 102 returned entrepreneurs. Our results show that returned entrepreneurs have better mental health than migrant entrepreneurs via the indirect effect of business-to-family enrichment. Moreover, the relationship between return from migration and business-to-family enrichment was stronger when the social legitimacy of entrepreneurship is high. Our study contributes to the scholarly understanding of domestic migrant entrepreneurship.

ENT: Politics is Money, Political Connections and Financial Credit in Chinese Firms.

Author: **Xihua Mu**, *Chongqing U.*
Author: **Antonio Crupi**, *Scuola Superiore Sant'Anna*
Author: **Fabrizio Cesaroni**, *U. of Messina*

Prior studies highlighted how political connections positively impact companies' ability to access the credit but do not go beyond the connections' dichotomous measurement. To contribute to this extensive literature, we measured the impact of connections on three different layers. Firstly, according to the connections' level – national or local. Secondly, according to the connections' type – with governmental officials or deputies in political bodies. Finally, using the agency theory, we apply the intensity measure based on the number of connected directors to explore the connections' strength to offer a comprehensive framework of the connections' strength. We test our hypotheses on the financial and investing behavior of Chinese private-owned firms listed in the Chinese Growth Enterprise Market of Shenzhen Stock Exchange from 2014 to 2016. Results show that local, governmental, and more intense connected boards positively influence both types of behaviors.

ENT: More for Less: Evidence from Cost Reduction Management Trainings for Micro-Enterprises

Author: **Egbert Amoncio**, *Goethe U.*
Author: **Cornelia Storz**, *Goethe U.*
Author: **Rajesh Ramachandran**, *Heidelberg U.*

Management trainings have shown to be effective in improving business outcomes. However, the impact on severely resource-scarce micro-enterprises which usually operate in Bottom of the Pyramid (BoP) markets remains unexplored. This is surprising, given their distinct need for cost reduction programs in this environment. We address two important questions: First, what is the impact of cost reduction management trainings on business outcomes of micro-enterprises? Second, which businesses are helped most by improving cost reduction management skills? Based on a randomized controlled trial in Zambia, this study finds that cost reduction management trainings improve several business practices. However, we only observe an effect on business profits for micro-entrepreneurs which are equipped with higher levels of capabilities and complementary. This implies that the effectiveness of management trainings is contingent on the available resources of micro-entrepreneurs in the emerging economy context.

Sustainability 2  

Digital Session Chair: **Brandon H. Lee**, *Melbourne Business School*

ENT: Sustainable entrepreneurship under market uncertainty: Opportunities, challenges, and impact  

Author: **Brandon H. Lee**, *Melbourne Business School*
Author: **Panikos G. Georgallis**, *U. of Amsterdam*
Author: **Jeroen Struben**, *EMLYON Business School*

Entrepreneurs are often viewed as uniquely positioned to address neglected social problems, and sustainable entrepreneurship in particular has been presented as the 'green panacea' that will put us on a path to mitigate climate change and other sustainability challenges. However, sustainable markets are fraught with uncertainties that curb entrepreneurial ventures' potential to deliver on such ambitious expectations. Despite several attempts to take stock of the literature on sustainable entrepreneurship, we lack a rigorous framework for systematically incorporating the market uncertainty that entrepreneurs face across different types of markets. In this paper we draw upon recent literature on collective action during market emergence and growth to develop an organizing framework to map entrepreneurial efforts across markets with varying degrees of uncertainty. In applying this framework to sustainable entrepreneurship, we highlight how demand and supply uncertainty affect sustainable entrepreneurship opportunities and challenges, and discuss to what extent entrepreneurial efforts may drive or inhibit societal impacts.

ENT: How Do (Green) Innovators Respond to Climate Change Scenarios? Evidence from a Field Experiment

Author: **Jorge Guzman**, *Columbia Business School*
Author: **Jean Joohyun Oh**, *Columbia Business School*
Author: **Ananya Sen**, *Heinz College - Carnegie Mellon U.*

This paper aims to unpack the pro-social motivations of green innovators. In a field experiment inviting SBIR grantees to learn more about and apply to MIT Solve, we provide scientifically valid scenarios varying the time-frame and scale of the human cost of climate change. Innovators' response in clicks and applications increases with both scale and immediacy treatments. Our structural model estimates a welfare discount rate of 0.76%, providing a measure of innovators' value of future generations, and an elasticity to lives lost of 0.23, implying diminishing marginal concern to human loss.

ENT: Opportunities Identification in Sustainable Entrepreneurship

Author: **Nisrine EL YADARI**, *ISEOR, Magellan, IAE Lyon, U. Jean Moulin*

Our research examines the sustainable entrepreneurial process and focuses on the identification and exploitation of sustainable opportunities. Some scholars consider opportunities as objective phenomena that need to be discovered. In this entrepreneurial process, known as causation, entrepreneurs first decide on the objectives to be achieved and then select the resources needed to achieve them. Other researchers argue that opportunities are created and cannot exist without the actions of entrepreneurs (Baker and Nelson, 2005; Sarasvathy, 2001). The entrepreneurial process is then said to be effectual in which entrepreneurs focus on the resources and means at hand to choose the possible effects that create opportunities. The objective of our research is to answer the following question: how do responsible entrepreneurs identify and exploit opportunities in responsible entrepreneurship? Do they adopt effectual or causal behaviours to identify and exploit sustainable opportunities? Using a qualitative multiple-case methodology, we traced the entrepreneurial process of six cases of sustainable new ventures. Our results show that responsible entrepreneurs not only adopt effectual and causal behaviours, but also demonstrate behaviours that are unique to them given the sustainable nature of their activities. We thus propose a model that describes the process of identifying and exploiting sustainable opportunities.

ENT: From Fiddling to Firefighting: A Sympathetic Critique of Social and Environmental Entrepreneurship

Author: **Siddharth Vedula**, *TUM School of Management, Technische U. München*
Author: **Desiree F. Pacheco**, *IASE Business School*
Author: **Claudia Doblinger**, *Technical U. of Munich*
Author: **Sophie Catherine Bacq**, *Indiana U. - Kelley School of Business*
Author: **Jeff York**, *U. of Colorado, Boulder*
Author: **Thomas J Dean**, *Colorado State U.*
Author: **Michael V. Russo**, *U. of Oregon*

One of the pillars of the field of entrepreneurship is appreciating how the pursuit of opportunities impacts society. With entrepreneurs increasingly heralded as change agents who can help solve society's grand challenges, some scholars have attempted to pursue this important agenda. In this review we highlight that much remains to be done, and that research on entrepreneurship for the public good faces multiple critical issues. The most prominent of these is that over the past two decades, this literature has bifurcated into two separate domains. These two domains, one organized around social entrepreneurship (SE) and another around environmental entrepreneurship (EE), have largely evolved independently. We perform a bibliometric network analysis with a complementary and detailed qualitative review of the literature to compare and contrast the evolution of SE and EE research from 1994 to 2019 to: 1) understand the main features and drivers of these diverging streams; 2) identify differences and synergies between the two; and 3) offer an agenda to limit redundancies and address unrealized synergies. The resulting framework enables future research to live up to the promise of understanding how and when entrepreneurial action contributes to the public good.

Value Creation

Digital Session Chair: **Anzelika Smagina**, *Transport and Telecommunication Institute*

ENT: Exploring craft entrepreneurship through the lens of value creation

Author: **Anzelika Smagina**, *Transport and Telecommunication Institute*
Author: **Iveta Ludviga**, *RISEBA U. of Business Arts and Technologies*

Theory of Entrepreneurship explains and defines it as a process of value creation and appropriation. In the craft sector, where small businesses dominate, the entrepreneur who is also owner-manager is integral to the value creation process, therefore the value created and how opportunities are realized heavily depend on his/her identity and motivation. However, value appropriation happens only when customers perceive the product or service positively. By combining Entrepreneurial Value Creation Theory and Theory of Consumption Values, we explore craft entrepreneurship from a value perspective and extend the value creation model by including entrepreneurial identity and customer perspective. In this paper, we present empirical findings based on the model and mixed-method research. We identify entrepreneurs' intentions and twelve value groups created in the process of opportunity development in the craft business. We measure how craft product value is perceived by customers - which value groups tend to increase the frequency of purchase. We conclude that customers buy craft products because of social acceptance value, however, satisfaction with the product depends on emotional values. Craft entrepreneurs should focus more on ecological value dimensions. We discuss the implications of these findings and suggest directions for future research.

ENT: Customers, Marketing or Technology: Performance Implications of Innovation Capabilities in SMEs

Author: **Oleksiy Osiyevskyy**, *U. of Calgary*
Author: **Kanhaiya Kumar Sinha**, *U. of Minnesota, Duluth*
Author: **Galina Shirokova**, *National Research U. Higher School of Economics*
Author: **Olga Shtepa**, *U. of Calgary*

It is well established that a firm's innovation capabilities form the basis for adaptation to changing external environments and creating and sustaining competitive advantage. The existing literature stresses crucial differences between the types of innovation capabilities, depending on their focus, e.g., customers/clients, marketing or technology. Yet, we still know relatively little about the impact of the distinct types of innovation capabilities on firm performance and its reliability. Based on the organizational capability view of innovation, the study proposes a theoretical framework linking the three distinct types of firm's innovation capabilities (customer-, marketing- and technology-focused) with the characteristics of the resulting performance distribution (level and variability) of small and medium enterprises (SMEs). Estimating the multiplicative heteroscedasticity regression model on the data from 521 SMEs from Russia, we demonstrate that customer-focused innovation capability improves the performance level while also making it unreliable. Marketing-focused innovation capability does not have a significant impact on firm performance, yet noticeably augments its variability. Finally, the technology-focused innovation capability stabilizes the performance without any impact on its level. The paper ends with a discussion of the theoretical and managerial implications of the findings.

ENT: The Real Effects of Private Equity Buyouts: A Meta-Analysis

Author: **Jeroen Verbouw**, *Ghent U.*
Author: **Miguel L.C.J. Meuleman**, *Vlerick Business School*
Author: **Sophie Manigart**, *Ghent U. and Vlerick Business School*

Using a meta-analytical approach, this study reviews the fragmented and contradictory empirical literature on the real effects of private equity (PE) on their portfolio companies, focusing on post-buyout operating performance and employment. Based upon 330 samples including 403,820 firms, we find a positive PE effect on operating performance in the medium-to-long term, but no effect on employment. Interestingly, performance gains are stronger in private-to-private buyouts compared to public-to-private buyouts. Countries with strong investor protection laws or with individualistic cultures facilitate larger operating performance gains, while employees are better off in countries with more stringent employee protection laws or with collectivistic cultures.

ENT: Changing Business Model through Cognitive Style: The Moderating Effects of Business Failure Experience

Author: **Xue Wan**, *Tongji U.*
Author: **Pang Xingyu**, *School of Economics & Management, Tongji U.*

Despite the widespread concern about the incumbent's responses to disruptive innovations, we still know little about why managers of small incumbent firms change their business models differently under the same cognitive style. By using survey data from a sample of 180 small incumbent firms, we found intuitive cognitive style did not have a significant relationship with either explorative business model change or exploitative business model change when controlling the condition of business failure experience. However, for those managers who have experienced business failure, the intuitive cognitive style was negatively associated with exploitative changes but positively related to explorative changes. On the contrary, the intuitive cognitive style was positively related to exploitative changes but negatively associated with explorative changes for those without failure experience.

Ecosystems 1

Digital Session Chair: **Grégory GUENEAU**, *IAE Paris - Sorbonne Business School*

ENT: **Entrepreneurial Ecosystems Power of Networks : central role impact in low income countries**  

Author: **Grégory GUENEAU**, *IAE Paris - Sorbonne Business School*
Author: **Didier Chabaud**, *IAE Paris - Sorbonne Business School*
Author: **Marie-Christine Chalus-sauvannet**, *MAGELLAN, IAE Lyon, U. of Lyon, France*

What makes an Entrepreneurial Ecosystem more conductible to Entrepreneurial Dynamics than another? Entrepreneurial Ecosystem research raised as a hot topic, leading to progresses on its elements, network, actors components, or levels of analysis. However, some scholars regret the absence of empirical analysis of EE as a whole to understand how EE configuration operates. To open this perspective we propose an unexplored inter-organizational ties analysis among all Entrepreneurial Ecosystem actors, at a country level scale. Nested in Network Theory perspective, we run an exploratory research in five low income African countries, using innovative research methods (Quantitative Graph Theory, web scraping, fuzzy-set Qualitative Comparative Analysis) to understand the organisational patterns in these Entrepreneurial Ecosystem having an impact on their outcomes. At the core of this perspective we develop the impact of the central actor role of these Entrepreneurial Ecosystems, which is a key causal condition of their outcomes, in our case entrepreneurial dynamics levels and trends in those low income countries. This research underlines how important are Entrepreneurial Ecosystem network attributes to facilitate the efficient distribution of entrepreneurial nurturing components to entrepreneurs. It highlights also the importance of a financial central actor to sustain high Entrepreneurial Dynamics levels.

ENT: **Creating entrepreneurship ecosystem of SME-SME-Academia by inter-organizational network solutions** 

Author: **Khuram Shahzad**, *U. of Vaasa*

This paper conceptualizes how small and medium enterprises (SMEs) can work smarter and become entrepreneurial in terms of increasing innovative cooperation and collaboration activities with their peers and with academic institutions. The focus of this research remains in eliminating SMEs' struggle to internationalize – regarded as silos in absorbing knowledge and in establishing collaboration and relationship with academia. Based on the current knowledge, this paper develops a conceptual framework of “next generation entrepreneurship ecosystem” involving multi-disciplinary cooperation and collaborative actions, shared resources and relationship governance mechanisms strengthening and empowering managers in SMEs to get access, utilize and combine state-of-the-art and “fitness to the market” research, best practices and business solutions in developing innovation capability, digital transformation and globalization. The overarching research question of this paper is “How can ecosystem network solutions can be conceptualized which can influence SMEs to get advantages of innovation capabilities, digitalization and globalization?” This paper theoretically contributes to entrepreneurship ecosystem literature by bridging the gap between cooperation and collaborative studies in perspective of SME-SME-Academia network solutions. Further, the proposed framework provides several practical implications for the managers involved in SMEs' cooperation and collaboration activities.

Paper is Available to Meeting Registrants Only.

ENT: **Bureaucratic Brothers in Arms: Complementor Governance Mode as Precursor and Prevention to Pivoting** 

Author: **Andrew Joseph Foley**, *Cornell SC Johnson College of Business*

Pivoting is a fact of life for new ventures: entrepreneurs develop ideas iteratively, often changing course many times before settling on a strategic orientation. However, new ventures rarely develop in isolation; rather, they exist in complex ecosystems of complementary services in which many products and services must be closely coordinated for consumers to derive value from any of them. Thus, pivoting entails not just a strategic reorientation of the focal firm, but also careful coordination and reorientation among the focal firm's ecosystem of complementors. Though differences regarding the ways in which new ventures are organized with respect to their complementors might therefore impact a firm's decision to pivot, however, current literature does not explore these dynamics. In this paper, I argue that the governance mode underlying a new venture's relationships with its complementors plays an important role in its ability to appropriate value from an opportunity, thereby influencing its propensity to pivot and pursue it. I test my hypotheses in the context of the U.S solar panel industry from 1992-2018. This paper contributes to the entrepreneurship literature by suggesting that it is not merely the content of a new venture's relationships that determine whether or not it will pivot, but also their structure.

Paper is Available to Meeting Registrants Only.

ENT: **Anchor Organizations as Change Agents in Nascent Entrepreneurial Ecosystems: An Ecosystem Governance**  

Author: **Aki Harima**, *U. of Bremen, Germany*
Author: **Jan Harima**, *U. of Bremen, Germany*

Recently, entrepreneurial ecosystems have become one of the major themes among entrepreneurship scholars and regional policymakers worldwide. Hoping to increase prosperity, politicians are keen to develop thriving entrepreneurial ecosystems in their region to foster the creation and growth of innovative startups. While the number of academic publications about entrepreneurial ecosystems has drastically increased in the last few years, understanding of mechanisms of how entrepreneurial ecosystems emerge and develop over time remain mostly unknown. The current research status calls for further investigations on the governance of nascent entrepreneurial ecosystems. Entrepreneurial ecosystems can be governed mainly in two distinctive ways; top-down and bottom-up governance. This study explores hybrid governance mechanisms by shedding light on a particular type of anchor organizations that intertwines these two different governance approaches. We theorize this function of anchor organizations by understanding them as “ecosystem change agents”. As a research setting, this study selected the Windhoek entrepreneurial ecosystem and conducted a single case study. Based on the single case study, this study derives a set of research propositions to conceptualize the functions of anchor organizations. We conclude this paper with limitations, practical implications, as well as research outlook.

Entrepreneurship and emotions 2

Digital Session Chair: **Rebecca Stürzaker**, *U. of South Eastern Norway*

ENT: Motivations or context? Factors influencing low-income entrepreneurship in a developed economy

Author: **Isla Kapasi**, *U. of Leeds*

Author: **Rebecca Stürzaker**, *U. of South Eastern Norway*

Author: **Laura Galloway**, *Heriot-Watt U.*

Author: **Laura Jackman**, *Heriot-Watt U.*

Author: **Andreea Mihut**, *Heriot-Watt U.*

This paper examines expressed motivations and the (expected) value sought from venture creation action amongst a sample of low-income venture owners in a developed economy. We build on the work of Dencker et al. (2019) by testing their theoretical framework of necessity entrepreneurship in a developed economy. First, we demonstrate that a conceptual development of push motivations, however nuanced, is not sufficient to understand the type of venturing action undertaken and outcomes achieved amongst this sample of venturers. Thus, explanations that position observed venturing outcomes as a robust explanation of presumed (motivational) inputs, and the simplistic push-pull dichotomy, are unsound. Second, findings indicate that a more complete explanation for venturing action outcomes observed requires consideration of the role of context, circumstance and an examination of process. Furthermore, we identify that the institutional norms of self-employment labour found in a developed economy are more influential than supportive institutional levers, and thus individuals and their choices for venture creation action will be shaped by factors beyond their control, contrary to conceptualisations of venture creation action as agency determined. Finally, we demonstrate that multiple forms of value are sought and that it is opportunity value that more frequently shapes the outcomes observed in (self-employment) venture creation with low-income outcomes.

ENT: Founders' Social Identities, Work-Life-Balance, and Stress: A Stakeholder perspective

Author: **Maximilian Martin Eckel**, *Innovation and Entrepreneurship Group (WIN) – TIME Research Area, RWTH Aachen Un*

Author: **Denise Fischer**, *RWTH Aachen U.*

Author: **Malte Brettel**, *RWTH Aachen U.*

Recent research on entrepreneurial well-being has shown that prosocial motivation and autonomy have significant impact on founders' stress levels and life satisfaction. While the literature has identified stakeholders as both reference points for entrepreneurial ambitions as well as potential constraints for entrepreneurs' autonomy, we know little about how founders' sense-making of their stakeholders in relation to their own self-understanding shapes their well-being. This study applies a stakeholder perspective informed by social cognition theory and applies survey data from 110 German-speaking commercial and social start-up entrepreneurs to examine the effects of the interactions between founders' social identities and perceived stakeholder power on work-life-balance and stress. Our results show that the influence of social identity on stress ultimately depends on founders' perception of their stakeholders' power. An altruistic Missionary identity is positively connected to stress via work-life-balance but only if they do not perceive their stakeholders as strong. On the other hand, a more self-centered Darwinian identity has a negative, indirect effect on stress but only if they perceive their stakeholders as having comparably little power. Accordingly, our research provides further arguments for the importance of examining individuals' sense-making of both themselves and their social environment simultaneously when studying results of founders' cognitive processes.

ENT: Beyond the Stereotype of an Intrapreneur

Author: **Jeanette Veronika Engzell**, *Dept of Business Studies Uppsala U.*

The corporate entrepreneurship literature has identified the importance of intrapreneurs for maintaining growth, revitalization and performance of corporations, but little is known about different types of intrapreneurs and how they perceive the corporate conditions they work under. The working conditions in the corporation are permanent and have importance of how employees behave. This paper empirically investigates corporate conditions from the individual's perspective and what varying types of intrapreneurs that exist. A cluster analysis of intrapreneurs suggests that there are three types of intrapreneurs; resilient intrapreneurs, neglected intrapreneurs and privileged intrapreneurs. The findings indicate that intrapreneurs are a heterogenous group of individuals who perceive the working conditions differently leading to different well-being and performance.

ENT: My Future Entrepreneurial Self: Investigating Antecedents of Students' Identity Aspirations

Author: **Patrick Gregori**, *U. of Klagenfurt, Austria*

Author: **Patrick Holzmann**, *U. of Klagenfurt, Austria*

Author: **Erich J. Schwarz**, *Alpen-Adria U. Klagenfurt, Austria*

Entrepreneurial identity aspiration refers to the desire to occupy an entrepreneurial role in the future and is an important impetus for engaging in entrepreneurial activities. This article investigates the antecedents of entrepreneurial identity aspiration of non-entrepreneurs to elucidate, which individual attitudes, beliefs, and behaviors render the prototypical role "entrepreneur" more meaningful and important for individuals. Based on a quantitative study among college students, we provide new insights on the antecedents of entrepreneurial identity aspiration contributing to research on entrepreneurial identity and motivation.

ENT: Professionalization and Managerialization In Family Firms: A Paradox Perspective

Author: **Damiano Petrolo**, *U. of Rome Tor Vergata*
Author: **Luca Gnan**, *U. of Rome Tor Vergata*
Author: **Wim Voordeckers**, *Hasselt U.*
Author: **Frank Lambrechts**, *Professor Organizational Learning & Change*

So long, literature considers Professionalization and Managerialization in family firms as transitions from entrepreneurial management to professional management and informal systems to formal systems. Professionalization and managerialization as transitions imply that entrepreneurial management, professional management, informal systems, and formal systems may replace each other. This paper aims to challenge this perspective, approaching the topic through a paradox perspective to underline the tensions of professionalization and managerialization in family firms and support the simultaneous existence of entrepreneurial management, professional management, informal systems, and formal systems. Consequently, we propose a conceptual framework to define different family firms' patterns relying on their different degrees of professionalization and managerialization and supporting both practice and theory in the future.

Paper is Available to Meeting Registrants Only.

ENT: Knowledge Management in Family Firms- A Literature Review

Author: **Shikha Agarwal**, *XLRI-Xavier School of Management*

The paper provides a systematic understanding of research that has taken place in the knowledge management domain of family firms. No prior work has carried out a systematic review of family businesses' knowledge management to the best of the author's knowledge. It uses a three-stage process for literature review analysis which involves collection of papers, classification and synthesis, and finally, evaluation. The classification of the papers' methodologies has been adapted from Palvia et al. 2015. The research carried out in family firms' knowledge management practices is few and scattered. Topics like succession, innovation, and entrepreneurial orientation have been touched upon. There is a high number of conceptual work. Further research should test the proposed frameworks and seek for generalizability of the same by replicating models in different settings. Given the influence of cultural practices in family firms' functioning, research work should be representative of various economies and different cultures to enrich the knowledge space as well as increase the applicability of frameworks in family firms.

Paper is Available to Meeting Registrants Only.

ENT: Meanings of Intrafamily Succession and Transgenerational Intent in Business Families

Author: **Stone Han**, *National Taiwan U. of Sport*
Author: **Artemis Chang**, *Queensland U. of Technology*
Author: **Hsi Mei Chung**, *I-Shou U., Taiwan*

We offer guidelines regarding how business family parents who wish to pass the family business to the next generation may best generate transgenerational intent in their children. Our recommendations derive from making two distinctions that are implicit in studies on transgenerational intent. First, some predictors identified by scholars as having influence over children's transgenerational intent cannot be manipulated by parents; some can. Second, there are two meanings to intrafamily succession in business families: personal choice and family obligation. Accounting for these two insights, we suggest that, given meaning context, certain parental tactics will be more practical and effective than others.

ENT: Developing Committed Next Generation Members in Family Firms: The Role of Socialization Processes

Author: **Juliana Binhote**, *U. of Louisville*
Author: **Isabel C. Botero**, *U. of Louisville*
Author: **Carol Wittmeyer**, *St John Fisher*
Author: **Joseph H. Astrachan**, *Kennesaw State U. - Emeritus*

Although researchers have highlighted the importance of next generation commitment for the continuity of a family firm, we have a limited understanding of what family businesses and business families can do to facilitate this commitment. This paper discusses the role of socialization in this process. Building on previous work on organizational socialization, this project presents a conceptual model of how different aspects of the socialization process (i.e., who delivers the socialization, what is done in the socialization, how socialization is executed, and when socialization occurs) affect the development of affective commitment in next generation members of family firms. Preliminary support for the model presented is provided based on interviews with family and non-family members from 11 family-owned companies. Implications and contributions of the model are discussed.

ENT: How Founders Can Get Stuck in Part-Time Entrepreneurship

Author: **MICHAEL RYCHENER**, *U. of St. Gallen*
Author: **Heiko Bergmann**, *U. of St. Gallen*

While part-time entrepreneurship has been conceptualized as low-risk alternative to directly entering full-time entrepreneurship, little is known why many part-time founders continue with their endeavors for prolonged periods without reaching profitability. Based on an exploratory mixed-method study of persistent part-time entrepreneurs (PPTe), we develop a process model of PPTes' emergence and prolonged existence. Our model shows how part-time entrepreneurs may get stuck in their startup process. Specifically, the model captures PPTes' intentions, motivations and general views of their circumstances and reveal key (cognitive) drivers of their status. We suggest that PPTes exhibit path dependent behaviors that neither result in a full-time entrepreneurial engagement nor in firm death, yet, in a continued state of being operational on a part-time basis but not profitable.

ENT: Until the Fog of Uncertainty Lifts – Disruptive Founding Visions and New Venture Funding Success

Author: **Anne Dreller**, *Heinrich-Heine U. of Dusseldorf*

Looking at today's startup landscape, it is easy to get the impression that today's founders are in a continuous race with their peers to develop the most disruptive vision. But does a disruptive vision actually help new ventures to succeed in the long run? We investigate if and how long disruptive founding visions are related to new venture funding success in the seed and post-seed funding stages. Drawing on a longitudinal, multi-source dataset of 318 US-based high-tech ventures, we use a new, time-conscious analysis method, the Aalen additive hazards model, to find that disruptive founding visions have a constant and positive effect on the time to seed funding. However, approximately two years after seed funding – when the initial fog of uncertainty lifts – the positive effect of a disruptive founding vision disappears in the post-seed funding stage. Our findings contribute to the theoretical and methodological advancement of the entrepreneurship discipline at the intersection of visionary leadership, disruptive innovation theory, and time-conscious entrepreneurship research. Further, we offer pragmatic managerial advice for founders who develop their founding vision.

ENT: From unemployed to business owner: Improving the returns from firm creation through experimentation

Author: **Elena Lizunova**, *HEC Paris*
Author: **Denisa Mindruta**, *HEC Paris*

Recent research in entrepreneurship has started to emphasize the view of entrepreneurship as experimentation, broadly understood as taking deliberate actions to reduce uncertainties concerning the viability of an idea. Building on this work, this paper develops a more multifaceted approach to the study of experimentation by discussing how the process of experimentation shapes venture outcomes. We observe entrepreneurial processes in an institutional context that offers protection against early failure and makes entrepreneurs more inclined to experiment after they found a venture. We employ unique, nationally representative data that allows me to observe both the process and the outcomes of experimentation and to link them theoretically and empirically. We document that entrepreneurs who transition into self-employment from unemployment engage in a greater number of experimentation steps. We also observe that, while the previously unemployed have lower financial performance initially, they bridge the venture performance gap overtime. The study contributes to the literature by highlighting the importance of the experimentation process as a linking thread between entrepreneurial entry and subsequent venture performance and by drawing attention to a large but often neglected group of entrepreneurs—those that transition into entrepreneurship from unemployment.

ENT: Entrepreneurial Activity as a Source of Meaning in Life

Author: **Sumaya Hashim**, *Jönköping International Business School*
Author: **Magdalena Markowska**, *Jönköping U.*

In this research, we ask why and how some women start or grow a business after initiating divorce, while others will not. Grounded on an in-depth study of 24 women who experienced divorce in a patriarchal society, we develop a framework that identifies two pathways. The first pathway is followed by those women who felt trapped in their marriage and engaged in entrepreneurial activities as part of an overall process of self-discovery and self-development that enabled them to search for and find new sources of meanings, while the second pathway is followed by those women who felt discontent with their marriage, remarried but did not engage in entrepreneurship. Our emergent theoretical framework explains the importance of entrepreneurship to attain eudaimonic well-being following an adversity, thereby expanding the scope of entrepreneurship research.

Presenter: **Pankaj Anand**, *Indian Institute of Management, Bangalore*

In this symposium, we argue for the development of a new research agenda on entrepreneurship in settings of poverty and resource scarcity. Despite growing interest in entrepreneurship as a means of poverty alleviation and economic development, results have been mixed and are often accompanied by unintended consequences. We propose that part of the problem may lie with accounts that are retrofitted from Western, high-income settings that are ill-suited to the phenomena of interest. We therefore call for the inclusion of theories and epistemological frameworks that are grounded in local reality, with scholars that are involved in their contexts. Towards this goal, we bring together four papers from a variety of scholars with different backgrounds. We also include a discussion from a scholar and practitioner on advancing research on entrepreneurship in such settings in a manner that is more inclusive of not only diverse perspectives, but also diverse researchers.

Finalist for the OMT Division Best Symposium Award

Entrepreneurial framing refers to the use of rhetorical devices by entrepreneurs to construct meaning around their novel endeavors and to influence audience engagement by focusing attention on selected salient features of their ventures. There is increasing recognition among scholars that entrepreneurs legitimize their ventures and the broader fields within which they operate through framing. Yet, there is no unifying framework to bring together existing theoretical perspectives on entrepreneurial framing and to make sense of their underlying mechanisms. This panel symposium will bring together scholars working in this area to reflect on the current state of entrepreneurial framing literature with the intention to: (a) develop a common future research agenda, and (b) generate new conversations on entrepreneurial framing processes and their effectiveness.

The current symposium aims to investigate an array of focal issues pertaining to older workers (managers as well as employees in non-managerial positions), such as how to create value in an aging and increasingly multigenerational workforce through intergenerational negotiations; how to support older employees in crafting more self-directed jobs and careers; how to decrease unemployment and increase re-employment in later life; and last but not least, how to fight age discrimination and stereotype threat related to age and aging. By answering these questions, we aim to contribute to keeping individuals working effectively and participating successfully in the labour market across the whole lifespan.

The 2021 AOM meeting theme - Bringing the Manager Back in Management - calls us to problematize our research, teaching and other activities to better serve practicing managers. In an increasing uncertain, ambiguous and turbulent global reality, effective management is challenged to adapt, and more importantly, to innovate new forms of managerial practice predicated on new paradigms of management education. This call resonates with the beckoning of a long line of feminist scholars and educators calling for more impactful management and organizational studies better positioned to tackle this century's monumental challenges. Indeed, the rich and varied history of feminist theorizing has made strong contributions in equipping managers, researchers and educators with analytic tools to counter the perpetuation of hegemonic privilege, as well as the ongoing inequalities and hierarchies faced by women, marginalized groups, and the oppressed. Feminist work has also explicitly sought to move beyond overly simplistic binaries and toward more process-oriented thinking; to step outside the domination of neoliberal capitalist agendas; to counter hegemonic knowledge flows and provide multiple alternative knowledge formations; and to enact a politics that can unsettle the very structures in which we manage and work. In this way, feminist work has provided nuanced analytic approaches for shifting and widening our managerial thinking, thereby creating invaluable ways to 'produce different knowledges and produce knowledge differently'. The proposed PDW celebrates this work, bringing in members of the academy engaged in feminist work and exploring how to expand on it by asking and addressing two basic questions: In what ways are feminist perspectives shaping or figuring into scholarly activism, curricular redesign, and student engagements in global management/business schools today? And, in what ways can we mobilize to drive this feminist work forward together?

Participant: **Anne-Marie Søderberg**, *Copenhagen Business School, Denmark*

The current pandemic and its related economic meltdown and social unrest challenges many countries, their societies, institutions, organizations, and individuals. Focusing on both more and less successful country-specific initiatives to fight the pandemic, the workshop organizers, contributors and participants will explore implications for effective action at the individual, organizational and societal levels. A wide range of international / cross-cultural management scholars will document actions taken and their various consequences in several countries around the globe (Australia, Austria, Canada, Denmark, France, Germany, New Zealand, South Korea, Sweden, Switzerland, UK, and USA). Informed by a cross-cultural lens, the panelists' opening statements set the stage for a dialogue to explore such urgent questions as: What is most important for leaders, scholars, and organizations to learn from dealing with critical, life-threatening, society-encompassing ongoing crises? How do leaders build and maintain trust? What kinds of communication have been most effective at various stages of the crisis? How can we accelerate learning processes for effective action? How does cultural resilience emerge within a rapidly changing environment of fear, shifting cultural norms, and challenges to core identity? This dialogue and exploration of these issues will enable us to learn from each other and begin to discover novel and more successful approaches in tackling this grand challenge.

Dear attendees, it will be helpful if you watched our asynchronous panel symposium on the same topic (A Grand Challenge No One Chose: Succeeding & Failing against the Covid Pandemic—A Global Perspective) prior to attending the PDW. The panel symposium will provide you with more detailed information for our PDW.

Compassion, Caring, and Helping

Digital Session Chair: **Ilanit SimanTov-Nachlieli**, *Tel Aviv U.*

OB: Give a Fishing Rod, Not a Fish: The Impact of Help Type on Support for Helper's Leadership

Author: **Ilanit SimanTov-Nachlieli**, *Tel Aviv U.*
Author: **Lily Chernyak-Hai**, *Peres Academic Center*
Author: **Daniel Heller**, *Tel Aviv U.*

We examine the differential impact of two types of helping behaviors— autonomy and dependency (providing peers in need “fishing rods” or “fish”, respectively), on support for the helper’s leadership. We found that autonomy- (vs. dependency-) helping enhances support for helper’s leadership for distinct focal parties— help recipients (Studies 1 and 2) and observers (Studies 3 and 4). Study 1, a correlational field study revealed that the more help given to an employee was perceived by him/her as autonomy-oriented (controlling for perceived dependency-oriented) the greater was one’s support for helper’s leadership. Study 2, a workplace role-playing experiment, established the causality of the effect and illuminated its underlying mechanism. Specifically, help recipients, randomly assigned to receive either an autonomy- or dependency-helping scenario, indicated greater support for leadership in the autonomy- (vs. dependency-) helping condition; an effect mediated by greater trust in the helper’s benevolence. Study 3, an experiment using an online team-based simulation context, replicated these effects among observers. Finally, Study 4, using a “moderation-of-process” experimental design, revealed that the benefit of autonomy-helping through benevolence-based trust was attenuated once incentives for help were present (vs. absent). Theoretical and practical implications of autonomy-helping in organizations and for leadership emergence are discussed.

OB: Efficacy of an online self-compassion intervention at work: A randomized controlled study

Author: **Ivana Igic**, *U. of Bern*
Author: **Tobias Krieger**, *U. of Bern*
Author: **Dandan Pang**, *U. of Berne*
Author: **Andreas Hirschi**, *U. of Bern, Work and Organisational Psychology*

The present study investigated the effectiveness of a brief internet-based intervention to improve self-compassion (SC) among employees and tested if the intervention improves health (i.e., emotional exhaustion), motivation (i.e., work engagement), and productivity (i.e., procrastination). A sample of 100 employees participated in the randomized controlled trial including an intervention group (N = 48) and a waitlist control group with delayed access to the intervention (N = 52). Assessments were taken at baseline, after the intervention (6 weeks from the baseline), and at follow-up (12 weeks from the baseline). Mixed-model repeated-measures analysis of variance showed significant intervention effects for SC and procrastination. The intervention effects were maintained at the 6-weeks follow-up. No effects were found for emotional exhaustion and work engagement. Growth curve analyses revealed that those with unfavorable initial levels of exhaustion, work engagement, and self-efficacy benefited more from the intervention in terms of increased SC. Our findings are discussed in the context of occupational health promotion in general and SC-based interventions specifically.

OB: Will Receiving Help Always Harm Your Self-Esteem? A Symbolic Interaction Theory Perspective

Author: **Yuan-Fang Zhan**, *Huazhong U. of Science and Technology*
Author: **Ying Xia**, *Nanjing U.*
Author: **Lirong Long**, *Huazhong U. of Science and Technology*
Author: **Xing Hu**, *Wuhan Institute of Technology*

Previous research suggests that received help contains a mixture of threatening and supportive self-related elements, and recipient characteristics determine whether it is threatening or supportive drawn from threat to self-esteem model. In this study, with the overarching theory of symbolic interaction, we explain why and how receiving help brings variant effects on domains of competence-based self-esteem and relational-based self-esteem and its consequences of task crafting and relationship crafting, as well as its boundary condition of competence-contingent self-esteem. Utilizing an experience sampling methodology through which 111 employees were surveyed for 10 workdays, we find that receiving help increases recipients' relational-based self-esteem and it doesn't necessarily threaten competence-based self-esteem. Relational-based self-esteem and competence-based self-esteem in turn mediate the effects of receiving help on daily job crafting. Moreover, employees' competence-contingent self-esteem influences the strength of the daily relationships between receiving help and relational-based self-esteem, as well as competence-based self-esteem. We conclude by discussing theoretical and practical implications of our multilevel model.

OB: Give a plum in return for a peach: linking employee caring practice to employee voice behavior

Author: **Bing Liu**, *Shandong U.*
Author: **Fengyu Li**, *Shandong U.*
Author: **Song Chang**, *Hong Kong Baptist U.*
Author: **Qi Lei**, *Shandong U. of Finance and Economics*

This study used multilevel and multisource data from 54 hotels, 226 teams, and 876 frontline employees in China to investigate how and when employee caring practice can motivate employee voice behavior. Drawing on social exchange theory, we proposed that employee gratitude is an important mediator in the influence of employee caring practice on employee voice behavior. Furthermore, the extent to which employee gratitude are associated with employee voice behavior depended upon employee’s positive reciprocity norm, such that the positive impact of employee gratitude on employee voice behavior is stronger when employee’s positive reciprocity norm is a higher rather than lower level. The empirical results of this study also confirmed our theoretical arguments and hypotheses. These findings provide new insights into how a service organization facilitates frontline employee voice behavior.

Control-Trust in Teams

Digital Session Chair: **Catharina Claudia Jecklin**, *Bond Business School, Bond U., Australia*

OB: The Trust-Control Paradox: Towards a Better Understanding

Author: **Catharina Claudia Jecklin**, *Bond Business School, Bond U., Australia*

The purpose of this research is to better understand trust-control dynamics in organizations through conceptualizing relationships between managerial trust-building activities and employee effectiveness. We consider (a) how trust-building activities are applied by managers and perceived by their employees, and (b) how subsequent trust impacts job effectiveness through the social control mechanisms of stewardship climate and psychological contracting. Our conceptual model and distilled propositions provide avenues for future research to examine the influence of managerial trust-building activities and the mediating role of previously unexplored controls (i.e., stewardship climate and psychological contract) on employee effectiveness.

Paper is Available to Meeting Registrants Only.

OB: A Multilevel Investigation of Love as a Key Underpinning of the Control-Trust Dynamics

Author: **Henri Slob**, *Erasmus U. Rotterdam*

Author: **Emre Karali**, *Ozyegin U.*

Author: **Harry Commandeur**, *Erasmus School of Economics, Rotterdam*

For years, scholars have investigated control and trust, in isolation as well as in relation to each other. Still, we lack understanding regarding what underpinning may explain how control and trust relate to each other, and which boundary conditions this relationship is contingent on. Hence, in this study we utilize the comparative case study method to investigate how the virtue of love as a behavioral underpinning affects control-trust dynamics across organizational levels, contingent on organizational characteristics. We find that love is an important underpinning of control and trust. Throughout our study, control and trust act as complements, because actors are found to both control and trust out of love. We find the enactment of love to be contingent on levels of the organization and on organizational characteristics. With this article, we contribute to the literature on control-trust dynamics through underscoring the importance of behavioral underpinnings, such as love, and of organizational levels and characteristics.

OB: Towards a Control-Trust Theory of Workplace Hazing

Author: **Kenneth Michael Sweet**, *Texas A&M U., San Antonio*

Author: **Rachel E. Sturm**, *Wright State U.*

Author: **Mortaza Zare**, *The U. of Texas, Permian Basin*

Author: **Marcus A. Valenzuela**, *Palm Beach Atlantic U.*

Utilizing a control-trust framework, we integrate the hazing literature with related literature in the management field to develop a theoretical account of why and how hazing generally manifests at work. In particular, we describe hazing as a trust-making control process designed to manage workgroup vulnerability with newcomers. Our theoretical model identifies four key phases of the workplace hazing process, including: 1) pre-arrival explains how workgroups can be vulnerable to potential newcomers due to a need for control or trust; 2) arrival captures how newcomer and workgroup perceptions of person-group fit interact to influence intragroup variance in hazing rituals; 3) adjustment unpacks the tensions emerging in a control-trust spiral that forms between newcomers and the workgroup; and 4) impact clarifies the nature of outcomes that can occur for both newcomers and workgroups. Our theorizing provides key insights into the interplay between control and trust dynamics in the context of socializing newcomers.

The Role of Digital Technologies During the COVID-19 Pandemic

Digital Session Chair: **Dritjon Gruda**, *National U. of Ireland, Maynooth*

OCIS: **Examining Anxiety Contagion in Computer-Mediated Communication using Machine Learning**  

Author: **Dritjon Gruda**, *National U. of Ireland, Maynooth*
Author: **Adegboyega Ojo**, *National U. of Ireland, Maynooth*
Author: **Alexandros Psychogios**, *Birmingham City U. Business School*

Based on emotional contagion theory, we longitudinally examine the transfer of state anxiety in computer-mediated communication (CMC) in a sample of 277 leaders and 1,649 followers across 87 companies. To test the proposed relationship, we use a machine learning (ML) approach to detect state and trait anxiety in 5,025,171 tweets of leaders and followers, resulting in a total of 88,946 daily dyadic leader-follower observations. We account for the dynamic changes in state anxiety, and control for leader and follower personality traits, demographics, and organization size. We also investigate the role of leader trait anxiety as a moderator of the relationship between leader- and follower state anxiety. In addition, we compare the relationship between leader and follower anxiety before and after the onset of the COVID-19 pandemic, over a total period of 316 days. We find a positive relationship between leader state- and trait anxiety and follower state anxiety even when considering a multi-day lagged analysis; no significant changes between pre and post-onset of the COVID-19 pandemic were observed. This study contributes to the literature on emotional contagion via computer-mediated communication using machine learning algorithms, allowing us to overcome several limitations outlined in previous research, and providing new insights into the complex relationship between leader and follower anxiety.

OCIS: **Person in Process of Practice: Between helping and managing helping**   

Author: **Michael Richard Cauley**, *Weatherhead School of Management, Case Western Reserve U.*

A qualitative examination of the work of health care professionals during the time of Covid-19 revealed the double-edged role of technologies between helping and managing helping. Health care professionals choose a health care profession through a commitment to helping. This commitment to helping is managed within a theoretical system of anti-planning, uncertainty, which relies on guarantors of faith and science. Health care providers are caught in the interrelatedness of how they practice and the systems in which they practice—the between. I used qualitative data from interviews with 24 health care professionals across the U.S. to develop an understanding of the between of helping and managing helping. This research suggests health care providers are caught in an interrelationship of the logics of intimacy in personal decision making and the logics of standardization in communication to the electronic medical record.

OCIS: **Examining User Engagement in AI-based Interactional Tools: Valorizing the Essence of Human-Beings**  

Author: **Shalini Chandra**, *S P Jain School of Global Management, Singapore*
Author: **Anuragini Shirish**, *U. Paris-Saclay, U. Evry, IMT-BS, LITEM, Evry-Courcouronnes, France*
Author: **Shirish Chandra Srivastava**, *HEC Paris*

As the COVID-19 pandemic batters the world and disrupts the economic activities globally, companies are attempting to reshape the future by swiftly turning to use AI-based interactional tools to comply with the mandated social-distancing protocols. However, practitioners are unsure about the efficacy of AI-based interactional systems in facilitating the desired user engagement. Turing test premises user engagement in AI-tools based on the “indistinguishability” of AI-tools from human-beings. Such a user engagement approach for AI-tools is very different from the dominant user-engagement approach employed in prior IS research focusing on the “instrumental” value of technologies. Rooting our arguments in “human competency” and “media naturalness” literature, we theorize the significant role of the three human-like interactional competencies —cognitive, relational, and emotional competencies in interactional-AI tools, for fostering the desired user engagement with AI. We also hypothesize the mediating role of user trust in the relationship between ‘human-like interactional competencies in AI tools’ and ‘user engagement’. The theorized model is tested through a sequential mixed-methods approach comprising a quantitative two-wave survey followed by qualitative interviews with a sampled set of AI users. Results from our study largely support the theorized model. The emerging theoretical and practical implications are also discussed.

OCIS: **Exploring the Online Rumor Sharing Behavior among Individuals under the COVID-19** 

Author: **Peng Luo**, *Sichuan U.*
Author: **Chenxiao Wang**, *Harbin Institute of Technology*
Author: **Feng Guo**, *Tianjin U.*
Author: **Li Luo**, *Sichuan U.*

Under the outbreak of COVID-19, the rumor about the disease sharing online is growing concern around the world. Drawing on stimulus-organism-response framework, this study aims to explore the impacts of peer condition and peer communication on fear of COVID-19 and the impacts of fear of COVID-19 on online rumor sharing behavior considering the contingency effect of health self-efficacy. Data from 1167 respondents from online survey in China were adopted to test our research model. The results indicate that peer communication and peer condition induce fear of COVID-19, fear of COVID-19 results in online rumor sharing. Health self-efficacy alleviates the positive effect of peer communication on fear of COVID-19, and the positive effect of fear of COVID-19 on online rumor sharing. This study advances the literature of online rumor sharing and S-O-R, and provides practical implications to social media users and government.

Author: **Xinxiang Xu**, *Nankai U.*

Author: **Xiaofei Zhang**, *Nankai U.*

How does rumor sharing on social media? The outbreak of the COVID-19 pandemic significantly threatens our health conditions and influences our information behaviors. More and more rumor sharing behaviors on social media are induced by the pandemic. From the perspective of information acquisition, we predict that information acquisition from social and traditional media interactively influence rumor decision (rumor belief and rumor sharing), and critical thinking shapes above relationships. Based a survey among 2424 valid sample of social media users during the COVID-19 pandemic, we find that information acquisition from social media is negatively related to rumor sharing and rumor belief mediates the relationship between information acquisition from social media and rumor sharing. Meanwhile, information acquisition from traditional media weakens the negative effect of information acquisition from social media and rumor belief and critical thinking alleviates the positive effect of rumor belief on rumor sharing. The theoretical contributions and practical implications are also discussed.

New Organizational Forms

New Organizational Forms

Digital Session Chair: **Heewon Chae**, *Arizona State U.*

OMT: New Wine in a New Bottle: A New Organizational Form and Change in Valuation of Category Spanning

Author: **Heewon Chae**, *Arizona State U.*
Author: **Daphne Ann Demetry**, *McGill U.*
Author: **Deepak Nayak**, *Fox School of Business, Temple U.*
Author: **Todd Schifeling**, *Fox School of Business, Temple U.*

This study investigates how the theory of value in a market can evolve towards recognizing and rewarding category spanning. We suggest that a new organizational form in existing markets enables this process by creating a distinct identity that valorizes spanning, which problematizes the existing theory of value and encourages audiences to have positive experiences with spanning. We argue that the prevalence of the new organizational form, then, shifts audiences' theory of value to appreciate hybridity and ultimately drives a change in evaluations of category spanners of the established form. Using the rise of gourmet food trucks in the U.S. restaurant industry as our context, we find an increase in returns to spanning by conventional restaurants over time and with the increase of gourmet food trucks in a focal city. This study contributes to research on spanning and entrepreneurship by investigating how audience evaluations towards spanners are socially contingent and change over time, explicating a “categorical opportunity” for new organizational forms.

OMT: Player or Platform? How Metaphors Affect the Attribution of Actorhood to New Forms of Organizing

Author: **Alexander Buhmann**, *BI Norwegian Business School*
Author: **Kateryna Maltseva**, *BI Norwegian Business School*
Author: **Dennis Schoeneborn**, *Copenhagen Business School*
Author: **Patrick Haack**, *U. of Lausanne, HEC Lausanne*

As discussed in the literature on organizational actorhood, organizations either tend to pronounce or downplay their status as collective actors. While prior work has primarily focused on actorhood attributions on the level of public communication, we study the causal interplay between public communication and individual perceptions of organizational actorhood. For this purpose, we conducted four empirical studies to show how anthropomorphic metaphors (e.g., player or participant) and non-anthropomorphic metaphors (such as platform or app) used in organizational portrayals affect cognitive attributions of collective actorhood to organizational entities. We embed our study in the context of new organizational forms (e.g., digital platform organizations) because here the question of organizational actorhood and responsibility is particularly salient. We show that the use of anthropomorphic metaphors in organizational portrayals lead to higher levels of individuals' attributions of collective actorhood to organizations. Such higher levels of organizational actorhood attribution occur, as we demonstrate, due to anthropomorphic metaphors directing individuals' attention to the organization as a collective entity rather than to its constitutive parts (e.g., members, products).

OMT: Triggers and Creation Processes of National Governance Codes for Cooperative Enterprises

Author: **Jozef Cossey**, *KU Leuven & UCLouvain*
Author: **Adrien Billiet**, *KU Leuven*
Author: **Frédéric Dufays**, *KU Leuven*
Author: **Johan Bruneel**, *KU Leuven & ETH Zurich*

During the last couple of decades, codes of governance have mushroomed in response to corporate scandals, the transformation of ownership and globalization. While most of these codes have been developed with the conventional firms as reference, some countries have recently witnessed the development of specific codes for cooperatives. Acknowledging the differences between conventional and cooperative governance, this paper explores how codes of governance found their way into the cooperative sector. With the help of qualitative semistructured interviews, we highlight the distinct challenges triggering code creation in a cooperative context namely, creating a shared purpose and managing member participation. Additionally we uncover two mechanisms of cooperative code creation within the sector: one that revolves around adoption, and another that originates from co-creation. We contribute to the literature by not solely focusing on the diffusion of codes, but especially in uncovering how alternative organizational forms such as cooperatives go through a phase of adaption in order to establish a code that meets their distinct governance nature.

OMT: Business Model Configurations, Design Theme Patterning, and Firm Performance

Author: **Armand Smits**, *Radboud U. Nijmegen*
Author: **Hendrik Leeendert Aalbers**, *Radboud U. Nijmegen*

Business model (BM) research has thrived the last decade and attention has gone to BM design choices and their performance implications, yet BM's theorized configurational nature has received insufficient attention in empirical studies. Taking on a neo-configurational perspective, which supports the investigation of BM design theme patterning, this study sets out to unravel the way(s) of embedding (different) design themes in and across BM components and the associated consequences for firm performance. fsQCA is used to analyze data on Dutch architectural firms. Results suggest that only a selected set of hybrids - BMs in which different design themes are combined - consistently lead to high financial performance. We also find that successful design theme patterning is contingent on business size. Our findings contribute to a more fine-grained understanding of the interplay of BM configurational choices and their consequences.

Presenter: **Heeyon Kim**, *Cornell U.*
Presenter: **Yuan Shi**, *Cornell SC Johnson College of Business*
Presenter: **Jaekyung Ha**, *EMLYON Business School*

While research on innovation and entrepreneurship has been primarily focused on high-tech industries, the phenomenon of creating new products and organizations is not confined to high-growth industries. Oftentimes, sociological studies based on less conventional settings (i.e., non-high-tech settings) provide invaluable insights for innovation and entrepreneurship research. This symposium aims to discuss recent works that study innovation and entrepreneurship from the theoretical angle of economic sociology using unique settings. The four presentations share close theoretical connections, while each presentation uses a unique entrepreneurship phenomenon from the beer market to Broadway performances to crowdfunding to the juvenile product market. We expect the symposium will provide a good opportunity for the scholars to learn about the benefits of each of the unique settings to derive theoretical and practical implications.

 **OSCM: Effects of Competition and Cooperation in Supplier Network on Buyer Innovation: An Ego Network View**

Author: **Xiaotian Yang**, *Graduate School of Commerce, Waseda U.*

Firms have recognized that the way upstream suppliers work with each other is important for their product innovation. However, it is still unclear what influences supplier–supplier (S-S) cooperation and competition in the supplier network have on their innovation. Thus, this study is aimed to take an ego network’s viewpoint to investigate the influence of horizontal S-S competition and cooperation in the supplier network on the ego buyer’s innovation, combining network theory with transaction cost theory and resource dependence theory. It takes the ego buyer’s supplier network as the analysis unit with cross-sectional data of 130 listed Japanese manufacturers and their supplier networks in 2016. The results of negative binomial regression indicate that both S-S competition and cooperation have inverted U-shaped effects on buyer innovation, although the result of S-S competition is not robust. It also shows S-S competition can play a moderating role in the relationship between S-S cooperation and buyer innovation. Regarding their interplay, simultaneously maintaining moderate cooperation and low competition among suppliers is the best choice for buyer innovation, whereas simultaneously maintaining high competition and cooperation among suppliers is also unexpectedly conducive for buyer innovation. This study contributes to linking the dyadic analysis of vertical relationships to the network analysis of horizontal S-S relations. It also provides insights to manufacturers on how to strategically manage horizontal S-S relations for their innovation.

Paper is Available to Meeting Registrants Only.

 **OSCM: The Root Causes of Servitization Challenges: An Organisational Boundary Perspective**    

Author: **Ali Ziaee Bigdeli**, *Aston Business School, Aston U.*

Author: **Kawaljeet Kapoor**, *Aston Business School*

Author: **Andreas Schroeder**, *Aston Business School*

Author: **Omid Omidvar**, *Aston Business School*

This paper explains how servitization disrupts long-established internal and external boundaries of product-focused manufacturers and investigates the root causes of servitization challenges. It draws from the collective experiences of 20 senior executives from ten multinational manufacturers involved in servitization, using a multiple case study approach, and employ a codebook thematic analysis technique. We develop an integrative framework based on the theoretical notions of power, competency and identity boundaries to offer insights into the root causes of various servitization-related challenges. This study contributes to the extant research by establishing rational links between organisational boundaries (internal and external) and servitization challenges in the interest of building a coherent and systematically integrated body of theory that can be successfully applied and built upon by future research.

OSCM: Ancillary Cost Implications of Multisiting and Organizational Boundary Spanning during Healthcare 

Author: **Yingchao Lan**, *U. of Nebraska, Lincoln*

Author: **Deepa Wani**, *Georgia State U.*

Author: **Aravind Chandrasekaran**, *Ohio State U.*

This study investigates the management of diagnostic testing and pharmacy expenditures in U.S. acute-care hospitals. These so-called ancillary costs are charges associated with services provided to support patient treatment, including laboratory, radiology, and pharmacy charges. Previous studies suggest that investing in structural and technological boundary-spanning practices may help reduce the increasing ancillary costs. In this research, we examine the role of individual boundary spanners, namely multisiting physicians who practice at more than one hospital, in reducing ancillary cost. We also look at how organizational boundary spanning abilities measured by the hospital’s affiliation in an accountable care organization (ACO) model affect this relationship. To do this, we assembled a unique data set of 163,617 patients treated by 4,411 physicians at 182 hospitals in Florida from 2014 to 2016. Using an econometric estimation approach accounting for endogeneity, we find that patients treated by multisiting physicians experienced per-hospitalization reductions in laboratory and radiology charges of 49.16% and 32.04%, respectively. These savings increase, moreover, when multisiting physicians have less practice experience. We also find that hospitals participating in ACO model complements the savings achieved through multisiting physicians in the form of even lower pharmacy costs. In our post-hoc analysis, we find the cost reduction that multisiting physicians achieve come through reducing the total number of procedures or tests ordered. We also find that lower treatment charges do not compromise the clinical quality of patients treated by multisiting physicians. Collectively, the findings offer important insights to the healthcare operations management literature on the interaction between individual-organizational boundary-spanning efforts and patient-level outcomes.

OSCM: Integrating Machine Learning and Human Judgment: A Study on Demand Planning in the Field  

Author: **Rebekah Inez Brau**, *Brigham Young U.*

Author: **John Aloysius**, *U. of Arkansas Sam M. Walton College of Business*

Author: **Enno Siemsen**, *U. of Wisconsin, Madison*

While firms use automated machine learning algorithms in their demand planning processes, human judgment continues to feature in these processes. This research examines two methods of integrating machine learning and human judgment into demand planning. We implement a field study at a large, multinational firm testing interactive machine learning (IML) in which humans estimate adjustment quantities due to special events, and human-guided machine learning (HGML) in which humans merely input information about the special events. Analyzing the results of over three million data-points across five product categories reveals that demand forecasts using IML and HGML are more accurate than the current demand planning process used in the firm. These findings suggest that using an appropriate process to integrate machine learning and human judgment—IML and HGML—provides a significant benefit to demand planning. Furthermore, the paper provides insights on how to implement IML and HGML in practice.

Understanding Public Employee Decisions and Behaviors

Digital Session Chair: **Rick Vogel**, *U. of Hamburg*

PNP: Public, Private, or Nonprofit? Experimental evidence on sector preferences in Germany and the U.S.   

Author: **Rick Vogel**, *U. of Hamburg*
Author: **Jana Cordes**, *U. of Hamburg*

Common wisdom suggests that public organizations often suffer from a poor employer image among 'high potentials.' However, sector preferences in job choice have rarely been tested empirically and across different administrative systems. We address this gap and examine how high potentials from an Anglo-Saxon (i.e., the U.S.) and a continental European (i.e., Germany) system evaluate the attractiveness of public, private, and nonprofit employers. In a between-subjects experimental design, respondents (n = 362) screened job offers under speeded and non-speeded conditions. The job offers only differed in the employer's sector affiliation, with all other job attributes held constant. Contrary to expectations, and consistently across the two subsamples, respondents evaluated public sector jobs more positively compared to vacancies in the private and nonprofit sector. By providing counterevidence to the prevalence of negative attitudes towards public organizations, our study warns against overgeneralizing previous findings on negativity biases to the context of employer image.

Paper is Available to Meeting Registrants Only.

PNP: Effects of Public Service Motivation, Risk Propensity, and Risk Perception on Defensive Decisions

Author: **Fabienne-Sophie Schäfer**, *Bundeswehr U. Munich*
Author: **Bernhard Hirsch**, *Bundeswehr U. Munich*
Author: **Christian Nitzl**, *Bundeswehr U. Munich*

Drawing on the literature on public service motivation, we investigate the relationship between public service motivation and defensive decision-making. Further, we explore risk propensity and risk perception as potential antecedents of defensive decision-making. Based on survey data from 144 German public financial managers of municipalities and federal agencies, we find no significant direct relationship between public service motivation and defensive decision-making. However, we can show that risk propensity fully mediates the relationship between public service motivation and defensive decision-making. Our findings also indicate that beyond the public service motivation and individual risk propensity of public financial managers, their risk perception does influence their decision making.

Paper is Available to Meeting Registrants Only.

PNP: Innovative Work Behaviour of public servants

Author: **Elisavet Kousina**, *Athens U. of Economics and Business*

Innovative behaviour of public servants is of key importance for public organizations' survival as its endorsement has been linked with increased efficiency and qualitative service delivery to citizens. However, only a handful of studies have sought to explore the determinants of employees' innovative work behaviour in public sector settings. Addressing this issue, we highlight the role of specific individual, psychological and contextual factors in unravelling the innovative potential of public sector employees. In a field study of 299 public servants and their immediate department heads, across 103 municipal and regional authorities of the biggest cities in Greece, we found that proactive personality and psychological ownership (as referred in its promotive-oriented dimension) are positively related to subordinates' innovative work behaviour. Additionally, the ambidextrous leadership style of supervisors is found to positively affect employees' innovative work behaviour. In light of our findings, important implications for policy makers, public managers and public sector's recruitment procedures are discussed.

PNP: Psychological Antecedents of Managerial Networking: On the Role of Personality Traits and PSM

Author: **Lorenz Schönherr**, *U. der Bundeswehr München*
Author: **Julia Stephanie Thaler**, *U. der Bundeswehr München*

Although scholars and practitioners increasingly recognize the importance of networks in public service delivery, little is known about why some public managers engage more in networking than others. Particularly the psychological antecedents of managerial networking represent scientifically uncharted territory. Addressing this research gap, our study examines whether Big Five personality traits and public service motivation (PSM) affect managerial networking. Using partial least squares structural equation modeling, we analyzed data from 207 senior public managers in German youth welfare organizations. Our results suggest that agreeableness and conscientiousness exert a positive effect on managerial networking, which is mediated by PSM.

Necessary Condition Analysis (NCA): Logic, Theory, Methodology, and New Applications

Necessary Condition Analysis (NCA)

Coordinator: **Jan Dul**, *Rotterdam School of Management, Erasmus U.*
Participant: **Sven Hauff**, *Helmut Schmidt U.*
Participant: **Stefan Breet**, *Radboud U. Nijmegen*
Participant: **Wangoo Lee**, *Fox School of Business, Temple U.*

In this workshop you will learn how to conduct Necessary Condition Analysis. This emerging method was recently published in the journal *Organizational Research Methods* (2016, 2018) and in the Sage book "Conducting Necessary Condition Analysis" (2020). NCA is now used in many fields including Strategy, OB, HRM, Operations, and Entrepreneurship and International Management. NCA understands cause-effect relations as "necessary but not sufficient" and not as additive and average logic that is used in regression analysis. "Necessary" means that an outcome will not occur without the right level of the condition, independently of the rest of the causal structure (thus the condition can be a "bottleneck", "critical factor", "constraint"). In practice, the right level must be put and kept in place to avoid guaranteed failure, and to allow the outcome to exist. NCA can be used as a stand-alone tool or in combination with regression and other approaches. By adding a different logic and data analysis approach, NCA adds both rigor and relevance to theory and data analysis. This interactive session familiarizes scholars with the method and has two parts. Part 1 is a general introduction discussing the importance of necessary conditions, illustrated with examples from different fields. Part 2 helps participants to become the first users of NCA in their field, with a practical demonstration about the application of NCA on how to build necessity theories, and how to analyze data for testing such theories using the NCA software.

This session is open to anyone and does NOT require registration or preparation. For information in NCA please visit the website www.crim.nl/nca. For information about the session you can contact jdul@rsm.nl

Multinational Strategies at a Common Point in Time

Digital Session Chair: **Di Bian**, *U. of St. Gallen*

STR: **When Beauty is Beastly: Facial Attractiveness of Female CEOs and Investor Reactions to Acquisitions**     

Author: **Di Bian**, *U. of St. Gallen*

Author: **Wei Chi**, *Tsinghua U.*

Author: **Jerayr M. Halebian**, *U. of California, Riverside*

Author: **Tomi MMLaamanen**, *U. of St. Gallen*

The increasing presence of women in corporate executive positions has sparked research on gender bias against female leaders. Prior work in the management area has focused on between-group gender bias in which female executives are compared to their male counterparts, which has led to mixed findings. In this study, we move beyond prior management work to explore within-group variability of gender bias in which some female executives encounter greater levels of gender bias than others do. Specifically, we investigate a personal attribute that contributes to within-group variability: facial attractiveness. Building on gender role congruity theory and the beauty-is-beastly effect, we propose that more, as compared to less, attractive female CEOs are viewed as less competent to manage stereotypically male-typed strategic actions, such as acquisitions. In a sample of female CEOs of public firms in China, we hypothesize and find that investors react more negatively to acquisitions conducted by more attractive female CEOs than to those conducted by less attractive female CEOs. Moreover, we find that this within-group bias is reduced under conditions in which there are more positive media reports about the focal female CEO, and in industries in which female CEOs are represented at a higher rate. Finally, in supplementary analyses, we assess within group male CEO attractiveness, but find that it does not influence investor perceptions of male CEO competence in conducting acquisitions.

STR: **Does National Culture Matter for Nature and Quality of Innovation?**  

Author: **Kyunghwan Lee**, *Texas A&M U., Mays Business School*

Author: **Jaiho Chung**, *Korea U. Business School*

This study examines how one important dimension of national culture, individualism-collectivism, affects firms' nature and quality of innovation. In doing so, we explain how individualism gives rise to agency relationships and how collectivism facilitates stewardship relationships between shareholders and managers. We then argue that individualism is more likely than collectivism to cause short-termism behavior of managers. That is, managers in individualistic culture tend to pursue more predictable short-term oriented activities, such as exploitation, rather than risky long-term oriented activities, such as exploration. In contrast, managers in collectivist culture act as stewards and conduct more explorative innovation than those in an individualistic culture. As a result, we find that firms in a collectivist culture tend to generate higher quality innovations than those in an individualistic culture. We, therefore, claim that culture matters for a firm's pursuit between two different types of innovative activities and affects the quality of innovation as well.

STR: **Jumping Out or Following the Road Post-Conversion Innovation Behavior of International Joint Ventures** 

Author: **Lizhen Wang**, *Guanghua School of Management, Peking U.*

Author: **Huaxi Gao**, *Beijing Normal U.*

Author: **Qi Wang**, *Guanghua School of Management, Peking U.*

This study examines the effect of converting international joint ventures (IJV) to either local for foreign wholly owned entities on the subsequent impact of innovation from the perspective of knowledge-based view, complementary asset and knowledge recombination literature. We argue that different knowledge compositions (technological vs. complementary) of post-conversion firms affect the way they integrate learnt knowledge with existing ones and subsequent recombination strategies. Based on longitudinal data in China between 1998 and 2013, we use an instrumental variable (IV) estimation to strengthen identification of causal effects. We find that substantial stock of complementary knowledge of post-conversion local wholly owned subsidiaries (LWOS) promotes subsequent recombinant reuse (i.e., reconfigure combinations already known to the firm), while hinders their recombinant creation (i.e., create combinations new to the firm). In contrast, substantial stock of technological knowledge increases the likelihood that post-conversion foreign wholly owned subsidiary (FWOS) will take a recombinant creation strategy, but decreases the likelihood of taking a recombinant reuse strategy. Contingencies such as knowledge features obtained through IJV and external appropriability regimes are discussed. Our study contributes to the literature on IJV operation mode, knowledge-based view, complementary asset, and knowledge recombination.

STR: **Selling out, really? Post-acquisition performance of CSR-oriented products**

Author: **May-Anne Very**, *INSEAD*

Author: **Matthew Lee**, *New York U.*

We study the effect of acquisition on the performance of products with a corporate social responsibility (CSR) orientation. In particular, we develop hypotheses on the impact of acquisition on sales and existing customer relationships. We test these hypotheses using a proprietary database that tracks purchasing patterns of tens of thousands of households for consumer packaged food and beverage products. We find that, while acquisition has a positive impact on sales overall, it disrupts the relationship with existing customers of CSR-oriented products.

Firm Acquisitions and Managerial Perspectives

Digital Session Chair: **Myung-Seon Song**, *National U. of Singapore*

STR: The Impact of Acquisition Sequence on Acquirer Stock Market Performance

Author: **Myung-Seon Song**, *National U. of Singapore*

This paper builds on real option theory to examine how distinct sequence patterns of diversifying acquisitions affect the acquirer stock market performance. I theorize that platform acquisition, which is a “growth option” for an acquirer, is negatively related to the acquirer stock market performance. On the other hand, I argue that roll-up acquisition, which is an “option to stage and sequence investment,” is positively related to the acquirer stock market performance. I also suggest that the transaction value of platform acquisition (i.e., option premium), previous roll-up acquisition experience (i.e., the frequency of sequential investments), and elapsed time between acquisition deals (i.e., when to exercise option) moderates these main effects, respectively. Empirical results indicate that platform acquisition is negatively related to the acquirer stock market performance. On the other hand, roll-up acquisitions that are repeatedly undertaken in the same industry with the platform company lead to positive acquirer stock market performance. Moreover, the longer elapsed time between platform acquisition and first roll-up acquisition positively influences the acquirer stock market performance. These findings suggest that in terms of diversifying acquisition, both the sequence and the roll-up process of acquisition make differences in the acquisition performance of an acquiring firm.

STR: Intra-Shift Information Costs: Transition Services Agreements in Corporate Spinoffs

Author: **James McGlinch**, *The Wharton School, U. of Pennsylvania*
Author: **Emilie Feldman**, *U. of Pennsylvania*

In this study, we introduce the concept of intra-shift information costs, defined as the costs that market participants incur of acquiring and processing information about a company during (as opposed to before or after) a governance shift from hierarchy to market. We investigate the role that voluntary disclosure plays in reducing intra-shift information costs, as well as the equity market implications thereof. Building on prior work characterizing corporate spinoffs as a shift from hierarchy to market, we find that voluntary disclosure during such governance shifts is beneficial for equity market performance, and that this benefit is pronounced when disclosure increases the information that is available to investors and when it reduces their cost of assimilating that information. These findings contribute to the literatures on corporate strategy, transaction cost economics, information asymmetry, and voluntary disclosure.

STR: Corporate Diversification and Resource Allocation Adjustments in Multi-Business Firms

Author: **Niklas Martin Lindlbauer**, *Cambridge Judge Business School*
Author: **Yasemin Y Kor**, *Cambridge Judge Business School*
Author: **Kulwant Singh**, *National U. of Singapore*

The resource allocation literature has shown that multi-business firms exhibit a harmful inertia in their headquarters-level resource allocation to strategic business units. Drawing on the concept of private information, we develop and test theory of why some multi-business firms have a stronger tendency to inertia in their resource allocation than others. The results indicate that firms with high levels of unrelated diversification act less dynamically in adjusting their capital resource allocation. In addition, our findings indicate that under conditions of high environmental dynamism, difficulties in detecting the need for change are reduced, which lowers a diversified firm's risk of inertia in resource allocation. Further, firms with experience with strategic agility and greater resource availability have less difficulty in using their private information to detect the need for adjustments in resource allocation.

STR: I'm Disinclined to Acquiesce to Your Request: Managerial Resistance Against Activism via Acquisition

Author: **Jennifer J. Lee**, *Michigan State U.*
Author: **Stefan Wuorinen**, *Michigan State U.*
Author: **Junghyun Mah**, *Michigan State U.*
Author: **Gerry M. McNamara**, *Michigan State U.*

Shareholder activism has emerged as a prominent threat for corporate managers, but extant research overlooks how managers resist the pressure from activist investors. Since overt resistance can lead to even more aggressive counter-resistance by activist investors, managers are theorized to leverage their discretion to resist indirectly, such as by pursuing acquisitions. We argue and demonstrate that managers who are under activist pressure undertake larger and diversifying acquisitions, which can help them further embed themselves and weaken activists' footholds at the firm by preemptively spending firm resources, diluting activist stakes, increasing operational complexity, and deterring potential buyers.

Community and Nonmarket Strategy

Digital Session Chair: **Cuili Qian, UT Dallas**

STR: Too Risky to Care? Government Corruption of a Local Region and Corporate Social Responsibility 

Author: **Cuili Qian, UT Dallas**
Author: **David Weng, California State U., Fullerton**
Author: **Louise Yi Lu, Australian National U.**
Author: **Kathy Jiang, Australian National U.**

The corporate social responsibility (CSR) literature has suggested that CSR can mitigate firm risk. However, we postulate that in regions with high levels of local government corruption, CSR, as a signal a firm has discretionary resources, may increase a firm's risk of becoming a government rent-seeking target. As such, firms operating in these regions may demonstrate less CSR commitment to avoid appropriation by corrupt local government. We further investigate the boundary conditions that may moderate the proposed effect including firm risk of becoming a government target (financial performance), firm susceptibility to government influence (sales to government), and firm susceptibility to the influence of local community (community religiosity). Results based on a sample of U.S. public firms from 1992 to 2013 support our arguments.

STR: Institutional Polycentrism and Community Resilience: Evidence From The COVID-19 Crisis In The U.S.

Author: **Zach Rodriguez, Syracuse U. Whitman School of Management**
Author: **Maria Minniti, Syracuse U.**

Communities expect crises to occur, like natural disasters, man-made disasters, complex emergencies, and pandemic events, which is why many communities create institutions to inform individuals against potential harm and protect local resources from contamination or depletion. Differences in how communities govern local institutions in response to crisis remains an understudied component of the community resilience literature. Institutional governance in this context refers to how communities develop strategies and make decisions in a system of related organizations. Using an institutional polycentric framework, we analyze how institutional governance affects community resilience during an unexpected crisis. We then investigate our theoretical framework empirically using the context of the spread of the novel Coronavirus in January 2020. Differences in public health governance exist across counties in the U.S. with regards to the centralization of public health decision-making. While some states give more autonomy to local governments and private entities, other states maintain decision-making power at the state-level. Our results show that counties under decentralized governance arrangements observe less cases and deaths related to COVID-19, while counties under centralized arrangements see an increase in cases. This result can be explained by the timing of emergency declarations issued across counties, as decentralized counties have the authority to issue public health orders sooner than centralized institutions, who must wait for direction from the state. As we think about communities facing unexpected crisis in the future, our results offer novel insight into the how differences in governance structure across institutions contributes to their ability to manage uncertainty, which can have serious consequences for community health and the protection of local public goods.

STR: Are native plants green? Assessing environmental performances of locally-owned facilities 

Author: **Narae Lee, U. of Minnesota**
Author: **Jiao Luo, U. of Minnesota**

We study the impact of corporate ownership and community conditions on firm environmental pollution. While the existing literature often thinks of environmental pollution as a unitary construct, we emphasize the distinction between toxic emissions, which have immediate but locally bounded impact, and greenhouse gas (GHG) emissions which have gradual but global impact, producing climate change. Using a facility-level panel of all manufacturing facilities in the US from 2010-2018, and leveraging within-facility changes in ownership status, we show that locally owned firms have lower levels of toxic emissions, but they are also less likely to report GHG emissions, and have higher levels of such emissions when they do report them, with these effects being stronger where the owner is not only headquartered locally, but has operations limited to that state. Our study suggests that while the pressures of local embeddedness may drive firms to be more environmentally responsible towards their local community, they also make firms more indifferent to their global environmental impact.

Paper is Available to Meeting Registrants Only.

STR: How Community Ideology Influences How Much Firms Pollute

Author: **Dong Hyun Shin, U. of Florida**

Utilizing ten years of panel data on 13,198 US commercial facilities, this study examines whether political contexts of facility location influences the amount of hazardous pollution facilities emit. Countering both the lay and academic perspectives which predict that a facility's toxic emissions would increase in the conservatism of its political context, I find that emissions of hazardous pollution decline with the conservatism of the local community, where a facility is located. Such relationship between community conservatism and facility hazardous pollution is more salient when a facility is less embedded in the community and is located in an otherwise liberal state. I theorize that a strong sense of group identity and a narrow moral boundary associated with conservatism delineates why – contrary to our common beliefs – facilities would pollute less as the community becomes increasingly conservative.

Antecedents of Organizational Innovation

Digital Session Chair: **Pia Kerstin Neudert**, *EBS Business School*

 STR: **Ecosystem orchestration: Matching new ventures and established organizations to catalyze innovation**    

Author: **Pia Kerstin Neudert**, *EBS Business School*
Author: **Markus Kreutzer**, *EBS Business School*

Innovation ecosystems have emerged as novel ways how to facilitate resource mobilization in order to develop innovative products and services. In such multi-actor settings, orchestrating firms play an especially interesting role; however, it is not fully understood how they attract, guide, and bring actors together. To comprehensively address this question, we draw on existing insights on network orchestration and combine them with novel theory on ecosystems. We seek to explore which mechanisms innovation ecosystem orchestrators use to identify matching resources among new ventures and established organizations, and how these ecosystem orchestration mechanisms differ from known network orchestration mechanisms. We conduct a single-case study of a Germany-based innovation ecosystem managed by one orchestrating firm. We thereby generate insights into general ecosystem management and specialized innovation programs in which the orchestrator “matches” established organizations and new ventures to identify opportunities for value co-creation. We illuminate how ecosystem orchestrators enable new ventures and established organizations to identify non-generic, multilateral complementarities. In this regard, we distinguish the outcomes of formal matchmaking programs and more informal engagement in the ecosystem. In addition, we show how the ecosystem orchestrator blends stakeholder-based network orchestration approaches with ecosystem-specific attitudes and practices. Lastly, our research adds to the dialectical perspectives on ecosystems by pointing towards key tensions that orchestrators need to manage.

STR: **Designing Collaborative R&D Contracts for Innovative Performance**

Author: **Punit Sharma**, *U. of California, Irvine*

Strategic management scholars have long emphasized the importance of innovation for a firm's competitive advantage. While firms have looked to interfirm collaborations as a common way to achieve innovative performance, R&D partnerships often fail to meet their expectations. The literature on interfirm collaborations has found that the design of the contract is a significant factor in explaining transaction outcomes. Thus, to understand why R&D partnerships fail or succeed it is important to examine the design of the contract. This paper seeks to develop a framework to better understand how elements of the design of the contract may impact the performance of R&D collaborations. Using the literature on innovation and R&D, the paper identifies management and interfirm relationship factors that can enhance or inhibit innovation that are likely to be affected by contract design. The paper then uses the literature on interfirm contracts to identify the control and coordination provisions of contracts that are highly pertinent to understanding interfirm behavior and outcomes, and augments it with recent research on contract framing to identify how certain provisions can play additional roles by psychologically impacting the exchange and ongoing relationship between firms. Finally, the paper integrates these two literatures streams and develops a framework and a set of propositions for understanding how contract design elements impact innovative performance through their effect on the management and interfirm relationship factors that enhance or inhibit innovation in R&D collaborations.

STR: **Dynamics of Digital Change – How Digital Sophistication Influences Innovation in SMEs**

Author: **Kevin Krause**, *U. of Siegen*
Author: **Sohaib Hassan**, *U. of Siegen*
Author: **Konrad Meisner**, *U. of Siegen*
Author: **Levan Bzhalava**, *U. of Turku, School of Economics*

In this study we examine the influence of digitalization on innovation performance in SMEs. We first conceptualize digital maturity as a possible measure of digitalization in organizations and then propose a one-dimensional digital maturity model: digital sophistication model, to classify the state of digital maturity in SMEs. Subsequently, we use ordered logit estimation techniques to predict the influence of digital maturity on the prospects of innovation in our sample of 820 German SMEs. Our results show a significant positive influence of digital maturity on innovation performance in our sample SMEs. We discuss results and implications of our research study.

 STR: **How environmental shocks influence firms' exploration intensity: Evidence from a nuclear disaster**  

Author: **Kathrin Wenke**, *U. of Cologne*
Author: **Philip J. Steinberg**, *U. of Groningen, Faculty of Economics and Business*
Author: **Matthias Schulz**, *U. of Cologne*
Author: **Christian Schwens**, *U. of Cologne*

Despite the importance of exploration intensity for firms' performance and survival, we lack a detailed understanding of how environmental shocks, which are increasingly common, influence firms' exploration intensity. We argue that environmental shocks increase firms' exploration intensity by breaking through firms' inertia and that this relationship is stronger in firms with lower levels of unabsorbed financial slack because they experience greater urgency to adapt to their environment. We empirically validate our research model through a firm-fixed effects model testing the effect of the 2011 Fukushima nuclear disaster on the exploration intensity of nuclear energy firms using an international multisource panel-dataset. We contribute to both the literature on exploration and exploitation and on slack resources.

Family Business, Management, and Governance

Digital Session Chair: **Qian Gu**, *Georgia State U.*

STR: Meeting Halfway? an Instrumental Approach of Family Firms' Voluntary Information Disclosure  

Author: **Qian Gu**, *Georgia State U.*

Author: **Stephanie L. Wang**, *Indiana U., Bloomington*

Author: **Tao Bai**, *Xi'an Jiaotong-Liverpool U.*

Whether and how family firms overcome public perception bias due to the perceived asymmetric treatment between family and nonfamily interests is under heated debate. Drawing insights from the instrumental stakeholder theory and the literature of voluntary disclosures, we propose family firms can overcome this bias by utilizing instrumental voluntary disclosure. Specifically, we distinguish between the intensity of information disclosure and the contents of information disclosed and develop the arguments in the context of voluntary information disclosure of newly established foreign subsidiaries. We posit that voluntarily disclosing more information can signal professionalization and alleviates concerns associated with family involvements. Disclosing information insensitive to socioemotional wealth, on the other hand, allows family firms to protect the core interests of the controlling families. We also highlight that the perceived salience of investor protection and family value protection in the host countries serves as important boundary conditions. We find support for our argument in a hand-collected sample of 425 newly established foreign subsidiaries from 283 Chinese publicly listed family firms from 2010 to 2017. Evidence from post-hoc analyses of foreign subsidiary survival and qualitative evidence further strengthens our arguments. We contribute to the literature of family business, voluntary disclosures, and the stakeholder theory.

STR: Innovation Activities after CEO Succession in Family Firms: A Longitudinal Perspective

Author: **Nora Zyburá**, *U. of Mannheim*

Author: **Bettina Müller**, *U. of Mannheim*

Author: **Sandra Gottschalk**, *Leibniz Centre for European Economic Research*

In this paper, we examine how CEO succession affects family firms' innovation activities. We take on a broad perspective and consider the effect of a CEO succession on innovation input as well as different kinds of innovation output (product, process and organizational innovation) by following an upper echelons perspective. For our analyses, we use a longitudinal data set of small and medium-sized German family firms for the period 2001 to 2017 and apply a matching approach. Our results indicate that CEO succession is associated with a higher likelihood of family firms being involved in innovation activities. Family firms that experienced a CEO succession are more likely to introduce an innovation in the work organization. This holds in particular for those family firms that had no innovation activities before the CEO succession. However, we do not see an effect on the likelihood of introducing a product innovation. Thus, CEO succession leads primarily to a change in "how things are done".

Paper is Available to Meeting Registrants Only.

STR: Strategic market focus in family and nonfamily firms  

Author: **Ivan Miroshnychenko**, *Free U. Bozen, Bolzano*

Author: **Kimberly A. Eddleston**, *Northeastern U.*

Author: **Josip Kotlar**, *Politecnico di Milano School of Management*

We integrate the behavioral agency model with the mixed gamble view to study the importance of strategic market focus for family vs. non-family firms. Accordingly, we propose that negative performance gap changes how family vs. non-family firms view the competitive mixed gamble of strategic market focus, thereby leading to different scale of strategic market focus over time. We also consider in our framework the role of market leadership, change in rivals' speed and market contestability as boundary conditions in shaping family vs. non-family firms' strategic market focus to different levels of negative performance gap. Our analysis of Spanish firms during 2002-2012 supports our theoretical framework.

STR: Indulging in the Centre Stage: CEO Narcissism and Successor Selection in Family Firms   

Author: **Chunhui Cao**, *School of Business and Management, Shanghai International Studies U.*

Author: **Zi Yun He**, *Shanghai International Studies U.*

Previous research on family business succession indicates that characteristics of the incumbents can influence successor selection. Yet, what and how the incumbents' personality affects the process has rarely been discussed. In this study, we build on upper echelon theory and narcissistic supply logic to develop and test a model of family business succession as well as the moderating effects of the proportion of independent directors and pre-succession performance, using a dataset of 83 CEOs from family firms in the United States between 1995-2020. To solidify our finding, we use different ways to measure CEOs' narcissism to check the robustness from the US sample. Furthermore, we explore our main findings in a cross-culture context with 124 Chinese CEO samples. We largely found support for the model in both the US and China context- a positive relationship between CEO narcissism and family member selection. We extend prior theory on family business succession by exploring the relationship between CEO narcissism and successor selection, the moderating effect of independent directors as well as pre-succession performance, and offering a greater understanding of narcissistic supply theory. In this way, our findings shed light on how the CEO's personality can strongly influence a family firm's succession decision, which contributes to upper echelon theory, CEO narcissism, and family succession literature.

The Effect of CEO and Board on CSR

Digital Session Chair: **Marwan Ahmad Alshammari**, *U. of Texas at Tyler*

STR: The Value of Expertise: How CEO and Board CSR Expertise Enhance the Financial Effects of Firm's CSR 

Author: **Marwan Ahmad Alshammari**, *U. of Texas at Tyler*
Author: **Soumendra Banerjee**, *Misericordia U.*
Author: **Tushar Ravindra Shah**, *Northeastern State U.*

We examine how CEO and board CSR expertise (knowledge) can interact to influence the extent to which firms benefit from their CSR investments. Using a sample of 170 publicly traded firms, we find evidence that CSR positively affect the firm's financial performance. Moreover, we find that firms realize optimal results from their CSR investments when both the board and CEO have higher CSR expertise. Both CEO and board CSR expertise positively impact the CSR-CFP relationship.

Paper is Available to Meeting Registrants Only.

STR: CEO Femininity, Masculinity, and Organizational Outcomes: The Effect on Corporate Social Performance

Author: **Lisanne Juliette Veter**, *Erasmus U. Rotterdam*
Author: **Jatinder Singh Sidhu**, *Leeds U. Business School*
Author: **Harry Commandeur**, *Erasmus School of Economics, Rotterdam*
Author: **Henk W. Volberda**, *Amsterdam Business School, U. of Amsterdam*

How corporate leaders influence corporate social performance (CSP) enjoys long standing research interest. This study draws on upper echelons theory and cognitive, developmental and social psychology literature to investigate the influence of CEO femininity and masculinity attributes and behaviors on CSP. Both men and women can be more or less masculine or feminine. We argue that being feminine or masculine implies certain attributes and behaviors which inform ones' likelihood of deciding on social responsible activities. We examine how femininity and masculinity are related to CSP and we consider the moderating effects of (financial) firm performance and firm risk. Using panel data of S&P 100 firms (2003-2013), hypotheses were tested on a sample of 846 firm years. We find support for our main hypothesis and the results for the moderating hypotheses show a weakly significant positive moderating effect of firm performance and a strongly significant negative moderating effect of firm risk. We attempt to study the implications of more 'feminine' and 'masculine' corporate leaders in the upper echelons. By doing so, we study the organizational implications of the intuitive reality of more feminine or masculine individuals without resorting to a binary notion of gender. Furthermore, we identify boundary conditions for this relationship. Our findings contribute to the literature on the microlevel antecedents of CSP. This study provides practitioners with the knowledge and instrumental tools to influence CSP.

STR: The Effects of Executives' Time Horizons on CSR Disclosures 

Author: **Binqi Tang**, *School of Business, Nanjing U.*
Author: **Alan Muller**, *U. of Groningen*

Management scholars have long been interested in understanding executives' time perspectives. We extend this research by examining the strategic implications of executives' time horizons. Because executives with short-term horizons emphasize explicit short-term value, they may use CSR disclosures as an impression management tactic to efficiently garner resources from stakeholders. We then posit that the positive effect of executives' short-term horizons on CSR disclosures is weakened when the firm has better internal resource conditions as indicated by firm slack and board political connections. Further, we hypothesize that CSR disclosures have a positive effect on firm performance, but that this effect is attenuated by executives' short-term horizons. We test and find support for these arguments using a longitudinal sample of 482 listed Chinese firms from 2010 to 2014. This study explicates the cognitive mechanisms underlying how executives' time perspectives affect specific CSR activities.

STR: Do CEOs matter to corporate social (Ir)responsibility? A meta-analytic investigation

Author: **Sibel Ozgen**, *Florida International U.*
Author: **Dasol Sim**, *Florida International U.*
Author: **Ronaldo C. Parente**, *Florida International U.*

Following high-profile corporate scandals and continued questions about the role and obligation of corporations beyond financial metrics, CEOs have attracted considerable public and research attention with respect to their firms' social performance. Research attention examining the link between CEOs and social performance has developed along two largely separate paths: corporate responsibility and irresponsibility, neither of which have been empirically summarized. In this paper, we meta-analyzed over 500 empirical studies to estimate true correlations between five broad categories of CEO characteristics (demographics; personality, leadership, values; CEO power; CEO experience; other characteristics) and firm-level social performance as indicated by both broad and narrow measures of social responsibility and social irresponsibility. We find that CEO gender, CEO values, CEO narcissism, CEO duality are significantly associated with social (Ir)responsibility. We discuss implications for upper echelons research, as well as practical implications of our findings.

STR: Beyond Biology – The impact of Perceptions CEO Social Gender on Investor Reactions During an IPO

Author: **Simone Maria Eulitz**, *LMU Munich*
Author: **Brooke A. Gazdag**, *U. of Amsterdam*

Leadership at the top of firms is largely performed by men. One reason for this male dominance in top leadership positions has been found in the congruity of male gender and leadership roles. Both – men as well as leaders – are assumed to show agentic behavior. We build on the assumption of the congruity of male gender and leadership roles, yet take it beyond biology. We hypothesize that CEOs of both sexes are rewarded by investors for behaving agentic in an IPO setting. We use a mixed method approach to investigate this phenomenon. We conduct a field study analyzing videos of CEOs during road show events complemented by an experimental study where investment decision based on CEO agentic behavior will be made under experimental conditions.

STR: Drivers of Firms' Risk Taking Behavior 

Author: **Turanay Caner**, *North Carolina State U.*
Author: **Beverly B. Tyler**, *Virginia Tech*

Risk-taking and behavioral theory of the firm (BTOF) research have not considered how positive economic sentiment influences firms' risk taking or how it moderates the performance feedback-risk taking relationship. Advocating scope acquisitions constitute evidence of firms' risk taking behavior, we develop theory that posits positive economic sentiment directly affects the number of scope acquisitions firms make, and moderates the relationship between firms' performance feedback and their scope acquisitions. Using data from the US economic sentiment index and 635 firms in 154 industries making 6,216 scope acquisitions between 1980 and 2015, we find support for our hypotheses. We contribute to the literature by recognizing positive economic sentiment as a boundary condition that influences firms' risk taking behavior in studies of behavioral theory of the firm

STR: The Effects of Incentive Structure Designs on Whether and Where Individuals Search

Author: **Mirza Ramic**, *Aarhus U., Department of Management*
Author: **Carsten Bergholtz**, *Aarhus BSS, Aarhus U.*
Author: **Oana Vuculescu**, *Aarhus U.*

The design of incentive structures affects individual search behavior both in an experimental (Ederer & Manso, 2013) and real life (Lee & Meyer-Doyle, 2017) context. Previous research on this particular topic has only focused on one aspect of search, which is where individuals search, ignoring the crucial first step in the two-step search process, which is whether individuals search (Billinger et al., 2020). This study integrates both steps of the search process and investigates how three different incentive structure designs first affect whether and then where individuals search. An experiment with a total of 343 participants is conducted, where all participants individually played a computerized problem-solving game built up around a NK landscape. Results show that incentive structure designs do significantly affect whether individuals search. An incentive structure design rewarding maximum performance leads to most searches followed by a design that relies only on a fixed payment and after that by a design rewarding average performance. Regarding where individuals search, we find clear evidence to conclude that a fixed payment design leads to significantly more exploratory search than a design rewarding average performance. The article contributes to the search literature by challenging and questioning previous results on the topic. This is done by showing that the theoretical predictions about where individuals search are not as clear as previously shown in the literature when one includes the important first step in the search process.

STR: Underperformance duration and Corporate misconduct: Evidence from China    

Author: **Tong Zhao**, *Peking U. Guanghua School of Management*
Author: **Shufeng Xiao**, *Peking U.*

Behavioral theory has investigated how underperformance intensity impact firms' misconduct decisions; however, scholars paid less attention to the underperformance duration on corporate illicit behaviors. Drawing on behavioral theory, we argue that the length of time that a firm has been underperforming will lead to a higher likelihood of corporate misconduct. By using Bivariate Probit model estimation, we can differentiate the likelihood of firm's conducting corporate wrongdoings and the probability of misconduct detection. We test our theory by using CSMAR patent data for 2,823 A-share listed firms in China between 2008 and 2015. Our results largely support our prediction that underperformance duration has both positive relationship with misconduct commitment and detection. In addition, inspired by resource dependence theory, we introduce facets of environmental factors to complete behavior literature and we find marginal evidence that high munificence will weaken this relationship by supporting with critical resources whereas high environment dynamism will strengthen this relationship by intensifying uncertainty. We contribute by incorporating time horizons of negative performance feedback into organizational misconduct decisions.

Politics & Governance

Digital Session Chair: **Justin Szewczyk**, *U. of Passau*

STR: How Board Embeddedness Affects Incumbents' Responses to Discontinuous Technologies

Author: **Justin Szewczyk**, *U. of Passau*
Author: **Christopher Kurzhals**, *U. of Passau*
Author: **Lorenz Graf-Vlachy**, *TU Dortmund U.*
Author: **Andreas Sebastian Konig**, *U. of Passau*

We combine research on strategic leadership, corporate governance, and organizational adaptation to technological change to provide a new perspective on the heterogeneous responses of incumbent firms to the emergence of discontinuous technologies. Specifically, we conceptualize two facets of the board of directors' embeddedness in the status quo—social-capital embeddedness (SCE) and knowledge-structure entrenchment (KSE)—and argue that they have intricate contradictory and interactive effects on the speed and intensity of incumbent adoption of discontinuous technologies. While higher SCE results in faster and more aggressive adoption of discontinuous technologies, higher KSE reduces adoption speed and adoption intensity. Moreover, we propose that the adoption-enhancing effects of SCE decrease with increasing levels of KSE, as more cognitively entrenched boards are less likely to leverage higher degrees of SCE to access information, capital, and status in ways that foster discontinuous technology adoption. Our examination of the responses of 75 U.S. retail firms to the advent of e-commerce between 1995 and 2019 largely corroborates our theorizing. Our research contributes by introducing strategic governance, especially boards, as an important yet thus far neglected perspective for research on incumbent inertia. It also highlights the paradoxical implications of cognitive and social board characteristics in times of disruptive change.

STR: By the people and for the people: Ridesharing companies' political strategies in the U.S.

Author: **Yuni Wen**, *Said Business School*
Author: **Lori Qingyuan Yue**, *Columbia Business School*

We argue that in the face of local opposition to disruptive technologies, technology firms resort to state governments to legalize and regulate the industry. They use both direct political strategies, mainly lobbying and campaign contributions, and indirect political strategies, such as user mobilization. However, the two strategies have different impacts when the interests of users and firms are in conflict. We find evidence in the US ridesharing industry from 2009 to 2019. Adopting both the DID method with entropy balancing and the instrument variable control function method, we find that the use of user mobilization strategy simultaneously increases the possibility that a state will legalize the technology and enhances the stringency of regulations that protect passengers and thus pose a burden on ridesharing companies.

STR: Stakeholder Rights, Market Introductions and Commercialization Performance: A Cross-country Study

Author: **Maarten Cerpentier**, *Ghent U.*
Author: **Tom R. Vanacker**, *Ghent U. and U. of Exeter*
Author: **Anja Schulze**, *U. of Zurich*

To date, we lack a detailed theoretical and empirical understanding of the country-level factors that influence firms' commercialization (success) of new innovations. Building on a stakeholder-power perspective, we propose that country-level laws protecting the interests of stakeholder groups (i.e., employees, creditors, shareholders) differently impact the probability that a firm introduces new innovations to the market, as well as the turnover resulting from these innovations. Empirically, we use a data from 6,316 small, independent, manufacturing firms from 12 European countries. We find that more stringent employment and creditor protection has a negative effect on the probability that a firm introduces a new innovation to the market. However, both laws have a positive influence on the commercialization performance of new innovations once introduced to the market. Taken together, these findings deepen our understanding of how country-level factors such as stakeholder protection laws impact the commercialization (success) of new innovations.

STR: Board Independence and Acquisitions of External Knowledge: Overcoming the NIH Syndrome

Author: **Araksya Ayvazyan**, *U. of Groningen*
Author: **Eduardo Melero**, *U. Carlos III de Madrid*
Author: **Kurt Desender**, *U. Carlos III de Madrid*

The not-invented-here (NIH) syndrome, defined as a negative attitude toward outside knowledge, prevents organizations from absorbing external knowledge to generate further innovations. We argue that corporate-level actions can play an important role in neutralizing the NIH syndrome. In particular, we examine the role of independent members of boards of directors, given their monitoring and advisory functions. We hypothesize and show the existence of a positive link between the presence of independent directors on the board and the propensity to acquire outside knowledge. Furthermore, this relationship is more pronounced for companies that are more likely to suffer from the NIH syndrome and weaker when the independent directors' monitoring power is limited by the power of the CEOs. Overall, our findings suggest that the effect is primarily driven by the supervisory function of the independent directors on the boards.

Exploring Strategic Rhythms in the Digital Economy
Exploring Strategic Rhythms in the Digital Economy

Chair: **Pengxiang Zhang**, *Guanghua School of Management, Peking U.*
Chair: **Sali Li**, *U. of South Carolina*
Panelist: **Liang Chen**, *U. of Melbourne*
Panelist: **Ashton Lewis Hawk**, *U. of Colorado, Boulder*
Panelist: **Timothy Ott**, *U. of North Carolina, Chapel Hill*
Panelist: **Liliana Pérez-Nordtvedt**, *U. of Texas At Arlington*

Interest in strategic rhythms, which represent temporal patterns of ongoing strategic activities, is surging rapidly. The importance of rhythms has also been widely recognized for firms competing in dynamic environments. This is particularly relevant in the digital economy. The advances in digital technologies lead the world towards a new era of business by redefining firm interfaces with consumer, firm, and environment. Firms competing in the digital economy must deal with novel challenges, which impel firms to develop a new playbook of temporal rhythms. First, firms' engagement with customers has transformed from discrete events to a continuous process, which require firms to develop new temporal strategies. Second, the digital environment is changing rapidly, moving beyond firms' capabilities to keep up. Therefore, firms have to develop their own rhythms by selectively entraining to important environmental conditions. Third, firms competing in the digital economy thrive in an ecosystem, where their success is highly dependent on coordination with diverse partners. To align the timing of their strategic moves with multiple partners, they have to enact temporal rhythms on their partners. The challenges of the digital economy push firms to arrange strategic activities in a temporal rhythm. Such unique aspects of digital economy require substantial advance of extant temporal frameworks in strategy, technology and entrepreneurship. Our panel aims at catalyzing the discussion on the intersection of temporal rhythms and emerging phenomenon of digital economy to explore some novel venues for extending current research in a digital context.

Presenter: **Bing Wan**, *Siemens Advanta Consulting*
Presenter: **Yanjiang Jia**, *RootCloud*
Presenter: **Massimo Russo**, *Boston Consulting Group*
Presenter: **Dimitri Petrik**, *U. of Stuttgart*

The purpose of this workshop is to explore how IIoT influences ecosystem dynamics, and in particular the evolving scope of benefits that ecosystems deliver. It is the ecosystem benefits brought to life by digitalization that appeal to different stakeholders. As digital advances such as the Industrial Internet of Things (IIoT) expand the scope of potential ecosystem benefits, it is useful to take stock of what benefits ecosystems facilitate for various stakeholders and how. Our panellists include both leading academics and industry practitioners, who will present different types of ecosystem benefits from their various perspectives, as well as their insights into the managerial challenges related to IIoT. By focusing on ecosystem benefits and IIoT-related phenomena, we will engage the workshop participants in an exploratory discussion of the emerging research agenda and begin to establish a community of TIM scholars interested in the implications of IIoT ecosystems.

Digital Transformation of Healthcare Delivery and Care Coordination

Digital Session Chair: **Hassina Bahadurzada**, *Stanford U.*

Health Technology and Digital Transformation

HCM: Cultural and Dynamic Capabilities Factors Facilitating Digital Transformation of Healthcare Services

Author: **Rima Sermontyte-Baniule**, *Kaunas U. of Technology, Lithuania*
Author: **Asta Pundziene**, *Kaunas U. of Technology, School of Economics and Business*
Author: **Victor Gimenez**, *U. Autònoma de Barcelona*
Author: **Isabel Narbón-Perpiñá**, *U. Autònoma de Barcelona*

Background Digital transformation of healthcare services was slow until the COVID-19 pandemic, however, global lockdown urged healthcare providers to accelerate the utilisation of advanced technologies in healthcare services. While the researchers focused on the role of technologies, the role of culture as an antecedent of dynamic capabilities responsible for digitalisation of the services, was undermined. Purpose The purpose of the paper is to explore the cultural and dynamic capabilities factors facilitating the digital transformation of healthcare services across three different countries. Methodology/Approach The exploratory multiple case study research design was applied, and data collected in Lithuania, the United States, and Spain. The multiple case study is based on 63 interviews of healthcare providers, start-ups, patients and secondary data analysis across three countries. Results Comparative analysis of the cultural dimensions, dynamic capabilities and performance of the digital healthcare services in Lithuania, California (United States), and Catalonia (Spain) shows that there is a tendency for strong dynamic capabilities to stimulate the more advanced performance of digital healthcare services. In addition, the manifestation of certain cultural dimensions, such as high masculinity and indulgency, might contribute to fostering dynamic capabilities. Conclusion Cultural context matters for developing strong dynamic capabilities in healthcare providers and, in turn, more advanced performance of digital healthcare services. Practice implications In order to accelerate the performance of digital healthcare services, healthcare providers are recommended to enhance dynamic capabilities, paying attention to the specifics of the national cultural dimensions.

HCM: AI Acceptance in Primary Care during COVID-19: A Two-Phase Study of Patients' Perspective

Author: **Efrat Kadosh**, *Tel Aviv U.*
Author: **Hila Chalutz Ben-Gal**, *Afeka Tel Aviv College of Engineering*

Artificial Intelligence (AI) is steadily entering and transforming the healthcare and primary care domains. We observe AI-based applications assisting physicians in disease detection, medical advice, triage, clinical decision-making, diagnostics and digital health. Recently literature explored the physicians' perspective about the potential impact of future technology on key tasks in primary care. However, limited attention has so far been paid to the patients' perspective about AI acceptance in primary care, specifically during COVID-19 pandemic. Addressing this research gap, we employed a two-phase mixed methods approach to investigate the criteria for patients' readiness to use AI-based primary care applications by analyzing key factors that affect the adoption of medical technology. First, we conducted a qualitative study which comprised of 18 semi-structured interviews. Second, based on the Technology Readiness and Acceptance Model (TRAM), we conducted an online survey (n=447). Study results indicate that respondents who score high on innovativeness have a higher level of readiness to use AI-based technology in primary care during COVID-19. Surprisingly, we found that patients' health awareness and socio-demographic factors such as age, gender and education are not significant predictors of AI-based technology acceptance in primary care. Therefore, we suggest exploring the effects of population-specific promotions and individual impediments to speed-up the adoption of AI-based technology in primary care in order to raise usability in complex digital healthcare ecosystems.

HCM: Advanced EMR Functionalities and Frontline Staff's Perception of Clinical Process Integration

Author: **Hassina Bahadurzada**, *Stanford U.*
Author: **Maike Vanessa Tietschert**, *Vrije U. Amsterdam*
Author: **Anna Sinaiko**, *Harvard T.H. Chan School of Public Health*
Author: **Veronique Martin**, *Stanford U.*

Electronic Medical Records (EMR) is considered to facilitate care integration, as EMRs can enable information flow and care coordination. Yet, evidence also suggests negative consequences such as increased provider burden. Research has yet to identify whether and in what way EMRs can promote care integration. This research studied the association between EMR functionalities, designed to enhance the alignment and exchange of clinical information across health care facilities, and clinical process integration within and outside health systems as perceived by staff of health system affiliated primary care practices. Using survey methods, we collected data from 700 primary care staff members in 48 practice sites within 18 physician organizations affiliated with 13 health systems. To examine associations between EMR functionalities and perceived care integration, we used multi-level linear regression models, weighting staff survey data for differences in response rate by discipline. Among distinguishing EMR functionalities, clinical decision support ($\beta=0.23, p=0.02$), medication management ($\beta=0.22, p=0.04$), and electronic messaging ($\beta=0.32, p<0.01$) were significantly associated with higher levels of perceived clinical process integration within health system, but not outside the system. Our findings provide guidance to health systems in efforts to improve clinical process integration.

Author: **Sebastian Gregor Bouschery**, *Institute for Technology and Innovation Management at RWTH Aachen*

Artificial intelligence is revolutionizing many industries, including the health care industry. While certain artificial intelligence applications are already being used to assist doctors with specific tasks, the development of artificial intelligence doctors that can autonomously interact with patients is still in an early phase. Such systems could potentially address several challenges that our health care systems are facing today, but patients are currently still resisting medical artificial intelligence. This paper investigates how trust and privacy impact the acceptance of such artificial intelligence doctors. Using data collected in an online questionnaire, this paper presents evidence that perceived risk, trusting beliefs, and perceived benefits play an important role in the formation of intentions to use artificial intelligence doctors. Trusting beliefs and perceived risk can be manipulated through the provision of trust forming information and the level of privacy protection that is offered by these artificial intelligence doctors. It is further shown that individuals' privacy literacy influences their ability to adequately assess risks associated with those privacy protection measures. This paper lays the groundwork for future research on the acceptance of artificial intelligence doctors and provides valuable insights for developers of such technology.

Organizational Adaptations Needed in Response to Public Health and Delivery System Challenges

Digital Session Chair: **Abi Sriharan**, *Health Services Researcher*

Emerging and Persistent Public Health and Delivery System Challenges

HCM: **Crisis Leadership during the COVID-19 Pandemic: A Review to Inform Policymaking**  

Author: **Abi Sriharan**, *Health Services Researcher*
Author: **Attila J. Hertelendy**, *Florida International U.*
Author: **Jane Banaszak-Holl**, *Monash U.*
Author: **Michelle M. Fleig-Palmer**, *U. of Saint Francis*
Author: **Cheryl Mitchell**, *Gustavson School of Business*
Author: **Jennifer Gutberg**, *U. of Toronto*
Author: **Devin Johnson Rapp**, *U. of Utah, David Eccles School of Business*

Context: The COVID-19 pandemic has placed unprecedented stress on health care systems worldwide. The global scale of the outbreak and its unpredictable nature has put a significant leadership burden on health care leaders and decision-makers. Predefined emergency preparedness plans are no longer working. Evidence-based guidelines and crisis communication plans are insufficient. There is an increased amount of pandemic fatigue among the general population. Businesses are suffering. A financial crisis is looming. Health systems leaders need new leadership behaviors and mindsets to help them lead during the next phases of this dynamic crisis as well as in future pandemics. Despite a proliferation of perspectives on the topic, given the novelty of the situation there is no aggregated resource distilling the evidence about how to lead under crisis conditions. Objective: The aim of this paper is to systematically examine evidence from research on public health crisis leadership to determine what competencies are explicitly needed to better respond to pandemics like COVID-19. Specifically, we sought to map and assess published studies on pandemics (a) to characterize core competencies required to lead in the health sector during a pandemic, and (b) to identify contextual enablers and barriers to leading during a crisis. Methods: We conducted a rapid review using the methodological framework of Arksey and O'Malley (2005), the World Health Organization Rapid Review Guide, and the Joanna Briggs Institute 2020 guide to scoping reviews (Peters et al., 2020; Tricco et al., 2017). The Preferred Reporting Items for Systematic Reviews and Meta-Analyses extension for Scoping Reviews (PRISMA-SR) guided our reporting of study findings. Data Sources: We performed a systematic and comprehensive search of MEDLINE (via Ovid), EMBASE, PsycINFO, Business Source Premier, and Canadian Business & Current Affairs for studies published between 2003 (since SARS) and July 28, 2020. Study Selection, Extraction, and Synthesis: We selected all empirical articles (quantitative, qualitative, and mixed methods) that discussed crisis leadership during a pandemic. Data Synthesis: The literature search identified 8,044 citations. A review of abstracts led to the retrieval of 749 full-text articles for assessment, of which 30 were selected for review. Conclusions: Our findings show that crisis leadership competencies commonly fall under three categories of leadership capacity: task, people, and adaptive. In pandemic-related leadership literature, task-related behaviors such as preparing and planning, establishing collaborations, and crisis communication often receive more attention. Our analysis revealed that during a crisis, people-oriented capacities and adaptive capacities are equally important for leaders to successfully lead in a dynamic situation shaped by structural, political, and cultural contextual factors.

HCM: **Interactive Effect of Covid-19 Risk and Hospital Measures on Healthcare Workers Turnover Intentions**   

Author: **Mehwish Majeed**, *International Islamic U., Islamabad, Pakistan*
Author: **Muhammad Irshad**, *Capital U. of Science and Technology*
Author: **Jos Bartels**, *Hong Kong Baptist U.*
Author: **Ume Rubab**, *Capital U. of Science and Technology, Islamabad Pakistan*

COVID-19 has led to a global health emergency worldwide. As a result, healthcare workers undergo distress mainly due to the perceived risk of contracting the virus. Such stress might cause them to leave their jobs. In this context, the current study: (1) introduced perceived risk of COVID-19 and measured it by adapting and validating an existing scale available on risk of infectious diseases and (2) investigated its outcomes, underlying mechanisms, and boundary conditions for healthcare workers. With the support of conservation of resources (COR) theory, the current study proposed the perceived risks of COVID-19 as a way to predict turnover intention among healthcare workers. Moreover, the present study examined the buffering role that perceptions of hospital measures against COVID-19 could have on diminishing workers' turnover intentions. Data was collected through a three time-lag email survey questionnaire of healthcare workers in Pakistan (n=178) who currently provide treatment to COVID-19 patients. The results supported that perceived risk of COVID-19 enhances fear of COVID-19 among healthcare workers and, consequently, their turnover intentions. Perceptions of hospital measures against COVID-19 weaken the relationship between perceived risk of COVID-19 and fear of COVID-19, which in turn reduces turnover intentions of health care workers. The current study offers implications for theory, practitioners, and society. Limitations and future research directions are also discussed.

HCM: **It Won't Happen to Me: Investigating Optimistic Bias and Health Risk Behavior During COVID19 Pandemic**  

Author: **Shanu Shukla**, *Indian Institute of Management, Indore*
Author: **Himanshu Rai**, *Indian Institute of Management, Indore*

In the wake of the ongoing COVID-19 pandemic, much importance has been given on the preventive measures to curb the staggeringly increasing number of affected people. While a part of the population is seen following the suggested behavioral norms, a significant fraction is found behaving otherwise. One of the reasons for this tendency may be optimistic bias - the perception that one's own risk is lower than the risk of comparable others, existing among a fraction of the population. This behavior erects a serious obstacle against the efforts to bring the world back to normalcy and needs to be studied so that a solution to minimize the risks is found. Using an online survey (N = 496) the study explores whether optimistic bias related to the COVID-19 favors risk-taking behavior among Indian college students. Besides, it also investigates whether their optimistic bias depends on the degree of closeness with another person. Results suggest that participants with high COVID-19 optimistic bias are prone to taking more health avoidance risks when friends, instead of neighbors/strangers are present. However, this risk-taking tendency is minimized owing to preventive behavioral norms followed by their peers. These findings offer important implications for policymakers to minimize the transmission of the disease among college students during pandemic times.

RESEARCH OBJECTIVE: The coronavirus disease of 2019 (COVID-19) which was declared a pandemic by the World Health Organization in March of 2020 has claimed the lives of millions of people around the world. The United States leads all countries worldwide in the number of COVID-19 related deaths. Individual level factors such as preexisting conditions and demographics along with county level factors such as availability of resources have been attributed to increased risk of COVID-19 related death. This study seeks to build on previous studies to assess the relationship between the level of health care resources and COVID-19 mortality among U.S. counties. **STUDY DESIGN:** We merged 2019 data from the American Hospital Association (AHA) Annual Survey of Hospitals, Area Health Resources Files (AHRF), and USA FACTS. The final sample consisted of 2,395 counties in the United States. The dependent variable was the number of COVID-19-related deaths by county. Independent variables were county level resources which included the number of airborne infection control rooms, average occupancy rate, number of full-time equivalent hospitalists and registered nurses (RN), hospital spending per capita, number of Joint Commission accredited and teaching hospitals, and total skilled nursing facilities beds. We controlled for the percentage of the population 65 years and older. Ordinary least square regression was used to determine the relationship between the level of health care resources and number of COVID-19 deaths. **PRINCIPAL FINDINGS:** The level of health care resources was significantly associated with COVID-19 related mortality. An increase in FTE Registered Nurses ($\beta = -0.0002$; $p < 0.001$), hospital spending per capita ($\beta = -0.0001$; $p < 0.001$) and teaching hospitals in the county ($\beta = -0.2063$; $p < 0.001$) were associated with a decrease in COVID-19 related deaths. However, an increase in the number of airborne infection control rooms ($\beta = 0.0071$; $p < 0.001$), average occupancy rate ($\beta = 0.0102$; $p < 0.001$), total skilled nursing facilities beds ($\beta = 0.0003$; $p < 0.001$), FTE hospitalists ($\beta = 0.0204$; $p < 0.001$), per capita income ($\beta = 0.0001$; $p < 0.001$), and Joint Commission hospitals in the county ($\beta = 0.0767$; $p < 0.001$) were associated with an increase in COVID-19 related deaths in the county. For each increase in the percentage of population 65 years and older, there was a decrease in the COVID-19 related deaths ($\beta = -0.0771$; $p < 0.001$). **CONCLUSION:** The availability of resources such as the presence of teaching hospitals, increased spending per capita, and adequate number of nurses to better care for patient may lead to a reduction in COVID-19 related death.

How to Manage Academic Collaborations: Tips and Strategies from Team Scholars (2nd Annual) *How to Manage Academic Collaborations*

Organizer: **Ulrich Leicht-Deobald**, *U. of St. Gallen*
Speaker: **Hendrik Johan Van De Brake**, *U. of Groningen*
Organizer: **Stefan Berger**, *U. of St. Gallen*
Speaker: **Anna Mayo**, *Johns Hopkins Carey Business School*
Speaker: **Margaret M. Luciano**, *Penn State U.*
Discussant: **Deborah Ancona**, *Massachusetts Institute of Technology*
Discussant: **Amy C. Edmondson**, *Harvard U.*

In this PDW, we draw from current research on team boundary spanning, multiple team membership, and virtual teams, to learn how we can successfully manage complex academic collaborations. The primary goals of this PDW are (1) to enhance participants' awareness of how they can effectively work together in multiple and/or virtual teams, and (2) to derive practical strategies they can use after the PDW to increase their success in academic collaborations. The PDW will begin with a brief introduction to the concepts of team boundary spanning, multiple team membership, and virtual teams, followed by small group discussions in which participants reflect on when they were most successful in their academic collaborations. Drs. Margaret Luciano, Anna Mayo, and Joost van de Brake will then present their cutting-edge research in this field, proposing a set of practical strategies to help participants find opportunities to make their academic collaborations more rewarding and fruitful. Then, participants will develop an action plan for incorporating strategies in their daily lives to make their collaborations more effective and share them with other participants. Finally, the practical and theoretical insights will be discussed and put into perspective by Drs. Deborah Ancona and Amy Edmondson. The PDW will conclude with a summative discussion of key learnings.

To advance our understanding of the mechanisms required to support teams under today's unstable and unpredictable conditions, this symposium explores team-level resources under various external (high perceived team virtuality, adopted agile methodology) and internal challenging conditions (membership change, high team diversity, autonomous technology as a team member). Bringing together five high-quality empirical papers that use a range of methodologies, we present evidence on emergent states (e.g., mutual trust, psychological safety) and team processes (e.g., feedback seeking behavior, coordination) as important team-level resources in various team types and contexts. Building on our findings, organisations can create teamwork-supportive conditions and environments to reduce stress, improve processes, and increase effectiveness.

Artificial Intelligence & Innovation

Digital Session Chair: **Margaret Dalziel**, *U. of Waterloo*

TIM: University-Industry Knowledge Transfer: The Case of the Godfathers of Artificial Intelligence

Author: **Margaret Dalziel**, *U. of Waterloo*

Author: **Xiao (Mimoso) Zhao**, *U. of Toronto, Rotman School of Management*

Though university-industry linkages are channels for two-way knowledge sharing, in the case of breakthrough research, it is the path from scientific discovery to commercial application that is of primary interest. The central question is whether knowledge can be codified and disseminated in disembodied form, or if engagement with knowledge creators, either explicit engagement through collaborative relationships or potential engagement made possible by geographic proximity, is required. We consider the case of the godfathers of artificial intelligence (AI), Geoffrey Hinton (University of Toronto), Yoshua Bengio (Université of Montréal) and Yann LeCun (New York University), who collectively won the 2018 Turing Award, the Nobel prize of computing, and examine the factors that affect the ability of private technology developments to absorb and build upon their research. We construct a dataset consisting of the modern AI patent universe and use patent citations to godfather research as an indicator of knowledge transfer, modelling the likelihood that an AI patent will cite godfather research as a function of geographic proximity and social relations. We find strong effects for geographic proximity, where inventors were former co-inventors or co-authors of the godfathers, and for absorptive capacity as a crucial control.

TIM: Pictures Worth A Thousand Words? AI for Design Patents

Author: **Egbert Amoncio**, *Goethe U.*

Patent examination process is crucial for firms and policymakers alike. From a firm's perspective, the duration of patent examination process and grant decision carries important strategic, legal, and financial implications. At the same time, policymakers are interested to optimize the allocation of scarce examination resources and improve the reliability of patent grant assignments. I propose using Image Analysis to enhance and standardize patent examination procedure. Using granted design patents for mobile phones issued by the U.S. Patent and Trademark Office (USPTO) from 1990-2018 as an exemplary case, I extract prior art contribution measures and develop an algorithm to assign new design patents. Results show that contrary to prior research on technological patents, text-based similarity and novelty measures do not perform well in the case of design patents. Next, results suggest that a high level of prior art contribution would have a shorter patent examination process. Lastly, evidence exhibits that the trained neural network has a 94 percent accuracy rate in automatically classifying new patent designs. I draw policy and managerial implications.

TIM: Measuring the Innovation Impact of Scientific Research: Exploring the Potentials of AI

Author: **Andreas Distel**, *Rotterdam School of Management, Erasmus U.*

Author: **Christoph Grimpe**, *Copenhagen Business School*

Author: **Sven Körner**, *thingsTHINKING GMBH*

Author: **Mathias Landhäusser**, *thingsTHINKING GMBH*

Author: **Marion Kristin Poetz**, *Copenhagen Business School*

Policy makers and funding agencies increasingly expect scientists to demonstrate the societal innovation impact of their knowledge production. But how can they assess the broader innovation impact of the research they provided funding for beyond the citation impact that publications associated with the funded research have? And, how can scientists increase their understanding in terms of how their research benefits society? In this paper, we explore the potential of machine learning to assess how scientific publications inform practice guidelines and as such shape actual decision-making in society. More specifically, we suggest an artificial intelligence-based semantic processing approach (AI) that seeks to identify the use of published research results in the field of diabetes in new clinical practice guidelines. Using this context allows to calibrate and validate the AI-based approach since guidelines contain citations to published articles while at the same time representing broader impact on clinical practice. Our results demonstrate the feasibility of AI-based impact measurement and identify a number of instances in which published research was used in guidelines but not cited ("hidden impact") or cited but not actually used ("legitimacy building"). We follow up on these cases through a series of expert workshops and discussions to validate insights and identify potentials and limitations of an AI-based innovation impact measurement.

TIM: Artificial Advantages: Toward a Theory of Situated AI

Author: **Ayenda Kemp**, *Virginia Tech*

How can firms establish competitive advantages using artificial intelligence (AI)? Although AI is beginning to permeate business activities, our understanding of how AI can be used to create unique value is rather limited. To address this void, this paper introduces the concept of situated AI and illuminates its importance for establishing AI-driven competitive advantages. The framework explains the constituent activities involved in situating AI—grounding, bounding, and recasting—and explains the conditions in which these situating activities may enhance the uniqueness of a firm's AI-driven capabilities, the cost of developing those capabilities, and the extent to which those capabilities match the demands of the firm's strategic environment. Thus, our theory offers an integrative framework for connecting a firm's AI pursuits to competitive advantage.

Paper is Available to Meeting Registrants Only.

Research on AI has been active for decades in fields such as engineering and computer science, but only recently in business. Employing bibliometric methods, we look into the structure of the business and management literature on AI and use bibliographic coupling to detect different topics within it with the aim of identifying the emerging ones. The emergence criteria we adopted in our analysis are growth, novelty, and scientific impact. Our findings show that four emerging topics in this literature are AI and Industry 4.0 technologies, AI and Robotics, AI in Marketing and Commerce, and AI Adoption and Acceptance. The importance of such findings can be seen both at the field level as well as at the researcher level. Bibliometric studies such as this one are seen as a complement to and not a substitute of extensive reading and literature reviews and have the role of providing a direction that can point toward more fine-grained content analysis of articles in those emerging topics.

Strategic HR

Digital Session Chair: **Sorin Krammer**, *U. of Exeter Business School*

HR: **HUMAN RESOURCE POLICIES AND FIRM INNOVATION: HR Policies and firm innovation**

Author: **Sorin Krammer**, *U. of Exeter Business School*

This paper examines the effects of human resource (HR) policies on firm innovation as proxied by its investment in R&D. Specifically, we argue that firms who implement policies to stimulate job autonomy and performance-based incentives will also be more likely to innovate (i.e., invest in R&D and patent). Moreover, we argue that the institutional and competitive context in which firms operate will affect this relationship between HR management and innovation. These hypotheses are tested using a sample of more than 900 firms in manufacturing sectors from a heterogeneous set of 12 countries. Our empirical results provide strong support to the role of HR practice in enabling firm to pursue formally innovation via R&D investments, and partial support to the role of institutional and competitive context in moderating this relationship.

HR: **Bridging the Female Gap at the Top: Implications for Firms' Strategic Behavior and Performance**

Author: **Steffen Burkert**, *LMU Munich*

Author: **Lena Göbel**, *LMU Munich*

A large literature has examined whether female representation in Top Management Teams (TMT) positively affects firm performance. These studies provide evidence of a performance advantage, however, evidence is rare when it comes to the question why this advantage occurs. We analyze how four intervening mechanisms - namely strategic conformity, risk taking, CSR and governance - influence the relation between female representation at TMT and firm performance. We test our theoretical predictions using data on the TMT of the S&P 1,500. We find robust mediating effects of conformity, risk taking and CSR: Female representation at TMT leads to less conformity, less risk taking and more CSR engagement. Performance effects are mixed.

HR: **Impact of critical mass on internal CSR: Moderating role of critical actor, position and culture**

Author: **Pooja Vijayakumar**, *U. of Limerick*

Author: **Michael J. Morley**, *U. of Limerick*

Author: **Noreen Heraty**, *U. of Limerick*

Practicing corporate social responsibility (CSR) helps organizations build sustainable business models. Drawing upon critical mass, human capital and institutional theories, we examine the direct relationship between the proportion of female employees (critical mass) and internal CSR policies. Furthermore, we examine the moderating role of senior female HR executive (critical actor), senior HR expertise on the board (critical position) and national culture (GDI index and Hofstede's masculinity/femininity index) on the direct relationship. We tested our theory-based research model with CRANET data from 7317 organizations across 34 countries. Our findings indicate that organizations that had a higher critical mass offered more work flexibility schemes. Organization with both a critical mass and a critical position offered more compressed work week and mobile work flexibility schemes. Organizations in high GDI countries with a critical mass offer high-flier schemes and international work assignments. Organizations in more masculine societies with critical mass did provide compressed work week and mobile work flexibility schemes, specific action programs targeting female employees, and parental support schemes. These findings will help organizations to seriously consider critical mass, critical actor, critical position, and national culture before designing their internal CSR policies, thereby preventing female employees from opting out of the workforce.

HR: **Effect of Franchise Growth on Franchisees' Investment in Human Resource Management**

Author: **Can Ouyang**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

The growth of corporations influences the way that subsidiaries manage their employees. Drawing on the theory of organizational routines and agency theory, I argue that the effect of corporate growth varies depending on the area of HR management and the governance strategies that parent firms adopt to control their subsidiaries. Findings based on 893 franchisees in the quick service restaurant sector indicate a positive relationship between the growth of franchise brands and franchisees' investment in standardized skill-enhancing HR practices such as selection and training, but not in non-standardized motivation-enhancing HR practices such as pay and rewards. Transactional governance strategies motivate franchisees to comply with franchisor requirements and invest in skill-enhancing HR practices. By contrast, when franchisors adopt relational governance strategies, franchisees are more likely to increase their investment in motivation-enhancing HR practices. This study provides important implications for research on organizational growth and strategic human resource management.

Emerging Market Multinational Corporation (EMNC) Internationalization

Digital Session Chair: **Rany Salvoldi**, *Ben Gurion U. School of Management*

This session examines the internationalization of emerging market corporations (EMNCs). It contains papers on international family firms from emerging markets, outward FDI of emerging market firms, the internationalization of state-owned enterprises, and the impact of home country political connections on EMNC internationalization.

IM: Do Political Connections Make Good Travel Companions? A Review of Politically Connected EMMNCs   

Author: **Dongdong Huang**, *Business School, Nankai U.*
Author: **Lai Si Tsui-Auch**, *Nanyang Technological U.*
Author: **Marleen H. Dieleman**, *National U. of Singapore*

Overseas investments from emerging market multinational corporations (EMMNCs) have stirred debate among stakeholders in host countries, as many such firms possess political connections to their home country governments. Based on a thorough review of the literature, we develop a multi-theoretical framework that identifies, from each major theoretical perspective on this topic, core assumptions, focus, main unit of analysis, factors shaping the strength of home country political connections, mediating and moderating mechanisms, and overseas investment outcomes while synthesizing arguments from major theories used. In the end, we develop an agenda for future research.

Paper is Available to Meeting Registrants Only.

IM: Individual- and Board-Level Attributes in the Internationalization of Emerging Market Family Firms

Author: **Carlos Gonzalez**, *ITAM*
Author: **Ana González-Galindo**, *ITAM*

International family firms (FFs) from emerging markets are increasingly widespread; little research, however, has considered how differences in the institutional context influence the way FFs organize to internationalize. Drawing upon institutional theory, we propose that FFs located in less-developed institutional contexts will rely upon a different set of individual- and board-level attributes to expand internationally. Results of a comparative research design based on the internationalization decisions of 162 U.S. and Mexican FFs show that in environments characterized by the prevalence of institutional voids, FFs configure their internal operations with the intention of overcoming obstacles to internationalization at home and abroad.

IM: Imitation, Performance Feedback, and the Outward Foreign Direct Investments of Emerging Market Firms 

Author: **Yong Wang**, *Xi'an Jiaotong U.*
Author: **Kaige Li**, *Xi'an Jiaotong U.*
Author: **Jiawen Chen**, *School of Management, Guangzhou U.*

This study proposes that emerging market firms (EMFs) tend to imitate the outward foreign direct investment (OFDI) decision made by their interlocked partners and high-status firms in the same industry. We further posit that interlocked partners and high-status firms have differential values in gaining legitimacy and providing key information for EMFs. Moreover, when EMFs' performance exceeds the aspiration level, they will be more likely to imitate high-status firms and less likely to imitate interlocked partners as high-status firms can provide information on high-valuable OFDI and high level of legitimacy or reputation despite the associated challenges. We validated these hypotheses by using panel data for a sample of Chinese listed firms during 2001–2017.

IM: The Internationalization of Chinese State-owned Enterprises under Multiple Institutional Complexity

Author: **Limin Chen**, *Wuhan U.*

An important emerging phenomenon is that a large number of state-owned enterprises begin to expand globally. Because SOEs have particular nature in that they do not obey the profit-maximizing logic but seek non-economic objectives, so the interesting question is that what different result will appear when SOEs internationalize? Will the state ownership have positive impact because of government-related advantages? Or will the impact be negative due to liability of stateness? In this paper we take Chinese listed firms as the sample in which SOEs occupy a considerable share to study the influence on internationalization by ownership. More important, the typical institutional complexity in China make it possible to further investigate its interactive effects with another two levels of institutional complexities besides the organization-level institutional complexity as profit-maximizing logic and non-economic motives conflict brought by state ownership: One is the field-level institutional complexity—the regional market of the headquarter as liberal market or coordinated market; Another is the individual-level institutional complexity—the governance attribute as the top management with particular overseas background or not. By these we enter a thicker institutional context with vertical nestedness, study the overlapped interplay by the triple institutional complexities (organization* field*individual), and obtain the following valuable conclusions: The degree of internationalization of SOEs is significantly lower than that of POEs (private-owned enterprises). Moreover, no matter the liberal market environment or the manager's overseas background both promote POE's internationalization more if they act respectively. However, their joint promotion to the SOE's internationalization is larger than to the POE's. This indicates that the vertical nestedness and complicated interaction by multiple institutional complexities will produce a totally different configurational effect from the thin institutional context. As for the deeply institutionalized organizations such as SOEs which have immense strategic inertia, their behavior can be effectively changed only under the functioning of multiple institutions combined as a system. Our paper contributes to the research of SOE's internationalization, to the theory of institutional complexity, especially for the configurational effect by the vertical nestedness of multiple institutional complexity.

Foreignness Issues in International Management

Digital Session Chair: **Harald Puhr**, *WU Vienna*

This session examines various issues related to foreignness in international management. The papers address reputation spillovers among MNE subunits, corruption, the digital economy and foreign subsidiary profitability, foreign divestment and its implications, and rent extraction by host country political actors from MNCs.

IM: **Corruption, digital economy and profitability of foreign subsidiaries**

Author: **Yan Wu**, *Shanghai Lixin U. of Accounting and Finance*

Author: **Yong Yang**, *U. of Sussex*

Author: **Tomasz Marek Mickiewicz**, *Aston Business School*

Drawing on more than 14,000 multinational enterprises and their foreign subsidiaries (over 18,000) operating in 14 emerging markets over the period of 2008-2016, we find that there is a reversed J-shaped relationship between profitability of a foreign subsidiary and host country corruption: when the host country corruption is in a middle range, foreign subsidiary profitability is strongly and negatively affected, which we argue is consistent with prospect theory. Yet, when corruption is widespread and becomes a norm, reducing uncertainty, the financial performance becomes relatively stronger, albeit still at a lower level compared to corruption-free environment. Furthermore, business restrictions decrease foreign subsidiary profitability, yet corruption attenuates this negative relationship, which is in line with the (narrowly defined) greasing-the-wheel theory. Foreign companies operating in digital sectors are less affected both by the host country corruption and by the business restrictions, compared to those in non-digital sectors.

Paper is Available to Meeting Registrants Only.

IM: **A 40-year-retrospective of foreign divestment and its implications**

Author: **Ha Nguyen**, *U. of Vaasa*

Over the past forty years, foreign divestment has received a tremendous attention in international business and management research. While there are excellent previous review studies on the antecedents of the foreign divestment decisions, the implications of the decisions such as divestment mode choices, process and outcome are still not received deserved attention. It leads our knowledge on foreign divestments to be insufficient. This paper traces the history of this research stream over these past four decades using bibliometric and qualitative content analyses covering leading journals and books, with a particular emphasis on the antecedents and implications of the foreign divestments. We highlight the evolution of interest in different contexts, phenomena, theories, and methodologies, along with the factors that have driven interest in these topics. We also offer a research agenda to stimulate new insights and novel work on the variables that relating to divestment decisions of foreign subsidiaries.

Paper is Available to Meeting Registrants Only.

IM: **A Nasty Face of Liability of Foreignness: MNCs and Rent Extraction**

Author: **Asli Kozan**, *IPAG Business School*

This paper provides a conceptual framework on contingency factors that determine rent extraction by host country political actors from MNCs. Using insights from resource dependence theory (RDT) and international business literature, the paper identifies the factors at different levels (MNC, dyad and political environment level) which determine rent extraction and aims to shed light in understanding why MNCs in a host country differ in their susceptibility vis-a-vis the political actors in terms of being subject to rent extraction and in their ability to manage their liability of foreignness. Moreover, by integrating the horizontal and vertical distribution of power in the political environment to the analysis of the power-dependence relation between the MNC and the political actors, it extends the resource dependence theory's dyad-focused approach and addresses a shortcoming of RDT in taking into account the dynamics of the external environment of the firm.

Paper is Available to Meeting Registrants Only.

IM: **Reputational Spillovers Among MNE Subunits: The Tension Between Categorical and Institutional Logics**

Author: **Lilac Nachum**, *City U. of New York, Baruch College*

Author: **Suparna Chakraborty**, *U. of San Francisco*

Applying reputation theories to the MNE, we theorize reputational spillovers among MNE subunits as originating in the tension between categorical and institutional logics. We test the theory based on a sample of non-US MNEs that listed in the US, employing listing as the reputation-generating activity. We find that listing affects reputation of US subunits and that of the MNE globally at varying magnitudes and time-spans. The relationships are contingent upon the similarity between the names of the MNE and US subunits and the diversity of their audiences. The study extends the theorization of assets' sharing and spillovers among MNE subunits to reputation, an asset that received limited research attention in spite of its critical impact on MNE performance in foreign countries and globally. It also advances reputation theory by studying reputational spillovers among geographically-separated entities connected by ownership and shared nationality.

Scenario Planning Gaming Workshop for Consultant-Facilitators *Scenario Planning Game*

Organizer: **Daniel Degraevl**, *California State U., Northridge*
Facilitator: **Alessandro Fergnani**, *National U. of Singapore*
Facilitator: **Donna Dupont**, *Purple Compass*
Facilitator: **John A. Sweeney**, -
Facilitator: **Aleksandra Wrobel**, *Erasmus U.*

Following the increase of interest in corporate foresight among practitioners and of the demand for corporate foresight consulting services, we will deliver a scenario planning gaming PDW, a participatory approach to facilitate corporate foresight via gaming/simulation. We will use the Scenario Exploration System method (virtual version), a highly interactive board game devised to explore alternative future scenarios of a business environment with cards and tokens in a series of role-played, simulated (future) actions. We will teach this game to participants in the same manner we have taught it in a variety of executive education settings. Attending AOM members will be able to pick up the method in a learning-by-doing fashion. During the workshop, participants will form groups of players who will play against each other autonomously. Our team of facilitators is composed of corporate foresight experts from both academia and practice. We will close the workshop with a sharing session and a briefing where we will reiterate the importance of consulting on corporate foresight.

This AAT symposium proposal is a response to the AOM 2021 CFP (theme: "Bringing the Manager back in Management"): "What technologies and methodologies will help us better understand managerial issues?... Supply chains and other operations will be affected. How will firms' competitive and comparative advantages, core competencies, and dynamic capabilities change? Where will new competitors come from and how will corporate strategies change in the future?" (Hillman 2020, p. 1). In MC, OCIS and MED AOM divisions, different approaches have been developed to investigate the research question of digital transformation value (DTV). The three divisions recently collaborated during and an AAT symposium on the topic of "artificial intelligence value" during the annual meeting of the AOM 2020 in Vancouver PDW and on a PDW on "artificial intelligence in management" during the AOM 2018 annual meeting in Boston. These divisions also organized pre-AOM conference on digital transformation at Harvard University in 2019 and 2020 in a virtual mode prior to AOM 2020 Vancouver. During these events, the three divisions compared their different research tradition on artificial intelligence value. These divergence are today extended to the broader field of digital transformation. In a nutshell, the keywords used by each divisions indicate how different may be the respective viewpoints. Whereas OCIS draw from the the business value of IT and IT success and failures or changing nature of work, MC rather consider the impact of technology, socio-economic approaches to management and organizational development. From the standpoint of MED, these issues raise research questions the future of management education including the role of business schools and MBA/MSc classes and programs. More precisely, how is digital transformation value approached in each division? In OCIS division, this digital transformation value is investigated through the concepts of process-oriented approach for evaluating the business value (Mooney, Gurbaxani, and Kraemer 1996; Lynn, Mooney, Rosati & Cummins 2019), or cost savings due to IT outsourcing either or not related to cloud platforms (Bapna et al., 2016), hidden work related to artificial intelligence in digital transformation projects (Watson-Manheim & Klein 2019), gain-share contracts in coordination in customer support center (Bhattacharya et al., 2014) or the strength of ties in online social networks (Bapna et al., 2017). In MC division, while the impact of technology and resistance to change have been subject to a growing number of communications during recent AOM annual meetings (Monod et al., 2018; Monod et al., 2019a; 2019b), one of the most promising approach to investigate digital transformation value seem to be related to hidden costs and Socio-Economic Approach to Management (Savall & Zardet, 2013; Savall et al., 2019) and their connection to organization development (Sanders, 2019). Beyond cost and benefit calculations, the future of management education may be at stake with AI. In the context of the crisis of business school described in AMLE (Pfeffer & Fong 2002; Pfeffer & Sutton 2006; Henisz, 2011), the way business schools will be able to catching competitive advantage (Eisner, 2003) relies in a great extend on the way they may take the lead on AI, renew their role, and include digital transformation in their MBA/MSc and DBA classes and programs (Eisner & Monod, 2019). This move would contribute to business school professors' credibility with practitioners (Ritter et al., 2016).

How Much Do I Tell You? The Interpersonal Dynamics of Self-Disclosure at Work

How Much Do I Tell You? Self-Disclosure at Work

Organizer: **Natalie Longmire**, *Tulane U.*
Organizer: **Kerry Roberts Gibson**, *Babson College*
Panelist: **Belle Rose Ragins**, *U. of Wisconsin, Milwaukee*
Panelist: **Brent John Lyons**, *Schulich School of Business, York U.*
Panelist: **Tiffany Dawn Johnson**, *Georgia Institute of Technology*
Panelist: **Ashley Elizabeth Hardin**, *Washington U. in St. Louis*
Panelist: **Kerry Roberts Gibson**, *Babson College*
Moderator: **Natalie Longmire**, *Tulane U.*

Self-disclosure is foundational to relationships, yet scholars are just beginning to uncover the complex interpersonal dynamics of exchanging personal (and sometimes stigmatizing) information in the workplace. This panel symposium is designed to move the field forward by gathering experts to share perspectives and recent findings from multiple conceptualizations of self-disclosure. Topics will include processes of disclosing and reacting to stigmatizing information about oneself or a colleague, as well as how self-disclosure more generally has been impacted by the shifting context of work. Finally, attendees will have the opportunity to engage with each other and the panelists.

**Developing Consciousness and Creativity for a Post
COVID World**
Development of Creativity

Chair: **Anil K. Maheshwari**, *Maharishi U. of Management*
Chair: **R Ray Gehani**, *U. of Akron*
Participant: **Chitra Khari**, *FORE School of Management*
Participant: **Sharda Nandram**, *Nyenrode Business U.*
Participant: **Nisha Pandey**, *Vivekanand Education Society's Institute of Management, Mumbai, India*
Participant: **Vikram Gulati**, *Maharishi International U.*

A crisis such as COVID-19 creates fear, uncertainty, and doubt which may hinder effective behaviors of employees. Standard managerial skills are not enough to manage a department, an organization or even a small team in such a situation. Additional abilities may be required to delve deeper into the experiences and interpretations of employees e.g., for helping them mentally to cope with the pandemic, for finding creative and collaborative ways to complete their current tasks, and to invite their imagination for organizing future tasks for the post-COVID world. This implies that managers need to connect with others at a much deeper level to bring together skills and resources seamlessly and creatively to address the current pandemic and other grand challenges. Addressing the Academy's 2021 theme, we suggest that one of the key qualities being brought in managers would be creativity. Creativity is a multi-dimensional concept that can be associated with the person, the product, and the process of creation (Amabile, 2012). Development of creativity in a person requires development of consciousness through a process of reflection (Torrance & Hall, 1980). By transcending surface reality, one can connect with pure transpersonal consciousness, which is the field of total interconnectivity. Participants in this workshop will be able to engage in an experiential reflection exercise for development of consciousness. Their creative output will be measured using standardized tests before and after the reflection exercise. Their participants will be able to compare their outputs before and after, and with those of the others, using tools and guidance provided by the presenters. Participants will gain valuable lessons on how to improve and measure creativity, and new areas of teaching and research could emerge.

Everyone is welcome!

Organizer: **Yuting Yang**, *Iowa State U.*
Organizer: **Ruidong Zhu**, -

A mini-conference within the AOM conference, the New Doctoral Student Consortium (NDSC) is one of the longest running and most well-attended pre-conference activities. The NDSC's central mission is to provide a professional development outlet for doctoral students entering the first or second year of a doctoral program, as well as those considering entering a doctoral program. The NDSC provides an interactive environment in which doctoral students can learn skills to succeed in a doctoral program and enter the academic profession. Participants will gain insights into how to navigate the Ph.D. journey as well as the academic career, network with fellow doctoral students from around the world, and learn how to get the most out of the Academy of Management Meeting. The NDSC is committed to facilitating doctoral students' initial experience with and further integration into the Academy of Management and the academic community at large. For the second time, the NDSC is embracing the opportunity to go online and connect new doctoral students in a virtual format. The NDSC will run across two days: ● Tuesday, August 3rd: 9:00am-12:00pm (noon) EST Session ID# 11182: Thriving in your PhD ● Wednesday, August 4th: 9:00am-12:00pm (noon) EST Session ID# 17413: Building your academic career Pre-registration is required for this workshop as space is limited to 110 participants. The deadline to register online is June 24th, 2020. Please register with the following link: https://docs.google.com/forms/d/e/1FAIpQLSeQtqkmSqVJsmtmhYdhCxbO4VhvS7cxXDJ3B_eKp1MC5xqvA/viewform?usp=sf_link In case of questions or difficulties in accessing the link please send an e-mail to: ndsc.aom@gmail.com

Please note: Completing the survey does not guarantee you a spot at the NDSC. Registration is only completed when you received a confirmation e-mail. Places will be given based on a first-come-first-served basis with priority given to pre-doctoral, first- and second-year Ph.D. students. The registration deadline is June 24th. We will inform you whether we can offer you a spot shortly after this date.

Negative Feedback, Attribution, and Impression Management

Digital Session Chair: **Patrick Flynn**, *North Carolina State U.*

OB: Impression Management and Group Member Performance: Examining the Role of Collective Altruism 

Author: **Patrick Flynn**, *North Carolina State U.*
Author: **Bradley L. Kirkman**, *North Carolina State U.*
Author: **Lynn A. McFarland**, *Darla Moore School of Business, U. of South Carolina*
Author: **Jeffrey M. Pollack**, *NC State U.*

There is debate in the literature regarding when impression management motivates affiliative behavior (i.e., helping others) and how well individuals perform organizational tasks when the driving motivation is to “look good.” Based on social exchange and sensemaking theories and research, and considering the increasing use of groups and teams in today’s workplaces, we propose that characteristics of the groups to which members belong enable them to make sense of, and interpret, their collective environment and subsequently determine how they should behave to look their best. Specifically, we identify collective altruism as an important group characteristic affecting how individuals’ positive (i.e., self-promotion, exemplification, ingratiation) and negative (i.e., supplication, intimidation) impression management tactics influence their willingness to help fellow group members. Findings from a sample of entrepreneurial networking groups illustrate that the relationship between positive impression management tactics and affiliative behavior was more strongly positive when collective altruism was higher, rather than lower; and, the relationship between negative impression management tactics and affiliative behavior was positive when collective altruism was higher, and not significant when it was lower. We discuss implications for both theory and practice.

OB: Solving the Emotional Expression Dilemma during Negative Feedback Giving Using Affective Shift 

Author: **SiYan Guo**, *Robert H. Smith School of Business, U. of Maryland*
Author: **Myeong-gu Seo**, *U. of Maryland*

Leaders expect their developmental feedback to effectively help employees develop skills and improve performance, yet the effect of developmental feedback on learning remains unclear. While the feedback intervention theory (FIT, Kluger & DeNisi, 1996) suggests that feedback delivery style contains important cues moderating the effect of feedback on learning, little is known about how cues from the feedback giver’s emotional expression influence this relationship. Integrating the FIT with emotion as social information theory, we hypothesized that leaders shifting affective displays from negative to positive significantly enhance the positive effect of developmental feedback on learning via enhanced task learning and reduced intention to quit, relative to leaders shifting affects in the reverse order (from positive to negative) and in steady-state PA or NA. An online experiment manipulating leader affective displays (transitioning from NA to PA vs. transitioning from PA to NA vs. steady-state PA vs. steady-state NA) and negative feedback message (developmental vs. non-developmental) supported our hypotheses. We discuss the theoretical and practical implications of our findings.

OB: A Theory of Attribution Profiles and Employee (Dis)trust Reactions to Supervisor Justice Enactment 

Author: **Yan Liu**, *Wuhan U.*
Author: **He Huang**, *Wuhan U.*
Author: **Ning Jiang**, *Wuhan U.*
Author: **Yan Li**, *Wuhan U.*

Although they value fair treatment, employees may not react in an equally favorable manner when experiencing the same justice from their supervisors. Prior research has suggested that employees tend to reason why their supervisors acted fairly and their attributions lead to cognitive, affective, and behavioral consequences. However, this research stream overlooks the reality of employee-supervisor power dependence, thus providing an oversimplified theory of employee attributions to supervisor justice motives. Drawing on power-dependence theory, we develop a theoretical framework delineating how the different forms of power dependence within the employee-supervisor dyad shape distinct patterns of employee attributions of supervisor justice motives, and how the combinations of motive attributions affect employee (dis)trust reactions to supervisor justice. Challenging the assumption that there is homogeneity in employee attributions of supervisor justice motives, our research conceptualizes heterogeneous groups of employees when making justice motive attributions, advances the understanding of employee reactions to justice, and has important implications for research on interpersonal relationships.

AI and Algorithmic Decision Making: Exploring Their Promises, Perils, And Pitfalls

AI and Algorithmic Decision Making

Organizer: **Dawei Wang**, *Northwestern Kellogg School of Management*
Discussant: **Michal Kosinski**, *Stanford U.*
Presenter: **Sandra Matz**, *Columbia Business School*
Presenter: **Poruz Khambatta**, *UCLA Anderson School of Management*
Presenter: **Dawei Wang**, *Northwestern Kellogg School of Management*

With the recent advancements in artificial intelligence (AI), there is a trend in management research to study how algorithms can assist in critical organizational decisions, such as who to target for web content, or who to interview and hire. These examples show that on one hand, AI can be a powerful tool that improves decision-making, helping companies to become more efficient and cost-effective. On the other hand, these improvements come with certain costs that research has recently exposed, such as algorithmic biases. These opportunities and challenges pose further questions as to how organizations will embrace AI in decision-making, and the extent to which managers' will trust in AI. In this symposium, we discuss the promises AI brings in recommendation, hiring, and lending systems. We also discuss the perils and pitfalls such as algorithmic bias. Lastly, we discuss how managers can navigate this novel and less-understood territory, given these opportunities and challenges.

Secrecy at Work: Navigating the Technological Frontier *Secrecy at Work: Technology*

Digital Session Chair: **Madeleine Stefanie Rauch**, *Copenhagen Business School*

OMT: Drones in Military Warfare: The Moral and Emotional Implications of an Emerging Technology

Author: **Madeleine Stefanie Rauch**, *Copenhagen Business School*

Winner of the OMT Division Best Paper Award

While there has been increasing interest in the design, adoption, and workplace-related issues pertaining to emerging technologies, the emotional and moral challenges for people interacting with them have received relatively less attention. In this paper, we study how emerging technologies trigger mixed feelings by disrupting the meaning and moral legitimacy of their work. We examine how drones—an emerging technology in warfare used to remotely observe and attack targets from offsite command centers—have changed the nature of the work of military personnel. To understand this change and its effects, we draw on field observations, interviews, internal documents, and 43 personal diaries from current and former military personnel working for the U.S. Air Force’s “drone program.” We explain how actors grapple with emotional ambivalence—the simultaneous pull of oppositional positive and negative emotions—but suppress the display of their emotions in an organization with strong social controls. We develop a model that explains how new technology changes the nature of work and triggers emotional ambivalence by unsettling its core meaning and moral legitimacy, and how actors deploy different strategies to uphold extant meaning in their work, add meaning to their work, or quit the organization altogether. We advance theory on emergent technologies by illuminating their emotional and moral implications for the nature of work.

OMT: Open Secrecy and Liminal Space: Managing Collective Secrecy in the Making of the Atomic Bomb

Author: **Rohin Borpujari**, *London Business School*

Innovation projects often involve the deployment of secrecy as a protectionary measure to prevent information leakages. Research in sociology and anthropology has long emphasized that a core consequence of secrecy is the social structuring of groups of actors, creating boundaries between those in-the-know and those not. This translates to a tension between the inclusion and exclusion of workers within the organization, which in turn presents a tension between value creation and value appropriation in the context of innovation. Through a historical case study of the making of the atomic bomb during World War II, I probe the question of how organizations manage this tension. I find that the emergence of a grey area between tactics of secrecy and openness – what I call “open secrecy” – facilitated the navigation of inclusion-exclusion boundaries in the “Manhattan Project”. I define open secrecy as the intentional revelation of secret-related information between actors. Secret-related information can be of three kinds – information about the act of concealment, meta-information about the secret, and partial information about the secret. I argue that open secrecy tactics give rise to a liminal space within the organization, occupied by groups that are partially included into the secret-keeping in-group, yet neither fully included nor fully excluded. This liminal space allows for the preservation of the value-creation benefits of inclusion while safeguarding the value-appropriation benefits of exclusion, thus helping the organization successfully achieve its innovation objective.

OMT: Safe Crossings: How Laboratory Staff Circulates Knowledge Amid Scientific Secrecy

Author: **Danielle Elaine Bovenberg**, *UC Santa Barbara*

Finalist for the Louis R. Pondy Best Paper Based on a Dissertation Award

In regional economies that revolve around advanced technologies, organizations often pool their resources into shared-instrumentation facilities that make crucial instrumentation available to all (Medler et al., 2016; Sia & Owens, 2015). Yet, when working in these facilities, competing researchers will likely hesitate to share useful operational knowledge with each other because they fear being “scooped” by researchers whose work lies close to theirs (Haas & Park, 2009; Nelson, 2016; Walsh, Cho & Cohen, 2005a, 2005b). Consequently, such pressures for secrecy hamper the capacity of shared facilities to foster cumulative innovation (Murray & O’Mahony, 2007). To deliver value despite these pressures, the facility’s technical staff must strike a balance when assisting competing users: develop expertise that is available to all users while safeguarding individual users’ competitive interests. This article considers how the staff engineers of a nanofabrication facility approach this task of circulating operational improvements among users despite pressures that keep users from sharing. Drawing from a year-long ethnographic study and ethnographic interviews with users and staff, I suggest that the facility’s process engineers develop strategies for arranging “safe crossings”, occasions when operationally useful but strategically innocuous information is transferred between research groups. Two facets of process engineers’ role in the facility’s division of labor enable them to arrange safe crossings: that of technician and that of broker. This combined role provides these engineers with technical and network-related knowledge surpassing that of the lab’s users, enabling process engineers to recognize risks and adapt their sharing practices accordingly. The findings contribute to literature on scientific secrecy and brokerage occupations by showing the strategies by which technical staff shares and withholds information to maximize the potential for innovation in competitive communities of practice.

OMT: Talk in Safe Modes: Firms’ Language Use Under Scrutiny

Author: **Hitoshi Mitsuhashi**, *Waseda U.*

Author: **Azusa Nakamura**, *Bocconi U.*

Author: **Aneesh Datar**, *Bocconi U.*

Firms communicate to gain resources and social support from stakeholders with highly diversified interests. Previous research suggests that firms engage in selective disclosure when being under scrutiny, but we know little about how firms under scrutiny change communication patterns, which can be characterized with language volume, language attributes, and language contents. In this study, we propose and test an argument of “talk in safe-modes”: if being highly scrutinized, firms use less voluminous and complex language and communicate in a less self-serving manner. To test our hypotheses, we use the variations in the level of scrutiny that results from U.S. SEC different leaderships and base our analysis upon valid qualitative evidences that Mary L. Schapiro (January 27, 2009 – December 14, 2012) was a stronger enforcer than Mary Jo White (April 10, 2013 – January 20, 2017). Our analysis of high-tech firms’ communication patterns in Form 10-k supports our arguments of “talk in safe-modes.”

Changing Socio-Ecological Systems at the Theory-Practice Nexus

Systemic change at theory-practice nexus

Organizer: **Domenico Dentoni**, *Montpellier Business School*
Organizer: **Rahmin Bender**, *Wageningen U. and Research*
Organizer: **Rob Lubberink**, *Amsterdam school of International Business*
Organizer: **Carlo Cucchi**, *Wageningen U. and Research*
Discussant: **Helen Etchanchu**, *Montpellier Business School*
Discussant: **Sylvia Grewatsch**, *Brock U.*
Discussant: **Ralph Hamann**, *U. of Cape Town*

A plethora of wicked problems affect our planet. Entrenched in ecological systems, our social systems struggle to organize to address, and even cope, with these grand challenges. Within these social systems, we - as sustainable business scholars, educators and/or practitioners - also struggle to organize our research and social impact activities in ways that effectively and collaboratively address these problems. As we face these daunting issues, the overarching goal of the PDW is to collectively stimulate, experience, reflect and theorise on processes of purposeful and collective change within socio-ecological systems. To meet this goal collectively, we invite PDW participants to work in teams that: 1) collectively map a complex socio-ecological problem (based on causal loop diagrams) and the actor ecosystem (based on value network maps) where the problem is entrenched; 2) collectively identify leverage points to address the problem innovatively and design novel partnerships in the actor ecosystem accordingly; 3) pitch the outcome of their mapping and proposed systemic intervention, and receive feedback from the other teams, us as co-organizers, and invited thought leaders; and 4) collectively reflect on the usefulness of this problem-ecosystem mapping approach, on how it could be further adapted, and on its potential in terms of theory and practice contribution.

Please contact Domenico Dentoni at Montpellier Business School, University of Montpellier (email address: d.dentoni@montpellier-bs.com) to receive background material in preparation for this session.

Collectively Acting and Re-Acting: Insights on Coping with the Past and Strategizing for the Future

Collectively Acting and Re-Acting in Strategizing

Digital Session Chair: **Neil Aaron Thompson**, *Vrije U. Amsterdam*

SAP: **Practicing Strategic Philanthropy: Notes from the Field**

Author: **Desmond Wong**, *Our Aletheia*

Strategic philanthropy is a field that has yet to tangibly apply Porter and Kramer's (2002; 1999) original concepts. In line with Kubickova's (2018) review of the field, this short paper seeks to fill a gap on the 'how' of measuring impact and applying strategy frameworks and tools to better managerial decision making. Action research was applied to answering two questions, following a five-week retrospective on synthesizing a framework to do just this for a grantmaker in Singapore. Application always precedes measurement, but adaptation needs to be made to the frameworks and tools. A competitive position and capabilities for 'outside-in' strategy is operationalized through issue-based dynamic capabilities and investment, as well as ongoing boundary critique on focus issues (where meaning is transverse on multiple planes). By comparison, the value chain in 'inside-out' strategy requires a synthesis with process-based approach to horizontal flow (where analyses on demand and attribution are bi-directional due to the nature of public goods). Saliently, the measurement inherent in cost accounting has a unique function of recombining both 'outside-in' and 'inside-out' strategies for an integrated approach and a cogent framework to embed in organizations. Scholar-practitioners would well benefit from mining the under-researched links between strategic management, systems thinking, and action research, where there has been theoretical exploration in the past five years. This is especially so for a field where meaning, horizontals, and systems in value creation cannot be divorced from what Laudal (2019) terms the utility, supply, and conversion of public goods in his novel analysis.

SAP: **Let Them All Discuss: Realizing Organizational Moral Agency through Collective Sensemaking**

Author: **Vinayak Ram Tripathi**, *IMT Ghaziabad*
Author: **Swati Ghulyani**, *Ahmedabad U.*

This paper explores how the moral agency is realized in organizations through collective sensemaking of the lived experiences of the organizational actors and organization virtues. In this ethnographic study, we use the strategy-as-practice perspective to examine the micro-social activities undertaken by doctors, nurses, hospital administrative staff, and frontline workers (community counselors) during a bi-weekly maternal healthcare review meeting at a community service hospital. These meetings are a salient platform facilitating interaction between the clinical and social actors delivering neonatal and antenatal care to a tribal community with high incidents of sickle-cell anemia. By illustrating the examination of an incident across two meetings, our findings demonstrate the subtle and intricate nature of interaction a) amongst the actors belonging to different professions and b) between the actors and the organization through the spiritual readings discussed at the beginning of every meeting. It is noted that collective sensemaking of the actors' experiences, their professional expertise, and the guiding philosophy of the organization symbiotically interact towards shaping the moral agency of the organization. We identify four inter-related collective sensemaking practices by these actors which are central to the process of realizing organizational moral agency. The practices a) exchanging information and b) experiencing liminality are mediated by c) engaging in organizational identification by reflecting on the foundational values and these linearly drive towards the fourth practice i.e. d) taking responsible actions towards the community. Implications of the study are discussed.

SAP: **Re-Acting Together: Coping Collectively with Breakdowns and the Evolution of Practices**

Author: **Daniel Massie**, *BI Norwegian Business School*

Coping with breakdowns is a challenge for people across fields of practice. Yet, both the role of breakdowns in interdependent work-processes and how actors cope collectively with them are currently not well understood. This ethnographic field study on coordination and inter-organizational relationships in a construction project presents empirical evidence of breakdowns and theorizes their role, consequences, and the variety of ways actors cope with them. Workers (on construction projects) face frequent breakdowns in their work-processes that they make sense of and cope with collectively. The paper examines breakdown processes that unfold over time to understand how actors make sense of and cope with breakdowns collectively. I identify three distinct types of breakdowns, and choose to focus on operational breakdowns to theorize about the breakdown resolution processes and how they relate to the evolution of practices. The analysis identifies four distinct coping practices for dealing with breakdowns. In conclusion, I suggest that both breakdown-processes and coping practices play a significant role in influencing project outcomes and the evolution of practices.

Incentives and Firm Performance

Digital Session Chair: **Djordje Zivkovic**, *U. of Liechtenstein*

SIM: Being Paid for Doing Good: The Effects of TMTs' Social Incentives on Firms' Social Performance

Author: **Djordje Zivkovic**, *U. of Liechtenstein*
Author: **Alexander Zimmermann**, *U. of Liechtenstein*

While recent years have witnessed radical environmental, regulatory, and societal transformation, an increasing number of organizations view social performance as an important business outcome. However, we know relatively little about the antecedents of this performance outcome. This study examines how the integration of social incentives in TMT compensation schemes affect firms' social performance and what role the overall firms' social value orientation plays in this regard. We rely on a novel database for TMTs' social incentives for the years 2016 and 2017 and found a positive relationship between social incentives and social performance. Further, we provide evidence that social value orientation on the firm level only fosters the adoption of social incentives, but not social performance itself. Based on these findings we contribute to the literature by introducing the adaptation of social incentives as (1) an important driver for social performance, and (2) as instrumental for the effectiveness of social value orientation.

Paper is Available to Meeting Registrants Only.

SIM: Are CEO incentives for corporate social responsibility really effective?

Author: **Philipp Alexander Thompson**, *Freie U. Berlin*

Calls for corporations to act more socially responsible have increased in intensity in recent years. As a result, in an effort to improve corporate social performance, companies have begun to introduce monetary incentives for executives to improve their firms' CSR engagement. However, insights from stewardship theory, behavioral research into the motivational effects of monetary incentives cast doubt on the supposed effectiveness of such CSR incentives. I argue that these new incentives, by fostering extrinsic motivation and an instrumental decision frame among executives, and crowding-out intrinsic and pro-social motivations, foster symbolic CSR efforts by managers, instead of improving substantial CSR implementation. The analysis of a panel dataset of roughly 1300 large, publicly traded corporations in the US nonfinancial sector over the period from 2002 until 2015 shows that CSR incentives for CEOs only increase the adoption of formal CSR policies, but do not lower the risk of corporate irresponsibility scandals.

SIM: Natural Experiments on the Impact of Financial Performance on Subsequent Changes in ESG Ratings

Author: **Abbas Hejri**, *Macquarie U.*
Author: **Dan Daugaard**, *Macquarie U.*
Author: **Martina K. Linnenluecke**, *Macquarie U.*
Author: **Thomas Martin Smith**, *Macquarie U.*

Much of the current reporting in the financial press suggests that companies with superior environmental, social, and governance (ESG) ratings outperform their competitors financially. However, and despite numerous studies on the relationship between a corporation's financial performance (FP) and its ESG score, researchers are yet to reach a consensus on whether there is indeed a causal relationship between FP and ESG. Here, we explicitly investigate the issue of reverse causality – while better ESG performance might lead to higher subsequent FP due to improved corporate reputation and less investment risk, it can also be argued that companies with higher FP have more slack resources, which are used for subsequent ESG investments. Endogeneity may mask the genuine relationship between variables; hence we employ a natural experiment method, using three distinct large-wave exogenous shocks in the market (the Enron/Worldcom scandal, the global financial crisis, and the introduction of Obama's climate change bill) to attempt to resolve this issue. Consistent with the slack resources theory first proposed by Waddock and Graves (1997) in the FP?ESG context, we find that corporations with superior FP in one period have more engagement in ESG-related activities in subsequent periods. We use both accounting-based and market-based measures for FP, and our results remain robust for all three exogenous shock episodes. We conclude by discussing implications for future research.

SIM: Corporate environmental responsibility motivated by loss aversion

Author: **Minjung Lee**, *U. of Texas at Dallas*
Author: **Young Hoon Jung**, *Montclair State U.*
Author: **Jihyun Eun**, *Salisbury U.*

As societal concerns over environmental protection increase, firms begin to face increasing legal obligations to engage in corporate environmental responsibility (CER). Interestingly, however, some firms go beyond what is legally required and proactively undertake CER practices, leaving scholars to question their motivations. To our best knowledge, the previous literature only offers a dearth of information on the characteristics of proactive CER practices as a risky investment. Thus, in this study, we investigate how organizational risk-taking propensity derived by loss aversion affects corporate motivation to implement proactive CER practices. Using data of firms voluntarily participating in the Green Power Partnership program in the United States, we find that firms performing better than their peers are likely to increase their use of green power. As outperforming firms typically have more to lose than underperforming firms, they become more risk-seeking to avoid future loss of competitive advantage. As a result, they become motivated to more proactively engage in stakeholder management in the form of green energy consumption, even though such proactive CER requires more time and resources. We also find that unrelated and related diversifications have conflicting influences on such a motivation mechanism.

Author: **Yuwei Qi**, *Renmin U. of China*

Author: **Ruxi Wang**, *Renmin U. of China*

Although research on CSR (corporate social responsibility) recognizes the impact of institutional pressure from government, there is little understanding of how that stakeholder would respond to CSR reporting. We developed a framework to examine how state-owned capital run by the government with both social effects and economic interests to pursue would react to CSR reports, the response of firms following government signals. Using the sample of Chinese private firms from 2014-2018, we found that CSR report quality would be positively related to socially effective state-owned capital investment while negatively related to profit-seeking state-owned investment. These two relationships are moderated by the power represented by the shareholding of these investors. Our study contributes to the CSR literature by examining whether obedient firms ultimately receive the resources they seek from the government, and advances stakeholder research by examining the interaction between government and firms.

Control and Trust in Teams

Digital Session Chair: **Dongwon Choi**, *Ewha Womans U.*

OB: The Interactive Effects of Peer-based Control and Leader Goal Orientation on Team Effectiveness

Author: **Dongwon Choi**, *Ewha Womans U.*
Author: **Yooshin Im**, *Anyang U.*

While peer-based control is one of prevalent control mechanisms in team process, the extant literature has examined the role of peer-based control under self-managing team context rather than more general team contexts with a formal team leader. Integrating team regulatory theory and the notion of goal orientation, we investigate the interactive effects of peer-based control and leader goal orientation on team effectiveness through team reflexivity. To test the research model, we adopted a time-lagged survey research design. On the basis of data from three sources (335 team members, 68 team leaders, 21 upper-level leaders), results showed that peer-based control is positively associated with team reflexivity, which result in higher team effectiveness. In addition, we found that leader learning goal orientation facilitates the positive impact of peer-based control on team reflexivity, which result in better team effectiveness. While we failed to find a significant moderating effect of leader performance-prove goal orientation, we instead found a three-way interaction effect of peer-based control, leader learning goal orientation, and leader performance-prove goal orientation in predicting team reflexivity. We discuss the implications of considering the interactive nature of team-member dynamics and leadership influences for understanding team processes at work.

Paper is Available to Meeting Registrants Only.

OB: Outcomes of Organizational Trust: A Multi-Level Perspective and Meta-Analytic Examination

Author: **Jae Young Choi**, *Drexel U.*
Author: **Bart De Jong**, *Australian Catholic U.*
Author: **Christian Resick**, *Drexel U.*
Author: **Natalie Jungyoun Shin**, *Drexel U.*
Author: **Edward Hyatt**, *U. of Melbourne*

Recognizing that organizational trust is inherently multilevel, scholars have adopted a level-of-analysis perspective in studying this phenomenon. However, research has predominantly focused on cross-level effects of team-level factors, thereby neglecting factors residing at higher levels of analysis (e.g., societal) and alternative models integrating levels (e.g., multilevel and compositional models). Consistent with these limitations, scholars have converged around the need to address three unanswered levels-of-analysis questions: 1) Are relationships of trust with other variables homologous across levels of analysis? 2) How does societal-level culture shape lower-level relationships of trust with other variables? 3) How does trust consensus help clarify the way trust operates at the unit level? This paper aims to advance understanding of these issues through a meta-analytic examination. In line with our multilevel theorizing on homology, we find that trust-outcome relationships are different in magnitude across levels. Contrary to our situational strength prediction, our cross-level findings reveal that Cultural Tightness strengthens individual-level trust-outcome relationships. Finally, our compositional findings demonstrate that trust consensus promotes unit outcomes both directly and by moderating the impact of trust magnitude. Our study advances a multilevel understanding of trust and elaborates on current theories by revealing discontinuities in how trust operates and manifests across levels.

OB: Reconceptualization of Intra-Team Trust: Shared Origins of Trust Perceptions Within a Team

Author: **Jin Won Park**, *Binghamton U.-State U. of New York*

This paper argues that current conceptualization of team trust seems deficient due to the questionable assumptions of the construct. Unlike the assumptions underlying the team trust construct, trust perceptions that individual team members hold may not be shareable or generalizable. Rather, what can be generalized and shared and thus become a shared team-level property is existence (or non-existence) of team members' trust in the team and the origins of trust perceptions existing within the team. Based on the clarified assumptions, team trust is redefined. And, as reconceptualization of team-level trust, novel forms of intra-team trust are proposed.

OB: The impression management-emergent leadership relationship: The mediating role of trustworthiness

Author: **Andrew A. Hanna**, *U. of Nebraska, Lincoln*

Recent research has greatly expanded our understanding of the element of emergent leadership (i.e., being perceived as "leaderlike", despite a lack of formal status or authority), exploring a number of individual behaviors thought to impact team members' perceptions of others as leaderlike. While growing attention to how individuals' natural behaviors influence these emergent leadership perceptions has seen success, questions regarding the impact of strategically used behaviors remain. To better our understanding of how conscious attempts to influence others' perceptions lead to informal leader emergence, I examine how different impression management tactics spark varying effects on these resulting perceptions. Further, I examine perceptions of trustworthiness as a mediating mechanism of this relationship and how an individual's trait authenticity moderates subsequent leadership emergence. In doing so, I look to provide a link between signaling and social categorization theories to help show how calculated behaviors act as signals of attributes associated with perceived leaders.

OB: I. Human: How Artificial Agents Make Us Try Harder (Or Not) In Creative Tasks

Author: **Daria Morozova, HEC Paris**
Author: **Mathis Schulte, HEC Paris**

Although creativity is almost universally considered a uniquely human faculty that will help humans keep their jobs and compete against artificial agents (robots, artificial intelligence), little research has examined how exposure to artificial agents impacts the human creative process. Drawing on social comparison and expectancy violation theories, we hypothesized that individuals would decrease their creative effort when they are exposed to artificial agents, but not humans, and consider artificial agents non-threatening. In multiple experimental studies and a survey (total n=1497) across collaborative, competitive, and neutral contexts, we found support for our hypothesis and showed that this effect is contingent on perceptions of artificial agents' creative capacities. When artificial agents are, in defiance of the general belief, capable of delivering a creative output, individuals exert greater effort when creativity as a uniquely human characteristic is more salient to the self and the perceived threat from an artificial agent increases.

OB: How Narcissism, Promotions Criterion, and Empowering Leadership Jointly Influence Radical Creativity

Author: **Huan Cheng, Huazhong U. of Science and Technology**
Author: **Shuangshuang Tang, Huazhong U. of Science and Technology**
Author: **Zhiqiang Liu, Huazhong U. of Science and Technology**
Author: **Wenjun Yin, School of Management, Huazhong U. of Science and Technology**
Author: **Kong Zhou, School of Management, Huazhong U. of Science and Technology**

From a person-situation interactional perspective, this study examined a three-way interaction among narcissism, promotions based on relative performance, and empowering leadership that affects radical creativity. Drawing on trait activation theory, we theorized that the relationship between narcissism and radical creativity is contingent upon promotions based on relative performance and empowering leadership. In addition, we also hypothesized employees' diverse information searching as an underlying mechanism linking the three-way interaction and radical creativity. We tested these hypotheses with a multi-time and multi-source field study of 462 employees in 88 teams, and as we expected, the results indicated that narcissism was positively related to radical creativity via diverse information searching when employees' promotions are based on relative performance and their supervisors display high empowering leadership.

OB: The Bias in Creativity Evaluation of Artificial Intelligence

Author: **Federico Magni, Hong Kong U. of Science and Technology**
Author: **Jiyoung Park, -**
Author: **Manchi Chao, Hong Kong U. of Science and Technology**

Drawing from folk psychology theories, we examine when and how the producer's identity as artificial intelligence (AI) or human influences creativity evaluations. Four experimental studies demonstrated that people generally discount the creativity of apparent AI (vs. human) production, both directly and because of reduced effort perceptions. However, this effect is not ubiquitous. Evaluators who believe that creativity is a fixed (vs. malleable) attribute are less likely to discount the creativity of productions presented as made by AI rather than humans. Moreover, the evaluation bias is found when production is framed as artistic but not when it is framed as commercial. Thus, the bias in creativity evaluations toward AI (vs. human) production is situated and depends on both internal (i.e., lay theories) and external (i.e., production domain) influences.

OB: Environmental Sensitivity and Task Performance: Exploring the Potential of Vantage Sensitivity in Le

Author: **Maike Andresen, U. of Bamberg**
Author: **Patrice Wyrsh, U. of Bern**

Environmental sensitivity is the ability to register and process environmental stimuli. Previous research shows a 'best-worst-school-performance' pattern in highly sensitive children. In this context, vantage sensitivity refers to the bright side, whereas vulnerable sensitivity refers to the dark side of sensitivity. However, environmental sensitivity has not yet been linked to employees' performance. Drawing on conservation of resources (COR) theory, and based on 217 German leader-follower dyads, our results show that both employee and leader vantage sensitivity are related to increased leader-rated employee task performance; employee and leader vulnerable sensitivity, meanwhile, are related to decreased employee task performance. Moreover, polynomial regression and response surface analysis show that the comparably highest performance levels are attained by vantage-sensitive dyads. Furthermore, vulnerable-sensitive leaders decrease the performance of vantage-sensitive employees. Lastly, the theoretical and practical implications of these findings, as well as limitations and future research directions, are discussed.

Legitimation Processes

Legitimation Processes

Digital Session Chair: **Chang Wa Huynh, HEC Paris**

OMT: **Organizational Purpose: Legitimacy Judgments and Preference for a Company**

Author: **Chang Wa Huynh, HEC Paris**
Author: **Yoonjin Choi, London Business School**
Author: **Rodolphe Durand, HEC Paris**

Organizational purpose is an overarching corporate goal that reaches beyond profit maximization which to be effective must be perceived as legitimate. In this paper, we test whether legitimacy judgments about a firm's purpose increase preference for the firm. Drawing on legitimacy-as-judgment theory and prosocial orientation literature, we expected and found using two distinct experiments that perceived collective agreement on legitimacy and personal deviations from this agreement both contribute to a higher preference for a purposeful company, while only the latter component depends on prosociality. This result holds for the moral (but not the pragmatic) dimension of legitimacy. This paper contributes to research on organizational purpose and the literature on legitimacy as judgment and has critical relevance for practice.

OMT: **Selling Liberation: Gender Washing and Tainted Markets' Legitimation (1920s-2010s)**

Author: **Lilia Giugni, U. of Cambridge**
Author: **Paul Tracey, U. of Cambridge**

This in-depth historical study explores the ways in which two tobacco manufacturers appropriated over a century the cultural resources produced by feminist movements in order to legitimate an increasingly 'tainted' market. Using archival, interview and online multimodal data spanning from the 1920s to the 2010s, we suggest that these corporations engaged in a specific type of social symbolic work, which we call gender washing. Based on this analysis, we offer a process model that encapsulates the conflicts surrounding gender-related meanings, labels and artefacts within the marketplace. We contribute to debates on market legitimation, as well as on the gender politics of market developments and social symbolic work.

Paper is Available to Meeting Registrants Only.

OMT: **Can Radicals Get a Seat on the Negotiation Table? A Dynamic Perspective on Legitimation Processes.**

Author: **Karina Reif, Albert-Ludwigs-U. Freiburg**
Author: **Thomas Karl Gegenhuber, Leuphana U. Lüneburg**
Author: **Diemo Urbig, Brandenburg U. of Technology Cottbus-Senftenberg / Indiana U. Bloomington**
Author: **Robin Buerger, Fraunhofer Center for International Management and Knowledge Economy IMW**

The growing body of the cultural entrepreneurship literature seeks to understand how actors facing the liability of newness gain legitimacy in the eyes of resource holding audiences. However, less is known about how dynamics play out overtime when an actor with a lack of legitimacy seeks to regain it. In this paper, we conduct a qualitative, in-depth case study of a radical soccer fan community facing an identity-threatening political decision (i.e., relocating their fan zone within their stadium). Realizing that they lack a seat on the negotiation table and their traditional forms of protest bore no fruits, they launched a crowdfunding campaign to promote their cause (i.e., keeping the fan zone). The radicals successfully raised money and - even more important - convinced several national and international audiences, ultimately resulting in a legitimacy gain in the critical local political audience's eyes. This paper demonstrates how digital artifacts such as crowdfunding serve as a mechanism for dissociating with illegitimate elements while reconfiguring the links with the environment to gain legitimacy. Moreover, we demonstrate that actors with a lack of legitimacy first need to gain endorsements from other actors before turning to the actor holding the most critical resource.

OMT: **New Ventures Versus Established Firms: Legitimizing Innovations in a Novel Market**

Author: **Dennis Van Kampen, Vrije U. Amsterdam**
Author: **Fleur Deken, Vrije U. Amsterdam**
Author: **Hans Berends, Vrije U. Amsterdam**
Author: **Joey Van Angeren, Vrije U. Amsterdam**

We study how new ventures and established firms legitimize their innovations for external audiences. While the existing literature has focused on distinguishing between the legitimacy consequences of familiarity and distinctiveness framing, and how this may also depend on the audience, what has been overlooked, however, is the actor who is framing. We therefore lack understanding on how differences between actors framing an innovation affect its legitimization. By following 6 new ventures and 9 established firms in a novel market, we find that the activities of new ventures and established firms to legitimize their innovation differed. For new ventures, gaining attention and acquiring legitimacy was particularly important, for which a distinctiveness frame was mostly effective. Established firms instead were confronted with audiences' existing expectations about them and had to ensure that their new product aligned with these expectations in order to extend legitimacy for the new product as well. For extending legitimacy, only familiarity framing was effective. Our main contribution is that the consequences of framing do not only depend on the framing strategy or the audience that is being addressed, but also on the actor framing the innovation.

Entrepreneurial Pivoting: Theoretical Frontiers and Practical Implications

Entrepreneurial Pivoting

Organizer: **Alicia DeSantola**, *U. of Washington*
Organizer: **Cheng Gao**, *U. of Michigan, Ross School of Business*
Organizer: **Christian E. Hampel**, *Imperial College Business School*
Panelist: **David Hsu**, *The Wharton School, U. of Pennsylvania*
Panelist: **Laura Huang**, *Harvard Business School*
Panelist: **Riitta Katila**, *Stanford U.*
Panelist: **Pinar Ozcan**, *Oxford U., Saïd Business School*
Panelist: **Violina Rindova**, *U. of Southern California*
Panelist: **Paul Tracey**, *U. of Cambridge*
Panelist: **Andy Wu**, *Harvard Business School*

This Symposium examines the emerging phenomenon of entrepreneurial pivoting through the lenses of key theoretical perspectives. While pivoting is often considered ubiquitous among new ventures, scholarly research on this topic is still nascent. This Symposium seeks to bridge this gap by shedding light on the major theoretical frontiers in entrepreneurial pivoting research. To this end, the Symposium will bring together leading scholars who will reflect on the state of entrepreneurial pivoting research and its implications for stakeholders from different theoretical perspectives (e.g. institutional theory, organizational learning, nonmarket strategy, design theory, stakeholder cognition, and new market emergence). The symposium will start with an introduction of pivoting research, and then will feature insights from each of the panelists, followed by an integrative discussion and Q&A session. The Symposium intends to equip participants with an understanding of the pivoting phenomenon, key theoretical approaches to studying pivoting, and promising opportunities for developing theory by advancing the theoretical frontiers of entrepreneurial pivoting research.

Heterogeneity in exchange platforms: Drivers of complementors' behavior and platform's performance *Heterogeneity in exchange platforms*

Organizer: **Katia Meggiorin**, *NYU Stern School of Business*
Presenter: **Carliss Baldwin**, *Harvard U.*
Presenter: **Bilgehan Uzunca**, *ESADE Business School / Ramon Llull U.*
Presenter: **Hakan Ozalp**, *Vrije U. Amsterdam*
Discussant: **Arun Sundararajan**, *NYU Stern*

This symposium discusses the strategic implications of heterogeneity in exchange platforms. In particular, the panelists will present original work investigating the effects on performance of heterogeneity at both the platform and the users' level (with a stronger focus on the supply side). The discussion that will follow, will uncover new research pathways for scholars and practitioners who are looking for ways to embrace the complexity present in platform environments, where there coexists a tension between the platform's need to influence the behavior of its users, and the complementors' need to pursue unique competitive strategies allowing them to differentiate from competitors in the same market space.

PNP: Making Sense of Critical Incidents in High Reliability Organizations: A Formative Literature Review

Author: **Catharina Geurtzen**, *U. of Bern*
Author: **Claus Jacobs**, *U. of Bern*

How has sensemaking of critical incidents in high reliability organizations been studied empirically? This paper explores this question by way of a formative review of the literature, by charting the terrain and by concluding an integrative framework that suggests future research. Drawing on the nexus of literatures on sensemaking and high reliability organization, we demonstrate that most empirical work has focused on the context of actual, fatal disasters (at the expense of important early cues such as critical incidents); has foregrounded the reliability threat from technology failure (with social-interaction-based reliability still to be fully understood) and shows a certain bias for after-action sensemaking (rather than in-action sensemaking). We conclude that future research should dedicate more attention to critical incidents and near-errors; reliability threats stemming from lapses in social interaction and therefore employ more in-action, interaction-oriented approaches to sensemaking.

PNP: Of Saints and Scroungers: Effects of Administrative Burden on Citizens' Policy Perceptions

Author: **Jonas Bruder**, *U. of Mannheim*
Author: **Martin Sievert**, *U. of Mannheim*

Administrative burdens potentially influence citizens' perceptions of welfare policies and beneficiaries. Still, empirical evidence on the effects of different cost categories (learning, compliance, and psychological costs) on citizens' perceptions is scarce. This research aims to unravel the impact of administrative burden on different levels of policy feedback. To this end, we apply a factorial survey experiment to examine the separate effects of learning, compliance, and psychological costs. Following previous research, we investigate whether and how exposure to administrative burdens affects citizens' prejudices against beneficiaries, their policy support, and legitimacy judgments. The design includes information cues about administrative burdens in the German unemployment benefit policy "Hartz 4". The results from a sample of 1.602 German citizens confirm an influence of administrative burdens on policy perceptions. Specifically, exposing participants to information about psychological costs decreases policy support and legitimacy judgments. At the same time, it increases support for spending on the policy. Furthermore, compliance costs decrease legitimacy judgments. However, learning costs have no impact, and prejudices against beneficiaries remain unaffected by administrative burdens, contradicting previous research. The findings provide fine-grained insights into the consequences of administrative burdens, showing that primarily psychological costs shape citizens' perceptions of policies and the implementing organization.

PNP: Perceived Red Tape and Recruitment and Selection Practices in the Public Sector

Author: **Anne Skipper Bach**, *Aarhus U.*
Author: **Ann-Kristina Løkke Møller**, *Aarhus BSS, Aarhus U.*
Author: **Anders Ryom Villadsen**, *Aarhus U.*

This study investigates the effects of perceived red tape on recruitment and selection practices in public organizations. Although, red tape is argued to constrain organizational practices and thus organizational performance, it has not yet been analyzed whether red tape is associated with recruitment and selection practices. By conducting a study with survey responses from 1,000 public frontline leaders combined with administrative data, this paper investigates how perceived red tape is associated with the formation of recruitment objectives and selections based on values and cultural fit. Findings indicate a negative relationship between perceived red tape and the formation of recruitment objectives and selections based on fit. Furthermore, findings indicate that leadership tenure does not moderate the association between red tape and recruitment and selection practices. The study contributes to the public human resource management literature by focusing on the negative influence of perceived red tape on HR practices.

PNP: Alleviating administrative burden through digitalization: An experimental approach

Author: **Janne Kalucza**, *U. of Hamburg*

Individuals experience costs of administrative burden when trying to gain access to social programs. Digitalizing the bureaucratic application processes could alleviate some of these negative experiences. In a lab experiment, participants (N=120) were randomly assigned to undergo one of two application processes to the German governmental student financial aid program: the standard paper-based or a digitalized and redesigned application procedure. Results show that students not only experience significantly less administrative burden in the digitalized application procedure as compared to the standard paper-based process, but also are more satisfied and perform better. Of three investigated variables of individual human capital, only functional literacy partly improves citizens' experience of the bureaucratic encounter, while core self-evaluations and financial insecurity do not. These findings reveal the potential of redesigning and digitalizing application services to alleviate some of the negative experience of administrative burden for digitally literate citizens, irrespective of their individual characteristics.

Nonprofit Strategy and Value Creation

Digital Session Chair: **Gaëlle Cotterlaz-Rannard**, *U. of Geneva and U. of Savoie Mont Blanc*

PNP: The four blades of the societal value creation of nonprofit organizations business models

Author: **Gaëlle Cotterlaz-Rannard**, *U. of Geneva and U. of Savoie Mont Blanc*
Author: **Michel Ferrary**, *GSEM - U. of Geneva & Skema Business School*

Most research on business models focuses on their role as description of what the firm does to grow and increase profits. However, by definition and nature, nonprofit organizations are different from for-profit organizations since their ultimate goal is to create societal value. Building on the Bourdieusian theory of forms of capital (i.e. economic, social, cultural and symbolic), the aim of this paper is to propose a theoretical framework to define a business model for non-profit organizations that highlights the fundamental mechanisms underlying the creation of societal value and its capture. We propose that the societal value creation and capture in the business model relies on the capability of a nonprofit organization to accumulate and convert complementary forms of economic, social, cultural and symbolic capital. To illustrate our theoretical framework, we build on the case study of Doctors without Borders (MSF).

PNP: Towards a Framework of Strategic Approaches for Membership Growth in Nonprofit Community Sport

Author: **Kristen A. Morrison**, *U. of Waterloo*
Author: **Katie E. Misener**, *U. of Waterloo*

Engaging in a strategic planning process may help nonprofit managers to develop strategic thinking as well as build capacity to sustain and expand their programs and services despite environmental uncertainty. This study proposes a typology for understanding how the membership growth strategies of community sport organizations, as one focal nonprofit context, are shaped based on their environment. Semi-structured interviews with fifteen presidents of nonprofit organizations, alongside analysis of strategic plan documents, were used to identify strategic imperatives that nonprofit managers considered when formulating their organizational strategies. These imperatives were grouped into two dimensions: organizational readiness for growth and environmental dynamism. These dimensions were then juxtaposed to create a matrix of four strategic types: Trailblazers, Enhancers, Maintainers, and Carers. Each type is described in detail and implications for practice are discussed.

PNP: Community Leadership: A Conceptual Framework and Preliminary Findings for Community Foundations

Author: **Viviana Chiu-Sik Wu**, *Assistant Professor at UMass Amherst*

Community foundations are increasingly looked to as community leaders that coalesce money, people, knowledge, and networks for addressing public problems at the local level. However, the field remains difficult to grasp—what it is and how it materializes in practice. Drawing from both academic and practitioner literature, this article proposes a multi-dimensional conceptual framework that construes community leadership in six capacities: (1) Convening, (2) Knowledge Building, (3) Capacity Building, (4) Policy Engagement, (5) Partnering, and (6) Strategizing. I then applied this conceptual framework to analyze 539 annual reports of U.S. community foundations using semi-automated content analysis. The exploratory analysis shows that they tend to specialize in one or a few leadership capacities, such as partnering, policy engagement, and capacity building, whereas convening, knowledge building, and strategizing are less common among community foundations. This article contributes to building the theoretical foundation and providing preliminary evidence to advance future research on community leadership.

The Clarion Call for the 2021 meetings suggests that, “seeking to help managers deal with the issues confronting them would be a valuable contribution to the world we live in.” In response to this challenge, this PDW will discuss strategies for mitigating the impact of the COVID-19 pandemic on issues of diversity, equity and inclusion in organizations. The outbreak of COVID-19 last year is noted for the global economic toll it has taken. But it also became a harbinger of heretofore less pronounced discriminatory practices, particularly against minorities and people of color. Several studies have shown an uptick in incidences of institutional racism, intolerance to diversity, and personal discrimination since the outbreak of the COVID-19 pandemic. In the post-COVID-19 years, interventions will be needed to address the social and structural determinants of these practices in order to foster a climate of equity and inclusion in organizations. This PDW will address these issues by focusing on several promising initiatives to mitigate the impact of these discriminatory practices. Examples will include RARE leadership as practiced in Zambia; ‘entrepreneurial leaping’ found to be successful in South Africa; a study of how nations have coped COVID-19 (the Netherlands); mitigating homophobic social networks for diversity; and challenges faced by URMs in PWI in the USA. The presenters will show how these practices can be used as models or archetypes for sustainable organization and institutionalizing diversity in the workplace in the post-COVID-19 environment.

Identity and Careers

Digital Session Chair: **Justin Pepe**, *Florida State U.*

CAR: To Identify or Not to Identify: The Impact of Performance & Status on Professional Identity   

Author: **Justin Pepe**, *Florida State U.*
Author: **David Maslach**, *Florida State U.*

This study focuses on how status influences the relationship between performance and how individuals identify in the professional context. Specifically, building on research on status and professional identity, we found evidence that the relationship between performance and professional identity is stronger for middle-status individuals than for high and low-status individuals. The results suggest that high performing middle-status individuals are more likely to conform to professional identity expectations than high or low-status individuals. We find empirical evidence in management scholarship that high-impact scholars from middle-status institutions are more likely to identify with practice. Implications for practice identification, status, and the science of science are discussed.

CAR: How young refugees choose a career: The role of contextual factors and other people 

Author: **Elena Glauninger**, *U. of Graz*
Author: **Renate Ortlieb**, *U. of Graz*

What factors affect the career choices of young refugees? This paper examines how contextual factors of the host country and varying people influence young refugees' career choices. We apply social cognitive career theory to unpack how individuals' self-efficacy and outcome expectations are shaped in the refugee setting. Drawing from qualitative visual and interview data produced by refugees serving an apprenticeship we find that young refugees pursue a common overarching goal, namely safety and stability in their lives. Legal, economic, and social aspects are connected to this goal, thereby constituting factors influencing young refugees' career choices. Furthermore, families, job coaches, teachers, refugee peers, private mentors, coworkers, and supervisors at work influence young refugees' career choices either through verbally persuading them to take up an apprenticeship in a set occupation or serving as models for vicarious learning. Contextual factors and other people's influences intertwined create distinct patterns of career choices, which are associated with more or less opportunity for young refugees to follow their own interests in choosing a career.

CAR: Identity Reinvention: How Epiphanies Impact Women's Career Paths and Identities

Author: **Christine Deborah Bataille**, *Ithaca College*
Author: **Melissa Symanski**, *Simpson Gumpertz & Heger*

In recent years, there has been an explosion of research on identity work as scholars seek to understand how individuals create and recreate their identities in response to experiences that call one's identity into question. Researchers who study identity transitions often draw on the three-phase model proposed by Van Gennep (1960) that begins with separation, which entails disengaging from a prior role/identity, followed by liminality, wherein the individual transitions to a new role/identity, and culminates in integration, in which the individual incorporates the new role/identity into their self-identity. Identity transitions are catalyzed by expected career events as well as unexpected experiences, such as career-ending injuries and epiphanies. In this study, we analyze 80 career narratives elicited through two qualitative studies of mid- and late-career professional women. From these 80 cases, we uncovered 27 cases in which the informant had experienced at least one identity-implicating epiphany. Through our analysis of these cases, we discover how professional women reinvent themselves in response to epiphanic experiences and unveil the profound impact that "identity reinvention" has on women's careers and identities. Based on these results, we propose an alternative model of the identity transition process.

Drucker conceptualised the Practice of Management as intimately connected to a new version of man – the Industrial Man (1942) – putting an end to the Economic Man (1939). It is this reframing and the scope for management to be understood as a distinct form of work which also inspired Drucker to conceive of the ‘Manager’ as an integral part of making management possible. In this framing a ‘Manager’ was not only an efficient executive, but also a professional, an entrepreneur, an innovator, a leader – a catalyst for progress. Despite Drucker’s powerful framing of Management and Managers’ receptivity alone has not proven enough to address the very ‘inability of capitalism to satisfy the criteria of economic performance and its moral failure’ (Flaherty, 1999: 23) which Drucker intended to see addressed through a ‘functioning society’. This raises not only the need for, but also the practical use of reflexivity to explore how management, managers and the future of work, corporations and leadership can be envisioned afresh, placing back the man and hu-man-ity into ‘Man-Agement’ (Antonacopoulou, 2014; 2015) and redefining who managers (‘Man-Agers’) are. Such a repositioning begs not only reassessing if a reflexive turn (Weick, 1999) has taken place, but what will it take for reflexivity to support resilience and reliability in future management practices given the variety of genres of reflexivity (Latour, 1988). This highlights the urgency to revisit what reflexivity actually is when practiced which this symposium will address through new empirical findings bringing the perspectives of junior and senior academics as well as practitioners to advance this agenda.

The Role of Reflexivity in Bringing the Manager back into Management and Leadership Practice

ENT: Regulatory Reforms and Entrepreneurs' Choices of Firm Structure: Evidence from Sub-Saharan Africa   

Author: **Valentina Assenova**, *The Wharton School, U. of Pennsylvania*

Carolyn Dexter Award Nominee

How do regulatory reforms lowering the upfront and ongoing barriers to registration and legal incorporation affect entrepreneurs' choices of firm structure? This study examines the effects of institutional reforms reducing the barriers to formalization on entrepreneurs' choices of firm structure. These reforms lowered the upfront barriers to formalization in terms of registration and incorporation time, fees, procedures, and the ongoing barriers to formalization, comprising labor, profit, and property taxes. The analyses employ firm-level nationally-representative samples from 36 countries in Sub-Saharan Africa over 2004-2019 comprising 13,441 informal micro, small, and medium enterprises (MSMEs) and event-history models with cohort and country fixed effects to evaluate the effects of these reforms on entrepreneurs' decisions about whether to register and legally incorporate their businesses. The findings show that reforms that reduced the upfront and ongoing formalization barriers increased entrepreneurs' registration rates and legal incorporation by between 68 and 93 percent. Reforms reducing the upfront barriers to formalization were most effective for small, high-productivity firms. In contrast, those reducing the ongoing barriers to formalization were most effective for large, high-profitability firms. These findings show that entrepreneurs' choices of firm structure depend on their institutional environments.

ENT: Entrepreneurial Public Private Partnerships: The Case of the Boulder Energy Challenge

Author: **Elizabeth Embry**, *U. of Colorado, Boulder*

Author: **Jeff York**, *U. of Colorado, Boulder*

This study explores an innovative public-private partnership that leverages the flexibility and docility of private entrepreneurial start-ups to address a public goal. In 2014, the city of Boulder, Colorado launched the Boulder Energy Challenge (BEC) to partner with local entrepreneurs to reduce and mitigate the impact of carbon emissions. Through an inductive study of the two BEC cohorts over a four-year period, we find that the success of an entrepreneurial public private partnership is driven through the establishment of systems that enable collaboration of the governmental, entrepreneurial, and market logics. Examining the organizational structure and social innovation process of this unique case study expands our understanding of how policy makers and entrepreneurs can form unique organizations to address pressing environmental issues. Our findings bridge the literature on entrepreneurship, public-private partnerships and institutional logics to offer a new model of entrepreneurial collective action.

ENT: When Does Entrepreneurship Contribute to Productivity Growth?  

Author: **Seongwuk Moon**, *Sogang U.*

We examine the role of incumbent corporations in the contribution of entrepreneurship to national productivity growth. We insist that entrepreneurship contributes to national productivity growth better in countries where corporations actively employ organization and management practices conducive to collaborating with entrepreneurs ("high experiment capacity") because high experiment capacity lowers the access costs of entrepreneurs to the resources and value chains of incumbent corporations. Using panel data of 73 countries over 13 year period from multiple international databases, we estimate the effect of experiment capacity on the relationship between entrepreneurship and productivity growth. Our data support the hypothesis: The increase in experiment capacity score by one standard deviation is associated with the increase of productivity growth by 0.037 percentage point. The magnitude is comparable to one standard deviation of the distribution of productivity growth rate. We also find that incumbent corporations with high experiment capacity are more important for entrepreneurs who entered in the previous year relative to those who just entered. The organization and management practices of incumbent corporations are under-appreciated factors for effective entrepreneurial policies.

ENT: What's Interesting about Unicorn Ventures? An Exploratory Study 

Author: **Suresh B Kotha**, *U. of Washington, Seattle*

Author: **Seowon Joseph Shin**, *U. of Washington*

Author: **Greg Fisher**, *Indiana U.*

Unicorns—private new venture firms with over a billion dollars in valuation—are a category that has recently emerged in the entrepreneurship domain. New ventures valued at or above one billion dollars have garnered increased attention from the media, analysts, regional politicians, and the general public. Using a complete dataset of all unicorns, we unpack similarities and differences within this group of high-growth venture firms. We examine critical issues around the resourcing and scaling of unicorn ventures, to highlight significant differences in the speed at which unicorn ventures have achieved their coveted status within our population. Guided by prior research, we specifically examine the associations among founder, investment, venture, business model characteristics, and the time to reach unicorn status. We provide some novel findings that we hope will provide a foundation for building a future theory of high-growth ventures.

ENT: Who Am I, Where Am I? The Influence of Founder Identity in Coworking Spaces

Author: **Ricarda B. Bouncken**, *U. of Bayreuth*

Author: **Martin Ratzmann**, *U. of Bayreuth*

Author: **Katie Brownell**, *Indiana U. - Kelley School of Business*

Author: **Till Marius Gantert**, *U. of Bayreuth*

Coworking spaces enable collaboration, creativity, and knowledge exchange among entrepreneurs, as well as offer opportunities to develop social and professional networks. Our study of 317 entrepreneurs across 57 coworking spaces demonstrates that an innovation-based narrative of the workspace predicts new venture progress for entrepreneurs embedded within the space. Using structural equation modeling, we show that the relationship between innovativeness and venture progress is moderated by founder identity. Similarly, the relationship between founder identity and venture progress is mediated by a sense of community within the coworking space. In this paper, we contribute to the founder identity literature by proposing that it is the reciprocal relationship between the context of the coworking space and the identity of founders embedded within that is critical for venture growth and performance.

ENT: Founder Imprinting and Gender Dynamics: Implications from Coworking Spaces

Author: **Rosalyn Grace Sandoval**, *U. of N.C. At Charlotte*

Coworking spaces are growing exponentially in the U.S. and worldwide and offer entrepreneurs a location to collaborate, network, and be part of a meaningful community. As such, coworking spaces offer a unique research opportunity to explore how the founders of coworking spaces envision and create their venture influences other entrepreneurs. Coworking spaces can be considered mini ecosystems of interconnected actors who have a range of ties but are also influenced by the very system they are a part of (i.e., the founder and coworking space). Thus, coworking spaces provide a novel context, allowing new insights into how a founder's new venture vision and creation can have intended and unintended consequences on their organization's gender equality and dynamics, thus influencing female entrepreneurs' business personal outcomes. Qualitative interviews were conducted with five founders from four coworking spaces across six locations. Interviews were also conducted with 52 staff and coworkers across locations and 550 hours of observation. Findings indicate that the founder's vision for their coworking space imprints onto their organizations, influencing the coworkers drawn to the space and, ultimately, business and personal outcomes for female entrepreneurs. This research provides important insights into theories on founder imprinting and gendered organizations and how founders have the power to change the gender dynamics of their organizations.

ENT: Finding Self Among Others: Navigating the Tensions Between Personal and Social Identity

Author: **Furkan Amil Gur**, *Northern Illinois U.*

Author: **Blake D. Mathias**, *Indiana U.*

Personal and social identity are critical for entrepreneurs in their journey of creating nascent ventures. However, tensions arise in entrepreneurial experiences due to the independence underlying personal identity and embeddedness underlying social identity. In this qualitative study involving interviews with entrepreneurs and leaders from incubators, accelerators, and shared work spaces in a large Midwestern city, we explore how entrepreneurs at different stages of the entrepreneurial process navigate the tensions between personal and social identity. We find that early-stage entrepreneurs are mainly concerned with discovering their unique personal identity (personal identity centrality) which predominantly occurs via extensive broad interactions within social groups (social identity salience). On the other hand, late-stage entrepreneurs devote more time to their advanced ventures (personal identity salience) and less time in social groups but they value these social groups, and the targeted collaborations occurring therein, more (social identity centrality). We discuss the mechanisms that we uncovered from our study that underlie the paradox between centrality and salience of personal and social identity for entrepreneurs at different stages of the entrepreneurial process.

ENT: The art of the pitch: More promise for entrepreneurship research and practice than meets the eye

Author: **Josie Burk**, *U. of Alabama*

Author: **Craig Armstrong**, *U. of Alabama*

The act of entrepreneurial pitching has achieved global recognition through popular media in television shows like Shark Tank and Dragon's Den, online pitching platforms such as Global Pitch, Kickstarter, GoFundMe, and Indiegogo, and the social phenomena of global startup incubators and university pitching competitions. In many of these instances the fate of a seemingly promising startup depends on the entrepreneur's ability to attract resources from strangers, quite often through the entrepreneurial pitch. The stakes are high, not just for the fate of a single new venture, but for the practice of entrepreneurship and our understanding of the processes entrepreneurs use to signal legitimacy to attract resources. We summarize the literature on entrepreneurial pitching research and identify several promising approaches for improving both practice and research in entrepreneurship.

Decision-Making By Entrepreneurs 1

Digital Session Chair: **Katharina Fellnhofer**, *ETH Zurich, Harvard U.*

ENT: **The link between entrepreneurial passion and tolerance for failure mediated by adaptive cognition** 

Author: **Marie Cecile Wilm**, *Chair of Innovation Management, TU Dortmund U.*

Author: **Corinna Vera Hedwig Schmidt**, *Chair for Technology & Management, TU Dortmund U.*

Emotion and cognition are fundamental for successful entrepreneurial efforts. Yet, the interplay between emotion and cognition and ultimately venture-level outcomes is not fully understood. This study sheds light on this relationship by investigating how entrepreneurial passion relates to adaptive cognition and ultimately to venture-level tolerance for failure. Drawing upon mood-dependent retrieval theory, we develop a mediation model in which adaptive cognition mediates the relationship between entrepreneurial passion and venture-level tolerance for failure. We test our hypotheses among a sample of 447 entrepreneurs in Germany. Our results suggest that adaptive cognition mediates the relationship between entrepreneurial passion for inventing and developing and venture-level tolerance for failure in an indirect-only manner. Overall, we contribute to mood-dependent retrieval theory by showing how emotion and cognition interact in an entrepreneurial context. We do so in a nuanced way considering three domains of entrepreneurial passion. Additionally, we investigate adaptive cognition as a translating mechanism from entrepreneurial passion to venture-level tolerance for failure.

ENT: **How to Measure Knowing Without Knowing? A Systematic Bibliometric Mapping and Visualization** 

Author: **Katharina Fellnhofer**, *ETH Zurich, Harvard U.*

In this work, we explore rational and intuitive decision-making styles via a literature review by taking advantage of advanced bibliometric analysis techniques. To contribute to the scientific debate, the aim of this mapping and clustering analysis is to systematically explore cognitive styles to call attention to several psychometric properties that can inspire future research, in particular for measuring intuitive decision making, the unconscious form, which has received less scholarly attention than the rational form. The data examined from the Web of Science and Scopus databases comprise 20,582 peer-reviewed documents published through the end of 2019. Based on this research review of decision-making styles across research domains and entrepreneurship literature in particular, we analyzed the literature regarding intuitive decision-making styles in greater detail. So far, the scientific community has focused its attention on measuring rational decision making. Thus, this first systematic bibliometric mapping and visualization study will allow us to recognize “invisible colleagues” across domains not only by offering insights from current research into the two uncorrelated constructs of intuitive and rational systems by identifying intellectual relationships but also by serving as food for thought for new measurements of entrepreneurial intuitive decision making.

ENT: **When Nudges Enhance Rationality—Experiments of Entrepreneurial Decisions Under Risk and Uncertainty** 

Author: **Kim Böhm**, *U. of Duisburg-Essen*

Author: **Marvin Müller**, *U. of Duisburg-Essen*

Author: **Erich Renz**, *U. of Regensburg*

Entrepreneurs often make decisions under risk and uncertainty. When evaluating future-oriented entrepreneurial actions, cognitive biases can arise that are manifested as aversions towards risky and uncertain situations, leading to non-optimal, irrational decisions. We investigate deviations from rational entrepreneurial decisions and rationality-enhancing behavioral interventions in a business venture setting by using experimental methods. We find that using a recommendation nudge before as well as after making an initial decision improves entrepreneurial performance to achieve higher rationality levels. In sum, we show that in entrepreneurial decision-making processes, where experience, time, and information are often lacking, simple decision-making aids lead to better decisions.

ENT: **Entrepreneurial Framing: A Literature Review And Future Research Directions**   

Author: **Yuliya Snihur**, *Toulouse Business School*

Author: **Llewellyn D W Thomas**, *IESE Business School*

Author: **Raghu Garud**, *Pennsylvania State U.*

There is increasing recognition among scholars that entrepreneurs legitimize their ventures and the broader fields within which they operate through framing. Yet, there is no unifying framework to bring together existing theoretical perspectives on entrepreneurial framing and to make sense of their underlying mechanisms. Based on an integrative review of prior studies, we propose a conceptual framework for organizing this important literature. Our review also suggests directions for future research on entrepreneurial framing.

Crowdfunding 3   

Digital Session Chair: **Clarissa E. Weber**, *U. of Goettingen*

ENT: How Overfunding and Category Spanning Affect Release and Quality of Crowdfunded Products

Author: **Clarissa E. Weber**, *U. of Goettingen*
Author: **Norbert Steigenberger**, *Jonkoping International Business School*
Author: **Hendrik Wilhelm**, *U. of Witten/Herdecke*

In this paper, we employ data on crowdfunded video game development projects to study the effects of overfunding on product release and customer-perceived product quality as well as the moderating effect of the product's category spanning. We find that overfunding is generally more beneficial for products spanning fewer categories. Overfunding increases the probability that low-category-spanning products are released but has no effect on the release probability of high-category-spanning products. We further find that high levels of overfunding increase customer-perceived product quality for low-category-spanning products but that overfunding exhibits an inverted U-shaped relationship with customer-perceived product quality for high-category-spanning products. Our study is among the first to connect fundraising success with the subsequent outcomes of crowdfunded product development projects and contributes to our emerging understanding of the role of categories in crowdfunding.

Paper is Available to Meeting Registrants Only.

ENT: Equity Crowdfunding and Startup Performance  

Author: **Nohyoon Sung**, *Korea Advanced Institute of Science and Technology (KAIST), College of Business*
Author: **Keongtae Kim**, *Chinese U. of Hong Kong*
Author: **Siva Viswanathan**, *Robert H. Smith School of Business, U. of Maryland*

This study examines the effect of equity crowdfunding on startup performance. To do so, it uses a novel dataset of equity crowdfunding startups from January 2016 to April 2019 and constructs a sample of matched non-crowdfunding startups. The data indicate that equity crowdfunding startups rather than non-crowdfunding startups are more likely to survive, and conditional on closure, their closing dates are later than those of non-crowdfunding startups. Equity crowdfunding startups also show higher growth. The positive effects of equity crowdfunding are observed mainly in equity offerings, but not in debt offerings. Additional analyses indicate that expert investors are crucial for startup performance at least by facilitating access to external funding.

Paper is Available to Meeting Registrants Only.

ENT: Tough Love: A Story of Stigmatization in Crowdfunding Communities  

Author: **Itziar Castelló**, *Surrey Business School*
Author: **David Lopez**, *U. of Exeter Business School*
Author: **Jordi Surroca**, *U. of Groningen*
Author: **Josep A. Tribo**, *Stevens Institute of Technology*

Why entrepreneurs entering a new community might be stigmatized? We adopt the perspective of evaluators, who are very influential actors in a community, to develop a theory of strategic stigmatization. Whereas extant research has focused on the pro-community orientation of the valuers, we propose that valuers may derive private gains from stigmatization processes. We use data from Kickstarter, an online crowdfunding platform, to understand the processes by which entrepreneurs get socially sanctioned and stigmatized. Results show that valuers' status plays a fundamental role in the stigmatization processes of newcomers in a community. We also show that cumulative and extreme sanctioning can turn into a boomerang effect: reducing both valuers' status in the community and the community's attractiveness to newcomers. With these findings, our study extends the theory on social sanctioning and stigma by understanding its strategic application in crowdfunding platforms. Why entrepreneurs entering a new community might be stigmatized? We adopt the perspective of evaluators, who are very influential actors in a community, to develop a theory of strategic stigmatization. Whereas extant research has focused on the pro-community orientation of the valuers, we propose that valuers may derive private gains from stigmatization processes. ENT: The Performance Implications of Crowdfunding

Author: **Christopher Kulins**, *Ernst & Young*

This study explores how crowdfunded products perform in comparison to their non-crowdfunded counterparts and which mechanisms explain differences in performance. Relying on a unique data set of Kickstarter-funded video game ventures, I find strong evidence that products backed by the crowd are more successful. As such, successful crowdfunding is a signal of product quality that helps potential customers in their buying decision. Moreover, crowdfunded products benefit from the contribution of innovative users who modify the product to extend its functionality and share these modifications with other users. The paper thus contributes to lead user and signaling theory.

Black Lives Matter

GDO: **Detroit Hustles Harder: Organizational Practices that (De)Stigmatize Blackness in Context**   

Author: **Courtney Lynn McCluney, ILR at Cornell**
Author: **Morela Hernandez, U. of Michigan, Ann Arbor**
Author: **Olivia Walker, U. of Virginia**

In this article we examine how organizational practices can reinforce systemic racism. We identified the stigmatization of Blackness as an ongoing social process that maintains devaluation of Black people through our inductive, qualitative investigation of Detroit, Michigan's entrepreneurial ecosystem. We implemented a relational ethnographic design to interview and observe how resource granters (i.e., entrepreneur support organizations) create and disseminate resources to their intended beneficiaries (i.e., Black women entrepreneurs) in this stigmatized context. Our data revealed that organizational practices employed to meet entrepreneurs' immediate, proximal concerns—such as providing office space and training courses—without adequately accounting for distal concerns—such as wealth inequality and geographic displacement—often, inadvertently, reinforced structural inequities. Accordingly, we build theory to explain how stigmatization unfolds between social contexts; that is, in the spaces between the different facets of Black women entrepreneurs' lived experiences. We apply these insights to develop recommendations for organizations and other social institutions seeking to dismantle systemic racism.

 GDO: **Responses to Racial Discrimination Before and During the Height of the Black Lives Matter Movement** 

Author: **Pamela Gu, U. of Wisconsin, Madison**
Author: **Mary Triana, Owen Graduate School of Management Vanderbilt U.**
Author: **Tanja Rabl, Technische U. Kaiserslautern**
Author: **Seo-Young Byun, Ball State U.**

Based on conservation of resources and relative deprivation theory, this paper examines the relationship between observed racial discrimination in the organization, ethical organizational culture, and employees' silence and withdrawal reactions within the context of the Black Lives Matter (BLM) movement. To test our hypotheses, we collected four samples between 2014 and 2020. We find that before the height of the BLM movement, racial discrimination was positively related to employee silence but not withdrawal. As expected, in organizations with weaker ethical cultures there was a strong relationship between discrimination and withdrawal but, contrary to our expectations, rather than reducing employee silence, a strong ethical organizational culture made employee silence more prevalent when racial discrimination was present. During the height of the BLM movement, racial discrimination was positively related to withdrawal, but we only found partial support for its proposed negative effect on employee silence. In addition, during the height of the BLM movement, we found that ethical organizational culture strengthened the relationship between racial discrimination and employee withdrawal but did not moderate the effect on employee silence. Our study contributes to the discrimination literature by offering insights on the role of anti-racism social movements in highlighting the moral wrong of racial discrimination and giving employees support to speak up and show non-tolerance of discriminatory behavior.

GDO: **Moral Allyship At Work: Ethical Leadership and Black Employees' Psychological Diversity Climate**   

Author: **Darryl Rice, Miami U.**
Author: **Jamila Maxie, U. of North Texas**
Author: **Steven William Day, -**

The issues of anti-Black racism, discrimination, marginalization, and exclusion have become a prominent topic for management and leadership scholars. Subsequently, organizations and organizational leaders have sought to understand how to be better allies to Black employees in the workplace. We seek to extend this literature by investigating how organizational leaders can improve the workplace for Black employees. For this purpose, we integrate ethical leadership and social information processing theories to explain how ethical leadership impacts Black employees' workplace experiences. We propose that ethical leadership involves structuring of a fair work environment. Correspondingly, as ethical leaders work to establish a fair work environment, this cultivates a positive psychological diversity climate for Black employees. In turn, by establishing a positive psychological diversity climate, Black employees are more likely to be engaged and are less likely to be ostracized in the workplace. Theoretical and practical implications are discussed. We conclude with limitations and future research ideas.

GDO: **Is simply being included enough?: A comparative analysis of hierarchical and numerical organization**   

Author: **Arielle Lewis, Emory U.**
Author: **Leslie Ashburn-Nardo, Indiana U. / Purdue U., Indianapolis**

Generally speaking, research has shown that diversity attracts diversity. Consequently, organizations may demonstrate their existing employee diversity in company recruitment material as an "identity-safety" cue to increase minority jobseekers' attraction. However, despite shifting U.S. demographics, Black-Americans remain underrepresented in most White-Collar organizations. Therefore, we tested the utility of a few Black employees in high-status positions (i.e., hierarchical representation) to compensate for overall low numerical representation by reducing Black jobseekers' anticipated tokenism at a fictitious organization. We presented 379 (59.4% Female; Age: M = 36.36; SD = 10.36) Black respondents with several images of a company's website depicting their staff (numerical representation: high vs. low) and leadership (hierarchical representation: with vs. without). The respondents then rated their anticipated tokenism and organizational identity-safety. Although hierarchical representation did not moderate the effect of numerical representation on anticipated tokenism ($p = .464$), organizations with hierarchical and high numerical representation reduced tokenism and promoted greater identity-safety than the organizations without hierarchical representation and low numerical representation ($ps < .001$) as previously documented (Avery 2003; Purdie-Vaughns, Steele, Davies, Dittmann, R., & Crosby, 2008). Extending on this work, we also found anticipated tokenism mediated the main effects of hierarchical (0.13, 95% CI: 0.04 – 0.23) and numerical (0.16, 95% CI: 0.06 – 0.25) representation on perceived identity-safety. Thus, these results demonstrate the importance and distinguishment of hierarchical representation as an identity-safety cue separate from general representation. Practically, this works suggests organizations should not only be mindful of their employees but of their leadership demographics as well.

Author: **Katherine Qianwen Sun**, *Columbia Business School*

Author: **Michael Slepian**, *Columbia Business School*

Author: **Modupe Akinola**, *Columbia U.*

Women and minorities are markedly underrepresented in leadership roles. We propose that overrepresentation of White males in top positions creates perceptual biases in how leaders should look, perpetuating discrimination. Six studies (total N=119,738 judgments from 1,063 participants) implemented a reverse-correlation paradigm, which is used to generate visual approximations of people's internal expectations of leaders. The images generated looked largely male and White, and appeared to have positive intentions and ability. However, the perceptual features that people expected and envisioned in leaders' faces shifted notably when considering race (Black vs. White) and gender (male vs. female). Participants' images of Black leaders looked positive and friendly, whereas participants' images of White leaders looked able and competent. Participants' images of female leaders looked both able and positive, even needing to display features aligned with hyper-feminized stereotypes. These visual approximations demonstrate that people internalize disparate standards of apparent leadership for underrepresented groups at a perceptual level. Thus, our results suggest a perceptual "imprinting" of leadership biases—a pernicious side-effect of extant gender and racial imbalance in top positions.

**The Manager in Intragroup and Intergroup Hierarchies:
Managing Hierarchy Across Levels of Analysis**
Managing Hierarchy Across Levels of Analysis

Organizer: **Kaylene McClanahan**, *U. of California, Los Angeles*
Organizer: **Nir Halevy**, *Stanford U.*
Organizer: **Miguel Unzueta**, *U. of California, Los Angeles*
Panelist: **Eric Anicich**, *U. of Southern California*
Panelist: **Eileen Chou**, *U. of Virginia*
Panelist: **Rosalind M. Chow**, *Carnegie Mellon U.*
Panelist: **Jennifer Dannals**, *Tuck School of Business at Dartmouth*
Panelist: **Cydney Dupree**, *Yale School of Management*

Research on hierarchy within organizations tends to focus on hierarchies of individuals within a group (intragroup hierarchy) or on hierarchies composed of groups, such as race- and gender-based hierarchies (intergroup hierarchy). Although both types of hierarchies impact individuals in organizations, the literatures on intra- and intergroup hierarchy run largely separately without significant cross-fertilization. This is likely to the detriment of both literatures: many ideas fundamental to hierarchy at one level of analysis are virtually or totally underexplored on the other level of analysis, undoubtedly leading to problematic gaps in our theorizing. This panel symposium will engage a group of expert panelists in a formal, moderated discussion of how intra- and intergroup hierarchy research can be integrated. We expect that more integrative theorizing will be a boon to the literature on hierarchy and that it will bolster organizational researchers' ability to provide actionable recommendations to frontline managers around the globe.

Women on Boards

Digital Session Chair: **Aishwaryya Deore**, *PhD student in accounting*

GDO: **Board Gender Diversity and its Impact on Firm Innovation Strategies**

Author: **Aishwaryya Deore**, *PhD student in accounting*
Author: **Ranjani Krishnan**, *MSU*
Author: **Deepa Mani**, *Indian School of Business*

We examine the effect of board gender diversity on innovation outcomes. Using upper-echelons and construal level theory, we argue that female representation on corporate boards increases the diversity of information sets, influences how information is processed, generates within-person changes in board member construal, and thereby affects the board's decisions related to innovation strategies. Consequently, board gender diversity is not only likely to affect the quantum of innovations, but also the impact of innovations, and a greater tendency to aim for moon shots – that is high risk, high value innovations. Using 20 years of panel data and instrumental variable (IV) regressions, we find that board gender diversity is positively associated with the quantum, impact, and risk of innovations. We explore the path through which board gender diversity influences innovation outcomes. Results indicate that existence of female innovators is an important mediator of the positive relation between board gender diversity and innovation outcomes. Further, the information brought by women directors from their membership in other corporate boards significantly influences innovation. Innovation outcomes positively influence firm financial performance in subsequent periods. We conclude that board gender diversity is a crucial driver of innovation strategy.

GDO: **What Drives the Social Performance of Microfinance Institutions? The Role of Gender Board Diversity**

Author: **Kais Bouslah**, *U. of St Andrews*
Author: **Qian Li**, *Cardiff Business School, Cardiff U.*
Author: **Asma Mobarek**, *Cardiff Business School, Cardiff U.*

Microfinance Institutions (MFIs)' business model is mission orientated to empower women and the poor to reach the social mission of sustainable development goals (SDG). This paper investigates whether women directors and institutional factors influence the five comprehensive and underexplored dimensions of MFIs' social performance including social goals, governance & HR, products & services, client protection and environment. Using an international sample of 2,293 MFIs operating in 116 countries during the period 2010-2018, we find that women directors, female-friendly environment and stronger sustainable development environment have a positive impact on the social performance, whereas country-level governance mitigates the social performance. We find that more gender-diverse board influences particularly three dimensions of social performance: social goals, product & services and environment. The results are more pronounced for non-profit MFIs and MFIs located in a higher-ranked governance environment. MFIs' social performance in the Africa region are more likely to benefit from a higher ratio of women on board than Eastern Europe and Central Asia region. Our findings provide implications for MFIs, funders and policymakers regarding the measurement and drivers of the social performance of MFIs that is crucial for achieving SDG.

GDO: **Female Board Representation and Firm Efficiency: Investigating via Human Capital Development Policies**

Author: **Conor Callahan**, *U. of Illinois at Chicago*
Author: **Arjun Mitra**, *California State U., Los Angeles*
Author: **Steve Sauerwald**, *U. of Illinois at Chicago*

In this study, we focus on how female board representation impacts firm efficiency through the enactment of human capital development policies. Drawing upon upper echelons theory and the literatures on glass ceiling, human capital, and training and development, we argue that increasing female board representation will lead firms to improve human capital development policies, though this positive relationship will ultimately diminish as boards accrue greater levels of gender diversity. We further predict that these policies will translate into greater firm efficiency as well as mediate the relationship between female board representation and firm efficiency. Using a sample of S&P 1500 firms from 2007 to 2017, we find support for our hypotheses. Our findings provide evidence that female board representation alone may not translate into improved firm efficiency; rather, the unique perspective of female directors lead them to put in place human capital development policies that are beneficial for improved firm efficiency.

Paper is NOT Available. Please contact the author(s).

GDO: **BOARD GENDER DIVERSITY IN BUSINESS GROUPS: EXPLORING THE CASCADING EFFECT BETWEEN HQs & AFFILIATES**

Author: **Paula Maria Infantes Sanchez**, *ESADE Business School*
Author: **Bartolome Pascual-Fuster**, *U. de les Illes Balears*

This study explores the cascading effect of board gender diversity within business groups. In particular, we empirically test whether board gender diversity in headquarters is positively associated with board gender diversity in lower layers of hierarchical business groups. We, moreover, analyze the empowerment of women directors in the boardroom, and we moderate by some business groups characteristics that may impact the influence of headquarters. We find a positive relationship between board gender diversity in headquarters and affiliates. This suggests that the existence of women at the top stimulates gender diversity in affiliates, and that this finding is influenced by several business group characteristics. However, the presence of women in board executive positions is not associated with an increase in gender diversity across business groups' affiliates.

Foreign Investment Issues

Digital Session Chair: **Sai Yang**, *WU Vienna U. of Economics and Business*

This session addresses issues related to international investment. It contains papers examining how MNE subsidiaries handle conflicts between internal and external networks, foreign divestment during post-merger integration, the choice among closure, sell-off, or consolidation as exit strategies for foreign affiliates, and CEOs' internationalization decisions in underperforming firms.

IM: How MNE Subsidiaries Handle Conflicts Between Internal and External Networks

Author: **Yang Liu**, *Queen's U. Belfast*

MNE subsidiaries can leverage resources from internal and external networks. However, they often struggle with conflicting requirements from internal and external networks. We still have very limited knowledge regarding how subsidiaries can handle the conflicts. Through an in-depth case study of an MNE subsidiary, I found that the subsidiary handled three types of conflicts; the subsidiary adopted three type-specific mechanisms and two non-type-specific mechanisms; and these mechanisms were used for two different processes. This study reveals a sophisticated way of handling the conflicts by MNE subsidiaries while maintaining the relationships with internal and external network members.

Paper is NOT Available. Please contact the author(s).

IM: Foreign Divestment during Postmerger Integration: Antecedents of MNE Foreign Divestment

Author: **Yunok Cho**, *Southern Methodist U.*

This study extends research on foreign divestment by considering it within the broader context of corporate restructuring, exploring how MNE M&As affect divestment of foreign affiliates. Drawing from agency and organizational theories, I claim that the postmerger integration process reduces managerial and organizational barriers to foreign divestment and thereby increases the likelihood of foreign divestment. I confirm this prediction using data from a sample of foreign affiliates in Korea during 2006–2019. The positive relationship between MNE M&As and foreign divestment is stronger for majority-owned foreign affiliates, for which managers have made more commitments and therefore are generally less likely to make a withdrawal decision. In contrast, the relationship is weaker when a focal affiliate is the parent MNE's sole affiliate in a host country.

Paper is Available to Meeting Registrants Only.

IM: Exit Strategy for Foreign Affiliates: The Choice Among Closure, Sell-off, or Consolidation

Author: **Yunok Cho**, *Southern Methodist U.*

While both entry and exit decisions are integral in the evolution of MNE foreign affiliates, the topic of foreign affiliate exit is relatively less studied compared to that of foreign market entry. Research addressing how managers implement the exit of foreign affiliates is even rarer; thus, our understanding of the factors influencing exit strategy for foreign affiliates is incomplete. In this study, I examine the factors that affect exit mode choice among the three alternatives: closure, sell-off, and affiliate consolidation. Affiliate consolidation, a construct newly suggested in this study, departs from the others in that it involves discontinuance of operations of a foreign affiliate while still retaining its valuable resources by transferring them to another affiliate owned by the MNE. By analyzing 1,348 foreign affiliates in Korea from 2006–2019, I find that different exit motives, signaled by different antecedents, translate into different choices of exit mode. The results show that an MNE is likely to choose 1) closure as an exit mode to withdraw inefficient foreign affiliates, 2) sell-off to mitigate financial distress of the MNE or raise capital to fund other investments, or 3) affiliate consolidation when it experiences corporate restructuring such as M&As. Overall, the findings suggest that foreign affiliate exit does not necessarily indicate failure, especially when the exit is through sell-off or affiliate consolidation, and that foreign affiliate exit is closely linked to MNE-level restructuring such as M&As.

Paper is Available to Meeting Registrants Only.

IM: CEOs' Internationalization Decisions in Underperforming Firms

Author: **Raquel García-García**, *U. of Oviedo*

Author: **Esteban García-Canal**, *U. of Oviedo*

Author: **Mauro F. Guillen**, *U. of Pennsylvania*

Drawing on the behavioral theory of the firm, we argue that underperforming firms will modify their attitude towards strategic change in the form of foreign direct investments (FDI) depending on their CEO's degree of control of the board of directors. We proxy this control by CEO duality and hypothesize that firms with non-dual CEOs will be more inclined to increase internationalization than firms with dual CEOs when performance falls below aspirations, as they are expected to dedicate more time to problemistic search. Our empirical analysis on a sample of Spanish listed firms during 1986 to 2010 provides support for our hypotheses. Our study adds to previous research by showing that CEO duality acts as a buffer against short-term performance feedback.

Strategies for Successful Virtual or Blended Executive Education Programs Post COVID?

Successful Virtual Executive Education Strategies

Presenter: **Carl Fey**, *Aalto U. School of Business*

Presenter: **Ho Howard Yu**, *IMD International*

Presenter: **Jean SK Lee**, *China Europe International Business School (CEIBS)*

Presenter: **S. Ramakrishna Velamuri**, *Mahindra U. School of Management*

COVID has forced much teaching to move on-line over the past year including in executive education. Over the coming year as hopefully we will emerge from COVID, it is important to think about what world-class executive education programs will look like moving forward. We believe that there are likely to look very different than in the past and that there will be many more on-line and especially blended programs which combine both on-line and in-person sessions. This PDW will suggest best practice in designing blended and on-line executive education programs post-COVID and also suggest strategies for effective on-line executive education teaching. The PDW will draw on examples from teaching international business, strategy, entrepreneurship, and leadership, all in an international context, in executive education programs. The session will draw on the experience of several of the leading business schools as well as that of several very experienced executive educators. Following some short presentations, the session will be very interactive including a panel discussion where attendee can ask questions and share their ideas and experience.

Thinking of a Position Outside the US? “Dos and Don’ts” of International Business Schools

Finding business school positions outside the US

Organizer: **David Leonard Patient**, *Vlerick Business School*
Organizer: **Andreas Wilhelm Richter**, *U. of Cambridge*
Organizer: **Dan V. Caprar**, *U. Of Sydney*
Organizer: **Marylene Gagne**, *Curtin Uni*
Panelist: **Rene Bohnsack**, *Catolica Lisbon School of Business and Economics*
Panelist: **Marjo-Riitta Diehl**, *Aalto U. School of Business*
Panelist: **Blaine Landis**, *U. College London*
Panelist: **Julia Richardson**, *Curtin U.*
Panelist: **Devasheesh Bhawe**, *Singapore Management U.*
Panelist: **Aleksandra Luksyte**, *U. of Western Australia*

Many management scholars are interested in taking their career to a new culture and context. Although the opportunities around the globe to teach and conduct organizational research have significantly increased, first-hand information on non-US business schools can be hard to come by. This PDW is designed for both junior and senior OB scholars who would like more information regarding academic careers at reputable non-US business schools. It will bring together six panelists currently working at schools in Europe, Australia, and Singapore, who are not originally from there or trained there. The panel will provide information, highlight challenges, and share distinctive features for academic careers in each country, including tacit knowledge and unspoken rules that the panelists have learned during their own adaptation process. Topics for discussion include: What does the job application process look like? How are faculty evaluated, and what types of tenure and contracts are used? What are key challenges in adapting to the national culture and university system? What was most surprising, so far? What are norms of professional conduct (i.e., dos and don'ts in presenting oneself and one's work)? The PDW includes individual presentations by panelists, country-specific roundtable discussions, and a closing Q&A.

Presenter: **Thalia Wheatley**, *Dartmouth College*

The rise of globalization and the international labor movement has sparked the growth of opportunities for individuals to accumulate multicultural experiences and develop multicultural backgrounds. Multicultural experiences have been linked to a number of individual, interpersonal and organizational outcomes such as creativity, intergroup relations, and firm performance. As individuals gain more diverse perspectives through multicultural experiences and as the society become more multicultural, what are the potential positive and negative effects on the social processes? In this symposium, we focus on the effects of multicultural experiences on social dynamics and discuss their implications for individuals and organizations. The purpose of this symposium is to feature new research that “zooms in” on how multicultural experiences shape social behaviors at an interpersonal level and “zooms out” to explore how multicultural experiences shape social networks more broadly. Inspired by the Academy of Management 2021 theme, “Bringing the Manager Back in Management,” these projects extend research and theory on how multicultural backgrounds help managers harvest greater social tolerance and overcome intergroup biases, as well as develop social capital that leads to personal and managerial outcomes.

Digital Session Chair: **Tianyu He**, *INSEAD*

OMT: **Groups Explore and Regularize More than Individuals in Learning by Doing**  

Author: **Tianyu He**, *INSEAD*
Author: **Marco Minervini**, *INSEAD*
Author: **Phanish Puranam**, *INSEAD*

How do groups learn differently from experience compared to individuals? We propose that because groups feature potentially greater internal heterogeneity of viewpoints, they may have an advantage over individuals in terms of greater exploration and lesser risk of overfitting. We test and find nuanced support for these arguments in data from an online platform featuring groups and individuals competing on the same learning task. Groups expend more effort than individuals when gathering experiences and also explore more diverse alternatives, but as a consequence may also struggle more than individuals at consolidating the fruits of that experience into an understanding of their task environment. We build on these findings to theorize about the conditions under which groups may accomplish better learning outcomes than individuals. Specifically, we propose a self-limiting nature to the group advantage in learning from experience.

Paper is NOT Available. Please contact the author(s).

OMT: **Star Teammates - an Aid or a Hindrance?**      

Author: **Dominika Kinga Sarnecka**, *Harvard Business School*

Although research has shown that evaluation of quality is a social process, which is rarely completely meritocratic, and that insider and outsider judges can vary in reliance on social cues, we still know little about factors influencing evaluations of individuals performing in teams, a way of working increasingly prevalent across organizations. This paper investigates social influences stemming from intra-team status asymmetries, and specifically, asks how star teammates impact their colleagues' chances for winning awards. Using the National Basketball Association's All-Star voting data, we identify three such effects: direct (due to endorsement effect also known as status leakage), indirect (due to effects on colleagues' visibility), and interactive (due to effects on judges' perceptions of colleagues' performances). We find that those effects operate in different stages of the evaluation process and vary in the extent of their influence on insider and outsider judges. Ultimately, our findings suggest that the presence of star teammates is an aid to award-winning when individuals are evaluated by insiders, but a hindrance when evaluated by outsiders.

Paper is Available to Meeting Registrants Only.

OMT: **Alterations of a Visual and How They Work For and at the Boundaries of an Interorganizational Team** 

Author: **Ellen Nathues**, *U. of Twente*
Author: **Mark Van Vuuren**, *U. of Twente*
Author: **Maaikje Endedijk**, *U. of Twente*

This article examines the boundary work efforts of an interorganizational team and draws attention to the special role of a visual artifact. Relying on a longitudinal dataset of video-recorded team meetings, we explore how this visual artifact helped (re)constituting subject, organizational, and temporal boundaries by functioning as an epistemic and/or boundary object. Importantly, our audiovisual data enabled a multimodal approach: We could scrutinize how the visual artifact materialized visually, verbally, and through embodiment. Findings illustrate that materializations were initially dominated by explicit showings of the artifact but over time extended to both verbal and embodied alterations as visible in members' vocabulary and gestures. They also show changes in the artifact's functions: While first predominantly used as an epistemic object to create a subject boundary around the team and as a boundary object to negotiate, defend, or downplay organizational boundaries, functions and boundary work practices increasingly blurred over time. Team members created and cultivated an authoritative presence of the artifact, guiding many aspects of their joint work and even inspiring them towards new paths. However, when team composition fluctuated, the visual lost its team-wide matter and boundaries shifted. This article contributes to the literatures on boundary work and collaboration objects by providing a nuanced and processual understanding of how a certain type of artifact—a visual, and its alterations—impacted boundary (re)assemblage. By integrating visual, verbal, and embodied modalities through a decentered grounding in communication, it also speaks to recent calls for increased attention to multimodality in organization scholarship.

OMT: **Authentic Leadership, Collective Efficacy and Team Performance and Commitment: A Multilevel Analysis**

Author: **Sharjeel Saleem**, *Government College U. Faisalabad*
Author: **Mariam Ayub**, *Government College U. Faisalabad*
Author: **Muhammad Mustafa Raziq**, *National U. of Sciences and Technology (NUST)*
Author: **Muhammad Zahid Iqbal**, *COMSATS U. Islamabad*

Recent societal and governmental concerns about transparency and corruption-free governance have created a need for a more transparent and fair leadership style. Resultantly, in the last decade, authentic leadership has been a focus of scholarly attention. Authentic leadership is relatively a newly emerging leadership style that is characterized by transparency and relational fairness. Taking a different and challenging route, this study focused on team phenomenon rather than individual outcomes. We develop a multilevel model in which we study the impact of authentic leadership on team performance and team commitment. Underlying psychological mechanisms are also uncovered, and we study the intervening role of collective efficacy. We collected data from 60 teams working in the manufacturing sector in Pakistan. Multilevel confirmatory factor analysis and multilevel structural equation modeling were conducted using Mplus. The results largely supported the study hypotheses and confirmed the direct and indirect effect of authentic leadership on team performance and team commitment. Theoretical contributions and practical implications are also discussed.

OMT: A Multilevel Study of Leader Political Skill and Followers' Self-Concept Based Perspective.

Author: **Beenish Qamar**, *National Textile U. Faisalabad*

Author: **Sharjeel Saleem**, *Government College U. Faisalabad*

Author: **Kanwal Shaheen**, *Government College Women U., Faisalabad*

Using matched reports from 70 leaders and 345 of their followers across 36 branches of 18 banks in Pakistan, this study investigates the influence processes of leader political skill (LPS) at both the individual and team levels concurrently and explores cross-level relationships. Mplus 7 was used to analyze the hypothesized relationships and the results showed that at the individual level, followers' self-efficacy mediated the effects of individual-focused LPS behavior on individual in-role and extra-role performance. At the team level, collective efficacy mediated the effect of group-focused LPS behavior on team performance. Implications for theory and practice are discussed and future research directions are outlined.

Sustainability in Supply Chains and Life Cycle Analysis

Digital Session Chair: **Moses Acquah**, *U. of North Carolina, Greensboro*

ONE: Environmental Orientation, Green Supply Chain Management, and Institutional Pressures on Performance

Author: **Moses Acquah**, *U. of North Carolina, Greensboro*
Author: **Ahmed Agyapong**, *KWame Nkrumah U. of Science and Technology, Kumasi Ghana*
Author: **Suzzie Aidoo**, *KWame Nkrumah U. of Science and Technology, Kumasi Ghana*

This study examines the direct and indirect effects of environmental orientation on sustainability performance through green supply chain management practices, and the conditional indirect effects of institutional pressures on sustainability performance. We use data from 202 manufacturing SMEs in Ghana and analysed the data with the Conditional Process Analysis software, PROCESS, (Hayes, 2017). The findings reveal that environmental orientation positively influences environmental performance but not economic performance. Furthermore, green supply chain management practices mediate the relationship between environmental orientation and environmental performance, but not economic performance. Finally, the conditional indirect relationship between environmental orientation and environmental performance through green supply chain management practices is positive at high levels of institutional pressures. The study contributes to the efficacy of environmental orientation on economic and environmental performance by providing evidence from an African economy.

ONE: How to embed life cycle management: the role of dynamic capabilities and managerial approaches

Author: **Guia Bianchi**, *Scuola Superiore Sant'Anna*
Author: **Francesco Testa**, *Scuola Superiore Sant'Anna*
Author: **Sara Tessitore**, *Institute of Management, Scuola Superiore Sant'Anna, Pisa*
Author: **Fabio Iraldo**, *Sant'Anna School of Advanced Studies and IEFÉ – Institute for Environmental and*

Life cycle management (LCM) is a managerial framework to embed a holistic environmental sustainability logic inside organizations. Despite its long tradition, the implementation of LCM is little explored. In this study we observe how sensing, seizing, and reconfiguring capabilities together with managerial approaches to environmental sustainability help organizations embed LCM in their practices. We performed a multinomial logistic regression using a sample of 187 medium and large enterprises. Our findings show that sensing and seizing capabilities, and an integrative approach to sustainability help embed LCM in presence of complex environment. Among dynamic capabilities, reconfiguring does not appear to help organizations embed LCM. This study contributes to the literature on life cycle management and dynamic capabilities.

ONE: Are Consumers Ready for a LCA-Based Sustainability Facts Panel? Insights From an Online Experiment

Author: **Felipe Vizzoto**, *Institute of Management, Scuola Superiore Sant'Anna, Pisa*
Author: **Francesco Testa**, *Scuola Superiore Sant'Anna*
Author: **Fabio Iraldo**, *Sant'Anna School of Advanced Studies and IEFÉ – Institute for Environmental and*

To make environment-friendly decisions, consumers need reliable and easy-to-understand information. LCA data addresses the first, but with multiple impact categories displayed in technical units, it struggles to deliver the second. This work investigates strategies to render LCA data more comprehensible, testing in an online experiment how consumers interact with it under missing information and with simplified communication styles. Participants ranked the impacts of six 3-dimensional (Water, non-renewable energy and CO2) environmental profiles of coffee. With a 3x3 between-subjects design, we analyzed answer accuracy under three communication styles (LCA units, values converted to popular references and standardized units), the positioning of a missing information profile under three data gap patterns and if common dimensions (those for which all options provide information) are overweighted in the decision. Our results show that: (1) Simplification does not always translate into better comprehension, as both simplified communication styles backfired in terms of accuracy, performing worse than LCA units; (2) Loss aversion was the dominant force guiding decisions under missing information, leading participants to rank the missing information profile as the least impactful in many cases. This contradicts the notion that consumers tend to see willful deception on information omission (3) Contrarily to what was observed in other contexts, consumers did not try to minimize cognitive efforts to reach a decision by overweighting common dimensions. These findings suggest viability for a LCA-based sustainability facts panel and reinforce the need for a uniform approach to communicate environmental performance.

OSCM: **Sourcing Code: Software Types, Sourcing Capabilities, and Organizational Archetypes**

Author: **Christoph Bode**, *U. of Mannheim*
Author: **Steffen Kokozinski**, *U. of Mannheim*
Author: **Jan Simon Ohmstedt**, *U. of Mannheim*
Author: **Jonas Ronellenfisch**, *U. of Mannheim*

The steadily increasing importance of software requires software purchasing departments of many firms to source more and more external software solutions. Based on a theoretical differentiation between custom and standard software, this study combines empirical qualitative interview and quantitative survey research. In 21 semi-structured interviews, we identify four sourcing process related and two overarching sourcing capabilities. Building constructs for the capabilities, we conducted an international survey among 153 companies identifying three organizational archetypes of software sourcing firms. We contribute by developing three lenses for analyzing software sourcing: A theoretical product differentiation, a capability framework, and an organizational archetypes perspective.

OSCM: **Big Data in Supply Chains- Achieving Supply Chain Innovation Through Capabilities**

Author: **Sabeen Bhatti**, *Bahria U. , Islamabad Pakistan*
Author: **Alberto Ferraris**, *U. of Torino*
Author: **Jabran Khan**, *U. Sains Malaysia*

Big data has revolutionized the industry and has become an important source of competitive advantage and firm performance. In order to be able to leverage big data to achieve higher innovation in the supply chain, a number of complementary resources are essential to achieve the competitive advantage of the incumbent firm. We propose that supply chain innovation is dependent on firm's big data analytics capabilities and this relationship is mediated by supply chain ambidexterity mitigating capabilities (agility and adaptability) and moderated by technology uncertainty. The data collected from 300 manufacturing firms operating in Pakistan confirm our hypotheses. Based on the results, it is suggested that both types of capabilities necessary for mitigating supply chain ambidexterity are critical for firms to realize better innovation in the supply chain. Furthermore, technology uncertainty moderates the relationship between big data analytic capabilities and supply chain innovation. This study extends the current literature on the importance of digital technologies especially big data analytics capabilities in improving the innovation outcomes of supply chains. This study confirms that big data projects may yield positive outcomes, if supply chain ambidexterity is mitigated through building capabilities of supply chain agility and supply chain adaptability and that uncertainties in technologies surrounding manufacturing firms further strengthen this relationship.

OSCM: **Operationalizing the Value of Industry 4.0 Technologies for Supply Chain Performance**

Author: **Hendrik Sebastian Birkel**, *Friedrich-Alexander U. of Erlangen-Nürnberg*

Industry 4.0 technologies are of high interest for researchers and practitioners alike. Even though, an overarching review of the overall impact, the operationalization of technologies, performance measures, and mechanisms leading to performance improvements is missing. Therefore, this study provides a comprehensive overview of the impact of Industry 4.0 technologies on supply chain performance. A systematic literature review using the databases Scopus, Web of Science, EBSCO, and ABI/Inform was conducted. The final sample consists of 108 empirical studies published between 2011 and 2020. The findings highlight integration, automation, and visibility as key features enabled by Industry 4.0, facilitating gains in process efficiency and customer-orientation, which enable the realization of favorable financial outcomes. In addition, important drivers of performance are data analytics and seamless data flows, enabled by the end-to-end digitalization of supply chain processes. While most organizations experience performance improvements after Industry 4.0 adoption, difficult market conditions, internal incompatibilities or high levels of complexity and uncertainty can still cause failure. Our analysis operationalizes the value of Industry 4.0 technologies and their capability to transform business processes, leading to favorable performance. The importance of management commitment, organizational transformation, and learning capabilities to realize performance improvements is highlighted and research recommendations are made.

Paper is Available to Meeting Registrants Only.

OSCM: **Enablers of Industry 4.0 Technology Adoption: Transformational Leadership and Emotional Intelligence**

Author: **Desiree Van Dun**, *U. of Twente*
Author: **Maneesh Kumar**, *Cardiff U.*

Many manufacturers are exploring the adoption of Industry 4.0-type technologies in their operations. Employee's contribution to high-tech initiatives is key to successful Industry 4.0 technology adoption. Few studies have explored the determinants of employee acceptance of Industry 4.0 technology adoption, including the role of their managers. Rooted in the unified theory of acceptance and use of technology model and social exchange theory, this abductive research follows an in-depth comparative case study approach. The two studied Dutch manufacturing firms engaged in the adoption of Industry 4.0 technologies in their primary processes, including cyber-physical systems and augmented reality. A mix of qualitative and quantitative methods was used, consisting of field visits, 14 semi-structured interviews with managers and frontline employees engaged in Industry 4.0 technology adoption, and the same participants filled in an exploratory questionnaire. The cross-case comparison introduces manager's need to adopt a transformational leadership style for employees to accept Industry 4.0 technology adoption. Secondly, manager's and employee's recognition and serving of their own and others' emotions through emotional intelligence are proposed as moderators to existing Industry 4.0 technology user acceptance theorizing. Synthesizing these insights with those from the domain of Organizational Behavior, propositions and a conceptual model were derived to "bring the manager back" into future Operations Management research.

Endogeneity: Myths, Legends, and Facts 
Endogeneity: Myths, Legends, and Facts

Organizer: **Elle Hyunjung Yoon**, *U. of Georgia*
Organizer: **Daniel Gamache**, *U. of Georgia*
Panelist: **John R. Busenbark**, *U. of Notre Dame*
Panelist: **Kenneth Frank**, *Michigan State U.*
Panelist: **Matthew Semadeni**, *Arizona State U.*
Panelist: **Michael C. Withers**, *Texas A&M U.*

Management scholars are increasingly concerned about biases in empirical analyses from endogeneity. When endogeneity is present, an ordinary least-squares (OLS) model may be inconsistent and can provide biased estimates. Thus, scholars strive to address endogeneity concerns in their research. Yet, scholars do not share a common understanding of endogeneity and often implement questionable solutions in response to their perceived concerns. Our target audience is Academy members who lack confidence in dealing with endogeneity or who want to improve their methodological ‘tool kit.’ This PDW will provide a learning opportunity about different topics related to endogeneity and how to address it correctly. To do so, we explore the myths, legends, and facts about endogeneity. The PDW will be divided into two parts. Part 1 consists of a selection of presentations on different issues related to endogeneity. First, Dr. John Busenbark will discuss the unique challenges associated with sample-induced endogeneity, Dr. Michael Withers will discuss the role of endogeneity when testing interaction terms, Dr. Kenneth Frank will discuss advances in measuring the potential for omitted variable bias using the Impact Threshold for Confounding Variables (ITCV), and Dr. Matthew Semadeni will share an editor’s perspectives on addressing endogeneity. In Part 2, panelists will answer questions from the audience from which we will facilitate a scholarly conversation between the panelists about their views on endogeneity. With this PDW, we hope that scholars will understand endogeneity better and learn when and how to account for endogeneity in producing high-quality, credible, and replicable scientific research.

TIM: Reordering the music industry: when digital platforms restructure industry ecosystems

Author: **Katharina Cepa**, *Lancaster U. Management School*

Author: **Amber Geurts**, *Aalto U.*

Digitalization allows disruptors to enter and transform industries with new disruptive technologies or business models, often introducing digital platforms that modify prevalent value creation and capture mechanisms. Prior research has analyzed external drivers and incumbents' organizational responses. We follow a growing field of interest studying the effects of such disruption on industry ecosystems. Specifically, we explore how and when digital disruptor platforms succeed in restructuring ecosystems. Our study of the Dutch music industry from the 1990s to 2016 shows that digital disruptor platforms succeed restructuring industry ecosystem when they reconfigure value creation as well value capture. We further show that digital disruptor platforms successfully dethrone industry sponsors by deploying inclusive content strategies, while defeated pre-digital incumbents later regain dominance by deploying exclusive niche content strategies. Our findings contribute to theories on digital disruption by showing the importance of intermediary organizations that help translate physical to digital offerings. We further contribute to platform competition literature by showing that digital disruptors and defeated pre-digital incumbents pursue different platform strategies.

TIM: Collective expectations and platform ecosystem creation: The Case of Baidu in autonomous driving

Author: **Yurong Chen**, *Tsinghua U.*

Author: **Donghong Li**, *School of Economics and Management Tsinghua U.*

Author: **Amit Kumar**, *Warwick Business School*

Studying the longitudinal, qualitative case of Baidu in China's autonomous driving industry (2013-19), we propose a process model of how a diversifying entrant creates a new platform ecosystem in a nascent industry, characterized by ups and downs in the collective expectations about value, reliability, and commercialization of the new technology. In this period, the Chinese autonomous driving industry underwent three evolutionary stages of collective expectations – incubation (2013-16), hype (2017-mid 2018), and disappointment (mid. 2018-19). Expectation dynamics significantly influenced the cognitions, decisions, and behavior of various industry actors, and threw distinct challenges to Baidu. In the incubation stage, incumbent complementors were reluctant to commit resources to autonomous driving technology and co-innovate with Baidu. In the hype stage, industry witnessed new entries, intensifying competition between and within ecosystems. Baidu's ecosystem experienced strong cooperative tensions over the issues of value-creation and value capture. In the disappointment stage, complementors became pessimistic about autonomous driving, which threatened collapse of Baidu's ecosystem. The challenge was to conserve the ecosystem and continue the development efforts. Our process model unravels strategic actions that an entrant takes to address such challenges and create a thriving ecosystem. We contribute to the literature on platform ecosystems by underlining collective expectation dynamics and evolving entrant-incumbent relationship as salient factors in the process of ecosystem development.

TIM: Forming an Ecosystem through an Incumbent's Strategic Transformation

Author: **Valentina Garbin**, *U. of Trento*

Author: **Alberto Nucciarelli**, *U. of Trento*

Author: **Erica Santini**, *U. of Trento*

Technological innovation and competitive pressure push incumbent manufacturers to transform into hybrid service providers making servitization one of the most relevant drivers for value creation. Servitization trajectories affect, however, the long-term prospects of firms as changes in strategic and organizational aspects may become necessary to drive the change. Despite the scale and implications of the phenomenon, literature provides scant evidence of the process and main implications of shifting from a product-based to a solution-based business model. Thus, our work is centered around the question: "To what extent the process of servitization can lead incumbents to form an ecosystem?". To respond to this question, we qualitatively investigate Philips, the Dutch firm that has been among the first to shift from a product-based business model to a service-centric one study. We investigate the process of formation of an ecosystem in the healthcare industry and we present a set of three strategic choices - each enabled by a set of three factors - that modify an incumbent's internal resources and external network of strategic partnerships as well as its organizational structure.

TIM: The role of technology during the ecosystem lifecycle

Author: **TRUC TRAN**, *EBS U. für Wirtschaft und Recht*

Author: **Pia Kerstin Neudert**, *EBS Business School*

Author: **Markus Kreutzer**, *EBS Business School*

While technology is considered a dynamic part of the emergence of any organization, most studies portray technology trajectories independently from the lifecycle of innovation ecosystems. However, technological progress is not materialized in a vacuum but rather shaped by the choices and efforts of the heterogeneous participants that compose the ecosystem. In this paper, we seek to close the gap among technology progress, ecosystem lifecycle, and roles of ecosystem actors. We employ a multi-case study approach in the field of highly-advanced technology. The results of our qualitative research point towards the following insights: As an innovation ecosystem develops over time, its core technology progresses and also ecosystem actors are found to mature through their responses to new technology: from defending, to adjusting, to re-orienting. We contribute to the discussion of innovation ecosystem lifecycles not only from a research but also from a managerial practice perspective: Ecosystem managers gain valuable insights on the value-creation mechanisms depending on the different roles of technology and ecosystem actors. In addition, depending on the role assumed in an innovation ecosystem, actors will be better skilled to develop ecosystem governance with respect to technology transitions.

HCM: Nursing Autonomy and Covid-19: A Temporal Theory of How Challengers Make Gains In Unsettled Times

Author: **Clayton Thomas**, *Iowa State U.*
Author: **Scott Feyereisen**, *Florida Atlantic U.*
Author: **William McConnell**, -
Author: **Neeraj Puro**, *Florida Atlantic U.*

HCM Division Best Paper

The onset of the COVID-19 pandemic unquestionably challenged healthcare systems worldwide, and forced healthcare and political leaders to make quick decisions in the face of many unknowns. In this paper, we highlight how the pandemic provided an opening in US Nurse Practitioners' broader pursuit of expanded autonomy. The pandemic created an external jolt that could not have been replicated or completely foreseen by their profession. We argue that this pandemic is indicative of a broader phenomenon analogous to a punctuated equilibrium, which fosters a challenging profession's entry into a new phase of their professionalization life cycle. Building on Freidson and Abbott's theories of the profession, we offer additional theorization of how a challenging profession moves their cause forward; highlighting the role of temporality, we argue that challengers consolidate gains attained during long periods of small wins, and usher their professionalization into new phases through punctuations. We also provide empirical support for our theory by offering a survival analysis of US state policy changes made by state governors in response to rising COVID-19 cases in their states during the first month of the pandemic. We further discuss the implications for professions theory and healthcare management.

HCM: How Managers Affect Followers' Health Behavioral Change: A Systematic Literature Review

Author: **Cedric Romme Bijl**, *U. of Twente*
Author: **Wouter A. Keijsjer**, *U. of Twente*

Employee health is of direct importance to managers of organizations, teams, and individuals. How managers affect employee health behaviors, and changes thereof, is still unknown. Only a few studies have sought these mechanisms associated with "healthy leadership", including studies that charted how managers/leaders affect employees' private health lives. In this systematic literature review of fourteen studies, we analyze the mechanisms that have been explored and substantiated so far. We identified eleven categories of variables that can explain the effects of leadership on employee health behaviors. The findings were incorporated into a conceptual model, offering insight into how healthy leadership/management may affect follower health behavioral change. At the core of this individual-change model are: 1) a personal leader-employee relationship and 2) role modelling. It is suggested that this model should be tested empirically, and that the links among the thus far explored independent and outcome variables should be theorized further. Ultimately, efforts to advance effective healthy leadership at work might promote health behavioral changes among employees' families and related social networks. In effect, managers may become crucial in the slow ascent of preventive medicine, thereby bringing 'managers back in' to pursue their potentially lofty, multi-purpose objectives.

HCM: Interpersonal Relationships, Dynamic Reinforcement, and Alliance Performance

Author: **Genevra F. Murray**, *Boston Medical Center*
Author: **Valerie A. Lewis**, *U. of North Carolina, Chapel Hill*
Author: **Thomas D'Aunno**, *New York U.*

The alliance literature has identified common alliance problems, including shirking and conflict among members. This literature has largely focused on structural factors, including governance mechanisms, that promote alliance stability and performance. We use a case study to develop theory focused on mechanisms through which alliances can overcome common problems, developing the concept of "dynamic reinforcement." We employ a longitudinal case study design of a set of medical groups that formed an alliance in order to pursue a new health care payment program. Data were collected from 2012-18 including documents, phone interviews, and site visits (totaling 8 visits, 80 interviews, 23 meeting observations). Approximately 50% of data were double coded; a single coder coded the remainder. We iteratively analyzed data for emergent themes. The alliance achieved stability in the face of these problems through a process of dynamic reinforcement, whereby formal alliance structures (e.g. committees) and informal organization (e.g. multidimensional bonding and bridging ties) reinforced one another, as formal meetings gave way to a dense web of multidimensional bonding and bridging relationships across member organizations; these relationships then encouraged both continued engagement with the alliance as well as enabled sharing vulnerabilities, engaging in collective problem solving, and negotiation of tension and conflict. Our work uncovers mechanisms through which alliances develop and reinforce a robust informal organization, and complicates views of alliances from dyads of organizations to a web of multidimensional relationships between staff across members.

HCM: Organizational Culture and Nursing Home Financial Performance: The Case of High Medicaid Nursing Ho

Author: **Akbar Ghiasi**, *U. of the Incarnate Word*
Author: **Justin Lord**, *Louisiana State U. Shreveport*
Author: **Jane Banaszak-Holl**, *Monash U.*

This paper investigates the relationship between organizational culture and financial performance in high-Medicaid Nursing Homes, nursing homes that serve a high proportion of Medicaid residents. As high-Medicaid Nursing Homes operate in resource-constrained environments, they usually have lower staffing and occupancy, higher minority resident mix, and worse quality of care. A specific organizational culture, assessed by the Organizational Culture Assessment Instrument, can be a strategy those nursing homes employ to secure resources necessary to survive. This instrument helps identify organizational culture types: adhocracy, clan, market, and hierarchically oriented. We tested whether a specific type of organizational culture was associated with higher financial performance, measured by an operating margin. Survey data of 348 nursing home administrators were collected in 2017-2018. We found that the market culture was positively associated with a higher operating margin. On the other hand, there was a negative relationship between a hierarchically oriented culture and financial performance. These findings can help nursing home administrators improve their financial performance through the adoption of certain organizational cultures.

Discussant: **Stephen M. Shortell**, *U. of California, Berkeley*
Discussant: **Angela Aristidou**, *U. College London*
Discussant: **Bjorn Erik Mork**, *BI Norwegian Business School*

The overall aim of this symposium is to stage a debate that enlightens our understanding of how relational practices are established and developed in response to highly diverse, multi-level, complex societal challenges. This symposium is inspired by an ongoing, comparative case study where data are being gathered from nine sites around the world (in China, Pakistan, Nigeria, UK, US, Denmark and Norway) in order to learn more about the relational practices being used to tackle grand societal challenges, such as the current pandemic as it intersects with growing inequality and health disparities. Findings from the comparative case study is to be followed by an interventional phase starting Fall 2021. This symposium will discuss relevant methodological issues that arise when conducting ethnographic comparative case studies across diverse settings, and will inform the design of the interventions to be adopted.

The symposium is open for attendees interested in the topic. For any inquiries, please contact the organizer, Claus H Jebsen at claus.h.jebsen@bi.no

Filling the Void: Researching Our Latinx Experience
Researching Our Latinx Experience

Chair: **Carlos B. Gonzalez**, *Cal Poly Pomona*
Chair: **Monica C. Gavino**, *San Jose State U.*
Chair: **Patricia G Martinez**, *Loyola Marymount U.*
Chair: **Carlos Jesus Alsua**, *U. of Arizona*
Chair: **Florencio F. Portocarrero**, *U. of California, Irvine*
Chair: **Desiree F. Pacheco**, *IESE Business School*

One of the big takeaways from the 2020 U.S. presidential election in November is acknowledgment, though a surprise to some, that Latinx are not a monolithic group. To be Latinx is to be part of a complex and contextual community, more than just Hispanic or Latino, and not a monolithic category in a box. Managerial research that addresses this complex and contextual Latinx life experience is non-existent. More perplexing is that although Latinx-identified people compose the USA's largest minority group, a review of the managerial literature highlights the absence of research focused on Latinx social identity groups (e.g., Cuban-American, Mexican-American, Puerto Rican.) This PDW is an effort by Latinx management faculty and doctoral students to voice our experiences, begin a discussion, and set in motion a research agenda that acknowledges and incorporates this complexity in studying the Latinx experience within contemporary organizations.

The Future of Macro Talent Management (MTM): Advancing the Field

Future of MTM

Panelist: **Shaista Ehsan Khilji**, *George Washington U.*
Panelist: **Vlad Vaiman**, *California Lutheran U.*
Panelist: **Ibraiz Tarique**, *Pace U.*
Panelist: **Karin A. King**, *London School of Economics*
Discussant: **Marion Festing**, *ESCP Business School*

In this panel symposium, we take stock of the Macro Talent Management (MTM) field given recent workforce disruptions, mounting socioeconomic pressures, and the global pandemic. Based on the contextual and content analysis of the field, we argue that MTM needs to advance beyond the descriptive and conceptual agenda. Four MTM scholars offer distinct perspectives for future direction. These include focusing on the practical utility of MTM (Vaiman), problematizing and contextualizing MTM (Khilji), exploring development events (Tarique), and making a case for the active role of management and its agency in influencing macro talent conditions and outcomes (King). This panel symposium aims to engage a group of panelists in a moderated discussion of the future of MTM while also addressing the Academy meeting theme (Hillman, 2020).

No invitation, no pre-registration required. If you have any questions about the session, please email sekhilji@gwu.edu or vvaiman@callutheran.edu

**Making Change Stick: A proven model for managers,
consultants and faculty**
Making Change Stick: A proven model

Presenter: **Mary Vradelis**, *Saint Mary's College of California*

We have all experienced a seemingly successful change effort, only to find that after six months the behaviors reverted. This PDW, designed for managers, consultants, and faculty, will explore how to apply William Bridges' transition model, which was developed for leaders who wonder why their clearly-researched change efforts fail. Bridges' model offers practical strategies and principles for managers and leaders to manage change effectively. The presenter, Mary Vradelis, guides organizations and individuals through transitions, both planned and unexpected. She is an experienced Interim Executive Director, facilitator, trainer, and management coach. In her role as a transitional leader, she is an embedded consultant who has used this model to help organizations make changes that stick. As a faculty member, she has brought this change model to life for undergraduate and graduate business students. This interactive session gives managers, consultants, and faculty an opportunity to apply the model to recently completed or current change efforts, as well as to a case study. Participants will also be encouraged to share change models that have been successful for them. SEARCH TERMS: management and leadership / change management / leadership transition

New Perspectives in Diversity Research: Politics, Exclusion, Social Class, and Expectations

Digital Session Chair: **Sophie Elizabeth Jané**, *Case Western Reserve U.*

MOC: Perceptions of Group Membership: Bringing Intentionality to the Forefront of Inclusion and Exclusion

Author: **Sophie Elizabeth Jané**, *Case Western Reserve U.*
Author: **Stormy Sweitzer**, *Weatherhead School of Management, Case Western Reserve U.*
Author: **Diana Bilimoria**, *Case Western Reserve U.*

In this paper, we propose a novel approach to conceptualizing inclusion and exclusion in the workplace. Drawing on a review of the inclusion and exclusion literatures, we argue that individuals desire autonomy in choosing their group memberships. To reflect this, we propose a framework for the conceptualization of inclusion and exclusion that has two dimensions: belongingness and intentionality. From these two dimensions arise four states of perceived group membership: earned inclusion, earned exclusion, unearned inclusion and unearned exclusion. We build on these constructs by defining the process of transition between each state and provide examples to illustrate each pathway. Finally, we outline several propositions regarding the outcomes of earned and unearned social states in organizations. We conclude with the implications of our framework for management theory and practice, as well as suggestions for future study.

Paper is NOT Available. Please contact the author(s).

MOC: Does Political Diversity Predict Organizational Dissatisfaction? Salience of Presidential Elections

Author: **Anuradha Anantharaman**, *Google People Innovation Lab*
Author: **Alicia A. Grandey**, *Pennsylvania State U.*

Political polarization is linked to increasing out-group hostility, as recently observed at the U.S. Capitol. Organizations are known to vary in their political leanings, but it is unknown how political diversity among coworkers affects organizational outcomes. Based on theorizing around similarity-attraction of values and identities, we propose that organizations with more political diversity evoke lower organizational satisfaction, specifically during national elections when political views become salient. With a sample of the S&P100 organizations and multi-source archival data starting in 2008, we find that U.S. organizations with greater political diversity (aggregated variability of employee donations to liberal or conservative political groups) elicit lower organizational satisfaction (averaged ratings from Glassdoor.com) than more homogeneous companies. Further, time-varying effect modeling (TVEM) shows that these negative relationships change across the election cycle, with strong inflections during the 2008 (Obama-McCain) and 2016 (Trump-Clinton) election years. A post-hoc test also showed that political diversity related negatively to performance (i.e., return on assets; ROA). Overall, organizations whose employees hold more diverse political views have worse outcomes during election years than organizations that more strongly lean in one direction, likely due to emergent conflict that is otherwise dormant. We provide directions forward for researchers and managers.

MOC: He Sees the Forest, She Sees the Trees: Gendered Construal-Level Expectations

Author: **Samantha Dodson**, *U. of Utah, David Eccles School of Business*
Author: **Rachael Goodwin**, *Syracuse U. Whitman School of Management*
Author: **Cheryl Wakslak**, *U. of Southern California*
Author: **Jesse Graham**, *U. of Utah, David Eccles School of Business*
Author: **Kristina Diekmann**, *U. of Utah*

People often have different expectations for men and women at work. We are the first to integrate social role and construal level theories to explain how people have differing construal-level expectations of men and women. Building on these theoretical frameworks, we empirically demonstrate that people are quickly and easily able to associate names of men with abstract terms and names of women with concrete terms (Study 1). We also show that these expectations shape the construal-related attributes men and women ascribe to others and themselves at work (Studies 1, 2). Finally, in a field study, we show that men, but not women, benefit from meeting these implicit construal-level expectations. More specifically, we find that supervisors give higher performance evaluations to men who perform workplace activities abstractly. However, the same boost in performance does not appear to be given to women who perform workplace activities concretely (Study 3). The implications of this research for workplace gender equality are discussed.

MOC: The "Haves" and the "Have Nots"

Author: **Hana Johnson**, *Washington State U.*
Author: **Jay Bates**, *Washington State U.*
Author: **Fong T. Keng**, *Nanyang Technological U.*
Author: **Elizabeth Eve Umphress**, *U. of Washington*

The COVID-19 pandemic affects the personal and work lives of employees on a daily basis with constant and changing information regarding health ramifications, school closures, and staying at and working from home. However, those lower in social class appear to experience disproportionate negative health and economic outcomes. We utilize the cognitive-motivational-relational theory of emotion to describe how employees of lower versus upper class differ in how they react to the salience of the COVID-19 pandemic, which subsequently influences their emotions and behavior. In an experiment and a field study, we either manipulate or measure COVID-19 salience and evaluate how higher levels of COVID-19 salience affect employees. We found that employees with higher levels of COVID-19 salience who were lower (versus higher) in social class reported higher COVID-19-related work anxiety when they also perceived their social class as highly central. In response to this work anxiety, employees experience emotional exhaustion thinking about how COVID-19 will affect their work in the future, which then results in avoidance behaviors as employees attempt to escape the threat posed by COVID-19. This work theoretically contributes to the organizational and psychology literatures and has practical implications for how organizations should help employees cope with the COVID-19 pandemic.

Modern Cognition Research: Meaning, Mindfulness, & Learning

Digital Session Chair: **Sarah Ward**, *U. of Illinois at Urbana-Champaign*

MOC: Meaning or Money? Examining Preferences for Meaningful Work and Compensation

Author: **Sarah Ward**, *U. of Illinois at Urbana-Champaign*

Workers often face challenging decisions about whether to prioritize meaningful work or high compensation. Tradeoffs between meaningful work and compensation have received extensive theoretical attention, but limited empirical examination. Across three studies, the present investigation examined the relative importance of salary and meaningful work to job evaluations and probed the extent to which high salaries are believed to promote meaningful work. Study 1 (N=408) demonstrated that people prioritize high salaries over highly meaningful work when evaluating hypothetical jobs. Study 2 (N=187) showed that participants overwhelmingly preferred a hypothetical high-salary job with low meaningfulness to a low-salary job with high meaningfulness. Finally, Study 3 (N=171) illustrated that high-salary jobs are expected to provide more meaningful work than medium or low-salary jobs. These results suggest that salary is paramount to meaningful work in hypothetical job evaluations and that people believe that salary is highly influential to the experience of meaningful work.

MOC: When Wor(1)ds Collide: Negotiating and Renegotiating Meaning in Interorganizational Relationships

Author: **Doerte Leusmann**, *U. of Passau*

Author: **Carolin Haeussler**, *U. of Passau*

Author: **Marvin Hanisch**, *U. of Groningen*

An integral feature of organizational enactment is the social construction of meaning. Over time, organizations create an often implicit canon of meaning, which is an essential ingredient for the social construction of what is collectively perceived to be valid and true. This interpretation-guiding, idiosyncratic canon of meaning can be challenged, however, when organizations form interorganizational relationships and the interpretive worlds of two organizations collide. In this paper, we investigate the partners' continuous efforts to negotiate and renegotiate meaning by examining the extent to which meaning manifests in contractual definitions which we understand as explicit outcomes of meaning (re)negotiations. Taking a socio-cognitive perspective, we suggest that the partners more likely strive for explicit definitions the larger their social and technology overlaps because overlaps (1) unleash the ability for explicit definitions and (2) establish mutual esteem of explicit definitions. We also argue that when uncertainty is high, the impact of social overlap on explicit definitions is stronger, while when uncertainty is low, the impact of technology overlap is more pertinent. We test our conceptual model on a longitudinal dataset of 1,672 interorganizational relationships in the biopharmaceutical industry and find general support for our predictions. Our paper contributes to research on interorganizational sensemaking and the literature on contract design and adaptation.

MOC: Mechanisms of Mindfulness-Based Training Intervention: Core and Peripheral Functional Elements

Author: **Kenneth S Law**, *Chinese U. of Hong Kong*

Author: **Yan Jiang**, *Nanjing U.*

Author: **Yolanda N. Li**, *Lingnan U.*

An ever-increasing number of studies and practice-based programs have evidenced the benefits of mindfulness. This leads to the impression that practicing mindfulness is a panacea for all the problems. In this study, we try to unpack the black box of mindfulness training. We base on the classical mindfulness training program and theorize that the training comprises a core part (attention) and peripheral parts (e.g., emotion regulation). We postulated self-concept altering as the mechanism explaining the effects of mindfulness training. Specifically, the core part functions through defreezing participants' self-concept. Different combinations of the core part and peripheral parts of the mindfulness training modules will reshape participants' self-concept and induce different outcomes. We tested our theorization using two studies. Study 1 surveyed 104 working employees from the U.S. with a time-lagged design, and Study 2 employed an eight-week experiment design with 136 students from China. The findings of both studies supported our theorization. We found that mindfulness training on attention will activate individuals' self-concept defreezing and prepare them for new changes. When peripheral parts were introduced after the core attention training, participants will enjoy the corresponding benefits. Particularly, when participants received training on emotion-regulation after their core attention training, they had a decreased level of emotion regulation difficulty. Likewise, participants who received training on other-orientation after the attention training had a higher level of other-focus. Those who undertook a balanced time training after the attention training fostered a more balanced time perspective. Using different measures in the two studies, we found evidence for our hypotheses about the roles of core and peripheral elements in the mindfulness programs.

MOC: Theoretical learning: how individuals learn with delayed and ambiguous feedback

Author: **Stefano Benigni**, *Imperial College Business School*

Author: **Paola Criscuolo**, *Imperial College London*

Author: **Markus Perkmann**, *Imperial College London*

Reinforcement learning is generally viewed as the central learning mechanism in the organizational learning literature. However, reinforcement learning cannot explain effective learning when feedback is ambiguous, delayed or absent. Based on prior work in cognitive psychology and neuroscience, we introduce the notion of theoretical learning that proposes that learning occurs as a result of individuals' repeated engagement with decision-making challenges. We argue that the accumulation of decision experience drives the development of more fine-grained and complex mental models of the environment, which in turn improve decision performance. The first part of the argument is based on the idea that repeated cognitive efforts induce individuals to draw new distinctions and categories of meaning. Importantly, this effect should be more pronounced in conditions of higher uncertainty. In turn, more complex representations afford a more accurate understanding of features and relationships of the environment, resulting in improved decision performance. We test and find support for our theory in the context of patent termination decisions in a large high-tech firm, made by 140 intellectual property experts under conditions of poor feedback over 15 years. Our study demonstrates that learning can occur under poor feedback, and we specify theoretical learning as an alternate learning mechanism, distinct from reinforcement learning. An important implication is while the presence of uncertainty is seen as problematic for reinforcement learning it can be conducive to effective theoretical learning.

Critical Perspectives Towards Spirituality and Meaning

Digital Session Chair: **Toyoko Sato**, *Copenhagen Business School*

MSR: **Clan Culture, Partner Surname Sharing, and Double Sword Consequences**

Author: **Huiyang Li**, *Lingnan College*

Author: **Heng Liu**, *Sun Yat-Sen U.*

Author: **Hanqing Zhao**, *South China U. of Technology*

In many emerging countries, firms face institutional “voids” that raise the difficulty and cost of doing business. In this study, we examine a unique mechanism that may address those voids: partner surname sharing based on clan identity. Using unique data merged from multi-sources and manually collected from China, we find that firms registered in the region with a stronger clan culture will be more likely to trade with supply chain partners with the same surname. This positive effect is moderated by the level of regional marketization. We also show that such taste-based selection leads to double sword economic consequences for the focal firm. Therefore, we shed new light on the supply chain-level implications of clan culture, an Asian cultural-specific topic that has received scant attention in the marketing and supply chain literature.

MSR: **Spiritual workspace and incivility: unraveling the psychological mechanisms and boundary conditions**

Author: **Madhu Lata**, *Indian Institute of Technology Patna*

Author: **Richa Chaudhary**, *Indian Institute of Technology Patna*

The role of a spiritual work atmosphere in mitigating the occurrence of negative workplace behaviors has gained the attention of management scholars lately. However, the underlying psychological mechanisms and contingencies governing the relationship between spiritual workspace and counterproductive behaviors are unknown. Addressing this gap, the present study examined the indirect effect of workplace spirituality on two forms of incivility at work via ethical climate. The study also investigated the moderating effect of narcissism on the mediated relationship between spirituality and incivility through ethical climate. The research hypotheses were tested on a sample of 338 employees working in the Indian hotel industry in two different studies. The findings established the mediating role of ethical climate on the association between workplace spirituality and incivility. Results also confirmed the moderating effect of narcissism on the indirect relationship of spirituality with incivility through ethical climate. Theoretical contributions and practical implications are discussed.

MSR: **Deliberating Dark Triad Traits and Spiritual Intelligence: A novel conceptual advancement.**

Author: **Sai Bhargavi Vedula**, *Indian Institute of Management, Kashipur*

Author: **Rakesh K. Agrawal**, *Indian Institute of Management, Kashipur*

With the corporates permeated with dark leadership behaviours, the organisational paradigm impels for inculcating spiritual intelligence at workplace. This paper endeavours to conceptualize the connection between leaders' Dark Triad Traits (DTT); Machiavellianism, narcissism and psychopathy; and their cognizance for cultivating Spiritual Intelligence (SI). We assiduously reviewed and drew upon the theoretical insights from the literature of transpersonal psychology and organizational behaviour and offered a conceptual map. This research article also elaborates on how spiritual intelligence is the need of the hour and underscores its distinction from other intelligences. Theoretical contributions, practical implications and future avenues of research have been discussed.

Paper is Available to Meeting Registrants Only.

MSR: **Multilevel Review of Critical Spirituality**

Author: **Tanja Wolf**, *Johannes Kepler U. Linz*

Author: **Birgit Feldbauer-Durstmüller**, *Johannes Kepler U. Linz*

As spirituality provides people meaning in life and advises their sense of values and ethics, there is increasing interest among management scholars concerning this research area. Considering that people are characterized by an innate need to find meaning in their lives likewise at workplaces, management theory and practice is challenged to discuss such topics. One key controversy is the debate about what kind of spirituality we are referring to in management theory and practice. The majority of publications emphasizes the positive consequences thereby considering spirituality as a management tool improving performance of employees and organizations. In contrast, a critical spirituality focuses on a serious debate about the sense of life and work, including a critical analysis of organizations and managerial practices. Research on critical spirituality spans a wide range of disciplines, however, an interdisciplinary systematic analysis of this critical spirituality is still missing. This interdisciplinary systematic literature review contributes to the management discourse by providing a view beyond traditional management perspectives on spirituality with a synthesized overview of the most influential theoretical foundations, specific descriptions of critical spirituality as well as a first framework of implications for management theory and practice.

MSR: **The Role of Subordinate Meaningfulness in Leader Trust and Territorial Behavior**

Author: **Siyao ZHU**, *Instituto de Empresa, Madrid*

Author: **Kriti Jain**, *IE Business School*

Author: **Konstantina Tzini**, *CUNEF*

Trust is an important element of workplace relationships. While most research has taken a top-down approach to study the role of leaders in influencing subordinates' trust and behaviors, here we take a bottom-up approach to examine the role of subordinates in eliciting leader's trust and consequently affecting leader's behavior. Specifically, integrating theories on social exchange and meaningful work, we argue that subordinate's work meaningfulness can elicit leader's trust in the subordinate and also increase leader's territorial behavior towards the subordinate. Finally, we propose that leaders with high (versus low) core self-evaluations (CSE) are less likely to engage in territorial behavior toward the trusted subordinates. Using a time-lagged dyadic field study with full-time employees in China (Study 1), a recall-based experiment with British sample (Study 2), and a scenario-based experiment with US sample (Study 3), we provide converging evidence for our hypotheses. Our research represents a first attempt to examine leader's trust and behavior towards the subordinate spurring from subordinate's work meaningfulness. Our findings answer the call to study the interpersonal effects of work meaningfulness. Importantly, by studying leader's territorial behavior, we contribute to a nuanced understanding of the possible 'dark side' of trust and of meaningfulness.

OMT: Dismantling the Trojan Horse: Professionals and Relational Resistance Against Technological Change 

Author: **Tomi Koljonen**, *Aalto U. School of Business*

Finalist for the OMT Division Best Student Paper Award

Occupations face increasing pressure to implement technology in work practices. Such demands are problematic when external actors call for changes that threaten established ways of working and professional autonomy. How can occupations resist such demands for technological change? I study this question by conducting a field level study of technological policy, reform and resistance in the Finnish educational system. Analyzing archival data, I find policymakers and other actors were first successful in framing a need for technological change in the field of education, gathering wide-ranging support for their new policies. Yet, when technological reform supporting the change was implemented, new practices were quickly deemed incompatible by frontline professionals. I find teachers and key stakeholders engaged in the process of relational resistance, a coalescence of stakeholder support and criticism that allows for a profession to push back on the externally imposed change, and ultimately regain autonomy over work practices. In the end, policymakers and elected officials walked back reform discourse, and a new 2019 curriculum downplayed the importance of technology. Overall, this case allows me to explain the processes by which professionals can resist externally imposed technological change, and the role core and peripheral stakeholders play in the process. This study contributes to research in occupations and professions, and technological change at work.

OMT: Vox Populi ET Vox Regni: Investigating Digital Voice Channels in the Gig Economy 

Author: **Eliane Bucher**, *BI Norwegian Business School*

Author: **Peter Kalum Schou**, *NHH Norwegian School of Economics*

Author: **Matthias Waldkirch**, *EBS Business School*

Voice is crucial for workers as it enables them to better their organizations and exert some degree of control over managerial decision-making. Yet, as workers increasingly find jobs on digital platforms in the gig economy, traditional channels of voice are being replaced by digital voice channels, such as online communities. To add knowledge to voice on such channels, we collected conversation data from two comparable online communities, which function as official (Upwork community) and unofficial (Reddit community) digital voice channels for gig workers active on Upwork. Based on a comparative mixed-method approach combining sentiment analysis with a qualitative analysis of both communities, we draw out a process of how voice is organized in digital channels, taking into account design differences and identifying two distinctive online community voice behaviors, voice framing and voice modulation. Our study contributes to the growing research at the intersection of voice and digital platforms.

OMT: Moving With the Times: A New Perspective on Organizational Control  

Author: **Jorge Walter**, *George Washington U.*

Author: **Markus Kreutzer**, *EBS Business School*

Author: **Laura B. Cardinal**, *Darla Moore School of Business, U. of South Carolina*

Author: **C. Chet Miller**, *U. of Houston*

In this paper, we propose that current technological trends in organizational and work environments necessitate a new perspective on organizational control. While we have witnessed dramatic shifts in, and a massive transformation of, organizational and work life since the beginning of the 21st century, our theories and frameworks focused on organizational control have not undergone corresponding updates. This has both preserved and masked limitations of traditional approaches to organizational control. Addressing these limitations, we provide a synthesis of the key assumptions and dimensions underlying existing organizational control research; theorize how current trends in technological and organizational environments require us to re-examine or even relax a number of assumptions underlying organizational control theory; and develop a novel set of propositions that help us advance a reconceptualization of organizational control for contemporary organizational realities.

OMT: Meaning Dynamics of Emerging Technologies: How Technologies Come Into Being in Contested Discourses

Author: **Pauline Charlotte Reinecke**, *Hamburg U. of Technology*

Author: **Thomas Wrona**, *Hamburg U. of Technology*

In this paper, we consider how emerging, controversially discussed technologies are discursively constructed. We argue that for such technologies, meaning is neither societally institutionalized, nor do social actors frame this meaning in a purely intentional way. Building on a hermeneutic sociology of knowledge perspective, we discuss how societal knowledge and heterogenous practices of actors are communicatively co-constructed and guide the becoming of technology. We illustrate the meaning dynamics using the example of the discourse around Big Data Analytics (BDA) in Germany from 2010-2020 and reveal three interpretive frames that unfold from the recursive relations of societal knowledge and social actors. The implication of our paper is that the discursive construction of emerging technologies can only be understood through an actor concept that understands social actors as both producers and recipients of societal knowledge.

IM Division Georgetown Best Paper in International Business and Policy Award

Digital Session Chair: **Nandini Lahiri**, *American U.*

This session features the finalist* papers for the IM Division Georgetown Best Paper in International Business and Policy Award, which is presented to the best scholarly paper of the IM Division that has strong policy implications in the international context at the Academy of Management annual meeting. All papers with a research focus on International Business and Policy accepted by the IM Division for presentation at the Academy of Management annual meeting are eligible for the award. *Session excludes one paper which is also a finalist for the CEIBS Best Paper Award.

IM: **Disasters and International Business: Insights and Recommendations from a Systematic Review**

Author: **Linglin ZHENG**, *2304*
Author: **Heidi Wechtler**, *U. of Newcastle*

While the COVID-19 pandemic revived the academic interest for disasters, little effort has been made to consolidate the fragmented research on disaster in the field of international business (IB). Yet, in the current global environment, we speculate that this international perspective to examine disasters of all forms (climate change, terrorism, pandemics) is likely to grow in the near future. Therefore, it appears crucial and urgent to consolidate the existing knowledge to provide a solid basis to future research. Guided by Werner's framework, we systematically review 88 articles published between 1978 and 2020 and evaluates the nascent but rapidly growing literature at the intersection of disasters and IB. In critically analyzing this body of work, we reveal a number of areas that warrant further attention for scholars who wish to enhance academic understanding of the role of disasters in within the field of IB.

IM: **Economic nationalism and the home court advantage**

Author: **Anand Nandkumar**, *Indian School of Business*
Author: **Srividya Jandhyala**, *ESSEC Business School*
Author: **Arnab Choudhury**, *Indian School of Business*

Economic nationalism refers to government actions that enhance national interest by protecting and aiding domestic firms at the expense of foreign ones. While prior research has highlighted discriminatory laws and government policies, we contend that economic nationalism may manifest as policies that are non-discriminatory but are nonetheless unequally and differently enforced among domestic and foreign firms by actors entrusted to implement them. We explore this subtler mechanism of economic nationalism in the context of judicial rulings in property rights disputes. We expect the legal system, through its interpretation and enforcement of policies and laws, to create a disadvantage for foreign firms. In a sample of 73,756 intellectual property lawsuits in the United States between 1963 and 2016, we find foreign patent holders (compared to other domestic firms) are 18% less likely to successfully defend their patents in lawsuits against domestic firms. Similarly, domestic patent holders are 19% more likely to win against foreign (compared to domestic) challengers. Our results are robust to controlling for firm and patent characteristics and appear unlikely to be driven by differences in legal capabilities. Thus, the legal system appears to be another source of economic nationalism, giving domestic firms the home court advantage.

IM: **Firm-level Impacts of Pro-Market Reforms: Latin America as a Laboratory**

Author: **Bruno Buscariolli**, *FGV EAESP Sao Paulo School of Business Administration*
Author: **Jorge M. T. Carneiro**, *FGV EAESP Sao Paulo School of Business Administration*

The impact of pro-market reforms on the profitability of companies has been investigated for more than two decades, but accumulated results are still inconclusive. While there has been general agreement in terms of the reasons why pro-market reforms would be expected to lead to higher profitability, findings across studies have been mixed. The present study improves over past research by employing causal analysis methods (specifically, vector autoregression and impulse response functions) and by using more appropriate sampling of countries and of firms (specifically, multiple countries that are comparable and that illustrate opposing directions of reforms). We use firm-level data from 1,248 publicly listed firms in seven Latin American countries, 2000-2016. Although our results were not statistically significant as regards the relationship between pro-market reforms and firm profitability (return on sales), our findings do indicate a positive relationship between pro-market reforms and operational efficiency (reduction in administrative and selling expenses) as well as between pro-market reforms and financial leverage (corporate indebtedness and interest expenses), as expected.

International Investment Topics

Digital Session Chair: **Bjoern Schmeisser**, *WU Vienna*

This session addresses assorted topics related to foreign investment. It includes papers examining performance and survival of maturing early internationalizers, de-globalization and evaluations of foreign products in the context of the U.S.-China trade war, international diversification, digital transformation, and MNE performance, and FDI entry mode choice in Myanmar by Korean multinational companies.

IM: Performance and Survival of Maturing Early Internationalizers—A Review and Research Agenda

Author: **Joan Freixanet**, *Graduate School of Management, Saint Petersburg U.*
Author: **Ryan Federo**, *U. de les Illes Balears*

Despite abundant research on early internationalization, we still lack systematic knowledge about what occurs to born globals as they grow and evolve over time. Prior reviews do not offer a comprehensive view of the factors influencing the long-term growth and survival of born globals. To fill this void, this paper critically examines 184 articles that have appeared in 28 academic journals over the past three decades. Drawing on complexity theory, this review identifies and maps a dynamic system comprising the interplay of four sets of factors relating to internal resources and capabilities, networks, environmental factors, and firm strategies, and the influence of the interplay of these elements on firm outcomes. This paper contributes to the extant literature by taking stock of the present state of knowledge on the different sets of factors influencing the post-entry performance and survival of born globals. Furthermore, this review reveals significant gaps and contradictions in the literature, which lead to important opportunities for future research.

Paper is Available to Meeting Registrants Only.

IM: De-globalization and Foreign Products' Evaluations: Evidence from the U.S. – China trade war

Author: **Weiliang Zhang**, *U. of Illinois at Urbana-Champaign*
Author: **Wei Wang**, *Northwestern Kellogg School of Management*

From a relative micro perspective, this paper investigates de-globalization socio-political consequences. We argue that customers' evaluations towards products of Multinational Enterprises (MNEs) will be influenced by dyadic de-globalization events. Specifically, we argue that products from a rivalry country will experience evaluation drops in the host country after dyadic de-globalization events between the rivalry country and the host country, and this negative effect would further spillover to products from countries that are considered to be similar to the rivalry country. Using the U.S. - China trade war as an exogenous shock, we are able to test our hypotheses. By examining the rating behaviors on a leading Chinese E-commerce platform, we found out that products from U.S. MNEs received lower ratings after the trade war. Moreover, this negative effect spilled over to products from European MNEs.

Paper is NOT Available. Please contact the author(s).

IM: International Diversification, Digital Transformation, and the Performance of MNEs

Author: **Can Tihanyi**, *WU Vienna*
Author: **Christian Schumacher**, *WU Vienna U. of Economics and Business*
Author: **Alexander Toni Mohr**, *WU Vienna U. of Economics and Business*

We explore how digitalization transformation acts a mechanism through which international diversification affects the performance of multinational enterprises. We argue that internationally diversified firms have greater opportunities, but also face greater pressures to engage in digital transformation. In turn, increased digital transformation enhances firm performance. Digital transformation thus acts as a mechanism through which international diversification affects firm performance. We further argue that the effect of international diversification on a firm's digital transformation varies with the industry that a firm operates in. We test our predictions empirically with a sample of 451 firms in the S&P 500 from 2010 to 2018. Our results show that digital transformation is a mechanism through which international diversification affects the performance of MNEs.

IM: An Empirical Study on FDI Entry Mode Choice in Myanmar: Evidence from Korean Multinational Companies

Author: **Byung Hee Lee**, *Hanyang U.*
Author: **Honey Soe**, *Hanyang U.*
Author: **Jing Liu**, *Northern Kentucky U.*
Author: **Hong Chen**, *Hanyang U.*

Myanmar, one of the poorest countries in Asia, had not actively promoted foreign investment until the recent decade due to political issues. While it is meaningful and necessary to study FDI in terms of the promotion of FDI and economic growth in Myanmar, research on FDI in Myanmar is limited to date. This study aims to analyze how foreign multinational companies make FDI entry mode choices between the wholly-owned subsidiary and joint venture in Myanmar. Drawing upon the OLI framework and industrial organization theory, we investigate the firm's decision of entry mode choice based on its internal and external factors, i.e., firm size, resource, international experience, host country experience, set-up costs, and industry competition. Using survey data collected from 91 Korean multinational companies that made foreign investments in Myanmar during the period from 1988 to 2014, this study shows that Korean multinational companies tend to adopt a wholly-owned subsidiary mode to enter Myanmar's local market when the firm is larger in size and has more intangible resources and international experiences. However, Korean multinationals are more likely to adopt a joint venture mode when the set-up costs and industry competition are higher in Myanmar. No empirical support is found for the relationship between the firm's experiences in the host country and FDI entry mode choice. The findings provide valuable implications for MNEs that consider entering into Myanmar.

Presenter: **Beth Kaufman**, *Pearson Education*
Presenter: **Richard McCracken**, *The Case Centre*
Presenter: **Rita J. Shea-Van Fossen**, *Nova Southeastern U.*
Presenter: **Jane Schmidt-Wilk**, *Maharishi U.*

Most management academics have been trained to do rigorous research in their chosen field, but few receive any guidance about how to translate that research into learning activities or create impactful intellectual contributions from their classroom activities. This professional development workshop is intended for authors, experienced or new to the management education and learning discipline, who are interested in developing their teaching and/or learning technique(s) into management education and learning academic conference presentations, publishable case studies, peer reviewed journal publications, and other intellectual contributions. This workshop brings together experienced management education teaching-scholars, teaching and learning journal editors, and publishers in a collegial environment that will allow participants to learn about and discuss ideas on converting research into classroom activities and the scholarship of teaching and learning, as well as build participants' networks and resources in this area of scholarship.

Despite the continuing interest in leadership and team processes, there is a growing concern over both theoretical and methodological aspects of their conceptualization and measurement. In this symposium, we will highlight some of these theoretical and methodological challenges and demonstrate how the application of neuroscience can help address them. Each presentation will focus on different methodologies, highlighting their theoretical and methodological value. For instance, one team will present research that extends work on leadership and team emergent/contagion processes by focusing on neurological and physiological synchrony. Another goal of this symposium would be to demonstrate the feasibility of utilizing neuroscience tools in the study of other areas of management beyond leadership and team processes. Danni Wang and her colleagues will highlight the assessment of team emergent processes using quantitative electroencephalogram (qEEG); Nir Milstein, Ilanit Gordon, and Steve Blader will demonstrate the role of physiological synchrony in explaining the effects of interactional justice on team outcomes; Yair Berson and Avi Goldstein will present experimental findings from magnetoencephalography (MEG) imaging revealing the effects of visionary leadership on neural synchrony; and Sean Hannah, who will report on research conducted to assess ethical leadership through EEG. Finally, Russell Cropanzano will discuss these presentations emphasizing both advantages and disadvantages of these research practices and their utilization in our field.

OB: The Two Faces of Paradoxical Leader Behavior in Workplace Creativity: Motivation and Hindrance

Author: **Zizhen Geng**, *Xi'an International Studies U.*
Author: **Yanfen Wang**, *Xi'an International Studies U.*
Author: **Haizhen Wang**, *School of Business, Xi'an International Studies U.*
Author: **Weiyi Chen**, *Xi'an Jiaotong U.*

The positive effects of paradoxical leader behavior have attracted extensive attention in dynamic and complex environments. However, its influence on employees' creativity is still blurred. Drawing upon the Job Demands-Resources (JD-R) model, this study reveals the double-edged sword effects of paradoxical leader behavior on employees' creativity via role ambiguity and creative self-efficacy. Further, this study investigates the moderating effects of job complexity and cognitive flexibility on the above effects. The responses of 317 employee-supervisor matching questionnaires indicated that: (1) paradoxical leader behavior is regarded as a hindrance that leads to role ambiguity, which is negatively related to employee creativity. Meanwhile, paradoxical leader behavior is also appraised as a motivation that is positively associated with employee creativity through creative self-efficacy; (2) cognitive flexibility and job complexity can magnify the positive impact of paradoxical leader behavior on employee creativity via creative self-efficacy, while cognitive flexibility can buffer the negative impact of paradoxical leader behavior on employee creativity via role ambiguity. The implications and limitations of this study are discussed in detail.

OB: Team Improvisation: Perspective Taking, Problem Formulation, and Prior Experience

Author: **Benjamin Ostrowski**, *Carnegie Mellon U. - Tepper School of Business*

A growing number of situations require teams to improvise, especially as organizations continue to turn to teams to address their most pressing problems. Though only some teams improvise successfully, little is known about what leads some to improvise better than others, while even less is known about the role of prior experience in improvisational performance. These gaps prohibit the implementation of beneficial interventions that could prepare organizations for dynamic and unpredictable events, such as crises. To address these questions, I present the results of two studies: first, an inductive qualitative study conducted with actors working at an improvisational theater, from which I generated a series of hypotheses; and second, a field experiment with improvisational teams conducted at the theater in which I tested the hypotheses. The qualitative data suggest that teams with high perspective-taking members are better able to realize when problems are presented and to actively design them based on the team's strengths. Manipulating team composition in the subsequent experiment, I find that teams composed of high perspective-taking individuals were more emergently interdependent, made better use of members' prior improvisational experience, and performed better than low perspective-taking teams.

OB: Individual resilience and sensemaking: Traumatic life experiences and employee creativity at work

Author: **Feirong Yuan**, *U. of Houston, Victoria*

Traumatic life experiences occur when individuals experience life-threatening or other similarly dis-stressful events in life. The extant literature focuses on the negative implications of traumatic life experiences. I theorize, in contrast, that individuals can demonstrate resilience toward traumatic life experiences by performing creatively at work in some situations. Integrating the research on individual creativity and the research on trauma coping, I articulate mechanisms by which employees can be motivated and enabled to demonstrate creativity at work when under the impact of traumatic experiences in other aspects of life. Drawing from a sensemaking perspective, I discuss conditions that increase the likelihood of a positive linkage between traumatic life experiences and employee creativity. The conceptualization in this paper contributes to a better understanding of the antecedent factors to workplace creativity as well as why traumatic life experiences lead to higher levels of employee creativity in some situations but not others.

Author: **Nico Surantha**, *Bina Nusantara U.*

Though the convention in cross-cultural research to adopt an East-versus-West comparison framework has allowed us to heuristically understand cultural differences, it could have conveniently assumed negligible differences among all Eastern countries. The present research aims to address this issue by developing an Asia-centric cross-cultural inventory to illuminate the richness of cultural diversity in the Asian region. In line with our second aim to explore the predictive power of our target cultural dimensions on innovation, we developed our cross-cultural inventory in the backdrop of innovation antecedents. We conducted two studies: the first as an exploratory study by surveying about 1100 respondents in China, India, Indonesia, Japan and Singapore on a list of about 150 proposed cultural dimension items. This large amount of data warranted the use of machine learning, specifically Random Forest Algorithm, in identifying items which effectively predicted country scores. The second study continually developed six selected items into cultural dimension scales and examined their psychometric properties and most importantly, their predictive power on individual innovation outcomes. We believe that findings of this research would stimulate discussions on cultural differences beyond the East-versus-West dichotomy and generate greater interest in innovation researchers to examine cultural antecedents.

Peer Teaching, Team Learning, Team Trust, and Commitment

Digital Session Chair: **Abraham Cyril Issac**, *Indian Institute of Technology, Madras and Swinburne U. of Technology*

OB: Team Commitment: Reconceptualization and Examination of the Effects on Employee Outcomes

Author: **Ming Kong**, *Shanghai Jiaotong U.*
Author: **Chuang Wu**, *Shanghai Jiao Tong U.*

Team commitment is recognized as one of the critical determinants of team effectiveness and organizational success. In this study, we aim to: (a) reconceptualize team commitment from a new theoretical perspective (i.e., role theory), (b) develop and test a moderated-mediation model whereby employee work engagement mediates the relations of team commitment and desired employee-related outcomes (i.e., in-role behaviors, proactive behaviors, and turnover intentions), and (c) test how career goals (i.e., intrinsic and extrinsic incentives) moderate this indirect effect. We conducted three studies to test these ideas. In Study 1, we developed a new measurement for team commitment and tested its reliability and validity with a sample of 237 employees in four enterprises. In Study 2, we tested the discriminant validity of the measurement with a sample of 199 employees in one enterprise. In Study 3, we investigated a moderated-mediation model using a sample of 240 employees in four enterprises. The results show that team commitment is positively related to employees' in-role and proactive behaviors and negatively related to turnover intention. Employees' work engagement mediates those relationships. Moreover, employees' career goals (i.e., intrinsic and extrinsic incentives) positively moderate (a) the relationship between employees' team commitment and work engagement and (b) the mediating role of work engagement.

OB: Developing Psychological Capital through a Peer Teaching Intervention

Author: **Miklós Szerdahelyi**, *Széchenyi István U.*
Author: **Ted A. Paterson**, *Oregon State U.*
Author: **Tamas Martos**, *U. of Szeged*

Drawing from role theory we predict that a peer teaching intervention in positive organizational behavior will significantly impact the peer teachers' psychological resources. In an experimental study with a working adult population, we explore whether a work-related psychological resource such as psychological capital (PsyCap), that has been demonstrated to be developable through intervention, would increase as a result of a brief peer teaching activity. The results of the pretest, posttest, and retest controlled trial are consistent with our predictions: information about PsyCap paired with a one-time teaching activity results in an increase in PsyCap that is statistically significant and non-trivial in magnitude maintained even three weeks after the intervention. We provide dimension level analysis about the change in PsyCap for a more thorough understanding of the intervention, and we consider an established PsyCap outcome measure, namely job satisfaction, to find out whether the peer teaching intervention is useful beyond the development of psychological resources. Findings are relevant to the growing literature on work-related positive organizational behavior interventions in general as well to PsyCap literature.

Paper is Available to Meeting Registrants Only.

OB: Be Resilient and Learn: When Service Employees Speak up About Customer Mistreatment

Author: **Jiani Zhu**, *Georgia Institute of Technology*
Author: **Jo K. Oh**, *U. of Connecticut*
Author: **You Jin Kim**, *City U. of Hong Kong*
Author: **Eugene Kim**, *Georgia Institute of Technology*

With much of the research highlighting the detrimental consequences of customer mistreatment, its functionality aspect is overlooked in the literature. Drawing from the failure and loss coping framework and resilience theory, we theorize that trait resilience functions to allow service employees to utilize customer mistreatment experiences as opportunities to learn, which further induces them to engage in voice behavior that benefits rather than harms the organization. Specifically, because resilience protects individuals from the immediate hindrances that interfere with learning, we argue that service employees with high trait resilience learn from customer mistreatment experiences, whereas those with low trait resilience do not. Further, we argue that service employees who learn from customer mistreatment experiences will speak up about the mistreatment to help others because learning provides the basis (e.g., knowledge and experience) for voice behavior. We test a theoretical model using experience-sampling data from a sample of hotel employees. The results show general support for the model. Our findings move beyond the perspective of viewing service employees as mere victims of customer mistreatment and acknowledge their active and pivotal roles in service improvement and organizational change.

The benefits of voice for both individuals and organizations have been widely studied. However, research on the relational context of voice has focused on leader and follower interactions while other relationships and their influence on voice have received limited attention. And yet, we know that other relational contexts, such as the team environment, peer relationships, and family members, also likely play an influential role on whether or not voice is expressed, heard, and implemented. To build understanding about these overlooked relational contexts of voice, we have organized this symposium, which considers five papers that offer new perspectives about how the relational context of voice influences voice and its outcomes. In doing so, we hope this symposium illuminates new perspectives about employee voice and its outcomes.

Founding and Acquiring New Ventures *New Ventures*

Digital Session Chair: **Minjae Kim**, *Rice U.*

OMT: **Steering the Ship: Founders and Strategic Change**

Author: **J. Daniel Kim**, *The Wharton School, U. of Pennsylvania*
Author: **Minjae Kim**, *Rice U.*

Winner of the OMT Division Best Paper on Entrepreneurship Award

We identify the role of founders in driving a nascent venture's decision to pivot. Two seemingly contradictory narratives emerge. On one hand, the founder may be an "agent of commitment" whose primary role is to set an initial strategic vision and ensure consistency in its routine. On the other hand, the founder may be an "agent of change" who steers her startup to pivot and take advantage of its inherent flexibility in navigating an uncertain environment. We adjudicate this theoretical tension by exploiting a natural experiment that exogenously removes the founder from some startups while leaving others intact—specifically, premature death of startup founders. Relative to closely matched control startups whose founders remain active, startups that lose their founders are significantly less likely to undergo strategic changes. These effects are stronger in markets where startups have difficulty surviving, suggesting that the founder's pursuit of a pivot reflects her effort to navigate the market environment. Together, these findings indicate that the founder is a proactive force steering organizational strategy and routines to change, rather than reinforcing the organization's structural stability and eventual inertia.

OMT: **When Is Organizational Culture More Replicable?**

Author: **Yeonsin Ahn**, *INSEAD*

Finalist for the OMT Division Best Student Paper Award

Most new venture founders are experienced and enculturated in existing organizations that may be seen as parents of their startups. Organizational culture is often seen as a source of success, raising the question of whether founders who are often already enculturated to the parent organization's cultural codes reproduce them in their ventures or instead use a clean slate to build something different. This study investigates whether and under what circumstances founders fill the new organization with the cultural repertoires of their parent organization. Founders enculturated in prior employment are more likely to adopt familiar cultural repertoires, resulting in a spawned startup becoming culturally similar to its parent. This spawned culture effect is predicted to be stronger when founders had longer tenure, and when the parent culture is more internally coherent and more atypical of the culture of other companies. The findings are mostly consistent with the predictions. Interestingly, the spawned culture effects do not hold when the parent culture is too atypical, but moderately atypical parent culture is likely to be reproduced when more than one co-founder moved together from the parents to the spawned startup.

OMT: **Desire-Belief-Opportunity Framework and a Typology of Family Firms Evidenced in Internationalization**

Author: **Bin Liu**, *School of Management, Xiamen U.*
Author: **Gongming Qian**, *southern U. of science and technology*
Author: **David Ahlstrom**, *Chinese U. of Hong Kong*

To disentangle the inconsistent predictions derived from the socioemotional wealth construct (SEW), the study proposes a typology of family firms (FFs) referring to the desire-belief-opportunity (DBO) framework in the sociology literature. Specifically, the three ideal types of FFs including born-family firms (BFFs), acquired-family firms (AFFs), and born-again-family firms (BAFFs) are defined and theorized with propositions related to their internationalization behaviors, which constitute the most representative risky decisions. Both theoretical arguments and case illustrations have preliminarily corroborated the distinctiveness among those FFs categorized by the family legacy and governance dimensions such that the different beliefs and available opportunity set would trigger different internationalization actions along with the intention, scale, and scope dimensions. This theoretical framework should enrich the conceptualization of SEW by introducing heterogeneous dynamics that originate from their configuration pathways while presenting a further extension of the family legacy concept. It thus offers a new wrench to reconcile the inconsistent predictions of SEW in family business literature from a micro-foundation perspective particularly. In addition to the advantage of capturing the equifinality and thus opening a new avenue for empirical examinations, the typology has urged integration of multiple perspectives that go beyond SEW and thus added new ingredients to the agency theory as well.

OMT: **What If Conformity Is Risky? The Effect of Contact Status on New Venture Acquisition**

Author: **Jiaosha Chen**, *U. of Nottingham, China*
Author: **Xi Chen**, *U. of Nottingham, China*
Author: **Michael Zhen**, *IntSig Information Co., Ltd*
Author: **Jin Chen**, *U. of Nottingham, China*

Prior studies focus on the relationship between entrepreneurial networking approaches and entrepreneurial outcomes but paid little attention to the role of contacts in facilitating that process. This study investigates the role of contacts in the acquisition of new ventures. Drawing on middle-status conformity theory, we posit that since middle-status managers are more risk averse than high- or low-status managers, when being approached by new ventures, their tendency to facilitate acquiring new ventures will be lower, given the liability of new ventures. Thus, the status of contacts in potential acquiring companies will have a U-shaped effect on the probability of new ventures to be acquired. We further hypothesize that this U-shaped effect will be more pronounced when the risk of status loss is higher, and the effect can be attenuated by industry norms that encourage risk taking. The results based on a sample of 19,507 venture-acquirer dyads on acquisitions in China rendered sufficient support to our hypotheses. The findings contribute to both social network research and middle-status conformity theory, and provide important implications for "whom" entrepreneurs should approach to achieve acquisition success.

Sustainability Innovation and Entrepreneurship

Digital Session Chair: **Zelong Wei**, *Xi'an Jiaotong U.*

ONE: How to leverage manufacturing digitalization for green process innovation?

Author: **Zelong Wei**, *Xi'an Jiaotong U.*
Author: **Lulu Sun**, *Xi'an Jiaotong U.*
Author: **Wengao Huang**, *School of Management, Xi'an Jiaotong U.*
Author: **Qining Jia**, *School of Management, Xi'an Jiaotong U.*

Although the stream of literature has focused on various internal and external drivers for green innovation, less attention has been paid to the role of manufacturing digitalization. Addressing this limitation, our study aims to explore how to leverage manufacturing digitalization for green process innovation. Based on the information processing theory, we investigated the effects of manufacturing digitalization on green process innovation and thus financial performance. We also investigated the moderating effects of organizational structure (information sharing and bottom-up learning) and also technological modularization. Five hypotheses were proposed and tested with a dataset from 334 manufacturing firms in China. We find a significant positive effect of manufacturing digitalization on green process innovation. Furthermore, fit organization structure is needed to leverage this positive effects for green process innovation. We found that inter-department information sharing strengthens while bottom-up learning process weakens the positive effect. We also find that manufacturing modularization can improve the impact of manufacturing digitalization on green process innovation. More importantly, we find that green process innovation has a positive effect on financial performance.

ONE: Effectuation and causation in sustainable entrepreneurship: An empirical analysis

Author: **Matthew Johnson**, *U. of Hamburg*
Author: **Jacob Hörisch**, *Leuphana U. Lüneburg*

This original article investigates the influence of behaviors associated with effectuation and causation on the sustainability orientation in entrepreneurial ventures. Based on a quantitative survey among 140 sustainable ventures, we find support for the hypothesis that causal behaviors reinforce sustainability orientation. Surprisingly, we realize that effectual behaviors exert a positive influence on sustainability orientation as well, although we hypothesize the opposite effect. These results may instruct sustainable entrepreneurs, researchers, and educators to purposefully include both behaviors in the venture development process, and they highlight that causal and effectual behaviors are both important elements for teaching sustainable entrepreneurship in advanced settings.

ONE: Entrepreneurial Autonomy and Paulo Freire's Theory: Revolutionary Environmental and Social Change

Author: **Ana Cristina O. Siqueira**, *William Paterson U.*
Author: **Benson Honig**, *McMaster U.*
Author: **Sandra Regina Holanda Mariano**, -
Author: **Joysi Moraes**, *OMT*
Author: **Robson Cunha**, *U. Federal Fluminense*

The emancipatory perspective highlights entrepreneuring as individuals' quest to remove constraints. However, while the emancipatory perspective has focused on individuals' impetus for emancipation, it has paid less attention to individuals' efforts to challenge the status quo by building enterprises that create positive change for their communities, the natural environment, and diverse stakeholders. Developing this idea, we study how individuals search for autonomy by reimagining constraints as a leverage to form a vision and transform reality. We examine case studies of women technology entrepreneurs in Brazil. We expand entrepreneurship research on autonomy by highlighting Freire's concepts of limit-situations as constraints to be surpassed, untested-feasibility as awareness that conditions can be transformed, and limit-acts as actions to change reality, which we extend to the field of entrepreneurship.

The information that managers voluntarily disclose to outsiders can have important performance implications for the firm. Information disclosure is therefore an important decision for managers and a growing area for strategic management research. In this symposium, we examine and discuss two major topics in voluntary disclosure research: (1) environmental disclosures that reveal the extent to which organizations are responsible members of society and (2) the information managers disclose in attempt to manage impressions. We focus not only on performance implications for the firm but also the important role of information disclosure on society. We discuss common themes, future directions, and collaborative opportunities.

Digital strategizing – processes and practices leveraging digital technologies to craft and implement organizational strategies – is on the rise. Increasingly, digital technologies are also utilized to tackle grand challenges. However, the digital strategizing-grand challenges nexus remains rather unexplored. To advance debates and future research, our symposium brings together distinguished scholars who will discuss the opportunities of using digital technologies to craft and implement strategies that tackle grand challenges, the challenges and paradoxes of this endeavor, and how to include digital tools and digitally-mediated actors.

Perspectives on Mergers and Acquisitions

Digital Session Chair: **Faisal Mohammad Ahsan**, *Indian Institute of Management, Ranchi*

STR: Effect of Cross Border Acquisitions on R&D Investments: An Emerging Market Perspective  

Author: **Faisal Mohammad Ahsan**, *Indian Institute of Management, Ranchi*
Author: **Ajay K. Singal**, *Institute of Management Technology, Dubai*

Emerging economy firms use cross-border acquisitions for building new technological capabilities and augmenting their internal research and development (R&D) efforts, thus enabling them to strengthen their capabilities. Little is known whether the investment in cross-border acquisitions by emerging economy firms complements or substitutes for the internal R&D investment. Based on a panel data set of 296 Indian firms over a period of 13 years, we find empirical evidence that investments in cross border acquisitions complement internal R&D investments initially, but substitute internal R&D efforts at higher values of such investments. Both investments (R&D and cross-border acquisitions) complement, then substitute each other over a higher range for technology-intensive firms as compared to firms in the non-technology sectors. Further, investments in cross border acquisitions complement a firm's internal R&D efforts in presence of high international product-market experience.

STR: The Role of Environmental Considerations in International Acquisition Performance    

Author: **Joao Albino Pimentel**, *Copenhagen Business School*
Author: **Anne Jacqueminet**, *Bocconi U.*

Recent research suggests that the environmental and social performance of a target firm positively influences its acquirer economic gains, as reflected in market reactions to acquisition announcements. However, previous studies indicate that firm investments aiming to mitigate negative environmental impacts may be perceived as misallocation of resources. This leaves unclear whether and when the acquisition of a target with a low environmental footprint will generate value gains for the acquirer. We shed light on this puzzle by identifying international acquisition deals characterized by certain configurations of factors that together bring about economic gains for the acquirer. We propose that such gains depend on the fit between the host country environmental regulations, the type of target acquired (clean vs dirty), and the bundle of capabilities of the acquirer. We study international acquisitions by French multinationals over 2007-2017. The results of our fuzzy set qualitative comparative analysis suggest that significant gains accrue to firms that invest in deals that favor the compliance with a strict regulatory context, either through the acquisition of clean targets or through the potential transfer of technical capabilities, in particular when the acquirer also has high social capabilities. By contrast, acquisitions consistent with regulatory arbitrage strategies are not likely to generate high returns. Our paper offers novel insights for research on firms' responses to environmental regulations, on the financial performance implications of environmental investments and international acquisitions, and on non-market strategy.

STR: Creating Value through Unrelated M&As: Growing in Hyper-Competitive Platform Markets 

Author: **Namgyoo K. Park**, *Seoul National U.*
Author: **Christina Yourim Ko**, *U. of Minnesota*
Author: **Jayoung Kim**, *Seoul National U.*
Author: **Hyunsoo Kim**, *Seoul National U.*

Previous literature on M&As and platform firms has not actively investigated how the acquisition strategies of platform firms differ from those of non-platform firms. We argue that there are two fundamental differences between platform and non-platform businesses: the platform businesses' governance of ecosystems and their possession of an installed user base, which grants them the leverage to venture into new industries. These differences may drive platform firms to deploy an entirely different approach to their M&A strategies. After analyzing the acquisition strategies of platform and non-platform firms that were listed on the NASDAQ-100 Index, we found that platform firms are more likely to pursue acquisitions than non-platform firms. We further found that platform firms have a higher propensity to acquire less related targets than non-platform firms. Our findings also indicated that platform businesses with larger installed bases and longer platform business experience were more likely to acquire less related targets. This study contributes to M&A literature by examining how the logic of relatedness should be modified to explain the M&A strategies of platform firms.

STR: Understanding Value Creation in Acquisitions: A Fuzzy-set Configurational Approach  

Author: **Emanuele Luca Maria Bettinazzi**, *U. della Svizzera Italiana*
Author: **Mario Schijven**, *U. of Illinois at Urbana-Champaign*
Author: **Maurizio Zollo**, *Imperial College Business School*

Extant work has predominantly investigated how acquisitions create value by focusing on the isolated effects of individual determinants. We propose that this approach needs to be complemented with a configurational one that captures the multi-dimensional fit among these factors, thus lending itself to a more accurate depiction of the mechanisms through which acquisitions create—and fail to create—value. Using fuzzy-set qualitative comparative analysis (fsQCA), we draw on a fine-grained dataset of 101 acquisitions to examine the fit among three sets of factors that cover the essence of the existing acquisition literature: pre-deal characteristics, the acquirer's acquisition capabilities, and post-acquisition decisions. Our findings highlight different configurations leading to value creation and failure thereof, together with novel insights regarding the multi-dimensional fit between the underlying factors.

Stakeholder Theory and Social Issues

Digital Session Chair: **Kate Odziemkowska**, *Rice U.*

STR: There Is No Planet B: Polycentric Governance In The Amazon Rainforest

Author: **Anita McGahan**, *U. of Toronto*

Author: **Leandro Simões Pongeluppe**, *U. of Toronto, Rotman School of Management*

How do firms design incentives compatible with environmental protection? The new institutional economics identifies the challenges of governing common-pool resources and the difficulties of internalizing environmental externalities into regular market transactions. New stakeholder management theory suggests that firms may avoid the tragedy of the commons through the formation of a polycentric governance structure among stakeholders. This paper evaluates these theoretical claims by analyzing the activities of Natura, a Brazilian cosmetics company, regarding Amazon rainforest preservation. We argue that, in line with theoretical predictions, Natura internalizes positive externalities arising from environmental protection by sharing value with stakeholders in rural Amazon communities. To test this proposition, the paper presents a differences-in-differences analysis comparing forest preservation in the municipalities that Natura entered versus those in which it did not. The study employs an instrumental variable based on missing satellite images, which Natura relies upon to make decisions about entry into different municipalities. Images are missing due to technical problems in satellite operations, which are uncorrelated with stakeholder needs on the ground. Quantitative results show that Natura's entry into a municipality helps to preserve forested areas. Analysis of three mechanisms using information on crop yields and carbon density ties Natura's involvement with stakeholder decisions to cultivate forest-generated crops rather than to engage in clear-cutting. The polycentric governance system that Natura stimulated also led to reforestation of previously cleared areas. This study contributes to the management literature by suggesting how firms can foster environmental protection through incentive alignment with critical stakeholders.

STR: The Walls Have Ears: The Impact of Selective Disclosure on Employee Evaluations

Author: **Navya Pandit**, *Department of Management and Technology, Bocconi U.*

Author: **Anne Jacqueminet**, *Bocconi U.*

Author: **Christiane Bode**, *Imperial College Business School*

Firms face increasing pressures from external stakeholders to be transparent regarding their environmental performance. To avoid backlash, firms oftentimes choose to disclose only positive performance while downplaying their negative environmental impacts. Engagement in this kind of selective disclosure may have negative consequences for firms unknown hitherto. Although, prior literature has looked at the consequences of selective disclosure from the perspective of external stakeholders, little is known about how internal stakeholders, e.g. employees, evaluate the same. This study aims to explore the conditions under which employees evaluate their firm's selective disclosure behaviour negatively. We find that firm-level selective disclosure in material dimensions is associated with positive employee evaluations. However, these positive evaluations are thwarted when this material selective disclosure occurs alongside harmful environmental damage caused by the firms. Based on the literature on organizational identification and cognitive dissonance, we theorize that employees interpret materiality of selective disclosure as a signal of firm intention to be more transparent which is contaminated by a firm's damaging environmental behaviour eliciting negative employee evaluations.

STR: The spillover effects of currency demonetization and social embeddedness of MFIs

Author: **Nachiket Bhawe**, *U. of North Carolina Pembroke*

Author: **Srivardhini K. Jha**, *Indian Institute of Management, Bangalore*

Hybrid organizations like microfinance Institutions (MFIs) work at the interface of the formal and informal economy by providing access to credit to the underbanked members of the economy who typically work outside the economic mainstream. Two approaches dominate the working of MFIs—a transactional approach where MFIs strictly focus on the banking aspect selecting the more credit worthy borrowers to grow and scale. Alternately, they could adopt a relational approach and embed themselves with various social programs to better understand their borrowers but expose themselves to greater liability and risk. Using a proprietary data of MFIs that operated in India during the policy shock of currency demonetization aimed at curbing the informal economy, we found that contrary to expectations, socially embedded MFIs increased their borrowers post demonetization compared to those strictly focused on banking possibly due to preference for trustworthy lenders. The risk of default for socially embedded MFIs due to exposure to the informal economy also reduced post demonetization due to greater digitalization. Our results suggest that differential spillover effects from policy shocks on firms at the interface of the formal and informal economies.

STR: When do Firms and Environmental Activists Cooperate?: Evidence from the US Electric Utilities Sector

Author: **Kartik Rao**, *Ivey Business School*

Author: **Adam Fremeth**, *Ivey Business School*

Author: **Guy Holburn**, *U. of Western Ontario*

We examine the role of heterogeneous organizational attributes of firms and environmental activists in determining the likelihood of them cooperating. We argue that insofar as heterogeneity in their attributes results in greater symmetry in their capabilities and objectives or induces either or both parties to make costly concessions during negotiations in anticipation of potential benefits, cooperation is more likely. A statistical analysis of firm-activist interactions in regulatory proceedings within the US electric utilities sector from 1990-2015 supports our predictions. We find that when firms demonstrated greater commitment to the environmental values, or when activists had a larger resource base, cooperation was more likely. In contrast, when a firm's environmental practices were more objectionable, firms were economically reliant to a greater degree on a stakeholder adversely affected by outcomes of cooperation, or the activist was more ideologically inclined to engage in contentious tactics, cooperation was less likely. Our findings contribute new insights on contingencies underlying cooperation between firms and environmental activists in the context of regulatory institutions.

Organizational Learning and Innovation Through Alliances

Digital Session Chair: **Jens-Christian Friedmann**, *Bocconi U.*

 **STR: Does the predator become the prey? Knowledge leakage and role reversal in alliances**  

Author: **Jens-Christian Friedmann**, *Bocconi U.*

Author: **Dovev Lavie**, *Bocconi U.*

Author: **Linda Rademaker**, *BI Norwegian Business School*

Carolyn Dexter Award Nominee

Research on learning in alliances explains how firms simultaneously seek to absorb their partners' knowledge while protecting their own knowledge from involuntarily leaking to their partners. We contribute to this research by studying whether a firm that managed to successfully absorb knowledge from its partner learns how to protect its own knowledge in subsequent alliances, as it reverses roles from a 'predator' to a 'protector'. Our analysis of 529 alliances formed by 87 East Asian firms between 1999 and 2015 suggests that as firms become more skilled at overcoming their partners' knowledge protection, they learn to better protect their own knowledge in subsequent alliances, but such vicarious learning increases at a diminishing rate. We further demonstrate that this learning is reinforced by the strength of the appropriability regime in the previous partner's country relative to that in the firm's own country and when the firm's business similarity with its previous partner is greater than with its subsequent partner. In turn, learning is weakened by the value chain scope of the firm's previous alliance.

STR: Value of Alliance Portfolio Reconfiguration During Industry Change Evidence from Automobile Industry

Author: **Yueyue Zhang**, *Fudan U. School of Management*

Author: **N Venkatraman**, *Boston U.*

Author: **Cheng Zhang**, *Fudan U.*

During industry change, firms usually update their resources by reconfiguring alliance portfolio. Firms not only hold existing network resources accessed through its current alliance portfolio, but also acquire new network resources accessed through a newly formed alliance. In this research, we move beyond the collection of dyadic relationships of individual alliances and examine more holistically the mutual dependences of existing and new resources during alliance portfolio reconfiguration, with a focus on the effect of the structural characteristics of the firms' alliance portfolio on firm value. Using strategic alliances of 34 firms in the global automobile industry in the period 2009–2018, we combine textual analysis with event studies conducted on stock market returns. By separating a firm's ego alliance network of existing resources into core(technology) resource network and complementary(marketing) resource network, our results show that firms' embeddedness (reflected by network cohesion) in existing core resource network is negatively associated with the value of new alliance for challenged new resource, while embeddedness in existing complementary resource network is positively associated with the value of new alliance for reinforced new resource. Our study contributes to a better understanding of the alliance portfolio reconfiguration, its structures, and market return consequences in the era of industry change.

STR: Exploring the Impact of Innovation Disclosures on Contracting for Technology Collaborations

Author: **Sandip Bisui**, *U. of Colorado, Boulder*

Author: **Jeffrey J. Reuer**, *U. of Colorado, Boulder*

Author: **Dutt Dev Harsha Tadikonda**, *Indian School of Business*

This paper encompasses the dynamic nature of information environment and investigates how the disclosures of technological developments impact the bargaining and distribution of value capturing rights during alliance negotiation. We propose that disclosures of technological innovations through credible and exogenous sources reduce the bargaining power of research and development (R&D) startups by increasing the market competition and appropriation concerns. Using data from technology alliances in bio-pharmaceutical industry and taking advantage of the passage of the American Inventors Protection Act (AIPA), an event that causes exogenous changes in information environment through the publication of patent applications, we find that the proportion of intellectual property (IP) rights decreases for the R&D firms with an increase in the availability of technological information. Further, we find that the effects of innovation disclosures enhance with the competition in the R&D firms technology domain, and when there is less external funding available. However, the effect is less prominent when the R&D firms pose valuable assets such as patents.

STR: Patent Enforcement Strength and Collaboration: The Effect of Firm's Litigiousness on Alliances. 

Author: **Said Matr**, *U. of Groningen, Faculty of Economics and Business*

Author: **Eduardo Melero**, *U. Carlos III de Madrid*

Author: **David Wehrheim**, *IESE Business School*

In this paper, we study the effect of the strength of the IP enforcement on firm's collaborative activities. We argue that there are two potential contradicting forces driving the effect, namely, the expected return from learning during a collaborative project, and the expected cost of any unintended potential knowledge leakage during that project. Our results from a quasi-natural experiment, exploiting the reduction of the IP enforcement due to a recent landmark event in the U.S. patent system (the ruling in eBay v. MercExchange), show that weaker property rights, on average, lead to fewer collaborations and alliances. To get additional insights, we also investigate the effect on particular types of collaborations, as well as in settings where the two mechanisms may be strengthened or weakened.

STR: Winning Without a Champion: Ecosystem Emergence Under Distributed Agency 

Author: **Susanne Koster**, *Erasmus U. Rotterdam*
Author: **Pursey Heugens**, *Erasmus U. Rotterdam*

The emergence process, through which actors construe the value creation, value capture, and coordination functions of an ecosystem, has recently sparked considerable scholarly interest. To date, most studies have focused on the central role of “champions”, actors controlling key resources, in constructing the ecosystem. However, many ecosystems emerge under conditions of distributed agency, in which initiative and key resources are spread across multiple nominally independent actors. We investigate the processes along which the three canonical functions of an ecosystem tend to emerge when champions are lacking. We conduct an in-depth, historically embedded study of the emergence of the Dutch ornamental crop breeding industry, a globally leading ecosystem that has been built under conditions of distributed agency. Our process model shows that distributed-agency ecosystems tend to emerge through various phases, in which the simultaneous construction of the value creation and value capture functions often leads to frictions between the individual economic incentives and the normative values that are collectively held by all actors in the ecosystem. Due to the property of distributed agency, actors must act collectively in self-enforcing institutions or appeal to third parties to resolve these frictions. We find that these coordinating institutions engage in three types of work: values work to advocate and enforce a set of normative values, friction-resolving work to stimulate collective value creation and to impose legal and moral boundaries on value capture rule structures, and sedimentation work to harmonize the new elements and the persisting old structures of the ecosystem.

STR: Measure Twice, Cut Once: Scaling Novel Business Models in the Nascent Online Fashion Industry   

Author: **Ron Tidhar**, *Facebook*
Author: **Kathleen Eisenhardt**, *Stanford U.*

This paper explores how promising ventures build novel business models that enable profitable growth (i.e., scale). By studying 3 venture-pairs with different business model templates in the nascent online fashion industry, we contribute a theoretical framework describing a phased process: successful entrepreneurs first 1) slowly design a simple, profitable core transaction by purposefully delaying growth, and then 2) sequentially build a core capability followed by an activity system that creates advantage and accelerates scaling. In contrast, less successful entrepreneurs focus on growth, learn quickly but narrowly, and end up with an often complex and unprofitable core transaction that cannot scale. While these ventures may grow quickly at first, they soon fade. Overall, our framework is reminiscent of Aesop’s classic fable about the race between the tortoise v. hare. We also add insights about the role of data science, optimal distinctiveness and extreme scalability, and about the process of how firms grow and more significantly, scale. Overall, we indicate how promising ventures become successful adolescent firms.

STR: Disentangling the Relationship between Business Model Innovation and Financial Performance  

Author: **Eduard Esau**, *Gottfried Wilhelm Leibniz U.*
Author: **Christopher Jung**, *WWU Münster*
Author: **Thomas Schäper**, *WWU Münster*

This study seeks to provide new insights into the relationship between a firm’s business model innovation (BMI) intensity and its financial performance over time. By adopting an institutional perspective, we hypothesize a non-linear relationship suggesting that a moderate BMI intensity is most beneficial as firms need to balance the tension between generating legitimacy while increasing their competitiveness. Moreover, we argue that the legitimacy threshold is contingent on the industrial environment since it could vary across different characteristics, particularly the average industry BMI and industry growth. To test the hypotheses, we draw on a machine-learning approach for text mining, analyzing 10-K annual reports from publicly listed U.S. firms between 1994 and 2018 to create a text-based measure of BMI intensity, and merged it with archival data. The firm fixed-effects regression analyses of 47,026 firm-year observations indicate that the relationship between BMI intensity and financial performance is S-shaped. In detail, performance decreases for low levels, increases for moderate levels, and decreases for high levels. We further demonstrate that the average industry BMI intensity positively, and industry growth negatively moderates the S-Shaped relationship. Our study contributes to both a better understanding of the BMI-performance relationship across different intensity levels and conditions as well as to the growing body of research at the intersection of institutional theory and strategic management examining the tensions between legitimacy and differentiation.

STR: Is research enough for a university to gain prestigious status

Author: **Rachel Bocquet**, *IAE Savoie Mont Blanc – U. of Savoie Mont Blanc*
Author: **Gaëlle Cotterlaz-Rannard**, *U. of Geneva and U. of Savoie Mont Blanc*
Author: **Michel Ferrary**, *GSEM - U. of Geneva & Skema Business School*

By combining the two streams of literature on nonprofit organizations and business models, the aim of this paper is to provide a novel conceptualization of nonprofit business models, particularly those of private, nonprofit American universities and to contribute to the ongoing debate on how nonprofit organizations can be better managed for their long-term survival. Building on the Bourdieusian theory of forms of capital, we propose an analytical framework that places the achievement of societal value for society at the forefront. We empirically test our framework using an original database of 205 private, nonprofit American universities. We find that the robustness and competitiveness of business models of nonprofit organizations rely on the accumulation and conversion of the four complementary and interdependent forms of capital (i.e. economic, social, cultural and symbolic).

STR: Worlds Apart? Connecting Competitive Dynamics and the Resource-Based View of the Firm

Author: **Ming-Jer Chen**, *U. of Virginia*
Author: **John G. Michel**, *U. of Notre Dame*
Author: **Wenchen Lin**, *Tsinghua U.*

Competitive dynamics and the resource-based view emerged simultaneously from the study of strategy more than three decades ago. The two subfields have advanced since then to occupy established positions in strategic management. Generally, competitive dynamics is outward-focused and interested in a firm's moves and countermoves in the marketplace. The resource-based view looks inward, examining a firm's internal organizational capabilities, its tangible and intangible resources. They have mostly been investigated independently; rarely have researchers put together the two pieces of internal capabilities and external competitive profile. Consequently, we have only a fragmented snapshot of the firm's core strategic elements and behaviors. Here, we compare and contrast the two perspectives along a number of dimensions such as focus of attention and conception of competitive advantage. Based on this understanding, we explore the CD-RBV interface, specifically how central elements of these research streams may be considered jointly to expand our understanding of firm behaviors and outcomes. We highlight limitations and lapses in the literature and suggest directions for future researchers interested in developing new theories connecting the intellectual boundaries of these two important strategy subfields.

STR: Multiple Domain Competition: Integration of Competitive Strategy and Corporate Political Strategy

Author: **Xiaoyan Sun**, *National School of Development at Peking U.*
Author: **Hao Ma**, *National School of Development at Peking U.*
Author: **Mengyue Su**, *Peking U.*

While competitive strategy focuses on a firm's competitive advantage and performance in the competitive domain, political strategy deals primarily with its legitimacy and government relation in the political domain. Will an attack by a rival in the competitive domain trigger a response in the political domain? What are the rationales and determinants of such a cross-parry between the two domains? Building on the literature of competitive dynamics and multimarket competition, we examine the joint deployment of firm competitive strategy and political strategy and advance a theory of multiple domain competition. Specifically, we systematically examine the determinants of the attacked firm's responses to an attack in the competitive domain: no response, response in the competitive domain only, response in the political domain only, and responses in both domains simultaneously. We posit that the choice of responses depends on the attacked firm's awareness of the interdependence between the two domains as well as the possibility of cross-parry, its motivation to engage in intra-domain and cross-domain responses, and its capability to respond within and across domains. By extending the literature on competitive dynamics and the concern for competitive advantage to the study of firm actions in the political domain, we attempt to make a theoretical contribution to the integration of competitive strategy and corporate political strategy. Our integrative account of the multiple domain competition will help enhance our understanding of how the firm simultaneously manages its competitive strategy and political strategy against the same rivals.

STR: Opening the Black Box: Boards of Directors, Competitive Aggressiveness, and Firm Performance

Author: **Jaeyoung Cho**, *Xiamen U.*
Author: **Sam Garg**, *Hong Kong U. of Science and Technology*
Author: **Jangwoo Lee**, *Kyungpook National U.*

This study develops and tests the theoretical model that examines how the board's composition and leadership structure relates to competitive aggressiveness and, ultimately, performance outcomes in the context of emerging economy firms where the separation of ownership and control is not the central issue. Analyzing a sample of 570 listed Korean firms from 1998 to 2017, we find that more independent directors and the separated role of a firm's CEO and chairperson help improve the corporate ability and tendency to identify and seize opportunities for pursuing competitive aggressiveness and therefore to link temporal competitive advantages that yield superior performance outcomes. The important implications of these findings are discussed.

Paper is Available to Meeting Registrants Only.

STR: Market Dominance and Imitative Response to Product Proliferation: A Competitive Dynamics Perspective

Author: **Chaturbhuj Tripathi**, *Alliance Manchester Business School*
Author: **Joseph Lampel**, *U. of Manchester*
Author: **Silvia Massini**, *U. of Manchester*

Extant research theorizes that market leaders often use product proliferation to saturate product space thereby deterring rivals from introducing close substitutes. This study argues that this overlooks the diversity of market leaders. Market leaders run the gamut from firms with temporary leadership to firms that dominate their industry for decades. Consequently, the impact of product proliferation as an imitation barrier may not always be the same. In this paper we focus on product proliferation by dominant market leaders. Using competitive dynamics perspective, we argue that in competitive action-reaction context market followers will not desist from imitation, but instead imitate the market leaders in order to avoid falling behind in an evolving market. We test our predictions using data drawn from Indian automobile industry (2009-2019) which is consistently dominated by a dominant market leader: Suzuki Motors. We show that product proliferation by dominant firm in a given product submarket will result in imitative product proliferation response from rival firms. We also find that the imitative product proliferation by the rivals, as a response to the dominant firm's product proliferation in a given product submarket, will result in performance gains for the imitating firms. Conversely, we do not find that when the dominant firm's product proliferation occurs in a more complex product submarket then the likelihood of imitative product proliferation from the rival firms in this submarket will decrease, and similarly, we do not find that rivals' imitative product proliferation in a complex product submarket will result in greater imitating firm performance.

Determinants of Board Effectiveness

Digital Session Chair: **Fabian K. Ahrens**, *Faculty of Economics and Business, U. of Groningen*

STR: The Impact of Social Dependence on Directors' Effectiveness in Monitoring and Advice-Giving Tasks 

Author: **Fabian K. Ahrens**, *Faculty of Economics and Business, U. of Groningen*
Author: **Laetitia Mulder**, *U. of Groningen*
Author: **Dennis Veltrop**, *U. of Groningen*
Author: **Floor Rink**, *U. of Groningen*

Prior work has mostly focused on independent directors' engagement in monitoring but research finds little systematic support for the positive effects of director independence. We highlight three reasons for this inconsistency, namely: (1) formally independent directors can still be socially dependent on the CEO, (2) director engagement in monitoring does not necessarily translate into higher monitoring effectiveness, and (3) in addition to monitoring the CEO, directors also provide advice. In this study, we demonstrate that director social dependence negatively impacts director effectiveness when monitoring but not when giving advice. This effect is robust across a survey and a randomized field experiment. Our study provides a micro-level examination that acknowledges the fundamental difference between (1) director engagement in board duties and (2) director effectiveness in these board duties, and thus contributes to a more nuanced understanding of director effectiveness. Our findings have implications for corporate governance in contexts where a majority of directors is formally but not socially independent. We highlight that best practices should not limit themselves to structural changes to mitigate negative effects of social dependence but raise awareness for the psychological pitfalls of board work.

Paper is Available to Meeting Registrants Only.

STR: The Effect of Short-Selling on the Ratio of Independent Directors 

Author: **Ribuga Kang**, *Chinese U. of Hong Kong*
Author: **Jingoo Kang**, *Nanyang Technological U.*

This study examines how a short-selling threat affects firms' board composition. We propose that firms will decrease the ratio of outside directors in their board when there is a short-selling threat because firms are concerned about outside directors leaking information to the financial market. To test this hypothesis, we exploit an exogenous shock in the US stock market associated with Regulation SHO whereby the Securities and Exchange Commission (SEC) randomly selected pilot firms for which the uptick restriction on short-selling no longer applied. We also examine the previous short-selling threat, the presence of executive directors on the nomination committee, and stock ownership by outside directors as contingencies. This research contributes to the literature on independent directors by adding a novel perspective that highlights the impact of independent directors as an information conduit.

Paper is Available to Meeting Registrants Only.

STR: How ideological diversity within top management teams influences strategic dynamism

Author: **Yungu Kang**, *Hong Kong Baptist U.*
Author: **M. K. Chin**, *Indiana U., Bloomington*
Author: **David H. Zhu**, *Arizona State U.*

Although many studies have examined the impact of the demographic diversity of top management teams (TMTs) on strategic outcomes, little theoretical or empirical work has investigated the influence of TMTs' ideological diversity on strategic decisions. Because ideologies held by top executives influence not only their goals but also their decision-making processes, we develop the construct of TMT ideological diversity to explain how it increases strategic dynamism. In addition, we suggest that the positive effect of TMT ideological diversity on strategic dynamism is weaker when the CEO is more conservative, when the TMT is more diverse in demographic characteristics, and when management has more discretion. Using political donation records of U.S. top executives to capture their liberal versus conservative values, we find considerable support for our predictions.

Paper is Available to Meeting Registrants Only.

STR: It takes two to tango: The joint effect of CEO- and chair dominance in predicting board monitoring 

Author: **Julia Prömpeler**, *U. of Groningen, Faculty of Economics and Business*
Author: **Dennis Veltrop**, *U. of Groningen*
Author: **Floor Rink**, *U. of Groningen*
Author: **Janka Ireen Stoker**, *U. of Groningen, Faculty of Economics and Business*

How to achieve effective board monitoring is a classic puzzle in corporate governance. Yet the increasing attention to executive traits in predicting board monitoring has let scholars and practitioners assume that dominant CEOs clearly represent one factor that threatens this outcome. Drawing from psychological and management insights, we challenge this assumption. We propose that in the increasingly common non-duality setting (i.e., separation of CEO and chair position) CEO dominance may in fact increase board monitoring and that this relation critically depends on the dominance of the boards' chair. In an experimental study among 81 non-executive directors and a survey study conducted among non-executive directors, chairs of non-executive boards, and CEOs from 120 Dutch organizations, we find large support for the positive effect of CEO dominance on board monitoring and full support for the interaction effect of CEO and chair dominance. There was a positive relationship between CEO dominance and monitoring in the non-duality setting when the chair was also dominant, but this effect became non-significant when the chair was not dominant. Among other implications, the results highlight the importance of nuancing the effects of dominance for different governance contexts, and further examining the important role of board chairs.

Behavioral Processes and Competition

Digital Session Chair: **Wei Yu**, *National U. of Singapore (NUS)*

STR: **The Effect of Interfirm Competition on Intrafirm Competition**

Author: **Patrick Hallila**, *City U. London*
Author: **Paolo Aversa**, *City U. London*
Author: **Hans Frankort**, *City, U. of London*

Prior work on firm competition has mostly studied external, interfirm competition and internal, intrafirm competition in isolation, while underemphasizing the interconnectedness of these two levels of competition. In this study, we develop and test a more integrative theory of firm competition by examining how actors divide their efforts across interfirm and intrafirm competition. Integrating arguments from competitive dynamics and intrafirm competition, we propose that increased competitive pressure from external competitors decreases the relative valence of attacking intrafirm competitors. In panel data (2004-2017) of riders competing in MotoGP, we find that increased competitive pressure from interfirm competitors (i.e., other race teams) reduces the probability that a rider attacks an intrafirm competitor (i.e., a team member) by overtaking them, and it decreases the proportion of all overtakes against team members. This shift in focus away from intrafirm competition is more pronounced when the external competitive pressure derives from teams equipped with inferior resources.

Paper is Available to Meeting Registrants Only.

STR: **Environmental Hostility vs. Dynamism: The Implications for the Organizational Resilience Process**

Author: **Wei Yu**, *National U. of Singapore (NUS)*
Author: **Yang Ye**, *Southwestern U. of Finance and Economics*

Organizational resilience is a key attribute to enable firms to adapt to the world with increasingly frequent and intense adversities. While previous literature focuses on the internal firm attributes that contribute to organizational resilience, little attention has been paid to the different dimensions of environmental adversity that matter as well. Unpacking the distinctive characteristics of environmental hostility and dynamism, we suggest that an increase in these environmental dimensions create different challenges for the organizational resilience process. While firms find it harder to deal with environmental hostility than dynamism initially, they are able to effectively neutralize environmental hostility in the long-term but not able to do so for environmental dynamism. Such unsatisfactory adaptation to environmental dynamism is aggravated for larger and older firms. Together, we suggest that firms need to pay attention to different environmental contexts as they have different implications for the resilience of the firm.

Paper is Available to Meeting Registrants Only.

STR: **Measuring the Impact of Alliance Change on Financial Outcomes: The Case of Intercollegiate Athletic**

Author: **Stephanie Kay Herbst-lucke**, *Weatherhead School of Management, Case Western Reserve U.*
Author: **Paul F Salipante**, *Case Western Reserve U.*
Author: **Abraham I. Turetsky**, *Weatherhead School of Management, CWRU*
Author: **Robert Mayberry**, *Georgia State U.*

Using two natural experiments based on the Synthetic Control Method and a personally developed database representing 85% of the population, this study measures the effect of strategic conference change on college Athletic Department financial outcomes. Contrary to conventional wisdom and literature, these experiments find that college alliance change neither increases Earned Revenue or Expenses nor decrease Debt for colleges that change conference. While realignments do not impact financial outcomes, the broader alliance-change literature indicates that altering century-long partnerships, changing iconic brand names, logos, and products as a result of realignments, negatively impacts brand value. While conference change may have other long-term benefits, conference change does not improve financial health and may lead to brand value depletion. Therefore, conference change leads to value depletion outcomes for the defecting colleges, the conference and possibly the Intercollegiate Athletic system. These findings illuminating the impact and effects of conference change can lead to more informed action by college administrators and the Intercollegiate Athletic stakeholders, as well as, to further the study of the logics of strategic actors in competitive alliances.

Paper is NOT Available. Please contact the author(s).

STR: **Template Variation within a Common Frame: Supporting Mission Cohesion in Dispersed Organizations**

Author: **Esther Leibel**, *Boston U.*

Research on strategy replication shows that strategy templates can advance an organization's mission across geographies by helping create strategic alignment with local conditions. However, local adaptation of templates can introduce variability that hampers growth and goal achievement. How can organizations harness local variation while maintaining coherence to their mission? This longitudinal, inductive field study of a multi-site organization examines the process of template variation within a common frame. Rather than derail an organization's mission, template variation allows geographically-dispersed units further cohesion around common goals, while fostering alignment with local conditions by developing local interpretations. This paper contributes a grounded theoretical explanation of how template variation can allow local strengths to flourish while supporting mission cohesion—a challenge common to any growing organization.

The Interaction Between Hierarchy and Cognition

Digital Session Chair: **Ankur Chavda**, *HEC Paris*

STR: It's Not What You Know, It's Where You Are: Hierarchy, Experience and Organizational Capabilities  

Author: **Ankur Chavda**, *HEC Paris*

Author: **John Eklund**, *U. of Southern California*

Strategic management scholars are increasingly paying attention to the micro-foundations of firms' capabilities by examining how the attributes of individuals within firms can shape organizational-level capabilities and performance. However, little attention has been paid to how individuals' positions within their firms and their interaction with other individuals can shape how their unique individual attributes impact organizational-level capabilities and performance. In this paper, we examine how the breadth of prior experience of managers and workers reporting to them within a hierarchy can influence organizational performance. Drawing on a cognitive dynamic capabilities theoretical lens, we argue that broader prior experience of managers is positively associated with organizational performance, whereas broader prior experience of workers is negatively associated with organizational performance. Further, workers with narrower experience tend to strengthen the impact of broader managerial experience on organizations' overall performances. We find support for our arguments in the movie industry using a dataset of 101,027 movies released between 1950 and 2017.

STR: When do Bosses Matter? Understanding the Relationship between Strategy, Hierarchy and Capabilities  

Author: **John Eklund**, *U. of Southern California*

This paper seeks to add to the literature on the micro-foundations of organizations' capabilities. This literature has tended to overlook that different individuals or groups are likely to play a greater or lesser role in shaping an organization's capabilities and subsequent performance depending on the strategy an organization undertakes. I argue that senior managers' capabilities have a greater impact on performance when undertaking proactive as compared to reactive strategies. The capabilities of units reporting to senior managers have a greater impact on performance than those of senior managers when undertaking reactive strategies. Further, senior managerial capabilities can be substitutes for units' capabilities when undertaking proactive strategies but complements for reactive strategies. I find support for my arguments within the context of US college football.

STR: Leading across factional faultlines and conflict spirals in IJV management

Author: **Maarten Van Der Kamp**, *Monash Business School*

Author: **Brian Vincent Tjemkes**, *Vrije U. Amsterdam*

Author: **Valerie Duplat**, *Vrije U. Amsterdam, School of Business and Economics*

Author: **Karen Jehn**, *Melbourne Business School*

While leadership has the potential to disrupt the escalation of conflicts occurring within IJV management teams, little is known about how leadership focus and practices interrelate with conflicts between factions. Drawing on the faultline framework, our qualitative study of leadership in IJV management teams prompts the adoption of a contingent as well as temporal leadership approach. We develop a conceptual framework and corresponding propositions that explain how factional faultlines, faultline framing, and leadership interrelate in explaining conflict spirals in the extreme and unique context of IJV teams. Our findings have implications for research on IJVs, group faultlines, and intergroup-leadership.

STR: Organizational influence across CEO life cycle: The moderating roles of prior performance and status

Author: **Biying Yang**, *Binghamton U.-State U. of New York*

Author: **Rory Eckardt**, *Binghamton U.-State U. of New York*

Author: **FUHE JIN**, *Binghamton U.-State U. of New York*

Author: **Chou-Yu Tsai**, *Binghamton U.-State U. of New York*

The CEO life cycle framework suggests discernable phases over CEO tenure that are associated with an inverted-U performance trajectory. The trajectory exhibits a performance improvement followed by a stagnation and ultimate decline. In this study, we investigate this general performance trajectory and leverage the behavioral theory of the firm to examine the moderating effect of an organizational-level factor – prior performance – on CEO life cycle. We also investigate the moderating effect of organizational status as an important organizational-level attribute on CEO life cycle. Through a multilevel analysis performed using random coefficient growth modeling of College Football Bowl Subdivision head coach data, we show the performance trajectory of CEOs can vary under different organizational conditions. Specifically, CEOs entering high performance organizations appear to have less initial performance improvement and a longer stagnation, while CEOs of higher organizational status exhibit a deferred and reduced performance decline. As such, this paper contributes to the understanding of how organizational-level factors can impact CEO tenure phases and associated performance patterns.

Corporate Acceleration, Firm Innovation, and Industrial Change:
What's New Under the Sun?
Corporate Acceleration and Firm Innovation

Organizer: **Cristobal Garcia Herrera**, *Imperial College London*
Speaker: **Sheryl Winston Smith**, *BI Norwegian Business School*
Speaker: **Erkko Autio**, *Imperial College Business School*
Speaker: **Susan L. Cohen**, *U. of Georgia*
Speaker: **Sandip Basu**, *City U. of New York, Baruch College*
Organizer: **Laurens Vandeweghe**, *ETH Zürich*
Speaker: **Raj Krishnan Shankar**, *Nord U. Business School*

In many industries, entrepreneurial startups are the source of disruptive innovations. One approach by which incumbent firms can tap this innovative potential and form relationships with new ventures is through Corporate Accelerator Programs (CAP). Yet, experience suggests that CAPs often fail, and extant research provides limited understanding of how incumbents could effectively harness innovation through engagement with startups. In this panel session, we seek to develop insights into the question of emerging models in collaborative innovation in CAP contexts and uncover interesting directions for future research. We highlight current research on corporate and traditional accelerators, the relationship between existing theory and the development of new theories in this context, and some of the methodological challenges and opportunities that this context provides. Our panel of leading researchers will discuss their work and contribute their views on how existing innovation and entrepreneurship theory relates to CAPs, how CAPs are distinct from conventional approaches to firm innovation, and how academic research can contribute to a better design and management of CAPs.

Presenter: **Steven Boivie**, *Texas A&M U.*
Presenter: **Prithwiraj Choudhury**, *Harvard U.*
Presenter: **Wei Guo**, *Hong Kong Polytechnic U.*

While the field of management has long argued the importance of manager attributes in organizational outcomes, scholars are often constrained by the limitation of data availability and computational power. To overcome the challenges, scholars start to leverage the recent development of computer science in management research. This symposium is focused on new measures using big data and machine learning techniques in strategic leadership research. The goal of the symposium is to bring together active scholars to demonstrate and discuss the opportunities and challenges of applying these new unobtrusive measures. The presentations explore a wide range of manager attributes including Big Five personality, immigration status, linguistic style, and humility and their implications on organizational investment, crises management, competitive strategy, and corporate governance. Overall, the goal of this symposium is to initiate a timely conversation with the audience from STR, RM, and OB divisions and, broadly, contribute to the theme of the annual meeting “Bringing the Manager Back in Management” by offering new insights into how managers affect organizational outcomes.

CMS: Training Warrior-Cops or Guardian-Officers? Law Enforcement Agencies' Leadership Styles Matter  

Author: **Darryl Rice**, *Miami U.*

Author: **Jamila Maxie**, *U. of North Texas*

Author: **Paul Prosper**, *Colorado State U. Global*

In effort to enhance our understanding of the historical and currently problematic relationship between law enforcement agencies and Black communities in the United States, we seek to extend the research on the warrior-cop vs guardian-officer conceptual framework by leveraging management and organizational psychology literatures. Specifically, we integrate leadership style and institutional resentment theories to develop and test a model to examine how law enforcement agencies' authoritarian leadership style (LEA ALS) and law enforcement agencies' ethical leadership style (LEA ELS) impact law enforcement agency (LEA) resentment via Black people's perceptions of abusive police behavior. In a field study of African-Americans and people of African or Caribbean descent in America, we find that while LEA ALS is positively related to Black people's perceptions of abusive police behavior, LEA ELS is negatively related to Black people's perceptions of abusive police behavior. In turn, Black people's perceptions of abusive police behavior is positively related LEA resentment. Consequently, Black people's perceptions of abusive police behavior mediated the relationship between LEA leadership style and LEA resentment. Theoretical contributions, practical implications, and future research are discussed.

CMS: The 'Entrepreneurial' Journey: Exploring the Liminal Identity transitions of Female Entrepreneurs in

Author: **Lucia Garcia-Lorenzo**, *London School of Economics and Political Science*

Author: **Ishan Jalan**, *Nottingham Trent U.*

Author: **Nida Sheikh**, *London School of Economics and Political Science*

This research contributes to critical entrepreneurship studies by exploring the entrepreneurial journey of female entrepreneurs in rural Pakistan. Despite increasing advocacy for supporting female entrepreneurs in developing countries, female entrepreneurship remains an atypical outlier with entrepreneurship being conceptualised from an androcentric western perspective. In this paper, we propose to use a liminal identity perspective to explore the challenges female entrepreneurs participating in a Pakistani Government program called 'Entrepreneurs' experience during their transition into entrepreneurship and how they manage that transition. Our qualitative analysis of nineteen female entrepreneurs' in-depth interviews shows how the Entrepreneurs' evolving identities, fluid legitimacy and limited resources can give birth to and shape subsequent entrepreneurial activities. It is in these liminal transitions that entrepreneurial identities and creative entrepreneurial practices and micro-businesses emerge. Our results expand current understanding of the process of entrepreneurial identity development in liminal conditions, especially among non-western female entrepreneurs and contribute to exploring alternative ways of managing the entrepreneurial journey.

CMS: Identity Work, Meaningfulness and Volunteers

Author: **Sarah Louise Weller**, *U. of the West of England*

Author: **Andrew D. Brown**, *U. of Bath*

Author: **Caroline Clarke**, *The Open U. Business School*

What identity narratives do those engaged in dangerous volunteering work on and how do they help satisfy their quest for meaningful lives? Based on a three-year ethnographic study of QuakeRescue, a UK-based voluntary, search and rescue charity, we show that volunteers constructed identities drawing on discourses of 'helping', 'heroism' and 'hurt'. The primary contribution we make is to analyse how meaningfulness (the sense of personal purpose and fulfilment) that people attribute to their lives, is both developed through and a resource for individuals' identity work. This approach permits analysis of how organizationally based actors attribute significance to their lives through authorship of desired identities which are sanctioned and supplied by societal discursive resources and embedded in and constitutive of local communities. In our case, the helper and hero identities dangerous volunteering offered members were seductive. However, their pursuit often had ambiguous and sometimes, arguably, negative consequences for volunteers who had seen action overseas, and our study adds to understanding of how organizational members' quest for meaningful identities may often falter and sometimes fail.

CMS: Transformational change in a hospital: Agency, structure, temporality and history in leadership

Author: **Jette Ernst**, *Roskilde U.*

The paper sets out to build an understanding of how managers experience and navigate difficult organizational transition in the establishment of a new acute care department. Applying Bourdieu's theoretical ideas and focusing on the intimate connection between political processes, historical conditions of the field and local attempts at change implementation, the study pays attention to power and agency in leadership. The study applies a longitudinal research design and focuses on the experiences of leaders in conducting their leadership in the context of field level change and development. The paper analyses leaders' feelings of powerlessness as hysteresis that develops in a mismatch between field and habitus at a particular moment in time and demonstrates that leadership emerges and is made possible or impossible in relation to institutionalised capital and political objectives in the field. The study has important implication for the way in which we can understand leadership agency and the results may hold useful lessons for policy makers and leaders across private and public sectors.

Paper is Available to Meeting Registrants Only.

Author: **Vijaya Doshi**, *Indian Institute of Management, Udaipur*

Based on interviews and focus-group discussion among urban women entrepreneurs in India, I find that women entrepreneurs acquire a neoliberal agency through entrepreneurship. However, soon their accounts reflect an underlying tension as they admit facing gender constraints while previously denying them. I theorize their conflicting narratives using the idea of sandwiched between a neoliberal and gendered identity. Being urban and middle-class, they can acquire a neoliberal agency, however, they find it difficult to maintain the same given the continuous gender constraints that they tackle. Thus, their subjectivity continuously adapts and resists to both the neoliberal identity and gendered identity. I discuss the implications of the findings for research and practice.

Panelist: **Kevin W. Rockmann**, *George Mason U.*

The future of work, or how work will change in the next decades because of advances in technology (e.g., robotics, artificial intelligence), demographic changes (e.g., aging populations), and other societal trends (e.g., shifting values), is a topic of increasing importance to practitioners and policymakers. But the future of work appears far less in management scholarship than would be expected given its prevalence in society, and research relevant to the topic in management thus far is fragmented (Santana & Cobo, 2020). The goal of this PDW is to drive forward research from management scholars on the future of work by collectively setting a promising agenda for research on the topic, so that scholars can add to ongoing dialogues, offer solutions, and collectively shape the future of work. Participants will leave with a shared understanding of how management scholars can contribute to research on the future of work, a recognition of methodological challenges in conducting research on the topic, and an awareness of the possible opportunities and pitfalls of publishing on the topic. The PDW will involve several components that utilize different formats to facilitate engagement, including a panel with experts who have editorial experience at top Academy journals (AMJ, AMR, and AMD) and virtual breakouts clustered by themes involving a mix of senior and junior scholars. To spark collaboration that continues after the Academy meeting, the PDW will feed into a research grant competition sponsored by the University of Zurich to fund promising research proposals related to the future of work.

Leadership: Managing Employee Performance and Retention

Performance and Retention

Digital Session Chair: **Alexandra Feldberg**, *Harvard Business School*

OMT: **Butchers, Bakers, and Barcharts: How Digitized Information Affects Gender Differences in Performance**

Author: **Alexandra Feldberg**, *Harvard Business School*

This study asks: does increased access to digitized information affect the performance of men and women workers differently? I find that the availability of information in digital platforms disproportionately improves women's performance in a male-dominated organization. I theorize that digitized information helps women by serving as a relationship substitute, an alternative channel to traditional relationship networks through which peripheral group members can gain access to performance-enhancing information. Using interviews, observations, and archival data, I take advantage of an intervention occurring within a grocery chain—when it introduced a weekly online report providing managers with a high-level summary of their departments' performance along key metrics. Comparing sales across departments twelve weeks prior to and following the report's implementation shows that women managers benefit disproportionately from the report's introduction but having longer duration of contact with peers and supervisors attenuates its benefits. Findings offer new directions for research on gender inequality and knowledge transfer by suggesting that digital channels of knowledge distribution can offset disparities arising from relationship networks in organizations.

OMT: **Heterogeneous Gender Effects of a Firm's Environment Social Governance Efforts on Employee Turnover**

Author: **Ming De Leung**, *U. of California, Irvine*

Author: **Chuchu Liang**, *U. of California, Irvine*

Author: **Ben Lourie**, *U. of California, Irvine*

Author: **Chenqi Zhu**, *U. of California, Irvine*

We study whether (and how) the turnover of female and male employees varies with public perception of their firms' environmental, social, and governance (ESG) efforts, as measured by the ESG sentiment of news articles. Leveraging organizational identification theory, we expect that employees derive increasing self-esteem from having an employer with a more positive, public ESG reputation. Such employees are less likely to leave their firms. Furthermore, we expect that retention rates among female employees will be higher than male employees because women derive more benefit from prosocial behavior. We support our contentions using regression analyses on a firm-month panel of 1,822 publicly listed US firms from 2008 to 2018. Specifically, our regression analyses reveal that a better public ESG reputation is associated with lower employee turnover, and this effect is amplified among female employees. We find that females respond to the perceptions of both internal-facing ESG (i.e., efforts that primarily target employees) and external-facing ESG (i.e., efforts that primarily target those outside the firm). However, we find that males are affected only by perceptions of increased internal-facing ESG. We also find that ESG reputation affects both men and women in states that have a greater proportion of Democratic voters. This underscores the prosocial aspect of our predictions. Our evidence highlights the indirect and heterogeneous effect of corporate ESG efforts on employee turnover, and the turnover of female employees in particular.

OMT: **How Insufficient Recognition Shapes the Rate and Scope of Contributions to the Commons**

Author: **Cassandra Chambers**, *Bocconi U.*

Author: **Pedro Aceves**, *Bocconi U.*

Author: **Marlon Fernandes Rodrigues Alves**, *Federal Institute of Education, Science and Technology of São Paulo*

Scholars have long extolled the power of reputation for maintaining contributions toward collective resources. Incentivized to achieve reputations as good citizens of the collective, individuals are less inclined to freeride off the contributions of others. However, in examining the effects of reputation, researchers have largely relied on no-deception experimental designs wherein the granting of recognition for contributions to the collective is error-free and reputation is perfectly calculated. Reality is more complicated, with individuals often receiving insufficient recognition for their contributions, and we know little about how such insufficient recognition shapes the subsequent rate and scope of contributions to the collective. Leveraging a unique data feature from one of the largest online question-and-answer knowledge communities, we examine how occurrences of insufficient recognition shape subsequent contributions. Contrary to our expectations, we find that individuals contribute more after insufficient recognition and are less likely to venture away from their knowledge domain. Individuals with higher reputations display higher increases in contributions, but do not differ in their range of content. Results reveal a double-edged sword of insufficient recognition on cooperation—it increases future contributions, but narrows their conceptual scope relative to prior activity. We discuss the implications of these findings for maintaining diverse knowledge commons.

OMT: **A Social Complexity Organization Theory of Collective Leadership**

Author: **Jim Hazy**, *Adelphi U.*

Author: **Murat Sakir Eroglu**, *Adelphi U.*

This article develops a new perspective on an under studied area of collective leadership theory inspired by complexity science as applied to social systems. It explicitly situates leadership in the context of emergent scale-crossing connections that form individuals into organizations. The authors first present a dynamic model of leadership at the organization level in the context of three different leadership activity modes each serving a distinct functional demand of complex organizing. They then describe how to study leadership at the individual level by identifying distinct types of activities that individuals can purposefully employ during social complexity to enact universal scaling dynamics which emerge to support each of these functional demands in their organizations. Using this approach, the article contributes a new conceptual model that views leadership as scaling mechanisms that enable complex organizing and suggests future research that explores how individuals can purposefully interact in ways that serve larger organizational and societal purposes. Finally, the article suggests a methodological approach that combines computational, analytic, and empirical methods.

Diversity and Inclusion in the Public and Nonprofit Sectors

Digital Session Chair: **Sandro Cabral**, *Inspere Institute of Education and Research*

PNP: Structural advocacy organizations and intersectional outcomes: The role of Women Police Stations

Author: **Paulo Arvate**, *FGV-EAESP*
Author: **Sandro Cabral**, *Inspere Institute of Education and Research*
Author: **Anita McGahan**, *U. of Toronto*
Author: **Paulo Reis**, *UFRJ*

By introducing the concept of 'structural advocacy organizations', this study theorizes and tests the boundary conditions within which institutions designed to protect the rights of disenfranchised groups promote structural changes at the gender and race intersection. We test these claims on Brazil's Women Police Stations, a type of structural advocacy organization with greater female representation on staff, and with specialized procedures and an institutional mandate to address violence against women. The analysis indicates that women police stations reduce homicides among the population of women as compared to conventional police stations. However, homicides committed against women of color only drop in municipalities with high levels of education and in metropolitan areas, but even in these locations, the effects of Women Police Stations on homicide reduction are lower for women of color. The results suggest that structural advocacy organizations innovate to address structural disenfranchisement; nonetheless, improving intersectional outcomes requires complementary policies

PNP: Nonprofit Chief Executive Compensation: Implications of Board Governance Activities

Author: **Ruth Bernstein**, *Pepperdine U.*
Author: **Christopher A. Fredette**, *U. of Windsor*

Using secondary data collected as part of a national survey of nonprofit organizations, this research examines compensation outcomes of 704 nonprofit Chief Executives (CEO), integrating and social and performative aspects of governing and governance to explain compensation (in)equity. Theorizing governance as a socially complex and functionally consequential arena, we examine the impact of social categorization and identity fit between CEO Ethno-Racial Demography and Board Ethno-Racial Variety prior to overlaying the influence of three forms of governance activity: Fiduciary Oversight, Internal Awareness, and External Engagement. We employ a serial multiple mediation regression analysis to test the direct and indirect effects of demographic diversity and governance activity for CEO compensation outcomes. Findings demonstrate the social and performative complexity underlying executive compensation outcomes, with mediators highlighting the interplay among social and performative aspects in executive compensation decisions. The significance of this study lies in its contribution to the discourses of CEO compensation and compensation equity, providing practical guidance to leaders and governors.

PNP: Understanding Vertical Pay Dispersion in the Public Sector: The Role of Publicness

Author: **Keppeler Florian**, *Zeppelin U.*
Author: **Ulf Papenfuß**, *Zeppelin U.*

This study introduces vertical pay dispersion into public management research, a prevailing equity issue in discussions in organizations and society. Bridging tournament and equity theory with the publicness debate, the study analyses how manager-to-worker pay ratios of state-owned enterprises (SOEs) are affected by the dimensions of publicness – ownership, funding, and control. For a unique, hand-collected, five-year data set, the study finds that ownership publicness partly affects vertical pay dispersion, and the effects are moderated by city and SOE size. It enhances the understanding of vertical pay dispersion in the public sector and offers a research agenda for the determinants.

Paper is Available to Meeting Registrants Only.

PNP: Ordinal Representativeness

Author: **Huafang Li**, *Grand Valley State U.*

Representative bureaucracy is a promising means to enhance social equity and coproduction. However, previous studies have not addressed the order effects of representative bureaucracy on coproducing better policy outcomes and public goods, which is essential to democratic governance. This study first proposes an ordinal representativeness model and uses gender representation to illustrate its application. The study then experiments with the order effects of gender representation on individuals' coproducing decisions. The study randomizes the order of female officials in a two-male and two-female setting across two different policy areas—recycling and emergency preparedness. Both experiments were unable to find significant statistical evidence of the effects of placing females in the top leadership positions on citizens' overall willingness to coproduce. However, the results revealed the pattern that the gender of the chief leader increases the willingness of others of that gender—and simultaneously decreases their gender counterparts' willingness—to coproduce. This pattern is consistent with the ordinal representativeness model.

Crisis, Stress, and Burnout in Public Service Delivery

Digital Session Chair: **Elizabeth Linos**, *U. of California, Berkeley*

PNP: **Reducing Burnout and Resignations of Front Line Workers**

Author: **Elizabeth Linos**, *U. of California, Berkeley*
Author: **Krista Ruffini**, *UC Berkeley*
Author: **Stephanie Wilcoxon**, *Behavioural Insights Team*

Government agencies across the world are struggling to retain front line workers, as high job demands and low job resources contribute to employee burnout. Four decades of research have documented the costs of burnout, yet we have limited causal evidence on strategies that reduce it. In this paper, we present evidence that low perceived social support puts employees at risk for burnout and that priming group identification and affirming social belonging can mitigate this risk. First, we present survey evidence that low perceived social support is correlated with high burnout among correctional officers (Study #1, n = 175). Second, we conduct a multi-city field experiment aimed at nudging group identification and social belonging (Study #2, n = 536), in which 911 dispatchers are prompted to share advice anonymously and asynchronously with other dispatchers. This intervention reduces burnout by 8 points (0.4 SD) and cuts resignations by more than half (3.4 percentage points) four months post-intervention. Finally, we conduct an online laboratory experiment (Study #3, n = 497) confirming that the experimental intervention increases perceived social belonging and support. These findings suggest that low-cost belonging affirmation techniques can reduce burnout, contributing meaningfully to the retention challenges facing government.

Paper is Available to Meeting Registrants Only.

PNP: **Psychological Climate's Effect on Stress among Public Servants**

Author: **Vadym Mozgovoy**, *U. of Lausanne*

Best Conference Paper by a Public and Nonprofit Division Doctoral Student

The organizational well-being is an issue in public management. Drawing upon a cross-sectional survey of 350 public servants in Switzerland, this study hypothesized and found that the psychological climate reduces the felt stress without a simultaneous reciprocal effect. Structural equation modeling and supplementary mediation models were used. The results show that three out of six dimensions – role clarity, contribution, and supportive management – characterize the psychological climate for public servants. Higher role clarity moderately and significantly reduces stress, whereas supportive management does so to a limited extent. This effect was observed mainly among public servants who were willing to continue on their current career path.

PNP: **The Context of Crisis: Teacher social network effects during crisis-based organizational change**

Author: **Cortney Evans**, *Harvard U.*

This exploratory study examines the ways in which teacher social networks vary by organizational context. The study draws on data collected in a large urban adjacent public school district in New England after start the start of the global COVID-19 pandemic and the subsequent switch to remote instruction. In so doing, the study compares changes in teacher's informal advice networks in the same schools during both a "Status Quo" context relative to a context of "Crisis-based Organizational Change." Results indicate that central traits of teacher advice networks – out-degree centrality, tie strength, and network composition – vary with organizational context. Further, these network traits are associated with variation in network mechanisms supporting more positive perceptions of innovative climate in each context. Findings of this study suggest that organizational context may drive variation in the ways that networks support the same organization outcome, furthering the notion that how networks 'work' is not the same in all instances. Implications for future research of teacher social networks and implications for school managerial staff involved in organizational change efforts are discussed.

Digital Innovation

Digital Session Chair: **Corinna Bertling**, *LMU Munich*

TIM: Boundary configurations for digital innovation 

Author: **Corinna Bertling**, *LMU Munich*

Organizational reality shows that—in order to foster digital innovation activities and promote the digital transformation of core processes and structures—new organizational units emerged, which we label digital innovation units (DIUs). Unfortunately, little scientific guidance on how to approach and effectively capitalize on these nascent units and how to overcome emerging collaboration challenges with more established units (e.g., IT) exists. For instance, knowledge about how a DIU's boundary configuration affects the necessary boundary spanning activities for digital innovation is still missing. Our data is based on 41 semi-structured interviews from four organizations differing in size and industry, but similar in that all established DIUs in order to promote digital innovation. The present study's exploratory approach to this phenomenon in the context of digital innovation reveals that boundaries play a key role in shaping the interaction patterns between DIU and IT. Specifically, we find that boundaries act as contingencies influencing the enactment of configurational boundary work (i.e., arranging, buffering, and coalescing boundaries). Based on this, we develop a model of different configurations of working through mental, social, and physical boundaries that shape collaboration between IT and DIU for digital innovation.

TIM: Government Digital Initiatives, Board Digital Attention, And Firm Digital Innovation

Author: **Xincheng Wang**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Author: **Longwei Tian**, *Shanghai Jiao Tong U.*

Author: **Haifeng Wang**, *Shanghai International Studies U.*

Digital innovation has attracted increasing attention from policymakers, academics, and practitioners as digital technologies become prevalent. However, digital innovation remains under-theorized. Using the attention-based view, we examine how and why government digital initiatives drive firms' involvement in digital innovation. Using text mining techniques and the unique context of China's 12th five year-plan, we find that the link between the government's digital initiative and the firm's digital innovation involvement is mediated by the board's digital attention. The board's political ties have a positive moderating effect. These findings have important theoretical and practical implications.

TIM: Digital entrepreneurship and institutional changes: fintechs in the mobile payment sector

Author: **Gabriel Machado Braido**, *U. do Vale do Taquari*

Author: **Amarolinda Klein**, *UNISINOS U.*

An institutional perspective allows the analysis of how critical actors legitimate new businesses and how entrepreneurs interact with existing institutional arrangements, which is particularly important when new digital ventures operate in mature and highly regulated markets, such as in the financial sector. This paper aims to analyze the institutional changes associated with digital entrepreneurship development by fintechs into the mobile payment sector. To achieve this goal, we conducted a case study with data collected from multiple sources, such as interviews with fintech entrepreneurs, document analysis, and a survey with 580 users and non-users of mobile payments. The Institutional Theory supported the understanding of institutional changes regarding the regulative, normative, and cultural/cognitive pillars of the mobile payment system needed to support the new entrants (fintechs) and the institutional work performed by different actors to promote the required institutional changes, especially the work of advocacy, defining, constructing identities and constructing normative networks.

TIM: Digitalization in distress: Digital technologies in healthcare and challenges of ecosystem adoption  

Author: **Wim Vanhaverbeke**, *Surrey Business School*

Author: **Richard Tee**, *U. of Surrey*

Our study provides an in-depth analysis of digital technologies in healthcare and the ecosystem challenges newly developing platforms face here. Based on three case studies of digital technology applications that transform the healthcare industry in different ways, we provide recommendations to help overcome these challenges. First, scaling in healthcare ecosystems tends to be more gradual, but this can be accelerated if it is coordinated by higher level umbrella associations. Second, digital healthcare technologies can only have a transformational impact if processes within healthcare organizations are realigned. This transformation process is driven by a value proposition that requires organizations to develop new competencies. Third, in complex regulated fields such as healthcare, rather than the commonly observed supply-side unipolar governance, multipolar governance is required to manage the ecosystem, leading to co-specialization between supply side technology providers and demand side actors and activities. Fourth, in healthcare ecosystems we observe across multiple levels potential challenges to, as well as potential solutions for, the development of the value proposition. These different levels need to be aligned for the newly developing value proposition to successfully emerge.

Callings and Work Passion

Digital Session Chair: **Brittany Buis**, *U. of Illinois at Chicago*

CAR: Your employees are calling: How organizations help or hinder living a calling and how employees react

Author: **Brittany Buis**, *U. of Illinois at Chicago*
Author: **Donald H. Kluepfer**, *U. of Illinois at Chicago*
Author: **Siyi Tao**, *U. of Illinois at Chicago*
Author: **Hannah Weisman**, *Harvard Business School*

Work as a calling—defined by passion, purpose, meaning, contribution, and a sense of destiny—dates back several centuries, but has experienced a resurgence in popular culture in recent decades, capturing the attention of scholars and employers. Research suggests that having a calling yields extensive benefits for called employees and the organizations they work for, but with one important caveat: employees must be living the calling within the organization. In this paper, we reveal the important role of the organization in providing the conditions necessary for employees to live their callings, by examining how—and to what end—organizations facilitate living a calling. Drawing on a tripartite theoretical framework of living a calling—characterized by destiny, personal significance, and social significance, as well as insights from Work as a Calling Theory, we hypothesize that person-environment fit (at the dimension level), empowerment, and servant leadership are related to living a calling. Further, we hypothesize that the benefits of living a calling extend to the organization, in terms of being negatively associated with employees' deviant behaviors, as rated by their supervisors, and the personality trait consistency of interest is a boundary condition of this relationship. Through testing our hypotheses in a multi-wave, multi-source field study of employees and their supervisors in a park district—a unique organizational setting for examining workers across a variety of occupations, we find that person-supervisor, person-group, person-organization, needs-supplies, and demands-abilities fit, as well as empowerment and servant leadership facilitate living a calling in the organization. Further, we find that consistency of interest moderates the relationship between living a calling and deviant behaviors. Our findings suggest that employers, who may feel an increasing moral obligation to facilitate meaningful work, can take action to help employees live their callings, and, in turn, mitigate negative consequences.

CAR: When the Stars Align: Career and Life Consequences of Calling 

Author: **Jennifer Tosti-Kharas**, *Babson College*
Author: **Shoshana Dobrow**, *London School of Economics*

Research on calling has examined many important outcomes for both career and life; yet, most of what is known is based on the psychological experience of calling, with most research focused on searching for, finding, and subsequently working in one's calling. At the same time, there is recognition that people do not always pursue their calling domains. Here, we argue for the importance of disentangling the psychological experience of calling from its behavioral pursuit, and, indeed, that understanding the relationships between calling and key outcomes depends on whether people actually pursue the calling. We examine both the strength of people's calling and their ultimate pursuit—or lack of pursuit—of that calling in their work. We conducted a 4-wave, 11-year prospective longitudinal field study of 508 people anchored in a common calling domain, music, to examine how calling and the pursuit of that calling interact to influence key career and life outcomes. We find differential effects based on whether people with varying calling strengths pursued the calling or not, across a range of outcomes. We discuss the implications of alignment versus misalignment of calling and pursuit of calling for research and practice.

CAR: The mediating role of optimism in the relationship between work passion and employee outcomes 

Author: **Jennifer Lajom**, *Edith Cowan U.*
Author: **Laramie Tolentino**, *Macquarie U.*
Author: **Patrick Raymund Matutina Garcia**, *Macquarie U.*
Author: **Hataya Sibunruang**, *U. of Waikato*

Building on the limited investigations that account for cognitive mechanisms that explain the relationship between work passion and employee outcomes, this study investigated the indirect effect of harmonious and obsessive passion on in-role performance, career satisfaction, and psychological well-being via optimism. Guided by the dualistic model of passion and theory of optimism, we argued that harmoniously passionate employees are more likely to display optimism than their obsessively passionate counterparts, enabling the former to benefit from optimal work and career outcomes. The proposed model was tested using survey data from an online panel of 309 Australian employees distributed across two time points. Results revealed that harmoniously passionate individuals a) performed better at work, b) were more satisfied in their careers and c) experienced greater psychological well-being compared to their obsessively passionate counterparts as a function of their increased levels of optimism. Theoretical and practical implications are discussed.

CMS: **Contracting Out to Manage: Evidence from Security Service Suppliers and Clients in India**  

Author: **Saikat Chakraborty**, *Indian Institute of Management, Ahmedabad*
Author: **Ernesto Noronha**, *Indian Institute of Management, Ahmedabad*
Author: **Premilla D'Cruz**, *Indian Institute of Management, Ahmedabad*
Author: **Parvinder Gupta**, *Indian Institute of Management, Ahmedabad*

The increasing practice of "contracting out" for managing noncore services by organizations trying to meet contradictory interests of cost reduction and service quality in the competition age requires critically analyzing the management side of contractual work arrangements. This study focuses on exploring the managerial interests that govern the decisions and practices of contracting out security services in the context of Indian formal sector organizations. Drawing on qualitative data, we find that cost-reducing interests dominate over service and legal compliance requirements for most clients, shaping these clients' contract management practices towards progressive cost reduction. However, some clients consciously moderate their cost-reducing interests to ensure quality service and reputation linked to legal compliance. We argue that although clients intensify price-based market competition for low-skill service contracts and exacerbate the conditions produced by the lack of government regulation, they also retain the choice to pursue dissimilar managerial interests within these dominant structures. Suppliers constrained by client-designed service specifications and exogenously guided by the nature of competition and regulation further enable clients to orchestrate their contractual work arrangements according to their managerial interests.

CMS: **"Nobody looks at these workers": The Precarious Work of the Agents of Death Market and the Pandemic**  

Author: **Rosana Silva**, *Unigranrio - U. do Grande Rio*
Author: **Robson André**, *FIOCRUZ - Fundação Instituto Oswaldo Cruz*
Author: **Rejane Nascimento**, *Unigranrio - U. do Grande Rio*
Author: **Denise Franca Barros**, *Unigranrio - U. do Grande Rio*

This research aims to identify the characteristics of precarious work in workers who work in the sale of products and in the provision of various services related to death management, here understood as the death market, and to raise possible precariousness caused by the pandemic of the new coronavirus. After analyzing these two scenarios, we will present the final considerations, including the government's challenges. This research is qualitative in nature and focused on understanding the dying market's work from its participants in various businesses. The articles published in a widely circulated newspaper contributed to understanding the current scenario. As a result, several characteristics of precarious work were identified, in addition to the stigma of society. During the pandemic period, it is possible to notice the accentuation of existing precariousness and new precariousness, such as high health risk and suffering at work. It is concluded that workers can be seen in three pillars of precariousness: objective, subjective, and given existing working conditions. Because of this, the challenges facing public authorities are enormous, especially after the pandemic, given that these workers are among the most exposed to the risks of coronavirus contamination.

CMS: **Conflicts that cannot be domesticated: analyzing urban conflicts from a demiurgic theorization view**

Author: **Morgana Krieger**, *Fundação Getulio Vargas - EAESP*
Author: **Marlei Pozzebon**, *HEC Montreal & FGV/EAESP*

The understanding of conflicts represents an important topic in organization studies. One might argue that, although different perspectives have been assumed, most of them end by attempting to 'domesticate' conflicts. In this paper, our objective is to discuss how conflicts can be investigated in a different manner, not pursuing domestication or elimination, therefore extending Contu's (2019) proposition of a demiurgic theorization. We present a hybrid analytical lens that combines the right to the city and the sociology of public problems theoretical paradigms. We apply this lens to comprehend and analyse conflicts that arise from the urban production process in São Paulo and in Medellín, arguing that this lens is an avenue for operationalizing the demiurgic theorization. The paper makes two main contributions: the development of a hybrid analytical lens for interpreting urban conflicts and the advancement of a demiurgic theorization that leads organization scholars to a new understanding of conflicts by learning how not to 'domesticate' them.

Best Critical Paper on International Business is sponsored by the journal Critical Perspectives on International Business

Carolyn Dexter Award Nominee

This study examined the methods used by a market-based conservation non-government organisation (NGO) to co-opt the livelihood plans of an indigenous Bolivian community and encourage them to adopt modern organic coffee growing methods without confrontation. Many previous studies have highlighted the use of violence, intimidation and manipulation by outside organisations when seeking to co-opt indigenous communities. To develop a pastoral-power relational-practices framework to analyse the case, first, the current literature on management, NGOs and community development was reviewed, after which the underused Foucauldian concept of 'pastoral-power' was applied, which is seen as a kinder, more benevolent governance that encourages self-nurturing in return for a new rewards value system. After the analysis of archival data, fieldwork was conducted in Bolivian communities and NGO officials interviewed. It was found that in communities where most members lacked formal schooling, the pastors recruited locals to act like sheepdogs to corral the flock and ensure they desisted and 'unlearned' their past traditional practices and implemented the more modern methods. We present a research agenda for future research on pastoral-power.

ENT: A configurational analysis of HRM systems in Family SMEs 

Author: **Giulia Flamini**, *U. of Rome Tor Vergata*
Author: **Luca Gnan**, *U. of Rome Tor Vergata*

Although traditionally applied separately, this study combines two theoretical perspectives - the stewardship and the agency perspective - and two HRM approaches – the commitment-based and the control-based HRM approach - to uncover configurations (HRM systems) of family SME-context influences and HRM practices able to create employee retention and productivity in family SMEs. We examined organizational outcomes provided by HRM systems using data from a sample of 623 family SMEs. Using fuzzy-set qualitative comparative analysis techniques, we found that the family SME-context influences and HRM practices are necessary, but not always sufficient, conditions for employee retention and productivity. Further, our results show that the family SME-context influences can fulfill substitute or complementary roles when they interrelate with well-developed bundles of HRM practices. Accordingly, this study highlights the need for studying the co-creation effects on employee retention and productivity in family SME HRM research, that is, how family and non-family managers and HRM practices interrelate for explaining employee retention and productivity in family SMEs.

ENT: Digital innovativeness in family firms: The role of non-family managers and family goals 

Author: **Anna Maria Bornhausen**, *Philipps-U. Marburg*
Author: **Torsten Wulf**, *Philipps-U. Marburg*

Digital innovations offer immense opportunities for organizations to reinvent their business model and renew their product and service offerings, yet, due to their complexity, rapid pace and generativity, they are also perceived as riskier than regular innovations. Since family firms are often more risk and loss averse in their innovation approaches, they might struggle to adopt digital innovations, which begs the question which governance conditions foster the adoption of digital innovations. To investigate this issue, the article examines the relationship between the share of non-family members in the top management team, transgenerational control intention (TCI) and digital innovativeness in family firms. Based on the risk and loss aversion of family firms and the characteristics of digital innovation, we argue that the presence of non-family managers only has a positive effect on digital innovativeness when the level of TCI is low. An empirical investigation of 104 CEOs of German family firms supports our hypotheses that non-family managers can only unfold their positive effect on digital innovation when the family does not pursue strong family goals. As such, we contribute to the growing research on digital innovation in family firms as well as family firm heterogeneity.

ENT: The agency role of proxy advisors in family firms

Author: **Laura Jimenez**, *unaffiliated*
Author: **Cristina Cruz**, *IE Business School*

This paper examines the unique nature of the agency conflict in listed family firms by comparing the role of Proxy Advisors (PAs) in family and non-family firms. Building on corporate governance and family firm literature, we hypothesize that family owner's pursuit of nonfinancial goals leads PAs to issue more negative recommendations against the voting proposals of family firms relative to nonfamily firms. We also argue that the severity of the principal-principal conflict in family firms increases the influence of these recommendations over the votes of investors in family firms. Additionally, we argue that the principal-principal conflict is not the same across family firms and hence the influence of PAs over investors votes is moderated by the presence of a family CEO. Using Fortune 1000 firms between 2011-2017, we find support for all our hypotheses except for the one regarding to the influence of PAs over investors votes. Contrary to our hypothesis, PAs exercise less influence over the votes of investors in family firms than nonfamily firms.

Gender 2 

Digital Session Chair: **Michela Mari**, *U. of Rome Tor Vergata*

 **ENT: Women entrepreneurs and innovation: state of the art and research challenges** 

Author: **Michela Mari**, *U. of Rome Tor Vergata*
Author: **Sara Poggesi**, *U. of Rome Tor Vergata*
Author: **Gianpaolo Abatecola**, *U. of Rome Tor Vergata*
Author: **Caroline Essers**, *Nijmegen School of Management*

This paper answers the call for a deeper understanding of innovation issues in relation to female entrepreneurship. It aims, in particular, to offer a comprehensive picture of the state of the art of management research on innovation in women-owned firms drawing on data from a systematic literature review. In so doing, we identify two main areas around which today's conversation is centered, namely the analysis of those factors able to affect innovation in women-owned firms, and how innovation affects these firms' outcomes. Interesting food for thought for scholars and policy makers emerges and the need to foster research in this issue is highlighted.

Paper is Available to Meeting Registrants Only.

ENT: Everything is (Not) Negotiable: The Gender Startup Valuation Gap  

Author: **Katja Bringmann**, *U. Ghent*
Author: **Theresa Helena Veer**, *U. of Tuebingen*

We explore gender differences in startup valuation in a comprehensive sample of 123 venture capital [VC] funded early stage high-tech startups from developed (Europe) and emerging (Latin America) markets. Startups led by female CEOs receive significantly lower valuations than firms featuring a male CEO, controlling for a wide range of startup and founder vocational characteristics. We build on role congruity theory and explore the potential moderation effects of self-initiation and negotiation experience on gender bias in VC deal terms. We find that, in case of female-led startups, self-initiation aggravates the gender gap in company valuation, whereas negotiation experience results in mitigating the gender gap. Further, our results suggest that supply side gender bias plays a stronger role in the gender valuation gap than demand-side bias.

Paper is Available to Meeting Registrants Only.

ENT: Human Capital Provision to Innovative Start-ups in a Male-Typed Industry. Gendered Perspective   

Author: **Vartuhi Tonoyan**, *California State U., Fresno*
Author: **Robert Strohmeier**, *U. of Mannheim*
Author: **Jennifer E Jennings**, *U. of Alberta*

This study addresses a highly relevant yet under-investigated topic within research at the nexus of gender, entrepreneurship and innovation: potential gender bias by prospective employees of innovative start-ups in male-typed industries. Drawing upon gender stereotype content theory, we suggest that potential recruits are likely to form less favorable impressions of a female (versus male) founder-CEO's perceived agency, warmth, and competence, which will spillover to reduce impressions of a female-led (versus male-led) venture's employer attractiveness, with both sets of perceptions ultimately resulting in a lower willingness to commit human capital to innovative start-ups headed by women. Findings from a randomized online experiment completed by 654 job-seekers reveal a 'double-female punishment' versus 'double-male reward' when the gender composition of other TMT members is also taken into account.

Paper is NOT Available. Please contact the author(s).

ENT: Questioning Portrayals of 'Female Underconfidence' in Entrepreneurship 

Author: **Jennifer E Jennings**, *U. of Alberta*
Author: **Zahid Rahman**, *U. of Alberta*
Author: **Dianna Dempsey**, *MacEwan U.*

Integrating research on gender and entrepreneurship with that on the cognitive biases exhibited by entrepreneurs, the overarching goal of this paper is to develop and test arguments that challenge women's supposed 'underconfidence' with respect to their entrepreneurial self-efficacy. We describe the two studies that underlie the empirical examination of our conjectures, summarizing and interpreting the findings from Study 1. These results contribute evidence that calls into question common portrayals of women as underconfident with respect to entrepreneurship. Instead, our analysis indicates that females are more likely to be unbiased in this regard whereas males are more likely to be overconfident. We further show that overconfidence has negative implications for the entrepreneurial pivot process. These findings bolster provocations regarding the need for continued skepticism of the 'yardsticks' against which women are typically evaluated in the context of entrepreneurship.

 **ENT: How Conflicting Imprints at Founding Affect New Ventures' Growth Strategies (WITHDRAWN)**     

Author: **Anna Krzeminska**, *Macquarie Business School, Macquarie U.*
Author: **Charmine E. J. Hartel**, *Monash U., Australia*

During organizational genesis, some existing individual and environmental characteristics become imprinted, persisting over time. These initial imprints may be conflicting. Drawing on a longitudinal qualitative case study, we develop a process model that offers substantive contributions to the scant knowledge on how intersecting imprints affect imprint manifestations. The new process we identify, termed vestigiality, refers to the limitations on adaptability of organizations to grow internationally due to conflicting imprints at founding continuing to influence ongoing decision making of key actors in the absence of an environmental change, while previous research on focuses on explaining imprinting metamorphosis due to environmental changes.

ENT: Social Influence of Celebrity CEOs: Evidence from Chinese Forbes Ranking List

Author: **Naijing Guo**, *School of Economics and Management, Tsinghua U.*
Author: **Qiushi Xie**, *Tsinghua U.*

In this study, we focused on the celebrity CEO and proposed the main effect that celebrity CEO has a positive impact on their peer companies' behavior and subsequent R&D investment. Further, we proposed the moderating effects of similarities between celebrity and peer CEOs' characteristics, similarities between celebrity CEO's company and peer company's firm characteristics, and the peer company CEO's power on the relationship between celebrity CEO and the peer firms' CEO and R&D investment. We built our arguments on the social influence perspective and proposed the hypotheses regarding celebrity CEOs' role model effect on the peer companies' R&D investment. We mainly focus on the antecedent condition of social influence—social identity and the reaction after being influenced—social learning. The hypotheses are tested in the Chinese context with the matched data from "The Best CEOs of The Year" published by Forbes China from 2012 to 2017. We attempt to contribute to the literature about celebrity CEO and social influence perspective.

Paper is Available to Meeting Registrants Only.

ENT: The Cost of Greatness: How Unanticipated Growth Affects New Venture Employees' Job Satisfaction  

Author: **Mohamed Ashraf Genedy**, *Jönköping International Business School*
Author: **Karin Maria Kristina Hellerstedt**, *Jönköping International Business School*
Author: **Lucia Naldi**, *Jönköping International Business School*
Author: **Johan Wiklund**, *Syracuse U.*

Studies on new venture growth show that there can be adverse effects of venture growth. However, the literature does not acknowledge that these effects might depend on whether growth is anticipated or not. Drawing on unanticipated events and job satisfaction literature, we show how it is not growth per se rather if growth is unanticipated or not that influences employee job satisfaction. We further show how this link depends on whether or not the employee is in a management position.

Paper is Available to Meeting Registrants Only.

ENT: An attention-based perspective on growth and value creation of firms in creative industries

Author: **Simone Van Bennekom**, *Erasmus U. Rotterdam*
Author: **Ellen Loots**, *Erasmus U. Rotterdam*

Drawing on an attention-based perspective, we explore growth's cognitive and behavioral underpinnings in creative industries, which are characterized by craftsmanship, imagination, artistic quality and innovativeness. Market leaders and followers of seven creative sectors in the Netherlands have been studied through a matched pair case study design. This article suggests that for entrepreneurial firms to develop (instead of stagnating or demising), founders need to understand the value creation and conversion processes in vigor within the industry. For firms to grow by means of an expansion of their markets, founders need to create resource advantages vis-à-vis other firms in the industry, which could lie in an internationalization or a digitalization vantage. Firm founders in creative industries create value opportunities that lead to firm development and growth not despite of, but because of their quality focus, which accrues to reputation advantages and impact. We discuss the generalizability of our findings and the saliency of existing growth measures.

Digital Session Chair: **Raja Singaram**, *U. of New Mexico*

ENT: Ending on a High Note or Perpetuating Commitment? Exploring Founder Exit in Social Business Ventures

Author: **Raja Singaram**, *U. of New Mexico*
Author: **Jeroen Kraaijenbrink**, *Amsterdam Business School, U. of Amsterdam*
Author: **William B. Gartner**, *Babson College*

By applying stewardship theory and threshold theory, we derive three criteria that founders of social business ventures use to set performance thresholds towards exit: 1) the desired social impact based on mission, 2) financial sustainability through multiple sources of revenue, and 3) organizational capability by building a firm that could progress beyond founder's tenure. Based on these criteria, we conducted a conjoint analysis experiment with 105 current founder-CEOs of social business ventures to examine their exit intentions and exit mode preferences. Contrary to the postulates of both threshold theory and stewardship theory, some founders were disinclined to exit even when venture performance fell below thresholds while others deviated from expectations in their exit choices during high firm performance scenarios. Deeper analysis of the decision-points revealed the existence of four distinct types of exit preferences among the founders: The Never Exit Idealists (20% of the respondents) expressed their opinions on the exit decision in idealistic terms and stressed on the importance of persevering and fighting against all odds even when their venture is not performing well. Impact-focused Traditionalists (43%) opted to leave explicitly when the social mission of the organization is achieved. Growth-oriented Realists (24%) expressed a high likelihood to leave when the venture performance was low, yet, were interested in further growth of the venture when performance was high in order to reach more beneficiaries. Performance-bound Pragmatists' (10%) intention to exit was the highest at extremes (high and low) of venture performance against the threshold conditions. We describe the heterogeneity in exit preferences among the founders of social business ventures and discuss the implications of our empirical typology for theory and practice.

ENT: Antecedents and Practices of External Goal Adoption: The Case of Social Ventures and the UN SDGs

Author: **Nicole Siebold**, *MGMT, BSS, Aarhus U.*
Author: **Franziska Günzel-Jensen**, *Aarhus BSS, Aarhus U.*
Author: **Steffen Korsgaard**, *U. of Southern Denmark*

As societal grand challenges become more pressing, organizations are exposed to a normative context of increasing ethical, social, and environmental concerns of stakeholders and related calls to take greater responsibility in tackling global problems. With the introduction of the Sustainable Development Goals (SDGs), organizations world-wide are now confronted with a set of predefined, external sustainability goals at the institutional level. The SDGs thereby offer the chance to mobilize and engage stakeholders to work together towards common societal goals, especially in the case of organizations such as social entrepreneurial ventures (SEVs) that place societal goals at the center of their organizational practices. In this study, we explore how SEVs enact SDGs in practices of goal adoption. Drawing on a qualitative study of 35 SEVs, our findings reveal four distinct approaches: resisted, necessity-driven, pragmatic, and strategy-making goal adoption. Across these approaches, we find distinct ethical reasoning as a motivation informing goal adoption and link it to the orientation of collaborative efforts. In doing so, our study contributes to theory on organizational goals by explaining how some organizations adopt external goals from institutional sources (while others do not) and by delineating how external goal adoption materializes differently in organizational practices.

ENT: When and How Awareness of Social Problems Would Boost One's Social Entrepreneurial Engagement

Author: **Dan Wang**, *Zhejiang U. of Technology*
Author: **Chu-Ding Ling**, *Renmin U. of China*

Social entrepreneurial engagement is a critical approach to solve social problems. Though previous literature has identified antecedents of individuals' social entrepreneurship from cognitive, affective, and contextual angles, we know little about when and how awareness of social problems could boost one's social entrepreneurial engagement. To address this question, we drew on the motivated information processing perspective and developed a conceptual model. In this model, we proposed that individuals' prosocial motivation and epistemic motivation can promote the transformation of social problems into social opportunities, and in turn boost social entrepreneurial engagement. In so doing, we aim to contribute to the current literature on social entrepreneurship and organizational behavior in several ways.

Paper is NOT Available. Please contact the author(s).

ENT: Entrepreneurship as social change: Enacting revitalization and emancipation in a precarious context

Author: **Dillon Berjani**, *Vrije U. Amsterdam*
Author: **Elco Van Burg**, *Vrije U. Amsterdam*
Author: **Karen Verduyn**, *U. of Amsterdam*

In this six-month ethnographic research, we explore the case of PurpleMuse to depict how entrepreneurship can enact individual revitalization and financial emancipation to imbue local artisans with new life and vitality, subsequently addressing injustices that appear in precarious neoliberalist societies in the form of what Brown (2003) called social deracination and cultural decimation. We explore that entrepreneurial initiatives can address such injustices and precariousness by allowing artisans to (1) reflect upon their capabilities and values and escape cognitive barriers that have been conceived over the years under a precarious cognitive state, (2) professionally rehabilitate as they can formally perform their work under organizational circumstances, which enacts professional and cognitive change, and (3) be empowered beyond this specific case as they are taught essential know-hows that facilitate their professional and personal advancement in future endeavors. We theoretically contribute to understanding what entrepreneurship embodies beyond its interpretation of economic progression by providing a precedent to entrepreneurship's social relevance in emerging neoliberalist societies.

In the last decade, there has been substantial growth in the number of individuals deriving income through digital platforms (e.g., Uber, Airbnb, Instagram), including from live streaming platforms. In this context, we examine whether reduced opportunity costs, such as having more free time and being unemployed, affect people's entrepreneurial efforts, particularly regarding professionalized streaming activity. As such, we use an extensive longitudinal dataset gathered from the live-video streaming service Twitch.tv, and we exploit the changes and restrictions brought about by the COVID-19 pandemic to measure individuals' responses to having to spend more time at home, also given that some streamers were more affected than others. By comparing newcomers to established streamers, we find that all streamers intensified their efforts during this period and that this effect was particularly strong for streamers who were somewhat but not fully professionalized prior to the pandemic. This is consistent with the view that low opportunity costs are advantageous for starting and professionalizing activities in the platform labor market, that the work is taken up because of a lack of alternatives and, thus, can provide a form of insurance. This especially holds for streamers who had reached a certain threshold pre COVID-19, as performing at this level enabled them to consider further professionalizing their streaming activities. The ex-post analysis of newcomers' success shows that even when mobility increased beyond pre-lockdown levels and unemployment rates had again fallen strongly, the most successful "newcomer" streamers were able to transform their initial reaction of potentially only income smoothing to a sustainable long-term solution with the potential for further entrepreneurial effort.

ENT: **A Necessity Effectuation Perspective of Entrepreneurial Action During COVID Pandemic**

Author: **George Kuk**, *Nottingham Trent U.*
Author: **Dr Amon Simba**, *Nottingham Business School, Nottingham Trent U.*

This research explores the ways micro-entrepreneurs used humanitarian aid cash transfers in the form of digital community currency (DCC) to alleviate hardship during COVID-19 pandemic. Using qualitative and quantitative methods, we draw on two streams of literature on necessity entrepreneurship and effectuation to examine how DCC enables micro-entrepreneurs to sustain trading. Findings from the field study in Kenya's informal settlements show that in addition to providing a temporary relief for access to basic essentials such as food, toilet access and water, DCC allows micro-entrepreneurs to create new means for trading and savings, and notably to apply effectual reasoning in adjusting prices for the essential commodities and services that they traded. Quantitative findings provide additional validity checks of this necessity effectuation framework and further revealed that micro-entrepreneurs who proactively engaged in preventive practices that sought to reduce the impact of COVID-19 on their livelihoods showed a more responsive pricing approach. In stark contrast, micro-entrepreneurs who were less capable to adopt the preventive practices tended to resort to increase prices of their traded goods and services to alleviate their economic hardships.

ENT: **The Shadow Pandemic: COVID-19 and Vertical Gender Bias Against Female-Led Crowdfunding Ventures**

Author: **Joel Andrus**, *U. of Missouri*
Author: **David W. Sullivan**, *U. of Houston*
Author: **James Bort**, *U. of Missouri, Columbia*

We investigate the impact the Coronavirus pandemic (COVID-19) on the accumulation of critical resources and status for female-led crowdfunding campaigns. Although past research suggests that crowdfunding presents a "safe haven" for female entrepreneurs—and thus reduce the impact of gender bias—our research goes beyond initial target-goal completion (i.e., horizontal success of goal completion) and explores the impact of gender bias on an important, yet underexamined, aspect of crowdfunding: vertical success bias (i.e., gendered-biased results pertaining to the accumulation of resources and status). Additionally, we examine how COVID-19 amplifies underlying societal norms and expectations impacting gender bias and the success of female-led crowdfunding campaigns. We test our hypotheses using data gathered from Kickstarter and examine the impact COVID-19 has on vertical success bias for female-led campaigns. Our results largely support the presence of vertical success bias both before and during COVID-19, while also demonstrating the pandemic's amplifying effect. The present research provides novel insight into the complex nature of gender bias via crowdfunding and challenges previous findings regarding crowdfunding's success for women. More importantly, this research demonstrates the impact a global pandemic, such as COVID-19, can have on gender bias and its shadow-effect for female crowdfunding success.

ENT: **Covid-19 and Blended Entrepreneurship Education in sub-Saharan Africa: Challenges and Prospects**

Author: **Constant D. Beugre**, *Delaware State U.*
Author: **James Calvin**, *Johns Hopkins U.*

Covid-19 has radically transformed education around the world. From K-12 to higher education institutions, administrators and faculty are using online platforms to deliver instruction to mitigate the negative impact of national and local lockdowns. For less developed countries in sub-Saharan Africa, Covid-19 has created unprecedented challenges because of the limited resources in information technology and internet connectivity. Despite these challenges, new institutions have emerged to embrace blended learning as a means of teaching. Using Seeka University, a start-up university in Ivory Coast, as a case in point, the paper explores the challenges and prospects of blended entrepreneurship education in sub-Saharan Africa. In so doing, the paper describes an integrated entrepreneurship model including five teaching approaches, face-to-face, online, MOOCs, collaborative learning, and service learning used by Seeka University to deliver entrepreneurship education. It also explores the importance of combining Western, local, and indigenous knowledge in providing impactful entrepreneurship education. The paper discusses this approach's implications for entrepreneurship education and research in sub-Saharan Africa.

ENT: Understanding Early Stage Investors' Motivations: A Resource Exchange Lens

Author: **Carlos M. DaSilva**, *HEG School of Management Fribourg / HES-SO // U. of Applied Sciences Wes*

Social identity theory has gained momentum across management disciplines, yet limited research has questioned role of early stage investors' identity in entrepreneurship. This research uncovers the underlying motivations and associated identities of active angel investors from Switzerland. Our results indicate that there are four major types of angel investors and that they make investment decision according to their own dominant identities. It is our aim to shed light on why investment decisions are not consistent across angel investors when presented with the same start-up investment opportunity.

ENT: (No) Politics at work? The relevance of political ideology for startup VC financing

Author: **Claudia Doblinger**, *Technical U. of Munich*
Author: **Jojo Jacob**, *Grenoble Ecole de Management*
Author: **Susanne Kurowski**, *Technical U. of Munich*

Access to venture capital is critical for startups to overcome the 'valley of death', i.e., the funding gap in the technology development and commercialization phase, and to meet rapid growth demands. While prior research has extensively examined factors that influence investors' decisions to fund new ventures, there is little understanding of the relevance of investors' political ideology for startup financing. Drawing on a panel of 415 US fintech and cleantech startups between 2008 and 2018, we assess the importance of investors' political ideology, conceptualized on the liberal-conservative dimension, for their investment commitments. Our findings suggest that conservative investors are less likely to fund new ventures, and that this effect is contingent on later investment stages and ideological congruence of (i) startups' and investors' political ideology and of (ii) the external political environment of the startups and investors' ideology. Our paper extends political ideology literature by addressing the impact of political ideology in an entrepreneurial setting. Our research further contributes to the entrepreneurship literature in two important ways. First, we identify the importance of investors' political ideology as a relevant factor that shapes startup financing. Second, we demonstrate that ideological differences between conservative and liberal investors may also lead them to attach differential importance to the same attributes of new ventures.

ENT: Type of Successful Cross-Border VC Exit: The Influence of Venture Age, US VCs, and Market Potential 

Author: **Kanhaiya Kumar Sinha**, *U. of Minnesota, Duluth*
Author: **Sanjay Goel**, *U. of Minnesota, Duluth*
Author: **Nga Nguyen**, *U. of Calgary*

We investigate the influence of venture age, influence of US VCs in syndicates, and market potential on the type of successful VC exit (trade sale and IPO) from cross-border venture investments. We theorize that VCs' exit behavior would be motivated by returns from a specific exit as well as longer term benefits from the exit via accretion to their reputation, which leads to improved deal flow and lower search costs in the future. We also investigate how US VCs' strength in the syndicate and market potential of the region influences venture timing and the exit type. We test our hypotheses in a sample of 995 exits outside the US by VC syndicates with US VCs as one of the partners. Our analysis controls for a variety of country, VC firm, VC fund, and portfolio firm (venture) level influences, as well as tests for potential selection bias. We find that venture age has a positive effect on the choice of TS as an exit option over IPO. Further, the strength of the US VC firms in the syndicate moderates this relationship toward favoring an IPO exit. Finally, we find support for the notion that VCs are more willing to wait for an IPO exit in fast-growing and high potential Asia Pacific region to build their reputation in the market than in the mature and slow-growth European market.

ENT: Potential Power in a Quasi-Competitive Market 

Author: **Aydin Selim Oksoy**, *U. of Hartford*
Author: **Anil Nair**, *Old Dominion U.*
Author: **Chris Hugh Willis**, *Old Dominion U.*

We study negotiations involving angel investors and entrepreneurs where the two parties have competing goals — the objective of the investor(s) is to secure equity in an embryonic firm in exchange for capital, while the entrepreneur's objective is to secure capital in exchange for an equity percentage in their firm. In this paper, we investigate the impact of 'potential power' and 'actual power' on negotiation outcomes. The negotiation context allows (1) investors to compete or collaborate with each other on a deal, and (2) all parties have the ability to walk away. We find that 'potential power' has a stronger impact than actual power, however, this relationship reverses when we introduce the impact of coalitions. While there have been some studies that have investigated potential power in a negotiation setting, this is one of the first papers to do so in an entrepreneurship setting.

ENT: New Venture Adaptation to a Major Crisis: The Role of the Entrepreneur's Temporal Dispositions 

Author: **Liliana Pérez-Nordtvedt**, *U. of Texas At Arlington*
Author: **Kilho Shin**, *Niagara U.*
Author: **Joochan Lee**, *U. of Texas At Arlington*

When a major crisis hits, new ventures are particularly vulnerable. Understanding what factors allow them to respond and adapt to a crisis is critical as new ventures are essential to economies. In this paper, we examine how the temporal dispositions of entrepreneurs (i.e., time urgency, and past, present, and future temporal foci) allow their new ventures to respond to the challenges presented by a major crisis. Using panel data of US and UK entrepreneurs, we find that new ventures run by entrepreneurs with both present and future temporal foci are better able to respond to the challenges created by the COVID-19 pandemic. However, our data show that the time urgency of the entrepreneur is detrimental to his/her new venture's ability to adapt to the COVID-19 pandemic. We find the effect of temporal dispositions to hold even after controlling for factors that enhance a new venture's adaptability such as the new venture's solid past-growth performance, size, age, and COVID-related aid from the government.

ENT: Manipulating Time: Temporal Agency and Entrepreneurial Action 

Author: **David Matthew Townsend**, *Virginia Tech*
Author: **Richard Hunt**, *Virginia Tech*

In recent work, scholars have taken important steps to explicate the role of time in theories of entrepreneurial action. Our research builds on these approaches in a number of important ways by further theorizing the inextricable bond and ongoing interplay between entrepreneurs and their respective temporal contexts. First, we identify and develop distinctions between the enabling and constraining influences of two different temporal forms: time-as-interval and time-as-emergence. Second, we build new theory to account for the temporal agency of entrepreneurship in order to address the constraining and enabling influences of time. Central to our approach is a re-conceptualization of time not simply as the medium of entrepreneurial agency, but as the target or object of entrepreneurial agency, which entrepreneurs attempt to manipulate through six types of action: conversion, inversion, subversion, diversion, perversion, and reversion. We ground our framework in common business venturing practices, discussing the wide-ranging implications of how the manipulation of time provides novel means for entrepreneurs to mitigate uncertainty in their attempt to achieve desired outcomes.

ENT: The Study of Person-Environment Fit in Entrepreneurship

Author: **Xue Wan**, *Tongji U.*
Author: **Stephen Xu Zhang**, *U. of Adelaide*
Author: **Feng Wei**, *Tongji U.*

Research on person-environment fit in entrepreneurship has become a central and quickly growing field of research. Yet, rapid growth has led to various theoretical conceptualizations and methodological operationalizations of person-environment fit, which has yielded a largely fragmented body of existing work. To assess and organize this research, we develop a typology of person-environment fit and provide an integrative synthesis that explains the relationship between person-environment fit and outcomes of the new venture creation process. Furthermore, we discuss how the study of person-environment fit in entrepreneurship can be advanced, given the research gap in the extant literature and latest development in related fields such as organizational psychology and organizational behavior. By identifying numerous research opportunities that may not be seen from the extant individual work, we chart a path for how the theory of person-environment fit can further help understand entrepreneurship.

Paper is Available to Meeting Registrants Only.

ENT: Entrepreneurial Self-Efficacy, its effect on situational Optimism, Venturing and Information Request

Author: **Niklas Frederik Kuehnel**, *KLU Hamburg*
Author: **Prisca Brosi**, *KLU Hamburg*
Author: **Björn Michaelis**, *Kühne Logistics U.*

We introduce componential appraisal theories to the investigation of Entrepreneurial Self-Efficacy (ESE) to contribute to nascent research on the irrational side of ESE. Combining evidence from a cross-sectional scenario study (N = 107) and an online experiment (N = 181), we demonstrate that ESE causes situational optimism when evaluating entrepreneurial opportunities; even when the entrepreneurial situation is neutral with equal expectancies for success and failure. This effect, in turn, fueled the decision to venture and lowered requests for more information. Based on these findings we discuss both the beneficial component of ESE causing optimism in getting people to go and venture, and the potentially detrimental component in leading to less well-informed entrepreneurial decision-making. These results have important implications for first time founders, active entrepreneurs and individuals close to the entrepreneurial environment alike in cautioning them against rushing decisions, even or especially when they feel optimistic about the venturing opportunity.

ENT: Government Policy for Entrepreneurial Activity: Failing as Means to Success  

Author: **Ouafaa Hmaddi**, *U. of Oregon*
Author: **Lauren Lanahan**, *U. of Oregon*

Entrepreneurship serves a fundamental role in the economy by leading innovations and promoting economic growth. However, the question of whether government interventions spur entrepreneurial activity is a topic of considerable debate. Proponents highlight the role of public funds in serving as a catalyst to offset the risk and uncertainty that are characteristic of early-stage ventures, while critics emphasize that publicly supported early-stage ventures tend to yield lower rates of private return. Adequately addressing this question requires that we not only account for the level of startup activity but also the nature of entrepreneurial experimentation that includes failure. We argue there is a more conclusive interpretation to this theoretical debate when we expand the scope of analysis to account for broader societal implications. Using the staggered diffusion of the U.S. State Small Business Credit Initiative and county-level Kickstarter crowdfunding data, we find consistent evidence of a positive effect of public funding on the level of entrepreneurial activity. However, when we account for the venture's success or failure to raise initial capital to launch and advance beyond the ideation stage, the relationship appears to manifest primarily among failed projects. These results offer conclusive findings that resolves a theoretical tension — public funding policies can productively drive economic growth and innovation by encouraging experimentation.

ENT: External Determinants of Entrepreneurship- Regulation, Technological Change, and Business Cycle

Author: **Alexander Berman**, *St. John's U.*
Author: **Ram Mudambi**, *Temple U.*
Author: **Chris Long**, *St. John's U., New York*

Existing research indicates that industry regulation and external technological change enact entry barriers restricting entrepreneurship and limiting related positive externalities. In this study, we present a contextual view of this relationship by examining how tactical regulation as well as external (market-level) technological innovation influence the expansion of entrepreneurial activity. We conduct an inductive qualitative study of the U.S.-based Registered Investment Advisory industry based on an in-depth analysis of the industry, semi-structured interviews with 37 representatives of 32 organizations, and a comparative case study of seven industry firms. We find that certain forms of non-entry-related regulation, as well as external technological change, can reduce entry barriers and enact a substantial increase in the formation of new ventures. We also contribute to the ongoing deliberation on the subject of business cycles and entrepreneurship.

ENT: A Multi-Level Analysis of Economic Inequality and Entrepreneurial Attitudes and Activities  

Author: **Nathan Sidney Greidanus**, *U. of Manitoba*
Author: **Yulin Shi**, *Asper School of business, U. of Manitoba*
Author: **Yefeng Wang**, *U. of Wisconsin, Whitewater*
Author: **Zhenyu Wu**, -

Coinciding with the rise in economic inequality (EI) is a renewed scholarly attention to the causes and impacts of the distribution of wealth within a society. Drawing on 16 years of data from the Global Entrepreneurship Monitor and other national-level datasets, we spotlight a strong implicit, yet understudied, relationship within this domain, that of EI and entrepreneurial activity. Our results support an inverted-U relationship between EI and opportunity-based entrepreneurial activity and a positive relationship between inequality and necessity-driven entrepreneurial activities. Furthermore, the fear of failure and perceived opportunities play a magnified role in predicting entrepreneurial activity as inequality increases.

ENT: Stay the Course? The Effects of Government Matching R&D Funding on Tech Startups  

Author: **Sukwoong Choi**, *MIT Sloan School of Management*
Author: **Yong Suk Lee**, *Stanford U.*
Author: **Taekyun Kim**, *Korea Advanced Institute of Science and Technology (KAIST)*
Author: **Wonjoon Kim**, *KAIST*

Governments have provided significant R&D funding for startups that are significant sources of innovation. The literature that examines the efficacy of R&D funding programs has found mixed results, likely due to program design and implementation issues. In this paper, we examine a special matching R&D subsidy program for startups in which the government provides a substantial amount of matching R&D funds to the awardees of private VCs. Using both secrecy and hand-collected data, we examine the effects of a government matching R&D subsidy to startups' subsequent investment and innovation. With a regression discontinuity, we find that startups funded by TIPS obtain more patents and subsequent investments than startups not supported by the program. It implies the effectiveness of this program can be increased by imposing the recipient selection system to the private sector. Our study also reveals that TIPS awardees tend to maintain their overall business model while adjusting their strategies in terms of technology development, new technology adoption, and HRM practices.

Leadership Issues in Diversity

Digital Session Chair: **Alexandros Efstratiou**, *U. College London*

GDO: **The Leader Oversight Bias in Justice and Hypocrisy Evaluations of Organisational Diversity Practices**

Author: **Alexandros Efstratiou**, *U. College London*
Author: **Andrew Marcinko**, *Durham U.*

Misalignment in diversity and inclusion (D&I) occurs when organisations make claims that they do not uphold through their practices. In the present study, we probed a leader oversight bias which may lead to ignorance of misalignment and, consequently, lower perceptions of organisational hypocrisy. Through an online experiment, we randomly allocated 198 participants to the role of either a leader or non-leader in a fictional organisation. T-tests showed that leaders perceived their organisation as less hypocritical than non-leaders. This effect was sequentially mediated by anticipated justice following exposure to a gender diversity statement, and perceived justice following exposure to organisational practices. Contrary to our predictions, gender did not moderate this effect. Our results demonstrate that leaders may perceive their organisations as more just and less hypocritical even when this may not be the case, because they attempt to confirm their prior, more favourable justice anticipations. This research calls for establishing better cross-hierarchical communication structures in organisations and for more effective management of leadership oversights. Future studies can examine this bias in field settings and isolate its driving mechanisms.

GDO: **The Female Beehive: How Queen Bee Behavior Affects Female Subordinates' Career-Related Outcomes**

Author: **Hannah Kremer**, *George Washington U.*
Author: **Isabel Villamor**, *George Washington U.*
Author: **Margaret Ormiston**, *George Washington U.*

Past work has found that female leaders in male-dominated environments often experience threats to their identities that they manage by engaging in individual mobility strategies (i.e., disassociating themselves from their gender identity; the Queen Bee phenomenon). This research explores the impact of this behavior on subordinates. We argue that Queen Bee behaviors cause female subordinates to feel uncertain about whether they belong in their organizations, which in turn, causes them to differentiate themselves from female leaders, reduce leadership aspirations, and increase turnover intentions. We develop our predictions through an inductive study of interviews with female employees and then test these predictions through two experimental studies (i.e., Cyberball, vignettes). We find support for our predictions for female subordinates whereas we find that irrespective of whether female leader engages in Queen Bee behavior or not, male subordinates' sense of belonging, differentiation, leadership aspirations, and turnover intentions do not differ.

Paper is Available to Meeting Registrants Only.

GDO: **Competence-bonus Effects for Female Leaders: Gender Roles, Affective Trust and Leader Effectiveness**

Author: **Lingyan Hu**, *Wuhan U.*
Author: **Ning Jiang**, *Wuhan U.*
Author: **He Huang**, *Wuhan U.*

Understanding how social perceptions of gender roles influence leader effectiveness is very important because female leaders are still far underrepresented in most organizations. Despite abundant research on the backlash against female leaders displaying masculine leadership roles, little is known about how female leaders could overcome negative effects of gender stereotypes to enhance leader effectiveness. Drawing on a legitimacy perspective and expectancy violation theory, this research investigates how leaders' sex and competence moderate the indirect relationship between leaders' gender roles and leader effectiveness through subordinates' affective trust. Through a two-wave study of 489 subordinates, we have found that leaders' high competence positively moderates the indirect effect of both leaders' gender roles (masculinity and femininity) on leader effectiveness through subordinates' affective trust; whereas this moderating effect only holds for female leaders, not for male leaders. Demonstrating a bonus effect of leaders' competence for female leaders, our research contributes to the existing gender and leadership literature by addressing the approaches for female leaders to leverage gender role perceptions to overcome gender bias and achieve leader effectiveness.

Paper is Available to Meeting Registrants Only.

GDO: **Expectation Misalignment, Purposeful Leadership, and Cooperation in Organizational Units**

Author: **Jin Wook Chang**, *Korea U. Business School*

Scholars and practitioners alike have paid increasing attention to the roles and importance of purpose—goals and objectives beyond profit maximization—for organizational functioning. Evidence indeed indicates that purpose-pursuing organizations can fare better, especially when their purpose is clearly understood by and imbued in employees. The current paper seeks to extend this burgeoning research on organizational purpose by investigating when organizations might fail to cultivate a clear sense of purpose and how organizations can provide their employees with clarity around their purpose. In two studies, one based on a large-scale proprietary survey and the other based on an experimental vignette study, we argue and find that misalignment between member expectations and organizational practices lowers members' clarity around an organization's purpose, which in turn impedes cooperation. Yet, we also find that lack of purpose clarity, driven by expectation misalignment, is alleviated when leaders endeavor to advocate their organization's purpose.

As of 2018, women comprise almost half of the U.S. workforce (Catalyst, 2018), earning 57% of bachelor's degrees, 60% of master's degrees, and 52% of doctoral degrees (National Center for Education Statistics, 2017). Furthermore, over the past decade, evidence has accumulated showing that greater numbers of women in organizations and greater representation of women in leadership positions tend to enhance organizational functioning and performance (Catalyst, 2011; Herring, 2009). Despite the fact that diversity and inclusion appear to be critical components of most organizations' missions and values (Bartels et al. 2013), research studies have indicated that women still undergo hardship at work given the unique challenges they face in the workplace which remain poorly understood in organizational literature (Bergman et al., forthcoming). In light of this, recent research has devoted increased attention to building an understanding of working women's unique experiences (Grandey et al., in press). Building on this important work, the papers included in this symposium cut across a variety of methodologies, understudied populations of women, and outcome domains to explore various challenges that place women at a disadvantage in employment settings. In addition to shedding light on these challenges, the papers also offer novel insights on strategies and best practices that, if implemented, will enable organizations to leverage the benefits that arise from creating a work culture that accommodates and empowers women.

Adaptability In Context: The Importance of Personality and Interpersonal Adaptation

Adaptability in Context: Interpersonal Adaptation

Organizer: **Steven Poelmans**, *U. of Antwerp/ Antwerp Management School*
Discussant: **Elaine D Pulakos**, *Personnel Dec Res Inst*

In this symposium individual adaptability is put into context. Different authors focus on different antecedents and processes explaining adaptive performance, and tease apart relatively stable aspects, like personality and self-efficacy, and aspects that can be developed, like interpersonal adaptability and cultural intelligence. The goal is to identify organizational interventions that allow increasing the crucial capability of adaptation.

This study examines the role of a host country's formal institutional environments on the design of international joint venture (IJV) contract and enhances our understanding on what types of IJV contract provisions/clauses should be more intensely utilized to respond to the challenges of the formal institutional environment of the host country. Using fine-grained data on 404 international joint venture contracts signed in between 2000 and 2016, we identified all contract provisions/clauses used in IJVs and classified them into three groups of clauses, namely (1) management structure, (2) control, and (3) operation through factor analysis. We then linked the three groups to the multiple dimensions of formal institutional environment (i.e., legal origin, court efficiency, and corruption). Empirical results reveal that when firms establish an IJV in a host country where the legal uncertainty is high due to the lack of legal formality (e.g., common law countries), control clauses that specify legal remedies and safeguards are more intensely utilized. On the other hand, when IJVs are established in non-common law countries, the utilization intensity of management structure clauses stipulating internal governance mechanisms such as board/informal meetings are increased. Similarly, internal governance mechanisms are more intensely used when the contract enforcement in the court of a host country takes a longer time. Finally, a high level of corruption in a host country increases the utilization intensity of control clauses rather than management structure and operation clauses. These findings extend the alliance governance literature and advance research on institutional theory.

IM: The Cost of Being Foreign: Evidence from a Nationally Representative Experiment in the US

Author: **Pedro Makhoul**, *UCLA Anderson School of Management*
Author: **João V. Guedes-Neto**, *U. of Pittsburgh*
Author: **Aldo Musacchio**, *Brandeis U.*

We conduct a conjoint experiment with a nationally representative sample of 3,010 US residents to assess their opinions on the acquisition of domestic companies by foreign firms. On average, US residents are 16 p.p. less likely to support a foreign firm as the preferred acquirer to an American company, compared to an identical domestic firm. We also show that there is a tension between nationalistic preferences and economic incentives. Still, it is quite hard for foreign firms to overcome their disadvantage by offering more favorable deal conditions. Additionally, we demonstrate that liability of foreignness (LOF) is considerably more complex than previously theorized by showing that LOF is not only a firm-level phenomenon, but also runs at the ownership level.

IM: How global digitalization influences the attractiveness of a firm digital name to foreign investors

Author: **Tianyu Gong**, *School of Economics & Management, Tongji U.*
Author: **Yijia Tang**, *Jones Graduate School of Business, Rice U.*
Author: **Shaker A. Zahra**, *U. of Minnesota*

Current IB studies focus mainly on firms' adaptation to the technological impacts of digitalization on their internationalization activities. However, they have paid less attention to firms' responses to the institutional impacts of digitalization. Invoking the institutional perspective, we argue that facing the increasing legitimacy of digitalization worldwide, firms respond by adopting a symbolic digital strategy, specifically the adoption of digital names, seeking to gain the legitimacy that helps them attract foreign investment. Further, we propose that these firms' outward foreign direct investment to developed countries facilitates their adoption of digital names. Moreover, media coverage amplifies the effectiveness of a digital name in attracting foreign investment. We find empirical support for these arguments using a database of newly publicly listed firms in China between 2013 and 2018. Our results enrich the IB literature on firms' symbolic responses to rising digitalization and the role of the informal institution in this process.

IM: Does organizational political ideology matter for firms' international strategy?

Author: **Yannick Thams**, *Florida Atlantic U.*

Why do firms vary in their international strategy? Decades of research in international business and global strategy have explored this question taking mostly an economic view. This paper adds to this conversation by bringing to the fore the interplay between politics and firms' decisions to engage in cross-border M&As. Specifically, it delves into organizational political ideology arguing that firms with a liberal leaning are more likely to undertake cross-border M&As since their organizational members may be more prone to risk taking. Additionally, this research takes a contingency approach and addresses the moderating influence of firms' local ideological context as well as their broader economic environment focusing on the impact of the 2008 economic crisis, which has brought a logic centered on de-globalization and domestically-focused strategy. Using the context of the U.S., a country in which firms are increasingly making their political leaning public as a result of pressures from stakeholders, I find support for my theory after controlling for many alternative explanations. I test these linkages with a sample of Fortune 500 from 2004 to 2014. This research may help further our understanding of the extent to which firms' internal and external ideological context may have bearings on their global strategy (in addition to economic factors).

Subsidiary Issues in International Management

Digital Session Chair: **Liang Li**, *Ivey Business School*

This session addresses related to international subsidiary management. It includes papers on MNE headquarters attention to subsidiaries in India, the moderating role of cultural distance on strategic issue selling by international subsidiaries, the linkage between lead firms and global value chain performance, and impacts of parent country nationals in foreign subsidiaries.

IM: MNE Headquarter Attention to Subsidiaries: Evidence from India

Author: **Mayank Sewak**, *Great Lakes Institute of Management*
Author: **Anna Lamin**, *Northeastern U.*

Building upon the attention-based view and specifically the cognitive drivers of headquarter (HQ) attention to subsidiaries, we examine when subsidiaries within an emerging market warrant HQ attention. We argue that subsidiaries gain HQ attention not individually but rather when the categories they are associated with earn attention. Specifically, subsidiaries in India receive HQ attention when HQ pays attention to other similar emerging markets such as Brazil, Russia, and China as well as on 'growth'. Additionally, a subsidiary gains HQ attention when competitors pay attention to their subsidiaries within the same country. We find support for these arguments using a dataset of 246 subsidiaries of large multinational corporations operating in India during 2000-2016. Finally, we do not find evidence that HQ attention is a signal that subsidiary investments in R&D, marketing or tangible assets have been made.

IM: Global Value Chains: Lead Firm Social/Relational Factors

Author: **Obie Paul Byrum**, *Kennesaw State U.*

While much of the literature on global value chains (GVC) has addressed strategy, structure, and governance, less is known regarding the relationship between lead firms and global value chain performance. Lead firms are influential, organizing, and strategic actors inside global value chains which drive the value addition and distribution by externalizing low value-added activities. The purpose of our paper is to explore the linkage between the lead firms and GVC performance. We incorporate social capital theory, relational embeddedness, and global value chain governance to propose that lead firms may: (1) facilitate successful strategic alliances in global value chains through partner selection, (2) enable success over and beyond formal contracts by enabling embeddedness, and (3) reduce exchange costs and enable investment into new capabilities by facilitating knowledge transfer and learning by the mechanism of lead firm social capital. We also discuss global value chain performance measures in terms of the processes and activities which contribute to comparative location advantages or sustained competitive advantage of the value chain members. Our model contributes to the literature on global value chain governance by delineating the lead firm's resources through social capital theory.

IM: Conquerors or Saviors? Parent Country Nationals in Foreign Subsidiaries

Author: **Tong Hyouk Kang**, *U. of Houston, Victoria*
Author: **Frances H. Fabian**, *U. of Memphis*

How multinational corporations (MNCs) control their subsidiaries—through either ownership (partial/whole equity; greenfield/acquisition) or operational (levels of parent country national staffing) controls—is theorized to impact ensuing subsidiary performance. Moreover, the impacts of these controls may be more or less effective when moderated by differences in cultural distance. Using an unbalanced panel sample of 2,692 Korean MNCs' foreign subsidiaries (9,147 subsidiary-year observations across 47 countries from 2006 to 2013), we find that foreign subsidiaries perform better overall in low cultural distance countries. The impact of staffing levels, though, is highly dependent on ownership control level and cultural distance. In particular, high staffing levels are only effective at improving performance if the subsidiary is under shared equity ownership; it is not effective (low cultural distance) or even hurts performance (high cultural distance) when it is used in a wholly owned subsidiary. The establishment mode of greenfield versus acquisition status did not affect performance. In a period of increasing nationalism in investment priorities, understanding that high parent country national (PCN) levels can be welcomed or resisted offers valuable implications for knowledge management and international investment, and suggests further research on the mechanisms that affect the reception of PCNs.

IM: Strategic Issue Selling by International Subsidiaries: The moderating role of the cultural distance

Author: **Renato Santos**, *FGV-EAESP*

This study was to examine the moderation effect of cultural distance in the packaging and process of a strategic issue selling by a subsidiary of multinational company affects the attention dedicated by the headquarters. Data was collected via an online survey sent to the country managers of subsidiaries of multinational companies and responded by managers from 29 different countries and 46 different headquarter location, with that was possible to assess the cultural distance. The method used was structural equation modeling using Smart PLS 3.0. The results of this research show that as the effect of the issue selling strategy changes due to the cultural distance in the headquarter-subsidiary relationship, the greater the cultural distance, the less the effect of presenting organizational benefits on headquarter attention and, contrary to priori theory, the greater the cultural distance the lesser the effect of the consistency of values on the attention of the multinational company's headquarters. This research brings two contributions to the strategic issue analysis and the headquarters-subsidiaries relationship literatures. First, to provide additional empirical evidence regarding impact of issue framing on headquarters' attention in MNC around the world; second, to expand the unresearched impact of the cultural distance like a moderation effect in headquarter-subsidiary relationship.

Keep your house in order: managing consultants

Digital Session Chair: **Frederik Schröder Jeppesen**, Aarhus BSS, Aarhus U.

MC: **Managing Consultants: How Clients Regulate External Consultants' Participation in Strategizing**  

Author: **Frederik Schröder Jeppesen**, Aarhus BSS, Aarhus U.

Author: **Kasper Elmholt**, Aalborg U.

Winner of the Management Consulting Division Outstanding Field Report Paper Award

How do clients manage external expertise in strategy-making? This question poses a challenge to numerous large corporations who employ highly specialized consultants at various levels and areas to help them strategize. While existing literature tends to focus on the consultancy side of the consultant-client relationship, how clients manage consultants through their everyday practices remains neglected. Building on a practice perspective, we address this lack of research by investigating how the client, through what we articulate as participation tests, manages the external consultant's participation in strategizing. Empirically, we draw on a one-and-half-year ethnographic study conducted in a large global manufacturing company, BEM. We theorize three participation tests that were embedded in the everyday practice of the client's management of consultants. These include introducing competition, scrutinizing consultants' work, and regulating the availability of information and physical access. The paper makes two main contributions. First, it contributes to the existing literature on the consultant-client relationship by proposing that participation tests are catalytic for the accomplishment of strategizing with external actors. Second, the findings problematize considering the client as either active or passive when engaging consultants. The client's everyday testing of the consultant is ongoing and consequential in comprising the consultants' authority as opposed to a general understanding of consultants as those who rationalize organizations. This understanding ascribes greater agency to the client than previously considered, and has implications for how to consider the role of clients in consulting engagements.

 MC: **Management Consultants Navigating Competing Systems of Engagement**

Author: **Jeanette Hartley**, The Open U., United Kingdom

Author: **Richard Holti**, The Open U.

Author: **Giacomo Carli**, The Open U.

The consultancy-facing role of the management consultant, which often involves ongoing responsibilities for the day to day operation and ongoing success of their consultancy alongside client work, has not been researched sufficiently. Management consultants must balance their participation between the three, often competing social systems of their client, their consultancy and their personal and family life. Their skills in managing transitions between these systems are worthy of study. In this paper we draw on empirical research performed with practicing management consultants in 2019 to explore how management consultants experience and navigate between these competing systems of engagement. We draw on the concept of liminality to provide a theoretical framework for our research (Turner, 1967, 1969). We based our research design on Interpretative Phenomenological Analysis, a qualitative approach concerned with in-depth exploration of lived experience, and with how people make sense of that lived experience (Smith, Flowers and Larkin, 2009). Data collection focused primarily on semi-structured interviews across three consultancy settings. We contribute to management consultancy theory by establishing that management consultants have a consultancy-facing role which may be significant. We contribute to theory on liminality by establishing that management consultants experience different kinds of liminality when navigating different systems of engagement. We also contribute to the slowly growing body of work using Interpretative Phenomenological Analysis (IPA) in business and management research.

The papers in this symposium share the aim of advancing research on the identity threats individuals encounter in organizations. Utilizing qualitative and quantitative approaches, the papers in this symposium address three important limitations of current research on identity threats. Specifically, the first presentation provides an empirical investigation of the proposition that employees respond differently when a highly salient identity is threatened as compared to a less salient one, thereby addressing the lack of tests of existing models. Answering the call for the development of quantitative measures to capture identity-implicating experiences (Caza et al., 2018), the second paper presents the validation of an identity threat scale. The last two papers focus on the experience of individuals who are aware that they pose a threat to others and therefore adjust their behavior to deal with the situation and salvage their outcomes. The third paper studies how people from minority groups develop strategies to be less threatening to dominant group members and subsequently improve their career outcomes in organizations. The fourth presentation describes the various coping responses that organizational gig workers – employees who engage in gig work within organizations – put into place to manage organizational insiders' perceptions and improve their standing in the organization. Together, the four papers in this symposium add to our understanding of the subjective experience of the modern workplace.

Emotional distress is a common occurrence in ordinary workplaces, with up to a third of the working population suffering from poor psychological health (Michie & Williams, 2002). With the emergence of the COVID-19 pandemic, concerns about psychological health at work are particularly relevant. Much of the current research in this area focuses on the causes and consequences of distress, as well as the stable characteristics that impact individuals' ability to cope with their distress (Joseph & Linley, 2005; Martin et al., 2004). However, less attention has been paid to organizational and interpersonal factors that can help mitigate employee suffering, as well as the behaviors that employees engage in to both manage and move forward from their distress. Additionally, existing research has largely been conducted in the context of inherently traumatic occupations, with less attention paid to workers in "ordinary" workplaces (Maitlis, 2019). To consider these topics, we have assembled a panel of scholars who study distress and wellbeing within organizations. Together, these panelists will shed light on distress in the context of ordinary work, including how suffering emerges in organizational contexts, and the types of behaviors that employees engage in to recognize, make sense of, and communicate about their own and others' distress – processes that are vital for both managing employee wellness and creating healthy organizational cultures.

Discussant: **Elana Feldman**, *UMass Lowell*

The purpose of this symposium is to explore the relationship between time and technology in our processes of work and organizing. We wish to deepen our theoretical understanding about this relationship by investigating it across multiple levels of analysis and in various contexts and conditions. Our symposium does so by drawing on fascinating studies that span different contexts, including technology hackathons, artificial intelligence for music, the Swiss watchmaking industry, virtual teams during the COVID-19 pandemic, and hotel management. By drawing on this empirical research and making connections across contexts, this symposium offers insights into how members of today's workplaces relate to the technologies that constitute their everyday lives, whether and how they accept them and their consequences as a legitimate part of what their world should look like, and which temporalities – be it excitement for modernization or profound wistfulness for a bygone age – therein win out. At stake is the shape of our shared future: not only what worlds we will build, but also how we in turn will find ways to live within these worlds of our own making.

NEU Best Symposium Award

Why is it that presentations on “neuro-entrepreneurship” are so well-attended (and seemingly applauded) yet little traction has really occurred? Meanwhile, why is it that in entrepreneurship we hear a regular drumbeat calling for nurturing the entrepreneurial mindset yet we see little progress in rigorously defining that? Nor do we see much progress in applying what we do know. The potential is significant; it seems that every issue of a neuroscience journal offers something that speaks to entrepreneurship and related phenomena. Could it be that we need to bring together the best thinkers and doers around this topic and learn from each other? This symposium intends to do just that. We have convened a diverse set of scholars, both rising and veteran, from Europe, Asia, and North America offering very differing perspectives on moving neuroentrepreneurship forward.

Diversity in Teams

Digital Session Chair: **Mohanad Dahlan**, *Coventry U., UK*

OB: **Diverse Group Effectiveness: Co-occurrence of Task and Relationship Conflict, and TFL**

Author: **Mohanad Dahlan**, *Coventry U., UK*
Author: **Amer Ali Al-Atwi**, *Al Muthanna U.*
Author: **Elham Alshaihani**, *Karbala U.*
Author: **Ali Bakir**, *Buckinghamshire New U., High Wycombe, Buckinghamshire, UK*
Author: **Kevin Maher**, *Buckinghamshire New U.*

This study develops a theoretical integrated model examining the role the co-occurrence of task and relationship conflict (CTRC) as a mediator in the relationship between diversity and group effectiveness. The model also examines transformational leadership (TFL) as a moderator in this relationship. Data were collected from 354 people in 56 workgroups from three private universities in the Middle East. Hierarchical regression results revealed that TFL moderated diversity's direct effect on CTRC, as well as the indirect effect linking diversity, CTRC, and group effectiveness. Specifically, diversity had an inverted U-shaped relationship with CTRC in groups with low TFL, but a negative linear relationship in those with high TFL. Findings help expand understanding of how, and under what conditions, diversity influences group effectiveness.

OB: **Standing together or falling apart? How mega-threats shape cooperative behaviour in diverse teams**

Author: **Steffen Keck**, *U. of Vienna*
Author: **Christian Schumacher**, *WU Vienna U. of Economics and Business*

Events such as the killing of 17-year-old Trayvon Martin which gave rise to the Black Lives Matter movement in 2012, the violent killing of Michael Brown in 2014 which sparked week-long nation-wide protests, or the emergence of allegations of sexual harassment against Harvey Weinstein in 2017 have continued to heavily draw public attention to the threat of discrimination against particular demographic subgroups. In this paper, we explore the effect of such diversity related societal events ("mega-threats") on relationships between members of different demographic subgroups within diverse teams. In particular, we suggest that the occurrence of mega-threats can potentially strongly decrease cooperation between threatened and non-threatened demographic subgroups, but also the potential to instead increase cooperation when team members can more easily develop a strong superordinate team identity due to high levels of team member familiarity or low levels of status discrepancy. Moreover, we argue that mega-threats are more likely to have positive effects on cooperation when team leaders belong to the threatened subgroup and are thus in a better position to take on a bridging function between different subgroups. We test our predictions using a novel large-scale dataset of interactions between White and Black players in the National Basketball Association in the 2014-2015 season during which the United States experienced widespread protests against race-based police violence. Our results provide predominantly supportive evidence for our main suggestions.

OB: **Age differences in the importance of interpersonal justice in the workplace**

Author: **Tatiana Marques**, *Instituto U. de Lisboa (ISCTE-IUL), Business Research Unit (BRU-IUL)*
Author: **David Leonard Patient**, *Vlerick Business School*
Author: **Ramona Bobocel**, *U. of Waterloo*
Author: **Sara Ramos**, *Instituto U. de Lisboa (ISCTE-IUL)*

The aging workforce is a major societal challenge that will affect managerial practices worldwide. Understanding how to better manage older employees is therefore of utmost importance for managers and organizations. By integrating the lifespan developmental perspective to adult development with organizational justice, the current research investigates employee age differences in the importance of interpersonal justice in the workplace. In Study 1, we used interviews (N=56) to explore employee age differences in the salience of interpersonal justice concerns. In Study 2, we used a scenario-based experiment (N=418) to investigate employee age differences in the relationship between interpersonal justice perceptions and trust in supervisor. In Study 3, we used a two-wave survey (N=215) to test one age-related psychological mechanism responsible for such differences. The results showed that interpersonal justice concerns are more salient among older versus younger workers, and that interpersonal justice predicts trust in one's supervisor to a greater extent among older versus younger workers. Results also suggest that these age-related differences could be explained by older workers' greater emotion regulation goals. These findings provide important theoretical implications for the study of aging and work and offer practical applications for how to motivate an increasingly older and age-diverse workforce.

OB: **Forming entrepreneurial teams: Mixing business and friendship**

Author: **Moran Lazar**, *Technion - Israel Institute of Technology*
Author: **Ella Miron-Spektor**, *INSEAD*
Author: **Gilad Chen**, *U. of Maryland*
Author: **Brent Goldfarb**, *U. of Maryland*
Author: **Miriam Erez**, *Technion - Israel Institute of Technology*
Author: **Rajshree Agarwal**, *U. of Maryland*

Founding teams can form utilizing either a resource seeking strategy (instrumental focus on complementary skills) or an interpersonal attraction strategy (close relationships with similar others in an immediate network). Yet, utilizing both (dual) formation strategies may be more beneficial. Our paper provides novel theory and evidence to shed light on why and how a dual formation strategy, although challenging and difficult to execute, may be critical for early performance. We theorize that teams that employ dual formation strategies from the onset develop stronger transactive memory systems, owing to close relationships that facilitate smooth coordination among founders who specialize in complementary tasks. Stronger transactive memory systems thus mediate the relationship between initial formation strategy and early entrepreneurial success. Findings from two field observational studies and a field intervention study are consistent with our theory: teams formed based on a dual strategy raised greater seed funding on Kickstarter – a leading crowdfunding platform (Study 1), were more successful in a prestigious entrepreneurial competition (Study 2), and gained more profits from selling their initial products (Study 3). Our research advances knowledge on entrepreneurial team formation and offers practical recommendations to facilitate this process at such nascent, but critical stages.

Why and How to Replace Statistical Significance Tests with Better Methods to Evaluate Hypotheses

How to Replace Statistical Significance Tests

Presenter: **William H. Starbuck**, *U. of Oregon*
Presenter: **Andreas Schwab**, *Iowa State U.*
Presenter: **Sam Holloway**, *U. of Portland*

This symposium will introduce and discuss how scholars can improve upon statistical significance tests, which continue to constrain the production of knowledge in management science. The extensive use of these tests in quantitative research has led to the accumulation of "statistically significant" results that are both too small to be practically relevant and so small that they are unlikely to replicate. A field that aspires to provide useful advice to managers needs to focus on practically important and robust effects. The proposed symposium introduces and discusses alternative approaches to overcome the limitations of statistical significance tests -- such as, effect size measures, confidence intervals, graphs, meta-analyses, baseline modeling and the implications of these approaches for the accumulation of scientific knowledge. A final "Question and Answer" session will offer additional opportunities for further discussions, advice and recommendations.

Using Feedback to Enhance Organizational Performance Performance Feedback

Digital Session Chair: **Elizabeth Lim**, *Georgia State U.*

OMT: **In Pursuit of Multiple Goals: Influences of Corporate and Business Unit Performance on Divestitures**

Author: **Elizabeth Lim**, *Georgia State U.*

We investigate how diversified firms adapt in response to performance feedback on multiple goals across corporate and business unit levels. By connecting performance feedback theory to the divestiture literature, we show that organizational structure influences adaptation through business and geographic divestitures in response to performance close to and far below aspirations, and that performance feedback on a lower-level business unit goal can modify the response to performance feedback on a higher-level corporate goal. We posit that declining corporate performance increases divestments of business and geographic segments to fix corporate performance problems up to a point after which these relationships taper off due to threat-rigidity response. In contrast, declining unit performance leads to increases in business divestitures and net decreases in geographic divestitures as freed-up resources from unproductive areas are reinvested into attractive regions; these coordinated set of refocusing and reinvestment activities improve profitability up to a point after which the relationships taper off as troubled units face reduced flexibility to change. We also posit that conflict resolution of multiple interdependent goals across levels occurs through changes in the types of divestitures. By empirically studying how adaptation occurs across diversified firms, we contribute to extending knowledge on divestiture behaviors in response to performance shortfalls with respect to multiple hierarchical goals.

OMT: **Interpreting a Social Reference Point: Peer Performance Feedback and Exploration-Exploitation**

Author: **Oliver Baumann**, *U. of Southern Denmark*

Author: **Daniel Newark**, *HEC Paris*

Author: **Franziska Sump**, *U. of Southern Denmark*

In this paper, we examine how intra-organizational peer performance feedback influences exploration-exploitation decisions. Data from two behavioral experiments suggest that an agent's propensity to explore is influenced not only by whether their peer performs better or worse but also by individual and situational factors that affect how peer performance feedback is interpreted. In particular, we report three main findings. First, we find that providing individuals with feedback from a high-performing peer leads to more exploration than feedback from a low-performing peer. Second, we find that this difference in behavior is driven by the subset of individuals who receive feedback from a high-performing peer who also have a low tendency to self-enhance. Third, we find that when the task environment is less ambiguous, feedback from a low-performing peer tends to curtail exploration; when the task environment is more ambiguous, this is no longer the case. Overall, our findings provide insight into the individual and situational contingencies of learning from performance feedback. They also suggest implications for organization design, which we address in our discussion section.

OMT: **Internal Social Aspirations, Expectations, and Multinational Corporations' Subsidiary Exit Decisions**

Author: **Jung-Hyun Suh**, *Chinese U. of Hong Kong*

Author: **Shige Makino**, *Chinese U. of Hong Kong*

Author: **Siva Ramakrishna Devarakonda**, *Tilburg U.*

In this study, we argue that foreign subsidiary exit decisions made by managers in multinational corporations (MNCs) are driven by backward- and forward-looking determinants: internal social aspirations and expectations. MNC managers' internal social comparisons—benchmarking a foreign subsidiary's past performance against other sister subsidiaries in the same parent firm in the same host country—allow within-parent firm, within-host country comparisons, thereby effectively steering MNC managers' decisions on whether to maintain or terminate a particular subsidiary. This aspiration setting is importantly bounded by MNC managers' forward-looking expectations that the subsidiary has a potential to make a turnaround. Using data on Japanese MNCs and their subsidiary exit decisions from 1997 to 2001, we find support for our arguments that a foreign subsidiary is more likely to be terminated if its past performance falls below internal social aspirations. However, this relationship is less pronounced for a subsidiary with a short (vs. long) host country tenure and a subsidiary operating in a politically unstable (vs. stable) environment because such a subsidiary is expected to make a turnaround in the future based on experience accumulation and non-market strategies.

OMT: **Volitional Learning: Performance Feedback and the Pace of Experience**

Author: **Lusi Yang**, *U. of Arizona*

Author: **Jungpil Hahn**, *National U. of Singapore*

Author: **David Lehman**, *U. of Virginia*

This study examines how performance feedback affects the timing of subsequent experiences. We define volitional learning as the process through which organizations or decision makers actively and voluntarily determine when to engage in subsequent trials. Volitional learning can be observed in contexts such as new product launches and R&D projects. Drawing on performance feedback theory, we posit that performance above aspiration leads to a longer duration from the current to the next experiences compared to performance below aspiration. For performance above the aspiration level, performance closer to the aspiration level increases the duration. For performance below the aspiration level, performance closer to the aspiration level decreases the duration. We tested and found support for our hypotheses in the context of serial entrepreneurship in reward-based crowdfunding campaigns launched by 143,761 unique entrepreneurs over six years. Theoretical and practical implications are discussed.

Entrepreneurship: Life Cycle of New Ventures

Life Cycle of New Ventures

Digital Session Chair: **Tommaso Ferretti**, *McGill U. - Desautels Faculty of Management*

OMT: Drawing the Ostensive Globally, Creatively Enacting Locally: Dispersed Knowledge & Routines Creation

Author: **Tommaso Ferretti**, *McGill U. - Desautels Faculty of Management*

Routines are essential to structure a new venture; however, we know little about how entrepreneurs develop new patterns of action in entrepreneurial settings where they cannot count on routine transfer and prior industry knowledge. In such contexts, entrepreneurs must draw from pools of knowledge to shape ostensive prescriptions and performance enactment. How do entrepreneurs interact with different knowledge sources to assemble the routines of a new venture? This paper conducts a qualitative analysis of the process of routine formation in four coffee ventures launched autonomously by entrepreneurs with no prior industry experience. The analysis connects the process of routines formation to the micro-dynamics that shaped the entrepreneurs' interaction with global and local knowledge. The study leverages insights from the study of global knowledge creation to highlight the mechanisms through which the entrepreneurs extracted ostensive components from global knowledge prescriptions and enacted them through performances modulated by local creative instances.

OMT: Learning from Outsiders: Explaining How External Advice Can Inform Entrepreneurial Strategy

Author: **Amisha Miller**, *Boston U. Questrom School of Business*

Author: **Siobhan O'Mahony**, *Boston U.*

Author: **Susan L. Cohen**, *U. of Georgia*

External advice is critical to entrepreneurial strategy as it can provide access to new information and prevent premature satisficing in firms with little experience. Despite the importance of external advice, scant research examines the process by which entrepreneurs learn from it. Understanding this process is important, because external advice can be difficult for entrepreneurs to interpret, absorb and make actionable. In an 11-month field study, we traced a cohort of 12 entrepreneurial firms in an industry-specific training program, which offered a common pool of advisors and three structured advice phases interspersed with time away to advance their ventures. Leveraging the program's phased design, we examined entrepreneurs' interactions with external advisors and traced how advice influenced subsequent action. Although all firms in the cohort conducted experiments, only some tested their strategies in new markets. Firms that coproduced, translated and integrated advice conducted experiments with new markets, leading to strategy changes. Firms that considered advice literally, discounted advice and conducted tests in planned markets, retaining their initial strategies. We offer a grounded process model that explains how some entrepreneurial firms learn from advice and widen their aperture to conduct more varied experiments, while other firms discount external advice and experiment more narrowly.

OMT: Remediation and Boundary Work in a Virtual Entrepreneur Community

Author: **Jessica J. Santana**, *UC Santa Barbara*

Virtual communities are distinct from traditional communities of practice in that they are global, always on, and void of many of the social attributes that influence social behavior in offline contexts. This fundamentally alters our understanding of networked organizing, entrepreneurial ecosystems, and entrepreneurship as a professional field. This study focuses specifically on how virtual communities invoke newly visible forms of boundary work and social capital following one particularly stigmatizing event: entrepreneurial failure. The study evaluates the role of network structure as a mechanism for discursive boundary work in a virtual peer community. Through a statistical analysis of the relationship between a peer's centrality in the /r/Entrepreneur subReddit network and the sentiment of their response to entrepreneurial failure narratives, I find support for the hypothesis that embeddedness, namely tenure, is directly related to stigmatization of failed members. However, by looking beyond the structure to the content of the tie, my findings suggest that such virtual communities are not closed, but open networks in which inclusive peer boundary work matters more to entrepreneurial persistence than stigmatization. Understanding these dynamics is critical to promoting social capital recovery from the stigma of organizational failure and vitality of a virtual community.

OMT: "I Solemnly Swear That I Am up to No Good": The Deviant Origins of Valuing Entrepreneurship

Author: **Ryan Scott Coles**, *U. of Connecticut*

Research at the nexus of institutional theory and entrepreneurship has not considered whether and how deviance impacts entrepreneurship. I argue that deviance will foster greater entrepreneurial activity in social contexts where entrepreneurship is not valued (or where traditional employment models are more valued). As deviance increases, a local culture develops which yields higher social value for entrepreneurship as a career path in two ways. First, it leads to valuing behaviors commonly associated with an entrepreneurial orientation: Risk-taking, experimentation, independent thinking. Second, a stronger deviant local culture is more supportive of entrepreneurship as a career path because a deviant subcultures view entrepreneurship as disrupting the economic status quo of the dominant cultural system of wider society. Thus, increasing aggregate levels of deviance should lead to increases in entrepreneurial activity. I test this argument using longitudinal data on all 2448 municipalities in Mexico. The results, and a series of robustness checks, confirm my hypotheses.

OMT: Venture Capital Time Bombs and New Ventures: Do Boards Limit the Damage?

Author: **Ting Yao**, *U. of Wisconsin, Milwaukee*

Author: **Hugh O'Neill**, *U. of North Carolina, Chapel Hill*

Finalist for the OMT Division Best Paper on Entrepreneurship Award

Venture capital funds have a limited lifecycle, which requires venture capitalists (VCs) to liquidate investments and return capital by the end of the fund. VCs shift attention from growing to exiting ventures as funds age. When valuable exits appear less likely, VCs facing exit pressure may pursue low-value M&As or liquidations. This pursuit could hurt the interest of those ventures that can continuously operate. Venture boards play a crucial role in exit decisions, so it is unclear if a VC's exit pressure has a material impact on venture exit, and if board composition can limit the impact of the VC's exit pressure. Building on resource dependence theory, we predict and show that VCs' exit pressure increases the likelihood of low-value M&As and liquidations. We also find that the presence of non-CEO founders and CVCs on the board exacerbates the impact of VCs' strong exit pressure, thus increasing the likelihood of low-value M&As and liquidations, while a higher proportion of independent directors alleviates the effect of VCs' strong exit pressure on ventures. The results suggest inviting VCs onto board solves resource dependence in the short-term but has future concerns, and board composition influences the interdependent relationship between ventures and VCs.

Using Quantitative Research Strategies to Extend Theory on Organizational Improvisation

Improvisation: Quantification

Organizer: **Anne S. Miner**, *U. of Wisconsin, Madison*
Organizer: **David Mendonca**, *Rensselaer Polytechnic Institute*
Organizer: **Hart E. Posen**, *U. of Wisconsin, Madison*
Organizer: **Jay O'Toole**, *Old Dominion U.*
Presenter: **António Cunha Meneses Abrantes**, *ICN Business School - CEREFIGE*
Presenter: **Michael P. Ciuchta**, *U. of Massachusetts, Lowell*
Presenter: **Dale T. Easley**, *U. of Nebraska, Omaha*
Presenter: **Josh Eaton**, *U.S. Military Academy, West Point*

Improvisation represents a crucial organizational process that can affect the lives and deaths of individuals and the survival of whole organizations. Scholarly organizational improvisation research has advanced substantially in the past decades but still offer frontiers for further theory development and for the expansion of research tools to help theory-building. Further, contemporary contexts offer naturally occurring, experimental and even synthetic data with untapped potential (e.g. human-computer interaction data). This session offers a timely participative workshop on current and potential links between quantitative data sources, analytic approaches and improvisation theory development. The workshop will involve (1) timely discussion of pros and cons of potentially underutilized research approaches and data (e.g. experimentation, simulation) and (2) sharing of experiences with current quantitative research strategies. Four published expert participants will offer brief thumb-nail summaries of research design approaches, ranging from survey method refinement to experimentation to computer-based simulation, with links to one illustrative theory gap. In the main body of the workshop, participants will share their own experience and consider whether or how improvisation research can advance through refining current and/or adding new tools. An additional four improvisation researchers have committed to facilitate and engage in discussion. The goal is explicitly NOT to seek standardization on universal approaches but to enhance cross fertilization and encourage careful assessment of quantitative data research possibilities. The workshop will honor the powerful body of qualitative improvisation research, and envision quantitative tools as complimentary rather than competitive research strategies.

Culture & Technology: Building Bridges Across Innovation & Entrepreneurship Research Contexts *Culture & Technology*

Organizer: **Hyejun Kim**, *HEC Paris*
Organizer: **Mitali Banerjee**, *HEC Paris*
Panelist: **Peter Younkin**, *U. of Oregon*
Panelist: **Giada Di Stefano**, *Bocconi U.*
Panelist: **Gino Cattani**, *New York U.*
Panelist: **Mary Tripsas**, *U. of California, Santa Barbara*

Cultural industries are sites of innovation and entrepreneurship. However, scholarly research on innovation and entrepreneurship is often confined to technology industries. The two contexts – culture and technology – have much in common but are separated by a chasm. The goal of this PDW is to bridge the chasm that separates the research in these contexts. In the context of their own research, the PDW panelists will demonstrate how cultural industries can be rich contexts for developing and testing theories of innovation, entrepreneurship and creativity. The panelists will also share insights and advice, based on their role as authors, reviewers and editors, to help scholars successfully navigate the challenges of publishing work in unique cultural contexts.

Sustainability Issues in OSCM II

Digital Session Chair: **Nan Chen**, *School of management, Northwestern Polytechnical U.*

OSCM: **Green Supply Chain Coordination Considering Yield Uncertainty Under Different Power Structures**      

Author: **Nan Chen**, *School of management, Northwestern Polytechnical U.*
Author: **Jianfeng Cai**, *School of management, Northwestern Polytechnical U.*
Author: **Pietro De Giovanni**, *Luiss U.*

The problem of environmental resources has promoted consumer demand for green products. This paper builds a green supply chain consisting of a manufacturer and a retailer. In the supply chain, we assume that the manufacturer makes green R&D investments but faces yield uncertainty and the retailer makes sales efforts to attract more consumers to buy green products. At the same time, there are different power structures between the manufacturer and the retailer. Therefore, in order to find how the green supply chain operates in these structures, we built four game models, and they are the manufacturer-led model, the retailer-led model, Nash Equilibrium model and the centralized model, respectively. Moreover, we analyze and compare the optimal wholesale price, the green degree of the product and the optimal order quantity in four game models. We find that the optimal wholesale price is the highest in the manufacturer-led model, but the optimal green degree of the product and order quantity is the lowest. Then, we design the cost sharing contract to coordinate the supply chain. It can improve the green degree of the product, the profit of the retailer and the manufacturer through numerical analysis. Finally, this paper will offer managerial insights, which can help managers better evaluate which market structure is more profitable.

Paper is Available to Meeting Registrants Only.

OSCM: **Research on Coordination of Green Supply Chain Based on Blockchain Concept** 

Author: **Yongfei Li**, *Professor, Xi'an U. of post and telecommunication, China*
Author: **Yuzhi Wei**, *Master's Student, Xi'an U. of Posts & Telecommunications*

Based on the concept of blockchain and Stackelberg game theory, the coordination problem of green supply chain under random environment is studied. Firstly, based on the concept of blockchain, green supply chain decision-making models composed of a manufacturer and a single retailer were constructed, in centralized, decentralized, revenue-sharing and green manufacturing cost sharing contract situations. Secondly, models were solved. Finally, the relevant conclusions are verified through simulation analysis and comparison. The study found that the revenue sharing ratio, green manufacturing cost sharing ratio and repurchase coefficient have a significant combined effect on supply chain coordination. When the green supply chain is coordinated, the overall revenue of manufacturers, retailers, and the supply chain under the blockchain concept is higher than that under the non-blockchain concept. Simultaneously, it improves product greenness, retailer's ordering and the supply chain robustness.

OSCM: **Is Sustainability Key to Become More Resilient After the COVID-19 Pandemic? The PA Farmer Case**

Author: **Veronica Haydee Villena**, *W. P. Carey School of Business, Arizona State U.*
Author: **Elizabeth Ransom**, *Pennsylvania State U.*
Author: **David Abler**, *Pennsylvania State U.*

During the COVID-19 pandemic, businesses are dealing with worker safety, reduced sales, supply chain disruption, among many other challenges. Their managers might think to shift their attention to survival, especially when operating in a highly uncertain industry. This research suggests that there is no better time to reinforce investments in sustainability practices. Firms that manage diverse stakeholder tradeoffs and short-term and long-term pressures become more equipped to be more resilient in the long run. Evidence from dairy industry supports this thesis. Dairy farmers have struggled to meet break-even points due to trade disputes, low milk prices, and a decline in milk consumption in the last few years. COVID-19 has brought significant new challenges to them as many were asked to dump milk and curtail production levels, straining their weak financial position. Using a sample of 587 Pennsylvania dairy farmers, the findings show that farmers who have invested in environmental, labor, and animal welfare practices are more likely to (a) continue their operations and (b) implement an emergency plan. Interestingly, large and women-owned farmers seem the ones to benefit more from these investments, suggesting that tailored programs to these groups are needed. This research provides some important implications for public policy makers, co-operatives, and dairy farmers.

Legitimacy and Repair Strategies

Digital Session Chair: **Adrian Gombert**, *Martin-Luther-U. Halle-Wittenberg*

SIM: Citizenship as Repair to Deviance: Roles of Moral Identity and Task Visibility

Author: **Sherzodbek Murodilla Ugli Dadaboyev**, *Yonsei U. Wonju Campus*
Author: **Yoonjung Baek**, *Kyungpook National U.*

This article extends and tests the compensatory model of workplace voluntary behaviors based on research insights from the related literature and theories. Taking a within-person level approach, this research examines the contextual roles of both individual difference – moral identity – and task characteristics – task visibility – to moderate the relationship between employee deviant behavior and citizenship behavior at work. The results of the analysis on the sample data collected from employees in various organizations operating in a variety of industries provided significant empirical evidence for the proposed hypotheses and findings are, mainly, in line with the study's theorized predictions. Research findings, implications, limitations, and future research suggestions are discussed.

SIM: Three dimensions of legitimacy and their meaning in the context of multi-stakeholder initiatives

Author: **Adrian Gombert**, *Martin-Luther-U. Halle-Wittenberg*
Author: **Rebecca Christin Ruehle**, *Vrije U. Amsterdam, School of Business and Economics*

Multi-stakeholder initiatives (MSIs) are considered promising governance devices in the wake of an increasingly complex globalized world, yet it is still unclear whether the assumption of political responsibilities by (international) non-state actors possesses legitimacy. Scholars have provided insightful concepts to analyze this problem, however, their inconsistent usage of the term legitimacy has often caused them to talk past one another. This paper offers a two-step approach to clarify the different usages of the term legitimacy. First, we demonstrate with the help of a descriptive analysis the necessity to distinguish between three different dimensions of legitimacy: lens, focus, and approach. Second, we discuss in a prescriptive analysis the appropriateness of using either a sociological or a normative lens to assess various legitimacy criteria. We illustrate our approach by drawing on the Mena's and Palazzo's (2012) seminal publication on MSI legitimacy, offering a nuanced reinterpretation of their model.

Paper is Available to Meeting Registrants Only.

SIM: The Power of Shareholder Political Transparency Activism

Author: **Yongjun Zhang**, *Stony Brook U.-State U. of New York*

Corporations have become frequent targets of shareholder activism that seeks to improve corporate political responsibility. Movement scholars have demonstrated that social activists can affect corporate behavior through the mechanisms of political and market disruption. Yet very few sociological studies have examined whether shareholder activists can politically and financially disrupt the targeted firms. This study uses shareholder political transparency activism (SPTA) as an illustrative case to test whether shareholder activism can increase the targeted firm's political risk and market uncertainty. Using a unique panel dataset on shareholder activism and the novel Longitudinal Corporate Political Outcomes Database for SP1500 firms from 2000 to 2018, I employed the difference-in-differences method with nearest matching to estimate the causal effects of shareholder activism on firms' quarterly PAC political donations, invited congressional hearings, PAC campaign donation returns, and awarded federal government contracts as well as security analysts' recommendation ratings and cumulative abnormal stock returns. The DID estimators show that SPTA can reduce the targeted firm's political donations and invited testimonies before Congress and increase the amount of campaign donation returns by politicians. But SPTA does not lead to a decline in awarded contracts, stock ratings, and cumulative abnormal stock returns. This study also suggests that three moderating mechanisms could affect the impacts of SPTA, including shareholder salience, the co-presence of shareholder environmental and social activism, and corporate receptivity to shareholder activism. This paper concludes by discussing its implications for shareholder activism and social movements studies.

SIM: Wag the Dog: How Embattled Corporate Leaders use Diversionsary Tactics against Shareholder Activism

Author: **Teresa Antonia Dickler**, *IE Business School*
Author: **Luis Diestre**, *IE Business School*

This paper examines how initiating a corporate restructuring process could help corporate leaders address threats to their power. Hypotheses are developed based on applying diversionary war theory—a theory advanced in political science—to the corporate context. Specifically, we theorize that when an activist shareholder submits a proposal to reduce corporate leaders' power, those leaders will undertake corporate restructuring. This, we claim, will increase the perception among the shareholders that a strong and powerful leadership is necessary, resulting in less voting in support of reducing the leaders' power. We test our theory using a sample of 978 proposals aimed at reducing corporate leaders' power voted on at 305 firms between 2000 and 2016 and find support for both our hypotheses: First, shareholder proposals threatening leaders' power receive less voting support in firms that just announced a process of corporate restructuring and second, corporate leaders are more likely to announce a process of corporate strategy restructuring right after a proposal to reduce their protection has been submitted. We discuss implications for the literature on shareholder activism, corporate leaders' responses to shareholder pressures, and corporate governance in general.

Paper is Available to Meeting Registrants Only.

Author: **Alison E. Holm**, *Copenhagen Business School*

Author: **Jasper Hotho**, *Copenhagen Business School*

Author: **Larissa Rabbiosi**, *Copenhagen Business School*

This paper explores what stakeholder attributes or combinations of attributes are sufficient for stakeholder salience. We argue that configurational theorizing is opportune for such an investigation. Empirically, we use original data on complaints of misconduct directed against multinational enterprises between 2011 and 2018. Adopting a set-theoretic approach, we explore the stakeholder attributes or combinations of attributes for corporate engagement in dialogue on issue of misconduct. We find that different combinations of attributes are relevant for stakeholder salience, including combinations in which stakeholders do not possess high levels of power or urgency, showing that stakeholder salience neither relies solely on one single attribute nor depends solely on the accumulation of all attributes. The findings demonstrate the value of theorizing stakeholder salience as configurational in explaining the relationship between stakeholder attributes and stakeholder salience.

Perspectives on TMT and Directors

Digital Session Chair: **Punit Arora**, *City U. of New York*

STR: How do directors' effort and firm efficiency influence performance of a diversified firm? 

Author: **Punit Arora**, *City U. of New York*
Author: **Ajai Singh Gaur**, *Rutgers U.*

Studying how boards contribute to firm performance and examining implementation costs associated with diversification strategy are domains of growing interest to strategy scholars. We integrate these incipient literatures to examine the role of Peer Independent Executive Directors' (PIED) effort in improving the performance of diversified firms. Using a longitudinal sample of US firms, we show that the PIED efforts are progressively beneficial for firm performance with successive increases in diversification levels, irrespective of diversification type. While we also theorized that the benefits of PIED efforts are greater for firms with lower benchmarked efficiency, we find results to the contrary. We contribute to both corporate governance and diversification research by highlighting the role of director domain expertise and effort in improving firm performance.

STR: When do Firms with new CEOs Engage in M&A? The Role of Stock Market Reactions to the CEO Appointment

Author: **Marie-Ann Betschinger**, *HEC Montreal*
Author: **Caterina Moschieri**, *IE Business School*
Author: **Olivier Bertrand**, *Fundação Getúlio Vargas/EBAPE*
Author: **Mahmoud Aidli**, *HEC Montreal*

This study examines the effect of the stock market reactions to the announcement of a new CEO on the firm's acquisitions during the first year of the CEO's mandate. Using a behavioral agency framework, we propose that newly appointed CEOs announce more acquisitions at the beginning of their term if the stock market reactions upon their appointment are less favorable. Such initial less favorable market reactions may endanger the CEOs' compensation and employment. As a result, new CEOs may be willing to take more risk through M&As to overcome these potential losses. However, we propose that lower managerial discretion at the country and firm level, i.e. a lower CEOs' latitude of action to take decisions within a country and firm governance structure, may limit the CEOs' ability to engage in M&As based on their preferences. Analyzing an international sample of 628 newly appointed CEOs and their M&A activity in the first 12 months after their appointment between 2003 and 2014, our results support most of our predictions.

STR: What Can Managers Learn from Practice Implications? The Case of Acquisition Research

Author: **Svante Schriber**, *Stockholm Business School*
Author: **David R. King**, *Florida State U.*
Author: **Florian Bauer**, *Lancaster U.*

There is an ongoing debate regarding the usefulness of management research to practice. Typically, two positions are taken, one where implications to practitioners in research is taken for granted and not problematized; one questioning the value of such prescriptions. Drawing on a heuristics approach, we suggest a path forward is to consider implications, at aggregate level, can be considered useful 'rules of thumb.' We assess the content from a decade of practice implications provided by acquisition research. We categorize and analyze managerial prescriptions into four broadly accepted schools of thought in this research stream, developing a portfolio of heuristics. This also allows us to suggest a different ontological status to practice implications as heuristics that can be of strategic value to firms. In discussing the value of implications compared to other sources available to practitioners, we argue for more implications, and suggest research can also benefit from a more integrative view of practice implications.

Paper is Available to Meeting Registrants Only.

 **STR: Seeking a Friend and Ally** 

Author: **Steven James Hyde**, *Boise State U.*
Author: **Eric Bachura**, *U. of Texas At San Antonio*
Author: **Darcy Kathryn Fudge Kamal**, *Sacramento State*
Author: **Meghan Ann Thornton-Lugo**, *U. of Akron*

It is widely known in other micro fields such as organizational behavior and psychology that motivation is an important predictor of behavior. Yet the alliance and Upper Echelons literature have largely overlooked this important antecedent. A deeper understanding of a CEO's motivations can illuminate why a firm may engage in higher levels of alliance activity while another firm may not. In this study, we explore how CEO needs—a manifestation of internal motivation—may impact alliance behavior. The results of our study demonstrate that the motivations of CEOs—namely their need for affiliation—have a non-linear relationship with alliance activity. More specifically, the results suggest an initial positive relationship between the need for affiliation and alliance activity. However, at high levels of affiliation, the CEO's concern for harmony with their board becomes more important, resulting in lower alliance activity.

High Performance Work Practices (HPWPs)

Digital Session Chair: **Samuel Aryee**, *U. of Surrey*

HR: **Examining the Adoption and Effects of High-Performance Work Systems**

Author: **Samuel Aryee**, *U. of Surrey*

Author: **Hsin-Hua Hsiung**, *National Taiwan U.*

Author: **Hyun Young Jo**, *Leeds U. Business School*

Drawing on resource orchestration theory, we proposed a moderated mediation model of the processes linking unabsorbed slack to the organizational outcomes of operational performance and labor productivity. Specifically, using a nationally representative survey data from South Korea, we examined (i) the moderating influence of top management human resource (HR) emphasis on the relationship between unabsorbed slack and the adoption of high-performance work systems (HPWS) and (ii) the conditional effect of perceived HR effectiveness on the indirect effects of HPWS on the two organizational outcomes through overall job attitude. The results of our analyses showed that: (i) top management HR emphasis moderated the relationship between unabsorbed slack and the adoption of HPWS such that this relationship was stronger when top management HR emphasis was high but not low, and (ii) HPWS indirectly related to operational performance but not labor productivity through overall job attitude when perceived HR effectiveness was high but not low. In sum, our results supported the two-stage moderated mediation of the relationship between unabsorbed slack and operational performance but not labor productivity. We interpreted these findings as underscoring the utility of resource orchestration theory in explicating variability in the adoption of HPWS which, in turn, develops the human resource-related internal capability leading to sustained competitive advantage.

HR: **Compatibility of High Performance Work Practices in Eastern Societies: A Qualitative Study**

Author: **Sadia Nadeem**, *National U. of Computer and Emerging Sciences, Islamabad, Pakistan*

Author: **Shzaa Asim**, *FAST School of Management*

As high performance work practices (HPWPs) are increasingly acknowledged as a best practice, there is an increasing diffusion of these practices in non-Western settings, while competing normative social values in such settings may oppose adoption. To understand the perceived usefulness and cultural compatibility of HPWPs, this study collected the opinions and perceptions of 104 individuals working in four organizations in Pakistan through interviews and focus group discussions. The data were analysed using thematic analysis, where themes were based on a matrix of dimensions of national culture and HPWPs. Results indicated the existence of policy for most HPWPs in all four organisations, and a clear perception of usefulness of these practices. However, managers and employees reported challenges in the implementation of two-way communication, merit based appraisals, rigorous selection, merit based promotions, internal career opportunities, contingent compensation, and investment in training because of cultural values. In this research setting, performance orientation, high in-group collectivism and high power distance were the main cultural dimensions affecting implementation. We recommend HPWPs scholars to work on implications of cultural (in)compatibility on multiple stakeholders, including organizations, individuals and social structures.

HR: **High-Performance Work Systems and Firm Performance: A Cross-National Meta-Analysis**

Author: **Joo Hun Han**, *Rutgers U.*

Author: **Saehee Kang**, *Florida State U.*

Author: **David G. Allen**, *Texas Christian U.*

Author: **Yan Pan**, *Rutgers U., School of Management and Labor Relations*

The present study seeks to develop the contingency theory in strategic human resource management (HRM) by revealing national contextual factors (i.e., national human capital and labor market flexibility) that moderate the effects of high-performance work systems (HPWS) on firm outcomes. Building on theories and research on human capital resources and labor market institutions, we propose that the level of national human capital as indicated by national education quality would display disparate moderating effects on the relations of HPWS to firm performance and voluntary turnover, depending on the flexibility of labor markets. When labor markets are flexible, national human capital would augment the effects of HPWS on firm outcomes, whereas when labor market flexibility is low, it may partly substitute for the effects of HPWS. A meta-analysis of studies containing 385 effect sizes from 15 different countries lends sufficient support for our hypotheses, highlighting the importance of national education and labor market characteristics as key contingency factors for the functioning of HPWS at the national level and offering meaningful implications as to how organizations can optimize their use of HPWS in a global context.

HR: **Navigating Uncertainty with Certain Systems: Longitudinal Analysis of HPWS and New Firm Performance**

Author: **Joonyoung Kim**, *Cornell U.*

Although a few published firm-level empirical studies have linked HR systems, or a set of systematic HR practices, such as high-performance work systems (HPWS), to the superior organizational performance of new firms, our understanding of this association is rather limited, and not many new firms are adopting such HR systems in reality. In this study, I use a longitudinal sample of new private sector South Korean firms to examine the impact of HPWS on new firm performance by focusing on the moderating effects of environmental uncertainty and technological change. My findings indicate that firms that are operating in high levels of environmental uncertainty and technological change benefit from implementing HPWS because HPWS lead to increased product sales, thus affecting firm profitability. That is, the positive effects of HPWS on new firm performance are stronger in uncertain environments than in static ones. These results contribute to ongoing efforts to understand how new firms might optimize their workforce and achieve superior performance. In particular, this investigation provides empirical insights into how formalized and routinized management practices, such as HPWS, may help new firms overcome the liability of newness.

Author: **Guoyang Zheng**, *Renmin U. of China*

Author: **Guangjian Liu**, *School of Business, Renmin U. of China*

Although the critical role of creativity in organizational success has long been emphasized, the mechanisms through which high-performance work systems (HPWS) influence employee creativity remain underexplored. Similarly, there is limited understanding of the joint effect of human resources practices and leadership styles on employee psychological state and creativity. Based primarily on a social embeddedness framework of thriving, this study investigates the indirect effect of HPWS on employee creativity through evidence of thriving at work. We integrate resource perspective with research on social embeddedness framework to explore the moderating role of temporal leadership in the relationship between HPWS and thriving. Hypotheses are tested using multi-wave, multi-source data from 235 employees and their direct supervisors. Our results show that thriving at work mediates the positive relationship between HPWS and employee creativity and that temporal leadership strengthens the relationship between HPWS and employee thriving. The contribution of this study lies in explaining how employee creativity is triggered by HPWS and how temporal leadership complements HPWS.

Modern organizations are complex and often require the use of teams to accomplish tasks. But to accomplish such tasks requires the effective assembly of human capital. As such, scholars and practitioners focus on how to best compile members' knowledge, skills, abilities, and other characteristics (KSAOs) – that is, team composition – in a way that best meets task demands. Research in this space has been fruitful and produced many important insights about how to best compose a team. However, this research has also become over-reliant on operationalizations of constructs that mute the fine-grained details inherent to their theories of emergence. That is, many rely on simple means of aggregation (e.g., a within-team average of a certain KSAO). This practice has led to multiple calls for alternative conceptualizations of team composition variables. To that end, our symposium proposed various ways to conceptualize composition issues that, together, advance our understanding of compositional arrangements and their effects on important organizational outcomes.

OMT: "Cage the Songbird": An Experiment Testing the Impact of Formalization on Firm Performance

Author: **Ryan Scott Coles**, *U. of Connecticut*
Author: **Wesley Sine**, *Cornell U.*

Prior research on formal structure and firm performance has explored age-related contingencies of the relationship. However, scholarship in this area has not explicitly teased apart the differential impact of firm age and size despite evidence that the two should be treated separately. In this study, we disentangle the moderating effects of firm age and size on the formalization–performance relationship using a randomized controlled experiment with a sample of 3,500 small and medium enterprises in Peru. Our Results demonstrate that increased formalization leads to higher firm performance. This relationship is more pronounced for larger ventures, the benefits of formalization increase as a firm grows. However, contrary to expectations and past research, firm age had no moderating effect on the formalization–firm performance relationship. The results are surprising because prior research has argued that firm age is a key driver of this relationship. Yet, we show that firm age has no impact on the relationship when age-related hypotheses are tested using a randomized experiment. Rather, firm size appears to be the essential driver of whether formalization increases firm performance in dynamic settings.

OMT: Dealing with Retrenchment in Times of Crisis: Contingent Effects of Knowledge Intensity (WITHDRAWN)

Author: **Daniel Ehnes**, *Goethe U.*
Author: **Cornelia Storz**, *Goethe U.*
Author: **Lars Schweizer**, *Goethe U.*

We examine two forms of labour cost retrenchment strategies, flexible and rigid retrenchment strategies. Guided by the resource- and capability-based view of the firm, we focus on two important questions: One, what are the different effects of flexible and rigid strategies on organizational outcomes in terms of market reactions to the announcements of these strategies? Two, how does the knowledge intensity such as a firm's reliance on knowledge assets and capabilities shape the relationship between flexible and rigid strategies and organizational outcomes? To answer these questions, we use a novel data set from 242 retrenchment announcements from publicly listed Japanese companies during the last severe economic crisis (2008-2009). Our results suggest that market reaction is shaped by the choice of the retrenchment strategy, and the firms' dependence on its knowledge intensity. Firms which practice flexible retrenchment strategies show positive market reactions, while the opposite holds true for firms with rigid retrenchment strategies. On the other hand, market participants evaluate rigid retrenchment strategies much more negatively if they threaten knowledge assets and capabilities. Our evidence suggests that resource- and capability-based contingencies matter when firms need to carry out retrenchment strategies.

OMT: Don't Sweat the Small Stuff? Superstitious Organizational Learning From Experience With Near Misses  

Author: **Peter Micah Madsen**, *Brigham Young U.*
Author: **Robin Dillon-Merrill**, *Georgetown U.*
Author: **Catherine Tinsley**, *Georgetown U.*

A near-miss is an event where the possibility of a failure is present but does not materialize. Many organizations in high-hazard industries have recently adopted near-miss learning systems in the hope that their members will learn from such events to prevent significant failures from occurring in the future. The challenge with correctly learning from near misses is that since the event is not a failure, decision makers must recognize that although a negative event did not happen, it might have occurred. If decision makers do not correctly distinguish between successes and near-misses, organizations and their members can systematically take away the wrong lessons from the event and future performance could decline (rather than improve) as experience accumulates. This negative learning pattern, referred to as "superstitious learning," has been identified in other contexts, but has not been explored in connection to near misses. In addition to exploring the role of near-misses in superstitious learning, we also explore what signals for learning are provided from heterogeneous versus homogenous near-miss experiences. We use data from reportable safety incidents in the US coal mining industry and a behavioral study set in the context of a coal mining decision to test our hypotheses.

OMT: In Search of Contrarian Opportunities from the Blind Spot of Majority Rule   

Author: **Jose Pablo Arrieta**, *U. of Amsterdam*
Author: **Chengwei Liu**, *ESMT Berlin*

Superior profit usually depends on capturing opportunities that rivals fail to identify or utilize. A key challenge for strategists is how to be both different and viable. Prior research has tended to associate contrarian opportunities with rivals' behavioral failures. Herein, we argue that contrarian opportunities can emerge endogenously in an ecology whenever there is a dominant logic. We develop our argument in the context of organizational design, in which the majority voting rule is demonstrated to be an efficient and typically mainstream approach for screening alternatives. We formally demonstrate when antimajority—an unconventional screening rule where acceptance depends on the minority's approval and majority's disapproval—exploits the opportunities left behind by the majority rule. We illustrate how a contrarian niche emerges, and its scope conditions using the case of an antimajority voting venture capitalist firm together with an evolutionary model of competing rules. More generally, a contrarian niche emerges not necessarily because the dominant firms have been suboptimal or inefficient but because their homogeneity predicts an exploitable blind spot, preserving opportunities for strategists who can afford to be contrary.

Social Issues with Human Capital

Digital Session Chair: **Grazia D. Santangelo**, *Copenhagen Business School*

STR: Refugee Human Capital and Firm Performance   

Author: **Grazia D. Santangelo**, *Copenhagen Business School*

Author: **Vera Rocha**, *Copenhagen Business School*

Author: **Wolfgang Sofka**, *Copenhagen Business School*

The availability of employment is a central determinant for addressing the refugee crisis in many host countries. Extant management research largely assumes that hiring refugees is part of firms' social responsibility since the knowledge and skills of refugees are too generic to produce positive performance effects. We challenge this perspective and offer a theoretical logic for how the generic human capital of refugees results in superior performance for the hiring firm. We theorize that the performance potentials from hiring refugees emerge because of value capture mechanisms. Within our reasoning, refugees have limited opportunities to bargain for higher salaries, due to demand frictions stemming from uncertainty, stereotypes, or discrimination by other potential employers. Moreover, we theorize that firm-specific incentives make employers that offer job security and social connections more appealing to refugees and, thus, enable their employers to capture value from their generic human capital. In line with our theoretical predictions, we find, for 176,792 firms and 10,338 refugees between 2001 and 2016 in Denmark, that firms hiring refugees have higher profitability and this effect is amplified for employers offering job security and the opportunity for bonding relationships with refugee co-workers.

STR: Accurate or Biased?: Employees' Perceived Firm-Specific Human Capital and Wages

Author: **Ilhwan Na**, *U. of Kansas*

The theory of perceived firm-specific human capital suggests that employees' perceptions of their own human capital may be biased toward less or not cognizant of firm-specific human capital. This study attempts to answer whether employees' perception is accurate or biased by investigating the relationship between employees' perceived firm-specific human capital and their wages when staying at the current job or transferring to another job. We first develop three new behavioral assumptions to modify the extant theory of perceived firm-specific human capital and then establish competing hypotheses about the situations between employees' accurate and biased perceptions based on the revised theory. Fixed-effects analyses of above 35,000 individual-year observations of 6,700 Korean full-time employees from 2002 to 2018 supported the accurate perception hypothesis of employees, in that employees' perceptions of firm-specific human capital are negatively associated with their wages one year later and the extent is stronger when transferring to another job than when staying at the current job.

STR: Workplace Populism? Workforce Diversity and Dominant Group Reactions to Pro-Diversity Claims  

Author: **William Reuben Hurst**, *U. of Michigan, Ross School of Business*

Existing research indicates that workers from historically dominant social groups (such as white workers in the United States) tend to view pro-diversity claims with indifference when it comes to choosing between employers. I argue, however, that perceptions of growing workforce diversity shifts this indifference to aversion as these claims come to be seen as undermining the group's now-at-risk status. I test these predictions using a pre-registered survey experiment on a representative sample of non-Hispanic white Americans (n=3,000). I find that information illustrating growing racial diversity in the United States labor market decreases attraction to a company that make a pro-diversity claim, but only among subjects without a bachelor's degree. I show that this information does not affect attraction to a company that makes a non-discrimination claim or makes no mention of diversity. In exploratory analysis, I present evidence that this effect is driven by newfound taste-based aversion to these firms rather than a shift in beliefs regarding unobservable firm characteristics.

STR: Demystifying The Turnover Effect Patterns: Organizational Learning At Employee Turnover

Author: **Yassine Lamrani**, *Erasmus U. Rotterdam*

Author: **Justin J.P. Jansen**, *Erasmus U. Rotterdam*

Author: **Tom Mom**, *Erasmus U. Rotterdam*

Author: **Ghahhar Zawosh**, *HEC Montreal*

Although scholars have argued that collective turnover impacts firm performance, they have used disparate logics and suggested different relationships – ranging from negative to positive nonlinear. In order to bridge these disparate arguments, we apply organizational learning theory and develop a simulation model to identify key contingencies and to explain about under what circumstances a pattern is more likely to emerge than the others. Importantly, we illustrate how organizational learning rates and newcomers' learning speeds conjointly shape the relationship of employee turnover on firm performance into either of the three argued patterns in the turnover literature. This effect is further moderated by external contextual factors such as newcomers' parity of knowledge, firm's ecology of competition, and environment turbulence. Our study helps bridging disparate arguments in the turnover literature, and offers key insights for turnover and organizational learning.

STR: Impact Investing in Disadvantaged Urban Areas   

Author: **Romain Boulongne**, *IESE*
Author: **Caroline Flammer**, *Boston U.*

We examine whether impact investing is more effective in fostering business venture success and social impact when directed toward ventures located in vs. outside disadvantaged urban areas (i.e., areas with high crime, unemployment, and poverty). We explore this question in the context of loans made to business ventures located in French “banlieues” vs. “non-banlieues”. We find that loans issued to banlieue ventures, compared to non-banlieue ventures, yield greater improvements in financial performance, as well as greater social impact in terms of the creation of local employment opportunities, quality jobs, and jobs for minorities—all of which contribute to the social inclusion of marginalized communities and the development of sustainable cities.

Paper is Available to Meeting Registrants Only.

STR: Text Mining Analysis of Business Models in Social Entrepreneurship 

Author: **Anil Kumar**, *PhD Scholar at Tata Institute of Social Sciences, Mumbai*
Author: **Ajit Kumar**, *National Institute of Industrial Engineering (NITIE), Mumbai, India*
Author: **Gautam Prakash**, *Tata Consultancy Services (TCS)*

An essential and relevant domain of social entrepreneurship focuses on the business model. The emerging themes from business models in social entrepreneurship appeal to the attention of many researchers. However, some attempts have been made to summarise the published literature in the form of a review. We have utilised the latest concept of text mining techniques for conducting descriptive analyse to the extant literature on the topic. The benefit of text mining techniques is that it helps researchers to cover a broad set of articles from literature databases and provides a comprehensive evaluation of research works by examining the evident patterns. We have used the Web of Science database for the literature search. We have prepared very structured findings including authors, authors’ network, affiliation, country, language, emerging themes and their period of activeness, top journals, list of highly cited articles, among other mappings. These findings help researchers to narrow down the scope of their research in the domain as well as identifying possible grey areas where further exploration of research could be conducted. Such mapping of literature underscores the evolution, development, and practice of the topic which other researchers would find beneficial to begin further research.

STR: Been in my shoes? A field experiment examining homophily in entrepreneurial prison training   

Author: **Robert Hill**, *U. of North Carolina, Chapel Hill*
Author: **Isin Guler**, *U. of North Carolina, Chapel Hill*

According to the Bureau of Justice Statistics, approximately 2.2 million Americans spent time in prison in 2016, costing the US \$80 billion a year. Mass incarceration, which has resulted in stigmatization and post-release challenges for millions, represents one of the Grand Challenges of our day. One novel approach to address this issue is to provide entrepreneurial training to the currently incarcerated near the release of their sentence, an approach that is reportedly resulting in significant reductions to recidivism. However, we have a limited understanding of the causal factors that enable these programs to effectively train incarcerated individuals toward meaningful outcomes. This paper is a first step towards building such understanding. By partnering with the world’s leading entrepreneurial prison training program to conduct a field experiment within the training program itself, we seek to understand the mechanisms that lead to greater program completion and increased intentions to enter entrepreneurship. Integrating insights from literatures on homophily and learning, we hypothesize that inmates will become more motivated by advisors who themselves have a history of incarceration (as opposed to experts) and more from failure testimonials rather than successes. In addition, we hypothesize that inmates will be motivated more by the successes of those similar to themselves and the failures of dissimilar others. While final results have been delayed due to the outbreaks of COVID-19 in the associated prisons, this paper presents the design of this experiment, with final results to be delivered during the 2021 AOM conference. Keywords: homophily, learning; advice; entrepreneurship; Grand Challenges

Drivers and Outcomes of CEO Compensation

Digital Session Chair: **SUCHEN**, *Rutgers U., School of Management and Labor Relations*

STR: Step In, Step Out: The Dynamic Relationship Between Interlocking Directors and CEO Compensation    

Author: **SUCHEN**, *Rutgers U., School of Management and Labor Relations*

Combining literature on CEO pay-setting process, board processes, and group norms, this study explores the influence of interlocking director dynamics on subsequent CEO pay raises. Particularly, we focus on two types of interlocking director changes—the loss and addition of interlocking directors—and consider their independent influence on CEO pay raises. Moreover, we hypothesize that the relationship between interlocking director dynamics and subsequent CEO pay raises is contingent on the CEO relative pay (of the changing interlocked firms vs. the focal firm), female board representation, and the interaction between these two moderators. Based on 4,510 firm-year observations from 702 S&P firms over 10 years (2009-2018), we found that interlocking director loss is negatively associated with subsequent CEO pay raises, yet there is no significant influence of interlocking director addition on subsequent CEO pay raises. The findings also partly support the moderating roles of the CEO relative pay, female board representation as well as the three-way interactions among interlocking director changes, CEO relative pay and female board representation. This study advances our understanding about the implications of interlocking director changes, determinants of CEO pay adjustments, and the board functioning processes.

STR: Forging Agents of the State? How Political Institutions Impact CEO Compensation in SOEs  

Author: **Roxana Turturea**, *Stockholm School of Economics*

Author: **Steve Sauerwald**, *U. of Illinois at Chicago*

Author: **Marc Van Essen**, *U. of South Carolina*

We show that governments around the world use the high-powered incentive of executive compensation to turn CEOs of partially state-owned enterprises (SOEs) into ‘agents of the state’. The current literature on principal-principal (PP) agency theory does not adequately explain how non-controlling shareholders are duped by the deployment of private means towards public ends, or how this agency problem can be repaired since governments cannot be kept in check with conventional corporate governance mechanisms. We develop a novel theory detailing how political institutions act as de facto corporate governance mechanisms by impacting governments’ ability to co-opt SOE CEOs to the detriment of non-controlling shareholders. Matched-samples evidence covering publicly listed firms from 20 countries corroborate our political-institutional extension of the PP agency framework. More specifically, we find that political power and political factionalization aggravate PP agency problems by enlarging incumbent governments’ sway over partially SOEs, whereas political constraint and political polarization reduce these problems.

STR: Standing Out Only to Get Hammered Down: CEO Overcompensatory Actions and Board Ratcheting Responses    

Author: **Shelby Gai**, *Michigan State U.*

Author: **Stefan Maric**, *Eli Broad School of Business, Michigan State U.*

While research examining the motivation behind CEO goal attainment has often focused on monetary incentives, this study analyzes the social factors motivating CEO behavior. Drawing on self-determination theory, we consider how differences between the CEO and the board may motivate the former to engage in overcompensatory actions—defined as attempts to overcome feelings of inferiority or inadequacy by overperforming—due to the need for relatedness. We identify three dimensions of difference that could lead to CEO overcompensatory action in the form of goal over-attainment: 1) demographic differences; 2) occupational differences; and 3) status differences. We also address the possible consequences of CEO overcompensatory action by examining board responses in the form of ratcheting up subsequent performance targets. Drawing on social identity theory, we expect that attempts to overcompensate will lead to backlash such that boards will increase subsequent targets, and the likelihood will be higher for CEOs that reflect one of the three difference dimensions. We test our hypotheses using an original dataset consisting of nearly 1000 firms from 2006-2019, and discuss the implications of our theoretical perspective and supportive empirical findings for future research on corporate governance, CEO/Board relationships, and overcompensatory actions.

Paper is Available to Meeting Registrants Only.

STR: CEO Relative Pay, Social Comparison, and Firm Earnings Manipulation 

Author: **David Weng**, *California State U., Fullerton*

Author: **Long Wang**, *City U. of Hong Kong*

While the issue of income inequality has received growing scholarly attention, existing studies tend to focus on within firm social comparison. We argue that inequality may emerge across firms and that this perception affects top executives’ motivation to engage in corporate wrongdoing. Specifically, we contend that a CEO whose pay is higher relative to other CEOs in an industry would be less inclined to engage in earnings manipulation, while a relatively poorly-paid CEO may have the motivation to present erroneous financial information. We further investigate certain boundary conditions that may strengthen or weaken the proposed effect including CEO overconfidence, TMT pay gap, and firm performance. Results based on a sample of U.S. public firms suggest that the extent to which a CEO’s pay is relatively higher or lower than peers in an industry influences a firm’s propensity of earnings management and that the effect of CEO relative pay varies depending on these boundary conditions.

Microfoundations of Corporate Governance

Digital Session Chair: **Priyanka Dwivedi**, *Texas A&M U., Mays Business School*

STR: Valuing at the top: CEO diversity-valuing behavior, executive psychological safety, and turnover  

Author: **Priyanka Dwivedi**, *Texas A&M U., Mays Business School*

Author: **Inn Hee Gee**, *Texas A&M U.*

Author: **Michael C. Withers**, *Texas A&M U.*

Author: **Steven Boivie**, *Texas A&M U.*

In this study, we focus on the role that CEO diversity-valuing behavior plays in shaping top executive turnover. We examine executive psychological safety as a key intervening mechanism. Further, we propose that the negative effect of CEO diversity-valuing behavior will be stronger for female executives. We test and find support for our theory and hypotheses using survey data from a sample of top executives in the largest 1,000 firms in the U.S. Our findings show that executive psychological safety mediates the effect of perceived CEO diversity-valuing behavior on executive turnover and that the negative indirect effect is stronger for female executives. Our study contributes to the upper echelons and diversity literatures by examining the impact of CEO diversity-valuing behavior on executive psychological safety and turnover.

STR: A Process Theory of Organizational Adaptation: a Top Management Game Perspective    

Author: **Patrick Besson**, *EMLYON Business School*

Author: **Guillaume Carton**, *EMLYON Business School*

Strategy has overlooked how organizations adapt to their environments. To overcome this gap, this article builds on the punctuated equilibrium model and offers a theory that shows that organizations adapt through a top management game. Our theory models a process through which an organization changes/does not change its path following a signal of drift between the organization and its environment. During what we call the adaptation crisis process, coalitions within the top management group play a game to solve the strategic dilemma between keeping the current path (e.g., path reinforcement) or changing it (e.g., path transformation). They strategize and confront their own responses to the signal of drift based on their deciphering and strategic interests, the dominant coalition being more likely to follow the same path and dissident coalitions being more likely to change it. The solution to the dilemma, path reinforcement or transformation, depends on the winner of the game. However, if the drift is not bridged, the adaptation crisis continues, and new rounds of top management games occur until the death of the organization or its ability to reconnect with its environment. This process theory of organizational adaptation offers implications for both strategic management research and practice.

STR: Outsider CEOs Who Disappoint: Directors' Ties, Familiarity Bias, and Flawed Hires

Author: **Jiyeon Kang**, *Pennsylvania State U.*

Author: **Donald C. Hambrick**, *Pennsylvania State U.*

Author: **Timothy J. Quigley**, *U. of Georgia*

We examine the performance of outsider CEOs, who are known to be risky hires. Recognizing that boards are at informational disadvantages in assessing external CEO candidates, we invoke the concept of familiarity bias to set forth a counterintuitive expectation: Boards are especially susceptible to hiring mistakes when individual directors have professional linkages to external candidates, as this familiarity induces superficial assessments of these candidates; if hired, these CEOs have disproportionate chances of delivering poor performance. Based on a sample of outsider CEOs, we find that those who had prior ties to directors were appreciably more likely to deliver poor post-succession performance, compared to outsider CEOs who were not professionally linked to company directors. We discuss implications.

STR: Forecasting as a Problem of Cognitive Search: Evidence from Auto Industry Forecasting Tournaments 

Author: **Rahul Kapoor**, *The Wharton School, U. of Pennsylvania*

Author: **Daniel Wilde**, *The Wharton School, U. of Pennsylvania*

Managers and entrepreneurs rely on forecasting as a means to navigate through industry opportunities and threats. We offer a cognitive perspective that is premised on forecasting as a problem-solving process in which individuals search for relevant information and develop conjectures about future industry outcomes. We consider the individual-level forecasting problem to be associated with either forecasting industry trends that tend to have clear underlying factors and historical bases or forecasting industry shocks that tend to lack specific historical references and could vary in terms of the perceived underlying factors. We argue that cognitively agile forecasting behavior in which individuals attend to and update their forecast is likely to be more effective in the case of forecasting trends than that in the case of forecasting shocks. Further, we argue that when the aforementioned forecast updating process conforms to a Bayesian mental process, it is likely to be more effective in the case of forecasting shocks than that in the case of forecasting trends. The data for the study were collected from two successive year-long forecasting tournaments conducted between 2017 and 2019, focusing on the evolution of the automotive industry shaped by the emergence of electric and autonomous vehicles. Evidence from more than 15,000 forecasts made by over 2,300 individuals who participate in a leading global forecasting platform, offers strong support for our theory.

Problemistic Search and Reference Points

Digital Session Chair: **Lakshmi Goyal**, *Indian Institute of Management, Indore*

STR: Performance Shortfall and R&D Search: The Effects of Organizational Task Environments

Author: **Lakshmi Goyal**, *Indian Institute of Management, Indore*
Author: **Manish Popli**, *Indian Institute of Management, Indore*

Emphasizing the importance of the feedback interpretation process in problemistic search literature, we build on the view that underperforming firms seek additional information from its immediate environment to infer its performance outcome. The information available from the organizational task environment assists the focal firm to define the source of the problem and make causal attributions, which directs managerial attention to aspiration or survival levels, thereby influencing firm responsiveness following performance shortfalls. Consequently, we suggest that the task environmental dimension of dynamism weakens, while munificence and complexity strengthen the relationship between performance shortfall and R&D search. We find support for most of our predictions using a sample of 4719 firm-year observations belonging to 988 publicly listed firms from the United States manufacturing industry between 2010-2016. By unraveling the effects of the environment on the process of feedback interpretation, our study shows how information derived from the environment drives firm responsiveness and, in doing so, hopes to contribute to the research on problemistic search.

STR: Attention to reference point formation: Examining how attention affects reference dependence

Author: **Joris Berns**, *Tilburg U.*
Author: **Tal Simons**, *Erasmus U. Rotterdam*

Reference points are fundamental to most behavioral decision-making. Prior scholarship has shown how reference points, e.g. aspiration levels, are not stable nor ever-present. We argue that these findings can be explained through reference point formation, the process of how reference points come into existence. From a cognitive-behavioral perspective, reference point formation needs to be understood through information processing. In this study, we measure changes in the distribution of attention, which are indicative of whether there are changes in decision-makers' cognitive mechanisms. Using an innovative two-stage methodology, we first link how a specific shock in the information environment alters decision-makers' allocation of attention across different loci. Second, we find that the relationship between reference points and risk-taking is dependent on whether there occurred a shift in the distribution of attention. Our main contribution is, through establishing the significance of reference point formation, that the existence of reference points is dependent on preceding cognitive processes. Another contribution is methodological, as our empirical approach and novel measurement techniques allow for a joint investigation of cognitive processes and reference dependence.

STR: Aspirational Motivation and Competitive Conformity

Author: **David G. Sirmon**, *U. of Washington*
Author: **Warren Boeker**, *U. of Washington, Seattle*
Author: **Young Seok Kim**, *U. of Washington, Seattle*
Author: **Sung Ho Park**, *U. of Washington, Seattle*

In a rapidly growing industry where all firms are doing extremely well, a firm whose performance is merely good may seem inadequate by comparison. By incorporating behavioral theory of the firm (BTOF) logic, we examine the degree to which managers choose to conform to the competitive actions and repertoires of peers based on the joint effects of their social performance (performance relative to peers) and historic performance (performance relative to their past performance). We assess the actions of 303 firms from 2001 to 2017 and find that poor social performance leads firms to imitate their more successful competitors, moving more closely to competitive repertoires that reflect the norms or "recipe" for the industry. We further find that this relationship is contingent on how the focal firm performs relative to historical aspirations, depending primarily on whether the signals from social and historic performance are congruent or inconsistent. Our results extend work on competitive dynamics and behavioral theories of the firm, as well as informing past research that has discussed the benefits that imitation provides to organizations, such as institutional theory and theories of mimetic isomorphism, which argue that firms benefit when they model themselves on other successful organizations.

STR: Performance Shortfall, Decision Makers' Cognition, and the Directions of Problemistic Search

Author: **Zhi Cao**, *U. of Nevada, Las Vegas*
Author: **Feifei Jiang**, *Xi'an Jiaotong U.*
Author: **Donghan Wang**, *Communication U. of China*

The problemistic search literature has recently inquired the directions of search, i.e., when and why performance shortfall leads to one type of search rather than the other. While extant studies suggest that factors such as slack resources, experience, and environmental contexts matter for the directions of search, they implicitly assume almost equal priority of different types of search for firms to choose ex ante. We argue that firms may assess the priorities of different types of search differently ex ante. As firm behavior is goal oriented, a particular type of search (e.g., R&D search) is driven by a specific organizational goal (e.g., R&D goal), and the priority of the specific goal is further determined by decision makers' belief in the efficacy of the specific goal in achieving the primary goal of the firm (e.g., profitability). We focus on two types of search represented by R&D intensity and philanthropic donation intensity, which are mapped to the R&D and CSR goal, respectively. Based on data from publicly listed firms in China (2009-2018), we find that negative performance feedback leads to greater extent of R&D intensity, but has a non-significant relationship with donation intensity. However, the latter relationship is strengthened by decision makers' belief in the linkage between CSR ratings and profitability.

STR: No Need to be Granted? Patent Applications, Signaling, and Valuation Events 

Author: **Yang Liu**, *Cornell SC Johnson College of Business*

Most existing studies suggest patent applications as quality signals, but only investigate granted applications with the assumption that patent applications are rarely rejected. However, recent findings show that a large portion of patent applications filed at the U.S. patent office have been denied. This paper aims to understand why some applications are less likely to be granted from the perspective of strategic signaling. Since new technologies are hard to precisely assess, I propose that firms with new technologies may strategically file applications to increase their firm value for impending valuation events. Therefore, those patent applications are less likely to be granted. Further, the effect becomes weaker for firms with more investors' information acquisition or more granted patent stock. Using a large sample of U.S. patent applications and a novel text-based measure of new technologies, I find supporting evidence for my hypotheses. I further conduct a series of supplementary analyses, including the propensity score matching approach and an instrumental variable analysis based on natural experiments, to obtain causal evidence. I contribute to the innovation literature and signaling theory by considering the motivation and self-selection in patent filings.

STR: A Sensitivity Analysis of the Patent Real Option Valuation Using the Binomial Model    

Author: **Grid Thoma**, *U. of Camerino*

Using the real option approach and the binomial decision tree model the paper appraises patent valuation in terms of the investment decision flexibility—conferred by patent protection—toward continued exploitation of the underlying invention in the commercialization phase. Consistently with the predictions of financial theory the paper reports that patent real option value raises with increases of patent asset value, decreases in patent commercialization investments, larger variability of future values of the patent asset, longer time to expiration of the patent protection, lower costs of delay in the commercialization investment decisions, and higher levels of interest rate. Furthermore, the paper estimates the patent real option value sensitivity for each of these input factors of the binomial decision tree model. More broadly, the paper provides a novel valuation tool for the monetary appraisal of patents.

STR: Persistence and the Gender Innovation Gap: Evidence from the U.S. Patent and Trademark Office  

Author: **Oren Reshef**, *Washington U. in St. Louis, Olin Business School*

Author: **Abhay Aneja**, *UC Berkeley*

Author: **Gauri Subramani**, *Lehigh U.*

We document that 85% of patent applications in the United States include no female inventors and ask: why are women underrepresented in innovation? We argue that differences in responses to early rejections between men and women are a significant contributor to the gender disparity in innovation. We evaluate the prosecution and outcomes of almost one million patent applications in the United States from 2001 through 2012 and leverage variation in patent examiners' probabilities of rejecting applications to employ a quasi-experimental instrumental variables approach. Our results show that applications from women are less likely to continue in the patent process after receiving an early rejection. Roughly half of the overall gender gap in awarded patents during this period can be accounted for by the differential propensity of women to abandon applications. We also provide evidence that the gender gap in persistence is reduced when women-led applications have the backing of firms, consistent with a potential role for institutional support in mitigating gender disparities.

STR: Market Insights and Product Technology Build-up: Latecomer Firms' Catch-up Strategies

Author: **Xiao Chen**, *PhD Student*

Author: **Rongxin Chen**, *U. of San Francisco*

Author: **Gang Zheng**, *Associate Professor*

Prior research has provided new insight into catching-up by latecomer firms but leaves an important question unanswered: the strategies of local latecomer firms during the catching up dynamics and surpassing processes in emerging markets. Through multi-case research of China's smartphone industry, we develop a theoretical framework explaining how latecomer firms grow and gain sustainable advantages via different strategic choices. We identify two strategic action paths that latecomer firms can follow to catch up and surpass the market leaders. One path is from exploring new business opportunities via deep market insights, followed by building up technologies. Another strategic path is from product technology build-up to market insights exploration. Firms following this path usually start with building up essential product technologies. They also act as fast followers by quickly capturing new market opportunities. As these companies develop, they improve their efforts to gain market insights and explore new opportunities. We find that market insights exploration combined with product technology build-up helps local latecomer firms gain sustainable advantages. The insights from this study broaden the understanding of the strategies for latecomer firms to catch up and surpass in emerging markets. This study challenges this "first imitation, then innovation model" mentioned in previous literature. Our study also shows that latecomer firms can pursue cutting edge innovations early on in their catching up activities. This study has important implications for helping latecomer firms to achieve sustainable advantages and growth via different strategic paths based on their heterogeneity.

Participant: **Aishen Li**, *Columbia Business School*

The panelists in the symposium leverage natural language processing techniques to build novel measures of core management concepts such as knowledge exploration, differentiation and status. Equally importantly, using these novel approaches, the panelists ask fundamental theoretical questions. In doing so, the symposium provides insight into the structure of markets, organizations and individual careers. The symposium will highlight how differences in strategic positioning and social hierarchy is understood and evaluated by a range of audiences. In analysing language across a range of forums, the symposium provides insights into different manifestations of culture and its impact on organizational and individual outcomes.

One relatively under-studied factor that can influence diversity-related cognitions and decisions is the desire to signal—to oneself and to others—an egalitarian, non-prejudiced mindset. At the organizational level, companies try to manage impressions of organizational diversity to avoid social sanction. At the individual level, people are motivated to avoid the appearance of bias or prejudice. But how might these signaling decisions backfire, and can we capitalize on them to improve outcomes for women and racial minorities? In this symposium, we focus our attention on how self- and other-signaling affect diversity-related cognitions and choices, focusing both on third party perceptions of reputational signaling behavior and on how desires for value-consistency and self-image maintenance can shape decision-making.

MC: Building an Effective Leader Roadmap: Using the Competing Values Framework  

Author: **Jeffrey R. Moore**, *Anderson U.*
Author: **James Miller**, *Anderson U.*
Author: **Robert Franklin**, *Anderson U.*
Author: **Jessica Jolly**, *Sephora*

Organizations continue to face increased business pressures which force leaders to consider new leadership theories focusing on enabling greater leader and team effectiveness. An increasing diverse ethnic employee constituency is one of these pressures that often result in value clashes. Sephora, an LVMH company, is redesigning its distribution center organizational culture towards shared leadership to respond to these challenges. Our study analyzed 39 managers, working in distribution centers in Salt Lake City and in Las Vegas, supervising employees from 7 different ethnic identities were grouped in 14 teams, using the Competing Values Framework (CVF) in a 360-performance appraisal system, performance metrics and annual performance evaluation data. Our action research used three methods to evaluate effectiveness: annual performance appraisal (rated highly successful), upper and lower group (groups based on organizational hierarchy), and 360 exceeding expectations (peer evaluations above supervisor benchmark). Our findings identify common management behaviors for both effective leaders and effective teams to be Create: Broker (influences, effectively presents ideas), and Team: Culture (builds effective relationships through achieving shared goals). Effective leaders add the Collaborate: Mentor (listening & assisting in meeting team member needs), while the effective teams add the Compete: Producer (results orientation) behavior. Consultants looking to improve organizational effectiveness can use this CVF tool to identify employee strengths and weaknesses. The employee results can then be compared to the profile of an effective leader and thus provide an effective manager behavioral roadmap.

MC: Challenges of a Transitional Leadership in a Morphing NGO

Author: **Pierre El Haddad**, *USJ Lebanon/ISEOR IAE Lyon*
Author: **Carole Bousquet**, *IDRAC Business School*
Author: **Robin Richa**, *Arcenciel*

Winner of the Benedictine University Scholar-Practitioner Collaboration Award

Purpose An intervention research was proposed to help a notorious middle eastern non-governmental organization to face its challenges in transforming into a social enterprise while maintaining its values, and into its passage from a founders' leadership into more institutionalization. Design/methodology/approach The methodology is one of scientific consulting anchored in qualitative intervention research, and the socio-economic approach to management. Findings Research findings suggest that the socio-economic approach to management congregated organizational constituency around a shared understanding of organizational dysfunctions and initiated a transformation process. The research also depicted a diagram of socio-economic transformation in organizations. Originality/value The originality of the paper stem from the application of the socio-economic theory in the specific context of a middle eastern organizations undergoing structural change. The theoretical value of the organizational transformation appends the practical transformation brought with a potentially generic model. Limitations of time and context warrant further research.

MSR: Ethical Leadership and Institutionalization of Ethics: Intervening Role of Personal Factors

Author: **Khawar Sultana**, *U. of Management and Technology*
Author: **Naveda Kitchlew**, *U. of Management and Technology*

This study is an initial attempt to analyse the relationship between ethical leadership and institutionalization of ethics in an organizational setup. It has been observed, on the basis of available literature and previous contributions by management practitioners, that ethical leadership directly influences the process of enacting ethical culture across organization. Ethical leadership is also found impressing the personal factors of employees that further ensures the ethical behaviour of employees. The intrinsic balance that is required to establish ethical culture is based upon relationships, freedom of communication, channelization, peers' behaviour and holistic organizational climate which ensures the possibility of lasting ethical foundation for any and every organization.

MSR: Evaluating spiritual leadership coherence at a professional services company

Author: **Danny Sandra**, *U. of Antwerp*

Based on the theory of entrainment - a process of synchronizing rhythms over time - it is suggested that applying the coherence model of spiritual leadership across an organization can positively influence organizational outcomes. This study evaluates the conditions for such entrainment at a professional services company at the individual and group level. It uses an explanatory sequential research design as mixed methods approach, integrating quantitative data from eighty-six participants across fourteen teams with qualitative data from five team leaders. The quantitative data are analyzed using techniques stemming from a qualitative comparative analysis approach. The findings support that inner life and coherent interaction can be usefully deployed in a consistent way to understand the emergence of spiritual well-being through entrainment. In addition, it further supports that developing personal spiritual leadership directly influences the level of spiritual leadership of the group to which the individual belongs. Finally, better performing teams pay more attention to inner life practices, while taking care of and believing in their team members.

MSR: How Servant Leaders Fuel Team Effectiveness: A Multilevel Mediation Model

Author: **PABLO RUIZ-PALOMINO**, *U. de Castilla-La Mancha*
Author: **JORGE LINUESA-LANGREO**, *U. de Castilla-La Mancha*
Author: **DIONI ELCHE-HORTELANO**, *U. of Castilla-La Mancha*

Widespread perceptions of a lack of ethics among business leaders has resulted in considerable research concerning servant leadership. Nonetheless, team-level studies of the ties between servant leadership and important outcomes, including both organizational citizenship behavior (OCB) and team effectiveness are uncommon, resulting in concerns about the generalizability of these relationships and their associated underlying mechanisms. This study evaluated a unifying cross-level model, in which team-level servant leadership enhances OCB among followers, which in turn fosters team internal social capital (TISC), to ultimately increase team effectiveness. Support for our model was found using a sample of 343 teams, reflecting 835 respondents from various departments at 171 hotels in Spain. Also notable was that individual-level OCB and team-level TISC fully accounted for the positive effect of servant leadership on team effectiveness. Our findings suggest that the use of servant leadership may foster a competitive advantage by enhancing OCB, TISC, and team effectiveness.

MSR: Bringing the Presidents Back: Content and Discourse of Academy of Management Presidential Addresses

Author: **Toyoko Sato**, *Copenhagen Business School*

This paper examines the annual addresses of Academy of Management Presidents since 1957 in regard to their approaches to caring and the culture of care in the professional association. In particular, I investigated three areas: 1) How is culture of care addressed in the AOM annual presidential addresses? 2) How does culture of care resonate between the AOM President addresses and the Management, Spirituality and Religion Interest Group? and 3) What underlines the presidential discourse? The research combines content analysis and historical discourse analysis. All available annual addresses were examined; there are 41 in numbers. My inquiry intends to recover past president discourse through study of stated commitments and discourses for academy members and the surrounding society. The Academy Presidential addresses reflect a discourse of aspirational engagement, with this study documenting that fact and looking into the texts to illuminate Academy concerns over time.

Value Creation in Online Platforms

Digital Session Chair: **Yash Babar**, *U. of Wisconsin, Madison*

OCIS: **Cooking or Clicking: The Impact of Online Food Delivery Platforms on Domestic Food Preparation**

Author: **Yash Babar**, *U. of Wisconsin, Madison*
Author: **Ali Adeli**, *U. of Memphis*
Author: **Brad Greenwood**, *George Mason U.*

One of the most notable changes to emerge from the sharing economy is the striking increase in on-demand services. In this work, we examine how such platforms (e.g. Grubhub, UberEats, and Doordash) affect a particularly important household activity, meal preparation, and dining behaviors of American households. To do so, we exploit the phased entry of the platform Grubhub into US counties from 2005 to 2019 using a difference in difference approach. Results indicate that the availability of an increasingly diversified delivery service leads to a significant reduction in time spent preparing meals within the home. Further, and alarmingly, we find that this impact is associated with an increase in the average BMI of affected persons; indicating an unfavorable dietary shift from healthier home cooking to unhealthy food away from home consumption. Implications for research, consumers, platforms, and public policymakers are discussed within.

Paper is Available to Meeting Registrants Only.

OCIS: **Next level legitimacy: Emancipation of platform-dependent entrepreneurial ventures in data markets**

Author: **Anna Auguste Penninger**, *Freie U. Berlin*
Author: **Hannes Rothe**, *Freie U. Berlin*

Platform-dependent entrepreneurs (PDE) gain access to platform resources by adhering to platform providers' rules. Yet, nascent markets require PDE to differentiate from existing structures and create new solutions with existing resources. This study inquires how PDE manage dependency to platforms by concentrating on one source of dependency, legitimacy. We find that PDE engage in emancipating to obtain legitimacy on their own. Theorizing on emancipating, we challenge assumptions of PDE being locked in platform provider dependency.

OCIS: **Noisebnb: An Empirical Analysis of Home Sharing Platforms and Noise Complaints**

Author: **Gorkem Turgut Ozer**, *U. of Maryland, College Park*
Author: **Anand Gopal**, *U. of Maryland*
Author: **Brad Greenwood**, *George Mason U.*

Digital multisided platforms and their societal implications are increasingly attracting attention from scholars. In this prior work, the predominant focus has been on platform participants, with little consideration given other market actors who coexist with the platform but do not participate in it directly. In this study, we investigate one aspect of the changing economy subject to considerable theoretical ambiguity: the effects of peer-to-peer home sharing on noise complaints, a growing problem associated with urban living. Leveraging the phased expansion of home sharing platform Airbnb into different locations at different times, and a differences-in-differences approach, we find that the entry of Airbnb is associated with a significant decrease in the rate at which city residents file residential noise complaints. This is striking, given the assumption made by academic literature, industry and government reports, and the popular press that externalities will be negative. This significant decrease is intensified further in locations where a material number of tourist attractions exists, suggesting the effect is driven by limited physical occupancy of residential housing. Corroborating this finding, we observe a significant increase in street noise following the entry of Airbnb, indicating that noise moves out of residential space and into streets where tourist attractions mostly take place.

OCIS: **Factors Influencing the Effectiveness of Third Party Online Organizational Reviews**

Author: **Jenelle Morgan**, *U. of Calgary*
Author: **Derek Chapman**, *U. of Calgary*

Online reviews of organizations through portals such as Glassdoor and Indeed are growing in popularity and have the potential to influence organizational attractiveness. This study examined how the various components of online organizational reviews affect helpfulness ratings (also referred to as information adoption). We examined the relationship between the valence of the reviews (i.e. the extent to which reviews vary from positive to negative attitudes) and information adoption. Overall organizational ratings, deviation from consensus in attitudes and employee status were also evaluated as moderators of this relationship. We assessed nearly 22,000 Glassdoor reviews across 450 companies and found that negatively valenced reviews generally received higher helpfulness ratings. This relationship was even more pronounced when negative reviews were provided by former employees and deviated from a consensus in attitudes. However, higher organizational reputational ratings were able to partially buffer these effects. These findings illustrate the impact that negative attitudes can have on information adoption and they further highlight the need for organizations to consider how their brand images are portrayed online.

Panelist: **Andrew Spicer**, *U. of South Carolina*

Panelist: **Andrea Wessendorf**, *Cambridge Judge Business School*

Panelist: **Eric Y.-F. Zhao**, *Indiana U., Bloomington*

Microfinance has been used as a primary empirical setting to advance research on hybrid organizing. In this PDW, we take stock of this literature and reflect on how this empirical setting has defined our knowledge on hybridity and, more broadly, on decision making under conditions of institutional complexity. The workshop is organized around three main questions: 1) what are the key takeaways for hybridity that have emerged from research on microfinance? 2) what are the potential limitations of microfinance as a setting to advance our understanding of hybridity? and 3) what are the opportunities offered by the microfinance setting? We will reflect on these questions with a series of three panel discussions, including senior and junior scholars with past and current research programs on microfinance. We will then continue the discussion on these and other topics of relevance to participants. We will use breakout groups in Zoom for these discussions to allow for greater engagement.

Digital qualitative research is gaining traction in management scholarship, yet there is little consensus regarding best practices in this domain. General unfamiliarity with digital research may present even seasoned scholars with daunting questions around data availability, legitimate approaches to data sampling, efficient analytic techniques, and clear communication of their methods. We propose this PDW to explore how digital contexts have given rise to new forms of qualitative research, and may challenge the underlying assumptions of existing methodologies. Our goal is to foster emergent scholarship that uses digital data. Generative discussions that surface ontological as well as methodological concerns will be led by a panel of scholars recognized as trailblazers in this domain. This session will also provide participants with actionable feedback on ongoing or proposed empirical projects.

Registration is required for this event. The deadline for registration is Monday, June 28th. For more information please contact organizers, Micah Rajunov (rajunov@bu.edu) and Njoke Thomas (njoke.thomas@bc.edu).

Openness in and beyond Strategy-Making: Breaking Through

Openness in and beyond Strategy-Making

Digital Session Chair: **Renate Kratochvil**, *BI Norwegian Business School*

SAP: Effective Participation in Open Strategy Processes: How Employees Get Heard by Senior Management

Author: **Violetta Splitter**, *U. of Zurich*
Author: **David Nils Seidl**, *U. of Zurich*
Author: **Richard Whittington**, *U. of Oxford*

For employees, gaining attention in more inclusive or “open” forms of strategizing is liable to be challenging. They need to discover appropriate means of communicating their contributions to capture senior managers’ attention. To examine these means, we draw on data from a longitudinal, ethnographic study of an international insurance company, which included 40 employees in its strategy process. We identify five discursive practices associated with creating coherence between corporate and local themes, which can explain success or failure in gaining senior management attention. Based on these findings, we develop a process model describing how employees develop discursive competence for gaining attention. We highlight the role of operant and vicarious learning in this development. With our study, we contribute to a more dynamic and interactional understanding of attention as well as to the challenges of effective participation.

SAP: Introducing Open Strategy: Dealing with Clashes Between the Traditional and Open Strategy Discourse

Author: **Theresa Langenmayr**, *U. of Zurich*
Author: **Violetta Splitter**, *U. of Zurich*
Author: **David Nils Seidl**, *U. of Zurich*

Most organizations which decide to introduce ‘open strategy’ have a legacy of strategizing exclusively and secretly. While we know that the traditional and open-strategy approaches to strategy development differ quite dramatically, we lack an understanding of how and whether these approaches clash during the introduction of open strategy. Considering that many scholars understand strategy as a particular discourse, we adopt a discursive perspective that allows us to uncover how strategy actors deal with the introduction of an open-strategy discourse in a context in which the traditional strategy discourse prevails. We draw on an extensive data base from a longitudinal, in-depth case study of an international financial company, which introduced an open-strategy discourse by including 20 lower-level employees along a traditional strategy process. We identify three discursive practices which traditional strategy actors enact in response to the changing interplay between the traditional and open-strategy discourse: (1) Paralleling discourses (2) separating discourses, (3) controlled linking of discourses. During strategy formulation, traditional strategy actors parallel discourses to maintain their traditional, privileged position in strategy writing which triggers clashes between contradicting subject positions and discursive principles. In response to these clashes, traditional strategy actors first engage in separating and later in controlled linking of discourses. During strategy implementation, traditional strategy actors re-engage in paralleling discourses to communicate the strategy together with new strategy actors which no longer creates tensions as discourses now designate compatible subject positions and discursive principles. With these findings we contribute to the open-strategy and discourse literature by providing a better understanding of the interrelation of multiple strategy discourses as well as to how strategy actors respond to it.

SAP: Open Theorizing in Management and Organization Studies (WITHDRAWN)

Author: **Paolo Vincenzo Leone**, *McGill U.*
Author: **Saku Mantere**, *McGill U.*
Author: **Samer Faraj**, *McGill U.*

We explore how open theorizing contributes to theory development within and across scholarly communities in management and organization studies. Open science precepts such as open data and open research material can foster open theorizing, enabling loosely coordinated researchers to develop theoretical explanations by drawing on each other's datasets, code scripts, notes, methodological protocols, auxiliary findings, and supplemental documentation. In social scientific, theory-intensive fields such as management and organization studies, open theorizing processes, however, can also take place through the sharing of framings, concepts, theoretical relations, and case examples; they can even happen via debates about values in research. By enacting the social epistemological principles of free criticism and diversity, these processes significantly affect theoretical vocabularies, promoting their concentration, extension, reinvigoration, and procreation. We examine how open theorizing can thus benefit theory development.

SAP: Power Dynamics in Inter-Organizational Strategizing

Author: **Henrike Schmidt**, *U. of Hamburg*
Author: **Eva Maria Wild**, *U. of Hamburg*
Author: **Carl Rudolf Blankart**, *U. of Bern*

Inter-organizational strategizing is associated with opening up the strategy-making process in order to pool expertise and resources across different organizations. However, some organizations still tend to have more power than others in the strategy-making process. Thus, understanding inter-organizational strategizing requires understanding how and by which resources actors that are more powerful exercise power over other, less powerful actors and how these power relations change over time. A deep understanding on power dynamics between organizations is still lacking in inter-organizational strategizing literature. However, exploring these power dynamics is essential because power crucially shapes the constitution of strategy. Our study addresses this important research need by exploring inter-organizational power dynamics and by identifying the relevance of different sources of power during different phases of a strategy-making process between eleven different organizations in a health care partnership. Our findings contribute to literature on inter-organizational strategizing by disclosing underlying power dynamics and by providing innovative and novel insights into the sources that explain changing power relations in inter-organizational strategizing.

Strategic change and adaptation play critical roles in young ventures' success as they can result in better competitive strategies, or even a strategic pivot for the focal firm - i.e., a change in its products, markets, technologies, or business models that leads to a strategic reorientation. A limited but growing body of research in entrepreneurship focuses on new venture adaptation and has explored the antecedents of strategic adaptation as explained by industry structures, characteristics of firm founders and updating of their beliefs and mental models. However, surprisingly few studies explore whether firm founding characteristics or vision and passion, impact subsequent strategic choices, or how information screening and processing lead to entrepreneurial change and pivoting. Using a behavioral lens to examine entrepreneurial adaptation, the studies presented in our symposium explore the processes behind strategic pivots and how founder as well as firm founding characteristics interplay with decision-maker's mental models and information screening lead to entrepreneurial change and adaptation.

Risk Perceptions and Outcomes

Digital Session Chair: **Lauri Valtteri Korkeamäki**, *U. of Vaasa*

TIM: Taking no risk is the greatest risk: Coping with the paradoxes of Outcome-based services  

Author: **Lauri Valtteri Korkeamäki**, *U. of Vaasa*
Author: **David Sjödin**, *Luleå U. of Technology*
Author: **Marko Kohtamäki**, *U. of Vaasa*
Author: **Vinit Parida**, *Luleå U. of Technology*

Traditional manufacturing firms take more operational responsibility and business risk when offering their customers outcome-based services (OBS). Research on servitization recognizes multiple paradoxical tensions between product- and service business that manufacturers must to accept and cope with. Using an explorative case study approach on three OBS providers, we find that the paradoxes related to this extreme servitization business model are related to control, knowledge and dependency. The found paradoxes are interlinked through an insoluble trefoil knot, which will persist while the OBS relationship continues to exist. Thus, OBS provider firms' managers cope with the paradoxical tensions using coping strategies we coin commitment, acknowledgement and alliancing. Overall, the current study contributes to the paradox theory – an alternative to traditional organization theories. More specifically, we contribute to paradoxes in servitization literature by elaborating the interplay of paradoxical tensions in an advanced form of servitization, that is, OBS.

Paper is Available to Meeting Registrants Only.

TIM: Consequences of Performance-Related CEO Dismissal for Firm Innovation Outcomes  

Author: **Ali Samei**, *TUM School of Management, Technical U. of Munich*
Author: **Mohamad Hasan Sadri Karami**, *IE Business School*

Among different types of CEO turnovers, performance-related CEO dismissals are usually a response to the request by unhappy shareholders to turn around a troubled firm. This may have negative long-term consequences for firms if the pressure to deliver short-term returns disincentivizes newly appointed CEOs from pursuing relatively risky and uncertain, but important, long-term growth strategies. In this study, we find in particular that performance-related CEO dismissals reduce firms' innovation activities. We also argue that corporate governance structures that insulate the board and the new CEO from pressures by shareholders can reverse or weaken this negative relationship. Using a sample of CEO turnover events among S&P 1500 firms over 18 years, we show that (only) performance-related CEO dismissal have a long-lasting negative effect on the amount of innovation a firm produces starting from the year immediately following the dismissal. Our results also show that the presence of informed institutional investors, high voting power of directors, and the existence of a family relative of the CEO among the board of directors, will reverse or weaken the negative effect of performance-related CEO dismissal on innovation. We provide several robustness tests to rule out alternative explanations. The paper thus provides important insights into the long-term consequences of the CEO dismissals for firms.

TIM: Exploitation & Exploration in Product Innovation of IT Firms: A Unified Framework of Decision Making 

Author: **Yueyue Zhang**, *Fudan U. School of Management*
Author: **Ling Xue**, *Georgia State U.*
Author: **Xia Zhao**, *U. of Georgia*
Author: **Cheng Zhang**, *Fudan U.*

This study examines IT firms' product innovation orientations using a unified framework that incorporates both the backward-looking perspective and the forward-looking perspective of organizational decision making. Adopting a word-embedding technique, we analyze the text content of IT firms' product announcements to assess their exploitative and explorative orientations in product innovation. We consider performance feedback as the key backward-looking factors and expected competitive threats as the key forward-looking factor, and also take into account IT firms' alliance network structure. Based on a sample of 921 public US IT firms between 2002 and 2016, we find that IT firms lean more towards exploration-based product innovation when their past performance falls below their aspiration levels to a greater extent, but the effect of above-aspiration performance is ambiguous. IT firms lean more towards exploitation-based product innovation when they expect a higher extent of competitive threats in product market, but this relationship can be weakened by the cohesion of their alliance networks. Our study contributes to the research on exploration and exploitation by assessing these innovation orientations based on actual product outcomes, and using a unified framework to integrate perspectives from different theoretical domains.

TIM: Managers' Perceptions of Security Threats: The Case of Data Breaches   

Author: **Joseph Simpson**, *Virginia Tech*
Author: **Ana Sariol**, *Valparaiso U.*

Organizations survive to the extent that they are able to provide adequate protection for their critical resources: personnel, information, and assets. Malicious actors including competitors, disgruntled insiders, terrorists, and nations frequently seek to steal, harm, damage, or destroy a firms' resources. These actors often prey on firms because they are suitable targets or vulnerable to attack, suggesting opportunity is present. Using crime theory of opportunity, we explain why perceptions of vulnerability exist in some industries or firms. Past archival studies have examined factors that increase or reduce the risk of firms experiencing a security breach, but such research remains nascent and does not take an inclusive approach. The current study attempts to replicate and extend the results of past archival research using a survey approach to explore predictors of security breaches. Using a sample of 265 senior executives, this study explores predictors of experiencing industry and firm security breaches. Through a crime theory of opportunity lens, the findings reveal that some industry, organizational, and executive characteristics are significantly related to perceptions regarding the frequency of security breaches by executives.

Does Form Follow Function? Organizational Responses to Competitive, Normative, & Regulatory Demand

Digital Session Chair: **Michaela Kerrissey**, *Harvard U.*

HCM: So Happy Together: A Scoping Review on Effectiveness of Inter-Organizational Care Delivery Networks

Author: **Robin Peeters**, *Maastricht U.*
Author: **Daan Westra**, *Maastricht U.*
Author: **Arno J A Van Raak**, *Maastricht U.*
Author: **Dirk Ruwaard**, *Maastricht U.*

While inter-organizational networks are widely recognized as a mode of organization to address the wicked problems in health care, we have a limited understanding of what makes these networks effective. This is imperative to keep health care delivery of high value (i.e. affordable and of high quality). In this study, we therefore performed a scoping review of the empirical literature that describes factors that influence the effectiveness of health care delivery networks. Our search yielded 3061 unique papers, of which 12 met our inclusion criteria. Much of the excluded literature studied different types of networks that did not seek to lower cost or improve quality, or lacked an explicit methodological approach. Included studies additionally lack robust theoretical foundation. Studies typically operationalize network effectiveness as a process measure, such as the degree of collaboration, rather than outcome measures. Furthermore, effectiveness is mostly measured as the perception of network members rather than actual goal attainment. Notably, coopting the operational level receives more attention in the health care literature, while the context remains underreported. To fully understand the factors influencing network effectiveness, there is need for more theoretically and methodologically robust research connecting perceived effectiveness, measured effectiveness, and the factors influencing network effectiveness.

Paper is Available to Meeting Registrants Only.

HCM: Social Features of Integration in Health Systems: Normative and Interpersonal Integration

Author: **Michaela Kerrissey**, *Harvard U.*
Author: **Zhanna Novikov**, *Stanford U.*
Author: **Hassina Bahadurzada**, *Stanford U.*
Author: **Veronique Martin**, *Stanford U.*
Author: **Anna Sinaiko**, *Harvard T.H. Chan School of Public Health*
Author: **Sara Singer**, *Stanford U.*

More is known about the structural features of health system integration than about their social features – elements of normative and interpersonal integration – that might be important factors affecting provider experience and care quality. We surveyed 1,360 staff and physicians at 59 practice sites within 17 health systems (828 responses; 61% response rate). Building on an established conceptual model, we measure normative integration as having aligned norms and interpersonal integration as collaboration among professionals and with patients. Survey items underwent cognitive testing and domains demonstrated strong psychometric properties. Normative and interpersonal integration were both consistently related to perceptions of better experience and care quality (e.g., a one-point increase in practices' normative alignment was associated with 0.53-point higher job satisfaction and 0.77-point higher perceived quality in the practice, all measured on 1-5 scales, $p < 0.001$). Interpersonal integration focused on the patient moderated the relationship between functional hospital-primary care integration and perceived care quality, but it did not uniformly strengthen the relationship. Variation in normative and interpersonal integration may help explain why some health systems better integrate care, pointing to social features of integration as potential resources for improvement.

Paper is Available to Meeting Registrants Only.

HCM: Do Soft Cost-control Measures Change Productivity? - Preferred Statin Prescribing in Germany

Author: **Daniel Avdic**, *Monash U., Australia*
Author: **Katharina Elisabeth Blankart**, *U. of Duisburg-Essen*

We study the efficacy of preferred drug policies in altering physicians' prescribing behavior for the high volume drug class of HMG-CoA-reductase inhibitors (statins) in Germany. Using a nationally representative panel of ambulatory care physicians between 2011 and 2014, we exploit the regional administrative structure of German healthcare policy to estimate treatment effects of changes in preferred drug policies across regions and time. To identify relevant policy parameters we specify a physician agency model to describe the incentive for the physician to use preferred drugs compared to non-preferred drugs. We account that physicians face a risk of a recourse claim when non-compliant. We then empirically analyze how physicians adapt their prescribing behavior in face of a policy change in a situation where the current standard of care is contested by generic entry of atorvastatin, a blockbuster drug of similar efficacy-safety-cost profile. Changes in the preferred drug policy does not lead to higher levels of the preferred drugs prescribed, on average. However, this average effect conceals treatment effect heterogeneity by a physician's compliance status pre-/post-policy and across the statin drugs of the preferred drug regimen. The large number of physicians who always comply do not change their behavior as expected. It is non-compliant physicians at risk pre-policy and never compliers by sticking to simvastatin despite the rise of the now generic atorvastatin.

HCM: Value-based Integrated Performance Management Tools in Healthcare: A Sociomaterial Work Story

Author: **Élizabeth Côté-Boileau**, *U. of Sherbrooke*

Author: **Mylaine Breton**, *U. of Sherbrooke*

Author: **Linda Rouleau**, *HEC Montreal*

Author: **Jean-louis Denis**, *U. of Montreal*

Purpose: Explore the appropriation of control rooms (value-based integrated performance management tools) implemented in Quebec's (Canada) publicly funded health system as a form of legitimate sociomaterial work. **Design/methodology/approach:** Multi-site organizational ethnographic case studies (N=2) in two Integrated health and social services centers, with narrative process analysis of triangulated qualitative data collected through non-participant observation (163 hours), individual semi-structured interviews (N=34), and document review (N=143). **Findings:** Three types of legitimate sociomaterial work emerge from appropriating control rooms: 1) reformulating performance management work; 2) disrupting accountability work and; 3) effecting value-based integrated performance management. Each actor (tools, institutions and people) follows recurrent institutional and organization work-paths: tools consistently engage in disruptive and technology work; institutions consistently engage in maintaining and strategy work, and people consistently engage in creation and boundary work. We present a refined multi-faceted theoretical framework of appropriating tools in health care as sociomaterial work, working on three intersected levels: actors, units and work. **Practical implications:** This paper offers a new understanding of performance management practice in health care as dynamic, inclusive and value-based (people-centred). It also offers actionable knowledge on how to create better health and organizational value with tools. Finally, it provides a new comprehensive multi-faceted theoretical framework to inform the work of appropriating tools in health care. **Originality:** We hope to stimulate new and original scholarship around the under-theorized concept of sociomaterial work, challenging both theoretical and ontological conceptions of work in healthcare organizations and beyond. **Keywords:** Appropriating, management tools, performance management, value-based care, integrated care, sociomaterial work, social-symbolic work, institutionalism, organizational qualitative research, multi-sites ethnographic case study, multi-level narrative process analysis

Paper is Available to Meeting Registrants Only.

HCM: Battling Over the Harm Reduction Logic in Addiction Services: The Role of Emotions  

Author: **Emma (Lei) Jing**, *U. of Alberta*

Author: **Jo-Louise Huq**, *U. of Calgary*

Author: **Trish Reay**, *U. of Alberta*

In this paper, we investigate how actors in the addictions field have been battling over the introduction of the harm reduction logic – principles of addiction services that aim to reduce the adverse effects of drug use while individuals with addictions continue to use drugs. In particular, we give attention to how emotions have played a role in this continuing battle. Through an inductive process, we identified highly emotional dimensions of the harm reduction logic, and focused our analysis on the emotion-based mechanisms employed by proponents and opponents of the harm reduction logic. We observed that during different time periods, principles of harm reduction were alternately strengthened or diminished. Our findings highlight the difficulties in introducing novel approaches to critical health concerns, such as addictions that have significant social implications. Theoretically, we contribute to the literature on institutional logics by focusing on the emotion-based aspect of certain logics, and by explaining how actors can strategically use emotions to strengthen or weaken particular approaches to healthcare concerns.

The Impact of the COVID-19 Pandemic on Healthcare Professionals

Digital Session Chair: **Karleen F. Giannitrapani**, *Stanford U. / VA Palo Alto*

COVID-19 and Healthcare Professionals

HCM: The Impact of COVID-19 on Healthcare Workers Moral Emotions and Workplace Commitment

Author: **Morgan Davidson**, *U. of Toronto, Institute of Health Policy, Management & Evaluation*

Author: **Meena Andiappan**, *U. of Toronto*

The novel coronavirus (COVID-19) pandemic is a major health crisis that is continuing to have a profound impact on healthcare organizations worldwide. As infection rates surge, there has been global shortages of personal protective equipment, critical medications, ventilators, and hospital beds, meaning that healthcare workers are facing increasingly difficult workplace situations. In this conceptual study, we argue that these situations can lead to moral emotions of contempt, anger, and disgust. This paper explores these moral emotions and their impact on healthcare workers' organizational commitment in the context of COVID-19. Drawing from the moral emotions and organizational commitment literatures, we develop a process model to demonstrate how healthcare workers' professional commitment is amplified while their organizational commitment is decreased. The potential for positive organizational outcomes from negative moral emotions is discussed, followed by theoretical and practical contributions of the model, and finally, directions for future research are identified.

HCM: Protecting Health Care Workers During COVID-19: Needs Assessment of VA Employee Occupational Health

Author: **Karleen F. Giannitrapani**, *Stanford U. / VA Palo Alto*

Author: **Susan Giannitrapani**, *Wilmington VA Medical Center*

Author: **Karl Lorenz**, *Stanford U. / VA Palo Alto*

Author: **Matthew McCaa**, *VA Palo Alto*

Author: **Elizabeth M. Yano**, *VA Greater Los Angeles Healthcare System*

Author: **Wendy Thanassi**, *Stanford U. / VA Palo Alto*

Author: **Cheyenne DeShields**, *Case Western Reserve U.*

Author: **Cati Brown-Johnson**, *Stanford U. / VA Palo Alto*

Objective: Early in the pandemic, Veterans Health Administration (VHA) Employee Occupational Health (EOH) providers were tasked with assuming a central role in coordinating employee COVID screening and clearance for duty, representing entirely novel EOH responsibilities. In a rapid qualitative needs assessment, we aimed to identify learnings from the field to support the vastly expanding role of EOH providers in a national healthcare system. Methods: We employed rapid qualitative analysis of key informant interviews in a maximal variation sample on the parameters of job type, rural vs urban, and provider gender. We interviewed n=21 VHA EOH providers between July-December 2020. This sample represents 15 facilities from diverse regions of the United States (large, medium, and small facilities in the Mid-Atlantic; medium sites in the South; large facilities in the West and Pacific Northwest). Results: Five interdependent needs included: 1) infrastructure to support employee population management, including tools that facilitate infection control measures such as contact tracing (e.g., employee-facing electronic health records, coordinated databases); 2) mechanisms for information-sharing across settings (e.g., VHA listserv), especially for changing policy and protocols; 3) sufficiently-resourced staffing using detailing to align EOH needs with human resource capital; 4) connected and resourced local and national leaders; 5) strategies to support health care worker mental health. Conclusions: Our needs assessment highlights local and system level barriers and facilitators of EOH assuming expanded roles during COVID. Integrating changes both within and across systems and with alignment of human capital will enable EOH preparedness for future challenges.

HCM: Servant Leadership and Healthcare Professionals' Outcomes during COVID19: The Role of Safety Climate

Author: **Khalid Dahleez**, *Associate Professor of Management, A'Sharqiyah U. - Oman*

Author: **Mohammed Aboramadan**, *U. of Insubria*

The negative effects of the COVID-19 pandemic open the door to investigate what leadership practices are needed to guarantee positive work-related outcomes among employees in organizations. This research proposes, building on the norm of reciprocity, a model to examine the role of servant leadership in stimulating task performance and risk-taking behaviors among healthcare professionals during the pandemic. In this model, safety climate was theorized to serve as a mediating variable between servant leadership, task performance and risk-taking behavior. Data in this study were collected from 237 healthcare professionals (Medical and Administrative Staff) working in Palestinian hospitals. Partial least-squares structural equation modelling was employed to analyze the data. The results of this study demonstrate that servant leadership is effective in fostering task performance and risk-taking behaviors in crisis times. Safety climate showed to exert a full mediating effect among the aforementioned relationships. Finally, results demonstrated that healthcare professionals with high experience are more willing to engage in risk-taking behavior. Discussion, implications, and limitations are discussed.

HCM Division Best Student Paper Award

Our study investigates the psychological process that links event characteristics related to the COVID-19 pandemic (i.e., perceived novelty, disruptiveness, and criticality of the event) to compassion fatigue (CF) and subsequent post-traumatic stress disorder (PTSD) in nurses. Analyzing data from 171 nurses revealed that the perceived disruptiveness and criticality of COVID-19 events were positively related to nurses' CF, a form of caregiver burnout, leading to COVID-19 instigated PTSD. Contrary to our hypothesis, the perceived novelty of the COVID-19 event was negatively related to CF. Also, the indirect effect of COVID-19 perceived novelty on PTSD mediated by CF approached significance only. Our study extends event system theory by conceptualizing and empirically investigating the role of psychological processes that link event features and resultant outcomes while also contributing to the literature by providing practical implications on recommended preparations for future extraordinary events.

Public and Nonprofit Governance and Strategy

Digital Session Chair: **Marina Gama**, *FGV-EAESP*

PNP: Political Ties to Nonprofit Connections? The Strategic Reconfiguration of Cross-Sector Interaction

Author: **Marina Gama**, *FGV-EAESP*
Author: **Aline Gatignon**, *The Wharton School, U. of Pennsylvania*

When corporate political ties fall out of public favor, do firms establish more ties with nonprofit actors instead? Using panel data from publicly listed firms in Brazil between 2010 and 2017, we examine their response to the 2014 corruption probe named "Operation Carwash". We find that Operation Carwash indeed triggered an overall increase in nonprofit ties, including for those firms with preexisting connections to the nonprofit sector, but also generated greater interdependence between political and nonprofit ties. Our findings help advance a dynamic perspective on nonmarket strategy and stakeholder engagement, by explaining when and how firms reconfigure their nonmarket relationships across sectors of society in reaction to shifts in their institutional environment.

Paper is Available to Meeting Registrants Only.

PNP: Local government decisions in resource allocation: what is stakeholders' role in the process

Author: **Ricardo Correa Gomes**, *FGV - EAESP*
Author: **Erika Lisboa**, *U. of Sao Paulo (FEA/USP)*
Author: **Stephen Osborne**, *U. of Edinburgh*

Resource allocation is paramount to strategic planning in any organization and of great importance to the public sector. However, there is a theoretical gap in the paucity of studies employing stakeholder influences to explain resource allocation decisions. This study contributes to the public management and stakeholder theory literature by offering stakeholder influences (economic, political, and managerial) upon local government resource allocation to deliver elementary educational services. We study a panel data of large Brazilian municipalities with populations over 100,000. The findings contribute to public management and public choice theories in a great deal as it suggests stakeholders as decisive influential factors related to local government decision-making processes. Implications for theory and practice are discussed.

Paper is Available to Meeting Registrants Only.

PNP: Nonprofit governance: When the private sector controls

Author: **Gwyneth Edwards**, *HEC Montreal*
Author: **Rick Molz**, *Concordia U.*

Using longitudinal case research methods, this paper demonstrates how a for-profit public firm controls a nonprofit organization, using the specific case of Intrawest Corporation, a Canadian property developer, and its timeshare program, Club Intrawest. The research demonstrates how the governance structure allows the for-profit firm to control the assets and revenue streams of the nonprofit organization, while passing on the costs and risk to the timeshare consumers. We believe that this research is one of the first to expose this non-standard governance structure, which questions both the legality and ethics of such a structure.

PNP: Understanding Foundation Philanthropy to Human Service Organizations

Author: **Heather MacIndoe**, *U. of Massachusetts, Boston*

Human service nonprofit organizations are a vital part of the social safety net providing a diverse array of services from job training, to assistive housing, to emergency food provision (Allard, 2009). To achieve their missions and raise funds to support their work, human service nonprofits must navigate an increasingly fragmented, complex, and competitive funding environment, piecing budgets together from multiple revenue sources (Allard & Smith, 2014; Galaskiewicz & Bielefeld, 1998; Smith, 2015; Young, 2007). Grants from philanthropic foundations comprise one piece of the funding puzzle for many human service nonprofits (Marx, 1996; Young, 2007). This paper explores foundation grantmaking to human service nonprofits in Chicago, IL from 1990 to 2005. We find three classes of nonprofits: sustained players, nonprofits that are continuously funded (by different foundations); repeat players, nonprofits with greater than average duration of funding; and new entrants, nonprofits that secure foundation funding for only a few years. This pattern of funding led to an increasing concentration of foundation funds in a small, privileged group of organizations. This paper explores the factors leading to this bifurcation of the grants economy and the consequences of such patterns.

Challenges and Triumphs in Overcoming Adversity: Taking Stock and Looking Forward

Challenges and Triumphs in Overcoming Adversity

Organizer: **Logan Macray Steele**, *U. of South Florida*
Organizer: **Jeffrey Lovelace**, *U. of Virginia - McIntire School of Commerce*
Panelist: **Ivona Hideg**, *Schulich School of Business, York U.*
Panelist: **Sonia Kang**, *U. of Toronto*
Panelist: **Samir Nurmohamed**, *The Wharton School, U. of Pennsylvania*
Panelist: **Joseph Vandello**, *U. of South Florida*

Myriad scientific disciplines have examined how people overcome adversity (i.e., barriers, challenges, difficulties, and misfortune), ranging from the mundane to the traumatic, to find success in their personal and professional lives. The variety of approaches to examining responses to adversity attest to its importance. However, these varied streams of research also pose some challenges to advancing a comprehensive understanding of this area of research. In this proposed panel, we aim to take stock of the research on overcoming adversity as it pertains to individual and collective life in organizations. Bringing together a group of panelists who use a diverse set of approaches to understand this phenomenon, we aim to identify key findings across studies, opportunities for different streams of research to learn from each other, and promising new directions for future research.

Proactive Workplace Behaviors: Voice, Personal Initiative, and Location Independence

Digital Session Chair: **Melanie Prengler**, *Texas A&M U., College Station*

MOC: A Grounded Model of Autonomy Calibration in Location-Independent Work Arrangements

Author: **Melanie Prengler**, *Texas A&M U., College Station*

Author: **Anthony Klotz**, *Texas A&M U.*

Author: **Chad Benjamin Murphy**, *Oregon State U.*

The location-independent work arrangement—an arrangement in which employees both work and travel without a permanent home base—is becoming increasingly common. Despite its growing popularity, little research has examined the subjective experiences of location-independent employees, both in terms of how employees enter this work arrangement and how they experience it once they have done so. Using an inductive, qualitative approach, our grounded model suggests that the subjective experience of location independence is comprised of a two-phase process we call autonomy calibration. The first phase explains the motivation and process for becoming location-independent, showing that employees first increase their autonomy by liberating themselves from the structures of traditional work arrangements. The second phase explains the experiences of location-independent workers, showing that employees decrease their autonomy using self-imposed constraints. Our findings indicate that through this two-phase process of autonomy calibration, location-independent workers achieve what we call autonomy equilibrium, or a subjective sense of balance between autonomy and constraints. By developing a grounded model of both the subjective factors that motivate location independence as well as employees' subsequent experiences with that arrangement, our model contributes new theoretical insights to the literature on work arrangements and job design.

MOC: The Impact of Reactive versus Proactive Help on Selfish and Unethical Behavior

Author: **Shike Li**, *IE Business School*

Author: **Sumit Malik**, *IE Business School*

Author: **Kriti Jain**, *IE Business School*

This paper contrasts the differential effect of proactive (i.e., unsolicited) help vis-à-vis reactive (i.e., solicited) help on the helper's subsequent selfish and unethical behaviors. We examine this effect and the underlying mechanism across three experimental studies with different contexts and behavioral measures. Building on the literature of counterfactual thinking and aversive comparison, we find converging evidence that reactive (vs. proactive) helpers are more likely to indulge in adverse behaviors (Study 1-3), and this effect manifests because reactive helpers tend to perceive the cost of help as higher (Study 2-3). We use the moderation-of-process approach to validate this mechanism in Study 2 and replicate the effects after controlling for the moral licensing explanation in Study 3. Study 3 further demonstrates the moderated-mediation effect of an individual trait: equity preference and we find that individuals who are innately tolerant to under-reward (i.e., benevolents) exhibit less selfish behavior – despite perceiving a higher cost of help. Theoretical and practical implications are discussed.

MOC: The Moderating Role of Lack of Needs Satisfaction on Proactive Motivation and Personal Initiative

Author: **Sophia Town**, *Fordham U.*

Author: **Ying Hong**, *Fordham U.*

Author: **Chun-Hsiao Wang**, *National Central U.*

In a workforce marked by telecommuting, decentralization, and automation, the need for employees to take personal initiative is greater than ever before. Research suggests that employees are more likely to engage in self-motivation behaviors such as personal initiative when they possess a high level of proactive motivation (Parker, Bindl & Strauss, 2010), and when their intrinsic needs for autonomy, competence, and relatedness are met (Deci & Ryan, 2000). However, this study extends and complicates this established relationship by demonstrating the moderating role a lack of needs satisfaction plays in the relationship between proactive motivation states and personal initiative. Our findings demonstrate that individuals with high “can do” proactive motivation in the form of self-efficacy take more personal initiative when their intrinsic needs for competence or relatedness are not met. Likewise, individuals with high “energized to” proactive motivation in the form of activated positive affect also take more personal initiative when their need for relatedness is not met. Our findings additionally demonstrate that individual personal initiative is positively related to supervisors' perceptions of their promotability, suggesting that the dissatisfaction of intrinsic needs may actually benefit certain individuals.

MOC: Voice and Insomnia: A Daily Study of Underlying Affective and Cognitive Mechanisms

Author: **Zahra Heydarifard**, *U. of Texas At San Antonio*

Author: **Dina Krasikova**, *U. of Texas At San Antonio*

In this study, we examined whether the expression of voice, as a prosocial yet psychologically costly behavior, during the day affects employee sleep quality at night and whether sleep quality affects the expression of voice on the next workday. Having surveyed 113 full-time employees twice a day over the course of two weeks, we found that the same-day effect of voice on sleep and the effect of sleep on the next day voice depend on the type of voice. Specifically, we found that employees who express promotive voice experience higher levels of positive affect at the end of the workday, more effectively detach from work at home, and as a result are less likely to suffer from insomnia at night. We also found that employees who express prohibitive voice tend to experience higher levels of negative affect at the end of the workday, are unable to effectively detach from work at home, and consequently are more likely to experience insomnia at night. Our study further demonstrates that, while there is no association between insomnia and next-day prohibitive voice, sleep-deprived employees are less likely to engage in promotive voice on the next day because of being psychologically depleted.

Edgy Modern Cognition Research: Inauthenticity, Bias, Attribution, & Bullsh*t

Digital Session Chair: **Li Huang**, *INSEAD*

Digital Session Chair: **Eric Yuge Lou**, *INSEAD*

MOC: To Thine Own Self Be True, Or The Organization Would Seem False Too: Inauthenticity Causes Cynicism 

Author: **Li Huang**, *INSEAD*

Author: **Eric Yuge Lou**, *INSEAD*

Be it a psychological need or a trending vocational prescription, many individuals seek to avoid personal inauthenticity at work for their personal benefits. While prior literature has indeed supported the negative effects of personal inauthenticity on individuals themselves, such as their reduced psychological and physical wellbeing and work engagement, the current work suggests that the experience of inauthenticity can ripple through individuals' psyche to influence their evaluative appraisal of the organization. First, we propose that employees' personal inauthenticity can result in organizational cynicism, a critical appraisal of the organization's motives that causes enduring and insidious harms to organizational effectiveness. Second, we theorize that three psychological processes employees mobilize to address the self-related threats posed by inauthenticity drive its effect on organizational cynicism. A time-lagged field study and an experiment provide support for the hypothesized main effect and two of the three psychological processes predicted to drive the effect – namely perceived person-organization misfit and lack of moral self-regard. This research moves beyond the traditional focus on the individual outcomes of personal inauthenticity to examine its organizational impact and is also one of the first to systematically theorize and examine the psychological antecedents of organizational cynicism.

MOC: The good, the bad, and the lucky: Causal attributions for prior outcomes and subsequent risk-taking

Author: **Alexander Hamrick**, *Auburn U.*

Author: **Sana Zafar**, *Auburn U.*

Author: **Miles A. Zachary**, *Auburn U.*

It is well documented theoretically in organizational studies and behavioral economics that prior gains and losses influence an individual's subsequent risk-taking. We argue that this theory is incomplete and should account for not only the prior outcome but also perceptions of why the outcome occurred. In this paper, we integrate attribution theory with quasi-hedonic editing theory to theorize that causal attributions, i.e., how individuals explain an outcome or event, regarding prior gains and losses, influence subsequent risk-taking. We test our hypotheses using two experiments, a poker experiment, and a trivia experiment. Implications as well as future avenues for management research are discussed. Overall, our findings provide a new theoretical perspective on the relationship between prior outcomes, attributions, and subsequent risk-taking.

MOC: A Functional Perspective on Workplace Bullsh*t: A Multidimensional Scaling Study 

Author: **Kohyar Kiazad**, *Monash U.*

Author: **Fan Xuan Chen**, *U. of Illinois at Urbana-Champaign*

Author: **Simon Lloyd D. Restubog**, *U. of Illinois at Urbana-Champaign*

Integrating functionalist (Snyder, 1993) and typology-driven (Snow & Ketchen, 2014) theorizing, the present endeavor set out to answer the question: why do employees bullsh*t at work? Phase 1 (n = 201) of multidimensional scaling (MDS) identified 36 unique reasons why employees bullsh*t. Phase 2 (n = 610) analyses yielded a two-dimensional configuration of these 36 motives. Phase 3 (n = 118) produced a four-quadrant typology of the motives grounded at the intersection of two established motivational theories: striving goals (Barick, Stewart, & Piotrowski, 2002) and regulatory focus (Higgins, 1997). On the basis of these dimensions, workplace bullsh*t appears to fall into four distinct categories with the following functional properties: a) 'getting ahead' (status-promotion), b) 'getting out' (status-prevention), c) 'getting along' (communion-promotion), and d) 'getting around' (communion-prevention). Theoretical and practical implications of the typology are discussed.

MOC: The Anti-Scientists Bias: The Role of Feelings about Scientists on COVID-19 Attitudes and Behaviors

Author: **Carmen Julia Sanchez**, *U. of Illinois at Urbana-Champaign*

Author: **David Dunning**, *U. of Michigan*

Across 3 studies, we investigated who expresses concern for COVID-19, or coronavirus, and engages in behaviors that are consistent with slowing the spread of COVID-19. In Studies 1 and 2 (n=415, n=199), those with warmer feelings towards scientists were more concerned and engaged in greater COVID-preventative behaviors, regardless of partisanship. That is, an anti-scientists bias was related to lessened concern and towards less preventive behaviors. Furthermore, those who were the most optimistic about hydroxychloroquine, a purported but unproven treatment against the virus, were less likely to engage in behaviors designed to decrease the spread of COVID-19. In Study 3 (n=259), asking participants to watch a scientist discuss hydroxychloroquine on Fox News led people to greater endorsement of COVID behaviors. In short, positive feelings towards scientists, rather than political attitudes or knowledge, related to who was concerned and those willing to engage in pandemic reducing behaviors. These behaviors were not immutable and can be changed by scientific out-reach.

Discussant: **Martin J. Kilduff**, *UCL School of Management*

Creating a social network from which one can benefit is not an easy-to-navigate process. Individuals behave according to rules of bounded rationality (Simon, 1972) when creating social networks, which often leads to misconceptions and pressing biases about different aspects of the networking process. For instance, individuals may share certain prejudices about the alters with whom they network or with whom they could initiate a social connection (Brands, 2013; Brands, Menges, & Kilduff, 2015; Hinds, Carley, Krackhardt, & Wholey, 2000; McPherson, Smith-Lovin, & Cook, 2001). Individuals may also hold misconceptions about their own ability to network (Kuwabara, Hildebrand, & Zou, 2018; Kuwabara, Zou, Aven, Hildebrand, & Iyengar, 2020) or their role in the networking process (Brashears, Hoagland, & Quintane, 2016; Casciaro, Carley, & Krackhardt, 1999; Simpson, Markovsky, & Steketee, 2011). In addition to biases regarding the ego and alters, the process of networking itself may represent another target of misjudgment: individuals may perceive the process of networking as dirty and unethical (Casciaro, Gino, & Kouchaki, 2014). Finally, individuals may also share misperceptions about the existence and the nature of their relationship with others (Byron & Landis, 2020; Landis & Byron, 2016). To better understand how these misconceptions impact individuals' willingness to create, maintain and utilize their social networks, and the downstream consequences such misconceptions lead to, we offer four presentations in which we explore the biases and misconceptions that individuals hold about the characteristics of their counterparts, as well as the means and reasons they can advance to capitalize on their pre-established social connections to extract networking-related benefits.

Novel Approaches to Organizational Performance

Organizational Performance

Digital Session Chair: **Felipe Csaszar**, *U. of Michigan*

OMT: **Organizations as Decision Boundaries: How Structure Can Compensate for Flawed Mental Representations**

Author: **Felipe Csaszar**, *U. of Michigan*
Author: **Luke Rhee**, *U. of California, Irvine*

Because aggregation structures and mental representations have opposing effects on fallibility—mental representations are a source of errors while aggregation structures aim to overcome these—aggregation structures can be used to compensate for flawed mental representations. Yet given the multiple structures from which to choose and given that their effects depend on environmental factors, it is not clear which structure is best suited to what circumstances. To answer that question, this paper develops a formal model of group decision making among individuals who base their decisions on flawed mental representations. The model predicts the performance of three different aggregation structures (delegation, unanimity, and averaging) under different environments (defined by their munificence, uncertainty, complexity, and attribute dominance). We show that the concept of “decision boundary,” an idea we borrow from the machine learning literature, explains when and how aggregation structures compensate for flawed representations. This allows us to characterize the conditions under which it is preferable to use different aggregation structures as well as situations where all aggregation structures perform poorly. More generally, our paper provides a theoretical framework to understand how aggregation structure, mental representations, and the task environment jointly determine organizational performance.

OMT: **Mapping Organizational Design as NK Graphs: A Neural Network Approach**

Author: **Siping Ren**, *JADS, Joint Graduate School of Tilburg U. and Eindhoven U. of Tech*
Author: **Ksenia Podoyunitsyna**, *JADS, Joint Graduate School of Tilburg U. and Eindhoven U. of Tech.*

The concept of interdependence has been widely theorized in organization theory and strategy using NK model, yet rarely has it been empirically explored. In this research we develop a novel way, building upon the advancements in Artificial Intelligence, to measure the interdependencies (K) among the firm activities (N). The method enables reconstructing the NK configurations of individual firms and represent them as graphs providing detailed insights into the whole structure of interdependencies. We use a sample of 2298 SMEs, 6 months of financial transactions per firm. In the obtained NK graphs, the bilateral relationships, i.e. interdependencies, and the unilateral relationships, i.e. dependencies, can exist simultaneously. We find that while interdependencies (compared to dependencies) are less prevalent than previously assumed, they have a more positive relationship with firm performance. We further observe that the centralization of the (inter)dependency pattern, instead of the bilateral or unilateral relationships, drives the firm performance differences. Finally, we observe substantial heterogeneity in terms of how firms in the same industry enact the K, and find that firm-level rather than industry-level interdependence variation drives the firm performance differential. We find that while interdependencies (compared to dependencies) are less prevalent than previously assumed, they have a more positive relationship with firm performance. We further observe that the centralization of the (inter)dependency pattern, instead of the bilateral or unilateral relationships, drives the firm performance differences. Finally, we observe substantial heterogeneity in terms of how firms in the same industry enact the K, and find that firm-level rather than industry-level interdependence variation drives the firm performance differences.

OMT: **Four Questions for Organizational Resilience: A Review and a General Framework for Future Research**

Author: **Ekin Ilseven**, *INSEAD*

Understanding how organizations deal with frequent unexpected disruptions and thrive will be an important stream of management research, as times of predictability and manageable complexity which are considered as “business-as-usual” are slowly being left in the past. The long-term survival of a system in the presence of adversities can be effectively investigated through organizational resilience perspective. However, our literature review of the leading management journals has shown that there is fragmentation and ambiguity in responses to the four fundamental questions that would concern any construct: How is it different from what we already know? What is it? What leads to it? What are its consequences? In this work, we offer an integrative general framework which seeks answers to these four questions and sets a potentially fruitful direction for more focused future research. Specifically, organizational resilience research would notably benefit from investigating equifinality in achieving organizational resilience, processes of decision-making leading to it, and both temporal and multi-level trade-offs arising from it. Moreover, we not only align with previous calls for more large-scale empirical analysis, but also point out that new econometric methods may be necessary to pin down relevant causal mechanisms of organizational resilience.

Paper is Available to Meeting Registrants Only.

OMT: **Infrastructures and Superstructures**

Author: **Joshua Hurwitz**, *Stanford Graduate School of Business*

Crises occur when risks become elevated and unmanaged, such that the organization’s continued existence comes into question, requiring swift, yet ambiguous action to resolve (Pearson and Clair 1997). To overcome crises, organizational decision-makers moot possible solutions. I propose here that crisis solutions have a common structure, containing crisis-specific actions overlaid upon a mapping of activities and functions that will be maintained, restricted, and curtailed. When enacted such solutions serve to allocate rights, resources, and risks via these features. Second, I consider how crisis solutions come to be devised, suggesting that they become Latourian heterogeneous networks of actors, ideas, and concepts, rife with both inconsistencies and interdependencies. A case study of the delineation of “essential businesses” during the COVID-19 pandemic is used to illustrate the process.

Dynamics of Markets and Ecosystems

Market and Ecosystem Dynamics

Digital Session Chair: **Ravi Shankar Pandey**, *Indian Institute of Management, Bangalore*

OMT: **A Time to Create, Imitate, Dream and Execute: Entrepreneurship in Emerging Electric Vehicle Industry**

Author: **Ravi Shankar Pandey**, *Indian Institute of Management, Bangalore*
Author: **Dalhia Mani**, *Indian Institute of Management, Bangalore*

The human and economic costs of pollution and climate change are especially high for emerging markets; thus, the need to shift to sustainable technologies is essential and urgent. However, the development and commercialization of any new product requires an ecosystem consisting of resource providers such as investors, suppliers, complementors, favorable policy and regulations, and more importantly, a market for these products. How does such an ecosystem emerge, especially in an emerging market context where there are institutional gaps and even “normal” entrepreneurship is difficult? We investigate this question in the context of the Indian electric vehicle industry, using 40 years of archival data, 54 semi-structured interviews, and ethnographic field notes. Our findings suggest that institutional entrepreneurship is more complicated than previously imagined and involves multiple eras characterized by a distinct combination of technology, supplier and complementors, market and competition, capital, and regulation. Each era gives rise to a distinct type of entrepreneur (the Schumpeterian visionary, the Kerznerian opportunist, the Buchananian aesthete, and the Knightian pragmatist), and the actors in each era, often accidentally and unintentionally, create the conditions for the next, culminating over time in an electric vehicle ecosystem that can support viable businesses. We contribute to the literature on ecosystems by taking a longitudinal perspective and showing how ecosystems involving various actors emerge across multiple stages. We also add to the literature on industry emergence by investigating an emerging market context where the chief source of uncertainty is not just technology but the interdependent and evolving uncertainty of regulation, market, capital and supplier.

OMT: **The Active Persistence of Shared Characteristics in an Organized Market**

Author: **Wendy Kilminster**, *Cass Business School, City U. London*
Author: **Alessandro Giudici**, *Cass Business School, City U. London*
Author: **Paula Jarzabkowski**, *City U. London*

Finalist for the OMT Division Best Paper Award

The organizational stability literature typically frames not changing as a negative, the result of failure to change. This raises a puzzle about the extent to which intentional stability may play a role in the persistence of shared interorganizational characteristics. We examine the persistence of a longstanding normalized practice in an organized market. Despite inefficiencies being experienced by participants and significant change in other shared characteristics, the focal characteristic has undergone remarkably little change. We find the deterministic forces of path dependence are only one possible mechanism of persistence. We identify an intentional maintenance process, which we term active persistence. Repeated reviews of the characteristic, led by a central organizing actor, privilege the collective level interests of the market. Active persistence results in a decision that the market is best served by the retention of the characteristic. Active persistence is either stabilizing or pragmatic, depending on participants’ interests in, and the temporal orientation of, the decision problem.

OMT: **The Other Invisible Hand: How Markets Can Propagate Errors**

Author: **Sheen S. Levine**, *U. of Texas at Dallas*
Author: **Edward J. Zajac**, *Northwestern U.*

Markets, the arenas where many strategies are enacted, are ubiquitous in modern society. This status is often justified by their presumed ability to aggregate bits of information into a single unbiased estimate of value. While acknowledging their unique role, we suggest that markets can also propagate individual valuation errors, agglomerating them into price bubbles. We offer a more sociological interpretation of such collective errors by advancing the notion that the very ubiquity of markets can cause participants to overweight market signals, thereby undermining the accuracy of individual decision-making. To identify causality, we study behavior and outcomes in laboratory markets resembling highly competitive strategic markets. Consistent with a perspective that theorizes markets as institutionalized practices, we find that even when participants possess and comprehend the information needed to price assets accurately, they are overly attentive to market signals (i.e., others’ valuation). Thus, they are likely to mimic others’ valuations — even when these reflect a distortion of an asset’s true value. We further predict and find that such overattention is also sensitive to differences in levels of ambiguity, as institutional theory predicts. We conclude by highlighting the relevance of our micro-institutionalization perspective, empirical approach, and supportive findings for research on valuation errors, market dynamics, micro-institutional processes, and behavioral strategy.

OMT: **Structuring Multi-Dimensional Collective Identity in Clusters**

Author: **Andrea Carlo Lo Verso**, *Alma Mater Studiorum U. di Bologna*
Author: **Cristina Boari**, *Department of management, Bologna U.*
Author: **Aurora Carneiro Zen**, *PPGA - EA - UFRGS*

The paper explores the discursive formation of supra-organizational collective identities. Adopting a field-level approach, we expound how the meaning-making activity on collective identities is embedded in a broader discourse and is in turn articulated on a number of different dimensions. Additionally, we analyze how different field actors have a specific role in structuring each of these dimensions. Empirically, the paper is built upon textual data regarding the Brazilian wine-making cluster of the “Serra Gaúcha” region that offers a convenient setting to explore the formation of a collective identity, which is there perceived as a hot issue at stake by different field actors. Our main contribution is that the collective identity of fields and industries can emerge as the result of a distributed discourse, and not just as an interplay between identity promoters (internal field actors) and identity validators (external audiences). In this more complex discursive interplay between multiple actors, professional associations may assume a pivotal role thanks to their interest in boundary demarcation that results in efforts to formalize the collective identity.

Impact Investing and Disclosures

Digital Session Chair: **Laurens Vandeweghe**, *ETH Zürich*

 **ONE: Strange Bird in the Breed: The Translation of the Impact Investing Concept to the Corporate Logic**   

Author: **Laurens Vandeweghe**, *ETH Zürich*

William H. Newman Award Nominee

In the face of the aggravating state of many grand challenges, corporations are increasingly pursuing and trialling less-conventional ideas, practices and models from fundamentally different fields to affect positive environmental and social change. While institutional scholars have explored the translation of ideas, practices, and forms in-between contexts that adhere to the same or largely compatible logics, much less is known about the translation of concepts in between mutually incompatible logics. Drawing on a 21 months long ethnographic single case study of the translation of the concept of impact investing to a European media corporation, I show that the corporate motivations for such translation gradually change from ideological to pragmatic as incompatibility tensions surface, and that internal agents morph the translated concept from a strict coupling to a decoupling with the source concept in response to these changes. My findings contribute to the literatures on institutional translation, organizational adoption of practices and ideas, and business and the natural environment.

ONE: Delineating Impact Investing: A Bibliometric Review

Author: **Truzaar Dordi**, *U. of Waterloo*
Author: **Phoebe Stephens**, *U. of Waterloo*
Author: **Sean Geobey**, *U. of Waterloo*
Author: **Olaf Weber**, *U. of Waterloo*

Nomenclature like impact investing, ethical investing, and responsible investing have grown quickly in recent years as investors explore the nexus between financial, environmental, and social returns. However, a common topic of debate in both academic and grey literature is establishing definitional clarity around the motivations and applications of each form of investment strategy. Adopting recent advancements in quantitative textual analysis and bibliometrics this study explores the current status of these related but disparate fields of research, by analyzing the metadata of 929 publications. We argue that impact investing, due to its emphasis on intentionality, multi-criteria decision-making, and incommensurability of values, is particularly well suited to address grand societal challenges like poverty, well-being, and climate change. However, impact investing remains a nascent subfield of social finance. We conclude that impact investing research should adopt bespoke theoretical frameworks to advance the field of study.

ONE: Truth Hurts? Mandatory Environmental Information Disclosure and Regulatory Activities 

Author: **Zhengyan Li**, *U. of Michigan, Ross School of Business*

This paper examines the impacts of mandatory environmental information disclosure policy on the implementation of traditional command-and-control environmental regulations in the context of the Toxics Release Inventory (TRI), which is a major environmental information disclosure program in the United States, and the Clean Air Act (CAA). With a difference-in-differences research design that exploits TRI's expansion of industry coverage in 1998, which has applied TRI's disclosure requirements only to larger facilities in the newly covered industries, I find that regulators significantly increased the numbers of CAA inspection activities on facilities that started to disclose information in the TRI, while the numbers of CAA enforcement activities did not change. Complementing the large body of literature that investigates various stakeholders' responses to information disclosure policy, the findings suggest regulatory response is also an important mechanism for the efficacy of information disclosure policy. They also highlight the strong intercorrelations between different forms of environmental policy.

STR: **Impact of Ownership Structure on Communication of Corporate Strategy**

Author: **Sze Sze Wong**, *Nanyang Technological U.*

Author: **Heather Li**, *Bentley U.*

Author: **Shen Rui**, *The Chinese U. of Hong Kong, Shenzhen*

According to impression management research, strategic leaders tailor their strategic communication to elicit favorable investor reactions. However, past research on strategy communication view investors as a monolithic group, even though institutional investors are heterogeneous in trading strategies. Building on research that highlights the distinctive trading preference of transient institutional investors, we offer a novel model to explain that leaders strategically tailor the content of their strategic communication to appeal to this group. We find that leaders selectively emphasize corporate growth and de-emphasize corporate refocusing in their strategic communication when their firm has higher transient ownership. To examine when such bias in communication is reduced, we integrate managerial discretion theory to examine the conditions when leaders engage in less discourse catering. By drawing attention to the heterogeneous preferences of institutional investors, our research not only highlights how leaders' communication of strategy might be biased but also opens new lines of inquiry into impression management techniques that are based on selective disclosure of strategic content.

STR: **Agency conflict in diversified business groups and performance of affiliated firms in India**

Author: **Anish Purkayastha**, *U. of Sydney Business School*

Author: **Chinmay Pattnaik**, *U. Of Sydney*

Author: **Atul Arun Pathak**, *Indian Institute of Management Nagpur*

This study examines how diversification in Indian business groups creates multiple forms of agency problems and has performance implications for group affiliated firms. Departing from prior literature which emphasizes the principal-principal agency conflict in business groups, we argue that business group diversification leads to dual agency problems between controlling and minority shareholders (principal-principal) and managers and shareholders (principal-agent) in affiliated firms. Both these agency problems arise in diversified business groups through cross-subsidization of affiliated firms by inefficient capital investment, continuing presence of affiliated firms in declining industries, tunneling of resources from profitable affiliated firms, lack of attention by business group headquarters to affiliated firms, and affiliated firm managers' sense of perceived security which negatively impacts affiliated firms' performance. These agency issues are reduced with the increase in product market competition from exposure to international markets and through concentrated promoter ownership in the affiliated firms. Our hypothesized model finds empirical support in a sample of 828 business group affiliated firms in India.

STR: **The Lower Returns on Political Spending for MNEs**

Author: **Murad A. Mithani**, *Rutgers U., Camden*

Author: **Yulia Muratova**, *Aarhus BSS, Aarhus U.*

Author: **Liudmyla Svystunova**, *Loughborough U.*

We integrate the research on liability of foreignness (LOF), corporate political activity, and positive political theory to argue that campaign contributions offer fewer economic benefits to multinational enterprises (MNEs) than to domestic firms. Using a matched sample of MNEs and domestic firms in India, we found that campaign contributions produced relatively smaller gains for MNEs than for domestic firms. Local political discrimination against MNEs emanated from fewer direct favors in the form of legislative concessions as well as weaker political influence on the judiciary. Our findings explain that politicians play a central role in the enactment of LOF. Their marginal aversion towards MNEs propagates across the host environment and makes it easier for other governmental agencies and the market to impose higher economic costs on foreign firms. Thus, rather than mitigating, campaign contributions exacerbate LOF.

STR: **Knowledge Sharing Under Coopetition: The Role of Symbolic and Substantive Actions**

Author: **Eric C. Mota**, *Wichita State U.*

Author: **Dorothy Leidner**, *Baylor U.*

Author: **Juliana Sutanto**, *Lancaster U.*

We empirically analyze determinants of knowledge-sharing in firms operating under coopetition. We note that actions taken by firms can be substantive or symbolic, and the ratio between them helps assessing firm's engagement in knowledge-sharing. Our analyzes suggest that firms are more likely to disguise their intentions using symbolic actions when four complementary conditions are met. From these results conditions, we derive four higher-order constructs that comprise a contractual structure under coopetition: contractual benefits, knowledge ambiguity, joint input production, and pricing of knowledge stocks. They represent our theoretical intent towards a theory that integrates contracting and knowledge elements to explain under which conditions firms are more willing to share knowledge under coopetition. Our work offers contributions to literatures in strategic management, institutional theory, and move forward Brandenburger and Nalebuff's (1996) ideas on coopetition tactics.

Reconfiguration, Redeployment and Power-dependence Relations

Digital Session Chair: **Zhonghui Wang**, *California State U. San Bernardino*

STR: Exploring the Impacts of Power-dependence Relations among Large Blockholders: Theory and Evidence 

Author: **Zhonghui Wang**, *California State U. San Bernardino*
Author: **Thomas Brush**, *Purdue U., West Lafayette*

We develop and apply a conceptual model to study how the power-dependence relations among large blockholders influence a firm's adoption of the cumulative voting rule. We posit and confirm that the power of the largest blockholder over the second largest one, when both have at least 5% ownership, negatively impacts the firm's adoption of the cumulative voting rule. The mutual dependence and power imbalance between the two largest shareholders respectively influences the presence of the cumulative voting rule in a negative way. Smaller shareholders can conduct balancing operations to offset the power of their larger counterparts and support the cumulative voting rule. Our research provides evidence that the key concepts and propositions of power-dependence theory offer a new and important perspective from which corporate governance scholars can investigate the impact of large shareholders.

STR: Managerial Redeployment in Acquisitions 

Author: **Agnes Guenther**, *Copenhagen Business School*
Author: **Francesco Di Lorenzo**, *Copenhagen Business School*
Author: **Hans Christian Kongsted**, *Copenhagen Business School*

Acquisitions are an important means through which firms can reconfigure and redeploy its resources. Among the resources being redeployed, human capital and managerial resources take a primary role. Providing a more comprehensive model of (human) resource reconfiguration post-acquisition, we investigate different mechanisms through which managers are redeployed and externally sourced—transfer, promotion and hiring—and discuss their relative advantages in relation to the 'coordination-autonomy dilemma' in acquisitions. We hypothesize (and find) that (1) redeployment of managers is preferred over the external resource acquisition. (2) The redeployment strategy adopted by the firm is conditional to (1) complexity of the acquisition, and (3) the quality of the acquisition target. Specifically, target managers are more likely to be redeployed by: i) transfer from the acquirer when the acquisition is complex ii) promotion within the target when the quality of the acquisition target is high.

STR: Corporate Reconfiguration and Corporate Differentiation: Evidence from Divestitures and Acquisitions

Author: **Eva Christina Anguiano-Herbolzheimer**, *U. of Illinois at Urbana-Champaign*
Author: **Sandra Teresa Corredor Waldron**, *U. of Illinois at Urbana-Champaign*
Author: **Steven C. Michael**, *U. of Illinois at Urbana-Champaign*

The current study leverages firms' product information from 10-K filings to examine whether divestiture and acquisition reconfiguration strategies affect the extent to which firms differentiate their products from their closest competitors' products. Our empirical results suggest that after divestitures and sequences consisting of both, acquisition and divestiture moves, the similarity of a focal firm's products to its competitors' decreases. These findings are consistent with firms trying to stake out a (maximum) differentiation position in the product-market space after reconfiguration, suggesting that competition is a neglected factor in the corporate strategy literature. This study contributes to the extant literature on corporate reconfiguration by illustrating the effects of divestiture and acquisition reconfiguration strategies on the competitive positioning of firms.

Stressors and Work/Career Transitions

Digital Session Chair: **Peikai Li**, *Utrecht U., Department of Social, Health, & Organizational Psychology*

CAR: Challenge, Hindrance, or Threat? A Systematic Review of Appraisal-Based Approaches in Work Stressor

Author: **Peikai Li**, *Utrecht U., Department of Social, Health, & Organizational Psychology*
Author: **Fangzhou Liu**, *Shanghai Jiao Tong U.*
Author: **Maria Peeters**, *Maria C.W. Peeters*
Author: **Toon Taris**, *Utrecht U., Department of Social, Health, & Organizational Psychology*

Although the challenge-hindrance stressor model (CHSM) proposes that work stressors can be clearly divided into challenge and hindrance stressors, there has been mixed support for the model and some researchers have called for moving away from the current CHSM to an appraisal-based approach. Thus, we conducted a comprehensive literature review to answer “what do we know and where do we go” of work stressor appraisal research. The results from 61 empirical studies (N = 19,713) showed that (1) work stressors can be appraised as challenges, threats, or hindrances; (2) challenge appraisals of work stressors generally have positive effects on employee work attitudes, well-being, job performance, behavior and health-related outcomes, whereas hindrance, threat, and harm appraisals have negative effects on these outcomes; and (3) appraisals can both mediate and moderate the relationships between stressors and work outcomes. Building on the extant knowledge, we provide detailed suggestions for future research.

CAR: Uniting 25 Years of School-to-Work Transition Research: An Integrative Review and Research Agenda

Author: **Rowena Blokker**, *Vrije U. Amsterdam*
Author: **Jos Akkermans**, *Vrije U. Amsterdam*
Author: **Paul G W Jansen**, *Vrije U. Amsterdam*
Author: **Mo Wang**, *U. of Florida*

A successful school-to-work transition is crucial for initial labor market entry as well as long-term career success. Scholarly interest in how young adults can achieve a successful transition to work has grown considerably in recent years in a range of disciplines. However, there is little interdisciplinary connectivity, which causes a lack of clear definition, scope, and empirical body of knowledge in this area. To synthesize this fragmented field, we systematically reviewed school-to-work transition literature published during the past 25 years, using a careers lens as an organizing framework. The objectives of this paper were threefold: a) to provide an overarching definition of the school-to-work transition, b) to systematically review the antecedents and outcomes of the school-to-work transition, and c) to synthesize the literature by developing an integrative theoretical model of antecedents and outcomes of the school-to-work transition. In doing so, we argue that school-to-career transition, thereby considering both short-term and long-term outcomes, is a more appropriate term to adopt moving forward. Finally, we provide suggestions for several key areas for further research, as well as practical implications for young adults, educational institutions, and human resource professionals.

CAR: Academic Skill Variety Among Scientists and Engineers

Author: **Briana Sell Stenard**, *Mercer U.*

This study analyzes how a diversified educational background versus an educational path in the same educational field influences salaries and career choices for scientists and engineers, including the career path of self-employment. The author argues that the reason for pursuing a certain educational path, whether it is for skill development or in preparation for a career change, may have different implications on academic skill variety. This study uses National Science Foundation SESTAT data on over 15,000 scientists and engineers who pursued a Master's degree in order to study their educational paths, the reasons they chose the educational mix they did, and how this impacts their salary in traditional wage work and self-employment.

CAR: Not all first-time managers are equal: Heterogeneity in the transition and challenges of new managers

Author: **Xavier Mundet**, *ETH Zürich*
Author: **Daniella Laureiro Martinez**, *ETH Zürich*
Author: **Renate Osterchrist**, *Hochschule München*

Building a pipeline of future leaders is a vital strategic task for organizations. However, managerial transitions are plagued by failure. To help organizations nurture future leaders, we need to understand: How can organizations support the processes of transitioning to first-time management roles? We answer calls in the leadership development literature to develop our understanding of on-the-job learning processes in order to customize ways to effectively develop leadership in organizations (e.g. McCall, 2004; Hill, 2004). In this study, we rely on in depth interviews and secondary data from social networks to study the processes of becoming a manager. We develop a process model of the transition to first-time managership with testable propositions. We find that the transition to first-time managers departs from different starting points, characterized mainly by their knowledge of team members and work content (i.e. Networker, Insider, Generalist, and Expert). Based on the starting points, we find evidence of four different transition learning processes, each of which encounter different developmental contexts characterized by different challenging situations. Our findings are summarized into theoretical propositions that should serve as a basis for further research. We derive practical implications for new managers' successful transitions, and how companies and management education can support them.

ENT: **Immigrant Entrepreneurs' Identity Constructions and Endeavors: Considering Ethnicity and Gender**   

Author: **Jieyi Liang**, *Schulich School of Business, York U.*
Author: **Samia Chreim**, *U. of Ottawa*

In this study, we ask: How do immigrant men and women construct entrepreneurial identities at the intersection of ethnicity and gender, and how do these identity constructions interact with entrepreneurial endeavors? We conduct a qualitative study based on interviews with Chinese immigrant entrepreneurs in Canada, and analyze their narratives. The findings show various configurations of ethnicity and gender themes in entrepreneurial identity narratives, and provide a nuanced understanding of how social categories of ethnicity and gender offer interpretive resources that immigrant entrepreneurs appropriate and employ, resist and efface, or subvert and customize in narratives of entrepreneurial identity. Identity constructions show limits of agency as individuals may be constrained by embodiment of identity markers through which they might come to define themselves. Identity markers can also be interpreted expansively, and can change as entrepreneurial endeavors bring about variations that are then taken up in identity reconstructions. The findings also reveal the ambivalences experienced by immigrant entrepreneurs, and show that these ambivalences may persist over long periods of time. This study contributes to research through inclusion of both men and women immigrant entrepreneurs. Men have hitherto not been a major focus of analysis in gendered identity studies of immigrant entrepreneurs.

ENT: **How aspiring corporate entrepreneurs can achieve role-identity legitimacy by narrating emotions**  

Author: **Aracely Soto-Simeone**, *Aalto U., Department of Industrial Engineering and Management*
Author: **Marina Biniari**, *Aalto U.*

Pursuing an aspirational role identity as a corporate entrepreneur often challenges organizational members' belongingness to the organization and may undermine their legitimacy. Identity scholars have long suggested that self-narratives can enable members to achieve distinctiveness and legitimacy without undermining their sense of belonging. However, how aspiring corporate entrepreneurs can self-narrate their role to achieve optimal distinctiveness within the organization remains undertheorized. Building on the narrative identity work literature, we propose that individuals can legitimize their role within the organization by narrating their emotions regarding their aspired role as a corporate entrepreneur. Our theorization proposes that a core mediating mechanism is the collective emotional energy created by the aspiring corporate entrepreneur's self-narratives. We argue that the creation of collective emotional energy around the aspiring corporate entrepreneur's role could facilitate other organizational members to legitimize that role. The organization's pro-innovation climate and affective display rules could further strengthen this process. By theorizing how aspiring corporate entrepreneurs build narratives that generate collective emotional energy around their distinct aspired role, we foster the understanding of how self-narratives facilitate the achievement of optimal distinctiveness when managing multiple identities in an organization.

ENT: **Family firms' brand importance and the contingency role of identity** 

Author: **Carlotta Benedetti**, *Free U. of Bozen, Bozen*
Author: **Paola Rovelli**, *Free U. Bozen, Bolzano*
Author: **Andrea Fronzetti Colladon**, *U. of Perugia*

This study explores the role of external audiences in determining the importance of family firm brands and its relationship with firm performance. Drawing on text mining and social network analysis techniques, we use the Semantic Brand Score to measure family firm brand importance – by combining its three constitutive dimensions of brand prevalence, diversity, and connectivity. The analysis of a sample of 63 Italian entrepreneurial families reveals that brand importance positively associates with family firm revenues and that this relationship is stronger when there is an identity match between the family and the firm. Interesting, departing from literature, sentiment does not associate to family firm revenues. This study advances extant research by offering a richer and multifaceted perspective on how external stakeholders perceive family firm brands. In so doing, it also suggests family firms to be less concerned about the positive or negative feelings conveyed by news, and be more interested in raising the importance of their brand.

ENT: **Entrepreneurs' Identity Work Tactics in Response to Conflicting Identities**

Author: **Sascha Hohen**, *Goethe U.*

This paper examines entrepreneurs' identities by using an inductive approach that builds on 51 interviews as a primary data source. My study provides deep insights into how and why entrepreneurs use identity work. In doing so, I present identity work tactics that entrepreneurs utilize in response to conflicting identities. These identity work tactics either change conditions in work- or non-work-related situations or the individual's role identities. Furthermore, I developed an entrepreneurial identity model that illustrates these identity work tactics in detail.

Immigrant Entrepreneurs 2

Digital Session Chair: **Kurian George**, *Syracuse U.*

ENT: The Founder Legitimation Process Among Refugee Entrepreneurs

Author: **Kurian George**, *Syracuse U.*
Author: **Todd W. Moss**, *Syracuse U.*
Author: **Maria Minniti**, *Syracuse U.*
Author: **Trenton A. Williams**, *Indiana U. - Kelley School of Business*

The founder legitimacy literature argues that would-be entrepreneurs establish their legitimacy by framing their stories and actions differently for different resource-providing audiences. Yet, different individuals frame differently, with some being more flexible and able to appeal to more diverse audience preferences and judgments than others. We explore these differences in flexibility and why they arise by investigating the under-studied founder legitimation process. Using a qualitative inductive approach, we investigate how early interactions of refugee entrepreneurs with host audiences, as well as their experiences prior to resettlement, influence how flexibly they frame. We find that refugees who have been exposed to more diverse environments prior to resettlement set broad targets for legitimacy, engage with more diverse audiences, and experiment with more types of legitimation symbols than other refugees. Refugees in the first group, called “Explorers,” tend to frame more flexibly than refugees in the second group, called “Traditionalists.” Finally, we find that flexibility of framing tactics have important business and personal implications, with Explorers having access to more diverse resources and dealing better with feelings of dissonance than Traditionalists.

ENT: Entrepreneurship under Extreme Constraints: Evidence of Micro-bricolage from Rohingya Refugee Camps

Author: **Rashedur Chowdhury**, *U. of Southampton*
Author: **Benjamin Siedler**, *U. College Dublin*
Author: **Saurabh Lall**, *U. of Oregon*

Through rare, independent access to the Rohingya refugee camps in Bangladesh we conducted an in-depth survey to examine how marginalized actors create and maintain their business activities in a highly restrictive environment. In so doing, we extend conventional notions of bricolage to the specificities of what we define as noncooperative spaces. Moreover, we offer a new theoretical lens of micro-bricolage as a more suitable approach to capture and represent highly vulnerable actors. By incorporating contextual sensitivities in this approach, we reveal a variety of counterintuitive insights regarding the role of (financial) capital, transgression against institutions, and social networks. Specifically, we find that conventional factors such as start-up capital, access to debt, possession of prior business experiences and internal social ties – which are deemed vital in conventional entrepreneurship or bricolage studies – are less relevant to socioeconomic development in refugee camps. In contrast, we identify that actors’ intangible resource specialization, abilities to transgress against formal restrictive institutions, and mobilization of strong external ties are more important factors. Accordingly, we argue for a fundamental shift in the way we perceive inhabitants of noncooperative spaces and recommend new ways of integrating vulnerable actors such as refugees and their spaces in wider societies.

ENT: Refugee Entrepreneurs’ Opportunity Production Process – Process Characteristics and Embeddedness

Author: **Yi Jiang**, *ESCP Business School*
Author: **Caroline Straub**, *Bern U. of Applied Sciences*
Author: **Kim Klyver**, *U. of Southern Denmark*
Author: **Rene Mauer**, *ESCP Business School*

In this paper, we observe the opportunity production processes among aspiring refugee entrepreneurs in their host countries. Our process data from eighteen refugee entrepreneurs reveal heterogeneity in how entrepreneurs move across the opportunity production stages of conceptualization, objectification, and enactment. We identify four patterns of sequence which we find to be characterized by differences in continuity, iteration, and order. By theorizing on process characteristics and connecting these to dual embeddedness, we provide insights into how use of networks from home versus host countries together with cognition help increase the accuracy of opportunity production theory of entrepreneurs who face discontinuity in their lives.

ENT: Migrant Tenure and the Venture Investment Use of Remittances to Developing Countries

Author: **Paul M Vaaler**, *U. of Minnesota*
Author: **Michael Cummings**, *U. of Arkansas*
Author: **David Deeds**, *U. of St. Thomas*

We develop and test hypotheses derived from a theoretical framework grounded in agency, social identity, and acculturation perspectives to explain how migrant tenure abroad changes remittance use for venture investment back home in developing countries. Regression and related analyses of remittances to 29 developing countries from 2001-2010 indicate that remittances from migrants residing abroad for less (more) than a year significantly increase venture founding rates (venture-funding availability). Our results suggest that migrants abroad only briefly retain stronger home-country identity and relationships leading them to remit to agents specifically directed to help found new ventures providing livelihoods to those same migrants upon return. Migrants abroad for many years acculturate more to and identify more with host countries, leading them to remit to home country agents with broader discretion to invest in ventures generating financial and social returns associated with enhancing the welfare of home-country families and communities.

Digital Session Chair: **Jason Cavich**, *Nova Southeastern U.*

 **ENT: Nascent Entrepreneurs and the Moderators of Race, Gender, and Government Support**

Author: **Jason Cavich**, *Nova Southeastern U.*
Author: **Ravi Chinta**, *Nova Southeastern U.*

Purpose: In a better attempt to understand nascent entrepreneurship, this paper explores the relationship between opportunity recognition and entrepreneurial intent of nascent entrepreneurs. Contrary to conventional wisdom, research on this relationship is fragmented and empirically underdeveloped. In addition, the contextual and perceptual boundary conditions of government support, gender, and minorities are explored. Design: We surveyed 1246 nascent entrepreneurs in the state of Florida, which is the largest data set on this topic. Respondents answered 55 survey questions on potential barriers to entrepreneurship to help understand how their context impacts their intent. Findings: Our empirical results indicate that opportunity recognition by nascent entrepreneurs significantly affects entrepreneurial intent, the strength of which is moderated by government support and gender, but not by minorities. Originality: The nascent entrepreneur is viewed through the lens of entrepreneurial self-efficacy (ESE) which refers to an individual's belief in one's capability to produce entrepreneurial outcomes and engage in entrepreneurial behavior. This study provides a more nuanced understanding of contextual factors that influence nascent entrepreneurs within the state of Florida.

Paper is Available to Meeting Registrants Only.

ENT: Just Do It? A Configurational Approach to Entrepreneurial (In)Action among Nascent Entrepreneurs

Author: **Trey Lewis**, *Virginia Tech*
Author: **David W. Williams**, *U. of Tennessee*

The outcomes of nascent firms (e.g., profitable emergence) are largely impacted by the actions undertaken by nascent entrepreneurs (NEs) during the startup process. Though much is understood about what NEs do to launch their ventures, we lack knowledge regarding why NEs opt to initiate (or avoid) specific actions. Complicating our understanding of why NEs initiate or avoid specific actions is the notion that such behavior is likely due to a combination of factors, rather than a set of linear relationships whereby investigation is limited to few explanatory variables. Thus, we examine the configuration of cognitive, emotional, and trait-based factors that influence the initiation and avoidance of specific startup activities, using fuzzy set/qualitative comparative analysis (fs/QCA). The results reveal configurational patterns that point to a typology of startup activity initiation whereby initiation occurs under four discrete categories of combinations of factors, which are distinct from the combinations of factors that lead to startup activity avoidance.

ENT: When People Rage Against the Machines: Strategic Framing of Nascent Markets under Externalities 

Author: **Yoseb Kang**, *ESSEC Business School*

This study explores entrepreneurial firms' strategic framing of nascent markets under externalities. When entrepreneurial firms attempt to establish nascent markets whose value can be completed only by capitalizing on public goods, regulators and interested stakeholders may deter entrepreneurial firms from entering to protect such goods. However, we know little about how entrepreneurial firms thrive and build their markets regardless of such resistance. Building on the literature of collective action frames, this study reveals that entrepreneurial firms can get access to public goods by leveraging nascent markets' unique window of opportunity - that is, underdeveloped interpretations about market externalities. An inductive case study of Lime, an e-scooter sharing company, proposes the procedural nature of framing among firms, regulators, and other stakeholders and entrepreneurial strategies to gain socially-negotiated access to public goods.

Paper is Available to Meeting Registrants Only.

ENT: The early development of new ventures with IT-focused founders

Author: **Maximilian Lemmens**, *Heinrich-Heine U. of Dusseldorf*

Some of today's most prominent organizations were founded by individuals with a strong IT background; a group of people often subject to stereotypes that significantly deviate from the hip and extroverted entrepreneurs' image and, thus, failed to gain attention in extant research so far. Consequently, this study investigates the development of new ventures founded by individuals with an IT background over time. We apply a novel machine learning approach to identify functional-related job positions using data obtained from LinkedIn and track the development of 333 ventures over six years on a monthly basis. Our empirical results show that ventures founded by individuals with an IT background tend to create more IT-related positions in their organizations and have a higher likelihood of receiving first-round VC funding, while we find no significant effect for the second round. The share of IT-related positions has an inverted U-shape effect on the likelihood of receiving first-round VC funding and a negative effect regarding the second round. Our findings highlight the need to invest in non-product related organizational functions for entrepreneurs with an IT background. Avenues for future research include extending the observation period beyond six years and using other operationalizations of IT-related positions.

Resilience 2

Digital Session Chair: **Amrita Lahiri**, *Washington State U.*

ENT: Building resilience following a policy shock: Evidence from India's demonetization

Author: **Amrita Lahiri**, *Washington State U.*
Author: **Nanjundi Karthick Krishnan**, *U. of Michigan*
Author: **Alex Kier**, *Washington State U.*
Author: **Joyojeet Pal**, *U. of Michigan*
Author: **Aditya Johri**, *George Mason U.*

Greater resource endowments are assumed to help the resiliency of businesses involved in a crisis. We challenge this assumption using the context of a unique natural experiment – India's demonetization policy shock in November 2016, when the Indian Government removed, without any warning, 86% of the country's currency in circulation, thereby precipitating large-scale disruption amongst small businesses in India. We take a multi-method approach to examine the effects of demonetization on 294 small businesses to show that resource endowments (financial and human capital) do not ensure business resilience. Using motivated cognition as a theoretical lens, we argue and empirically demonstrate that resources facilitate business resilience when the entrepreneur identifies with the political party enacting the policy but do not appear effective in facilitating resilience when the entrepreneur does not identify with the political party enacting the policy. Our study contributes to the literatures on resilience, entrepreneurial cognition and institutions in entrepreneurship.

ENT: Business Model Resilience During A Crisis: Subscription as A Service and Co-Creation Strategy

Author: **William C Zhou**, *U. of Massachusetts, Lowell*
Author: **Li Sun**, *UMass Lowell*
Author: **Peiyi Jia**, *U. of Massachusetts, Lowell*

How can business models navigate through a crisis? Based on service-dominant logic, we argue that subscription business models, with customer orientation and inter-functional coordination, help ventures remain resilient during adverse events. With a sample of 852 new ventures during 2009–2019, we find the ventures with subscription business models are more customer-oriented and inter-functionally coordinated than their non-subscription counterparts. In an analysis of resilience during the COVID-19 pandemic, we find that, on average, subscription business models increase abnormal stock returns by 164%, decrease firm risk by 54.55%, and reduce financial volatility by 21.82%. Finally, we find that subscription business models do not depend on slack resources during a crisis.

ENT: Reducing inequality in communities through social entrepreneurship

Author: **Anna Rebmann**, *King's College London*
Author: **Emma Catharina Folmer**, *Groningen U. (RuG)*

Equitable distribution of all of society's benefits and costs is a key dimension of community resilience. Yet in contemporary urban developed economies, a multitude of inequalities can be observed which are often geographically concentrated in deprived urban communities. Our paper asks, how do social enterprises create positive social change and reduce inequality in deprived urban communities? This is an important question as there is little theorizing on how social enterprises create social impact at a community level. We extend the MCO (motivation, capability, opportunity) framework by Stephan et al. (2016) to understand how social enterprises use these three mechanisms for change in the community context. We collected data from 12 social enterprises in deprived areas of London and Birmingham in the UK using semi-structured interviews. By analysing the social enterprises' theories of change and the mechanisms they employ to illicit positive social change in their communities we discovered three pillars for creating community-level change: individual behavioural change, adaptive problem solving and establishing community cohesion. We find that social enterprises that use all three pillars provide holistic solutions to complex problems they encounter in their communities and demonstrate that social change is achieved when individual- and system-level changes are targeted simultaneously.

ENT: Resilience strategies during COVID-19: How informality and social networks can shield SMEs

Author: **Adam Montserin**, *The U. of the West Indies*
Author: **Miguel Dindial**, *The U. of the West Indies*
Author: **Panagiotis Piperopoulos**, *College of Business and Law, RMIT U.*

In this research note we explore the role of informality and social networks in building resilience during the COVID-19 crisis. We present preliminary findings drawn from semi-structured interviews in a Small Island developing country, Trinidad and Tobago, and uncover how business informality, which has carried a negative connotation in the extant literature, can in fact contribute positively to firm resilience during this unprecedented exogenous shock. Building on the theory of social networks and capital we also find that both formal and informal small business owners leverage (to different extent) on their personal ties/networks to manage operational costs, maintain business operations, supplier and customer relationships, and persevere during the exogenous shock from COVID-19. Our preliminary findings provide some fresh views of how (paradoxically) informality as well as social networks assist business resilience and offer both theoretical and practical suggestions for future research.

ENT: Re-examining the Impact of Educational and Gender Diversity in Ventures in Business  

Author: **Violetta Gerasymenko**, *Oregon State U.*
Author: **Yohan Choi**, *Southern Illinois U., Edwardsville*
Author: **Samyul Cho**, *Oregon State U.*
Author: **Jonathan D. Arthurs**, *Oregon State U.*

This research investigates why and when venture founding team (VFT) gender diversity is associated with second-order competences in ventures that graduated from accelerators. Combining psychological safety and information processing theories, we develop a moderated model explaining why VFT gender diversity moderates the effect of VFT educational diversity on second-order competences and how accelerator characteristics moderate this relationship. We rely on mixed methods research and test our hypotheses with a random sample of 92 ventures from 21 U.S. accelerators. Our findings show that VFT gender diversity moderates VFT educational diversity's impact on second-order competences and that such moderation is contingent on accelerator program length and intensity of cooperation in cohorts. Our study advances gender diversity, dynamic capabilities, innovation, and entrepreneurship literature.

ENT: The role of trainers in entrepreneurship training   

Author: **Matt Karlsven**, *Brigham Young U.*
Author: **Stephen Yanchar**, *Brigham Young U.*
Author: **W Gibb Dyer**, *Brigham Young U.*

Business training programs have been created to support and grow economies throughout the developing world by cultivating and strengthening small businesses. In general, these training programs have made little impact on businesses, likely because few entrepreneurs engage and apply the principles and practices they are taught. Little research has been done to understand how to facilitate an entrepreneur's adoption of better business practices. Using multiple case analysis, this study addresses this research gap through examining the role and experiences of seven trainers and coaches in two business training programs in Lima, Peru. Trainers and coaches were found to play a crucial role in managing groups of entrepreneurs to engage in the training and to put the principles into practice in their own businesses. Effective trainers and coaches use a variety of strategies and resources that go far beyond their official responsibility to deliver the content of the training program. This study shows that skilled trainers and coaches are an invaluable part of effective training programs and should not be overlooked in the discussion of how to design and implement effective business training programs in developing countries.

ENT: Individual Level Effects of Entrepreneurship Training: A Natural Field Experiment

Author: **Niklas Eschner**, *Ludwig Maximilian U. of Munich (LMU)*
Author: **Johann Kranz**, *Ludwig Maximilian U. of Munich (LMU)*

It is scientific consensus that entrepreneurship training of school kids and university students is effectively resulting in entrepreneurial activity. However, we have a limited theoretical understanding of entrepreneurship training of employees. As most employees are not inherently entrepreneurial, we lack an understanding of entrepreneurship training as a potential explanatory link between the organizational and individual level to explain the emergence of entrepreneurial employees. Within this study, we conceptualize a theoretical model based on the established constructs as well as a self-developed scale. Our model reflects both the organizational embeddedness and entrepreneurial behavior of employees inside the organization. We conducted a natural field experiment within a large German multinational technology company over a time period of half a year. As we measured the effects of entrepreneurship training as change within entrepreneurial behavior of employees over time, we tested our model using a difference-in-differences estimator. Our results support the hypothesized positive treatment effect of entrepreneurship training on entrepreneurial self-efficacy. Moreover, we find a significant impact of time availability and management support on the development of entrepreneurial behavior of employees. Our results suggest entrepreneurship training to be an explanatory link between an organization and the emergence of entrepreneurial employees.

ENT: Being Alert Matters! A Sequential Interplay of Entrepreneurial Training and Business Outcomes  

Author: **Ahmad Raza Bilal**, *Sohar U. Oman*
Author: **Tehreem Fatima**, *The U. of Lahore Pakistan*

Recently the interest in argentic psychological factors promoting the small business sector is burgeoning. The scholarship in this field has called for not only developing the psychological traits in business owners but also to uncover the mechanisms through which these trainings influence training outcomes. To respond to this, we introduced individual entrepreneurial orientation (IEO) training based on Action Regulation Theory. Through a randomized controlled field experiment spanning 4 waves (T0= at the time of training, T1=6 months after training, T2=1 year after training, and T3= 2 years after training, each wave of 6 months apart); of 165 small business owners (training group=79, control group=86) in Pakistan, we found that individual entrepreneurial orientation training promotes the small business success. Moreover, we shed light on the serial mediating role of IEO behavior and opportunity exploitation in translating the training impacts into business outcomes. Lastly, we highlighted that individual action characteristics i.e., entrepreneurial alertness enables small business owners to be more efficient in opportunity exploitation after the individual entrepreneurial orientation training intervention. This study offers implications for entrepreneurial psychology, action-based training, and has practical takeaways for small business owners, trainers, and regulatory authorities.

A significant body of research has shown that social network position and structure are important for entrepreneurship. Networks impact both an entrepreneur's decision to pursue an idea and the performance of their business by stratifying people's access to information, resources and contacts. However, many open questions remain regarding how entrepreneurs' networks come to be that are essential for conceptualizing the relationship between networks and entrepreneurship. This symposium makes progress on this with six presentations on how decisions or strategies employed by potential entrepreneurs during the early ideation stage influence how their networks evolve and the success of their ventures. These papers show the importance of factors like training, individual behaviors, relational matching and demographics in enabling or constraining entrepreneurs' ability to construct a productive network and extract value from that network. In addition, as social networks research is often beset by endogeneity concerns, these papers all use field experiments to study network dynamics in entrepreneurship.

The Effect of the Ideal Worker Norm on Employees *The Effect of the Ideal Worker Norm*

Chair: **Clarissa Rene Steele**, *Kansas State U.*
Participant: **Jennica R. Webster**, *Marquette U.*
Participant: **Vanessa Burke**, *Pennsylvania State U.*
Participant: **Alyson Gounden Rock**, *McGill U. - Desautels Faculty of Management*

In today's organizations, supervisors expect employees to be highly productive throughout their workday, no matter how long they work or when they work. These expectations have been termed the "ideal worker norm" (Davies & Frink, 2014). The ideal worker prioritizes their work over other life domains and shows this dedication to work by working overtime and non-traditional hours, being always available, visibly working (e.g., sending emails during non-work hours), and being unhampered by non-work obligations (Kelly et al., 2010; Reid, 2015; Sallee, 2012). The nascent ideal worker literature has focused on defining the norm, but the effects of the ideal worker on employees has been little studied. For example, gendered social roles, in which women are caretakers and men are breadwinners, may affect perceptions of female employees' ability to fulfill the ideal worker norm, regardless of family context, negatively affecting their careers. Likewise, for men who deviate from this expectation, such as those who request flextime or parental leave (Sallee, 2012), they may be perceived as unable or unwilling to live up to the ideal worker norm. This paper symposium explores the effects of the ideal worker norm on the careers of male and female employees.

Stars and Specialized Talent

Digital Session Chair: **Daniel M. Peat**, *U. of Cincinnati*

HR: **Marching Boots to Business Suits: Military Veteran Human Capital in Nonmilitary Organizations**   

Author: **Daniel M. Peat**, *U. of Cincinnati*

Firms increasingly leverage unique sources of human capital to remain competitive in dynamic, complex, and global markets. One source of often sought but underutilized human capital is that of military veterans. Veterans develop their human capital in extreme conditions, demonstrate their utility in complex, dynamic environments, and are a target labor pool for many organizations. Organizational research on military veterans is scarce, but the research that does exist shows that there are significant disconnects between the potential and realized value of veteran human capital. We employ abductive logic and draw on interdisciplinary scholarly research to provide a theoretical framework to better understand veterans in the civilian workforce.

HR: **Unpacking the perils and pitfalls of personal specialization in knowledge-intensive organizations**  

Author: **Yea Hee Ko**, *U. of Wisconsin, Madison*

This study explores the concept of personal specialization, which is how much organizational members work on the same domain (i.e., low personal specialization) or work on different, narrowly defined domains (i.e., high personal specialization). Personal specialization is unique to knowledge-intensive organizations. It differs from a traditional form of division of labor, namely task specialization, that makes activities consisting of a job narrow, simple, and repetitive. I predict that personal specialization increases overall productivity through accelerated learning but generates side effects due to the knowledge gap among organizational members. To test these ideas, I use art units of patent examiners working on the same technology at the USPTO between 2005 and 2017.

HR: **Some stars twinkle more: What Type of Star is Viewed As More Valuable Than Others?** 

Author: **Yeongsu Kim**, *Western Kentucky U.*

Because stars are assumed to be highly productive, star performers often receive more favorable decision than nonstars in the labor market even if their performance is in question. However scholars have also claimed that, since a star's task performance and external recognition varies along one's career stage, and thus stars are not always recognized at the "peak" of their career, there is a possibility that more than one type of star exist. Although there can be different types of stars, little is known about how each star is viewed from in and outside the organization. Are evaluators more biased against a particular type of star? If yes, who are they, and are they equally valued from in and outside the organization? In the present paper, we study these questions by using a rich data set from Major League Baseball.

Author: **Shavin Malhotra**, *U. of Waterloo*

Winner of HR Division Best Conference Paper Award

While star performers are commonly believed to exhibit disproportionately stronger job performance, recent research demonstrates this is not always the case when stars move to new organizations. In this article, we draw insights from attribution and dual envy theories to develop a conceptual framework that investigates how nonstars make attributions about star status and the subsequent effect on star performance. In particular, we develop a typology of four different attributions that nonstars make about how an individual attained their status as a star. In turn, these star status attributions result in either benign or malicious envy. Nonstars who experience benign envy engage in relational-enhancing behaviors that positively affect star performance, whereas nonstars who experience malicious envy engage in relational-inhibiting behaviors that negatively affect star performance. Our conceptual model sheds light into the under-researched role of nonstars in shaping star performance with an elaboration of the critical cognitive-based processes through which nonstars help and harm star performance.

Organizational Climates and Work Outcomes

Digital Session Chair: **Tae-Yeol Kim**, *China Europe International Business School*

OB: Organizational innovative climate and employee innovative behavior

Author: **Tae-Yeol Kim**, *China Europe International Business School*
Author: **Xing Wang**, *China Europe International Business School (CEIBS)*
Author: **Sebastian C. Schuh**, *China Europe International Business School (CEIBS)*
Author: **Zhiqiang Liu**, *Huazhong U. of Science and Technology*

Organizational innovative climate is widely seen as a central driver of employee innovative behavior. However, little is known about why and under what conditions organizational innovative climate may unfold its impact on employee innovative actions. Against this backdrop, this study developed and tested a cross-level contingency model of organizational innovative climate. The results from a multi-wave, multi-source study in 94 organizations showed that organizational innovative climate was positively related to employee innovative behavior and that this link was transmitted through managers' proactive goal regulation. However, the results also showed that these effects did not always occur but were dependent on important boundary conditions. Specifically, the indirect link between organizational innovative climate and employee innovative behavior via managers' proactive goal regulation only emerged in firms that faced high competitive intensity, and this link was significantly stronger when managers had a low rather than high learning goal orientation. These findings provide a new cascading-effects perspective on organizational innovative climate and indicate when and why organizations may (not) benefit from a pronounced organizational innovative climate.

OB: To Break Through or To Be Restricted? How and When Team Territorial Climate Affects Team Performance

Author: **Xingwen Chen**, *U. of Hong Kong*
Author: **Zheng Zhu**, *Renmin U. of China*

Previous research addressed territoriality from an individual level and highlighted the importance of extending the analysis to teams or organizations. Though with its great value, less is known about how to define territoriality from the team level and uncover its influences on team processes and outcomes. Grounded in the appropriateness framework, this study captured the climate of team territoriality (i.e., territorial climate), tested the relationship between territorial climate and team performance, and explored the mediating roles of help giving and seeking. We further proposed that territorial climate would interact with intra-team and inter-team competitions to influence the helping interactions. As we adapted the territoriality scale to capture the shared perception of whether team members exhibit territorial behaviors, Study 1 was employed to validate the scale of team territorial climate. Study 2 (i.e., a field study) was used to test the theoretical model, and the results revealed that team members in highly territorial climate would be less likely to display help giving and seeking behaviors; the ineffective helping interactions would thereafter hamper team performance. In addition, intra-team and inter-team competition can separately (i.e., two-way interaction) and jointly (i.e., three-way interaction) affect the relationship between territorial climate and team performance. The negative effect of territorial climate on help giving/seeking was more pronounced when either intra-team competition was high (vs. low) or inter-team competition was low (vs. high), and this negative relationship became the strongest when both intra-team competition was high and inter-team competition was low.

OB: Don't Worry about Your Ability: Error Management Climate as Stress-Buffer for Cognitive Demands

Author: **Lea Christina Ameres**, *Technical U. of Munich*
Author: **Prisca Brosi**, *KLU Hamburg*
Author: **Tanja Erlmaier**, *Technical U. of Munich*

We combined evidence from an experience sampling study (N = 220) and two experimental vignette studies (N = 298, N = 90) to test error management climate as specific stress-buffer for cognitive demands and to examine ability attributions as explanatory mechanism of this buffering effect. In support, results of the multilevel mixed-effects analyses of Study 1 indicated that the positive relationship between cognitive demands and stress was indeed weaker, the more employees perceived to work in a high error management climate. Notable, error management climate did not influence the relationship between workload and stress. Study 2a and 2b step-wise confirmed ability attributions as explaining mechanism as a) error management climate lowered ability attributions in response to errors when working on cognitive demands (but not on workload) and b) ability attributions led to higher stress. Generating evidence on a specific buffering factor for stress resulting from cognitive demands, we provide a concrete suggestion on how organizations, leaders, and employees can mitigate the stress-inducing effect of high cognitive demands: By establishing a climate for error management.

OB: Influences of Perceived Motivational Climate on Employee Work Passion and Subsequent Work Behaviour

Author: **Qinyun Zhang**, *Faculty of Psychology, Beijing Normal U.*
Author: **Xiao-Hua Wang**, *Beijing Normal U.*
Author: **Christina Nerstad**, *BI Norwegian Business School*
Author: **Ren Hantao**, *Faculty of Psychology, Beijing Normal U.*

Drawing on achievement goal theory, self-determination theory and the dualistic model of passion, this study identifies distinct contextual antecedents and subsequent work behavior for employees' harmonious and obsessive passion. The results based on data collected from 259 leader-subordinate dyads largely support our theoretical model. First, employees' perceived mastery climate is positively related to harmonious passion while perceived performance climate is positively related to obsessive passion. Second, employees' harmonious passion is positively related to their proactive work behavior, whereas employees' obsessive passion is positively related to their pro-job unethical behavior. Finally, the results also show that harmonious passion mediates the positive relationship between a mastery climate and proactive work behavior and that obsessive passion mediates the relationship between a performance climate and pro-job unethical behavior. Theoretical contributions and practical implications are also discussed.

Creative Networks

Digital Session Chair: **Vojkan Nedkovski**, *U. of Milan*

OB: Benefit from Partners' Learning: Whom Should I Keep Close with to Improve My Creativity?

Author: **Chuanjia Li**, *Shanghai U. of Finance and Economics*
Author: **Zhishuang Guan**, *U. of Maryland, College Park*
Author: **Jingyu Li**, *Chinese U. of Hong Kong*
Author: **Hui Liao**, *U. of Maryland*
Author: **Yuan Li**, *Shanghai Jiao Tong U.*

The creativity literature suggests the important role of social network ties in driving individual creativity. What is unknown is that how does the focal actor can benefit from different alters. Drawing on social capital theory, we suggest that the effects of social capital on individual's creativity depend not only on the structures of the social network ties (i.e., tie strength and structural holes), but also on the learning attributes of the alters. Drawing on organizational learning theory, we suggest that exploration and exploitation of the alters will bring different knowledge to the focal actor through their social network ties. Based on data from 390 employees in 31 teams, we find being strongly tied with alters who are exploratory can facilitate focal actors' creativity. However, being weakly tied with alters who are exploratory or being strongly tied with alters who are exploitative impede the focal actor's creativity. We also examine how structural holes of the focal actor moderate the effects of strongly-tied and weakly-tied alters' learning on focal actor's creativity.

Paper is NOT Available. Please contact the author(s).

OB: Negative Ties at Work: How Brokering Negative Ties Affects Individuals' Innovative Behavior

Author: **Vojkan Nedkovski**, *U. of Milan*
Author: **Marco Guerici**, *U. degli Studi di Milano*
Author: **Dennis Holding Jacobsen**, *Yale School of Management*
Author: **Diego Stea**, *Copenhagen Business School*

Social structure is critical in organizational life. While abundant scholarly work has emphasized the benefits and opportunities that follow from positive interpersonal relationships in the context of social networks in work organizations, it has largely overlooked the role of negative relationships. The aim of this paper is to shed more light on this issue. Using a mixed methods approach, we examine the role of direct and indirect negative relationships on individuals' innovative behavior. In a study of a high-end Italian architectural studio, we demonstrate that both direct and indirect negative relationships lead to poorer innovative performance, as evaluated by the focal individual's supervisor. The results provide important insights into the social processes and relational dynamics that explain the relationship between negative ties and individuals' innovative behavior, offering noteworthy implications for theory, research, and practice on negative ties and innovative behavior.

OB: Illumination and elbow grease: A theory of how creative process mental models influence creativity

Author: **Brian J. Lucas**, *Cornell U.*
Author: **Ke Michael Mai**, *National U. of Singapore*

How do people think creative ideas are generated? Anecdotally, people's lay beliefs about the creative process seem to span the gamut of possible behaviors. The current research develops a theoretical framework for understanding lay beliefs of the creative process. We introduce the concept of creative process mental models – lay mental knowledge frameworks of the creative process – and propose that people's lay beliefs can be organized around two prominent mental models (i.e., the insight model and the production model). Our framework describes how these mental models influence engagement in creative process behaviors (i.e., preparatory and production behaviors), and their consequences for creativity. Our theory provides a framework for understanding how people think about the creative process and identifies promising directions for future research.

Paper is Available to Meeting Registrants Only.

OB: An Ego Depletion Perspective of How and When Creative Engagement Engenders Unethical Behavior

Author: **Xiaodong Ming**, *Jiangxi U. of Finance and Economics*
Author: **Xinwen Bai**, *Institute of Psychology, Chinese Academy of Sciences*

Drawing on the ego depletion theory, we explore the dark side of creativity from the perspective of the creative process. Three studies (a laboratory observation revealing a link, two experiments establishing a causal chain, and a field daily-diary study increasing external validity) that adopted a mixed-method research design consistently showed that creative process engagement resulted in ego depletion which, in turn, leads to unethical behaviors. Supportive climate for creativity moderated the relationship between creative process engagement and ego depletion. Furthermore, supportive climate for creativity mitigated the indirect effect of creative process engagement on unethical behavior via ego depletion. The theoretical and practical implications of these findings and future directions are discussed.

Creativity and Innovation in Collaborative Projects

Creativity and Collaboration

Digital Session Chair: **Birke Dorothea Otto**, *Free U. Berlin*

OMT: **Tolerating and inducing temporal asynchronicity in complex innovation journeys.**

Author: **Birke Dorothea Otto**, *Free U. Berlin*

Author: **Elke Sybille Schuessler**, *JKU Linz*

Author: **Joerg Sydow**, *Freie U. Berlin*

Author: **Lukas Vogelgsang**, *Leibniz Institute for Research on Society and Space*

While research has often alluded to the temporal complexity of innovation processes, we still understand little about the temporal work practices through which actors address the tension between predictability and creativity, which are both inherent in most complex, resource-intensive innovation contexts. Based on a multi-temporal qualitative research approach of studying pharmaceutical drug development, we focus on the role of entrainment in relation to this tension. We find that entrainment does not just imply the reactive synchronization of work processes with dominant temporal structures, but can also be achieved by actively influencing these Zeitgeber. Moreover, while the chief concern of entrainment research to date has been the synchronization with dominant Zeitgeber, we find that temporal work also involves practices of detrainment, defined as either inducing a deliberate temporal uncoupling of practices from procedures and pacers, or the temporary toleration of moments of asynchrony. Adding to the conception of a ‘dance of entrainment’ and the literature on temporal work more broadly, we develop the notion of Zeitgebung as a reflexive process to mediate the tension between creativity and predictability, both common to complex innovation processes. We also contribute to further connecting creativity and innovation research from a process perspective by highlighting the temporal work needed to keep an idea going and prevent its premature closure in the context of highly standardized innovation processes.

OMT: **Exploring Idea Evaluators' Aesthetic Learning in Creative Projects**

Author: **Giada Baldessarelli**, *Imperial College Business School*

Author: **Ileana Stigliani**, *Imperial College Business School*

Clients are increasingly involved in creative projects as external idea evaluators. While research has provided evidence on expert evaluators accustomed to expressing aesthetic feedback—i.e., feedback that rests on subjective, sensory reactions—, far less attention has been devoted to understanding how non-expert clients can provide such feedback during creative projects. We draw on an ethnographic study of the collaboration between creative workers and their clients to explore how the latter learn to formulate aesthetic feedback through repeated feedback interactions. We find that idea evaluators engage in aesthetic learning that allows them to acquire the knowledge to express sophisticated judgments and suggestions vis-à-vis material artifacts. Our findings contribute to the research on feedback in creative contexts by illustrating how evaluators acquire knowledge to perform their role. We also contribute to the research on organizational aesthetics by unpacking aesthetic learning and highlighting the underlying mechanisms that lead to its emergence.

OMT: **The Effect of Epistemic Information on collaborative consumption: The Case of Maasai Mara**

Author: **Dorthe Doejbak Haakonsson**, *Aarhus U.*

Author: **Erik Reimer Larsen**, *City U. London*

Author: **Jacob Eskildsen**, *Aarhus U., Department of Management*

We examine how collaborative action develops in a natural resource commons, organized as an actor-oriented structure. In a framed field experiment, teams of Maasai livestock owners played a board game related to collaborative consumption of a commons (in this case, grazing areas). We examine team decisions over time and draw inferences about the difference between two information treatments: one where participants are subjected to an infrastructure that provides them with predictive information, and one that does not; and their effectiveness in furthering collaborative consumption. Measures of ecosystem viability were used as measures of collaborative consumption. We find that participants that are provided with predictive information are more effective than participants not provided with predictive information in obtaining preservation and sustainable usage of a commons. Based on our findings, we argue that actor oriented structures should include predictive information structures to achieve effective integration of efforts.

Paper is Available to Meeting Registrants Only.

OMT: **Creativity and Routines: Actions Enabling Co-Creation**

Author: **Giada Baldessarelli**, *Imperial College Business School*

Author: **Scott F. Turner**, *U. of South Carolina*

This study examines how creativity emerges from a co-creation routine, i.e., one intended to generate creative outcomes and whose participants include insiders and outsiders that span an organizational boundary. In particular, we are interested in how the enactment of the co-creation routine unfolds when outsiders lack experience with the routine, and how such enactment evolves as outsiders gain experience. We address these questions through an in-depth study of two multi-project collaborations involving a design agency (insiders) and two respective clients (outsiders). Our study identifies an ecology of actions that enables enactment with inexperienced outsiders, revealing those actions that are salient for facilitating collaborative work. Moreover, our findings show how routine enactment and roles evolve with outsiders’ accumulation of experience. Our study provides insights that advance routines research in two important areas: how routines facilitate creativity, and how they unfold under dispersed conditions.

Advances in Transaction Costs and Formalization
Transaction Costs

Digital Session Chair: **Wooseok Jung**, *HEC Paris*

OMT: **For Good, But Not For Long: Disengagement from Pro Bono Supports in U.S. Law Firms, 2008-2012**

Author: **Wooseok Jung**, *HEC Paris*
Author: **Amanda Sharkey**, *U. Of Chicago*

Finalist for OMT Division Best Paper on Environmental and Social Practices Award

Many businesses have implemented corporate social responsibility (CSR) initiatives in the last few decades, spawning a substantial body of research on the drivers of adoption. Yet, firms that adopt can vary tremendously in their post-adoption trajectories. While some firms remain committed, others eventually reduce their support for CSR or disengage entirely. Given the range of possible outcomes following initial adoption, as well as the likelihood that short-lived CSR efforts have little impact, it is important to understand the factors that lead firms to step back from their CSR efforts. In this paper, we propose that a firm's status or social standing plays a central role in distinguishing firms that reduce or withdraw their support for CSR from those that persist. Drawing on middle-status conformity theory, we argue that higher-status and lower-status firms will be more likely to reduce support for their CSR programs, compared to firms with middling status. We test and find support for our arguments using a unique dataset of law firms' provision of benefits supporting pro bono work, a major employee-related type of CSR. Overall, our examination of the antecedents of CSR abandonment contributes to a more comprehensive picture of CSR activity in firms.

Finalist for the OMT Division Best International Paper Award

Whether to formalize or not is a key decision for informal firms. We explore behavioral antecedents of this decision, arguing it is subject to financial and legitimacy aspirations of informal firms. Drawing on the institutional and behavioral theory of the firm literatures, we suggest that informal firms' under (over) performance on financial and legitimacy aspirations are both independently and jointly associated with risk-seeking (risk-avoiding) behavior. We explore these effects through conducting three experimental vignette studies in a cluster informal firms in Ghana. The findings indicate that informal firms formalize when financial performance and perceived legitimacy is above aspiration level, yet do not do so when financial performance and perceived legitimacy is below aspiration. We also find that perceived legitimacy relative to aspiration positively moderates the effect of financial performance on informal firms' decision to formalize.

OMT: **Time to Give and Time to Receive: Role Switching and Generalized Exchange in a Financial Market**

Author: **Alessandro Lomi**, *U. of Italian Switzerland*
Author: **Federica Bianchi**, *U. della Svizzera Italiana*

We study the effect of generalized exchange as a stabilizing mechanism for the flows of resources in financial markets. In an analysis of on-line trading in a major interbank market for liquidity we find that for regular market transactions generalized exchange is unlikely to be observed in the short-term, but emerges forcefully in longer-term. This result is consistent with our prediction that generalized exchange may be understood only with reference to the temporal micro-structure of transactions linking occupants of market roles. We also find that, for market transactions institutionally classified as large, generalized exchange does not operate in the shorter-term and is unlikely to emerge in the longer-term. This empirical result is consistent with our prediction that generalized exchange does not operate as a stabilizing mechanism for asymmetric market transactions when they involve higher levels or risk. Together, the results of the study clarify some of the contingent elements that trigger (or defuse) generic social mechanisms in decentralized systems of exchange like, for example, markets.

OMT: **The Role of Transaction Costs on Vertical Integration and Innovation: A General Equilibrium Approach**

Author: **Leonardo Mayer Kluppel**, *Ohio State U.*

Acquiring information from outside firms is crucial for a firms' innovation output. According to the transaction cost perspective, firms can increase the information flow between them by integrating. This view, however, usually considers only pairs of firms. This paper applies a general equilibrium approach to transaction costs to assess how vertical integration impacts a dyad's ability to get information from other firms in the market. The model shows that, in general, we need to understand the transaction costs between all agents in the economy. Additionally, this paper breaks down the innovation process into three stages (information sharing, R&D investment, and innovation adoption) and shows the situations in which the inability to write contracts in each stage will impede an innovation to arrive in the market.

OSCM: **The Heterogeneous Effects of SSCM Information Disclosures: A Mixed Methods Approach**

Author: **Yanji Duan**, *U. of North Florida*

Author: **Yiming Zhuang**, *Frostburg State U.*

Realizing potential revenue and reputational benefits from an organizations' CSR activities is contingent upon stakeholder awareness and favorable perceptions. Thus, in the era of information, organizations use social media to communicate their CSR activities to these constituents, including consumers. Yet, little is known about what is the most effective approach that will resonate most in the context of social media communications. Anchoring on theory from social psychology and adopting a multi-method approach, this research investigates how two information attributes (i.e., information direction and argument quality) of organizations' CSR communications affect consumer attitudes in the context of social media. Specifically, we establish internal validity with a behavioral experiment at the individual level; We establish external validity using social media data from the field with sentiment analysis on 697,433 tweets. We find consistent results from our two studies: while argument quality can significantly affect consumer attitudes, this effect is conditional under different information direction scenarios. This study is among the first study that empirically demonstrates the conditional effect of argument quality under different information direction scenarios. Results of this study provide important implications for firms and policymakers in terms of sustainability-related information disclosure. When disclosing such information that is inconsistent with consumers' general beliefs, it is possible to avoid potential negative effects or even induce positive ones by providing arguments supported with logical persuasive reasons.

OSCM: **Investigating the Dynamic Relationship between Marketing Capabilities and Firm Performance**

Author: **Cherng George Ding**, *National Chiao Tung U.*

Author: **Yen-Wei Chang**, *National Chiao Tung U.*

Author: **JoHan Cheng**, *National Chiao Tung U.*

This study examined the dynamic relationship between marketing capabilities and firm performance (the relationship between the change in marketing capabilities over time and the change in firm performance over time) and the moderating effect of industry type on the dynamic relationship. A three-step approach was proposed to facilitate analysis. In the first step, DEA was used to measure marketing capabilities. In the second step, growth modeling with the case-by-case approach was used to obtain the estimates of the slope of the linear growth trajectory. In the third step, the moderated regression analysis was conducted to test for the research hypotheses regarding dynamic relationship. The results, based on a sample of 392 firms from S&P500, indicated that there existed a positive dynamic relationship between marketing capabilities and firm performance and the relationship was moderated by industry type. The positive dynamic relationship existed for manufacturing firms but not for service firms. Some practical implications were discussed. This work contributes to the literature on marketing capabilities.

OSCM: **Strategic Disclosure of Disruptions and Firm Stock Performance – An Event Study**

Author: **Tony N.K. Lynch**, *Auburn U.*

Author: **William Luse**, *U. of La Verne*

Author: **Joo Jung**, *UTRGV*

Companies' announcements are a signal to the market of their strategic decisions and intentions. Some firms create "strategic noise" to mitigate the effects of potentially negative disclosures by dampening any negative news with some important but unrelated information. This study examines the effects of the timing of supply chain disruption announcements on a firm's stock performance. The results of our analysis are based on a sample of 29 companies which made announcements of supply chain disruptions that affected their operations between 2016 - 2018. We employ an event study methodology and examine the abnormal returns of companies in our sample to determine if the event – the supply chain disruption had an effect of the firm's stock price. Our findings, although statistically insignificant, indicate that the timing of announcements does have an effect on a firm's stock performance. We found that companies in our sample experienced positive abnormal returns relative to announcing an event and reporting a supply chain disruption. This study also examines whether the composition of a firm's top management team (TMT) and its reputation in the market mitigate the effects of any announcements of a supply chain disruption. Our study contributes to the operations and supply chain management literature by advancing the integrated and contingency and signaling theoretical framework through which we examine these phenomena.

OSCM: **Omnichannel Grocery Retailing: A Balancing Act between Fulfillment Fees and Operations Management**

Author: **Elliot Rabinovich**, *Arizona State U.*

Author: **Rui Sousa**, *U. Católica Portuguesa*

Author: **Sungho Park**, *Seoul National U.*

Author: **Sina Golar**, *Massachusetts Institute of Technology*

Omnichannel grocery retailers can fulfill online orders by allowing consumers to collect their orders at the retailers' stores (click and collect or "CC" fulfillment) or have their orders delivered from the stores to their homes (home or "H" fulfillment). Because the former option does not involve costly last-mile deliveries to consumers' homes, retailers have sought to make it more attractive by lowering its associated fulfillment fees to consumers. We analyze the economic value of this strategy. We offer new insights into the influence of CC fee reductions on consumer online shopping behavior and how this behavior impacts fulfillment costs in an omnichannel environment. Moreover, we provide an understanding of the mechanisms that drive the economic value that omnichannel retailers derive from this strategy which implies trading-off revenue from consumers' expenditures on fulfillment service versus products. These contributions inform the development of pricing strategies to improve the economic value of fulfillment services in omnichannel retailing. We find that lower CC fees increase revenues from additional demand for products. However, they are ineffective in shifting ordering activity from H to CC fulfillment, and thereby in decreasing the costs incurred by the retailer in carrying out H orders' deliveries. Moreover, the contribution to profitability from the gains in product revenue obtained from reductions in CC fees are observed to be much lower than the losses caused by (1) the revenue no longer collected from the CC fees and (2) the additional operating costs at the stores necessary to fulfill higher CC order volumes.

Deception is pervasive in negotiations, organizations, and interpersonal interactions and a particularly difficult, enduring, and vexing problem. Why do many people use deception in these situations, and why do others behave honestly? In this symposium, we present our theoretical and empirical research on the antecedents to deception and honesty. Our research considers the individual and situational forces that drive people to engage in these behaviors and the tactics that negotiators, managers, and regulators can use to both curtail the use of self-interested deception and encourage honesty. Taken together, our papers provide important insights into deception and honesty in negotiations, organizations, and everyday life, as well as a theoretical foundation for future research.

Human and Social Capital

Digital Session Chair: **Johanna Alfs**, *WWU Muenster*

 **STR: Managerial Internal Social Capital, Environmental Dynamism, and Business Model Design**

Author: **Yunhui Wang**, *Xi'an Jiaotong U.*
Author: **Yaqun Yi**, *Xi'an Jiaotong U.*
Author: **Zelong Wei**, *Xi'an Jiaotong U.*

Drawing on business model and dynamic managerial capability literature, this paper explores how managerial internal social capital impacts business model design under environmental dynamism. Based on a sample of 210 firms in China, we find that managerial internal social capital has a positive relationship with business model efficiency and an inverted U-shaped relationship with business model novelty. Demand uncertainty strengthens the impact on business model novelty. Competitive intensity strengthens the impact on business model efficiency but weakens that on business model novelty. Our findings enrich the business model literature by identifying the antecedent role of managerial internal social capital and the different moderating effects of demand uncertainty and competitive intensity.

STR: The Impact of Career Paths - Examining how CMO Experience drives Value Creation and Appropriation

Author: **Johanna Alfs**, *WWU Muenster*

The trade-off between value creation and appropriation is a fundamental strategic decision for firm performance. The Top Management Team (TMT) is shaping these strategies. However, this process requires a certain degree of consensus. Following upper echelons theory, the personal characteristics of the TMT members are the micro-foundations but what are the mechanisms that turn the wheel towards value creation (innovation) or appropriation (differentiation)? We used as data set a cross-industry panel of U.S. S&P 500 firms over 12 years and scrutinized as reference characteristics the career path of the Chief Marketing Officer (CMO). Our findings indicate that career variety positively influences differentiation but negatively influences innovation. However, role-specific experiences only negatively influence innovation. We contribute to TMT and Strategic Management revealing that the different kinds of experience are the significant levers that impact strategy. To practice, we propose a shift in the weight of relevant criteria for recruiting CMOs and build TMTs, based on the overall strategic vision of the firm.

STR: Making Sense of Factor Market Blind Spots: Evidence from Personnel Mobility Networks, 2008-2015  

Author: **Stephen Thomas Downing**, *U. of Missouri*
Author: **Jin-Su Kang**, *National Chiao Tung U.*

A foundational assumption of competitive dynamics research holds that competition in product markets antecedes awareness of competitive threats, and thus factor market threats are most salient among product market rivals. However, changing economic and technological conditions of digital arenas are enabling threats to encroach from seemingly unrelated domains. Addressing the problem of factor market blind spots (i.e., competitive threats in factor markets without corresponding product market overlap), this study applies a sensemaking lens to develop a model for attentional triangulation, which integrates multilevel, relational cues—firm status, dyadic category similarity, and triadic closure—for triangulating areas of high factor market threat despite low product market awareness. We find support for our hypotheses using a multiplex network sample that combines customer-oriented competitive relations and personnel mobility network data in the information technology arena during 2008-2015.

STR: Profiting from Most-Favored Customer Procurement Rules: Evidence from Medicaid

Author: **Josh Feng**, *U. of Utah, David Eccles School of Business*

Author: **Luca Maini**, *U. of North Carolina, Chapel Hill*

Author: **Thomas Hwang**, *Harvard Medical School*

We exploit a 2010 reform to Medicaid drug reimbursement to provide empirical evidence that “most-favored customer” clauses (MFCC) in procurement rules can increase private-market prices and profits, even when suppliers have significant market power. Under a bargaining model, Medicaid’s MFCC creates a credible threat point that drug manufacturers exploit to negotiate smaller discounts with private payers. Using novel data on estimated discounts and a difference-in-difference framework, we show that the reform, which reduced the scope of the MFCC constraint, led to higher discounts and lower profits in non-Medicaid segments for drugs with high exposure to Medicaid.

STR: Out of the Trap: Customer Switching Costs, Conversion Funnel, and Industry Profitability (WITHDRAWN)

Author: **Niloofar Abolfathi**, *National U. of Singapore*

Author: **Andrea Fosfuri**, *Bocconi U.*

Author: **Simone Santamaria**, *National U. of Singapore*

Do lower switching costs reduce industry profitability? While established strategy frameworks predict a drop in prices and profitability following reductions in switching costs, we provide a counterexample in which firms’ business model interacts in unexpected ways with switching costs. Across many industries, firms employ a conversion funnel business model to attract customers with affordable products, generate lock-in, and later encourage them to convert to more advanced and profitable products. We argue that a sudden reduction in switching costs disrupts this conversion funnel, which eventually can increase industrywide prices and profitability. We develop a stylized model to formalize our ideas and provide evidence in support of the predictions, using a difference-in-differences methodology with staggered treatment for a large, global sample of mobile telecommunications operators.

STR: The wild west? Complementor performance following antitrust intervention against a dominant platform

Author: **Sruthi Monica Thatchenkery**, *U. College London*

Author: **Riitta Katila**, *Stanford U.*

Drawing on research on competitive repositioning, we analyze the relation between a regulatory intervention against a dominant technology platform and complementor performance. We examine whether antitrust regulators can spark new opportunities for complementors by weakening a dominant platform’s market power. Using a dataset on enterprise infrastructure software from 1998–2004, and a difference-in-differences design using matching and synthetic controls, we examine the relationship between the U.S. Department of Justice’s antitrust intervention against Microsoft (a dominant enterprise server platform) and subsequent value creation and value capture by enterprise infrastructure applications firms (complementors). The data show that value creation—measured by citation-weighted patents of complementors—is increased following the antitrust intervention. In contrast, value capture—measured by profitability—is reduced. The findings suggest a social benefit to antitrust enforcement in the form of increased innovation but caution that disrupting the “order” of an industry may lead to wasteful development and losses in efficiency.

STR: Location strategies of spinoff entrants: Implications of clustering and staying close to the parents

Author: **Jarrod Humphrey**, *U. of Florida*

Author: **Gwendolyn Kuo-fang Lee**, *U. of Florida*

The research on agglomeration posits that co-locating in a cluster with industry rivals benefits the firm because of its proximity to resources including suppliers, labor, and knowledge spillover from rivals. Although it’s often assumed that co-location benefits new entrants, more recent research finds that stronger entrants gain less from co-location. Spinoff entrants—the organizational descendants of ongoing established firms—are comparatively stronger entrants because of the product, market, and industry knowledge they inherit from their parents. They may gain less from co-location, because the competitive pressures exerted by their parents and other industry rivals are higher when they are more proximate. For the spinoff entrants that locate farther away, the inheritance from their parents may be portable and thus do not decay with distance. Our paper examines the performance implications of whether spinoff entrants are located inside a cluster and staying close to their parents. Specifically, we conduct an event history analysis estimating the amount of time it takes a spinoff entrant to reach six entrepreneurial milestones. We find that being located inside a cluster and staying close to the parents are beneficial to spinoffs only when the industry has a single dominant cluster, as we observe in the semiconductor industry. When the industry has many clusters widely dispersed across the country, as we observe in the pharmaceutical industry, co-location is associated with worse performance. Our findings suggest that the dispersion of clusters in an industry is one condition where the assumption about new entrants benefiting from co-location is invalid.

The Detection of Corporate Misconduct

Digital Session Chair: **Christina Walker Robichaud**, *U. of Kansas*

STR: Ex-Military Director on the Board: A paradox for monitoring corporate misconduct

Author: **Christina Walker Robichaud**, *U. of Kansas*

Author: **Juan Carlos Morales**, *U. of Kansas*

We examine the effects of the presence of ex-military directors on a firm's board of directors and firm corporate misconduct (e.g., health, safety, environmental, fraud, and other regulatory violations). Drawing upon agency logic and the demography-based perspective of upper echelons theory, we suggest that firms who appoint ex-military to a board position face the paradoxical situation of an independent director who is uniquely deferential to managerial authority. On one hand, a military background may impart directors with discipline, obedience, selflessness, and other values particularly suitable to ethical conduct. On the other hand, military values "follower mentality", group solidarity, and unwavering trust in leaders. Due to this strong deference to superior's mandates, ex-military director firms may fail to vigilantly monitor manager actions, and we expect ex-military director firms to have a greater likelihood of corporate misconduct. Further this relationship is moderated by board size that can create challenges from the dilution of individual effects, diffusion of responsibility, factions, and increased power of the CEO, resulting in greater deference given by the ex-military director firm compared to non-military director firms. We test our predictions using a constructed dataset of archival and secondary sources in the US manufacturing segment during fiscal years 2005 and 2018. Results from this study provide strong support for our hypotheses. We discuss the implications of these empirical findings in the context of corporate governance demographic characteristics and corporate misconduct.

STR: Does Fraud Experience Make Directors Better Monitors? The Effect of Fraud Experience on Firm Fraud

Author: **Nawon Oh**, *Penn State Smeal College of Business*

Author: **Vilmos F. Misangyi**, *Pennsylvania State U.*

While past theory and research has highlighted the damaging effect that being involved in a fraudulent event can have on a director's reputation and future board prospects, in the current study we examine whether serving on a board through a fraud event provides directors with experience that proves to be highly beneficial for the subsequent boards on which they serve. That is, we propose that fraud experience equips directors with requisite expertise to be an effective monitor with respect to preventing fraud at the firms at which they serve in the future. As such, we predict that the presence of fraud-experienced directors on firms' boards is related to a lower likelihood of fraud occurring at such firms as compared to firms without such directors on their boards. We tested our hypothesis on a sample of firms who had committed fraud ("fraud firms") matched with similar peers who had not committed fraud (non-fraud firms) during the study period of 2010-2019.

Paper is NOT Available. Please contact the author(s).

STR: Female independent directors and corporate fraud detection

Author: **Yuehua Xu**, *Shandong U.*

Author: **Shan Xue**, *Lingnan U. / Sun Yat-sen U.*

Detecting the fraudulent behaviors of firms effectively and timely is of significant importance for the development of corporate governance in emerging markets such as China. Nevertheless, factors affecting the detection of corporate fraud are still underexplored. This article attempts to fill the gap by focusing on female independent directors. Drawing on insights from social identity theory, we develop a theoretical model to examine the role of female independent directors in fraud detection in emerging markets. We conducted empirical tests using both bivariate probit regression and Cox proportional hazard regression. The results showed that female independent director ratio is negatively associated with the likelihood of fraud commitment but positively associated with the likelihood of fraud detection. Moreover, the results also demonstrated that among firms with female independent directors, the financial expertise of female independent directors is negatively associated with the likelihood of fraud commitment but positively associated with the likelihood of fraud detection. Our article makes important contributions to the literatures of corporate governance and female leadership.

Foresight, Framing, and Sensemaking

Digital Session Chair: **Andreas Sebastian Konig**, *U. of Passau*

STR: Incumbent Firms' Framing and Analysts' Evaluations of the Adoption of Discontinuous Technologies 

Author: **Andreas Sebastian Konig**, *U. of Passau*
Author: **Angelo Boutalidakis**, *U. of Passau*
Author: **Lorenz Graf-Vlachy**, *TU Dortmund U.*
Author: **Michael Pfarrer**, *U. of Georgia*

How can incumbents use framing to effectively alleviate securities analysts' concerns about the adoption of a discontinuous technology? Combining framing theory with sociological perspectives of analysts' evaluations, we theorize that analysts' favorability is a function of two characteristics of how a firm rhetorically frames its actions: conformity—the degree to which the framing accommodates analysts' deeply held beliefs, assumptions, and norms—and commensurability—the degree to which the framing matches analysts' existing knowledge and deliberations. We then apply Snow et al.'s classic framework to conceptualize discontinuous technology adoption framing as consisting of first, three distinct strategies of adoption frame articulation—bridging, extension, and transformation—and second, adoption frame amplification—defined as the clarification and invigoration of the respective frame articulation. Theorizing that the three articulation strategies systematically differ as to their conformity and commensurability, we argue that adoption frame extension is, ceteris paribus, the most effective articulation strategy, but nevertheless unlikely to fully resonate with analysts. We propose that incumbent adopters can resolve this dilemma and gain analysts' support if they combine adoption frame transformation with high levels of adoption frame amplification. We substantively advance research on incumbent responses to discontinuous technologies, particularly the emerging framing perspective.

STR: Time horizons and the staging of search on rugged landscapes: A laboratory experiment 

Author: **Stefano Benincasa**, *U. of Southern Denmark*
Author: **Marco Faillo**, *U. of Trento*
Author: **Stephan Billinger**, *U. of Southern Denmark*

This paper investigates how available time influences the staging of search. We inquire into this question using a laboratory experiment centered on a 2x2 design: shorter vs. longer time horizons and simple vs. complex search landscapes. When more time is available, search oscillates between later stopping and less risky experimentation. In contrast, when less time is available, it oscillates between earlier stopping and more risky experimentation, particularly when the level of complexity is higher. We further examine the frequency of search and the rhythm underlying the patterns of change. Search frequency improves the development of standard procedures able to enhance both average and maximum performance when more time is available. An irregular rhythm, characterized by an uneven pattern of changes, negatively moderates the effect of search frequency, especially when less time is available. On the whole, time surfaces as a unique type of resource that prompts decision makers to differently strike a balance in the way they stage exploration and exploitation. These findings contribute improving our understanding of the temporal unfolding nature of problemistic search.

Machine Learning, AI, and Firm Performance

Digital Session Chair: **Cristina Oana Vlas**, *U. of Massachusetts, Amherst*

STR: A Power-Learning Perspective of Innovation-Intensive Firms' Performance  

Author: **Cristina Oana Vlas**, *U. of Massachusetts, Amherst*
Author: **Eugene See**, *U. of Massachusetts, Amherst*
Author: **Rishabh Chaudhary**, *U. of Massachusetts, Amherst*

This paper investigates why innovation growth does not always have a positive effect on firm performance in innovation-intensive environments (IIEs). Adopting a power-learning perspective, we hypothesize that firms that succeed in fast-paced environments are those using both soft power and learning levers to address uncertainty. Soft power refers to subtle methods that IIE firms use to reduce uncertainty for others: create the illusion of power and exploit others' tendencies by imprinting their innovations recognizable markers others can relate to. We explore how the interplay of soft power and learning drives the inverse U-shape relationship between firms' innovation growth and market performance and why higher innovation pace has a negative impact on performance. We further identify CEOs' regulatory focus as driving firms' motivation to pursue power-learning tactics. The analysis of a panel of IIE firms supports our framework. We conclude that while perspectives involving competency, efficiency, or learning on their own may be useful frameworks in explaining firm performance in stable markets, a perspective focused on a combination of soft power and learning levers is better fitted to explain firms' performance in environments plagued by extreme uncertainty. Our main contribution is to the study of performance in innovation-intensive markets.

STR: Causal Inference in Strategy: How can Machine Learning Help? 

Author: **Jason Michael Rathje**, *Stanford U.*
Author: **Riitta Katila**, *Stanford U.*
Author: **Philipp Reineke**, *Stanford U.*

Recent advances in machine learning methods have opened up a set of new possibilities for inductive theorizing, and for analysis of unstructured text data in strategy and organizations research. In contrast, the application of machine learning to improve causal explanation in deductive strategy research is less well understood. In this paper, we spotlight supervised machine learning and its application to matching methods to support stronger inference in deductive research. We use a simulation and an analysis of technology invention data to illustrate the method. A core contribution is to provide guidance to strategy researchers in the use of supervised machine learning.

STR: Testing Non-monotonic Associations in Performance Data 

Author: **Chengwei Liu**, *ESMT Berlin*
Author: **Jerker C. Denrell**, *U. of Warwick*
Author: **Scott Cohn Ganz**, *AEI / Georgetown MSB*

The assumption that better performance today predicts better performance tomorrow pervades nearly all behavioral theories of learning from experience in organizations. Because of the widespread reliance on the higher-is-better heuristic, theories predicting performance non-monotonicity—higher past performance generating lower future performance—are of long-standing interest in management theory and economic sociology. The extent of real-world violations of the higher-is-better heuristic is, at its core, an empirical question. However, there is very little research testing the higher-is-better assumption, despite its ubiquity in organizations and markets and the panoply of mechanisms detailing when it might fail. In part, the lack of empirical research on this very important question is driven by the weaknesses of existing methods for detecting non-monotonic relationships in data. The method applied here, which adopts a "shape constrained" approach to statistical inference, avoids the well-known problems of testing non-monotonic associations in commonly-used methods based on linear regression. Our paper empirically tests the hypothesis of performance monotonicity in 12 datasets across four commonly-studied domains. Performance monotonicity is rejected in eight out of the twelve datasets examined and at least one dataset in all four domains demonstrates a non-monotonic performance pattern.

Paper is Available to Meeting Registrants Only.

STR: Human and AI: adaptation of the knowledge workers to artificial intelligence  

Author: **Xi Kang**, *INSEAD*

Self-adaptive artificial intelligence (AI) technologies can perform a growing number of cognitive tasks that used to depend on human judgement, raising debates about whether AI may substitute for or complement knowledge workers. There is no conclusive evidence on how AI transforms the nature of work, human capital and organization, especially in knowledge-intensive industries. This study highlights the important yet overlooked strategic adaptation of knowledge workers to AI, and how it shapes the human-AI relationship through two mechanisms—a learning mechanism and a differentiation mechanism. Empirical analyses using proprietary data at individual worker level and task level suggest that the adoption of AI significantly improves the performance of knowledge workers. AI provides implicit incentives for knowledge workers to exert effort and adapt, leading to a revised division of tasks between humans and AI.

Platforms and Ecosystems: Building and Sustaining Competitive Advantages *Platforms and Ecosystems*

Organizer: **Christine Choi**, *U. of Michigan*
Organizer: **Hyuck David Chung**, *U. of Michigan*
Presenter: **Kevin Boudreau**, *Northeastern & NBER*
Presenter: **Brian Wu**, *U. of Michigan*
Presenter: **Tobias Kretschmer**, *LMU Munich*
Presenter: **Shiva Agarwal**, *U. of Texas at Austin*
Presenter: **Cameron Miller**, *Syracuse U.*

Over the last decade, platforms have become an indispensable form of economic transactions in many industries and attracted attention from academic scholars and policymakers alike. In this symposium, we bring together a group of panelists to share their insights on how platforms can design and implement efficient strategies to foster engagement and cooperation among third-party participants (i.e., users and complementors). The panelists come from diverse theoretical perspectives (e.g., the theory of the firm, economics, digitalization, strategic leadership, etc.) and employ diverse methodologies (large-scale quantitative studies and field / lab experiments). By sharing recent advances and ongoing research in the field, this symposium aims to advance our understanding on how platforms can build and sustain their competitive advantages by influencing and leveraging their participants.

Crowdfunding 4  

Digital Session Chair: **Yuanqing Li**, *Dominican U.*

ENT: How to Attract Low Prosocial Funders in Crowdfunding?  

Author: **Yuanqing Li**, *Dominican U.*
Author: **Pingshu Li**, *U. of Texas Rio Grande Valley*
Author: **Frank Cabano**, *U. of Texas at El Paso*

Crowdfunding research that investigates funding success factors has been increasing. However, existing research shows inconsistent evidence regarding how a prosocial project description affects funding success and largely ignores the issue of matching/mismatching among different factors in affecting funding success. By conducting two experiments, we provide evidence for matching/mismatching effects among funders, project prosocial descriptions, and platform types (donation-based vs. reward-based). While there are no differences for participants with high prosocial motivation across conditions, we find that participants with low prosocial motivation are more likely to contribute higher funding amounts to a project that has a high prosocial description on a donation-based platform, or to a project that has a low prosocial description on a reward-based platform. Thus, this research sheds light on the crowdfunding and prosocial motivation literature.

ENT: Responding to the Crowd: How Online Investor-Entrepreneur Discussions Inform Crowdfunding Decisions 

Author: **Denis Iurchenko**, *California State Polytechnic U., Pomona*
Author: **Jeffrey S. Petty**, *U. of Lausanne, HEC Lausanne*
Author: **Joern Hendrich Block**, *U. of Trier*

Based on the analysis of a unique dataset comprising 276 equity crowdfunding campaigns, we propose that interactive forum discussions between potential investors and entrepreneurs serve as a strong signal of a new venture's quality. The results show that these dialogues play an essential role in campaign performance and that the importance of different topics raised by investors evolves throughout a campaign. As these online discussions are impromptu and initiated by the crowd, responding to investor queries is an important aspect of managing an equity crowdfunding campaign. We discuss the implications of our results for research and practice.

ENT: Are Entrepreneurs Better Start-up Investors?  

Author: **Catherine Paek**, *Kenan-Flagler Business School, U. of North Carolina at Chapel Hill*
Author: **Isin Guler**, *U. of North Carolina, Chapel Hill*
Author: **Michelle Rogan**, *Imperial College Business School*

Conventional wisdom holds that start-up investors with prior entrepreneurial experience perform better than investors who come from different backgrounds. Accordingly, entrepreneur-investors may have advantages in sourcing, picking and managing start-ups due to their past experience, unique skills and networks. However, the realization of these advantages hinges upon the assumption that the advantages of experience gained in entrepreneurial roles can be translated into the new investment roles without difficulty. In this paper, we question this assumption and argue that entrepreneur-investors may overestimate the value of their past experience in an investor role, which may adversely affect their performance as investors. Through a matched-sample analysis of entrepreneur-investors and non-entrepreneur-investors in the United States and invested in start-up ventures between 2000 and 2019, we find that (a) entrepreneurial experience is detrimental to investment performance and (b) average venture age in the investor's portfolio mediates the negative influence of entrepreneurial experience on investment performance.

ENT: Does Local Bias Exist at The Regional Investments? Evidence from Equity Crowdfunding

Author: **Wanxiang Cai**, *Utrecht U. School of Economics*
Author: **Friedemann Polzin**, *U. Utrecht School of Economics*
Author: **Erik Stam**, *Utrecht U.*
Author: **Xing Li**, *Utrecht U. School of Economics*

It is a longstanding finding in the finance literature that most investors have a strong preference for geographically close investments. Such local bias has also been found on the national level; however few studies have explored local bias at the regional level within a country. This severe regional local bias may result in financial constraints for SMEs that locate in peripheral regions, thereby increasing social inequality. This paper analyses whether local bias in investments exists at the regional level and whether regional characteristics have an effect on it. We test our hypotheses by data from a leading Dutch equity crowdfunding platform. The results indicate that crowdfunding flows between two regions decreases with their geographic distance, and the negative effect of distance is weaker if their regional social networks are strong and the investing region's location quotient (a measure of the geographic concentration) of the finance industry is high.

Qualitative Studies of Groups

Digital Session Chair: **Susanne Beck**, *LBG OIS Center & Copenhagen Business School*

OB: **Exploring Organizational Design for Openness and Collaboration in Scientific Research**

Author: **Susanne Beck**, *LBG OIS Center & Copenhagen Business School*
Author: **Marcel LaFlamme**, *Ludwig Boltzmann Gesellschaft*
Author: **Robin Brehm**, *Ludwig Boltzmann Gesellschaft*

Academic scientists are increasingly expected to conduct their research in an open and collaborative manner, crossing disciplinary, organizational, and even functional boundaries to increase productivity and impact. At the same time, scientific research organizations such as universities or research institutes are facing a progressive trend towards managerialism, increasingly enmeshing organizational priorities with individual researchers' agendas and workflows. This raises the question of how and to what extent scientific organizations can facilitate or block researchers from engaging in open and collaborative research practices. We investigate this question from an organizational design perspective and explore two in-depth case studies of scientific organizations with a total of 63 interviews, 4,129 pages of secondary material, and field observations. Our analysis results in a list of 30 factors, grouped into seven clusters (strategy, leadership, processes, structure, infrastructure, people, and culture), which facilitate or block researchers engaging in open and collaborative practices. Subsequently, we reflect on these results against the backdrop of three contingencies resulting from the particularities of the science system: the scientific field, the open or collaborative practice applied, and the intensity of organizational influence exerted on researchers within the organization. Our findings contribute to the literature on the organization of science and hold meaningful implications for research policy as well as for managers of scientific organizations.

OB: **Context matters: On factors and processes how resilience unfolds in project teams**

Author: **Sebastian Raetze**, *Brandenburg Technical U. Cottbus*
Author: **Stephanie Duchek**, *BTU Cottbus-Senftenberg*
Author: **M. Travis Maynard**, *Colorado State U.*
Author: **Nora Tietz**, *TU Dresden*

This study examines the effects of contextual dimensions and adversity types on processes for team resilience and factor underlying these processes. Based on 48 in-depth-interviews with members of 16 project teams, participants provided broad insights into the diverse ways adversities are encountered in project-based teams nested in business and academic organizations. Results confirm and enrich existing knowledge on enablers and concrete processes of team resilience. At the same time, our work highlights the need for future research to more fully consider contextual dimensions and their impact on team resilience and the complexity inherent in such considerations of context. From these findings, we draw fruitful managerial implications for practitioners.

Paper is Available to Meeting Registrants Only.

OB: **Meta Synthesis of the Qualitative Team Literature**

Author: **Bret Bradley**, *U. of Oklahoma*
Author: **Joann Keyton**, *North Carolina State U.*
Author: **Chandler Marr**, *Arizona State U.*
Author: **Ryan Bisel**, *U. of Oklahoma*
Author: **Pavitra Kavya**, *California State Polytechnic U., Pomona*

The body of qualitative research on teams has grown considerably in the last few decades – yet no accumulation or analysis of this body of research exists, despite the development of a method to do so. Meta-synthesis represents a set of methods used to accumulate and analyze qualitative research in a systematic and rigorous way. A total of 74 articles were identified from 1988 to 2019 in Management or interdisciplinary journals, and we employed meta-synthesis techniques to assess the state of this body of research. Across this time period, scholars have used a diverse set of 42 methods of data collection and 38 types of data analysis. Seven categories of team processes were inductively derived from articles in the dataset: relationship development and management, decision making, leadership, conflict management, safety and trust, communication, and norms and control. A deductive analysis then compared these articles to the hierarchical model of team process, which includes transition, action, and interpersonal processes to identify areas of concentration and areas where future research is most needed. Examples of research in these categories are described, followed by directions for future qualitative research in each category. We encourage scholars to use meta-synthesis methods to ask further questions in this body of team research and to accumulate and assess qualitative research in other areas of Management scholarship.

Paper is Available to Meeting Registrants Only.

OB: **Measuring Leader Perfectionism in Organizations: The Development of Theoretical Construct and Scale**

Author: **Ming Ji**, *Guanghua School of Management, Peking U.*

Leader perfectionism is widely recognized as an important, yet profoundly underinvestigated, construct that lacks conceptual clarity and valid measurement. To address this lack, our research intends to develop a clear conceptualization and an integrative multidimensional measurement of leader perfectionism. We conducted two inductive studies, the focus group interview and the study using critical incident technique, to confirm our conceptualization and generate items and dimensionality of leader perfectionism. We finally define leader perfectionism as leaders' dispositional desire for perfection from themselves and/or their employees, which is characterized by multiple cognition and behavioral characteristics. Moreover, we empirically developed a two-level multidimensional scale. The higher level contains two general dimensions of leader self-oriented perfectionism and leader subordinate-oriented perfectionism, under which the lower level is consisted of 15 subdimensions (8 for leader self-oriented perfectionism and 7 for leader subordinate-oriented perfectionism) to capture specific facets of leader perfectionism.

There has never been a more important time for researchers to generate useful knowledge, catalyze change, and contribute to managerial and organizational effectiveness. Organizations have to adapt to the pressures, opportunities, and conundrums presented by a changing economic, technical, ecological, social, and political landscape. Managers need practical insights, research-based evidence, and knowledge partners to inform and guide their actions. Will organizational researchers be there to help them in this transition? Can we find better ways to connect our work to the challenges faced by managers, organizations, and their stakeholders? Doing practical research means studying the real issues, problems, and challenges facing organizations and the people that work in and manage them. It means generating knowledge that is 1) relevant to practice, 2) useful to practitioners, and 3) actionable. And to this a fourth condition is added—that research also be grounded in theory, methods hew to standards of reliability and validity, and findings speak to the literature, academic peers, and practitioners. This symposia addresses and describes how to do research in the middle space between the worlds of academe and practice.

Innovation in Medicine

Digital Session Chair: **David Maslach**, *Florida State U.*

TIM: How do firms overcome regulatory delays to product innovation?   

Author: **David Maslach**, *Florida State U.*

The ability of firms and regulators to work together to reduce regulatory delays in product innovation is important. However, much research tends to focus on the responsibility of the regulator to reduce delays. Here, we study whether and why some firms pursue regulatory alternatives when they experience delays when given the opportunity to do so. Using a regression discontinuity design in the medical device industry, this paper shows that firms choose regulatory alternatives if the existing medical device approval process took too long. Firms are likely to stick with the existing alternative if they have competitive advantages, resources, and private information that allow them to exploit the slower alternative. Most importantly, the results suggest that the interaction between giving firms regulatory choices and regulators the ability to learn from these actions allows both the firm and regulator to work together and more fully exploit information that reduces regulatory delays in innovation. These findings contribute to research on regulatory delays, behavioral theory, and innovation.

TIM: Mobilising informal networks for open science practices in biomedicine

Author: **Adrián A. Díaz-Faes**, *Institute of Innovation and Knowledge Management INGENIO (CSIC-UPV)*

Author: **Oscar Llopis Corcoles**, *U. of Valencia*

Author: **Pablo D'Este**, *Polytechnic U. of Valencia*

Scientific research increasingly involves the active participation of a diverse range of actors across different fields of science and beyond the academic spheres. In this paper, we seek to understand how the informal networks established by scientists provide access to a variety of resources that contribute to idea generation. We analyse informal networks from two complementary approaches: the compositional perspective (based on the heterogeneity of actors involved in informal networks) and the relational perspective (based on the properties of the links to network members). Our data draws on a large-scale survey to biomedical scientists. Biomedicine represents a suitable context for this study due to the expected potential for knowledge generation from collaboration among multiple actors (e.g. basic and clinical researchers, health professionals, patients, industry practitioners, etc.). The study proposes an analytical network framework and provides granular data to understand the process of resource mobilisation towards knowledge generation in open science practices.

Paper is Available to Meeting Registrants Only.

TIM: Medicines Patent Pool and HIV Drug Cocktail Diffusion and Innovation   

Author: **Lucy Xiaolu Wang**, *Max Planck Institute for Innovation and Competition*

Designed to reward innovation, patent protection often leads to high drug prices that make life-saving medicines unaffordable for patients. This tension further increases patent infringement and invalidation to reduce prices, particularly in developing countries. The situation is serious for treatments that require multiple drugs owned by different firms with numerous patents, notably for HIV. I study the impact of the first joint licensing platform for drug bundling, the Medicines Patent Pool (MPP), on global drug diffusion and innovation. The pool allows generic firms worldwide to license drug bundles cheaply and conveniently for sales in a set of developing countries. I construct a novel dataset from licensing contracts, public procurement, clinical trials, and drug approvals. Using difference-in-differences methods, I find robust evidence that the pool leads to a substantial increase in the generic supply of drugs purchased. In addition, branded-drug makers and other entities, such as public institutions, respond to the pool by increasing the number of new clinical trials. The R&D input increase is accompanied by increases in generic drug product approvals. Finally, I estimate a simple structural model to quantify welfare gains and simulate counterfactuals. The total benefit to consumers and firms far exceeds the associated costs. The MPP has become the key implementing partner for the WHO's COVID-19 Technology Access Pool and deserves more future research.

Paper is Available to Meeting Registrants Only.

TIM: Platforms in Highly Regulated Industries: An Analysis of GAFAM Entry into Healthcare and Education   

Author: **Hakan Ozalp**, *Vrije U. Amsterdam*

Author: **Pinar Ozcan**, *Oxford U., Saïd Business School*

Author: **Dize Dinckol**, *Warwick Business School*

Author: **Markos Zachariadis**, *Alliance Manchester Business School, U. of Manchester*

Author: **Annabelle Gawer**, *U. of Surrey*

While platform firms have disrupted many sectors, they have not yet visibly transformed most regulated industries. However, we observe early signs of the onset of platformization in a few regulated sectors such as healthcare and education. In this study, we examine the challenges and opportunities that regulated industries present to big tech platforms. By examining GAFAM entry patterns into the education and healthcare sectors, we uncover a paradox: whereas GAFAM might be very well suited to solving these markets' inefficiencies, they also are uniquely challenged by the sensitivity of the data emanating from these sectors' social regulation. We develop propositions that identify various modes of platform entry in highly-regulated industries. We suggest that GAFAM modes of entry depend on their pre-entry resources and capabilities, and on the extent to which the primary services offered in the target industries are offered by centralized government actors.

Presenter: **Janet Kleber**, *U. of Klagenfurt*

Whereas most research focuses on the negative effects of stigma, this symposium will present research from 4 empirical projects that showcase both the negative and positive elements of stigmatized work and workers. The studies range both in terms of method (qualitative and quantitative) and sample (Covid-19 health care workers, impoverished newspaper vendors, sex workers, and workers with disabilities). We consider the theoretical advantages of taking this both/and approach, note the methodological opportunities of doing so, and discuss how future research on stigma can implement this holistic lens.

Organizational Influences on Patient Satisfaction, Experience, and Patient-Centered Care

Digital Session Chair: **Seokjun Youn**, *U. of Arizona*

Patient Experience and Satisfaction

HCM: Unwarranted Variation in Healthcare: Impacts of Test-Order Practice Variation on Care-Delivery Cost 

Author: **Seokjun Youn**, *U. of Arizona*

Author: **Gregory Raymond Heim**, *Texas A&M U.*

Motivated by payment reform model policies that aim to reduce practice variation, this study explores whether and how lower variations in clinical practice relate to hospital resource usage. Specifically, we focus on practice variation in test-ordering (e.g., laboratory and radiology tests) stage and use the statistical process control as a theoretical lens to hypothesize its negative impacts on subsequent care-delivery costs. We define practice variation as all variation not resulting from patient mix, and construct a measure using inpatient discharge data for each patient cohort having an identical medical condition. The high underuse practice variation in test-ordering implies that a hospital is more likely to fail to order proper tests for some patients. Thus, such a hospital may spend extra efforts in care-delivery stages to alleviate potential adverse effects of the test underuse. We also consider the intervening effects of two quality initiatives on the relationship: process quality (i.e., how well a hospital adheres to evidence-based medical guidelines to diagnose and treat patients) and experiential quality (i.e., external perceptions of care quality from a patient's perspective). Based on a comprehensive six-year inpatient data from New York and Florida states, we find that higher underuse variation in the test-ordering lead to higher care-delivery cost. Interestingly, this phenomenon is even stronger when a hospital provides a higher-quality patient experience because such a hospital tends to provide more responsive care, which is often resource-intensive. Therefore, hospitals may be improperly rewarded for quality improvements if practice variation is ignored, implying that incentives and penalties for hospital operations should be designed to account for such effects. We discuss our findings and policy implications.

HCM: Explaining the Lackluster Impacts of Colorectal Cancer (CRC) Risk Calculators

Author: **Jungmin Lee**, *Georgia State U.*

Author: **Mark Keil**, *Georgia State U.*

Author: **Aaron Baird**, *Georgia State U.*

Author: **Jong Seok Lee**, *U. of Tennessee, Knoxville*

Risk calculators are increasingly being used to promote cancer awareness and prevention. The assumption is that by providing individualized risk assessments, users will be nudged to consider their risk and perhaps undergo screening. To date, there has been limited work on the effects of colorectal cancer (CRC) risk calculators on the intention to undergo CRC screening. Little is known about the mechanism through which risk calculators might influence patient intentions. We conduct an experiment to evaluate the role of perceived susceptibility to CRC as a potential mediator that channels the impact of CRC risk calculator on participants' intention to undergo CRC screening. We also investigate the moderating effect of gender. Our findings show that providing participants with a CRC risk calculator result influences perceived susceptibility to CRC, which in turn influences intention to undergo CRC screening. Interestingly, the CRC calculator results actually decreased perceived susceptibility. Further, we found that gender moderates this mediation relationship. Specifically, the relationship between perceived susceptibility and intention to undergo CRC screening was significant only for women. The implications of this work are that risk calculator results may actually discourage people from undergoing CRC screening and that gender differences should be considered when promoting CRC screening.

HCM: An Update: The Association between the CXO Role and Hospital Patient Experience Scores

Author: **Seongwon Choi**, *Trinity U.*

Author: **Alisha Singh**, *U. of Alabama at Birmingham*

Author: **Kristine Ria Hearld**, *U. of Alabama, Birmingham*

Author: **William Breen**, *U. of Alabama, Birmingham*

Author: **Nancy Borkowski**, *U. of Alabama, Birmingham*

Due to the healthcare industry's shift from fee-for-service to value-based purchasing (VBP), many hospitals have changed their internal structure to adapt to the new environment by including a new C-suite leader, a Chief Experience Office (CXO). Payers have implemented various performance models to incentivize hospitals and other providers to incorporate the concept of patient-centeredness for improving the patient experience. The patient experience domain of the HCAHPS survey is an integral part of CMS' hospital VBP program payment adjustment. Considering that most hospitals operate with under two percent profit margins, payment incentives or penalties can have a significant impact on their financial sustainability. So this study aimed to answer the question, does a hospital receive a return on a CXO investment in way of higher patient experience scores? Using Breen and colleagues (in-press) study data, we wanted to explore if our findings, post three years, would be consistent with their findings, that is, to determine if hospitals that continue to employ a formal full-time CXO role report higher HCAHPS scores than hospitals without this C-suite position. Our study's findings were consistent with the Breen et al. study in that hospitals that have a formal CXO role are more likely to have higher HCAHPS scores as determined by the patient recommendation question as well as the hospital overall rating question included in the HCAHPS survey. We also provide additional insight into the organization characteristics of hospitals and the market factors associated with those hospitals that have filled the CXO role.

Author: **Ganisher K. Davlyatov**, *U. of Oklahoma Health Sciences Center*

Author: **Robert J Weech-Maldonado**, *U. of Alabama, Birmingham*

High Medicaid nursing homes are associated with lower resident quality of care due to fewer nurses, lower occupancy rates, and lower proportion of Medicare and private pay residents. Culture change is a movement to transition nursing homes to more home-like environments to improve quality of life and care of residents. The literature on culture change initiatives indicates a positive relationship on outcomes, however little to no literature on the use of culture change initiatives in high Medicaid nursing homes and quality. The purpose of this study was to examine how the involvement of culture change initiatives among high Medicaid facilities was associated with nursing home quality. The study relied on both survey and secondary nursing home data for the years 2017-2018. The sample included high Medicaid (85% or higher) nursing homes. The outcome of interest was the overall nursing home star rating obtained from the Nursing Home Compare Five-Star Quality Rating System. The primary independent variable of interest was the years of involvement in culture change initiatives among nursing homes, which was obtained from the nursing home administrator survey. The final model consisted of an ordinal logistic regression with state-level fixed effects. High-Medicaid nursing homes with six or more years in culture change initiatives had an increased log-odds of having a higher star rating, while facilities with one year or less had significantly lower log-odds of having a higher star rating. Culture change initiatives may require some time to effectively implement, but these initiatives are potential mechanisms to improve quality in high Medicaid nursing homes.

Panelist: **Lynn Offermann**, *George Washington U.*
Panelist: **Maritza R. Salazar**, *U. of California, Irvine*
Moderator: **N. Sharon Hill**, *George Washington U.*

As the problems faced by modern science become more complex, developing effective solutions increasingly requires teams of researchers working across disciplinary, organizational, and geographic boundaries. This practice of conducting science research in teams across these boundaries is referred to as team science. Management scholars are well-equipped to make significant contributions to this field as over decades they have accumulated a strong body of research focused on understanding factors that promote more effective teamwork. Participants in this symposium will gain important insights from a panel of researchers who have worked and consulted extensively with science research teams on how to apply management research to increase the effectiveness of these teams.

**Breaking the Scholar-Practitioner Dichotomy: Integration
and Synthesis for BOTH Knowledge & Practice**
Breaking the Scholar-Practitioner Dichotomy!

Chair: **Eric Sanders**, *Elmhurst U.*
Facilitator: **Ram Tenkasi**, *Benedictine U.*
Facilitator: **George W. Hay**, *Chicago School of Professional Psychology*

We in academia view the practical application of our work through far too narrow a lens. Instead of viewing scholarship and practice as opposite ends of a linear continuum, we should expand our focus to integrating the two into a synthesis of practice based on solid theory, and theory based on reliable practice. In this session, we will look at four models of how to use a larger, more integrative focus – three from Sanders (2015) and one from The Chicago School for Professional Psychology – and apply them to the various roles we fulfill in our work: researchers, teachers, consultants, leaders, etc.

The dramatic arts can provide valuable lessons for understanding management principles and developing leadership skills. When playwrights and screenwriters develop scripts, they use their imaginations to create believable and moving stories. These stories can provide interesting insights into managerial and leadership issues. Similarly, when actors prepare for plays and films, they apply different strategies aimed at creating truthful and compelling performances. These strategies can play a key role in developing leadership skills. The purpose of this workshop is to provide consultants, coaches, managers and educators with valuable insights on drama-based strategies that can be used to illustrate management principles and develop leadership skills. The workshop draws on a set of management and leadership principles developed in Daniel Goleman's work, and connects them to specific drama-based strategies. These principles include Goleman's six leadership styles (coercive, authoritative, affiliative, democratic, pacesetter and coaching) as well as his five components of emotional intelligence (self-awareness, self-regulation, motivation, empathy and social skills).

Modern Leadership Topics: Mentorship, Despotism, Reactions to Rule-Breaking & Leader Emergence

Digital Session Chair: **Ting Zhang**, *Harvard Business School*

MOC: Learning Down to Train Up: Mentors are More Effective When They Gather Insights from Below   

Author: **Ting Zhang**, *Harvard Business School*
Author: **Dan Jun Wang**, *Columbia Business School*
Author: **Adam Galinsky**, *Columbia Business School*

Mentorship, advising, and coaching are vital for individuals to achieve success within their organizations and across their careers. Although most mentors believe that knowledge resides at the top of organizational hierarchies, the current research demonstrates that they are more effective when they adopt and integrate a downward learning orientation. We introduce and define a downward learning orientation as the recognition that individuals lower in positional power are valuable sources of knowledge and learning. The current studies test whether the beliefs that mentors have about their sources of learning produce important downstream consequences on their mentees' performance and desire to learn. A field study at an online coding academy finds that mentors with a downward learning orientation increase the appeal of their students in the labor market. Two additional studies involving career advice exchange show that a downward learning orientation leads to better mentorship because it guides mentors to be more engaged and to create greater psychological safety. Overall, the current research adds new insights to the theory and practice on talent development by showing that effective mentorship depends on seeking insights from not only up but also down the status hierarchy.

MOC: Despotic leadership and job performance: A test of serial mediation and moderation model    

Author: **Shazia Nauman**, *Riphah International U.*
Author: **Hassan Imam**, *Riphah International U.*

Drawing on COR theory, this research investigates the negative side of leadership and examines how despotic leadership undermines subordinates' job performance by testing a serial mediation moderation model. The present study proposes surface acting and emotional exhaustion as explanatory mechanisms in the despotic leadership—performance relationship. Moreover, it investigated faith as a coping mechanism between despotic leadership and surface acting. Three wave time-lagged data were collected from supervisor-subordinate dyads (N= 241) working in manufacturing and service organizations. The results showed that despotic leadership has a direct and negative relationship with job performance and a negative indirect relationship with job performance via surface acting and emotional exhaustion. As expected, when subordinates religious faith increases, the positive relationship between supervisor's despotism and subordinates' surface acting becomes weaker. These findings have important implications for organizations wish to mitigate the negative effects of despotic leadership.

MOC: Political Skill and Informal Leadership: A Socioanalytic Perspective

Author: **Ning Guo**, *Peking U.*
Author: **Kai Yao**, *Fudan U., School of Management*
Author: **Zhang Yue**, *Fudan U., School of Management*

We propose a theoretical model of the socially constructed process of leadership emergence to clarify why and when political skill predicts team members' emergence as informal leaders within teams. Drawing upon the socioanalytic theory, we propose that team-member exchange (i.e., getting along with others on the path to leadership) and perceived competence (i.e., getting ahead of others on the path to leadership) underlies the relationship between political skill and informal leadership emergence. Additionally, we examine whether outcome interdependence serves as a boundary condition for political skill in team members' interactions. The results of a multi-time and multi-source survey indicate that politically skilled individuals could acquire informal leadership by getting along with and ahead of others in teams. Further, outcome interdependence enhances the positive effects of political skill on team-member exchange and perceived competence. Finally, the theoretical and practical implications of political skill and informal leadership are discussed.

MOC: How Leaders deal with Pro-Social Rule Breaking: Unravelling their rationales for response behavior

Author: **Annika Janssen**, *U. of Kassel*
Author: **Peter Eberl**, *U. of Kassel*

In this paper, we explore leaders' rationales for their responses to pro-social rule-breaking by their subordinates. Pro-social rule breaking describes a violation of formal organizational rules but with a good intention. Demonstrating appropriate leadership behavior in such a situation is a challenging task. On the one hand, leaders are expected to recognize the good intention of their subordinates, on the other hand, they are responsible for ensuring that rules are respected. Our study aims to improve our understanding of this dilemma situation of leaders by identifying key elements that leaders use for the rationalization of their behavior. In doing so, we employed a qualitative experimental design with vignettes. Our findings suggest that leaders generally consider two types of responses: 'clarifying and supporting' or 'clarifying and sanctioning'. Their rationales for these responses are based on two different levels of reflection. At the first level, they will consider cues directly related to the pro-social rule breaking, such as the outcome, the perceived intention, the severity, and the communication of the rule violation. However, these reflections will be mitigated or reinforced by more general cues on a second level like the organizational culture, the leader-follower relationship, and the structural setting.

Entrepreneurship, New Product Development, & Invention

Digital Session Chair: **Evangelos Syrigos**, *Department of Business and Management, LUISS Guido Carli U.*

MOC: **Corporate and Functional-level Performance Feedback in New Product Development**  

Author: **Evangelos Syrigos**, *Department of Business and Management, LUISS Guido Carli U.*

Author: **Konstantinos Christos Kostopoulos**, *U. of Piraeus*

Author: **Constantinos Mammassis**, *Athens U. of Economics & Business*

In this study, we add new insights in the performance feedback theory by arguing that although organizations give primacy to feedback regarding corporate-level financial goals, they also have to attend to a variety of functional-level performance signals to identify more suitable solutions and better adjust their behavior. However, due to the multiplicity of functional goals, we build on Gestalt theory to suggest that firms may use two key properties of functional performance feedback (i.e., simplicity and predictability) to guide their problemistic search and effectively select behavioral responses. In a longitudinal sample of 97 global incumbent pharmaceutical firms, we find that a simpler and more predictable set of functional performance signals strengthens the relationship between poor financial performance and the number of new products that firms initiate.

MOC: **Founding team entrepreneurial and professional identification, identity conflict, and ambidexterity**   

Author: **Niranjan Srinivasan Janardhanan**, *London School of Economics*

Author: **Stephen Xu Zhang**, *U. of Adelaide*

Author: **Jianfeng Jia**, *Northeastern U. China*

Author: **Steven Gray**, *U. of Texas at Austin*

Author: **Yuxin Jiao**, -

We introduce the concept of startup identity conflict as disagreements among founding team members about the core, enduring, and distinctive characteristics of a nascent business, and relate it with business ambidexterity—the balance between exploration and exploitation. Although ambidexterity is essential for startups' funding success, performance, and growth, it is difficult to achieve in a startup as its founding members may differ among one another in what they value. We argue that startup identity conflicts are negatively related to ambidexterity. Further, we demonstrate how founding team members' identification with two different targets, namely, the founding elite and their profession, jointly bring about startup identity conflict. Drawing from social identity theory and founder identity theory, we demonstrate that there is an indirect negative effect of team entrepreneurial identification on ambidexterity mediated by startup identity conflict, and that this indirect relationship is weaker when team professional identification is higher rather than lower. We test our hypotheses using a multi-informant three-wave survey of 102 startups. Implications for theory on identity in entrepreneurship, ambidexterity, and interpersonal conflict in teams are discussed.

MOC: **Searching Combinatorial Potential Through Knowledge Networks**

Author: **Siwei Zhu**, *Minnesota State U., Moorhead*

Author: **Gokce Serdar**, *Minnesota State U., Moorhead*

Individual search behaviors evolve to fit the conditions in which the search is performed and the goals of the search. Taking a survey-based network approach, this study conceptualizes inventors as agents that connect knowledge elements within a knowledge network; inventors' searches focus on a knowledge element's combinatorial potential—its suitability for combination with other knowledge elements to generate innovation. Our results, gleaned from a survey of top chemical scientists in the R&D department of a leading US oil & gas company, show that internal search in a knowledge network has an inverted U-shaped relationship with innovation and external search has a positive relationship with individual innovation performance. No reinforcement effect between internal and external search was found. Instead, our study reveals the search strategy through knowledge networks that inventors are likely to reduce their effort on internal search but maintain external search to identify the combinatorial potential of knowledge elements, making them more likely to create fruitful knowledge combinations for innovation.

Learning From Failure

Learning From Failure

Digital Session Chair: **Tristan L. Botelho**, *Yale School of Management*

OMT: **Firm Failure, Scandal, and Employee Exit From Innovation-Driven Industries**

Author: **Tristan L. Botelho**, *Yale School of Management*
Author: **Matt Marx**, *Cornell U.*

Over 100,000 employees join innovation-driven ventures each year, many of which will fail. How does firm failure impact the subsequent career of these employees? Current research primarily focuses on how failure affects executives, leaving a theoretical and empirical gap in our understanding with regards to how firm failure may also affect the modal employee: non-executives. We fill this gap by focusing on the relationship between firm failure and employees exiting the industry. In contrast to prior work, we leverage data from an entire industry (Automatic Speech Recognition), many (158) failure events, and differentiate between failure with and without scandal. Tracking nearly 14,000 employees, we find that the effect of firm failure is contingent on the employee's role and nature of the failure. Employees from failed firms exit the industry similar to employees who voluntarily leave surviving firms. However, employees from failed firms (with scandal) are the most likely to exit the industry. Furthermore, employees with specialized human capital from failed firms are the most likely to be retained in the industry, but this is not true if the failure involved a scandal. We also discuss demand- versus supply-side mechanisms and the permanent loss of specialized human capital to the industry.

Paper is NOT Available. Please contact the author(s).

OMT: **Binding Effects of Interorganizational and Interpersonal Trust and Control During Project Failure**

Author: **Ramin Vandaie**, *U. at Buffalo, The State U. of New York*

Although failure in joint projects is not uncommon, our knowledge of the impact of failure on the relationships between alliance partners and project participants remains limited. This study explores the conditions under which dyadic interpersonal and interorganizational ties in failed joint projects persist and reappear within a future project. We examine the role of past mutual experience and dyad similarity at the dyadic level, and team size and presence of a dominant partner at the team level, as moderators of the negative impact of project failure on the probability of any two partners collaborating again in the future. Implications for literatures on interpartner tie persistence and multipartner alliance dynamics are discussed.

Paper is Available to Meeting Registrants Only.

OMT: **All Failures Are Not Made Equal: Towards a Comparative-Contingent Theory of Learning From Failures**

Author: **Federica Angeli**, *U. of York Management School*
Author: **Marius Meeus**, *Tilburg U.*
Author: **Ashley Metz**, *Tilburg U.*

Although much scholarly work has investigated how organizations learn from past failures, we still lack knowledge about whether and how different types of failure experiences interact and jointly help firms prevent future failure events. This article develops a novel comparative-contingent theoretical framework that considers firms' experience with both small and large failures, as well as experiential and vicarious learning mechanisms through firms' both direct and indirect failure experience. We test our hypotheses on an original dataset comprising all companies that have issued high-severity and low-severity medical device recalls in the decade 2009-2018. We provide evidence of a strong experiential learning effect from both small and large failures, which however is salient only to prevent the same type of failure but not the other. We also find that firms' learning from small failures is contingent on two experiential factors. Firms directly experiencing a high number of large failures prove unable to learn from their own small failures, while exposure to a high number of peers' small failures reduces firms' learning rate from small failures. This article contributes to the scholarship addressing organizational learning by demonstrating a differential salience of small vs large failure events in stimulating learning and a detrimental interaction of experiential and vicarious learning mechanisms.

OMT: **Optimal Repositioning Following Failure and Time to Success on The Google Play App Store**

Author: **Ryan Angus**, *West Virginia U.*
Author: **Matthew Barlow**, *U. of Nebraska, Lincoln*
Author: **Cameron Verhaal**, *Tulane U.*

The optimal distinctiveness literature articulates how firms can increase their odds of success through product positioning strategies. However, new firms lack legitimacy and suffer from other liabilities of newness that increase the likelihood that their early products will fail to create value – even if they adopt optimal positioning strategies. This paper draws on the optimal distinctiveness and vicarious learning literatures to explore repositioning strategies in the wake of product introduction failure. We use survival analysis to test our theory using a unique data set from the Google Play app store. Our findings suggest that app developers can vicariously learn from the products introduced by their competitors and decrease the number of failures they experience before producing a successful app. More specifically, we find that app development organizations can substantially decrease the time to success by maximizing intra-firm product distinctiveness. We also find that the level of performance of a product's nearest competitors amplifies vicarious learning, further decreasing the time to success. While failure may be difficult to avoid in entrepreneurial contexts, these results help reveal strategies new firms can enact to fail less and succeed sooner.

Perspectives on Market Entry and Firm Boundaries

Digital Session Chair: **Hyoju Jeong**, *U. of Minnesota*

STR: Cooperative as an Entrant and Incumbents' Technology Upgrades 

Author: **Hyoju Jeong**, *U. of Minnesota*

This study examines the pro-competitive role of cooperative entry compared to investor-owned firm entry. Consumer cooperatives, by aligning firm's interests with those of consumers can eliminate costs coming from limited competition; thus, their entry becomes a bigger threat than investor-owned firm entry, forcing stronger reactions from incumbents. I test and find support for this argument in the US broadband industry from 2014 to 2018, showing that incumbents are more likely to upgrade their technology to high-tech in response to cooperative entry than in response to investor-owned firm entry. These effects are stronger for local investor-owned providers than for national investor-owned providers and in highly concentrated markets for high-tech internet service. The results are consistent when cooperative entries were made with low-tech, excluding an alternative mechanism that incumbents' responses are driven by technology level that cooperatives enter with and not by cooperative's unique organizational form itself.

STR: A Bilateral Perspective on Asymmetric Distance and Alliance Governance mode

Author: **Sergio Grove**, *U. of Texas at El Paso*

Author: **Rebecca Ranucci**, *U. of Hartford*

Author: **David Souder**, *U. of Connecticut*

Author: **Brian C. Fox**, *Bentley U.*

Collaboration and mutual learning motivate many firm alliances, but realizing these sources of value can also have the paradoxical effect of transforming alliance partners into future competitors. This paper revises models of alliance governance mode to capture the inherent tension between entry cost, mutual learning, and bilateral safeguarding by simultaneously analyzing the asymmetry between partner firms and that alliance based on industry relatedness. Using a sample of 2,878 U.S. alliances from 1985-2017, we find that instead of prioritizing low entry costs by using non-equity alliances, managers opt for equity governance when the partner firm may attempt to become a future competitor. Specifically, equity-based governance increases with partner industry asymmetry as firms safeguard against potential competition from both the alliance and their partner in a bilateral and dynamic way.

STR: Market Entry Decisions Revisited: The Case of Biopharmaceutical Firms in the Midst of COVID-19 

Author: **Shinhye Gloria Ahn**, *Seoul National U.*

Author: **Theresa Cho**, *Seoul National U.*

Author: **Sun Hyun Park**, *Seoul National U.*

In this study, we explore the linkage between a firm's status and its decision to enter new markets. Specifically, we focus on the speed of the entry decision, as well as the linguistic framing of their entry itself. Using a unique dataset of the biopharmaceutical industry during the COVID-19, we find that the middle-status firms were the fastest in entering the vaccine market and most prone to using novelty-oriented frames in announcing their entry. In the therapeutic drug market with lower Knightian uncertainty, however, middle-status firms failed to show such behavior. The findings of our study provide a novel contingency view on the effects of environmental uncertainty on market entry decisions.

Paper is Available to Meeting Registrants Only.

STR: Implications of Priority Access in Markets with Experts: Evidence from Online Marketplace Lending   

Author: **Anparasas Mahalingam**, *Purdue U.*

Author: **Mohammed Alyakoob**, *U. of Southern California*

Author: **Mohammad Rahman**, *Purdue U.*

Platform governance mechanisms such as market access control help to align all market players towards a common value proposition. Our study focuses on an important market access control mechanism: platform owners granting priority access to a subset of supply-side complementors to grow the marketplace and remove potential demand-side bottlenecks. We further examine how the effect of priority access may vary across expert versus novice complementors. Leveraging the randomized priority access given to expert institutional investors in LendingClub.com, we show that such access creates negative spillover effects on the performance of crowd retail investors. We provide further evidence in support of two mechanisms driving the impact of priority access, the intensity of priority access and creamskimming by institutional complementors.

Refugees and HRM

Digital Session Chair: **Robin Pesch**, *Newcastle U. Business School*

HR: Refugees in HRM: A Review, Conceptualization, and Research Agenda for Workplace Integration     

Author: **Robin Pesch**, *Newcastle U. Business School*
Author: **Ebru Ipek**, *San Francisco State U.*

Due to the ongoing refugee crises, refugees have attracted the attention of management scholars. However, the management literature on refugees lacks a conceptual foundation and contextualization. The present paper reviews and examines the concept of refugees, arguing that the careless use of the term refugee in research, combined with a lack of contextualization when theorizing about refugees' workplace integration, impede research in the emerging field of human resource management dealing with refugees. We argue that greater construct clarity is needed, as is a refugee definition that clarifies who belongs to the group of refugees and who does not. This conceptualization emphasizes that refugees are a heterogeneous group of displaced persons. Using a micro-macro framework, we discuss various criteria that can be used to distinguish different kinds of refugees. To consider this heterogeneity for further theorization and empirical work, we call for multi-level contextualization, which we concretize by formulating guiding principles that might aid future human resource management research on refugees.

HR: Expanding Strategic Human Resource Management by Learning from Refugee Recruitment     

Author: **Betina Agata Szkudlarek**, *The U. of Sydney Business School*
Author: **Eun Su Lee**, *U. of Newcastle*
Author: **Chris Brewster**, *Henley Business School, U. of Reading*

The recruitment of refugees is an increasing challenge around the world and one that is unlikely to be ameliorated by any effects of the COVID-19 pandemic. Finding employment is one of the most critical steps for refugees towards integration into their new society. Yet, many organizations do not consider or see the benefits to refugee recruitment. Our empirical evidence is collected from semi-structured interviews with multiple stakeholders partaking in refugee recruitment including, employers, governmental organizations, refugee support-service providers and refugees in Australia, a country with a long history of receiving humanitarian migrants. We demonstrate how employers leverage a collaborative model of recruitment while attempting to hire refugees. Our analysis uncovers a stakeholder-responsive and multi-level view of strategic human resource management where recruitment is seen as an embedded process involving the expertise, know-how and interests of numerous actors, many external to the employing organizations. To attend to both the organizational and societal goals, we suggest a potential role for strategic human resource management in addressing the grand challenges linked to employment in areas beyond refugee workforce integration.

HR: The HRM-CSR nexus and stakeholder co-dependency: Investigating refugee employment support programs     

Author: **Eun Su Lee**, *U. of Newcastle*
Author: **Betina Agata Szkudlarek**, *The U. of Sydney Business School*

Carolyn Dexter Award Nominee

Recent research suggests that human resource management (HRM) can play a crucial role in corporate social responsibility (CSR) and in addressing grand challenges, such as refugee workforce integration. This paper investigates how employers carry out their CSR goals through HRM practices, while working closely with non-profit organizations (NPOs) that facilitate refugee employment support programs. Using qualitative semi-structured interviews with employers and NPOs in Australia, we highlight their co-dependent relationship in addressing the challenge of refugee workforce integration. We demonstrate how, in this co-dependent relationship, the achievement of both CSR goals and social impact is enhanced through each stakeholder's unique expertise and access to resources. Our research findings advance the current understanding of the HRM-CSR literature on external stakeholder engagement by suggesting that a co-dependent, rather than just a collaborative, relationship can underpin the effective execution of HRM practices with CSR goals.

The Structural, Organizational, and Societal Shape of Authenticity *Organizational Authenticity*

Organizer: **Erica Bailey**, *Columbia Business School*
Organizer: **Rebecca Ponce de Leon**, *Fuqua School of Business, Duke U.*
Presenter: **James T. Carter**, *Columbia Business School*
Presenter: **N. Derek Brown**, *Haas School of Business, UC Berkeley*
Discussant: **Sheena S. Iyengar**, *Columbia U.*
Participant: **Carl Blaine Horton**, -
Participant: **Drew Jacoby-Senghor**, -
Participant: **Ashleigh Shelby Rosette**, *Duke U.*

Given the benefits of authenticity for individuals and their organizations, the goal of this symposium is to explore the social dynamics of authenticity, with a particular focus on how authenticity is socially constructed. Our focus complements past research on authenticity, which has primarily focused on the individual processes that prompt authenticity (Heppner et al., 2008; Peus, Wesche, Streicher, Braun, & Frey, 2012; Sheldon, Ryan, Rawsthorne, & Ilardi, 1997). In contrast to that approach, we adopt a social and organizational lens, examining how various structural and contextual factors—including hierarchical and intergroup processes—affect authenticity. Bringing together studies that explore both felt and perceived authenticity, we help to shed light on the complex, dynamic nature of authenticity. Utilizing experimental, archival, and observational methods, these four papers speak to the many ways authenticity can be influenced by social and organizational contexts. Additionally, this set of papers illuminate important psychological, physical, and interpersonal underpinnings of authenticity. To this end, the first two talks in this symposium explore the complex relationship between power and authenticity. Specifically, Bailey demonstrates how a seemingly simple decision—choosing one’s attire—shapes task engagement via feelings of authenticity. Further, emphasizing the importance of felt authenticity, these findings suggest that authenticity explains the effect of attire on workplace outcomes better than feelings of power. Building upon this paper, Carter reveals that social status, rather than power, facilitates greater authentic expression. Taken together, these first two talks clarify how power and authenticity relate to one another and emphasize how external factors, like dress codes and social hierarchy, may affect people’s ability to authentically express themselves at work. Resultantly, these results shed light on the ways that social dynamics impact authenticity. The final two talks explore how the strategies individuals adopt to navigate intergroup interactions impact both felt and perceived authenticity. These concluding talks focus on how identity and context interact to inform dynamics related to authenticity. Brown finds that in an effort to combat intergroup bias, stigmatized individuals may choose to downplay their identities, resulting in diminished feelings of authenticity. Finally, Ponce de Leon discusses perceptions of white allyship from the perspective of Black observers, revealing that whites who signal allyship through consistent and costly acts are viewed as less instrumentally motivated and, in turn, more authentic. Following these presentations, Sheena S. Iyengar will proctor a discussion on what authenticity is, how individuals create and express themselves in their organizations, and future directions for the organizational antecedents of authenticity.

Polynomial regression and response surface analysis (Edwards & van Harrison, 1993) was first introduced to management research nearly 30 years ago. Presented as an alternative to difference scores, researchers have adopted this methodology to visually present and statistically test the effects of fit and misfit proposed by theory. Since the advent of polynomial regression in management, it continues to prove itself as a useful and meaningful way to test and represent theory. The papers in this symposium present theoretical and empirical insight into abusive supervision, impression management, prosocial behavior, and supervisors' psychological contracts by using polynomial regression. The objective of this symposium is to showcase polynomial regression's utility, highlight theoretical and empirical contributions, and to stimulate new questions with Dr. Jeff Edwards serving as a discussant.

OMT: When Safe Spaces Turn Violent: How Managers Secure and Defend New Business Unit Legitimacy

Author: **Thijs Geradts**, *Maastricht U., School of Business & Economics*
Author: **Paul Tracey**, *U. of Cambridge*

New Business Units (NBUs) are commonly perceived as a legitimate innovation mechanism. While many corporations have introduced NBUs to help facilitate internal corporate venturing, NBUs often prematurely close long before ventures can demonstrate success. Moving beyond existing literature on NBUs, we study the internal dynamics of NBU legitimation work by managers inside a multinational conglomerate. At the large corporation, we find that mid-level managers played a critical role in attaining strategic and political legitimacy through molding and signaling as two legitimation building strategies. Following a legitimation crises, we find that mid-level managers sought to overcome strategic incongruence and political hostility through organizing a countermovement and functional disobedience as two defensive legitimation strategies. These findings uniquely shed light on legitimacy dynamics of NBUs and advance our understanding of how managers create NBUs and how they may respond when internal and external factors threaten the NBUs' survival.

OMT: Formal Contract Violation and Conflict: The Mediating Mechanism of Psychological Contract Violation

Author: **Wenjun Wang**, *School of Management, Xi'an Jiaotong U.*
Author: **Longwei Wang**, *Xi'an Jiaotong U.*

Although contract violation has a great negative effect on the supply chain relationship, few studies have deeply explored its influence. Based on the institutional theory, this study investigates how formal contract violation affects conflict in emerging economies. We extend the contract violation literature by suggesting that formal contract influences conflict through the psychological contract violation. The findings from a dataset of 186 firms in China indicate that formal contract violation has a positive effect on psychological contract violation. And psychological contract violation has a J-shaped relationship with conflict. Moreover, legal enforceability and relationship orientation strengthen the positive effect of formal contract violation on psychological contract violation.

OMT: Is the Paradox of Project Control Alive and Well in Mega Infrastructure Projects?

Author: **Michael Rollo**, *U. Of Sydney*

In the project context, the paradox of control has been associated with traditional, reductionist approaches to the management of projects where complexity and uncertainty are addressed by imposing more controls expecting more predictable outcomes when in reality this usually leads to more uncertainty and unpredictability. Complexity is a defining feature of mega infrastructure projects. Over the last decade, a number of research studies have advocated an approach to megaproject management, grounded in complexity theory, that suggests a move away from control focused reductionist methodologies toward the application of self-management, changing the level of control through delegation and empowerment. This paper reports on a study conducted from the perspective of the construction contractor project directors of 24 of the 25 mega infrastructure projects awarded in Australia from 1995 to 2018. It explores their approach to mega project management with the aim of identifying the extent to which they respond to complexity by encouraging self-management or by relying upon reductionist control based approaches. Evidence suggests that while some directors of mega infrastructure projects have encouraged self-management through empowerment and delegation, others have not, and the paradox of project control is alive and well in the delivery of mega infrastructure projects.

OMT: Acceptability in Cross-Border Regions: Towards a New Condition of Emergent Coordination

Author: **Nour KANAAN**, *OMT*

Emergent coordination relies on the accomplishment of three integrative conditions : accountability, predictability and common understanding (Okhuysen & Bechky, 2009). In this perspective, different organizational dynamics can erode the achievement of these conditions so that organizations must constantly work to (re)create them. Organizations operating in cross-border regions face political and social challenges as diverse profile of actors are required and because every situation at the border naturally raises political concerns associated to questions of national sovereignty. These challenges inherent to actors may emphasize divergent political agendas and interests, social incompatibilities and tensions which contribute to erode the coordination process yet without affecting the capacity to achieve the three conditions identified by Okhuysen and Bechky (2009). Based on an in-depth investigation of the Mont-Blanc and the Franco-Belgian regions, we developed a coordination-practice perspective that stress the necessity to consider acceptability as a new condition of coordination and by doing so, emphasize the efforts and work of actors engaged in such coordination process. Acceptability can be defined as the actors' willingness to accomplish and/or maintain tasks allocation and to support interaction articulations so that each member can benefit from the interaction. By creating acceptability, actors agree to engage in coordination work and consent to make and/or maintain such efforts so that complex interdependencies can be managed. We suggest that acceptability is achieved through three different practices: practices of consensus, conciliation or arbitration. Each of these practices is supported by different institutional, strategical and operational actors whose work converge respectively towards different logic : unity, coexistence and calculation.

Policy Issues in OSCM

Digital Session Chair: **Eugenia Rosca**, *Tilburg U.*

OSCM: A Relational View on the Role of Intermediaries in Poverty Setting Supply Chains

Author: **Eugenia Rosca**, *Tilburg U.*
Author: **Wendy Tate**, *U. of Tennessee*
Author: **Feigao Huang**, *U. of Tennessee, Knoxville*
Author: **Lydia Bals**, *Mainz U. of Applied Sciences*

There is significant impact of various external stakeholders on firms' global operations and supply chain decisions. In areas of extreme poverty, known as Base of the Pyramid (BOP) markets, there can be institutional voids in labor, capital, regulatory, product and contracting markets exacerbated by the informal nature of these markets. In these challenging settings, acquiring information and local legitimacy is difficult. For understanding how intermediaries can serve as instruments of public policy and influence the adoption of sustainability issues in global supply chains, extensive qualitative data was collected via expert interviews and field visits with multiple intermediaries and focal firms operating in BOP markets. Drawing on the relational view and distinguishing between material and support flows in supply chains, the findings suggest that strong ties with public, private and hybrid intermediaries can enable BOP businesses to achieve economic and social viability through four pathways: formalization, legitimacy for vulnerable stakeholders, social capital development, and acquisition of complementary resources through the extended network of intermediaries. Public intermediaries fill in structural holes in the support ecosystem and bridge links between BOP businesses. By funding these support organizations, governments can influence global supply chains and their operating environment.

OSCM: Public Procurement Capabilities for Collaboration and Enhanced Performance in Complex Projects

Author: **Juliana Bonomi Santos**, *FGV EAESP*
Author: **Sandro Cabral**, *Inspere Institute of Education and Research*

This paper explores how public procurers manage to collaborate with private suppliers to obtain enhanced procurement performance in complex projects. To answer our research question, we conducted an in-depth analysis of two case studies on the procurement of complex military systems by the Brazilian Armed Forces. We then followed the GIOIA methodology to inductively analyse data from interviews, official documents, media articles, and notes of project meetings. We identified public procurement capabilities for complex projects as an essential aspect to activate trust-based collaborative practices with private suppliers and enhance procurement performance by enabling the conciliation of operational performance (i.e. on-time delivery, budget and project scope compliance) and policy goals (i.e. inclusion of local suppliers in defense supply chains). Public procurement capabilities for complex projects encompass routines to manage the bidding and contracting process, relationships with a myriad of governmental agencies, and knowledge acquired within and across projects. The study extends the literature on collaboration in complex projects by shedding light on mechanisms that enable public procurers to successfully adopt collaborative practices in complex projects. It also complement existing studies focused on the performance implications of collaboration in complex exchanges by showing that collaboration facilitates the achievement of policy objectives without threatening operational performance.

OSCM: Orchestrating Coordination among Humanitarian Organizations

Author: **Lea Rüsich**, *Kühne Logistics U.*
Author: **Murat Tarakci**, *Erasmus U.*
Author: **Maria Besiou**, *Kühne Logistics U.*
Author: **Niels Van Quaquebeke**, *Kühne Logistics U.*

Disasters mobilize hundreds of humanitarian organizations. Despite the common aim to assist beneficiaries, coordination among humanitarian organizations remains a challenge. This is why the United Nations has formed clusters to facilitate information and resource exchange among humanitarian organizations. Yet, coordination failures in prior disasters raise questions as to the effectiveness of the cluster approach in coordinating relief efforts. To better understand barriers to coordination, we developed a grounded theory and augmented the theory with an agent-based simulation. Our theory discerns a cluster lead's roles of facilitating coordination but also investing in its own ground operations. We find that specifically serving such a dual role impairs trust and consequent coordination among cluster members. The additional simulation findings generalize the detrimental effect of the cluster lead's dual role versus a pure facilitator role and specifies it against various boundary conditions.

OSCM: An Analysis of Foreclosure Effects and Public Policy Remedies in Last-Mile Transportation

Author: **Lina Wang**, *W. P. Carey School of Business, Arizona State U.*
Author: **Elliot Rabinovich**, *Arizona State U.*
Author: **Harish Guda**, *W. P. Carey School of Business, Arizona State U.*

We examine how Amazon's decision to vertically integrate its retail platform and last mile delivery operations can lead to foreclosure in the last-mile transportation industry (as reflected in the deterioration of operating costs in the industry) as well as generate negative externalities (as reflected in decreases in the industry's environmental performance). We also expand on public policy measures that can ameliorate these effects. Based on an operational analysis of one of the largest last-mile transportation firms in the United States, we find that Amazon's decision to vertically integrate led approximately to a 45 percent increase in the mileage necessary to deliver parcels across the country. Furthermore, we find that this increase was more pronounced in areas of the country that are harder to reach or that require faster deliveries. These effects translate, on average, into \$0.69 in additional costs necessary to cover extra vehicular and labor expenditures per parcel. In areas that are more difficult to serve (either because they are harder to reach or require faster deliveries) these additional costs are even greater, reaching up to \$9.44 per parcel. These effects also carry with them negative environmental externalities. Our analysis suggests that for every parcel delivered, green-house-gas emissions increase on average by 0.25 kg, which, in turn, generate social costs in the order of \$0.01 per parcel. Because at the root of these outcomes are interactions among multiple organizations with significant market power asymmetries, we conclude our paper with suggestions on how public policy can monitor these asymmetric interactions and ameliorate such outcomes.

Renewed Interests in Geography: Implications for Innovation and Firm Strategy

Geography, Innovation, and Firm Strategy

Organizer: **Min Jung Kim**, *U. of Illinois at Urbana-Champaign*
Organizer: **Jing Deng**, *U. of Colorado, Boulder*
Discussant: **Janet E.L. Bercovitz**, *U. of Colorado, Boulder*
Discussant: **J. Myles Shaver**, *U. of Minnesota*

Researchers have made significant progress in understanding the role of geography in innovation and firm strategy (e.g., Alcácer & Chung, 2007; Audretsch & Feldman, 1996; Porter, 1998; Saxenian, 1996; Shaver & Flyer, 2000; Sorenson and Baum, 2003). Recently, scholars have shown renewed interest in understanding how geography affects inventors and firms, paying increasing attention to its relation to issues such as gender inequality (Ghani, Kerr & O'Connell, 2013; Sorenson & Dahl, 2016), regional dynamics (Safford, 2009; Wang, Madhok & Li, 2014), intellectual property litigation (Alcácer, Beukel, & Cassiman, 2017; Beukel & Zhao, 2018), and political uncertainty (Cerqueiro, Mão-de-Ferro, & Penas, 2019; Jens, 2017). This symposium aims to extend this conversation by including four empirical studies that explore the following questions: 1) How does geography affect the inventor gender gap (i.e., female vs. male inventor activity)? 2) How do the dynamics of industry clusters (i.e., the patterns of growth or decline) affect the novelty of firm innovation? 3) Why is patent litigation so geographically concentrated across countries? and 4) How does political risk affect firms' decision to locate in the center of power (i.e., the capital city)? We expect that this symposium will encourage cross-fertilization of ideas between different literatures in management and between literatures in management and other fields.

Entrepreneurship and Venture Capital

Digital Session Chair: **Susanne Koster**, *Erasmus U. Rotterdam*

STR: Generating Knowledge Transfers and Capital Gains: The Challenge of Corporate Venture Capital 

Author: **Susanne Koster**, *Erasmus U. Rotterdam*

Management scholars typically conceptualize corporate venture capital (CVC) investments as options to generate knowledge transfers from the ventures to the corporate investors but overlook that these investments also create an option to generate capital gains by exiting the ventures. We investigate when the investment paths towards knowledge transfers and exits overlap or diverge. In a novel dataset, we follow the ventures in which corporate investors in the chemical industry invested over time resulting in 2,688 venture-year combinations. We explore three investment characteristics known for facilitating the growth of ventures and estimate the effects that they have on the probability of generating a knowledge transfer and an exit. Using a bivariate probit model, we find that investing in ventures that are technologically less distant and that have many patents increases the likelihood of both a knowledge transfer and an exit. Investing in a syndicate with many co-investors increases the likelihood of an exit but decreases the likelihood of a knowledge transfer. These findings support the idea that knowledge transfers require a link between the ventures and the internal business units of the corporate investor, while exits require access to future buyers of the ventures, typically obtained by syndicating with venture capitalists. Our study therefore demonstrates the conditions under which the dual investment paths of CVC compete.

STR: Low Risk and High Return? Political Connections in Venture Capital Investments 

Author: **JiaMin Zhang**, *Department of management and marketing, The U. of Melbourne*
Author: **Jiatao Li**, *Hong Kong U. of Science and Technology*

Venture capital (VC) firms are characterized by investing in high-risk/high-return deals. Drawing upon the influence rent perspective, our study finds that the risk-return relation of VC investments can be manipulated and distorted through political influence. Based on 8,748 VC deals made by 359 VC firms in China, it shows that politically-connected VC (PVC) firms tend to invest in late stage companies (low-risk). Moreover, PVC firms exit VC deals significantly more quickly and demonstrate higher investment returns than other VC firms (high-return). Finally, we show that PVC-bundled firms (i.e., VC firms closely following PVCs via co-invest relationships) are endorsed with setting-specific influence rents and can also access to low-risk/high-return VC deals when co-invest with PVC firms.

STR: Into the great unknown: When expressing more uncertainty improves entrepreneurial financing outcomes 

Author: **Ivana Naumovska**, *INSEAD*
Author: **Derek Harmon**, *U. of Michigan*

Entrepreneurial firms usually try to express less uncertainty when communicating with prospective investors. However, we propose that in nascent markets, where what it takes to be successful often is not yet known, expressing more uncertainty may actually be beneficial. Drawing on research that shows how expressing uncertainty about issues that are unknowable can signal competence and credibility, and build trust with an audience, we argue that firms in nascent settings that express more uncertainty will enjoy more favorable financing outcomes. Studying the nascent market of special purpose acquisition companies (SPACs) in the United States from 2003 to 2016, we show that firms that express more uncertainty in their prospectus have a higher likelihood of securing financing. We then show that as the SPAC market matures and knowledge about what it takes to be successful in this market increases, the positive effect of conveying uncertainty diminishes and eventually turns negative. This study expands our understanding of the role of uncertainty in entrepreneurship, offers deeper insight into of how language operates in financial markets, and sheds light on an increasingly popular but understudied investment option.

STR: Micro-Level Homophily as a Macro-Level Feedback Loop  

Author: **Demetrius Lewis**, *Emory U., Goizueta Bus Sch*
Author: **Anand Swaminathan**, *Emory U.*

We argue that the effects of homophily at the micro and macro levels represent a feedback loop. At the micro level, homophily between exchange partners can reduce search and transaction costs but trades off on selecting higher-quality partners. At the macro level, as higher-quality partners that go unselected leave the market, less-skilled but better-connected partners are left behind. As the market's skill base weakens, search and transaction costs increase. When search and transaction costs are high, decision criteria based on homophily become more efficient and partners rely further on these criteria. Thus, homophily makes high-quality exchange relationships more difficult to attain at a macro-level, reinforcing homophily as a decision criterion at the micro level. Empirical analysis of the investment decisions of venture capital investors finds that homophily based on network and personal attributes influences which entrepreneurs' ventures are funded. In industries where homophily is more prevalent, the skill base of entrepreneurs becomes weaker over time. Dynamics of investor decision-making illustrate that a weaker skill base reinforces network-based homophily and that network and personal-based homophily reinforce themselves over time.

The Dark Side of External Monitors

Digital Session Chair: **Felipe Calvano Da Silva**, *Virginia Tech*

STR: A Shuffling Of The Guard: Audit Committee Exit As A Response To Financial Restatements 

Author: **Felipe Calvano Da Silva**, *Virginia Tech*
Author: **Joel Andrus**, *U. of Missouri*
Author: **Michael C. Withers**, *Texas A&M U.*
Author: **Steven Boivie**, *Texas A&M U.*

Financial restatements can lead to numerous substantive and symbolic actions that help offending firms regain legitimacy. Prior research has generally focused on “changing of the guard” as a response to restatements, where directors exit the board. However, firms are not limited to the binary decision of whether directors should exit or not. Instead, directors might exit the audit committee while still retaining their board seats—a phenomenon we refer to as committee exit. Drawing on symbolic management theory, we argue that firms may engage in a “shuffling of the guard” that allows them to retain key directors with greater human and social capital, structural power, and influence. Using a sample of audit committee members at publicly traded firms who announced a restatement between 2003 and 2018, we explore which of three possible paths audit committee members take following a restatement: staying on the audit committee, exiting the audit committee but remaining on the board, or exiting the board entirely. The results of our analysis provide support to our arguments that committee exit is an important decoupling tactic for firms that signals change while simultaneously allowing for stability on the board.

STR: Watchdog or Colluder? The Role of the Media in Private In-house Meetings  

Author: **Mingzhi Liu**, *Asper School of business, U. of Manitoba*
Author: **Songlian Tang**, *East China U. of Science and Technology*
Author: **Zhenyu Wu**, -
Author: **Rong Zeng**, *U. of Manitoba*

Many extant studies argue that the media have an effective governance role in disciplining firms’ opportunistic behaviors. However, the agenda-setting theory in communication research suggests the possibility of collusive behavior between the media and its stakeholders. To contribute to the corporate governance literature, we use private in-house meetings—the opaque communications between management and outside investors—as our empirical context to examine the specific governance role played by the media in insider trading. We investigate the monitoring effects of media in disciplining insider trading using a special large dataset from private in-house meetings. In particular, we investigate whether the media agenda (measured by the total number of news counts about the focal firm within a period around the firm hosting its private in-house meeting) is associated with higher or lower insider trading profitability. We found that the media coverage tends to be more positively related to insider trading profitability, suggesting the possibility of colluding effects between corporate and media agendas. We also investigate the moderating effects of media orientation, media tone, and media content source. Empirical results suggest that policy-oriented media coverage and media coverage from original sources weaken the association between media coverage and insider trading profitability, while negative tone media coverage enhances the association.

STR: How Does the Majority Voting Rule of Director Election Influence Firm Value? 

Author: **Zhonghui Wang**, *California State U. San Bernardino*

Taking the agency theory perspective, we theoretically analyze and empirically explore whether the majority voting rule of director election significantly influences firm value. Investigating S&P 1,500 firms between 2007 and 2017, we predict and confirm that the majority voting rule positively impacts firm value and stronger board independence strengthens the positively effect of the majority voting rule on firm value. Meanwhile, the temporal effect of the majority voting rule on firm value resembles an inverted U-shape relationship. Contrary to our prediction, we find that institutional shareholder ownership weakens the positively effect of the majority voting rule on firm value. We contribute new evidence that helps clarify the empirical ambiguity among extant research of the impacts of the majority voting rule. Further, our results shed light on both the benefits and potential drawbacks of empowering shareholders to strongly influence board elections.

Understanding the Causes and Impacts of CEO Departure

Digital Session Chair: **Aida Darouichi**, *U. of Geneva*

STR: **MONEY VERSUS LEGACY: PRE-SUCCESSION BEHAVIOR OF VOLUNTARILY DEPARTING CEOs**   

Author: **Aida Darouichi**, *U. of Geneva*

Author: **Sven Kunisch**, *Aarhus U.*

Author: **Albert Cannella**, *Texas A&M U., College Station*

Do CEOs who leave voluntarily influence firm performance before their departure to boost their own wealth or do they care more about their legacy? We address this research question by examining whether voluntarily departing CEOs—defined as CEOs who terminate their tenure without facing significant pressure to do so—make decisions in the pre-succession phase to boost firm performance. In this study, we focus on voluntary departure because the pre-succession phase of this departure type is uniquely characterized by pronounced information asymmetry and considerations of future career prospects of the CEO. Building on the premises of agency theory and on cognition-based explanations of executive decision-making we distinguish between two types of self-interested behavior: CEO personal wealth interests and CEO legacy interests. Our analyses of hand-collected data for voluntary CEO departures in S&P 500 firms between 2000 and 2016 reveal that voluntarily departing CEOs do not actively engage in self-interested decisions in the pre-succession phase. However, throughout their tenures, these CEOs do make accounting-based decisions that are likely to serve their interests in the post-departure phase. With this study, we aim to spur research devoted to voluntary CEO departures and their implications for organizations. These findings have important theoretical and practical implications for corporate governance research and agency theory and what the most appropriate mechanisms of monitoring and control might be on the behavior of voluntarily departing CEOs.

Paper is NOT Available. Please contact the author(s).

STR: **The role of human and social capital in CEO rehiring after voluntary departure**  

Author: **Aida Darouichi**, *U. of Geneva*

This study examines the rehiring of voluntarily departed CEOs. We develop and test a theoretical framework, which analyzes how CEO human and social capitals influence the likelihood of CEO rehiring. We argue that voluntarily departed CEOs represent unique resources for organizations that can hardly be found in the executive labor market when they master highly specific skills and have large networks. The analysis of CEO rehiring of S&P500 firms between 2000-2016, reveals that strong specialist skills do favor the rehiring of voluntarily departed CEOs as top executives, while large social networks do not confer an advantage for rehiring. The paper contributes to the scholarship about CEO career, human capital, and social capital.

Paper is NOT Available. Please contact the author(s).

STR: **Can Powerful Allies Save the CEO? The Effect of the CEO's Subgroup on CEO Dismissal** 

Author: **Jihae You**, *Louisiana State U.*

Author: **Taekjin Shin**, *San Diego State U.*

Author: **Yunhyung Chung**, *U. of Idaho*

While existing research on power and CEO dismissal predominantly focuses on CEO power over the board, we examine how CEO power as well as power dynamics among subgroups in the board influence CEO dismissal. We use a faultline approach to identify subgroups in the board based on directors' demographic attributes (i.e., gender, race, and age) and examine how the power and size of the subgroup that includes the CEO affect the likelihood of CEO dismissal. We argue that the risk of CEO dismissal is reduced when the CEO is more powerful, the CEO belongs to a powerful subgroup, or the CEO belongs to a larger subgroup in the board. Using data from S&P 500 boards, we find that the risk of CEO dismissal decreases as CEO power increases, the power of the CEO's subgroup (i.e., subgroup including the CEO in the board) increases, and the size of CEO's subgroup increases.

STR: **CEO Turnover and Bankruptcy: The Effects of CEO Turnover on Bankruptcy Reemergence**

Author: **Achim Schmitt**, *Ecole Hoteliere de Lausanne*

Author: **Rob Langan**, *U. of Geneva*

Author: **Markus Menz**, *U. of Geneva*

Does CEO turnover before or during bankruptcy proceedings increase a firm's chances for bankruptcy reemergence? Whereas scholars have emphasized that CEOs are critical to improve organizational performance and effectiveness, prior turnaround studies on CEO turnover have neglected the dynamics of managerial discretion during the period prior to filing and the period under bankruptcy protection. In this study, we highlight the differences between both periods to theorize about how a CEO turnover will affect a bankrupt firm's likelihood for bankruptcy emergence. Emphasizing the distinctiveness of the two periods, we further hypothesize that performance severity will have opposing moderating effects on the relationship between CEO turnover and firm emergence depending on the period in which the CEO turnover occurred. Based on a sample of 345 US firms that filed for bankruptcy between the years 1992 and 2019, we find empirical support for our arguments.

TMTs, Affect, and Personality

Digital Session Chair: **Marc Kowalick**, *U. of Mannheim*

STR: And Everything Stays the Same: How CEO Hubris Induces Persistence

Author: **Marc Kowalick**, *U. of Mannheim*
Author: **Moritz Appels**, *U. of Mannheim*

We qualify suggestions of prior literature that hubristic CEOs' risk-affinity should lead these CEOs to engage in strategic change. Specifically, we extend prevailing arguments on the positive association between CEO hubris and risk-taking to show that, while engaging in risky strategic activities, hubristic CEOs are unlikely to adapt the organization's overall strategic path. We examine our arguments using a panel dataset comprising 1,126 S&P 1500 CEOs and find strong support for a negative effect of CEO hubris on a set of indicators of strategic change. This effect is moderated by CEO conservatism, especially in munificent environments. Our results indicate that, beyond a preference for risk, hubristic CEOs exhibit a preference for steadiness that may prevail in the overall effect of hubris on certain organizational outcomes.

STR: The Interplay of CEO Affect, Ambiguous Performance Feedback, and Firm Risk Taking

Author: **Yuxuan Lily Zhu**, *U. of California, Irvine*
Author: **John Kim**, *U. of California, Irvine*
Author: **John Joseph**, *U. of California, Irvine*

One frequent assumption in the behavioral theory of the firm is that managers react in similar manners to a given type of performance feedback. However, ambiguous feedback leaves ample room for key decision makers' psychological factors to shape decisions. Augmenting the behavioral theory of the firm with psychological research on affect and cognition, we examine how CEO affective traits—a largely under-examined domain of CEO characteristics—alter firm risk taking under ambiguous performance feedback. We theorize that (1) feedback ambiguity dampens firm risk taking in general; (2) CEO positive affectivity attenuates this effect, while CEO negative affectivity strengthens this effect. We use a sample of Fortune 500 companies over the period of 2001-2019 and assess CEOs' affective dispositions using content analysis of their speeches in the Q&A sections of earnings conference calls. Results provide general support for our theory.

Paper is Available to Meeting Registrants Only.

STR: The effect of executive personality on strategic assessment of an environmental jolt

Author: **Michael Greiner**, *Oakland U.*
Author: **Scott D Julian**, *Wayne State U.*

Upper Echelons Theory is the subject of active and ongoing research. Yet the validity of one of its foundational relationships, that executive characteristics affect their interpretations, has been implicitly assumed rather than empirically tested. Such lack is no doubt due to the difficulty in assessing the internal thought processes of top managers. In this paper, we start to open this black box, taking advantage of computerized textual analysis to identify CEO personalities and relate them to differing ways these executives may interpret their environment. We test how the Big 5 personality traits relate to the level of urgency and certainty CEOs resulting from their assessment of an environmental jolt, namely the financial crisis of 2008. We find mostly strong support for our ten predicted relationships, thus contributing to research into upper echelons theory, strategic issue diagnosis, environmental jolts and "grand challenges."

STR: When CEOs are all about themselves: Perceived CEO narcissism and middle managers' workplace behavior

Author: **Jooyoung Kim**, *Michigan State U.*
Author: **Hun Whee Lee**, *The Ohio State U. Fisher College of Business*
Author: **He Gao**, *Michigan State U.*
Author: **Russell Eric Johnson**, *Eli Broad School of Business, Michigan State U.*

The COVID-19 pandemic has significantly impacted how businesses operate, creating high levels of uncertainty on the part of organizational members. Drawing on social information processing theory and implicit leadership theory, we develop and test a model that explains how middle managers' perception of CEO narcissism shapes their perceived uncertainty at work, particularly when COVID-19 threatens the firm's survival and growth. Managers' sense of uncertainty leads to their engagement in uncertainty-based coping responses, including laissez-faire leadership (i.e., escape coping) and impression management (i.e., control coping). We collected data from 200 middle managers in North America and the United Kingdom and found general support for our model. Our research bridges the gap between macro and micro perspectives and provides novel insights about how perceived CEO narcissism can shape managers' behaviors in the context of the COVID-19 pandemic, thereby contributing to the literatures on CEO narcissism, leadership, and crisis management.

Digital Session Chair: **Kamil Stronski**, *ESMT Berlin*

STR: Buying Legacy? How CEO Career Horizon Impacts Employee Wages   

Author: **Kamil Stronski**, *ESMT Berlin*

Management scholars demonstrated that CEOs upon retirement think more seriously about their legacy. Most prior studies focused on how the short career horizon of CEOs amplified their concern of legacy in the eyes of external stakeholders, which further impacted their strategic decision making. This paper takes a different approach in that it recognizes the importance of internal stakeholders' (i.e., employees) view of CEO legacy and how it affects CEO decisions. Specifically, I predict that to ensure being remembered favorably by their employees, CEOs near retirement – i.e., with shorter career horizon, pay higher wages to employees. This effect is further hypothesized to be less pronounced for female CEOs and owner-CEOs, who are less motivated to leave a legacy. Moreover, it is predicted to be stronger in situations when the retiring CEOs are especially concerned about improving employees' perception of them, such as when a larger number of employees are already quitting voluntarily or are residing in the same communities as the retiring CEOs. These ideas were thoroughly examined using comprehensive data on German firms between 2000 and 2014 and received robust empirical supports.

STR: Alarm Bells: The Effect of Hedge Fund Activism on CEO Attention to Shareholder Value

Author: **Haeyoung Koo**, *U. of California, Irvine*

Author: **Margarethe F Wiersema**, *U. of California, Irvine*

Hedge fund activism has emerged as a key corporate governance mechanism. While studies and anecdotal evidence suggest that activist hedge funds increase shareholder value, the mechanism by which they influence management to increase shareholder value is relatively unknown. We draw on the attention-based view of the firm to develop a deeper understanding of the effect of hedge fund activism on managerial attention. Through a textual content analysis of earnings transcripts of Fortune 500 companies from 2003 to 2017, we argue and find that the attention of the CEO to shareholder value and to capital allocation increases when the firm is targeted by an activist hedge fund.

STR: The Role of Institutional Environment Driving Firms' Attention to Forward-looking Aspirations  

Author: **Ali Alipour**, *Özyegin U.*

Author: **Kamyar Goudarzi**, *Smith School of Business, Queen's U.*

Author: **Nufer Yasin Ates**, *Sabancı U.*

Author: **Renzi Gozubuyuk**, *Sabancı U.*

Author: **Mehmet Erdem Genc**, *Ozyegin U.*

When are firms' search behaviors regulated by their future performance expectations below their future performance targets (forward-looking determinant of search behavior) versus their performance below their historical or social aspirations (backward-looking determinant of search behavior)? Firms' search behaviors are influenced both by their forward- and backward-looking determinants, yet we do not know much about the contingencies that make firms more/less attentive to the forward-looking versus backward-looking search determinants. Our fundamental argument is that firms' resource dependence on distinct environmental actors in different institutional settings makes their search more attentive to forward- or backward-looking search determinants. We specifically argue that although capital market demands in market-based financial systems make firms' search forward-looking, demands and pressures of banks in bank-based financial systems make their search activities backward-looking. Our findings suggest that although the impact of future performance expectations below targets on firms' search activities is intensified in market-based financial systems, firms' search activities are more influenced by their performance decline below aspirations in bank-based financial systems. We discuss implications for theory and practice.

Learning & Imitation

Digital Session Chair: **Christopher Jung**, *WWU Münster*

STR: Let's Get Digital: Does Digital Transformation Spur Long-term Performance? 

Author: **Christopher Jung**, *WWU Münster*

Scholarly literature posits that systematic change activities are vital for firms to create and sustain competitive advantage. One of these activities is digital transformation. Prior studies have focused on the short-term performance effects of digital transformation, but its effects on long-term competitive advantage have remained unclear. This study draws on the dynamic capabilities view and offers new theory and empirical evidence on the long-term performance implications of digital transformation as a systematic change activity. Accounting for the benefits and costs of a firm's digital transformation activities, we theorize that the relationship between digital transformation and long-term performance is more complex than previously assumed; we believe it follows an S-shaped functional form across the three stages of variation, selection, and maturity. To test our theorizing, we use state-of-the-art techniques in machine learning, text-based data on corporate digital transformation activities that synthesize scholarly literature and consultancy reports, companies' annual reports, and recent methodological advances in capturing long-term performance. We assemble a unique longitudinal data set of 17 years with 30,456 firm-year observations. Our regression analyses confirm the presence of an S-shaped functional form that rises in the variation stage of digital transformation, declines in the selection stage, and rises again in the maturity stage. Our study suggests that a more holistic and nuanced assessment of systematic change activities is warranted. Given that so many companies are intensifying their digital transformation activities, this study is of interest to practitioners seeking to understand the effects of those activities on long-term shareholder value.

STR: Resource Allocation as a Hierarchical Learning Process 

Author: **Oliver Baumann**, *U. of Southern Denmark*
Author: **Kannan Srikanth**, *The Ohio State U. Fisher College of Business*
Author: **Tiberiu Sergiu Ungureanu**, *Ohio State U.*

How to allocate resources between competing uses, such as between exploration and exploitation, denotes a fundamental management challenge. In this paper, we use an agent-based approach to model corporate resource allocation as a hierarchical learning process, in which senior managers learn about the prospects of divisions, whose (middle) managers learn about the value of the projects available to them. We apply our model to understand the implications of an underexplored facet of organizational structure – the centralization of decision rights, or span of control, at different levels of the organizational hierarchy. By changing the breadth of opportunities and the nature of feedback that senior and middle managers receive, the centralization of decision rights is an important determinant of an effective division of exploratory labor. We provide two main insights into this relationship: First, we characterize how, for organizational structures that differ in their degree of centralization of decision rights, senior managers need to promote either broad exploration through more frequent reallocations to divisions, or deep exploration through more stable allocations. Second, we show how failure to achieve appropriate exploration at any level of the organizational hierarchy is costly and cannot be compensated for by adjustments at another level. Overall, our findings suggest that “exploration follows structure” in the sense of mandating fit between the locus of exploration and the locus of control.

STR: When Running Out of Imagination: Vicarious Learning as a Mechanism to Revitalize Unused Knowledge

Author: **Sara Ryoo**, *Binghamton U.-State U. of New York*
Author: **Seungho Choi**, *Ewha Womans U.*
Author: **Joseph T. Mahoney**, *U. of Illinois at Urbana-Champaign*
Author: **Wen Zheng**, *ShanghaiTech U.*

This study examines conditions under which the focal firm is more likely to learn from other firms' experience to leverage its unused knowledge. In doing so, we examine 2,688 U.S. pharmaceutical firms from 1979 to 2017 concerning how their propensity to explore or exploit influences the subsequent use of their own unused knowledge. We find that the focal firm with increased exploration orientation positively affects the spill-ins of its unused patents. Furthermore, knowledge similarity between the knowledge-originating firm and the recipient firm positively moderates this relationship.

STR: Learning from being imitated

Author: **Sangyun Kim**, *U. of Wisconsin, Madison*

A long-standing view in the strategy literature is that being imitated by competitors hinders the competitive advantage of the firm. This study, however, proposes a different view that being imitated by others can actually help a firm sustain its competitive advantage in the context of sequential product developments. Drawing on the theory of experiential learning and strategic experimentation, I argue that imitation by competitors offers learning opportunities for the innovator because the imitation product can serve as a vicarious experiment from which the innovator learns more about its own product. Results from the unique data of the video game industry support the prediction that, conditional on the quality of the initial version of the product, the more heavily imitated an original product is, the higher quality the sequel of the original product tends to have. Furthermore, the positive effect on the quality of the innovator's next-generation product is strengthened when market visibility of the imitators is high and weakened when the innovator experiences structural changes in its organizational units.

Strategic Intent, Leadership, and Commitment in the Modern Economy

Digital Session Chair: **Wayne Brooke Nelson**, *Cranfield School of Management*

STR: Theorizing the Nature and Process of Strategic Intent: A Literature Review and Conceptual Synthesis

Author: **Wayne Brooke Nelson**, *Cranfield School of Management*
Author: **Andrey Pavlov**, *Cranfield School of Management*
Author: **Cliff Bowman**, *Cranfield U.*

Since its introduction over 30 years ago, management scholars have employed the strategic intent concept to assign a central role to management agency in their research of organizations. To improve our understanding of strategic intent we conduct a systematic review of the management literature, including papers from action philosophy, which address the related notions of intentionality and 'we-intention.' The review reveals that strategic intent is used to represent managers' purposeful behavior in studies of strategy and strategic change, international business, innovation, ecosystems, corporate social responsibility, and technology adoption. Despite this broad usage, strategic intent and the processes and mechanisms by which it influences managers' behaviors and beliefs remain imprecisely defined and explored. Seven attributes of strategic intent emerge from the review: a desired future state; a belief in the linkage between action and outcome; a resource commitment; a socialization process creating awareness and acceptance across an organization; selection, allocation and preservation mechanisms; shared cooperative action; and action-based learning. Integrating these attributes, we outline a theoretical model of strategic intent. Finally, we set out avenues for future research to advance a more complete conceptualization of the concept.

STR: The value of Commitment for Strategic Decision-Making: Evidence from a Field Experiment

Author: **Elena Novelli**, *Bayes Business School (formerly Cass)*
Author: **Chiara Spina**, *INSEAD*

A fundamental question for research in strategy concerns the extent to which managerial approaches can make a positive impact on firm-level performance. This question is particularly relevant in entrepreneurial settings, where firms have to form their strategy in environments characterized by high degrees of uncertainty that is endogenous to entrepreneurial action. An emerging stream of research suggests that, in these contexts, firm performance benefits from systematic decision-making approaches. Despite the important insights brought forward by these contributions, the advancement of research in this area is constrained by two fundamental issues. First, limited conceptual work has investigated the boundary conditions that determine the effectiveness of systematic managerial approaches to decision making. A particularly relevant open debate in this area concerns the role of commitment, or the extent to which some of the choices that define a firm's strategy have been made, constraining subsequent action. Second, despite the substantial interest that these types of decision-making approaches have generated within the scholarly and practitioner communities, empirical evidence on their performance implications is still very limited and tends to focus on more established firms, characterized by higher levels of commitment. In this paper we address these issues and theorize that some level of commitment allows firms in entrepreneurial settings to benefit from the use of systematic approaches to managerial decision-making. We test our theoretical intuition with a 9-month field experiment with 259 UK entrepreneurs attending a strategy training program.

STR: Treading a Tightrope: Platform Strategy and Political Externalities

Author: **Olivier Chatain**, *HEC Paris*
Author: **Madhulika Kaul**, *HEC Paris*

Platforms employ various levers to enable user membership and participation among the various participant sides, in order to generate and grow positive network externalities that are in turn, beneficial for their performance. However, the use of the same platform levers also generate political externalities, since platform users are also state constituent(s) simultaneously. We explain the origin of these political externalities, as a result of platform actions, and analyze their impact on states, and users. We further investigate how these political externalities impact platform performance - first, due to changes in their non-market environment and second, due to changes in user membership and participation. We draw implications for platform strategy and policy.

STR: Moving Strategic Leadership Further: An Analysis of Strategic Shared Leadership and Firm Performance

Author: **Alexandra Van Der Berg**, *U. of Muenster*
Author: **Thomas Schaeper**, *U. of Muenster*
Author: **Stephan Nüesch**, *Westfälische Wilhelms-U. Münster*

Supervisory theories of leadership have identified a trend towards less hierarchical leadership structures in organizations, which put the concept of shared leadership into focus. Accordingly, the strategic leadership of the organizations has also already started to adopt more horizontal decision-making processes and introduced strategic shared leadership. Strategic shared leadership defines the process of sharing strategic decisions at the top management level and becomes especially important in today's complex work setting. In this study, we theorize that a shared leadership approach needs to complement the strategic leadership of a firm by its top management to cope with an increasingly complex and uncertain work environment, and to exploit the advantages of a shared decision-making process in this context. To probe our theorizing, we derive a text-based measure of strategic shared leadership and identify how and under which conditions strategic shared leadership shapes firm performance. We analyze the 10-K annual reports of 7,668 publicly listed firms in the U.S. between 1994 and 2017. Results of regression analyses support our theorizing that strategic shared leadership increases firm performance and, furthermore, show that this effect is contingent upon internal and external characteristics of the firm. Precisely, high managerial ability and high market dynamism increase the strategic shared leadership-firm performance relationship.

Author: **Lena Song**, *New York U.*

This paper examines the role racial discrimination plays in the positioning of radio stations in the post-war Jim Crow era. I construct a novel, comprehensive dataset of all commercial radio stations across the U.S., including station-level financial information and black-oriented programming hours, at the start of minority programming in broadcast media. By comparing profitability of black-oriented and other radio stations, I show that black-oriented stations were significantly more profitable than other stations in the same market. In addition, higher profits are correlated with higher levels of black-oriented programming. The profitability of this new format is shown to be correlated with local measures of racism. Using a theoretical framework with endogenous product choice, I show that the empirical results provide evidence for firm owner discrimination, consistent with an underprovision of content for minorities.

The last few years have seen an explosive growth in the power of platform-based firms, aka Big Tech, which has become even stronger as a result of the COVID-19 crisis. Their unprecedented and increasing success had recently led to some serious questions about the nature and exercise of their power, as calls for regulating them have been increasing the world over. Traditional antitrust analysis, well geared for a world of discrete markets which can be assessed by robust tests and well delineated players, is not well suited to address this changing conception of power, as recent reviews in the US, the EU and the UK suggested in 2019, and regulators are clamoring for a more fine-grained understanding of business practices – such as what our field can offer. This panel brings together an all-star crew of leading academics who have worked in the intersection of platforms and ecosystems, industry evolution, value capture, and regulation. They combine both a deep theoretical understanding of the knowledge and a practical grasp of the phenomenon, as they have been directly involved in the ongoing debate. The range of perspectives from these world-class participants is intended to ignite discussion not only between the presenters, but also between presenters and participants on a key societal challenge, where our field can contribute significantly.

High Consciousness Manager – Who Are We Bringing Back in Management? *High Consciousness Manager (HCM)*

Chair: **Anil K. Maheshwari**, *Maharishi U. of Management*
Presenter: **Chris Laszlo**, *Weatherhead School of Management, Case Western Reserve U.*
Presenter: **Satinder Dhiman**, *Woodbury U.*
Presenter: **Sharda Nandram**, *Nyenrode Business U.*
Presenter: **Isabel Rimanoczy**, *PRME Working Group on the Sustainability Mindset*
Presenter: **Cathy L.Z. DuBois**, *Kent State U.*

The Academy's theme for 2021 is Bringing the Manager Back in Management. How should one interpret and model the manager that needs to be brought back? It is unlikely to be the qualities that were factored out of management by digital technologies. The qualities needed in the new manager could be the empathizing and synergizing quality, the visionary and transformative quality, the moral quality (Laszlo, 2020), and more. All these and similar qualities can be subsumed under the idea of an integral (Wilber, 2000) or holistic (Dhiman, 2019) or higher state of consciousness (Maheshwari & Gupta, 2020), towards the appreciation of the total interconnectedness (Tsao & Laszlo, 2019) and oneness of the world (Laloux, 2014). A manager being brought back ideally would be self-aware, self-regulating, and flexible enough to work at higher levels of consciousness. The ability to raise consciousness around him/her/them could be a key role for the new High Consciousness Manager (HCM). From an increasing convergence of quantum science and spirituality, also identified as the Unified Field Theory (Hagelin, 1987), we hope to offer useful, grounded and generative perspectives that could offer a new ontology and epistemology for the new HCMs (Laszlo, 2020; Pavlovich, 2020). This may be also the key to accelerating the kind of pro-social and pro-environmental behavior needed for business-led flourishing and expansion of happiness. Some of the challenges to be discussed on this path are (a) What are the structural and personal rewards and incentives, as well as obstacles and challenges, for organizations to develop and deploy HCMs? (b) What new concepts, holistic and functional, are emerging to model the future of HCMs in organizations? (c) What are the characteristics of the experiences of organizations that have progressed on this path of deploying HCMs? This symposium plans to provide a rich unfoldment of these questions from multiple perspectives,

Everyone is welcome.

Gig work is now the career context of a significant share of the workforce across the world but still remains a 'black box' in many respects. In this symposium, we discuss the issues of equality and discrimination in the gig economy from multiple perspectives. The contributions include both theoretical and empirical examinations, quantitative and qualitative approaches, and instances of discrimination both against gig workers and by gig workers. The first presentation in this symposium provides a new understanding of gig-work careers as ones in which labour is defined independent of jobholders and their social context, introducing new boundaries of inclusion and exclusion. The second study, considering the role of the selectors and the selection context, provides a theoretical model that suggests the possibility of both persistence and absence of hiring discrimination in online gig-work platforms. These theoretical propositions are then followed by two empirical papers, each of which supports one of the competing hypotheses. Finally, discriminatory behaviour is compared across gig-work and traditional careers to investigate the difference in customers' perceptions. Researchers and practitioners could benefit from the research findings and ideas discussed in this symposium, as presentations provide theoretical and actionable insights, showcase new evidence, and raise new questions.

Digital Session Chair: **Donato Cutolo**, *U. of Bologna*

ENT: The role of digital platforms in turning leisure passion into entrepreneurial intentions

Author: **Donato Cutolo**, *U. of Bologna*
Author: **Rosa Grimaldi**, *Alma Mater Studiorum U. di Bologna*

Online digital platforms are increasingly becoming new contexts for business activities and generating new opportunities for start-ups and entrepreneurs. In compliance with mainstream literature on the emergence of entrepreneurial opportunities, platform entrepreneurship is nearly always presented as the outcome of intentional processes. However, there is plenty of evidence that platform entrepreneurship often happens accidentally, when people are on their way to something else as often individuals decide to engage with a digital platform for leisure, with the intent to join a community, learn new things, or express and practice their skills, talents, and passion. This paper explores the relationship between passion and the emergence of unintentional entrepreneurial processes triggered through the platform. Our empirical setting is YTTalk forum, the largest digital community for YouTubers, where we tracked the activities of 20,538 users from September 2011 through March 2020. Drawing on the Linguistic Inquiry and Word Count (LIWC) software, we proposed a new methodological approach that makes use of language to infer passion. Our results show that community engagement over digital platforms is key for favoring the emergence of entrepreneurial intentions in passionate platforms participants. Specifically, we show that it is not the frequency of interactions (number of users' posts) but the quality of the interactions over the platform (positive reactions and comments of appreciation generated by users' posts) having the potential to favor the transition from pure leisure passion towards entrepreneurial intentions. Entrepreneurial intention emerges as platforms' users become aware of the attention and appreciation that they receive.

ENT: Intergenerational Knowledge Transfer in Family Firms during Times of Digital Innovation 

Author: **Emanuela Rondi**, *U. degli Studi di Bergamo*
Author: **Ruth Überbacher**, *Free U. Bozen, Bolzano*
Author: **Leopold Von Schlenk Barnsdorf**, *U. of Witten/Herdecke*
Author: **Marcel Hülsbeck**, *U. of Witten/Herdecke*

In the fast-changing digital age, the unique governance of family firms, unifying ownership, management and control, characterized by long-lasting knowledge, makes digital innovation particularly challenging. On one hand, the incumbent generation (especially if senior) has developed specific knowledge throughout the experience in the business, being thus more likely to adopt a traditional and conservative approach towards the business model. On the other hand, the next generation of family members' (especially if junior) has grown up accessing and developing digital knowledge, but might lack the specific skills, organizational know-how and authoritativeness to make it relevant to the family business model. Therefore, the paradigm 'incumbent generation teaches, next generation learns' becomes obsolete. How can family firms manage intergenerational knowledge transfer in times of digital innovation? To address this issue, we conduct a multiple case study on five German family firms that have recently digitalized their business models. Building on our findings we develop a model of intergenerational knowledge transfer through which family firms successfully foster digital innovation and introduce the concept of generational metamorphosis as the role swinging in the apprenticeship process requiring family members of different generations to either acting as teachers or learner depending on the knowledge domain. Our study offers contributions to research on family business generational transition, innovation and knowledge transfer.

ENT: Individual Differences in Digitally-Mediated Embedding: A Conceptual Model and Research Agenda

Author: **Claudia Smith**, *U. of Victoria*
Author: **Brock Smith**, *U. of Victoria*

Micro-foundational differences in entrepreneurial embedding actions are examined in relation to the enabling and disabling technological affordances manifest in today's digital networks. Drawing on evidence gained from 20 founder depth interviews, we develop four research propositions and a conceptual model that specify the mechanisms that manifest individual differences in entrepreneurs' embedding actions on digital networks - affordance utility assessment, risk assessment, norm awareness and assessment, and technology dispositions. We also identify temporal judgment, association judgment, and audience collapse as key sources of these underlying differences in digital embedding behavior. We discuss contributions to theory and implications for practice, including the need to recognize individual-level, not collective, best practice.

Paper is NOT Available. Please contact the author(s).

ENT: Internet Use and Entrepreneurship: Narrowing the Gender Gap

Author: **Xuanli Xie**, *Peking U.*
Author: **Waverly W. Ding**, *U. of Maryland*

The study develops and validates a research model examining the impact of the use of internet on women's entrepreneurship. While women are in disadvantaged positions in entrepreneurial arena, we suggest the use of internet could reduce such disadvantages. In addition, we propose two possible mechanisms, providing resources and changing social values, of internet use on women's entrepreneurship. The empirical analyses based on data from China Family Panel Studies (CFPS) support the positive effect of internet use on facilitating women's entrepreneurship, but mainly through providing knowledge and resources, rather than through reducing social gender inequality.

Exploring Entrepreneurial Failure And Exit In The Midst Of Chaos

Failure and Exit Symposium

Chair: **Ashley Yerves Roccapriore**, *U. of Tennessee, Knoxville*
Chair: **Jacob Waddingham**, *Auburn U.*
Panelist: **Dawn DeTienne**, *Colorado State U.*
Panelist: **Anna Saies Jenkins**, *U. of Queensland*
Panelist: **Dean Shepherd**, *U. of Notre Dame*
Panelist: **Amanda Jasmine Williamson**, *Waikato Management School*

Entrepreneurial ventures carry a high level of uncertainty, which makes the potential for failure and exit a rather common occurrence. Adding to this uncertainty is the COVID-19 global pandemic, which has disrupted individual's lives both personally and professionally. State mandates on social distancing requirements and disruptions in workers' schedules from telework have likely impacted multiple aspects of entrepreneurial businesses and projects. Notwithstanding, social movements and political activism (e.g., Black Lives Matter, Women's March, and #MeToo) have called attention to those who have previously been neglected and whose needs have been ignored. In response, entrepreneurs and scholars may need to pivot, making a sharp change in direction for what to focus time and resources on what is next. This panel symposium brings together prominent scholars in the entrepreneurial failure and exit domains to provide a current perspective on the state of research in this domain and initiate a proposed launching point for future research on entrepreneurial failure and exit. The topic naturally investigates the influence of the on-going pandemic and social movements impacting entrepreneurs around the globe, specifically how both entrepreneurs and stakeholders make sense of failure and exit and in turn adapt.

Psychological Contracts

Digital Session Chair: **Anna Nikina-Ruohonen**, *Haaga-Helia U. of Applied Sciences*

OB: The Psychological Contract: Examining the Differences in Entrepreneurial and Bureaucratic Contexts

Author: **Anna Nikina-Ruohonen**, *Haaga-Helia U. of Applied Sciences*
Author: **Lois Shelton**, *California State U., Northridge*

The highly uncertain, fast-paced, opportunistic, change and challenge driven entrepreneurial context offers a distinctive backdrop for employment relationships relative to more bureaucratic, policy-guided organizational environments. It is proposed here that the entrepreneurial context influences employment relationships in a manner that tends to result in work arrangements that are often broader in scope, more open-ended and more customized than the more narrowly-focused standardized work agreements typical of bureaucratic organizations. Since psychological contracts lay at the foundation of employment relationships (Morrison & Robinson, 1997; Rousseau, 1989; Schein, 1965), we argue that entrepreneurial context imprints its own specific characteristics on the concept of a psychological contract (PC). Much of the previous research on psychological contracts has focused on what is defined here as psychological contracts in the bureaucratic organizational context. To date, relatively few studies have aimed at placing psychological contracts into the context of entrepreneurship and small business – the gap that the present article addresses through conceptualization. We demonstrate how psychological contract theory provides a unique framework to contrast the structure and content of employment relations within bureaucratic/organizational and entrepreneurial contexts, and makes it possible to bring to surface the primary distinctive characteristics and building blocks of psychological contracts in these two contexts. Previous research shows that work environments impact psychological contracts since the nature of the environment influences the nature of the obligations covered (Kissler, 1994; Morrison, 1994; Morrison & Robinson, 1997). Understanding the special characteristics of a psychological contract in entrepreneurial context provides theoretical grounding for explaining the employment dynamics in start-ups and scale-ups, corporate intra-preneurship and skunkworks/task forces.

OB: Psychological contract dynamics in the context of organizational change

Author: **Sabine Raeder**, *U. of Oslo*
Author: **Rene Schalk**, *Tilburg U.*

Dynamics of psychological contracts have rarely been explored. This study investigates trajectories of employee psychological contracts in the context of organizational change in a sample of 546 employees in five firms across three waves. Drawing on event system theory and social exchange theory, organizational change events are expected to moderate the relationship between employer and employee perceptions of psychological contracts. The results show that downsizing, more than reorganization, affects psychological contract dynamics. Employees re-interpret the employer perception of the psychological contract in the context of organizational change and adapt their contributions and perceived employer obligations. The results demonstrate the benefit of distinguishing different types of organizational change and different dimensions of psychological contract content when investigating psychological contract dynamics.

OB: Being Left in The Dark: The Effect of Perceived Leader Secrecy on Employee Discretionary Behaviors

Author: **Yating Wang**, *National U. of Singapore*
Author: **Ke Michael Mai**, *National U. of Singapore*
Author: **Michael Slepian**, *Columbia Business School*
Author: **Pok Man Tang**, *Texas A&M U., Mays Business School*

We all keep secrets and secrecy plays an important role in organizational life. While a growing body of work examines how keeping personal secrets influences the psychological states of the secret holder, scant empirical work has examined the effect of perceiving oneself as left out of a secret by other important organizational actors, such as, leader. By integrating research on secrecy in the social psychology literature with psychological contract theory, the current studies examined how employee perceptions of leader secrecy can reduce leader-directed organizational citizenship behaviors (OCBs) and voice, through employee perceived psychological contract violation. These effects were especially pronounced among employees with a low propensity to trust. Results from two experiments with different leader secrecy manipulations and one multi-source multi-wave field study (total N = 834) consistently supported our hypothesized model. Implications are discussed as well as possible limitations and directions for future research.

Frontline Service Employees in a Changing World: Interdisciplinary Perspective & Research Directions *Frontline Service Employees in a Changing World*

Discussant: **S Douglas Pugh**, *Virginia Commonwealth U.*
Discussant: **Michael Brady**, *Florida State U.*

A large body of research examining the relationship between frontline service employees (FLEs) and their customers has accumulated across multiple disciplines over the past four decades. These literatures portray a complex and diverse picture of FLEs within a rapidly changing service context. However, emerging research streams related to FLEs in various disciplines appear to have developed independently, with limited opportunities for interaction and confluence. This presenter symposium showcases six papers that present insights on the current and evolving roles of FLEs in relation to their customers. These papers utilized diverse methodologies, including qualitative interviews, laboratory experiments, field studies, meta-analysis, and bibliometric literature review techniques. In addition, with two experts representing the service-aspect of the management and marketing disciplines, this symposium will involve provocative and engaging discussions addressing challenges and opportunities in facilitating interdisciplinary collaborations in service research.

**The Meta-Change Global Report: Integrating 9
Main Indices to Examine Favorability and Pace of
Change**      

The Meta-Change Global Report:

Participant: **Steven H. Cady**, *Bowling Green State U.*

Participant: **Michelle Brodke**, *Bowling Green State U.*

Participant: **Mark Skidmore**, *Michigan State U.*

Participant: **Gavin M. Schwarz**, *UNSW Sydney*

Participant: **Eric Sanders**, *Elmhurst U.*

Since data became widely available globally, various institutions have developed indicators to characterize and rank countries. Interestingly, with all the talk about change in our world, we found no index to provide a comprehensive integration of indices nor to measure the pace of change. Further, there have been no publications that offer a comprehensive assessment of the nature of changing and its characteristics on a global and local (country) scale. We invite scholars from across disciplines to join us to enrich and advance the possibilities for the Meta-Change Global Report. The report organizes 9 well-established global indexes into two interrelated meta-indices using needs theories as the organizing framework: The Global Country Favorability Index and The Global Country Change Index.

Antecedents of Corporate Political Strategy

Digital Session Chair: **Tedi Skiti**, *UCD Smurfit*

STR: Campaign contributions and new technology investment in the broadband industry 

Author: **Tedi Skiti**, *UCD Smurfit*
Author: **C. Jennifer Tae**, *Temple U.*
Author: **Francis V. Frazier**, -

We study how nonmarket actions taken by firms to shape the regulatory environment may impact their strategic market behavior. Studies have shown that corporate political activities (CPAs) can affect policy outcomes and firm value, but their influence on market actions remains underexplored. We propose that firm donations to politicians are associated with reduced investment in new technology infrastructure resources. We also argue that the size of the local market mitigates this effect while the positive local political environment intensifies the negative relationship. Our findings elucidate how firms implement their integrated strategies with both market and nonmarket actions and the important role that the nested nature of the larger political environment and local-level heterogeneity plays in shaping those strategies.

STR: The Individual-Level Antecedents to Corporate Political Stances  

Author: **Patrick Rooney**, *U. of Toronto, Rotman School of Management*

What factors lead powerful corporate actors to take political stances as part of a business strategy? Prior research has found that corporate political stances influence critical stakeholders (such as workers and consumers), and politically motivated social activism can lead to board departures. In this study, I run a lab-in-the-field experiment examining the role of cause-individual value alignment, monetary incentives, and sustained stakeholder pushback on participants' willingness to take a costly political stand as part of a business strategy. I find that cause-individual value mismatch and sustained stakeholder pushback lead to significantly less political stance-taking, while higher incentives encourage more stance-taking. When profits from stance-taking strategies are uncertain, cause-individual value match can lead to lower performance due to a matched individual's higher propensity to explore (unprofitable) stance-taking strategies. Liberals are more reactive to alignment between their personal political orientation and cause orientation than conservatives, a finding partially attributable to differential attitudes towards salient controversial political organizations. Moreover, among mismatched participants, holding an outcome-based ethical outlook is associated with more stance-taking and higher earnings than holding a process-based ethical outlook. Collectively, these findings contribute causal foundations to the nascent literature on the strategic implications of corporate sociopolitical stances.

STR: Alone as a Drop, Together as an Ocean: Corporate Political Activity in Cooperatives

Author: **ELEANDRA MARIA PRIGOL MENEHINI**, *U. do Vale do Itajaí (UNIVALI)*
Author: **Jeferson Lana**, *U. do Vale do Itajaí (UNIVALI)*
Author: **Marina Gama**, *FGV-EAESP*
Author: **Rosilene Marcon**, *U. do Vale do Itajaí (UNIVALI)*

In this paper we examine the forms of individual and collective involvement of corporate political activities (CPA) of Brazilian agricultural cooperatives, under the lens of the collective action theory. The theoretical rationale points out that collective political activities are more efficient in achieving political alignment. Our hypothesis points out that the collective political activities of cooperatives increase benefits, such as access to credit from development banks. Methodologically, we use a mixed approach. For quantitative research, we developed an unbalanced panel database with 395 agricultural cooperatives based in the southern region of Brazil and analyzed the period from 2006 to 2018, which culminated in 4,772 observations. Hypotheses were tested using multivariate regression with random effects. In the qualitative approach, we conducted nine interviews with Brazilian politicians and former politicians, managers and cooperative specialists, members of the Organization of State Cooperatives (OCE) and Organization of Brazilian Cooperatives (OCB). The results suggest that individual political actions have no positive relationship with amounts financed by the National Bank for Economic and Social Development (BNDES). However, we have shown that collective CPA are highly related to obtaining funds from the state-owned bank. The results of the primary data corroborate this evidence.

STR: For Fear and Duty: Peer Firm Lobbying Following Government Sanctions of Competitors 

Author: **Jason Ridge**, *U. of Arkansas*
Author: **Sergei Kolomeitsev**, *U. of Arkansas*
Author: **Kristie Joy Neff Moergen**, *U. of Arkansas*
Author: **Dan L. Worrell**, *U. of Arkansas*
Author: **Scott Kuban**, *Tulane U.*

This study explores the general deterrence mechanisms of fear and duty through which firms may alter their targeting of lobbying expenditures, specifically in response to competitor firms' sanctioning by governmental agencies. To do so, we adopt a view of lobbying as an information gathering action, where information asymmetries put firms in deficits and regulators as holders of critical information. Accordingly, we suggest that, following a competitor firm being sanctioned, (1) non-violating peer firms will increase their lobbying targeted at the sanctioning agency relative to the violating firm and (2) increases in targeted lobbying will increase due to fear-based motivations (stronger penalty amounts) and duty-based motivations (organizational ideological alignment). We test our hypotheses using EPA violations as a context, and they largely receive support.

The Governance of Interfirm Collaboration

Digital Session Chair: **Tadhg Ryan-Charleton**, *Queen's School of Management, Queen's U. Belfast*

STR: Value Creation and Tension in Coopetition: The Emergence of Virtuous and Vicious Cycles

Author: **Tadhg Ryan-Charleton**, *Queen's School of Management, Queen's U. Belfast*

Author: **Devi R. Gnyawali**, *Virginia Tech*

Literature on tension in coopetition has focused almost exclusively on 'simultaneity tension', which is rooted in the interplay of simultaneous competition and cooperation. Our paper identifies and unpacks a distinct 'value tension' which occurs due to simultaneous firm value creation and joint value creation in coopetition. We layout incompatibilities between firm value creation, which is collaborative, and joint value creation, which is cooperative, and articulate the inherent challenges of pursuing both simultaneously. Efforts to pursue both can pull resources in opposing directions, forego scale and scope advantages, and undermine isolating mechanisms that are at odds with each other. We illuminate positive and negative synergies depending on the extent to which firm value creation and joint value creation are pursued simultaneously and how the ensuing tension is managed. We suggest that subsequent behaviors may reinforce the positives, leading to virtuous cycles, or negatives, leading to vicious cycles. Our integration of the coopetition literatures on tension and value with broader strategic management discourse regarding value creation provides novel future-focused insights concerning coopetition and interorganizational relationships.

STR: Digital Fungible Controls: Understanding Trust and Transparency in Interorganizational Governance

Author: **Katharina Cepa**, *Lancaster U. Management School*

Organizations increasingly implement digital technologies to create operational transparency over complex interorganizational processes. This transparency represents a new form of control that is designed to coordinate, and later re-used to monitor partner performance and behavior. Such dual-use is new so that prior theory on interorganizational governance cannot be applied directly. I therefore conduct a multiple case study to explore how these new, inherently digital controls affect interorganizational governance. I find that even though organizations need relational trust to implement transparency, once implemented, organizations use it to monitor their partners. This increasing reliance on and trust in numbers replaces relational trust irrespective of partner performance. I contribute to theory on interorganizational governance by theorizing this as "digital fungible controls", a new type of digital controls, and how this affect governance.

STR: The Individual Manager in the Spotlight: Knowledge Protection in Coopetitive Relationships

Author: **Tatbeeq Raza Ullah**, *Umeå School of Business and Economics, Umeå U.*

Author: **Lea Stadler**, *Grenoble Ecole de Management*

Author: **Anne-Sophie Fernandez**, *U. of Montpellier*

Despite the multiple benefits that cooperation among competitors may bring about, such coopetitive relationships are spiced with the risk of opportunistic behavior since a competitor-partner may gain access to a firm's sensitive knowledge, use it to its own advantage, and thereby undermine the focal firm's competitive advantage. Since individual managers are at the forefront of safeguarding sensitive knowledge from competitors, we draw on the Upper Echelons Theory to explore how their cognitive bases and values, as expressed in their demographic characteristics, affect knowledge protection. Specifically, we test our hypotheses about managers' age, gender, education, and tenure and subsequent firm performance using multi-source, time-lagged data on a sample of 198 managers and discuss the implications for effective knowledge protection. Theoretically, our results help link managerial characteristics and profiles to the critical knowledge protection decisions and activities and, thus, position specific managerial profiles as a source of securing sustainable firm performance. Practically, these insights may help companies appropriately staff sensitive positions at the collaborative-competitive interface.

STR: Quasi-Experimental and Survey Studies of Supplier Dependence and Buyer Product Innovation

Author: **Chanchai Tangpong**, *North Dakota State U.*

Author: **Kuo-Ting Hung**, *Suffolk U.*

Author: **Thomas Clauß**, *U. of Witten/Herdecke*

Author: **Michael Michalisin**, *Southern Illinois U. Carbondale*

Author: **Arlyn Melcher**, *Southern Illinois U. Carbondale*

This study investigates the relationship between supplier dependence and product innovation at the buyer firm level. Based on the absorptive capacity and the exploration-exploitation perspectives, this study hypothesizes that (1) supplier dependence is negatively related to the buyer firms' product innovation (BFPI) and (2) the negative supplier dependence – BFPI relationship becomes stronger under a high relationalism condition. To test these hypotheses, two empirical studies were conducted, including (1) a quasi-experimental study using the archival data from the computer industry and (2) a survey study with the data collected from a broader range of industries for greater generalizability. The results from both studies are largely consistent with each other in supporting the hypotheses. The survey results also suggest that the two hypotheses proposed in this study are more applicable to the revenue-impact dimension of BFPI than to the productivity dimension of BFPI.

Digital Session Chair: **Haneul Choi**, *Arizona State U.*

TIM: Assessing differences between university and federal lab postdoc scientists in technology transfer

Author: **Haneul Choi**, *Arizona State U.*

Author: **Donald Siegel**, *Arizona State U.*

Author: **Elle Hyunjung Yoon**, *U. of Georgia*

Author: **David A. Waldman**, *Arizona State U.*

Although there are numerous studies of university technology transfer, there have been relatively few recent studies of technology transfer at federal labs. Studies of university technology transfer have also focused on faculty, not post-doctoral scientists and ignored identity and sensemaking theories in organizational behavior, which are relevant in the context of technology transfer. We fill these gaps by analyzing differences between university scientists and federal lab scientists, in terms of how they engage in technology transfer. Based on extensive interviews of postdoctoral scientists and their supervisors/principal investigators (PIs) at two major research universities and four large federal labs, we find that federal lab scientists are more influenced by mission-driven research and their sense of public service. These motivational differences may constitute significant barriers to technology transfer. Thus, federal lab scientists experience more cognitive dissonance in pursuing commercialization of their research and have more sophisticated resolution strategies than their university counterparts. Principal investigators at federal labs are also not highly incentivized to engage in technology transfer.

TIM: Firing Costs and Decoupling of Technological Invention and Post-invention Investments   

Author: **Dongil Daniel Keum**, *Columbia Business School*

We show that employment protection laws, which increase firing costs, decouple invention and post-invention investment by reducing the coordination benefits of collocation. The decoupling played a significant role in US employment decline and jobless growth, the vertical and geographical disintegration of firm activities, and underinvestment relative to Tobin's Q. Technological inventions lead to employment growth, but employment protection laws almost fully negate this positive effect, especially in fast-changing and high-offshore industries and for radical inventions. We find limited effects on firm revenue and profits, as firms bypass increased firing costs through capital substitution and increased JV and alliance activities, driven in part by collaborations with foreign partners. Our findings suggest labor market flexibility as a critical link between invention and firm growth dynamics and question the efficacy of technology-led revival of the US manufacturing employment without the accompanying labor market reforms.

Paper is Available to Meeting Registrants Only.

TIM: Team Diversity and the Retention of R&D Workers after Acquisitions  

Author: **Agnes Guenther**, *Copenhagen Business School*

Because knowledge is often embedded in employees, the mobility of R&D workers is a primary concern in acquisitions in knowledge-intensive industries. While the reasons for post-acquisition mobility of R&D workers have been widely studied, the focuses has been on the acquirers' characteristics or on the acquirer-target dyad's characteristics. How the target's characteristics affect the retention of R&D workers in acquisition targets is poorly understood. Extending the idea that employees' mobility is limited by the embeddedness of their knowledge within a team, we theorize that R&D workers' post-acquisition mobility is contingent on the R&D teams' diversity and the uniqueness of a R&D worker's knowledge within the team prior to acquisition. By investigating a target characteristics that changes with the acquisition, this study presents an alternative way of understanding why R&D workers leave post-acquisition and which knowledge resources are retained within the target after being acquired.

TIM: Temporary fresh blood: Secondments for promoting novelty

Author: **Athanasia Lampraki**, *U. of Bath*

Author: **Christos Kolympiris**, *Warwick Business School*

Organizations regularly fail to recognize and select novel ideas. We propose that secondments, where the host organization employs full time but temporarily an employee of a different organization, can improve the host's ability to select novel ideas. We conceptualize seconded employees as assuming a dual identity by being, simultaneously, external experts and temporal insiders at the host organization. This dual identity allows them to infuse the host organization with continuously updated tacit knowledge, which then helps permanent employees to better comprehend and subsequently promote novelty. We test our predictions using the secondment program at the National Science Foundation. Leveraging a number of program features, we construct treatment and control groups that yield estimates supporting our arguments. Permanent employees grant more novel awards when they interact with a seconded academic. The effect is substantially stronger when secondees and permanent employees share common knowledge maps.

How Organizations Influence Employees: Psych-Contract Breach, Surveillance, Language, & Assignments

Digital Session Chair: **Rachel Schlund**, *Cornell U.*

MOC: Who's My Manager? Surveillance by AI Leads to Perceived Privacy Invasion and Resistance Practices

Author: **Rachel Schlund**, *Cornell U.*

Author: **Emily Zitek**, *Cornell U.*

Within the last few decades, we have witnessed a dramatic rise in the use of AI surveillance technology in organizations. In this paper, we answer calls from management scholars to investigate the impact of this new aspect of managerial oversight on manager-worker dynamics. Focusing on employees' perceptions of privacy invasion, we investigate in five experimental studies whether these differ when employees are monitored and evaluated by AI technology instead of a human. We demonstrate that employees perceive their privacy is invaded to a greater extent when AI surveillance technology monitors them as opposed to human managers (Studies 1-4). We further assess downstream consequences of perceived privacy invasion (Studies 1-2b), explore mechanisms that explain the relationship between monitoring form (AI surveillance technology vs. human managers) and perceived privacy invasion (Study 3), and investigate ways to attenuate the effect (Study 4). Throughout these studies, we extend prior theory to provide insight into the implications of the increasing use of AI surveillance technology in organizations.

MOC: The Impacts of Algorithmic Work Assignment on Fairness Perceptions and Productivity

Author: **Bing Bai**, *Washington U. in St. Louis*

Author: **Hengchen Dai**, *UCLA Anderson School of Management*

Author: **Dennis Zhang**, *Washington U. in St. Louis*

Author: **Fuqiang Zhang**, *Washington U. in St. Louis*

Author: **Haoyuan Hu**, *Alibaba Group*

Since algorithms are widely adopted by businesses and often require human involvement, understanding how humans perceive algorithms is instrumental to the success of algorithm design. Particularly, the growing concern that algorithms may reproduce inequality historically exhibited by humans calls for research about how people perceive the fairness of algorithmic decision-making relative to traditional human-based decision-making and, consequently, adjust their work behaviors. We study how algorithmic (vs. human-based) task assignment processes change task recipients' fairness perceptions and productivity. In a 15-day-long field experiment with Alibaba Group in a warehouse where workers pick products following orders (or "pick lists"), we randomly assigned half of the workers to receive pick lists from a machine that ostensibly relied on an algorithm to distribute pick lists, and the other half to receive pick lists from a human distributor. Despite that we used the same underlying rule to assign pick lists in both groups, workers perceived the algorithmic (vs. human-based) assignment process as fairer by 0.94-1.02 standard deviations. This yielded productivity benefits: receiving tasks from an algorithm (vs. a human) increased workers' picking efficiency by 17.35%-19.39%. The algorithmic assignment produced larger productivity gains among workers for whom perceived fairness has a stronger effect on productivity, including more educated workers and workers who cared more about the difficulty of their pick lists. We replicated the main results in another field experiment and showed via online experiments that people in the U.S. also view algorithmic task assignment as fairer. We demonstrate that algorithms can have broader impacts beyond offering greater efficiency and accuracy than humans: introducing algorithmic assignment processes may enhance fairness perceptions and productivity. This insight can be utilized by managers to better design and implement algorithm-based decision making at work.

MOC: Be consistent! The interactive effects of psychological contract breach and CSR on OCBO

Author: **Hwayoung Kim**, *Hanyang U.*

Author: **Se Hyung OH**, *Hanyang U.*

Previous studies have shown that psychological contract breach has negative effects on employee attitudes and behavior. However, researchers have largely ignored the potential contextual factors that accentuate or mitigate the negative reactions to psychological contracts. In this study, drawing from social exchange theory (Blau, 1964), we theorize and test that employees' perceived psychological contract breach (PCB) decrease their affective organizational commitment (AC), and this lowered commitment, in turn, reduces organization-directed citizenship behavior (OCBO). We also, based on the cue consistency theory (Solvic, 1966; Brehmer, 1972; Maheswaran & Chaiken, 1991), examined that corporate social responsibility (CSR) amplifies the negative relationship between PCB and AC and conclusively the negative indirect relationship between PCB and OCBO via AC. Data of 239 employees in 19 organizations demonstrated that the proposed mediation mechanism and the interaction effects are significant in predicting employee OCBO. Theoretical and practical implications are discussed.

MOC: Organizational language, cognition, and adaptability

Author: **Laura Fritsch**, *U. of Oxford*

Author: **Alan D. Morrison**, *Oxford U., Saïd Business School*

Organizational language links individual and group-level cognition and therefore affects organizational efficiency and adaptability. We present a model of organizational language that makes sense of these relationships. In the model, some members of an organization achieve detailed understandings of the external environment and must then convey their knowledge to other members who synthesize environmental and organizational knowledge to select actions. The languages that they develop are negotiated, path-dependent, and resistant to change. They enable long-term retention of critical information about the organization's relationship to its environment and, hence, our work provides a linguistic approach to organizational learning and organizational memory. Our formal analysis of language negotiation explains what a linguistic code is, how it is formed, and the way that organizational messages are decoded for processing and action selection. The model explains how individual cognition is formed and also the relationship between linguistic codes and actions. We relate organizational efficiency to an organization's cognitive breadth and we show how language and corporate adaptability are related. By our account, competitive markets, hierarchical organizational structures and remote working reduce adaptability; staff turnover and team recombination increase it. Our work has implications for the design of research studies that deploy natural language processing and other techniques to analyze the use and the evolution of corporate language.

Creativity and Decision Making

Digital Session Chair: **Hsin-Min Hung**, *National Dong Hwa U.*

OB: Resolving conflicting results of intellectual capital's influence on innovative capability

Author: **Hsin-Min Hung**, *National Dong Hwa U.*

Previous studies have shown conflicting results of intellectual capital's influence on innovative capability. The conflicting results impede not only theoretical development but also managers' investment decisions on innovation. This study indicates that divergent knowledge (positive effect), reluctantly sharing knowledge, self-justification (for prior period decision), and sunk cost fallacy (negative effects) explain the human capital conflicting results; inertial (positive effect) and overinvestment (negative effect) explain the organizational capital conflicting results. This study further argues that a firm's dynamic capability help itself sense (entirely new and partially new) opportunities, seize the strategic-fit opportunities and utilize intellectual capital to transform/enhance its innovative capabilities. Dynamic capability reflects aggregated results of above positive and negative effects and thus resolves the intellectual capital conflicting results. Furthermore, this study argued the social capital facilitate the influences of human capital and organizational capital on innovative capability via opportunities and trust. This study expects following possible findings to contribute theoretical development and managerial implications: (1) when human capital is insufficient, greater human capital increases incremental innovative capability but decreases radical innovative capability. However, to 2 increase radical innovative capability, sufficient human capital is required. (2) Firms incline to overinvest organizational capital in incremental innovative capability; however, dynamic update of organizational capital is a key to increase incremental innovative capability. (3) Dynamic capability mediates the relationship between intellectual capital and innovative capability. Dynamic capability explains the influence of organizational learning on innovative capability from a resource-based perspective. (4) Social capital moderates the relationship between human capital/organizational capital and radical/incremental innovative capability. (5) dynamic capability discloses the mechanism/process of intellectual capital's influence on innovative capability; human capital and organizational capital, per se, are actors/predictors for increasing innovative capability. Social capital provides opportunities and trust to facilitate (moderate) human capital and organizational capital to increase innovative capability; together with human capital and organizational capital, social capital influences innovative capability through dynamic capability.

OB: Personal vs. organizational cost benefit analyses in the creative adoption decision process

Author: **Wayne Johnson**, *Cornell SC Johnson College of Business*

Author: **Elizabeth A Mannix**, *Cornell U.*

Adopting and implementing creative ideas entails costs as well as benefits. These costs fall on the organizational receivers of creative ideas who put them into action through development, championing, and adaptation. Whereas the literature has focused on the antecedents of creativity for idea generators, we focus on the next critical, but under-examined step in the adoption chain, receiver consequences. In five studies, we find when personal and organizational interests are misaligned, decision makers will accept or reject ideas on the basis of costs and benefits to themselves, not on their creative value. We examine the effects of low and high construal on the personal costs and benefits of creative idea adoption for idea receivers. At low construal, personal costs and benefits are perceived as more impactful, affecting creative idea adoption. This effect is attenuated at high construal. We discuss the results in terms of implications for research and practice.

OB: People adjust their impressions more for applicants' disadvantages than advantages

Author: **David Mauricio Munguia Gomez**, *U. of Chicago Booth School of business*

Author: **L Taylor Phillips**, *NYU Stern*

When making selection decisions (e.g., college admissions, hiring), decision makers are tasked with assessing the quality of applicants based on their achievements and the circumstances in which those achievements took place (e.g., whether the applicant faced advantages or disadvantages). In the present research we explore this process by examining how decision makers update their impressions of an applicant's competence and their intentions to select that applicant after learning whether the applicant's circumstances were advantageous versus disadvantageous. Across 3 studies (N = 1,730), we find that decision makers positively adjust their impressions and decisions after learning that the applicant faced disadvantage more than they negatively adjust after learning that the applicant faced a symmetric advantage. We provide initial evidence that this asymmetric adjustment is at least partly explained by the belief that facing disadvantage signals an applicant's ability to overcome obstacles, whereas advantage does not signal the trait (or its absence). These findings further our understanding of how people reason about advantage and disadvantage, and they shed light on how attributional processes may further inequality in higher education and in the workplace.

OB: A Process Study on Two-Stage Influence of Dual Authoritarian Leadership on Employee Creativity

Author: **Honglei Zhao**, *School of Management, Harbin Institute of Technology*

Author: **Huimin Luo**, *School of Management, Harbin Institute of Technology*

Author: **Ming Lou**, *School of Management, Harbin Institute of Technology*

Abstract: This study aims to explore the mediating and moderating effects of the two components of authoritarian leadership on employee creativity by qualitative research methods using data of interviews and archives. We found that: (1) There was two-stage influence of leadership on employee creativity, state of demand perception and state of coping strategy. (2) Dominance-focused authoritarian leadership and Disciplined-focused authoritarian leadership were both related to creativity. Dominance-focused authoritarian leadership inhibit creativity by negative path, in contrast Disciplined-focused authoritarian leadership promote creativity by positive path. (3) The criticality of three kind of event moderated the relationship between authoritarian leadership and employee creativity. The finding of two-stage effect extends our understanding the process of leadership influencing creativity. More importantly, we provided that three types of specific events the strength of which moderate the relation between authoritarian leadership and creativity play a very important role.

STR: **Who Bleeds When Activists Attack? Activist Institutional Ownership And Employee Safety**

Author: **Chongwu Xia**, *U. of Science and Technology of China*
Author: **Philipp Meyer-Doyle**, *INSEAD*

While prior research on shareholder activism has highlighted how the shareholders of targeted firms can economically benefit, more recent studies suggest that shareholder activism can also economically disadvantage other stakeholders, notably employees. Yet such research has largely focused on the economic impact of shareholder activism on stakeholders. Our study explores a more direct impact on stakeholders, namely how activist institutional ownership influences the rate of injury and illness among the employees of targeted firms. We contend that greater activist institutional ownership can adversely affect the health of employees at targeted firms because activist investors pursue financial returns through increasing operational efficiency of targeted firms at the expense of workplace safety. Further, we theorize that the political ideology of the activist investor and the board as well as the board's ideological diversity are important factors influencing how competing stakeholder interests are resolved in the context of shareholder activism. Using establishment-level data, we find support for our theory. Our study contributes to shareholder activism research by highlighting a more direct interest conflict between activist shareholders and employees and by explicating the political ideology of activist shareholders and boards as factors governing such a conflict. Our study also contributes to research on human capital by highlighting how the firm's ownership structure can harm its human assets.

STR: Private Equity and Venture Capital: Social and Environmental Practices and Financial Performance

Author: **Jimi Kim**, *U. of New South Wales*

In this paper, I investigate the impact of private equity (PE) and venture capital (VC) investment on social and environmental practices, and PE- and VC-backed firm performance. I also explore how sector expertise and investor market presence affect this relation between PE/VC investment and social and environmental practices. I find that PE-backed firms are less likely to embrace social and environmental practices, whereas VC-backed firms are more likely to engage in both. Furthermore, sector expertise and investor market presence strengthen the relation between PE/VC investments and social and environmental practices. Finally, social and environmental practices contribute to the financial performance of both PE- and VC-backed firms.

STR: How Top Management and Investors Shape Environmental Performance and Reporting

Author: **Nathan Barrymore**, *U. of Maryland R.H. Smith School of Business*

Driven by investor demand reporting on environmental and social performance has become standard for large corporations and is now a component of firm strategy. However, investors, practitioners, and academics all doubt the reliability of third party ESG ratings due to perceived greenwashing. Identifying greenwashing and its causes remains a significant challenge. I address this measurement gap by comparing self-reported ESG practices to independently reported ESG outcomes, generating a novel measure of greenwashing. I next propose that greenwashing behavior depends on the preferences of inside stakeholders (e.g., top management) and outside stakeholders (e.g., investors). I model the interaction between these parties using a cheap talk game, in which the firm can misrepresent their ESG performance, but may be sanctioned for misrepresentation. The model predicts that the relative preferences of inside and outside stakeholders drive greenwashing behavior and ratings accuracy. I test this model's predictions by analyzing earnings call transcripts and a firms' shareholder composition. I find that investors' time horizons shape reported, but not actual, ESG performance, while managers' discussion of ESG issues on earnings calls correlates with both reported and actual ESG performance. As investors' preferences for ESG performance increase relative to those of managers, I find firms increasingly greenwash.

STR: Political Connection Loss and Financial Statement Irregularities

Author: **Tong Zhao**, *Peking U. Guanghua School of Management*
Author: **Hong Zhang**, *Wuhan U.*

The relationship between political connections and firm financial reporting is unclear. Some researchers argue political connected firms are more likely to engage in fraudulent behavior because they are confident that political resource may reduce fraud detection or they can more easily hide their misreporting behavior. While other researchers believe political connected firms might do less financial misconduct because they adopt the government's stand and thus be more likely to meet social norms. We theorize from different literatures to disentangle the effect of losing political connection on the likelihood of financial statement irregularities. We use the unexpected tie disruptions between senior executives and politicians caused by anti-corruption cases in China between 2003 to 2012 as an external shock to test our predictions. Using a difference-in-differences estimation, we find that after tie disruptions, the affected firms increase their financial statement irregularities. The relationship is weaker when creditors and shareholders have more stringent monitoring but stronger when local governments exert higher pressures on the firms. We contribute by adding a dynamic and a multiple stakeholder perspective into the research on the relationship between political connections and firm financial reporting.

From Genius to Crooks: A Discussion of The Dark Side of Innovation *From Genius to Crooks*

Organizer: **Felipe Calvano Da Silva**, *Virginia Tech*
Participant: **Karen Schnatterly**, *Virginia Tech*
Participant: **Wei Shi**, *U. of Miami*
Participant: **Christine Shropshire**, *Arizona State U.*
Participant: **Siri Ann Terjesen**, *Florida Atlantic U.*
Participant: **Shaker A. Zahra**, *U. of Minnesota*

The purpose of this panel symposium is to engage scholars in the field of entrepreneurship, corporate governance, and misconduct in a discussion of the dark side of innovation. Innovation is considered by many as the primary driver of organic growth and leads to value creation. However, it is concerning to observe that some of the most innovative companies have committed fraud. Some examples of highly innovative company that committed misconduct are AOL, Enron, Uber, WeWork, etc. In this symposium, the panel will provide an insightful discussion of several topics including: (1) what we currently know about the topic; (2) what are potential mechanisms that contribute or hinder the association; (3) what are the different stakeholders' perspective on innovation and fraud; (4) what theoretical lenses are worth pursuing; (5) what are the expectations for future research on the area.

Thank you for the consideration.

SIM: The More You Talk, the More You Win: CSR and Firms' Ability to Win Public Procurement Contracts

Author: **Ouiam Kaddouri**, *Leonard de Vinci Business School*
Author: **Stephane Saussier**, *Sorbonne Business School*

This paper examines the possible link between the corporate social responsibility (CSR) communication efforts of companies and their ability to obtain public procurement contracts by focusing on the study of the business-to-government (B-to-G) market. By exploiting a database with the number of public procurement contracts won by SBF 120 companies in France and a constructed CSR index over the period of 2007-2015, the results obtained showed a striking influence of prior CSR communication on the ability of firms to win more contracts during a given year. Our results also underlined the fact that budget constraints may incline public procurers to not base their choices on a company's CSR communication.

SIM: Firm size and the organizational response to supply chain responsibility issues

Author: **Christian Hauser**, *Swiss Institute for Entrepreneurship*
Author: **Eleanor Jehan**, *U. of Applied Sciences of the Grisons*

Concerns for responsible business practice have increased in the wake of supply chain scandals. Consequently, companies are increasingly held accountable not only for irresponsible business conduct within their own organisation but also by supply chain partners. In this light, companies implement controls to safeguard responsible business conduct within their international supply chain. Extant literature looks extensively at internal controls in isolation, with less of a focus on how supply chain partners can interact to ensure responsibility. Moreover, literature on the topic pays little attention to the organisational differences between small and medium size enterprises (SMEs) and their larger counterparts. Rather, extant literature places a heavy emphasis on formal controls favoured by large enterprises and tends to overlook the informal approaches taken by SMEs. With this in mind, the aim of the present paper is to propose a qualitative inductive framework based on contingency theory, illustrating how SMEs' and larger companies' responsibility-related control systems are organised. Based on the model, it becomes evident why the approaches used by SMEs and LEs to implement, promote and ensure responsible management throughout the international supply chain are often incompatible in practice and lead to conflicts.

SIM: Beyond Structural Injustice: Creating Mutual Benefit in Post-Pandemic Global Value Chains

Author: **Harry J. Van Buren**, *U. of St. Thomas*
Author: **Judith Schrempf-Stirling**, *GSEM - U. of Geneva*

The COVID-19 pandemic has affected businesses and their stakeholders in myriad ways. The effects of the pandemic have been particularly acute for participants in supply chains. The pandemic offers an opportunity to address an important question: which value chain practices are more suitable than others for lead firms to contribute to social justice? This question particularly import because value chain activities can have positive and negative effects on various stakeholders as well as on social systems. We propose that the COVID-19 pandemic has exacerbated underlying and pre-existing social, political, and economic conditions that make their negative effects both more likely and more negative, particularly for workers. However, businesses can—as they implement their value chain strategies and promote competitive advantage—also positively affect social justice-related outcomes that will help stakeholders and societies recover from the damage caused by the pandemic. We will offer principles for businesses in this regard, using Iris Marion Young's concept of structural injustice to frame our analysis. We conclude by discussing the future of global value chains in a post-pandemic world.

SIM: The End of Eldorado? Post-Legitimation Adoption of Mining Agreements by Indigenous Communities

Author: **Maggie Cascadden**, *U. of Alberta*
Author: **Emily S. Block**, *U. of Alberta*
Author: **P Devereaux Jennings**, *Alberta School of Business*

Late stage adoption is receiving renewed attention in institutional theory. The varied emergent patterns of late stage adoption has led researchers to re-investigate the nature of adopted practice and the power of organizations and characteristics of fields that influence adoption. One burgeoning stream of work has been around the slowed adoption of complex yet opaque practices once their drawbacks are revealed; another is around the power of local communities as actors to resist adoption of practice advocated by more powerful, central field players. We combine these two streams of work to examine the increasing resistance to the adoption of impact benefit agreements (IBAs) and other forms of mining agreements by Indigenous Canadian communities. Event history analyses of adoptions from 1997-2019 show some alignment of material and cultural community resources with early adoption, but no evidence that such resources lead to later adoption, even though the features of mining firms – being public, Canadian, emergent – influence adoption both early and late. As a result, our paper contributes to institutional explanations of adoption and community studies of Indigenous group power.

The Effects of Governance on Firm Innovation

Digital Session Chair: **Johana Cristina Sierra**, *U. of León, Spain*

STR: The board of directors and firm innovation: a meta-analytical review  

Author: **Johana Cristina Sierra**, *U. of León, Spain*
Author: **Laura Cabeza-García**, *U. of León*
Author: **Nuria Gonzalez-Alvarez**, *U. of León*
Author: **Juan Botella**, *Autonomous U. of Madrid*

The literature on corporate governance has highlighted the importance of board characteristics related to firm innovation. However, empirical findings have not been totally conclusive, and some seem contradictory. Adopting a new perspective, we have tried to help resolve the puzzle using a meta-analysis that integrates findings from 96 previous studies to analyse the relationship between board attributes and firm innovation for the period 1988-2018. In addition, this paper reveals the importance of other aspects like the dimensions of innovation (inputs and outputs) that might also explain previous contradictory findings. The results suggest that aspects of boards, such as the proportions of independent directors and outsiders, show the most significant correlations associated with firm innovation, but the levels of association vary depending on whether innovation is measured as inputs or outputs. Finally, general guidelines are suggested regarding practical implications and future research.

STR: Structural Embeddedness of CEO Social Networks and Firm Exploratory Innovation   

Author: **Jinxin Yang**, *U. of Texas at El Paso*
Author: **Mengge Li**, *U. of Texas at El Paso*

While CEOs have been considered as an important driver for firm innovation, current research has not gained many insights on whether CEO social networks can influence various innovation outcomes. In this paper, we integrate the upper-echelons perspective with social networks theory to examine the effects of structural attributes of a CEO's social network on exploratory innovation. Drawing from a structural embeddedness perspective, we predict that CEO network centrality has an inverted U-shape effect on exploratory innovation, whereas structural holes have a positive relationship with exploratory innovation. In addition, we hypothesize that structural holes reinforce the curvilinear effect of network centrality. We tested our hypotheses with a sample of 1,831 CEOs in the U.S. from 2000 to 2016. Our findings provided supports for our predictions. Our study contributes to strategic leadership and innovation research.

STR: Board and innovation: A systematic review of the literature from a contingency perspective.  

Author: **Ranzi Belkacemi**, *Laval U.*
Author: **Sophie Veilleux**, *U. Laval*
Author: **Marie-Josée Roy**, *Laval U.*

The link between board of directors and innovation has received increasing interest on the part of the scientific community in recent years. Nevertheless, it remains poorly understood, in particular due to limitations in terms of analytical frameworks, theoretical foundations and methodology, as well as the absence of an approach that highlights the importance of contingencies. In this regard, a synthesis of the literature is required, not only to gain a better understanding of this link, but especially to lay a solid foundation on which to build future research. The approach used in this study has led to the emergence of an integrative conceptual framework from a contingency perspective and a promising research agenda. In doing so, this study provides contributions to both the scientific community and the managerial context.

STR: Try to Do Something Creative: How CEOs' Creative Hobbies Affect Firm Innovation 

Author: **Chudi Yang**, *Guanghua School of Management, Peking U.*
Author: **Xuanming Wang**, *Peking U. Guanghua School of Management*
Author: **Weiguo Zhong**, *Peking U.*

The extant research has paid increasing attention to the off-the-job activities of corporate executives. However, most studies have focused on the risky hobbies and their effects on firm risk-taking while neglected important relationships between other kinds of hobbies and firm outcomes. This study highlights CEOs' creative hobbies and investigates their effects on firm innovation. Using a national survey on the various hobbies of CEOs across multiple industries, we obtain strong evidence that firms led by CEOs who have creative hobbies outperform those with CEOs without creative hobbies in innovation. These relationships become stronger when the CEO has to face higher job demand for innovation and engages in better behavioral integration with top management team members off-the-job. We contribute by opening a new arena and uncovering the relevance of CEO creative hobbies.

HR: **Screened Out: Recruiter Evaluations of Job Applicants with Prior Entrepreneurial Experience**

Author: **Jacob Waddingham**, *Auburn U.*

Author: **Miles A. Zachary**, *Auburn U.*

Author: **Harvell Jackson Walker**, *Auburn U.*

Best Student Paper Award for Human Resources-Entrepreneurship Research

A great deal of research on entrepreneurial exit focuses on the potential challenges that entrepreneurs may face when launching a new venture, but very little is known about those who choose to reenter the traditional workforce. It is commonly assumed that an entrepreneur can always “go back to work,” however, it is unclear whether entrepreneurial experience will help or hurt them on the job market. We attempt to answer this question by investigating how recruiters evaluate former entrepreneurs early in the selection process. Drawing on screening theory and attribution theory, we argue that, contrary to popular belief, former entrepreneurs are evaluated more negatively than their counterparts with traditional work experience. Additionally, we theorize that former entrepreneurs who close their business will face considerable difficulty reentering the traditional workforce compared to former entrepreneurs who sell their business. Results of two studies reveal that professional recruiters tend to screen out former entrepreneurs – both those who close and those who sell their ventures – from interview consideration in favor of applicants with traditional work experience. Our qualitative findings provide further support and insight into the attributions that recruiters make when considering former entrepreneurs as potential employees.

HR: **Can Becoming an Entrepreneur Shape Your Personality Traits? A Three-Wave Longitudinal Investigation**

Author: **Wen-Dong Li**, *Chinese U. of Hong Kong*

Author: **Jie Feng**, *Rutgers U.*

Author: **Kaili Yu**, *Chinese U. of Hong Kong*

Micro entrepreneurship research has predominantly adopted the dispositional perspective of personality traits, assuming that entrepreneurs possess certain personality traits that are distinctive from non-entrepreneurs, and interpreted the findings as personality traits driving individuals to become entrepreneurs, not vice versa. As such, micro entrepreneurship research has yet to examine the possibility that entrepreneurship experiences may foster personality development over time. Recent theory and research in personality psychology suggest that adult personality traits are both relatively stable, and subject to change as people transition into novel life roles. In this research, we adopt a role-based perspective and a quasi-experimental design to examine personality development of a group of individuals that transitioned from employees into entrepreneurship roles (i.e., self employment) in a three-wave longitudinal study across approximately twenty years and compared their personality development with an equivalent group of individuals (matched via propensity score matching) that remained as employees over time. We theorized that transitioning into entrepreneurship roles from employees may foster decreases in agreeableness and increases in neuroticism and conscientiousness. We found support for hypotheses on changes on agreeableness and neuroticism. This research advances entrepreneurship research on the causal interpretation of the relationship between personality and entrepreneurship status and offer practical implications for employees, entrepreneurs, and entrepreneurship training.

HR: **Hiring in Entrepreneurial Firms: Pre-Founding Affiliations & the Origins of Organizational Diversity**

Author: **Rhett Andrew Brymer**, *U. of Cincinnati*

Author: **Vera Rocha**, *Copenhagen Business School*

Best Paper Award for Human Resources-Entrepreneurship Research

New ventures typically have few resources and rarely have formal human resource processes, calling into question how these entrepreneurial firms find early employees critical to their success. Additionally, entrepreneurial hiring practices set the trajectory of how workforce composition is built in a growing organization. A common, informal tactic in young firms for finding workers is the use of incumbent workers’ prior affiliations (employment and educational), an expedient practice though one that may limit a new venture’s workforce diversity. Our study examines when young firms engage in such affiliation-based hiring and its implications for demographic diversity. Using a representative sample of new ventures drawn from Danish matched employer-employee data, we find that larger founding teams with greater internal social tie depth are more likely to hire from founders’ prior affiliations. Our results further suggest that affiliation-based hiring reinforces demographic homophily, contrasting with diversity imperatives as firms grow. Our work provides insights to hiring processes in entrepreneurial firms and the enigmatic origins of diversity differences between firms.

HR: **Performance in Tourism SMEs: Alternative HRM Configurations**

Author: **Irene Zografou**, *Athens U. of Economics and Business*

Author: **Eleanna Galanaki**, *Assistant Professor Athens U. of Economics and Business*

Author: **Nikolaos Pahos**, *Athens U. of Economics and Business*

Author: **Ioanna Deligianni**, *Athens U. of Economics and Business*

The Human Resource Management (HRM) field has matured over the last 40 years and models of HRM practices that lead to high business performance in large businesses have been agreed upon in both scholars’ dialogue and practitioners’ application. In Small and Medium Enterprises (SMEs), however, because of the small volume of HRM activity, together with the resource scarcity, these models do not fully apply. With a focus on the hotel industry and drawing from 34 in-depth interviews with SME owners and managers, we conducted fuzzy set qualitative conditions analysis to identify 6 meaningful configurations of human resource management practices that lead to business performance. Aspects such as family involvement and size (micro, small, medium) appear to fully differentiate the HRM pathways to business performance, with high employee compensation and extensive training being the most common conditions of high performance.

Paper is Available to Meeting Registrants Only.

Author: **Brian Harney**, *Dublin City U.*

Author: **Na Fu**, *Trinity Business School, Trinity College Dublin*

Author: **Margarita Nyfoudi**, *U. of Birmingham*

.We still know little about employee's experience of HR practices in small firms, especially in the context of dramatic change such as restructuring and downsizing. In this study, we adopt an HR process lens and build on the theory of communicative action to examine how, and under what conditions, top-down communication of change relates to employee outcomes in the form of commitment and employee resilience. To explore our hypothesis, we draw on a unique sample of 2,131 employees from small firms that have experienced restructuring and downsizing. Our findings demonstrate that the degree to which change is communicated, and the quality of communication matter for small firms under turbulence. The benefits of communication about change operate through the mediator of employee relational climate and are differently moderated by the quality of information received, suggesting different paths to employee commitment and willingness to undergo further change. Our findings contribute to both the HR and small firm literature moving the focus beyond HR content, stable conditions and managerial perspectives to embrace HR process, turbulent contexts and employee experiences.

Creating and Responding to Change

Digital Session Chair: **Ipek Koparan**, *Bentley U.*

STR: Dynamic Capabilities in Strategic Factor Markets: The Effect of Resource Rarity

Author: **Ipek Koparan**, *Bentley U.*

Author: **Gorkem Aksaray**, *Koc U., College of Administrative Sciences and Economics*

Dynamic capabilities are largely imprinted: they are built at the time of foundation and evolve over time. Firms bring in outside resources from the strategic factor markets (SFMs) to improve their operational efficiency and to gain a competitive advantage. Such resource acquisition activities require the abilities to discover, create, and exploit environmental opportunities, to value them accurately, and to successfully integrate the new resources into the organization. Taken together, these abilities constitute a type of organizational meta-capability that enables the organization to process information about its environment, to accurately assess the potential and compatibility of external resources, and then changing itself by reconfiguring and building new capabilities. In this paper, we conceptually explore the relationship between strategic factor market activities and dynamic capabilities. We argue that resource rarity determines this relationship. Strategic factor market and reconfiguring capabilities interactively function to create opportunities from 'common' resources, while strategic factor market and sensing and seizing capabilities complement each other to recognize and exploit opportunities from 'rare' resources. We finally devise an exemplar pathway that comprises systematic processes on how organizational change is implemented through interactions between strategic factor market and dynamic capabilities.

STR: The Design and Implementation of Novel Business Models in the Manufacturing and Services Firms

Author: **Rani Shahwan**, *an-najah national U.*

Author: **Raihana Bahemia**, *Newcastle U. Business School*

The current study focuses on the key antecedents to novel business model design in a comprehensive, empirically verified model. Utilizing the theory of dynamic capabilities, the results of our survey of manufacturing and services firms in the UK indicate that the design of a novel business model is a first-order dynamic capability that contributes to superior firm performance. Technological turbulence is found to be a significant contingency factor that strengthens the relationship between the design of novel business models and firm performance. A key implication of our research is that exploiting internal firm capabilities is important for the implementation of novel business models. We find that three second-order capabilities namely market orientation, entrepreneurial orientation, and technological orientation are drivers to the design of novel business models.

Paper is Available to Meeting Registrants Only.

STR: Nothing Permanent Except Change: Trade-Offs and the Substitution Paradox.

Author: **Jason Sigler**, *The Ohio State U. Fisher College of Business*

Author: **Jaideep Anand**, *Ohio State U.*

Inimitability and non-substitutability make a competitive advantage sustainable; however, they can also have trade-offs between them. The more inimitable a resource is, the more competitors will feel pressure to substitute around it. At the same time, we do not know if this trade-off is dynamic or static, nor do we know the contingencies as to when this trade-off occurs. We study this paradox using a natural experiment – the Biologics Price Competition and Innovation Act of 2009. We find that the substitution paradox is dynamic, and it is also subject to important boundary conditions. While firm characteristics help determine whether there is a trade-off, resource characteristics are unaffected by the exogenous shock. These results support our hypotheses while drawing important implications about the applicability of the VRIN framework.

Ethical consideration in Technology

Digital Session Chair: **Mingang K. Geiger**, *West Virginia U.*

TIM: Raising the Volume on Fairness in Speech Technology  

Author: **Mingang K. Geiger**, *West Virginia U.*
Author: **Mike Horia Teodorescu**, *Boston College*
Author: **Lily Morse**, *West Virginia U.*

Voice recognition has become the dominant tool for communication in our daily life by replacing the keyboard. Not surprisingly, however, this extraordinary technology comes with great risks and moral responsibilities. Over the past decade, the computer science literature has made great strides in advancing the accessibility and capability of speech technology, but lacks an understanding of the ethical implications of such tools for users and organizations. We argue that management scholars should consider how speech technology impacts fairness and ethical behavior in today's organizations. In this paper, we provide an ethical analysis of potential risks to fairness in speech technology in the workplace. By analyzing these risks through the lenses of behavioral ethics and three dimensions of organizational fairness – distributive, procedural, interactional – this paper identifies several concerns relevant to the use of speech technology. We discuss these concerns and provide practical recommendations for promoting fairness in this context. Keywords: speech technology; distributive fairness; procedural fairness; interactional fairness; biometrics; deep fakes

Paper is NOT Available. Please contact the author(s).

TIM: Mass Shootings and Peer-to-Peer Lending: How Do Local Shocks Affect Platform Lending Behavior?  

Author: **Sen Li**, *Lally School of Management, Rensselaer Polytechnic Institute*
Author: **Raffi Garcia**, *Lally School of Management, Rensselaer Polytechnic Institute*
Author: **Abdullah Mahmud**, *Brandeis U.*

This paper analyzes the effect of mass shootings on peer-to-peer lending behavior and credit access. The study uses data from a national gun violence tracker and a major peer-to-peer online lending platform for 2014-2018. We use a difference-in-differences methodology to exploit the quasi-experimental nature of mass-shooting incidents. The results show that relative to the control group (zip codes with no mass-shooting incidents), individuals from treatment zip codes (those with mass-shooting incidents) are approved for lower loan amounts, with higher interest rates, and shorter loan terms. Both principal and interest rates' repayment decreases immediately after a mass shooting relative to the control group, resulting in increases of charge offs for the lenders. Additionally, the interest rate spread increases, while volatility seems to decrease. These results are further amplified, the higher the severity level of the mass-shooting incidents. These results highlight that online credit marketplaces are reactive to random local shocks at the community level.

TIM: Is Cyberloafing a Problematic Behaviour in the Organization?  

Author: **Tsz Chit Yui**, *PhD Student at National Sun Yat-Sen U.*
Author: **Chin Tung Stewart Ng**, *PhD Student at National Sun Yat-Sen U.*
Author: **Hsien Chun Chen**, *National Pingtung U. of Science and Technology*
Author: **Chiung-Ying Wu**, *PhD Student at National Sun Yat-Sen U.*

We have examined whether cyberloafing is a counterproductive work behaviour (CWB; Henle & Blanchard, 2008) in this study. It is done by studying the moderating role of cyberloafing and the mediating role of job stress between the association of one's ability to manage resource and job burnout. We sampled 207 full time working adults for the Taiwan population. Data were analysed using structural equation modelling and regression analysis. The result revealed that a compensation effect exists in cyberloafing and managing resources to reduce job burnout (via job stress). Importantly, we found that a small degree of cyberloafing in the workplace can help reduce employees' job burnout levels. We suggest that organisations review the current internet policy by allowing employee to cyberloafing during their office hour as a coping strategy to "take a short break" in the face of job burnout.

TIM: From Iron Cage to Digital Cage: Platform Control in the New Gig Economy 

Author: **Jiahui He**, *Zhejiang U.*
Author: **Xiaoyun Xie**, *Zhejiang U.*
Author: **Wu Liu**, *Department of Management and Marketing, The Hong Kong Polytechnic U.*

This qualitative research challenges the underlying assumption of previous research on gig workers in the gig economy. Specifically, this study proposes that gig workers in technology-mediated platforms are not the "freelancers" who work with high autonomy as the literature indicates. Instead, due to advanced technologies such as digital equipment and algorithms, platforms often exert great controls over the gig workers of their ecosystem. Drawing on interviews with gig workers in one of the world's leading mobile transportation and local services platforms in China, this research reveals the control tactics and five characteristics of platform control in the new gig economy: opaqueness, imbalance, inessentiality, dehumanization, and spirality. Through the vivid depiction of technology-mediated platform control, our findings contribute new understandings of the new gig economy.

Presenter: **Kirsten Edrie Martin**, *U. of Notre Dame*
Presenter: **Jochem T. Hummel**, *Warwick Business School*
Presenter: **Mikkel Flyverbom**, *Copenhagen Business School*

Algorithmic management has the potential to dramatically change the overall workforce structure and organizational control. Via this symposium, we aim to learn and discuss the importance of various organizational transformations that AI brings. The symposium has papers and discussants drawing on diverse disciplinary perspectives, that will help us gain a better understanding of these complex phenomena. Our goal is to push the boundaries of our collective understanding of the managerial implications of AI-adoption in organizations, and to that effect, our symposium is well aligned with this year's theme of bringing the manager back in management. In addition, we aim to discuss novel methods and theoretical perspectives in the field that may help in developing a better understanding of the adoption and spread of AI across organizations.

ENT: The Effects of Male Entrepreneurs' Prototypical Masculine Attributes on Venture Evaluation Outcomes

Author: **Soojin Oh**, *Pennsylvania State U.*

While past research has unequivocally established that female entrepreneurs are penalized because they do not fit these prototypes, it has not examined how and why male entrepreneurs are advantaged by evaluators' schema of 'the successful entrepreneur'. Specifically, it is not known how various sub-facets of masculine prototypes are evaluated within the category of male entrepreneurs. I identify two sub-facets of prototypes in the context of technology-oriented entrepreneurship: a context-specific 'nerd' prototype, reflecting expectations to be a highly work-focused and intellectually stimulated male, and a cross-context 'dominance' prototype, reflecting stereotypic expectations that males are aggressive, forceful and confident. Drawing from male-role socialization research and prototype theory, I propose that male entrepreneurs are evaluated based upon the extent to which they possess attributes that fit both these prototypes. Testing these predictions, I use a video-metric approach to study a sample of 143 male entrepreneurs who participated in TechCrunch Battlefield San Francisco from 2012 to 2019. I examine the effects of the prototypes on two venture evaluation outcomes – selection as pitch finalists and a total amount of investment funds raised over a firm's lifetime. The results showed that male entrepreneurs had a better chance to be selected as finalists and received greater amounts of funding when they possessed a higher level of context-specific nerd attributes; dominance among males did not have direct effects on outcomes. This main effect of nerd attributes was amplified by high levels of dominance attributes. The interaction was significant only for predicting investment funds.

ENT: Boys don't cry: Entrepreneurial pitches in crowd-financing    

Author: **Jayaram Suryanarayana Uparna**, *Indian Institute of Management, Bangalore*
Author: **Dalhia Mani**, *Indian Institute of Management, Bangalore*

Crowd financing aims to address the needs of small low-growth entrepreneurs, the most critical and largest section of entrepreneurs. Past research on crowd financing shows that narratives that display negativity get faster funding because they evoke empathy in the lender. However, prior research on gender in the workplace shows that positivity/negativity and competence are interpreted differently based on gender. We bring together research on gender and on narratives and draw on theory on gender and role incongruity to predict that, in the crowd finance context, women whose narratives display positivity and competence get faster funding. We rely on a large dataset of 500,000 Kiva loans given to 1.2 million entrepreneurs and find that women get funded 11% sooner than men. In addition, women whose narrative pitches display positivity and competence are funded sooner, while men who display positivity and competence take the longest to get funded. We contribute to research on narratives, gender, and crowd financing.

ENT: A Conceptual Model on Gender Biases and Discrimination in Entrepreneurial Resource Provision  

Author: **Vartuhi Tonoyan**, *California State U., Fresno*
Author: **Robert Strohmeyer**, *U. of Mannheim*

The entrepreneurship literature has provided mixed evidence as to whether various resource-providers —such as actual investors or hypothetical providers of financial capital, technology office licensers, consumers, as well as potential employees— discriminate against female-led innovative start-up ventures in their resource-commitment decisions in terms of the likelihood and terms of resource provision. While some studies revealed evidence indicative of negative discrimination against female entrepreneurs, others have provided evidence of positive discrimination. Yet, another set of studies suggested that entrepreneurial resource-providers are "gender-blind" in their evaluations after accounting for differentials in individual, organizational, and industry characteristics of female- and male-led ventures. These divergent findings point to the need for a more nuanced and integrative approach to studying gender biases in entrepreneurial resource provision, with greater attention paid to both moderating contingency factors and mediating mechanisms. We develop a conceptual model and empirically-testable propositions discussing when, how, and why entrepreneurial resource-providers are likely to undervalue, equvalue, and overvalue female-led innovative ventures. Our model discusses the importance of a key contingency that is likely to influence evaluations of female- and male-led innovative ventures by resource providers: the gender-typing of the entrepreneur's product or service offering. We further discuss the mediating channels through which gender stereotyping is likely to influence the valuation of female- versus male-led ventures. Our model develops a systematic framework and empirically-testable propositions for assessing the occurrence of gender biases in entrepreneurial evaluations and the ensuing resource provision to innovative start-up ventures. We conclude with implications for future entrepreneurship research.

ENT: Women Entrepreneurs and Their Gender Influence In Venture Capital Syndicate Formation (WITHDRAWN)

Author: **Lei Zhang**, *U. of South Florida*

Prior research suggests that women entrepreneurs are at disadvantage when seeking external funding. It is unknown if such disadvantage also exists in the selection of venture capital (VC) syndicate partners. In this paper, we propose that the gender impact can be on both sides. Women entrepreneurs' ventures are more likely to be invested by syndicates of VC partners who have older funds and who are geographically distant from each other; but they are also more likely to obtain syndicated investments from VC firms who have better track records. Using a unique dataset of Internet-specific ventures that received VC investments, we found general support to our hypotheses. By examining gender influence on syndicate composition, this paper makes important contributions to our understanding of gender equality and entrepreneur-investor relationships.

ENT: Evaluation of International Market Opportunities: A Creation Versus Discovery Perspective

Author: **Ryan C. Bailey**, *U. of Oklahoma Price College of Business*

In this article, I discuss two theories of opportunities—discovery and creation—as methods for entrepreneurs to evaluate international market opportunities under conditions of risk and uncertainty. I examine how dimensions of opportunities at the market, community, firm, and entrepreneur levels of analysis influence entrepreneurs' evaluations of discovery and creation opportunities. Lastly, I propose future research directions to expand the concept of international entrepreneurial opportunities and the implications for researchers.

ENT: Fighting uncertainty with (dis)trust: entrepreneurial behaviour in a transitional context

Author: **Aron Perenyi**, *Swinburne Business School, Swinburne U. of Technology*

Author: **Julia Iy**, *Northeastern U.*

Author: **Joanne Larty**, *Lancaster U.*

Our research explores how entrepreneurs develop trust in the uncertain context of a transition economy. We build on social exchange theory to understand the experiences of entrepreneurs in post transition Belarus in the early 2000s, about building, maintaining and utilising networks, that benefit their business ventures. We interviewed entrepreneurs who were successful in this context, and found that entrepreneurs use relational trust with their in-groups and instrumental trust when facing representatives of the faceless and corrupt administrative nomenclature. They modify their approach based on the processes of monitoring and verification. We conclude the study by highlighting the usefulness of distrust in an uncertain environment.

ENT: The Effects of Alliance on Foreign IPO Firms' Survivability in the United States

Author: **Sangyoun Lee**, *Sungkonghoe U.*

Author: **Eun-Jeong Ko**, *Fairleigh Dickinson U.*

Author: **Gilsoo Lee**, *Oregon State U.*

The purpose of this paper is to understand how foreign firms' alliances and the characteristics of those alliances (ties to a host country and alliance portfolio diversity) influence firms' survivability. Using data from 162 foreign firms that made IPOs in the U.S. financial market between 2000 and 2008, this study investigates how number of alliances, alliances with US firms, and alliance portfolio diversity post-IPO influenced the foreign firms' long-term survivability. Relying on the resource-based view, we hypothesized that number of alliances and alliances with US firms would have positive impact on survivability and that alliance portfolio diversity would have an inverse U-shaped relationship with survivability. The study finds that a greater number of alliances post-IPO has a positive impact on firm survivability, but ties with US firms do not have significant effect. Contrary to our expectation, the relationship between alliance portfolio diversity and survivability is U-shaped (not inverted). A moderately diverse alliance portfolio diminishes a firm's survivability, but a high level of alliance portfolio diversity has a positive impact on the firm's survivability. To the best of our knowledge, this is the first study to investigate the relationship between the alliances of foreign firms and survivability post-IPO. This study sheds new light on the implications of alliance building by foreign firms.

ENT: How Internationalization Intentions Trigger Action in Pre-Startup firms

Author: **Silvia Fernandes Costa**, *U. of Groningen*

Author: **Arjan Frederiks**, *U. of Groningen*

Author: **Paula Danskin Englis**, *Berry College*

Author: **Basil Englis**, *Berry College*

We propose that internationalization intentions already exist before a company is established and that different configurations of intentions may lead to different internationalization behavior. Using the Theory of Planned Behavior, this study extends our understanding of individual-level antecedents of internationalization by developing a taxonomy of entrepreneurial internationalization mindsets. Our results show that early internationalization mindsets are predictive of internationalization behavior two years later. These findings provide a starting point for theorizing on pre-venture antecedents of internationalization behavior, for exploring different configurations of individual-level antecedents, and for comparing how these may evolve into internationalization behavior.

OB: Moderating role of attachment in predicting performance with self and collective efficacies

Author: **Erez Yaakobi**, *Ono Academic College*
Author: **Jacob Weisberg**, *Bar Ilan U.*

The importance of individual and group resources for predicting performance is a well-known debate in the literature. This paper presents one of the first attempts to examine the concurrent and relative effects of internal (self) and external (collective) efficacies on performance. We argue that one of the underlying mechanisms that affect the importance of these resources depends on the individual's internal working model of attachment. Study 1 examined the moderating role of employees' attachment orientations in the relative importance they ascribe to self and collective efficacies for predicting performance. Study 2 examined the moderating role of managers' attachment orientations in the importance they attribute to employees' self and collective efficacies in predicting their subordinates' performance. Two samples of employees (N = 143) and managers (N = 132) in high-tech industries participated in these studies. Findings indicate that both employees and managers evaluated self-efficacy as a better predictor of performance than collective efficacy. Moreover, the analysis of both employees' and managers' attachment orientations illuminates how self vs. collective efficacy contribute to performance predictions. Findings also underscore the contribution of attachment theory to performance predictions in the workplace.

OB: Empower Me or Not? Influence of Societal Culture

Author: **Jasenko Ljubica**, *National Research U. Higher School of Economics*
Author: **Romie Frederick Littrell**, *National Research U. Higher School of Economics*
Author: **Gillian Warner Soderholm**, *U. of South-Eastern Norway School of Business*
Author: **Inga Minelgaité**, *U. of Iceland*

Our review of the literature discussing cross-cultural studies of employee empowerment finds frequent theoretical and methodological flaws, leading to inconsistent and often contradictory findings. With these deficiencies in mind, we carry out an empirical study of the relationship between the late Geert Hofstede's seven-dimensional model of national culture and employee preferences for employee empowerment behaviors by managerial leaders. We employ data obtained from ten samples in eight countries, from a global study of preferred managerial leader behavior across cultures. Empirical analyses indicate that cultural value dimension predictor variables affect, but do not explain, employee preferences for leader empowerment behaviors in any of the societies studied. Our findings indicate the importance of engaging in future investigations of the dynamics among cultural, organizational, and personal values, and contingency factors, to advance the understanding of employee attitudes toward, and leader effectiveness of, empowerment styles across societal cultures.

OB: Attack of the Robots: The Threat of Automation on Workplace Attitudes.

Author: **Fade R. Eadeh**, *Carnegie Mellon U. - Tepper School of Business*
Author: **Sarah Lee**, *Dominican U. of California*

Workers are increasingly confronted with the prospect that millions of jobs will be lost to automation in the near future. This leads to a question: How do automation threats affect workplace attitudes? The current research examines this question, through the use of archival and experimental samples. In our archival study (N = 4,199), analyses indicated that individuals working in sectors with high automation potential reported lower levels of job satisfaction, and these effects were mediated by higher levels of job insecurity. We then used a highly powered experimental study (N = 547) to examine which affective components of job insecurity may be responsible for these findings. Given the past literature on sadness and situational control, we hypothesized that this emotion may play a role in reducing job attitudes. Analyses supported our hypothesis; threat-evoked (vs. control) sadness led to reduced levels of job satisfaction. In contrast, fear tended to increase support for job satisfaction and affective commitment. These findings provide a key insight to a particular type of emerging job insecurity (automation), with emphasis on further understanding the link between workplace threat, job insecurity, and the affective consequences of such feeling states.

OB: Culture-informed Influence of Job Autonomy on Burnout: Power Distance Orientation as A Moderator

Author: **Wenjuan Guo**, *Valdosta State U.*
Author: **Julie Irene Hancock**, *U. of North Texas*
Author: **Danielle Cooper**, *U. of North Texas*
Author: **Miguel Caldas**, *U. of Texas at Tyler*

Job autonomy, as a job resource, is expected to yield beneficial effects for employees. We examine job autonomy's relationship to burnout and propose three mediators that explain its effect. Further, considering the diversified workplace, we argue that how job autonomy affects burnout depends on individuals' levels of power distance orientation (PDO). Tested with a combined sample of individuals from three countries – the U.S., China, and Brazil –, we found that job autonomy is generally beneficial to reducing burnout, but that individuals with lower PDO benefit more than individuals with higher PDO. More specifically, we found that PDO moderates the relationship between job autonomy and three role stressors – role conflicts, ambiguity and overload. In addition, our study found that people with different levels of PDO experience different processes of job autonomy – burnout relation. Supplemental analyses suggest that country contexts have significant influences on some of the hypothesized relationships.

Virtual Teams: Opportunities and Challenges for Organizations and Organizing

Digital Session Chair: **Jennifer Rhymer**, *Stanford*

OCIS: **Location-Independent Organizations: Designing Collaboration across Space and Time**

Author: **Jennifer Rhymer**, *Stanford*

OCIS Gerardine DeSanctis Dissertation Award

William H. Newman Award Nominee

Physical proximity has long been a key component of organizational collaboration. Even when organizations have team members spanning multiple locations, organizations frequently rely on their offices as a place in which employees gather and interact. Yet there are an increasing number of organizations, location-independent organizations, that exist without a physical office, where all work is distributed and yet still highly interdependent. I conducted an inductive multiple-case study to understand how these organizations collaborate. The findings reveal two emergent organizational design configurations, namely an asynchronous orientation and a real-time orientation. Additionally, I identify the set of practices which enable the asynchronous oriented organizations to collaborate with limited real-time interactions. Finding that they maintain an open single source of truth, utilize rich work trails, and rely on informed action-first iteration. The first two practices establish an infrastructure, of both breadth and depth while the third practice captures the authority granting behavior of organizations. This set of practices contrasts with the real-time organizations which leverage technology to substitute for physical proximity. The findings contribute to organizational theory by explicitly recognizing both physical and temporal distance in organizational designs and therefore identifying multiple design configurations of distributed work and their enabling practices.

OCIS: **Cultural Intelligence and Employee Engagement in Global Virtual Teams**  

Author: **Farheen Fathima Shaik B**, *Indian Institute of Management, Tiruchirappalli*

Author: **Upam Pushpak Makhecha**, *Indian Institute of Management, Tiruchirappalli*

Author: **Sirish Gouda**, *Indian Institute of Management, Tiruchirappalli*

Author: **Biju Varkkey**, *Indian Institute of Management, Ahmedabad*

The extant literature has been elaborate on multiple conceptualizations of employee engagement. However, there is dearth of literature which addresses employee engagement in varied organizational contexts, one such being the context of global virtual teams (GVTs). The practitioner literature reports reduced levels of employee engagement in members of GVTs. Furthermore, it has been proposed in scholarly literature that the drivers of employee engagement might change in the context of GVTs. One such significant driver influencing employee engagement in GVTs was found to be 'cultural intelligence' of the GVT members. In this study, we intend to study the influence of cultural intelligence on employee engagement by testing the relationship at GVT member level and team level. The research site for this study was a global engineering, and digital technology solutions company, Cyient Ltd., headquartered in Hyderabad, India. Cyient uses GVTs to organize its work and at the time of study it had around 1500 GVTs functioning in diverse geographic locations. Data for this study was collected through a survey across Communications Business Unit of Cyient. The survey was administered to 3500 employees across several locations of which we received 827 valid responses from across 102 teams. In this study, it was found that the levels of trust in a team (both at individual and team level) partially mediated the relationship between cultural intelligence and employee engagement. It meant that apart from cultural intelligence other factors might also be effecting employee engagement in GVTs both at individual and team levels. This study empirically evaluates the relationship between cultural intelligence and employee engagement both at GVT member and GVT levels using a multilevel modeling technique.

OCIS: **The Impact of Job Need for Human Proximity and Communication Technologies on Remote Work Efficacy** 

Author: **Nikhil Madan**, *Indian School of Business*

Author: **Deepa Mani**, *Indian School of Business*

Author: **Madan M Pillutla**, *London Business School*

Media reports and large-scale surveys have documented significant heterogeneity in employees' experience with COVID-19 necessitated remote work arrangements. Prior academic research is limited in the extent to which it can account for this heterogeneity because (1) it has evaluated effects of remote work on workers and organizations that have self-selected into remote work arrangements, and (2) has paid little attention to the role that job characteristics play in determining the impact of remote work. This research note overcomes these limitations and explicates factors that account for the diverse impacts of remote work arrangements. We utilize the context of exogenously imposed remote work arrangements during the COVID-19 pandemic to evaluate whether effects of remote work on employee outcomes differ systematically based on the extent to which employees' work-related tasks are characterized by the need for human proximity (NHP) and whether the use of information and communication technologies (ICTs) have differential impacts on employee outcomes in low and high NHP jobs. Analysis of a multi-source dataset consisting of NHP scores for 107 job types estimated before the COVID-19 induced country-wide lockdown in India (N=3,099) and a survey of employees' experience working remotely conducted during the lockdown (N=403) reveals that employees working in jobs that entail high NHP are both less productive and experience greater isolation than those working in jobs with low NHP. Although the use of videoconferencing technologies compensates for the relatively lower productivity of employees in jobs with high NHP, it doesn't similarly reduce the extent to which they experience isolation. These findings generate several important implications for organizational and governmental policy and make important theoretical and methodological contributions to prior research on remote work.

Paper is Available to Meeting Registrants Only.

Author: **Sut I Wong**, *BI Norwegian Business School*

Author: **Elizabeth A. Solberg**, *Institute for Energy Technology*

Author: **Laura E. Mercer Traavik**, *Kristiania U. College*

The present study investigates the relationship between virtual team members' digital mindset beliefs (beliefs about personal- and organizational resources as work becomes more digitalized) and their experiences of helplessness. Furthermore, we consider how the relationship between virtual team members' digital mindsets beliefs and their experience of helplessness could be intensified under conditions of perceived HRM misalignment. We find, based on a time-lagged survey of 153 virtual team members, that virtual team members having high fixed digital mindset beliefs related to the malleability of personal resources and expandability of organizational resources experience higher levels of helplessness than those with low fixed digital mindset beliefs. Furthermore, we find that having a fixed digital mindset about the expandability of organizational resources is positively related to experienced helplessness when team members perceive that the broader HRM system is misaligned with virtual teamwork arrangement. On the other hand, we find that having a fixed digital mindset about the malleability of personal resources is positively related to experience helplessness when team members perceive that the broader HRM system is aligned with virtual teamwork arrangements. Theoretical and practical implications for virtual team work are discussed.

Green HRM

Digital Session Chair: **Mengwei Li**, *U. of Kansas*

HR: Why Go Green? Exploring Antecedents of Implementing Green HRM

Author: **Mengwei Li**, *U. of Kansas*

Author: **Javier Martínez-del-Río**, *U. of Almeria*

Author: **Pingshu Li**, *U. of Texas Rio Grande Valley*

Author: **James P Guthrie**, *U. of Kansas*

Green HRM (GHRM) is an emerging research topic linked to organizations' efforts to manage environmental issues, which are critical parts of corporate social responsibility. Given the scarcity of empirical research, we first developed a measure of GHRM and explored its internal structure. We next invoked the behavioral and upper echelons perspectives to consider the influence of proactive green strategies, high performance work systems (HPWS), and plant managers' perceptions of discretionary slack on the implementation of GHRM. We also examined the interactive effect of proactive green strategy and HPWS as well as the interaction between prior emission and plant managers' perception of discretionary slack. We tested our hypotheses in 129 Spanish plants using phone surveys and a secondary archival database. Our data suggests GHRM to be a two-factor construct consisting of what we label as branding-oriented GHRM and high investment GHRM. Proactive green strategy predicted both dimensions while HPWS was only associated with the adoption of high investment GHRM. Proactive green strategy and HPWS had opposite interactive effects on the two types of GHRM. Prior emissions enhanced the relationship between plant manager's perception of discretionary slack and high investment GHRM.

HR: Green HRM System and Green Culture: A Conceptual Model Towards Green Competing Values Framework

Author: **Sudhanshu Maheshwari**, *Indian Institute of Management, Ahmedabad*

Author: **Ashneet Kaur**, *Doctoral Student at IIM Ahmedabad*

The study expands our understanding of the linkage between the green human resource management (GHRM) system, green culture and environmental performance of the firm. The paper builds upon the popular work of Quinn & Rohrbaugh's (1983) competing values framework (CVF) and probes the CVF in the green context. We propose a Green CVF (GCVF) that entails four green cultures referred as (1) green clan, (2) green adhocracy, (3) green hierarchy, and (4) green market that are positively shaped through practices corresponding to a specific GHRM system. The GCVF model highlights respective green beliefs, core values and green behaviours formed via particular GHRM system that materializes each of the green cultures. Further, the proposed model states the particular environmental performance effectiveness criteria for the respective green culture. The study adopts the theoretical lens of the resource-based view to explain the conceptual model. After discussing the theoretical and practical implications of the study, we state the future directions for researchers working in the sustainability and GHRM realm.

HR: What Makes Employees Green Advocates? Exploring the Effects of Green Human Resource Management

Author: **Yufei Cheng**, *School of Management, Shandong U.*

Author: **Yiwei Yuan**, *School of Business, Renmin U. of China*

Author: **Huanxin Liu**, *Shandong U., China*

Author: **Ji Haochen**, *Boston U.*

Author: **Jinguo Zhao**, *School of Management, Qilu U. of Technology*

Green advocacy has been the focus of both practitioners and theorists for decades. However, little attention has been paid to green advocacy within organizations despite its significance to employees' green behaviors and organizations' environmental sustainability. In an effort to contribute to this nascent field, this study investigates what promotes green advocacy within organizations and its psychological mechanisms. Based on cognitive consistency theory, we propose that green human resource management can influence employees' organization-based self-esteem, which motivates them to engage in green advocacy within organizations to sustain their positive self-image and avoid possible cognitive disorders. Data from a sample of 135 organizations supported our hypotheses. We discussed the theoretical and practical implications of our findings.

Paper is Available to Meeting Registrants Only.

HR: Commitment or Exhaustion? Effects of Green Human Resource Management on Employee Green Behavior

Author: **Yiwei Yuan**, *School of Business, Renmin U. of China*

Author: **Shuang Ren**, *Deakin U.*

Author: **Ji Haochen**, *Boston U.*

Author: **Guiyao Tang**, *Shandong U.*

Green human resource management (GHRM), a set of human resource management practices targeted at environmental goals, has been proposed as the key to achieve sustainable organizational development. However, the mechanisms through which GHRM influences pro-environmental employee behavior are not yet understood fully. Drawing on the conservation of resources (COR) theory, this study presents an integrated model linking GHRM to employees' voluntary workplace green behavior (VWGB) via employee environmental commitment and emotional exhaustion. Path analysis based on data from 396 employees partly supported our hypotheses. Specifically, GHRM was found to positively influence employees' VWGB through environmental commitment, while simultaneously enhancing employee emotional exhaustion, thus decreasing their VWGB. Meanwhile, supervisory support for environmental behavior was found to mitigate the impact of GHRM on emotional exhaustion as well as the relationship between GHRM and employee VWGB via emotional exhaustion. This study contributes to the GHRM literature in particular and to organizational environmental management in general.

Open Innovation

Digital Session Chair: **Yeolan Lee**, *U. of Alabama, Huntsville*

TIM: Technological similarity and market entry as antecedents of inbound open innovation 

Author: **Yeolan Lee**, *U. of Alabama, Huntsville*
Author: **Eric Fong**, *U. of Alabama, Huntsville*

This paper investigates resource-based, market-based, and imitation-based motives in open innovation (OI) technology sourcing decisions. Using the theoretical foundations of these diverse motives, we identify antecedents related to whether firms source technology from science-based organizations (i.e., universities, government and research institutes) and competitors. Using 307 patent licenses, we found that technological similarity has differing impacts on the choice of science-based organizations and competitors. Our results show that there is an inverted U-shaped relationship between technological similarity and choice of competitors while a U-shaped relationship exists between technological similarity and choice of science-based organizations. We find that when there are a large number of product market entries, firms tend to source technology from competitors. These results confirm that OI partner selections differ based on the firm's motives.

TIM: Measuring Open Innovation Practices: How Openness Relates to Firm Performance

Author: **Qinli LU**, *HSG U. of St. Gallen*
Author: **Henry Chesbrough**, *U. of California, Berkeley*

Despite the popularity of open innovation in recent years, performance results from the practice of open innovation have been mixed. Previous empirical work on open innovation practices is usually done either in isolation, such as studying a single open innovation practice, or in aggregate, such as employing a proxy measure. To avoid the limitations of these approaches, we employ an unsupervised learning technique (i.e. topic modelling) that utilizes natural language processing to extract information on companies' open innovation practices from their annual reports, creating an initial key-word basket for future development. We then evaluate the relationship between our derived open innovation practices and the business performance of firms. Our empirical results show that a firm's use of open innovation practices is associated with its improved business performance. Our approach allows us to develop more granular practices within open innovation, and our results show that these practices vary in their impact on business performance. Open innovation practices regarding customer engagement have a particularly significant positive association with firms' growth potential, compared to other open innovation practices. The salience of these derived open innovation practices also varies by sector. We relate our results back to the mixed findings on open innovation and firm performance, and conclude that there is no One Size Fits All, or a uniform set of Best Practices, to practice open innovation.

Paper is Available to Meeting Registrants Only.

TIM: The Direction and Form of Openness: Homogeneity of Openness Strategies and Innovation Novelities

Author: **Hamdy Abdelaty**, *Freie U. Berlin*

Open innovation model spurred considerable research endeavors in scrutinizing how openness toward external sources of knowledge influences firms' innovation performance. We argue that external sources are heterogenous concerning their knowledge novelty and knowledge accessibility. Accordingly, firms have to consider those two aspects when choosing the direction of openness (i.e., market sources or science sources) and the form of openness (i.e., search or collaboration strategy). The combination of both aspects results in four different openness strategies, namely, market-driven search, market-driven collaboration, science-driven search, and science-driven collaboration. We hypothesize that each external openness strategy influences the firms' innovation novelties (i.e., firm-novelties or market-novelties) differently. Our empirical analysis relies on a sample of 4457 German firms that participated in the German community innovation survey CIS in 2005, 2009, 2013, and 2017. Our findings show that a market-driven search strategy is strongly correlated to firm-novelty than to market novelty. Using a collaboration form of openness with the market sources does not enhance innovation novelty. In contrast, a science-driven collaboration strategy is strongly associated with market-novelty than firm-novelty, and that deploying a search form of openness with the science-sources has no influences on innovation novelties. We draw practical implications for managers based on those results.

Paper is Available to Meeting Registrants Only.

TIM: Can free innovation create value? Stock market reactions to firms' releases of open technologies 

Author: **Wei Yang**, *China Europe International Business School*

This study examines whether and how firms create value by making their innovations free and non-proprietary, a possibility that runs counter to the central tenet in strategy regarding the control of private knowledge as a key to profiting from innovation. In exploring this counterintuitive conjecture, we focus on the stock market reactions as a forward-looking indicator of value creation and connect the literature of innovation ecosystems with investors' reactions to firm strategies. More specifically, we argue that the stock market positively reacts to firms' release of innovation as open technologies, because it constitutes an effective ecosystem disclosure strategy that not only enables investors to fully evaluate the value of the underlying innovation ecosystem, but also creates new opportunities for ecosystem expansion and maintaining more efficient coordination and collaboration in ways that creates value. In turn, we further argue that stock market reactions to the disclosure of open technologies are positively influenced by a firm's proprietary innovations that ease the value capture within an ecosystem, while they are negatively affected by the potential of non-proprietary open collaboration opportunities that present high opportunity cost in the process of value appropriation through ecosystem collaboration. We also propose that the effect of those drivers would be accentuated by the technological interdependencies of the released technology. Those arguments are fully supported in our empirical analysis of 2,738 release of open-source software programs by 132 public companies in the software development industry. Our analysis shows that, on average, a release of innovation as open technologies created a 0.34% cumulative abnormal return for the disclosing company. We discuss implications for the understanding of innovation ecosystems and the development of value creation of open technologies.

Bringing the Manager Back in Strategic HRM: Redefined and Enhanced Roles of Managers in HRM

Bringing the Manager Back in Strategic HRM

Organizer: **Rebecca Rheinhardt Kehoe**, *Cornell U.*
Organizer: **Joonyoung Kim**, *Cornell U.*
Discussant: **Patrick Wright**, *U. of South Carolina*
Participant: **Clint Chadwick**, *U. of Kansas*
Presenter: **Jinhwan Jo**, *Wright State U.*

Participant: **Byron Y. Lee**, *China Europe International Business School (CEIBS)*
Participant: **Kaifeng Jiang**, *Ohio State U.*
Participant: **Zhiqiang Liu**, *Huazhong U. of Science and Technology*

Strategic human resource management (SHRM) scholars and practitioners have long recognized the importance of HRM as a source of competitive advantage (e.g., Boxall, 1998; Coff, 1997; Wright, McMahan, & McWilliams, 1994), demonstrating that systems of effective and interconnected HR practices enhance the abilities, motivation, and opportunities of employees to meaningfully contribute to value creation in their employing organizations (Jiang, Lepak, Hu, & Baer, 2012; Lepak, Liao, Chung, & Harden, 2006). This literature has traditionally focused on the link between HRM and organizational performance, with a frequent emphasis on the alignment of HR practices – or HR content – as a coherent system (i.e., horizontal alignment) that supports the requirements of an organization’s environment (i.e., vertical alignment). It has been more recently that some SHRM scholars have begun to explicitly examine additional influences on the effectiveness of HRM, including HR process within the focal organization (e.g., Bowen & Ostroff, 2004), key organizational members (e.g., Jackson & Schuler, 2003) and changes in the external environment (e.g., Combs, Liu, Hall, & Ketchen, 2006). One key insight that has emerged from these research efforts has concerned the important role of managers – whether at the frontline, middle, or executive level, or at the organizational or functional level – in organizations’ efforts to achieve competitive advantage through HRM. The purpose of the present symposium is to build on this insight by bringing together research that explicitly investigates the redefined and enhanced roles of managers in human resource management and, in so doing, furthers our understanding of how, when, and by whom HRM contributes to competitive advantage. Our symposium is comprised of papers examining a broad range of such topics, including the roles of the dynamics characterizing organizational environments, internal HR actors, and the interaction between HR systems and managers as they contribute to (or hinder) organizations’ abilities to achieve a human resource-based competitive advantage. The benefits of such a symposium are two-fold. First, this symposium will allow for a richer discussion regarding the roles of managers and the contexts and mechanisms through which HRM creates and maintains the competitive advantage of organizations. Specifically, the papers in this session span research concerning the achievement of HR alignment via an agentic and process-based model (Kim), the value and benefits of HR functions and HR executives (Bentley, Han, & Choudhury; Chadwick & Jo), and the influence of HR systems and managers on employee creativity (Takeuchi, Lee, Kim, Jiang, & Liu). We aim to transcend the HR practice-oriented perspectives adopted in prior studies by highlighting the roles of managers in human resource management.

Board Diversity and Outcomes

Digital Session Chair: **Claire Wright**, *McQuarrie U.*

GDO: Capturing cohesion: Integrating network and life history approaches for Australia's corporate elite

Author: **Claire Wright**, *McQuarrie U.*
Author: **Corinne Cortese**, *U. of Wollongong*
Author: **Abdulla Al Mamun**, *U. of Wollongong*
Author: **Searat Ali**, *U. of Wollongong*

How cohesive is Australia's corporate elite? To demonstrate the interrelatedness of board members of the ASX50, we integrate the analysis of directors' structural connections (through interlocking directorates) with a detailed examination of their life histories to reveal a closely connected and homogenous group of participants. By applying institutional theory, we account for the structure and composition of the elite, particularly the way various isomorphisms have reinforced and disrupted the status quo. Our study offers an innovative methodological and theoretical contribution to understanding diversity in corporate leadership, and provides a point of comparison to other studies that investigate board diversity.

GDO: Predictors of Board Gender Diversity: A Systematic Review and Meta-analysis

Author: **Shasanka Chalise**, *PhD Candidate, Memorial U., NL, Canada*
Author: **Kara Anne Arnold**, *Memorial U. of Newfoundland*
Author: **Catherine Loughlin**, *St. Mary's U.*
Author: **Cara-Lynn Scheuer**, *Coastal Carolina U.*
Author: **Corinne McNally**, *Saint Mary's U., Canada*
Author: **Danielle Mercer**, *Acadia U.*

Drawing on macro (country), meso (industry and organizational), and micro (board) level literature related to board gender composition, we provided a systematic review and meta-analysis of factors predicting gender diversity on boards (k = 62 independent samples; N = 632,185 firm-year observations). Results showed that at the macro-level, representation of women on boards is lower in countries that place higher value on masculinity ($r = -0.30$), have greater power distance ($r = -0.15$), and higher levels of religiosity ($r = -0.30$). The presence of women in politics and government rankings was also positively associated with increased board gender diversity ($r = 0.47$). Positive associations were also found between board gender diversity and meso-level factors which included female work-force participation ($r = 0.18$), firm size ($r = 0.20$), board size ($r = 0.22$) and ownership structure ($r = 0.23$). At the micro-level, we found positive associations between board gender diversity and the presence of network opportunities and mentoring ($r = 0.25$), board development practices ($r = 0.29$), chair of the board being a woman ($r = 0.26$), and female presence on board nomination committees ($r = 0.23$). Overall, findings address the previous calls for research investigation (e.g., Hillman, Shropshire, & Cannella, 2007; Terjesen & Singh, 2008) of the endogenous causes of underrepresentation of women on boards.

Paper is Available to Meeting Registrants Only.

GDO: The Differential Impact of Risk Preferences of Board on Ownership Decisions in Foreign Acquisitions

Author: **Fatemeh Askarzadeh**, *Old Dominion U.*
Author: **Krista Lewellyn**, *Florida Southern College*
Author: **Habib Ashrafal Islam**, *Old Dominion U.*
Author: **Kaveh Moghaddam**, *U. of Houston, Victoria*

Drawing on gender role theory and the information economics perspective, we aid in contributing to the ongoing debate of the risk preferences of female directors. Thus we distinguish between types of risk and take the position that the concept of risk is not a monolithic one. By decomposing acquisition risk into ex-ante and ex-post hazards, this cross-national study investigates how female representation on acquirers' boards affects the level of ownership in foreign acquisitions. We further test how the relationship is moderated by institutional distance. Using a sample of 1,118 firm-year observations in 48 countries from 1997-2016, we find that greater female representation is associated with lower levels of ownership. We also find that institutional distance between home and host countries magnifies this relationship. Our findings support our arguments that female directors prefer different types of risk than their male counterparts, which drives choices about the appropriate level of ownership. We challenge the assumption of rational-risk assessment and unidimensional risk attitudes of female directors, offering unique theoretical implications. Recognizing that the presence of female directors influences the type of preferred risk in acquisitions provides insights that may help match board composition to the optimal risk profile of a firm.

GDO: Board of Directors' Knowledge Heterogeneity: A Literature Review and Multi-Domain Research Agenda

Author: **Louisa Selivanovskikh**, *National Research U. Higher School of Economics*
Author: **Virginia Bodolica**, *American U. of Sharjah*

The objective of this paper is to systematically review and critique the literature on corporate board of directors' knowledge heterogeneity. Based on the analysis of corporate governance and management research articles published over the past 30 years in leading peer-review journals, we aim to conceptualize knowledge heterogeneity in a corporate board setting, disentangle the heterogeneity effects, and model the process of knowledge heterogeneity of corporate directors. Finally, we advance a multi-domain research agenda to encourage scholars to engage with the topic in new and not previously considered ways.

Turnover

Digital Session Chair: **Syed Shah**, *Macquarie U.*

OB: Polychronicity Fit and Turnover Intentions: The Mediating Roles of Exhaustion and Work Overload

Author: **Syed Shah**, *Macquarie U.*
Author: **Denise Mary Jepsen**, *Macquarie Business School*
Author: **Sarah Bankins**, *Macquarie U.*

Despite the deployment of state-of-the-art methodologies for project management, employee turnover in projects remains high. Such turnover has significant costs in terms of replacing personnel, potential deadline over-runs, and financial expense. One reason turnover may be high in project contexts relates to timing issues associated with multiple parallel projects and short deadlines. Using person-environment fit and time congruence theory, this research examines the relationship between individual-organizational (I-O) polychronicity fit and employee turnover intentions in projects. I-O polychronicity fit is the degree to which there is a match between individuals' and organizational preferences for focusing on multiple tasks at the same time. It was hypothesized that I-O polychronicity fit (misfit) will be related to employees' turnover intentions. The mediating roles of exhaustion and perception of work overload were also examined. Hypotheses were tested using polynomial regressions and response surface modelling. Survey data from 309 Pakistani software project employees found I-O polychronicity fit was related to turnover intentions. I-O polychronicity fit leads to increased exhaustion and overload which increase employee's intention to quit. These findings contribute to the academic literature on effective project management and carry practical implications for retaining valuable project employees.

OB: The Double-edged Sword Effect of Inclusive Leadership on Employee Presenteeism

Author: **Dongdong Wang**, *Nanjing U. of Finance and Economics*
Author: **Zhichao Qian**, *Leicester U.*
Author: **Chen Hanhan**, *School of Business, Renmin U. of China*
Author: **Yan Yanhua**, *China National Institute of Standardization*

Prior studies commonly believed that inclusive leadership is of considerable benefit to employees but rarely discussed its potential downsides. To address this issue, this study explores why and when inclusive leadership promotes and inhibits employee presenteeism. Based on a sample data of 373 employees from three manufacturing enterprises in China, the empirical result shows that inclusive leadership may reduce employee presenteeism by enhancing their psychological safety on the one hand and foster it by promoting their felt obligation on the other. In addition, power distance orientation negatively moderates the relationship between inclusive leadership and employee's felt obligation. The study also finds that power distance orientation moderates the indirect effect of felt obligation in the relationship between inclusive leadership and employee presenteeism, such that the indirect effect of felt obligation is significant only when power distance orientation is low. Finally, the theoretical and practical implications of these findings are discussed.

Paper is Available to Meeting Registrants Only.

OB: Why Do Middle Managers Leave? Middle Managers' Trust in Supervisors and Turnover Intention

Author: **Ho Wong**, *Hong Kong Baptist U.*
Author: **Guohua Huang**, *Hong Kong Baptist U.*

This study focuses on the role of trust in supervisor in shaping middle managers' turnover intention. We develop a theory-based model to explain that cognition-based trust in supervisor generates a sense of job security and affect-based trust generates a sense of fit in the organization which in turn decrease turnover intention, and such effect is stronger for middle managers than for employees at lower or higher levels. A three-phase longitudinal quantitative research is used to test the research model. The results from 162 participants in Hong Kong support most of the model, showing that job security and person-organization fit mediate the relationship between trust in supervisors and turnover intention. In addition, the affect-based trust in supervisors and person-organization fit relationship is stronger for middle managers. The implications of the findings for future research and management practice are discussed.

OB: The Impact of Job Crafting and Career Expectations on the Dysfunctional Outcomes of Amotivation

Author: **Huda Masood**, *York U., Toronto*
Author: **Leonard Karakowsky**, *York U.*
Author: **Mark Podolsky**, *York U.*

The lack of motivation towards an activity also known as amotivation (Gagné et al., 2015) has been found to impact a range of significant employee outcomes, including emotional exhaustion, burnout, and turnover, etc. Nonetheless, the existing organizational behavior scholarship has paid little attention to amotivation as a determining factor of important work behaviors such as workplace deviance and turnover intentions. Given that the latter behaviors tend to co-occur, the aim of this study was to examine their relationship with amotivation and explore the plausible boundary conditions that can attenuate this relationship. We conducted a multi-method study in order to examine the influence of proactive job redesign and career outcome expectations on the link between amotivation, deviance, and turnover intentions. First, our findings offered support for the assertions that amotivation can be antecedent to both workplace deviance and turnover intentions. Second, we found evidence that this link can be negatively impacted by job crafting and career outcome expectations. This paper concludes with a discussion of both the practical and theoretical importance of these findings.

Antecedents of Creativity

Digital Session Chair: **Cayrol Alex**, *Grenoble Ecole de Management*

OB: The effect of expression of ambivalence and happiness on creative performance

Author: **Cayrol Alex**, *Grenoble Ecole de Management*
Author: **Thomas Gillier**, *Grenoble Ecole de Management*

Leaders frequently assign creative tasks to their employees. Surprisingly, the effect of the emotions that leaders can express during task instructions has been poorly explored by the literature. Using the EASI (Emotion As a Social Information) theory, this paper aims at better understand how the emotions that a leader expresses during task instruction influence the creative performance of the employee. More specifically, this study aims at comparing the effect of expression of ambivalence, happiness and anger. Two laboratory experiments show that in terms of quantity of ideas, an angry leader significantly triggered better results than a happy leader, who triggered better results than an ambivalent leader. In terms of quality of ideas (i.e. their originality and their novelty), there was no difference between a happy and an ambivalent leader. However, a happy leader triggered better ideas than an angry leader. Future studies can explore the mechanisms mediating the effect of expression of emotions on creative performance. This paper extends the EASI theory (Van Kleef, 2009) with the exploration of the effect of expressing mixed emotions (ambivalence) in task instructions.

OB: The relationship between activated resource-based faultlines and team creativity

Author: **Jin Yao**, *Xi'an Jiaotong U.*
Author: **Xinmei Liu**, *Xi'an Jiaotong U.*

This study proposes a conceptual model that examines whether, how and when activated resource-based faultlines affects team creativity. Based on the social information processing theory, this study explains how activated resource-based faultlines influence team creativity via team open communication and verify humble leadership as a moderator of such mediation relationship. We conducted a multiple-source (from both team members and their team leaders), time-lagged (separated by four months) research design to collect survey data from 70 teams and test the research model. The empirical results show that activated resource-based faultlines are negatively related to team creativity and such impact is mediated by team open communication. The moderated mediation analyses also prove that team open communication mediate the negative impacts of activated resource-based faultlines on team creativity only in teams with low humble leadership. Finally, we discuss the theoretical and practical implications of our research.

OB: How Status Diversity Fosters Team Innovation? The Role Of Behavior Integration And Empowering Leader

Author: **YUPING XU**, *Huazhong U. of Science and Technology*
Author: **YANYI HUANG**, *Huazhong U. of Science and Technology*
Author: **Yuqi Huang**, *13174*
Author: **KangHui Chen**, *Huazhong U. of Science and Technology*
Author: **Kong Zhou**, *School of Management, Huazhong U. of Science and Technology*

Although status diversity has emerged as an important concept, it is still relatively understudied in organizational behavior research, especially in team innovation research. By taking a behavior integration perspective, we propose that team status diversity has a curvilinear relationship with team members' behavior integration that promotes team innovation. Furthermore, we argue that the relationship between status diversity and behavior integration is moderated by empowering leadership, i.e., team members tend to achieve a higher level of behavior integration and team innovation at slightly low and medium level of status diversity when empowering leadership is high. Results from a multisource field study support all of our hypotheses. The findings provide new insights into the team innovation research.

Paper is Available to Meeting Registrants Only.

OB: Do Multiple Identities Holders Create More? The Role of Ambivalence and Mindfulness

Author: **Yangxin Wang**, *Chinese U. of Hong Kong*
Author: **Dora C. LAU**, *Chinese U. of Hong Kong*
Author: **Youngsang Kim**, *Sungkyunkwan U.*

It is prevalent for individuals in organizations to define themselves according to simultaneous, multiple, salient identities. When individuals adopt multiple identities, they have several cognitive frameworks in which to interpret a single event, resulting in ambivalent attitudes towards a single target. Similarly, identity plays a central role in arousing emotional reactions and individuals with multiple identities may have different reactions to a single event and thus have ambivalent emotions. Drawing on the ambivalence and identity literature, we propose that multiple identities (versus a single identity) would be positively related to individuals' attitudinal and emotional ambivalence. As ambivalence has the potential to broaden one's thinking and lead to cognitive flexibility, we further suggest that ambivalence may mediate the relationship between multiple identities and individual creative performance. We also suggest that individuals' mindfulness may strengthen the relationship between ambivalence and creative performance and therefore strengthen the indirect effect of multiple identities on creative performance. The results from two multi-wave, multi-source survey studies confirmed our hypotheses. Theoretical and practical implications are discussed.

Platforms and Ecosystems: Formation and Governance

Digital Session Chair: **Ganqi Tang**, *U. of Fribourg*

STR: Platforms, Blockchains, and Hybrids: Digital Governance of Interorganizational Networks

Author: **Curtis Goldsby**, *Erasmus U. Rotterdam*
Author: **Marvin Hanisch**, *U. of Groningen*

Digital platforms and blockchains have gained increasing attention as viable governance instruments for interorganizational networks. Research has juxtaposed these two instruments by emphasizing that platforms achieve network governance through intermediation, whereas blockchains do so through disintermediation. Extending this theoretical groundwork, we propose that platforms and blockchains can blend into hybrid forms with characteristics of both intermediation and disintermediation. Since this phenomenon has received scarce scholarly attention, we develop a rich, grounded theory of network-level interorganizational governance choices and transitions. We seek to better understand these complex governance phenomena with a focus on supporting trust and control mechanisms. Our model emerges from a longitudinal, qualitative analysis of Global Commerce Portal (pseudonym), a world-leading, industry-spanning global trade network. By highlighting how network governance transitioned from an intermediated, platform-based governance mode to a disintermediated, blockchain-based governance mode, we integrate and extend previously disparate scholarly conversations.

Paper is NOT Available. Please contact the author(s).

STR: Interdependency, business model design, and new stakeholder introduction in nascent markets

Author: **Ganqi Tang**, *U. of Fribourg*

Business model design involves configuring what activities organizational actors perform, how activities are distributed among actors, and how activities are interconnected in a value-creating activity system. One way to design innovative business models is to introduce new actors to take over activities that were previously conducted by other existing actors. Such innovation can create difficulties for executives of a focal firm to understand system dynamics and to design an effective business model accordingly. The current study investigates how executives of an entrepreneurial firm design its business model to introduce a new business model stakeholder into a nascent market. Through the lens of interdependency, I ask 1) whether introducing new business model stakeholders generates challenges concerning interdependencies in an activity system, and 2) if so, what actions executives of a focal firm takes in business model designing in response these interdependency challenges. Based on an in-depth longitudinal case study of a start-up company that provided crowdsourcing-based online laundry service, I develop a theoretical model to answer the above questions. The data reveal that three specific forms of interdependency (i.e., role, epistemic, and goal interdependence) drive business model design when executives introduce a new business model stakeholder in an entrepreneurial firm in a nascent market. In response to challenges concerning these forms of interdependency, executives of the focal firm design their business model with four actions: Delineating roles, instilling knowledge, constructing goals, and tuning interfaces. This business model design process resembles the process of plant grafting to create graft-chimeras—i.e., symbiotic combinations of new and existing parts, ensuring the interconnectedness between the new actor (the “scion”) and the existing actor (the “stock”) and thus strengthening the vigorous cohabitation of both. The study contributes primarily to the literature on business model, by incorporating theories of organization design and documenting a transitional process from novelty-based to lock-in-based business model design.

STR: To Be or Not To Be (on The Platform): Offline complementors' decision to join entrant platforms

Author: **Christine Choi**, *U. of Michigan*

Existing studies on platform competition have emphasized the importance of complementors on platform success but paid little attention to complementors' heterogeneous decisions to collaborate with a particular platform. Building on the literature on adjustment costs, this paper examines how complementors' organizational attributes influence their decisions to adopt an entrant platform. My preliminary results based on U.S. restaurant industry data show that restaurants that had already partnered with at least one incumbent food delivery platform were more likely to adopt an entrant platform. However, this positive relationship was weaker for complementors that had (1) a higher capacity utilization rate and (2) more than one organizational unit. This paper provides implications on how entrant platforms can establish an initial population of complementors, preparing the ground to compete with incumbent platforms.

STR: Platform Competition and Strategies of Third-Party Complementors: Evidence from an E-Commerce Market

Author: **Ziyi Chen**, *HKUST*

Platform ecosystems are characterized by a cooperation tension between platform owners and complementors. In this study, we first document a large difference between the performance of first- and third-party complementors using data from JD.com, a leading e-commerce platform in China. Building on the cooperation framework, we propose and empirically evaluate two strategies third-party complementors can take to close the performance gap. The first is to collaborate with the platform owner by making platform-specific investments such as using the platform's logistics services, which will increase the common benefits on the platform and show their commitment. The second is to affiliate with high-end brands, which have both the incentive and capability to maintain a balance between the digital platform and agents in their established distribution network. We further examine how the behavior of third-party complementors changes as the cooperation landscape between first- and third-party sellers alters. We hypothesize and find evidence that third-party complementors offer greater price discounts when competing with first-party complementors in the same product space, but are less likely to do so under greater threat from the platform. Contributions to the platform and cooperation literature are discussed.

Strategic Foresight and Cognitive Representations

Digital Session Chair: **Mana Heshmati**, *U. of Michigan*

STR: Learning Strategic Representations: Exploring the Effects of Taking a Strategy Course      

Author: **Mana Heshmati**, *U. of Michigan*
Author: **Felipe Csaszar**, *U. of Michigan*

Despite the popularity of strategy courses and the fact that managers make consequential decisions using ideas they learn in such courses, little is known about the effects of taking a course in strategy. This paper is the first large-sample study of the effects of taking a strategy course. We examine how 2,269 MBA students analyze real-world video cases before and after taking the MBA strategy core course at a large US business school. We document several changes in terms of students' performance, mental representations, and self-perceptions. Among other findings, we show that taking a strategy course improves strategic decision-making performance, increases the depth of mental representations as well as the attention paid to broader industry and competitive concerns, and boosts students' confidence while making them more aware of the uncertainty that pervades strategic decisions.

STR: Simple Rules: An Exploration of Contextual Contingencies on Competitive Performance

Author: **George A. Shinkle**, *UNSW Sydney*
Author: **Angel Sharma**, *UNSW Business School, Australia*
Author: **Steven Siu-Yun Lui**, *U. of New South Wales*
Author: **Salih Zeki Ozdemir**, *U. of New South Wales*
Author: **Christopher Jackson**, *U. of New South Wales*
Author: **Benjamin Walker**, *Monash U.*

We investigate the performance efficacy of simple rules under four theoretically anticipated contextual contingencies: environmental uncertainty, technology intensity, firm age, and firm size. Our theorizing is based on the efficiency-flexibility balance that underpins simple rule logic as well as notions from contingency theory. We use a unique survey dataset of 254 US-based executives to test our hypotheses. We find that simple rule usage is broadly beneficial to competitive performance. Counterintuitively, we find that environmental uncertainty does not moderate the simple rule usage – competitive performance relationship. We find that simple rule usage is associated with competitive performance in firms with high technological intensity but does not offer differential benefit based on firm age or size. Post-hoc analysis indicates that managers tend to limit usage of simple rules in uncertain environments (mismatching with performance indications) and promote usage in firms with high technological intensity and large size. Broadly, we contribute to the simple rules literature by highlighting the boundary conditions under which simple rules are effective for competitive performance.

STR: Shifting the Bounds on Rationality: Artificial Intelligence and Organizational Search

Author: **Sebastian Raisch**, *GSEM - U. of Geneva*
Author: **Kateryna Fomina**, *GSEM - U. of Geneva*

The behavioral search model explains how organizations embrace new things considering the nature and limitations of the human agents who constitute them. However, research on artificial intelligence (AI) suggests that organizations increasingly use machine search, which could enable them to overcome their human search limitations. Despite its theoretical and practical importance, surprisingly little research has explored the role of advanced technology use in the search process. To address this gap, we initially describe organizations' traditional technology use to enable human search, which is consistent with behavioral theory's assumptions of bounded rationality and local search. Against this baseline, we then contrast three distinct and novel applications of AI-based machine search in organizations (i.e., machine creation, machine prediction, and machine recombination) and compare their effects on search outcomes. We theorize that organizations using machine search can overcome their human search limitations, or reinforce them further, contingent on how human and machine agents combine their distinct cognitive abilities in the search process. With our conceptual model, we extend existing behavioral search theories from a human-centric perspective to an augmented search perspective, which takes account of the interaction between human search and machine search in organizations.

STR: Feedback and Foresight: Adapting to the Asymmetric Ratcheting of External Goals  

Author: **Oliver Baumann**, *U. of Southern Denmark*
Author: **Matthias D. Mahlendorf**, *Frankfurt School of Finance and Management*
Author: **Zhiyan Wu**, *Erasmus U. Rotterdam*

We study how firms adapt to the dynamics of external goals, i.e., relevant performance expectations by external parties that are beyond firms' direct control. Using analyst forecasts as a proxy, we (1) provide evidence for "asymmetric ratcheting" – upward goal adjustments following over-achievements are larger than downward adjustments following under-achievements of the same magnitude, and (2) test competing hypotheses regarding the adaptive responses to these dynamics: that firms increase search to identify novel long-run bases of performance; or that they reduce search to control the goal through lower performance variability. We find support for the latter, suggesting that learning in the presence of external goals is driven by both feedback and foresight: firms respond to the goal dynamics they experience, but anticipate potential future goal adjustments.

Innovative Ecosystems

Digital Session Chair: **Mara Guerra**, *ETH Zürich*

TIM: Orchestrator legitimacy in a nascent ecosystem: The case of Atos and fintechs

Author: **S. James Ellis**, *Radboud U. Nijmegen*
Author: **Saeed Khanagha**, *Vrije U. Amsterdam*
Author: **Philipp Tuertscher**, *Vrije U. Amsterdam*

In ecosystems where collaboration between firms is advantageous or even necessary to progress firm innovation, buy-in must be won from stakeholders to enable operative actors to do so. Flashy ideas and big promises may carry weight in the process of winning them over, but convincing stakeholders of the legitimacy of the proposed collaboration is paramount. In this paper, we investigate how actors within a firm engage in a bifurcated legitimacy campaign to coerce internal and external stakeholders into supporting an innovating orchestration system. Drawing on a unique case study at one of Europe's leading IT service integrators, and drawing on institutional theory and ecosystems literatures, we specifically look at shifting motives, expectations, and legitimacy-building strategies through a process lens to shed light on how an incumbent's internal and external stakeholders can be cleverly made to work for each other.

Paper is Available to Meeting Registrants Only.

TIM: Failing To Emerge: An Empirical Investigation Of Why Industries Do Not Succeed

Author: **Mara Guerra**, *ETH Zürich*
Author: **Rajshree Agarwal**, *U. of Maryland*

Scholars have long investigated how industries emerge. Yet, extant work largely suffers from a success bias in that much of existing research has focused on cases in which industries were able to transition across all milestones of commercialization, firm takeoff and sales takeoff to successfully reach commercial sustainability. We use detailed quantitative and qualitative evidence from the US solar PV industry and its thin film technology to examine the factors that prevent industry's success. Our study systematically explores the technical, institutional, demand and ecosystem dimensions of the industry and show the role of demand and ecosystem dimensions for sales takeoff. We further illuminate the critical role played by bottlenecks emerging at the intersection of different dimensions to create a vicious cycle preventing sales takeoff. We juxtapose our stylized findings to received wisdom to generate new theoretical insights and set the stage for further work on industry failure.

Paper is Available to Meeting Registrants Only.

TIM: The Role of Place in Emerging Fields: A Comparative Study of ICT Entrepreneurial Ecosystems in Japan

Author: **Agata Kapturkiewicz**, *School of Commerce, Waseda U.*

This paper highlights how place matters for the development of smaller entrepreneurial ecosystems (EEs), developing in a situation when a dominant EE is already present within given national institutional boundaries (here: Japan). The findings show that smaller EEs of Osaka-Kyoto and Fukuoka have similar institutional gaps in their institutional infrastructure (e.g. gaps in funding, and in the access to information and expertise from successful startups), and in response their stakeholders engage in similar types of actions to obtain the missing elements. However, the existing and expected outcomes of these actions are found to be moderated by certain elements underlying the EEs' institutional infrastructure – local resources (stronger in Osaka-Kyoto), and place cohesion (stronger in Fukuoka). The latter is a concept newly identified and defined in the paper. The findings of this paper have theoretical implications for research about EEs and for comparative study of organisational fields.

TIM: China's Mobile Payments in Complementary Multiplatform Ecosystems

Author: **Marina Yue Zhang**, *Swinburne Business School, Swinburne U. of Technology*

Using a longitudinal case study this paper aims to demystify how China developed the world's largest mobile payment market based on a backward technology and in a rigid institutional environment. We find that, different from multi-sided platform ecosystems, complementary multi-platform ecosystems are critical in the success of China's mobile payments. In such ecosystems, mobile payment platforms – a nascent field at the convergence of mobile communications and payment industries – are a type of 'platform of platforms' intermediating multilateral interactions across multiplatforms. We expanded the scope of complementarity in ecosystems from multi-sided platform ecosystems to multi-platform ecosystems. The findings enrich our theoretical understanding of the effects of multi-platform ecosystems on individual platforms, not only on nurturing a nascent field (i.e., mobile payments) by enacting a value co-creation and co-capture environment for sharing, but also on signalling their legitimacy in a country where institutional settings are generally rigid. The lessons also carry practical and policy implications.

Employee Job Crafting

Digital Session Chair: **Stefan Jooss**, *U. College Cork*

HR: Frequent Changes Undermine Employee Adaptivity: The Importance of Job Crafting and Personal Needs

Author: **Kaixuan Tang**, *U. of Electronic Science and Technology of China*
Author: **Lu Chen**, *U. of Electronic Science and Technology of China*
Author: **Yilin Xiang**, *U. of Electronic Science and Technology of China*

Drawing on the transactional theory of stress and self-regulation theory, we propose a conceptual framework examining how change frequency relates to approach or avoidance adaptations. Multiwave, multisource data from 424 subordinate-supervisor dyads indicate that (1) approach and avoidance crafting mediate the negative relationship between change frequency and adaptivity; (2) need for human connection weakens the relationship between change frequency and approach-avoidance crafting; (3) need for control strengthens the relationship between change frequency and approach-avoidance crafting; (4) change frequency has a weakened (strengthened) indirect effect on adaptivity via approach crafting and avoidance crafting when employees have high needs for human connection (for control). The study expands research on job crafting and adaptivity, and provides practical implications for organizations undergoing or soon to undergo changes.

HR: Discretion as a Double-edged Sword in Global Work: The Perils of International Business Travelers

Author: **Stefan Jooss**, *U. College Cork*
Author: **Kieran Michael Conroy**, *Queen's U. Belfast*
Author: **Anthony McDonnell**, *U. College Cork*

International business travelers have become omnipresent in multinational enterprises, and yet we know little on how they manage the inherent complexities of their global work. Through a qualitative research design, our study reveals a perturbing job demands-resources mismatch faced by these individuals. They are afforded substantial discretion with respect to how they carry out their global work which enables engagement in a series of job crafting actions. These inadvertently intensified rather than eased the demands-resources mismatch they confronted. We advance job crafting theory through unpacking the potentially dysfunctional nature of job crafting in a global work context and in doing so, challenge the overwhelmingly positive benefits commonly outlined. Our findings lead us to call for greater organizational oversight and configuration of support structures for business travel, alongside increased virtual working.

HR: Bright sides of boredom at the workplace: A theoretical framework

Author: **Caroline Fischer**, *U. of Potsdam*
Author: **Carina Schott**, *Utrecht U., School of Governance*

The management literature describes workplace boredom and related behaviors mostly as counterproductive and deviating, leading to negative outcomes at the individual and organizational level. However, psychological literature suggests boredom to be a functional emotion. This article introduces this positive approach towards boredom to the management literature. Specifically, we provide a comprehensive theoretical model of the positive effects of employees' boredom at the workplace, providing testable propositions. Based on the job-demands resources model, we argue that boredom can constitute a challenging demand leading to three approach-oriented coping behaviors (task-unrelated thought, changing task engagement and other task engagement), which in turn, lead to positive work-related outcomes, such as creativity, learning and own development (individual level), innovation, higher performance through taking on additional tasks, more challenging tasks or varying tasks, helping and network building (organizational level) and general pro-social behavior (societal level). We identify personal and job resources, which potentially foster these approach-oriented coping behaviors against boredom, namely different characteristics of an individual's personality (personal resources), as well as adhocracy culture and empowering leadership styles (job resources).

HR: When does job crafting work? A person-job fit approach to effective job crafting

Author: **Gavin Joseph Williamson**, *U. of Tennessee, Knoxville*

Job crafting (i.e. employees proactively altering their own work design) has garnered scholarly attention as job design researchers have shown benefits to performance, job attitudes, and well-being from bottom-up work redesign. Interestingly, research has neglected to differentiate between engagement in job crafting and effectiveness in job crafting, and therefore few studies examine the outcomes of crafting efforts that lead to real changes in work experience relative to those that do not. Resultant from this gap is a paucity of study on outcomes of failed job crafting efforts, theoretical confusion as to why job crafting has certain effects, and little guidance for practitioners on how to craft jobs effectively or manage subordinate job crafting. To address this issue, we introduce a construct, job crafting effectiveness, defined as the extent to which crafting improves person-job fit, and propose relationships between effective and ineffective crafting, individual work outcomes (performance, job attitudes, well-being) and others' work outcomes. Implications for theory and practice are discussed, including potential for the development of interventions that train workers on how to be effective and ethical job crafters, and a research agenda to inform these interventions.

Paper is Available to Meeting Registrants Only.

Author: **Shunhong Ji**, *Shanghai U. of Finance and Economics*

Author: **Zhijun Chen**, *Shanghai U. of Finance and Economics*

In this research, we extend job crafting behaviors to the job market and explore whether candidate's job crafting work experiences influence recruiter's hiring evaluation. Using data from two pilot surveys and another two studies with different working samples, we found that candidates presenting approach job crafting work experiences were more likely to gain higher levels of hiring recommendation than those with avoidance job crafting, and this association was significantly driven by recruiter's fit perception. Moreover, due to the role congruity, we predict that job crafting work experiences are stereotypically ascribed to different genders in the decision-making. Results of Study 1 and Study 2 revealed the interaction between candidate's job crafting work experiences and their gender, such that male candidates who showed approach job crafting work experiences in the resume received higher levels of hiring recommendation via recruiter's fit perception, compared to female candidates. Taken together, these studies highlight an unidentified recruiting discrimination caused by the combination of group-based bias and work behavior-based traits in the selection.

Effects of Leadership on Creativity

Digital Session Chair: **Vahid Mehraein, U. of Udine**

OB: The Dark Side of Leadership and Workplace Mistreatment: A review of Creativity and Innovation

Author: **Vahid Mehraein, U. of Udine**

The critical role of social influence in determining creativity and innovation is undisputed in the scientific circles of organizational behavior. Research has typically tended to focus on positive leader behaviors and positive social influences on creativity and innovation and has generally concluded that such behaviors promote these often-desired outcomes. In contrast, our work takes an unorthodox approach by bringing together research on the dark side of leadership and workplace mistreatment to join the conversation of creativity and innovation with darker perspectives of leadership and organization. In this study, we begin by defining the dark side of leadership and then provide a comprehensive systematic review of 163 empirical studies that address this topic. These studies address 35 leadership and workplace variables (abusive supervision, authoritarian leadership, aversive leadership, close monitoring, coercive power, conflict with co-worker, controlling supervision, counterproductive work behavior, defensive silence, despotic leadership, destructive leadership, directive leadership, hubristic leadership, incivility, jeer pressure, knowledge hiding, laissez-faire leadership, linguistic ostracism, Machiavellian leadership, management by exception (active), management-by-exception, management-by-exception (passive), mobbing, narcissistic leadership, organizational politics, ostracism, overconfident leadership, passive leadership, psychopathic leadership, relationship conflict, self-serving leadership, sexual harassment, supervisor undermining, workplace bullying, workplace deviant behavior) known to predict negative employee and organizational outcomes. This paper reports the main effects but also summarizes the results of mediating and moderating variables and provides useful taxonomies. Finally, recommendations for future research directions provide insights into areas worth considering.

OB: Does Contingent Reward Leadership Enhance or Diminish Team Creativity?

Author: **Debjani Ghosh, Indian Institute of Management, Ranchi**
Author: **Eric Kearney, U. of Potsdam**
Author: **Martin Buss, U. of Potsdam**
Author: **Amita Shivhare, Narsee Monjee Institute of Management Studies, Mumbai, India**

Although prior research has shown that contingent reward transactional leadership is, on average, nearly as highly related to team outcomes as is transformational leadership, few studies have examined the mechanisms whereby and the conditions under which contingent reward leadership is related to team creativity. Drawing on social exchange theory, we argue that contingent reward leadership can enhance team knowledge sharing and, in turn, team creative performance because it specifies effort-reward contingencies for knowledge sharing and because it motivates team members to reciprocate for consistency and transparent treatment their leader exhibits towards them. Moreover, we propose that this relationship is moderated by leader unpredictability, which can undermine the otherwise positive effects of contingent reward leadership. In a two-source, lagged design (three-wave) field study with data from 70 organizational teams, we found a conditional indirect (moderated mediation) effect of contingent reward leadership on team creative performance through team knowledge sharing. This conditional indirect effect was positive when leader unpredictability was low, and negative when leader unpredictability was high. Our research suggests that consistent and predictable contingent reward leadership can be an effective tool for leaders to foster creativity in teams.

OB: Temporal Leadership and Team Creativity: A Curvilinear Relationship

Author: **Chenggang Duan, Xi'an Jiaotong U.**
Author: **Melody J. Zhang, City U. of Hong Kong**
Author: **Xinmei Liu, Xi'an Jiaotong U.**

Modern organizations increasingly rely on project teams to provide creative solutions (e.g., products and services) in a timely manner. Team temporal leadership has thus gained substantial interest in the assumption that it is beneficial for team effectiveness. However, we advocate a second thought on temporal leadership's influence on team creativity. Building on the nature of team creativity and paradox theory, we proposed an inverted U-shaped relationship between temporal leadership and team creativity and the moderating roles of team knowledge complexity and team learning goal orientation. Analyses of multisource data from 68 R&D project teams with 374 team members supported our theorized inverted U-shaped relationship: teams exhibited higher team creativity at a moderate level, compared with low or high levels, of temporal leadership. The results further showed that this inverted U-shaped relationship was more prominent for teams with high knowledge complexity and learning goal orientation. The theoretical and practical implications of these findings are discussed.

OB: Role Modeling Effects: The Influence Mechanism of Team Leader's Job Involvement on Team Creativity

Author: **Dongqing Hu, Antai College of Economics and Management, Shanghai Jiao Tong U.**
Author: **Qinxuan Gu, Antai College of Economics and Management, Shanghai Jiao Tong U.**
Author: **Yinxuan ZHANG, Antai College of Economics and Management, Shanghai Jiao Tong U.**

Researchers have examined the effects of multiple leadership styles on team creativity but have yet to examine how team leader's work attitudes would influence team creativity. Drawing on social learning theory, we explored how team leader's job involvement would enhance team creativity through improving team members' average job involvement. Using a sample of 101 knowledge-based teams from a Chinese state-owned media technology company, we found that team leader's job involvement could promote team members' average job involvement, and then enhance team creativity. In addition, team leader's prosocial motivation and mean leader-member exchange (LMX) could strengthen the positive relationship between team leader's job involvement and team members' average job involvement, and also strengthen the indirect positive relationship between team leader's job involvement and team creativity via team members' average job involvement. The theoretical and practical implications of these findings are discussed.

A large body of management research have traditionally examined individual prosocial behaviors that benefit others via ethical means (individuals, organizations, larger social groups) (Penner, Dovidio, Piliavin & Schroeder, 2005). Fairly recently, organizational scholars working in this area have examined unethical pro-social behaviors (UPBs) - unethical behaviors intended to benefit “in-group” others - individuals or entities (e.g., group, organization) (Chen, Chen & Sheldon, 2016; Umphress & Bingham, 2011; Umphress, Bingham & Mitchell, 2010). However, so far this literature has mainly focused on individual-level attitudes predicting UPB, leaving the role of contexts largely unexamined. UPBs occur within the employment context, and for a better understanding of this construct, it is important to understand how UPBs are influenced by contextual influences such as exogenous crises, cultures at various levels, leadership influences, and interaction history. To advance this body of literature, this symposium is designed to investigate how these contextual factors influence UPBs. The five papers included in the symposium examine how UPB engagement or disengagement is bounded in the ongoing global crisis (i.e., COVID-19 – Chen & Chen), ethical culture (Lupoli, Mount, Newman, & Schwartz), leadership influences (Mo & Song), and interaction history (Umphress, Dang & Paskill; Kong & Belkin). Collectively, these featured papers use a variety of research designs, study populations, and analytic methods to provide insights on this topic and shift attention to contextual influences.

OCIS: **Mitigation of Work-Family Frustration in Dual-Earner Couples during COVID-19**  

Author: **Rui Zhang Sundrup**, *U. of Louisville*

Author: **Manju K. Ahuja**, *U. of Louisville*

Author: **Massimo Magni**, *Bocconi U.*

In this paper, we develop and test a framework of work-family frustration in live-in, dual-earner couples in the context of COVID-19 which acts as a work-life shock event. We tested the model using a 10-day diary study of dual-earner couples in live-in partnerships. The paper contributes to the literature on work-from-home (WFH) phenomenon, which has been enabled by advanced information and communication technologies (ICTs) such as email, messaging, and video conferencing (such as Google Meet and Zoom). We posit that given the human limitations of cognitive and emotional resources, the ICT permeability in WFH situations can favor the emergence of a state of frustration leading to potential conflicts between partners as they deal with coordination issues with work, with each other and if they have children, with the demands of caring and home schooling. We also examine the moderating effect of gender on this relationship, given the recent reports showing that women are carrying a higher proportion of domestic responsibilities even as they meet the demands of their own employment. Further, we investigate planning as a mitigating behavior that interrupts the pattern of permeability creating frustration and conflict. We find strong support for our model, providing empirical evidence of psychological costs and alleviating strategies for employees who have made an unanticipated switch to WFH with ICTs.

OCIS Best Paper Award Finalist

The COVID-19 pandemic has forced office-based teams to shift to remote work for an indeterminate time. The demands of forced virtual teamwork and “social distancing” create stress among entire organizational teams and their members. We study how teams and their members cope with forced virtual work during the office-lockdown from March to August in 2020, as well as the impact on vitality, in a longitudinal qualitative multi-case study of twelve office-based teams. Our findings reveal that the needs of teams and individuals are sometimes in conflict, such that attempts to cope end up enhancing vitality on one level while undermining it on the other. We call this phenomenon the vitality paradox. We find that the composition of individual coping approaches on the team level explains this paradox, and that only teams that actively apply both individual- and team-focused coping thrive. The present study extends coping theory by viewing coping as a multilevel process with both team-level and individual-level outcomes, and by elucidating the paradoxical ways in which virtual team processes and well-being are interrelated.

OCIS: **Is it a Matter of Trait or State? Understanding IT-mediated Learning Effectiveness During COVID-19** 

Author: **Anuragini Shirish**, *U. Paris-Saclay, U. Evry, IMT-BS, LITEM, Evry-Courcouronnes, France*

Author: **Shalini Chandra**, *S P Jain School of Global Management, Singapore*

Author: **Shirish Chandra Srivastava**, *HEC Paris*

Despite the many expected positives of online learning, during the current COVID-19 impacted scenario, students have reported mixed-outcomes. While some students could adapt to the increased IT demands for learning, others struggled to adjust to this sudden transformation. Grounding our work in IT mindfulness literature, we theorize a differential in the students’ learning effectiveness based on the level of their IT mindfulness trait. Further, leveraging the “mindfulness to meaning” theory, we hypothesize the mediating role of techno eustress in the relationship between student IT mindfulness and the two learning effectiveness outcomes of productivity-in-learning and creativity-in-learning. The theorized model is tested via data collected from a two-wave survey among graduate students who had to abruptly switch to an exclusive IT-enabled learning environment during the pandemic lockdown period. Results show that IT mindfulness has a significant positive relationship with both the learning effectiveness outcomes and these relationships are mediated by the students’ techno eustress perceptions. The emerging theoretical and practical implications are also discussed.

OCIS Best Paper Award Finalist

Nearly one third of U.S workers are self-employed or independent contractors. Autonomy has long been identified as a driving motivation for independent workers, but it remains unclear how these workers experience agency in their day-to-day lives. In an interview and diary study with highly-skilled independent workers, we find that “autonomy” is not a monolithic or unidimensional experience; rather, there are multiple forms of autonomy, that we label “agencies” that workers value. In addition, the experienced value of these agencies generally supersedes the uncertainties associated with independent work, even during the unprecedented COVID-19 pandemic. By creating a framework of experienced agencies in independent work, this paper expands our understanding of how autonomy is experienced in practice and the tradeoffs that independent workers make in service of seeking various forms of agency. For, we find that only when experienced agency disappears entirely, with little hope of returning, do these highly-skilled workers consider abandoning independent work and contemplate working for a traditional organization.

Corruption and Wrong Doing

Digital Session Chair: **Evelina Gillard**, *Cesar Ritz Colleges*

SIM: Procedural corruption strategies in public service

Author: **Evelina Gillard**, *Cesar Ritz Colleges*

The Opportunity-Motivation-Justification model explaining the organizational corruption antecedents conceptualizes procedural corruption as the abuse of legal-rational authority based on formal rules. Yet, the link between the procedural offences and public service remains underexplored, despite severe damages to equal access to market, competition and government legitimacy that corrupt transactions between business managers and public officials might cause. This paper uses a multiple case study strategy to investigate critical incidents of bribery of the public officials in return for business as procedural outcomes. Insights into explanations regarding the legal-rational authority abuse by managers that intend to corrupt the public officials is obtained from the cases of the Foreign Corrupt Practices Act (FCPA) violations formalized from 2013 to 2017. The data includes the US Securities and Exchange Commission proceedings, US Department of Justice communications, and corporate press releases regarding five North American and five European firms publicly traded on the US Stock Exchange. The findings suggest that the business managers may engage in different procedural corruption strategies, depending on the extent to which they interact with formal rules as the base of their legal-rational authority. The four proposed procedural corruption strategies include ignoring, minimizing, denigrating, and constructing.

SIM: Approach-oriented versus avoidance-oriented bribery: The effects of bribery on firm performance

Author: **Zhexiong Tao**, *U. of International Business and Economics*

Author: **Jiasi Fan**, *U. of International Business and Economics*

While extant theory suggests that bribery is related to firm performance, empirical research has produced inconclusive results. Drawing on the approach-avoidance motivation theory, we reconcile the mixed findings by establishing a motivation-oriented framework. Under the framework, we argue that firms pay bribes with different motivations, and for that matter, differ in performance results achieved through bribery. Specifically, we distinguish between two types of firm bribery. While approach-oriented bribery involves firms using the temptation of payments to engage government officials in order to get rewarded, avoidance-oriented bribery occurs when firms feel that they have to pay bribes to government officials to avoid being punished. Hypotheses pertaining to the effects of approach-oriented and avoidance-oriented bribery on firm performance are developed and tested using a unique database of 2930 firm-year observations from 1465 firms based in 30 countries. Our findings indicate that approach-oriented bribery promotes firm performance, whereas avoidance-oriented bribery dampens firm performance. Our results also show that political constraints can negatively moderate the positive relationship between approach-oriented bribery and firm performance. The results are consistent across diverse performance indicators.

SIM: Is bribery a managerial myopia? A denial from the perspective of CEO career horizon

Author: **Jiasi Fan**, *U. of International Business and Economics*

Author: **Zhexiong Tao**, *U. of International Business and Economics*

As bribery costs and pays, it can be considered as a corporate investment that relies on time horizon. We follow this logic and investigate the impact of CEO career horizon on corporate bribery. While most research tends to believe that bribery is an opportunistic behavior that is short-term oriented, bribery may be implemented as a relational strategy with long-term incentives in emerging markets. As such, CEOs with longer rather than shorter career horizons are prone to make bribery investment because they are able to achieve paybacks during their incumbency. Testing the hypothesis on a sample of 2,915 Chinese listed companies during the period from 2010 to 2018, we find that CEOs with longer career horizons are more likely to engage in corruption. Further, this relationship is weaker for state-owned companies and companies in more market-oriented regions.

SIM: The cost of corrupt lobbying and the role of institutional correction for bystander firms

Author: **Minjung Lee**, *U. of Texas at Dallas*

Author: **Seung-Hyun Lee**, *U. of Texas at Dallas*

This research combines legitimacy theory with expectancy violation to argue that when salient wrongdoing outside a firm is associated with a strategic behavior of bystander firms, the stakeholders show a negative reaction to those firms as this strategic action lost legitimacy and failed to meet the stakeholders' expectancy for conformation to social norms and laws. Moreover, within-category variation in the engagement of suspicious strategic behavior is associated with the bystander firms' level of culpability. We also show that correction by a trustworthy third party, such as the government, enables bystander firms tainted by the focal wrongdoing to restore their legitimacy by ensuring that their future activities will meet the stakeholders' expectancy. Using the most notorious corrupt lobbying case in United States history and the related legislation that followed, we show that the more bystander firms lobby, the more these firms are penalized by stakeholders at the time of any focal corrupt lobbying disclosure. This penalty intensifies when these firms hire more lobbyists with close connections to politicians and government officers, thus using revolving-door lobbyists. However, when new laws requiring higher transparency are stipulated, those bystander firms that lobbied the most and were penalized the most recover their value most.

Paper is NOT Available. Please contact the author(s).

Author: **Renato Chaves**, *HEC Montreal*

Author: **Emmanuel Raufflet**, *HEC Montreal*

Compliance programs are promoted as effective solutions to corruption in organizations. Compliance programs, also known as ethics and compliance programs, ethics programs, and integrity programs, are widely adopted by organizations across the world, but their ability to effectively curb corruption is largely disputed. Current research mainly focuses on compliance programs as sets of organizational self-regulatory practices dissociated from wider country and sectoral anti-corruption initiatives. This article reviews and critiques the multidisciplinary literature on compliance programs. The literature reveals that anti-corruption regulation is the main driver of compliance programs, but little attention is paid to corruption as the organizational issue that compliance programs are expected to solve. This review discusses how compliance practices are informed by two dominant theoretical approaches to explaining corruption (based on principal-agent theory and collective action theory) and the implications for research and organizational practice. This review concludes by proposing a shift towards situated, problem-driven organizational strategies that take into account the challenge to tackling specific instances of corruption, the processual character of compliance programs, and the interplay of social structure and individual agency in different phases of the process of design, implementation, and maintenance of such programs.

Innovation Strategy

Digital Session Chair: **Tobias Baehr**, *Chair of Innovation Management, TU Dortmund U.*

TIM: Exploring The Antecedents of Digital Orientation: The Role of Dynamic Managerial Capabilities 

Author: **Tobias Baehr**, *Chair of Innovation Management, TU Dortmund U.*

A digital orientation increases firm performance and builds the foundation for a successful digital transformation. However, little is known on why some firms dedicate more time and resources on digitalization initiatives than other firms do. In our study, we empirically provide first determinants for the novel construct of digital orientation by utilizing a panel dataset with 3,595 firm-year observations between 2006 and 2018 on large firms in the United States. We model R&D search intensity as a dynamic managerial capability and reveal that it is positively related to a digital orientation. We demonstrate that competitive intensity as well as the presence of a digital executive interact with this relationship. We also find a three-way interaction between CEO age, digital executive presence, R&D search intensity and digital orientation, adding to the literature on top management team member interrelations in strategic decisions. Taken together, our study advances literature on how dynamic managerial capabilities unfold in the R&D search and digital strategy context. Our findings also provide advice for practitioners.

TIM: Serve the State or Serve Myself: State Ownership, CEO's Political Experience and Firm Innovation

Author: **Yudi Hou**, *School of Economics & Management, Tongji U.*

Author: **Yuchen Zhang**, *Yuchen zhang Tongji*

Prior studies provided mixed results and different standpoints of the impact of state ownership on firms' innovation. To reconcile this tension, we propose a contingency-agency model and theorize that state ownership may promote exploitative innovation but hinder exploratory innovation due to the agency duty. Moreover, we theorize that if the CEO has served as a national- or provincial-level position, the negative relationship of state ownership and exploration will be attenuated and if the CEO has served as a municipal- and county-level position, the positive relationship of state ownership and exploitation will be enhanced because CEO's political experience may imprint on a distinct state-oriented ideology. Working in an environment consistent with the orthodox state-oriented ideology—such as a state-owned enterprise within a state-monopolistic industry—maintains and even intensifies the imprinting ideology. Our research reveals the light side of political ideology by demonstrating that the CEO's state-oriented ideology may benefit SOEs' exploratory innovation. We examine our hypotheses based on a longitudinal panel data of 519 Chinese firms from 2008 to 2017.

 **TIM: Artificial Intelligence and Firm Performance**

Author: **Taekyun Kim**, *Korea Advanced Institute of Science and Technology (KAIST)*

Author: **Yejin Park**, *Korea Advanced Institute of Science and Technology (KAIST)*

Given that systems based on artificial intelligence (AI) technologies now match or surpass human levels, more firms are adopting these technologies to gain a competitive advantage. However, the literature has not examined the relationship between AI adoption and its effect on firm performance. To fill this gap, this paper investigates the relationship between AI technology adoption and firm performance, focusing on Tobin's q, profit, and cost structures. We observe a positive relationship between AI and Tobin's q, an effect that is more pronounced with adoption of augmentation AI than of automation AI. Moreover, whereas automation AI significantly reduces firms' cost of goods sold, augmentation AI neither increases profit nor reduces costs. Finally, the cost reduction and value increase are associated more with manufacturing than with service industries.

Paper is Available to Meeting Registrants Only.

 **TIM: Herding and Learning: How Rivals' Actions Shape Firm's Decisions to Enter Strategic Factor Markets.**

Author: **Thomas M. Klueter**, *IESE Business School*

Author: **Jason Sigler**, *The Ohio State U. Fisher College of Business*

Author: **Jaideep Anand**, *Ohio State U.*

Value creation in product markets originates in strategic factor markets, where firms compete to gain the best resources to implement their strategies. While we know that rivals' activities in product markets are an important source of information, we know little about how firms set expectations and react to information emerging from competitors' actions in strategic factors markets. We fill these gaps by building a theoretical framework that explains how rivals' actions shape a firm's entry decisions in strategic factor markets and how firms enter those markets (resource picking or capability building). We go beyond previous strategic factor models to differentiate two additional types of markets in which a rivals' actions can be observed: strategic factor markets with common outputs and with common inputs. We test our theoretical framework by analyzing entry decisions by the top 50 biopharmaceutical firms between 1999 and 2008. Our results offer strong evidence that firms react differently to information emerging from rivals in the three distinct strategic factor markets. We find that rival actions in a focal strategic factor market invoke a strong herding response through resource picking in that strategic factor market. However, capability building is more likely used to respond to rival actions in common input and output strategic factor markets as learning is the key motivator.

Paper is Available to Meeting Registrants Only.

Author: **Wenlong He**, *U. of International Business and Economics*

Author: **Dan G. Prud'homme**, *EMLV*

Author: **Nianchen Han**, *U. of Colorado, Boulder*

In this paper, we develop a contingency theory of how the design of inventor reward schemes and characteristics of employee inventors collectively shape corporate innovation performance. We hypothesize that extra-organizational constraints and asymmetrically short-termist tradeoffs codified in the design of inventor rewards schemes will likely incentivize innovation opportunism; we also hypothesize that these designs will further incentivize innovation opportunism by negatively interacting with employee inventors' motivational proclivities, namely those formed by their time-in-role and search routines, towards short-termist rewards. We test our hypotheses based on difference-in-differences models leveraging micro-data about employee inventors in China and the effect of introduction of a prominent type of inventor reward scheme, imposed by Chinese patent law on state-owned enterprises, on corporate innovation performance. Our work extends the contingency theory of compensation schemes to corporate innovation contexts by explicating when inventor reward schemes tend to incentivize opportunism and thereby misalign with firm strategies targeting advanced inventions and broad-scope patenting.

Paper is NOT Available. Please contact the author(s).

Participant: **Brian Connelly**, *Auburn U.*
Participant: **Alvaro Cuervo-Cazurra**, *Northeastern U.*
Participant: **Ilya Cuypers**, *Singapore Management U.*
Participant: **Ajai Singh Gaur**, *Rutgers U.*
Participant: **Nan Jia**, *U. of Southern California*
Participant: **Grazia D. Santangelo**, *Copenhagen Business School*
Participant: **Mary E Zellmer-Bruhn**, *U. of Minnesota*

The session gathers together the Editors of the major journals publishing research on international management, international business, and global strategy. It is a great opportunity to learn about these journals, discuss factors to consider when choosing among them, get tips on how to write papers for successful publication, and avoid common pitfalls. Please, join us and bring your questions to the session!

Speaker: **Samantha C. Paustian-Underdahl**, *Florida State U.*

The 2021 Junior Faculty Consortium aims to address career questions relevant to pre-tenure faculty, with discussions with mid-level and senior faculty panelists. The primary discussion topics will involve preparing for and navigating the tenure process, planning for research and publication success, managing the political environment of academia, and coping with the stresses of the junior faculty role. The core of this consortium is comprised of an interactive panel where dynamic scholars at varying career stages share advice about how young scholars can effectively build their brands and identities as independent researchers.

Doctoral Student Workshop   
Doctoral Student Workshop

Chair: **Brent John Lyons**, *Schulich School of Business, York U.*
Chair: **Alison Sheridan**, *U. of New England*

The 2021 doctoral student workshop is designed to connect with our emerging GDO scholars and provide them an opportunity to explore range of issues they may face in their doctoral studies through a mixture of a panel presentation (60 minutes) and general discussion with a Q&A format (60 minutes). Five panelists will engage with topics including (but not limited to): preparing oneself for the academic job market and realistic academic job previews across varying types of academic institutions; different tips and takes on how to publish one's dissertation or tweaking the dissertation to eventually get it published; strategies around leveraging the value of partnering with organizations (e.g., accessing data through the Kauffman Foundation); and discussions around navigating well-being and mental health throughout career transitions from the PhD to junior faculty and afterwards. Through the general discussion, we will include opportunities for students to foster connections with their peers.

The International Management Doctoral Student Consortium is designed for current PhD students with an interest in international management as either the primary or secondary field of inquiry. We welcome participants from all areas related to international management and all stages of the PhD program to attend. The consortium will offer both structured and informal discussion between participants and faculty panelists on research, job opportunities, and early stage career strategies. A substantial amount of time will also be set aside for dissertation development, featuring feedback from faculty in small groups. This is both an excellent opportunity to get valuable feedback on your work and a chance to network with fellow doctoral students and leading scholars in the International Management field. The International Management Junior Faculty Consortium is designed for junior colleagues who have defended their dissertation in the last 1-5 years and are building their academic careers in the field of IM. It will provide a unique opportunity for junior faculty to engage in a conversation around the key issues of careers, research, publishing, teaching, and service with leading IM scholars from around the world. The senior faculty panel includes a diverse and international group of scholars in with a variety of academic, leadership and editorial experience. Through a combination of structured panels, round table discussions, and informal interactions, we will tackle the questions of risks and opportunities of choosing a career in IM, getting tenure, building a scholarly reputation, developing a research/publishing strategy for greater impact on the field, and maintaining a healthy balance between research, teaching, and service.

Attendance is by invitation and participants will be asked to pre-read one to two papers by other attendees, as the basis for discussion during the session.

Organizations and the Natural Environment (ONE) Doctoral Consortium
ONE Doctoral Consortium

Organizer: **Sara B. Soderstrom**, *U. of Michigan*
Panelist: **Panikos G. Georgallis**, *U. of Amsterdam*
Panelist: **Shelley F. Mitchell**, *Hult International Business School*

The ONE Doctoral Consortium aims to offer a networking, learning, and research reflection opportunity to doctoral students engaged in organizations and the natural environment (ONE) research. In addition to doctoral students with a primary interest in environmental research, this doctoral consortium is designed for doctoral students whose focus research area is outside of ONE but who also focus on environmental issues in their work. A maximum number of 24 doctoral students will be selected based on their research quality and representation of a diversity of academic institutions, geographic interests, and research topics. The aim of the doctoral consortium is to provide doctoral students the opportunity to have faculty members reflect on their work, to integrate them in international research networks, and to create new networks of their own. The consortium will be cross-disciplinary and open to different theoretical perspectives and the faculty members involved come from different cultural and research backgrounds. The format of the doctoral consortium is informal and open, but doctoral students will come well-prepared to optimize the interaction with other doctoral students and faculty. The format will be a combination of dynamic sessions with the group as a whole as well as small breakout sessions to ensure that doctoral students are able to get profound advice, learn about the work of others, and get to know each other. In this way, doctoral students will get to know and engage in dialogue with senior and junior ONE faculty from various parts of the world who will share their knowledge and experiences from their research, teaching, and careers.

The event is oversubscribed each year. We encourage participants to apply early. Please email the organizers for questions.

The STR Division is pleased to sponsor the 2021 (Virtual) Junior Faculty Consortium. The objective of the consortium is to enhance the scholarship, teaching, and professional development of faculty in the early stages of their careers. The consortium provides a forum for exchanging ideas concerning teaching and research as well as for expanding one's academic network. The Co-Chairs for the 2021 Consortium are Kenneth G. Huang (National University of Singapore) and Mahka Moeen (University of North Carolina). During the consortium, senior faculty panelists and mentors from top global research and teaching universities will share their expertise with participants. STR members who have completed their dissertation by September 2020 and are in the first through the third year of their academic career are welcome to apply. In addition, a participant should have a record of teaching and research in strategic management or closely related fields and not have participated in prior STR Junior Faculty Consortia. The application deadline and process will be announced through STR communication channels.

Invitation is required for the 2021 AOM STR JFC. For junior faculty (or post-doctoral researcher) to be considered for participation in the STR JFC, please use the following link to fill out your information: <https://forms.gle/HcnCEFPsW3hUkKyBA>. For questions, please email the organizers: Kenneth Huang at National University of Singapore (kennethhuang@nus.edu.sg) or Mahka Moeen at University of North Carolina, Chapel Hill (Mahka_Moeen@kenan-flagler.unc.edu).

This research consortium will consist of two individual sessions, each of which will provide an in-depth focus on two research trends that have grown due to the global COVID-19 pandemic. Session 1 (9:00 – 11:30 EDT) is: “Pivoting Research in Health Care Management in the Context of COVID-19” and will offer discussion on innovative approaches to research collaboration that have emerged as a result of disruptions caused by the pandemic. In this workshop, we will describe our approach to collaborating across multiple disciplines; discuss the processes and practices that support this collaboration; describe lessons we have learned from one another and from this collaborative process about research, methodologies, translation of theory to practice, and even about organizing logistics and interests across time zones and cultures. Workshop participants will be invited to share norms and practices from their own collaborations and discuss barriers to multidisciplinary collaborations as well as strategies to address these challenges. We hope the session will illuminate new opportunities to support transdisciplinary health management research. Session 2 (11:30 – 3:30 EDT) is: “Secondary Data and Empirical Research” will be a deep dive into best practices for working with secondary data, which many scholars have turned to due to primary data collection disruptions. The session will provide an overview of approaches to efficiently secure and analyze publicly available data, and include some discussion of the Epic environment as another common source of data from research. This workshop offers an introduction to the emerging field of Health Analytics - the use of health-related data to improve the lives of people, processes and organizations. We will explore the data ecosystem, wrestle with the challenge of moving from that data to meaningful questions, answer those questions using available tools and then present that data in meaningful ways. The progression of information technology, facilitated by the diminished cost of computing and storage, has enabled many sectors of the economy to adopt technology and information systems that drive innovation and operational excellence. While each sector has taken different approaches, the journey of the healthcare sector in the adoption of technology has been unique. For instance, in no other sector has the US Government set aside over \$27 billion dollars to subsidize the transition to, and adoption of, information systems. The result has been a technology transformation across the sector that is marked by increased innovation in this space among payers, within healthcare organizations, and across the populations they serve. We will address issues of ontologies, taxonomies, data heterogeneity, databases, analytics software, and the problems of using systems at scale that were not built to measure health services delivery to advance Management scholarship.

(Pre-registration is not required, but is encouraged. Email cheryl.rathert@slu.edu to register or for more information.)

The HR Division Late-Stage Doctoral Student Consortium will take place at the Academy of Management annual meeting, virtually, on Wednesday, August 4, 2021. Highlights of this year's Consortium include: a networking session, a keynote address by Maria Kraimer; a research feedback session with leading scholars in the field of HR; a variety of panels and discussions about job talks and campus visits, evaluating and negotiating an offer, getting published, and effective teaching; and, finally, a panel meeting with the major journal editors. The ideal candidates are doctoral students who have finished coursework and are currently working on their dissertations. There is no attendance fee, but pre-registration is required. To register, complete the form (https://memphis.co1.qualtrics.com/jfe/form/SV_1zFtAM3zpnNuTBz) by May 15, 2021. Please note, the form should be endorsed and e-signed by your doctoral program. Additionally, you will also be asked to upload a 1-2 page CV with contact information, education, research/teaching interests, publications, and conference presentations for distribution to all attendees.

A mini-conference within the AOM conference, the New Doctoral Student Consortium (NDSC) is one of the longest running and most well-attended pre-conference activities. The NDSC's central mission is to provide a professional development outlet for doctoral students entering the first or second year of a doctoral program, as well as those considering entering a doctoral program. The NDSC provides an interactive environment in which doctoral students can learn skills to succeed in a doctoral program and enter the academic profession. Participants will gain insights into how to navigate the Ph.D. journey as well as the academic career, network with fellow doctoral students from around the world, and learn how to get the most out of the Academy of Management Meeting. The NDSC is committed to facilitating doctoral students' initial experience with and further integration into the Academy of Management and the academic community at large. For the second time, the NDSC is embracing the opportunity to go online and connect new doctoral students in a virtual format. The NDSC will run across two days: • Tuesday, August 3rd: 9:00am-12:00pm (noon) EST Session ID# 11182: Thriving in your PhD • Wednesday, August 4th: 9:00am-12:00pm (noon) EST Session ID# 17413: Building your academic career Pre-registration is required for this workshop as space is limited to 110 participants. The deadline to register online is June 24th, 2020. Please register with the following link: https://docs.google.com/forms/d/e/1FAIpQLSeQtqkmSqVJsmtmhYdhCxbO4VhvS7cxXDJ3B_eKp1MC5xqvA/viewform?usp=sf_link In case of questions or difficulties in accessing the link please send an e-mail to: ndsc.aom@gmail.com

Please note: Completing the survey does not guarantee you a spot at the NDSC. Registration is only completed when you received a confirmation e-mail. Places will be given based on a first-come-first-served basis with priority given to pre-doctoral, first- and second-year Ph.D. students. The registration deadline is June 24th. We will inform you whether we can offer you a spot shortly after this date.

Participant: **Chang Wa Huynh**, *HEC Paris*

Like every year, the OMT doctoral consortium aims at providing late-stage doctoral students with research interests in the areas of organization and management theory practical advice on finding jobs, managing their careers, doing and publishing research, and teaching. It will also provide an opportunity for students to form relationships with others at the same stage in their career and with more senior scholars who share their research interests. The event consists of a series panel presentations, round-table conversations, and mentoring sessions.

Doctoral students interested in attending need to be nominated by a representative of their university department by May 15th, 2021. Nominations should be sent via this online form: <https://forms.gle/Ja6gJzkWNUm94Ari8>. For any questions, email the organizers Santi Furnari (Santi.Furnari.1@city.ac.uk) and Michel Anteby (manteby@bu.edu).

The OMT Junior Faculty Consortium provides a forum for junior scholars with interests in organization and management theory to get practical advice and build relationships that will help them prosper in their academic careers. It includes feedback sessions, panels, and facilitated discussions focused on three key topics: 1) developing research for publication with the help of seasoned scholars, 2) strategies for impact and growth as a researcher and teacher, and 3) navigating the early years of building a successful faculty career in diverse institutional settings.

Participation by invitation only. Applications due May 15. Please indicate in your application: 1. Your name, email address, title, institutional affiliation, 2. Your CV, 3. Extended abstract of a working paper for feedback purposes (5 pages max.) 4. An indication of three preferred faculty mentors. Please submit here: <https://goo.gl/forms/q85HtRWqy0EYzJE93>. Questions can be addressed to the organizers, Marya Besharov (Marya.Besharov@sbs.ox.ac.uk) and Paul Tracey (p.tracey@jbs.cam.ac.uk).

The Strategic Management Division will once again sponsor a Mid-Career Consortium for the 2021 Annual Meeting of the Academy of Management. Following the Academy's decision to hold the meetings virtually, the Consortium will also be organized virtually. The Mid-Career Consortium is for STR faculty members who are tenured on or before August 2020 and have at least five years of academic experience. The consortium is designed to be an interactive session where mid-career faculty members will interact with senior faculty in a set of small group discussions on the opportunities and challenges scholars face as they transition from junior to senior scholars. The objective is to facilitate networking and discussion around the unique professional challenges, problems and opportunities facing STR faculty moving into their "Associate Professor Years."

Panelist: **Henning Piezunka**, *INSEAD*

This consortium focuses on core business- and corporate-level strategic management teaching concepts, methods, and class management topics. The content will be most impactful to those early in their career, and the topics should be of particular interest to those relatively new to teaching strategic management. Our target audience is both research- and teaching-oriented Junior Faculty who are 0-5 years out. In particular, the consortium is organized around four panels focused on the following topics: a) combining teaching and research; b) case-based teaching; c) online teaching; and d) practical issues such as student engagement and class management.

Interested participants should apply via the application website (below). ***Application Website: <https://tinyurl.com/STRJrFacTeachConsortium2021> If you have questions about the STR Junior Faculty Teaching Consortium, please contact consortium co-chairs Giada Di Stefano or John Mawdsley

TIM Junior Faculty Consortium - Friday - Day 1 
TIM Junior Faculty Consortium

Organizer: **Annamaria Conti**, *U. of Lausanne*
Organizer: **Florenta Teodoridis**, *California Southern U.*

The Consortium will provide junior members of faculty in Technology and Innovation Management with insights how to thrive in the increasingly challenging academic environment. It focuses on strategies for building a career and increasing impact as a scholar and teacher. It will feature outstanding senior faculty members with proven research and teaching records, who will lead four interactive discussions about how to balance the competing pressures of teaching, research and service. They will provide first-hand and detailed advice about how to build a successful academic career in a range of different institutional settings. Participants will also learn about strategies for publishing in top journals, and engage with editors of prestigious journals in the field. Most importantly, participants will receive feedback on their “research trajectory” from their peers and senior faculty. The consortium will also provide participants with opportunities for networking with new peers and senior colleagues with interests in technology and innovation.

This workshop is geared toward HR doctoral students in the middle of their program. The goal of this workshop is to help these students navigate the collection of career issues that begin to emerge when students are about halfway through a doctoral program. In many PhD programs, the middle stage is a critical point. Students are expected to begin the transition into independent scholars, start building professional networks, move beyond the structure of courses and exams, and develop skills as an instructor. The workshop topics are designed to help these students develop the knowledge and skills required to be successful at this middle-stage and continue their development into strong researchers and teachers. It is also a way for HR doctoral students to build connections with others and become more involved in the HR Division.

This session requires pre-registration. Please register by emailing Crystal Harold at charold@temple.edu.

The New Faculty HR Consortium (NFC) is geared toward helping recently hired professors (e.g., assistant professors) start their careers. Sessions will focus on effective teaching, quality research, and other career development activities. In order to foster a sense of community and continuity, the consortium will hold a session during the virtual 2021 convention. In addition, the consortium will hold two other sessions that will be hosted online before the 2021 virtual meetings.

This session requires pre-registration. Please register by emailing Young Eun Lee at: ylee@mays.tamu.edu, with your CV and a list of 3-4 research interests.

Organizer: **Linda Rouleau**, *HEC Montreal*

Organizer: **Steven H. Cady**, *Bowling Green State U.*

Participant: **Christopher Klinghardt**, *U. of Edinburgh business school*

The annual Junior Faculty Consortium is in its third edition. It constitutes an opportunity for junior faculty members to receive mentoring from established ODC scholars, establish connections with other early-career scholars, and learn about the ODC community. This virtual event will occur on Saturday, July 31 while the mentoring sessions will be organized throughout the whole AOM according to participants availability. To attend, junior faculty members will have to first submit an application to the consortium organizers, Linda Rouleau (linda.rouleau@hec.ca), et Steve Cady (scady@bgsu.edu), Christopher Klinghardt (Christopher.Klinghardt@ed.ac.uk). When the application will be formally accepted, Junior faculty members will have to register for this session. The consortium will be held on QiqoChat platform.

TIM Doctoral Research Development Workshop 
TIM Doctoral Research PDW

Organizer: **Jean-François Soublière**, *HEC Montreal*
Organizer: **Elie J. Sung**, *HEC Paris*
Organizer: **Joey Van Angeren**, *Vrije U. Amsterdam*

The workshop is designed as an idea-, paper-, and dissertation- development meeting for PhD students interested in technology, innovation, creativity, product development, and related topics. Students may be at any stage of a PhD program, and similarly the ideas brought to the workshop can range from initial ideas of a paper or dissertation to a fully-developed paper. The workshop will be comprised of a panel discussion of what makes quality research, as well as extensive time dedicated to round table conversations about submitted research ideas from doctoral students. Workshop facilitators will include a mix of junior, mid-career, and senior scholars whose research focus on TIM-related areas. Many of the facilitators have served as members of the TIM leadership committee or have been finalists of different TIM Awards including TIM Dissertation Award. Participation is limited to 30 students. To apply, please visit <https://forms.gle/E1b2PVxQ4TDXSmCc6> and upload a 3-page extended abstract of your doctoral research and your resume,

The Critical Management Studies Division Doctoral Student and Early Career Scholar Consortium is aimed at meeting the needs of both doctoral students and early career scholars interested in critical research, education and engagement. The consortium provides a great opportunity for participants to connect with like-minded individuals at all career stages, from varied nationalities and backgrounds, and explore ideas, share knowledge and contribute to the discussion on a diverse range of topics and issues. Also, the consortium affords participants the opportunity for one-on-one discussion with more experienced critical management scholars. The Division's Professional Development Workshop Program, which starts after the Consortium and runs through to Saturday evening, offers participants further opportunities for development on a variety of related topics.

Academic and Teaching Career Dynamics

CAR: **Heeding the call of science: What leads PhD graduates to pursue an academic career?**

Author: **Elisabeth Mueller**, *Bundeswehr U. Munich*
Author: **Joachim Schnurbus**, *U. of Passau*

The academic workplace has undergone substantial changes over the past decades. However, the implications of these developments for the career choices of junior scientists, i.e., PhD graduates, are largely unexplored. In this study, we build on the basic premises of social cognitive career theory (SCCT) to investigate the personality-related, behavioral, and environmental factors that lead individuals to pursue an academic career. Using panel data from a cohort of PhD students who graduated in the 2014 academic year in Germany, we find that factors from these three categories influence PhD graduates' career decisions, although some factors do not (or do not only) have a direct influence, but interact with the other factors. Our results show that PhD graduates' involvement in research collaborations and their level of intrinsic motivation are the most important factors influencing their decisions to stay in academia, and that the former strengthens the influence of the latter. Our findings may encourage researchers to further investigate the applicability of SCCT to PhD graduates' decisions to choose an academic career.

Paper is Available to Meeting Registrants Only.

Institutional leaders have long championed interdisciplinary research; however, researchers have paid relatively little attention to the people responding to such calls and their subsequent career outcomes. With the benefit of two large datasets spanning from 1986 through 2016, we show that interdisciplinary dissertations have become consistently more common in recent years as institutional leaders have highlighted the value of boundary-spanning research for solving important and emergent problems. With the benefit of survey data from a near-complete population of all dissertators in the US starting in 2001 through 2016, we observe a consistent upward trend in interdisciplinary dissertations. Unfortunately, we show that these interdisciplinary dissertators have experienced a comparably persistent penalty when considering salaries for their first year after earning the PhD. We also show that among interdisciplinary dissertators, individuals in lower-paying fields tend to earn more when choosing distantly related topic-combinations whereas researchers in higher-paying fields tend to be most rewarded for staying within relatively narrow disciplinary silos.

CAR: **Understanding Career Decision-Making of Teachers' through the Lens of Job Crafting**

Author: **Hayuta Yinon**, *Oranim College of Education*

Teachers are often viewed as having straightforward, 'flat' teaching careers, but their career paths are in fact often quite complex. This qualitative study characterizes the career decision-making processes of 34 teachers in Israel. It relates to the field of career research, with a focus on the 'meaning of work' and job crafting. The present study attempts to extend the limited literature that connects between teachers' career decision-making processes and job crafting, by examining how teachers' experiences of meaningfulness and meaninglessness serve as an underlying platform for making informed career decisions using different forms of job crafting. The career stories of the teachers included descriptions of their career-related decisions made over a period of ten years. Collected through semi-structured interviews, their stories were analyzed through hermeneutic processes of data analysis and interpretation. The findings of the study revealed that when making career decisions, the teachers applied the promotion-approach-expansion form of job crafting when experiencing meaningfulness. On the other hand, they used the prevention-avoidance-reduction form of job crafting when facing meaninglessness. As a result, applying the promotion-approach-expansion form of job crafting led to decisions of meaningfulness preservation, while utilizing the prevention-avoidance-reduction form of job crafting steered attrition decisions.

CAR: **Navigating conflicting logics: Early or late(r) retirement in the German teaching profession?**

Author: **Heike Schroder**, *Queen's U. Belfast*
Author: **Katharina Chudzikowski**, *U. of Bath*

Drawing on the institutional logics perspective and life course theory, we explore conflicting logics related to retirement: early retirement versus late(r) retirement in line with extended working life policies. Using qualitative interview data collected in a multiple nested case study, we explore how secondary school teachers in a German School District conceptualise these conflicting logics in the context of factors at the micro-individual, meso-organisation and macro-policy level of analysis that enabled and/or constrained retirement transitions. We further explore teachers' narratives to evaluate how they navigated these multi-level factors and whether they were able to control and/or plan retirement timing. Our findings indicate that conflicting logics were perceived similarly by the individuals in our study, but that they navigated these logics differently depending on existing experiences related to career proactivity and changes to professional identities. Using five narratives based on four extreme cases, we outline how individuals were able to use human agency when navigating factors that influenced their anticipated retirement transitions, but this was mostly seen as a strategic adaptation to their constraining external environment rather than rational choice.

Career Strategy and Career Management

CAR: Local Worker Perspectives from Nicaraguan Surf Tourism: Revisiting Career Anchors

Author: **Amanda Peticca-Harris**, *Grenoble Ecole de Management*
Author: **Michelle Mielly**, *Grenoble Ecole de Management*

This qualitative study explores the internal careers of local workers in the highly internationalized sector of surf tourism using career anchor theory. The results of the study indicate the sustained value and instrumentality of Schein's original career anchor theory. Specifically, the results suggest that the most common career anchors for our sample of local workers were lifestyle, security and stability, and entrepreneurial creativity. These findings provide valuable insights on the career anchors of workers in non-bureaucratic vocational settings and shed light on local workers' career decisions, an often-neglected perspective within international human resource management.

CAR: Why Side Hustle? Multi-level Antecedents of Multiple Job Holding

Author: **Chayanika Bhayana**, *Indian Institute of Management, Ahmedabad*
Author: **KV Gopakumar**, *Indian Institute of Management, Ahmedabad*
Author: **Neharika Vohra**, *Indian Institute of Management, Ahmedabad*

Even though multiple job holding (MJH) is not a new phenomenon, the recent trends in the contemporary work context, such as technology-enabled platforms, are bringing about a renewed interest in the field, as people are increasingly exploring opportunities to monetize their interests and passions by engaging in additional work along with their full-time employment. Therefore, a comprehensive understanding of what factors lead people to engage in multiple jobs, and in what ways, becomes important. Current research on MJH either focuses on outcomes of MJH, or examines the individual-level motivations to take up multiple jobs, while largely understating the role of contextual factors. Our review offers a synthesized framework of antecedents of MJH operating at multiple levels – individual, job, organizational, and macro level. The framework also captures the mechanisms through which these antecedents influence MJH. Synthesizing these different levels of factors can facilitate organizations to better design policies and practices to address the issues related to MJH arrangements and employment contracts.

CAR: Too Much of a Good Thing? Resilience as a Predictor of Academic Commitment in (Un)Challenging Times

Author: **Daniela Datzler**, *LMU Munich*
Author: **Stefan Razinskas**, *Freie U. Berlin*
Author: **Martin Hoegl**, *LMU Munich*
Author: **Yvette Hofmann**, *U. of Munich*

Addressing the problem of the demand for STEM jobs outstripping the supply has stimulated particular investigations of the “leaky pipeline” at early stages, that is, the vocational qualification of STEM professionals. In a longitudinal study, we investigate the development of affective commitment to STEM disciplines in students (N = 234). Given that both the academic life in, and the working context of, STEM disciplines are particularly challenging, resilience appears to be an important resource in STEM careers. By pursuing an interactionist approach, we investigate the question of if and under which circumstances resilience is particularly useful in maintaining affective commitment. Consistent with our theorizing, the results of latent growth curve modeling show the relationship between resilience as the personal ability to overcome adverse events and the development of commitment over time to be curvilinear. Whereas high levels of resilience prove beneficial in the face of adverse conditions, a too-much-of-a-good-thing effect is observed for highly resilient individuals in non-challenging environments. Our findings offer important practical and theoretical implications for addressing the leaky pipeline early by enhancing the affective commitment to STEM disciplines in students.

CAR: Motivational career resources and subjective career success: A longitudinal cross-lagged analysis

Author: **Yasir Mansoor Kundi**, *Aix-Marseille Graduate School of Management – IAE, France*
Author: **Sandrine HOLLET-HAUDEBERT**, *IAE Toulon*
Author: **Jonathan PETERSON**, *Aix-Marseille Graduate School of Management – IAE, France*

The purpose of this research was to examine the relationships between motivational career resources and subjective career success across time, and to determine the mediating role of job crafting in these relationships. A two-wave longitudinal study was conducted with a sample of 193 full-time business professionals. Results indicated that motivational career resources positively relate to subjective career success assessed concurrently and longitudinally. Additionally, motivational career resources predicted an increase in subjective career success over a six-month period, after controlling for baseline levels of motivational career resources. Bootstrapped tests of mediation revealed that motivational career resources exerted a significant indirect effect on subjective career success through its associations with job crafting behavior. This study suggests that career resources have an impact on employee career success over time through job crafting.

CAR: Organizational Career Management in New Career Era: Scale Development and Validation

Author: **Wenxia Zhou**, *Renmin U. of China*
Author: **Qinglin Zhao**, *Renmin U. of China*
Author: **Nan Jiang**, *Renmin U. of China*
Author: **Puxin Lin**, *LIN PUXIN*

Despite the widely recognized change of career management in the new career era, little is known about whether the organizational career management practices are different from previous ones and their both possible beneficial and detrimental effects. In this paper, we developed a scale of organizational career management that reflected some features of the new career era based on an open questionnaire and literature review. Two independent studies were conducted (N=320; N=216) to examine the reliability and validity of the scale. The final OCM scale includes four dimensions: boundaryless and autonomy work, diversification, training and development, work-family balance. Further, we tested the effectiveness of the perceived organizational career management based on 179 employees over two months interval. We found both the possible benefits (i.e., higher organizational commitment and less turnover intention) and risks of perceived organizational career management (higher career competency and more likely to leave organizations). The contributions, practical complications, and future research suggestions are discussed.

Entrepreneurial Careers

CAR: Examining Women's Entrepreneurial Careers as Yoga Teachers 

Author: **Amanda Peticca-Harris**, *Grenoble Ecole de Management*
Author: **Sara R. S. T. A. Elias**, *U. of Victoria*
Author: **M. N. Ravishankar**, *Loughborough U.*

In this qualitative, interview-based study, we explore 49 North American women's entrepreneurial career experiences in their efforts to teach yoga, a 'slow fitness' activity. We draw on contemporary theories of sport entrepreneurship and lifestyle entrepreneurship to illustrate the critical role that context plays in facilitating and limiting their career experiences. We illustrate how lifestyle entrepreneurial careers are a contextualized, relational, and embodied process using three distinct, yet interconnected processual dimensions: self-discovery, quest for legitimacy, and balancing tensions. We relate these results to a broader discussion about the challenges of using entrepreneurial careers to make a difference in one's life, and in the world more broadly, while surfacing some of the discursive gendered politics that shape the economic realities of their self-employment.

CAR: Career Transitions to Entrepreneurship: Through the Lens of Mid-Career African American Women

Author: **Joanna F. Norman**, *U. of Texas at Tyler*
Author: **Leah Aiken**, *U. of Texas at Tyler*
Author: **Tomika Greer**, *U. of Houston*

Racial and ethnic minority (REM) women are choosing entrepreneurial careers, owning over 8 million businesses in the United States. Few entrepreneurial studies exist on both women and racial/ethnic minorities - groups that historically face greater barriers to business ownership. No studies were found that focused on the career transitions of minority women. This study fills a void in the current career transition and entrepreneurship literature by using the Transition Theory 4S model to evaluate minority women's career transitions to entrepreneurship. Nine African American women entrepreneurs participated in this phenomenological study. Semi-structured interviews were used to deepen understanding of their lived experiences during the career transition. Results suggest that many minority women entrepreneurs are fulfilling a long-term goal of business ownership. Despite being the chief officer, many encountered situations where they must prove themselves as a business owner, especially when seeking capital to open or expand the business. Tenacity, a desire to succeed, and a strong support system have bolstered their success. This study adds new knowledge about minority women's career transitions to entrepreneurship and offers implications for practitioners interested in supporting minority women as they transition to entrepreneurship.

CAR: Personality and narcissism in mentoring for entrepreneurs: Do they affect learning outcomes?

Author: **Soumaya Meddeb**, *UQTR*
Author: **Etienne St-Jean**, *UQTR*

The personality configuration of mentors and mentees is important in understanding mentoring outcomes. While the best mentors appear to have higher degrees of agreeableness and conscientiousness, entrepreneurs generally score lower on these characteristics and have higher degrees of narcissism, a personality trait that is detrimental to mentoring. We investigated the interaction of narcissism with two traits from the Big Five Inventory on the main recognized mentoring outcome, namely entrepreneurial learning. Our findings suggest that mentors' agreeableness mitigates the relationship between the mentees' narcissism and their learning, and that highly conscientious mentees learn less from narcissistic mentors. These findings show certain beneficial personality configurations in entrepreneurial mentoring and provide elements to consider in managerial practice when pairing mentors and mentees in this context.

Leadership and Work Outcomes

CAR: What if I have Two Bosses? Examining LMX Within Dual Jobholders

Author: **Brian Webster**, *Ball State U.*
Author: **Mickey B. Smith**, *U. of South Alabama*
Author: **Bryan D. Edwards**, *Oklahoma State U.*
Author: **Mackenzie Miller**, *Ball State U.*

The present study sheds light on a growing body of literature; dual jobholders. We examine if and how high LMX relationships at one's second job impacts one's work experience at the primary job. Drawing from social exchange theory, we show that dual jobholders engaged in high LMX relationships at their second job exhibit lower work engagement at their primary job. Moreover, we identify intentions to leave one's primary job as the mediating mechanism by which the relationship between second job LMX and primary job work engagement occurs. We extend work on social exchange theory by demonstrating that resources expended toward one relationship may have leave little resources left over to devote to other relationships. We also introduce the study of a supervisory variable, LMX, into the emerging literature on dual jobholders. We highlight that dual jobholders, who have more than one supervisor, may experience work in a different manner than their single jobholding counterparts. We discuss the theoretical, research, and practical implications of our work.

CAR: Leader Personal Brand Equity and Team Resilience: The Role Of Perceived Leader Bottom-Line Mentality

Author: **Wei Wu**, *Renmin U. of China*
Author: **Guoyang Zheng**, *Renmin U. of China*
Author: **Lynda Song**, *Leeds U. Business School*

Taking the perspective of the crossover model of COR, we examine the relationship between the leader's personal brand equity and team effectiveness, focusing especially on the mediating role of team resilience and the moderating role of perceived leader bottom-line mentality. Data were collected with a three-wave survey administered to a final sample of 445 employees in 75 teams from a private hospital in China. Our results show that the leader's personal brand equity can promote team members' task performance and creativity via team resilience. Additionally, perceived leader's bottom-line mentality, as a moderator, negatively moderates this conversation. The theoretical and practical implications of this research are discussed.

CAR: How and when servant leaders foster employee work meaningfulness

Author: **Yingyin Shao**, *Jinan U. Management School*
Author: **Angela Jie Xu**, *Jinan U.*
Author: **Shuzhen Lin**, *Jinan U. Management School*

Understanding how and when leaders foster employee work meaningfulness is theoretically and practically important. Drawing on the theoretical underpinnings of servant leadership and person-environment fit, we propose that servant leaders, with an emphasis on putting followers first, would help employees fit into their job (i.e., person-job fit) and subsequently promote their work meaningfulness. Moreover, we argue that working under servant leaders who possess high rather than low prototypicality would make employees more likely find congruence with their jobs and experience more work meaningfulness as a result. A full-time working sample from China evidenced our hypotheses. Our findings provide important contributions to extant management literature and carry vital practical implications for organizations to develop employee work meaningfulness.

Careers in the Rough is a workshop consisting of accomplished scholars mentoring PhD students and/or junior scholars who submit careers papers that are in the formative stages. Research in the careers domain includes topics such as: people's lifelong succession of work experiences, the structure of opportunity to work, the relationship between careers and other aspects of life, individual career development, career management strategies, relationships between human resource systems and careers, career outcomes (e.g., success, plateauing, discouragement, derailment), life cycle interactions with work, race, culture, and gender effects on careers, labor force diversity, internal labor market structures and functions, cross-cultural careers, and effects of demographic and social changes on work. Participants are asked to provide a manuscript that is close to submission for a refereed journal. They can also write up to 250 words on a challenge they want help addressing. Each participant will receive detailed feedback regarding the positive aspects of their work, as well as helpful input regarding how it can be improved from two accomplished scholars. This PDW will thus foster the design and development of good careers research into valuable careers publications.

When is Enough, Enough? Insights on Career Implications of Being Treated Unfairly at Work
Career Implications of Unfair Treatment at Work

Presenter: **Paulien D'Huyvetter**, *KU Leuven*
Participant: **Marijke Verbruggen**, *KU Leuven*
Presenter: **Gina Gaio Santos**, *School of Economics and Management, U. of Minho, Braga, Portugal*
Discussant: **Ryan M. Vogel**, *Fox School of Business, Temple U.*
Presenter: **Alycia Marie Damp**, *U. of Toronto*
Participant: **David Zweig**, *U. of Toronto*

Despite the prevalence of individuals experiencing unfairness at work in many different forms across the globe, we know little about how being treated unfairly has implications for one's career success. Without this knowledge, we are ill equipped to advise individuals who are treated unfairly on best practices for managing their situations in ways that will limit potential damage to their careers. This symposium includes three papers, each of which investigates mistreatment or unfairness at work within a specific context: abusive supervision, the 'dark' side of friendship, and knowledge theft. We integrate these contexts here with two central objectives: 1) to understand how exposure to mistreatment or unfairness affects individuals' career-related outcomes, and 2) to understand when, why, and how individuals should act to effectively manage their experiences. Importantly, all papers highlight some of the perceived career-related costs associated with acting or failing to act when responding to unfairness or mistreatment at work. By providing insight on the mechanisms involved with action or inaction, we contribute new knowledge to the field that will inform individuals on how to protect their careers when they are exposed to mistreatment or unfairness in the workplace.

Participant: **Olaolu Eniola**, *Newcastle Business School, Northumbria U.*
Participant: **Shuo Wang**, *Newcastle Business School, Northumbria U.*
Discussant: **Ricardo Rodrigues**, *King's College London*

This symposium explores career regret and career sacrifice – phenomena experienced by many individuals throughout the course of their working lives. Career regret is the feeling of wishing to undo a past decision made in one's career, whereas career sacrifice involves a decision to give something up in one's career. These related career experiences have both been relatively under-explored in the field of careers and organisational behaviour (Byington, Felps and Baruch, 2019). However, their prevalence and their potential to impact on the careers and well-being of career actors, especially in the current turbulent climate, calls for a better understanding of these phenomena. Scholars in this symposium have been united in their motivation to further understand these phenomena and their individual and organisational consequences

Teams in Conflict

CM: **Team Conflict Perception Over Time in Virtual Teams: A Cross-Level Moderating Role of Cultural Value**

Author: **FUHEJIN**, *Binghamton U.-State U. of New York*
Author: **Etka Topaloglu**, *Binghamton U.-State U. of New York*
Author: **Chou-Yu Tsai**, *Binghamton U.-State U. of New York*
Author: **Yonghong Liu**, *U. of North Carolina, Greensboro*

During recent decades, workplace research has increasingly addressed issues relating to process dynamics and team conflict perceptions; however, there has been very little theoretical and empirical analysis relative to virtual teams. Drawing on information processing and human perception perspectives, we investigate the change trajectory of various types of team conflict perception (i.e., relationship, process, and task) over time and explore the moderating role of personal collectivism value on this dynamic process. Based on the analysis of 4333 subjects nested in 907 virtual teams via a longitudinal design assessment (Study 1), our results show that in virtual teams, (1) team conflict perceptions (i.e., relationship, process, and task) represent individual-level constructs, (2) team conflict perceptions (i.e., relationship, process, and task) exhibit a U-shaped curvilinear pattern of change over time with increasing rates of change, and (3) personal collectivism value negatively moderates changes in process and task team conflict perceptions although the associated impact is relatively small. These analyses have also been replicated in a second data set (Study 2: 3839 subjects nested in 924 virtual teams) with similar results. Keywords: Virtual team; Team conflict perception; Personal collectivism value; Random Coefficient Modeling; Longitudinal research

CM: **Differentiated Effect of Power and Status Hierarchy on Intra-team Trust: A Social Network Perspective**

Author: **Ruo Mo**, *Montpellier Business School*
Author: **Sebastien Brion**, *IESE Business School*

Whether hierarchy is functional or dysfunctional to team outcomes has been subjected to substantial debate, with mixed evidence supporting both the bright and dark sides of hierarchy. Although much scholarly attention has been devoted to identifying “when” hierarchy is functional, this research specifies a separate but equally important question - “what” hierarchy is functional. Indeed, the failure to investigate the effects of different types of hierarchies has limited our understanding of how hierarchy affects team dynamics. To address this oversight, this research provides a refined examination of the consequences to hierarchy by distinguishing between power and status hierarchy and employing a social network approach to delineate an important team dynamic, intrateam trust. This social network perspective better captures the previously overlooked emergent process and structural patterns (i.e., density and centralization) of intrateam trust that result from hierarchy in teams. Drawing on prior research on the distinction between power and status, we predict that power hierarchy is positively related to the intrateam trust network density and negatively related to trust network centralization, while status hierarchy is negatively related to intrateam trust network density and centralization. The results from two studies, using different measures of power and status, and using both cross-sectional and longitudinal designs, partially supported our hypotheses. Taken together, these findings offer a potential resolution to conflicting findings about the effects of hierarchy on team outcomes.

Paper is Available to Meeting Registrants Only.

CM: **Drivers of Intra-Family Conflict and Employee Outcomes in Family Firms**

Author: **Andreas Strobl**, *Lancaster U. Management School*
Author: **Giovanna Campopiano**, *Lancaster U. Management School*
Author: **Martin Friesl**, *Otto-Friedrich U. Bamberg*

Family business are prone to organisational conflicts in general and intra-family conflicts specifically. Drawing arguments from literature on family businesses, organisational behaviour, top management teams and goal setting, this research identifies socio-emotional wealth (SEW) related goal setting and employee bonds to predecessor generations as salient antecedents of intra-family conflict and demonstrates how such conflicts impact non-family employees. Using dyadic survey data, we provide evidence that internal and external dimensions of SEW attenuate and drive intra-family conflict. Employee preferences for predecessor generations are a further driver of intra-family conflict. In turn, intra-family conflict yields negative organisational consequences as it lowers non-family employee job satisfaction and indirectly increases turnover intentions of these employees. The findings of this research contribute to our understanding of intra-family conflicts and SEW related outcomes in family firms. The findings lay the ground for important theoretical and practical implications.

Paper is Available to Meeting Registrants Only.

CM: **Intra-Team Conflict in the Nascent Venture Crucible (WITHDRAWN)**

Author: **Amanda Plummer Weirup**, *Babson College*
Author: **Melissa Manwaring**, -
Author: **Lakshmi Balachandra**, *Babson College*

Conflict within organizational teams is inevitable. We propose that conflicts within nascent venture leadership teams (NVLTs) differ from those within established organizations due to the ambiguous, dynamic, high-risk context and the potential impact on both the team and the venture. Drawing on existing literature and a content analysis of eleven interviews and 74 surveys, we identify four ways in which misalignments among NVLT members manifest as conflicts: over respective contributions and rewards (e.g. equity division), over resource allocation (e.g. how to spend money), over decision-making processes, and over personality and values. These conflicts can have positive or negative repercussions for the team and for the venture, depending on the misalignment at the root of the conflict and on the how the team members attempt to manage the conflicts.

Conflict and Leadership Effectiveness

CM: **Persistent Preference for Leaders Who Make Fast Decisions: Decision Speed Impacts Leader Evaluations**

Author: **Jessica Jee Won Paek**, *Fuqua School of Business, Duke U.*
Author: **Anyi Ma**, *Tulane U.*

Past research has found that making complex decisions slowly and intuitive decisions quickly leads to better interpersonal evaluations, since people like decision makers who think “just the right amount.” However, we propose that this effect does not hold for leaders because people have a stereotypic belief that leaders must be decisive, assertive, and self-assured, and therefore make quick decisions. Four studies support this prediction. Specifically, we observe that people evaluate leaders (vs. non-leaders) more positively when they make fast (vs. slow) decisions (Study 1) regardless of whether the nature of the decision is complex or intuitive, and this effect of decision speed on positive evaluations of leaders is mediated by judgments of confidence (Studies 2 and 3). Additionally, we examined the boundary conditions of this persistent bias for leaders who make fast decisions by varying the rationales (e.g., debating with others, doing calculations, gathering information) that leaders give for making slow decisions. Still, we did not find that there were situations in which leaders who make slow decisions were evaluated more positively than those who made fast decisions (Study 4). Taken together, results indicate that people make strong, positive evaluative judgments for leaders who always make quick decisions.

CM: **A Meta-Analysis of the Role of Destructive Leadership and Personality on Subjective Well-Being**

Author: **Joshua C. Palmer**, *Kennesaw State U.*
Author: **Katherine Crawford Alexander**, *Auburn U.*
Author: **Jeremy Mackey**, *Auburn U.*
Author: **B. Parker Ellen**, *Mississippi State U.*
Author: **Charn Patrick McAllister**, *Northern Arizona U.*
Author: **Pamela Perrewe**, *Florida State U.*

Drawing on affective events theory, we examine the impact of destructive leadership and subordinate personality (i.e., the Big Five traits of openness to experience, conscientiousness, extraversion, agreeableness, and neuroticism) on subordinates’ subjective well-being (i.e., positive and negative state affect). Consistent with affective events theory, we examine if personality (a stable disposition) or destructive leadership (a work event) are more important predictors of positive versus negative subjective well-being. Our results suggest that destructive leadership predicts more explained variance (i.e., about 70.518%) in negative subjective well-being than all the Big Five traits (i.e., about 29.482%). Interestingly, we found that personality predicts more explained variance in positive subjective well-being (i.e., about 76.190%) than destructive leadership (i.e., about 23.810%). These findings have important implications for the leadership, well-being, and affective events theory literatures because they suggest that destructive leadership is very damaging to our negative subjective well-being, but less impactful for our positive subjective well-being. In this meta-analysis, we discuss the implications for these findings on affective events theory and the leadership and well-being literatures.

CM: **Nothing to Worry About: Why Liberals Underestimate Dominant Leaders and Act Complacently**

Author: **Danbee Chon**, *Duke U.*
Author: **Hemant Kakkar**, *Fuqua School of Business, Duke U.*

When dominant-authoritarian leaders are successful, political liberals overwhelmingly express shock and disappointment. Beyond party affiliation, we offer a psychologically grounded explanation contending the prevalence of a systematic bias among liberals. We argue that liberals, compared to conservatives, underestimate the success of dominant-authoritarian leaders, and that this systematic underestimation makes liberal complacent, overconfident, and less inclined to exercise their vote. We test our hypotheses across seven studies (two pre-registered, one in SI), including large-scale field data, six experimental studies with varied contexts, and a combined sample of more than 215,000 observations from 93 countries and spanning the past three decades. In doing so, our work explains the continued underestimation of dominant leaders and consequent surprise from political liberals during critical elections, and why underestimating the success of dominant leaders may lead liberals to act complacently and paradoxically increase such leaders’ chances of success.

CM: **Get Angry or Get Compassionate? How Leader Displays of Moral Emotions Influence Leader Effectiveness**

Author: **Matthew Lupoli**, *Monash U.*
Author: **Nathan Eva**, *Monash Business School*
Author: **Bo Shao**, *Deakin U.*

Ethical transgressions in organizations are emotionally evocative events, yet it is not fully understood how leader emotional responses in these situations influences their perceived effectiveness. In this research, we draw on emotions as social information theory to compare how leader effectiveness is impacted by display of two moral emotions amongst leaders: anger and compassion. Across three studies with full-time employees, including two experiments and a critical incident design, we document several key results. First, anger (versus compassion) led to greater perceived leader effectiveness when leaders did not punish transgressing employees, but given that the leader punished the employees, leader compassion resulted in greater perceived leader effectiveness. Second, the degree to which the transgressing employee expressed guilt for the transgression diminished the effectiveness of leader anger. Additionally, benevolence-based trust mediated the positive effect of leader compassion on leader effectiveness. Leaders who expressed anger were seen as more effective in part due to increased integrity-based trust, benevolence-based trust, social intelligence, and leader prototypicality, but only when employee guilt was low. Collectively, these results highlight the effectiveness of a “tough love” approach, whereby leaders punish transgressing employees to correct and disincentivize unethical behavior, yet also demonstrate compassion for their welfare.

Negotiation and Influence

CM: **How Experts Use Their Emotions to Influence Decision Makers: Differentiating Two Unique Mechanisms**

Author: **Yamei Cai**, -
Author: **Jun Gu**, *Macquarie Business School, Macquarie U.*

This paper examines two distinct mechanisms via which the affective expression of an expert can influence a decision maker's evaluation of a strategic issue faced by an organization. Results from two experimental studies consistently showed that an expert's excitement caused decision makers to evaluate a strategic issue more positively via two distinct mechanisms – an affective-oriented mechanism and a cognitive-oriented mechanism. More importantly, this paper is the first to show that the influence achieved via the two mechanisms have unique characteristics on decision makers. The influence achieved via the affective-oriented mechanism was issue-diffusive and time-bound. In contrast, the influence achieved via the cognitive-oriented mechanism was issue-bound and time-diffusive. Implications of the findings and future research directions are discussed.

CM: **Asians Don't Ask? The Bamboo Ceiling in Starting Salary**

Author: **Jackson Lu**, *MIT Sloan School of Management*

Well-educated and prosperous, Asians are commonly viewed as the “model minority” in the United States. We challenge this rosy view by revealing a “Bamboo Ceiling” in starting salary. We analyzed a unique dataset of 19 class years of MBA students who accepted full-time job offers in the United States. When considered under the larger “Asian” umbrella, Asians appeared to have starting salaries equally high as Whites. However, a striking gap emerged when we distinguished among East Asians (e.g., Chinese, Japanese), Southeast Asians (e.g., Singaporeans, Vietnamese), and South Asians (e.g., Indians, Pakistanis): East/Southeast Asians had the lowest starting salary of all ethnicities, whereas South Asians had the highest. This salary gap was mediated by East/Southeast Asians' propensity to not negotiate because of higher relational concerns. In support of this mechanism of negotiation propensity, we identified industry as a boundary condition, such that the salary gap was not observed for consulting jobs, where MBA job offers are usually standard and non-negotiable. The salary gap between East/Southeast Asians and South Asians for non-consulting jobs was estimated to be \$4,915/year (in Year 2019 dollars), a remarkable difference that can compound over one's career. These results were robust after controlling for variables such as nationality and GPA. In revealing important differences within the “Asian” umbrella, this research moves beyond the predominant East-vs-West paradigm in cross-cultural research, and uncovers an overlooked problem underneath Asian prosperity.

CM: **The Influence of Multiple Intelligences on Conflict Occurrence and Performance in GVTs**

Author: **Mahboobeh Davaei**, *Free U. of Bozen-Bolzano*
Author: **Marjaana Gunkel**, *Free U. of Bozen-Bolzano*
Author: **Valerio Veglio**, *Free U. of Bozen, Bozen*
Author: **Vas Taras**, *U. of North Carolina, Greensboro*

The role of different facets of intelligence in the occurrence of conflict in global virtual teams (GVTs) has largely been overlooked in the literature. Building on the theory of multiple intelligences as well as the affective events theory and the contingency theory of task conflict and performance in groups and organizational teams, the present study explores the influence of cultural intelligence, emotional intelligence, and cognitive ability on the occurrence of interpersonal, task, and process conflicts and the impact of these different types of conflict on the performance of GVTs. Utilizing multi-level analysis, we tested the research model using a sample of 810 individuals from almost 40 countries who worked in 232 GVTs. The results show that the cultural intelligence, emotional intelligence, and cognitive ability of the team members reduce the occurrence of the three different intragroup conflicts in GVTs. We also demonstrate that process conflict negatively affects the GVT performance. We discussed the implications for research and practice.

CM: **The Perceiving Side of Novelty: Its Role in Product Evaluation**

Author: **Yingyue Luan**, *U. of Cambridge*
Author: **YeunJoon Kim**, *U. of Cambridge*
Author: **CHANGSU**, -

The literature on perceived novelty and product evaluation has diverged into two disparate streams of research. The first stream builds on the theories of curiosity and argues that perceived novelty of a new product increases its product evaluation because it induces curiosity and provides evaluators (e.g., customers) with positive experiences in learning new features of the product and resolving their curiosity. In contrast, the second stream adopts the theories of expectation violations and argues that perceived novelty decreases product evaluation because it violates evaluators' anticipation of products and necessitates burdensome efforts to make sense of the new product. The main goal of our research is to resolve the theoretical inconsistency by offering an integrative model of new product evaluation that proposes an inverted U-shaped curvilinear relationship between perceived novelty and product evaluation. Based on this model, we further examine whether a producer's reputation plays a moderating role in this curvilinear relationship. Utilizing content analysis and big data approaches with a large sample of 49,860 reviews of 146 movies in the movie industry, we found that a movie's perceived novelty benefited its product evaluation but only when that novelty was moderate; at higher levels of perceived novelty, the product evaluation decreased. In addition, we compared the curves of high vs. low reputation producers and found that perceived novelty penalized product evaluation of new movies created by high reputation producers.

Conflict's Effect on Prosocial and Collaborative Behavior

CM: **Risk Transforms Prosocial Behavior**

Author: **Polly Kang**, *NUS Business School*
Author: **David P. Daniels**, *NUS Business School*

Humans routinely incur costs and take risks to help others. Current theories across the behavioral sciences explain prosocial behavior by assuming that people are rational but altruistic. However, extant empirical tests of these theories have focused on riskless prosocial behaviors and implicitly assumed their findings will also apply to risky prosocial behavior. We challenge this assumption. Across seven field and laboratory studies, we show that risk transforms prosocial behavior. In a field setting, we examine millions of risky prosocial behaviors by volunteer crisis counselors who try to help others deal with depression, abuse, and suicide. By leveraging plausibly exogenous increases in positive affect (driven by good news, happy calendar days, and sunshine), we show that unlike riskless prosocial behavior, risky prosocial behavior actually decreases when people experience an exogenous increase in positive affect. These findings contradict current theories and lay beliefs. In pre-registered experiments, we show that loss-frame (vs. gain-frame) nudges boost risky prosocial behavior by 38%-40%, but do not influence riskless prosocial behavior. These findings contradict current theories and identify a novel prosocial-behavior nudge that is nearly ten times stronger than leading prosocial-behavior nudges. To explain these findings, we argue that deciding to engage in risky prosocial behavior creates a warm glow gamble – prosocial successes feel good, but prosocial failures feel bad – which people evaluate in line with Prospect Theory. Our Warm Glow Gamble framework parsimoniously explains our findings. Because many real-world prosocial behaviors are risky, the largest barrier to prosocial behavior may not be selfishness, but risk aversion.

CM: **Expressing Debates Versus Disagreements to Foster Collaboration by Creating Perceived Receptivity**

Author: **Ming-Hong Tsai**, *Singapore Management U.*

People frequently view conflict as the opposite of collaboration and assume that these two concepts are mutually exclusive. To question this prevalent viewpoint, the current research distinguishes debates from disagreements and aims to evaluate how debate and disagreement expressions influence collaboration differently. I conducted empirical studies utilizing experimental and survey methods and found that debate expressions create perceptions of another person's receptivity to alternative ideas and suggestions and thus increase perceivers' collaboration with the person to a greater extent than do disagreement expressions. Accordingly, the current research counterintuitively suggests that conflict can stimulate collaboration when people display their opinion differences in an open-minded manner.

CM: **Managerial Motivation to Promote Prosocial and Protective Voice: An Integration and Path Forward**

Author: **Emma (Lei) Jing**, *U. of Alberta*
Author: **Andrew Luchak**, *U. of Alberta*

Building on disparate voice research traditions from organizational behavior (OB), industrial relations (IR) and strategic human resource management (SHRM), we develop a series of propositions that explain managerial motivations for promoting two key forms of employee voice - prosocial and protective. Whereas prosocial voice is a voluntary and discretionary action by employees aimed at helping the organization succeed, protective voice refers to actions or behaviors by employees meant to safeguard their workplace rights and interests. Our arguments are rooted in the fundamental importance of both forms of voice for a sustainable, balanced employment relationship and we draw upon a theory of decision making - regulatory focus theory - to understand how management of an organization may emphasize one, both or neither form of voice. In addition to advancing the study of voice itself, the value of our broader conceptualization of this topic is shown through linkages to employment research in OB, IR and SHRM more generally.

CM: **The Good Fight: Conflict and the Multipartner Alliance**

Author: **Rachel Pacheco**, *The Wharton School, U. of Pennsylvania*

A multipartner alliance experiences heightened conflict: The increased number of partners impedes communication and trust-building; and the strategic importance of the alliance's projects often means the close and contentious involvement of external stakeholders. It is well-accepted that conflict is harmful to multipartner alliance performance, yet there exists a gap in understanding what specifically drives conflict between alliance partners and between the alliance and external stakeholders; and more importantly, what can lessen these instances of conflict. This study examines conflict through the lens of institutional diversity – a characteristic that is often necessary for alliances to build new capabilities or enter uncertain markets, but one that increases transaction costs. I posit that the conflict resulting from diversity is mitigated in instances when the financial structure of the alliance is highly asymmetrical – that is, a few partners in the alliance control a majority of financial resources. I test these hypotheses by creating a unique measure of the level of conflict experienced by the alliance through the coding of 345,000 pages of alliance documents across 2138 global alliances. Additionally, using over 25,000 interim status reports, I examine the performance of the alliance over time to empirically assess if conflict is as detrimental to performance as previously theorized. This research shows that the composition and structure of the multipartner alliance does matter for conflict and its prevention, and that not all fighting is indeed bad.

Conflict's Darker Side

CM: Disentangling Deception: An Empirical Investigation of the Nature of Lying and Cheating

Author: **Samuel Skowronek**, *The Wharton School, U. of Pennsylvania*

An individual lies if they misreport honestly generated information. They cheat if they create fraudulent information. The field of behavioral ethics has sought to investigate both types of ethical decision making. To do so, scholars have deployed experiments that rely on incentivized self-report procedures in which the generation of information is often random. In this article, I demonstrate that incentivized self-report procedures are incapable of studying cheating behavior. This limitation, combined with the motivation to theorize about the nature of cheating, has caused the theoretical and empirical literatures to make competing predictions about the nature of deception. In this article, I introduce a new class of deception paradigms capable of identifying both cheating and lying behavior. Across four experiments, I demonstrate that cheating and lying are fundamentally different activities, each with their own set of environmental antecedent and behavioral consequences. By distinguishing between these types of deception, I reconcile several conflicting predictions presently asserted in the behavioral ethics literature.

CM: How Rivalries Are Born: Exploring the Emergence of Rivalries

Author: **Jeffrey P. Thomas**, *London School of Economics and Political Science*
Author: **Daniel Sands**, *New York U.*

This paper advances theory by explaining the sparks necessary to ignite rivalry, as opposed to non-rival competition or enmity. Building on research identifying antecedents to rivalry, this paper integrates and develops theory to explain escalating transitions from competition to rivalry, and de-escalating transitions from enmity to rivalry, by examining how specific types of similarity, interaction, and competitiveness facilitate the emergence of new rivalries. We examine the roles of competitive actors, audiences, and institutions play in facilitating or stifling the emergence of rivalry.

CM: Revisiting Leader Narcissism Effects: When and How Do Narcissistic Leaders Harm Follower Performance

Author: **Quan Li**, *Business School at Nankai U.*
Author: **Zhuolin She**, *Renmin U. of China*
Author: **Debra L. Shapiro**, *U. of Maryland*

In a time-lagged (three-wave) multisource survey of 102 leaders and 529 corresponding followers (i.e., subordinates who were all involved with a product-selling task), we examine dynamics associated with varying levels of narcissism in, both, leaders and their followers. We found leaders' narcissism to be negatively associated with their followers' self-reported sales performance and objective sales performance (i.e., actual sales volume); and this relationship was stronger when high levels of narcissism characterize followers and their leader rather than only the leader. Also, we found this two-way interaction-effect to be mediated by followers' perception of goal-congruence with their leader. Taken together, our findings increase understanding about when and how leader narcissism has the potential to harm followers' performance. Implications for how to effectively manage narcissists (followers as well as leaders) in organizations are discussed.

CM: Practitioners' Blame Patterns and Intervention Measures for Workplace Bullying Complaints

Author: **Eva Zedlacher**, *Webster U., Vienna*
Author: **Allison Snowden**, -

Organizational practitioners must often interpret accounts of workplace bullying as non-observing third parties. However, they are often reluctant to confirm the target's account and often fail to set effective intervention measures. Building on novel approaches in attribution theory (multi-/conjunctive and relational attributions), this study explores how causal explanations and blame shape the labelling of a complaint and the subsequent recommended intervention measures. 187 Austrian human resource professionals, employee representatives and other practitioners were confronted with a fictional workplace bullying complaint including conflicting accounts of actors and diverse possible internal, relational and external causes. Since the prior low performance of a target might affect internal blame attributions, the previous performance ratings of the target were manipulated. A qualitative content analysis reveals that the cues and labels for the same complaint are very diverse. However, dominant single/multi-blaming patterns could be identified when the case was rejected or confirmed: When respondents reject the complaint, single internal causal attributions and blame against the target and/or trivialization of the complaint as "conflict" are predominant. When the complaint is fully supported, deontic statements and blame attributions against the perpetrator prevail; however, the full blame on the perpetrator is often discounted via multi-blame attributions against other actors like supervisors, colleagues and the target. Structural causes were rarely mentioned. Relational attributions are rare and often used to trivialize the complaint. Irrespective of the preceding attributional blame patterns, most third parties recommend "reconciliatory measures" between the actors (e.g. informal talks, mediation) rather than punitive measures (e.g. warnings) or structural changes. This study shows that organizational third parties often view bullying as dyadic and interpersonal victim/perpetrator conflict rather than an organization-caused phenomenon. The discussion of findings includes building effective trainings to avoid reflexive victim blaming and increasing the awareness for structural causes and solutions of workplace bullying complaints.

Conflict Identity, Intensity, Attribution, and Apology

CM: **How Moral Identity Leads to High-Quality Apologies via Guilty Feelings**

Author: **Tatiana Iwai**, *Inspere Institute of Education and Research*
Author: **Joao Vinicius Carvalho**, *U. of Sao Paulo (FEA/USP)*

High-quality apologies are effective strategies to solve interpersonal conflict. However, transgressors often fail to provide comprehensive apologies. Instead, they commonly offer perfunctory apologies that lack important components such as admission of responsibility, promise of change or an attempt to compensate. In this paper, we investigate the role of moral identity in apology comprehensiveness. Additionally, we examine one potential underlying mechanism responsible for this relationship, namely, guilt. Across three studies using a combination of real-world and hypothetical transgressions, we demonstrate that transgressors high in moral identity feel guiltier after committing a transgression, and because of that, they offer more comprehensive apologies. However, the positive effects of guilt on transgressors' apologizing are conditional on the perceived apology effectiveness. When transgressors estimate high chances of having their apologies accepted, the link between guilt and apology comprehensiveness is weakened. Theoretical and practical implications of these findings for the reconciliation process are discussed.

CM: **Towards an Attribute-Based Conceptualization of Conflict: Reflections on Three Decades of Conflict**

Author: **Lihan Zhang**, *School of Economics and Management, Hebei U. of Technology*
Author: **Yongcheng Fu**, *College of Management and Economics, Tianjin U.*

Conflict is considered a frequent phenomenon and crucial concern for social entities. Despite the dynamic nature of conflict, the event-oriented perspective has received relatively less attention in conflict research, which overly utilizes intensity and frequency to describe conflict. Through a systematic and integrative review, we address this gap by synthesizing the current state of knowledge on conflict and establishing a comprehensive theoretical framework for conflict attributes as well as an attribute-based conceptualization of conflict. The framework depicts conflict from three separate but related dimensions – strength, time, and space. The framework in turn helps expand knowledge on conflict, which scholars can build on to fill gaps, resolve paradoxes, and thus move conflict research forward. We then propose four promising areas for future conflict inquiry: (1) linking the effectiveness of conflict to its attributes; (2) exploring the interplay and configuration of multiple conflict attributes; (3) progressing from variance- to process-oriented conflict theories; and (4) developing symmetric/asymmetric views of conflict.

CM: **Apologizing Without Felt Transgression: Investigation of Its Affective and Relational Consequences**

Author: **Shike Li**, *IE Business School*
Author: **Ivana Radivojevic**, *Fundación IE Maria de Molina 13, 28006 Madrid VAT Number: G-81711459*

Apologizing after having caused harm is important for forgiveness, reconciliation, and the future of relationships. However, individuals may also often find themselves apologizing in situations where they do not feel they transgressed. In this paper, we explore this phenomenon and the affective and relational consequences of apologizing without felt transgression. Using a micro-narrative procedure with full-time working professionals (N = 151, UK participants) and an inductive data analytic approach, in Study 1 we explore the broad affective and relational consequences of apologizing without felt transgression in the workplace. In Study 2 (N = 181, US participants), we provide an immersive workplace scenario and measure participants' specific emotions of anger and empathy along with restorative efforts and supportive behaviors. We find converging evidence of worse affective and relational outcomes associated with apologizing without felt transgression. As such, in contrast to the well-documented restorative potential of apologies for conflicts in the workplace, apologizing when one does not feel having transgressed can incite negative feelings and damage, rather than reconcile, relationships.

Conflict in Hierarchies

CM: **Helping as a Means to Empower or Create Reliance: Hierarchical Motivations Predict Helping Behaviors**

Author: **Jessica Jee Won Paek**, *Fuqua School of Business, Duke U.*
Author: **Hemant Kakkar**, *Fuqua School of Business, Duke U.*

Prosocial organizational behaviors such as interpersonal helping are desirable, as it increases organizational effectiveness and engenders positive outcomes for both the help providers and recipients. However, helping can also be strategic and a means to create dependency (by providing dependency help: fixing a problem for someone) rather than a way to empower others (by providing autonomy help: teaching someone how to fix a problem). To date, little research has explored predictors of such help-giving behaviors by leaders in the workplace. We propose that leaders associated with dominance, i.e., those who are seen as assertive and commanding, offer more dependency and less autonomy help. In contrast, leaders associated with prestige, i.e. those who value sharing knowledge and skills, provide more autonomy and less dependency help. We further examine the mediating role of leaders' role conceptualization and the moderating role of time pressure in explaining our effects. We test our hypotheses using a combination of experimental and field studies. In doing so, this research highlights the systematic manner in which helping behaviors in workplace can be discriminated along dependency and autonomy help and the antecedents for such behaviors.

Paper is Available to Meeting Registrants Only.

CM: **Victorious and Hierarchical: Past Success as a Determinant of Team Hierarchical Differentiation**

Author: **Christopher To**, *Northwestern Kellogg School of Management*
Author: **Taiyi Yan**, *UCL School of Management*

Hierarchies emerge as collectives attempt to organize toward successful performance. Consequently, research has focused on how hierarchies affect team performance. We adopt a different perspective: performance is not only an output of hierarchy, but also a critical input – teams' hierarchies may dynamically vary based on whether they are succeeding. Integrating research on exploitation and exploration with work on group attributions, we argue that teams engage in exploitation by committing resources to what they attribute as the cause of their success. Specifically, collectives tend to attribute their success to individuals who held greater influence within the team, and these individuals are subsequently granted relatively high levels of resources, leading to a high degree of hierarchy. We additionally suggest this tendency to attribute, and therefore commit resources, to members believed to be the cause of success is stronger for teams previously high (vs. low) in hierarchy, since a high degree of hierarchical differentiation provides clarity about which members had greater impact over the team outcome. We test our hypotheses experimentally with teams engaging in an online simultaneous game and with archival data from the National Basketball Association. Overall, our work highlights that performance is not only an output of hierarchy, but also serves as a critical input that affects how teams actively and dynamically shape their hierarchy.

CM: **A Relational Account of Low Power: The Role of the Attachment System in Reduced Proactivity**

Author: **Jieun Pai**, *U. of Virginia*
Author: **Jennifer Ann Whitson**, *U. of California, Los Angeles*
Author: **Junha Kim**, *Ohio State U.*
Author: **Sujin Lee**, *Korea Advanced Institute of Science and Technology (KAIST), College of Business*

Although the literature has found widespread evidence for the effect of power on action, we lack a systematic understanding of why low power individuals are less prone to action. Here we focus particularly on proactive behavior as a form of action; we argue that because power exists within social relationships, our research elucidates a relational underpinning of the link between low power and reduced proactive behavior through the framework of attachment theory. We predict that the experience of low power will increase attachment anxiety, and that this increase in attachment anxiety will reduce proactive behavior. In a series of four pre-registered experiments and one quasi-experimental field study, we examine our hypothesized relationship that low power individuals are less proactive, and that this relationship is mediated by attachment anxiety. Overall, we find support for attachment anxiety as an important factor in the experience of low power individuals which inhibits proactive behavior and go on to offer a powerful intervention grounded in attachment theory to ameliorate this effect.

CM: **Review of Organizational Misbehavior Constructs: Hierarchical Reflective Model**

Author: **Sherzodbek Murodilla Ugli Dadaboyev**, *Yonsei U. Wonju Campus*
Author: **Yoonjung Baek**, *Kyungpook National U.*

Organizational misbehavior (OMB) is a complex phenomenon for researchers and a big issue for practitioners to deal with because of its vast number of individual and organizational negative outcomes, and its complexity to cope. Organization researchers and practitioners are increasingly becoming more aware of different types of work-related misbehavior by members, and their significant and costly consequences for both employees and employers. OMB can take many forms and a swarm of terms has been introduced to describe those OMBs. Our paper has attempted to review the constructs describing member misbehaviors. This study provides a comprehensive review of workplace misbehaviors and an organized picture of OMB constructs by developing a hierarchical reflective model of OMB related phenomenon and pinpoints some challenges which the literature of OMB phenomenon as well as the study of organizational behaviors have to overcome.

ENT: **[Making Long Distance Work: Increasing Investment Returns of International Business Angel Syndicates \(WITHDRAWN\)](#)**  

Author: **Henrik Wesemann**, *U. of St. Gallen*
Author: **Torben Antretter**, *U. of St. Gallen*
Author: **Joakim Wincent**, *Luleå U. of Technology*

This paper investigates the performance effects of international business angel investments in early-stage ventures. Building on theoretical arguments relating to transaction costs of international investments, we disentangle the costs and benefits of geographic and cultural distance in early stage investing. With a unique dataset of 797 investment decisions made via an international angel investment platform, we find an inverted U-shaped relationship between distance and investment returns. We further show that this relationship is moderated by business angel syndication such that in large syndicates, investors earn consistently higher returns and are less sensitive to the costs of both geographic and cultural distance. With these findings, we provide a new perspective to the discussion on cross-border venture investments, contribute to the emerging literature on international angel investment platforms, and develop the mechanisms of transaction cost theory in a new setting.

ENT: **[Mapping the Trajectories of Sustainable Entrepreneurship Research - a Review and Research Agenda \(WITHDRAWN\)](#)** 

Author: **Amitabh Anand**, *SKEMA Business School, U. Côte d'Azur, GREDEG*
Author: **Padmaja Argade**, *Kedge Business School*
Author: **Ralf Barkemeyer**, *Kedge Business School*
Author: **Fanny Salignac**, -

Sustainable entrepreneurship (SE) has attracted significant scholarly attention over the last decade. Given its rapid development and its multidisciplinary character, the SE literature is increasingly difficult to navigate. We combine two bibliometric approaches (i.e. co-citation analysis of references and bibliographic coupling of documents) with manual coding of documents to take stock of progress within the field, mapping out focal points as well as blind spots in the SE research agenda. We show how distinct subfields have formed around key ideas expressed in subsets of seminal papers, shedding light on the relational nature of knowledge creation – uncovering the characteristics, evolution and future trajectories of these subfields. We develop a future research agenda based on the developments of the overall field as well as the subfields of SE.

ENT: **[Small firm Growth-Enabling Capability: Toward a Framework for Young Technology-Based Firms \(WITHDRAWN\)](#)**     

Author: **Morane Atzmon**, *PhD student at U. of Antwerp*
Author: **Johanna Vanderstraeten**, *U. of Antwerp*
Author: **Sascha Albers**, *U. of Antwerp/ Antwerp Management School*

Growth of young technology-based firms (YTBFs) is dynamic rather than linear in nature. As such, the increased complexity accompanying their growth confronts YTBFs with unique challenges, making it difficult for these firms to grow. Despite this inherent complexity, however, there remains much left to discover in terms of how such transitioning processes can be facilitated. While earlier studies have mostly adopted a stage-based approach to exploring the notion of growth, we argue that viewing the concept through a dynamic perspective presents a more appropriate approach in the context of YTBFs. In this article we indeed assume a dynamic perspective to explore how YTBFs can facilitate dynamic growth transitions. Based on insights from strategic entrepreneurship and growth literature, we suggest that such transitioning is reflected by three inherent challenges: the engineering challenge, the orchestration challenge, and the legitimation challenge. To achieve our objective, we adopt a qualitative, systematic combining approach based on eight exploratory interviews, eight semi-structured interviews, and two focus groups. We find that YTBFs should focus on the development of absorptive, adaptive, networking, innovative, learning, and individual (managerial) capabilities, in order to enable growth-transitions. Our results are largely in line with, but also extending, existing literature in that they show how particular capabilities can be perceived as relevant growth-enabling capabilities. As such, this study contributes to several research streams, providing interesting paths to future investigation. First, by adopting a strategic entrepreneurship perspective, we adopt a novel approach to addressing the problem of growth-transitioning in the context of YTBFs. Similarly, this allows us to explore the relevance and application of dynamic capabilities in the same context, which has received a rather limited attention as opposed to that of established firms. To further clarify our article's contributions, we develop a comprehensive framework, connecting our results to existing literature, explaining how each capability can be related to particular challenges, thereby paving the way for further research on the topic. In doing so, we provide managerial insights for YTBFs' managers to enhance their understanding of growth and more appropriately allocate their resource-investments. Our study's main limitation is represented by the relatively small sample used and its exploratory approach, which provides incentive for further empirical investigation to validate our results.

ENT: **[Bringing family firm history to light: A systematic review of history in family business research \(WITHDRAWN\)](#)**

Author: **Julia Brinkmann**, *PHD Student at Bielefeld U.; Faculty for Business Administration*
Author: **Jana Boevers**, *Bielefeld U.*

Research on history-related issues in family businesses is an expanding, yet nascent field that is rife with widely dispersed, loosely connected studies about the role that the past plays in future courses of action. Integrating viewpoints from organizational history scholarship, this paper delineates the notion of rhetorical history to propose history as narratively reconstructed accounts which are used to motivate action toward a collective future-state. Based on this understanding we systematically review 52 history-related family business studies from 25 journals and 4 books. Findings from the review show that the past in family firms is embodied through a collection of intangible and tangible resources such as founders' heritage and legacy, material artifacts and living memory. Our review reveals the strategies of invoking, modifying and inventing or selectively forgetting this embodied past and, additionally, the consequences history has for the future course of actions. Synthesized in an integrative framework, we unpack family firm history as an embodied and conscious resource which is malleable in use and is inseparably linked to and deeply embedded in family firm consequences. We offer four research directions particularly worthy of further exploration for developing and extending theory in the field of family business history research.

Cognition and decision I

ENT: **Entrepreneurship as an individual choice: the joint effects of personality traits and institutions**

Author: **Tianchen Li**, *Middlesex U. London*
Author: **Yue Wang**, *Macquarie Business School, Macquarie U.*
Author: **Miles M. Yang**, *Macquarie U.*

This study develops a multilevel framework to examine how individual-level cognitive traits interact with country-level characteristics pertaining to the rule of law in shaping individuals' decisions to become entrepreneurs instead of being employed. Empirical results based on 50,624 observations from 59 countries show that entrepreneurship as an occupational choice is positively affected by individuals' self-efficacy and alertness to opportunities and negatively affected by fear of failure. The results also show that the rule of law both influences the choice of entrepreneurship over employment directly and indirectly through moderating the impact of cognitive traits on such a choice.

ENT: **Entrepreneurial Rationality as Value Alignment**

Author: **Per L. Bylund**, *Oklahoma State U.*
Author: **Mark D. Packard**, *U. of Nevada, Reno*

We examine the implications of a recognition that value is subjective, and that the value of the entrepreneurial venture is determined by both the consumer and the entrepreneur, for the concept of entrepreneurial rationality. Consumers determine the economic value of the output, while entrepreneurs determine the value they see in running a possible venture. As consumer value can only be recognized after both production and the final sale are done, we argue that the rationality in the entrepreneur's endeavors cannot be assessed with respect to outcomes, which are necessarily uncertain, but must be assessed given the situation in which the decision is made. Consequently, while success is not guaranteed, the risk of failure is likely minimized if and to the extent that entrepreneurial decisions are made with the explicit aim of creating value for consumers. Thus, we define entrepreneurial rationality as directing and aligning all stages of the entrepreneurial journey toward specific, anticipated consumer value.

ENT: **The Impact of Perceived Entrepreneur Cognitive Complexity on Venture-Capital Financing**

Author: **Florian Demann**, *U. of Passau*
Author: **Martin Diessner**, *TUM School of Management, Technical U. of Munich*
Author: **Lorenz Graf-Vlachy**, *TU Dortmund U.*
Author: **Andreas Sebastian Konig**, *U. of Passau*

In this paper, we examine how a key facet of entrepreneurs' cognitive processes—cognitive complexity—influences decision making among early-stage investors. Cognitive complexity refers to an individual's degree of nuanced and differentiated thinking (i.e., “black and white” versus “shades of grey” thinking styles). Within the context of early-stage investment decisions, we theoretically derive the link between entrepreneurs' cognitive complexity and investors' funding decisions. Beyond examining the main effect of entrepreneurs' cognitive complexity on venture-funding decisions, we consider the moderating effect of entrepreneurs' elite education, which we expect to alter investors' perceptions of entrepreneurs. We test our hypotheses using a sample of 547 pitches made by early-stage ventures during the TechCrunch Disrupt Startup Battlefield between 2009 and 2018. Overall, our results suggest that ventures led by entrepreneurs with higher cognitive complexity acquire more funding from investors. We also show that a degree from an elite university modestly and positively moderates this relationship. Our findings contribute to the literature on entrepreneurial finance, entrepreneurial cognition, and social psychology.

ENT: **Do you see in the way I see? – bringing temporal perspectives on venture opportunity formations**

Author: **Soongoo Ahn**, *No Affiliation*

Previous research on entrepreneurial opportunity has focused on the deterministic relationships between different contextual conditions (or pre-conditions) and opportunity formations - contextual conditions determine specific type of opportunities leading to either discovered, created, or imagined opportunity. Departing from the deterministic view, this paper explores dynamic generations of different opportunities via cognitive processes. Since future anticipations / forecasting has been a foundation for entrepreneurial opportunity formations, this piece summarizes three different temporal perspectives as cognitive processes that concern different future forecasting. The core proposition is that adaptation of specific temporal perspectives can concern different entrepreneurial venture opportunities. The proposed view of this paper thus allows an entrepreneur to generate series of different types of opportunities by adapting different thinking skills in time. The proposed paper offers theoretical insights on 1) opportunity formation, 2) cognitions, and 3) importance of temporal perspectives in entrepreneurship.

Decision-making by entrepreneurs 2

ENT: **Rejected, What's Next? The Impact of Entrepreneurial Rejection on Cognitive and Behavioral Responses** 

Author: **Anh Dinh**, *TU Dortmund*
Author: **Jan-Martin Geiger**, *TU Dortmund U.*
Author: **Andreas Liening**, *TU Dortmund U.*

We investigate how the type of feedback and perceived credibility of feedback source influences behavioral and cognitive responses to entrepreneurial rejection with two experiments. First, the impact of rejection on the entrepreneurial decision and the attribution of the cause of a rejection was assessed through an online experiment based on a sample of 125 participants. Second, the effects on individuals' perceptions and retentions of feedback were assessed through an eye-tracking experiment with a sample of 38 subjects. Our findings indicate that sources being perceived to be highly credible lead to higher acceptance of feedback and business withdrawal. Furthermore, we observe that feedback from sources perceived to be highly credible attracts more attention and remains stronger in the memories of feedback recipients. In addition, cognitive feedback is more accepted and remains stronger in the memories of feedback recipients than outcome feedback. The results contribute to entrepreneurship research, as we reveal the role of how feedback is presented affects recipients' perception processing and decision making. Since new venture creation depends on incorporating feedback, the results offer practical implications for stakeholders who are engaged in entrepreneurship.

ENT: **Empathy and the entrepreneurial process**

Author: **Chih-mao Hsieh**, *SUNY Korea*
Author: **Edwin Sanusi**, *SolBridge International School of Business*

Empathy has recently been addressed in entrepreneurship research, notably regarding the opportunity discovery stage. We instead investigate how empathy could relate to all stages of the entrepreneurial process. Specifically, our paper compiles how different kinds of empathy affect the entrepreneurial process both directly (upon alertness, opportunity exploration, innovation, and exploitation) and indirectly (via market orientation and marketing mix). Overall we show that empathy is valuable across the entrepreneurial process. In uncovering shortcomings of the literature, some propositions are offered. (For example, we propose that empathy relates to entrepreneurial alertness via spontaneous helping behavior.) The discussion delivers some insight into why empathy will become more important to a generalized entrepreneurship process in the future.

ENT: **Are unsuccessful entrepreneurial experiences harmful?: Product failures in medical device ventures** 

Author: **Sae Young Lee**, *China Europe International Business School (CEIBS)*
Author: **Taiyuan Wang**, *China Europe International Business School (CEIBS)*

Entrepreneurial processes are learning journeys; as entrepreneurs found one company after another, they learn from those experiences to create better-performing companies. Compared with this widely documented learning effect, knowledge on debilitating behavioral consequences of entrepreneurial processes, especially involving unsuccessful entrepreneurial experiences (UEEs), remains limited. By drawing on behavioral decision theories, we argue that UEEs can lead to entrepreneurs' increased desperation to succeed and higher tolerance for risk, which in turn may result in the dysfunctional outcome of product-harm crises in their subsequent ventures. We further argue that desperation effects may be stronger when the venture is founded by a solo entrepreneur or during an economic recession. On the other hand, the positive effect of higher risk tolerance on product-harm crises is argued to be less pronounced when the penalty against risk taking is high, such as when the venture has several product lines and one product-harm crisis can have a spillover effect on other products, or when the venture faces stricter regulations for product functionality, quality, and safety. An analysis of new ventures in the U.S. medical device industry provides an overall support for our claims.

ENT: **Path-Dependent Collective Attention in Entrepreneurial Opportunity Emergence** 

Author: **Aishwarya Kakatkar**, *TUM School of Management, Technical U. of Munich*
Author: **Holger Patzelt**, *TUM School of Management, Technische U. München*
Author: **Nicola Breugst**, *TUM School of Management, Technical U. of Munich*

While extant literature has studied the process of entrepreneurial opportunity emergence (EOE), the dynamics within the process remain underexplored in the context of entrepreneurial teams. Co-founders bring diverse information relevant to the identification and development of entrepreneurial opportunities. However, in order for the information to be actually used in EOE, it needs to move into the collective attention of the team. We apply a novel, path dependence lens to study how an entrepreneurial team's collective attention develops over the course of the EOE process. To do so, we use a controlled setting in which 20 early-stage entrepreneurial teams participate in an opportunity identification task. Taking a qualitative, multiple case study approach, we analyze a unique video dataset of the teams engaging in this task to build a model of the genesis, evolution, and resolution of what we call 'collective attention paths' during EOE. In doing so, we contribute to theory on entrepreneurial opportunities and teams, as well as collective attention.

ENT: What is your story: The persuasive effects of entrepreneurial stories on investment decision & beyond

Author: **Smita Srivastava**, *Wichita State U.*
Author: **Manish Kumar Srivastava**, *Michigan Tech U.*

Investors often acknowledge that their financial investment decisions are heavily influenced by the stories that entrepreneurs share. Although prior research has explored the role of entrepreneurial narratives on investors' decision making, we still do not know much about the persuasive influence of stories on investors' decision-making. In doing so, we uncover the mechanism of narrative transportation, a cognitive process that transports the investors into the story world through identification and emotional connection with the story. Using an archival data of 9971 entrepreneurial stories shared by entrepreneurs at a crowdfunding platform (Study 1) and an experimental study (Study 2) with 102 investors, we find that entrepreneurial stories with higher narrative content and with progressive emotional representation of events persuade investors to contribute higher investment amount. We also find support for our assertion that stories even change the attitude of the investors towards entrepreneurial activities that are usually deemed risky.

ENT: The Effect of Perceived Warmth and Competence on Crowdfunding Success: The Moderating Role of Gender

Author: **Pyayt Phyo Oo**, *U. of Texas At Arlington*
Author: **Steven Creek**, *Appalachian State U.*
Author: **Leah Sheppard**, *Washington State U.*

Perceptions of warmth and competence account for a large proportion of the variance in impression formation. However, these constructs and their underlying mechanisms have received little attention in the entrepreneurship literature, particularly in the context of entrepreneurial resource acquisition. We examine the impact of perceptions of warmth and competence on the outcomes of 350 crowdfunding campaigns sampled from a popular crowdfunding platform, Kickstarter, wherein only cursory determinations of entrepreneurs and their new ventures occur prior to funding decisions. Drawing from the stereotype content model and expectancy violation theory, we propose and find support for a model in which each of affect- and cognition-based trust mediate the relationships between crowdfunding performance and perceived warmth and competence, respectively, with the strength of these pathways differing as a function of entrepreneur gender. Specifically, women are benefited more than men by their displays of competence, and the cognition-based trust that ensues.

ENT: A Theory of Dishonest Signaling: Evidence from Crowdfunding Imposters

Author: **David James Scheaf**, *Baylor U.*
Author: **Tim Michaelis**, *Northern Illinois U.*
Author: **Austin R. Brown**, *Baylor U.*
Author: **Gordon Miller**, *Baylor U.*

In this study we introduce a theory of signal corruptibility--the ability of imposters to co-opt and effectively send dishonest signals--by establishing the necessary conditions of a signaling environment for the possibility of signal corruptibility to emerge, introducing three properties of signals which contribute to signal corruptibility, and detailing how various levels of these properties work in concert to render a signal as susceptible or resistant to corruptibility. Logistic regression results comparing data from 278 crowdfunding imposters to a matched sample of 278 authentic entrepreneurs support most of our hypotheses and offers initial confirmation status to the theory of signal corruptibility.

ENT: Understanding Reward Delivery Obligations in Reward-based Crowdfunding: A Theoretical Analysis

Author: **Anthony Macari**, *Sacred Heart U.*
Author: **Grace Chun Guo**, *Sacred Heart U.*

Crowdfunding has emerged as a significant and growing source of capital for entrepreneurs. Among major forms of crowdfunding, reward-based crowdfunding (RBC) model is the most prevalent one. In this paper, we focus on the implementation stage of the RBC model and build an integrated theoretical framework to explain the commonly observed failures and delays in delivery of rewards to investors and to explain how these failures and delays may be perceived by investors as violations of entrepreneurs' reward delivery obligations. We review RBC as a contractual relationship between entrepreneurs and investors. Drawing on entrepreneurial personality theory and psychological contract theory, we develop propositions and identify factors related to both entrepreneurs (overconfidence and narcissism) and factors related to investors (types of motivators and psychological contracts) that may explain failures and delays in reward delivery as well as perceived violations of reward delivery obligations. Implications for theory and practice are also discussed.

ENT: Entrepreneurship and Knowledge Flows in China's Supply Chains: The Roles of Platforms

Author: **Marina Yue Zhang**, *Swinburne Business School, Swinburne U. of Technology*
Author: **Mark Dodgson**, *U. of Queensland*
Author: **David M Gann**, *Imperial College Business School*

Digital transformation has profoundly affected entrepreneurship in supply chains. SMEs and micro entrepreneurial firms are able to start up their business and join larger supply chain networks, enabled by 'common' resources provided by platforms. How China's supply chains evolved, especially how knowledge flows changed from intra-organization to inter-organization supporting entrepreneurship, is the focus of this study. This paper uses a longitudinal case of China's supply chains over the past twenty years with four embedded cases to investigate knowledge flows in entrepreneurship and roles played by different types of platforms (regional clusters and digital platforms). Social networks and human interactions, mediated by regional clusters, play a critical role in tacit knowledge transfer beyond organizational boundaries in supply chains. In digital ecosystems, system-level features, such as digital infrastructure, enable knowledge sharing and facilitate transactions among strangers. Understanding the distinctive role of platforms in entrepreneurship requires recourse to their antecedents and alternatives.

ENT: When Do Donors and Investors Unite? Entrepreneurial Ecosystems and the Financing of Hybrid Ventures

Author: **Ikenna Stanley-Paschal Uziegbunam**, *Howard U.*
Author: **Brandon Ofem**, *U. of Missouri, St. Louis*
Author: **Satish Nambisan**, *Weatherhead School of Management, Case Western Reserve U.*

A central tenet of hybrid ventures is that their dual focus on social and commercial missions can enable them to attract funding from philanthropic and equity financing sources simultaneously. Yet, many hybrid ventures face conflicting institutional demands that can make it difficult to do so. Leveraging recent theorizing on entrepreneurial ecosystems, this study investigates conditions when alternate sources of entrepreneurial finance for hybrid ventures may complement each other. We propose that spatial (e.g., accelerators) and digital (e.g., social media) affordances act as signaling platforms in modern entrepreneurial ecosystems that moderate resource mobilization in hybrid ventures such that they can enhance the complementarity between philanthropic and equity financing of hybrid ventures. Furthermore, we suggest that the higher order, cultural affordances (relational norms) will govern the signaling strength of these lower-order entrepreneurial ecosystem affordances. Empirical results from a simultaneous equation model of a global sample of 6576 social ventures from 38 countries support the proposed framework. By applying a novel empirical approach on a multi-level entrepreneurial ecosystems' framework, we direct attention to how hybrid ventures leverage signals between financing sources to increase funding outcomes.

ENT: Connectivity, Social Venture Creation, and Income Inequality: An Opportunity Structure Perspective

Author: **Li Sun**, *UMass Lowell*
Author: **Peiyi Jia**, *U. of Massachusetts, Lowell*
Author: **Chao Guo**, *U. of Pennsylvania*
Author: **Jipeng Qi**, *Beijing Jiaotong U.*

We develop an opportunity structure perspective on how transport connectivity affects social venture creation and how both affect income inequality. We argue that transport connectivity shapes social venture creation through three different channels--- knowledge diffusion, institutional environment, and entrepreneurial ecosystem, which in turn reduces the income in-equality between the urban and rural areas. Based on a unique dataset of 519,684 social ventures in China in 2007-2016, we find that the operation of high-speed rail positively affects social venture creation, and that these social ventures help reduce urban-rural income inequality. We further find that both effects are higher in interior provinces than in coastal provinces.

ENT: Aligning Platform Ecosystems through Distributed Ledger Technologies

Author: **Kilian Schmueck**, *U. of St. Gallen*
Author: **Magnus Schücker**, *U. of Mannheim*
Author: **Thomas Moellers**, *U. of St. Gallen*
Author: **Tobias Gutmann**, *EBS Business School*
Author: **Oliver Gassmann**, *HSG U. of St. Gallen*

A firm's ability to profit from technological innovations increasingly depends on its business model's ability to create, deliver and capture its latent value. The literature on business models and business model innovation has provided profound insights, yet, it's insights are largely drawn from context relating to the internet and information technology. The advent of digital technologies, however, carries broader implications for value creation and value capture through their inherent and unique characteristics. We use the context of distributed ledger technology to understand how digital technology affects business model design choices of startups and their competitiveness. Through a mixed methods study design, we first develop a taxonomy on business model configurations, and second identify respective business model archetypes that are fundamentally shaped by distributed ledger technologies.

Effectuation 1

ENT: **Development of Products and Services in Small Enterprises: Artifact to Discuss Creative Logics**

Author: **José Osvaldo De Sordi**, *Centro U. Campo Limpo Paulista (UniFACCAMP)*
Author: **Reed Nelson**, *U. of Louisiana Lafayette*
Author: **Manuel Meireles**, *Faculdade Campo Limpo Paulista*
Author: **Marcos Hashimoto**, *Millikin U.*

The innovation of companies' product and service portfolio is a challenge, especially for small companies with limitations on their resources. The scientific literature that focuses on innovation and creativity in organizations is predominantly centered on the new product development (NPD) approach, projected for the reality of large companies. From this scenario, we used the Action Design Research (ADR) method to develop an artifact that helps consultants and teachers to understand and expose creative logics that are different than those used in NPD, allowing them to help entrepreneurs, future entrepreneurs and managers of small companies to develop their product and service portfolio. Following the principles of ADR, researchers and practitioners (teachers and consultants) collaborated in the development of the artifact. Successive versions of the artifact were tested in the field: in classrooms by the teachers and in small companies by the consultants. The lessons learned through this design process were formalized in meta-requirements and meta-designs, in accordance with the precepts of the design theory that serve as the foundations of ADR. These meta-specifications facilitate the critical analysis and evolution of the proposed artifact in addition to the conception and proposition of new artifacts for the same class of problem.

ENT: **The Double-edged Sword Effect of Effectuation on New Product Creativity**

Author: **CEHNG DENG**, *Xi'an Jiaotong U.*
Author: **Jianjun Yang**, *Xi'an Jiaotong U.*
Author: **Zhongfeng Su**, *Xi'an Jiaotong U.*

Existing literature offers contradictory findings of the impact of effectuation decision-making logic on new product creativity (NPC). We address these contradictions by arguing that effectuation differentially affects two dimensions of new product creativity, namely novelty of new product (NNP) and meaningfulness of new product (MNP). Besides, we investigate the moderating roles of competitive intensity and firm size between effectuation and two dimensions of NPC. Survey data from 232 firms from China reveal that effectuation increases NNP but decreases MNP. Moreover, the competitive intensity only strengthens the relationship between effectuation and NNP, and firm size strengthens the relationships between effectuation and both two dimensions of NPC. Consequently, this study highlights the dual effects of effectuation on NPC and provides important theoretical and managerial implications.

ENT: **Effectual learning toward causal competence –a POMDP model of decision-making sequences**

Author: **Yi Jiang**, *ESCP Business School*
Author: **Daniel Lyons**, *Euler Hermes*

Effectuation is often viewed as more preferable to causation for managing uncertainty. Introducing process theory's perspective on sequencing, we challenge this view by arguing that entrepreneurs navigate better under uncertainty by interpolating between decision logics. We show that the rate of dynamic switching between decision logics (causal versus effectual) increases as entrepreneurs approach the plunge decision. To unpack the evolution of entrepreneurs' decision-making sequences in the lead-up to new venture creation, we conducted 3 studies. From a sample of 389 decision events identified from the narratives of 30 successful entrepreneurs, in Study 1, we derive model parameters for a partially observable Markov decision process (POMDP) solution. In Study 2, we analyse the decision-making pattern where effectual logics predominate up until the 'plunge' decision and proceeds recursively until that plunge decision results in a 'go' or 'abandon' decision. Finally, in Study 3, we examine the conditions under which the rate of switching between decision logics becomes more dynamic. We conclude by exploring possible explanations for these findings in the qualitative data.

Paper is Available to Meeting Registrants Only.

ENT: **Alliances Between Academic Entrepreneurs & Large Firms-A Theory Elaboration Approach to Effectuation**

Author: **Somayeh Taghvaei**, *ESCP Business School*
Author: **Rene Mauer**, *ESCP Business School*

This study applies a theory elaboration approach to investigate how effectuation's assumption manifests in inter-firm alliance governance. We conducted a field study of 25 alliances between technology-based academic entrepreneurs and large firms. We generate theoretical insights into how effectuation contributes to two dominant alliance governance mechanisms: trust and control. The emerging findings contribute to both scholarship of effectuation and inter-firm relationship governance by revealing how means-based actin and goal ambiguity respectively facilitate and impede trust-building an alliance and how affordable loss contributes to alliance control.

Entrepreneurship and Emotions 1

ENT: **Activating collective agency in crisis: The social-cognitive context of ad hoc organizing**

Author: **Marcus W. Y. Ho**, *Auckland U. of Technology*

The purpose of this study was to extend existing research on collective agency in the crisis management literature through empirically examining the phenomena of ad hoc organizing. Our study utilized an inductive, theory-building multiple case study design that allowed insight into SME managers' ad hoc organizing patterns following a crisis. Taking a socio-cognitive approach, we explore how SME managers enabled collective agency through two micro process patterns: building collective efficacy and normalizing change. Data suggested that socio-cognitive complementarities to ad hoc organizing processes can extend theoretical approaches to the study of crisis management in entrepreneurship.

Paper is Available to Meeting Registrants Only.

ENT: **How mood and emotions relate to exploration and exploitation in entrepreneurial learning**

Author: **Marius Jones**, *NHH Norwegian School of Economics*

In this paper, I explore how mood and emotions (affect) may influence entrepreneurial learning in startups. To succeed, startups must engage in exploitative learning, refining their current product and business model, and exploratory learning, identifying new business opportunities and learning about new markets. While scholars agree that entrepreneurial learning is a key process in startups, the role affect in these learning processes has not been explored. In this paper, I develop a theoretical model, suggesting how entrepreneurs mood and emotions may influence what and how much they learn. Moreover, I suggest that a startups emotional culture, norms and assumption related to the expression of mood and emotions, may influence a startups ability to engage in collective learning. I thereby contribute to literatures on entrepreneurial learning and affect in entrepreneurship, as well as to the literature on exploration and exploitation more broadly.

ENT: **Affective reactions, individual behaviors and social dynamics in creative process**

Author: **Satu Rekonen**, *Aalto U., Department of Industrial Engineering and Management*

Author: **Lotta Hassi**, *U. Ramon Llull, ESADE Business School*

Author: **Natalia Vuori**, *Aalto U.*

We investigate the creative process in five cross-functional teams. Our analysis of interviews and video data showed how the enactment of idea generation and experimentation triggered both positive and negative affective reactions and how some teams were able to overcome emergent problems while others were not. We contribute to the creativity and innovation literatures in two main ways. First, we show how and why both positive and negative emotions can lead to challenges in the creative process, such as interruption in idea generation and interruption in experimentations. Second, we provide new underpinning mechanisms that describe how both individual-level behavior and social dynamics can amplify or help to overcome emergent challenges.

ENT: **Devotion or Best of Both World? How Values and Attitudes Shape Entrepreneurial Career Entry**

Author: **Etienne St-Jean**, *UQTR*

Author: **Francisco Liñán**, *U. of Sevilla*

The Theory of Planned Behavior (TPB) attracted attention in entrepreneurship to explain essentially entrepreneurial intention, but much less entrepreneurial behavior. The social psychology field uses the Value-Attitude-Behavior (VAB) model to explain behaviors, but this model is overlooked in entrepreneurship. This research hypothesizes that values and attitudes can shape not only entrepreneurial career choice but the decision to become hybrid (ie. combining salaried work with entrepreneurship) (HE) or full-time entrepreneur (FTE). We used a longitudinal nine-year sample of 1,736 individuals that were not in entrepreneurship at Time 1 to see if components of TPB or VAB can predict who will become HE or FTE at Time 2. We found that entrepreneurial intention is a strong predictor of FTE, just as the attitude related to wanting high income, and the values of power and self-direction. The value of security can predict the choice of HE. We contribute to demonstrating the relevance of VAB model in entrepreneurship and the importance of distinguishing hybrid entrepreneurship from devoted (or full-time) entrepreneurship.

ENT: Our social legacy will go on: Understanding outcomes of family SMEs succession through Buddhism

Author: **Nicholas Burton**, *Northumbria U.*
Author: **Mai Chi Vu**, *Newcastle Business School, Northumbria U.*
Author: **Allan Fernando Discua Cruz**, *Lancaster U. Management School*

Family SME succession has repeatedly remarked how succession is a function of protecting a biological and material legacy for future generations. While scholarship has suggested that family SME succession to non-kin warrants further exploration, few have identified religion as a factor in the succession process. Our aim is to develop theory-building in this field by offering a counter-example that runs contrary to existing explanations of kin succession, and to illuminate the role of religion in that process. Our study of 12 Buddhist family SMEs shows a demonstrable link between family SME succession and Buddhist philosophy. In particular, the Buddhist principles of non-attachment and impermanence were instrumental in influencing how firms rejected succession as a biological and material legacy process. In contrast, Buddhist family SMEs conceived succession as the continuance of the social legacy, whereby those who were best-placed to carry on the social legacy were selected as successors. Implications and opportunities for further research are offered.

ENT: Alliance Management Capability in Family Business: Evidence from a Politically Instable Economy

Author: **Abdalhamed Nasr**, *Huddersfield Business School, U. of Huddersfield*
Author: **Omar Al-Tabbaa**, *U. of Kent, Canterbury*
Author: **Nadia Zahoor**, *U. of Strathclyde*
Author: **Lasandahasi Ranmuthumalie De Silva**, *Birkbeck, U. of London*

We have a lack of understanding of the role of socioemotional wealth (SEW) in determining the success of alliances formed by family firms. By integrating the SEW of family businesses, and alliance management capability (AMC) of strategic alliance, literature, this study investigates how the extent of SEW in family firms operating in politically unstable contexts influences the development of AMCs, which in turn acts as a determinant of alliance success. By gathering data from 302 family firms in a politically unstable, the Libyan context, we found that the greater the SEW of family firms, the more likely they are to develop three types of AMCs: namely, alliance proactiveness (firms' ability to identify valuable partners for alliances), alliance coordination (firms' ability to manage the relationship with alliance partners), and alliance learning (firms' ability to learn from alliance partners), capabilities, which in turn increases the success of alliances formed by family businesses. We also found that the level of political instability confronted by family businesses positively moderates the positive relationship between the extent of SEW and AMCs. Our results also generate useful practical implications to family businesses, their strategic alliance partners, and policymakers involved in supporting family businesses.

ENT: Families' entrepreneurial heritage transfer improves organizational ambidexterity through succession

Author: **Rolf Wilmes**, *U. of Hohenheim*
Author: **Leif Brändle**, *U. of Hohenheim*
Author: **Andreas Kuckertz**, *U. of Hohenheim*

While prior research on family firms has emphasized the importance of balancing innovation and tradition, less attention has been given to how a family firm's heritage is transferred across generations. Drawing on imprinting theory, we argue that entrepreneurial heritage establishes a cognitive framework for successors to utilize traditions for balancing exploration and exploitation. By collecting and analyzing data from a unique sample of 303 multi-generational family firms, we find that family firms pass on entrepreneurial imprints of past organizational learning during the bridging period of succession. Our results indicate that the intergenerational transfer of entrepreneurial heritage increases the firm's organizational ambidexterity. Further, succession mechanisms of providing an entrepreneurial-friendly organizational environment increasingly benefit organizational ambidexterity under conditions of entrepreneurial heritage passage, and harming effects of family cohesion are mitigated by the successor's increased levels of entrepreneurial heritage.

ENT: Towards a communications pattern model of non-family employees' attraction to small family firms

Author: **Victor Amofum Boyi**, *Florida Atlantic U.*
Author: **Roland E. Kidwell**, *Florida Atlantic U.*

Recent surveys have revealed that small family firms struggle to attract non-family employees. Current theoretical perspectives propose that non-family employees join family firms because they perceive a fit with family firms. However, these perspectives are flawed because they do not acknowledge the heterogeneity across family firms. In this paper, we develop a theoretical model that incorporates family communication orientations to explain how family characteristics influence non-family applicants' attraction to small family firms. We argue that controlling families' communication orientations are a source of heterogeneity among family firms. We also argue that such heterogeneity across family firms explain differences in staffing practices and applicants' willingness to join a family firm. We conclude with a discussion of the theoretical implications of our model.

Family Business 2      

 ENT: **The Pillars of Family Firm Performance? How Owner Manager's Values impact SEW and Performance**

Author: **Philipp Julian Ruf**, *U. of Siegen*
Author: **Sven Wolff**, *U. of Siegen*
Author: **Michael Graffius**, *Berlin School of Economics and Law*
Author: **Sabrina Schell**, *U. of Bern*
Author: **Petra M. Moog**, *U. of Siegen*

While research has often claimed that individual actors' values and consequently behaviour impact the performance of a firm significantly, empirical underpinning about the mechanisms is missing. Especially in family firms, this is crucial to understand, as owner-manager exert an extraordinary influence on values, goals, and their respective firm's behaviour. Therefore, this study aims to connect individual values of the owner-manager to the performance of a family firm, mediated by socioemotional wealth. To help understand this phenomenon, we used structural equation modelling on a dataset of 673 family firms. Based upon upper-echelon theory, our results indicate that person-focused values impact performance directly while social-focused values impact performance mediated by SEW.

Paper is NOT Available. Please contact the author(s).

ENT: **An intraorganizational Power Perspective on Family Owners and Managerial Entrenchment** 

Author: **Zhonghui Wang**, *California State U. San Bernardino*
Author: **Esra Memili**, *U. of North Carolina, Greensboro*
Author: **Emma Youyi Su**, *U. of Dayton*
Author: **Zonghui Li**, *Jacksonville U.*

Studying the contingent effect of intraorganizational power on the relationship between the founding family and managerial entrenchment in S&P 1,500 firms, we find that the intraorganizational power of the founding family, which encompasses hierarchical and resource power, is negatively associated with the adoption of golden parachutes for a non-family CEO. Meanwhile, a family CEO is less likely associated with golden parachutes. Both the hierarchical power imbalance between the family and non-family managers and directors as well as the resource power imbalance between the family and non-family shareholders are positively (negatively) related to golden parachutes granted for a non-family (family) CEO.

ENT: **Good deal or bad deal? A meta-analysis of acquiring family firms and M&A performance**      

Author: **Marina Palm**, *WHU - Otto Beisheim School of Management*
Author: **Priscilla Sarai Kraft**, *WHU Otto Beisheim School of Management*

Family firms have often been portrayed as being distinct from non-family firms in their pursuit of M&A and their performance thereof. Empirical research examining whether family firms perform better or worse than non-family firms in M&A has, however, yielded conflicting findings and sparked controversy among scholars. To extend this stream of research, we theorize that family firms, based on their wealth concentration in the firm, reduced agency costs, and their pursuit of socio-emotional wealth goals, outperform non-family firms in M&A. Meta-analytic results from 40 primary studies covering over 20 years of research and 50 different countries support our hypothesis. We further argue and empirically show that the observed positive effect is weaker when family members take on board positions and conduct industry-diversifying M&A. Moreover, our findings emphasize that the family firm status and M&A performance relationship is contingent on the institutional environment of the family firm's home country, examined through the country's ease of doing business and education level of the workforce.

ENT: **How Do Family Firm Characteristics Influence Strategic Path Formation and Path-Breaking?**

Author: **Julia Katharina de Groot**, *WHU - Otto Beisheim School of Management*
Author: **Julienne Gasser**, *U. of Bern*
Author: **Benjamin Schmid**, *U. of Bern*
Author: **Nadine Kammerlander**, *WHU - Otto Beisheim School of Management*

The role of context and the influence of organizational hierarchies have not been sufficiently investigated in the context of organizational path dependencies so far. We argue that the context of family businesses poses a particularly relevant context of investigation. We take a qualitative approach to answer the research question of why and how family business peculiarities influence path formation and path-breaking. We base our findings on the analysis of six in-depth case studies. We find that high levels of concentration of formal and informal power, as well as collective and retrospective orientation stabilize path dependencies and delay path-breaking. Professionalization and formalization of decision-making processes weaken the concentration of power and can thereby help to initiate path-breaking. We identify different strategic outcomes of path dependent processes. In cases where path-breaking is achieved, firms either pivot their business or develop a strategic approach, which we refer to as renewing by restructuring. The latter approach encompasses the development of new revenue streams while keeping parts of the original businesses at a typically smaller scale and with lower financial expectations. We discuss the theoretical and practical implications of our findings for family and non-family businesses.

ENT: Family CEOs' Perceived Certainty of Family Managerial Succession and Organizational Ambidexterity

Author: **Hakaru Iguchi**, *Kyoto Sangyo U.*
Author: **Junichi Yamanoi**, *Waseda U.*
Author: **Hajime Katayama**, *Waseda U.*

How does a family CEO's perceived certainty of family managerial succession influence his/her firm's orientation for organizational ambidexterity? Using the socioemotional wealth perspective, we propose that a family firm is more oriented for organizational ambidexterity when its CEO is more certain that his/her family members will succeed it, because he/she prefers to hand over the family business in as good a condition as is possible, thereby preserving the family's socioemotional wealth. Further, this relationship will be stronger as the firm's sales is smaller because its CEO is more inclined to avoid loss in socioemotional wealth of his/her family successor caused by firm failure. We examine a sample of 478 small- and medium-sized manufacturing firms run by families in Tokyo, Japan, and find statistical support for the hypothesized relationships.

ENT: Professionalization and Family Firm Performance: A Meta-Analytic Review

Author: **Vasiliki Kosmidou**, *U. of New Haven*
Author: **Jestine Phillip**, *U. of New Haven*

The purpose of this meta-analysis is to empirically quantify the relationship between family firm professionalization and performance and to examine the potential influence of moderating factors on this relationship. Integrating the findings from 69 studies and 105 total samples, we find a significant, positive, and weak relationship that is contingent on firm variables including firm size, age, and listing on the stock market as well as methodological variables including research design and measures for professionalization and firm performance. Our findings show that professionalization has a stronger performance effect in studies with small, young, and private family firms and in those with panel datasets as opposed to cross sectional ones. The study contributes to the family firm literature and yields critical implications for research and practice.

ENT: Exogenous Shocks and the Adaptive Capacity of Family Firms: Everything New in the COVID-19 Pandemic?

Author: **Jonas Soluk**, *WHU - Otto Beisheim School of Management*
Author: **Nadine Kammerlander**, *WHU - Otto Beisheim School of Management*

The COVID-19 pandemic has been and is currently still affecting organizations of any size and in any industry and research still lacks profound insights into the managerial implications of this phenomenon. In particular, it is unclear how family firms, which are the economic backbone of most of the countries affected by the pandemic, have adapted to COVID-19. This paper addresses this gap by drawing on a rich body of evidence collected from 90 interviews and secondary data in a longitudinal case study of four German family firms. We develop a framework for understanding how family firms adapt to exogenous shocks such as the COVID-19 pandemic and find that the exogenous shock further reinforces the family firm's resource constraints and the family's fear of losing their socioemotional wealth (SEW). These motivational sources, in turn, trigger behavioral changes in both the firm and the family. In addition to a temporarily induced short-term orientation, these changes manifest in a (pseudo-)family cohesion, less rigid mental models, and a utilization of digital technologies. Organizational outcomes such as new alliances, digital platforms, and the adaptive capacity of family firms are the result of these behavioral changes. By providing a comprehensive understanding of how COVID-19 affects family firms, the insights from our study contribute to innovation research, business practice, and policy-making alike. More broadly, we provide innovation scholars with a theoretical comprehension of how exogenous shocks can challenge our canonical understanding of organizations' (innovative) behavior.

ENT: How Spousal Capital Influences Family Firm Performance: An Empirical Analysis

Author: **Xi Yang**, *East Stroudsburg U.*
Author: **Wanrong Hou**, *U. of Texas Rio Grande Valley*
Author: **Wencang Zhou**, *Montclair State U.*

By applying the resource-based view, we propose that spousal capital of family business CEO influences firm performance. Spousal capital was categorized into human capital, social capital, and financial capital. The questionnaire was conducted to CEOs of small and medium-sized family firms in the U.S. The empirical analysis shows that there is a positive effect of spousal human capital and emotional support on firm performance. Moreover, spousal emotional support strengthens the positive effect of spousal human capital on firm performance. The implications of our findings are also discussed.

ENT: Matching Words with Deeds: The Imprinting Effect of Future-Time-Reference on Innovative New Ventures

Author: **Jintong Tang**, *Saint Louis U.*

Author: **Jun Yang**, *Zhejiang U.*

Author: **Wenping Ye**, *school of management, Jinan U.*

Language structure differences have received wide scholarly attention to explain the differences in the behavior of organizations or individuals in different countries. Drawing upon linguistic relativity theory and imprinting theory, we extend linguistic research toward entrepreneurial theory and practice by examining how language structure differences impact cross-national variations in innovative new ventures. We contend that entrepreneurs speaking a strong future-time-reference language are more likely to create innovative new ventures than entrepreneurs with a weak future-time-reference language. Further, the imprinting effect of future-time-reference is eroded when entrepreneurs experience greater exposure to a multitude of new information and knowledge determined by such contextual factors as their age and home country globalization. We utilized merged, multi-level, and multi-source data of 40,022 entrepreneurs from 47 countries speaking 26 different languages to test our hypotheses. Results offer compelling support for our hypotheses.

ENT: The Roles of Personality and Regulatory Focus in Entrepreneurial Persistence Decisions

Author: **Farzaneh Noghani**, *Texas Tech U.*

Author: **William L. Gardner**, *Texas Tech U.*

The decision for entrepreneurs of whether to persist with a new business or discontinue its operation when confronted with negative feedback from the market is one of the most challenging decisions that they might encounter. Drawing from regulatory focus theory, we argue that allocentric/idiocentric tendencies and self-evaluation attributes influence the regulatory foci of entrepreneurs. Furthermore, the likelihood of entrepreneurs' decision to persist changes based on which one of regulatory foci, promotion or prevention, is most active. We argue that when provided with a new business alternative, entrepreneurs who have a chronically or temporarily more active prevention versus promotion focus are more likely to persist with a current failing new venture. We tested our arguments using two random samples of entrepreneur owners of privately held small businesses. In Study 1, we used an experimental design to test the effects of temporarily induced regulatory focus on entrepreneurial persistence decisions. In Study 2, we used a correlational design with two waves of data collection to investigate the relationships of allocentric/idiocentric tendencies and self-evaluation attributes with chronic regulatory focus. We found support for our arguments in Study 1 and for the relationship between self-esteem and the two chronic regulatory foci in Study 2.

ENT: Founder Cognitive Style & Firm Performance

Author: **Stephen E. Lanivich**, *U. of Memphis*

Author: **Samuel Adomako**, *U. of Bradford*

Author: **Mujtaba Ahsan**, *San Diego State U.*

Author: **Baris Istipliler**, *U. of Mannheim*

This study investigates the antecedent role entrepreneurs' cognitive styles play in the choice of strategic approach and resource orchestration behaviors, and how these relate to venture performance. Based on the entrepreneurial cognition literature and the Upper Echelon Theory, we postulate that entrepreneurs with different cognitive styles depend on different strategic approaches and resource orchestration choices to exploit their opportunities. Our mediation hypotheses posit that entrepreneurs with planning and knowing cognitive styles rely on a causation approach and bootstrapping resource behaviors, whereas entrepreneurs with a creating cognitive style choose an effectuation approach and bricolage resource orchestration behaviors to achieve venture performance. Using a sample of 260 Ghanaian entrepreneurs and conditional process modelling technique to analyze the mediation relationships separately and in parallel, we find support for many of our hypotheses.

Paper is Available to Meeting Registrants Only.

ENT: How founders' affective commitment moderates the effect of flexibility on opportunity exploitation

Author: **Christopher G. Pryor**, *U. of Florida*

Is flexibility or formality more useful for organizations that are pursuing improved performance? Organizational structure scholars offer opposing answers to this question, and empirical results have been mixed. Our study contributes to this research by describing a mediational model that links organizational flexibility to performance via opportunity exploitation. Specifically, we argue that flexible firms are able to exploit a greater number of opportunities, which, in turn, can improve performance. We also argue that the indirect effect of flexibility on performance via opportunity exploitation is stronger when top executives display higher affective commitment for their firms, meaning that they have a positive emotional attachment to their firms. Top executives with higher affective commitment can mitigate the downsides experienced by the staff of flexible firms, such as uncertainty and negative affect, which improves the outcomes of flexibility. Drawing on a sample of 211 firms and their founders, we find support for our hypotheses.

ENT: **Immigrant Entrepreneurship: The Joint Effect of Host and Home country Institutions**

Author: **Punit Arora**, *City U. of New York*
Author: **Marta Bengoa**, *City U. of New York*
Author: **Priya Nagaraj**, *William Paterson U.*

In this paper, we examine the joint effect of immigrant entrepreneurs' human capital, their home country's entrepreneurial culture and their host country's sub-national institutional environment on their entrepreneurial success. Using a comprehensive dataset constructed from multiple sources for 2012 to 2017, we show that the effect of human capital on immigrant entrepreneurship is dependent on their institutional environment. We find that entrepreneurial culture at origin is highly significant and positively associated with the likelihood of starting an incorporated business across migrants. Mandatory E-Verify reporting has a positive and significant effect on immigrants' decision to run an incorporated businesses but discourages immigrants from running unincorporated businesses. In showing persistent and lasting impact of institutional mind-maps from immigrants' home environments, we provide a more nuanced understanding on the effect of human capital than that depicted in the prior entrepreneurial research. The results of this study inform immigration policy on how to augment the contributions of immigrant entrepreneurs and enhance the positive spillovers coming from innovation and business creation.

ENT: **Understanding the effects of Venezuelan migration on the entrepreneurial activity in Colombia**

Author: **Juan Carlos Muñoz-Mora**, *U. EAFIT*
Author: **Sebastian Aparicio**, *Durham U. Business School*
Author: **Diego Martínez-Moya**, *EAFIT*
Author: **David Urbano**, *U. Autònoma De Barcelona*

Motivated by the lack of evidence about the effect of migration on entrepreneurship in a highly informal country, such as Colombia, this paper has a twofold purpose. First, it explores how Venezuelan immigration affects entrepreneurial activity in Colombian regions. And second, it intends to shed light on this relationship by distinguishing between formal and informal sectors. We employ an instrumental variable approach to account for the selection of immigrants into locations with more or less desirable conditions. Venezuelan immigration positively influences self-employment and own-account workers, but negatively affect employers. However, once these immigrants infringe the informal sector the effects increase.

ENT: **Returnee Entrepreneurs and Collaborative Innovation: The Impact of Institutional Environments**

Author: **Aqi Liu**, *Tsinghua Shenzhen International Graduate School*
Author: **Siva Ramakrishna Devarakonda**, *Tilburg U.*

This study examines the propensity of collaborative innovation between returnee entrepreneurs and local partners. We argue that while collaborative innovation with local partners may be beneficial for returnees to tap into new technological opportunities in their home market, concerns about appropriability are likely to dissuade returnees from collaborative innovation. However, the availability of different institutional safeguards that can shelter against appropriability hazards can encourage returnees to pursue collaborative innovation. Specifically, we propose that an environment with a robust IPR enforcement and high social trust are two important formal and informal institutional dimensions that can mitigate appropriability concerns for returnees and promote collaborative innovation with local partners. Empirical analyses using a sample of Chinese high-technology ventures provide broad support for our hypotheses.

ENT: **How Do Nationalism and Immigrant Entrepreneur Assimilation Impact Firms' Survival?**

Author: **Shoug AlSharhan**, *Kent State U.*

Resource dependence theory posits that firms are dependent on their environment for survival. Firms' survival becomes challenging when the environment changes and affects the supply of critical resources and firms' network of interdependencies. One proposed mechanism to manage resource dependency and increase survival probability is to loosen dependencies on other firms. We extend the literature and investigate the circumstances under which tightly coupled interfirm linkages and high dependencies reduce uncertainty and increase firms' survival. We focus on immigrant-owned firms in the context of rising nationalism and propose that nationalism impose constraints on immigrant-owned firms' transnational and international networks. Consequently, immigrant-owned firms' survival becomes highly dependent on developing a network of interdependencies with firms in the domestic market. Yet, firms' attributes on which immigrant-owned firms create their dependencies on and the extent of immigrant entrepreneur assimilation have differing effects on firms' survival.

Institutional Context 3

ENT: Trade Associations as Indigenous Institutions: Exploring Trust and Entrepreneurial Behaviour

Author: **Kingsley O. Omeihe**, *U. of Aberdeen*
Author: **Ibiyemi Omeihe**, *U. of the West of Scotland*

This paper examines the institutional logics shaping entrepreneurial behaviour. It investigates how institutional contexts affect entrepreneurial behaviour especially in challenging environments. By drawing on a rich empirical study of small and medium-sized enterprises (SMEs), the paper uncovers how indigenous institutional forms such as trade associations have evolved to replace dysfunctional formal institutions. The institutional logics perspective was useful in understanding the effects of culture on trade associations. Our interview data reveal how entrepreneurs take advantage of institutional-based trust to enforce trade agreements in the absence of formal institutional trust. The paper contributes to the field of entrepreneurship concerning SMEs and trade associations, by examining issues in relation to economic-institutional contexts that have been largely neglected

ENT: Institutional Demands in the Context of Artisan Entrepreneurship

Author: **Caren Crowley**, *Maastricht School of Management*
Author: **Maura McAdam**, *Dublin City U.*
Author: **Richard T. Harrison**, *U. of Edinburgh*

This paper explores how artisan entrepreneurs respond to conflicting institutional demands. Specifically, we focus attention on the conditions under which institutional conflict lead to the adoption of specific response behaviours. Prior research has highlighted the importance of artisan entrepreneurship in facilitating socio-economic, rural and regional development, with significant attention paid to strengthening the formal institutional environment, supporting organisations and government regulations. However, there has been limited focus on the negative consequences of conflicting institutional support and the demands they make on artisan entrepreneurs. The empirical setting for this paper is a full population analysis of the Irish artisan cheese sector. Our findings demonstrate that in the face of competing institutional demands entrepreneurs have three primary response behaviours, 'navigate', 'bridge' or 'drown'.

ENT: An Analysis of the Effects of Formal Institutions on High-Quality Entrepreneurship Across Nations

Author: **Michael Alexander Mazur**, *Westfälische Wilhelms-U. Münster*
Author: **David Bendig**, *Westfälische Wilhelms-U. Münster*

Entrepreneurs differ in the degree and type of novelty and economic contribution they introduce to a nation's economy. This paper defines the quality of early-stage entrepreneurial efforts based on motivation (opportunity-driven), customer demand (innovativeness), and supply-side technology and processes (newness of used technology). How early-stage high-quality entrepreneurial efforts are formed and exploited depends upon the institutional environment. We contribute to academia on the contextual determinants of entrepreneurship by examining Global Entrepreneurship Monitor (GEM) multi-level data on 2,115,018 individuals from 101 countries for 2003-2016. We show that formal institutions differently affect early-stage high-quality entrepreneurship activities across countries. Regulatory efficiency and trade freedom have an expected positive and statistically significant effect on early-stage high-quality entrepreneurship. On the other hand, government integrity (i.e., corruption) has an unexpected negative, and statistically significant relationship. We find that the level of economic development in a country positively moderates the relationship between government integrity and early-stage high-quality entrepreneurship. We discuss the practical implications for business leaders and policy-makers and avenues for future research in academia.

ENT: Partnering with Bridging-economy Firms and Locals: Cross-Border Venture Capital Investments

Author: **Jing Zhang**, *Old Dominion U.*
Author: **Wei Zhang**, *Tsinghua U.*
Author: **Andreas Schwab**, *Iowa State U.*

The international business literature advocates that firms entering a new foreign market partner with local firms. However, for Western firms, high environmental and partner uncertainty in emerging economies severely constrains the ability to form partnerships with local firms in the host country. Extending the multi-party collaboration literature, we suggest that Western firms form a multi-party collaboration involving local firms from the country targeted for market entry and firms from a "bridging economy"—a third country with (1) an institutional environment more closely resembling to the Western country, (2) active business collaborations with the host country, and (3) well-established firms in the industry of interest. The bridging-economy partner can play a critical role in dealing with venture-, partner-, and environment-level uncertainties. We test the hypotheses based on data on Western VC investments in China during 1997-2008 when China's VC industry was emerging. We provide evidence for the value of multi-party collaborations involving both a partner from the host country and a bridging country for the internationalization strategies of Western firms.

Internationalization 1

ENT: **Founders' Education, Social Capital, and Their Interplay in New Venture Internationalization**

Author: **R. Isil Yavuz**, *Bryant U.*

While research acknowledges the importance of founders' education and social capital on new ventures' international intensity, the interplay between the two is less understood. Drawing on the theories of human and social capital, I argue that education interacts positively with formal social capital but interacts negatively with informal social capital in affecting new ventures' international intensity. GEM data on newly founded new ventures from 61 countries support my interaction hypotheses. I discuss implications for entrepreneurship theory and practice.

ENT: **A theory of state-centered international entrepreneurship**

Author: **Wei Hua**, *Texas Tech U.*

Author: **Ronald K. Mitchell**, *Texas Tech U.*

In response to the need for increased integration of theories of international entrepreneurship with theories of institutional work, this paper explains how state-led international entrepreneurship can result in four types of institutional work relevant to international entrepreneurship, based on the presence or absence of two key variables: international cooperation opportunity, and state-level entrepreneurial orientation. The theory we advance in this paper helps to explain how and when states are expected to engage in the institutional work of creation, maintenance, disruption, or inaction. This paper contributes to research on institutional work and entrepreneurship, international entrepreneurship, international relations and state-level entrepreneurial orientation.

Paper is Available to Meeting Registrants Only.

ENT: **Scaling, Fast and Slow: Business Models and the Internationalization of Digital Firms**

Author: **Maximilian Stallkamp**, *Virginia Tech*

Author: **Andreas P.J. Schotter**, *Ivey Business School*

Since digital offerings can be delivered almost instantly throughout the world, digital ventures challenge established theories governing foreign market entry. But despite a seemingly effortless path to international markets, the degree to which new digital ventures internationalize is highly heterogeneous, suggesting that the underlying drivers of digital venture growth are more nuanced than is reflected in existing perspectives. We theorize that certain business model characteristics play a central role in explaining why some digital ventures internationalize faster than others. We analyze the pre-IPO internationalization of 169 US-based firms and find strong support for our framework linking business models to internationalization outcomes.

ENT: **From Family Embeddedness to Families Embedding in Migrants' Opportunity Development Processes**

Author: **Quang Vinh David Evansluong**, *Umeå School of Business, Economics, and Statistics*

Author: **Marcela Ramirez-Pasillas**, *Jonkoping International Business School*

This paper examines the roles of family in migrant entrepreneurs' opportunity development. We employ the opportunity development and family embeddedness for theory building purposes. We conducted a longitudinal inductive case study on four cases of migrant entrepreneurs who have established businesses in Sweden and who have their origins in Lebanon and Syria, Cameroon, and Mexico, documented with 29 interviews and field observations. The paper identifies families embedding occurring by means of three norms of reciprocity and obligations that facilitate the opportunity development process. These norms are fulfilling the expectations of family and the existing family business, regularly interacting with family and the existing family business, and deploying family and business loyalty. These norms are connected to specific sub-processes of opportunity development, namely, the generation of an entrepreneurial idea, shaping an entrepreneurial idea, and defining the (new) family venture offering. By identifying these norms in the opportunity development processes, we theorize that migrant entrepreneurs rely on different family members and the existing family business from the home or host country at different moments of the opportunity development process. Such dynamic creates different norms of reciprocity and obligations for migrant entrepreneurs and their families, which influence the opportunity development.

ENT: **Dealing with Failure – Exploring the learning modes of entrepreneurs confronted with failure**

Author: **Thomas Schardt**, *Johannes Gutenberg-U. Mainz*

Learning from failure is a critical part of being an entrepreneur. In this study, we seek to shed light on the blackbox of learning by examining entrepreneurs' learning behavior when confronted with failure events. Using a grounded theory approach, we proceed to develop a rich qualitative appreciation on the link between learning modes of entrepreneur's on the one side, and cognitive processes influencing the choice of learning mode in a particular failure situation on the other side. Our results demonstrate three different learning modes – (1) on the fly, (2) analytical, and (3) network-learning. Moreover, we offer a more dynamic perspective by showing which cognitive processes (e.g., attribution, perceived consequences of a failure) influence how entrepreneurs likely choose between different learning modes depending on each failure experience.

ENT: **Learning by interactions with outside directors in family business boards: a dynamic perspective**

Author: **Céline Barredy**, *CEROS - U. of Paris Nanterre*
Author: **Maria Jose Parada**, *ESADE/JIBS*
Author: **Paula Maria Infantes Sanchez**, *ESADE Business School*
Author: **Julien Batac**, *U. of Bordeaux*

This article focuses on the dynamics and interactions of outside directors with family members within the board of directors. Based on a longitudinal single case study drawn from a French family business, we qualitatively explore and extend the role of outside directors as catalysts for learning. We highlight that the emergence of shared beliefs and shared new practices on the board without threatening the family's place in the organization follows a three-phase learning process; 1) Difference between professional and cognitive learning, the informative phase; 2) Cognitive learning actions, outside directors become less informative and more transformative. Outside directors share more than they do train; 3) From cognitive learning to behavioral learning. Outside directors train family members for family relation management in the firm.

ENT: **Exploring Behavioral Outcomes of Compulsory Entrepreneurship Education: Quasi-Experimental Evidence**

Author: **Katrin Marika Smolka**, *Warwick Business School*
Author: **Thijs Geradts**, *Maastricht U., School of Business & Economics*
Author: **Andreas Rauch**, *U. of Sydney Business School*
Author: **Peter Van Der Zwan**, *Leiden U., The Netherlands*

Governments increasingly invest in compulsory entrepreneurship education to stimulate entrepreneurial behavior as a precursor to innovation and economic growth, yet conclusive evidence on its effectiveness is still missing. To inform policy, the aim of this study is to evaluate the behavioral outcomes of compulsory entrepreneurship education. We conduct a field quasi-experiment by following two groups of university business students over time with an almost identical curriculum, except for an entrepreneurship course. Our results reveal that the effects of compulsory entrepreneurship education are more nuanced than previously assumed. We find that compulsory entrepreneurship education significantly increases early nascent entrepreneurial behavior of students immediately and eight months after the entrepreneurship course. Although commonly perceived, we find this relationship is not mediated by entrepreneurial intentions. We also find that entrepreneurial self-efficacy does not mediate the education-intentions relationship. Additionally, our results suggest that adding practice-focused elements to theory-driven entrepreneurship education yields a stronger positive effect on entrepreneurial behavior than theory-driven education alone. The findings contribute to research on entrepreneurship education and policy, and have wider implications for theories on entrepreneurial intentions and entrepreneurial self-efficacy in relation to entrepreneurship education.

Entrepreneurial Mindset

ENT: Where Ecosystem Mindsets Come From: How Tech Entrepreneurs Envision Their Target Markets

Author: **Stephan Davys Manning**, *U. of Sussex*

Business ecosystems – systems of value creation that transcend conventional industry boundaries – are becoming increasingly important contexts of tech entrepreneurship. Yet, we lack an understanding of how tech entrepreneurs develop an understanding of nascent ecosystems for new products. Based on a multi-case study of Boston-based tech entrepreneurs, this study finds that entrepreneurs build an ecosystem mindset incrementally by shifting from targeting alternative primary clients, based on an industry mindset, to envisioning inter-connected clients across industries exploiting complementarities between multiple product uses. Findings contribute to micro-foundations of ecosystem strategizing and a better understanding of opportunity generation and entrepreneurial learning.

ENT: An Entrepreneurial Mindset in an Organizational Context: A General Model of Entrepreneurial Spikes

Author: **Dagmar Hattenberg**, *Groningen U. (RuG)*

Author: **Olga Belousova**, *Groningen U. (RuG)*

Author: **Aard J. Groen**, *U. of Groningen center of entrepreneurship*

The purpose of this paper is to integrate the seemingly disparate entrepreneurship and mindset literatures and extant work to conceptualize the entrepreneurial mindset and its embeddedness in an organizational context. Furthermore, we theorize about the entrepreneurial mindset as expressed through entrepreneurial spikes. We develop the entrepreneurial mindset concept as an ability and willingness combined phenomenon driving individuals, specifically in a corporate environment, in their entrepreneurial behavior, moving research forward from ‘what it is’ into understanding ‘how and when it works’. We detail the implications and insights and propose a future research agenda, focusing on the context beyond the content of the entrepreneurial mindset.

ENT: The Mindset Matters: Psychological Capital and Strategic Responses During Crisis

Author: **Ann-Christin Groezinger**, *U. of Siegen*

Author: **Sven Wolff**, *U. of Siegen*

Author: **Philipp Julian Ruf**, *U. of Siegen*

Author: **Petra M. Moog**, *U. of Siegen*

The goal of this study is to investigate how the Psychological Capital of owner-managers influences their strategic responses, ultimately impacting the performance of a company during the COVID-19 pandemic. Grounded on established psychology, upper echelons theory and crisis literature, we find evidence in our sample of 381 owner-managed companies that higher Psychological Capital leads to a preferred adaptation of offensive strategic responses, which in turn positively influences the performance of a company during crisis. We contribute to the entrepreneurship literature and upper echelons theory by introducing Psychological Capital to the debate and thus shed light on which measures can be used to increase or sustain the performance of owner-managed companies throughout crisis.

ENT: Back Into Entrepreneurship: Entrepreneurial Mindset of Experienced Entrepreneurs

Author: **Etienne St-Jean**, *UQTR*

Author: **Maripier Tremblay**, *U. Laval*

Author: **Rahma Chouchane**, *U. du Québec à Trois-Rivières*

This research focuses on entrepreneurial intention after a first entrepreneurial experience. Depending on the perception of success or failure, this work highlights the role of optimism and grit in the process of returning to entrepreneurship in complementarity with attitude, subjective norms, and entrepreneurial self-efficacy from the Theory of Planned Behavior (TPB). The sample consists of 48 previous entrepreneurs, not in the process of returning, nor entrepreneurs at that moment. Fuzzy-set Qualitative Comparative Analysis (fsQCA) configurational approach was utilized. Our results show the different configurations that can lead to entrepreneurial intention after being an entrepreneur. When there is failure perception from this previous experience, entrepreneurial attitude and self-efficacy are essentials and either optimism or subjective norms are required. On the opposite, even with grit and self-efficacy, the perception of failure will hinder entrepreneurial intention when there is no optimism, nor subjective norms and attitudes. When there is no perception of failure, grit, and optimism are almost required to complement other missing components of TPB. Our results demonstrate that optimism is a central part of an entrepreneurial mindset in explaining entrepreneurial career persistence, while grit is important but more peripheral. We also demonstrate the importance of configurational approaches to understanding entrepreneurial intention and behavior.

ENT: **Protect thyself! How venture CEOs fight off dismissal by their boards**   

Author: **Theodore Waldron**, *Texas Tech U.*
Author: **Jeffery McMullen**, *Indiana U. - Kelley School of Business*
Author: **Lori Leigh Tribble**, *Clemson U.*
Author: **Oleg V. Petrenko**, *U. of Arkansas*
Author: **Olivia Aronson**, *U. of Richmond*

We examine how venture CEOs might protect themselves from dismissal by their boards. Using a qualitative single-case study approach and rare longitudinal data capturing a CEO's perspectives and behaviors, we track how the founder and CEO of a renowned craft distillery insulated himself from dismissal by his distillery's board throughout their relationship. Our primary theoretical contributions are to the resource dependence perspective on venture governance, placing another stone on the path of emergent conversations about the behavior and influence of power-disadvantaged CEOs relative to their boards. First, we enrich understanding of the implications of power-resource exchanges between venture CEOs and boards after these exchanges have occurred. Second, we enrich understanding of the balance of power between venture CEOs and boards in their post-exchange relationships. Third, we extend understanding of the behaviors available to venture CEOs as they navigate power disadvantages relative to boards to stave off dismissal. Implications for other key corporate governance perspectives (agency theory), along with the boundaries of our findings, also receive attention.

ENT: **Contingency fit between open innovation and product market strategy: Evidence from Japanese firms**

Author: **Naohiro Sawada**, *Aoyama Gakuin U.*

This research shows the contingency fit between open innovation and product market strategy. Prior research studies these two managerial concepts separately. This study combines these research streams and shows the contingency fit between them. To investigate open innovation in detail, this study analyzes open innovation from two aspects: external search breadth and depth. This study investigates the effects of these concepts on three research and development (R&D) outcomes: innovation performance, new product development (NPD) speed, and firm performance. This study uses questionnaires and archival data from Japanese firms. The results show that cost leadership strategy has a positive effect on firm profitability. Differentiation strategy has a positive effect on all three R&D outcomes. External search breadth barely has a positive effect on any of the R&D outcomes. External search depth has a positive effect on firm performance. When firms implement a cost leadership strategy, external search breadth has a positive and significant effect on both innovation performance and NPD speed. Under the same conditions, external search depth negatively correlates with innovation performance and firm performance. These results show that narrow and deep collaboration enhances R&D outcomes. Last, neither external search breadth nor depth has a significant effect on any of the R&D outcomes when firms implement a differentiation strategy. This study shows that open innovation by firms improves their R&D outcomes especially when firms select a cost leadership strategy. This research complements two prior research streams and indicates the possibilities and limitations of open innovation

ENT: **Engage the vulnerable in the institutional change: a novel perspective from missionaries in Africa** 

Author: **Andrea Sottini**, *U.Cattolica del Sacro Cuore*
Author: **Benedetto Lorenzo Cannatelli**, *U. Cattolica del Sacro Cuore*
Author: **Alessandro Giudici**, *Cass Business School, City U. London*

Research on tackling social exclusion has highlighted the role of institutional intermediaries as prominent actors able to rebalance power of resource and market access. However, scholars have taken-for-granted that excluded people accept interventions aimed to tackle their societal exclusion. Our study addresses this limitation by examining the under-theorized religious intermediaries to model a process through which engaging resigned marginalized people in a platform of inclusive relationships. Our analysis was informed by the intersection between neo-institutionalism and relational sociology. By doing so, we offer novel and rare empirical substantiation and theoretical elaboration on the micro-foundations and processes of institutionalism

ENT: **Ideas of Entrepreneurial Activity Embodied in Depictions of New Venture Unit Spaces**

Author: **Eve-Michelle Basu**, *Uppsala U.*

New venture units (NVUs) are once again attracting interest among corporations across industry and geographic boundaries as a means to organize for entrepreneurship. In descriptions of their innovation 'garages' or 'labs', as well as what they are and do, firms typically present these NVUs as a vital infrastructure or breeding ground for entrepreneurial activity. The notion entrepreneurial activity, here, appears to refer to a set of activities that are recurring and considered to be meaningful in the context of NVUs. What firms believe to constitute entrepreneurial activity, however, typically remains unarticulated and taken for granted. In light of our scholarly understanding of entrepreneurial activity as an umbrella term describing a multi-stage problem-solving process encompassing a set of interrelated yet distinct tasks and behaviors, this is rather surprising. To explore the corporate understanding of 'entrepreneurial activity' in the context of NVUs, in this study, we turn to the spatial design of these units as a window onto the processes, activities and relationships corporations believe to be associated with them

Passion 1

ENT: Social Networks and Entrepreneurial Passion: Selection or Contagion?

Author: **Kai Becker**, *Amsterdam Business School, U. of Amsterdam*
Author: **Joris Ebbers**, *Amsterdam Business School, U. of Amsterdam*
Author: **Yuval Engel**, *U. of Amsterdam*

Entrepreneurial passion is contagious such that social interaction leads to passion convergence. However, do entrepreneurs also select whom they interact with based on passion similarity? The complex interdependencies between social networks and passion remain undertheorized and empirically puzzling. Using a stochastic actor-oriented model (SIENA) and four waves of panel data, we test hypotheses about the co-evolution of social networks and entrepreneurial passion during a 5-months university-based acceleration program. We find that entrepreneurs select social network ties based on similar levels of passion for founding and inventing but that only passion for founding is socially contagious. We discuss theoretical, empirical, and practical implications.

ENT: Harmonious passion, bricolage, and firm performance: The role of entrepreneurial autonomy

Author: **Younggeun Lee**, *Cal State, Los Angeles*
Author: **Pol Herrmann**, *Iowa State U.*

Drawing from the theory of entrepreneurial bricolage and the resource-based view, we study the indirect influence of harmonious passion on firm performance through bricolage, i.e., achieving specific goals with existing resources. We propose that in small and medium-sized enterprises (SMEs), CEOs with high harmonious passion establish bricolage through deliberate practice, creative solutions, and awareness of organizational capacity. Moreover, firms with high levels of bricolage enhance firm performance through creatively recombining accessible resources, acting on without biases to overcome the liability of smallness, and maximizing the firm's potential by use of all possible methods. Entrepreneurial autonomy positively strengthens this mediation model by providing independent decision-making and promoting organizational creativity. We test the proposed model using a six-month lagged survey data collected from 237 CEOs of Korean SMEs.

Paper is NOT Available. Please contact the author(s).

ENT: Entrepreneurial passion and organizational innovation

Author: **Younggeun Lee**, *Cal State, Los Angeles*
Author: **Brandon Mueller**, *Iowa State U.*
Author: **Pol Herrmann**, *Iowa State U.*

Building on identity theory, we investigate the impact of developing and inventing passion on organizational innovation and performance. Passionate entrepreneurs are motivated to behave according to their identities. Specifically, considering passion as a domain-specific concept, entrepreneurs who are passionate about developing (or inventing) would behave according to their identities. Accordingly, we argue that entrepreneurial passion for developing leads to exploitative innovation and eventually enhances firm performance. Moreover, entrepreneurial passion for inventing promotes exploratory innovation and increases firm performance. To test the proposed hypotheses, we apply a two-round survey data collected from 150 entrepreneurs of Korean venture firms.

ENT: Getting It Done or Doing It Right: Antecedents and Outcomes of Entrepreneurial Passion

Author: **Carlos David Valladares**, *Iowa State U.*
Author: **Brandon Mueller**, *Iowa State U.*

The study of entrepreneurial passion has helped to extend understanding of why certain entrepreneurs are better able to cope with extremely challenging situations in ensuring the creation, survival, and growth of their new ventures. Previous work has focused on how passion for inventing, founding, and developing influence entrepreneurs' performance on a wide array of individual and venture outcomes. However, less progress has been made in developing a better understanding of the individual characteristics that influence and give rise to particular forms of passion. In this study, we explore how two of the functional dimensions of self-regulatory mode - locomotion and assessment - can direct individuals toward specific types of entrepreneurial passion. We argue that an individual's regulatory mode orientation towards assessment, locomotion, or both, precede and direct the development of a particular type of entrepreneurial passion. Further, we specify and test a holistic model where each type of entrepreneurial passion (inventor, founder, and developer passion) influences entrepreneurial effectiveness on distinct aspects of the entrepreneurial process (e.g., opportunity recognition, venture creation, and venture growth). Finally, we hypothesize that each type of entrepreneurial passion mediates the influence of locomotion and/or assessment on these different new venture outcomes.

ENT: The Perception of a Founder's Obsessive Passion and Co-founders' Decision to Join the Venture Team

Author: **Yingzhu Fu**, *Nanyang Technological U.*
Author: **Matthias Alfred Tietz**, *U. of St. Gallen Institute of Management in Asia*
Author: **Frederic Delmar**, *EMLYON Business School*

We investigate how perceived obsessive passions (OPs) influence potential co-founders' decision to join a venture team. Using a conjoint experiment with two samples: 116 founder entrepreneurs and 177 master business school students (supplementary sample), we find that potential co-founders are more likely to join when they perceive that the founder has OP for inventing and developing. Potential co-founders are less likely to join when they perceived OP for founding. Further, we also find significant interactions between perceived OPs, and interactions between perceived OP and potential co-founders' own OP. These findings provide important theoretical implications.

Passion 2 

 ENT: **Is Artificial Intelligence the New Frontier for Research on Passion? On Inferring Passion from Text** 

Author: **Amanda Jasmine Williamson**, *Waikato Management School*
Author: **Martina Battisti**, *Grenoble Ecole de Management*
Author: **Jeffrey M. Pollack**, *NC State U.*

As the study of passion continues to grow in both relevance and interest, passion scholarship confronts new and sizeable challenges for (a) engaging in context-specific, theoretically-driven, inquiry into passion, and (b) identifying methods to collect sufficiently rich, longitudinal, data that can be paired with replicable, rigorous, data analytic approaches. In this paper, we aim to address these issues that hinder the advancement of the passion literature. We use Artificial Intelligence (AI) to infer entrepreneurial passion from multi-wave qualitative text data. By applying AI approaches (sentiment analysis and machine learning) to text data, we capture how different aspects of entrepreneurial passion change over time, and provide new insights into the changeable nature of passion in the specific context of social entrepreneurship. We hope that our work affords an ample foundation for future research—in passion and using AI—that are both theory-focused and practically useful.

Paper is Available to Meeting Registrants Only.

ENT: **Blinded by passion: how entrepreneurial passion biases towards extreme risk-taking** 

Author: **Marie Cecile Wilm**, *Chair of Innovation Management, TU Dortmund U.*
Author: **Bastian Kindermann**, *Chair for Technology & Management, TU Dortmund U.*

Entrepreneurial emotions often predict entrepreneurial behavior, thereby determining how a venture is lead. The resulting behavior can influence a myriad of stakeholders. Hence, scholars have highlighted the importance of researching consequences of entrepreneurial passion. Drawing on identity theory, we develop a research model investigating the relationship between harmonious and obsessive entrepreneurial passion and extreme risk propensity, moderated by illusion of control. We investigate the relationship between passion and extreme risk propensity because risk is strongly attributed to entrepreneurship yet can be harmful. In addition, we incorporate illusion in the model, a cognitive bias explaining how entrepreneurs make decisions in risky environments. To examine our research questions, we rely on a sample of 446 entrepreneurs. We find both harmonious and obsessive entrepreneurial passion positively relate to extreme risk propensity. The interaction effect with illusion of control is negative significant for harmonious entrepreneurial passion and positive for the obsessive manifestation. We contribute to research by advancing theory on outcomes of harmonious and obsessive entrepreneurial passion. We also provide evidence to identity theory showing that identities with lower salience are not necessarily reflected in behavior.

 ENT: **From fragmentation to integration: Time- and emotion-related dynamics in CEO-top manager interaction**

Author: **Ganqi Tang**, *U. of Fribourg*

Behavioral integration of top management teams (TMTs)—i.e., CEO and other top managers (TMs)—represents a key enabler of firms' strategic success in dynamic environments. Behavioral integration denotes quality information exchange, collaboration, and joint decision making among top executives, while it differs from counterproductive groupthink. Yet, it is unclear how TMT behavioral integration comes about. The current study adopts a multiple-case approach to investigate how behavioral integration emerged from CEO-TM interaction in three entrepreneurial firms. Results reveal that time and emotions interact in two ways to shape TMT integration. Specifically, temporal emoting describes a dynamic in which temporal gaps (e.g., unmatched pace and temporal focus) between founder CEOs and their executives lead to executives' emotional frictions (e.g., frustration). It is a dynamic in which time-related differences induce emotional conflicts. Emotive syncing describes a dynamic in which emotional resemblance between executives (e.g., pride and hope) and their founder CEO leads to the similarity in temporal structures (e.g., matched pace and togetherness) between the two. It refers to a dynamic in which emotion similarity drives time-related assimilation. Further, TMTs with more executives experiencing temporal emoting are more likely subject to fragmentation—i.e., the opposite of integration. Nonetheless, executives experiencing emotive temporizing take initiatives to integrate their TMT—and thus foster TMT integration, tackling issues concerning the dynamics of time and emotions in founder CEO-TM interaction. Lastly, results unveil that founder CEOs' entrepreneurial passion invokes temporal emoting pervasively among top executives, whereas it enacts emotive temporizing among executives with high entrepreneurial motivation. The current study primarily contributes to upper echelons theory and the literature on CEO-TMT interface by adopting a processual perspective, leveraging the lens of time and emotions, and incorporating the concept of entrepreneurial passion. The study also contributes to the relevant literature on entrepreneurial passion by identifying its divergent effects in team processes.

ENT: **Obsessively passionate entrepreneurs and firm performance: The role of identity fusion and overwork** 

Author: **Youngeun Lee**, *Cal State, Los Angeles*
Author: **Minjoo Joo**, *Iowa State U.*
Author: **Pol Herrmann**, *Iowa State U.*

We examine the relationships between obsessive passion, identity fusion, and firm performance. Based on the theory of identity fusion, the affect infusion model, and the literature on the dualistic model of passion, we argue that obsessive passion is positively associated with firm performance through identity fusion. Specifically, we theorize that obsessively passionate entrepreneurs fuse strongly with their organizations because of positive affect and ego protective behaviors, eventually increasing firm performance through high levels of loyalty and responsibility toward their organizations. We also examine overwork as a moderator between identity fusion and firm performance and assert that extreme time investment in work intensifies the level of identity fusion toward firm performance by increasing the exposure to organizational colleagues. Based on a two-stage survey data collected from 196 Korean firms, we find that the indirect impact of entrepreneurs' obsessive passion on firm performance through identity fusion is only significant when entrepreneurs overwork.

Performance

ENT: **A balanced strategy performs better than a pure strategy**

Author: **In Hyeock Ian Lee**, *Loyola U. Chicago*

Empirical scholarly work often focuses on either marketing or R&D activities in isolation to examine their effects on firm performance. Built on the concept of a balanced strategy and the resource management and orchestration theory, this study investigates the simultaneous pursuit of marketing and R&D activities of new, resource-constrained firms and the superiority of their performance in the market. The basic position of this study is that balancing resource allocation and deployment in both marketing and R&D contributes to new firms' competitive advantage and thus to their overall performance when resource constraints are considered. We first construct a parsimonious formal model to guide the development of a set of hypotheses, and then test them on a sample of 4,928 U.S. new ventures from the Kauffman Firm Survey (KFS) database. The empirical findings provide strong support for the notion that a balanced strategy of resource allocation between marketing and R&D activities helps new, resource-constrained firms achieve superior sales revenues in the market in the form of inverted U-shaped curves between the two constructs.

ENT: **To Interlock or Not To Interlock? The Effect of Board Interlocks on New Venture Growth**

Author: **Tatevik Harutyunyan**, *NHH Norwegian School of Economics*

Research addresses different aspects of the role of boards in new ventures (Li, Terjesen, & Umans, 2018). However, instances when firms are linked by the directors that serve on their boards – board interlocks – are understudied in the entrepreneurial setting (Lamb & Roundy, 2016). Moreover, findings on one of the most researched relationships in the board interlock literature – the relationship between board interlocks and firm performance - are inconsistent (Lamb & Roundy, 2016). Therefore, the paper investigates the extent to which board interlocks affect new venture growth. The paper takes a closer look at the presence and number of board interlocks to identify whether board interlocks matter for venture growth. To investigate the relationships, I employ Norwegian registry data – a longitudinal dataset of all Norwegian residents and firms. With this dataset, the identification of board directors, new ventures and estimation of a wide array of different variables becomes possible. The richness in this register data also enables a number of empirical techniques and models used to make causal claims. Findings show interlocking ventures significantly outperform non-interlocking ones in terms of equity, asset and sales growth. After estimating 2SLS, the results demonstrate more interlocks have a positive and significant relationship with equity growth.

ENT: **Entrepreneurial teams and early performance of new ventures: An analysis of Taiwanese tech-firms**

Author: **Christie Jo Hsien Hsieh**, *Ph.D Student*

Author: **Bou-Wen Lin**, *National Tsing Hua U.*

Author: **Shih-Chang Hung**, *National Tsing Hua U.*

In this paper, we investigate the effects of the relation between the human capital of the entrepreneurial team, R&D-manufacturing linkage and the performance of new technology-based firms in accordance with a resource-based view. We try to comprehend how entrepreneurial teams and R&D-manufacturing linkage shape firm's ability to have a positive outcomes in terms of company sales revenue and international connection. We take advantage of a new data relating to a sample composed of 152 Taiwanese young firms that operate in technology-based industries. We find that firms with higher proportionally advanced professional education entrepreneurs in the team have a positive effect on firms' performance. Furthermore, it is R&D-manufacturing linkage that determines technology-based firm's growth. Individuals with entrepreneurial experiences exerts key influences on firms' international connection. Firms can also benefit from their team members' background affiliation and achieve better performance. Lastly, we provide evidence that there are gains from the complementary capabilities of entrepreneurial teams and firms relating to (i) advanced professional education, (ii) entrepreneurial or CEO experiences and team members' background affiliation and (iii) R&D-manufacturing linkage. We conclude that the human capital of entrepreneurial team and R&D-manufacturing linkage of new technology-based firms have a critical impact on the firm's development. These findings are consistent with and complements the growing body of research that emphasizes the importance of entrepreneurial teams in developing knowledge about the strategies and allocation of the enterprises resources.

ENT: **Failing Fast and Asymmetric Performance Outcomes for Venture Capital Investors and Entrepreneurs**

Author: **Demetrius Lewis**, *Emory U., Goizueta Bus Sch*

Author: **Anand Swaminathan**, *Emory U.*

When entering exchange relationships, actors decide between vetting and developing working routines with new partners versus choosing imperfect, but familiar partners. Actors engage with those that are more familiar, for example, along ethnicity, gender, or embeddedness within a social network, in order to achieve improved coordination and reduced monitoring costs, which can result in better performance of their exchanges. For venture capitalists, decisions based on familiarity criteria manage downside risk, which leads to improved survival. This leads to more successful investments over a long time horizon but reflects worse financial outcomes for any particular venture. As a result of persistent relationships with investors, entrepreneurs may learn how to "fail fast," but not how to learn from failure.

Affect Regulation, Firm Names, Institutions, and Transitions to Self-employment during COVID

 **ENT: Sizing destructive entrepreneurship: The role of institutions in the regional economic growth process** 

Author: **Sebastian Aparicio**, *Durham U. Business School*
Author: **Juan Carlos Muñoz-Mora**, *U. EAFIT*
Author: **Diego Martínez-Moya**, *EAFIT*
Author: **David Urbano**, *U. Autònoma De Barcelona*

Despite the importance of (productive) entrepreneurship for economic growth, there is little attention about the existence of destructive entrepreneurial activity and its influence on growth. Thus, we explore how the relationship between destructive entrepreneurship and economic outcomes is conditioned by existing formal and informal institutions. Institutional economics frames such interplays, which are assessed through 3SLS, using a sample of 1122 municipalities in Colombia. Our findings reveal that the negative effect of coca crops (as destructive entrepreneurship) on regional economic growth is mitigated thanks to institutional reinforcement and integral performance index (as formal), as well as land conflict and religious communities (as informal institutions). Theoretical and policy implications can be derived from these results.

ENT: How Do Firms Choose Their Names: Insights from Biotechnology 

Author: **Irina Stoyneva**, *Thomas Jefferson U.*
Author: **Veselina Vracheva**, *Chapman U.*

In this paper, we explore patterns of name choices of entrepreneurial firms in the field of biotechnology. Drawing on the legitimacy argument and institutional entrepreneurship theory, we hypothesize that in the early years of the industry, entrepreneurs choose the names of their start-ups with greater focus on their unique sound. In these early years, we find that more start-ups select names that are longer, begin with rare sounds or plosives, and have stronger links to the biotechnology industry. We further argue that in the later years of the industry evolution, entrepreneurs are more likely to select names that are more generic. We find that in the later years of the industry, the start-ups select names that are shorter and with cues from technology and discipline. Our findings hold across 281 entrepreneurial firms in the field of biotechnology.

Paper is NOT Available. Please contact the author(s).

ENT: Don't Calm Down! Collective affect regulation in startups

Author: **Marius Jones**, *NHH Norwegian School of Economics*
Author: **Elisabeth Norman**, *U. of Bergen*
Author: **Therese Egeland Sverdrup**, *NHH Norwegian School of Economics*
Author: **Vidar Schei**, *NHH Norwegian School of Economics*

Prior research has demonstrated how affect (mood and emotions) often emerge and influence outcomes in startups. While prior research has explored how startup CEOs regulate affect, we know less about how startup team members collectively regulate mood and emotions. Through a 22 month-long multiple case study, we explore how five startup teams regulate affect. We reveal a pattern of affect regulation that allowed some startups to develop organisational learning and manage team member's negative mood and emotions. In these startups, negative affect was expressed openly, met with curiosity and understanding, and managed through problem-focused coping. Through a theoretical framework on how collective affect regulation allow startups to learn and develop, we contribute to literatures on affect regulation in entrepreneurship, affect regulation more broadly, and organisational learning in startups.

ENT: Entrepreneurial career outcomes of women who switch to self-employment during the crises

Author: **Retno Ardianti**, *Petra Christian U., Indonesia*
Author: **Adwin Atmadja**, *Petra Christian U., Indonesia*

This paper aims to reveal the implication of transitions from paid to self-employment during the period of economic crises, and whether such a transition may widen the gender gap in career outcomes. We use insights from the career perspective in entrepreneurship to study career outcomes in three steps. First, we study the survival rate and the career patterns of individuals who switch to self-employment in the post-crisis period. Second, we examine income, job satisfaction, and life satisfaction, as the subjective and objective measure of career success of individuals who survive in self-employment. Lastly, we look at the possible differences in entrepreneurial career outcomes between male and female self-employed in our samples. We use descriptive statistics and entropy balancing to examine the changes in career outcomes of individuals who switch to self-employment during the 1998 Asian financial crisis in Indonesia and the 2008 global financial crisis in the United Kingdom. Our findings demonstrate that in both countries, the survival rate is less than 50% for over 5 years following the transitions, with the risk of experiencing downward job mobility for those who do not survive in self-employment. In addition, our study reveals that transitions to self-employment give no gains to the individuals; as the career outcomes of those who switch to self-employment are relatively similar or even not any better than similar individuals who remain in paid employment. Lastly, we found a smaller proportion of females survive in self-employment in the long term, as those who switch to and survive in self-employment in both countries are dominated by males.

Resilience 1

ENT: **Building Entrepreneurial Resilience Through Adversity**

Author: **Lauren Atkinson Zettel**, *U. of Louisville*
Author: **Robert P. Garrett**, *U. of Louisville*

Although significant adversity can have detrimental effects on entrepreneurs' venturing efforts, recent research also points to a potential benefit of facing challenges. It is possible that through weathering adversity, entrepreneurs build their resilience and ability to respond and adapt to future difficulties. Nonetheless, it is still unclear how and under what circumstances this growth occurs. The existing literature offers several suggestions, and also debates, over the types of adversity that build resilience, as well as the mechanisms that account for the relationship between adversity and resilience. However, these ideas have yet to be thoroughly explored and grounded in theory, particularly in the domain of entrepreneurship. We suggest that viewing entrepreneurial resilience through the lens of entrepreneurial learning offers a systematic explanation for the ability of adversity to build entrepreneurial resilience. We draw on the psychological resilience, entrepreneurial resilience, and entrepreneurial learning literatures to develop a theoretical model of the development of entrepreneurial resilience through weathering adversity. This model has the potential to not only provide a framework for studying entrepreneurial resilience, but also to inform future programs designed to cultivate resilience in entrepreneurs.

ENT: **Towards a Dynamic Model of Entrepreneurial Fatigue**

Author: **Aishwarya Kakatkar**, *TUM School of Management, Technical U. of Munich*
Author: **Holger Patzelt**, *TUM School of Management, Technische U. München*
Author: **Nicola Breugst**, *TUM School of Management, Technical U. of Munich*

Feeling energy in connection with the venture is arguably a core aspect of what it means for founders to be psychologically well, and recent research in entrepreneurship has highlighted the need for better understanding the well-being of founders. While founders might initially feel a high level of energy for their venture, over time some founders develop a condition we term entrepreneurial fatigue – a persistent and extreme exhaustion that arises when working on the venture. Drawing on rich, longitudinal data from 38 founders nested within 14 early-stage ventures, we develop a dynamic model of entrepreneurial fatigue consisting of three phases: eudaimonic, destructive, and diverting. Founders in the eudaimonic phase do not experience entrepreneurial fatigue, as they balance out the energy consumed in tackling entrepreneurial challenges with energy recharged through periodically detaching from the venture. However, in the destructive phase, tackling entrepreneurial challenges triggers disillusionment and identity conflict, two ways through which the founder may develop entrepreneurial fatigue. Finally, in the diverting phase, the founder is unable to recover from entrepreneurial fatigue and may redirect energy into other endeavors, potentially exiting from the venture entirely. Our study has implications for research on entrepreneurial well-being, adversity, and founder exits.

ENT: **Role of creativity and resilience in contemporary and entrepreneurial knowledge work**

Author: **Anna-maija Nisula**, *Associate Professor*
Author: **Heidi Olander**, *Associate Professor*
Author: **Ilona Toth**, *LUT U.*

In the contemporary economy, knowledge work is entrepreneurial whether it takes place in organizations or in any form of entrepreneurship. In this paper, we investigated individual creativity in contemporary knowledge work among organisational and platform knowledge workers. Specifically, we investigated what role creativity and resilience play in knowledge work and how creativity and resilience are related. We conducted a mixed-method study, collecting qualitative data (N=15) from platform knowledge workers to build understanding regarding the nature of contemporary knowledge work. Based on the findings of the qualitative study, we created a research model in which we linked creativity and resilience and tested the proposed model with the data collected from 419 organisational knowledge workers. We found that knowledge worker creativity and resilience are bidirectionally linked in the context of organizational knowledge work. We discuss the implications of our study for research on knowledge work and creativity in knowledge work as well as for practitioners in the field of contemporary knowledge work.

ENT: **Entrepreneurial Resilience During a Crisis: Systematic Review and Integrative Framework**

Author: **Xueqi Yuan**, *Imperial College Business School*
Author: **Erkko Autio**, *Imperial College Business School*

The Covid-19 pandemic presents an urgent challenge and opportunity for entrepreneurial resilience research. A sub-set of broader research on general organisational resilience, extant research on entrepreneurial resilience remains limited, fragmented, and under-conceptualised. To address this gap, we conduct a systematic review of resilience and crisis research in entrepreneurship. Based on a review of 146 articles published in business and management journals, we propose an integrative framework that distinguishes between five dimensions of entrepreneurial resilience: agent, context, temporal orientation, enabler and outcome. We highlight key findings and salient features of received research along each dimension. Our findings contribute to entrepreneurial resilience literature by presenting a coherent research platform that integrates extant literature and supports future research. Building on the review, we consolidate the definition of entrepreneurial resilience as opportunity-seeking, opportunity pursuing and opportunity consolidating behaviour prior to, during, and after an external shock and introduce a distinction between static and dynamic resilience. The paper offers implications to support entrepreneurial adjustment and post-Covid recovery and informs timely policy responses.

Resource  

 ENT: **How new ventures from resource-scarce contexts form ties with foreign resource holders**  

Author: **Lina Reypens**, TUM School of Management, Technische U. München
Author: **Hana Milanov**, TUM School of Management, Technical U. of Munich

When domestic resources do not suffice to satisfy their needs, entrepreneurial ventures in resource-scarce contexts are impelled to liaise with foreign resource holders. Extant literature suggest the use of domestic networks for foreign tie formation and otherwise provides few options for less well endowed ventures in these conditions. New ventures' domestic partners can forge links to foreign targets through introductions, referrals, endorsements, or signals of visible affiliation. We conducted a multiple-case study to examine international tie formation behaviors of 10 medical technology ventures operating in the resource-scarce context of Uganda. Our data reveals that ventures relying less on domestic networks and deploying a strategic approach with proactive tie formation behaviors tend to acquire more resources. In contrast, ventures relying more on domestic networks and deploying an opportunistic approach tend to acquire fewer resources. The theory we develop contributes to the integration of international entrepreneurship with network research and guides entrepreneurs in resource-scarce contexts in mobilizing resources on the international stage.

 ENT: **Deciding to Be Different: A Protocol Analysis of Entrepreneurs Positioning Their Ventures** 

Author: **Devin Burnell**, Indiana U. - Kelley School of Business

Entrepreneurs seek to reconcile the competing tensions of conformity to established institutions and competitive advantage from differentiation by choosing to become optimally distinct. This research, however, has yet to explain how entrepreneurs begin to think about the strategic position of their ventures. Understanding these cognitive processes is important given that resources and performance benefits result from strategic balance. This research aims to reveal internal cognitive processes that successful entrepreneurs use when thinking through positioning their ventures to be optimally distinct. Preliminary findings from verbal protocol analysis suggests (a) entrepreneurs will tend to use sensemaking, analogical reasoning, and perspective-taking when thinking about positioning their ventures; (b) experts and novices differ in how they think about strategic positioning; (c) experts and novices differ in their attention to factors that determine market uncertainty and (d) copying the prototype or exemplar may depend on how many strategic dimensions entrepreneurs decide to differentiate.

ENT: **The Relationship between Resource Allocation, Knowledge Transfer and Innovation Performance** 

Author: **Chueh Chu Ou**, -
Author: **Ku-Ho Lin**, -
Author: **Wei-kuo Tseng**, National Chung Hsing U.
Author: **Yi-Ru Lai**, Chung Hsing U.

In the face of a turbulent and rapidly changing business environment, enterprises must respond to customers and market demands in real time. Start-ups, featuring high flexibility and innovative energy, are rising in this rapidly competitive market. Although they have a certain knowledge base in their own professional fields, they need the help of external network partners to obtain key resources. Furthermore, in the process of acquiring key resources, the absorptive capacity of start-ups will affect the quality of acquiring resources and further affect their innovation performance, which was the main topic in this study. Based on resource-based theory and network theory, this study explored the relationship between the internal and external resources (network resources and knowledge bases), knowledge sharing and innovation performance of start-ups, and probed into the possible moderating effect of the absorptive capacity of start-ups. Questionnaires were mainly distributed to the Angel and Start-up Resources Platform databases as the main subjects, and 154 questionnaires were effectively collected. This study found that there is a positive relationship between network resources, internal organizational knowledge and knowledge sharing behavior. Absorptive capacity plays a key role in knowledge transformation between acquiring external network resources, internal knowledge bases and knowledge sharing behavior.

ENT: **When money isn't everything—Exploring different patterns of entrepreneur resource acquisition**

Author: **Esther Leibel**, Boston U.
Author: **Denise Falchetti**, U. of Bologna

Entrepreneurs use business pitches to persuade and gain support from investors. While scholars have examined what makes business pitches successful, they have narrowly defined success as financial capital acquisition. Yet, different types of entrepreneurs (i.e., early-stage vs. late-stage entrepreneurs) need different types of resources. In a qualitative field study of social entrepreneurs, we identify social ties formation as a key outcome of the relationship between early-stage entrepreneurs and investors, one that is key to access other resources. Building on our qualitative findings and the literature on strategic ties formation, we theorize that firms use language referencing relational processes when they prioritize investor relational commitment, while they use language referencing money when they seek investor financial commitment. We test our hypotheses on a database of in person, one-to-many pitches of social entrepreneurs. We find that early-stage firms attract a broader range of investors and a higher amount of financial resources. Also, the benefits of using relational language are higher for early-stage firms who seek to acquire investor relational commitment, whereas later-stage firms using financial language can reduce their disadvantage with respect to the acquisition of financial commitment. These findings add to the literature on strategic ties formation by increasing our understandings of pitches as a proactive networking tool for less-endowed firms.

ENT: Quitting Your Job to Pursue Entrepreneurship or Join Start-ups: Implications on Job Satisfaction

Author: **Danny Chung**, *Ivey Business School*

Many people dream of leaving their jobs to pursue entrepreneurship. They often imagine that they will be able to have a more rewarding career. However, is doing so always associated with higher levels of job satisfaction? Using a large sample of the US college graduates who are part of the science and engineering workforce, we examine the job satisfaction of the individuals who quit their jobs at large incumbent firms to pursue entrepreneurship. By separating entrepreneurs who operate large ventures from those who operate small ventures, we show that the higher job satisfaction among entrepreneurs is driven by those who operate small ventures and that those who operate large ventures show lower job satisfaction. Moreover, we show that joining a start-up as an employee (a.k.a joiner) is also associated with higher levels of job satisfaction. Finally, we examine the level of satisfaction with respect to different job attributes and find that the high job satisfaction among entrepreneurs of small ventures and joiners is driven by their satisfaction with the non-pecuniary aspects of their jobs, such as intellectual challenge, level of responsibility, independence, and contribution to society.

ENT: Steal, Tinker, Tailor: how coordination emerges in start-ups

Author: **Marius Jones**, *NHH Norwegian School of Economics*
Author: **Peter Kalum Schou**, *NHH Norwegian School of Economics*

Start-ups operate in uncertain and dynamic environments that put great toll on their ability to coordinate their activities to secure growth and development. However, little is known about how start-ups develop coordination mechanisms. As start-ups are new organizations with few routines or structures to rely on, they must develop coordination from scratch with limited time to get it right. As such, coordination represents a unique challenge for start-ups. We study how start-ups manage this challenge. Relying on a longitudinal qualitative multiple-case study of 5 start-ups, we present an emergent theoretical framework of how start-ups achieve and improve coordination over time. We find that start-ups develop coordination by mixing vicarious and experimental learning in a cyclical manner. This framework contributes to the literatures on coordination in start-ups and the emergent coordination literature by showing how coordination emerges and develops in start-ups, who begin with no clear rules, plans, routines, or roles.

ENT: Diversity in Coworking Spaces: A Comparative Keyword Analysis of Online Customer Reviews

Author: **Nam Kyoon Kim**, *Ivey Business School*
Author: **Dominic Sun Kyu Lim**, *Ivey Business School*

Coworking spaces emerged as a new type of shared workspace for entrepreneurs and mobile knowledge workers but significant differences exist among coworking spaces. For instance, coworking in corporate franchise occupied with thousands of members and coworking in independent operators with relatively small group of coworkers offers vastly different experience. We examine the differences of coworking spaces based on users' perceptions of coworking spaces collected from online customer reviews. This paper uses a novel research method, comparative keyword analysis, and finds strong evidence that operation types of coworking spaces are closely related to the differences in members' coworking experiences. Specifically, we find that independent coworking space are salient for its positive review mentioning the keyword 'entrepreneur'.

ENT: Exploring the motivations and success metrics of everyday entrepreneurs: A qualitative examination

Author: **Corey Fox**, *Texas State U.*
Author: **Steven Rayburn**, *Texas State U.*

Entrepreneurs are diverse. However, the concept of entrepreneurship has evolved over time to become synonymous with exceptional ventures – the high-growth, technology-focused, and equity-financed ventures indicative of the Silicon Valley Model (SVM) of entrepreneurship. The academic research associated with entrepreneurship has similarly evolved along this path. Unfortunately, this focus on a narrow type of entrepreneurship has undermined research on everyday entrepreneurs, who are responsible for much of the entrepreneurial activity around the world. Following calls in the literature, we explore these entrepreneurs to better understand this often-overlooked group. In this qualitative study, we address two research questions related to motivation and success in the everyday entrepreneurship context. We conclude with a discussion of the importance of this research and how it contributes to the extant literature.

Social Entrepreneurship 1

ENT: **The Liability of Gender: Examining Investment Gaps in Male- and Female-led nascent social ventures**    

Author: **Romi Kher**, *City U. of New York, Baruch College*
Author: **Shu Yang**, *Hofstra U.*
Author: **Scott L. Newbert**, *City U. of New York, Baruch College*

While most empirical evidence suggests that male-led ventures raise more financing than female-led ventures due to investor biases, these studies primarily focus on commercially-oriented ventures seeking traditional forms of investment (debt/equity). In response, we draw on stereotype content theory and signaling theory to determine whether and how entrepreneur gender impacts nascent social ventures' access to traditional and non-traditional (philanthropy) financing. Our results show that while female-led ventures do raise less traditional investment, they also raise more non-traditional investment than male-led ventures. However, a third-party endorsement signal increases female-led ventures' disadvantage in traditional investment and eliminates their advantage in non-traditional investment

ENT: **Gender's Influence on Starting a Social Business by User-Innovators:**  

Author: **Marlies Koers**, *Saxion U. of Applied Science*
Author: **Paula Danskin Englis**, *Berry College*
Author: **Aard J. Groen**, *U. of Groningen center of entrepreneurship*

Our research investigates the influence of gender on user-innovator' characteristics in starting a social business. Specifically, we examine the extent to which unmet personal needs, being ahead of the trend, experiencing high expected benefits to develop a solution to overcome these needs, use experience and product-related knowledge influence these entrepreneurs in starting a social business. We use a sample of 142 (nascent) social entrepreneurs (64 men and 78 women) who enrolled in a social entrepreneurship training program in the Netherlands. A mixed-method approach was used that combines quantitative (survey) and qualitative (19 in-depth interviews) research. Using Fuzzy Set Qualitative Comparison Analysis (FsQCA) to examine the gender-related differences and the user-innovator characteristics' influence in starting a social business, we find different configurations for men and women. With our research, we gain more insight into gender's influence on the lead user characteristics in this process. We also gain an understanding of the interplay of these specific conditions, which is a methodological contribution to the underlying assumptions regarding data asymmetry, equifinality, and causal conjunction. Our findings are useful to social entrepreneurs to better understand what drives them and to entrepreneurial development and education programs to develop more effective training and support with less masculinization by showing how gender may influence the factors that facilitate social business startups.

ENT: **The Spatial Dimension of Social Entrepreneurship: Manifesting the Imaginary during COVID19**

Author: **Emilio Costales**, *Royal Holloway, U. of London*
Author: **Anica Zeyen**, *Royal Holloway, U. of London*
Author: **Oana Branzei**, *Ivey Business School*

This paper explores the spatial dimension of social entrepreneurship by examining how social entrepreneurs respond to spatial disruption in light of the COVID-19 pandemic. In doing so we analyse which elements of space social entrepreneurs engage with to affect change. Adopting a sociomateriality framework, we explore the extent to which the digital dimension of space is adopted as an intermediary through which space is (pre)constructed and enables shared social imaginaries to manifest in the physical realm. We implement a Netnographic and practice-tracing methodology with 17 social entrepreneurs in the Netherlands and United Kingdom over a 10-month period (February – December 2020). This research contributes to the social entrepreneurship literature by illustrating the cognitive and spatial configuration capacity of social entrepreneurs. Methodologically, this research demonstrates the value of space as an epistemic tool through which research can analyse routine behaviours and how these behaviours may change in according to spatial (re)configuration. The longitudinal and exploratory nature of this research provides in-depth insight on the influence of social and material elements of space. Our findings suggest that social entrepreneurs utilize space as a mechanism of protracting and contracting psychological distance to innovatively promote change.

ENT: **Business Models in Social Entrepreneurship – Linking Founder Imprinting and Financial Performance**

Author: **Aman Bhuvania**, *Indian Institute of Management, Bangalore*
Author: **Srivardhini K. Jha**, *Indian Institute of Management, Bangalore*
Author: **Nachiket Bhawe**, *U. of North Carolina Pembroke*

We examine the relationship between founder imprinting and the financial performance of their social enterprises (SEs) and the important role of business model choice in shaping it. We do this by studying microfinance institutions (MFIs). We argue that business imprinting on the founders influences their business model choice (target market) for their social enterprises. This choice is vital for explaining the subsequent financial performance of their SEs. The enduring effect of business imprinting is such that it leads to a lower likelihood of them selecting rural customers as their target market. This in turn influences their ability to generate interest income from their loan portfolio as well as to manage their business risk, due to the prevailing institutional context. The results obtained from a generalized multilevel structural equation model on data based on Indian MFIs between the years 2013 and 2018 support our hypotheses. Overall, our findings have important theoretical and practical implications for business models and social entrepreneurship literatures.

ENT: **How Adolescent Destructive Deviance Improves Lifetime Health Through Entrepreneurship** 

Author: **Jinyi Zhou**, *U. of Science and Technology Beijing*
Author: **Yawen Li**, *Beijing U. of Posts and Telecommunications*

ABSTRACT: Despite the fact that some prior studies indicated that destructive deviance in adolescence can destroy individuals' whole life, in current study, based on the career stage theory, we propose a theoretical model indicating that even a high level of destructive deviance in adolescence can also improve individuals' life by encouraging them to enter the entrepreneurship (have their own business), which in turn can bring them with a better lifetime health after retirement. Employing a relatively large and representative dataset from National Longitudinal Survey of Youth (1979) with 12,686 participants across different social classes in United States and more than 35-year career tracks, we indeed find that although the adolescent destructive deviance is negatively related to the lifetime health, entrepreneurship will suppress this main effect, meaning that teenagers with a high level of destructive deviance are likely to enter entrepreneurship (i.e., owning business) which can bring many benefits to their lifetime health even after 30 years. Potential theoretical contributions and implications are also discussed.

ENT: **The Opaque-Side of Entrepreneurship: Some Founders Trade Substances for Entrepreneurship Addiction**

Author: **Nicola Anne Thomas**, *Technical U. of Denmark*
Author: **Carina Lomberg**, *Technical U. of Denmark*
Author: **Lars Alkærsg**, *Technical U. of Denmark*

We examine substance addiction as a primary antecedent in the development of entrepreneurship addiction, which is the compulsive need to engage in entrepreneurship. We draw on psychological addiction literature to expand examining entrepreneurship addiction through the lens of behavioural addictions, such as gaming or internet use, to focus on theories of behavioural and substance addictions alike. Through the use of a mixed-method approach, we team both epidemiological data from more than 48,833 founders from 2005-2014, with qualitative case study data from four founders with a history of addiction. We demonstrate how founders with a history of any addiction are more likely to become serial entrepreneurs, and consequently entrepreneurship addicts, and how the cycle of entrepreneurship addiction plays out for founders with concomitant addictions. We found some founders trade-up more socially undesirable addictions for the socially acceptable addiction of entrepreneurship, evidencing perhaps a more opaque side of entrepreneurship.

ENT: **The Impact of Psychological Vulnerabilities, Gender and Venturing Stage on Entrepreneurial Wellbeing** 

Author: **Mi Hoang Tran**, *Syracuse U. Whitman School of Management*
Author: **Johan Wiklund**, *Syracuse U.*
Author: **Wei Yu**, *National U. of Singapore (NUS)*
Author: **Ana Perez-Luño**, *Pablo de Olavide U.*

This study examines the effect of ADHD symptoms on entrepreneurial well-being and how gender and venturing stage moderate this relationship. Surveying 2,000 entrepreneurs in the U.S, Australia and Spain, we hypothesize and find negative associations between ADHD symptoms and well-being. Gender moderates this relationship. The negative effect of ADHD symptoms on well-being is aggravated for women entrepreneurs. We theorize that this is because both ADHD and entrepreneurship are male gendered – women entrepreneurs with ADHD simultaneously challenge two behavioral stereotypes. And the challenging of stereotypes takes a toll in terms of well-being. Our research highlights the importance of examining gender differences in ADHD research, and examining outcomes other than performance in research on gender and entrepreneurship.

As entrepreneurship education grows across disciplines and permeates through various areas of university programs, this timely symposium offers an interdisciplinary, comparative and global perspective on best practices and new insights for the field. Through the theoretical lens of collaborative partnerships, it examines innovative practices of entrepreneurship education and advances understanding of the discipline. Exploring and showcasing how global collaboration can foster entrepreneurship education, international contributors share their experiences as educators, scholars and thought-leaders involved in the Babson Collaborative for Entrepreneurship Education – a global institutional membership organization connecting universities around the world that are building and expanding their entrepreneurship ecosystems. Presenters will illustrate the challenges faced by educators and creative methods for tackling them, offering useful insights from a range of disciplinary perspectives in an international comparison. Highlighting the significance of the field to higher education environments, this symposium encourages active participation in entrepreneurial practice and collaboration between stakeholders and disciplines to ensure high-quality education in a variety of settings. Our symposium will be a rousing and inspiring view of entrepreneurship education for scholars and academic entrepreneurs who are working to build robust education ecosystems in the field. In this symposium, we include six papers that explore (1) the contextual factors and (2) the managerial and policy implications of entrepreneurship education from an international comparative perspective. Following the six presentations, Candy Brush, one leading entrepreneurship scholar and a major contributor in entrepreneurship research, and Lise Aaboén, Chair of Teaching and Learning Conference at AOM will serve as the discussants to provide both theoretical and practical suggestions on the role of entrepreneurship education in shaping the evolutionary path of entrepreneurial ecosystems and implications for policy.

Stigma, Prejudice and Discrimination

GDO: **Accent Speaks Louder than Ability: The Effect of Nonnative Accents on Trust Repair**   

Author: **Mingang K. Geiger**, *West Virginia U.*
Author: **Luke A. Langlinais**, *West Virginia U.*

This paper examines whether speaking with a nonnative accent adversely affects individuals' perceived trustworthiness and level of trust after a trust violation in an English-speaking context. Furthermore, this study also examines how others-focused perspective taking plays a role in helping to overcome the biased judgements. An experimental vignette situated around a hiring process was conducted to examine these research questions. The results suggest that nonnative English speakers do face bias in the form of being judged as less trustworthy in terms of their ability, but not benevolence and integrity, and are hence trusted less in comparison to native English speakers following an identical interaction. In addition, the findings indicate that perspective taking ameliorates that unjustified penalty by having the trustor vicariously walk in the nonnative speaker's shoes. These study findings hold promising theoretical and practical implications for organizations that unfair judgements on stigmatized individuals, including nonnative English speakers, may be overcome through operationalizing perspective taking. This study contributes to the current literature on diversity management by emphasizing language-based stigmas and a more comprehensive understanding of interpersonal trust repair. Keywords: Nonnative accent, stigma, ability, trust repair, trustworthiness, perspective-taking

GDO: **Talented, Valuable, and Committed: Employer Perceptions of Applicants with a Criminal History**

Author: **Nicole C. Young**, *Franklin & Marshall College*
Author: **Jakari Griffith**, *Bridgewater State U.*
Author: **Jessica Keech**, *Franklin & Marshall College*

Research on hiring consistently finds criminal history to be one of the most stigmatized and detrimental characteristics during the selection process. However, once hired, little research exists regarding the employer perceptions of employees with a criminal history. We surveyed employers to explore how employers that have hired individuals with a criminal history may perceive them to be a valuable source of talent, productive, committed, and able to fit skill demands. We also considered how employers who interpreted diversity and inclusion to be an important part of their organization may be more or less willing to hire individuals with a criminal history. Overall, employers that hired individuals with a criminal history were more likely to do so when they perceived diversity and inclusion to be important. Moreover, these employers were also more likely to perceive individuals with a criminal history to be a valuable source of talent, productive, committed, and able to fit skill demands. In effect, while stigma may still keep this population out of many workplaces, those employers who invite them in may hold favorable perceptions.

GDO: **Not all Disclosures are Created Equal: Employee Ratings of Leader Effectiveness After Disclosure**   

Author: **Amanda J. Hancock**, *Memorial U. of Newfoundland*
Author: **Kara Anne Arnold**, *Memorial U. of Newfoundland*

Most empirical research on voluntary disclosures of concealable stigmatized identities in the workplace has focused on employee populations of stigma holders. Early leader-focused results suggest employee evaluations of leaders are negatively affected when leaders disclose a concealable stigmatized identity. The current research aims to improve our understanding of factors that may attenuate or reverse these negative perceptions. Using experimental vignettes, I examined employee reactions to leader disclosures of concealable stigmatized identities. Independent variables including leader gender and disclosure content (Study 1a, n = 478), discloser identity (Study 1b, n = 422), and group prototypicality (Study 1c, n = 365) were manipulated to determine how differing disclosure contexts affected employee ratings of leadership effectiveness. Across studies, leader gender and discloser identity did not play a significant role in follower ratings of leader effectiveness, but disclosure content and group prototypicality did. Post-hoc testing showed that leaders who disclosed minority sexual orientation received the highest ratings of leadership effectiveness - higher than leaders who did not disclose a stigmatized identity. Leaders who disclosed substance abuse received the lowest ratings of leadership effectiveness. In terms of group prototypicality, highly prototypical leaders received the highest ratings of leadership effectiveness. Theoretical and practical implications are discussed.

GDO: **In the Shadows of Instagram: How Marginalized Groups Resist Stigmatization on Social Media Platforms** 

Author: **Milena Leybold**, *U. of Innsbruck*
Author: **Monica Nadegger**, *U. of Innsbruck*

In our research, we focus on moral stigma as an additional and structural diversity dimension that unproportionally intersects with precarious working conditions of those being affected. Marginalized groups facing soft or hard moral stigmatization regarding their occupations, such as pole dancers, sex workers, or strippers, flee into digital spaces to build their business ties, organize learning, and make livelihoods. However, obscure content moderation practices in the digital hinder communication within and among marginalized groups facing moral stigmatization and thus, enforce the precarity. Consequently, marginalized groups either leave or organize resistance. We focus on strategies of the pole dance community as a marginalized group to resist moral stigmatization encoded in the content moderation practices of Instagram. Applying a 'communication constitutes organization (CCO)-perspective', we see content moderation and the encoded moral stigma as co-constitutive for organization and therefore, for organizing resistance. We conducted a netnography and analyzed 288 communicative acts uttered by the pole dance community and other marginalized groups. We identified three strategies of resistance that evolve from individual to collective resistance and from emphasizing differences and, thereby, stigmatizing to emphasizing similarities among pole dancers and other marginalized groups. The findings show how the moral stigmatization in the digital is contestable through content moderation and how it constitutes collective resistance re-establishing and finally fighting it.

Paper is Available to Meeting Registrants Only.

Author: **Janet Xu**, Princeton U.

Many universities and companies have used diversity scholarships and pipeline programs to achieve organizational diversity goals. These programs target high-achieving members of underrepresented groups by offering them additional opportunities and resources. At the same time, however, these initiatives publicly identify their recipients as targets of affirmative action efforts, which can be stigmatizing. This paper investigates the reputational effects of diversity scholarships for recent college graduates seeking entry-level jobs. Using a multi-city audit study, I compare the rate at which employers call back applicants with diversity scholarships, applicants with other types of merit scholarships, and applicants with no scholarships at all. I also examine how the scholarship signals differ when applicant names have a Black racial cue versus a white racial cue. I find that while putatively white applicants with diversity scholarships and non-diversity merit scholarships receive more callbacks than white applicants without scholarships, putatively Black applicants do not receive similar benefits from either type of scholarship. Black diversity scholarship winners are treated more similarly to Black applicants without scholarships than Black applicants with non-diversity merit scholarships. The findings illustrate the importance of examining individual-level effects of diversity practices in addition to organizational-level outcomes.

Diversity Spotlight on CEOs

GDO: **How poorly-educated CEOs are sometimes evaluated less strictly?**

Author: **Xiaoou Bai**, *U. of Texas at Dallas*
Author: **Wei Xia**, *U. of Washington*
Author: **Eric WK Tsang**, *U. of Texas at Dallas*

By examining an under-researched group, CEOs who do not have a bachelor's degree, we develop two new theoretical constructs – expectation mismatch and mismatch elasticity – to show how unfulfilled audience expectations regarding a CEO's qualification may affect organizational outcomes. This expectation mismatch is elastic and can be alleviated in two ways: first, through the audience changing its evaluation standard by justifying the reasons for an “educational deficiency”; and second, through the audience adjusting its evaluation by recognizing the identity work CEOs devote to compensate for such deficiency. We examine this idea in the context of initial public offerings (IPOs) using a sample consisting of the entire population of private firms listed on the Shanghai and Shenzhen stock markets between 2000 and 2016. Our results indicate that poorly educated CEOs are liable for illegitimacy costs and, accordingly, raise less capital through an IPO. However, investors will look into the reasons underlying the unfulfilled expectation in relation to educational qualifications in the case of older or female CEOs and adjust upward their evaluation of CEOs who have pursued an MBA degree or assembled a well-educated top management team.

GDO: **The Effects of Dominance and Optimism Displays by Male and Female CEOs on Hedge Fund Activism (WITHDRAWN)** 

Author: **Steven Kardel**, *Pennsylvania State U.*
Author: **Aparna Joshi**, *Penn State Smeal College of Business*
Author: **Mark R. DesJardine**, *Penn State Smeal College of Business*

During interactions with external stakeholders, to convey a positive impression of the firm, two influence tactics are likely to be vivid among CEOs – dominance and optimism. Drawing on social psychological research on social influence, we theorize that these tactics are also likely to seep into the decision-making of activist hedgefunds about whether to target the firm. Although both male and female CEOs are likely to display dominance and optimism to varying degrees, we also theorize that CEO gender acts as an interpretive lens through which the credibility of these tactics is evaluated and affects the likelihood that the firm is targeted. Using data on hedge fund activism campaigns between 2011 and 2019, linguistic analyses of CEO communications with external stakeholders revealed that both dominance and optimism had a negative effect on the likelihood that the firm is targeted. This negative effect varied across male and female CEOs: firms led by male CEOs were less likely and firms led by female CEOs were more likely to be targeted when CEOs displayed higher levels of dominance or optimism. We highlight how these findings contribute to shareholder activism and gender research in the upper echelons.

GDO: **Examining How Women CEOs' Financial Knowledge and Ownership Homophily Affect Venture Performance** 

Author: **Ian Blount**, *George Washington Carver Food Research Institute*
Author: **Maria Del Carmen Triana**, *Owen Graduate School of Management Vanderbilt U.*
Author: **Orlando C. Richard**, *UMass Amherst*

We examine the impact of female-led firms' knowledge of alternative forms of financial capital and its effect on their financial performance as compared to male-led ventures. We contend that women entrepreneurs face unique historical and stereotypical challenges when attempting to enhance their financial knowledge and performance. We utilize social and liberal feminism frameworks, complemented with homophily theory to illustrate how female entrepreneurs can overcome these challenges by increasing the proportion of females in the ownership structure of female-led firms.

GDO: **When Marriage Becomes a Liability: The Economic Implications of Marital Status for Female CEOs**  

Author: **Ipek Kocoglu**, *Kean U.*
Author: **Murad A. Mithani**, *Rutgers U., Camden*

While research has consistently found that divorce has a negative effect on women's earnings, we argue that for females who are successful in navigating social constraints, divorce has a positive effect on earnings. Building on evolutionary psychology, which shows that mate removal increases resource acquisition efforts by females but not by males, we argue that divorced female CEOs have more cognitive resources to invest at work. It leads them to earn higher compensation – a divorce premium – relative to married female CEOs. Using a matched sample of female and male CEOs, we found a divorce premium for female CEOs that was absent for male CEOs. The premium increased the longer the female CEOs were divorced although it decreased with children and when the CEOs remarried. Our findings offer new insights into gender differences in earnings by explaining that constraints that emanate from evolutionary adaptations operate differently. While social constraints decrease women's earnings after divorce, evolutionary adaptations decrease women's earnings when they are married. The lack of any difference between divorced and married male CEOs validates that partner's presence affects women's preferences but not those of men.

Women and STEM

GDO: Gender diversity and project publication quality – an analysis of STEM in the UK

Author: **Yasaman Sarabi**, *Edinburgh Business School, Heriot Watt U.*
Author: **Matthew Smith**, *Edinburgh Napier U.*

Gender diversity in STEM remains a salient issue, as the field continues to be a male dominated one, despite increased attention on the subject. This paper examines the interplay between gender diversity on projects funded by a major UK research council, the EPSRC (Engineering & Physical Sciences Research Council) and the publication success of a project, as measured by the average journal quality of project publication output, over a ten-year period. The proportion of female representation and leadership on these projects remains very low. This study does not find a significant relationship between gender diversity and journal quality output.

GDO: Complexity, Competition, and Ambiguity in OLMs - Experimental Evidence on the Role of Gender

Author: **Yifei Wang**, *U. of Maryland R.H. Smith School of Business*
Author: **Nishtha Langer**, *Rensselaer Polytechnic Institute*
Author: **Anand Gopal**, *U. of Maryland*

Online labor markets (OLMs) such as upwork.com and freelancer.com are increasingly common channels for engaging with trained individuals for technical and analytical work. Yet, like much of the tech industry, OLMs suffer from under-representation of women. In this paper, we address the broad question of why this may be the case by focusing on project factors that deter women from participating. We study how task complexity and competition increase the risk profile of projects, and disproportionately affect the odds of women choosing to bid for projects, as well as their bid amount, relative to men. Furthermore, we examine the role of environmental ambiguity, induced by Covid-19, on the propensity of women to bid for such projects. We conducted two large, randomized experiments conducted on Amazon Mechanical Turk (AMT) before and during the pandemic. We vary task complexity and competition as experimental treatments within the experiments, while we treat the pandemic as an external shock that raises environmental ambiguity between the two experiments. We find that women are indeed deterred by project complexity in their bidding behavior but are more likely to bid when faced with competition pre-pandemic. However, during the pandemic, women forgo competition, suggesting the presence of significant opportunity and transaction costs for women as they deal with online work during the pandemic. We contribute to the literature on STEM and gender diversity by establishing the specific factors affecting women's participation and wages in OLMs and suggest several actionable managerial insights to make OLMs more inclusive and attractive to women.

Paper is Available to Meeting Registrants Only.

GDO: Embodiment and Women in STEM: A Proposal

Author: **Patty Sofirin**, *Michigan Technological U.*
Author: **Sonia M. Goltz**, *Michigan Technological U.*

We advocate that change programs aimed at faculty women's advancement in STEM fields engage with embodied knowledge both because lived bodies are at the heart of such projects and because embodiment is not. We discuss two challenges for centering the material body in such intervention programs. The first challenge is overturning a paradigmatic research bias that marginalizes embodied knowing. The second challenge is the integration of embodied knowledge into programs that seek to transform advancement practices and policies. To this end, we make several suggestions for pragmatic approaches that draw on our own experiences working on gender equity in academe.

Women and Networks

GDO: **With a Little Help from Another Woman: Female Networking and the Professional Networking Divide**

Author: **Patricia Helena Hein**, *EBS U. für Wirtschaft und Recht*
Author: **Karin Kreutzer**, *EBS U. für Wirtschaft und Recht*
Author: **Marjo-Riitta Diehl**, *Aalto U. School of Business*

This paper illustrates women's networking patterns at female-only events. Existing research has emphasized structural challenges (e.g., network position, and network type) as well as women's individual networking behaviors as issues that hinder female networking success in comparison to men. Yet, insufficient attention has been given to the mechanisms underlying female networking. In this study, we inductively investigate women-only networking events, which are specifically set up to promote women's careers. Drawing on extensive interviews, observations and archival data, we find that proactive networking in such settings paradoxically can lead to the emergence of the female professional networking divide that hinders social capital accumulation. Our findings advance theorizing on networking, social capital, and female careers. First, we offer a grounded theory model that reveals the female professional networking divide as an underlying mechanism impacting the success of women-only events. We also show how this divide may become less salient. Second, we provide a nuanced view on the relationship between female networking and the attainment of social capital. Third, we theorize that female networking is embedded in and may even reproduce gendered organizations instead of decreasing gender inequality.

GDO: **Female Network Opportunities: Reflecting on the Place & Purpose of External Women-Only Networks**

Author: **Hannah-Rose Williams**, *U. of Edinburgh*
Author: **Heather J. McGregor**, *Heriot Watt U.*

In recent decades there has been increasing emphasis placed on the benefit of women-only network opportunities within organizations, finding these environments to foster network strategies and professional outcomes that mitigate for gendered network inequalities. More recently there have been changes occurring in the landscape of External women-only network organizations, providing network opportunities through spaces, events, and socializing outside of traditional workplaces. The impact of these communities on network outcomes is yet to be captured with research. Our paper seeks to add an additional perspective by interviewing member-club and professional-oriented external women-only network members. Further, due to lack of research comparisons between external network organizations and Internal women-only networks, we set out to analyze differences between these networks regarding opportunity, member perception, and career outcomes. Results indicate that professionals engage in external women-only networks as extensions of pre-existing strategies, providing instrumental and expressive network benefits simultaneously. Additionally, external women-only network experiences are found to differ from internal networks in structure, ideology, and member diversity. Our paper provides encouraging feedback on the impact of external women-only network membership and takes the first step in using research to highlight differences between internal and external women-only networks to the benefit of all associated stakeholders.

GDO: **Dis/Organising Women's Freedom: Feminist Dialectical Tensions in Women's Business Networks Blogs**

Author: **Florence Villeseche**, *Copenhagen Business School*
Author: **Eina Meliou**, *Aston Business School*
Author: **Harsh Kumar Jha**, *Newcastle U. Business School*

The growing popularity of women's business networks (WBNs) is paralleled by a critique of their postfeminist character: by promoting individualist ideals in line with neoliberalism, WBNs are considered to disorganise rather than contribute to women's freedom. To unpack this tension between the empirical phenomena and the feminist critique, we employ an inductive approach combining topic modeling, thematic coding and dialectical analysis to examine over 1,500 blog posts from four WBNs. We show how multiple discourses are circulated in the blogs and exist in tension with each other, and interpret the interstices for change and action that these tensions open. We thus contribute to understanding the ways to women's freedom at the intersection of neoliberalism and postfeminism and extend the comprehension of how WBNs can contribute to this agenda. Furthermore, we make ancillary methodological contributions by using topic modeling in conjunction with other qualitative analysis tools and a large corpus of blog posts.

Diversity in Teams: Benefits and Consequences

GDO: **More Team Cognitive Diversity, Higher Team Member Creativity? The Role of Chaxu Climate**    

Author: **Jiaojiao Qu**, *Taiyuan U. Of Technology*

Author: **Shuming Zhao**, *Nanjing U.*

Author: **Man Cao**, *Southeast U.*

Author: **Xia Cao**, *Shanxi U. of Finance and Economics*

In the diversity literature, empirical studies investigating the effects of cognitive diversity on creativity have not yielded conclusive findings. To reconcile the inconsistencies, we attempt to disentangle when and how team cognitive diversity fosters individual creativity. Drawing upon the categorization-elaboration model (CEM) and the literature on Chaxu climate, we theorize a multilevel mediated moderation model with team Chaxu climate as the moderator and team knowledge sharing as the mediator. Using two-wave paired data of 46 teams and 368 members, we find that the team Chaxu climate mitigates the positive effect of team cognitive diversity on team knowledge sharing, and, in turn, team knowledge sharing mediates the interactive effect between team cognitive diversity and team Chaxu climate on individual creativity. Our study not only facilitates a shift in the research lens from automatically oriented to contingently oriented but also advances research concerning the mechanisms from general to specific, enriching our knowledge of the boundary conditions and processes underlying the function of cognitive diversity.

GDO: **Can Membership Change Bring Beneficial Outcomes to Strong Faultline Teams?** 

Author: **Grace M. Y. Poon**, *Chinese U. of Hong Kong*

Author: **Qin Su**, *Sun Yat-Sen U.*

Author: **Dora C. LAU**, *Chinese U. of Hong Kong*

Author: **Lynn Shore**, *Colorado State U.*

Author: **Ran Li**, *Hitotsubashi U.*

Membership change is common in organization. However, extant research generally suggests that teams with low temporal stability (i.e., frequent membership change) tend to perform worse than teams with high temporal stability (i.e., stable membership), because membership change often disrupts team coordination. In this paper, we examine whether membership change can also bring beneficial outcome to strong faultline teams by 'disrupting' team conflict. We conduct experiment on 179 student teams and field survey on 71 organizational teams to test this idea. Our finding reveals a mixed benefit and cost of low temporal stability on strong faultline teams. Our experiment result supports that low temporal stability has beneficial effect to newly formed strong faultline teams by reducing conflict and increasing team performance growth. However, temporal stability does not moderate the effect of faultline on team conflict in our field survey. Instead, when strong faultline teams experience task conflict, such conflict would reduce team performance when temporal stability is low. While further research will be needed, our results provide some evidence that low temporal stability may sometimes reduce conflict of newly formed strong faultline teams, but may also intervene with effective conflict resolution among long-standing teams.

 GDO: **Does Age Diversity Benefit Team Outcomes, if so, When and How? A Moderated Mediation Model**   

Author: **Xinhui Wu**, *China U. of Political Science and Law*

Author: **Alison M. Konrad**, *Ivey Business School*

While prior research has shown a relationship between age diversity and outcomes in teams, little knowledge exists regarding the theoretical mechanisms driving these outcomes. Furthermore, mixed findings from prior research indicate that these relationships differ depending upon contextual factors. Our field study tests two potential mediators and one possible moderator of the relationship between age diversity and team performance. Multi-source data collected from 71 Chinese township government leadership groups showed that team age diversity is positively associated with survey measures of two emergent states, specifically, perceived team effectiveness and collective team identification, which in turn positively predict an objective measure of team performance. The fully mediated model was moderated by leader moral identity, which strengthened the relationships between age diversity and both team emergent states. Results also showed a curvilinear relationship between age diversity and the two team emergent states which was not significantly moderated by leader moral identity. These findings contribute to extant knowledge from an integrative approach within a non-Western cultural context. Theoretical and practical implications are discussed.

GDO: **How disability diverse teams can drive innovation through mutual perspective taking**    

Author: **Stephan Alexander Boehm**, *U. of St. Gallen*

Author: **David J. G. Dwertmann**, *Rutgers U.*

Author: **Kristie Lynne McAlpine**, *Rutgers U.*

Conceptualizing disability as a job-related facet of diversity within organizations, we provide the first empirical examination of the relationship between work unit-level disability diversity and innovation. We propose and test perspective taking within units as a relevant boundary condition to build upon and translate health-related differences between unit members into implemented ideas for improving work processes. Results, based on time-lagged and objective data in a sample of 7,037 employees of a construction site of a large German manufacturing organizational largely support our arguments. Our findings allow us to challenge the conventional framing of disability as a weakness, burden, and reason for individual accommodation. Rather, we propose and theorize disability as a job-related facet of diversity within organizations which has the potential to serve as a catalyst for positive outcomes within firms as it propels workplace redesign and work-design related innovation. We provide recommendations for organizations on how to make use of the innovation potential that disability brings to the workplace.

Enabling Diverse Teams

GDO: **We Are Vigilant Yet Eager: Attaining Team Psychological Safety to Unleash the Potential of Teams** 

Author: **Victor Chen**, *U. of North Texas*

Team psychological safety represents the key that unlocks the untapped potential of work teams. Interpersonal risk-taking sparks a team process of exchanging and building on ideas. However, how demographic diversity (racial/ethnic diversity) channels into team psychological safety needs to be further understood. Based on two different collective regulatory frames, we build on regulatory focus theory to shed light on how collective prevention focus and collective promotion focus co-occur to differently influence team psychological safety. By doing so, we elucidate the path which seeks to reduce uncertainty through collective prevention focus. We also explain how humble leader behaviors enhance the conditions of team psychological safety by way of collective promotion focus. Through group-level inclusion of racial/ethnic identities, work teams realize their fullest potential. The attainment of team psychological safety has important implications on how work teams embrace divergent thinking.

GDO: **Does my Leader Care about my Subgroup? Team Faultlines and Subgroup-based LMX Differentiation**

Author: **Sophie Johanna Moser**, *U. of Konstanz*
Author: **Max Reinwald**, *LMU Munich*

This article investigates the impact of age-gender faultlines in work teams on absenteeism by considering the level of leader-member exchange (LMX) that supervisors develop with the different subgroups in a team. We integrate faultline research with the literature on LMX differentiation to build an integrative multilevel model to explain absenteeism behavior in subgroups. Drawing from social categorization and social comparison theory, we propose that subgroups receiving less favorable LMX treatment than their outgroup increase their absenteeism behavior due to faultline-induced social categorization. In contrast, subgroups receiving more favorable LMX treatment compared to the outgroup reduce their absenteeism behavior. Our predictions receive empirical support using a sample of 32 subgroups of a German electrical engineering company. We discuss implications for the faultline and LMX literature and executives who have to lead in diverse team settings.

GDO: **The Empathic Potential of Diverse Teams: How Member Contact Reduces Disparity in Treatment (WITHDRAWN)**

Author: **Anusuya Banerjee**, *U. of Washington*
Author: **Xiao-Ping Chen**, *U. of Washington*

Disparity in treatment of customers and beneficiaries from different social groups is a pervasive phenomenon in the United States. To address this issue, we propose that service organizations should form work teams of providers from a diverse range of social groups. Drawing on intergroup contact theory and literature on intergroup emotions, we present a theoretical model articulating how inter-member contact inside diverse work teams reduces member anxiety about , and builds affective ties with, other social groups, resulting in increased empathy and decreases in affective prejudice (or empathy bias). Moreover, we theorize an empathy diffusion process from colleague-to-colleague to service provider-to-service recipient, which ultimately results in reduction of disparity in treatment of extra-organizational individuals at work. Our conceptual model makes important theoretical contributions to the team diversity literature by challenging the assumptions of social categorization process theories to highlight the empathetic potential of diverse teams. This model also has significant practical implications for organizations struggling to curb discrimination and alleviate the disparity in treatment of service recipients.

GDO: **THE CONSEQUENCES of PERCEPTION of SOCIAL-STATUS-BASED LMX DIFFERENTIATION in DIVERSE WORK GROUPS**

Author: **Pegah Sajadi**, *HEC Montreal*
Author: **Christian Vandenberghe**, *HEC Montreal*

This paper proposes the construct of social-status-based LMX differentiation (SS-LMXD) and shows its importance in predicting interpersonal behaviors in diverse teams. Specifically, we hypothesize a model in which relationship conflict mediates the relationship of SS-LMXD with interpersonal deviance and interpersonal citizenship behavior. Using a sample of 734 individuals in 75 teams, we found that individual perception of SS-LMXD was negatively related to interpersonal citizenship behavior and positively related to interpersonal deviance and relationship conflict. Indeed, we show that relationship conflict partially mediated the effect of SS-LMXD on interpersonal deviance. Theoretical implications and directions for future research are explored.

Work Family Conflict and Support

GDO: Why and When Family-Supportive Supervisor Behaviors Relate to Performance: A COR Perspective

Author: **Samuel Aryee**, *U. of Surrey*
Author: **Emmanuel E. Y. Seidu**, *U. of Ghana Business School*
Author: **Hsin-Hua Hsiung**, *National Taiwan U.*
Author: **Lilian Otaye-Ebede**, *U. of Liverpool Management School*

Drawing on Conservation of Resources (COR) theory, this study examined why and when family-supportive supervisor behaviors (FSSB) relate to overall performance (a second order construct comprising task proficiency, task adaptivity, and task proactivity). Specifically, we examined work-family balance effectiveness and sleep quality as serial mediators of, and use of family-supportive paid leave as a boundary condition of, the FSSB-overall performance relationship. Data obtained in Ghana from healthcare employees (n = 481) and their supervisors (n = 117) were used to test our hypotheses. Results of Multilevel Structural Equation Modeling (MSEM) revealed that FSSB related to overall performance through the serial mediation of work-family balance effectiveness and sleep quality. Additionally, use of family-supportive paid leave moderated the FSSB-overall performance relationship such that this relationship was stronger when use of family-supportive paid leave was high rather than low. We interpret these findings as underscoring the generalizability of work-home resource-based theories of the work-family interface in accounting for work-family dynamics as well as contributing to the growing interest in workforce sustainability.

GDO: Work-life Preferences of Female Entrepreneurs: The Role of Marriage, Children and Education

Author: **Veselina Vracheva**, *Chapman U.*

Entrepreneurship is the lifeblood of economic development. It requires risk-taking and decisiveness—characteristics scarcely used to describe women. The notion of increasing female entrepreneurship is popular, but male- and female-run businesses are pegged against each other, with performance discrepancies explained by background and institutional barriers that disadvantage women. Equalization of institutional opportunities for both sexes reflects the expectation of equal entrepreneurship outcomes. Nevertheless, fewer women than men view entrepreneurship as a viable employment choice and in the most egalitarian societies this is prevalent. Preference theory has explanations. Women and men choose self-employment for different reasons and few women view entrepreneurship as a career. This study suggests that in developed economies self-employment relates to work-life preference differences between the sexes. Current policies disregard such differences. The focus of this study is on whether women entrepreneurs differ than men in their work-life priorities. Findings suggest so. Preference theory is a viable predictor of work-life priorities of US female entrepreneurs. The study also explores how these preferences link to marriage, education and children and is intended to inform policymakers with a genuine interest in promoting (female) entrepreneurship.

GDO: A Meta-Analysis on Marital Status-Performance Relations: Like a Horse and Carriage?

Author: **Yingyi Chang**, *Virginia Commonwealth U.*
Author: **Frank A. Bosco**, *Virginia Commonwealth U.*

A meta-analysis was conducted to examine relations between marital status and three dimensions of job performance. Results indicated that marital status was weakly, positively related to in-role performance and counterproductive work behavior, yet unrelated to organizational citizenship behavior. After statistically controlling for age, parenthood, and perceived organizational support, marital status was positively related to all three performance dimensions. Mediation analyses revealed that family-to-work conflict partly explains the marital status-performance relations. Implications are drawn concerning personnel policies regarding married and unmarried employees.

GDO: Weathering Work-Family Conflict: an analysis and model of shock event resolution

Author: **Linh Chi Vo**, *ESDES, U. Catholique de Lyon*
Author: **Mary C. Lavissière**, *U. of Nantes*
Author: **Alexandre Lavissiere**, *Kedge Business School, France*

Work-family conflicts (WFC) is an established topic both for researchers and practitioners. The episode-driven approach facilitates understanding of psychological perception and the decision-making process of an individual facing a work-family conflict. In this sense, specific incidents of work-family incompatibility that disrupt the habitual ways of simultaneously ensuring work and family responsibilities are called shock events. In this paper, we interviewed 35 women executives from a male-dominated industry, the maritime transport industry, in order to explore and theorize the psychological perception and decision-making processes of working individuals in response to work-family conflict shock events. Our results show how macro level factors, grounding factors (including internal cues, future self, and work-family ideology), and situation-specific factors (including shock event cues) are related to each other and to different types of resolution of a work-family conflict shock event. Based on these results, we develop a model of decision-making processes to handle work-family shock events which integrates these factors.

Disability: Work and Accommodation

GDO: [Motivating Supervisors During Disability Accommodation](#)

Author: **Mohammad Alam**, *S & P Data*

Author: **DuckJung Shin**, *Korea U. Business School*

This study examined the relationship between increased job demands and strain on supervisors during disability accommodation (DA). We proposed and tested a comprehensive model of supervisors' DA, applying/integrating existing theories on job demand and resources (i.e., demand-ability fit, job demand-control, job control-control-support, effort-reward balance, and job demand-resource models) to explain how and why supervisors' increased job demand during DA can be negatively associated with their work motivation. Specifically, we examined whether the level of supervisors' job strain can mediate the relationships between multiple dimensions of demand and resources of supervisors (job demand, job control, social support, and rewards) and their work motivation. We also suggest that DA complexity can be associated with increased job demand, which in turn increases strain on supervisors and reduces work motivation. Based on a sample of 335 British, Canadian, American, Australian, Dutch, and German supervisors with recent DA experience, we found support for the demand-ability fit, effort-reward balance, and job demand-resource models. Job strain did not mediate the relationship between job control and social support and work motivation; instead, job control and social support directly affected work motivation. Our findings contribute to the understanding of how increased job demand during DA influences supervisors' strain and motivation, how DA regulates supervisors' job demand and strain, and why sufficient job control, social support, and reward is important to support supervisors to accommodate employees with disabilities.

Paper is Available to Meeting Registrants Only.

GDO: [Working with Chronic Illness: Investigating Individual Health Status and Burnout](#)

Author: **Alexandra Cook**, *Vrije U. Amsterdam*

Author: **Alexander Zill**, *Organizational and Economic Psychology, Technical U. Chemnitz*

Although chronic illnesses are prevalent and increasing among the workforce in the US and Europe, their consequences are rarely attended to in theoretical considerations and empirical analyses on work and health. In this paper, we analyze the impact of chronic illnesses and their perceived severity on employee burnout in two studies including employees with multiple sclerosis, rheumatoid arthritis, and inflammatory bowel diseases. In the first study, we show that people with a chronic illness report more higher burnout levels compared to employees without any chronic medical conditions. Furthermore, we show that the perceived severity of the illness is associated with higher levels of exhaustion burnout in two cross-sectional analyses. In the second study, we show that the perceived severity of the illness predicts exhaustion burnout 6 months later. Our results strongly imply the inclusion of health status and chronic illness into occupational health research and practice.

GDO: [Evidence of Reversal of Ableism among High Performing Students with Disability in a Business School](#)

Author: **Deepti Sharma**, *156230*

Author: **Ganesh N. Prabhu**, *Indian Institute of Management, Bangalore*

Educational policies and school level interventions are often targeted at average students and inclusive policies meant for students with disability are no exception. How do gifted or high performing students with disability overcome their disability hurdles in the absence of targeted inclusive policies and academically perform on par or even better than their peers? We address this research question through in-depth interviews of eight multi-talented high performing students with disability from birth currently enrolled in a top ranked business school in India. These students had achieved a reversal of ableism in their context by showing remarkable agency to develop a positive identity among their business school peers. Common factors found salient across our interviews were: (a) key early incidents in life that showed the student as an exception to the habitus of disability, (b) active parental support that countered any negativity from others regarding the student's disability, and (c) motivation from role models in the family and among tutors during critical phases of the student's academic journey. Some students crafted innovative ways early in life to become self-dependent and had learnt new skills that were hard to learn due to their disability. Some students had developed a larger social circle and become a source of inspiration to their peers. We provide a positive narrative of an under-represented social group in the business school context and identify new factors relevant to the inclusion and encouragement of high performing students with disability to enable them to reach their true human potential.

GDO: [Understanding versus Liking: Disability Dissimilarity as Predictor of Idiosyncratic Deals](#)

Author: **Miriam Karin Baumgaertner**, *U. of St. Gallen*

Author: **Amit Jain**, *S P Jain Institute of Management and Research*

Author: **Christoph Breier**, *U. of St. Gallen*

Although people with disabilities (PWD) represent the largest minority in the world, they are still underrepresented within organizations. Idiosyncratic deals (i-deals) are an effective tool to realize accommodations for PWD, aligning their individual needs and abilities with job demands. While antecedents of i-deals are generally under-researched, this particularly applies to minority employees, such as PWD. Past research demonstrated that similarity in supervisor-subordinate dyads plays a decisive role in this respect. We go beyond the similarity attraction paradigm by introducing the perceived need for accommodation, which is operationalized by person-job fit, as a second theoretical process. We argue that both processes interact depending on the different subordinate-supervisor dyad constellations. They can either reinforce or oppose each other, leading to different outcomes in terms of i-deals and subsequent job and life satisfaction. We test our hypotheses in a time-lagged sample of 6,944 employees who are representative for the German working population. We compare three different scenarios with the baseline in which neither of the dyad members has a disability and find a varying amount of i-deals, also with regard to the different types of i-deals. In dyads in which both members have a disability, more i-deals of any type are granted. Dyads, in which only the subordinate has a disability, do not differ in terms of task and location i-deals, but schedule i-deals are lower, suggesting that similarity outweighs perceived need. However, supervisors with disabilities grant more task and location i-deals to their subordinates without disabilities.

Gender and Entrepreneurship

GDO: **Gender-Biased Implementation Support for Novel Ideas: A Theoretical Lens of Judgments of Morality**  

Author: **Zhenyu Liao**, *Northeastern U.*
Author: **Haoyue Zhang**, *Washington U. in St. Louis, Olin Business School*
Author: **Nan Wang**, *Lingnan U.*
Author: **William Bottom**, *Washington U. in St. Louis*

Although gender inequality research has long recognized social and economic barriers as primary factors causing gender disparity in creative achievement, less well understood is why such barriers emerge and how they accumulate to disadvantage creative women. Drawing upon research on the ethicality of creation and social role theory, we posit that resource holders may unconsciously adopt stricter moral standards for, then impose harsher moral judgments on, novel ideas proposed by women regardless of idea usefulness. This asymmetry leads resource holders to disproportionately withhold support for implementing ideas from women. Our hypotheses were supported by results from four methodologically complementary studies situated in managerial and entrepreneurial settings including two experiments with manager participants, one archival field study of Shark Tank (2009-2019), and one survey study of organizational managers. By studying how resource holders' gender-based double standards for moral evaluations of creative ideas affect their implementation support, our research casts light on a cumulative disadvantage process that precipitates gender stratification in creative achievements and thus, generates new insights for reducing sequential barriers that produce and perpetuate gender inequality.

Paper is NOT Available. Please contact the author(s).

GDO: **Sexism, Deficits, and the Gendered Representation of Entrepreneurship in Canadian Print Media** 

Author: **Suzanne Marie Gagnon**, *Asper School of business, U. of Manitoba*
Author: **Wendy Cukier**, *Ryerson U.*
Author: **Amy Oliver**, *U. of Manitoba*

This paper explores media representation of entrepreneurship in Canada in order to understand how men and women are presented. Inspired by research on the gendered nature of entrepreneurship stereotypes and how they reinforce barriers to women's entrepreneurship at the societal, organizational and individual level, the paper considers the frequency but also the themes in entrepreneurs and entrepreneurship stories. Drawing on more than 500 articles in Canada's largest English print national newspapers – the Globe and Mail and National Post – as well as the largest French newspaper La Presse, over a five year period, the themes include the gendered representation of entrepreneurship, the deficit discourse pertaining to women as well as the ways in which barriers to women are presented. The study, which is exploratory, reveals interesting patterns and significant differences in the stories about women and men entrepreneurs in terms of the ways in which their families, their motivations, their characteristics, perceptions and experiences are presented recognizing that the differences could be a function of the different ways in which women and men speak about their experiences and or the questions and framing posted by journalists. It also demonstrates that women entrepreneurs are more likely to be featured in stories about women entrepreneurs than they are in stories about entrepreneurs in general, which is a double edged sword – it raises awareness of the challenges facing women entrepreneurs but also tends to reinforce othering or exceptionalism. It also confirms that a small number of mostly white men, mostly in tech, are reference repeatedly. Finally the study calls for further research to explore the complex ways in which media representation both reflects and shapes assumptions about entrepreneurship.

GDO: **How Signals of Existing Funding Sources Moderate Gender Effects on Business Accelerator Acceptance**  

Author: **Fatemeh Askarzadeh**, *Old Dominion U.*
Author: **Veronika Ermilina**, *Old Dominion U.*
Author: **Matthew Farrell**, *Old Dominion U.*
Author: **Jing Zhang**, *Old Dominion U.*

Building on insights from signaling theory and gender literature, this multi-national study aims to differentiate the effect of existing funding source on accelerator acceptance for male and female-led venture. Using survey-data of 10,298 observations for startups in 166 countries over 2016-2018, we find a female advantage in applying for business accelerators. Further, we show that the self-funding signal complements the gender signal sent by women, while external funding substitutes for it. Unlike previous studies, we show that sending signals incongruent with the founder's gender stereotypes do not necessarily decrease likelihood of success in accelerator acceptance. Instead, the presence of signals that women stereotypically lack can increase female advantage in accelerator applications. Access to global initiatives that support growth-oriented entrepreneurs is highly valuable for new ventures; however, female entrepreneurs traditionally face discrimination when seeking capital. This is the first study that shows female advantage in the context of formal entrepreneurial assistantship programs and identifies a new source of variation (i.e., existing funding source) in men and women business owners' access to accelerator programs.

GDO: **Exploring Gender Influences on Debt vs. Equity Financing of Social and Socio-Tech Ventures**    

Author: **Mohsen Mohaghegh**, *Ohio State U.*
Author: **Mohammad Saleh Farazi**, *U. of Montpellier*
Author: **Joanne Lee Scillitoe**, *California State U., Northridge*

The extant literature has shown there is a persistent bias against women founders in regard to securing equity funding. In this study we look specifically at the gender balance of for-profit social venture founding teams and their acquisition of debt versus equity financing. Social ventures have a growing influence both socially and economically and have a higher proportion of women founders than other types of ventures making this an important subsample for study on this issue. Drawing from the gender, entrepreneurship and institutions literature, we hypothesize and empirically test the varying proportion of females on founding teams of social ventures and its influence on securing debt versus equity financing within the U.S. and Latin American. Findings suggest gender bias remains a considerable issue for equity financing for these social ventures in all countries studied. In addition, we tested a small subsample of socio-tech ventures; social ventures leveraging a core technology. Findings suggest that gender bias in regard to equity financing to socio-tech ventures is greater in the U.S. than in Latin America.

Paper is Available to Meeting Registrants Only.

GDO: **Entrepreneurial entry: Does family diversity matter?**

Author: **Wei Wang**, *School of Management, Xi'an Jiaotong U.*

Author: **Qiaozhuan Liang**, *Xi'an Jiaotong U.*

Author: **Stephen Xu Zhang**, *U. of Adelaide*

Author: **Wei Deng**, *School of Management, Xi'an Jiaotong U.*

Based on the family embeddedness perspective and the literature on team diversity, we build a framework on how individuals' family diversities in terms of industry and demographic (age, gender and education) characteristics are associated with their entrepreneurial entry, i.e. whether they start new businesses. We further posit that the relationship between individuals' family diversity and entrepreneurial entry is stronger for individuals' who have more frequent family meals, because family meal helps the family members to bond and exchange ideas together. Using data from a sample of representative adults via the China Family Panel Studies (CFPS) in the period 2014-2018, our study casts new light on entrepreneurial entry research by introducing two new antecedents in family diversity and family meals, carrying concrete implications to both theory and practice.

Age and Generational Differences

GDO: Age Differences in Affective Responses to Daily Inclusion: An Daily Diary Method

Author: **Yixuan Li**, *U. of Florida*
Author: **Catherine Kleshinski**, *Indiana U. - Kelley School of Business*
Author: **Kelly Schwind Wilson**, *Purdue U., West Lafayette*
Author: **Kaili Zhang**, *East China U. of Science and Technology*

The global trend of increasing age diversity in workforces has called for research on understanding and managing age differences to better integrate employees across the lifespan into organizations. Integrating aging and lifespan development research and inclusion work, we adopt an experience sampling approach to investigate age differences in response to inclusion experience on a daily basis. In light of socioemotional selectivity theory, we argue that older workers exhibit stronger affective responses (i.e., increased positive affect and lessened negative affect) to inclusion experience because they put higher value on relationships, such that the daily effects of inclusion experience on positive and negative affect are stronger for older (vs. younger) workers through the mediating mechanism of relationship value. We tested our hypotheses by surveying 128 employees from a manufacturing company for 10 consecutive workdays (N = 1,248). Consistent with our hypotheses, the daily effects of inclusion experience on positive and negative affect were only significant for older workers through the mediation of higher relationship value. Positive and negative affect, in turn, related to employees' work engagement. Our study serves as an important initial step to uncover age differences in responses to daily inclusion and sheds light on the importance of promoting workplace inclusion for older workers in particular.

GDO: Millennial's Perception on Cyberloafing: Workplace Deviance or Cultural Norm?

Author: **Meena Chavan**, *Macquarie U.*
Author: **Bella Galperin**, *U. of Tampa*
Author: **Alexander Ostle**, *Macquarie U.*
Author: **Abhishek Behl**, *O. P. Jindal Global U., Sonipat, India*

This research examines the perceptions of 'Millennials' on cyberloafing, as a form of workplace deviance, and uncovers their rationale for cyberloafing to better understand, how organisations can mitigate this issue. Employing a qualitative research methodology, a total of 90 semi-structured interviews were conducted. Results suggested that Millennials viewed cyberloafing to be a relatively inconsequential form of workplace deviance and a social and cultural norm among their cohort. Cyberloafing was seen as a tool to work faster and to enhance their productivity in the long-term. Other themes that emerged included, cyberloafing as an escape from boredom and a stress reliever. Many respondents justified their behaviour and explained that cyberloafing has developed as an ingrained habit and is a brilliant necessity in today's competitive world and good for business. Our findings suggest that organisations will need to develop policies in collaboration with Millennials to reach a middle ground between deterrence and laissez-faire policies to curb this menace that is costing organizations millions of dollars in productivity.

GDO: Young Female Managers Are Less Endorsed as Leaders When Claiming Leadership in Interactions

Author: **Sofia Schlamp**, *Vrije U. Amsterdam*
Author: **Fabiola Heike Gerpott**, *WHU - Otto Beisheim School of Management*
Author: **Tanja Hentschel**, *Amsterdam Business School, U. of Amsterdam*
Author: **Niels Van Quaquebeke**, *Kühne Logistics U.*

Integrating implicit leadership theory with intersectionality theory, we propose that the extent to which a manager is endorsed when claiming leadership is a function of a manager's gender (i.e., being female) and their age difference between manager and employee (i.e., being older). We test our hypothesis using a fine-grained relational control coding approach to analyze the meeting communication of 55 manager-employee dyads in daily workplace meetings. Providing support for a double jeopardy effect, we found that female managers who are younger than their employees are less endorsed for displaying leader claiming behaviors, whereas female managers who are older than their employees are more endorsed. For male managers, age did not matter – younger and older male managers claiming leadership were equally endorsed. Our work suggests that existing research on gender biases benefits from an intersectional lens – integrating additional demographic characteristics – when explaining leadership endorsement.

GDO: The older the fairer? Board chairs and CEOs' age effects on gender diversity in leadership positions (WITHDRAWN)

Author: **Jie Huang**, *Capital U. of Economics and Business, China*
Author: **Sandra Paterlini**, *U. of Trento*

This paper discusses the obstacles to women's career advancement from the perspective of corporate strategic leadership, namely CEOs and board chairs. Drawing on a sample of thirty Germany-based public companies that comprised the DAX 30 index, we find that the age of both the board chair and CEO has significant negative effects on female participation in boards and executive teams, respectively. In so doing, we contribute to the existing literature by highlighting that the team composition in terms of age influence how board chairs and CEOs approach gender diversity. Our findings also contribute to the pipeline theory by clarifying that the selection procedure and mechanisms of the two boards (supervisory board and management board) differ, leading to different types of pipelines for management boards and supervisory boards, respectively. We also expand the emerging understanding of antecedents of gender diversity literature beyond the U.S. context.

Diversity and Climate of Inclusion

GDO: **On Legitimate Exclusion and Illegitimate Inclusion: A Paradox Theory of Inclusion**

Author: **Hans Van Dijk**, *Tilburg U.*

Author: **Jasmien Khattab**, *Erasmus U. Rotterdam*

Inclusion holds numerous benefits, but theory on inclusion suffers from a number of shortcomings regarding its nature and boundary conditions. In conceptualizing inclusion and exclusion as a paradox (i.e. contradictory yet interrelated elements that exist simultaneously), we develop theory on its three dimensions: latency (i.e. including and excluding behaviors), salience (i.e. experiences of inclusion and exclusion), and persistence (i.e. changes in the presence and experience of inclusion and exclusion). By disentangling their latent and salient dimensions, we argue that including and excluding acts and behaviors are complementary and can both be functional and dysfunctional, and legitimate or illegitimate. We further assert that only a fraction of all latent including and excluding behaviors become salient, and advance an understanding of the conditions under which such behaviors are (considered) illegitimate. In subsequently theorizing about the persistence dimension of inclusion and exclusion, we provide insights on the temporal dynamics of inclusion and exclusion, and how including and excluding behaviors and experiences can change over time. Based on our paradox theory of inclusion, we conclude, among others, that inclusion and exclusion can both be beneficial or detrimental, that dialogue is key to fostering inclusion, and that the path towards inclusion requires identity work.

GDO: **When is a Diversity Climate Specious? A Theory of Diversity Climate Development**

Author: **Anna Katherine Ward**, *Virginia Tech*

Author: **Jieun Park**, *Drake U.*

Author: **Elizabeth C Ravlin**, *U. of South Carolina*

We argue that positive diversity climates that appear to be genuine may in fact be specious; that is, the climate may look good, but this appearance may be false. We examine this phenomenon by building theory on the development of positive diversity climate (unit value for fairness and difference) based on three foundational elements: 1) leader inclusiveness, 2) unit composition (leader in- and out-group members), and 3) the negative/positive experiences members have had with diversity initiatives in the past. While leader inclusiveness may reduce effects of potential subunits or faultlines based on membership in the leader's in-/out-group, prior experiences with diversity initiatives are not necessarily addressed, and can still produce specious elements in the climate. We address cases in which members do not agree as to what constitutes unit value for fairness and difference, and those in which distinct prior diversity initiative experience aligns with leader in-/out-groups. This theory development should lead to a better understanding of when a reported positive diversity climate will actually result in positive outcomes.

GDO: **Personalized Optimal Distinctiveness: An Exploration of Dynamic Inclusion**

Author: **Caitlin Ray**, *Darla Moore School of Business, U. of South Carolina*

Fostering inclusion among employees has become increasingly important to organizations in light of evidence that inclusion leads to positive outcomes for both employees and organizations. However, although organizationally driven programs and policies of inclusion are increasing, it is unclear whether these programs actually make individuals feel included. This is because inclusion literature has mainly taken a universalistic approach to inclusion, assuming that all individuals feel inclusion in the same way. To challenge this assumption, this paper explores how individualized views of inclusion may cause individuals to seek out and experience inclusion in unique ways.

GDO: **Can leadership training improve climate for diversity? A quasi-experimental investigation**

Author: **Narda Quigley**, *Villanova U.*

Author: **Kristin Broussard**, *Villanova U.*

Author: **Amanda Grannas**, *Villanova U.*

Author: **Teresa Nance**, *Villanova U.*

Author: **Noelle Comolli**, *Villanova U.*

Author: **Seth Matthew Fishman**, *Villanova U.*

Author: **Teresa Boyer**, *Villanova U.*

Author: **Kate Kozlova**, *Villanova U.*

Author: **Elizabeth Svenson**, *Villanova U.*

Author: **Adam Smith**, *Villanova U.*

Author: **Priscilla Futema**, *Villanova U.*

Author: **Kamil Vickers**, *Villanova U.*

Although a great deal of published research supports the importance of climate for diversity—or “employees’ perceptions about the extent to which their organization values diversity as evident in the organization’s formal structure, informal values, and social integration of underrepresented employees” (Dwertmann, Nishii, & van Knippenberg, 2016: 1137)—and its impact on workplace outcomes, little research to date has examined its antecedents. This quasi-experimental study considers whether different approaches to leadership training in a half-day workshop (general leadership training vs. mindfulness training for bias reduction) influence individual-level climate for diversity perceptions among employees in the short and longer term. We collected five waves of data in an academic setting from full-time faculty nested within departments whose department chairs had either not received training, received general leadership training, or received mindfulness for bias reduction training. 345 faculty responded to at least one wave of data collection. Multilevel modeling results suggest that baseline levels of climate for diversity perceptions interacted with training condition in influencing post-training climate for diversity perceptions; longitudinal growth curve modeling results suggest that training condition may have a main effect on the climate for diversity perceptions over time. We discuss the implications and future research directions associated with these findings.

Gender and Leadership

GDO: Androgyny and the 2020 US Presidential Election: The Benefits of a “Balanced” Ticket?

Author: **Gary N. Powell**, *U. of Connecticut*
Author: **D Anthony Butterfield**, *U. of Massachusetts, Amherst*
Author: **Xueting Jiang**, *New York Institute of Technology*

Data gathered from 667 respondents during the 2020 U S presidential election showed that, in contrast to previous studies of presidential leadership, the Ideal President was viewed as androgynous (i.e., balanced in masculine and feminine traits) rather than masculine. None of the four (President and Vice-President) major party candidates fit the ideal profile perfectly. Donald Trump, Mike Pence and Kamala Harris were perceived as higher on masculinity than femininity, whereas Joe Biden was perceived as higher in femininity than masculinity. Compared to the White male candidates, Harris, a woman of color, was most notably perceived as the opposite of her running mate Biden in both masculinity and femininity. Male and female respondents perceived the Ideal President differently, men as higher in masculinity than femininity and women as higher in femininity than masculinity. Respondents' presidential candidate preferences were related to their descriptions of the Ideal President: Trump supporters perceived the Ideal President as higher in masculinity than femininity, whereas Biden supporters perceived the Ideal President as balanced in masculinity and femininity. The Democratic ticket as a whole represented a balanced team, with one candidate higher on femininity and the other higher on masculinity; in essence, an androgynous ticket. In contrast, the Republican ticket as a whole represented a decidedly masculine team. That the Democratic ticket clearly won the election (both the popular vote and the electoral college vote) with an androgynous ticket raises the question of whether the relationship between gender and leader stereotypes has shifted towards a more level playing field for female vis-à-vis male candidates for leader roles.

GDO: When Gender Matters: The Female Leadership Trust Advantage during the COVID-19 Crisis

Author: **Alan Belasen**, *SUNY Empire State College*
Author: **Ariel R. Belasen**, *Southern Illinois U., Edwardsville*

Trusted leadership offers promise for a new era of relational methods of leadership critical for navigating through major crises, such as COVID-19. More so than their male-equivalents, female leaders' interpersonal skills were found to be critical in earning trust and in reducing the negative effects of crisis situations. Successful leaders also share inherent qualities of honesty, accountability, credibility and transparency essential for building trust. Are women also better than men on these qualities? Our findings reveal significant differences in two key outcome measures between the sampled males and females: A one-standard deviation increase in female self-perceived value for Transparency is associated with a desired Transparency score nearly five times higher than their male counterparts – and reflects a desirability score that is roughly 5% higher than the average female in the sample. Likewise, a one-standard deviation increase in self-perceived Honesty would be associated with a 0.157-point increase in the desired Honesty, roughly 121% higher than their male counterparts. Further research should examine the role of women in leading businesses during crises and the benefits organizations can reap by tapping into the qualities and talents that women bring to senior leadership.

GDO: Examining the moderating effect of gender on compassion and leader emergence

Author: **Reut Livne-Tarandach**, *Manhattan College*
Author: **Sophie Pychlau**, *U. of Oregon*
Author: **Angela R. Grotto**, *Manhattan College*
Author: **Poonam Arora**, *Manhattan College*

Compassion, the endeavor to alleviate another individual's distress, is commonly seen as a prosocial behavior with positive consequences. Drawing on social role theory and leadership categorization theory, we propose that compassionate behavior is related to perceptions of competence and warmth, which are subsequently related to leader emergence perceptions. Yet, because compassion is a behavior often associated with women, it may activate gender stereotypes, and thus we propose that gender will moderate the relationship between compassion and leader emergence via perceptions of competence and warmth, with compassionate women less likely to be perceived as leaders. However, men stand to benefit from acting compassionately because defying gender stereotypes is unexpected behavior that invites positive attention. Study 1, a longitudinal study with 38 student teams working together for 8 weeks, demonstrates a mediated moderation effect of gender on the relationship between compassion and leadership via competence, such that men, but not women, gain competence credit for displaying compassion and are thereafter ranked higher on leader emergence. To offset these negative consequences of compassion for women, the authors distinguish between two different types of compassion, agentic and communal. Study 2, a pre-registered vignette study with a diverse sample of 563 working adults, shows that gender effects are attenuated when women engage in agentic compassion, a specific form of compassion that both conforms to and breaks with gender stereotypes.

GDO: Female Disadvantage in Hollywood: How Do Conventions and Audiences Constrain Female Leaders?

Author: **Jusang Lee**, *U. of Michigan*
Author: **Michael Jensen**, *U. of Michigan*

This study suggests that deviations from established conventions are evaluated differently depending on the gender of the deviating individual and the audience evaluating the deviation. Female leaders are evaluated more negatively for deviating from conventions than male leaders because of the greater critical attention that stems from their minority status in leadership positions. Moreover, professional evaluators rate female leaders more negatively for deviating from conventions than regular consumers because their expectations of female leaders are likely to be inflated because they recognize the uniqueness of females in leadership positions. Using a sample of 1,135 U.S. films from 2004 to 2015, we find that female directors are evaluated more negatively for deviating from gender-level genre conventions and that the negative evaluation is particularly pronounced among professional critics compared to regular audiences. We do not find any evidence that female directors are evaluated differently for deviating from industry-level genre conventions. Taken together, our study contributes to a more nuanced understanding of audience evaluation on deviance and of underlying factors behind the persistence of female disadvantages in leadership positions.

Paper is Available to Meeting Registrants Only.

Author: **Avani Pimpotkar**, *Wayne State U.*

Previous research has explored the many benefits and drawbacks of using humor in the workplace, deepening our understanding of its effects on various organizational outcomes. One stream of research, in particular, focuses on leaders and how their use of humor can affect followers. However, scholars have paid little attention to how leaders' use of humor affects follower boredom. I argue that this is an important oversight, particularly since boredom is a common feeling in the workplace which can hinder focus, concentration, and performance. Drawing on the appraisal theory of humor and arousal theory of boredom, I propose that leaders' use of humor will help relieve followers' experiences of boredom at work and stimulate creative behaviors. I also propose that gender plays an important role in these relationships and will increase understanding of the conditions in which leaders' use of humor would be most effective. I expect that humor expressed by leaders is likely to have a greater affect on follower boredom and, consequently, follower creative behaviors for male followers. These differences have implications for understanding leadership assessments, managing follower boredom, and inspiring a positive and productive work environment. Results from surveys of both followers and their leader provide partial support for the moderated mediation model presented. Theoretical and practical implications are discussed.

Gender Differences at Work

GDO: [Think Star Performer, Think Male? Existence and Nature of Implicit Star Performer Theories](#)  

Author: **Isabel Villamor**, *George Washington U.*
Author: **Herman Aguinis**, *George Washington U.*
Author: **Kelly Gabriel**, *George Washington U.*

We conducted a research program involving four studies to generate new theoretical insights about the star performer gender gap. Based on inductive and deductive theorizing, experimental and non-experimental designs, multiple analytical techniques, and a dependent quasirandom replication, we discovered the think star performer, think male phenomenon. First, we uncovered the existence of implicit star performer theories (i.e., common shared beliefs) (ISPTs) and the five characteristics star performers are believed to have: Kind, Dependable, Ambitious, Smart, and Fast. Second, we found that ISPTs are gendered because attributes comprising ISPTs were more closely related to masculine attributes (e.g., decisive, desires responsibility) than to feminine attributes (e.g., grateful, helpful). In addition, while implicit theories of male stars are similar to ISPTs, Dependable (with attributes such as reliable, productive, timely), and Ambitious (with attributes such as driven, eager, committed) are believed to be characteristics that female star performers in less traditionally male industries lack. Our results contribute to existing theory as well as future theory building and testing and also have implications on how to mitigate the practically important but understudied societal problem of the star performer gender gap.

GDO: [Workplace Gender Segregation in the “New Economy”](#)

Author: **Alex Makarevich**, *California State U., East Bay*

Using an institutional theory perspective we examine workplace gender segregation and provide a systematic analysis of what the rise of nonstandard employment means for gender inequality in the workplace. We compare four standard and nonstandard employment regimes paying special attention to independent contingent employment - the segment of nonstandard work representing novel and consequential developments in work arrangements. Our analyses based on a comprehensive sample of the U.S. workforce reveal that the overall degree of workplace gender segregation is lower in nonstandard employment, that the degree of segregation corresponds to the degree of attachment to the employer, and that the pattern of segregation in nonstandard work arrangements is not uniform but complex, with some occupations segregated more, not less, despite the overall lower segregation.

GDO: [Knowledge Hiding within Organizations: Do Males and Females Differ?](#)  

Author: **Tatiana Andreeva**, *Maynooth U.*
Author: **Paola Zappa**, *Maynooth U.*

The role of gender in knowledge behaviors remains largely unexplored. We address this topic by examining whether, how and why gender matters in shaping two complementary aspects of knowledge hiding behaviors: frequency of hiding and approaches used by the perpetrator to hide knowledge. We suggest the social roles to which females and males are socialized and the sanctions faced if they behave incongruently with them affect both aspects of knowledge hiding. We explore these ideas in a longitudinal study of participants in the Prolific online platform. Our findings suggest that males hide more frequently and in a way which is congruent with others' expectations on their social role. This study constitutes a first step toward a gender theory of knowledge hiding.

GDO: [Lucky Lady: Antecedents & Consequences of the Exceptional Woman Mindset](#)    

Author: **Dana Kanze**, *London Business School*

Male-dominated organizations are settings that not only devalue women but also misvalue women in ways that are likewise detrimental. What happens when a woman in a male-dominated organization is told that only the strongest of women can survive in that environment, and she is one of the chosen few lucky enough to be working there? Based on theories of resource scarcity, social dominance, and social identity, we propose that a factor of benevolent sexism known as protective paternalism can manifest as expressions of gender scarcity as opposed to gender abundance in organizations. We outline a model by which female numerical minorities in male-dominated organizations are indoctrinated into a “gender mindset,” internalizing the subtitled social identity of being an “Exceptional Woman” valued due to her rarity as a female numerical exception. We reason that a prospective female entrant will trigger a social identity threat to the “Exceptional Woman” who will constitute less of a numerical exception upon her entry, inducing competitive as opposed to cooperative interdependence as a threat response. Rather than competition originating from numerical minorities themselves, our theoretical model sheds light on the institutional inductions of competition that serve to divide and undermine them. By introducing the concept of gender mindset, we provide a theoretical model for developing interventions that foster cooperation, facilitating movement toward gender neutrality in male-dominated organizational settings.

GDO: [Are men just insensitive \(to job experience in their application decisions\)?](#)  

Author: **Brian Rubineau**, *McGill U.*
Author: **Alyson Gounden Rock**, *McGill U. - Desautels Faculty of Management*
Author: **Jean-Nicolas Reyt**, *McGill U.*
Author: **Batia Mishan Wiesenfeld**, *New York U.*

Labor force gender segregation has many contributing mechanisms including gender differences in job application decisions. One widely-reported difference is that for similar levels of job-relevant experience, women are thought to be less likely than men to apply for jobs. Testing for such gender differences presents multiple empirical challenges, and we can find no prior empirical study meeting them all. We leverage data from a labor market including information about jobs considered but not applied for and allowing for a within-individual analysis of job application decisions. We find significant gender differences in the role of job-relevant experience on job application decisions. Men exhibit a one-and-done pattern, where for men with at least one year of job-relevant experience, additional experience plays no role in their job application decisions. Women exhibit a the-more-the-better pattern, where increases in job-relevant experience consistently increase women's likelihood of applying to jobs. For most of our data, women are less likely to apply for jobs than similarly-experienced men. This gender difference goes away for men and women with two or more years of job-relevant experience. We discuss how the gendered patterns of sensitivity to job-relevant experience inform current theories concerning the mechanisms of labor force gender segregation. Keywords: Gender segregation, job applications, labor market

Representation of Women on Boards

GDO: **Cross-Country Examination of Speed of Advancement and Exit of Male and Female Executive Directors**   

Author: **Esha Mendiratta**, *Groningen U. (RuG)*
Author: **Shibashish Mukherjee**, *RSM Erasmus U.*
Author: **Jana Oehmichen**, *U. of Groningen*

In the context of intense global stakeholder pressures to improve female representation in the executive suite, we examine the speed of advancement and exit of first time executive directors around the world. We make two inter-related arguments. First, we argue that while normative pressures from global stakeholders have created a gender premium for women in the form of lower age at the time of appointment vis-à-vis male executive directors, appointed women are also penalized in the form of quicker exits from these positions because of their lower age. Second, we contend that this gender premium and penalty is contingent on the local gender norms in a society such that lower gender parity leads to a higher premium and penalty for these women. Results based on a sample of 15,202 first time executive directors from 6,452 firms in 33 countries largely support our theoretical predictions.

Paper is Available to Meeting Registrants Only.

GDO: **Regulation and the Trickle-Down Effect of Women in Leadership Roles: An Attention-Based View.** 

Author: **Aaron Page**, *U. of Exeter Business School*
Author: **Ruth Sealy**, *U. of Exeter Business School*
Author: **Andrew Parker**, *U. of Exeter Business School*

The gender diversity of a board can trickle-down to increase the representation of women in lower-level management roles. Although this relationship has been well established by prior research, little is known about how trickle-down effects are influenced by external events in a firm's environment. Using the attention-based view of the firm as a theoretical framework, we present a natural experiment that demonstrates how the trickle-down effect is influenced by regulation in a firm's external environment. Specifically, we focus on the implementation of a regulatory target aimed at increasing the representation of women on the boards of firms listed on the FTSE 350 Index. The results of this paper provide evidence of a positive relationship between female board representation and female senior management representation in the pre-regulation era. However, the introduction of regulation substantially weakens this trickle-down effect, such that the representation of women at board level ceases to have a meaningful impact on the subsequent representation of women in senior management. This suggests attention and action of the board and senior management team becomes misaligned after regulatory targets are set. We discuss the implications of the findings for research on trickle-down effects and the attention-based view.

Paper is Available to Meeting Registrants Only.

GDO: **0% Female Directors as an Aspiration Level – Gender Targets for German Corporate Boards**  

Author: **Luise Pentter**, *Otto-von-Guericke U. Magdeburg*

This paper discusses the antecedents of firms' target-setting for female representation on executive boards as a signal of intent. Our analyses are based on targets disclosed by firms in their annual reports and supplemental secondary data. We find that firm size, prior female executive board representation, executive board size as well as female representation on the supervisory board predict firm targets. Our findings suggest that the motivations for aspirational talk on gender representation are similar to those of actual female representation i.e. signals of quality. We contribute to literature on signaling and voluntary quotas in the gender context by distinguishing between quality signals and signals of intent.

Paper is Available to Meeting Registrants Only.

GDO: **The Illusion of Inclusion: Examining Trickle-Down Effects of Board Gender Quota Regulation in India**   

Author: **Esha Mendiratta**, *Groningen U. (RuG)*
Author: **Hammad Ul Haq**, *U. of Groningen*

Proponents of board gender quotas argue that such policies ought to generate trickle-down effects in the form of higher female executive appointments within organizations because of female directors' motivation and ability to correct firm level gender imbalances. In this study, we argue and show that such normative arguments may not be reflective of social realities of historically male dominated corporate boards. Grounding our theoretical ideas in the attention based view, we argue that such policies increase appointments of female directors because of the mandated shift in firm level attention towards the issue. However, given the controversial nature of such policies and gender differences in status and power, such policies may have unintended consequences of negative trickle-down effects where firms reduce appointment of women in senior executive positions. Analysis on a sample of 185 largest, publicly listed firms in India during 2008-2017 find support for our theory.

Gender Diversity and Equity Issues

GDO: **Unleveled playing fields: Gendered institutional entrepreneurship and deviance neutralization**  

Author: **Eun Young Song**, *U. College London*

Although existing studies highlight that new institutional logics are grounded in pre-existing norms and beliefs in society, few studies have examined how a society's gendered expectations can shape and constrain the development of a new logic. To address this gap, I focus on the first American movement for bird conservation from 1889 to 1920 and the movement participants' responses to women's institutional entrepreneurship. Specifically, I investigate a mechanism that is responsible for the slow expansion of the new logic and that perpetuates gender inequality throughout the bird conservation movement: deviance neutralization. This is an individual strategy to counteract perceived deviance from gender norms by living up to society's gendered expectations. When female participants introduce a new technology-based practice and hold leadership positions that enable them to further the movement, movement participants see the women's entrepreneurial action as deviance from generally expected feminine qualities. To neutralize such deviance, movement participants are less likely to promote what these women campaign for, environmentalism. I test this mechanism using an event count analysis of individual contributions, by article count, to the movement's bimonthly magazine that shared the movement's vision with the public. I find that the more women implemented a new practice and the more women occupied official positions, the fewer contributions participants were likely to make to the magazine. The findings of this study extend current understanding of institutional entrepreneurship using the lens of gender, and the mechanism of gender inequality in even progressive movements. They also have practical implications for addressing deviance neutralization today.

GDO: **The Unintended Consequences of Organizational Gender Diversity Strategies on Psychological Safety**  

Author: **Stephanie Smallets**, *U. of Southern California*
Author: **Andrea Villafuerte**, *USC Marshall School of Business*
Author: **Leigh Plunkett Tost**, *U. of Southern California*

As gender equity continues to be a pressing goal, organizations are increasingly adopting gender diversity management strategies, and sometimes these strategies may have unintended consequences. Researchers have identified two primary competing gender diversity management strategies: the gender blindness strategy, which encourages downplaying gender differences, and the gender awareness strategy, which encourages celebrating gender differences (Koenig & Richeson, 2010; Martin & Phillips, 2017). We propose that the gender blindness approach, despite having potential positive consequences for women (e.g., Martin & Phillips, 2017), leads to lower psychological safety among employees, compared to a gender awareness approach or no strategy at all. We also argue that, as a consequence of this effect on psychological safety, a gender blindness strategy reduces perceptions of organizational openness to diverse opinions and increases employees' vigilance of speech. We find support for these ideas in two pre-registered experimental studies.

GDO: **Regulatory Mandates and Gender Diversity in Corporate Boards: The Family Firm Effect**   

Author: **Raveendra Chittoor**, *U. of Victoria*
Author: **Nupur Pavan Bang**, *Indian School of Business*
Author: **Ramachandran Kavil**, *Indian School of Business*

Regulatory mandates by various governments on women representation in company boards play an important role in fulfilling the sustainable development goal 5 (SDG-5 on gender equality) adopted by the members of United Nations. In this paper, we explore the heterogeneity in firm responses to such a regulatory mandate introduced by the Indian government in 2014. We propose that, driven by the need to build legitimacy among internal and external stakeholders, family firms are more likely to comply with the mandate, when compared to non-family firms. However, family firms are also driven by considerations to leverage woman family members and minimize board independence and hence are likely to appoint a woman executive director rather than an independent director. Within a sample of family firms, this pattern of behaviour is more likely among standalone firms when compared to firms belonging to family-owned business groups. We find supportive evidence in a comprehensive panel data sample of 1507 publicly listed Indian firms over a five year period (2013 to 2017), consisting of pre- and post-regulation years.

GDO: **Social Sustainability: Challenges and Opportunities (WITHDRAWN)**   

Author: **Maria Fernanda Wagstaff**, *U. of Texas at El Paso*
Author: **Gabriela Flores**, *Southwestern U.*
Author: **Rawia Ahmed**, *Zayed U.*
Author: **Sarah Villanueva**, *U. of Texas at El Paso*
Author: **Erica Helena Salvaj**, *U. del Desarrollo*

The purpose of this study is to examine individual responses to gender inequality in organizational settings. In this process, we consider different perspectives and conceptualizations. To accomplish this goal, we analyze interviews of female leaders from different countries around the world. Results reveal how female leaders respond to unequal treatment. We discuss implications of our findings for theory and practice. In particular, we consider the role of responses to gender inequality in theories of cross cultural human resource management and propose opportunities for leadership development.

Presenter: **Ramona L. Paetzold**, *Texas A&M U.*

This symposium focuses on the experiences and strategies of persons with disabilities and the disclosure and identity management steps they take to manage their careers. The conceptual foundations are stigma, identity, and disclosure. The session incorporates organizational-level phenomenon, such as HR practices for disclosure and hiring intentions; and individual-level studies of employee disclosure and advocacy, accommodation, identity, and career success over time. We contribute empirically to research on diversity and disability disclosure to improve employment outcomes for this population. While we are focused on disability, our findings are applicable to other minority groups (e.g., sexual minorities, refugees) who may experience disclosure dilemmas.

Our goal in the current symposium is to build on this base of knowledge regarding the barriers faced by refugees, and to present research that unpacks the processes and factors that enable refugees to overcome tremendous challenges in pursuing successful employment from multiple perspectives. In doing so, we provide deeper insight into the problems and challenges that refugees face, provide preliminary solutions, and make theoretical contributions in the field. Finding solutions to the barriers that refugees face is necessary, as research has found that the single most important factor for successful refugee resettlement is securing employment (Porter & Haslam, 2003). From a theoretical standpoint, researchers have started to criticize current career theories for failing to describe the careers of underprivileged people, such as refugees, as underprivileged people often lack agency and choice in their careers (Duffy, Blustein, Diemer, & Autin, 2016). Thus, the scholarship presented here aligns with the 2021 conference theme Bringing the Manager Back in Management, as managers increasingly face the challenge of shaping how organizations are perceived by society. Our symposium addresses critical questions pertaining to the successful management of organizations, such as factors that can enable refugee career adaptability, how managers successfully and ethically integrate refugees into their workplace and identifying potential barriers refugees may face during their job search process. We focus on the two major career choices refugees face: traditional employment and entrepreneurship.

Mental Health Challenges at Work  
Mental Health Challenges at Work

Organizer: **Emily Rosado-Solomon**, *California State U., Long Beach*
Discussant: **Neal M. Ashkanasy**, *U. of Queensland*

This symposium includes four papers that provide diverse yet complementary perspectives on mental health challenges at work. Whereas many employees face mental health challenges in the course of their employment—underscored by the fact that one in six employees have a mental illness—mental health challenges are persistently under-examined in management research. The papers in this session are diverse in their contextual focus, temporal focus (e.g., short-term challenges versus chronic mental illness) and analytic approach, yet have commonalities that serve to promote a cohesive multifaceted view of this topic. For instance, multiple papers in this session investigate the role of work-related antecedents to mental health challenges and the role of support in helping—or failing to help—those with mental health challenges. Of note, all these studies uncover nuanced and complex dynamics that underscore the futility of merely trying to “fix” employees’ mental health challenges with simplistic interventions. Following presentation of the papers, integrative commentary will be provided that suggests fruitful opportunities for future research on mental health challenges at work.

Over the past few decades, research on the inclusion of employees with a disability has allowed for theoretical as well as practical contributions. A key focus of this research has been on how best to include (e.g., through accommodations, legislation) those with a disability in the workplace (Beatty, Baldrige, Boehm, Kulkarni, & Colella, 2019). While this research has alluded to the importance of allies and detractors in influencing workplace inclusion, this topic has not received as much research attention. Specifically, allies can support others through affording tangible help, support, defense from threats, and policy advocacy (Asta & Vacha-Haase, 2013; DiStefano, Croteau, Anderson, Kampa-Kokesch, & Bullard, 2000; Sabat et al., 2013; 2014). To address this important albeit under-researched area, this presenter symposium features five research papers by well-known disability scholars. Together, these studies summarized below, extend the boundaries of disability research by highlighting who can be an ally (e.g., internal stakeholders such as managers, external stakeholders such as vocational rehabilitation employees), when, and forms of help extended by such allies.

Organizational Processes and Patient Safety Outcomes

Processes and Safety

HCM: **Organizational and Individual Contributing Factors to Safety Climate in Healthcare Industries**

Author: **Yimin He**, *U. of Nebraska at Omaha*
Author: **Jin Lee**, *Kansas State U.*
Author: **Yueng-hsiang Huang**, *Oregon Health and Science U.*
Author: **Chang-Ya Hu**, *National Chengchi U.*
Author: **Bowen Shi**, -

Research has demonstrated that safety climate is a robust predictor of organizational safety outcomes. The current study aims to identify individual and joint key drivers of safety climate in healthcare industries using Bayesian Network simulations to explore which individual or combinational factors can be leveraged to most effectively improve safety climate for the healthcare industry. We collected the survey data from 452 employees from one hospital in China and use Bayesian Network analysis to identify the best key drivers and joint strategies for safety climate improvement. The results from Bayesian Network analyses showed that among the five contributing factors, interpersonal trust and locus of control had the strongest independent effects on safety climate. Moreover, the results indicated that the best two joint strategies for promoting safety climate were the joint optimization of error disclosure culture and interpersonal trust as well as error disclosure culture and self-efficacy. The findings suggest that hospital safety climate can be improved by providing a psychologically safe error disclosure culture and enhancing interpersonal trust among employees and their self-efficacy.

HCM: **The Incomplete, Outdated, Incorrect, and Unknown: Mitigating Threats to Knowledge Errors**

Author: **Alden Lai**, *New York U.*

HCM Division Best Paper Based on a Dissertation

Patient-centered medical homes (PCMHs) are a type of high-performance primary care clinics where workers are constantly acquiring and processing information about patients to help ensure their health and safety. Because PCMH workers have to acquire fragments of information from various sources that are not always coordinated, they can commit knowledge errors when they do not know certain facts, or are unable to form an appropriate cognitive representation of a patient situation. Given this complex informational environment, I use a qualitative approach to explore how PCMH workers handle knowledge errors at work. The findings reveal that PCMH workers encounter four types of informational threats to knowledge errors – information that is incomplete, outdated, incorrect, and unknown. To address these threats, PCMH workers engage in various modes of information acquisition, which result in two different knowledge outcomes. The first is maximized knowledge, which contributes to decision-making, such as the formulation of diagnoses and care plans. The second is elaborated knowledge, which represents a new understanding of a situation that is enhanced by what was previously unknown, such as linking a patient's personal life conditions with their health status. These discoveries contribute to the error literature by examining error from an information-processing perspective, and how efforts to prevent knowledge errors create different kinds of knowledge in organizations. More generally, because knowledge errors have typically been studied in the context of technical systems, this paper indicates the need for a more complex view where information acquisition is also highly relational in nature (i.e., based on agent-client interactions).

HCM: **Patient Education for Infection Prevention: Roles for Managers in Patient Engagement**

Author: **Sarah MacEwan**, *The Ohio State U. College of Medicine*
Author: **Eliza Beal**, *The Ohio State U. College of Medicine*
Author: **Alice Gaughan**, *Ohio State U.*
Author: **Cynthia Sieck**, *Ohio State U.*
Author: **Ann Scheck McAlearney**, *Ohio State U.*

Device-related healthcare-associated infections (HAIs), such as catheter-associated urinary tract infections (CAUTIs) and central line-associated bloodstream infections (CLABSIs), are largely preventable. Patients have the potential to contribute to HAI prevention when they are educated about their risks and actions they can take to mitigate those risks. However, there is little evidence regarding what patient education is needed to engage patients in the prevention of these infections. This study examined perspectives of hospital leaders, managers, and frontline staff about the use of patient education to support CAUTI and CLABSI prevention efforts. The Engagement Capacity Framework (ECF) was used to understand how our findings about patient education may impact patient engagement in infection prevention. Interviews with 471 key informants were conducted across 18 hospitals. Participants identified patient education topics specific to the prevention of CAUTIs and CLABSIs, as well as patient education challenges and opportunities for improvement. Based on these education topics, aspects of the four ECF dimensions—patient resources, self-efficacy, willingness, and capabilities—necessary to engage in infection prevention were identified, which informed suggested roles for managers to support patient engagement through patient education. These educational topics and suggestions for managers can help guide successful strategies to engage patients in infection prevention.

HCM: **Accounts of Restorative Reconciliation After Medical Injury: Implications for Risk Management**

Author: **Jeffrey Driver**, *Weatherhead School of Management, Case Western Reserve U.*
Author: **Philip A. Cola**, *Weatherhead School of Management, Case Western Reserve U.*

This research is a qualitative examination of how patients and families describe their long-term recovery in the aftermath of a significant or fatal accidental patient medical injury (PMI). The research is designed to achieve three objectives: (1) explore the continuing lived experiences of those impacted by PMI, (2) advance industry knowledge and management of PMI response, and (3) build on existing voluntary communication-and-resolution program and PMI management infrastructure to activate the potential of CRP discussions, design, and research. We used qualitative data from interviews with 25 of 27 PMI-impacted individuals across the U.S. and Canada to examine acknowledged and existing knowledge gaps pertaining to patient or surviving family member long-term reconciliation and restorative justice. The research concludes by suggesting an emerging theory of 'restorative reconciliation' that begins to delineate an actionable process to advance long term non-compensatory recovery from loss, individual healing, and justice after PMI. We do so by focusing on analysis and synthesis of our data, culminating in our initial discovery of a triad of overarching influencers of an individual's restorative reconciliation after PMI – the influencing factors of understanding, accepting, and redirecting within a spatial recovery dimensions model.

Functionality of Work Environments: Impacts on Workforce Motivation and Wellbeing

Workforce

HCM: Perceived Organization-Profession Goal Conflicts and Work Motivation among Healthcare Professionals

Author: **Hyunjin Woo**, *U. of Toronto*

Healthcare organizations often present goals and values that conflict with those held by public health policies and healthcare professions, and this organization-profession goal conflict can influence work motivation among healthcare professionals. However, as most work motivation theories have primarily focused on micro-level factors, research has rarely been conducted to understand how perceived organizational goal conflicts influence the type of work motivation that healthcare professionals develop. To fill the research gap, this paper builds a process model on motivation development among healthcare professionals, with particular focus on those who perceive organizational goal conflicts and choose to identify with either their organization or profession. In this model, I suggest that one of four motivational situations (i.e., M1~M4) will occur depending on organizational contexts and each professional's social identification choice. This model tries to predict motivation development and suggest what management strategies will be effective for each motivational situation.

Paper is Available to Meeting Registrants Only.

HCM: Upholding of Routines in Interprofessional Collaboration: A Qualitative Study in Nursing Homes

Author: **Christian P. Kortkamp**, *U. of Goettingen*

Author: **Clarissa E. Weber**, *U. of Goettingen*

Building on research on routine dynamics and interprofessional collaboration (IPC), in this study we investigate how actors in interprofessional dyadic routines engage in upholding efforts to ensure continuous routine performance when one actor is temporarily absent during routine enactment. We conduct a qualitative field-study of routines in IPC between geriatric nurses (GNs) and general practitioners (GPs) in German nursing homes. Our findings show how routine participants engage in creative tactics, which allow for upholding the routine even when one actor cannot continuously be present for routine enactment. They do so by ensuring direct and timely communication and enabling a flexible reconfiguration of resources and roles. Furthermore, we explore conditions for the effective application of the tactics and outline a process model for upholding dyadic routines when one actor cannot continuously be present. Our study contributes to the literatures on organizational routines and IPC.

HCM: Can't Stop Eating My Feelings: The Maladaptive Responses of Abused Employees

Author: **Asfia Obaid**, *National U. of Sciences & Technology (NUST)*

Author: **Hussain Tariq**, *National U. of Sciences and Technology (NUST)*

Author: **Muhammad Subhan**, *National U. of Sciences and Technology*

Although organizational research on abusive supervision and its detrimental effects on individuals and organizations has become increasingly popular, little attention has been paid to subordinate's maladaptive responses to abusive supervision. We, synthesize on self-regulatory theory, to investigate one common but ignored subordinate's maladaptive response to abusive supervision: subordinate overeating behavior. We conducted a multi-wave experience sampling study on ten consecutive working days (N = 115 employees and 1150 daily surveys) to investigate the relationship of abusive supervision, subordinate negative mood, and overeating behavior. We, from the perspective of self-regulatory impairment, found that subordinate's perceptions of abusive supervision instills a sense of negative mood, which in turn loses control over his/her behavioral intentions towards overeating behavior. Moreover, our findings found that subordinate's recovery experiences at the workplace mitigates the depleting effects of abusive supervision, such that employees are less susceptible to the effects of abusive supervision on overeating behavior when they are high in recovery experiences at the workplace. Implication for theory and practice are discussed.

HCM: Differences in Work Attitudes when Nurses Get their Ideal Roster Based on their Shift Preferences

Author: **Herlinde Wynendaele**, *Ghent U.*

Author: **Jeroen Trybou**, *Ghent U.*

Author: **Paul Gemmel**, *Ghent U.*

Author: **Dries Myny**, *Ghent U.*

Author: **Ellen Peeters**, *The Open U., Netherlands*

Background: Unattractive work schedules can be a cause of discontentment for nurses. Moreover, optimizing the fit between nurses' preferences in shifts and obtaining and securing organizational goals, is very complex. Aims: To gain insight into (1) the preferences in shifts of individual nurses and (2) the discrepancy between the "imposed roster" (drawn up by the manager or head nurse) versus the "nurses' ideal roster" (ideal for the individual nurse, without regard to any restrictions) through four work attitudes, i.e. autonomy, job satisfaction, work-life balance and employer attractiveness. Method: An exploratory cross-sectional pilot study where the focus lies on descriptive statistics rather than formal hypothesis testing. Results: The results showed a significant difference in the mean score of nurses' their autonomy, job satisfaction, and work-life balance when the "nurses' ideal roster" would be used. Nurses' preference in shifts were mapped into three groups with similar preferences. Two cluster groups showed a significant higher median autonomy, work-life balance and job satisfaction in case of the nurses' ideal roster. These groups showed no large differences with regard to their personal characteristics. Conclusion: This pilot study already indicates that nurses' ideal roster can lead to better work attitudes, and that groups of people exist with differences in shift preferences. The next step is to perform more advanced analyses in newly collected data, which aim to account for common method bias, clarify the characteristics of the different groups and take the discrepancy between the two rosters into account.

Bringing the Manager Back in Management: Implications for Healthcare

HCM: **What do Practitioners Want to Know about Managing the Performance of Healthcare Delivery Systems?**

Author: **Jenna M. Evans**, *McMaster U.*
Author: **Julie Gilbert**, *Cancer Care Ontario*
Author: **Jasmine Bacola**, *Cancer Care Ontario*
Author: **Victoria Hagens**, *Cancer Care Ontario*
Author: **Vicky Simanowski**, *Ontario Health*
Author: **Philip Holms**, *Ontario Renal Network*
Author: **Rebecca Harvey**, *Ontario Renal Network*
Author: **Garth Matheson**, *Cancer Care Ontario*

Few studies engage end-user groups in setting research priorities at the intersection of healthcare and management. With health systems increasingly establishing “Performance Management” (PM) programs to account for and incentivize performance, it is important to conduct research that is meaningful to and actionable by the end-users involved with or impacted by these programs. The aim of this study was to co-design a research agenda on healthcare PM with and for end-users in a specific jurisdictional and policy context. We undertook a rapid review and conducted end-user interviews that included a quantitative ranking exercise to prioritize directions for future research. Seventy-three interviews were conducted with 156 end-users. End-user groups prioritized different research directions. Despite this variation, a research direction on motivating improvement had the highest overall priority ranking and was modified based on end-user feedback to include an explicit behaviour change lens and stronger consideration for the influence of context. Joint research priority-setting resulted in a practice-driven research agenda capable of generating results to inform management practice and contribute to the literature. The results suggest that practitioners are keen to open the “black box” of PM to explore more nuanced questions beyond “does PM work?” Practitioners want to know how, when, and why PM contributes to behaviour change (or fails to) among front-line care providers. Keywords: research priority-setting; research co-design; performance management; performance incentives; behavior change; embedded research; healthcare; network governance

HCM: **The Identity Work of Medical Directors as Collateral Construction**

Author: **Emilie M. Gibeau**, *Royal Military College of Canada*
Author: **Fernando Fachin**, *Royal Military College of Canada*

We examine identity work performed by autonomous professionals who undertook management roles and over time experienced shifting pressures from different sources. Over a period of 21 months, we interviewed and observed 20 physicians in four different health care organizations, as they assumed their management role as medical directors of their institutions. We identified three distinct trajectories in their identity work. In particular, individuals who were successful in the role self-defined by including indirect positive definitions of others were also found to integrate positive constructions of self in their new role and to perform it according to expectations. We refer to this interactional accomplishment as “collateral identity work” that sustains the self-narrative by including the definition of others.

Paper is Available to Meeting Registrants Only.

HCM: **Local Physician Practice Migration and Changes in Practice Style**

Author: **Gary J Young**, *Northeastern U.*
Author: **David Zepeda**, *Northeastern U.*
Author: **Stephen Flaherty**, *Stonehill College*
Author: **Ngoc Thai**, *Northeastern U.*

Much interest exists in identifying strategies for changing physician practice style as research demonstrates that many physicians practice in a way that is not aligned with the best available scientific evidence. We investigated the extent to which a physician’s work environment influences practice style versus training and personal preferences. We used multiple data sources to track physician migrations to new practice settings within a single state over a span of eight years to assess changes in practice style. For practice style, we focused on inappropriate use of diagnostic imaging as we had data showing that rates of inappropriate imaging varied markedly by practice settings. Drawing from contextual shift and social contagion theories, we examined changes in physician practice style at two levels of a work environment, the practice organization comprised of peers who shared administrative arrangements, and practice site comprised of peers who shared actual physical working space. Study results indicate that migrating physicians changed their practice style for imaging quickly and substantially in conformance with the prevailing pattern of their new work environment regardless of whether or not the pattern was aligned with evidence-based standards for diagnostic imaging. The magnitude of change was greatest for shared physical space but effects also diminished as variability in the use of inappropriate imaging increased within the peer group. Policy makers and healthcare managers do have leverage for improving physicians’ adherence to evidence-based guidelines but strategies should most likely be directed toward developing strong peer influence at the physicians’ local work environment.

HCM: **Leader-member Exchange and Innovative Work Behavior in Saudi Nursing Context**

Author: **Basheer M. Al-Ghazali**, *King Fahd U. of Petroleum and Minerals*

William H. Newman Award Nominee

Innovation is critical to add value to the individual and community health and it can be done by improving healthcare workers’ innovative work behaviors. Leadership of immediate supervisors is an important catalyst to encourage innovative work behaviors. The purpose of this study is to explore the effect of leader-member exchange on nurses’ innovative work behavior. Moreover, the mediating effects of psychological empowerment and knowledge sharing behavior are also examined. Data were collected from 337 nurses and their immediate supervisors (137 nurse managers) from seven public hospitals in Saudi Arabia. Results show that psychological empowerment and knowledge sharing mediated the effect of leader-member exchange on innovative work behavior. Theoretical and practical implications and future area of research are discussed at the end.

Better Together: The Influence of Teams and Teamwork in the Workplace

Teams and Teamwork in the Workplace

HCM: Surgical Team Effectiveness Model: Team Awareness mediates subculture teamwork and communications

Author: **Tobi Lam**, *U. of Toronto*

Author: **Melanie Hammond Mobilio**, *U. of Toronto*

Author: **Carol-anne Moulton**, *U. Health Network*

The Institute of Medicine (Kohn et al, 2000) reports that effective team function is a core principle of safe health care systems. Lemieux-Charles and McGuire (2006)'s Integrated Team Effectiveness Model (ITEM) provides a comprehensive and adaptable framework for describing healthcare team effectiveness. Here we adapt the ITEM within the microenvironment of surgical team design based on the ad hoc nature of a Standard Roles Variable Personnel construct (Andreatta, 2010). With the changing nature of personnel, we propose that team monitoring requires a degree of constant awareness to changes in membership and task prioritization throughout the course of a surgery. We propose the concept of Team Awareness, the negotiation of Standard Roles Variable Personnel at the level of the individual as a mediator between teamwork and organizational outcomes. The implications of Team Awareness are necessary for understanding how individuals balance between competing priorities in team subcultures. Describing a group-level context for surgery offers the opportunity to shift agency towards individuals' role in effectiveness. The result is a Surgical Team Effectiveness Model, an understanding of the relationships between teamwork and organizational outcomes in surgery. This model may be valuable for soliciting organizational and team member support for improving teamwork in the operating room.

HCM: Team Faultlines, Professional Stereotypes and Leadership in Interprofessional Teams

Author: **Galia Sheffer Hilel**, *Tel-Hai academic college*

Author: **Anat Drach-Zahavy**, *U. of Haifa*

Author: **Ronit Endevelt**, *U. of Haifa, Israel*

Despite the calls for ensuring quality care via interprofessional teamwork, interprofessional teams do not necessarily fulfill its potential to perform effectively. This study focused on professional stereotypes emerging in interprofessional teams and examined the contingency effects of interprofessional teams' faultlines, professional stereotypes and the leader's championship behaviors. The model was tested with a nested sample, consisting of 59 interprofessional teams working in geriatric facilities, and 5-7 residents that they cared for. Data collection employed a multi-source (interprofessional team members) multi-method (questionnaires and data from residents' medical files) strategy. The results indicated that faultlines are not harmful to team's quality of care, however rather they can mitigate team quality of care only when team stereotypes emerge. Furthermore, whereas teams typified by high professional stereotypes require a person-oriented type of championship leadership, for teams typified by low team stereotypes championship leadership harms team's quality-of-care. These findings carry implications for handling interprofessional teams.

HCM: Contribution of an Inclusive Climate to the Work of Culturally Diverse Healthcare Teams

Author: **Timur Uman**, *Jönköping International Business School*

Author: **Ellinor Edfors**, *Kristianstad U.*

Author: **Anna-Karin Edberg**, *Kristianstad U.*

Author: **Sergio Padoan**, *Kristianstad Central Hospital*

The purpose of the study is thus to explore the contribution of inclusive climate to the work of culturally diverse healthcare teams. This study has a qualitative descriptive design and is based on 17 interviews with health care professional in an acute unit of a regional hospital in Sweden. The study adopts general inductive approach for analyzing qualitative data. Findings of the study suggest that an inclusive climate serves as an important catalyst for the effective functioning of these teams by highlighting the value of individual and team differences and similarities, stimulating meaningful interaction among culturally diverse healthcare team members, and assisting in establishing engagement structures that benefit the work of these teams. These findings demonstrate the importance of introducing an inclusive climate into healthcare organizations that increasingly employ culturally diverse healthcare teams and identify the mechanisms through which these practices benefit patients, healthcare, and organizations.

HCM: When the Personality of Others Matters: Self-monitoring, Homophily, and the Origins of Brokerage

Author: **Stefano Tasselli**, *Erasmus U. Rotterdam*

Author: **Alberto Caimo**, *Technological U. Dublin*

Author: **Alessandro Lomi**, *U. of Italian Switzerland*

Author: **Martin J. Kilduff**, *UCL School of Management*

We investigate whether the personalities of the professionals with whom individuals interact help explain the extent to which individuals occupy brokerage positions in social networks. We draw on self-monitoring theory and research concerning the extent to which people flexibly adapt attitudes and behaviors to the demands of different situations. We suggest that differences in self-monitoring personality affect social structure beyond the reach of the individual. In Study 1, we use cross-sectional data on advice relations in a hospital to investigate patterns of similarity matching. We find that high self-monitors attract advice requests mainly from high self-monitors, and low self-monitors from low self-monitors, although high self-monitors receive more advice requests overall. In Study 2, we use longitudinal data on advice relations within a post-graduate cohort, to show that high self-monitors come to occupy network brokerage roles to the extent that they are sought for advice by other high self-monitors. High self-monitoring contacts tend to remain unconnected from each other whereas low self-monitoring contacts tend to interact with each other. In contrast to existing research that emphasizes the agency of focal individuals, our research reveals the extent to which brokerage opportunities depend on the personalities of those with whom professionals interact.

Evolution of Digital HR

HR: **Digital Technologies and Expatriation – A Systematic Literature Review**

Author: **Jana Bucher**, *Leuphana U. Lüneburg*
Author: **Jürgen Deller**, *Leuphana U. Lüneburg*

Over the last two decades, the impact of digital technologies on the management of international assignments (i.e., expatriation) has gained increasing attention by researchers across the world. Although, studies on the influence of digital technologies on the expatriation process exist for 20 years now, most researchers focus on conventional face-to-face expatriate assignments. Given the new relevance of digital technologies in a COVID-19 pandemic affected world, we reviewed existing expatriation literature between 2000 and 2020 to guide future research. Our review shows that the entire expatriation cycle is influenced by various digital technologies and that global HR practices need to reflect the increasing use of digital technologies from an integrated perspective. We point to the emergence of advanced technologies (i.e., Virtual Reality) and their potential for expatriation. Thus, understanding the transformation and digitalization of expatriation should be the focus of researcher and practitioners aiming to adapt expatriation to the new normal.

HR: **Making digital transformation work: Drivers and barriers in HRM digitalisation**

Author: **Neil Lowndes**, *Trinity College Dublin*

Digital transformation has transcended contemporary people management practices, spurring fast developments in HRM digitalisation. Despite the progress made in HRM digitalisation during the past few decades, a few major questions remain unanswered. For example, the conceptualisations of digital HRM are limited and inconsistent. In addition, scant research has examined how organisations are using digital HRM, and few studies have investigated the predominant drivers and barriers pertinent to HRM digitalisation. The present study capitalised on these research opportunities, particularly the drivers and barriers of digital HRM, by adopting a qualitative approach and conducting 20 in-depth interviews with HRM professionals involved in digital HRM. The findings inferred that digital HRM was conceptualised relative to data and technology. The adoption of digital HRM was relative to various selection criteria, digital platforms in use, transition and integration of digital HRM tools. Digital HRM drivers constituted organisational support and efficiency as a benefit, whilst barriers comprised lack of user training and employee resistance. The results and implications for future research are discussed.

HR: **Whether and when e-HRM improves organizational performance: A meta-analysis**

Author: **Yuan Cheng**, *School of Business, Renmin U. of China*
Author: **Yunqing Zou**, *School of Business, Renmin U. of China*

Using information technology, a growing number of companies have adopted a digital approach to human resource management. We provide evidence and propose a framework to confront two questions: Does e-HRM adoption effectively enhance organizational performance? If e-HRM does matter, what factors would facilitate the adoption of e-HRM? To address these questions, we conducted a meta-analysis of e-HRM. The results generally supported our framework. Our findings provide meaningful and timely implications for future research and e-HRM adopters.

HR: **Pluralism and Digitalization: Reinstalling Employee Voice for Social Sustainability**

Author: **Verena Bader**, *Bundeswehr U. Munich*
Author: **Georg Loscher**, *Bundeswehr U. Munich*

In this paper we ask how pluralism in organizations matters for the evolution of social sustainability when digital technologies are implemented. To do so, we explore employment relationships in seven case organizations that implemented new digital technologies. We identify three pluralist negotiation practices alongside digitalization: controverting, envisioning, and experimenting. Divergent activities within these practices transformed pluralism into two forms—asymmetric pluralism and eye-level pluralism—both laying the ground for different pathways of social sustainability. While the former fosters surveillance capitalism and erodes employee voice, the latter paves the way for sustainable organizing within digitalization. By emphasizing the importance of pluralism for digital transformation, our paper offers a positive perspective on how digital technologies can be implemented within organizations in a fair and socially sustainable way.

Pay, Perceptions, and Firm Outcomes

HR: [Sparkling Creativity among Manufacturing Workers using Extrinsic Rewards](#)

Author: **Caihui Lin**, *U. of Queensland*
Author: **Helen Shipton**, *Human Resources*
Author: **Weili Teng**, *Nottingham Trent U.*
Author: **Adam Kitt**, *Nottingham Business School, Nottingham Trent U.*

The relationship between extrinsic rewards and creativity has been debatable. In particular, there is a lack of research in the manufacturing sector. In this study, using 187 employee-supervisor dyads in an electronics manufacturing company, this study investigated how and when extrinsic rewards may foster creativity among manufacturing workers from a conservation of resources perspective. We found that employee psychological availability mediated the relationship between extrinsic rewards and creativity. However, this relationship only held when employees rated their leader-member-exchange (LMX) as high and when their uncertainty avoidance orientation (UAO) was low. The findings reveal the important role of extrinsic rewards in guiding manufacturing workers' resource investment and stimulating creativity. The identification of LMX and UAO as moderators uncovers crucial boundary conditions of this relationship. Theoretical and practical implications are discussed.

Paper is Available to Meeting Registrants Only.

HR: [Dispersed or Skewed? An Expanded Conceptualization of Pay Dispersion and Firm-Level Implications](#)

Author: **Joonyoung Kim**, *Cornell U.*

This article extends prior research on the performance implications of horizontal pay dispersion. Prior research has shown mixed evidence about the influence of pay dispersion, and most studies have conceptualized and measured pay dispersion based on its variance and range. I expand the conceptualization of pay dispersion by suggesting pay skewness as a supplementary measure. I then hypothesize that the benefits of pay dispersion are magnified (and its drawbacks are mitigated) when the pay distribution is negatively skewed, and the drawbacks of pay dispersion are exacerbated (and its benefits are weakened) when the pay distribution is positively skewed. Longitudinal analyses of five-wave panel data yield general support for my expanded conceptualization of pay dispersion and my hypotheses.

Paper is Available to Meeting Registrants Only.

HR: [The Effects of Pay Equity Perceptions and Pay Transparency on Personal Pay Disclosure](#)

Author: **Ormonde Cragun**, *U. of Minnesota, Duluth*
Author: **Jason Kautz**, *U. of Texas at Dallas*
Author: **Lin Xiu**, *U. of Minnesota, Duluth*

Pay transparency and pay disclosure represent a top-down and a bottom-up perspective on pay information transfer, respectively. Yet, despite the importance of understanding the cross-level implications of both pay transparency and pay disclosure, there is little research considering both perspectives simultaneously. Utilizing an experimental design, we seek to untangle the effects of pay equity perceptions (individual-level) and pay transparency policy and practice (organizational-level) on employees' enactment of pay conversations. Using ANOVA and structural equation modeling, we find pay equity perceptions are negatively related to the likelihood of holding a pay conversation and positively related to the perceived credibility of the information in that conversation. We find pay equity perceptions are negatively related to pay seeking behaviors but positively related to pay sharing behaviors. We find pay transparency policy and practice are positively related to the likelihood of holding a pay conversation, but only together do they affect the credibility of the information exchanged during a pay conversation. Thus, while pay transparency policy and practice encourage pay conversations, high pay equity perceptions discourage individuals from seeking pay information. Such a situation indicates that employees who perceive high pay equity may be operating under a false understanding of pay within the organization. Finally, this study shows pay transparency and policy have unique effects that warrant future study.

Paper is Available to Meeting Registrants Only.

HR: [Examining the Relationship between Bonus Pay and Voluntary Turnover](#)

Author: **Rakoon Piyanontalee**, *U. of Wisconsin, Madison*

Winner of HR Division Best Student Paper Award

William H. Newman Award Nominee

The relationship between bonuses and turnover is far from simple because bonuses not only influence the likelihood of turnover occurring, but also the timing at which they occur. Conventional beliefs suggest that bonuses help reduce the level of turnover; however, closer examinations suggest that such behaviors may simply be delayed, only to reemerge en masse. The current study investigates the turnover patterns surrounding multiple bonus pay periods in a call center context. Consistent with economic and psychological theories, results suggest that employee turnover decreases as bonus payout approaches before increasing sharply afterwards. Moreover, this pattern can also give rise to turnover clusters that are comprised of high performers. Since the extant literature indicates that turnover clusters and quality are negatively associated with unit and firm performance, the timing of bonus pay and its relationship with outcomes of interests should be of central importance when designing incentive schemes.

HR: [Sink or Swim Together: Team Pay for Performance and the Role of Team Managers](#)

Author: **Anvesha Choudhury**, *Binghamton U.-State U. of New York*
Author: **Cynthia Kay Maupin**, *Binghamton U.-State U. of New York*

Team-based pay for performance (PFP) practices are organizational-level interventions often used by organizations with the intention of motivating team performance. However, limited theory and research has been devoted to the motivational processes at the team- and individual-level that underlie the link between team PFP practices and team performance. Further, little attention has been paid to critical contextual factors, such as the actions and behaviors of the team manager, which might shape how a team PFP practice is enacted throughout an organization. Therefore, we integrate signaling theory with theories of team motivation to provide a dynamic conceptual framework detailing the multilevel processes a team and its members undergo in response to a team PFP practice. Further, we elucidate how team managers can affect these processes through the implementation of the PFP practice, their leadership behaviors, and their manner of providing feedback between performance episodes. We provide implications for both theory and the practice of team PFP in organizations.

Citizenship and Prosocial Behaviors

HR: From Help to Helpful Help: A Social Network Examination of Antecedents and Outcomes of Helpfulness

Author: **Andra Serban**, *Virginia Commonwealth U.*
Author: **Zitong Sheng**, *Curtin U.*
Author: **Yimin He**, *U. of Nebraska at Omaha*
Author: **Jose M. Cortina**, *Virginia Commonwealth U.*
Author: **Xiang Yao**, *Peking U.*

Utilizing a multilevel social network design, the current study demonstrates the importance of helpfulness, an understudied aspect of helping behavior, in predicting key individual outcomes (i.e., task performance, job satisfaction) and team outcomes (i.e., team satisfaction). Using a sample comprised of 416 nurses and 42 supervisors from a large hospital in Beijing, China, we distinguish between helping behavior frequency and helping behavior quality (i.e., helpfulness) and reveal that the latter is a stronger predictor than the former of all focal outcomes, at both the individual and the team level. In addition, we identify servant leadership as a crucial predictor of employee and team helpfulness. We discuss theoretical and practical implications associated with our findings and provide avenues for future research.

HR: When and Why Does Safety Compliance Lead to One's Well-being?

Author: **Junhyok Yim**, *City U. of Hong Kong*
Author: **Jeonghun Kim**, *Cornell U.*
Author: **Heeun Jang**, *Chungbuk National U. South Korea*
Author: **Anthony Klotz**, *Texas A&M U.*
Author: **Matt Call**, *Texas A&M U., College Station*

Employee safety compliance has been a critical issue in the workplace for centuries, but it has taken on increased significance as a result of the COVID-19 pandemic. Because of the importance of employee safety, prior research has focused on the predictors of employee safety compliance. In this paper, we shift the focus of safety compliance research beyond the accident-based consequences of such compliance and examine how complying with safety measures affects how employees feel about their impact on others, and their subsequent well-being. Specifically, drawing from work on prosocial impact and self-determination theory, we predict that complying with safety measures will boost employees' feelings of having a prosocial impact in their work, leading to higher well-being. Moreover, we expect the prosocial-impact driven effects of safety compliance on employee well-being to be particularly strong when employees' compliance is not driven by external pressure (i.e., controlled motivation). Results from an experience-sampling study of independent delivery drivers in South Korea, operating in the midst of the COVID-19 pandemic, suggest complying with safety measures during the workday elicits higher perceptions of prosocial impact, which generates increased psychological vitality and job satisfaction and reduced emotional exhaustion in the evening. However, this effect was not significant when delivery drivers felt compelled to comply with safety measures for controlled reasons. By highlighting some benefits of safety compliance for frontline workers, these findings meaningfully extend our understanding of the effects of safety compliance on employee well-being, and the boundaries of these effects.

HR: Being Helpful and Being Innovative: The Role of Psychological Meaningfulness and Positive Affect

Author: **Zhenduo Zhang**, *Harbin Institute of Technology*
Author: **Li Zhang**, *Harbin Institute of Technology*
Author: **Ping Li**, *Harbin Institute of Technology*

This study attempts to link helping behavior to innovative behavior. Helping behavior can be regarded as an emotional regulation tool that facilitates helpers' positive affect, which is important to enhancing innovative behavior. The present study is developed based on conservation of resources theory (COR) to explore the underlying mechanism and boundary condition for the relationship between helping behavior and innovative behavior. Through collecting two-wave data from 193 full-time Chinese workers nested in 68 supervisors, this study developed a moderated mediation model using Mplus 7.0. The results show that: 1) helping behavior increases innovative behavior through enhancing positive affect, and 2) psychological meaningfulness moderates the indirect relationship between helping behavior and innovative behavior through positive affect. In the condition of high psychological meaningfulness, helping behavior has a stronger indirect impact on innovative behavior through enhancing positive affect. This study enriches the literature on the outcomes of helping behavior. Moreover, this study provides several managerial implications to amplify the positive impact of helping behavior on innovative behavior.

Paper is Available to Meeting Registrants Only.

HR: A Curvilinear Relationship: Perceived Overqualification and Organizational Citizenship Behaviors

Author: **Farid Jahantab**, *Pennsylvania State U., Worthington-Scranton*
Author: **Prajya Rakshit Vidyarthi**, *U. of Texas at El Paso*

Drawing upon equity theory, we integrate two contrasting perspectives on overqualification and propose a curvilinear relationship between perceived overqualification (POQ) and organizational citizenship behaviors (OCB) with the lowest level of OCB occurring at the intermediate levels of POQ. Further, we extend overqualification research to employees' social context of workgroup membership and propose that workgroup fit climate moderates the curvilinear relationship between POQ and OCB. Results of multi-level analyses from 215 employees nested in 40 workgroups demonstrated a U-shaped relationship between POQ and OCB. Moreover, moderation analysis revealed that workgroup fit climate influences the relationship between POQ and OCB. Implications for individual and group level overqualification research are discussed.

Total Rewards - Benefits and Practices

HR: [Employee Benefit: A Meta-analysis of Relationships with Work Attitudes](#)

Author: **Yeong-hyun Hong**, *U. of Alabama*
Author: **Michael Thomas Ford**, *U. of Alabama*
Author: **Jaehye Jong**, *Northern Illinois U.*

Although employee benefits account for 38.1 percent of total compensation cost (U.S. Bureau of Labor Statistics, 2020) and their importance has been recognized by management scholars (Dulebohn et al., 2009), the literature on employee benefits is currently scattered and not systematic. To address this issue, we performed a meta-analysis to integrate the literature on employee benefits and employee work attitudes and commitment. A database of 526 effect sizes from 87 primary studies (81 articles) identified 11 types of employee benefits. The meta-analytic results showed that a) perceived availability, b) usage, and c) perceived quality of (each type) of employee benefits were positively associated with employee work attitudes and commitment. Specifically, perceived quality of employee benefits showed the strongest positive effects on work attitudes and commitment, followed by perceived availability and usage of employee benefits. Interestingly, usage of employee benefits was positively related to absenteeism and turnover intention. Taken together, the present meta-analysis advances the literature on employee benefits by organizing a comprehensive list of benefits types and investigating differential effects of availability, usage, and perceived quality of employee benefits on work attitudes and commitment.

Paper is Available to Meeting Registrants Only.

HR: [Work-life balancing practices can help in maintaining morale when pay needs to be cut or frozen](#)

Author: **Yeong Joon Yoon**, *Texas A&M U. Central Texas*
Author: **Sukanya Sengupta**, -

Research on the effect of pay cuts/freezes on employee morale is limited. More importantly, past studies examining this relationship tend to focus on fairness perception as a mediator. This study hypothesizes that work-life conflict also mediates the negative relationship between pay cuts/freezes and employee morale. An analysis of 13,245 employees in 1,848 workplaces in Britain confirms the hypothesis. The results also demonstrate that this mediating mechanism can be mitigated to some extent when work-life balancing practices are available, but much more strongly when they are actually used. Thus, our study provides implications to practitioners that organizations should provide and encourage employees to use work-life balancing practices when employees' pay needs to be cut or frozen if maintaining employee morale is a concern.

HR: [Evaluation of Workplace Wellness Programs](#)

Author: **Bianca Mulaney**, *Stanford U.*
Author: **Rebecca Bromley-Dulfano**, *Stanford U.*
Author: **Erin McShane**, *Stanford U.*
Author: **Martin Stepanek**, *Vitality Health London*

Objective: To provide companies with information on employee engagement in workplace wellness interventions. Methods: We summarize the distribution of wellness intervention availability, awareness, participation, and associated self-reported health improvement using 2019 survey data from 23,667 UK employees and 135 workplaces. Results: Employees' awareness of wellness interventions at their workplaces was often low (mean 43.3%, sd 2.57, range 11.6%-82.3%). Participation (mean 30.0%, sd 2.32, range 2.1%-94.2%) was highest in diet/nutrition initiatives and lowest in alcohol counseling and smoking cessation interventions. Employees considered higher-risk for various health concerns were less likely than lower-risk employees to report awareness, participation and health improvements from wellness interventions addressing the relevant health concern. Conclusions: Employers and policymakers should consider variation in wellness intervention engagement as they plan and implement wellness interventions. A more targeted approach is needed for engaging employee populations with higher health risks.

Paper is NOT Available. Please contact the author(s).

HR: [Longitudinal effects of engagement with workplace health programs on employee outcomes](#)

Author: **Annilee Game**, *U. of East Anglia*
Author: **Roberta Fida**, *U. of East Anglia, Norwich Business School*
Author: **Martin Stepanek**, *Vitality Health London*
Author: **Cloé Gendronneau**, *RAND Europe*

Employers increasingly adopt organizational health and wellbeing programs (HWPs), yet little is known about the underlying processes or boundary conditions that may influence the effectiveness of these initiatives on employee outcomes such as wellbeing and job satisfaction. In a 3-year study, we adopted a social exchange approach to examine: 1) the role of relational context in mediating the links between employee engagement with HWPs and wellbeing and job satisfaction over time, and 2) whether organizational prioritization of HWPs moderates the relationship between engagement with HWPs and quality of relationships at work. The results of our multilevel and longitudinal structural equation model (N=7,785 UK employees, nested within 64 organizations) showed that the more employees engage with HWPs the better the quality of co-worker relationships, the less they experience bullying over time, and the better their longer-term wellbeing and job satisfaction. Against expectations, organizational prioritization of HWPs did not moderate the link between HWPs engagement and perceived co-worker relationship quality. Theoretical and practical implications of the study are discussed.

HR Systems and Strength

HR: **Emergence of HRM in Organizations: An Exploratory Study**

Author: **Varun Elembilassery**, *Indian Institute of Management Ranchi*

A review of existing literature suggests that studies concerning the contextualized nature of HRM (Human Resource Management) and, in particular, the process by which an HRM system emerges in organizations are significantly less. Further, literature also indicates that the Emergence of organizational entities or how an HRM comes into being remains underexplored, prompting an inquiry to understand Emergence of HRM. We used criteria like the state of theory development and the research question's nature to identify the most appropriate methodology, which is an inductive approach using a multiple case study method. A detailed case study design is prepared to ensure reliability. The design includes criteria for selecting cases, the process of data collection, the type of data analysis, and the form of data representation that was followed. A brief note on the interview guidelines, question development, and quality criteria was prepared and ensured. Three firms from different industry sectors were studied. Data include detailed interviews of selected managers from the HRM department, conducted across several sessions and archival information related to HRM. Cumulative from all research questions, thirty-eight empirical categories emerged. These categories are grouped into three theoretical aggregates under each research question. Further, the data indicate that an HRM system's Emergence involves activities related to learning, adaptation, and stabilization.

During times of crises, employees turn to their managers for information and guidance. Human resource (HR) research highlights the pivotal role of HR strength, which refers to distinctive, consistent, and consensual information, when communicating messages to staff. However, the literature has remained silent around the antecedents of HR strength. Drawing on attribution theory and crisis management frameworks, we develop and test a longitudinal, multi-level and cross-cultural model of the antecedents of HR strength in times of crisis. More specifically, we examine whether the severity of the crisis influences HR strength, and whether this relationship is influenced by the reliability of the organization and the avoidance uncertainty of the country. To test this model, we conducted a study within the higher education sector (281 fortnight periods, among 33 universities within 13 countries and regions). The results provide insights about the factors that influence the emergence of distinct, consistent, and consensual information during a crisis. Theoretical and practical implications are discussed.

HR: **Imprinting Antecedents of the HR Process: Towards a Multi-level Model**

Author: **Adam Kitt**, *Nottingham Business School, Nottingham Trent U.*

Author: **Karin Sanders**, *UNSW Business School, Australia*

Human resource (HR) process research refers to the way HR policies and practices are communicated to employees, including the way HR is received (i.e., perceived HR strength) and interpreted (i.e., HR attributions) by employees. Previous research has mainly focused on the HR process in the HR practice-employee relationship. However, research that examines the antecedents of the HR process is rare. This is especially the case for the so-called 'imprinting factors', defined as the hereditary and familial/parental influences, individual differences, non-work contextual factors, and cultural beliefs that can have an effect on the way individuals perceive, understand, and attribute HR in their organization. To further explore this relatively new area of research, 20 studies are reviewed that investigate imprinting antecedents in HR process research. Applying an imprinting framework, we theorise why, how, and when these factors influence the HR process. In addition, we also examine the role of bundles of HR practices (content approach) and national values in this relationship. We conclude the paper with several research directions that act as a platform of future scholarship in this area. Finally, we outline the importance of this research area for HR professionals and practitioners.

Paper is Available to Meeting Registrants Only.

Author: **Madleen Meier-Barthold**, *U. of Mannheim*

Author: **Torsten Biemann**, *U. of Mannheim*

Author: **Kerstin Alfes**, *ESCP Business School*

In explaining the effectiveness of a human resource (HR) system within an organization, researchers have turned their attention to HR attributions, which capture employees' perceptions about the intentions behind their organization's HR practices, and demonstrated that an HR system's content and process of communication drive employees to form specific HR attributions. However, current research has not yet explained why HR attributions diverge among employees. In this study, we investigate the variability in HR attributions among individuals and the organizational factors that influence this variability. Drawing on signaling theory and the concept of situational strength, we conceptualize that employees' HR attributions vary less when signals of HR information are unambiguous. Using an online scenario-based experiment with 638 participants, our findings reveal that both the internal fit and strength of an HR system have significant effects on the variability in HR attributions among employees.

Human Capital

HR: Will the Robots Take Our Jobs? An Intersectional Study of Human Capital and Automation

Author: **Bui K. Petersen**, *Memorial U. of Newfoundland*
Author: **James Chowhan**, *York U., Canada*
Author: **Gordon B. Cooke**, *Faculty of Business Administration, Memorial U., Canada*
Author: **Ray Gosine**, *Memorial U. of Newfoundland*
Author: **Peter Warrian**, *U. of Toronto*

In response to recent exponential advancements in computer technology (such as artificial intelligence, machine learning, and robotics), there have been several recent studies trying to assess the impacts on employment. Whereas most recent studies have focused on either the net effect on employment or the effect on particular occupation groups, this study extends this research by focusing on the social impacts in terms of the likely effect of various population groups. Employing a human capital and intersectionality lens, and a moderated-mediation analysis of Canadian 2016 Census data, this study finds that the likely effects of automation differ significantly depending on the intersections of income level, gender, and visible minority status, differences that for the most part are explained (or mediated) by human capital, especially education. However, a portion of the relationship between our intersecting variables and automatability is not explained by human capital variables, suggesting alternative explanations. We discuss the public policy implications, including the individual, employer, or government responsibilities for addressing the employability, labor market, human capital, and macro-level talent management challenges.

Paper is Available to Meeting Registrants Only.

HR: Double shock effects of downsizing in economic downturn on employees with high firm-specificity

Author: **Myungjune Song**, *U. of Alberta*

Extant human capital theory relies on isolating mechanisms through which the employer restricts mobility of employees with firm-specific human capital (less favorable to external market). Recently, studies suggested a possibility that such employees experience reduced job satisfaction and increased attention from new employers. In an effort to find a strong situation in which collapse of isolating mechanisms happens prevalently, this paper suggests double shock effects of downsizing in economic downturn, which cause employees with firm-specific skills to feel violation of the psychological contract and want to leave the organization voluntarily, using two Korean labor panel studies. Study 1 suggested that employees with firm-specific skills experience were less satisfied with their jobs in economic downturn than those with general skills. Study 2 showed that downsizing cause employees to perceive low levels of trust in talent management and intend to leave the organization when the employer downsize their employees in economic downturn. Firm-specificity worked as a moderator between trust and turnover intention in a way that employees with high firm-specificity are more likely to feel distrust in talent management than those with low firm-specificity, resulting in high levels of turnover intention. This paper contributes to human capital literature by shedding a light on the possibility that traditional belief of human capital theory could be inconsistent with a specific situation and fail to explain unexpected outcomes.

HR: Human Resources and Service Quality: The Mediating Role of Employees' Human Capital and Turnover

Author: **Andreas Georgiadis**, *Brunel Business School*
Author: **Andreas Kornelakis**, *King's College London*

The relationship between human resource management practices and performance has received considerable attention; however, the mechanisms that link bundles of practices, intermediate outcomes, and performance in service contexts, are not yet fully understood. The article unpacks their relationship by applying a framework that combines an employment systems approach with human capital theory. It uses unique longitudinal matched employer-employee data from the social care sector in England to test the framework and to examine the pathways that underpin the impact of HRM practices on performance. The analysis provides evidence that the impact of skills-enhancing and motivation-enhancing HR practices on service quality is mediated by collective human capital and voluntary turnover. The results support the importance of a more widespread diffusion of HRM practices in low wage services sectors that improve service quality through investment on employees' human capital and reduction of turnover.

HR: When New Talent Scores: The Impact of Human Capital and the Team Context on Newcomer Performance

Author: **Marvin Schuth**, *TUM School of Management, Technische U. München*
Author: **Prisca Brosi**, *KLU Hamburg*
Author: **Nicholas Folger**, *TUM School of Management, Technical U. of Munich*
Author: **Gilad Chen**, *U. of Maryland*
Author: **Robert E Ployhart**, *U. of South Carolina*

Integrating the literatures on strategic human capital, newcomer socialization, and work teams we seek to close the gap between micro staffing research and macro research on strategic human capital. We thereby examine the unique and combined influences of newcomer human capital and the team's environment (prior team performance and number of newcomers) on newcomer performance during different socialization contexts (which provided more vs. less time for newcomers and teams to mutually adjust). Examining large, multi-year data from the top five European professional football leagues, we found that individual human capital related positively to newcomer performance across socialization contexts while the relationships between the collective team environment and performance were dependent on the socialization context. Beyond the direct relationships, our results also showed that human capital is less positively related to newcomer performance when newcomers join higher performing teams. These findings extend our understanding of the complex relationships between individual human capital and the team's socialization environment on newcomer performance; relationships that are sensitive to the socialization context.

Author: **Theresa M. Welbourne**, *U. of Alabama*

Author: **Joshua Victor White**, *U. of Alabama, Tuscaloosa*

Author: **Miranda Welbourne Eleazar**, *U. of Iowa*

This paper examines how the values of a firm's leadership team at the key event of going public can determine whether it will survive twenty years later. Relying on research on the impact of imprinting at important times in a company's life, such as an IPO, we hypothesize that specific, high level imprinting of two core human capital values, sense of urgency and human resource value, could provide an underlying foundation for future growth and predict survival 20 years post IPO. We study the 1996 IPO cohort, which to date is the largest group to go public in one year. To measure urgency and value, we conducted surveys with the leaders of these firms early in the year after the 1996 IPO. We then waited until enough time passed, 20 years in particular, to conduct analyses on the impacts of those early values of the IPO leadership team on long-term survival. Using survival and logit analyses, we find a significant effect demonstrating the way in which both urgency and value, balanced together, predict the survival of this sample of IPOs. In doing so, we contribute to the literature on human capital, imprinting, and the attention-based view.

HR: The role of recontextualization and HR practices in transferring corporate values

Author: **Therese Egeland Sverdrup**, *NHH Norwegian School of Economics*
Author: **Annelise Ly**, *NHH Norwegian School of Economics*

Companies that nurture a shared corporate culture based upon corporate values can drive companies towards high performance. However, when companies go global and establish subsidiaries in foreign countries, transferring these corporate values may be challenging. This process is particularly challenging when there are significant linguistic and cultural differences between the headquarters and the subsidiary that may lead to a misalignment of values. This study examines the transfer of corporate values and HR practices of a small Norwegian IT company into a subsidiary in India. Our data are based on a four-year field study of a small IT company based in Norway that during this period established a subsidiary in India. We examine how the leaders recontextualize the company's corporate values, how the corporate values were implemented through a set of HR practices in India, and how the local employees perceived the corporate values. Our main findings show how the Indian leaders are active participants in the recontextualization process, translating the meaning of the headquarters corporate values into the specificities of the Indian culture and day-to-day practices. Moreover, we show how a small company without a formal HR department and with no expatriates to guide the process can use activities related to more formalized and structured HR practices to implement the values. We discuss theoretical and practical implications.

HR: Cross-Cultural Collectivism supports Extraversion and Agreeableness Leadership Advantage

Author: **Anoop Javalagi**, *U. of Illinois at Urbana-Champaign*
Author: **Daniel A. Newman**, *U. of Illinois at Urbana-Champaign*

By combining insights from Culturally Endorsed Implicit Leadership Theory (CLT; House et al., 2002) and Trait Activation Theory (Tett & Burnett, 2003), we propose that aspects of the trait approach to leadership represent culturally-bound effects. First, using 1,035 correlations, we update Judge et al.'s (2002) meta-analysis of personality and leadership. Updated results show the 80% credibility intervals for Big Five-leadership effectiveness links are twice as large as the corrected correlations, suggesting the trait approach to leadership is not universal. We propose that in collectivistic societies (i.e., cultures that value interdependence with groups), leader Agreeableness and Extraversion (interpersonal traits) are both stronger predictors of leadership effectiveness—consistent with the theorized need for enhanced social coordination in such nations. In addition to supporting our hypotheses that societal-level collectivism moderates Agreeableness-leader effectiveness and Extraversion-leader effectiveness relations, we also observe that leader Emotional Stability and Openness are stronger predictors of leadership effectiveness in collectivistic nations. Implications for the cultural dependency of the trait approach to leadership are discussed.

HR: A multilevel framework for an international conceptualisation of idiosyncratic deals.

Author: **Dotun Ayeni**, *U. of Edinburgh business school*
Author: **Maryam Aldossari**, *U. of Edinburgh*
Author: **Sara Chaudhry**, *U. of Edinburgh*

A growing body of research provides evidence that comparable employees working in the same job can have dissimilar working conditions. Idiosyncratic deals (I-deals) are customised employment arrangements negotiated between employees and their employers- an indication of a fundamental shift in the nature of the traditional employment relationship. Despite growing attention to I-deals in the past two decades, the conceptualisation of I-deals in the extant literature remains predominantly static, single-level, and fundamentally fails to capture the dynamic processes shaping I-deals across multiple national contexts. To enhance conceptual and theoretical advancement, we propose a multilevel framework which considers pressures at the macro-national, meso-organisational and micro-individual levels and delineate their dispersive and constitutive impact on I-deals. We argue that our multilevel I-deals framework can serve as a sophisticated heuristic to situate extant findings in the field into a broader framework, yielding a more comprehensive understanding of I-deals. We offer researchable propositions to enhance future conceptualisation and multilevel I-deals research.

HR Practices and COVID

HR: **Leadership and Group Attachment Styles During the COVID-19 Crisis: The Role of HR Systems**

Author: **Huda Masood**, *York U., Toronto*
Author: **Parbudyal Singh**, *York U.*
Author: **Souha R. Ezzedeen**, *York U.*

The purpose of this paper is to explore the role of leadership and HR Systems in maintaining followers' attachment security during the COVID-19 crisis. Given that the current pandemic has disrupted the group ties that sustain individuals at work, we focused on group attachment activation or the extent to which individuals feel secure within a group setting. We considered the moderating roles of leadership processes and follower group dynamics to develop a typology of followers' discretionary work behaviors (i.e. positive organizational citizenship behaviors; OCB and detrimental counter-productive work behaviors CWB). We further discussed the role of relationship-oriented HRM systems (or synergized HRM practices designed to establish interpersonal work relationships) in fostering followers' group attachment security. In particular, we integrated research on attachment systems, human resource management (HRM), and leadership within the COVID-19 context. Our paper contributes to the managerial literature by offering a unique perspective in exploring the role of leadership in determining employee outcomes during the COVID-19 crisis. Theoretical and practical implications are discussed.

HR: **Impact of the COVID-19 Pandemic on New Hire Engagement**

Author: **Robert E Ployhart**, *U. of South Carolina*
Author: **William James Shepherd**, *The Ohio State U. Fisher College of Business*
Author: **Sam Strizver**, *U. of South Carolina*

The purpose of this paper is to simultaneously advance theory and practice by understanding the effects of the COVID-19 pandemic on new hire engagement, along with State- and individual-level moderators of such effects. Prior research suggests starting a new job is an uncertain experience; here we theorize that the COVID-19 pandemic creates additional environmental uncertainty that leads new hires to reduce their engagement. First, we hypothesize that new hires become less engaged in uncertain times, such that engagement negatively covaries with unemployment rates caused by the pandemic. Second, drawing from strategic management theory, we test whether U.S. States that introduce stronger COVID policies help reduce uncertainty and thus enhance the engagement of new hires. Third, we theorize that the effects of the pandemic become more disruptive on new hire engagement as they gain tenure within the organization. Examining a U.S. national sample of 12,577 newly hired (90 days or less) quick service restaurant employees over nine months (January to September, 2020), we find support for these hypotheses. Together, these findings advance new research directions for understanding relationships between macro contextual influences on new hire perceptions and socialization. They also offer practical implications by helping organizations understand the importance of explicitly managing environmental uncertainty, particularly in terms of COVID policy.

HR: **Flexible Staffing Practices, Unit-level Turnover, and Performance Recovery During COVID-19**

Author: **Hyesook Chung**, *Cornell U.*

This study examines how flexible staffing practices, often adopted to help organizations weather difficult times, can affect organizational performance restoration in the context of an environmental shock, the COVID-19 pandemic. Despite the commonly held belief that flexible staffing practices can contribute to organizational resilience – thereby helping a firm survive an economic downturn and subsequently rebound from it, the findings of this study suggest otherwise. In particular, the findings from a longitudinal dataset of 14,902 unit-month observations from 1,678 restaurants show that establishments with a higher proportion of part-time workers and greater use of variable work hours had slower recovery after the onset of the COVID-19 crisis. Furthermore, this effect was stronger when the severity of the crisis was higher. Thus, this study calls for a reconsideration of the general assumption that HR practices that enhance labor flexibility also enhance organizational adaptability to uncertain environments.

HR: **Compensation During Crisis: Understanding the Effects of Bonus Deferral Severity During the COVID-19**

Author: **Helen Hailin Zhao**, *U. of Hong Kong*
Author: **Jingyang Gu**, *U. of Hong Kong*
Author: **Christopher C. Rosen**, *U. of Arkansas*
Author: **Brad Harris**, *Texas Christian U.*

In response to financial stress caused by the COVID-19 pandemic, many organizations have deferred bonus payments to employees. To date, the literature offers little insight into how employees process and react to bonus deferrals, particularly during times of crisis when employees may be more forgiving of employers who do not provide expected compensation. Drawing from signaling theory, we argue that employees use information from two pay-related signals, bonus deferral severity and pay-for-performance perceptions, to determine whether the deferral should be attributed to an external crisis (e.g., the COVID-19 pandemic) or company-specific factors. We argue that when bonus deferrals are perceived as more severe, employees will attribute the event to company-specific factors rather than the COVID-19 pandemic. We expect this relationship is qualified by employees' prior pay-for-performance perceptions, such that when pay-for-performance perceptions are low, employees are more likely to attribute severe deferrals to company specific factors rather than the COVID-19; however, the inverse is true when pay-for-performance perceptions are strong. Finally, we argue that company-related attributions of the deferral will be associated with higher withdrawal and turnover intentions than COVID-19 attributions. We find general support for the proposed model in a two-wave field study of 205 employees that endured bonus deferrals during the COVID-19 pandemic.

Author: **Jonathan D. Jensen**, Aarhus BSS, Aarhus U.

Author: **Rahul Anand**, Aarhus BSS, Aarhus U.

Author: **Kenneth Nygaard**, Aarhus U., Department of Management

Despite the increasing prevalence of freelancers in the workforce on a global scale, there is a dearth of research examining why and how firms change their human resource composition, especially during exogenous shocks. Our research aims to fill this gap by examining how firms reconfigure their human resources in response to the COVID-19 shock. We argue and show that firms, which are severely affected by the Pandemic, are more likely to (1) downsize (2) hire more freelancers, and (3) replace laid off permanent employees with freelancers. These strategic actions would allow firms to obtain much needed strategic flexibility (a) by reducing adjustment costs related to human resources, (b) building organizational resilience, and (c) rapid redeployment of resources. We test our hypotheses using survey data obtained from 1177 Danish SMEs during the COVID-19 Pandemic. To alleviate concerns regarding endogeneity, we use coarsened exact matching techniques to compare firms that were more (or less) affected by the crisis. We contribute to the literature on human resource management by combining ideas on employment externalization and strategic repositioning. We also contribute to the nascent research on strategic responses to crises, and provide a novel explanation of why firms might be inclined to externalize.

Flexible Work During COVID

HR: **Exploring Layers of Context-Related Work-at-Home Demands During Covid-19 Pandemic** 

Author: **Laxmikant Manroop**, *Eastern Michigan U.*
Author: **Daniela Petrovski**, *York U., Toronto*

In this article we use qualitative data to empirically investigate the work from home (WFH) experience during the Covid-19 pandemic. Drawing from our data, we introduce and investigate four layers of contextual variables individuals have encountered during the pandemic that forced them into mandatory WFH arrangements. We develop a conceptual process model and in so doing we extend theory by explicating the process through which these contextual factors (i.e., omnibus, task, social, and personal) influence people's affective reactions, and consequently, impact their health and wellbeing as well as their work activities. Our findings offer new insights into the forced WFH experience, showing that it is characterized by difficulties, challenges, or disruptions during the Covid-19 crisis.

HR: **The joint role of HRM and leadership for teleworker well-being - An analysis during COVID-19**  

Author: **Niklas Günther**, *Helmut-Schmidt U.*
Author: **Sven Hauff**, *Helmut Schmidt U.*
Author: **Philip Dorsel**, *Helmut-Schmidt-U*

The sudden and extensive implementation of telework at the beginning of the COVID-19 pandemic has threatened the well-being of employees. In our study, we identify telework specific sets of HRM practices and leadership behaviors and examine their joint effects on teleworkers' happiness, relational and health well-being. In particular, we hypothesize social isolation and psychological strain to serve as mediators in explaining work engagement and job satisfaction in two different models. We also expect that HRM and leadership should interact and reinforce each other. Our analysis are based on data from German teleworkers from two consecutive time points during the COVID-19 pandemic. Our findings reveal differentiated and complementary effects of telework-oriented HRM and leadership. We also identify the components that contribute most to the provision of teleworker well-being and therewith provide detailed insights that enable organizations and leaders to care for teleworker well-being successfully.

Paper is Available to Meeting Registrants Only.

HR: **A signalling theory analysis of employee interpretations of telework in times of turbulence**  

Author: **Almudena Canibano**, *ESCP Business School*
Author: **Argyro Avgoustaki**, *ESCP Business School*

How do workers make sense of telework and respond to it in a context of macro level uncertainty and crisis? This case study of a large consultancy firm in Spain, during the financial crisis of 2009, explores employee understandings and interpretations of telework in the context of major macro economic disruption. We draw on the premises of signalling theory to consider telework as a signal sent by the organization, whose interpretation by employees is affected by the environment in which it is sent out. Our data reveal that while telework is generally understood as an employee-centric practice, in the context of an economic crisis it is also interpreted as a source of vulnerability for employees, who thus reject to adhere to it. The paper argues that context is not just one more variable to control for, but a space in which employees create meaning. In this sense, the meaning of telework is not predetermined, but continually shaped socially and in light of events that go beyond the boundaries of the firm.

Paper is Available to Meeting Registrants Only.

HR: **In the loop or cut off from the business - How to keep employees virtually engaged during Covid-19 (WITHDRAWN)**

Author: **Pauline Sophie Boberg**, *Bielefeld U.*
Author: **Jana Boevers**, *Bielefeld U.*
Author: **Christopher Hansen**, *U. of Trier*
Author: **Kai Christian Bormann**, *Bielefeld U.*

The Covid-19 pandemic caught organizations all over the world totally unprepared and forced most of them to transition into a virtual workplace, whereby employees were confronted with limited social contact. Accordingly, keeping employees engaged is key to ensure business continuity. Studies on virtual work engagement offer substantive insights into how to keep employees engaged in remote work settings. However, we still lack insights into how employees experience work engagement in times of crises. To generate empirical insights into virtual work engagement during the Covid-19 pandemic, we conducted a qualitative study with 1256 ratings of employees who worked from home from March to August 2020. In particular, we draw on the job demands-job resource theory to explore how employees experience their access to supervisory-, collegial-, and organizational resources during the Covid-19 pandemic. Our findings indicate five types of virtual work engagement differing in the degree to which they have access to crucial job resources, namely supervisory support, collegial interaction and organizational working conditions. We discuss these five types and develop implications for designing resourceful work environments to enforce employees' virtual work engagement in times of crises.

Employee Development

HR: **Formal Mentoring Quality and Protégés' Motivation to Lead: Focus on Social Capital**  

Author: **Min Kyu Joo**, *U. Of Sydney*

Author: **Kevin S. Cruz**, *Georgia Southern U.*

We seek to better understand how formal mentoring quality may impact protégés' motivation to lead. We argue that protégés' social capital helps explain the relationship between formal mentoring quality and protégés' motivation to lead, but that protégés' political skill and gender serve as boundary conditions of this mediated relationship. Using 100 South Korean mentor-protégé dyads in four organizations across three points in time, we found that higher quality formal mentoring is positively associated with protégés' social capital, which, in turn, is positively associated with protégés' motivation to lead. We also found that the relationship between higher quality formal mentoring and protégés' social capital is strengthened when protégés have a higher level of political skill. In addition, we found female protégés obtain more social capital benefits from their formal mentors than male protégés. Theoretical and practical implications are discussed.

Paper is NOT Available. Please contact the author(s).

HR: **The Dark Side of Employees' Informal Learning** 

Author: **Yuhan Zhan**, *Ohio State U.*

Author: **Raymond A Noe**, *Ohio State U.*

Despite the recognition of the benefits of employees' informal learning, we have a limited understanding of its potential "dark side". Based on an integration of social exchange and conservation of resources theory, this study examines why and when informal learning is positively related to employees' organizational deviance and negatively related to their job performance. The results of three online surveys show that employees' informal learning is positively related to emotional exhaustion when role ambiguity is high, which in turn results in increased organizational deviance and decreased job performance. This study contributes to a more complete view of informal learning, a broader understanding of learning outcomes, and a balanced view of positive organizational behavior in the workplace. Implications of these findings for future research and practice are discussed.

Paper is NOT Available. Please contact the author(s).

HR: **Managerial coaching and tacit knowledge sharing: The role of gratitude and overqualification** 

Author: **Quan Li**, *Nankai U.*

Author: **Zhuolin She**, *Renmin U. of China*

Author: **Qianrui Chen**, *Business School, Nankai U.*

Although researchers have recognized the critical role of leader behavior in knowledge management practice, scant attention is paid to the managerial coaching, and the mechanism and boundary condition of which managerial coaching affects follower tacit knowledge sharing remains understudied. Drawing on affective event theory, we argue that managerial coaching may positively influence follower knowledge sharing via the mediating role of follower gratitude. Follower perceived overqualification would moderate the relationship between managerial coaching and gratitude such that managerial coaching exerts a stronger positive influence on gratitude for those employees with a lower perceived overqualification. To test these ideas, we conducted two studies. A ten-working day quantitative diary survey of 232 employees from an internet company supported our whole theoretical model. The implications of our findings for both theory and practice were discussed.

HR: **The Chemistry Between Us: Momentary Complementarity Effects in Interpersonal Assessment Methods**   

Author: **Christoph Nils Herde**, *Singapore Management U.*

Author: **Filip Lievens**, *Singapore Management U.*

Interpersonal complementarity has emerged as a key principle to structure and regulate everyday interactions. This begs the question whether interpersonal complementarity also influences ratings in interpersonal assessment methods. Unfortunately, we still lack a solid understanding of what happens in these assessments at the behavioral exchange level. Prior studies used single-point, retrospective self-reports of one party's independent interpersonal behaviors. This study integrates Interpersonal Theory with Situational Strength Theory and conducts a fine-grained examination of how interpersonal behavior continuously unfolds to advance our understanding of interpersonal and temporal dynamics in interpersonal assessment methods. Ninety-six junior managers participated in four interpersonal simulations ("flash" role-plays) as part of diagnosing their strengths and weaknesses. In all interpersonal simulations, people consistently showed momentary interpersonal adaptation patterns in line with complementarity principles: Affiliative behavior led to affiliative behavior (correspondence), whereas dominant behavior resulted in submissive behavior (reciprocity). For affiliation, mutual interpersonal influence also occurred in that both parties' temporal trends in affiliative expressions were correlated over time. Complementarity effects were significantly related to ratings of in situ (role-playing) assessors but not of ex situ (remote) assessors. Importantly, however, complementarity effects did not contain erroneous, nondiagnostic information because they did not decrease predictive validity.

Developing Current and Future Leaders

HR: [Ask and you shall receive? Linking leader development proactivity to developmental opportunities](#) 

Author: **Shawn T. McClean**, *U. of Oklahoma Price College of Business*
Author: **Stephen Hyrum Courtright**, *Tippie College of Business, U. of Iowa*

The leader development literature has long implied that the source of leader development lies either with the employee or organization. Challenging this implicit dichotomy, we propose that leader development proactivity (LDP; an employee's request for leader development opportunities and resources) is evaluated by decision makers in allocating developmental resources. Integrating social exchange theory and implicit leadership theory, we propose that LDP leads employees to be perceived as psychologically entitled to the extent that the employee and decision maker have a low-quality social exchange relationship. Meanwhile, LDP should increase perceptions of the employee as prototypical of the leader role, conditional on the degree of deep-level similarity between the employee and decision maker. In turn, both perceptions of psychological entitlement and leader prototypicality should be negatively and positively associated, respectively, with the receipt of leader development by the focal employee. Results from both an experimental and a field study provide broad support for our theoretical model.

HR: [Climbing the Ladder to Jump Ship? A Sequence Analysis of Executive Development and Job Mobility](#)  

Author: **Guorong Zhu**, *Salem State U.*
Author: **Lan Wang**, *Peking U.*

Executives learn from work experiences, advance through job changes, and move from companies to companies. Throughout this process, how do different work experiences relate to development of executive competencies and job mobility? In this study, we conducted a time sequence analysis to explore three primary questions: (1) What are the major paths of work experiences that lead up to senior executive positions? (2) How does an executive's path of work experiences relate to post-GM job mobility? (3) How do executive competencies affect job mobility? Using sequence analysis on longitudinal data collected in 2001-2004 (Time 1) and 2019 (Time 2), we identified three distinctive paths of general manager (GM)'s work experiences in a Fortune 100 company across half a century from 1963 to 2019, namely stayer, internal mover, and external mover. Different paths of work experiences were associated with different levels of executive competencies measured at the transition point of taking on the GM position which led to future turnover and employer transitions. These findings highlight the sequential and temporal nature of work experiences in executive careers and also underscore the critical role of executives' developmental paths on their future job mobility, therefore shedding theoretical and practical light on executive development and job mobility.

Paper is Available to Meeting Registrants Only.

HR: [Developing and Validating a Model of Leadership Potential for VUCA Environments](#)   

Author: **Kevin S. Groves**, *Pepperdine U.*

A critical succession planning challenge for organizations across industries is the identification of leadership talent in mid-management roles who are ready for executive-level positions. Despite the incredible demand for greater attention to executive succession practices and the challenges associated with unplanned executive turnover, the published research literature currently lacks a model and assessment process designed for organizations competing in highly complex and volatile business contexts. To develop theory and guide succession management practices, this paper presents a multi-phased study describing the development and validation of such a model: Learning, Engaging, Adapting, and Persevering (LEAP). The first phase presents a qualitative study that identified the leadership competencies associated with executive potential in VUCA (volatile, uncertain, chaotic, and ambiguous) work contexts. The second phase presents a quantitative study of 308 mid-level leaders and 213 of their immediate managers across four organizations in a highly complex and turbulent industry. The third phase consists of a quasi-longitudinal study examining the LEAP's predictive validity across a series of job performance, promotion, and attitudinal outcomes. Based on convergent, concurrent, and predictive validity estimates provided across the three phases, this paper presents evidence for a theory of leadership potential, providing much needed guidance for executive succession planning. The study's implications for theory, future research, and a range of practical applications for executive teams, board members, and HR professionals are discussed.

HR: [Evaluation of a change-oriented training in instrumental and transformational leadership](#)

Author: **Catrin Millhoff**, *TU Dortmund U.*
Author: **Jens Rowold**, *TU Dortmund U.*

The present field study evaluates a newly designed and change-oriented leader development training to strengthen instrumental and transformational leadership behaviors. The aim was to investigate the trainability of instrumental as well as transformational leadership behaviors within a two-day training and to examine the process of how leaders develop when taking their previous knowledge as a starting point. In order to evaluate the training, we calculated a growth curve model, considering nonlinearity of the development. In addition, we have set up a moderated meditation session within the training to test whether changes in leadership behavior caused by training alter change outcomes. In sum, 59 leaders rated by 387 followers participated in the training. The control group consists of 54 leaders, rated by 188 followers. The results show that instrumental and transformational leadership behaviors developed three months after the training, whereas the control group nearly maintained or decreased. Moreover, it was found that the transformational leadership behavior develops in a reversed u-shape based on previous knowledge, and that the positive change in leadership behaviors caused by the training resulted in a variation of change-relevant criteria.

Diversity and Gender Inequity

HR: Perceived/Experienced Sexism Scale: Women's Perceptions of Support and Job Attitudes during #MeToo

Author: **Jacqueline Deuling**, *U.S. Army Research Institute*
Author: **Jenell Lynn-Senter Wittmer**, *U. of Toledo*
Author: **Kimberly Wilson**, *U.S. Customs and Border Protection*
Author: **Adam Arthur Roebuck**, *U. of Connecticut*
Author: **Adrian Thomas**, *Roosevelt U.*

Existing measures of sexism are intended to identify and measure sexism amongst men and women by examining perpetrator's actions or thoughts. However, researchers must make assumptions as to the effect such sexist acts or behaviors has on the target (women). The current study provides a psychometrically sound measure intended to capture perceived/experienced sexism by women in the workplace, the Perceived/Experienced Sexism Scale (PESS). PESS is utilized to consider the effects of perceived experiences of benevolent and hostile sexism at work, as well their relationships with perceived organizational support and the job attitudes of job satisfaction and turnover intentions. Results from 220 (November 2015) and 183 (March 2018) female employees suggest perceived organizational support and trust perceptions mediate the relationships between perceptions of sexism and organizational outcomes of job satisfaction and turnover intentions. This study answers calls from organizational support theorists to investigate unfavorable treatment by those within the organization and extrapolate how the fulfillment of socioemotional needs act as a mechanism linking perceived organizational support to organizational outcomes. This study further validates the PESS scale with samples prior to and after the beginning of the #MeToo movement, finding significant differences between the samples in women's experiences of sexism.

HR: Gender difference in reactions to cutting people vs. pay

Author: **Yeong Joon Yoon**, *Texas A&M U. Central Texas*
Author: **Sukanya Sengupta**, -

The current research investigates the gender difference in reactions to payroll cost reduction methods (downsizing vs. cutting pay) through secondary data analysis (Study 1) and experiment (Study 2). In Study 1, 2,139 employees in Ireland were analyzed. The results reveal that, for males, the commitment and satisfaction levels of survivors of downsizing are higher than those of employees whose pays are cut. In contrast, there were no differences in the commitment and satisfaction levels between survivors of downsizing and pay-reduced employees for females. In Study 2, we conducted an online experiment of 384 people in the U.S. The analysis indicates that females are more attracted (in terms of general attractiveness and job pursuit intention) to organizations that utilized pay cuts over downsizing to overcome financial difficulties. Males, in contrast, demonstrated no differences in job-seeker attraction outcomes to organizations that chose either of these two payroll cost reduction methods. Thus, the results from the two studies indicate that females, compared to males, react less negatively (or more favorably) to pay cuts over downsizing.

HR: The Main Factors Influencing the Promotion of Female Leaders in Chinese Organization

Author: **Xingyue Jia**, *China Merchants Securities*
Author: **HongLing Wan**, *Chengdu U. of Information Technology*
Author: **Biao Huang**, *LSE*

While scholars have paid more attention to the study of female leadership compared with past decades, there are still questions that need to be answered. We try to explore the main factors influencing the promotion of female leaders in Chinese different organizations (i.e., the government, state-owned enterprise and the private sector) and proposed actions for female leaders themselves (internal) and the family, the society (external) to take so as to improve the situation. We adopt mixed design including both qualitative and quantitative methods. First, we conduct eighteen semi-structured interviews within three types of organizations. We find that the institutional factor under the Chinese context, domestic responsibility (especially children), guanxi/relationship and professional certificate play vital roles in affecting the promotion of female leaders. Next, we build multilevel models to test and prove that professional certificate affects the promotion of female leaders with statistical significance by analyzing 135,666 managers in 3,687 Chinese listed companies between 1999 and 2017. We find that the influence of professional certificate is consistent across 79 industries and 31 provinces where the headquarters of 3,687 Chinese listed companies locate. Finally, we provide suggestions for management practice and future research.

HR: HR managers riding the glass escalators, walking the stairs of equality, or both?

Author: **Isabella Scheibmayr**, *U. of Salzburg*
Author: **Astrid Reichel**, *U. of Salzburg*

HRM's professional status within and beyond organizational boundaries has been tied to its gender demography. Gender demography as a context, can be found at various levels and this context again might be contingent on institutions at the national level. We untangle the influence of gender demography as a multidimensional context on HRM's professional status using data from a sample of over 3,000 organizations from 34 countries. While gender demography is not associated with the professionalization strategies applied, it indeed is an important explanatory factor for differences in HRM professional status. On the organizational level, male HR directors of female-dominated HRM departments benefit from a glass escalator effect. At the country level, gender equality is positively related to professional status of HRM.

Employee Onboarding and Training

HR: **A Determinant Activation Model of Training Transfer**  

Author: **Jeffrey Olenick**, *Old Dominion U.*
Author: **Eric Alan Surface**, *ALPS Insights*

Historically, the transfer of training has been treated as a predominantly cross-sectional outcome of organizational training interventions. Although we intuitively know that transfer occurs over time, it is not often studied in that way. This limitation has constrained our ability to understand the process by which transfer of training occurs back on the job, which in turn reduces our ability to lower the training-transfer gap. To help address the lack of process-oriented theory in training transfer we propose a Determinant Activation Model of Training Transfer (DAM-TT) which integrates existing empirical evidence on training transfer, performance determinants, person-Trait Activation Theory, dual process cognitive theory, habits, and self-regulatory perspectives to describe the cognitive process underlying transfer as it unfolds dynamically over time. The proposed model helps to close a large gap in existing organizational theory, as well as provide practical implications for how organizations can better support transfer.

HR: **Interaction of Task-Contingent Conscientiousness and Supervisor Support to Promote Training Transfer**

Author: **Zhonghao Wang**, *Michigan State U.*
Author: **Jason Huang**, *Michigan State U.*
Author: **Brian D. Blume**, *U. of Michigan, Flint*
Author: **J Kevin Ford**, *Michigan State U.*

Research on training has accumulated knowledge of factors influencing transfer of training. However, little is known about how these factors may interact to impact training activity level and training transfer. Based on recent advances in the contingency approach to personality, we examine person-situation interaction by testing how task-contingent conscientiousness influences trainees to utilize supervisor support differently during training and transfer. Based on data from a field sample of 200 employees participating in management training courses, we found that task-contingent conscientiousness moderated both the linkage between supervisor support and training activity level and the linkage between training activity level and transfer of training. Specifically, for trainees with higher task-contingent conscientiousness, supervisor support tended to have a stronger association with training activity level, and training activity level tended to translate into more transfer of training. Our findings provide unique insights into when supervisor support would be more beneficial to trainees depending on trainees' individual differences. We discuss the theoretical and practical implications of this research.

HR: **Talk the Walk: Onboarding with Organizational Authenticity**  

Author: **Liat Eldor**, *U. of penns*
Author: **Peter Cappelli**, *U. of Pennsylvania*

the organization, typically referred to as onboarding. The most common approach in formal onboarding practices is arguably to talk up favorable characteristics of the organization to new hires, what we refer to as a “strengths” approach. We contrast that with onboarding that presents a more accurate picture of the organization, including descriptions where the work can be challenging and stressful. We refer to this as an “organizational authenticity” approach. In a field experiment carried out in a global consulting company, we compare onboarding with an authenticity approach to the traditional strengths model. We find that the authenticity approach leads to better learning and work performance. We further find that trust in the organization mediates the effect of authenticity approach on work performance. We supplement these results with qualitative analyses of written stories and interviews with new hires. These results expand our understanding of the usefulness of authenticity in organizations and of onboarding more generally.

Ethical HRM

HR: **Can I speak up? The effect of ethical human resource management on employee ethical voice**

Author: **Silu Chen**, *Central China Normal U.*
Author: **Wenxing Liu**, *Zhongnan U. of Economics and Law*
Author: **Guanglei Zhang**, *Wuhan U. of Technology*

Organizational development includes moral challenges, and some ethical decisions need to be made; otherwise, the organization will face great public pressure and damage to its public image. In recent years, scholars have expanded past human resource management practices and proposed ethically oriented ones. Can these practices promote employee ethical voice? Based on the social cognitive theory of moral thought and action, this study investigates ethical human resource management (HRM) and ethical voice relationship involves the mediating role of ethical efficacy and the moderating role of ethical task complexity. Data from 265 supervisor-subordinate dyads employed in China revealed that employees' ethical HRM perceptions directly and indirectly affect their engagement in ethical voice through ethical efficacy, and these effects are stronger for high levels of ethical task complexity. The theoretical and practical implications of our findings are further discussed.

Paper is NOT Available. Please contact the author(s).

HR: **How does mitigate the effects of illegitimate task on unethical behavior? The role of ethical HRM** →

Author: **Silu Chen**, *Central China Normal U.*
Author: **Yujie Che**, *Zhongnan U. of Economics and Law*
Author: **Sun Ao**, *Zhongnan U. of Economics and Law*

Research has consistently demonstrated that illegitimate tasks produce a wide array of negative outcomes for employees. However, knowledge about whether such tasks could stimulate employees' unethical behavior and the conditions under which employees might withhold their unethical behavior is relatively limited. The purpose of this study was to provide insight into the effects of employee experienced illegitimate tasks on unethical behavior based on social cognitive theory and social information processing theory. We conducted a two-wave, two-source survey with a sample of 247 Chinese employees working in the transportation industry. As expected, employee experienced illegitimate tasks are positively related to moral disengagement, and resulting in unethical behavior. In addition, ethical human resource management (HRM) buffers the relationships between moral disengagement and unethical behavior. This study broadens the focus of the research on illegitimate tasks and presents a more complex model in the literature of how ethical HRM influences employees' moral thought and action.

HR: **Perceptions of ethicality: The role of attire style, gender, and context** 📄

Author: **Kristin Lee Sotak**, *SUNY Oswego*
Author: **Andra Serban**, *Virginia Commonwealth U.*
Author: **Barry Friedman**, *State U. of New York at Oswego*

Professional attire has traditionally been regarded as a sign ethicality. However, several prominent fraud scandals of the past decades involved CEOs of large public corporations who, despite projecting a professional image, engaged in overly unethical behavior. To determine if these events have rendered the association between professional attire and ethicality obsolete, our research examines, in four different studies, the effects of attire style (i.e., business formal, business casual, casual) on perceptions of an employee's ethicality. Drawing on gender-role (Eagly, 1987) and expectancy-violation theory (Jussim et al., 1987), we also examine the main effects of gender and context (industry type) on attire-based perceptions of ethicality, and the mediating effects of attire appropriateness in the relation between attire style and our outcome of interest. We find that, compared to business formal and business casual attire, casual attire is perceived as the least ethical style across all four studies. The influence of attire on perceptions of ethicality was robust regardless of industry. In one study, both men and women rated women as more ethical. Lastly, the effect of attire style on perceptions of ethicality was fully mediated by perceptions of attire appropriateness. Theoretical and practical implications, study limitations, and future research are discussed.

HR: **Ethical Leadership, Self-Efficacy, and Creative Performance: A Moderated Mediation Examination** → 📄

Author: **Kwame Ansong Wadei**, *School of Management and Economics, UESTC*
Author: **Bernice Wadei**, *Kwame Nkrumah U. of Science and Technology*
Author: **Jenkins Asaah**, *Kumasi Technical U.*

This study presents a moderated mediation model of leadership influences by examining the effects of ethical leadership on employee creative performance, using data from 342 employees matched with their supervisors in small and medium organizations in Ghana. The study revealed that creative self-efficacy mediated the positive relationship between ethical leadership and employee creative performance from the SPSS macro PROCESS analysis. Additionally, job autonomy was identified as a situational moderator in the ethical leadership and employee creative self-efficacy relationship. Thus, the relationship between ethical leadership and employee creative self-efficacy was stronger as the job autonomy level rose. The theoretical contributions, practical implications as well as limitations, and future research directions were further discussed.

Work and Family

HR: **Small Move Big Impact: The Ripple Effects of Employees' Sleep Deprivation between Work and Family**  

Author: **Jian Shi**, *Vrije U. Amsterdam*

Despite that sleep has long been recognized as one of the fundamental physiological needs for human survival, the emerging sleep dilemma among employees — sleep is always being first sacrificed for coping with the onerous burdens of work and family demands — has attracted extensive attention to scholars and practitioners. To tackle this puzzle, we aim to find out how and when lack of sleep (i.e., sleep deprivation), in the short run, triggers employees' subsequent reactions, particularly at the workplace and home. Drawing from ego depletion theory and conservation of resource theory, we developed a dual-path model of ripple effects of employees' sleep deprivation on workplace depletion and work-family conflict. Through a daily diary study using data collected from 109 full-time employees with 524 workday observations in Chinese, we demonstrated employees' sleep deprivation was positively related to their next workday's emotional exhaustion and cognitive fatigue at workplace. Through these affective and cognitive approaches, deprived employees were found to engage in more work-(to)-family conflicts on the next workday's evening. Furthermore, employees' high work-family centrality aggravated employees' sleep deprivation's undesirable impacts on their next workday's workplace emotional exhaustion. We discuss both theoretical and practical implications of promoting employees' sleep health and well-being at and outside of work.

HR: **Double Challenges: How Working From Home Affects Dual-Earner Couples' Work-Family Experiences** 

Author: **Jia Hu**, *Ohio State U.*

Author: **Jack Ting-Ju Chiang**, *Peking U.*

Author: **Yihao Liu**, *U. of Illinois at Urbana-Champaign*

Author: **Yating Gao**, *Peking U. Guanghua School of Management*

Remote work is on the rise around the globe. Remote work poses challenges to dual-earner couples whose work and family demands are intertwined. Against the backdrop of COVID-19, we connect the two disjointed bodies of literature of remote work and dual-earner couples and focus on how daily work-from-home status (i.e., working from home vs. office) affects both employees' and their partners' work task and family task completion and subsequent reactions to their work (i.e., psychological withdrawal from work) and their family (i.e., felt guilt toward family). We test the hypothesized relationships with 1,592 daily responses of 169 cohabiting dual-earner heterosexual couples. We discover that working from home (vs. office) decreased one's own work task completion and increased their family task completion and that a crossover effect existed especially from wives to husbands. We also find that daily work task completion increased felt guilt toward family through increased work-family conflict (among wives only) and daily family task completion increased psychological withdrawal from work through increased family-work conflict (among both husbands and wives). Furthermore, we reveal that employees' work task completion crossed over to affect their spouses' psychological withdrawal from work through spouses' increased family-work conflict. We discuss theoretical and practical implications for understanding the influences of dual-earner couples' working from home during the current pandemic and beyond.

HR: **Switching Off From The Home Office**

Author: **Heini Pensar**, *U. of Vaasa*

Author: **Liisa Mäkelä**, *U. of Vaasa*

COVID-19 pandemic has forced millions of employees to work from home. Working remotely and working from home has specific elements that cause workload and increase need for recovery. Psychological detachment is the most important form of recovery; it helps people to temporarily detach from their workload. There is limited research of psychological detachment in remote working, and none of it has focused on exploring activities for self-promotion of detachment. COVID-19 pandemic outlines a new context for remote working, whereas the literature to date has considered remote working as voluntary or partial agreement. We conducted 87 interviews to examine remote workers' experiences from home-based working and the ways they self-promote psychological detachment. The findings reveal the conditions in the home environment that cause a need for recovery: Increasing working hours and work intensity, decreased physical activity among remote employees, weakened social network and slowness in support. Further, we found that remote workers self-promote psychological detachment through cognitive, physical, time-bound and nonwork activities. The current study extended the literature of recovery and psychological detachment to remote working, added a new context to literature for remote working and provided guidelines for remote workers and employers to enhance employee well-being and recovery from work.

HR: **Supporting parents: The effects of work-family policies on within-person productivity trends** 

Author: **Drake Van Egdorn**, *U. of Houston*

Author: **Christiane Spitzmueller**, *U. of Houston*

Although multiple theories illustrate how policies affect work outcomes, theory and research do not fully explicate how work-family policies impact within-person job performance, especially after the birth of a child. To address these gaps, we examined the productivity trends (i.e., slopes) of 151 parents (n = 1,842 years) before and after the birth of their children. Then, we analyzed the impact of availability and use of onsite childcare and a flexible work arrangement on those productivity trends, along with examining gender differences in these effects. Our results suggest that productivity trends do not change after the birth of the first or second child for men or women. The availability of either work-family policy did not relate to productivity trends, whereas the use of onsite childcare after the birth of a child increased productivity trends and the flexibility work arrangement decreased productivity trends. Supplemental analyses demonstrate the robustness of the findings. Our work strengthens the theoretical understanding of human resource management policies and contributes critical insights for organizations and their performance management systems.

Financial Issues in International Business

This session addresses various financial issues associated with international business, including two papers on IPOs, one on the global debt market, and one examining the impact of patents on a firm's ability to take on debt.

IM: **Information Asymmetry, the Role of Intermediaries, and Underpricing in the Global Debt Market**  

Author: **Thomas Lindner**, *U. of Innsbruck*

This paper investigates underpricing in the global bond market. It associates losses in proceeds from bond issues to information asymmetry between issuers and investors. This information asymmetry is driven by firm risk and the quality of intermediaries, particularly when a transaction crosses a national border. Moreover, the influence of cross-listing on underpricing is theorized to be contingent on intermediaries and the investor protection in the capital market. Empirical predictions are tested on a unique dataset of 5,507 bonds issued by firms from 23 home countries in seven capital markets between 2007 and 2017.

Paper is Available to Meeting Registrants Only.

IM: **The Interplay Between Patent Ratios, IPR, IP-Intensity and Firm-Debt** 

Author: **Elizabeth Marie Moore**, *Northeastern U.*
Author: **Bruno Buscarioli**, *FGV EAESP Sao Paulo School of Business Administration*
Author: **Luis Alfonso Dau**, *Northeastern U.*
Author: **Jorge M. T. Carneiro**, *FGV EAESP Sao Paulo School of Business Administration*

As foreign innovation, and the related patenting activity, continues to steadily increase, it is timely to examine the impact of the relative growth of foreign patents on host-country firms. We investigate one particular aspect of a company's investment strategy – debt raising. We argue that a relative rise in non-resident patents increases spillover effects, so that local firms may invest less in R&D, thus allowing them to take on more debt, and invest more in serving foreign companies or in fighting them, thus potentially resorting to more debt to fund their competitive moves. Further, we argue that these relationships depend on two important contingencies: country-level intellectual property rights (IPR) protection and industry-level IP intensiveness. Data of all publicly listed companies in 19 emerging-market countries from 2000 to 2018 provide robust support for these assertions.

Paper is Available to Meeting Registrants Only.

IM: **"Tell Me a Story": A Sensemaking and Sense-giving Perspective On IPOs**   

Author: **Peiyi Jia**, *U. of Massachusetts, Lowell*

This study adopts a sensemaking and sense-giving perspective to examine how venture capital affiliation influence its portfolio companies' IPO performance beyond the certification effect. We argue that the IPO company engages in a sensemaking and sense-giving process to tell a story to investors and influence their perceptions. The narratives help shape investors' perceptions by conveying entrepreneurial orientation and customer orientation. Based on a dataset consisting of 1,831 companies that went public between 2005-2019, we use PLS-SEM to test a multiple mediation model. The results suggest that venture capital presence positively affects IPO performance through increasing entrepreneurial orientation and customer orientation narratives in the prospectus.

Paper is Available to Meeting Registrants Only.

IM: **Legal Perception and IPOs: An Investigation into the Impact of Legal Signaling on Firm Valuation**  

Author: **Gerhard Schnyder**, *Loughborough U.*
Author: **Anna Grosman**, *Loughborough U.*
Author: **Mathias Siems**, *Durham U. Business School*
Author: **Kun Fu**, *Loughborough U.*

In this paper, we contribute to the literature on institutional determinants of IPO valuation. We introduce the concept of “legal signaling,” which focuses on the perception of law and thus complements the existing institutional approaches to IPO valuation which consider the quality of the positive law (“standard view”) and firm-level corporate governance practices (“firm signaling view”). Our approach explicitly models the difference between the effect of the positive law and the effect of the perception of law on IPO value. Based on a world-wide longitudinal dataset of IPO performance across a large number of countries, we find strong support for the claim that the perception of quality of law, operationalized as a country's legal shareholder protection, is more important than its actual quality to explain post-IPO firm value. We also uncover that the effect of perception on IPO value is stronger when the law's quality is correctly perceived than when it is misperceived. Overall, our findings underscore the need for a more sophisticated theorization of the ways in which law affects entrepreneurial finance.

Internationalization and Emerging Market Firms

This session address issues related to internationalization and emerging market firms. It includes papers related to internationalization of business group affiliated firms, institutional voids and nonmarket strategy effects on international expansion, home country nonmarket political strategy and international expansion, and the microfoundations of overseas CSR activities of emerging market firms.

IM: EMNEs international expansion: home country institutional voids and nonmarket strategy effects

Author: **Cinara Gambirage**, *FGV EBAPE*
Author: **Mohamed Amal**, *Regional U. of Blumenau- FURB*
Author: **Wlamir Goncalves Xavier**, *Biola U.*
Author: **Jaison Caetano Da Silva**, *Fundação Getúlio Vargas/EBAPE*

Based on new institutional economics view, we theorized and empirically demonstrated that home country institutional voids not only provide an incentive to the Emerging Markets Multinationals Enterprises (EMNEs) escape to foreign markets, but also and mainly that these home country institutional voids may create exit barriers to EMNEs' international expansion through outward foreign direct investment (OFDI). Moreover, we provide new insights explaining how home country nonmarket political strategy fill home country institutional voids for EMNEs enter in foreign markets. Our original database on cross border mergers and acquisitions (CBM&A) by Brazilian firms over a 16-year time frame provide strong support for the paradox effects of home country's institutional voids on EMNEs international expansion. Our findings also reveal that home country nonmarket political strategy support EMNEs in their international expansion. Finally, our results suggest that particular political positions may mitigate home country institutional voids on international expansion of EMNEs. The study develops theoretical and empirical implications to IB literature extending the knowledge of the international expansion of EMNEs and bringing new insights regarding the role of nonmarket political strategy for the international expansion of EMNEs.

Paper is NOT Available. Please contact the author(s).

IM: International expansion and home country nonmarket political strategy of EMNEs

Author: **Jaison Caetano Da Silva**, *Fundação Getúlio Vargas/EBAPE*
Author: **Rosilene Marcon**, *U. do Vale do Itajaí (UNIVALI)*
Author: **Ronaldo C. Parente**, *Florida International U.*
Author: **Cinara Gambirage**, *FGV EBAPE*

In this study, we investigate the drivers of home country nonmarket political strategy and, why some emerging markets multinationals (EMNEs) intensify these political ties more than others EMNEs do. Theoretically grounded on institutional-based view of strategy, we theorized and empirically tested international expansion as a driver of home country nonmarket political strategy. Next, we also test resources and capabilities as moderators of nonmarket political strategy intensity. We argue that EMNEs with international expansion become more inclined to pursue a nonmarket political strategy in home country and, depending on their resources and capabilities, these MNEs implement higher or lower levels of political ties. Thus, the value of nonmarket political strategy to the EMNEs can increase as resources and capabilities to deal with international expansion issues decreased. We empirically test our theoretical framework using a longitudinal data set from 2002 to 2017 with Brazilian firms on campaign donations, state-owned loans and cross border mergers and acquisitions (CBM&A) and the results support our hypotheses.

Paper is NOT Available. Please contact the author(s).

IM: Internationalization of business group affiliated firms: Network based explanation

Author: **Anish Purkayastha**, *U. of Sydney Business School*
Author: **Vikas Kumar**, *U. Of Sydney*
Author: **Andrew Delios**, *National U. of Singapore*

This study attempts to explain the internationalization of business group (BG) affiliated firm with the help of network-based arguments. Considering that both costs and benefits are differentially associated with the characteristics of a BG, we propose that group level diversification has a U-shaped relationship with affiliated-firms' levels of internationalization. We introduce two affiliate level contingent factors – market knowledge and technology knowledge. Our empirical analyses of 3,204 Indian BG affiliated firms (16,110 firm-years) for the period 2006–2014 lends support to the U-shaped direct effect, with an observed flattening effect of market knowledge, but the expected moderating effect of technology knowledge shows no evidence in our data. From our arguments and findings, we provide both a theoretical extension to the BG literature and connect to managerial implications relevant to the internationalization of BG-affiliated firms.

Paper is Available to Meeting Registrants Only.

IM: Corporate Social Responsibility and Emerging Market Multinationals

Author: **Sihong Wu**, *U. of Western Australia*
Author: **Di Fan**, *Swinburne Business School, Swinburne U. of Technology*

Integrating expatriate management and corporate social responsibility (CSR) literature, this study aims to explore the underlying microfoundations of the overseas CSR strategy of emerging market multinationals (EMNEs). We posit that EMNEs engaging in overseas CSR activities can yield abundant learning advantages and enhance the individuals' learning skills (i.e., cross-cultural competence). Our empirical results confirm this argument and show that the CSR activities can improve the EMNE expatriates' work performance and contributes back to the headquarters via reverse knowledge transfer. Compared with the extant literature suggesting that CSR is a compulsory investment for EMNEs to get rid of liability of foreignness, this study shows that the "beyond regulatory" investments can be viewed as learning expenses for these firms to get rid of liability of backwardness. Our findings framed in a knowledge-based view contributes to the microfoundations of CSR research, and provide an in-depth learning paths analysis of emerging market multinationals.

Paper is NOT Available. Please contact the author(s).

Author: **Carlos Gonzalez**, *ITAM*

Author: **Daniela Ruiz Massieu**, *ITAM*

Integrating institutional and effectuation theories, this paper examines the relationship between entrepreneurs' means and internationalization in an emerging market. Results indicate that some means, such as technical expertise or business network membership, transform into valuable internationalization resources despite institutional conditions. Others, however, such as industry or international experience, are best deployed locally. Findings also indicate that certain means, such as entrepreneurship experience and number of founders, act as catalysts of internationalization, allowing for other means to transform into internationalization resources. This study extends effectuation theory by showing how means transform into internationalization resources and contributes to research at the intersection of institutional theory and international entrepreneurship by expanding our understanding of universally-enabling and context-binding internationalization resources. The paper also identifies a boundary condition to international entrepreneurship theories that emphasize the role of individual resources during venture internationalization by revealing a context in which certain traits exhibit non-standard relationships with internationalization.

Foreign Direct Investment

This session includes papers related to various aspects of foreign direct investment. It includes papers related to foreign market exit decisions, shadow organizational structures, whether acquisition and greenfield FDI are substitutes or complements, mechanisms underlying performance in rapid internationalization, and Artificial Intelligence and FDI.

IM: **Foreign Market Exit Decisions of U.S. Multinational Hospitals**

Author: **Kiyohiko Ito**, *U. of Hawaii at Manoa*
Author: **Teresa Silvernail Hinnerichs**, *U.S. Army-Baylor U.*

We analyze the relationship between the foreign direct investment and foreign divestment activities of U.S. multinational hospitals. While the extant literature in game theory discusses various aspects of action–reaction behavior, divestment activities of companies that entered host countries before their rivals’ entry in the same location have not been assessed empirically. Our analysis indicates that large for-profit U.S. hospitals are not pushed out of the foreign country by their rivals’ new investment. Instead, the decision for a complete divestment is related to the presence of the most internationalized U.S. hospital, HCA Healthcare. This finding demonstrates the strong influence of an industry leader on the international strategies of other rival hospitals.

Paper is Available to Meeting Registrants Only.

IM: **AI Development, SOE, And Firm's FDI In The Digital Economy**

Author: **Yifei Pan**, *Peking U. Guanghua School of Management*
Author: **Xuchang Chen**, *Peking U.*
Author: **Ting Xiao**, *Peking U.*
Author: **Jun Xia**, *U. of Texas at Dallas*

Business investments are influenced by technology, culture, and policy. Artificial intelligence (AI), the leading technology in this digital era, has become one of the most important drivers among them. While we know little about its underlying theoretical mechanisms and functioning boundaries. Drawing on the institution-based view, we argue that AI development creates an emerging institution that becomes a centripetal force for attracting foreign firm investment (FDI). Accordingly, we predict that host-country AI development attracts FDI in the form of setting up subsidiaries. We highlight home-subnational AI development and a firm’s state ownership as important boundary conditions under which the relationship is stronger and weaker, respectively. Our dataset is selected from a sample of 1,524 Chinese listed companies that engaged in OFDI activities in 26 major developed and developing host countries from 2015 to 2017. Our results provide valuable implications for the literature on international digital economy and AI research.

IM: **Cross-Border Acquisition Activities and Greenfield FDI: Substitutes or Complements?**

Author: **Nan Zhang**, *California State U. Stanislaus*
Author: **Joseph Clougherty**, *U. of Illinois at Urbana-Champaign*

Foreign direct investment (FDI) typically occurs through two dominant modes: cross-border mergers and acquisitions (M&As) and Greenfield investment. This study examines the relationship between cross-border M&As and Greenfield FDI by using antitrust enforcement to capture the “price” paid by foreign investors. Based upon the cross-elasticity approach, if M&A activity and Greenfield FDI are complements, then as the price of engaging in cross-border M&A activity is increased, both M&As and Greenfield FDI activities will decrease. However, if M&A activity and Greenfield FDI are substitutes, then as the price of engaging in cross-border M&A activity is increased, M&A activity will decrease, but Greenfield FDI activities will increase. We consider the impact of U.S. merger-policy enforcement on foreign firm participation in the U.S. sectoral markets for investment via two different modes. We empirically test our theoretical priors on firm-level data covering 1,763 firms and 58 industries over the 2003-2017 period. Our panel-data empirical results indicate that merger-policy investigations deter cross-border horizontal M&As and attract Greenfield FDI. These results indicate that foreign firms actually substitute Greenfield FDI for cross-border acquisitions in the U.S. host-country context.

IM: **Examining the mechanism underlying performance advantages of rapid internationalization**

Author: **Arash Sadeghi**, *Aston Business School*
Author: **Omid Aliasghar**, *Auckland U. of Technology*

Prior research has acknowledged the merits of firm’s post-entry speed of internationalization (PSI) for export performance. However, little attention has been paid to the underlying mechanisms that enable firms to convert their PSI into performance outcomes. Drawing on the dynamic capabilities perspective, this study examines the mediating effects of two firm-specific capabilities, i.e., adaptive capabilities (ADC) and knowledge capability upgrading (KCU), on the relationship between PSI and financial and non-financial export performance. Employing a sample of 211 New Zealand exporting SMEs, we found a positive relationship between PSI and both ADC and KCU and found support that PSI’s effect on export performance is conveyed through the dynamic capabilities of ADC and KCU. This study contributes to the international business literature by elucidating that the process of knowledge and capabilities creation and upgrading is a viable channel for SMEs to achieve the superior performance implications associated with rapid internationalization.

IM: Situated Shadows In A Multinational Corporation: Evidence of a Japanese multinational corporation

Author: **Hitoshi Iwashita**, *vietnamese german U.*

This paper aims to extend the understanding of how shadow organizational structures emerge in the foreign subsidiaries of a single Japanese multinational corporation (MNC). Examining communication within foreign subsidiaries and between foreign subsidiaries and headquarters, in the context of Japanese MNCs' drive to increase the use of local managers, the paper demonstrates how shadow structures are created and situated in specific contexts of communication, informal structures and language. Whereas the existing literature tends to portray such shadow structures as static and fixed structures created by language disparities within the workforce, this paper identifies and elaborates two patterns, which we refer to as sporadic shadow and deep shadow organizational structures. The findings have a twofold significance. First, it is found that sporadic shadow organizational structures are not only created among employees able to speak the organization's home country language, as usually believed, but depend on a deeper affinity between the communicating parties; namely the perception of a shared cultural identity and/or nationality. Second, it is identified that a deep shadow organizational structure is created by the persistence of dual-track human resource management (HRM) in Japanese MNCs, whereby Japanese expatriates effectively operate within a separate self-contained organization structure that exists independently from their formal positions within the organizational structures of their subsidiaries. This suggests that deep shadow structures may persist notwithstanding the recruitment of bi-lingual candidates, such as new university graduates and mid-career staff, as a way of solving language issues through a process of internal internationalization .

Knowledge and International Management

This session contains papers related to knowledge in international management. It includes papers examining the impact of psychic distance on knowledge transfers, explicit and tacit knowledge transfers in international joint ventures, returnee entrepreneurship in China, the role of co-inventor collaboration in China, and the effects of co-location of inventions and geographic overlaps of external sources on the reciprocal exchange of knowledge.

IM: Returnee entrepreneurship as a type and catalyst of emergent entrepreneurship: The case of China

Author: **Yipeng Liu**, *Henley Business School, U. of Reading*
Author: **Marcello Mariani**, *U. of Reading*
Author: **Eugenia Xing**, *Brunel U. London*

The purpose of this paper is threefold. First, we argue that the consolidating phenomenon of returnee entrepreneurship constitutes an increasingly important type of emergent entrepreneurship whereby entrepreneurs leverage latent opportunities and knowledge spillover matured abroad, and subsequently exploit them when they return to their home country. Second, based on empirical evidence from the Chinese context, we provide empirical evidence that returnee entrepreneurship itself represents a catalyst for emergent entrepreneurship, as it can encourage other local entrepreneurs to identify latent opportunities that were not exploited by returnee entrepreneurs. Third, we provide a framework illustrating how returnee entrepreneurship, as a form of emergent entrepreneurship, unfolds in time and space by developing a time/space matrix that can explain the origination of emergent returnee-induced entrepreneurship (ERIE), taking into account also the impact of institutional conditions on talent mobility. Our findings bear important theoretical and practical implications for emergent and returnee entrepreneurship.

Paper is Available to Meeting Registrants Only.

IM: The impact of disseminative capacities on knowledge transfers: Does psychic distance really matter?

Author: **Chansoo Park**, *Memorial U. of Newfoundland*
Author: **Youngrae Kim**, *IDER U. & Royal International U.*
Author: **Charles Chen**, *U. of Hawaii at Manoa*

The purpose of this paper is to assess how the transfer of explicit and tacit knowledge is affected by the knowledge disseminative capacity of a foreign parent firm, with an emphasis on the moderating role of psychic distance, by developing and testing a theoretical model of IJV (international joint venture) learning. We tested the hypotheses with survey data collected from 199 IJVs in South Korea, estimating a structural equation model using AMOS 23.0. We found that the capacity of the foreign parent to disseminate knowledge has a more positive effect on the explicit knowledge transfer than tacit knowledge transfer to the IJV. The relationship between disseminative capacity and explicit knowledge transfer is significantly affected by psychic distance, although this is not the case for tacit knowledge transfer. Our results are critical for IJVs and parent firms seeking to improve knowledge transfer, as they establish the importance of parent firms' disseminative capacities and the moderating role of psychic distance in the process of both tacit and explicit knowledge transfer. This research addresses the research gap regarding disseminative capacity by providing empirical evidence.

Paper is Available to Meeting Registrants Only.

IM: Innovativeness in International Joint Venture: The effect of explicit and tacit knowledge transfer

Author: **Chansoo Park**, *Memorial U. of Newfoundland*
Author: **Jeoung Yul Lee**, *Hongik U.*
Author: **Pervez Nasim Ghauri**, *U. of Birmingham*

The purpose of this paper is to explore the relationships between tacit knowledge, explicit knowledge, and innovativeness of International Joint Ventures (IJVs) based on knowledge-based and learning theories. In the context of IJVs, explicit and tacit knowledge transfer related to innovativeness still is complicated by many challenges. We conducted a survey of 199 IJVs in South Korea. A structural equation model was used to test hypothesized linkages. Our results confirm that explicit knowledge transfer is positively associated with innovativeness. The explicit knowledge transferred from the foreign parent to the IJV has a stronger impact on innovativeness than tacit knowledge does. Additionally, tacit knowledge proved to not exhibit a direct impact on innovativeness of IJVs. The results provide strong support for the mediating role of explicit knowledge in the relationship between tacit knowledge transfer and an IJV's innovativeness. Finally, we find that the transfer of tacit knowledge has a significant effect only on the innovativeness of IJVs with a high level of international work experience.

IM: Improving Global Knowledge Centrality: The Role of Co-inventor Collaboration with China

Author: **Jessica Salmon**, *Siena College*
Author: **Fernando Sanchez**, *U. del Desarrollo*
Author: **Beyza Satoglu**, *Izmir Katip Celebi U.*
Author: **Andres Velez-Calle**, *U. EAFIT*
Author: **Salma Zaman**, *Lahore U. of Management Sciences (LUMS)*

We analyze the role of co-inventor collaboration with China and the USA on a country's increase in centrality in global knowledge networks. Building on research in economic development, innovation, social networks, and institutional theory, we find that co-patenting with Chinese inventors is positively related to a country's centrality in global knowledge networks and that this relationship is negatively moderated by collaboration with the current most central knowledge network, namely that of the USA. We also find a negative effect from intellectual property rights protection and high transparency on the relationship between a country's centrality when collaborating with China. Regression analyses of a panel of 197 countries for the years 2002-2015 support these findings, which contribute to recent debates on knowledge networks and international cooperation. In terms of theory, we extend social networks approach on international business literature, focusing on what institutional characteristics are related to participation in knowledge networks. Regarding policy makers, our findings can be used to encourage international collaboration for increased access to new sources of knowledge that fosters innovation while keeping a close eye on local institutions.

Paper is Available to Meeting Registrants Only.

IM: How location portfolios and geographic overlaps of external sourcing regulate reciprocation

Author: **Sarah Edris**, *Maastricht U., School of Business & Economics*

Author: **Salma Zaman**, *Lahore U. of Management Sciences (LUMS)*

Author: **John Cantwell**, *Rutgers U.*

This paper examines the effects of co-location of inventions and geographic overlaps of external sources on the reciprocal exchange of knowledge between leading MNEs in the pharmaceutical industry. Analyses of USPTO patents from 1976 to 2016 reveal an inverted U-shaped relationship between co-location and the reciprocation of knowledge. Findings also indicate MNEs that source external knowledge from a similar profile of city-regions increase their knowledge exchange. Taken together, we discuss how the sites of origin of inventions, proximity to competitors, and commonalities in sourcing knowledge beyond a geographically bounded context influence inter-firm knowledge reciprocity. We offer a richer conceptualization of geographic profiles.

Culture and Institutions in International Management

This session address various aspects related to culture and institutions in international management. It includes papers related to the sharing economy, sociocultural responses to COVID-19, how the new media affects the divestiture of acquired overseas subunits, and U.S. Antitrust enforcement after the global financial crisis.

IM: **How Do News Media Affect the Divestiture of Acquired Overseas Subunits (WITHDRAWN)**

Author: **Shu Deng**, *U. of Texas at Dallas*
Author: **Jun Xia**, *U. of Texas at Dallas*
Author: **Xinran Joyce Wang**, *U. of Missouri*

The media research in strategic management has uniformly presumed how the news media portrayed firm actions and environments affect constituents' perceptions of firms, given constituents' sense-making rely on the media processed information. Going to a step further, our paper suggests that not only constituents but also firms use media reports for making sense of the environment that they are embedded in. On the basis, the news media affect strategic decisions by shaping firms' perception of the environment. To examine how the media affect corporate strategies, we specifically focus on the divestiture of acquired overseas subunits, a context where the media play an especially important role of information intermediary due to firms' lack of information about host countries. We hypothesize that the negativity of news sentiments regarding a host-country's environmental, social, and governance issues increase the divestiture hazard. Furthermore, we incorporate a moderator of subunit power exemplified as corporate entrepreneurship activities carried out by the subunit. We argue that stronger subunit power weakens the positive effects of media negativity. This study advances the understanding of media's impact on firms' strategic decisions and contributes to divestiture literature and corporate entrepreneurship literature.

IM: **Sociocultural Responses to COVID-19 and Their Consequences for International Business** →

Author: **Haruo Hagiwara Horaguchi**, *Hosei U.*

This study conducts a factor decomposition of the COVID-19 infection rate and mortality in 44 countries. The international comparison reveals socio-cultural tendencies in infection rate and mortality mapping. Several Latin American and Middle Eastern middle-income countries record similar high mortality rates. In contrast, Western countries, except the United States and Israel, tend to show low mortality rates but high infection rates. With the notable exceptions of the United States and Israel, most Western countries are mapped in this cluster. In these countries, regulating people's behavior may be difficult, but it may be possible to perform a sufficient number of PCR tests to check for positives. Several Asian countries are located in a cluster of low infection and either very low or quite low mortality rates.

Paper is Available to Meeting Registrants Only.

IM: **The sharing economy: A critical review and research agenda** → 📖 🖱️

Author: **Patcharapar Rojanakit**, *Queensland U. of Technology*
Author: **Rui Torres de Oliveira**, *Queensland U. of Technology*

Sharing economy businesses do not consistently experience favourable outcomes among different geographical regions, regardless of their emergence globally. Additionally, since the sharing economy is considered a contemporary business mechanism, unlike the traditional business model, there is a lack of constructive business frameworks for sharing economy business to contemplate in order to maintain or advance their business operations. Accordingly, our study provides a comprehensive systematic review of the relevant sharing economy literature to determine influential factors and their impacts on sharing economy business performance. Our findings suggest a diverse context classification and research trend within the existing sharing economy literature and, thereby, we conceptualise a sharing economy epistemology to enhance comprehension of the different forces and mechanisms in place. With that, we develop a conceptual model based on the strategy and institutional literature where we uncover differences for emerging markets. Finally, we suggest a future research framework for the sharing economy field.

Paper is Available to Meeting Registrants Only.

IM: **The End of Globalization? U.S. Antitrust Enforcement After the Global Financial Crisis** → 📖

Author: **Nan Zhang**, *California State U. Stanislaus*

In the years subsequent to the global financial crisis of 2008, there has been growing skepticism with respect to the unmitigated benefits of globalization. The deterrence effect of antitrust enforcement on foreign investments suggests that increased enforcement would lead to backlashes against globalization, which is also called "de-globalization." This study examines how antitrust enforcement has changed after the global financial crisis of 2008. I posit that the strictness of antitrust has increased in the post-financial-crisis years, suggesting that antitrust policy in the contemporary cross-national context for global business has partly contributed to the de-globalization. I find U.S. antitrust enforcement is characterized by higher degrees of scrutiny in the years after the global financial crisis (i.e., the age of global skepticism). Specifically, U.S. antitrust generally becomes stricter when (1) economic downturns are manifest in the economy; (2) antitrust officials are unencumbered by a wave of transaction activity; and (3) the Presidency resides with the Democratic Party.

Global Teams and HR Issues

This session addresses topics related to global teams and other HR issues in international management. It includes three papers that address issues related to various aspects related to performance in global virtual and multinational teams. Additional papers examine the impact of international experience on individual-level outcomes and self-initiated expatriation.

IM: The Holy Grail in Global Virtual Teams: The Mediating Role of Satisfaction on Performance Outcomes

Author: **Katharina Gilli**, *Free U. Bozen, Bolzano*
Author: **Valerio Veglio**, *Free U. of Bozen, Bozen*
Author: **Marjaana Gunkel**, *Free U. of Bozen-Bolzano*
Author: **Vas Taras**, *U. of North Carolina, Greensboro*

Even though the satisfaction-performance relationship has been well-established in the context of traditional face-to-face teams, prior research has largely overlooked the global virtual teams (GVTs) context. As the COVID-19 pandemic has given virtual teams a further boost and increased their relevance, it is unclear whether or not findings based on traditional teams are generalizable to GVTs. Our multi-level analysis based on a sample of over 2,700 participants working in 680 teams examines the relation between satisfaction and both, individual and team performance in GVTs. Using multi-level modeling, we demonstrate the mediating role of satisfaction between various antecedents of individual as well as team satisfaction and performance in GVTs. We discuss the implications of our findings for both research and practice.

Paper is Available to Meeting Registrants Only.

IM: Leaders' Cultural Gap Bridging Behaviors and Subordinates' Work Engagement in Multinational Teams

Author: **Andreas Stefan Hundscheil**, *LMU Munich*
Author: **Julia Backmann**, *U. College Dublin*
Author: **Amy Wei Tian**, *Curtin Business School*
Author: **Martin Hoegl**, *LMU Munich*

The effect of leadership in multinational teams on individuals remains underdeveloped. Based on the self-concept theory, our study investigates how subordinates' work engagement is influenced by their perception of leader's cultural gap bridging (i.e., CGB) behaviors, aiming at facilitating intercultural collaboration in multinational teams. Specifically, we draw on a quantitative, two-wave individual-level study with 280 employees working in multinational teams. Our results reveal that subordinates' perception of leader's CGB behaviors enhanced their work engagement, via its effect on their team identification. In addition, the positive indirect effect is contingent on the level of relationship conflict in the multinational teams.

IM: Team Dynamics and Performance in Virtual Teams During COVID-19: Does Leadership Structure Matter?

Author: **Leah Katell Grubb**, *U. of North Carolina at Greensboro*
Author: **Yonghong Liu**, *U. of North Carolina, Greensboro*

The COVID-19 pandemic has changed how people interact with each other, especially in the workplace and business settings. Based on a sample of 1,224 self-managed global virtual teams (GVTs) consisting of 4,096 members, we found that compared to the pre-pandemic time, during the pandemic, GVT members experienced decreased team conflict, leading to increased team members' satisfaction and improved team performance. We also found support for the interaction effect between team leadership structure and pandemic condition, such that shared leadership was beneficial before the pandemic but not during. Implications for practice and directions for future research are discussed.

Paper is Available to Meeting Registrants Only.

IM: The impact of international experience on individual-level outcomes: A meta-analysis

Author: **Marius Brand**, *WU Vienna U. of Economics and Business*
Author: **Christopher Schlaegel**, *U. of Groningen*
Author: **Gunter Stahl**, *WU Vienna U. of Economics and Business*

This meta-analysis aggregates the insights of 202 studies on the relationships between international experience (IE) and a range of individual-level outcomes including cultural intelligence, cross-cultural adjustment, and work-related satisfaction, performance, and turnover intentions. We provide a conceptual framework to organize the literature, review and integrate existing research on IE-outcome links, explore the impact that different types of IE operationalization and measurement have on the direction and magnitude of effects, and establish the incremental predictive validity of IE beyond commonly used predictors, such as personality traits, general mental ability, and language proficiency. We find that effect sizes are generally small; however, subgroup analyses of different types of IE operationalization and measurement yield substantially larger effect sizes. Additionally, we show incremental predictive validity of IE for more proximal outcomes beyond a set of established predictors. We discuss the implications of our findings for theory development and measurement of IE and offer avenues for future research.

Paper is Available to Meeting Registrants Only.

IM: Self-initiated Expatriation as an Emancipatory act: A Rancièrian Perspective

Author: **Kamila Moulai**, *U. of Louvain Belgium*
Author: **Laurent Taskin**, *Critical Management Studies*

Despite growing scholarly interest in self-initiated expatriates (SIEs), who leave employers at home behind to relocate to a foreign country for a new job, we still know relatively little about how home organization conditions and their perception by SIEs motivate such decisions. We examine this question based on a qualitative analysis of interviews with European SIEs who moved to North America. Using the philosophy of emancipation by Rancière as a sensitizing device, we find that SIEs view their self-initiated expatriation mainly as an act of liberation from constraining orders of evaluation in their home organization. The latter, however, also give meaning to their expatriation going forward as a critical reference for future experiences. Findings have important implications for expatriate research by elaborating on the complex interplay between individual choices and experiences, and organizational contexts.

The Building Meaningful International Collaborations PDW is intended to foster and create new rich collaborations with colleagues around the world through sharing experiences and best practices of international research and teaching endeavors, with a mind to breaking the barriers associated with the different national and topical locating of colleagues. This session answers the legacy conference theme challenge, "How can the Academy of Management serve the diverse interests of its global membership?" The conference theme statement notes that the Academy aims to "inspire and enable a better world through our scholarship and teaching about management and organizations." This workshop also addresses the 2021 theme of "bringing the manager back in management," from an international perspective. Addressing this with an expansive international exchange is an approach imbued with the spirit of innovation spawned by diversity that the 2020s ought to support, as well as our new virtual collaboration that has emerged during the COVID-19 pandemic throughout the year 2020 and as we enter 2021. Some nations have rich traditions of international collaboration and have many strong centers of research while other countries might have one institution that is the center of international collaboration. In some cases, countries and nations might have several competing centers that dissipate the resources available for such ventures. Bringing together scholars and academics from nations that have been underrepresented in cross-country partnerships with those from well-funded and experienced institutions will enhance our discipline of Management and indeed "bring the manager back in management" as suggested by the 2021 virtual conference theme. The workshop will be focused on collaborations among academicians, their students, NGOs, government institutions, and businesses to open new ways and methods of collaboration among them. It is hoped that these exchanges will lead to future collaborations among the presenters that will be productive and successful both in research as well as in teaching areas.

Panelist: **Anne-Marie Soderberg**, *Copenhagen Business School, Denmark*

The Covid pandemic and its related economic meltdown and social unrest has challenged most countries, their societies, institutions, organizations, and individuals. Focusing on both more and less successful country-specific initiatives to fight the pandemic and its consequences, the panel members of this Symposium will explore implications for effective action at the individual, organizational and societal levels. As international / cross-cultural management scholars, the panelists will document actions taken and their various consequences in a wide range of countries around the globe (including Austria, Australia, Canada, Denmark, France, Germany, New Zealand, South Korea, Sweden, Switzerland, UK, and USA). Informed by a cross-cultural lens, the panelists' opening statements will set the stage for a dialogue to explore such urgent questions as: What is most important for leaders, scholars, and organizations to learn from dealing with critical, life-threatening, society-encompassing ongoing crises? How do leaders build and maintain trust? What kinds of communication have been most effective at various stages of the crisis? How can we accelerate learning processes for effective action? How does cultural resilience emerge within a rapidly changing environment of fear, shifting cultural norms, and challenges to core identity? This dialogue will enable us to learn from each other and begin to discover novel and more successful approaches to tackling grand challenges.

Assessment: Grading, Instructing and Learning

MED: The Gradeless Paradox: Emancipatory Promises and Constraining Effects of Gradeless Learning

Author: **Annette Kjaergaard**, *Copenhagen Business School*
Author: **Elisabeth Naima Mikkelsen**, *Copenhagen Business School*
Author: **Julie Buhl-Wiggers**, *Copenhagen Business School*

This article offers a novel perspective on the role of grades in business education by examining opportunities and challenges arising from gradeless learning. The negative implications of grades for students' approach to learning and well-being have spurred interest in gradeless learning in higher education, with current literature focusing primarily on positive outcomes for students such as the advancement of student learning, reduction of stress, increased motivation, and enhanced performance. We present a mixed-methods case study of the experiences of Danish business school students exposed to gradeless learning in a first-year undergraduate program in which all grades were substituted with pass/fail and feedback. Contrary to previous research, gradeless learning did not influence stress levels and performance. However, our qualitative data show that students experienced learning without grades with ambivalence: Although gradeless learning was associated with less pressure, higher motivation, and more collaborative learning, it engendered a feeling of identity loss and created uncertainty about own performance and future opportunities. We explore these dynamics by applying the notion of identity work in transitions as an original and fertile perspective from which to study students' ambivalent experiences of both the emancipatory and constraining effects from gradeless learning.

Paper is Available to Meeting Registrants Only.

MED: We Can Work it Out: Faculty Interpretation of Student Evaluations of Teaching

Author: **Gilberto Sarfati**, *FGV-EAESP*

Despite previous literature strongly criticizing the use of student evaluations of teaching (SETs), it is unlikely that the frequency of SETs will be decreased for university instructors. However, little attention has been given to how we can make SETs work as a tool for improving teaching effectiveness. This research explores how faculty members of a large professional master's program in Brazil interpret the summative and formative results of their SETs. The findings show that formative comments combined with summative scores are effective in improving classes. It also shows that faculty critically assess students' feedback by disregarding emotional positive and negative comments and looking for suggestions in comments. Less effective instructors have difficulty interpreting feedback and tend to attribute their performance to nonresponse bias. This research contributes to the SET literature by showing that a combination of formative and summative questions can be effective in improving teaching quality but that some instructors may need support in interpreting SET results to change their teaching.

MED: Measuring the Cross-Functional Integration Skills of Business Majors

Author: **Danuse Bement**, *Texas A&M U.*
Author: **Derrick ED'Souza**, *U. of North Texas*

As organizations strive to integrate processes to streamline operations and enhance performance, the demand has grown for employees, including new hires, that espouse cross-functional integration skills. However, evidence from the popular press indicates that organizations struggle to hire capable new business graduates. This suggests that despite well-intended efforts, undergraduate business programs may not be providing their students with adequate levels of these skills. We posit that the lack of research related to understanding and addressing cross-functional integration skills have contributed to this gap. To help address this disparity, we adapt and validate an instrument to measure the cross-functional integration skills of undergraduate business majors. The instrument is the first to offer business school administrators the opportunity to map the deliverables of their undergraduate business programs on three CFI skill dimensions: cross-functional collaboration, cross-functional coordination, and cross-functional communication, and to use the information to enhance their programs.

MED: Why Do Students Stay? How Embeddedness Influences Business Student Retention and Performance

Author: **Tyler Burch**, *Idaho State U.*
Author: **Neil Michael Tocher**, *Idaho State U.*
Author: **Gregory B Murphy**, *Idaho State U.*

Two decades of research finds that embeddedness consistently predicts employee retention and performance. Although colleges of business are very interested in student retention and performance, the embeddedness construct has not been researched in the academic context. The present paper examined the embeddedness student outcome relationship in a college of business at a western university. Study findings suggest that more embedded students perform better academically and have higher retention intentions within the college than less embedded students. Results also suggest that the effects of academic embeddedness influence student outcomes indirectly through academic self-efficacy. These results imply that embeddedness should continue to be studied in the academic context and administrators would do well to focus on the question of "why do students stay?" to better understand student outcomes.

Coaching: Intentions, Tensions and Interventions

MED: Coaching Context, Coachee Regulatory Focus and Pre-Coaching Motivation: An Experimental Study 

Author: **Gil Bozer**, *Sapir Academic College*
Author: **Marianna Delegach**, *Sapir Academic College*
Author: **Silja Christina Kotte**, *HMKWU. of Applied Sciences Frankfurt*

This study responds to the call for a closer look at the role that contextual and individual factors play in workplace coaching as a context-sensitive intervention. Drawing on and integrating theories of regulatory focus and training we proposed and examined a model that explains the impact of organizational coaching context on coachee pre-coaching motivation using coachee situational regulatory focus as an underlying mechanism. Results of a scenario-based experimental study (N=175) demonstrated that organizational coaching context affects coachees' situational regulatory foci beyond chronic dispositions. Further, the indirect relationship between developmental organizational coaching context and pre-coaching motivation was mediated by coachee situational promotion focus. However, we did not find the hypothesized indirect relationship between remedial organizational coaching context and coachee pre-coaching motivation via coachee situational prevention focus. The study highlights the important role that organizations' management and human resource personnel play in the 'kick-off' of a workplace coaching intervention by shaping the context of coaching assignments prior to coaching. Furthermore, this study emphasizes the importance of including the organization's informal feedback for the employee prior to coaching as a key contractual element that contributes to coachees' pre-coaching motivation. We conclude with implications for future workplace coaching research and practice.

MED: What Can the Coach Do: The Role of the Coach's Self-Awareness in Creating a Good Working Alliance

Author: **Bastian Hechenrieder**, *Chair for Technology & Management, TU Dortmund U.*
Author: **Tessa Christina Flatten**, *TU Dortmund U.*

Carolyn Dexter Award Nominee

There is broad evidence that the working alliance is the success factor for coaching effectiveness. However, there is limited knowledge which factors the coach contributes to facilitating the working alliance. Based on automatic and controlled processing theory, we explore the two factors self-awareness and experience with which the coach can drive the working alliance. Automatic processing bears the risk of unreflective behavior. Since self-aware coaches have the ability to suppress or even alter undesired automatic processes, the present study intends to research how a coach's self-awareness relates to the working alliance. Furthermore, the coach's experience is considered as a moderating factor, as it takes a strengthening role in altering automatic reactions. We use a multi-group structural equation model to examine the relationships, allowing a differentiation between the three subdimension of the working alliance: goal, task and bond. The empirical analysis of 225 responses from professional coaches in Germany confirms that a coach's self-awareness is positively related to all three subdimensions. The group comparison with the coaches' experience indicates a significant difference for the relationship between self-awareness and the subdimension working alliance—bond.

MED: The Leader as a Coach: A Paradox-based View 

Author: **Udayan Dhar**, *Weatherhead School of Management, Case Western Reserve U.*

Growing emphasis in organizations on reimagining the leader as a coach who prioritizes the development of team members in addition to focusing on task performance often ignores the possibility of emergent tensions in such an approach. Delineating these tensions could help researchers design methodologically rigorous studies on leadership effectiveness, and enable practitioners to train supervisors in the complexities involved in leadership-as-coaching. In this article, I throw light on these nuances by elaborating the learning-related paradoxes that emerge when the organizational leader acts as a coach. I describe five pairs of tensions that emerge in the learning and development of the follower: change and continuity; autonomy and structure; convergence and divergence; short and long-term orientations; and authenticity and social influence. I also explain their bi-directional cognitive, affective, and motivational impacts. Implications for research and practice are discussed.

MED: Executive Coaching: Client's Coachability As Requirement For Coaching Effectiveness?

Author: **Julia Peitzmeier**, *Chair for Technology & Management, TU Dortmund U.*

Research surrounding executive coaching is thriving. However, we still lack theoretical underpinning of the mechanisms which explain why coaching works. Scholars have proven that coaching is effective and recently, the coach perspective receives attention. However, coaching is defined as one-on-one interaction between client and coach. Surprisingly, research on what clients contribute remains scarce. This study takes a client perspective to explain how coachability positively influences coaching effectiveness. Drawing upon social exchange theory, we derive intrinsic motivation as client resource. Following self-determination literature, we assess three facets of intrinsic motivation—autonomy, competence, interest—which we hypothesize influence coaching effectiveness positively. We include openness to change as moderator, building upon role theory. Our results support the direct positive association of all facets of intrinsic motivation with coaching effectiveness. Surprisingly, we find no support for the hypothesized positive impact of our moderator, but find openness to change negatively influences the association between autonomy and coaching effectiveness. We are among the first to take the clients perspective and explain motivational client factors to drive coaching effectiveness. By building a theoretical foundation for coaching research, we expand social exchange theory and integrate role theory, allowing to introduce a moderator with solid theoretical underpinning.

Diversity Equity and Inclusion: Narrowing the Opportunity Gap

MED: Exploring gendered attributional disparities in student outcomes: Are universities complicit?  

Author: **Isabel Fischer**, *Isabel.fischer@wbs.ac.uk*
Author: **John Luiz**, *U. of Sussex*

Whereas female students in the UK, on average, outperform their male counterparts academically whilst at university, within five years of graduation a substantial gender pay gap emerges. Various reasons have been put forward for why this may be the case. We seek to contribute towards the understanding of this disparity by focusing on the students' learning whilst at university and ask whether universities are preparing students effectively for the workplace or contributing towards gender inequality through their practices. Underpinned by attribution theory we use a mixed methods approach, combining both quantitative and qualitative aspects, in which we survey and interview 356 generation Z students, faculty and employers to unpack their perceptions of factors contributing towards students' academic and career success. While students stressed the importance of their own agency and the role of organizational and time management skills, employers highlighted skills associated with teamwork, communication, and the role of confidence. The importance of gender differences manifested strongly with both employers and students indicating that female students tend to prioritize planning and organizational skills as a way to compensate for a lack of confidence, rather than being supported in building confidence. This, in turn, affects how female students approach their university and workplace experience. We examine tensions between students, employers and faculty to investigate how universities can play a role in addressing this gendered experience and outcome. We contribute towards the understanding of how Butlerian gender performativity linked to attribution theory manifests in the higher education sector.

MED: Affirmative action policy: A longitudinal investigation among socially disadvantaged students  

Author: **Sreelekha Mishra**, *Indian Institute of Management, Rohtak*
Author: **Malvika Nandlal Chhatwani**, *OP Jindal Global U., Haryana*

The affirmative action (AA) policy provides admission opportunities to socially disadvantaged students in academic institutes by reducing the entry barriers. However, scholarly work investigating these beneficiaries' performance after they get admitted to academic institutions is relatively scarce. Borrowing from cultural adaptation theory, we examined AA beneficiaries' academic performance over time. We further examined whether ascribed (parental income) and acquired status (work experience) influence AA beneficiaries' academic performance. Our findings indicate that AA beneficiaries belonging to low parental income groups consistently perform better in academics. Besides, AA beneficiaries with work experience demonstrate better academic performance over time. Implications for theory and practice are discussed.

MED: Equity, Equality and Digital Inclusion: Evidence of practice from an Australian University  

Author: **Geraldine Hardie**, *U. of Wollongong*
Author: **Mario Fernando**, *U. of Wollongong*
Author: **Jan Turbill**, *U. of Wollongong*

The pandemic caused by COVID-19 has created unprecedented and irreversible changes to higher education. It has put more pressure on universities to ensure continuation of learning in a remote mode. This paper reports on the experiences of undergraduate students and key staff in relation to digital inclusion in an Australian university. We conducted twenty-three interviews with learning and development specialists, librarians, information technology specialists, peer support leaders, course coordinators, teaching staff and undergraduate students. All participants were asked to describe their understanding of digital inclusion policies. Key staff members were asked for their understanding of equity and equality and how these were operationalized to ensure digital inclusion. The in-depth interviews were supported with documentary sources both internal and external to the university. The two main findings of this research are that digital inclusion policies must be communicated clearly and then linked specifically to equity or equality goals to ensure that digital literacy is achieved. The global pivot to remote work, learning and education has highlighted the importance of access and use of technology to bridge the gap caused by digital exclusion.

MED: Drones and Decisionmakers: The Paradox of Undergraduate Education for Business in the U.S.  

Author: **Sarah Stookey**, *Central Connecticut State U.*

Addressing social and planetary crisis requires altering current business practices and deploying the best possible problem-solving capabilities. Yet, in the United States the system of undergraduate education undermines the needed response. Lower income students who have the most direct experience with business and its impact on society are often educated to function as minimally influential "drones," in overtly practical, results-oriented programs (often at public institutions). Higher income students with the least direct familiarity with business are educated in elite, usually private, liberal arts colleges that emphasize interdisciplinary connections and critical thinking to be "decision-makers". This paper describes the historical roots and current characteristics of a segregated educational system—one based on economic and social privilege rather than talent or ability—and suggests possible changes.

Frameworks for Curriculum and Experiential Learning

MED: Creating effective online modules using the cognitive theory of multimedia learning  

Author: **Thomas Cavanagh**, *Dominican U. of California*
Author: **Kurt Kraiger**, *U. of Memphis*
Author: **Janet M. Peters**, *Colorado State U.*

In response to the COVID-19 pandemic and associated shutdowns, many universities were forced to pivot to online learning in the spring of 2020. Although abrupt, this pivot creates opportunities for both learners and instructors. This article provides practical advice to educators and instructional designers regarding how to create effective online learning modules using principles derived from the Cognitive Theory of Multimedia Learning. Specifically, we discuss how instructors can utilize advance organizers, concise narrated animations, segmenting, interpolated questions, and learner control to facilitate learning.

MED: Teaching and Learning Complex Reasoning: An Integrative Framework

Author: **Andrea Montefusco**, *LUISS Business School*
Author: **Federica Angeli**, *U. of York Management School*

Despite the increasing calls for embedding complexity theory and system thinking in business and management research and education, scholarly work and educational curricula adopting complex reasoning are still very sparse. This conceptual article aims to propel this line of research and education by developing an integrated framework for teaching and learning of complex reasoning. The model highlights several cognitive challenges underpinning the adoption of complexity thinking, such as the tendency to simplify reductionist thinking, the counterintuitiveness of complex systems' behavior, the continuous evolution of complex systems, and the difficulty of updating cognitive frames, and the tendency towards immediate decision-making. Given such challenges, we argue for the need for dynamic preparedness as a core competence for embedding complex reasoning in research and practice. Based on complexity's threshold concepts, namely non-linearity, feedback loops, system delays, systems' dependency on initial conditions, and multiple interactions, we argue how dynamic preparedness can be developed through an inductive, situated educational approach, which trains intuition to sensemaking and towards the recognition of boundary conditions of simplified models. The proposed framework provides a timely contribution to complexity research and complex reasoning education in management and policy, particularly crucial to prevent and mitigate future systemic shocks.

MED: A Principled Discussion: Is the P-O-L-C Framework Still Relevant?   

Author: **Jason Fertig**, *U. of Southern Indiana*
Author: **Meg Joseph**, *Fashion Institute of Technology*

There is considerable diversity in the required cornerstone management course for all undergraduate business majors within the curricula of accredited business schools. Most notably, many schools do not require students to take a Principles of Management course, even though the four principles of Planning, Organizing, Leading, and Controlling are said to anchor the discipline and are the basis for Principles texts. If schools are not requiring a Principles course, what management course do they require for all business students? In this paper, we first aim to provide some historical background on the "Principles of Management." We then discuss how the debate between management relevance and rigor needs to include students as stakeholders. Next, we provide data on management course offerings from a sample of 114 AACSB-accredited schools to support the notion of heterogeneous cornerstone course offerings. Less than half of the sampled schools offered a required Principles of Management course, with many choosing to require Organizational Behavior or another "craft course" in management. Finally, we will provide some suggestions for synergies in management education without seeking resolution to the theoretical debates over rigor vs. relevance.

Paper is Available to Meeting Registrants Only.

MED: Dialogue in Management Education : A Conceptual Framework and Operationalization   

Author: **Varun Elembilassery**, *Indian Institute of Management Ranchi*
Author: **Shreyashi Chakraborty**, *XLRI-Xavier School of Management*

The collective experience of a management classroom has a huge potential for learning and development, which may not be necessarily harnessed by the dominant pedagogical method of problem-based learning. Experience-based learning allows the individual to not only focus on the problem at hand but also facilitates interaction with the self and the world and requires dialogue for expression and for the creation of shared meanings. The dialogic approach, a tool for experience-based learning, incorporates reflective, appreciative, and generative dialogue. The paper proposes a framework for operationalizing and delivering the dialogic approach in a management classroom to attain the objectives of self-awareness based development and realization of student potential.

Cross-Cultural Institutional and Student Perspectives on Management Education

MED: Embracing paradigmatic change among LATAM business leaders. Implications for sustainability education  

Author: **Maria Jose Murcia**, *IAE Business School - Argentina*
Author: **Pilar Acosta**, *U. Icesi*
Author: **Fernanda Tomaselli**, *U. of British Columbia*

Drawing on the psychology theory and empirical findings, this study examines the perceptions of future business leaders in Latin America (henceforth, LATAM) about alternative economic paradigms not based on indefinite economic growth (i.e., post-growth paradigms). Based on a survey among 186 MBA students from six LATAM countries (Argentina, Chile, Ecuador, México, Peru, and Uruguay), this study finds evidence of both justification of the dubbed “growth ideology” and signs of critique or the ambivalence about the role of economic growth in enhancing environmental sustainability and societal well-being. This study contends that the current signs of cognitive dissonance among participants expand opportunities for cognitive change to embrace discussions about alternative modes of sustainable development. We discuss the implications of our findings for management and sustainability education.

Paper is Available to Meeting Registrants Only.

MED: The hierarchic isomorphic pressures facing Latin American B-schools 

Author: **Fernando A R Serra**, *U. Nove de Julho - UNINOVE - São Paulo*
Author: **Isabel Cristina Scafuto**, *U. Nove de Julho - UNINOVE - São Paulo*
Author: **Jacob Eisenberg**, *UCD*

The intention behind this work was to understand the interaction among isomorphic pressures that affect the decisions of Business Schools managers who participate in the America Economia Ranking (AER), an emerging market ranking. Data was collected through 19 semi-structured in-depth interviews with managers from X countries. Results indicate that the coercive pressures that originate from rankings and accreditations and influence B-Schools relation to rankings are hierarchical in nature. We propose a situational model that indicates that the sources of the mimetic pressure stem from participation in accreditation forums, associations, and other meetings, as well as the debate on the best practices and contact with B-Schools with the best reputations in the AER. This study contributes to the literature on the institutional view on B-Schools considering emerging market HEI rankings, given that B-Schools are placed under strong institutional pressures, which are discussed with implications drawn both for the Latin American setting as well as for HE environments in other emerging economies.

MED: A Cross-national Study of International Students' experiences 

Author: **Juana Du**, *Royal Roads U.*
Author: **Rong Wang**, *U. of Kentucky*
Author: **Michal Wilczewski**, *U. of Warsaw*
Author: **Sheila M. Puffer**, *Northeastern U.*
Author: **Terence Mughan**, *RRU.*
Author: **Mary Vigier**, *ESC Clermont Graduate School of Management*

This study examined cross-cultural adaptation experiences of international students from non-English speaking countries studying in English-taught programs in Europe and the United States. Based on the integrative theory of cross-cultural adaptation (Kim, 1988, 2001, 2005), this study examined the positive impact of communication engagement, interaction and general adjustment, and psychological well-being on general satisfaction. We conducted a survey of international students studying in ten universities in Poland, Denmark, Germany, France, Finland and the U.S. A total of 916 international students were selected as the sample for this analysis. This study found that social interaction with local peers in the host culture is a driver for international students to adapt as they are facing a high level of challenges and stress. The research findings contribute to the contradictory viewpoints on the role of communication with co-ethnics in the host cultural environment, finding a significant positive impact of host interpersonal communication, rather than ethnic interpersonal communication, on general satisfaction. Additionally, the results support studies on the multidimensional construct of adjustment by providing empirical evidence of international students, and testify the mediating role of interaction adjustment on student satisfaction. This study has several practical and policy implications to create a diverse and multicultural campus.

Paper is Available to Meeting Registrants Only.

MED: Decolonizing the Business Case Study 

Author: **Dara Kelly**, *Simon Fraser U.*
Author: **Magnolia Perron**, *U. of Victoria*
Author: **Jordyn Hrenyk**, *Beedie School of Business Simon Fraser U.*
Author: **Candice Day**, *Simon Fraser U.*
Author: **Carnation Zhuwaki**, *Pamooja Capacity Builders Inc*

Business education needs to be decolonized. The teaching case is at the heart of contemporary business school pedagogy. However, case studies rarely reflect Indigenous business values or practices. In this paper, we argue that Indigenous ontologies, epistemologies, and axiologies need to be integrated into mainstream business school curricula and that this can be accomplished through a case writing methodology grounded in Indigenous research methods. We scrutinize the lack of Indigenous-focused business cases currently available, as well as describe some of the most important initiatives to date that attempt to address this gap. It is our hope that business scholars and researchers alike will have a deeper understanding of the need for inclusion and decolonization of business school curricula.

Leadership: Intentions, Interventions and Tensions

MED: Do Creativity, Risk-Taking Propensity, and Locus of Control Drive Entrepreneurial Intentions?

Author: **John James Cater**, *U. of Texas at Tyler*
Author: **Marilyn Young**, *U. of Texas at Tyler*
Author: **Kevin James**, *U. of Texas at Tyler*

Using the theoretical lens of the theory of planned behavior, we investigated the effect of the personality factors, risk-taking, creativity, and locus of control, on the entrepreneurial intentions of U.S. business college students. We performed a quantitative survey of 353 students, comparing those with entrepreneurial intentions (n=213) versus those without entrepreneurial intentions (n=140). Our results indicated that risk-taking and creativity both significantly and positively predicted entrepreneurial intentions, but locus of control did not have a significant impact. Contextually, this study was performed during the widespread complications of the Covid-19 pandemic. In response to the heightened interest in entrepreneurship brought on by the pandemic, we advise management educators to pursue programs that encourage student entrepreneurship by fostering creativity and providing educational resources that help students reduce the perceived risk of starting their own businesses.

Paper is Available to Meeting Registrants Only.

MED: Navigating Dynamic Tensions: A Social Network Framework for Leadership Development

Author: **Kate Elgayeva**, *U. of Minnesota, Duluth*

Leadership development trajectories among women in higher education leadership are permeated with a multitude of dynamic tensions. Paving the way to advancement, dynamic tensions encompass perpetual 'holding' patterns of enabling and constraining forces on the path to development. What frames the continuum of these bidirectional forces is the social context of institutions and organizations as systems of interdependent social interactions. In other words, institutions and organizations are imbued with the sociality of (1) cognitive-affective schemas, (2) dynamics of relational exchange, and (3) innerworkings of structural coordination among collectives. The multilevel interplay between these three domains is activated within channels of interactions – the visible and invisible social networks weaved into the fabric of social systems. At the intersection of these domains in social networks is social capital. Social capital mobilized within social networks can cast light on salient pathways to leadership development. Yet even when illuminated, such pathways are nonlinear, since the bidirectional forces within social networks introduce dynamic tensions into the scope of developmental trajectories. How can women in higher education leadership navigate the dynamic tensions in social networks and mobilize social capital to develop leadership capacity? Drawing on social cognitive and social exchange theories, I explore this question by delineating a conceptual framework that captures the multilevel context of enabling and constraining forces on the path to leadership development. In doing so, I offer a developmental roadmap for women in higher education leadership that articulates tensions in aims, values, and expectations driving individual and collective action.

MED: Impact of Leadership Academy on the Transformational and Servant Leadership Development of Students

Author: **Alaba Apesin**, *Saint Michael's College*
Author: **Paul Olsen**, *Saint Michael's College*

This 3-phased longitudinal study assesses the impact of the leadership academy (a structured training invention), implemented by the athletics department of a private liberal art college, on the leadership development of student-athletes. The academy employs the Team Captain's Leadership Manual designed by Jeff Janssen (2014), which used transformational and servant leadership models to guide the development participants to be effective leaders. Data was collected from student-athletes who participated in the academy (experimental group) and those who did not participate (control group). A Multilevel Linear Model (MLM) analysis was conducted to assess and compare the leadership development trajectories of the two groups. This involved using a two level-hierarchy in which the leadership development outcomes at multiple phases (level 1 variable) were nested within student-athletes (level 2 variable) and the dummy variable for participation in leadership academy (participation = 1, non-participation = 0) was inputted as level 2 predictor. Findings indicate a significant positive relationship between the number of phases and the leadership outcome of the student-athletes. It also shows that participation in the leadership academy positively influences their transformational and servant leadership development more significantly than non-participation.

MED: Leadership Complexity Capacity: A Leadership Development Perspective of Intentional Tension

Author: **Stephanie Thomas Solansky**, *Texas State U.*
Author: **Tammy Elizabeth Beck**, *U. of Nebraska, Lincoln*

The purpose of this paper is to propose a new leadership development framework that is focused on the leader's ability to manage and understand the role of complexity in organizational systems. We refer to this ability to manage complexity within systems as leadership complexity capacity (LCC). The LCC development approach considers how the leadership process can serve as tension and enact tensions within a system. In doing so, leader and leadership development is examined through a complexity leadership theoretical perspective. As a result, the leadership function is positioned as a paradox of serving as either a stabilizing or destabilizing tension on the system that enables the system to reach and remain in a region of effective organizing while avoiding the anchor points of dysfunctional equilibrium and chaos. The premise is that developing leaders to know when and how to serve as an intentional tension on a system is important in organizational effectiveness. This paper contributes a different perspective of leadership development by demonstrating how the leadership process can be enacted and engaged for the purposes of creating complexity capacity. The perspective proposed considers the development of the leader and the leadership process as both are necessary for effective leadership functioning and reinforce each other to maintain a system in the region of effective organizing.

Author: **Ibiyemi Omeihe**, *U. of the West of Scotland*

Author: **Kingsley O. Omeihe**, *U. of Aberdeen*

Author: **Christian Harrison**, *U. of the West of Scotland*

This fragility of organisations, institutions, and society has been exposed by the context of the COVID 19 pandemic. This has necessitated the demand for new leadership that will drive to improve and develop institutions and enterprises. This paper examines authentic leadership, highlighting the complexity and problematic nature of the construct. The rise and the acceptance of this construct are explored as well as its inability to advance beyond the current conceptualisation. Though, the importance of this leadership approach has been affirmed by scholars; with positive organisational outcomes linked to this leadership approach. Scholars are yet to chart the path that provides a second chance for leaders; that is enabling inauthentic leaders to become authentic and be perceived as such by their followers. This paper contributes to the literature on authentic leadership theory by proposing the authentic leadership plumb line and its role in the resurgence of authentic leadership within organisations. This paper concludes that authentic leadership should be adopted within organisations during crises as it facilitates the alignment of the leader-follower interaction.

Teaching and Learning with Teams

MED: **Chartering the Course in Team-Based Projects: Do Team Charters Affect Performance in GVTs?**    

Author: **William H. A. Johnson**, *Pennsylvania State U.*

Author: **David Scott Baker**, -

Author: **Longzhu Dong**, *U. of Wisconsin, Eau Claire*

Author: **Charles Wankel**, *St. John's U., New York*

We conducted an experiment using 1,891 student teams that completed an eight-week international business consulting project. Half of the teams were instructed to develop a team charter, while the other half were not. Teams with charters saw improved process performance metrics, but only at the forming stage of team development, and reported higher conflict levels. However, more conflict did not negatively affect peer evaluations or team output quality, suggesting that such conflict was not entirely negative. Team charter was not directly associated with output quality. However, team national diversity moderated the creativity of the project output such that high-diversity teams benefited from charter use in producing a more creative team output. These findings suggest team charters may initially aid process improvement but not necessarily the quality of the output. We hypothesize that the difference between the two groups studied is essentially one of formal written versus informal psychological contracting, which provides for equifinality in performance over the lifecycle of a project. The study contributes to the theory on team charters, particularly with respect to formal versus informal psychological contracting within the context of global virtual teams. The implications for the use of charters in team-based projects are discussed.

Paper is NOT Available. Please contact the author(s).

MED: **Collaboration for Leadership and Academic Performance: Empirical Exploration of Team-Based Learning**  

Author: **Anjali Chaudhry**, *Dominican U.*

There has been a great deal of interest among academics and practitioners in collaboration as a mechanism for learning and productivity as well as potential to contribute to leadership development. In the spirit of engaging in scholarship of teaching and learning, a study was designed for investigating team-based learning (TBL) as a collaborative learning pedagogy for students' leadership competencies and academic performance. Self and peer assessments of leadership competencies were collected over two time-periods from management students of a small private university in the US Midwest. Ratings of the four leadership competencies- self-confidence, self-management, behavioral flexibility, and interpersonal understanding- were higher at Time 2 in comparison to Time 1. T-tests revealed that the improvement in ratings was significant for self-ratings of self-management and behavioral flexibility. Analyses using hierarchical linear modeling showed team membership impacted leadership assessments over time. Furthermore, peer-ratings of all competencies explained significant variance in academic performance. Discussion of the results are presented with the goal of highlighting a path forward for research on leadership development, TBL as a collaborative learning pedagogy, and diversity of students.

MED: **Dynamic boundaries in virtual student teams: Do we still need team cohesion?** 

Author: **Monika Maslikowska**, *U. della Svizzera Italiana*

Author: **Michael Gibbert**, *U. della Svizzera Italiana*

Distance education is becoming a global phenomenon affecting student teamwork, especially since the recent COVID-19 pandemic outbreak. Nonetheless, research in management education on changes in team cohesion in student teams is still quite limited, and even less is known in the context of dynamic forms of modern virtual team collaboration. In the present study, we address this gap by exploring how dynamic boundaries affect team cohesion. We address this question through a study conducted across two editions of a cross-university course (spring 2018 and 2019). Results from the qualitative triangulated data collected from a multiple holistic case study composed of 11 virtual student teams (65 participants) suggest that in the virtual student teams, dynamic boundaries replace team cohesion with "participant alignment" and have differential effects on this novel concept. Our results contribute to the literature in management education and team dynamics and can be helpful in the academic and management practice, shifting the focus from team cohesion onto participant alignment as a new individual-level multidimensional concept. This could become an important aspect of successful virtual teams operating under the modern dynamic conditions.

MED: **Developing Resilience in Diverse Teams: The Role of Resilience-Enhancing Diversity Training (WITHDRAWN)**     

Author: **Ianina Scheuch**, *TU Dresden*

MED Barry Armandi Award for Best Student Paper in Management Education and Development, for the paper submitted by a student or group of students (maximum of ONE non-student, not leading author) that offers the most significant contribution to advance management education and development.
William H. Newman Award Nominee

In today's increasingly complex and turbulent business world, teams in organizations need to develop resilience capabilities. However, until now, there has been only few research on team-resilience capabilities and opportunities for their promotion, especially in diverse teams. This paper aims to narrow this research and analyzes the role of diversity training in developing resilience-related capabilities and thus in unleashing the resilience potential of diverse teams. For this purpose, we use a qualitative research design to compare diverse teams with and without resilience-enhancing diversity training. The results of our video-based analysis show that diversity training has a potential to foster both positive team dynamics and the development of resilience-related capabilities (anticipation, relationship-oriented, and task-related capabilities). In this context, we also observed specific effects of different diversity types (experience, knowledge, and cultural diversity). Based on our in-depth observation, this paper provides first insights on the potential role of resilience-enhancing diversity training, that can be used as a foundation for further research.

Mindfulness and Mindsets

MED: **Distanced from Others, Connected to Self: Mindfulness Training Fosters Wellbeing via Authenticity (WITHDRAWN)**    

Author: **Adam Austen Kay**, *U. of Queensland*
Author: **Tarli Young**, *The U. of Queensland*

Management students are experiencing a crisis in wellbeing and educators have a pressing responsibility to help them cope with the stresses of business school under the new realities of physically distanced learning. Amid rapidly growing interest in mindfulness in management education, we examine the effects of a promising new technology for cultivating student wellbeing: online mindfulness training. In investigating whether and how online mindfulness training works, and which students it most benefits, we conducted a large quasi-experiment with a custom-designed active control group and multiple waves of data collected over two semesters of an academic year. Results show that online mindfulness training improved psychological wellbeing by helping students cultivate authenticity, but that such rewards were only realized by those who were relatively high in trait conscientiousness. In presenting our theory and findings, we shed new light on the role of personality in helping management students integrate experiential learning into their sense of self, and we offer novel, practical, and empirically substantiated guidance to management educators on how to help students develop authenticity and psychological wellbeing through an innovative, engaging, and ready-made online solution that requires little extra effort or cost to implement.

MED: **Mindful Unlearning in Unprecedented times: Implications for Management and Organizations**

Author: **Mai Chi Vu**, *Newcastle Business School, Northumbria U.*
Author: **Loi Nguyen**, *Metropolitan State U.*

Crises trigger both learning and unlearning at both intra-organizational and inter-organizational levels. This paper stresses the need to facilitate unlearning for effective crisis management and shows how we could use mindfulness practice to enhance unlearning and transformative learning in a crisis. In this study, we propose the conceptualization of mindful unlearning in times of crisis with different mechanisms to foster unlearning in three stages of crisis (pre-crisis, during crisis, and post-crisis). These mechanisms include mindful awareness of impermanent and sensual processing (pre-crisis stage), mindful awareness of interdependence and right intention (crisis management stage), and mindful awareness of transiency and past experiences (post-crisis stage).

Paper is Available to Meeting Registrants Only.

 MED: **Embedding a 'Reflexive Mindset': Lessons from Reconfiguring the Internal Auditing Function** 

Author: **Woon Gan Soh**, *U. of Liverpool Management School*
Author: **Elena P. Antonacopoulou**, *Ivey Business School at Western U., Canada*
Author: **Clare Rigg**, *U. of Liverpool Management School*
Author: **Regina F. Bento**, *U. of Baltimore*

Auditors have commonly been perceived as the 'internal policemen' of organizations, primarily because of the application of a compliance-based Internal Auditing approach, coupled with a conformance mindset. This may hinder their effectiveness in auditing 'conduct risk' – i.e., behaviors that would cause problems to consumer protection, market integrity or competition. This paper presents the lessons from an action research inquiry designed to reconfigure the Internal Auditing Function of a branch of a global financial services institution. We explain the process of identifying the deficiencies in the existing compliance-based approach, culminating in the design and implementation of a new conduct-focused approach. We show how cultivating a 'reflexive mindset' becomes a critical catalyst in developing a different internal auditing approach that leads to the identification of misconduct, potential conduct risk and deficiencies in the organization's conduct risk management and governance frameworks. Practising reflexivity fosters a growth orientation and leadership that supersedes the 'conformance mindset'. A 'reflexive mindset' provides auditors with new capabilities to navigate the unknown and deal with the complexities of tensions, dilemmas and paradoxes endemic in organizational life. Perhaps more fundamentally, a 'reflexive mindset' explains how it is possible for the Internal Auditing Function to serve the common good.

MED: **The emergence of implicit leadership theories in children: An empirical study**  

Author: **Claudia Escobar Vega**, *Deakin U.*
Author: **Jon Billsberry**, *U. of Wollongong*
Author: **John Molineux**, *Deakin U.*

Implicit leadership theories (ILTs) occupy a central position in socially constructed approaches to leadership. They are people's lay theories of leadership that determine whom they perceive as leaders, what behaviors they interpret as those of leaders, and whom they allow to exert influence over them. To date, most research into ILTs has focused on how they present in adults and relatively little research has looked at their development in children, which is an important omission because it is during this early period when future adult conceptualizations of leadership are formed. The scant research that has looked at the development of children's conceptualizations of leadership suggests that ILTs develop in phases (spatio-temporal, functional, socio-emotional, and humanitarian) between the ages of five and twelve. We test whether children's ILTs emerge in such a phase-like manner and how the emerging conceptualizations of leadership relate to those found in adults. Gathering empirical evidence from a sample of 251 children between five and twelve-years-old, we show that the development of ILTs in children maps poorly on to the phase-based model and instead emerges with a functional core upon which perceptual dimensions expand or contract over time. Results also show that the majority of ILTs in children can be assigned to factors known to be present in generic models of adult ILTs and these increasingly coalesce into adult ILT dimensions. By discovering that children's ILTs emerge towards adult ILTs, while becoming increasingly sophisticated, we provide a new angle for scholars addressing leadership development for future generations.

Student Stress, Well-being and Identify

MED: Negotiating liminal roles: Analysing the interstructural positionality of management interns

Author: **Farooq Mughal**, *U. of Bath*
Author: **Uzair Shah**, *10824*
Author: **Carolyn Downs**, *Lancaster U. Management School*

Through our narratological approach driven by grounded research, we present a theory of interstructural positionality. In this paper, we explore how management interns experience positional shifts, and in so doing, negotiate the role dynamics of working in a transitory space. Our study contributes to literature on education-to-work transitions by exploring changes in subjective positioning of undergraduate business students during an interstructural journey across domains, i.e. internships, which we consider as a liminal period for students-as-interns that disrupts established patterns of identity and internship work. An inductive analysis of 154 students' year-long reflective diaries, as part of a work placement programme at a UK business school, shows three interstructural positions as a coping mechanism: confused outsiders, regulated adapters and recognized insiders in responding to internship work. Findings also contribute to scholarship on management learning and education by illustrating how business school students learn from liminal role experiences and resolve identity misalignment arising as a result of a break in self-conceptions and internship ideals.

MED: The Best Intentions: The Curious Effects of Online Wellness Training during COVID-19  

Author: **Fallan Mitchell**, *Ted Rogers School of Management, Ryerson U.*
Author: **Steven Kavaratzis**, *Ted Rogers School of Management, Ryerson U.*
Author: **Ellen Choi**, *Ted Rogers School of Management, Ryerson U.*

Although the shift to online learning has been gaining momentum, the current global pandemic has forced institutions to pivot to virtual learning environments. This pilot study evaluates the efficacy of three permutations of a multi-week wellness intervention on mental health, mindfulness, and loneliness in order to examine the effects of different online learning conditions during COVID-19. Undergraduate students were randomly assigned to one of three conditions manipulating the format through which the training was conducted: 1) asynchronous self-guided sessions, 2) synchronous online sessions with a live facilitator, and 3) a hybrid between asynchronous self-guided sessions and brief synchronous online sessions with a live facilitator. Results suggest that all conditions, despite their synchrony, show changes over time; however, counter to our expectations, participants show decreases in mindfulness, increases in loneliness, and non-significant changes to their mental health. To better understand this surprising finding, we analysed short answer responses to find that as stress increases, wellness training can be perceived as "just another task" that overwhelms rather than reduces experiences of wellbeing. This research underscores the importance of considering contextual factors, like a global pandemic or preferences to value achievement over wellbeing, when making decisions around when and how to implement wellness programs.

MED: Stress Training in the Classroom: Evidence of Learning Transfer and Gains in Psychological States an

Author: **Carol Flinchbaugh**, *New Mexico State U.*
Author: **Erin Whitney G. Moore**, *Wayne State U.*
Author: **Shammi Gandhi**, *New Mexico State U.*

Stress is ubiquitous in life. Learning effective stress responses is necessary for any life domain. In this study, we attempt to address these concerns to understand how students respond to their learning and use of stress management techniques in the classroom context. We conduct a content analysis of weekly student journal reflections about their use of stress management techniques over 12 weeks. The findings emerge to depict a transfer of training effect that leads to students' improved well-being beyond the classroom into other life domains. Furthermore, our results detail improvements to students' psychological states after using the techniques and how an increased present-focused orientation may enhance student mindfulness. The results suggest that an explicit focus on student stress reduction in the classroom facilitates a transfer of learning that has important implications for how educators can better prepare students for addressing stress in their multiple life experiences.

MED: Stress, learning, and psychological well-being: An integrated model

Author: **Gerald Burch**, *Texas A&M U., Commerce*
Author: **Dale Telgenhoff**, *Oakland U.*
Author: **Jana Burch**, *U. of West Florida*
Author: **Nathan Heller**, *Tarleton State U.*

The COVID-19 pandemic has caused colleges and educators to change both curriculum and curriculum delivery models. These sudden changes in instruction, along with obvious external stressors on the students, have brought focus back on the role of stress on student learning and psychological well-being. Previous models of the relationships between these constructs do not incorporate advances in neuroscience, stress, learning, and psychological well-being research. Similarly, these models do not include the interactions between learning performance and psychological well-being. This paper integrates research in each of these fields to propose a more comprehensive model to help reduce student stress, increase learning performance, and improve student psychological well-being. Practical implications for educators and recommendations for future research are included.

MED: Creating safe spaces: An exploration of dominant and subordinate identity status (WITHDRAWN)

Author: **Holly Slay Ferraro**, *Seattle U.*

Author: **Meredith Flowers Burnett**, *American U.*

Through a qualitative study consisting of 68 undergraduate business students representing both dominant and subordinate identities, we examine how students make meaning of situations where they feel “unsafe”. Participants were primed on the increased occurrence of incidents involving negative comments or behavior about diversity on U.S. college campuses. They were then asked to think about a time when they felt unsafe in a diversity-related situation and to describe the situation and how it made them feel. Next, we conducted a grounded theory qualitative analysis to study participant’s explanations of how those unsafe experiences. Our results reveal that feeling unsafe is triggered by norms violations such as repeated offensive behaviors and comments. Furthermore, we find these triggers are interpreted as identity, contextual, vicarious, and hazardous working-condition threats which lead to affective and self-protective responses. Additionally, we found evidence that members of dominant groups reported vicarious and hazardous working condition threats more frequently than members of subordinate identity groups did. We propose that social identity group status influences interpretations of norm violations and how people make meaning about being unsafe. In the wake of the #BlackLivesMatter and #MeToo movements, our results underscore the practical importance of higher education institutions providing concrete action items to address safety inequities on college campuses and beyond.

Teaching with Cases, Horses and Open Resources

MED: Learning by Analogy: The Case Method in Customized Executive Programs in Latin America   

Author: **Roy Campos**, *U. de Costa Rica*

Author: **Carlos Rodriguez Lluesma**, *IESE Business School*

The Case Method (CM) helps executives develop their problem-solving skills by exposing them to real-life situations, challenging them to look for similarities and differences with respect to their professional contexts. This study seeks to explain how the analogies and metaphors generated by the CM capitalize on the authentic learning of experienced executives in Custom Executive Programs (CEPs). An analogy is an explicit, non-literal comparison between two objects, or sets of objects, that describes their structural, functional, and causal similarities. Our comparative-case study, conducted on nine CEPs across six Latin American countries, seeks to identify the key factors that enable the CM effectiveness in authentic executive learning. Our results suggest that the success of a CEP depends on the dynamics of co-creation between firms and business schools, but also on the creation and use of analogies and metaphors through the CM. Our analysis reveals three critical factors that determine the success or failure of the CM in a CEP: the visualization of analogies and metaphors as an authentic learning tool, its influence on the speed of executives learning, as well as their relevance during the CM delivery.

MED: Does the Rising Tide of OER Lift All Boats?

Author: **Candice Vander Weerd**, *Cleveland State U.*

While open education resources (OER) have grown in popularity over the last few years, few researchers have considered the benefits of OER adoption beyond student satisfaction and performance. Pursuant to Stakeholder Theory and Expectancy Theory, direct benefits for different stakeholder groups may motivate further OER adoption behavior. Using a quasi-experimental research design, I evaluated the effect of OER adoption on multiple student outcomes, perceptions of instructors, and benefits for higher education institutions. I found student satisfaction, perceptions of quality, and academic dishonesty were significantly related to OER adoption. While relationships to the other outcomes, notably of direct instructor benefits, were not supported, further understanding of how to connect benefits to decision-makers is discussed.

Paper is Available to Meeting Registrants Only.

MED: Equine Facilitated Learning for Enhancing Leadership and Communication Skills   

Author: **Hedwige Serot Almeras**, *U. of St. Gallen*

Author: **Sabrina Bresciani**, *U. of St. Gallen*

Equine facilitated learning (EFL) is an innovative experiential learning method in which horses are utilized for training, creating a unique environment to practice communication and leadership skills. Organizations are increasingly seeing the need to move away from traditional training approaches and scholars have started to discuss the potential of utilizing horses for practicing communication and leadership skills. Participants do not need to ride horses but rather conduct exercises on the ground, for instance getting a horse to follow a specific path. Unlike humans, horses are not influenced by socio-demographic or corporate hierarchies, and honestly reflect a person ability to lead with their behavior. Theorized benefits, based on evidence from the field of psychotherapy, include higher self-awareness, increased emotional intelligence, better communication effectiveness - nonverbal and emotional - and more authentic and efficient leadership. However, only few empirical studies have investigated these outcomes in the organizational context. This paper aims at contributing to the understanding of this experiential learning method by analyzing the effects of corporate training assisted by horses. For this purpose, a qualitative research design with semi-structured interviews is deployed to explore the impacts of EFL workshops on executives and managers from a variety of organizations who attended programs conducted in four different EFL centers. Findings indicate that participants (aged 28-58), interviewed 1 to 2 years after the EFL training, perceive positive effects at both individual and group level. We propose a comprehensive model of Equine Facilitated Learning which includes three major elements: the context (of interacting with horses in the nature, facilitated by coaches) which influences participants' perceived understanding (specifically, self-awareness, awareness of others, awareness of how to lead) and behavior (non verbal communication, relationship and leadership). A remarkable parallel can be noticed between this emergent threefold model and Bandura's Social Cognitive Theory (1986), suggesting that future empirical studies could find in Social Cognitive Theory an appropriate theoretical grounding.

Teaching with Technology: Simulations, Gaming and Blockchain

MED: Integrating Activity-System Maps and NK Model to Understand Organizations Under Dynamic Environments

Author: **Jiunyan Wu**, *Kansai U.*
Author: **Tomoki Sekiguchi**, *Kyoto U.*

Although scholars have used various pedagogical approaches to address complex business challenges, little research integrates multiple teaching methods to help business students understand how complex organizations perform in turbulent environments. In this article, we propose a framework that integrates the management practice of activity-system maps and the NK computational model. We apply this framework to illustrate the effects of environmental changes on developing organizational performance and the patterns of resilience in organizations. We use two companies—IKEA and MUJI—to demonstrate the application of the framework. The simulations show that, in stable environments, it takes time to realize the performance advantage of both moderate and customer-oriented exploration strategies. However, the simulations also show that turbulent environments help organizations avoid the trap of reaching a sticking point quickly. Moreover, when companies encounter disruptive events, an organizational structure in which operational activities are relatively independent helps buffer shocks and a low-exploration strategy enables the company to return to its original performance level faster than do the other two strategies. Our integrative framework and the examples we use offer experimental and evidence-based insights into building strategic and resilient organizations.

MED: Creating Gameful Experience as an Innovative Approach in the Digital era

Author: **Mona Höyng**, *U. of Duisburg-Essen*

In the current digitalization era, games have become a crucial new method for digital game-based learning (DGBL) in higher education. Regarding the use of games in DGBL, the development of meaningful learning experiences within games, i.e., gameful experience (GE), among students is decisive, as GE is a necessary precondition determining the effectiveness of games. Therefore, this study provides deeper insights into the GE and empirically investigates the factors creating GE among students. Grounded in the theory of experience, a double-mediation model is developed that considers instructional support, group engagement, and flow as determinants of students' GE. Based on data from 336 students participating in a team-based business simulation game at two universities in Germany, regression-based mediation analysis revealed that instructional support promoted students' GE. However, in this relationship, the interpersonal factor, group engagement, alone did not indirectly create students' GE in terms of absorption and dominance. Instead, the individual factor, flow, mediated the corresponding relationship. Furthermore, group engagement and flow together sequentially double-mediated the relationship between instructional support and GE. Consequently, in the context of DGBL, appropriate instructional support as well as high levels of group engagement and flow are important to create students' GE.

MED: Blockchain goes to School: A mixed-method investigation to Blockchain adoption in HEIs

Author: **Sushil S. Chaurasia**, *U. of New Brunswick*
Author: **Dhirendra Shukla**, *U. of New Brunswick*
Author: **Natasha Kaul**, *Indira School of Business Studies PGDM*
Author: **Manoj Motiani**, *Indian Institute of Management, Indore*
Author: **Kapil Khandeparkar**, *Goa Institute of Management*

Extant research has established that technology-based innovation can trigger growth, increase productivity, efficiency, and induce better performance. BT can provide a platform for continuous innovation across industries, however, its application specifically in the education industry is still at its nascent stages. The aim of this study is to examine the connection between blockchain and higher education institutions (HEIs) by identifying the key drivers & their significance for adoption of blockchain in HEIs. A mixed-method investigation was carried out by collecting data from one developed country (Canada) and one developing country (India). Study 01 utilized Delphi survey technique to identify critical success factors that are then in Study 02 (Necessary Condition Analysis) was carried out to determine the critical levels that need to be present in order to achieve behavioural intention to adopt blockchain in HEIs. The outcomes indicated a new consideration for the combined role of technology, environment and organizational factors for Blockchain adoption in HEIs. Our analysis revealed that at differing levels, all the three conditions (technology, environment and organizational factors) are necessary for the adoption of blockchain technologies in HEIs.

Effectiveness in eLearning: Individual and Contextual Factors

MED: E-Learning System Usability and Learning Outcomes: The role of Teacher Behavior & Online Engagement

Author: **Khalid Dahleez**, Associate Professor of Management, A'Sharqiyah U. - Oman

Author: **Ayman El Saleh**, A'Sharqiyah U., Oman

Author: **Abrar Al Alawi**, A'Sharqiyah U., Oman

Author: **Fadi Fattah**, A'Sharqiyah U., Oman

This research explores the effect of e-learning MOODLE-based system usability on students' learning outcomes with the possible intervening role of teacher's behavior and online engagement. This study is crucially important as it adds to our understanding of the role of e-learning system usability in predicting student outcomes. From practical perspectives, especially during the spread of the COVID-19 pandemic, this study also helps practitioners at private higher education institutions (HEIs) use e-learning systems more efficiently and effectively to improve students' engagement and learning outcomes. In this research work, data were collected from 433 students at different study levels and academic specializations in HEIs in Oman. The data has been analyzed using partial least squares structural equation modeling via Smart-PLS. The findings of this research show that the e-learning system usability affects students' learning outcomes. Moreover, the relationship between these two variables is mediated by teacher behavior and students' online engagement.

MED: The Role of Learner Self-efficacy, Instructor Humility and Interaction in Online Business Education

Author: **Yajun Cao**, Guanghua School of Management, Peking U.

Author: **Minya Xu**, Guanghua School of Management, Peking U.

The benefits of learner-instructor interaction are universally recognized in face-to-face educational situations. However, for online education, the capacity for learner-instructor interaction to bring advantages to learners and how to trigger it is an under-explored area. Based on and extending AMO theory, we propose that learner self-efficacy (ability) jointly with instructor humility (opportunity) positively affect learner intrinsic value (motivation) through learner-instructor interaction. A two-round survey study of 125 college students attending business related courses was used to empirically test this mediated moderation model. Theoretical and practical implications as well as limitations and direction for future studies are addressed.

Paper is Available to Meeting Registrants Only.

MED: Narcissism in Cyberspace: Effect of Instructor Narcissism Based on Linguistic Data in Business MOOCs

Author: **Yajun Cao**, Guanghua School of Management, Peking U.

Author: **Minya Xu**, Guanghua School of Management, Peking U.

Existing literature has tended to associate narcissism as a negative personality trait that brings out negative outcomes. In the present study, we investigate and uncover that narcissistic lecturers could be an asset instead of a debt for online videotaped courses. We choose online business courses from Coursera MOOCs to study the effect of narcissism on learners' outcomes and experiences. A linguistic analysis by LIWC was conducted on course scripts and reviews from learners to measure instructor narcissism and student psychological states. We demonstrate that lecturer narcissism leads to less learner negative affect and positively relates to learner self-efficacy, which both subsequently, positively associated with high course ratings. These findings contribute to the online courses and narcissism in cyberspace on both theoretical and practical levels.

Emotional Intelligence, Organizational Identity, and External Shocks

MH: The History of ‘Taylorism’: Generational Conflict, External Shocks and Contested Terrain

Author: **Michael Weatherburn**, *Imperial College London*

Scholarship on management history has reached a stage of maturity where it is now possible to develop periodisation, to refine concepts and meaningfully mesh with organisation studies. This paper extends this work to ‘Taylorism’. Long stated to be identical to ‘scientific management’ this article studies the two terms since the life of F.W. Taylor, recovers five distinct ‘Taylorisms’ from history. Building on related scholarship, it then addresses the issue of whether management scholarship has internally ‘evolved’ over time or whether external shocks such as government intervention, war, organised labor and political activism can take claim for key developments.

MH: A History of Emotional Intelligence in Work Settings

Author: **Rebecca DICKASON**, *Gustave Eiffel U.*

Author: **Neal M. Ashkanasy**, *U. of Queensland*

Author: **David Hampton-Musseau**, *U. of Toulouse I, Capitole*

In 2018, the World Economic Forum labeled emotional intelligence one of the “top 10” skills needed to thrive at work in 2020 and beyond. This is especially so in the wake of the Covid-19 pandemic, which will continue to reshape societies and workplaces as we know them. In these turbulent and disruptive times, being emotionally intelligent may prove an asset to maintain trust and creativity, as well as to establish relevant leadership and managerial practices. While imprints of the term can be traced back in time, emotional intelligence has existed, in its modern incarnation, since 1990. In this paper, we explore the history of emotional intelligence: its origins, its underlying theoretical background in research on emotion and general intelligence, the early self-report instruments, the emergence of the ability model of emotional intelligence, and the identification of three distinct “streams” of research in emotional intelligence. This allows us to draw a roadmap for the future and to open new research avenues, particularly considering the challenging times we are all facing. [169 words] (Keywords: emotional intelligence, organizational behavior, history, workplace)

MH: Business Internationalization and Co-evolution of Organizational Identities

Author: **Yuki Nakajima**, *Nanzan U.*

Author: **Motohiro Nakauchi**, *Aoyama Gakuin U.*

This paper analyzes the history of Brother Industry Ltd. to propose a new take on the conventional wisdom surrounding the internationalization of Japanese companies—a common understanding that the key factor behind Japanese firms’ successes in establishing an international competitive edge was how the companies’ headquarters in Japan implemented a powerful combination of control and integration over their international distributors and moved up from low-end markets to high-end markets through unyielding technological development. By exploring the case of Brother Industry Ltd., we locate a different path to growth where highly autonomous local subsidiaries sought to remain in low-end markets and thereby helped their companies develop into major enterprises through successive instances of what Clayton M. Christensen defined as “disruptive innovation.” To establish a logical foundation for our argument, we root our approach in examining the conflict and co-evolution that arises between two different organizational identities.

This symposium aims to outline new applications of intuition research in organizations to mark the 12th year of annual intuition events at AoM. The contribution by Steffen et al. illustrates how training of mental simulation contributes to the development of intuition in crisis response work. Atanasiu and Wickert explore development of intuition by training, focusing on a process to help managers acknowledge and cultivate the use of intuition in decision-making. Hallo et al. highlight the different cultural understandings of intuition between the West and the East regarding decision-making and problem-solving. Mi et al. investigate the configurations of different contextual factors, use of intuitive and rational decision styles, and the impact on decision outcomes. Bas and Dörfler develop the method of intuitive wayfinding by analytical thinkers as an approach to research design. Yeung and Sinclair explore the role of body as an intuitive receptor with a particular focus on sensory perceptions. Antonacopoulou examines intuition by focusing on sensing and sense making through practising sensuousness. Hodgkinson problematizes the concept of collective intuition by examining its construct validity. Finally, Dias et al. address how intuition researchers understand and use intuition in their own work through the dialogic method of inquiry.

Are you working on cognition-related research? Would you like to discuss your work with major scholars in the field? The 24th Annual Cognition in the Rough (CIR) workshop provides an excellent opportunity to discuss your research in an informal, collegial (virtual) roundtable setting. Each virtual roundtable will have 2 facilitators to give feedback on 3-4 early-stage research papers, allowing plenty of time for discussion. Regardless of whether you are a senior or a more junior researcher, this workshop offers you an invaluable opportunity to receive detailed feedback from scholars who are often editors or on the editorial board of top journals.

Pre-registration and submission of a paper proposal is required for attending this PDW. Please visit <https://moc.aom.org/intherough/cir> for more information on how to submit a proposal for consideration for CIR.

Workplace Identity: Novel Perspectives & Investigations

MOC: Limbo and Diremption: Exploring the Process of Firm Digitalization and Individual Dis-identification

Author: **Georg Windisch**, *TUM School of Management, Technical U. of Munich*

Author: **Nicole Alexandra Rosenkranz**, *Ecole hôtelière de Lausanne, HES-SO / U. of Applied Science Western Switzerland*

Strategic change remains a topic of intense debate: Not only because it is a recurring phenomenon in the lifespan of an organization, but also for its consequential bearing on an organization's long-term survival. Strategic change, either motivated to stay true to internal advances or necessary in response to external shifts, tend to be of transformational nature and hence risk disrupting the relationship that organizational members have with the organization they identify with. While a growing body of studies have focused on explaining how employees deal with disruptions to their identification and the restoration of it, much less is known as to how these identification disruptions build up in the first place. In our more than three-year ethnographic case study of a multinational engineering company, organizational members finished an initially endorsed strategic change with disrupted identification. The theoretical model developed on the basis of this strategic change points to the centrality of three process characteristics as triggers to identification disruption. More specifically, two identification mechanisms are identified, namely – identification limbo and identification diremption – with identification limbo leading to deidentifying with the organization, and identification diremption causing dis-identification to emerge. In sum, this study provides one perspective as to why employees may be unable to adapt their identification over the course of a strategic change.

MOC: Identities as Resources: The Role of External Relational Identification in Newcomer Socialization

Author: **Peter Anzollitto**, *U. of North Texas*

Although research regarding socialization processes recognizes the importance of organizational identification for newcomer adjustment outcomes, it has less frequently considered the impact of newcomer identification with targets external to the organization. Through two multi-wave studies, we investigate whether relational identification with identities external to the organization can be beneficial for socialization outcomes. We found that stronger relational identification with identities external to the organization is positively related to job engagement through the dual mediation of social support and psychological well-being, a relationship we explain through Conservation of Resources Theory. At a time when newcomers are expending resources and may not have a support system inside the organization, important identities foster success through building a resource base of support available to the newcomer. These external resources encourage well-being and free newcomers to invest in becoming physically, emotionally, and cognitively engaged with their new jobs. Our research suggests that external relational identities are a neglected and important element influencing the socialization process.

MOC: Driving to Make Dollars and Sense: Self-Narrative Construction under Algorithmic Management

Author: **Eric Anicich**, *U. of Southern California*

Based on the results of an autoethnographic field study involving 130 hours of personal driving experience as a food delivery driver, in-person and virtual meetings with company representatives, and semi-structured interviews (N = 40) with current rideshare and food/grocery delivery drivers, I elaborate the self-narrative construction process affecting drivers in the on-demand economy. My findings reveal that drivers resist the depersonalizing consequences of algorithmic management by harnessing personalizing experiences that occur in the on-demand workspaces (e.g., driver's personal vehicle). Specifically, drivers respond to experiences stemming from momentary customer encounters that occur in these intimate spaces by forging temporal connections to their past and desired future selves – aided by fantasy and rationalization at times – in a way that adds structure and agency to their self-narratives. This process, which I call narrative structuring, helps drivers combat identity-threatening aspects of their work and craft a more coherent self-narrative. However, persistent loneliness fuels drivers' desire for social support and social comparison which drivers satisfy in online sentient communities through a form of storytelling that I call narrative flexing, the identity implications of which depend on the narrative's intergroup versus interpersonal focus. Overall, I advance theorizing on self-narratives and narrative identity work while illuminating the struggles of a vast, yet understudied class of workers.

MOC: Haunted: An Inductive Study of Social Strategies to Manage Haunting Identities

Author: **Yeon Ka Kim**, *U. of Wisconsin, La Crosse*

Author: **Patricia Caulfield Dahm**, *U. of Kansas*

Author: **Theresa M. Glomb**, *U. of Minnesota*

Author: **Spencer Harrison**, *INSEAD*

Individuals with salient work and family identities embody a chosen identity which combines work and family, yet they are surrounded by others who embody much different, improbable selves that focus more exclusively on either work or family. Employing a grounded theory approach, we interviewed 65 working professionals and develop a model of how social reminders of improbable selves influence individuals' self-concepts and how individuals manage their chosen work-family selves in their social environments. We find that individuals are haunted by improbable work-family selves, which in turn make disappointing, judged, and solitary feared selves salient. To escape feared selves, individuals employ others in the service of celebrating, liberating, or validating their chosen work-family selves and distancing from improbable selves. Our findings extend the identity literature by introducing the concept of identity haunting, a companion construct to identity threat that highlights the importance of managing improbable selves in maintaining the chosen work-family self, and exploring the social tactics individuals use to manage haunting identities.

Author: **Yifeng Fan**, *Fairfield U.*

Author: **Hannah Ariane Berkers**, *Amsterdam U. of Applied Sciences*

Self-sacrifice is not a new phenomenon at the workplace. Employees proactively make personal sacrifices to advance the goal of their colleagues, workgroup, organization, or a cause or movement, despite the potential cost to themselves. However, our understanding of why employees do so is surprisingly lacking, partially due to the isolated and sporadic research effort. In this conceptual paper, we aim to synthesize the research on this important organizational phenomenon and build a foundation for future research. To achieve the purpose, we define self-sacrifice at work as all behavior that a) exceeds the direct self-interest of employees to benefit someone else and that b) may cause employees physical or emotional harm. Moreover, we put forward a framework of internal self-sacrifice motives through the lens of identity and identification. We argue that employees' identification with different targets in the organization may serve as powerful drivers to promote sacrifice in their attempts to verify the respective identities. We also articulate how the employees' identifications may change following the sacrifice, depending on the reactions from relevant others, thus contributing to their future identity construction.

Novel Leadership Research: Leader Humor, Leader Mindfulness, & and Team Leadership

MOC: **How and When Leader Mindfulness Influences Subordinate Interpersonal Behavior: A Mixed-Method Study**

Author: **Dan Ni**, *School of Economics and Management Tsinghua U.*
Author: **Xiaoming Zheng**, *Tsinghua U.*
Author: **Lindie Hanyu Liang**, *Wilfrid Laurier U.*

Although an increasing number of studies have verified the beneficial effects of individual mindfulness in the workplace, little is known about the interpersonal effects of leader mindfulness on employee outcomes. Based on motivated empathy theory and the mindfulness literature, this research seeks to develop and test a moderated serial mediation model that leader mindfulness enhances leader empathic concern, which in turn, improves subordinates' interpersonal organizational citizenship behavior and decreases their interpersonal counterproductive work behavior via increased subordinate empathic concern. Workplace hindrance stressors within a team moderate the relationship between leader mindfulness and leader empathic concern, and the serial mediation effects of the model. We tested this model using two studies. Study 1 involved a field experiment in which 72 front-line leaders were assigned to either a mindfulness intervention condition or to a waitlist control condition. Study 2 was a three-wave time-lagged survey using a sample of 84 leaders and 697 subordinates from southern China. Both studies provide consistent support for our hypotheses.

Paper is Available to Meeting Registrants Only.

MOC: **The Dark Side of Humor: The Positive Effect of Leader Humor on Employee Incivility** 

Author: **Yue Yuan**, *Tsinghua U. School of Economics and Management*
Author: **Qi Zhang**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

While much research has focused on the positive effect of leader humor on improving individual and organizational performance, little is known about how leader humor produces negative outcomes, such as employee incivility. Through the multi-time point investigation data analysis, the moderated mediation model proposed in this study has obtained the support of observation data in the Chinese context. Specifically, first, leader humor was positively related to employee incivility. Second, employee psychological safety mediated the relationship between leader humor and employee incivility. Third, employee moral identity moderated the relationship between leader humor and employee psychological safety, as well as moderated the mediating effect of employee psychological safety between leader humor and employee incivility. These findings are conducive to further understanding of the psychological mechanism and boundary condition of employee incivility from the perspective of leader humor, and provide practical guidance for organizations to effectively control employee incivility in the workplace.

MOC: **The Double-edged Sword Effect of Leader Critical Thinking on Team Creativity** 

Author: **Yanan Dong**, *School of Economics and Management, Beihang U.*
Author: **Hui Liao**, *U. of Maryland*
Author: **Baiyin Yang**, *Tsinghua U.*

Drawing on the component model of creativity, we test the processes through which leader critical thinking might influence team creativity and the boundary conditions. We argue that two team processes necessary for team creativity, including team willingness to take risks and team information elaboration, link leader critical thinking and team creativity. Specifically, these two processes act in a paradoxical way such that leader critical thinking may reduce team creativity via decreasing team willingness to take risks, while enhance team creativity via promoting team information elaboration. In addition, we propose that these effects are contingent on leader's use of two types of power – reward power and coercive power. In particular, leader's use of reward power may mitigate the negative effect of leader critical thinking on team willingness to take risks, and its positive effect on team information elaboration; while leader's use of coercive power may strengthen the negative effect of leader critical thinking on team willingness to take risks, as well as its positive effect on team information elaboration. After developing and validating the measurement of critical thinking (Study 1), we tested the hypotheses using a two-wave design with field data from a large technology company (Study 2). Our results supported all the hypotheses except for the moderating effect of leader's use of reward power in the relationship between leader critical thinking and team information elaboration. The findings offer interesting theoretical and practical implications for critical thinking and team creativity.

MOC: **Who's the Leader Anyway? Paradox Theory and Shared Leadership in Teams**

Author: **Peter Anzollitto**, *U. of North Texas*
Author: **Virginie Lopez Kidwell**, *U. of North Texas*
Author: **Elisabeth M. Struckell**, *U. of North Texas*

Our study identifies an important potential downside of the need for leaders to reach opposing objectives, as identified by paradox theory: communicating competing goals can contribute to team member perceptions of low behavioral integrity for leadership sharing. Behavioral integrity for leadership sharing is associated with team performance through the mediating effects of shared leadership and team efficacy. Team leaders have important roles in establishing well-functioning leadership collectives through helping team members develop their own leader identities. This process is disrupted when leaders are perceived to have low behavioral integrity for leadership sharing. We extend adaptive leadership theory by highlighting the disproportionate influence a team leader has in establishing shared leadership in a team.

MOC: **Help Yourself Before Helping Others: When CSR Makes a Company Look Authentic**

Author: **Madeline Ong**, *Texas A&M U.*
Author: **Yong H. Kim**, *Texas A&M U.*

A growing body of research shows that an organization's corporate social responsibility (CSR) increases its attractiveness as an employer. What remains less explored, however, are the conditions under which some job seekers may be less likely to respond positively to a potential employer's CSR activities. We propose that job seekers will be less likely to view an organization that engages in CSR activities focused on external stakeholders (i.e., external CSR) as authentic when the organization does not first engage in CSR activities that benefit its own employees (i.e., internal CSR). Subsequently, job seekers will be less likely to be attracted to that organization. In other words, they will view an organization that is engaging in external CSR as authentic and attractive insofar as the organization is also engaging in internal CSR. The results from a combination of three studies—an archival study of Fortune 500 companies (Study 1), a field study of unemployed job seekers (Study 2, $n = 465$), and an experiment (Study 3, $n = 400$)—provide support for our hypotheses. We discuss our findings by highlighting their contributions to the literatures on corporate social responsibility, employee recruitment, and authenticity.

MOC: **Cultural Diversity Stimulates Entrepreneurship: Evidence from Two Large-Scale Natural Experiments**

Author: **Jackson Lu**, *MIT Sloan School of Management*

Entrepreneurship is the engine of economic advancement and innovation. Leveraging two large-scale, pre-registered natural experiments, we provide the first causal evidence that the cultural diversity of individuals' social environments stimulates them to become entrepreneurs. In Study 1, 3,632 MBA students from 98 countries were assigned to 540 learning groups that naturally varied in cultural diversity (e.g., in some groups all students were from the same country, whereas in other groups students were from different countries). Multilevel analyses revealed that the cultural diversity of an individual's learning group positively predicted whether he/she became an entrepreneur upon graduation. Importantly, this positive effect existed for both American and foreign MBA students. Moreover, among individuals who became entrepreneurs, the cultural diversity of their learning groups positively predicted the novelty of their start-ups. Study 2 replicated these effects in another MBA program, in which 2,516 students from 90 countries were assigned to 461 learning groups that naturally varied in cultural diversity. The positive effect of group cultural diversity on entrepreneurial entry was (a) mediated by the number of intercultural friendships an individual had within his/her learning group and (b) moderated by the personality trait of openness to experience, such that the positive effect of group cultural diversity was stronger for more (vs. less) open individuals. By demonstrating the entrepreneurial benefits of cultural diversity, this research offers broad and tangible implications for cultural diversity, creativity, entrepreneurship, and immigration policies.

MOC: **Are Two Solutions Better than One? Effects of Multiple Solutions on Group Problem Solving**

Author: **Gbemi Abimbola**, *U. of Waterloo*
Author: **P Robert Duimering**, *U. of Waterloo*
Author: **Arielle Grinberg**, *U. of Waterloo*

Throughout problem solving literature, little is known on the effects of the availability of multiple equally satisfactory solutions on the behavior and performance of groups. Our study fills the gap in knowledge, and makes recommendations for future work. In this experiment, four-person groups solved card exchange problems with either one or two possible solutions and different structural properties: (a) sort (a single-solution control problem); (b) a two-solution problem; (c) a two-solution problem and detour; and (d) a two-solution problem and restructuring. We predicted that groups solving for problems with more than one solution would solve these problems more quickly. Our results, however, indicated that when more than one solution existed, this significantly increased solution times, search path complexity, and the number of moves needed to reach solutions, particularly for problems with detour or restructuring properties. The findings suggest that increased coordination difficulties due to increased problem structure complexity and the goal interdependence of group members outweighed potential performance improvements related to the availability of multiple solution states.

MOC: **Do We Need to Run all the Time? How and When Negative Media Evaluations Influence Individual Effort**

Author: **Pierre Nicolas Huneke**, *Johannes Gutenberg-U. Mainz*

Though the influence of media evaluations on organizations' decisions and performance is generally recognized, empirical evidence on the impact of media evaluations on individuals is lacking. This study examines how and when individuals respond to negative media evaluations about themselves. To address these questions, we integrate insights from performance feedback research and attribution theory and test our theoretical framework with a panel data analysis in the context of professional football (soccer) players in Germany. Our results indicate that the more critical individuals' media evaluations are, the greater their subsequent effort. Further, we reveal when individuals' attributions moderate this relationship. Specifically, we find that this relationship is stronger under certain circumstances: (a) when individuals are criticized similarly by different media sources, (b) when their reference group does not receive similar criticism, and/or (c) when they have received similar criticism in the past. Our findings have important implications for the growing body of research on performance feedback as well as attribution theory in a workplace setting.

MOC: [Neurodiversity and Early-Stage Entrepreneurs](#) 

Author: **Stephen E. Lanivich**, *U. of Memphis*

Author: **Curt Moore**, *Oklahoma State U.*

Author: **Nancy H. McIntyre**, *West Virginia U.*

To strengthen our growing understanding of the relationship between neurodiversity and entrepreneurial cognition, we utilize the neuropathology perspective and conservation of resources theory to explore this relationship. Specifically, we introduce the resource-induced coping heuristic (RICH) as a mechanism to explain the relationship between ADHD and entrepreneurial alertness, cognitive adaptability, and entrepreneurial intent. We propose that ADHD functions through the RICH in an entrepreneurship context, primarily because ADHD-related neurofunctions lead entrepreneurs to encounter resources to be considered for acquisition, development, and protection. Our findings indicate that while there is no direct relationship between ADHD and entrepreneurial alertness, cognitive adaptability, and entrepreneurial intent, there is a strong relationship with all three when the RICH moderates each relationship. In this way, the RICH bridges the conceptual gap for entrepreneurs with ADHD, between their pathological cognitive executive control and reward attributes and other cognitive resources, such as entrepreneurial alertness, cognitive adaptability, and entrepreneurial intent.

MOC: [A Quasi-Field Experiment Examining the Conflicting Links between Positive Feedback and Creativity](#)      

Author: **YeunJoon Kim**, *U. of Cambridge*

This research proposes a dual-pathway model for positive feedback and creativity as a comprehensive theoretical framework to understand inconsistent theories and empirical findings in the literature. Past research has produced mixed evidence regarding the relationship between positive feedback and recipient creativity. The dual-pathway model organizes these inconsistencies under two pathways: the creativity complacency pathway and the perceived leader support pathway. In addition, this study builds on the dual-pathway model to examine whether and how a leader's positive feedback benefits employee creativity, particularly in a time of crisis. With a sample of 158 leader-employee dyads, this study found that positive feedback was related to employee creativity via two opposite pathways. On the one hand, positive feedback was negatively related to employee creativity via the increased level of creativity complacency. On the other hand, it was positively related to employee creativity via the increased level of perceived leader support. These two pathways negated each other, making the whole relationship nonsignificant. Finally, this study found that during a time of crisis (COVID-19), positive feedback significantly improved employee creativity because the crisis strengthened the perceived leader support pathway but weakened the creativity complacency pathway.

MOC: [The Bamboo Ceiling: A Network Perspective on Why East Asians are Underrepresented in Leadership](#)     

Author: **Jackson Lu**, *MIT Sloan School of Management*

Carolyn Dexter Award Nominee

In the United States, Asians appear disproportionately underrepresented in leadership roles, a puzzling phenomenon known as the “Bamboo Ceiling.” We advance a social network explanation for this phenomenon: ethnic homophily. We theorize that East Asians—but not South Asians—are less likely than Caucasians to attain leadership roles in multiethnic environments partly because of their tendency to socialize with their ethnic ingroup members (i.e., other East Asians). Across two studies, we examined the leadership attainment and the friendship networks of 11 ethnically diverse class sections of new MBA students in a US business school. East Asians were less likely than South Asians and Caucasians to be (a) nominated as leaders and (b) elected as leaders. Social network analysis revealed that while all ethnic groups exhibited ethnic homophily in friendship, East Asians exhibited the highest ethnic homophily, which consistently mediated their low leadership attainment. These results were robust after we controlled for variables such as assertiveness, availability of ethnic ingroup members, nationality, socioeconomic status, and personality. By applying social network analysis, this research identifies ethnic homophily as an important reason why East Asians but not South Asians face the Bamboo Ceiling. More broadly, by uncovering the negative link between ethnic homophily and leadership attainment in multiethnic environments, our research suggests that connecting with people from diverse ethnic backgrounds may facilitate individuals' leadership attainment in multiethnic environments.

MOC: [Relational Defensiveness at Work: An Attachment Perspective to Workplace Conflict](#)

Author: **Dayna Walker**, *San Francisco State U.*

Author: **Jeffrey Yip**, *Simon Fraser U.*

Conflicts between co-workers can result in defensive reactions, escalated emotions, and greater rigidity towards possible resolutions. Despite advances in conflict management research, the relational mechanisms of defensiveness remain a black box. Why and how do people respond defensively to conflicts in work relationships? To address this question, we integrate perspectives from attachment theory and conflict management to develop an attachment-based model of relational defensiveness. Specifically, the paper unpacks the unique characteristics of relational defensiveness, the conditions by which it occurs, and its consequences. Integrating research on attachment interventions, we theorize the role of person-focused and process-focused coaching in mitigating defensiveness and in preventing the escalation of interpersonal conflict. We conclude with a discussion of how an understanding of relational defensiveness can inform new directions for research on conflict, leadership, and interpersonal dynamics in organizations.

MOC: [The Role of Organizational Nostalgia in Promoting Informal Social Interactions](#)  

Author: **Shota Kawasaki**, *Nanyang Business School*

Author: **Xi Zou**, *Nanyang Business School*

Author: **Constantine Sedikides**, *U. of Southampton*

Author: **Tim Wildschut**, *U. of Southampton*

The COVID-19 pandemic has pushed many organizations to implement social distancing policies, disrupting social interactions among employees. As informal social interactions are less likely to spontaneously occur at workplace under social distancing measures, it is important then to examine what could motivate employees to initiate more informal social interactions so that communications and bonding among employees can be maintained during the pandemic. Incorporating the literature on organizational nostalgia and social support, we hypothesized that both trait and state organizational nostalgia are positively associated with informal social interactions, which in turn enhance one's job satisfaction and positive affect. The results from two studies, employing a cross-sectional design and a 5-day daily diary design respectively, supported our hypotheses, and their practical implications for during and beyond the pandemic are discussed.

MOC: Investigating the relationships among error culture, error reporting, and performance: A panel study

Author: **Nicole Hartwich**, *RWTH Aachen U.*

Author: **David Antons**, *RWTH Aachen U.*

Errors can have far-reaching consequences, especially in high-reliability contexts like healthcare. While it has been highlighted long ago, that organizations are able to learn from negative performance feedback that might have its root cause in human errors, the process how management becomes aware of errors has not yet been fully understood. Whereas research mostly assumes that employees share negative feedback with their superiors in a timely and accurate manner, upward flows of negative information are often delayed, sugarcoated, or even suppressed. Guided by the behavioral theory of the firm, we stress the importance of internal performance feedback and introduce organization-level error reporting as a key mechanism that triggers problemistic search activities of management. We incorporate temporal dynamics in current theorizing and provide new insights into the interplay of organizational error culture, error reporting, and organizational performance. Based on a large, longitudinal data set of public hospitals in England, our study successfully demonstrates that, within organizations, an increase in positive error culture increases organizations' error reporting rate which in turn reduces the number of fatal patient safety incidents over time. Moreover, the investigation of lagged relationships offers a more nuanced understanding of how this within-organizational mediation process unfolds over time.

MOC: How and When Mindfulness Motivates Work Performance: PsyCap Mediates & Work Meaningfulness Moderates  

Author: **Adam Austen Kay**, *U. of Queensland*

Author: **Andrew Hafenbrack**, *U. of Washington*

Author: **Daniel Skarlicki**, *U. of British Columbia*

Author: **Zen Goh**, *Monash Business School*

Author: **Yabome Gilpin-Jackson**, *Fraser Health Authority*

Organizations are investing heavily in mindfulness, yet a paucity of research has tested the effects of mindfulness on motivation and work performance, and existing studies show mixed results. In this paper, we examine the effect of mindfulness on work performance via the motivating mechanism of psychological capital. Across two experiments conducted online and in the field, we draw from theory on the metacognitive function of mindfulness to explain how it activates psychological capital and thereby improves work performance. Responding to calls to identify boundary conditions of psychological capital on work performance, we further show that the performance benefits of mindfulness vary according to how meaningful employees consider their work to be. In so doing, we address a number of key issues in the field of mindfulness at work, including how mindfulness can motivate improved work performance, and when it is most likely to do so.

Paper is Available to Meeting Registrants Only.

MOC: What difference a day makes: An examination of dynamic antecedents of voice

Author: **Nicole Hartwich**, *RWTH Aachen U.*

Author: **David Antons**, *RWTH Aachen U.*

Research has mostly considered employee voice to be a relatively stable behavior and has examined it primarily on a between-person level. In this work, we reason that existing between-person examinations of voice behavior should be complemented with more within-person assessments. Integrating regulatory focus theory with affective events theory, we hypothesize an affective events model of employee voice. To understand whether and to what extent increases and decreases in job resources and momentary states in relation to the prior day affect voice behavior, we conducted a diary study and use multilevel analysis to analyze the hypotheses in a cross-level moderated mediation model. Results confirm that voice varies within individuals and that, on an intrapersonal level, an increase in job situations increases voice behavior via an increase in positive mood. Employees' regulatory focus was found to moderate the indirect within-person effects. This work expands the current understanding of employee voice by focusing on a dynamic within-person perspective, explores new determinants at the dynamic level, and extends the knowledge of the interplay of momentary states and personal traits at the workplace.

Participant: **Jacqueline N. Hood**, *U. of New Mexico*
Participant: **Lyndon Earl Garrett**, *Boston College*

The symposium includes four empirical papers that explore how police officers think and feel about their work and their identities. These studies address the implications of traumatic incidents at work on mental health, how work and parenthood interact to increase stress for individuals, how training can influence ones' professional identity, and perceptions of one's occupational identity and its implications for workers' behaviors. Each study is qualitative, exploring meaning making processes as they are subjectively experienced in context.

Social and Collective Perspectives in Spiritual Practice

MSR: **Through a Buddhist lens: the tensions of self-decentralization in workplace collectivism**

Author: **Mai Chi Vu**, *Newcastle Business School, Northumbria U.*
Author: **Nicholas Burton**, *Northumbria U.*

Workplace collectivism is often imbued with a positive tone and associated with enhanced social and moral benefits for both individuals and organizations. Yet, workplace collectivism often requires individuals to subsume their unique self-identities into the identity of the wider collective group; how these identity dynamics occur and how the experiences of doing so are perceived remain under-elaborated. Further, the notion that workplace collectivism may involve negative and painful experiences is surprisingly limited in the extant literature. Our study elaborates the process of collective identity construction through an examination of Buddhist leader-practitioners in Vietnam. Our study contributes to the critical workplace collectivism literature by revealing how the Buddhist principle of self-decentralization frames a process of karmic reasoning that enables practitioners to decenter self-identity in order to accommodate a 'collective self'. This process, however, is personally challenging and there is a constant tension between de-centering and re-centering the self which often results in uncomfortable and painful experiences in the workplace.

MSR: **Collective Consciousness: Journey towards Corporate Spiritual Responsibility**

Author: **Anita Mendiratta**, *IIT Delhi, and Keshav Mahavidyalaya, U. of Delhi*
Author: **Shveta Singh**, *Indian Institute of Technology, Delhi*
Author: **Surendra Singh Yadav**, *Indian Institute of Technology, Delhi*

This article bridges the literature on social issues in strategic management and collective consciousness by (1) delineating modes of corporate responsibility involving corporate spiritual responsibility along with corporate social responsibility and corporate social irresponsibility, and (2) embedding the levels of collective consciousness in the organizations making into the essential criteria on deciding the corporate responsibility mode. The article shows that organizations in a particular stage of collective consciousness typically have matched comers considering the contingent responsibility decisions for its real applications. The paper identifies three matched pathways and discusses how they may explain observed irresponsibility phenomena related to corporate scans.

Paper is NOT Available. Please contact the author(s).

MSR: **Social Mindfulness Adoption and Functional Use in a Classroom Context: A Qualitative Exploration**

Author: **Latha Poonamallee**, *The New School*

Mindfulness has been adopted for leadership development from a personal self perspective in an instrumental fashion. This paper advocates for an implementation of social mindfulness without bypassing the spiritual roots. The paper describes a curriculum for the same and the results of a qualitative analysis in the form of a process model of mindfulness adoption.

Program Session: **1514** | Submission: **13108** | Sponsor(s): **(OB)**
Virtual session type: **Asynchronous (On Demand; Not Live)**

OB Research Virtual Roundtables: Connecting on Common Ground

OB Research Virtual Roundtables

Organizer: **Chad Hartnell**, *Georgia State U.*
Organizer: **Semin Park**, *U. of Iowa*
Organizer: **Amanda Ferguson**, *Northern Illinois U.*
Organizer: **Troy Smith**, *U. of Nebraska, Lincoln*
Organizer: **Virgil Fenters**, *UNLV*
Organizer: **Christopher Winchester**, *U. of Minnesota Carlson School of Management*
Chair: **Elizabeth Margaret Campbell**, *U. of Minnesota*

This year, the OB Research Virtual Roundtables intend to leverage the unique virtual AOM format to connect our members on common ground. We will host informal topic-based research discussions led by engaged and accomplished experts in OB. Our purpose is three-fold: (1) highlight thoughtful scholarly contributions to the 2021 Annual Meeting, (2) create a forum where members can enrich and expand their networks of scholars interested in similar topics, and (3) convene and facilitate smaller, informal research discussions where members can listen, learn, ask questions, and offer their insights on emerging trends, opportunities, and challenges on research areas of interest. Each forum will be facilitated by 2-3 experts on the topic. Experts will curate several presentations/papers from the 2021 scholarly program. Then, during the Annual Meeting, they will host a discussion (45-75 mins, duration determined by hosts) using the set of presentations/papers to forge common ground from which to launch a conversation about the state-of-the-science regarding the topic. We will utilize a series of breakout rooms to enable meaningful connections and focused discussions. After the program is published, we will announce the exact topics, expert hosts/discussants, the set of presentations/papers they curate, and when the session will occur. Space will be granted on a first-come, first-serve basis. Pre-registration is essential. Members may register for up to three Virtual Roundtables. Please pre-register early and carefully read subsequent emails, which will contain details about how to join. This PDW is organized by members of the OB Division's Making Connections Committee (MCC).

Please register for your OB Research Virtual Roundtable(s) of interest here (note: exact timing, expert facilitator names, and refined topics will be published in June): https://z.umn.edu/AOM_OB_Roundtable

The Promises and Pitfalls of Diversity and Inclusion in Organizations and Society
Promises and Pitfalls of Diversity and Inclusion

Presenter: **Brittany Torrez**, *Yale U.*
Presenter: **Ivoma Onyeador**, *Northwestern Kellogg School of Management*
Presenter: **Sandra Portocarrero**, *Columbia U.*
Presenter: **Ezgi Ozgumus**, *London Business School*
Presenter: **Aneeta Rattan**, *London Business School*
Participant: **LaStarr Hollie**, *UMass Amherst*
Discussant: **Michael W. Kraus**, *Yale School of Management*

Despite efforts to diversify organizations and move toward a more antiracist society, progress toward these noble goals remains elusive and, often, misunderstood (Dobbin, Kim, & Kalev, 2011; Kraus, Rucker, & Richeson, 2017; Opie & Roberts, 2017; Williams, 2001). Historically underrepresented groups still struggle to integrate into, persist in, and feel included within organizational cultures (Acker, 2006; Ray, 2019; Rivera & Tilcsik, 2016). Corporate leaders continue to make racially biased statements, which observers can meet with intolerance and indignance. Furthermore, despite the amount of time, resources, and money put forth to create a more inclusive workplace and world, there is a lack of understanding surrounding what strategies are effective and why (Kalev, Dobbin, & Kelly, 2006). Considering the current dynamics of our society, organizational leaders are in need of consensus to create effective and sustainable diversity, equity, and inclusion initiatives. In this symposium, we consider the challenges, constraints, and possibilities within efforts to create a more diverse and inclusive society. We hope to suggest practical pathways forward to engage with and bring managers back into these conversations. What organizational policies and practices impede progress toward diversity and inclusion of underrepresented groups, such as women and racial minorities? What psychological processes predict whether onlookers respond to the prejudiced corporate leader with intolerance or forgiveness? How are diversity and inclusion personnel, particularly workers of color, enabled and constrained in their ability to improve the climate of a large-scale organization such as a university? These are a few of the questions our presenters will answer in this symposium on the promises and pitfalls of diversity and inclusion in organizations and society.

Facilitator: **Jaime Leigh Williams**, *U. of Mississippi*

The academic job market can be ambiguous, tumultuous, and downright frightening; potentially doubly so in the wake of the COVID-19 pandemic. The purpose of this PDW is to reduce some of the inherent ambiguity of the job market by providing recent perspectives on a variety of job market topics and to create an inclusive space for prospective job seekers for the 2021 cycle and beyond. This interactive session will be comprised of two parts, one offered prior to AOM and one offered after AOM. Across both parts, a total of six individuals who were on the job market in 2019-20 will give short presentations on key aspects of the job market, such as the application process, selling oneself as an excellent researcher/teacher, and campus/virtual visits. This will be followed by a short Q&A. Second, across both parts, attendees will participate in a total of seven interactive breakout rooms (out of a possible nine) led by individuals who were on the job market in 2020-21. Breakout room topics will be more specific than the presentations and will include crafting application materials, virtual interviews and job talks, mental health, and being an international student on the market. At the end of our PDW, participants will be provided with a Google spreadsheet of contact information (collected through pre-registration) in order to build their networks and foster a more lasting connection with presenters, breakout room leaders, and each other. This will be a LIVE, SYNCHRONOUS PDW conducted in TWO sessions: Part 1: Thursday, July 29, 12-2pm EST (11am-1pm CST/10am-12pm MST/9-11am PST) Part 2: Thursday, August 5, 12-2pm EST (11am-1pm CST/10am-12pm MST/9-11am PST) Registration is required. The deadline to register is June 25, 2021. Participants will be accepted on a rolling basis, so earlier registration is encouraged. To facilitate interaction between speakers and participants, we are limiting the number of registrants to 90. While 2021-2022 applicants will be prioritized for inclusion in this session, others who are not yet on the market are encouraged to apply to attend as information in this session is likely to be useful for mid-stage students as well. We expect registered participants to attend BOTH parts of the PDW. Unfortunately, we cannot accommodate attendance at only one of the two sessions. To register, please submit the following information to organizer David Arena (david.arena@uta.edu): Name, institution, year in your program, job market status, email address, primary AOM division, brief summary of your research interests, and confirmation that you can attend both sessions. ALSO rank order ALL of the following breakout session topics: (1) Preparing your application package, (2) managing productivity, (3) virtual interviews, (4) virtual job talks, (5) maintaining your mental health, (6) teaching during the pandemic, (7) dual careers and backup plans, (8) job market logistics, and (9) navigating the market as a non-US student.

Part 1: Thurs, Jul 29, 12-2pm EST Part 2: Thurs, Aug 5, 12-2pm EST Pre-register by submitting: Name, institution, year in program, job market status, email address, primary AOM division, brief summary of research interests, and confirmation you can attend both sessions. (david.arena@uta.edu) Also rank all the following: (1) Preparing applications, (2) managing productivity, (3) virtual interviews, (4) virtual job talks, (5) maintaining mental health, (6) teaching during the pandemic, (7) dual careers and backup plans, (8) job market logistics, (9) navigating as non US student

Affect in Teams and Organizations

OB: **A Dark Side of Team Identification: Negative Effects in the Stress & Coping Process for Firefighters**

Author: **Jayci M. Robison**, *Oklahoma State U.*
Author: **Lindsey Greco**, *Oklahoma State U.*
Author: **David Huntsman**, *Oklahoma State U.*
Author: **Dale Li**, *Oklahoma State U.*

A significant amount of research has been devoted to understanding the benefits of both organizational and team identification. However, the processes outlined in social identity theory that are typically framed in a positive light because they encourage behavior that benefits the group (i.e., internalization of group norms) can just as easily have negative effects. In this study we examine the dark side of team identification by proposing a moderated-mediation model wherein the interaction between masculinity contest culture and team identification results in maladaptive coping (detachment and self-blame) and negative mental health outcomes. Our analysis was based on a time-lagged design with a sample of firefighters. Results confirmed that team identification can be a detriment in the stress and coping process as masculinity contest culture was indirectly related to post-traumatic stress disorder (PTSD) through maladaptive coping strategies when team identification was high but not when team identification was low. Our study advances social identity theory and theories of stress by illustrating how strong team identification can result in negative outcomes when team norms are dysfunctional.

OB: **Be Good To One Another – Modelling Social Support Temporal Interactions In Teams**

Author: **Ann-Kathleen Berg**, *Technische U. Braunschweig*
Author: **Cafer Bakaç**, *TUM School of Management, Technical U. of Munich*
Author: **Lena Christine Müller-Frommeyer**, *Technische U. Braunschweig*
Author: **Simone Kauffeld**, *Technische U. Braunschweig*

There is a consensus among researchers that social support contributes to positive social interactions at work. Previous research however relied heavily on self-report measures of social support and thus, refrained from gaining a more nuanced understanding of social support. Adopting a behavioral-based and temporal dynamic interaction lens on social support, the present paper investigates in how far affective and task-related social support predict well-being and team performance during team meetings, above and beyond self-report measures of perceived social support. To that end, 303 coworkers in 53 teams were videotaped during a team meeting followed by behavior-based interaction coding. Firstly, multilevel regression modelling revealed that affective support predicted team satisfaction, meeting citizenship behavior, and team performance, whereas task-related support predicted only team performance. Secondly, accounting for the dynamic pattern in both predictors with applying recurrence quantification analysis, we found only affective support to be significantly associated with all three outcome variables. We discuss theoretical implications for conceptualizing social support from a behavioral-based and dynamic perspective within teams, and practical implications for supportive acts during team meetings. Keywords: social support, well-being, team performance, behavioral interaction analysis, temporal dynamics

OB: **Well-Being in Agile Teams: The Role of Work Demands and Emotional Contagion**

Author: **Tom Junker**, *Erasmus U. Rotterdam*
Author: **Arnold Bakker**, *Erasmus U. Rotterdam*
Author: **DAJA Derks Theunissen**, *Erasmus school of Social and Behavioural Sciences*

The present study develops and validates a model that seeks to explain the emergence of shared work engagement and exhaustion in agile teams. Following the team literature, we introduce the concept of agile work practices and make a distinction between agile taskwork and agile teamwork. Based on job demands-resources (JD-R) theory we hypothesize that agile taskwork contributes positively to affective well-being when teams face high (vs. low) levels of work complexity (i.e., high challenge demands). Agile teamwork is hypothesized to contribute positively to affective well-being (WB) when teams face low (vs. high) levels of role conflict (i.e., low hindrance demands). Furthermore, agile teamwork is hypothesized to strengthen the crossover from team-WB to individual-WB through emotional contagion mechanisms. We tested our model in a multilevel field study involving 110 teams (N = 694 employees) of a large German organization. Results of random coefficient analyses supported most predictions of our model, based on both referent-shift and direct-consensus measures of shared work engagement. Results with measures of shared exhaustion as WB outcome were less consistent, particularly with respect to the role of agile teamwork. We discuss the implications of our findings for the literature on work demands, well-being, and emotional contagion in teams.

OB: **Hiding or Revealing Negative Emotions? Leaders' Emotion Regulation in Young Firms During Crises**

Author: **Lynn Schmodde**, *Heinrich-Heine U. of Dusseldorf*
Author: **Marius Wehner**, *Heinrich-Heine U. of Dusseldorf*

When experiencing negative emotions in a crisis, leaders in young firms face a trade-off between either revealing their negative genuine emotions or employing emotion regulation (i.e., by deep and surface acting) in front of their employees. While the display of negative genuine emotions might induce negative emotions in employees and, hence, negatively influence employees' job behavior, emotion regulation has been linked to perceived inauthenticity with equally harmful effects. Drawing on the emotions-as-social-information (EASI) model and employing an experimental between-subject design with a hypothetical crisis scenario and a sample of 159 employees, we compare the relationships of a leader's deep and surface acting and the display of negative genuine emotions with employees' job engagement and affective commitment, mediated by employees' affect. Results show that surface acting has harmful effects and deep acting partially reduces employees' negative affect, but not improves positive affect in comparison to leader's display of negative genuine emotions. Our findings indicate that leaders who experience negative emotions during crises, should consider revealing their negative genuine emotions rather than engaging in emotion regulation as an exhausting way of expressing emotions.

Abusive Supervision's Effect on Employees

OB: [Supervisors' Work Hours, Abusive Supervision and Leader-Member Exchange](#)  

Author: **Marie-Colombe Afota**, *U. de Montréal*
Author: **Christian Vandenberghe**, *HEC Montreal*

Current trends suggest that growing numbers of workers in managerial positions work long hours. This observation brings light to the ambivalent relationship between long work hours and ethics: while long hours are indicative of managers' strong work ethic, they may raise ethical concerns if they harm subordinates. Research shows that working long hours is detrimental to one's own health, yet there is a dearth of research on the influence of supervisors' work hours on subordinates. This paper addresses this gap by exploring the relationship among supervisors' work hours, abusive supervision, and leader-member exchange. Drawing upon ego depletion theory and the literatures on emotions and leader-member exchange, we argue that supervisors' work hours positively relate to abusive supervision behaviors through negative affect, which in turn, undermines leader-member exchange relationships with subordinates. We further posit that this process is exacerbated among subordinates with a strong relational self-concept. We tested our hypotheses in a three-wave study among a sample of 449 employees from multiple organizations and a multi-source study of an organizational sample of 181 employees. Results from structural equation modeling and multilevel modeling analyses supported our predictions, indicating that supervisors' long work hours may have detrimental consequences for subordinates. We discuss the theoretical implications of these findings for research on work hours and abusive supervision, as well as their practical significance for organizations and managers.

OB: [How Abusive Supervision Makes Me Seek Feedback: From a Resource Acquisition Perspective](#)

Author: **Ming Lou**, *School of Management, Harbin Institute of Technology*
Author: **Eryue Teng**, *Department of Management and Marketing, The Hong Kong Polytechnic U.*
Author: **Yang Qiu**, *Harbin Institute of Technology*

While researches have primarily focused on the detrimental effects of abusive supervision, scholars still found its potential positive effects. Drawing from the conservation of resources theory, we develop and test a model that specifies how and why abusive supervision increases subordinates' feedback seeking behaviors. Via a two-wave sampling study, we found that abusive supervision was positively related to subordinates' workplace anxiety, which in turn interacted with subordinates' regulatory focus to predict subordinates' feedback seeking behaviors. When subordinates were highly prevention-focused, workplace anxiety was likely to make them engage in feedback monitoring. In contrast, highly promotion-focused subordinates were inclined to choose feedback inquiry. The implications of these findings and future research directions have been discussed.

OB: [Destructive Leadership and Dark Personality Subordinates](#)

Author: **Daniel Nelson Jones**, *U. of Nevada Reno*
Author: **Peter Hom**, *Arizona State U.*

It is widely believed that "employees quit bosses, rather than jobs." We seek stronger corroboration for this adage by investigating destructive leadership and how the Dark Triad (comprising psychopathy, narcissism, and Machiavellianism) moderates its impact on employees' quit propensity. We found that leader's psychopathy positively relates to abusive supervision and exploitative leadership. Such destructive leadership was positively related to employees' quit intentions, especially abusive supervision. Moreover, employees high in psychopathy were more quit-prone when supervisors committed destructive leadership. By contrast, employees high in Machiavellianism and narcissism more likely stayed when their leaders did not engage in destructive leadership.

OB: [How can age-related coping strategies reduce supervisor incivility's negative effect on commitment?](#) 

Author: **Mohammad Sadegh Sharifirad**, *ardakan U.*

This study aims at investigating the emotional mechanism linking supervisor incivility to reduced affective commitment. According to Affective Events Theory, it was predicted that, first, supervisor incivility impacts employees' affective commitment negatively through engendering negative affect. Second, drawing on socioemotional selectivity theory, it was hypothesized that the negative impact of negative affect on commitment is weaker when employees are older. Additionally, it was proposed that the moderating impact of age is mediated through two coping strategies of reappraisal and distraction in a way that older employees, relative to young employees, would demonstrate an increased tendency for distraction over reappraisal in the face of negative affect caused by incivility. The sample comprised 297 employees (75.1% female) aged from 19 to 55 in diverse businesses. The results revealed that high supervisor incivility was significantly associated with higher levels of negative affect and less employee commitment. In this regard, more committed employees felt more negative affect when they faced supervisor incivility. Confirming the moderating role of age, this research also showed that the older the employees are, the more reappraisal (not distraction) is used. Additionally, up to an age, more commitment causes more negative affect while being exposed to incivility; however, from an age onward, more negativity harms commitment. These results have implications for managers and future researchers.

Social Comparison, Envy, and Gossip

OB: Challenge or Threat? Exploring the Dual Effects of Temporal Social Comparison on Employee behaviors

Author: **Jinfan Zhou**, *Nanjing U.*
Author: **Yuan-Fang Zhan**, *Huazhong U. of Science and Technology*

The extant literature has indicated that comparison with high-performers could lead to negative emotions and behaviors among colleagues (including superior). In contrast, other research also suggested that this comparison can effectively motivate low-performance employees to work hard. However, social comparison theory points out that besides social comparison with others, individuals also compare with their past selves in the temporal dimension, that is, temporal comparison. Therefore, in this study, we apply the temporal dimension of the social comparison to explore the impact of an actor's temporal social comparison with a target (whose performance development in the past period is better than the actor's) on the actor's psychological state and behavior. A scenario experiment and a three-wave field study show that the performance temporal social comparison can lead to social undermining in the workplace (leveling-down) and effectively promote the actor's self-improvement (leveling-up) simultaneously. Based on the cognitive appraisal theory of stress, we have further tested the challenge-hindrance stresses' significant mediating effects. We further find that general self-efficacy (GSE) is an essential individual characteristic that affects the actor's pressure perceptions. The effect on challenge stress will be more substantial when the actor's GSE is higher, whereas hindrance stress will be more substantial when GSE is lower. Meanwhile, GSE is also moderating the indirect effects of performance temporal social comparison on different behaviors. Overall, our findings make significant contributions to social comparisons theory development and provide critical managerial implications for high-potential talent management.

OB: The Antecedents and Consequences of Workplace Envy: A Meta-Analytic Review

Author: **Miaomiao Li**, *Tongji U.*
Author: **Xiaofeng Xu**, *Tongji U.*
Author: **Ho Kwong Kwan**, *China Europe International Business School (CEIBS)*

Extensive research has been conducted into the antecedents and consequences of workplace envy, but a meta-analytic review is lacking from the literature. This meta-analytical study draws on social comparison theory to examine studies on envy at work and provides a comprehensive model of the antecedents and consequences of workplace envy. We reconcile the divergent findings of the research by building a multilevel model of workplace envy, which considers episodic, dispositional, and general envy. The results suggest that individual differences (e.g., narcissism, neuroticism), organizational contexts (e.g., competition, position level), and social desirability are predictors of workplace envy. They also reveal that workplace envy is related to organizational citizenship behaviors (OCBs), negative behaviors (e.g., ostracism, social undermining), negative emotions, organizational perceptions (i.e., engagement, satisfaction), turnover intentions, and moral disengagement. We test the moderating roles of envy types, measurement approaches, and causal effects. The results reveal that there is little difference, and that specific variables (e.g., self-esteem, fairness) can be regarded as antecedents or consequences of workplace envy. Finally, we suggest that future research into workplace envy investigates contextual predictors and moderators through a social comparison process. This meta-analysis can serve as a foundation for future research into workplace envy.

OB: Evidence for Gender Effects in Asymmetric Effects of Upward and Downward Envy

Author: **Jaewoo Kim**, *U. of Houston*
Author: **Leanne Atwater**, *U. of Houston*
Author: **Ho-Jung Yoon**, *Sejong U.*
Author: **Jamie Belinne**, *U. of Houston*

Envy research has typically focused on envy of those who are superior in some way referred to as upward envy. Drawing upon a social-functional perspective on envy and evolutionary theory, however, we introduced downward envy and shed light on how upward and downward envy affect envious' behavioral responses differently. Notably, we conceptualized a new emotion focused coping reaction to envy—avoidance—, which is another type of reaction to envy in addition to threat-based (e.g., social undermining) and challenge-based (e.g., self-improvement) reactions. Moreover, we propose that such asymmetric effects of envy are pronounced depending on gender, social support, and core self-evaluation (CSE) in a competitive context such as the job market. The conceptual model was tested with two experimental studies using a sample of Korean job seekers (n=114) in Study 1 and U.S. undergraduate internship seekers (n=128) in Study 2. In general, we conclude that male job seekers who experienced downward envy with low-social support or with low-CSE tend to engage in more maladaptive behaviors such as undermining and avoidance than female job seekers do.

OB: Supervisor Gossip in Organizations: Its Social Comparison Function and performance outcome

Author: **Fangliang Zhang**, *Renmin U. of China*
Author: **Chunling Zhu**, *Renmin U. of China*

Workplace gossip is ubiquitous in organizations. However, it is generally viewed as a deviant behavior that produces negative work-related outcomes. Contrary to this prevailing belief, recent work has begun to shed light on the finding that workplace gossip has the potential to generate positive influences. Drawing on the social comparison and social cognitive perspectives of gossip, we adopt a balanced view to investigate the pros and cons of supervisor's job-related gossip for employee recipients. We propose that supervisor's job-related gossip has social comparison function for recipients, such that positive gossip results in recipients' upward comparison while negative gossip leads to downward comparison. Dyadic data collected from 218 supervisors and their 671 employees in a Chinese enterprise showcased evidence for the positive influence of supervisor's job-related positive gossip and negative influence of negative gossip on recipients' performance through self-efficacy. In addition, the indirect effect of positive gossip is attenuated when recipients have salient performance goals. Our research enriches the current understanding of workplace gossip functions, which extends social comparison theory to multi-disciplinary application. The empirical findings also provide guidance for business practitioners to make proper use of positive gossip and to be cautious of negative gossip when interacting with employees.

The Spillover Effects of Abuse at Work

OB: How Supervisor Ostracism gets Catalyzed? Cognitive Rumination and Subordinate Aggression

Author: **Jie Guo**, *Carolina U.*
Author: **Lusi Wu**, *U. of Electronic Science and Technology of China*

We introduce cognitive rumination reflected on supervisor ostracism as an important mediator in promoting subordinate aggression. Drawing on the temporal model of ostracism effects, our model has focused primarily on a reflective stage (in contrast to a reflexive stage in prior research) to examine how and when ostracism effect gets deteriorated to aggressive responses. Further, we provided a nuanced view in ostracism-provoked aggression by identifying two different targets – coworkers (displayed aggression) and the supervisor (direct aggression). We conducted three studies to test the moderated mediation model, where the first study focuses on coworker-directed aggression and the second study examines supervisor-directed aggression. We then provide a complementary study (study 3) on the overall model to investigate within-person fluctuations in follower-displayed aggression provoked by supervisor ostracism on a daily basis. Our findings suggest that supervisor ostracism can be displayed episodically and influence followers on a within-individual level. Our work thus contributes to the supervisor ostracism literature by integrating the role of cognitive rumination and separating its effect that launches direct versus displaced aggression respectively.

Paper is Available to Meeting Registrants Only.

OB: Intimate Partner Violence

Author: **Phoenix Van Wagoner**, *U. of Colorado, Boulder*
Author: **Brittany Lambert**, *Indiana U. - Kelley School of Business*
Author: **Jessica Mariah Rivin**, *U. of Colorado, Boulder*
Author: **Russell Cropanzano**, *U. of Colorado, Boulder*

Intimate partner violence (IPV) is a serious social problem, with pernicious consequences for families and children. Likewise, organizations may be disadvantaged due to lost productivity and medical expenses. Building on this literature, we argue that the coworkers of IPV victims may also experience elevated anxiety and depression, at least under certain conditions. We explored these ideas in a four-month, experience sampling methodology (ESM) study. The study was designed to examine anxiety and depression at work, as well as how the former impacts employee work goal progress. Tragically, eight weeks into data collection, an estranged husband murdered his former spouse and subsequently committed suicide. Consequently, we were able to assess potential changes on all three criterion variables, both among those with higher psychosocial proximity to the IPV (worked in the same job and in the same building) and lower psychosocial proximity (worked in different jobs and/or in different buildings). Even further, we also examine individual characteristics to determine who is most affected by a vicarious IPV. As expected, employees showed heightened levels of anxiety and depression after IPV against a coworker. Anxiety, in turn, was associated with reduced work goal progress. However, these effects only held among coworkers with high psychosocial proximity to the incident and those prone to anxiety.

OB: The impact of customer mistreatment on employees: A moderated mediation model

Author: **Yu Chin Lee**, *Shu-Te U.*
Author: **Cheng-Chen Lin**, *National Pingtung U. of Science and Technology*
Author: **Hui-Chuan Tang**, *I-Shou U., Taiwan*
Author: **Szu-Chi Lu**, *National Taichung U. of Science and Technology*

This study aims to investigate employee reactions toward customer mistreatment. Mainly based on the self-concept perspective, we propose that when an employee's organization-based self-esteem is threatened by the negative experiences of customer mistreatment, he or she is more likely to engage in destructive and disengaged work behaviors. This relationship is especially stronger for individuals who have poorer relationships with their supervisors. We tested this theoretical model with a sample of 308 nurses nested within 64 work teams. The data were collected over three time points and the hypotheses were tested with multilevel regression analysis. Our findings suggest that organization-based self-esteem mediates the relationships between customer mistreatment and interpersonal deviance, job neglect, service-oriented organizational citizenship behavior, and job performance. Further, supporting our hypotheses, these relationships were stronger for employees with weaker leader-member exchange. Theoretical contribution, practical implications, and directions for future research are discussed.

Paper is Available to Meeting Registrants Only.

OB: Spillover effects of abusive supervision

Author: **Shahid Khan**, *Central Queensland U.*

Abusive supervision (AS) is relentless in damaging employees' personal and professional life. This study examines the underlying mechanism through which AS damages employee's job and life satisfaction and most importantly the boundary conditions that help attenuate the cascading effects of AS on employee's wellbeing. Using a sample of 187 employees from a large public sector organization, this study found that job tension transmit the antagonistic effects of AS on employees' job and life satisfaction. However, these effects were low for employees who were high rather than low on their personality trait (resilience). The study contributes to the AS literature by explicating job tension as one possible underlying mechanism and resilience as a personality trait that helps diminish the deleterious effects of AS on employees' job tension and wellbeing. Theoretical contributions and practical implications are discussed.

Multiple Causes of Employee Deviance

OB: Stripped of Agency: The Paradoxical Effect of Employee Monitoring on Deviance

Author: **Chase Thiel**, *U. of Wyoming*
Author: **Julena Bonner**, *Utah State U.*
Author: **John Bush**, *U. of Missouri*
Author: **David Welsh**, *Arizona State U.*
Author: **Niharika Garud**, *U. of Melbourne*

Organizations have long sought to mitigate the risks associated with unsupervised employee conduct (e.g., employee deviance). To combat these risks, organizations often employ performance monitoring as a way to externally regulate their employees' behavior. This external regulation is quite effective for minimizing targeted deviance. Yet, deviance has many forms, and effectively deterring deviance in general may require other processes, such as enhancing employees' self-regulatory capacity. In this research, we call into question whether monitoring may always serve its intended function. Specifically, we argue that there is a paradoxical effect of monitoring whereby it undermines the self-regulatory systems of monitored individuals. Drawing on social cognitive theory, we hypothesize that monitored individuals perceive a diminished sense of agency, which makes them more likely to displace their sense of moral responsibility. Contrary to what organizations expect and previous work predicts, this process ultimately leads individuals to engage in more (not less) deviance. Across a field and an experimental study, we find converging support for our predictions and rule out alternative mechanisms. This research provides important theoretical and practical insights into the unintended consequences of monitoring employees.

Paper is Available to Meeting Registrants Only.

OB: Knowledge Theft in Organizations

Author: **David Zweig**, *U. of Toronto*
Author: **Alycia Marie Damp**, *U. of Toronto*

We have all worked with them - colleagues who get ahead by taking credit for another person's work or who take our ideas and present them as their own. For anyone on the receiving end of this behavior, it can feel as though a theft has occurred. As with a theft of physical goods, a theft of ideas can elicit highly negative reactions and behaviors. However, despite widespread acknowledgement that people have their ideas and work efforts stolen, this phenomenon is yet to be studied empirically. We explore the concept of knowledge theft – the deliberate act of claiming unjustified ownership of the work contributions of another – and propose that the central and defining features for those who experience knowledge theft are loss of knowledge and the loss of acknowledgement or recognition for that knowledge that would have otherwise been received if not claimed by another. We then present four studies establishing the validity and reliability of a measure of knowledge theft, differentiating it from other deviant workplace behaviors, and demonstrating the incremental validity of knowledge theft in predicting relationships with a variety of negative work-related outcomes. Additionally, we find that the relationship between knowledge theft and negative workplace outcomes is exacerbated when the degree of loss perceived by targets is greater. Our research lays the foundation for further study of knowledge theft from the perspective of targets who lose out on the recognition for their ideas and efforts and from perpetrators who steal ideas and recognition from others.

Paper is NOT Available. Please contact the author(s).

OB: Forced to Be a Good Citizen: The Mechanisms and Boundary Conditions of Daily Compulsory Citizenship

Author: **Nai Wen Chi**, *National Sun Yat-Sen U.*
Author: **Chieh-Yu Lin**, *National Sun Yat-Sen U.*
Author: **Patrick Bruning**, *U. of New Brunswick*
Author: **Yu Hung**, *National Sun Yat-Sen U.*

Compulsory citizenship behavior (CCB) refers to employees' engagement in citizenship behaviors that go against their own will. The literature is currently unclear about whether the implications are positive, negative, or a nuanced combination of both. To address this confusion, we attempt to clarify the concurrent enrichment and depleting effects of daily CCB on employees' subsequent organizational citizenship behavior (OCB) and interpersonal deviance. Drawing on the enrichment- and depletion-based perspectives of helping behaviors, we theorize that employees' daily organization-based self-esteem (OBSE) and daily depletion are core mechanisms that explain the benefits and costs of daily CCB. In addition, we also theorize that employees' extraversion and leader-member exchange (LMX) are critical boundary conditions of the effects of employees' daily CCB. By using an experience sampling method, we collected daily data from 186 full-time employees across 10 working days (twice a day), yielding 1,551 valid daily responses. The results of multilevel path analyses showed that: (a) CCB has a positive indirect effect on subsequent OCB via increased OBSE, and LMX strengthens this positive indirect effect, and (b) CCB also has a positive indirect effect on subsequent interpersonal deviance via increased ego depletion, but extraversion buffers this positive indirect effect. Theoretical and practical implications are further discussed.

Author: **Qurat Ul Ain Talpur**, *ESSCA School of Management*

This article examines whether ego-depletion mediates the positive link between employees' fear of failure in meeting their goals and their unethical behavior. In addition, the moderating roles of moral attentiveness on the mediated relationship is examined. Drawing on multi-wave data from sales representatives in the USA (n = 334) and Pakistan (n = 381) ego-depletion was found to mediate the positive relationship between fear of goal failure and unethical behavior. In addition, employees' moral attentiveness was found to attenuate the positive link between fear of failure and unethical behavior.

Theoretical Perspectives on Leadership

OB: **20 Years of Chinese Leadership Research: A systematic Literature Review and Future Research Agenda**

Author: **Yue Hu**, *Vrije U. Amsterdam*
Author: **Oli Mihalache**, *Vrije U. Amsterdam*

As the Chinese economy has grown over the past decades to take a prominent place on the world stage, so has research on Chinese leadership. The growing research provides much needed breadth in our understanding of Chinese leadership. However, the research is quite fragmented as it has developed in several largely disconnected areas. This study develops an integrative framework of Chinese leadership, based on a systematic review of peer-reviewed articles published in the last 20 years. We synthesize insights from 169 articles to develop a comprehensive understanding of traditional Chinese leadership practices and Western leadership theories applied in Chinese organizations. Furthermore, we advance research on Chinese leadership by proposing five areas of future research that build on our integrative framework.

OB: **Leading from the Ground: A Meta-analysis of Humble Leadership and Its Related Outcomes**

Author: **Zhihao Wu**, *Renmin U. of China*

Focusing on the existing research gap of a systematic quantitative review of previous research related to humble leadership, this article aims to conduct a comprehensive meta-analysis on humble leadership and explore its relationship with the most surveyed and significant variables from the perspectives of employee attitude and psychological state, employee behavioral process and work performance, leader outcomes and team outcomes. To further explore the boundary conditions of the proposed main relationship, moderation analysis on publication status, measurement scale, survey data collection design and variable data source were also conducted as an essential supplement. Through the quantitative review of existing empirical research with the meta-analytic method, this article exerts to uncover the research status of humble leadership and promote the current understanding. The article is anticipated to have several theoretical contributions and practical implications as well as providing some insights for future research.

OB: **Virtual Leadership in the Age of Social Distancing: A Field Experiment on Work Team Creativity**

Author: **Lan Wang**, *Peking U.*
Author: **Xiao-Ping Chen**, *U. of Washington*
Author: **Jun Yin**, *National School of Development at Peking U.*

The extending lockdown and social distancing due to the COVID-19 pandemic create an extreme context in which leaders must respond to threats of severe physical, psychological, or material consequences to organizational members. Building on affective events theory and the media richness literature, we develop a theoretical model explicating how virtual leadership in an extreme context can promote team creativity by reducing team anxiety elicited by extreme events, which in turn facilitating team information elaboration. Data from a three-stage longitudinal field experiment, in combination with an experience sampling method on 251 employees in 32 teams across 12 preschools in the extreme context of lockdowns during the COVID-19 pandemic provide strong support for the hypothesized sequential mediation effect between virtual leadership and team creativity. Our findings have significant theoretical and practical implications on virtual leadership and work team management.

OB: **A Paean to the “Poet Laureate of Management” Peter B. Vaill**

Author: **Eric B. Dent**, *Florida Gulf Coast U.*

During the COVID-19 pandemic, Peter B. Vaill passed away at age 83. Although most of his scholarly output was in the 20th century, Vaill, remains a leading voice for the post-COVID generation for insisting that managing, organizing, and leading are performing arts not just skills, behaviors, or competencies. He questioned the dominant unsustainable paradigms of the field and often found them inaccurate or insufficient. He observed over 60 years that the field has made little progress in producing actionable research and effectively teaching it. His career is briefly summarized and then his vision, philosophy, and perspective for more sustainable organizations are arrayed in five sections (1) “Permanent Whitewater” – VUCA (2) Manager-Leaders not Management Competencies (3) Practice (4) Management is Purposing, Learning, En-courag-ing and (5) Management Education. The current structure of the business school academy, AACSB accreditation, and the norms of Academy of Management scholarship largely mitigate against a next-generation Peter Vaill and more sustainable approaches to leadership and organizations.

Leadership Authenticity and Charismatic Behaviors

OB: **Under-communication and the Empathy Gap: The Price Leaders Pay for Not Sharing Enough**

Author: **Frank Flynn**, *Stanford U.*
Author: **Chelsea Lide**, *Stanford Graduate School of Business*

Managers can miscalibrate their communication—either communicating too much or too little with their subordinates. We propose that such miscalibration reflects a strong bias toward under-communication. In Study 1a, we examine 2,717 qualitative comments from 360-degree leadership assessments and find that managers are nearly ten times as likely to be criticized for under-communicating than over-communicating. In Study 1b, we find further evidence for this bias using ratings of managerial communication drawn from a nationally representative sample of U.S. adults. In Study 2, we focus on leader selection, finding that managers who tend to under-communicate are viewed as less capable and are less likely to be selected for a leadership role than managers who over-communicate. In Study 3, we test our model in the context of the COVID-19 pandemic, demonstrating that organizational leaders tended to be seen as under-communicating with their employees about pandemic-related planning, which led to them being seen as less empathic, and in turn, less effective, leaders.

OB: **To Self-Verify or Self-Enhance? Effects of Self-Presentation and Authentic Leadership on Felt Trust**

Author: **Tae-Yeol Kim**, *China Europe International Business School*
Author: **Emily David**, *China Europe International Business School*
Author: **Tingting Chen**, *Lingnan U.*
Author: **Jessica (Yongyi) Liang**, *school of management, Jinan U.*

When it comes to self-presentation, people may present their genuine selves or reveal only positive attributes, but most research has examined these behaviors separately. The self-presentation literature has also failed to distinguish between truthful and fabricated efforts to enhance one's self-image. In this study, we developed and tested an integrated theoretical model that examines the simultaneous effects of self-verification (genuine self-presentation) versus self-enhancement (i.e., self-promotion and self-aggrandizement) on employee outcomes. Using a multi-source, three-wave survey design and a sample of 115 working groups (i.e., 115 supervisors and their 555 employees), we found that self-verification and self-promotion enhanced task performance via felt trust, whereas self-aggrandizement demonstrated negative indirect effects. In addition, self-verification was positively related to felt trust and task performance when authentic leadership was higher rather than lower. In contrast, self-promotion was positively associated with felt trust and task performance when authentic leadership was lower rather than higher.

OB: **The Positive Effects of Leader Impression Management on Follower Perceptions of Transformational Leadership**

Author: **Jessica Peck**, *Cleveland State U.*
Author: **Mary Hogue**, *Kent State U.*

Followers accept influence when target leaders meet follower perceptions of what it means to be a leader. Impression management (IM) is an important means of influencing these perceptions, particularly for transformational leaders. In transformational leadership, followers are inspired by leaders and experience strengthened levels of motivation and performance (Yukl, 1999). We examine the multi-dimensional nature of IM as composed of information processing, communicative, and goal-directed components and use this framework to examine empirically how these dimensions influence follower perceptions of transformational leadership (TL perceptions). We develop an instrument used in experimental studies to test the impact of IM within transformational leadership theory. Further, we highlight the implicit cognitive categorization processes that explain how the influence process occurs. Across two empirical studies, we find authentic IM behavior leads to greater TL perceptions than inauthentic, and pro-social IM behavior leads to greater TL perceptions than pro-self. There is no significant difference in TL perceptions between automatic and controlled IM behavior. Finally, we provide a cognitive explanation for the IM influence process, showing that certain IM behaviors are implicitly associated with transformational leader behaviors. We integrate the results within existing literature and provide a future research agenda.

OB: **"Your Cognition, My Territory": Charismatic Leaders' Management of Follower Cognitive Dissonance**

Author: **Farzaneh Noghani**, *Texas Tech U.*
Author: **Hamid NoghaniBehambari**, *Texas Tech U.*

In their role as a leader and in the process of achieving their goals, charismatic leaders incorporate various strategies to utilize certain capabilities of their followers. One form of such strategies is to manage followers' cognitive dissonance. To manage others' dissonance could be implemented as acting to either reduce or induce it. In this paper, we propose that charismatic leaders may seek to, through various mechanisms, facilitate either cognitive discrepancy reduction or induction in followers. Drawing on the self-standards and the action-based models of cognitive dissonance theory, we explain how charismatic leaders are empowered to do so by the interaction of situational opportunities and their own motivations and abilities. Specifically, we focus on the relevant impression management techniques (i.e., amplifying, scripting, promotion, and exemplification) that charismatic leaders utilize in the process of managing followers' dissonance. We also propose that the type of the charismatic relationship, i.e., personalized or socialized, formed between leaders and followers of certain characteristics, moderate this process.

Stress and Mindset

OB: Can Work Interactions Cause Technostress during the COVID-19 Crisis? A Dyadic Study

Author: **Huda Masood**, *York U., Toronto*
Author: **Marie-Helene Elizabeth Budworth**, *York U.*

The Corona Virus Disease 2019 (COVID-19) containment protocols led to two broader shifts in the workplace namely the increased use of information and communication technologies (ICTs); and modified work interactions. The aim of the current study is to investigate how work relationships impact the technostress or the stress experienced by using ICTs during the pandemic. We measured work interactions through (i) interactional justice or fairness of interpersonal treatments received at work; and (ii) relational crafting or proactive modifications in the frequency and nature of work interactions. Through mixed-methods design, our research seeks to answer how manager-employee interactions are impacted during the COVID-19 crisis and how these interactions determine the level of technostress experienced by each party. For Study 1, we conducted Actor Partner Interdependence Model (APIM) analysis on manager-employee dyads to elucidate how they have modified their work interactions during the pandemic. Our findings indicate a strong interdependence between managerial interactional justice and employee relational crafting and vice-versa. Engagement in relational crafting also significantly informed the technostress for both managers and employees. In Study 2, semi-structured interviews were conducted for completeness and complementarity of the first study. Through thematic analysis, we gained in-depth insights into the modifications of work interactions during the COVID-19. The proposed relationships contribute to refining our understanding of justice, job design, and stress literature during times of emergency. Managerial implications during and beyond the COVID-19 times are discussed.

OB: Mindset and Stress: How and When a Growth Mindset Reduces Employee Stress?

Author: **Yingfang Zhao**, *ZaoZhuang U.*
Author: **Ning Chen**, *City U. of New York, Lehman College*

The belief that people can change (i.e., growth mindset) has been found to be associated with lower level of stress, however its underlying mechanism has not yet been investigated. Furthermore, the basic assumption of this association is that individuals respect themselves, recognize their limitations, and expect to grow over time, which are the characteristics of high self-esteemers. It is unclear whether the association still holds for low self-esteemers. The current study examines the mediation role of hope and the moderation role of self-esteem in the relationships between employee mindsets and their stress. The data from a survey and an experiment revealed that when high self-esteemers adopt a growth mindset, they are more hopeful and have lower levels of stress compared with those who adopt a fixed mindset. The effect of growth mindset on reducing stress was not found among low self-esteemers. Implications for understanding employee stress and for developing preventive interventions are discussed.

OB: The wolf in sheep's clothing.

Author: **Sonja Hollerbach**, *PhD Student*
Author: **Abiola Sarnecki**, *EBS Business School*
Author: **Myriam Bechtoldt**, *EBS U. of Business and Law*

Many universities and business schools have introduced a specific form of performance feedback: Student Evaluation of Teaching (SET). SET increasingly take place in a digitized and anonymous form, thereby reversing the power relations between professors and students in a form that would never exist in face-to-face interactions. SET is a double-edged sword. While SET are relied on for administrative decisions, researchers question their value, validity and reliability. Yet despite the extensive research on the student perspective of SET, we know little about professors' mental reactions to the receipt of negative SET. In the present work, we identify different categories of negative SET, test their frequency and investigate their influence on professors' perceived levels of stress. We also explore the mediating effect of interpersonal justice. Our theoretical and empirical findings highlight that negative SET can be operationalized in a 2x2 matrix comprising active disrespect regarding the person/course and matter-of-fact feedback concerning person/course. All SET categories targeting the person lead to increased stress in professors, which is significantly positively mediated by the perception of fairness. By examining this relationship, we offer important limitations for the use of SET at universities as tool to motivate professors to improve their teaching performance.

OB: The Reciprocal Effects of Organizational Constraints and Employees' Strain

Author: **Yijue Liang**, *U. of Illinois at Urbana-Champaign*
Author: **YoungAh Park**, *U. of Illinois at Urbana-Champaign*

Employees' turnover intention and physical health problems can be costly to organizations because they tend to decrease productivity and increase organizational expense in training and healthcare. Research has shown that they are related to organizational constraints, a prevalent type of work stressors that can harm employees' work attitude and well-being. However, scant attention has been paid to whether organizational constraints and the two strain reactions (i.e., turnover intention and physical symptoms) can reinforce each other overtime, leaving causal inference of such important relationships unclear. Drawing from the conservation of resources theory, this study aimed to narrow this research gap by examining the reciprocal relationships between organizational constraints and the two strains. Organizational constraints were hypothesized to increase employees' turnover intention and physical symptoms which, in turn, may further elevate their perceived organizational constraints. Moreover, job control was hypothesized to mitigate these reciprocal effects. With a longitudinal data of 702 teachers over five weeks, results of cross-lagged models supported the hypothesized reciprocal relationships and provided partial support for the moderating role of job control. Theoretical and practical implications were discussed.

Goals, Feedback, and Affective Responses

OB: **A Within-Person Field Experiment to Test an Affect-Resource Model of Employee Effectiveness at Work**

Author: **Vera M. Schweitzer**, *WHU – Otto Beisheim School of Management*
Author: **Wladislaw Rivkin**, *Trinity Business School, Trinity College Dublin*
Author: **Stefan Diestel**, *U. of Wuppertal*
Author: **Fabiola Heike Gerpott**, *WHU - Otto Beisheim School of Management*
Author: **Jana Kühnel**, *U. of Vienna*
Author: **Roman Prem**, *U. of Graz, Austria*

We expand research on the daily dynamics of employee effectiveness at work by integrating conservation of resources theory with a broaden-and-built perspective on positive emotions. Specifically, we expect that on days with high work-related self-control demands, employees experience regulatory resource depletion, which makes them less effective at work because they enter a resource preservation mode. Recognizing that positive affect replenishes employees' regulatory resources and thereby serves as a signal to approach challenges, we further propose that increasing positive affect can prevent employees from conservation of regulatory resources after dealing with high self-control demands. To test our integrated affect-resource model, we developed a daily micro-intervention that induces positive affect and tested it in a within-person field experiment (daily diary study design) over 12 workdays with 85 employees. Consistent with our predictions, the adverse effects of morning self-control demands on afternoon measures of employee effectiveness (work engagement, organizational citizenship behavior, creativity) via regulatory resource availability was attenuated on days when participants experienced increases in positive affect due to a text- or video-based positive affect intervention. This was not the case on days when a control condition was administered to participants. We discuss theoretical and practical implications of our affect-resource model.

OB: **Mood Repair and Maintenance at Work: A Scale Development and Theoretical Extension**

Author: **Nai-Wen Chi**, *National Sun Yat-Sen U.*
Author: **Linna Wan-Ling Chien**, *Institute of Human Resource Management, National Sun Yat-sen U., Taiwan*

Although researchers have generally found that daily negative moods lead to harmful outcomes, in contrast, daily positive moods improve well-being and performance. It remains unclear how employees engage in mood regulation strategies to “repair” their negative moods or “maintain” positive moods. Drawing on the mood regulation literature, we employed three studies to develop a scale to measure employees' mood regulation strategies and test the mood repair/maintenance hypotheses. In the pilot study, we followed Hinkin's (1998) scale development process to generate seven mood regulation strategies by interviewing 138 full-time employees and collecting items from existing literature. In Study 1, the daily data was collected twice a day (i.e., 9:00 AM and 4:30 PM) from 108 employees across two consecutive weeks, resulting in 1022 valid daily responses. Study 1 results showed that engaging in positive social activities, negative social activities, and task-related activities (e.g., trying harder to solve problems) effectively maintain their positive moods. In Study 2, we collect daily data twice a day (i.e., 8:30 AM and 11:30 AM) from another independent sample composed of 106 full-time employees across two weeks (i.e., 987 valid daily responses). Then we constructively replicate the Study 1 findings by employing different measures and research design. Notably, we also included recovery- and task-related outcomes as potential mechanisms to explain the effects of mood regulation strategies. Theoretical implications for mood regulation and recovery literature are further discussed.

Paper is Available to Meeting Registrants Only.

OB: **Emotional Job Demands, Learning Goal Orientation, and 10-Year Changes in Sympathy**

Author: **Susan Reh**, *U. of Exeter Business School*
Author: **Susanne Scheibe**, *Groningen U. (RuG)*

Many contemporary jobs require emotional effort from employees to perform their job effectively. A large body of research on emotional labor has investigated the consequences of these emotional job demands (EJDs) on employees' own emotions and well-being with mixed findings with regards to whether they are beneficial or harmful. Few studies, however, investigated the longitudinal effects of EJDs. Moreover, we lack a clear understanding whether EJDs facilitate or inhibit the development of employees' emotional functioning such as the degree of sympathy they show toward others and which factors enhance or buffer this relationship. This study tests the effect of EJDs on changes in employees' sympathy over a ten-year time period. Moreover, we investigate whether a learning goal orientation (LGO), the motivation for task mastery and self-improvement, buffers the potentially detrimental effects of EJDs on sympathy changes. We test these hypotheses using data from N = 831 working adults from the second and third wave of the Midlife in the United States survey (MIDUS) in combination with data from the Occupational Information Network (O*NET). Results from latent change score models show that whereas sympathy on average increases over the 10-year span, EJDs have a negative effect on these changes and a LGO moderates this effect so that EJDs have a negative effect on sympathy changes only for employees low in LGO. We discuss implications for theory and practice.

Paper is Available to Meeting Registrants Only.

OB: **Negative feedback change on follower's performance: a goal-setting theory perspective**

Author: **Li Xing Xu**, *School of Economics & Management, Tongji U.*
Author: **Feng Wei**, *Tongji U.*
Author: **Shicheng Zhang**, *School of Economics & Management, Tongji U.*
Author: **Zhaoyu Chen**, *Tongji U.*

Negative feedback is dynamic, evolves over time when individuals and aspects of their environments change, but most research has treated negative feedback as a “static” phenomenon. We addressed this oversight by presenting a dynamic, process-oriented approach to understand negative feedback from a goal-setting theory perspective using a three-wave survey design over time, and examining how two outcomes of change in perceptions of negative feedback predict task performance. Using supervisor-subordinate dyadic time-lagged data (n = 127), results revealed that negative feedback change affects employee task performance via goal commitment. In addition, we propose a moderating effect of growth mindset. The present study therefore shifts attention to the dynamic nature of negative feedback and in doing so offers a promising new direction for future research. Implications to theory and practice are discussed. Keywords negative feedback change, goal commitment, task performance, growth mindset, goal-setting theory

Affect in Organizations: Effects of Job Insecurity and Humility

OB: A Meta-Analysis of Curvilinear Relationships Between Job Insecurity and Employee Workplace Behaviors

Author: Amy Lawrence, U. of Auckland
Author: Lixin Jiang, U. of Auckland
Author: Xiaohong Xu, Old Dominion U.

Based on the stress-based perspective, job preservation motivation perspective, social exchange theory, and activation theory, we propose competing hypotheses to understand the relationships between job insecurity and employee behavioral outcomes, including task performance, organizational citizenship behavior (OCB), safety behavior, and counterproductive work behavior (CWB). We then use a meta-analysis to examine the relationships between job insecurity and these behavioral outcomes. Overall, our meta-analytic results demonstrate that relationships between job insecurity and employee behavioral outcomes are essentially linear. The limited evidence of the curvilinear relationship between job insecurity OCB-individual we did find supports the application of activation theory. This study helps to clarify past inconsistent findings and deepen our understanding on how the varying levels of job insecurity may impact employee workplace behaviors.

Paper is Available to Meeting Registrants Only.

OB: The Duality of Boundary Spanning after Downsizing: A Resource Allocation Perspective

Author: Thomas Arend De Vries, U. of Groningen, Faculty of Economics and Business
Author: Gerben S. Van Der Vegt, U. of Groningen

Teams frequently establish and maintain relationships with other teams to manage joint work and obtain external resources. Such “boundary spanning” can be beneficial or detrimental for teams. Nevertheless, prior research has largely focused on the benefits that teams draw from boundary-spanning activities without addressing potentially negative effects. To address this issue, we draw from resource allocation theory to examine when and why boundary spanning benefits and harms team performance. Specifically, we propose that when teams face strongly reduced staffing budgets, boundary spanning helps to replenish team resources, which then benefits team performance. By contrast, when teams face smaller reductions in staffing budgets, we suggest that boundary spanning diverts finite available time and attention from other crucial activities, thereby depleting team resources and hurting team performance. We test this moderated mediation relationship using time-lagged, multi-source data from a healthcare organization that had reduced staffing budgets without lowering output requirements. Corroborating our expectations, our results illustrate that reductions in team staffing budgets critically shape boundary spanning’s implications for teams’ resources availability and performance. Our research, thereby, adds value by offering a more complete and integrated perspective on the performance implications of boundary spanning that complements the one-sided, and overly optimistic, view within much existing research.

OB: A double-edged sword of employee humility: understanding its influence on actors’ well-being

Author: Jie Zhong, Harbin Institute of Technology
Author: Chao Ma, The Australian National U.
Author: Qiuxiang Wen, Nanjing U.

Though previous research concerning general humility explored its’ impact on actors’ well-being, the findings were inconsistent and they scarcely investigated the underlying mechanisms and boundary conditions. Based on ego-depletion theory and literature concerning self-efficacy, we propose an integrative model that investigates both the dark and bright sides of employee humility for actors simultaneously. Specifically, we suggest that employee humility is harmful to their well-being via increased ego-depletion while it may also benefit employees’ well-being by improving their self-efficacy. Based on internal identity asymmetry theory, we propose that perceived leader underestimation is a critical boundary condition influencing above relationships. We tested our hypothesized moderated-mediation model by using time-lagged and supervisor-subordinate matched data. Results partly supported our hypothesized relationships that ego-depletion and self-efficacy mediate the relationship between employee humility and employee well-being (i.e., personal growth, job satisfaction, and sleep deprivation). In addition, although perceived leader underestimation failed to moderate the positive influence of employee humility on ego-depletion, but played a moderating role in the relationship between employee humility and self-efficacy. Theoretical and practical implications that employee humility has both positive and negative influence on actors’ wellbeing are also discussed.

Paper is NOT Available. Please contact the author(s).

OB: Organizational populism

Author: Patrice Cailleba, PSB Paris School of Business

Since populism is considered to be inherent to politics and that every organization is a place for politics to thrive, we coin the concept of organizational populism to help firms and employees alike identify and use their voice against this phenomenon. Based on studies in the fields of management and political, we adapt Rosanvallón’s three-fold simplification (social, procedural and hierarchical) to the management sciences. Each simplification presents different characteristics and leads to specific behaviors, which flourish thanks to the organizational populist leader’s ability to manage employees’ emotions. Dangerous by definition, this form of populism progressively increases psycho-social risks and accentuates suffering at work by multiplying contradictory orders and deepening the denial of organizational reality as well as market forces.

Conflict and Change: Effects on Teams

OB: [The impact of individual conflict experiences on proximal task performance in a multi-team context](#) 

Author: **Semin Park**, *U. of Iowa*

William H. Newman Award Nominee

Conflict is a dynamic phenomenon that may manifest in different fashions over time. In understanding conflict in small groups and teams, however, much of our understanding is still limited around team-level perceptions and distal outcomes without much consideration of individual members' experiences who are directly involved in the process. Moreover, teams are increasingly working in a multi-team context, in which team members may interact with individuals within and between their team boundaries at different times. In this study, building upon the behavioral manifestation of team conflict and theories of cognitive resource allocation, I advance and test a new framework that investigates the influence of members' conflict experiences on individual proximal performance. Specifically, I differentiate and consider conflict in terms of their directionality (sender vs. receiver), team boundaries (within vs. between team), and cumulative experience effects. Using continuous behavioral data from paramedics completing simulated mass-casualty incidents, I found that sending conflict was beneficial to individual proximal task performance when it was directed within team boundaries, whereas it was detrimental when it was directed between team boundaries. In contrast, receiving conflict was beneficial to individual proximal task performance when it was emanated between team boundaries. Lastly, these relationships were moderated by senders' and receivers' cumulative conflict experiences throughout the day. Implications, limitations, and directions for future research are discussed.

OB: [A team emergent state approach towards readiness to change](#)

Author: **Patrick Michel Groulx**, *HEC Montreal*

Author: **Kevin J. Johnson**, *HEC Montreal*

Author: **Jean-François Harvey**, *HEC Montreal*

Building on the need for a team based approach towards readiness to change (Rafferty, Jimmieson & Armenakis, 2013), the authors propose and test the process by which team readiness to change emerges. Building on the foundation of the team regulation theory and readiness to change theory, the authors propose that team reflexivity play a central role in the emergence of team readiness to change by developing a team understanding of organizational change which enables teams to plan effectively their efforts towards the implementation. In addition, in response to current debate on the effect of managers on the development of team emergent states, the authors demonstrate the negative effect of the non-implication of managers in the process of emergence. In total, 83 teams participated in this cross-sectional study providing primary support to the double mediation model of the emergence of team readiness to change.

OB: [Team Diversity and Team Innovation: Examining Mediating Mechanisms and Boundary Conditions](#)

Author: **Yi-Ting Lin**, *Department of Business Administration, National Chung Hsing U., Taiwan*

Author: **Nienchi Liu**, *Department of Business Administration, National Taiwan U., Taiwan*

Drawing on the information/decision-making and social categorization perspectives, the present study investigated the indirect effects of team diversity on team innovation performance via team knowledge sharing. Cognitive and relational boundary conditions of the indirect effects were also explored. We collected data from team leaders and team members of 70 research and development (R&D) teams in two time waves and performed structural equation modeling (SEM) to test the hypotheses. Consistent with the information/decision-making perspective, the results revealed that job-related diversity had a positive influence on team knowledge sharing, which in turn promoted innovation performance. In accord with the social categorization perspective, psychological diversity had a negative indirect effect on innovation performance through team knowledge sharing. In addition, team human capital accentuated the positive indirect effect of job-related diversity on innovation outcomes, while team identification with diversity attenuated the negative indirect effect of psychological diversity on innovation performance via team knowledge sharing. Finally, important theoretical and managerial implications were discussed.

OB: [Looking Beyond the Team: Team Member Behaviors After a Transactive Memory Intervention](#)  

Author: **John R. Austin**, *U. of New England*

Awareness of available expertise in groups directly influences the group performance. Extensive empirical research on transactive memory systems has demonstrated this to be true. While there have been numerous research studies of this phenomenon, there is far less known about how interventions designed to increase transactive memory in natural continuing groups may have impacts beyond the groups. This paper addresses that gap. I provide an overview of transactive memory research and report on a team intervention designed around transactive memory systems theory. Qualitative data was collected through group interviews with participants in this intervention. The results of these interviews indicate that the most significant impacts of within-team transactive memory system awareness are in how team members change their interactions across the team boundary. I define the concept of situated expertise to describe the combination of knowledge awareness, help-seeking actions, and social network awareness needed to convert accurate team transactive memory systems into sustained system-level high performance.

COVID-19's Effect on the Workplace

OB: **Overcoming Work-family conflict During COVID-19 Pandemic: A Serial Mediation Model**

Author: **S.M. Ramya**, *Indian Institute of Technology, Madras*
Author: **Jasmine Banu**, *Indian Institute of Technology, Madras*
Author: **Rupashree Baral**, *IIT Madras*

COVID-19 pandemic is a global crisis that has resulted in considerable changes to the way of life and work. Due to the lockdown conditions executed in several countries, organizations have resorted to long-term work from home settings, but this has had a diminishing effect on the employees' work and family boundaries, augmenting work-family conflict (WFC). In this study, we hypothesize the role of spouse support to overcome this WFC and identify the possible psychological mechanism to explain this process. The main aim of the study was to understand the role of work-home boundary incongruence through a conceptual model connecting spouse support, problem focussed coping strategy, boundary control, and work-family conflict. Using a cross-section survey design (N=350 married and full-time working individuals), structural equation modelling, and SPSS Process macro, we tested a serial mediation model. While the effect of spouse support in diminishing WFC was meagre, problem focussed coping strategy, and boundary control were found to be crucial. We found a significant indirect effect supporting our serial mediation hypothesis, extending the current knowledge about boundary theory and the work-home boundary model. We also offer implications and directions for future research.

OB: **Navigating the COVID-19 Threat: Organizational Justice Matters More under Mortality Salience**

Author: **Haijiang Wang**, *School of Management, Huazhong U. of Science and Technology*
Author: **Mengyuan Wang**, *Peking U., School of Psychological and Cognitive Sciences*
Author: **Xiaomin Xu**, *U. of Liverpool*
Author: **Changqin Lu**, *Peking U., School of Psychological and Cognitive Science*

Studies have shown that fairness is a functional quality, particularly when people are uncertain about fundamental aspects of human life, such as mortality salience (Van den Bos & Miedema, 2000). However, the role of organizational justice in mortality salience has been underexplored in field studies. COVID-19 has caused tens of thousands of deaths across the world. Does justice within an organization matter more to employees exposed to the threat of death from COVID-19? Based on social exchange theory and uncertainty management theory, we hypothesize that organizational justice and COVID-19 trigger mortality salience and jointly influence employee trust in their organizations and their work performance. We tested our hypotheses through a 16-day daily diary study using a sample of Chinese employees (N = 75, 831 total observations) and a three-wave study using a sample of American employees (N = 262). The results of the two studies showed that mortality salience consistently strengthened the effects of justice, as organizational justice was associated with higher levels of trust in the organization and work performance when the mortality salience triggered by COVID-19 was high (versus low). These findings replicate and extend other laboratory studies that apply uncertainty management theory and suggest that organizational justice matters more to employee trust and performance under the threat of COVID-19. Our research also advances social exchange theory by identifying personal uncertainty (i.e., mortality salience) as an important boundary condition through which justice can establish social exchange relationships in organizations.

OB: **COVID-19 and Its Impact on Employee's Work Performance**

Author: **Ambreen Sarwar**, *Virtual U. of Pakistan*
Author: **Muhammad Ibrahim Abdullah**, *Comsat U. Islamabad- Lahore Campus*
Author: **Muhammad Kashif Imran**, *The Islamia U. of Bahawalpur, Pakistan*
Author: **Tehreem Fatima**, *U. of Lahore Sargoha Campus Pakistan*

With theoretical underpinnings in the terror management and conservation of resources theory, this research aims at investigating how the fear of contamination of COVID-19 has affected the performance of employees in the banking sector of Pakistan. The data was collected in two waves, from banks in Punjab region and analyzed through SPSS. The data from 206 employees showed that such fear results in emotional exhaustion which in turn negatively influences work performance. However, the perception of better precautionary measures adopted by the organization of the employees against the spread of disease moderated the relationship and weakened the strength of fear on performance through emotional exhaustion. Amid the wide-spread fear and detrimental effects of COVID-19 on organizations and economies, this research has implications for policy makers about the importance of organizational measures displayed to employees in decreasing the negative effects of extensive fear and uncertainty prevailing due to the pandemic.

OB: **Job Meaningfulness as an Important Motivator during the COVID-19 Pandemic**

Author: **Yi Huang**, *Nanyang Technological U.*
Author: **SinHui Chong**, *Nanyang Technological U.*

Under the ongoing and unprecedented uncertainties of COVID-19 (i.e., C19), people constantly seek and appraise relevant information to make sense of the situation. Yet, little is known about how people connect the external situation to their feelings and behaviors, and reconcile the meaning of their work roles with the larger pandemic context. This gap in knowledge is aggravated by the fact that many past studies on large-scale crises or tragedies focused on between-person employee reactions after a singular incident, which would not apply to the current enduring pandemic. Our research addresses this by examining the within-person daily relations of an employee's C19 situational appraisals with their job performance. Based on Lazarus' (1991) cognitive-motivational-relational theory, we predict that unfavorable previous-day C19 situational appraisal will be more strongly related to current-day negative affective state for employees whose C19-induced workload is higher (vs. lower), because fluctuations in the pandemic situation would have greater personal relevance for them. We also contend that higher (vs. lower) perceived job meaningfulness in combating C19 can mitigate the negative relation of negative affective state on job performance, because it offers employees a sense of social duty and obligation to maintain their performance despite their negative emotions. The results from 848 daily responses from 118 full-time employees collected during the pandemic support our hypotheses, and we discuss the implications of these findings for the present and the future beyond the C19 pandemic.

Gratitude at Work

OB: Examining Gratitude's Role in Moral Partiality for Divergent Help Within Leader-Follower Dyads

Author: **Jennifer A. Harrison**, *EM Normandie Business School, Métis Lab, France*
Author: **Marie-Helene Elizabeth Budworth**, *York U.*
Author: **Thomas H. Stone**, *OSU Tulsa*

Building on research on gratitude, prosocial behavior, and caring and ethical leadership, we examine the role of gratitude in motivating leader-follower help that diverges from organizational goals (e.g., rule lenience). Drawing from moral self-regulation theory, we present a conceptual model on the role of gratitude as a moral emotion, whereby its prosocial action tendency focuses on moral partiality toward referent targets prompting the prioritization of targets' welfare. We propose two power moderators specific to leaders and referent followers, strengthening the proposed associations between gratitude and divergent help; these are the leader's power to diverge from rules and the follower's perceptions of their power relative to the leader's. We also examine the role of follower attributions in predicting gratitude feelings, and divergent help directed toward leaders.

Paper is NOT Available. Please contact the author(s).

OB: Thank me! Seeking gratitude leads to interpersonal avoidance

Author: **Shike Li**, *IE Business School*
Author: **Kriti Jain**, *IE Business School*
Author: **Ivana Radivojevic**, *Fundación IE Maria de Molina 13, 28006 Madrid VAT Number: G-81711459*

Gratitude has long been found to enhance interpersonal relationships. However, we challenge this assumption by examining situations where benefactors may offer help but then seek gratitude from the beneficiary. In four studies, we explore such sought-gratitude and demonstrate that it increases beneficiaries' avoidance mediated through their perception of the benefactor's self-righteousness. In a pilot study, we first established the prevalence of sought-gratitude in everyday life. In Study 1, participants recalled real life instances of sought-gratitude and the results provided initial evidence of its effect on avoidance through perceived self-righteousness. Study 2 replicated the predicted mediation by ruling out felt indebtedness as an alternative explanation. Study 3, using a behavioral task, showed that this mediation was moderated by beneficiaries' dispositional gratitude. These results contribute to a nuanced understanding of gratitude by shedding light on the phenomenon of sought-gratitude and its negative outcomes. We discuss theoretical and practical implications.

OB: You Make Me Feel Understood and Trusted: The Role of Leader Appreciation Expression

Author: **Ping Shao**, *California State U. Sacramento*
Author: **Katrina A. Graham**, *Suffolk U.*
Author: **Zhiqing Zhou**, *Baruch College & The Graduate Center, CUNY*
Author: **Hongcai Li**, *West Texas A&M U.*
Author: **Lindu Zhao**, *Southeast U.*

Drawing upon the social functionalist view of emotions, we tested expresser- and object-informational processes that transmitted the effect of leader appreciation expression onto employee job performance. Additionally, we explore the moderating effect of team cooperative climate as an important boundary condition. Using multi-wave, multi-source data, we found that leader appreciation expression was positively and indirectly related to employee job performance through employee felt trust from leader, and this relationship was strengthened when team cooperative climate was low. Concurrently, leader appreciation expression indirectly facilitated employee job performance through employee feeling understood at work and subsequent felt trust from leader. Our findings provide strong evidence for why it is important and rational for organizational leaders to express appreciation to their employees.

OB: Influence of Distributive Justice on Organizational Citizenship Behaviors: The Mediating Role of Gra

Author: **Bala Subramanian R**, *Xavier U. Bhubaneswar*
Author: **Srikanth PB**, *Director-HR, CTS, Mumbai, India*

Distributive justice is known to have important emotional and affective outcomes. The present study explores the role of distributive justice as an antecedent to feelings of gratitude towards the organization. Borrowing from social exchange theory we investigate the mediating role of gratitude between the relationship between perceived fairness in distributive justice and employees' organization citizenship behaviors. Multi-source data was collected from 185 employees and their supervisors employed in a large manufacturing organization based in East India. Data collection spanned two-time intervals. Data was analysed using structured equation modelling. The results indicate that feelings of gratitude not only signal fair distribution of benefits such that the employees go beyond the call of the duty to invest in OCB such by engaging in such acts, but they also presumably repay their social debts highlighted in the social exchange perspective. Implications for theory and practice are discussed.

Leader Narcissism and Ambition

OB: [Does ambition correspond to leadership aptitude?](#) 

Author: **Emily Reit**, *Stanford Graduate School of Business*
Author: **Frank Flynn**, *Stanford U.*

We posit a null hypothesis—that people who are more motivated to hold senior leadership roles do not possess stronger leadership skills. Drawing from three studies (two pre-registered), which focus on simulated and actual leadership behavior, we find no evidence of a connection between ambition and aptitude; rather, using Bayesian analysis, we find more support for the hypothesis that there is no relationship between these two constructs. More ambitious MBA students participating in a leadership skills competition were judged by a panel of experts as having no more leadership potential than their less-ambitious peers (Study 1). Likewise, high-aspiring executives received 360-degree evaluations of their leadership behavior that were no more positive than their low-aspiring peers (Study 2). Finally, using a nationally representative sample of U.S. adults asked to lead a team in a simulated leadership task, we again find no support for the presumed link between ambition and aptitude (Study 3).

OB: [Throwing good money after bad: Leaders' personality traits model for escalation of commitment](#)

Author: **Yael Brender-Ilan**, *Ariel U. Department of Economics and Business Administration, Israel*
Author: **Yonatan Shertzer**, --

Escalation of Commitment (EoC) relates to decision-makers' tendency to commit resources to a failing course of action. The current study attempts to expand the understanding of personality traits as factors that potentially engender EoC by offering an EoC-prone personality profile. Our moderated-mediation model illustrates how extraversion affects EoC through the mediations of sensation-seeking, and how hubris moderates the effect of sensation-seeking on EoC. The results are based on data gleaned from an online questionnaire completed by 314 respondents from various managerial levels employed among wide-ranging Israeli industries. Data was obtained via network respondent-driven sampling from a 500 managers' sample. The model was tested using Hayes's (2017) Process procedure. Sensation-seeking was found to fully mediate the relationship between extraversion and EoC, while hubris was found to moderate the relationship between sensation-seeking and EoC. Managerial implications and future research directions are suggested

OB: [Narcissism in Organizations: Zooming in on Personality Facets and Situations](#) 

Author: **Ulf Steinberg**, *Technical U. of Munich*
Author: **Arian Musliu**, *Ludwig Maximilian U. of Munich (LMU)*
Author: **Ellen Schmid**, *Munich Business School*

Narcissism plays a central role among the personality traits that lead to problems in the workplace and beyond and its complexity has fascinated researchers for decades. Although mostly studied as a one-dimensional trait, narcissism has in fact different facets, such as grandiosity, authority and entitlement. Its association with self-interest is well-established conceptually and could be particularly damaging to organizations, despite some research attesting to positive effects of narcissism. Empirically disentangling the relationship of different facets and situational cues will advance our understanding of narcissism and self-interested behavior. Thus, we contacted employees (N = 370) via a panel firm to assess personality traits and, two weeks later, measures for self-interested behavior based on two different situations that may occur in the workplace. Our results suggest that trait narcissism is not related to self-interested behavior and may, depending on the situation, even be a negative predictor. Exploitative entitlement predicted self-interested behavior, but only in a scenario that was somewhat suggestive of an opportunity to take an unduly large reward for oneself. We interpret our findings in terms of trait activation and discuss potential alternative explanations, as well as conceptual difficulties of the concept self-interest.

 OB: [Selecting for competence or for the ego: How narcissistic CEOs structure their top management teams](#)

Author: **Jan Moritz Bredlich**, *WIN Lehrstuhl RWTH Aachen*
Author: **Sebastian Kruse**, *WIN Lehrstuhl RWTH Aachen*
Author: **Malte Brettel**, *RWTH Aachen U.*

While the importance of a firm's top management team (TMT) is indisputable, the question of why TMTs look the way they do remains largely unresolved. As the most prominent and powerful executives in a firm, CEOs and their specific personalities hold a great deal of influence when executives are being appointed to the TMT. In this paper, we consequently focus on one important and dominant CEO personality trait, which is said to be especially found in a company's top levels: narcissism. Drawing from upper echelons research and personality psychology, we answer the question of what characteristics a narcissistic CEO is looking for in his or her TMT. In our longitudinal analysis of 641 CEOs from 399 U.S. firms listed on the S&P 500 index between 2007 and 2017, we identify a negative impact of CEO narcissism on TMT role- and firm tenure as well as a U-shaped relationship between CEO narcissism and TMT age. This provides evidence for narcissistic CEOs being predominantly interested in fulfilling their narcissistic needs through influencing the composition of the TMT. Thereby, we shift the level of analysis on CEO narcissism towards firm internal outcomes and advance the understanding of CEO personality as an antecedent of TMT characteristics. Finally, we derive practical implications for executives, as well as directors.

Psychological Safety and Efficacy of Voice Behaviors

OB: **Adaptive followership: The role of leader psychological safety and magnitude of change**

Author: **Marie Thommes**, *Maastricht U.*
Author: **Sjir Uitdewilligen**, *Maastricht U.*
Author: **Ramon Rico**, *U. Carlos III de Madrid*
Author: **Mary J. Waller**, *Colorado State U.*

In this longitudinal laboratory study, we investigated the effects of an adaptive followership training intervention on team adaptive performance. One hundred two four-person teams were assigned to one of the six conditions resulting from the 2 (adaptive followership training vs. control training) x 3 (change magnitude: team, task, or team & task) factorial repeated measures design. Results revealed the magnitude of change exerted a moderating effect on the relation between adaptive followership training and team adaptive performance, such that adaptive followership training significantly increased team adaptive performance when teams faced both a task and a team change, but not when they faced only a task or a team change. Additionally, we found that adaptive followership increases leader psychological safety across change conditions, and that leader psychological safety mediates the positive effect of adaptive followership on team adaptive performance in the team and task change condition. Our work extends both team adaptation and followership literatures and enhances organizational practice, providing vital insights for training program development to increase teams' ability to adapt effectively during environmental complexities.

OB: **Chinese positive leaderships and employee voice: The perspective of pan-familism activation**

Author: **Hao-Cheng Lo**, *Department of Psychology, National Taiwan U.*
Author: **Tsung-yu Wu**, *Department of Psychology, National Taiwan U.*

Applying cultural schema activation view (Chiu & Hong, 2007) to pan-familism, the current study seeks to explore and answer the following three questions regarding the leader's role in employee psychological safety and subsequent voice in Chinese organizations: First, how does moral leadership encourage followers' voice through their psychological safety? Second, how does benevolent leadership moderate above leaders' moral influence on employee voice, serving as a second-order moderator? Third, how does guanxi between leaders and followers color the moderating effect of benevolent leadership, serving a third-order moderator? Adopting time-lagged multisource survey technique, we obtained 198 pairs of leader-follower dyad data in organizations in Taiwan. The results showed that follower psychological safety mediated the positive relationship between moral leadership and follower voice. Besides, benevolent leadership weakened the mediating effect of psychological safety. Last, guanxi strengthened the weakening effect of benevolent leadership. That is, the weakening effect of benevolent leadership occurred only when high guanxi. The theoretical and practical implications, limitations, and further directions are discussed. Keywords: voice, moral leadership, benevolent leadership, pan-familism, cultural schema activation

OB: **Too Futile to Speak Up? How Leaders Can Increase Employee Perceived Efficacy of Voice**

Author: **Xiaofei Hu**, *Hong Kong Polytechnic U.*
Author: **Wu Liu**, *Hong Kong Polytechnic U.*
Author: **Wei He**, *Nanjing U.*

Although efficacy judgment has been recognized as one key factor leading to employee voice behavior, we still know little about how to help enhance employee perceived efficacy of voice. Based on social cognitive theory, we argue that voice implementation resulted in previous voice episodes plays an important role in shaping employees' consequent perceived efficacy of voice and thus affect their further engagement in voice behavior. We also theorize the moderating role of perceived implementation rule clarity (i.e., whether voicers perceive that leaders' implementation decision rules are clear and explicit) in the path of past voice implementation—efficacy—further voice. We collected data from 32 health care teams in a hospital in China, by tracking nurses' voice proposed in monthly team meetings and their efficacy following leaders' voice implementation. We found that not all voice implementation produced efficacy benefits for the focal nurses. Voicers experienced efficacy increase and conducted more voice behavior only when they perceived leader's implementation rule as explicit and clear.

OB: **The Bright and Dark Sides of Daily Challenging and Supportive Voice Behaviors**

Author: **Thomas Keleman**, *U. of Oklahoma*
Author: **Samuel Matthews**, *U. of Northern Iowa*
Author: **Sarah E. Henry**, *U. of Oklahoma*
Author: **Bret Bradley**, *U. of Oklahoma*
Author: **Yejun Zhang**, *U. of Texas Rio Grande Valley*

Employees contribute to their organizations by voicing concerns. They can provide suggestions that support current practices (supportive voice) and suggestions that challenge how things are done in the organization (challenging voice). Prior research suggests that there are both personal gains and costs associated with individual voice behavior. As such, we attempt to integrate the bright and dark sides of employee voice behavior and focus on the interpersonal daily costs and benefits experienced by employees who engage in these two types of voice behavior. Results from a daily-diary study using experience sampling methodology (ESM) find that challenging and supportive voice have differing personal costs and benefits for the individual employee. We find that supportive voice increases perceptions of prosocial impact, which in turn increases daily job satisfaction; we also find that supportive voice decreases ego depletion, which then reduces daily job stress. Daily challenging voice likewise increases perceptions of prosocial impact, which in turn increases daily job satisfaction; however, unlike supportive voice, challenging voice increases ego depletion, which then increases daily job stress. Implications for theory and practice are discussed.

Reactions to Voice at Work

OB: Employee Voice Behaviors: Manager Intention-Outcome and Political Workplace

Author: **Sibel Caliskan**, *Istanbul Bilgi U.*
Author: **Gonca Gunay**, *Istanbul Bilgi U.*

Employees often encounter the decision of whether speaking up or remaining silent in case of work-related issues. There are recent studies about how different attributions made about supervisors' behaviors by employees and organizational environment to speak up may be cue for various forms of voice behaviors. The objective of the study is to examine multi-layers affecting employee voice behavior: (1) "political workplace" where political influence is used at low vs high level at organizational level, and (2) attribution toward "supervisors' intention and behavioral outcomes" at dyadic level. This study aims to investigate the influence of previous observation of a risky environment to speak up and supervisors' intention-outcome gap over "employee voice behaviors". Hypothetical-scenario based experimental design is used to recreate an environment where supervisors' intention-outcome is attributed and political workplace is created. We found that the malfunctions in workplace, intention or outcome result in different types of prohibitive voice (Neglect, Aggressive Voice, and Exit). Otherwise promotive voice (Patience) is secured. Unfair treatment forces promotive voice (Constructive). Inconsistency in intention and outcome leads to Neglect because of mixed signals, but leads to Considerate Voice in interaction with a safe workplace. Intention matters in decreasing passive voice (Neglect and Patience) that alleviates malfunction in other factors. Outcome matters in decreasing detrimental Aggressive Voice and Exit that alleviates malfunction in other factors. The originality of the study come from holistic and quasi-experimental view on the determinants of voice behaviors, in terms of including not just behavioral cues but also safe work environment.

OB: Employee Reactions to Coworker Voice in the Workplace

Author: **Xiang Zhou**, *Nanyang Technological U.*
Author: **SinHui Chong**, *Nanyang Technological U.*
Author: **Jiajin Sophie Tong**, *School of Psychological and Cognitive Sciences*

This research examines how and when employees respond to coworker voice. Drawing on cognitive-motivational-relational theory of emotion (Lazarus, 1991, 2001), we argue that constructive coworker voice arouses positive emotions in employees, which is associated with more interpersonal organizational citizenship behavior, while destructive coworker voice provokes negative emotions and withdrawal behavior. In this process, perceived behavioral control acts as a first-stage moderator and emotional control serves as second-stage moderator. Temporally lagged data from 307 insurance sales representatives and 48 managers largely support our hypotheses.

OB: Employee voice and silence as mechanisms to regulate job insecurity perceptions during COVID-19

Author: **Zitong Sheng**, *Curtin U.*
Author: **Kathleen Keeler**, *Ohio State U.*
Author: **Sheila Keener**, *Old Dominion U.*

As employers worldwide grapple with the COVID-19 pandemic, employees are faced with a highly uncertain work environment and, consequently, high levels of job insecurity perceptions. This study aims to fill an existing gap in the literature by examining what employees do to manage this uncertainty and whether these actions are effective at reducing subsequent job insecurity perceptions. Using uncertainty management and reduction theories as a guiding framework, we propose employee voice and silence as possible behavioral responses to manage uncertainty. We also propose that informational justice perceptions will influence which course of action employees will take to manage this uncertainty. Our study of 302 employees over a three-week period shows that perceptions of high job insecurity motivate individuals to seek out ways to reduce uncertainty. Our results reveal that people generally use silence, rather than voice, to manage job uncertainty. This exacerbates the situation by further increasing subsequent insecurity perceptions. We find, however, that informational justice "breaks" this vicious cycle by reducing one's inclination to remain silent. We discuss the implications of our findings in the context of the current pandemic, and their implication for theory and practice more generally.

OB: When Is Speaking up Unnecessary and Risky? A Dual-Mechanism Model of Abusive Supervision and Voice

Author: **Xinxin Li**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*
Author: **Huirong Ju**, *National U. of Singapore*

We propose and test two voice-specific beliefs (i.e., voice role conceptualization and psychological safety) as mechanisms explaining the effects of abusive supervision on employee voice. Based on the role perception perspective on voice, we argue that abusive supervision is negatively related to voice role conceptualization, an effect mitigated by employees' perceived deep-level similarity with leaders. Drawing on the risk-taking perspective on voice, we argue that abusive supervision is negatively related to psychological safety, an effect weakened by leader narcissism. A time-lagged survey study of 172 employees supported our moderated dual-mechanism model such that both voice role conceptualization and psychological safety mediated the negative effect of abusive supervision on voice, with dyadic deep-level similarity and leader narcissism weakening these mediation effects, respectively. Theoretical and practical implications are discussed.

Team Performance

OB: Not so siloed: The role of affective, cognitive, and motivational factors on team performance

Author: **Gabriela De Souza Cuconato**, *Weatherhead School of Management, CWRU*
Author: **Ishani Aggarwal**, *Brazilian School of Public and Business Administration*
Author: **Nufer Yasin Ates**, *Sabanci U.*

Previous literature extensively studies the affective, motivational, and cognitive factors that explain team performance in isolation. However, research combining the role of all these factors is rare. In this paper, we propose a model integrating these distinct elements, focusing on the input role of team commitment, a team affective factor, and predict that it impacts team performance by enhancing team cognition, specifically transactive memory systems. Further, team's motivational factors, specifically team composition on both learning and performance goal orientations, provide an important contingency to this indirect effect. Empirically, given the importance of replications toward building reliable science, we test the predictions in two studies and find robust support with a total of 170 longitudinal teams. Broadly, this research adds to an integrative model of teamwork by considering affective, cognitive and motivational factors simultaneously, and specifically demonstrates that team commitment has an indirect influence on team performance through teams' transactive memory systems, with this positive relationship amplified by members' learning (but not necessarily performance) goal orientations.

OB: Leader Other-Oriented Perfectionism, Team Emergent States, and Team Performance  

Author: **Ning Guo**, *Peking U.*
Author: **Ran Li**, *Hitotsubashi U.*
Author: **Zhi Liu**, *Guanghua School of Management, Peking U.*

Although discussed in both academic studies and management practice, research on perfectionism is mainly limited to its intrapersonal influence at the individual level. To explore the interpersonal effect of perfectionism, this paper studied the influence of leader other-oriented perfectionism(OOP) at the team level in an organizational context. Combining the information processing theory (IPT) and the social information processing (SIP) theory, we argue that the interactive effect of leader OOP and leader task helping influence team shared mental model (SMM) and team in-role performance while the interactive effect of leader OOP and team power mutability influence team trust and both team in-role and extra-role performance. A dual path model is developed using a three-wave survey with a sample of 633 employees and their leaders from 91 teams. This study demonstrates a potential bright side to other-oriented perfectionism and how this leader trait may interact with other factors to influence team emergent states and work outcomes through both task-related and relationship-related information processing.

Paper is Available to Meeting Registrants Only.

OB: Team Size and Performance: A Meta-Analytic Investigation

Author: **Jeremy Bernerth**, *San Diego State U.*
Author: **Jeremy M. Beus**, *Washington State U.*
Author: **Catherine A. Helmuth**, *Central Michigan U.*
Author: **Terrance L. Boyd**, *Louisiana State U.*

Scholars agree team size is a critical component of team effectiveness, but the nature of the relationship between team size and important indicators of effectiveness is unclear due to contradictory theoretical perspectives and empirical findings. We meta-analyzed the relationship between team size and team task performance using data from 156 primary studies with 19,114 teams. Results indicate team size has a small but significant relationship ($p^{\wedge} = .10$) with team task performance. Moderator analyses found the relationship was dependent upon task coordination, task complexity, and national culture (i.e., collectivism). Additional results revealed links between team size and other aspects of effectiveness including counterproductive work behaviors ($p^{\wedge} = .20$) and team attitudes ($p^{\wedge} = -.05$). Exploratory analyses found team size was essentially unrelated to various aspects of individual effectiveness. Implications for theory and future team research are discussed.

Leader-Follower Interactions

OB: **Give Them What They Want: A Conceptual Examination of the Job and Member in Leader-Member Exchange**  

Author: **Franziska M. Renz**, *U. of Texas at El Paso*

Following the theme Bringing the Manager Back in Management, leader-member exchange (LMX) theory is conceptually examined with a focus on two important boundary conditions: the members' personality and the job's psychological ownership potential (POP). POP refers to the extent to which jobs offer employees the opportunity to take ownership of their jobs irrespective of legal ownership. A typology is developed to facilitate the collaboration between leaders and members in leader-member exchange (LMX) relationships and save valuable resources in the recruitment and selection as well as training and development processes. Members high in neuroticism and agreeableness in jobs with low POP prefer low-quality relationships. Low-quality relationships are purely transactional while high-quality relationships go beyond an economic exchange and provide subordinates with additional benefits (e.g., developmental opportunities). High-quality relationships are preferred by members high in extraversion, conscientiousness, and openness in jobs with high POP. Implications for future research and managers are derived.

OB: **The Effect of Leader-Follower Age Congruence on Leader Humor and Follower's Performance**  

Author: **Tian Jiang**, *Guangdong U. of Finance & Economics*

Author: **Chengquan Huang**, *U. of Florida*

Author: **Lin Wang**, *Sun Yat-Sen U.*

Leader's humor expression to follower is a powerful way of interaction in organizations. Though previous research has showed the positive effect of leader humor on many team outcomes such as performance, very little is known about why team leader express humor or not, especially why team leader express humor more to some followers but less to others. Drawing upon relational demography and similarity-attraction theory, this research examined the effect of leader-follower age congruence on leader humor expression, as well as the indirect effect on follower's performance. We posit that (a) leader's humor to follower will be more frequent when leader age and follower age are aligned, as opposed to not aligned; (b) leader humor to follower will be more frequent when the leader is older than the follower, as opposed to when the follower is older than the leader; and (c) leader-follower age congruence has a positive indirect effect on follower performance via leader's humor to follower. We conducted a multi-wave multi-source field study and used cross-level polynomial regression as well as response surface technology to test the proposed hypotheses, and the results supported our argument. Theoretical and practical implications are well discussed.

OB: **Dusting Off and Bouncing Back: The Role of Resilience in the Relationship between LMX and Well-Being**  

Author: **Liliane Furtado**, *U. Federal Fluminense*

Author: **Urszula Gabriela Lagowska**, *NEOMA Business School*

Author: **Filipe Sobral**, *EBAPE/FGV*

Author: **Eduardo Cardoso De Moura**, -

Drawing on data from a two-wave longitudinal study with 484 physicians working in the Brazilian healthcare system during the Covid-19 pandemic, we explore the impact of leader-member exchange (LMX) on employees' psychological well-being (burnout and professional fulfillment). Specifically, using a resource-based perspective, we postulate that high-quality relationships with supervisors have the potential to promote a state of resilience, and ultimately, improve employees' well-being by providing valuable resources that allow employees to effectively adapt and respond to adverse events. Our findings corroborate our theoretical model showing that LMX reduces physicians' burnout and increases their professional fulfillment through the enhancement of their resilience. Moreover, the results indicate that the follower's self-concept is an important boundary condition of the effectiveness of LMX, such that the effects of LMX on burnout and professional fulfillment are weaker when employees have higher levels of independent self-construal. Overall, the study provides evidence that resilience, fostered by relationship-oriented leadership, plays a key role in bouncing back from hardship and avoiding the deterioration of well-being at work, especially in face of severe adversity.

Effects of Unethical Workplace Behaviors

OB: **Exploitative Leadership and Counterproductive Work Behavior: A Discrete Emotions Approach**

Author: **Limin Guo**, *School of Economics & Management, Tongji U.*
Author: **Jinlian Luo**, *Tongji U.*
Author: **Ken Cheng**, *School of Management, Zhejiang U. of Technology*
Author: **Shuwen Li**, *Tongji U.*

Integrating appraisal theories of discrete emotions and theory of emotion regulation, we seek to examine the effects of exploitative leadership on certain types of counterproductive workplace behavior (CWB) through discrete emotions and the moderating effect of cognitive reappraisal. Using time-lagged data from 440 full-time employees of a high-technology company in North China, our results revealed that exploitative leadership was positively related to approach-oriented CWB and avoidance-oriented CWB. Moreover, we found that anger mediated the relationship between exploitative leadership and approach-oriented CWB, whereas fear mediated the relationship between exploitative leadership and avoidance-oriented CWB. Further, cognitive reappraisal attenuated the positive effects of exploitative leadership on anger and fear and the indirect effects of exploitative leadership on approach-oriented CWB (via anger) and avoidance-oriented CWB (via fear). Implications for theory, practice, and future research are also discussed.

OB: **Leader UPB and Follower Unethical Behavior: Integrating Relational and Moral Perspectives**

Author: **Han Li**, *Peking U.*
Author: **Shenjiang Mo**, *Zhejiang U.*

We integrate relational and moral perspectives on unethical pro-organizational behavior (UPB) to test the mechanisms through which leader UPB results in follower unethical behavior. In doing so, we argue that leader UPB can influence followers' relational ambivalence and moral disengagement, which subsequently affect follower unethical behavior. Moreover, we test the moderation effects of follower power distance orientation and leader moral decoupling on the indirect relationships. Results from a sample of 556 employees showed that leader UPB has a positive indirect impact on follower unethical behavior by increasing both relational ambivalence and moral disengagement. In addition, follower power distance orientation strengthens the relationship between leader UPB and follower unethical behavior through relational ambivalence, while leader moral decoupling strengthens the relationship between leader UPB and follower unethical behavior through moral disengagement. Theoretical and managerial implications are discussed.

OB: **Innovative Strategy and Illegal Behavior**

Author: **Chong Zhong**, *Birkbeck, U. of London*

Why might innovative strategy trigger illegal behavior? This study considers that firms will resort to the problemistic search according to the anticipated negative feedback of the strategy rather than the actual outcomes. Using the data from World Bank Enterprises Survey, we found that investing R&D will result in bribery in developing countries, confirming that the discrepancy between the aspiration of innovation and expectation of actual achievements is the source of illegal behavior. To extend the boundary of the behavior theory of a firm (BTOF), we borrow the light from the general strain theory (GST), which identifies the other two mechanisms of illegal behavior of organizations. The results support the hypotheses that unfair strain and aspirational strain intensify the positive relationship between R&D input and bribery. However, when a firm has the experience of R&D output, it will mitigate a firm's tendency to bribe.

OB: **How Does Cyber Incivility Affect Work Withdrawal?**

Author: **Boreum Ju**, *Slippery Rock U. of Pennsylvania*
Author: **Sunjin Pak**, *Slippery Rock U. of Pennsylvania*

Written information and communication technologies such as email and online messaging have dominated workplace communication. The purpose of this study was to explore the effects of cyber incivility on adverse work outcomes of work withdrawal and turnover intention. Specifically, we draw on self-determination theory and conservation of resources theory to examine the mediating roles of basic need satisfaction and burnout in the relationship between cyber incivility and work outcomes. Furthermore, we investigated conscientiousness and neuroticism as boundary conditions that influence the effects of cyber incivility on basic need satisfaction, burnout, and work outcomes. The results based on time-lagged data from 685 full-time workers in the United States provide support for the hypotheses that cyber incivility is indirectly associated with work withdrawal and turnover intention through basic need satisfaction and burnout. We also found that for individuals with high conscientiousness, the negative direct effect of cyber incivility on basic need satisfaction and the positive indirect effects of cyber incivility on work withdrawal and turnover intention through basic need satisfaction and burnout are stronger than for individuals with lower conscientiousness. The results and implications on about workplace cyber incivility, basic need satisfaction, burnout, work withdrawal, and turnover intention are discussed.

Diversity, Creativity, and Teamwork

OB: **Techno-Support, Techno-Stressors, and Employee Innovative Behavior: A Diary Study**

Author: **Valentin Petzsche**, *Technische U. Kaiserslautern*
Author: **Tanja Rabl**, *Technische U. Kaiserslautern*

Based on affective events theory and conservation of resources theory, this paper examines how perceived daily techno-support and perceived daily techno-stressors are related to daily innovative employee behavior. Findings from a diary study with two daily surveys over the course of ten workdays with 1727 data points nested in 94 employees working fulltime showed a statistically significant and positive indirect effect of perceived daily support for communication and collaboration and perceived daily ease of effort on daily innovative employee behavior through daily high-activated positive mood. Furthermore, perceived daily information overload and perceived daily communication overload had a statistically significant and negative indirect effect on daily innovative behavior through daily high-activated positive mood and, contrary to our expectations, a statistically significant and positive indirect effect through daily high-activated negative mood. Thus, results provide support for perceived daily techno-support and daily techno-stressors being affective work events that cause affective reactions in the form of daily high-activated positive and negative mood which in turn trigger affect-driven behavior such as daily innovative employee behavior.

OB: **Fun, Friends, and Creativity: A Social Capital Perspective (WITHDRAWN)**

Author: **Janet Boekhorst**, *U. of Waterloo*
Author: **Michael Halinski**, *Ted Rogers School of Management*
Author: **Jessica Good**, *York U.*

Although creativity research has devoted considerable effort towards identifying the antecedents of creativity, there remains important questions about how organizations can foster creativity through social processes. Drawing from social capital theory, we hypothesize a moderated mediation model that investigates the influence of employee participation in fun activities on individual creativity through workplace friendships. We further hypothesize that the strength of this positive indirect effect is weaker for managers compared to non-managers. Our analysis of data collected from a multi-source, three-wave field study (n = 163 employees) reveals a positive mediation between participation in fun activities and incremental creativity (but not radical creativity) via workplace friendships. Contrary to expectations, the results support a moderated mediation relationship, such that the moderating effect of manager status on the relationship between participation in fun activities and incremental creativity via workplace friendships was significant for non-managers and insignificant for managers. Our findings not only highlight the practical and theoretical importance of fun activities in generating novel and useful ideas, but they also reveal that the benefits derived from fun activities (i.e., strengthened friendships, incremental creativity) are particularly salient for non-managers.

OB: **Searching for a Cure: The Role of a Project Scaffolding Intervention In Scientific Collaborations**

Author: **Maritza R. Salazar**, *U. of California, Irvine*
Author: **Gerardo Okhuysen**, *U. of California, Irvine*
Author: **Heejin Kim**, *U. of California, Irvine*

We investigate the use of formal interventions in early-stage discovery collaborations focused on curing devastating diseases. To advance their objectives, these collaborations must overcome profound differences in members' specialized knowledge, despite having limited familiarity and prior histories of collaboration with one another. We conducted a field quasi-experiment using 26 biomedical research collaborations across the US beginning to work on treatments or cures for human diseases. We provided and tested the efficacy of a formal scaffolding intervention, focused on tentative problem solving and provisional planning. Results show that using this intervention allowed collaborations to integrate members' disparate and diverse expertise into innovative research projects, which led to increased productivity. The effect of the intervention was mediated by the extent to which collaborators were able to align and coordinate with one another to complete project tasks. Elements of transactive memory (i.e., knowing who knows what) and nascent creative efficacy did not mediate this effect.

OB: **Every little bit helps: Does diversity in police departments and communities affect arrest rates?**

Author: **Chester S. Spell**, *Rutgers U., Camden*
Author: **Yekaterina Bezrukova**, *U. at Buffalo, The State U. of New York*
Author: **Alok Baveja**, *Rutgers Business School*
Author: **Sayan Mukherjee**, *T A Pai Management Institute*

We provide a conceptual replication of representativeness research using a different sample and extend it to understand how the relationship between racial/ethnic diversity within an organization and in its surrounding community can affect treatment of community members. Using the Law Enforcement Management and Administrative Statistics (LEMAS) database, American Community Survey (ACS) and Uniform Crime Reporting (UCR) Program data, we show that the proportion of African-American residents arrested was the lowest when racially diverse police forces were located in diverse communities. Contexts where diversity was not matched, that is, only the police force was diverse or only the community was diverse, still had lower arrest rates than when diversity was lacking in both organization and community. Implications for policy decisions are discussed in light of how the power of diversity may eventually inspire better relationships between police and community, preventing unnecessary and unfounded arrests that scar communities.

Family Support and Creativity

OB: Integrating the bright and dark sides of family supportive supervisor behaviors

Author: **Yan Pan**, *School of Management, Xi'an Jiaotong U.*
Author: **Yuhui JIANG**, *School of Management, Xi'an Jiaotong U.*
Author: **Yufan Shang**, *Xi'an Jiaotong U.*

Family supportive supervisor behaviors (FSSB) aim to influence employees positively, yet scholars know little about how it affects actors themselves. We draw on conservation of resources theory and self-determination theory to develop hypotheses about the effects of FSSB on supervisors. We suggest that although FSSB can cause supervisor's emotional exhaustion and consequent laissez-faire behaviors, FSSB is also positively associated with supervisor's perception of prosocial impact, prosocial motivation and sequent servant leadership behaviors. Furthermore, for supervisors who are high in a family harmony climate, engaging in FSSB is associated with reduced emotional exhaustion and an increased perception of prosocial impact.

OB: What's love got to do with it? The spillover and crossover effects of family support on creativity

Author: **Jakob Stollberger**, *Aston Business School*
Author: **Mireya Las Heras**, *IESE Business School*
Author: **Yasin Rofcanin**, *School of Management, U. of Bath*

This study examines the role of spousal love for the work-home dynamics that link coworker family support to the work-related creativity of dual earner couples. Relying on the work-home resources model as conceptual framework, we investigate the work-to-home spillover of coworker family support onto spousal family support, the crossover of family support at home, and the reverse home-to-work spillover of family support onto the creativity of both members of a couple through growth experiences (i.e., family crafting at home for the spouse providing support and flow at work for the partner receiving support). We further test whether spousal love moderates the dynamic mechanisms that connect coworker family support to work-related creativity. Results of an experience-sampling study, whereby 145 dual earner couples completed weekly surveys for six weeks, support our model. We find that on weeks with higher coworker family support, couples report greater family support provision and receipt, which leads to growth experiences and higher creativity at work. We also demonstrate that coworker family support only enables positive work-home dynamics for creativity in case of high spousal love. We conclude that spousal love is a catalyst for work-home enrichment, offering meaningful implications for research on creativity and the work-home interface.

OB: Family Supportive Supervisor Behavior and Promotive Voice 

Author: **Shuwen Li**, *Tongji U.*
Author: **Ruiqian Jia**, *Tongji U.*
Author: **Limin Guo**, *School of Economics & Management, Tongji U.*
Author: **Jinlian Luo**, *Tongji U.*

While employees' self-concept factors have received considerable attention in the research on the triggering mechanism of employee voice, our knowledge about how family factors affect employee voice remains underdeveloped. According to the resource conservation theory and gender role theory, we constructed a research model to investigate the influence and boundary of family supportive supervisor behavior on employee promotive voice, and tested our research model using a paired data of 332 married employees and their direct supervisors of enterprises in China. Findings suggest that: (1) Family supportive supervisor behavior has a positive effect on employee promotive voice. (2) Family supportive supervisor behavior can strengthen employee promotive voice by improving work-to-family enrichment and reducing work-family conflict, yet no significant mediation effect was found regarding family-to-work enrichment and conflict. (3) Furthermore, family supportive supervisor behavior is more likely to improve female employee work-family enrichment and assuage male employee work-family conflict, and thus enhance employee promotive voice. These findings have insightful theoretical as well as practical implications for managing employee voice.

OB: Be creative after work? The curvilinear relationship between cognitive detachment and creativity 

Author: **Wenxin He**, *Xi'an Jiaotong U.*
Author: **Xinmei Liu**, *Xi'an Jiaotong U.*

The use of smart communicational technology and the work-from-home policies during the Coronavirus pandemic make it even harder for employees to cognitively detach from work. But literature has rare yet mixed results regarding the connection between cognitive detachment from work and employee creativity. Despite that previous scholars suggest a linear relationship, drawing on the Dual Pathway to Creativity Model and boundary theory, this research proposes a curvilinear relationship between cognitive detachment from work and employee creativity and further investigates how and when the cognitive detachment is beneficial for creativity. In a field study (N = 304), we found that the relationship between cognitive detachment from work and employee creativity is in an inverted U-shaped pattern via a mechanism of cognitive flexibility. And this curvilinear relationship will be more significant when employees have higher intrinsic motivation. The findings reveal the complex nature of cognitive detachment from work and underline the importance of cognitive processing and motivational factors involved in the connection between cognitive detachment and creativity.

Qualitative Studies of Leadership

OB: **Not always a demand: A look at between-supervisor differences as resources in rotational supervision**  

Author: **Elizabeth A. Adair**, *California State U., Monterey Bay*

In rotational supervision structures, multiple shift supervisors rotate responsibility for supervising a shared group of subordinates. That is, subordinates report to different supervisors each shift. A resulting idiosyncrasy of these structures is the requirement for subordinates to navigate between-supervisor differences while performing in the same role each shift. Based on work revealing that within-supervisor differences contribute to negative outcomes for subordinates (e.g., Duffy et al., 2002; Lian et al., 2012; Matta et al., 2017; Xu et al., 2015), we would assume this would also be the case for between-supervisor differences. However, it is possible that these differences can serve as resources for employees by broadening perspectives and increasing the pool of knowledge and skills on which they can capitalize, and decreasing monotony, for example. In this paper, I conduct a qualitative study of front-line employees in the restaurant industry to uncover the types of between-supervisor differences employees experience, and how these differences operate not only as job demands, but, also as job resources. My findings reveal that employees can capitalize on supervisor differences to experience increased job control, supervisor support, learning and development, and job variety, and decreased exposure to toxic supervisors. These findings have implications for the staffing, selection, and scheduling of rotational supervisors.

OB: **Leveraging trust and control in temporary emergency team leadership** 

Author: **Kirsimarja Blomqvist**, *LUT U.*

Author: **Pia Hurmelinna-Laukkanen**, *U. of Oulu*

This study reports an ethnographic case study, where a temporary emergency team was established in response to scarcity of respirators at hospitals during the Covid-19 crisis. Developing an innovative cleaning method required cross-sectoral collaboration, where trust-control dynamism emerged at temporal, interactional and multilevel dimensions. We examine how a temporary emergency team leadership leverages these dynamics in a cross-sectoral collaborative innovation. Our results suggest that mechanisms such as third-party trust, perspective taking, and social support facilitate trust at the individual level and may mitigate the lack of emerging leader authority and control. This impacts trust and control mechanisms at the higher levels of analysis. Through appropriate interpretation and translation of rules, control at higher levels may be leveraged to provide needed justification and the means to build trust across different levels. Higher-level trust also feeds back to the individual level, strengthening the emerging leadership.

OB: **Leading digital change in a VUCA environment: a case study of Nokia's services transformation** 

Author: **Irina Heim**, *Henley Business School, U. of Reading*

Author: **Daniel Delibes**, *Henley Business School, U. of Reading*

This article explores the leadership within the context of the global telecommunication industry and how it can be utilized to address customer needs to digitalize their businesses. Through a qualitative case study of Nokia and their transformation from traditional telecom services toward those analytics-based services that have a higher market value, it explores leadership skills and effective practices of leaders in a VUCA environment. To be successful in such transformations requires new leadership approaches based on openness to new ideas to considering different solutions, and to a tremendous amount of courage to change the corporate culture to implement those changes.

I Feel Overqualified...

OB: Perceived Overqualification, Creative Deviance and Radical Innovation: Perspective of Resource Gain

Author: **Yuqi Huang**, *13174*

Author: **Huan Cheng**, *Huazhong U. of Science and Technology*

Prior studies have examined the negative effects of overqualification on individuals and organizations, but ignored the positive creative potential that this study emphasizes. Drawing on the conservation of resources (COR) theory, we investigate a potentially positive effect of overqualification on radical innovation from the perspective of resource gain spiral. In accordance with COR theory, we propose that two factors, transformational leadership and error management culture, might foster resource gain spiral of overqualified employees. Examining data collected from multiple waves, we find that overqualification is positively associated with radical innovation via creative deviance; transformational leadership strengthens the relationship between perceived overqualification and creative deviance, and error management culture strengthens the relationship between creative deviance and radical innovation. The results enrich the research on overqualification and innovation, along with implications for organizations regarding better management of overqualified employees.

OB: Integrating the bright and dark sides of perceived overqualification: A meta-analytic investigation  

Author: **Meishi Liao**, *Sun Yat-Sen U.*

Author: **Melody J. Zhang**, *City U. of Hong Kong*

Author: **Chengquan Huang**, *U. of Florida*

Author: **Lin Wang**, *Sun Yat-Sen U.*

We provide a meta-analytic examination of the regulation reactions that employees adopt to cope with perceived overqualification and how these reactions are linked to work behaviors, including job performance, extra-role behavior, and counterproductive work behavior. Drawing from self-regulation theory, we introduce cognitive and affective reactions in responding to perceived overqualification, providing an integrative investigation among both positive and negative effect. In addition, we test how cultural dimensions influence how employee react to perceived overqualification. We conducted an original meta-analysis with 293 effect sizes drawn from 120 samples. We also meta-structural equation method together with full-information bootstrapping technique to test our hypotheses. Our results extended theoretical understanding and practical implications of perceived overqualification.

OB: Overqualification and turnover intention: do life-domain balance and developmental climate matter?  

Author: **Felix Ernesto Ballesteros Leiva**, *U. Laval*

Author: **Sylvie St-onge**, *HEC Montreal*

Author: **Sebastien Arcand**, *HEC Montreal*

From an individual, organizational, and societal point of view, it appears crucial to make better use of the skills, education, and experience of overqualified employees. Based on the conservation of resources theory, this study innovates in analyzing to what extent the perceived life-domain balance and the perceived developmental climate have an indirect effect on the relationship between employees' perceived overqualification and their turnover intention. Two independent field studies examine these links, one among 227 local workers and the other among 237 immigrant workers. Both studies confirm the indirect effect of employees' perceived developmental climate on the relationship between their perceived overqualification and their intent to quit their jobs. One research shows that immigrants' life-domain balance has an indirect effect on the link between their perceived overqualification and their turnover intention. We discuss theoretical and practical expansions of these results on the career management of overqualified employees, whether local employees or immigrant workers.

Motivational Effects of Status, Power, and Politics

OB: Status and Power Needs Satisfaction in Relation to Autonomy, Competence, and Relatedness

Author: **Ingvild Müller Seljeseth**, *Kristiania U. College*
Author: **Anders Dysvik**, *BI Norwegian Business School*
Author: **Robert Buch**, *OsloMet - Oslo Metropolitan U.*
Author: **Bard Kuvaas**, *BI Norwegian Business School*
Author: **Mehrad Moeini Jazani**, *Groningen U. (RuG)*

Basic psychological needs theory (BPNT) suggests that humans have innate, basic needs for autonomy, competence, and relatedness. Humans' need to acquire and maintain a high-rank status or power position is left unexplored in relation to BPNT. In the present research, we empirically investigated the satisfaction of two potential need candidates—the need for status and the need for power—and their discriminant and incremental validity in relation to BPNT needs. Using a preregistered two-wave study (N = 362), we examined and obtained empirical support for the discriminant and incremental predictive validity of the satisfaction of the needs for both status and power. More specifically, satisfaction of the need for status predicted outcomes such as intrinsic motivation, work engagement, and general job satisfaction over and above the satisfaction of BPNT and power needs. The satisfaction of the need for power predicted outcomes such as intrinsic motivation, work engagement, and affective commitment over and above the satisfaction of BPNT and status needs. The satisfaction of the need for neither status nor power consistently predicted turnover intentions and general life satisfaction. We discuss the theoretical implications and future directions for examining satisfaction of the need for status or of the need for power together with the satisfaction of BPNT needs when predicting work outcomes.

OB: Unemployment and Job Change Affect Future Time Perspective

Author: **Joerg Korff**, *U. of Mainz*

This paper examines the effects of workers becoming unemployed, unemployment duration, and job change as antecedents on their future time perspective (FTP). Drawing on socioemotional selectivity theory, unemployment theories, and job mobility theory, we hypothesize that becoming unemployed, unemployment duration, and job change to be associated with FTP. We apply propensity score matching to control for potentially confounding covariates and to gain unbiased estimates of treatment effects in a quasi-experimental study comprising 1,261 participants of the German Socioeconomic Panel (SOEP) providing longitudinal data from ten survey waves between 2007 and 2017. The results provide support for effects of unemployment experience and job change on future time perspective.

Paper is Available to Meeting Registrants Only.

OB: Political Will Hunting: Antecedents and Outcomes of Political Will

Author: **Liam Patrick Maher**, *Boise State U.*
Author: **Ilias Kapoutsis**, *Athens U. of Economics and Business*
Author: **Jun Yang**, *U. of North Carolina, Greensboro*
Author: **Darren Brooks**, *Florida State U.*
Author: **Gerald R Ferris**, *Florida State U.*

Politics pervade our organizational lives. Thus, as Mintzberg noted, to survive and thrive in organizations, individuals need to possess both political skill and political will. However, political skill has received the lion's share of scholarly attention. With the current research, we aim to advance the field toward empirical and theoretical balance as it relates to political will and its antecedents and evaluate its short- and long-term effects. We draw on social cognitive and social information processing theories and propose that political will is a learned individual characteristic. Furthermore, we extend the motivation, ability, opportunity framework by suggesting that political will interacts with political skill to shape opportunities, which in turn enhance job/contextual performance, and career success. Results across three studies, including five samples from three different cultural settings (USA, China, and Europe), provide support for a social information processing theory perspective, in that perceptions of supervisor political behavior and individuals' history with organizational politics predict political will. In addition, we find support for the joint effect of political will and political skill on task performance and citizenship behavior, via leader-member exchanges. Finally, we demonstrate that political skill moderates the effect of political will on objective career success (overall and organization-specific) through career engagement. Our research contributes to a more nuanced understanding of political will and its role as an individual difference within an organizational politics paradigm and carries important implications for management theory and practice.

OB: Trapped in Past Successes? A Mediated Moderation Model Promoting Employees' Success Learning

Author: **Qiwei Zhou**, *Beijing U. of Chemical Technology*
Author: **BOWEI LIU**, *Ocean U. of china*
Author: **Shuting Xiang**, *Southwestern U. of Finance and Economics*

Based on Self-Determination Theory, and integrated the research findings of experiential learning, from the perspective of job design, this study aimed to explore how to encourage employees to learn from past successful experiences. Further, we reveal the underlying mechanism and discover which kind of leadership could strengthen the influence. Empirical results from multiple-wave survey data collected from 454 Chinese employees indicated that: Job autonomy could promote employees to learn from past successful experiences; employees' intrinsic motivation mediates the relationship between job autonomy and success learning. Further, contrary to previous research findings regarding the potential "dark-side" of directive leadership, this paper found that directive leadership could not only strengthen the relationship between intrinsic motivation and success learning, but also moderate the whole mediating effect of job autonomy on success learning via intrinsic motivation. Notably, since employees may face misunderstandings and pitfalls during success learning, previous research always stressed the importance of employee learning from failures. This paper, to some extent, fulfilled the rather vacancy of the research field on employee learning from successes. Further, this paper has found a feasible approach to promote such learning behavior from the perspective of job design, meanwhile proposed and proved a boundary condition of conducting directive leadership, which could relieve the potential learning traps the employees may encounter during success learning. In the end, both theoretical and practical implications in promoting organizational learning were discussed.

Exhaustion, Breaks, and Performance

OB: The diminishing returns of work engagement: The roles of feedback seeking and personal resources (WITHDRAWN)

Author: **Dave Bouckennooghe**, Brock U.
Author: **Dirk De Clercq**, Brock U.
Author: **Saima Naseer**, Brock U.
Author: **Fauzia Syed**, Assistant Professor (FMS)

Drawing from conservation of resources theory, this study examines the curvilinear relationship between employees' work engagement, and job performance. We also hypothesized employees' feedback-seeking behavior as a pertinent boundary condition that mitigates this curvilinear relationship. Finally, we suggest personal resources to mediate the work engagement-job performance relationship. Data were gathered from 190 employees and their supervisors in Ukraine (study 1) and 171 employees and their supervisors in Pakistan (study 2). The results show that while work engagement enhances job performance, this effect occurs at a declining rate as work engagement increases. Feedback-seeking behavior moderates this curvilinear relationship, such that the decline in the rate at which work engagement enhances job performance is mitigated by higher levels of feedback-seeking behavior. Furthermore, after controlling for the role of feedback-seeking behavior, the curvilinear effect of work engagement on job performance is mediated by personal resources (i.e., self-efficacy, optimism and resilience). These findings have significant implications for research and practice.

OB: It's Time for a Break! The Nature and Functioning of Breakwork in Multifaceted Jobs

Author: **Soohyun Yoon**, Arizona State U.
Author: **Jeffery LePine**, Arizona State U.

Consistent with the recovery lens, respite breaks enhance employee effectiveness by replenishing attentional and energetic resources that become depleted from engaging in work. Unfortunately, because jobs today are multifaceted, these resources are further depleted by cognitions and emotions that go hand in hand with the need to engage in, and transition between, a number of highly varied tasks during a workday. Although the recovery lens suggests that more frequent or longer breaks would replenish resources used to cope with the additional demands of multifaceted work, the practical constraints of time available in a workday imply a negative feedback loop. We propose here that by integrating an episodic view of work with the concept of attentional focus, another possibility emerges. Specifically, we propose that a state of task mindfulness—or a heightened sense of availability and presence while engaging in a task—can enhance task performance, and that this state may be engendered when employees process thoughts and emotions associated with other tasks outside of the task episode. Following from this foundation, we propose that transitions between tasks that involve breakwork, which not only involves respite, but also reflection, planning, and emotion regulation, enhance task effectiveness by the virtue of its effect on task mindfulness. We also discuss practical issues surrounding how breakwork might be leveraged to structure workdays to enhance effectiveness in tasks and streams of tasks. Finally, we identify task characteristics that influence the degree to which breakwork promotes effectiveness through task mindfulness.

Paper is Available to Meeting Registrants Only.

OB: The Role of Impulses in Predicting Within- and Between-Person Exhaustion and Job Performance

Author: **Konrad Senf**, *andré media group*
Author: **Erik Dietl**, Loughborough U.

Self-control research in organizational behavior has focused overwhelmingly on the hypothetical limited nature of control capacity, while neglecting further important components. This predominant “strength” model dictates that only effortful self-control leads to mental exhaustion within situations, and has led to the belief that this effort is responsible for the positive outcomes (e.g., job performance) that are typically associated with trait self-control. We draw on a broader perspective of self-control that also includes the disruptive impulses, which may trigger the need to exert self-control. We examined both disruptive impulses (spontaneous urges, motivational resistance, and distractions) and expended control effort meant to resist these impulses and their prediction of mental exhaustion and job performance. In an experience-sampling study with employees over 10 workdays, we found that disruptive impulses were more important than expended self-control effort in predicting mental exhaustion and job performance both on the within- and between-person levels. Our findings challenge the pervasive use of the strength model of self-control as an explanatory model and instead suggest that concentrated work may be best achieved by implementing measures to reduce the disruptive impulses one experiences rather than relying on willpower.

OB: Stuck in Self-sacrifice: How Self-sacrificial Leadership Affect Employees' Emotional Exhaustion

Author: **Xiulin Chen**, Huazhong U. of Science and Technology
Author: **Jiayao Zhou**, Huazhong U. of Science and Technology

Drawing upon the social information processing theory, this study examined the relationships about how self-sacrificial leadership affect employees' citizenship pressure, compulsory citizenship behavior and emotional exhaustion. Analysis of data collected from 249 employees, at multiple time periods, revealed that self-sacrificial leadership is significantly relate to employee citizenship pressure. The results further indicated that self-sacrificial leadership has an indirect positive relationship with emotional exhaustion, with this relationship mediated by citizenship pressure and compulsory citizenship behavior. Specially, self-sacrificial leadership positively relates to citizenship pressure, which in turn, positively relates to compulsory citizenship behavior, and then positively relates to emotional exhaustion. Our findings discuss the theoretical implications and provide practical insights to make employees reacted with leaders' behavior and organization run effectively.

Author: **Alvaro San Martín**, IESE Business School

Author: **Andrew Hafenbrack**, U. of Washington

Author: **Hajo Adam**, Rice U.

Drawing on and integrating theory in occupational health and socio-ecological psychology, we propose that relational mobility (i.e., the degree of freedom and opportunity in an organization to establish new relationships and end old ones) can mitigate employees' job burnout. High relational mobility workplaces provide employees with the ability to exercise choice, access resources via flexible connections, and form desirable relationships at work. This way, relational mobility at the workplace should nurture employees' needs for autonomy, competence, and relatedness, which, according to self-determination theory, are the essential components of self-determined motivation. As a result, we argue that self-determined motivation mediates the negative effect of relational mobility on job burnout. However, working in a relationally immobile context is not aversive when everyone gets along. Therefore, we also predicted that the effect of relational mobility on self-determined motivation becomes more pronounced as perceived relationship quality decreases. The results of four studies (N = 1,018), correlational and experimental, conducted in three countries (Spain, the UK, and the US) in different contexts (an IT consulting firm, university, and general working population) supported our predictions. We introduce relational mobility to the management literature and discuss implications for theory and practice.

Organizational and Work Team Climate

OB: **Team Procrastination Climate: An Integrative Multilevel Model**   

Author: **Fu Yang**, *Guizhou U. of Finance and Economics*
Author: **Zheng Zhou**, *Guizhou U. of Finance and Economics*

In the current study, we extend procrastination at work to the team level and identify team procrastination climate as a new construct, the collective perceptions members of teams hold regarding procrastination at work. We also develop a theoretical model to examine how initiative-enhancing human resource management (HRM) systems and leader procrastination foster conditions to inhibit or facilitate team procrastination climate and subsequent team effectiveness, operationalized as team performance and team organizational citizenship behavior (OCB). We tested the theoretical model with two-source data collected from 550 members of 124 teams across three time periods. Results showed that initiative-enhancing HRM systems inhibited, while leader procrastination facilitated, the development of procrastination climate among team members that undermined team effectiveness. Further, leader procrastination was positively related to team procrastination climate only under low levels of initiative-enhancing HRM systems. These results provide new insight into theoretical implications for research on procrastination at work and offer practical implications about how to counteract the development of team procrastination climate.

OB: **Never Too Much? The Nonlinear Effect of Psychological Safety on Business Performance**

Author: **Liat Eldor**, *U. of Penns*
Author: **Michal Hodor Star**, *The Wharton School, U. of Pennsylvania*
Author: **Peter Cappelli**, *U. of Pennsylvania*

Psychological safety is widely seen as having a positive relationship with work performance. Could there be a downside, however? Drawing on the theoretical principle of a “too-much-of-a-good-thing” effect, we propose that high levels of psychological safety can actually harm business performance. We also propose that perceptions of accountability and shared ultimate goals can moderate this too-much-of-a-good-thing, based on cognitive representation theory. We test our hypotheses using data on employee attitudes as well as business performance outcomes over four years and across 257 branches of a retail chain store. We find that moderate levels of psychological safety have strong and positive effect on business outcomes, as expected, but at the highest levels, the relationship reverses and becomes negative. Perceptions of accountability and shared ultimate goals moderate the negative effect. The results help identify boundary conditions on the psychological safety concept as well as extend research on this topic to organization level relationships with business outcomes that have real world consequences.

OB: **Exploring customer orientation in service teams and its impact on customer outcomes** 

Author: **Xiaoning Liang**, *Trinity Business School, Trinity College Dublin - U. of Dublin*
Author: **Xin Zhao**, *Northeastern U. at Qinhuangdao*
Author: **Patrick Christopher Flood**, *00353*

Reviews of the customer service literature demonstrates that employee’s customer orientation (CO) is critical for ensuring service quality. However, CO in teams, which are the unit of service, has been somewhat neglected. Accordingly, this study focuses on CO in service teams by examining the effect of team CO climate and team CO consensus on customer trust, service quality and the moderating effect of team exhaustion. Data were collected from matched 261 employees and 1020 customers nested in 87 service teams using a time-lagged research design. Using polynomial regression with response surface analysis, our study indicates the existence of the linear and non-linear impacts of team CO level and CO consensus on customer outcomes under conditions of (in)congruence. Moreover, team exhaustion is found to weaken the positive impact of congruence but enhance the negative impact of incongruence between team CO climate and CO consensus on customer outcomes. The findings send a clear message to managers that they need to align team’s overall CO climate and CO consensus as well as reducing team-level emotional exhaustion in order to achieve desirable customer outcomes.

OB: **A tale of Two Climates: The Cross-Domain Effects of Service and Safety Climates** 

Author: **Ruixue Zhang**, *Rennes School of Business*
Author: **Yaping Gong**, *Hong Kong U. of Science and Technology*
Author: **Mingjian Zhou**, *Harbin Institute of Technology at Shenzhen*

The domain-specific effects of service climate and safety climate are well-established, but little is known about their cross-domain effects. Adopting the multiple climate perspective, we examine the cross-domain main effects of service climate (on safety performance) and safety climate (on service performance) and their joint effects in predicting service and safety performance. Drawing on the exploration-exploitation framework, we further introduce team exploration and team exploitation as mechanisms for the cross-domain effects. We conducted two multiwave and multisource field studies using nursing teams in hospitals. Results from Study 1 show that service climate has a positive relationship with service performance but a non-significant relationship with safety performance, whereas safety climate has a positive relationship with safety performance but a negative relationship with service performance. Study 2 replicated the findings from Study 1 and further showed that safety climate moderates the indirect relationships that service climate has with service and safety performance through team exploration; Service climate moderates the indirect relationships safety climate has with team service and safety performance through team exploitation. We extend the climate literature by revealing the missing cross-domain effects of service and safety climates and their explanatory mechanisms.

Finding Meaning in Work

OB: [On the Functions of Work: A Meta-Analysis of Jahoda's Latent Deprivation Model](#)

Author: **John Aitken**, *George Mason U.*
Author: **Seth A. Kaplan**, *George Mason U.*
Author: **Jessie Cannon**, *George Mason U.*
Author: **Heekyung Kim**, *George Mason U.*

The necessity of work for psychological well-being is a topic that has generated much research. Two dominant perspectives on this issue are the agency restriction model, which posits that it is the manifest (i.e., financial) function of work that is most necessary for well-being, and the latent deprivation model, which instead points to the latent functions of work as most necessary. These two models suggest that work's absence in unemployment is pernicious for different reasons. Thus, the current meta-analysis examines the question of work's importance for well-being according to these two models, examining the difference in access to the latent and manifest functions between persons who are unemployed versus employed as well as the association between the functions and well-being. We find that unemployment indeed deprives persons of access to each function, and, moreover, the deprivation of these functions is associated with decreased well-being. However, the results of this meta-analysis suggest that both perspectives must be considered together rather than separately. We discuss further implications of these results.

OB: [Paying Less and Getting More? Evidence on the Effect of Corporate Purpose from Two Field Experiments](#)

Author: **Nikolai Dominic Brosch**, *TUM School of Management, Technical U. of Munich*
Author: **Alwine Mohnen**, *TUM School of Management, Technische U. München*

The (re)definition of corporate purpose beyond profit-maximization can be seen as one of the fundamental tasks of management and leadership in the 21st century. To this end, the present paper employs two natural field experiments on different online labor marketplaces to investigate the effect of communicating a pro-social corporate purpose on three employee-level outcomes that constitute major cost components for most organizations: workers' reservation wage, work quality and work misbehavior. The main findings in both experiments show that receiving information about an employer's corporate purpose causes workers to accept lower wages for the same job. Workers that personally assess a high importance to organizations having a pro-social purpose are most responsive. At the same time, sacrificing wage for a corporate purpose comes at no cost of quality and even decreases the likelihood of engaging in work misbehavior. In a broader context, the results provide some indications that the (re)definition of corporate purpose in commercial organizations is not ultimately at odds with creating profits.

OB: [New Graduate Nurses' Professional Identification Awakened During COVID-19](#)

Author: **Wei Wu**, *Hong Kong Polytechnic U.*
Author: **Wu Liu**, *Hong Kong Polytechnic U.*
Author: **Wen Wu**, *Beijing Jiaotong U.*
Author: **Yuhuan Xia**, *Beijing Jiaotong U.*

Although the COVID-19 pandemic has put health-care employees, especially nurses, under tremendous pressure, it may provide these workers with a chance to reassess their professional identification and break the "hangover" effect in socialization. Drawing on an identity construction process perspective, we explore the trajectory of professional identification among new graduate nurses, and propose that since the COVID-19 outbreak, new graduate nurses' professional identification increases. Furthermore, the increased professional identification is positively related to both sensegiving, as a top-down process, and moral elevation, as a bottom-up process of identity construction via work meaningfulness. Using nine-wave longitudinal data (five waves before and four after the COVID-19 outbreak) from 322 new graduate nurses at a public hospital in China, we conducted discontinuous growth modeling (DGM) analyses to test our hypotheses. We found that new graduate nurses' professional identification gradually fell during the initial months into professional practice (hangover effect), but rose significantly after the onset of COVID-19. Sensegiving and moral elevation, mediated by work meaningfulness, were positively associated with this increase in professional identification. Our findings shed light on professional identification dynamics in the crisis context and the disruptive socialization processes to overcome the hangover effect.

OB: [Sometimes Enough is Enough: Nurses' Nonlinear Levels of Passion and the Influence of Politics](#)

Author: **Ilias Kapoutsis**, *Athens U. of Economics and Business*
Author: **Yingge Li**, *Florida State U.*
Author: **Wayne Hochwarter**, *Florida State U.*
Author: **Mayowa Babalola**, *Graduate School of Business, Nazarbayev U.*
Author: **Abdul Karim Khan**, *United Arab Emirates U.*

The current study examined linear and nonlinear effects of work passion on relevant outcomes for nurses practicing during the COVID-19 pandemic. We also investigated whether these relationships are consistent across levels of work politics. Results indicated that passion reported nonlinear effects on job satisfaction (inverted U-shape), citizenship (U-shape), and work performance (U-shape). Confirming prior research, politics perceptions (POPs) was non-linearly related to job satisfaction (U-shape), citizenship (OCBs) (inverted U-shape), and performance (U-shape). Lastly, passion demonstrated nonlinear relationships OCBs when POPs was both high (U-shape) and low (inverted U-shape), and with performance at high levels of POPs (U-shape). These findings question the often-held assumption of linearity in the organizational sciences. Implications of these results for nursing practice and scholarship are discussed, as our strengths, limitations, and avenues for future research.

Work Compulsion, Territoriality, and Insecurity

OB: Job Insecurity Keeps Me Awake at Night: Is My Supervisor Making Me Insecure?

Author: **Minseo Kim**, *Griffith U., Brisbane, Australia*
Author: **Terry A Beehr**, *Central Michigan U.*

Job insecurity, a prominent work stressor, has detrimental effects for employee health and is significantly influenced by leader styles. Considerable research has assessed negative leadership styles (i.e., abusive supervision) as predictors of adverse employee outcomes, including job insecurity. The present study instead focuses on positive leadership styles in order to help provide a more comprehensive perspective of the impact of job insecurity for employees. Specifically, we examine (1) empowering leadership and subordinates' psychological resources as antecedents of job insecurity, and (2) subordinates' sleep quality as a consequence of job insecurity. Four-waves of data with one-month intervals were collected from full-time employees in South Korea (n = 399) and the United States (n = 359). Structural equation modeling and comparison with alternative models assessed the mediating effects among the research variables. In accordance with the hypotheses, empowering leadership predicted subordinates feeling less insecure about their jobs via psychological capital, which in turn, predicted subordinates' sleep problems. Overall, the present study showed the importance of resources (empowering leader behaviors and psychological capital) for employees' sleep quality.

OB: Tracing an unyielding work compulsion in an organizational setting

Author: **Ali Taimur Baig**, *Lahore School Of Economics*
Author: **Zahid Riaz**, *Lahore School Of Economics*

This research examines the formation of compulsory citizenship behaviour in the employees of the insurance sector. For this purpose, active-aggressive abusive supervision, passive-aggressive abusive supervision, perceived support of coworkers, emotional exhaustion and compulsory citizenship behaviour are articulated in a conceptual framework for empirical testing. Data were collected from 205 managerial level employees working in the insurance sector of Pakistan. Both aspects of abusive supervision have direct as well as indirect effects through emotional exhaustion on compulsory citizenship behaviour. Active-aggressive abusive supervision, coupled with low perceived coworkers' support causes emotional exhaustion that culminates into increased compulsory citizenship behaviour of employees. Interestingly, when perceived support of coworkers is high then the indirect link between active aggressive abusive supervision and compulsory citizenship behaviour through emotional exhaustion decreases. The dimensionality of abusive supervision has been a vexing issue for scholars. The dearth of empirical evidence coupled with inconsistent findings warrants further studies to probe into the dimensionality of abusive supervision. Most of the studies have explored the consequences of compulsory citizenship behaviour, whereas few have looked at the mechanism through which this phenomenon occurs. Therefore, primarily with the help of JD-R theory and COR theory, this study would facilitate the ongoing research on compulsory citizenship behaviour by investigating the impact caused by two dimensions of abusive supervision on CCB.

OB: This Is My Job and I Don't Want Your Help! Effects of Job Territoriality on the Receipt of Help

Author: **Qiqi Wang**, *Renmin U. of China*
Author: **Chao Liu**, *Peking U.*
Author: **Xueling Fan**, *School of Business, Nanjing U.*
Author: **Jun Liu**, *Renmin U. of China*
Author: **Wenjing Cai**, *Vrije U. Amsterdam*

Recent research on the territorial behavior has focused on the social impacts of territoriality in the workplace. However, the extant research solely examines how the other party reacts to the employees who display territorial behaviors but neglects the investigation on how territorial employees respond to the other party, which represents one half of the dynamic social interactions among employees. Based on interdependence theory, we integrate the territoriality research to citizenship behaviors, and propose that employees who exhibit territorial behaviors over their jobs likely to experience work threats, which further drives them to reject coworkers' task-focused interpersonal helps. This reactive pattern would become more salient in teams where team task conflict is high than low. We collected a three-wave data from a property management company to test our hypotheses, and the results supported these hypotheses. Our findings contribute to the specific research on the territoriality as well as the broad research on citizenship behavior.

Working From Home

OB: **Boundary Management and Recovery when Working from Home**

Author: **Verena C. Haun**, *Johannes Gutenberg-U. Mainz*
Author: **Chiara Rimmel**, *Johannes Gutenberg-U. Mainz*
Author: **Sascha Haun**, *www.haun-beratung.de*

Blurred work-home boundaries can hamper teleworkers' recovery from job demands. We investigate teleworkers' temporal, physical, communicative, and technological boundary tactics as predictors of recovery experiences (i.e., psychological detachment and control during leisure time) and recovery outcomes (i.e., exhaustion). We hypothesized that individuals' work-home segmentation preference as a personal factor and availability demands as a situational factor should moderate the relations between boundary tactics and recovery. We collected data from 207 individuals who mainly worked from home in a lockdown period during the COVID-19 pandemic. Results of hierarchical regression analyses revealed that the use of temporal tactics was positively associated with psychological detachment, control, and lower exhaustion. The use of physical tactics was related to higher control and lower exhaustion. Our moderator hypotheses were partly confirmed: Only for individuals with high segmentation preference and high availability demands, technological boundary tactics were associated with higher detachment. Further, for teleworkers with high availability demands, the associations between temporal tactics and detachment, between physical boundary tactics and control, and between technological boundary tactics and lower exhaustion were stronger. Our study contributes to a better understanding of teleworkers' recovery processes and provides actionable knowledge on how to enable and sustain teleworkers' recovery.

OB: **Work-From-Home Adjustment in the COVID-19 Pandemic: The Role of Psychological Climate for Face Time**

Author: **Marie-Colombe Afota**, *U. de Montréal*
Author: **Yanick Provost Savard**, *U. du Québec à Montréal*
Author: **Ariane Ollier-Malaterre**, *UQAM U. of Quebec in Montreal, Canada*
Author: **Emmanuelle Andree Leon**, *ESCP Business School*

The COVID-19 pandemic has led many organizations to mandate large-scale full-time work-from-home (WFH), shattering the dichotomy between remote workers and those who are physically in the office. Emerging findings on full-time WFH have not yet brought clarity on the causes and mechanisms of employees' well-being and productivity in this context that contrasts with prior-pandemic work. Drawing on the transactional theory of stress (Lazarus & Folkman, 1984), we argue that employees who perceive their organization's psychological climate as emphasizing face time may appraise full-time WFH as a threat and, as a result, perceive higher availability expectations on the part of their organization. We further argue that this relationship will be stronger in the US than in Europe, where employment protection is higher. In turn, perceived expectations of extended availability predict WFH adjustment, a multi-dimensional affective, behavioral, and cognitive construct we borrow from expatriate adjustment's literature to guide future research on WFH. In a two-wave study on an organizational sample of 532 employees working in the US and in Europe, we find that a psychological climate for face time hampers employees' adjustment to WFH through increased perceptions of availability expectations, and that this process is exacerbated in the US.

OB: **Negotiating idiosyncratic deals: An examination of the role of individual level-factors**

Author: **Jorgelina Marino**, *CONICET and UNICEN Business School*
Author: **Guillermo E. Dabos**, *UNICEN Business School & U. de San Andres*
Author: **Andrea G. Rivero**, *UNICEN Business School*
Author: **Lucas Pujol-Cols**, *CONICET*

Although previous studies have recognized the impact of employee's characteristics and skills on the idiosyncratic negotiation of employment terms, scholars have called for further exploration of other individual-level factors and, particularly, of the mechanisms underlying their relationship to i-deals. Thus, this study examines the direct and indirect effects of self-efficacy, networking abilities and perceived employability on the negotiation of idiosyncratic deals (i-deals). Hypotheses are tested in a non-random sample of 213 managerial professionals through a structural equation modeling approach. Results reveal that self-efficacy and networking abilities exert an indirect effect on i-deal negotiation through perceived employability (total mediation). Those individuals with higher levels of self-efficacy or greater networking abilities tend to develop more positive perceptions of their employability and, therefore, to be more prompted to negotiate i-deals with their employers. All in all, this study provides a more comprehensive understanding of the personal characteristics and skills that facilitate i-deal negotiation.

OB: **The Effect of Sleep Quality on Loneliness and Well-Being among Full-Time Remote Workers**

Author: **Kristen Faile**, *U. of Texas At San Antonio*
Author: **Zahra Heydarifard**, *U. of Texas At San Antonio*
Author: **Dina Krasikova**, *U. of Texas At San Antonio*

With an increasingly growing population of employees moving from traditional offices to home offices and loneliness becoming a wide-spread concern globally, we seek to examine predictors and outcomes of loneliness among full-time remote workers who arguably suffer from loneliness most. In our study, we seek to address question: What can remote workers do to decrease their feeling of loneliness and maintain well-being, apart from the commonly recommended remedies, such as engaging in the face-to-face interactions with co-workers during "in-the-office" days or engaging in social networking online. Drawing from conservation of resources theory (Hobfoll, 1988), we develop a model which explains how telecommuters' daily sleep quality impacts their next day loneliness and well-being by affecting their engagement at work. Having surveyed a sample of 107 full-time remote workers in 8 different countries every day over the course of a full work week, we find that high-quality sleep helps reduce loneliness and improve hedonic and eudaimonic well-being of remote workers by increasing their work engagement.

Knowledge Hiding

OB: **The implications of knowledge hiding at work for recovery after work: A diary study**

Author: **Laura Venz**, *Leuphana U. Lüneburg*
Author: **Catherine Connelly**, *McMaster U.*
Author: **Katrin Boettcher**, *Berlin School of Economics and Law*

Past research on at-work predictors of after-work recovery mainly focused on what happened to someone at work. Yet, employees also act at work, and their own behavior and its consequences likely affect their ability to recover as well. Based on this premise, we bring together recovery research and research on moral behavior in organizations, examining the intrapersonal consequences of knowledge hiding, the intentional attempt to withhold knowledge that others have requested, for employee recovery. Specifically, we propose that knowledge hiding poses a moral dilemma, and thus has both positive (lower exhaustion) and negative (lower performance) intraindividual consequences that represent two opposing pathways to recovery in terms of work-related remorse in the evening and vigor the next morning. To test our hypotheses, we conducted a diary study across ten workdays, analyzing 517 daily reports from 152 participants. The results of multilevel path modeling suggest that day-specific knowledge hiding (in the form of playing dumb) can have both good (i.e., saving energy resources) and bad (i.e., low immediate performance) outcomes that cancel each other out in predicting evening work-related remorse. Evening remorse was negatively related to next-morning vigor. By considering how employees' remorse affects their knowledge hiding, we meaningfully extend recovery research, showing that employees' reflections on their own actions affect their post-work recovery processes and outcomes.

OB: **Antecedents and outcomes of Follower Moqi: Leader Humility, Follower Humility, and Knowledge Hiding**

Author: **Jie Zhong**, *Harbin Institute of Technology*
Author: **Huan Xiao**, *Harbin Institute of Technology*
Author: **Qiuxiang Wen**, *Nanjing U.*
Author: **Maoyong Bu**, *Liaocheng U.*

Contrasted to most leadership research which treated followers either as non-existent or as passive entities, follower moqi enriches followership literature by stressing followers' active role in co-creating leadership and outcomes with leaders. Given the effectiveness of follower moqi in the leadership process, we integrated social information processing theory to explore its antecedents and outcomes. Specifically, we hypothesized that leader humility is positively related to follower moqi; follower moqi, in turn, decreases knowledge hiding; this mechanism of follower moqi is moderated by follower humility so that leader humility increases more follower moqi with higher follower humility. Our results supported our hypotheses in a multi-wave time-lagged study of 315 leader-follower dyads. Overall, our research highlights that leader humility has a stronger effect on follower moqi under the context of higher follower humility. In addition, follower moqi in turn decreases knowledge hiding. The theoretical and practical implications of this study are presented and discussed.

OB: **Light and Shadow: Linking Trust Network Brokerage to Knowledge Hiding and Creativity**

Author: **Chengcheng Xia**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*
Author: **Chuanjia Li**, *Shanghai U. of Finance and Economics*

The existing literature has explored how trust may influence knowledge hiding between dyads, yet overlooked the structure of interpersonal trust on knowledge hiding from a network embedded view. Drawing upon social network theory and impression management theory, we suppose that knowledge hider's structural holes in trust network will divergently influence their knowledge hiding behaviors in different dimensions (namely, evasive hiding, playing dumb, and rationalized hiding) and as well have various indirect effects on the hider's creativity. Following a two-wave survey of 217 R&D employees, our results suggest that trust network brokerage positively affects all dimensions of knowledge hiding, and the effect on rationalized hiding is stronger than evasive hiding and playing dumb. Moreover, our study reveals that perspective taking will mitigate the structural hole's positive effect on evasive hiding and playing dumb. Further, we prove that evasive hiding has a positive mediating effect on the broker's creativity while playing dumb and rationalized hiding have adverse ones. Our study pioneeringly expands the knowledge hiding literature from a dyadic perspective to a network perspective.

OB: **The Effects of Expert and Referent Power on Knowledge Sharing and Hiding**

Author: **Abraham Cyril Issac**, *Indian Institute of Technology, Madras and Swinburne U. of Technology*
Author: **Timothy Colin Bednall**, *Swinburne Business School, Swinburne U. of Technology*
Author: **Rupashree Baral**, *IIT Madras*

Knowledge transfer is essential for organizations to utilize new knowledge and innovate, yet many employees are unwilling to share knowledge or deliberately withhold it. In this study, we investigate how employees' expert and referent power influences their knowledge sharing and knowledge hiding behavior. We adopt a two-wave survey design and apply polynomial regression to investigate the effects of discrepancy between employees' current levels of power and their expected levels if they divulge their unique knowledge. We find that employees with strong expert and referent power are more likely to share knowledge, and that expected losses in power are associated with reduced knowledge sharing and increased knowledge hiding. Surprisingly, we find these negative outcomes are also associated with expected gains in power. Therefore, our study suggests that power plays an important, but complex role in influencing employee participation in knowledge sharing and knowledge hiding. We conclude the optimal situation for knowledge sharing is one in which employees' contributions are valued, and their reputation is not expected to change due to sharing knowledge.

Help Seeking

OB: **A Good Soldier Or Random Exposure? Stochastic Requests And Sustained Help** (WITHDRAWN)

Author: **Christopher Dishop**, *Michigan State U.*

The terms, “extra miler” and “good soldier,” refer to employees who exhibit sustained, superior citizenship relative to others. Researchers have argued that this streaky behavior is due to motives, personality, and other individual characteristics such as one’s justice perceptions. What is seldom acknowledged is that differences across employees in their helping behavior may also reflect differences in the number of requests that they receive asking them for assistance. To the extent that incoming requests vary across employees, a citizenship champion could emerge even among those who are identical in character. This study presents a situation by person framework describing how streaky citizenship may be generated from the combination of context (incoming requests for help that follow random walks) and person characteristics (reactions to such requests). A pilot web-scraping study examines the notifications individuals receive asking them for help. The observed empirical pattern is then implemented into an agent-based simulation where person characteristics and responses can be systematically controlled and manipulated. The results suggest that employee helping behaviors, in response to pleas for assistance, may exhibit sustained differences even if employees do not differ a priori in motive or character. Theoretical and practical implications, as well as study limitations, are discussed.

Paper is NOT Available. Please contact the author(s).

OB: **Asking How to Fish vs. Asking for Fish: An Investigation of Different Help-Seeking Behaviors**

Author: **Yihao Liu**, *U. of Illinois at Urbana-Champaign*

Author: **Jack Ting-Ju Chiang**, *Peking U.*

Author: **Fan Xuan Chen**, *U. of Illinois at Urbana-Champaign*

Author: **Zheng Wang**, *Shandong U.*

Author: **Haiyang Liu**, *London School of Economics and Political Science*

In the modern workplace, it is virtually impossible to succeed without seeking any help from others. Despite its widely recognized importance, help-seeking has rarely been explored in the organization literature. Specifically, it is unclear from the existing literature whether and how various work-related demands drive employees’ help-seeking and whether seeking help always benefits employees in need. Our research model integrates the challenge-hindrance stressor framework and the dual-type view of help-seeking (i.e., autonomous and dependent help-seeking) to test the situational and structural workplace antecedents that determine different types of help-seeking, and examine their differential intrapersonal and interpersonal consequences that eventually impact job performance. Evidence from a time-lagged, multi-sourced, and team-based field study showed that challenge stressors at work increased employees’ autonomous help-seeking while hindrance stressors increased dependent help-seeking. Moreover, when employees occupied more central positions in their team workflow network, the effect of hindrance stressors on dependent help-seeking became stronger. Finally, autonomous help-seekers benefited from more positive job performance ratings from team supervisors through increased team-based self-esteem, whereas dependent help-seeking hurt help-seekers’ job performance via decreasing their perceived competence by teammates. Theoretical and practical implications were discussed.

Paper is NOT Available. Please contact the author(s).

OB: **When help-Seeking Backfires: An Integrative Model of Sub-optimal Help-Seeking**

Author: **Dongwon Choi**, *Ewha Womans U.*

Although help-seeking is a prevalent phenomenon in the organizational context, researchers have paid less attention in this topic, in compare to help-giving (Bamberger, 2009). In addition, most studies have examined antecedents of help-seeking while assuming the positive impacts of help-seeking activities. However, recent findings suggest that help-seeking activities do not necessarily guarantee the positive implications on work outcomes; rather, their impact on work outcomes depends on other characteristics and inter-personal dynamics. To address this issue, in this article, we propose an integrative theoretical framework of help-seeking. Specifically, based on help-seeking dilemma and micro-processes of help-seeking literature, we argue that sub-optimal help-seeking activities, such as procrastination of help-seeking and help-seeking from the novice member, can emerge in organizational context. In addition, we propose antecedents and consequences of sub-optimal help-seeking processes. Finally, we provide solutions that prevent sub-optimal help-seeking processes and reduce negative impacts of sub-optimal help-seeking. Theoretical, practical implications and suggestion for empirical research are discussed.

OB: **The Dark Side of a Coworker Receiving Help**

Author: **Emily Poulton**, *U. of Georgia*

Author: **Szu-Han Lin**, *U. of Georgia*

Author: **Min-Hsuan Tu**, *U. at Buffalo, The State U. of New York*

Author: **Mengjie Xu**, *U. of Massachusetts, Amherst*

The majority of research on helping behavior has focused on the consequences for the helpers and receivers of this behavior, ignoring its consequences on third-party observers (i.e., the person who witnesses the helping event). We shift this predominant focus by investigating how a coworker receiving help impacts third-party observers. By integrating a cognitive-affective processing system framework and sociometer theory, we examined the negative cognitive and affective reactions to a coworker receiving help. Results from an experience sampling study showed that a coworker receiving prompts third-party observers to engage in withdrawal behaviors through their diminished self-esteem (cognitive response) and enhanced anxiety (affective response). Additionally, our results showed that the negative consequences of a coworker receiving help could be mitigated for employees with high (vs. low) team identification. This paper concludes with a discussion of the theoretical and practical implications of our findings.

Recovery

OB: The role of the leader in fostering employee resilient behaviors: a multi-source, longitudinal study  

Author: **Marjolein C.J. Caniels**, *The Open U., Netherlands*
Author: **Dave Stynen**, *The Open U., Netherlands*

In this study, we aim to uncover the relationship between leadership behaviors (servant and resilient) and leaders' psychological capital and employee resilient behaviors, and we assess whether employee resilient behaviors and employee psychological capital mediate this relationship. To support the theoretical propositions in our model, we draw on the key premises of the Conservation of Resources theory. Based on dyadic three-wave data collected from 111 unique leader-follower pairs, we use time-lagged path analysis to test our hypotheses. Results suggest that servant leadership and leaders' psychological capital may strengthen employees' psychological capital, which in turn may foster resilient behaviors in employees over time. Resilient leadership was negatively related to employee psychological capital on the short run, but positively related to employee resilient behaviors over a six week time window. In conclusion leaders can, by enacting servant leadership and through their psychological capital, stimulate resilient behaviors in employees.

OB: The Feeling of Recovery as a Predictor of Work Engagement through Positive Coworker Relationships 

Author: **Hee Young Lim**, *Hanyang U.*
Author: **Da Eun Hong**, *Hanyang U.*
Author: **Min-Soo Kim**, *Hanyang U.*

In this study, we aim to examine the effect of feeling recovered before the end of the day on work engagement through the positive relationships between coworkers in the team. Despite intensive research on recovery, empirical evidence extending an individual's intrinsic process for recovery remains relatively insufficient. Emerging literature indicates that relationships that experience positive affect among individuals have a critical role in organizational life, as individuals' roles and tasks within an organization do not exist independently. Therefore, this study expands the discussion that individual recovery accumulates as an internal resource and has a positive impact on individuals; individual recovery helps team members to view their relationships more favorably and consequently has a positive effect on individual work engagement. Data collected from 170 participants within 37 teams and analyzed using the multilevel structural equation model. The results supported the hypotheses, and especially the indirect effect of recovery through positive coworker relationships on work engagement was revealed by the Bayesian approach. We also discuss the theoretical and practical implications of our findings.

OB: Developing Mindfulness: A Software-Based Intervention  

Author: **Yizhen Lu**, *National U. of Singapore (NUS)*
Author: **Remus Ilies**, *National U. of Singapore*
Author: **Jayanth Narayanan**, *National U. of Singapore*

We studied the effects of mindfulness on emotional exhaustion, work engagement and job satisfaction in a field study involving full-time employees who participated in a mindfulness intervention program and reported their weekly outcomes during the 8-week program. To examine how mindfulness impacted work outcomes, we used intraindividual modelling of the eight-week data. Mindfulness increased over time, and was a mediator between time and emotional exhaustion, work engagement and job satisfaction. Supplementary growth curve analyses on the improvement of mindfulness over time showed a slight decrease in the positive effect of time on mindfulness.

OB: Enhancing Daily Workplace Well-being through Micro-break Activities: A Recovery Perspective

Author: **Qi Nie**, -
Author: **Jian Peng**, *Guangzhou U.*
Author: **Jie Zhang**, *Nanjing U. of Aeronautics and Astronautics*
Author: **Xiao Chen**, *Huazhong U. of Science and Technology*

Micro-break activities, as a series of energy management strategies for sustaining personal resources, have been widely considered facilitators of health and well-being due to their role in resource recovery. Surprisingly, the role of the recovery level in the well-being implications of micro-break activities remains largely untested. Based on the effort-recovery model, we explicitly tested the idea that the recovery level mediates between micro-break activities and workplace well-being, moderated by supervisor support for recovery. To examine our predictions, we adopted the experience sampling method (ESM) and accordingly collected daily surveys from 115 full-time employees for five consecutive workdays. The multilevel path analysis results revealed that micro-break activities were associated with increased recovery levels, which, in turn, were related to higher workplace well-being. Supervisor support for recovery strengthened the effect of micro-break activities on the recovery level as well as the indirect effect of micro-break activities on workplace well-being via the recovery level. Our findings advance prior work by explicitly testing the mediating role of the recovery level between micro-breaks and workplace well-being and identifying supervisor support for recovery as a critical condition of this relationship.

The Impact of Leader Personality Traits on Employees

OB: **The Trickle-Down Effect of Green Behavior: A Test of Social Learning Theory**

Author: **Xiaojing Shao**, *Harbin Institute of Technology*

Author: **Liyang Yang**, *Antai College of Economics and Management, Shanghai Jiao Tong U., Shanghai*

Author: **Yuan Jiang**, *Harbin Institute of Technology*

Author: **Li Zhang**, *Harbin Institute of Technology*

Organizational research has established the existence of green behavior trickle-down effects in the view of social learning theory which behavior of one person in an organization affects those of another person at a lower level. Thus, we develop and test a model that explicates the impact of social learning theory on the trickle-down effect of green behavior. For a sample of 70 leaders and 190 work group employees from China, we found that employee perceived leader voluntary green behavior associate with leader green role model influence; Further, we found leader role model influence and employee green self-efficacy mediates the positive relation of employee perceived leader voluntary green behavior and employee voluntary green behavior. Meanwhile, we revealed the interaction between leadership green advocacy and employees perceived leader voluntary green behavior on leader role model influence. These findings support the role of social learning theory in the trickle-down effect of green behavior and suggest implications for organizations to enhance environmental social responsibility.

OB: **Leader Humility and Challenging and Supportive Voice: The Role of Different Motivation**

Author: **Keyu Chen**, *School of Economics and Management, Tsinghua U.*

Author: **Qiwei Zhou**, *Beijing U. of Chemical Technology*

Leader humility has recently emerged as an important topic for the development of organizations. Taking a motivational perspective, the present research investigates the motivational effects of leader humility, and uncovers how humble leaders influence subordinates' different types of voicing behavior through triggering different motivations. By collecting data of 152 leader-subordinate dyads through survey method, the results revealed that, as predicted, leader humility was positively related with both employees' prosocial motivation and organizational concern motivation. Meanwhile, these two motivations play mediating roles in explaining how leader humility can positively affect employee supportive voice and challenging voice. It is noteworthy that leader humility, which features interpersonal experience and highlighting value and strength of others, are more likely to trigger employees' prosocial motivation and thus influence their voicing behavior. This research extends the theoretical understanding of leader humility, motivation and workplace voice. Practical implications and limitation of the results are also discussed.

Paper is Available to Meeting Registrants Only.

OB: **Good Disciple or Good Actor: How and When Leader Perfectionism Impels Subordinates' Self-Regulation**

Author: **Ning Guo**, *Peking U.*

Author: **Hui Wang**, *Peking U.*

Author: **Zhi Liu**, *Guanghua School of Management, Peking U.*

Integrating goal orientation approach with self-concept perspective of self-regulation, we develop and test a multilevel theory that delineates both functional and dysfunctional subordinate responses toward leader perfectionism. We propose that when subordinates have a strong learning goal orientation, leader perfectionism leads to perfectionistic identity salience, resulting in increased job performance and proactive behavior. In contrast, when subordinates have a strong performance goal orientation, leader perfectionism hinders job performance and proactive behavior via perfectionistic self-presentation. The theoretical and practical implications for perfectionism and leadership are discussed.

Paper is Available to Meeting Registrants Only.

OB: **How and when leader humility encourages follower leadership potential**

Author: **Xiaoshuang Lin**, *U. of Southampton*

Author: **Herman Tse**, *Monash U.*

Author: **Bo Shao**, *Deakin U.*

Author: **Jinyun Duan**, *East China Normal U.*

Leader humility has received increasing attention in research and practice in recent years; however, little is known regarding whether leader humility can foster followers' leadership potential. Drawing on expectation states theory and using data collected from 216 supervisor-subordinate dyads, we investigate how and when leader humility can foster followers' leadership potential. Results indicate that leader humility promotes followers' leadership potential (i.e., followers' motivation to lead and taking-charge behaviors) via the followers' perception of their own workplace status. However, the aforementioned effects occur only among those followers who are high in individualistic orientation. Our research offers novel theoretical and practical insights into consequences of leader humility.

Presenter: **Hilary M. Hendricks**, *U. of Michigan*

Grief is an increasingly salient component of organizational life. Yet, we know relatively little about: (1) how employees experience and manage grief in their workplaces, (2) the impact of grief on employees and organizations, and (3) how colleagues, leaders, and organizations can best aid grieving employees as they move through grief towards recovery. Our symposium reports qualitative and quantitative research that extends the understanding of grief in the management literature, provides research-based recommendations for organizations in managing grieving employees, and subsequently strongly contributes to the Academy of Management's conference theme "Bringing the Manager Back in Management." The symposium includes four papers showcasing the influence of grief on employees' work lives. Taken together, our papers and discussion, led by Dr. Gianpiero Petriglieri, endeavors to provide insight into the consequences of grief and mourning for employees and organizations, build an emerging community of scholars focused on issues related to grief and mourning, and generate a strong program of future academic research.

Goal Achievement Strategies in the Workplace

Goal Achievement Strategies in the Workplace

Organizer: **Craig Brimhall**, *U. of Utah, David Eccles School of Business*
Organizer: **Ariella Kristal**, *Harvard Business School*
Discussant: **Katherine Milkman**, *U. of Pennsylvania*

In this symposium, we bring together leading and emerging scholars to explore goal-achievement broadly with three of the papers focusing on commitment devices, as a way to better understand: (1) what motivates people effectively to overcome their self-control problems; (2) why people fail to use effective strategies to advance their own causes and goals, and (3) how we can encourage people to make better decisions that can lead to better outcomes in workplace contexts and beyond. Together, the papers in this symposium offer important empirical insights into how people can make decisions that improve their chances of achieving their goals. Practically, the collection of papers also provides managers and policymakers with field-tested interventions to increase goal-achievement.

This symposium presents compelling theoretical and empirical research on the challenges that employees face to effectively manage work-home boundaries, role transitions, and well-being during an era of increased virtual work, which has been exacerbated by the Covid-19 pandemic. Our four papers highlight the struggles that modern employees face to maintain engagement and well-being when the boundaries between work and home are increasingly blurred. Importantly, the papers in this session also present promising solutions to enable employees to better manage their roles and the transitions between them. Through exploring research questions related to boundary work both before and during Covid-19, this session will provide a holistic perspective on the experiences of today's workers, as well as how employees and organizations can better utilize boundary work to improve well-being.

Panelist: **Kristina Marie Workman**, *Cornell U.*
Panelist: **Sabrina DeeAnn Volpone**, *U. of Colorado, Boulder*
Panelist: **Carla Fernandez**, *The Dinner Party*
Panelist: **Rebecca Klein**, *Evermore*

This PDW brings together an expert panel of grief scholars and practitioners to kickstart an important and timely conversation on grief in organizations. Grief is a common human experience resulting from suffering a profound loss, such as the death of a loved one, divorce, and job loss. 2020 was a year of much suffering and grief, and the losses will continue to be felt long after. Important questions to be addressed in this panel include: How should researchers go about building a research agenda on grief at work? How can organizations and managers support grieving employees? How can we reduce the scholar-practitioner gap? To maximize the audience experience, prior to the AOM, the organizers will create a PDW website that will serve as an open platform for prospective participants to engage with the panelists, their work, and to pose questions. In the first PDW segment, academic panelists will weigh in on the state of grief research and identify key directions for future work. In the second PDW segment, practitioner panelists involved in workplace grief training will share insights on their experiences on-the-ground, best practices, and areas for improvement. Thereafter, the full panel will discuss a crowdsourced list of frequently asked questions posed by Academy members pertaining to dealing with grief in academia. Finally, with the goal of creating a grief resource toolkit for Academy members in mind, the organizers will collate valuable insights from the panel discussions and share them on the PDW website and with interested participants.

This inclusive PDW will provide students and junior faculty from diverse backgrounds the opportunity to discuss their leadership research in a collegial virtual setting with prominent leadership scholars. The junior scholars are required to submit brief research proposals prior to the conference, and will be matched with a more senior scholar with similar research interests (not from their home university). At the virtual ZOOM session, the senior scholars will then discuss these proposals with the 1-3 junior scholars they are matched with in ZOOM Break-out rooms, providing insights and suggestions for future research directions. A general networking session in ZOOM will follow, whereby current and former editors of top leadership journals will discuss how to transform the proposals into publishable journal articles. The focus will be on developing theoretical foundations and designing high quality empirical studies. This is a great opportunity for the junior scholars to develop their ideas, and it may even lead to future academic collaborations and foster ongoing mentoring relationships. Last year, our 1st virtual version of this Leadership PDW was a great success with numerous ZOOM sessions in 4 different time zones and over 75 participants from all over the globe.

IT & Work: Impact on Performance and Outcomes

OCIS: Explaining Hospital Laboratory IT Enabled Transformation: A Human Agency Perspective

Author: **Sampath Bengal**, *Ivey Business School*

Examination of human agency during IT enabled organizational transformation has been done either explicitly or implicitly in the past. However, explanations have either predominantly focused on governing agency (involving management level staff) or working agency (involving worker level staff) but not both simultaneously. Examining how and why humans at different hierarchical levels act like the way they do during transformation becomes a useful area of research, one that can provide more insights for practitioners. To accomplish this purpose, an in-depth case study was performed at a hospital laboratory unit. The lab envisioned on transforming its operations by automating patient samples processing relying on middleware software systems and new analyzer instruments. By examining the transformation evolution from an automation vantage point, the findings show that humans at different hierarchical levels (lab management and lab technicians) design their agency in the present by interpreting different structures in the surrounding environment either from a past or a future tone. Due to presence of such temporality in agency, managerial staff and workers sometimes diverge in their interpretation of structures resulting in negotiations in order to converge on their interpretations. Such variance in structural interpretations in turn molds the trajectory of transformation. Findings also show that future orientation of agency dominates throughout the process of transformation to a large extent. Through these insights, this research further advances the knowledge on IT enabled organizational transformation and also opens up the black-box of human agency manifestation in detail.

OCIS: Outcomes of Technostress at Work: A Meta-Analysis

Author: **Elena Gerdiken**, *U. of Konstanz*

Author: **Max Reinwald**, *LMU Munich*

Author: **Florian Kunze**, *U. of Konstanz*

In this paper, we provide the first meta-analysis of 96 empirical studies ($N = 34,350$) of technostress and its relationship with a wide range of employee outcomes. This novel analysis allowed us to sparse out the most prominent and powerful technostress effects in work-related settings. Significant negative relationships were found between technostress and employees' job performance ($\rho = -.07$), innovation ($\rho = -.20$), job satisfaction ($\rho = -.23$), continuous usage intentions ($\rho = -.34$), and end-user satisfaction ($\rho = -.32$). While, technostress displayed significant and positive relationships with employees' turnover intentions ($\rho = .13$), work engagement ($\rho = .30$), job burnout ($\rho = .31$), work-to-family conflict ($\rho = .41$), and techno-exhaustion ($\rho = .60$). In general, technostress demonstrated the strongest effects on health-related employee measures, followed by attitudinal and behavioral measures. Beyond providing estimates of population correlations, we addressed several important gaps in the technostress literature, including the role of methodological characteristics as moderators. Especially, we provide evidence for common method variance biasing the relationships between technostress and health-related outcomes and discuss potential remedies.

OCIS: Why the Agile Mindset Matters

Author: **Karen Eilers**, *Research Center for Information System Design (ITeG), U. of Kassel*

Author: **Benedikt Simmert**, *Research Center for Information System Design (ITeG) - U. of Kassel*

Author: **Christoph Peters**, *U. of St. Gallen and U. of Kassel*

Author: **Jan Marco Leimeister**, *U. of St. Gallen and U. of Kassel*

Volatility, uncertainty, ambiguity, and complexity (VUCA) are drivers in today's business world. Therefore, an increasing number of organizations implement agility (agile methods) to cope with these rapid and accelerating changes. However, these agile transformations do not succeed unhindered, and some fail. One reason for this is that employees lack an agile mindset and do not support or participate in the transformations. So far, knowledge of the agile mindset is in its infancy, and a conceptualization for developing a measurement instrument on the individual level is lacking. Furthermore, the relevance of the agile mindset regarding organizational performance in a VUCA world is still unclear. Our study aims to close this gap. To do so, we examine the agile mindset by analyzing 15 qualitative interviews and conduct an online survey ($N=449$) to predict organizational agility and organizational performance based on the agile mindset. As for results, we conceptualize the agile mindset as an attitude that comprises four dimensions: Attitude towards 'learning spirit', 'collaborative exchange', 'empowered self-guidance', and 'customer co-creation. We found that there is an indirect effect of the agile mindset on organizational performance towards organizational agility. These findings contribute to agility and management research by providing both a conceptualization and a measurement instrument for the agile mindset. Furthermore, the agile mindset's relevance in agile transformation is explained, and its relationship to organizational performance is outlined. For a successful agile transformation, executives must focus on and foster the agile mindset, for example, by being a role model.

Author: **Jessica Pye**, *W. P. Carey School of Business, Arizona State U.*

Author: **Arun Rai**, *Georgia State U.*

Author: **John Dong**, *Trinity College Dublin*

While the behavioral theory of the firm explains the heterogeneity of organizations' search for new technologies in response to performance shortfalls, institutional theory illuminates isomorphic organizational responses to policy uncertainty in the institutional environment, resulting in the homogeneity of organizations' technological choices. We suggest that these two seemingly different theoretical perspectives can jointly explain the heterogeneous or homogeneous locus of search, or the innovativeness of decisions made by organizations, for implementing information technology (IT) to address performance gaps. In the context of the U.S. healthcare industry, we focus on explaining how the innovativeness of hospitals' decisions for health information technology (HIT) to enable clinical process management in response to their performance shortfalls may change based on the time-variant healthcare policy uncertainty in the institutional environment—specifically, within the Health Information Technology for Economic and Clinical Health (HITECH) Act. Based on a large-scale panel dataset from 3,846 hospitals in 2007-2014, we show that when cost increases relative to aspiration level, a hospital tends to explore novel technologies earlier than other hospitals to innovate its clinical processes. Furthermore, we demonstrate that with declining policy uncertainty associated with the HITECH Act from a high level, moving from the conceptualization phase to the enactment phase of the policy, a hospital's innovativeness of deploying HIT for clinical process management increases to a greater extent in response to performance shortfalls (i.e., less uncertainty reduces the need to imitate the locus of search allowing heterogeneous technological choices). However, with further declining policy uncertainty to a low level, moving from the enactment phase to the enforcement phase of the policy, the innovativeness increases to a smaller extent in response to performance shortfalls (i.e., certain policy incentivizes the locus of search toward homogeneous technological choices). Overall, our findings demonstrate that we can provide a more holistic picture by advancing a behavioral institutional theory on how the institutional environment alters an organization's decision to innovatively deploy HIT when addressing performance shortfalls.

Diverse Approaches to OD and Change

ODC: **Exploring the Role of the OD Consultant: Historical Perspectives and Contemporary Findings**      

Author: **Nicole Hobbs**, -
Author: **Therese F. Yaeger**, *Benedictine U.*
Author: **Peter Sorensen**, *Benedictine U.*

The purpose of this study was to explore the lived experience of contemporary OD consultants to better understand their knowledge, skills and abilities, as well as their work experiences, perceptions and challenges. There are three sections to this paper. First, forty OD consultants were identified and then interviewed in 2020. To obtain the richest data, we used a mixed method approach using exploratory interviews and survey data. The interview data provided verbatim quotes to identify major themes. From the qualitative data, three primary themes surfaced; namely, a) OD consultants as continuous collaborators; b) OD consultants as knowledge communicators; and c) OD consultants as value providers. A second section of this paper includes the unexpected finding of the alignment of contemporary OD consultants' words to the OD classical writings of roughly 40 years earlier. These 2020 OD consultants' words and values aligned with the classical OD works and views of scholars from decades ago. Additionally, although OD is often challenged by controversy and criticisms such as the need to 're-invent', OD is dying, and OD as Adolescent, the interviewees conversely resounded the alternative positive outcomes of OD. The final section includes the contribution to the theme of AOM regarding managers, and the resurfacing of AOM's Organization Development and Change Division's Past Chairs published works and how today's OD consultants' thoughts and experiences (at the 50th year celebration of the ODC Division) align with the ODC Division Past Chair's scholarly contributions. In short, what is old is now new!

Paper is Available to Meeting Registrants Only.

ODC: **Interacting Effects of Transformational and Instrumental Leadership on Employees' Change Reactions**

Author: **Catrin Millhoff**, *TU Dortmund U.*
Author: **Jens Rowold**, *TU Dortmund U.*

The aim of the two-study investigation was to examine the theoretical assumption, that transformational behaviors are reinforced by instrumental behaviors in the change context. For this purpose, a field study and an experimental vignette study were carried out, in which the interaction between transformational and instrumental leadership on employees' change reactions was tested. In the field study, 405 employees were surveyed and the results revealed a significant interaction under control of laissez-faire and transactional leadership: Only when instrumental leadership was highly developed, transformational leadership was positively related to change support. In the vignette study, instrumental and transformational leadership behavior was manipulated within fictitious change scenarios. 772 participants took part in the investigation. 2x2 ANCOVAs showed that instrumental leadership influences the mean values of employees' change reactions more strongly than transformational leadership. However, the interaction was not significant for the manipulated leadership styles. Implications for leadership and change literature are discussed.

ODC: **Project Management Canvas: Original Model where Traditional and Agile Project Management Intersect**  

Author: **Fabio Galletta Latour**, *Copenhagen Business School*
Author: **Finn Florin Johansson**, *Copenhagen Business School*
Author: **Charles Thomas Tackney**, *Copenhagen Business School*

Winner of ODC Division Rupert F. Chisholm Best Theory-to-Practice Paper

Our research issue sought to assist practitioners to structure a hybrid approach that overcomes the binary presumption of agile and traditional project management. The basis for this inquiry was inspired by an observed gap concerning practical hybrid project management models, combining elements of apparently incompatible traditional and agile project management. We first conducted an extensive literature review of the two well-known approaches. Second, we complemented this review with sources on the Business Model Canvas that provided us with insights on how to combine the PM approaches in practice. We synthesized and expanded on the findings in our third and final step by proposing an innovative hybrid approach to project management we call the Project Management Canvas. Our model represents a contribution to the existing discourse, which immediately and iteratively aids practitioners to effectively craft the most appropriate project management methodology.

ODC: **Exploring Barriers and Opportunities for Digital Servitization in SME Manufacturing Firms**    

Author: **Marie-Anne Le Dain**, *Grenoble INP Industrial Engineering and Management – G-SCOP Lab*
Author: **Judy Matthews**, *Queensland U. of Technology*

While many firms have captured benefits from increasing digitalization, few SMEs in Europe indicate that they are digital or have started a digital transformation. Some firms have used digital tools to extend their offerings in the product-service strategy of servitization. We reviewed existing literature on digitalization and servitization, clustering the barriers and opportunities that SMEs identified in their move to digitalization. Using focus groups of senior managers of diverse SMEs in a workshop setting, we conducted an empirical study of the perceptions of the main barriers and opportunities of digitalization and the types of services offered by these SMEs. Our results demonstrate the relationships between the barriers and opportunities that an SME identifies during its digitalization, the type of product-service it develops, and aspirations for future digitalization.

Intersection of Strategy, Context, and Institutions

ODC: **The Impact of Intra-Firm Competition on Strategic Renewal**

Author: **David An**, *European Business School, Wiesbaden*

While scholars emphasize the role of managerial practices in strategic renewal, intra-firm competition as such a practice has not been scrutinized yet. We fill this gap by examining whether and how intra-firm competition influences an organization's path dependence over time and in how far paths of intra-firm competition change in the course of strategic renewal. To examine this issue, we conducted an in-depth longitudinal case study of ProSiebenSat1 Media with a focus on its entertainment pillar which is at the center of the eroding linear TV business. We find evidence that ProSiebenSat1 intra-firm competition activities (1) were not path breaking, but consistently subject to path dependences rooted in the core business. (2) They further created subsequent path dependences leading to additional lock-in (3). The practice of intra-firm competition itself became path dependent. (4) Intra-firm competition that involves a deep internal collaboration between units has the potential to grow new platforms outside of the core business. As a whole, we contribute to the understanding of intra-firm competition as a strategic renewal activity by illustrating the changing dynamics from intra-firm competition to competition in a longitudinal study.

ODC: **Genesis of New Financial Institution: Exploration of the Conducive Institutional Environment**

Author: **Shashi Kant Srivastava**, *Indian Institute of Management Sirmour, Sirmour, Himachal Pradesh, India*
Author: **Deepika Chandra Verma**, *OP Jindal Global U., Haryana*
Author: **Srinivas Jangirala**, *Jindal Global Business School, OP Jindal Global U., Sonipat, India*
Author: **Janardan Krishna Yadav**, *Jindal Global Business School, OP Jindal Global U., Sonipat, India*

From institutional economics perspective this study identifies blockchain as an example of new financial institution. Further, the study explores existing institutional strength such as economic, human capital, and political on the adoption/development of the blockchain technology in a cross-country analysis. To do so, it employs the concepts of institutional economics. The path analysis of the relationships of the various global indicators reveals that only the human capital of a country significantly affects the development of blockchain technology, while economic and political capitals does not play any role in it. Further, the general institutional strength parameter of a country fully mediates the relationship of human capital and blockchain development. While we found convincing evidence that strength of human capital can promote blockchain technology, the examination also reveals that a lack of institutional strength negatively influences the relationship.

ODC: **Toward the Post-COVID-19 Normalcy in the Air-Travel Industry: The GPS Model for Crisis Navigation**

Author: **Virginia Bodolica**, *American U. of Sharjah*
Author: **Martin Spraggon**, *Mohammed Bin Rashid School of Government*

ODC Division Rupert F. Chisholm Best Theory-to-Practice Paper Finalist

The Covid-19 pandemic was a sudden event that had a devastating effect on various sectors of the world economy, especially the travel industry. Prior crisis response research has focused on survival and adaptation efforts of organizations, leaving the deployment of more proactive market-shaping strategies unexplored. Drawing on a qualitative case study method, we analyze how a company operating in the air-travel services sector in the UAE responded to the coronavirus disruption. We develop a grounded framework for understanding how air-travel providers can effectively navigate through crisis – the GPS model. The advanced model suggests that in times of disruption, industry players should adopt a number of strategies to (1) Guard against failure, (2) Potentiate innovative change, and (3) Shape the future of air-travel. An outcome of forward-looking shaping strategies that may define the new post-pandemic normal in the air-travel industry constitutes the idea of 'scattered airports' with a modified airport architecture.

ODC: **Preparing for a New Hybrid: The Microdynamics of Change in the UK Nuclear Clean-up Industry**

Author: **Namrata Malhotra**, *Imperial College London*
Author: **Tim J Morris**, *U. of Oxford*

Organizations respond to institutional complexity by becoming hybrids embracing multiple logics internally. Yet, we understand little about the microdynamics of preparing for a hybrid in the course of which an organization may be forced to change the intended hybrid solution. In this paper we examine the microdynamics of change that unfolded as the UK Government sought to privatise British Nuclear Fuels Limited (BNFL) responsible for the clean-up of nuclear waste and safe disposal. As BNFL prepared for the intended public-private hybrid, unanticipated events called into question the viability of the hybrid solution. Drawing on institutional logics and attention-based perspectives, we show how unanticipated events shift the attention of key stakeholders to different types of risk and affect, in turn, the dynamic between logics of the proposed hybrid solution even making them irreconcilable.

Field Formation
Field Formation 

OMT: Where Do Institutional Changes Come From? 

Author: **Ju Young Lee**, *Boston College*
Author: **Yi Ren**, *Montclair State U.*

Where do institutional changes come from? While most of the institutional change and status research shows that changes are more likely to come from either the core or the periphery of the field, we still know relatively little as to what accounts for such divergent findings. In this paper, we propose a framework that delineates the scope conditions for the inconclusive findings. We argue that the role of field actors' status on initiating and implementing institutional change depends on two primary field conditions—field concentration and field settledness. We build these dimensions into an integrative framework that includes four ideal types of fields—distributed, dominated, perplexed, and volatile. We then illustrate how this framework provides insights into the likelihood, sources, and types of changes that are likely to occur in each field type.

OMT: Power and Meaning in Genomic Medicine: Processes of Field Emergence and Evolution 

Author: **Celeste Diaz Ferraro**, *Pennsylvania State U.*

While fields are central concepts in institutional theory, our understanding of them is largely theoretical and we have limited empirical evidence explaining the processes by which they emerge. In this study, set in the emerging field of genomic medicine, I explore the relationships through which power flows between field members, constructing a new field through their interactions. In the context of the nascent field of genomic medicine, I draw on extensive interviews with members of the genomic medicine field and its progenitors, four years of observational study of a field-convening organization shaping field standards, and a rich trove of historical data spanning the period of 1864 to 2020 to ask how genomic medicine evolved as a field and the role of power in shaping the interactions and meanings that constructed the field. My preliminary findings show that socio-political conflict, new technologies and shifting societal norms led to meaning-making that stigmatized genetic research, gave rise to divergent scientific fields and later reunified genomic research in new power relations that established the cultural meanings and institutions evident at the beginning of modern genomic medicine's emergence. Subsequent analysis of industry news coverage during the emergent period (1990-2000) is anticipated to reveal the power-based interactions that show the clustering of organizations around emergent practices that indicate shifts in meaning, practices, and ultimately the power relations that shape the field's emergence. These findings make a significant contribution to the dynamics of network emergence, by amassing rare empirical data on pre-emergent structures and interactions, while also explaining how and when heterogenous organization types and forms collaborate, potentially yielding new understandings of complex systems marked by flexible boundaries and changing compositions of organizations and types of ties. I also contribute to the institutional literatures where there is need for clearer understanding of field-to-field interactions that ultimately create opportunity for new fields and institutions to emerge. Lastly, I anticipate these findings contributing to the institutional literature on field-configuring events, as the deep inclusion of context provides evidence that may cause us to reconsider new forms of field-configuring events as individuals, organizations, communities and fields convene and negotiate new norms and structures in entirely new ways.

OMT: Symbolic Bridges and False Friends: When Symbols Cross Organizational Field Boundaries

Author: **Stephanie Koornneef**, *Radboud U.*
Author: **Achim Oberg**, *U. of Hamburg*
Author: **Tal Simons**, *Erasmus U. Rotterdam*

To investigate organizational fields' differences and similarities in meaning frameworks, we conducted a cross-sectional mixed-method study of the symbols used in three organizational fields – health care, software, and organic food – in Germany. Using a web crawler, we reconstructed the three fields and collected the logos of a sample of the fields' members. We not only show that organizational fields differ, resulting in each field's unique collective identity and mostly impermeable field boundaries, but also that some symbolic elements can cross field boundaries. Specifically, we observed elements that are used in all three fields, derived from a shared wider institutional environment such as nationality and culture, as well as, interestingly, some symbolic elements that are used in only two fields. Based on these results, we make a distinction between those elements that cross boundaries and have a similar meaning in two fields, fulfilling the function of symbolic bridges, and elements that appear to be similar but have significantly different meanings in both fields, constituting false friends.

OMT: Inscribing Soft Rules: A Study of The Transnational Issue Field of Business and Human Rights   

Author: **Alison E. Holm**, *Copenhagen Business School*
Author: **Jasper Hotho**, *Copenhagen Business School*

This paper explores how soft rules are inscribed into corporate behavior in transnational issue fields. We study processes of inscription and the outcomes of these processes using an inductive approach to an embedded, single-case study of international guidelines complaints mechanism in the transnational field of business and human rights. Our findings three main sequential mechanisms for soft rule inscription in corporate behavior through the actions of different agents of the issue field: publicizing issue by monitoring agent, legitimating complaint by a field authority, and engagement of the targeted corporation with the monitoring agent and the field authority. Furthermore, our study of outcomes revealed that the soft rule inscription process leads to changes in corporate positioning relative to the issue and to other actors in the transnational issue field. These findings from the level of actors' interaction contribute to knowledge on institutionalization processes at the level of the field in transnational issue fields.

Framing and Sensemaking in Institutional Processes

Framing and Sensemaking

OMT: **Recursive Relationship of Sensemaking and Institutions: A process view**

Author: **Ibrat Djabbarov**, *Cranfield School of Management*
Author: **Andrey Pavlov**, *Cranfield School of Management*
Author: **David Denyer**, *Cranfield U.*

Developing a micro-level processual perspective is necessary for a nuanced understanding of how actors and institutions interact. Adopting a sensemaking perspective can offer scholars new insights into how actors change or stabilize institutions over time. In this paper, we systematically consolidate existing research on sensemaking and institutions, and theorize how sensemaking enables actors to accomplish institutional change and maintenance over time. We propose a multi-level processual model of how actors' sensemaking and institutions are bound together temporally.

OMT: **Hostile frame takeover: Co-opting the security frame in the German nuclear energy debate**

Author: **Stephan Bohn**, *Humboldt Institut for internet and society (HIIG)*
Author: **Nora Lohmeyer**, *Radboud U.*
Author: **Harsh Kumar Jha**, *Newcastle U. Business School*
Author: **Juliane Reinecke**, *King's College London*

Finalist for the OMT Division Best International Paper Award

Despite growing attention to framing contests as important discursive struggles in articulating societal challenges and their solutions, most research focuses on competition over which frame becomes dominant. The process of how macro-level master frames themselves are subject to processes of meaning elaboration is less well understood, yet central for understanding field dynamics. In this paper, we focus on how a master frame – seen as relatively stable macro-level meaning structures – can itself get co-opted, such that it is reinterpreted to support a logic of action that is contrary to the original set of meanings. Using a mixed methods approach, combining topic modeling with qualitative analysis to examine the German nuclear energy media debate, we explore the hostile takeover of the dominant and socially resonant “security” master frame. This led to a complete frame reversal: nuclear energy could now be presented as a solution to security, rather than presenting a significant security threat. We develop a model explaining this process of frame co-optation, which involves broadening the master frame through its infusion with new diagnostic claims with regards to the identification of problems and problem solving-schema, sustaining frame plurality, and then selectively retaining the new meanings while detaching the original meanings.

OMT: **"It's a Good Thing To Do!": How Institutional Entrepreneurs Scale Up Social Innovations.**

Author: **Panita Surachaikulwattana**, *U. of the Thai Chamber of Commerce*

Institutional entrepreneurs who are interested in solving social problems often seek out solutions in other contexts and then move the successful social innovations they find to their local context. This requires that the social innovation is translated successfully into the new context and, if it is to have significant impact on the social problem, “scaled” by diffusing it out into the institutional field to become the institutionalized solution to the problem. But while we have theories of the translation and diffusion of institutions that explain this process of innovation in general, we do not have a theory that fully explains how an institutional entrepreneur carry out this process of translation and diffusion to solve local problems. In this paper, I draw on a case study of the translation of the “High Scope” educational practice from the US to Thailand as a solution to tackle poor quality of early childhood education and social inequality, and the subsequent diffusion of the translated practice to develop a model of this process. I describe this process as “institutional evangelizing” that enables and promotes the diffusion of a social innovation. Our presented model of institutional evangelizing consists of three phases, including translation, enrolment, and integration. Our study contributes to the institutional literature by examining an important way that a social innovation is translated from another institutional context and diffuses in the new context, shedding light on how a social innovation scales and has an impact on institutional change.

OMT: **Local Food: Charting Meaning Emergence Through the Dynamics of Discourse, Rhetoric and Framing**

Author: **Shazia Karmali**, *U. of Victoria*

This study seeks to understand how new meanings emerge in the context of institutional change. Existing research seeking to understand shifts in meaning has primarily accessed meaning, across numerous contexts, via the three key constructs of discourse, rhetoric, or framing. Within the context of the emergence of the local food movement in Canada, I employ a mixed methods approach using term frequencies, topic modelling and qualitative content analysis, within a computational grounded theory framework for Big Data analysis. My data consists of all articles containing any mention of the term “local food” in popular Canadian press over 37 years from 1978-2014, a database totalling 31,421 articles. My results show that firstly, new meanings pertaining to local food emerged rapidly over the 37-year period. Secondly, unexpected actors were found to significantly impact the propulsion of meaning change, by establishing new vocabularies surrounding the term “local food”. Finally, I find evidence that supports a strong role for both micro-processes of rhetoric and framing and macro-processes of discourse. I demonstrate how these processes occur through the dynamic intersection of rhetoric, framing and discourse. I propose an emergent process model of meaning change.

Dynamics of Hybrid Organizing

Hybrid Organizing

OMT: **Mission and Money: Unpacking Competition between Hybrid Organizations in the Nascent MOOC Market**

Author: **Eric Volmar**, *Stanford U.*

Finalist for the OMT Division Best Paper on Entrepreneurship Award

This study explores the competition between hybrid organizations in a nascent market over time. Grounded in a multi-case theory-building study of two massive open online course (MOOC) technology ventures, this study contributes at the intersection of organization theory and strategy in relation to hybrid organizations. The theoretical framework indicates that hybrid ventures in nascent markets engage in competitive games that include setting performance objectives, creating distinct hybrid forms, and making relevant moves. I find that successful hybrid ventures (1) play their own games as the market forms, (2) adapt how they play their games as the market evolves, and (3) rely on boards of directors to organize their games over time. In contrast, less successful hybrid ventures struggle to adapt their games as the market evolves, ultimately blunting their abilities to achieve their missions. As the market evolves, hybrid ventures must adapt their forms to sustain and gain performance advantages. A core insight is that the flexibility (or inflexibility) of venture governance shapes how effectively a hybrid venture adapts to the market and competes with rivals. Overall, this study provides a novel view of how hybrid organizations compete for both the mission and the money in nascent markets over time.

OMT: **The Role of Governance in the Dehybridization of Social Enterprises**    

Author: **Magdalena Plesa**, *U. of Oxford*

This paper examines the challenges of organizational governance in the transformation of hybrid organizations. Hybrid organizations, studied in the context of 33,350 Community Interest Companies from 2006-2020 in the United Kingdom, highlight tensions and contradictions arising from pursuing multiple goals. In the world of hybrid organizations, an important problem is how and why hybrid organizations shed one or more logics, which I conceptualize as the process of dehybridization. Dehybridization has implications which can transpire by the hybrid changing form to a dominant logic form, a new hybrid, or dissolution of the organization. Governance in the form of board heterogeneity is examined along eight dimensions—age, gender, title, education, occupation, directorships, tenure, and nationality—to find whether boards that are more heterogeneous are more adaptive in dehybridizing. This paper finds that boards with more overall heterogeneity are 4.5 times more likely to adaptively transform by shedding logics and dehybridizing than any other type of community interest company.

OMT: **Can Convincing Strategies Transcend Conflicts? A Study of Competing Institutional Logics**

Author: **Sebastian Everding**, *Martin-Luther-U. Halle-Wittenberg*

Author: **Stefan Hielscher**, *School of Management, U. of Bath*

We extend theories of competing institutional logics to include convincing as a new conflict management strategy in hybrid organisations. Relying on longitudinal data of a hybrid organisation of the sharing economy, we find that decoupling, compromising, and combining, while explicitly or implicitly accepting the underlying disagreement, all aggravate most conflict intensities – weak, medium, and strong – while compromising and combining only temporally reconcile strong and weak conflicts, respectively. Convincing strategies, in contrast, view the goals and practices of competing logics as interdependent and deliberately use these interdependencies to transcend – i.e., to go beyond the perceived limits of – a given conflict. We find four mechanisms that facilitate transcend-ing, including (i) developing novel persuasive arguments as to why given practices can promote another logic’s goal, (ii) suggesting a new distinction previously unappreciated that separates controversial from uncontroversial practices, (iii) proposing a novel overarching goal agreeable to a competing logic and (iv) providing an “enabling environment” for open discussions about goal-practice interdependencies. We posit that these mechanisms provide opportunities for competing logics to overcome conflicts and, thus, can make hybrid organisations more enduring, innovative, and sustainable.

OMT: **Managing Institutional Logic Hybridization Process: A Strategy-Timing Contingency Approach**

Author: **Yijie Min**, *Guanghua School of Management, Peking U.*

Hybrid organization research is witnessing prosperity. However, we know little about hybrid organizations that are “made”, namely, those transitioned from original single-logic to dual/multiple-logic forms through logic hybridization. As an example, we focus on the “familization” transition of lone-founder firms, during which single market-logic organizations integrate family logic and evolve to market-family hybridity, and examine buffering approaches to manage organizational destabilizations in this transition. We find financial slack and founder reputation, representing for unfitnes- and discontinuity-buffering strategies respectively, could loosen the positive relation between familization transition and TMT turnover rate (i.e., organizational destabilization). Meanwhile, as field-level density of market-family hybridity (i.e., family ownership) evolves dramatically during our observation window, the relative effectiveness of the two buffering strategies also varies. On industry level, following family ownership density grows, the moderation effect of financial slack becomes weaker while the moderation effect of founder reputation becomes stronger. Our findings suggest logic-hybridizing likely happens in transition phase between firm life-cycle stages, and propose to manage organizational destabilization by a strategy-timing (evolution) contingency view.

Geographical and Cultural Embeddedness of Organizations
Local Embeddedness

OMT: **Geography in the Making of Culture and Corporate Strategy: A Longitudinal Study of M&As**

Author: **Kunyuan Qiao**, *Cornell U.*

Finalist for the OMT Division Best Student Paper Award

I argue that a region's geographical characteristics shape the level of independence vis-à-vis interdependence of its culture, which in turn affects M&As of firms therein. Specifically, terrain ruggedness—i.e., amount of elevation difference within a region due to mountains—leads to a more independent culture due to significant coordination and cooperation costs, difficulty of transportation and economic exchange, and potential armed tensions. A temperate climate—i.e., ample precipitation and a moderate temperature—allows residents to obtain sufficient agricultural yield and makes unifying with others to combat the harsh environment unnecessary, thus breeding a culture favoring independence. Cultures with a low (high) level of independence (interdependence) set expectations for connectedness of assets, emphasize value creation through synergy, advocate corporate hierarchy, and downplay integration problems. Thus, more interdependent (less independent) cultures encourage firms to acquire and prompt investors to react more favorably to M&As. I find supportive evidence for my hypotheses with two samples covering diverse geographies, cultures, and publicly traded firms of subnational regions worldwide. A study of firms in China and the United Kingdom based on natural language processing provides further evidence. My study (1) advances a geographical origin of culture and unpacks cultural formation at the more nuanced, subnational level, (2) contributes to the institution-based view by highlighting the cultural dimension in understanding firms' M&A decision and investors' reaction, and (3) finally outlines a geography-based view of firm.

OMT: **Salient yet Susceptible: Coalition Composition in Shareholder Engagements on ESG Issues**

Author: **Kevin Chuah**, *London Business School*

How shareholder activists influence firms' environmental, social, and governance (ESG) practices has become a central concern in the corporate governance literature. Building on this, I investigate how the composition of shareholder activist coalitions contributes to successful engagements with targeted firms. Consistent with studies emphasizing the benefits of stakeholder salience, I focus on participation in ESG activism by mainstream shareholders—e.g., mutual funds. However, I also highlight how susceptibility to attentional constraints affects the mainstream's willingness to participate in collective activism and the efficacy of their participation. I find that participation by mainstream shareholders is greater when activists are in close geographical proximity to each other and conversely, when located distantly from targeted firms. In terms of outcomes, I show that firms are more responsive when coalitions involve greater participation by mainstream shareholders compared to those dominated by lower salience shareholders—e.g., religious organizations. Importantly, I further demonstrate that the benefits of mainstream participation are conditional: mainstream participation is less effective during busy periods of the corporate calendar when attentional constraints are heightened. These findings emphasize the benefits of participation by salient shareholders in collective ESG activism and the limits associated with attentional constraints relating to geographical proximity and calendar time.

OMT: **The Grand Tour: The Role of Catalyzing Places for Industry Emergence**

Author: **Paolo Aversa**, *City U. London*

Author: **Emanuele Bianchi**, *Cass Business School, City U. London*

Author: **Loris Gaio**, *U. of Trento*

Author: **Alberto Nucciarelli**, *U. of Trento*

Finalist for the OMT Division Best Paper on Entrepreneurship Award

Research on clusters highlights that some areas display superior conditions to locally nurture concentrations of businesses. But why do certain industries—despite ascribing their origin to specific locations—emerge as dispersed across multiple geographies? To respond to this question, we qualitatively investigate the influence that the town of Arco (Italy) and its periodic event 'RockMaster' exerted on the emergence of the global sport climbing industry. We advance the concept of 'catalyzing places' that support the emergence and growth of dispersed industries through an ongoing, cyclical process of three distinctive forces—centripetal (i.e., attracting), catalyzing (i.e., reacting), and centrifugal (i.e., ejecting). The forces attract communities of practice to the catalyzing place, expose them to intense, transformational experiences towards entrepreneurship, and ultimately induce them to establish their ventures elsewhere. By redeploying the resources and practices acquired in the catalyzing place, these scattered communities enact a phenomenon of collective user entrepreneurship, which forms dispersed industries. We underline that while the place continuously nurtures the underlying forces, the event periodically enhances their effect. We also define two novel mechanisms, 'springboard firms' and 'dispersion economies,' that support the industry dispersion. We discuss our contribution in relation to research on industry emergence, places and practices, and collective user entrepreneurship.

OMT: **Nationalism, Firm Value and Relocation**

Author: **Ariel A. Casarin**, *U. Adolfo Ibañez*

Author: **Sinziana Dorobantu**, *New York U.*

Author: **Angel Saz-Carranza**, *ESADE Business School*

Over the last decade, the backlash against globalization has brought about a renewed wave of nationalism around the world. Yet, despite extensive research on nationalism in history and social sciences, management research has paid little attention to the impact of nationalism on firms. We argue that nationalist movements threaten the stability of institutions governing firms' exchange relations and thus affect firm value and location decisions. Our analysis of increased nationalism in Catalonia, which peaked during the 2017 secession crisis, shows that nationalist political events affected Catalan firms more than other Spanish (non-Catalan) firms, and that firms identified more strongly with Catalonia were affected more severely. We argue that this effect reflects investors' expectations that firms with strong Catalan identity are less likely to make strategic adjustments (such as the relocation of firm headquarters) that mitigate the effects of nationalism, and we show that, indeed, these firms are less likely to relocate their headquarters than their peers are.

Unintended Consequences That Backfire *Unintended Consequences*

 **OMT: Walking the Talk: Public Historical Rhetoric, Traditions, and External Stakeholder Perceptions** 

Author: **Rachel W. Mui**, *Kansas State U.*
Author: **Owen Nelson Parker**, *UT Arlington*
Author: **Varkey Titus**, *U. of Nebraska, Lincoln*

Extant literature on rhetorical history has overlooked the possibility that despite a firm's well-intended efforts to strategically communicate the values found in its history, such rhetoric may still produce unintentional, adverse reactions from certain stakeholder groups. Drawing upon stakeholder theory and recent advancements on the strategic use of public language, we argue that when used in isolation, public historical rhetoric is detrimental to firm performance for reasons akin to how audiences perceive "greenwashing" messages as noisy and inauthentic. For such historical rhetoric to be accepted and deemed authentic by the public, we contend that firms must authenticate the message by either a. reinforcing their strategies with traditional actions, or b. possessing a tradition-linked image. Results from our study of U.S. orchestras indicate that tweeting about their orchestra's history hurts their financial performance (ticket sales and donor revenue) – however, this detriment is lessened when the orchestra either a. plays the traditional, canonical composers, or b. is designated as one of the historical "Big Five" orchestras. This study aims to make several important contributions to the rhetorical history and public language literatures, as well as provide important managerial implications for firms committed to leveraging their history for performance gains.

OMT: Institutionalizing Inequality Anew: Grantmaking & Racialized Postsecondary Organizations 

Author: **Jeannette Anastasia Colyvas**, *Northwestern U.*
Author: **Heather McCambly**, *Northwestern U.*

This paper combines theories of racialized organizations with neo-institutional insights on institutionalization to analyze the role of grantmakers in the maintenance or diminishment of racial inequality in postsecondary education. We combine longitudinal archival analysis with a Difference-in-Difference-in-Difference statistical design to trace processes of persistence and change and to estimate effects on resource distribution in a federal grantmaking agency—the Fund for the Improvement of Postsecondary Education (FIPSE). We demonstrate how FIPSE's adoption of an equity-conscious frame/enactment bundle had causal consequences on which postsecondary organizations received grant dollars. And yet, instead of diminishing sources of persistence that reproduce racial inequalities, FIPSE, however unintentionally, created new and more deeply institutionalized modes of reproduction for the outsized delivery of resources to historically white-serving organizations. This study brings analytic clarity to how variation in an elite's frames—and their enactments—can dramatically affect the distribution of educational resources, while leaving the larger terms of racialization intact.

Paper is Available to Meeting Registrants Only.

OMT: Place Elasticity and Institutional Translation of Grand Challenges in Cross-Sector Partnerships   

Author: **Paula Ungureanu**, *U. of Modena and Reggio Emilia*

This work investigates the mediating role of place in how grand challenges translate from policymaking to cross-sector partnerships. By focusing on science and technology parks as tools for tackling the grand challenge of regional innovation, we investigate how place mediates the way policy travels in the institutional field and is transformed along the way, generating unexpected and unwanted consequences for the involved institutional actors. Findings highlight the central role played by place elasticity in the mobilization and transformation of a grand challenge. Specifically, place continuously reshaped its boundaries to first highlight, and then ease, policymakers' demanding concerns about doing well (managerial concerns) by catalyzing progressive attention around doing good (ethical concerns). We highlight the important role of material-ethical bundles which may first galvanize a partnership, then push it towards failure, and ultimately towards desperate attempts of recalibration which can compromise both managerial performance and ethics. These findings allow us to discuss when and how policy makers may provide guiding or misleading directions for action, why regional governments walk a thin line between mobilizing action and injecting further complexity into a field, and how to tell if cross-sector partnerships stay on course or go adrift with respect to policy indications.

OMT: The Evolution of Collaboration in Multi-actor R&D Projects: Patterns of Couplings and Innovations  

Author: **Svetlana Klessova**, *U. Côte d'Azur, CNRS, GREDEG, France*
Author: **Sebastian Engell**, *TU Dortmund U.*
Author: **Catherine Thomas**, *U. Côte d'Azur, CNRS, GREDEG, France*

Multi-actor R&D projects are a setting where a network of multiple organizational actors, usually from research and industry, creates a temporary consortium and are funded based upon a proposal to jointly develop new knowledge and innovations. The couplings between the organizations are designed in the proposal, however based on incomplete knowledge. Using a comparative multiple case study of multi-actor projects funded in European Research and Innovation Programs, we investigate why and how these planned couplings, i.e. the collaborations between organizations evolved during the different project phases and what effect this had on the collaborative innovations. We investigated 4 projects with 54 organizations generating 46 innovations, using data from over 740 pages of documentation and over 33 hours of semi-structured interviews with 24 project actors. The study uncovers eight types of reconfigurations of couplings, activated by six disintegrative and two integrative mechanisms. Most of these reconfigurations led to negative consequences for innovations or to innovations created by less partner organizations. The weakening of couplings was much less pronounced within specialized modules (subgroups of closely collaborating partners) within the projects than at the interfaces that were planned to connect the modules. Here, planned strong couplings often degraded into weak couplings or even disappeared over the project lifetime. Based on these findings, we propose a process model of the evolution of couplings in multi-actor R&D projects and implications on collaborative innovations.

OMT: Crowd-Based Accountability: How Social Media Commentary Reconfigures Organizational Accountability 

Author: **Arvind Karunakaran**, *McGill U.*

Author: **Wanda J Orlikowski**, *MIT*

Author: **Susan Scott**, *London School of Economics and Political Science*

Accountability is considered to be critical to organizations' sustained performance and survival. Prior research has examined the structural and rhetorical response strategies that organizations use to manage accountability pressures from different stakeholders. With the advent of social media, where a dispersed, heterogenous, and pseudonymous "crowd" is able to express and disseminate their concerns about organizations and its workers, the structural and rhetorical response strategies used by organizations become less effective. How do organizations respond to accountability pressures from social media commentary and with what consequences for organizing? Adopting a performative approach, we conducted a multi-sited comparative study to examine this research question. Specifically, we investigated how organizations in two distinct service domains (emergency response and hospitality) responded to accountability pressures manifesting as social media commentary on two different platforms (Twitter and TripAdvisor). We find that organizations respond by actively engaging online with social media commentary, but end up enacting changes to their practices on the ground. Such changes shift ways of working by recalibrating risk, redeploying resources, and redefining service. Together, these practice changes reposition the core meanings, relations, activities, and outcomes of service work and reconfigure the boundaries of organizational accountability. Organizations, thus, become increasingly unclear about what they are held accountable for and uncertain about how, when, and to whom they are accountable. We synthesize these findings in a process model of crowd-based accountability and discuss the contributions of this study to research on accountability and organizing in the social media era.

OMT: The Public Responsibility of Platform Corporations

Author: **Mislav Radic**, *London School of Economics and Political Science*

Author: **Alessandro Niccolo' Tirapani**, *Montpellier Business School*

Finalist for the Responsible Research Award

To capture the ethical and political challenges posed by so-called platform corporations, in this paper we develop the concept of public responsibility. Despite the proliferation of research in corporate social responsibility (CSR), existing theories seem to fall short when it comes to the complexities of recent forms of organising. By analysing the concept of a multisided platform business models (MSPs) through a CSR lens, we argue that the responsibilities they face resemble more those of organisations in the public sector (i.e., public utilities) than those normally ascribed to private businesses – hence we develop the concept of public responsibility. We identify five sources of this responsibility: network effects; centrality of data production, collection and monetisation; global scale; and private policy-setting. Consequently, we argue that MSPs uniquely combine them, leading to three dimensions of public responsibility: privacy, accessibility and control of content. By doing so, we show how platform corporations have developed and provide 'private' services that in many ways are of 'public character', blurring our traditional understanding of public vs. private goods and services.

OMT: The COVID-19 Contact Tracing App in the UK: Co-production in the Public Sector Which Went Wrong 

Author: **Tobias Polzer**, *WU Vienna U. of Economics and Business*

Author: **Galina Goncharenko**, *U. of Sussex*

This study explores how accountability and trust in relationships between governments and citizens impact the outcomes of co-production of digital technologies implemented in emergency situations. The extraordinary circumstances of the COVID-19 pandemic brought governments into the situations of having to make radical decisions and to act under tight time pressures. The paper focuses on the public discourse around contact tracing apps (CTAs), using the case of the United Kingdom as empirical setting. A framework to study accountability and trust in co-production of public services is developed. The study draws on a netnography method to analyze the reactions of the civil society expressed in social media to the introduction of the CTA, together with the consequences. Our findings carve out two pillars related to the discourse around the CTA, one related to technical and one related to social aspects. The analysis identifies specific concerns of citizens belonging to each pillar, highlighting polarization between government rhetoric attempts to justify the CTA's possibilities of surveillance and direct interventions by mobilizing the arguments for physical safety, and the escalated public anxiety around the ambiguity of the broad range of CTA's implications. The study also reveals that the main challenges of the CTA's implementation were a high level of public skepticism and distrust of the UK government and its actions, as well as concerns related to the potential violation of democratic freedoms and the abuse of CTA and data the app was designed to collect.

OMT: How Does Technology Shape Corruption?  

Author: **Bijan Azad**, *American U. of Beirut*

Does computerization reduce corruption? The field of ICT4D (Information and Communication Technology for Development) has grappled with this issue with no clear direction emerging. To address this question, our study focuses on the technological disruption brought about by a decade long computerization of the paper records, data and work procedures of a national land registration agency in a Mediterranean country. Based on a five-year ethnographic field study involving 127 interviews, we identify and describe the working of elusive actions within the three major work practices in the Registry. By focusing on the struggles that surrounded the introduction of digitization, we offer a highly contextualized analysis of how employees involved in corruption reacted to the limits on previous elusive actions and the visibility that the system imposed. From our analysis, we find that corrupt actions are deeply embedded in legitimate and core work processes but involve specific actions such as: document alteration, delaying and accelerating process, and subverting organizational controls. Institutionally, these corrupt activities are protected by claims of professional autonomy, active maintenance of process opacity, and the implicit acquiescence to the operation of camouflaged networks.

Causes and Effects of Misconduct

Misconduct: Causes & Effects

OMT: Status, Celebrity, and Misconduct Spillovers to Bystanders

Author: **Jung-Hoon Han**, *U. of Missouri*
Author: **Srikanth Paruchuri**, *Texas A&MU*.
Author: **Tim G. Pollock**, *U. of Tennessee, Knoxville*

Organizational misconduct often has ramifications that affect innocent bystander firms—that is, create positive and/or negative spillovers. However, limited research has explored what determines the valence of such spillovers. We argue that perpetrators' and bystanders' status and celebrity, and their distinctive sociocognitive content, determine the direction and magnitudes of spillovers to bystanders. High-status perpetrators engender negative spillovers by signaling audiences that other firms are similarly fallible whereas celebrity perpetrators, due to their atypicality among peers, incur positive spillovers by being considered individual aberrations. Bystanders' status and celebrity further shape the spillovers by providing interpretive frames through which to process the implications of high-status and celebrity firms' misconduct. Our findings based on the corporate data breaches in 2018 confirmed the effects of perpetrator firms' status and celebrity on the likelihood of positive and negative spillovers to innocent, S&P 500 bystanders. Bystanders' status amplified the positive spillover from celebrity firms' data breaches, while their celebrity attenuated the negative spillover from high-status firms' breaches and amplified the positive spillover from celebrity firms' breaches. This study contributes to research on misconduct spillovers by examining both positive and negative spillovers and delineating the antecedents of the valence of the spillovers. It contributes to the social evaluations literature by identifying the role social approval assets play in stakeholders' post-misconduct sensemaking.

OMT: Under Pressure: Cultural and Structure as Antecedents of Organizational Misconduct

Author: **Andrea Cavicchini**, *IESE Business School*
Author: **Fabrizio Ferraro**, *IESE Business School*
Author: **Sampa Samila**, *IESE Business School*

Does toxic organizational culture lead to misconduct? To address this question, we build on Merton's strain theory and theorize the relationship between organizational culture, structure and misconduct. We first argue that organizations with cultures characterized by strong performance pressure are more likely to engage in misconduct. Then we consider how organizational structure moderates this relationship, and hypothesize that in more formalized organization this relationship is weaker, while it is stronger in more decentralized organizations. To test these hypotheses, we use natural language processing to identify cultural content in Glassdoor employee reviews of 880 publicly traded firms combined with official penalties due to misconduct provided by Good Jobs First. The empirical results lend support to our hypotheses. Organizations with high performance pressure cultures are 65% more likely to be fined for misconduct than organizations with low pressure. The moderation effects of the organizational structure are also supported.

OMT: Politically Extreme CEOs and Corporate Misconduct

Author: **Thomas John Fewer**, *PhD Candidate, Drexel U.*
Author: **Murat Tarakci**, *Erasmus U.*

Organization's misconduct harm their organizations, society and environment alike. Prior research have proposed agentic and trait-based explanations on why executives engage in misconduct. However, misconduct is essentially a moral failure, where personal values underlie engagement in misconduct. These values are often embodied in one's political ideology—defined as the sets of beliefs about the proper order of society and how it can be achieved. Drawing on recent research on political ideologies and social identity theory, we hypothesize that CEOs with extreme political ideologies- extreme conservatives and extreme liberals- are more likely to engage in misconduct than CEOs with politically moderate ideologies; and this effect is accentuated when the organizational and state ideology echo the CEO's views. We find strong evidence for our hypotheses in a sample of Fortune 500 CEOs in the period 2010-2018 by taking advantage of variation imposed by CEO turnover.

OMT: An Organizational Identity Orientation Perspective on CEO Turnover Following Misconduct

Author: **Andrea Farro**, *Rowan U.*
Author: **Thomas John Fewer**, *PhD Candidate, Drexel U.*
Author: **Dali Ma**, *Drexel U.*
Author: **ChuanRen Liu**, *Drexel U.*

Misconduct poses a significant threat to organizations, as these unethical and illegal actions result in loss of credibility and market value in addition to harming environmental and societal well-being. Because of the importance of the CEO in making organizational decisions and “setting the tone,” research has identified CEO dismissal as an important consequence of misconduct. However, not all CEOs are punished for misconduct. Contrasting extant studies which highlight governance structures in explaining turnover following misconduct, we build from theory on organizational identity orientation to suggest that this may be the product of firm-level factors. Using a sample of S&P 1000 firms from 2000-2018, we conduct word embedding and natural language processing on letters to shareholders to capture organizational identity orientation, and find that organizational identity orientation influences CEO turnover following misconduct. Our findings have important theoretical and practical implications to organizational identity and misconduct.

OMT: **Gatekeepers, Structural Embeddedness of Firm Names, and Customers' Demand in Luxury Watchmaking**  

Author: **Kim Claes**, *Sungkyunkwan U.*
Author: **Frederic Clement Godart**, *INSEAD*

Gatekeepers play a critical role in connecting producers and customers. For example, in well-established industries, the media's discourse partly determines consumers' perceptions of producers. This goes beyond the tone or extent of coverage. In this study, we argue that the structural embeddedness of firm names—that is how the media relate firm names to one another in their accounts—impacts consumers' perceptions. We reason that structural embeddedness of firm names reveals both their associativity and their legitimacy. Using exhaustive media reports on the luxury watchmaking industry between 2001 and 2009, we find a positive effect of a watch producer's structural embeddedness on the prices reached by its watches in auctions. This relationship is positively moderated by both the absolute level of watch experts' monetary valuations of these watches and the uncertainty of those valuations.

 OMT: **Past the Business Case: Reorienting Corporate Philanthropy Research Towards Outcomes and Impact**

Author: **Marian Eabrasu**, *EM Normandie Business School, Métis Lab, France*
Author: **Arthur Gautier**, *ESSEC Business School*

Finalist for the Responsible Research Award

Corporate philanthropy (CP) is a growing area of academic inquiry in management and business ethics. To date, empirical and theoretical studies have primarily examined the "business case" for CP in two distinct ways: understanding the motives of corporate executives and measuring the outcomes for corporations in terms of stakeholder relations and financial performance. Despite important advances in these areas, we note that scholarly conversations on CP face a deadlock owing to the theoretical limitations in determining corporate donors' genuine motivations and extrapolating a firm causal link between CP and corporate financial performance. This paper identifies the difficulties faced by extant research and proposes a way forward by shifting scholars' attention to an important yet overlooked facet of CP: outcomes for beneficiaries and, ultimately, long-term impact, i.e., the lasting changes, whether positive or negative, intentional or not, that CP brings about for individuals, communities, organizations, society, and/or the environment. It identifies key areas and questions for which new theories and empirical studies could be developed, with the potential to reinvigorate CP research beyond a one-sided focus on corporate interests.

OMT: **Organizational Digital Identity: Concept and Underlying Centrifugalistic and Polycentralistic Forces** 

Author: **Ricarda B. Bouncken**, *U. of Bayreuth*
Author: **Roman Barwinski**, *U. of Bayreuth*
Author: **Katie Brownell**, *Indiana U. - Kelley School of Business*

Organizational digital identity (ODI), institutionalized in a collectively shared digital identity prototype in organizations might explain firm performance in the current digital era. We outline the ODI concept and examine how it radiates by a) centrifugalistic forces, e.g. spreading from founders, key stakeholders, and digital initiatives or b) how it evolves by polycentralistic forces (grassroots processes of sub-digital-identities related to individuals and groups who develop shared perceptions, feelings, and behaviors). We use a flexible pattern matching approach to explore our model empirically, within ten case firms. Our results largely support our theory, showing that both the centrifugalistic forces and the polycentralistic forces can create the ODI. It can be created in three different ways: inherent corporate ethos, waves, and earthquake. Boundary spanning agents additionally might support the ODI.

OMT: **It's a Trap! How Cognitive Representations Inhibit Performance in Complex and Changing Environments**

Author: **Abraham Yeonwoo Pai**, *Yonsei U.*
Author: **Ji-hyun Kim**, *Yonsei U.*
Author: **Mooweon Rhee**, *Yonsei U.*

Organizations rely on simplified cognitive representations to make sense of the complex environment they participate in. These environments rarely stay stable—either by active attempts such as market entry or through incremental and disruptive changes in the environment itself, organizations are continuously pushed to adapt to new situations. Drawing on theories of organizational search and learning, cognitive sciences, and cognitive psychology, we explore how simplified cognitive representations facilitate and inhibit firm performance under uncertain circumstances, and how these effects differ over time in environments of differing degrees of complexity and similarity. Results of a computational simulation indicate that there is a trade-off in benefits provided by cognitive and experiential search, and that a 'representation trap' affects high and low performers differentially across different environments. In the initial landscape, the simplified cognitive representations adopted by low performers effectively trap them in inferior path-dependent trajectories, largely precluding the possibility of performance enhancement. However, the tables are turned when the population enters a different environment. Previous high performers experience difficulty in defending their advantage because their previously superior cognitive representations become an imprint that limits performance. We extend prior accounts of the cognition-oriented view in organizational search and learning by showing how simplified cognitive representations can inhibit performance and how they react to environmental change.

Managing Opposing Forces: Insights From Cultural Industries *Cultural Industries*

OMT: **Being Distinctively Similar: The Pursuit of Optimally Distinctive Partners In The Film Industry**

Author: **Keunwoo Jeong**, *London Business School*
Author: **Yoon Jae Shin**, *Seoul National U.*
Author: **Sun Hyun Park**, *Seoul National U.*

While homophily is considered one of the primary drivers of partnership decisions, studies also demonstrate that individuals may be simultaneously drawn to partners who present distinctive qualities. Here, a tension may emerge between the pursuit of homophilous partners for fluid collaboration and the pursuit of distinctive partners that would enable the achievement of creative interaction. Drawing on the literature on optimal distinctiveness, we predict that in such cases, the dual pursuit of a similar yet different partner is satisfied by valuing different qualities at different levels of comparison. Specifically, we predict that actors are more likely to select partners who present similar qualities to themselves but sufficiently distinctive among all other available potential candidates. Utilizing a dataset on the Korean film industry from 2000 to 2018, we show that the film directors select actors based on how similar the experiences of the actors are to themselves, but the effect increases when the actor is sufficiently differentiated from the industry peers. The selection seems to follow a two-stage process where the comparison between the selector and the potential partner is initiated first, and then the comparison of the potential partner against all other potential candidates. We contribute to the literature on partnerships by showing that individuals seek optimally distinctive partners through differentiated valuation at the different levels of comparison. Furthermore, we contribute to the market categories literature by extending the theoretical discussion towards the heterogeneity of the individual audience evaluation.

OMT: **Disperse and Preserve the Perverse: How Hip-Hop Censorship Changed Popular Music Production in China**

Author: **Ke Nie**, *UC San Diego*

How do states censor an artistic genre that challenges the social norms? The answers to this question in the existing literature are mostly based on investigations of particular artists or artworks of the genre, while the impact on the entire genre field remains unchecked. This paper explores how censorship of an artistic genre changes artistic forms of that genre while also triggering strategic reactions from the artists of closely related genres. Using an original dataset of 53,364 songs released on a Chinese online music platform, I study the impact of Hip-Hop censorship in China in 2018 on Hip-Hop as well as Pop, Rock, and Folk songs in terms of how they sound and what topics they write about in the lyrics. I propose a novel approach to measuring sound similarities and topic prevalence in song lyrics using computational tools including Music Information Retrieval (MIR), neural networks, and topic models. I found that Hip-Hop songs produced after the censorship sound significantly different from those before, with a bigger impact on popular songs than unpopular ones. Moreover, genres of similarly restricted production sound more like Hip-Hop after the censorship, while genres of large-scale production sound less “Hip-Hop”. The censorship also made Hip-Hop musicians engage less with topics related to violence, smoking, or drinking but more with sexual content in a covered form. The findings thus suggest a model of dispersion in explaining the mechanism of censorship in cultural production.

OMT: **The Role of Cultural Embeddedness and Social Salience in Coevolution of Related Industries**

Author: **Ying Li**, *U. of Illinois at Urbana-Champaign*
Author: **Samira Reis**, *U. Carlos III de Madrid*
Author: **Olga Khessina**, *U. of Illinois at Urbana-Champaign*

Previous research suggests that an emerging industry may erode the life prospects of a related incumbent market, when the newcomer industry is based on superior technology, has a more appealing ideology, or generates collective action. It is not well understood, however, why an incumbent industry may decline when those factors are weak or absent. We develop two new mechanisms of cultural embeddedness and social salience to explain such cases. When organizations in the nascent market embed their offerings in cultural artifacts of a related incumbent market and/or achieve social salience by reflecting public discourse, they invoke a sense of familiarity in audiences and in this way alleviate the uncertainty surrounding the novelty on which the emerging market is based. Decreased uncertainty draws audience attention to the new industry, often away from the incumbent market. This effect should be especially strong in the early stages of a new industry development and attenuate as the industry matures. We find support to our theorizing in the archival study of the historical coevolution of the emerging U.S. TV programming industry and the related incumbent market of all movie theaters in Illinois in 1944-1962.

OMT: **Creating "like a complete unknown" or the interest of becoming imperceptible**

Author: **Sylvain Colombero**, *Grenoble Ecole de Management*
Author: **Duymedjian Raffi**, -
Author: **Amelie Boutinot**, *Ecole de Management Strasbourg U. Strasbourg*

This article intends to provide an alternative view to approach the tension between familiarity and novelty for creation that reunites and dynamically combines these two extremes crucial to creative industries. By questioning the traditional organizational studies dedicated to creative industries that present a quite static dichotomy between novelty and familiarity, this paper considers the Deleuzian concept of “becoming-imperceptible” to explore the perpetual movement modalities between familiarity and novelty. Studying such perpetual movements can inform organization studies on how they can remain creative over time. While studying what happened when Bob Dylan won the 2016 Literature Nobel Prize, echoing his entire career, we empirically investigate the necessary regular “deterritorializations” (for novelty) and “reterritorializations” (for familiarity) to become imperceptible, so as to remain creative. This article contributes to organizational debates regarding creative process in creative industries.

Perception and Ideology in Organizations

Perception and Ideology

OMT: **Power of Words: How Do Employee Narratives Shape Our Understanding of Managerial Incompetence?**

Author: **Minjie Gao**, *Imperial College Business School*

Incompetent leaders are all around us. The notion of managerial incompetence has received some, but insufficient attention from organisational scholars with existing studies treat incompetence either as an inevitability, or as an outcome of senior managers' deliberate efforts to create that impression. Missing from these accounts is an explanation of how and when employees perceive leadership incompetence, or how employee perceptions might impact an organisation's functioning. In this research, we build on and extend prior work on employee narratives to specifically examine the narrative construction of leadership incompetence, addressing the research question: what is the process through which employee narratives shape their perceptions and understandings of incompetent leaders and lead to different outcomes? To do so, we used ethnographic methods to study employee narratives at an English hospital's critical care centre. Our study led to theoretical insights about employees, the perceived incompetence of their managers and the employees' consequent actions.

OMT: **The Interplay Between Network Brokerage and Sense of Power**

Author: **Lara Bertola**, *ESCP Business School*
Author: **Claudia D. Jonczyk**, *U. of Neuchâtel*

Studies demonstrate the importance of brokerage positions in organizations for motivation, promotions and career success. However, we still lack a thorough understanding of how psychological factors like an individual's sense of power can explain specific differences in brokerage activities and outcomes. In this paper, we seek to explain that the way an individual interprets their sense of power impacts how they broker, using either a tertius iungens orientation bringing individuals together, or a tertius gaudens orientation keeping individuals apart. Applying a processual view of brokerage, we show how these two central strategic orientations towards brokerage depend on an individual's perception of their ability to influence others. We find that actors with a low sense of power more often engage in tertius iungens brokerage while those with a high sense of power more often engage in tertius gaudens brokerage. Findings further demonstrate that gender and the level of seniority also shape the way that brokerage is enacted, with women more often engaging in tertius iungens brokerage, and senior employees more often referring to tertius gaudens brokerage.

OMT: **Ideology as an Analytical Lens in Organization and Management Studies**

Author: **GERASIMOS KOUVARAS**, *Cass Business School*

After having been set aside for years, the notion of ideology has recently regained space in academic debates. The concept has lived a turbulent life since it was coined in 1796. The conditions in which it was conceived and evolved were also reflected in its scholarly use. Through a systematic and critical review of the literature I reveal how the concept can be used as a viable analytical lens in organization and management studies. I briefly reconstruct a historical trajectory of the notion and outline how ideology is defined and approached in different fields of study. I then review how the concept has been used in organization and management studies, with applications at individual, organizational, and societal level, highlighting the underlying contrast between critical and non-critical views of the concept, and the impact of ideological processes in decision-making and organizational change. Based on this review, I propose a reconceptualization of the term, in terms of key properties and functions of ideology, to distinguish it more clearly from other similar or related concepts – such as values, culture, and logics, and I suggest implications for future research on ideological processes in and around organizations, pursued through a multi-level and multi-disciplinary approach.

Paper is Available to Meeting Registrants Only.

OMT: **Discourse and Discretion**

Author: **Marius Andersson**, *BI Norwegian Business School*

This conceptual paper employs a discursive perspective to investigate the determinants of managerial discretion, succinctly defined as latitude of managerial action. The paper argues that a number of key mechanisms for explaining managerial discretion identified in extant literature are fundamentally discursive in nature, and that a critical discourse analysis framework is therefore appropriate for advancing the understanding of the antecedents to discretion, and how they are interrelated. Accordingly, a discursive perspective is outlined in which managers' latitude of action is constituted through the production, dissemination, and consumption of texts.

Stigmatization at Work

OMT: **Racial Inequality in Employee Selections: The Effect of Employment and Diversity Practices**

Author: **Andrea Wessendorf**, *Cambridge Judge Business School*
Author: **Lionel Paolella**, *U. of Cambridge*

Organizational practices have been shown to contribute to the reproduction of social inequality, i.e., unequal opportunities and outcomes based on social group membership. However, little is known about how organizations can effectively help overcome patterns of social inequality. We address this gap by integrating insights from the social inequality and the diversity literatures. We examine the relationship between organizational employment and diversity practices and selection decisions, which are primary gatekeeping mechanisms that enable or restrict access to organizational positions. We hypothesize that minorities are more likely to be selected through internal promotion than external hiring decisions and in organizations that foster inter-group interaction through mentoring. Moreover, we hypothesize that diversity managers moderate the relationship between employment practice and selection decisions. We test our hypotheses on a data set of more than 41,000 partner selection decisions in US Law Firms between 2007 and 2017. We contribute to the literature on social inequality in organizations by showing how different organizational employment practices affect access to elite positions and to the diversity practices literature by better explaining which practices can effectively help mitigate the negative consequences of stereotyping on access to elite positions for minorities.

OMT: **Applicant Bias: Evidence From a Field Experiment**

Author: **Peter Younkin**, *U. of Oregon*
Author: **Kaisa E. Snellman**, *INSEAD*

Winner of the OMT Division Best Paper on Environmental and Social Practices Award

Do job seekers consider the race or gender of an employer when applying for a job? While we have extensive research on employer-side discrimination, we know less about employee-side biases and their consequences. In this study, we examine how the gender and race of the employer shapes the willingness of prospective employees to apply for a job. To do this, we need a setting where we can observe not only the applicants who decided to apply but also those who decided not to apply. We address this challenge by conducting a field experiment where we advertise real jobs for real applicants and vary the demographic composition of the employer. We find that applicants were no less likely to apply to jobs in companies with white female founders than white male founders. In contrast, they were significantly less likely to apply to Black founders and when they did apply, they requested ten percent higher salary. In addition, the more qualified a candidate the less likely they were to apply to Black founders. Our findings indicate that Black founders face significant bias from job applicants and, solely because of their race, attract fewer high-quality applicants and face higher salary demands. We conducted a second experiment to help distinguish between several potential explanations and find no evidence that applicants fear that the organization will underperform or that the founders are less qualified. By contrast, white applicants fear that they will not be good cultural fits to startups run by Black founders.

OMT: **Beyond Representation: Extending the Effectiveness of Diversity Approaches via Individuation**

Author: **James Mellody**, *MIT Sloan School of Management*
Author: **Ray Reagans**, *MIT Sloan School of Management*

Organizations face two main options for managing diversity: a “colorblind” approach that minimizes differences by valuing equality and a “multicultural” approach that highlights, and thereby values, differences. Emerging research emphasizes the importance of demographic representation in shaping the appeal of either approach to women and people of color. While this helps to make sense of why these groups respond better to different approaches, it introduces a tradeoff. Because these groups are usually represented at different levels within organizations, managers may have to choose between creating a culture that benefits women or people of color, but not both. Building on a connection between representation and a more general idea of individuation, this paper argues that individuation offers a more malleable contingency along which the effectiveness of a diversity approach varies. The benefit of a more malleable contingency is that it enables managers to foster alignment. We predict that this alignment will in turn enable a single diversity approach to work for all demographic groups. In an experiment, we find support for our predictions. First, we find that the effectiveness of a diversity approach varies with individuation. Second, we find that aligning different demographic groups on their level of individuation softens the tradeoff between choosing a “colorblind” or “multicultural” approach, such that all groups perform as well or better under one approach compared to the other.

OMT: **A Managerial Model of Stigma Buffering Through Target-Relational Identification**

Author: **Wesley Helms**, *Brock U.*

In this paper we theorize how managers can effectively reduce the experience of stigma for those groups that are its targets. We depart from prior theories of stigma reduction that have predominantly emphasized how managers work to influence stigmatizers’ perceptions of a targeted group’s attributes to reduce their negative evaluations by theorizing how managers effectively relate to targeted groups to “buffer” them from the experience of stigma during interactions. Drawing from Goffman’s (1963) observation that individuals relate to stigma in different ways, we propose a managerial model of stigma buffering through target-relational identification. We theorize that managers’ capacity to protect targets from the experience of stigmatization will depend upon their internalization of social and professional group identities that enable them to relate to the stigmatized, navigate interactions with those targets, and connect with them. Our theory building extends research on stigma reduction by moving beyond how managers work to normalize targeted groups in the eyes of stigmatizers to delineating how managers use their roles to relate to targets in order to limit stigma’s salience during targets’ interactions in organizations and communities.

Advances in Organizational Learning 
Organizational Learning

OMT: Individuals and Absorptive Capacity: A Supervenient Model

Author: **Antonio Garzon-Vico**, *U. College Dublin*
Author: **Dimitar Krastev**, *U. College Dublin*
Author: **Jan A. Rosier**, *U. College Dublin*

Despite the centrality of individuals in the discussion of absorptive capacity, limited attention has been paid to how organizations' absorptive capacity depends on that of individuals. To fill this void, we use supervenience—a concept borrowed from philosophy—and research on individual cognition to conceptualize the role of individuals in organizational absorptive capacity. In particular, we employ supervenience to explain how organizations absorb new knowledge through individual interactions. The model provides new insights into how individual-level cognition explains variance in absorptive capacity across organizations. Our approach helps to expand future empirical research in the field.

OMT: Distinct Momentum Strategies of Search and Learning for Organizational Development

Author: **Lin Shi**, *Huaqiao U.*
Author: **Runtian Jing**, *Shanghai Jiao Tong U.*

Literature of an organization's strategic development choices has revealed three types of behavioral tendencies — acceleration, deceleration, and a non-linear trend — in describing an organization's current choice relative to its prior action. However, how these behavioral tendencies are formed and further shape the organization's development process remains unclear. To disentangle this blackbox, we distinguish three types of managerial momentum and theorize how they respectively matter in the process of an organization's search and learning for fitness development. With simulations based on the NK model, we explore how the strategies associated with different momentum result in distinct search and learning behaviors and fitness performance of the organization. Our simulation results shed light on the comparative importance of these three managerial momentum types in different contingencies of structural interdependence. The study contributes to the literature of managerial momentum as it affects organizational development and provides important managerial implications.

 **OMT: On Learning Benefits of Homophily in Firms** 

Author: **Yongha Kwon**, *U. of Wisconsin, Madison*
Author: **Hart E. Posen**, *U. of Wisconsin, Madison*

Practitioners and scholars have often warned against the negative social consequences of homophily. We consider the implications of homophily for the efficacy of organizational learning. In doing so, we highlight conditions under which homophily may enhance, rather than undermine, a firm's ability to recombine and exploit individuals' diverse knowledge. Employing a computational model, we identify two distinct pathways via which homophily influences the interactions between individuals in the organization, which we call the segregating and integrating effects of homophily. While homophily segregates individuals into homophilous social clusters, it also integrates individuals across a firm's structural units (e.g., teams, divisions, departments). These two competing effects of homophily adjust the firm's formal structure to drive effective recombination and diffusion of knowledge within the firm. We discuss why this positive role of homophily is more likely to exist in firms than in other social contexts.

OMT: Voluntary Organizational Learning and Incentives to Be a Slow Learner

Author: **Minyoung Choi**, *Korea Advanced Institute of Science and Technology (KAIST)*
Author: **Ji-hyun Kim**, *Yonsei U.*
Author: **Jae-Suk Yang**, *Korea Advanced Institute of Science and Technology (KAIST)*

Studies on organizational learning emphasize the positive effect of slow learning in the long-run. We argue that this result hinges on the selectivity within the organization. Building on March's (1991) classic model of mutual learning, we design the computational model to study the variation of learning rate effect, based on the different learning conditions by involving selectivity of both organizational code and its members. Our results suggest that the positive effects of slow learning vary depending on the selectivity of each entity. Specifically, we find that benefit of slow learning materializes when organizational code learn selectively. We also test this model across time to address the incentive issues of individuals, regarding to being a slow learner. We find that both learning rate and selectivity of entities should be considered important to seek the optimal learning conditions.

Developing and Managing Routines *Developing & Managing Routines*

OMT: **New Routine Formation in Temporary Interorganizational Project**

Author: **Sunny Mosangzi Xu**, *U. of Copenhagen*
Author: **Paul R. Carlile**, *Boston U.*

Organizational routines have been a useful concept to understand how organizations work. In interorganizational settings, routines can largely influence the effectiveness of interfirm coordination and cooperation. New routines are often required to set up to facilitate the workflow between organizations and to balance competition and cooperation dynamics. Although we have a much better understanding of how routines are both for stability and change, we do not yet have a clear idea of how routines are born and established. In this paper, we chose to study the routine formation process and dynamics in a temporary interorganizational project, as establishing routine swiftly is vital for the survival and success of temporary organizations in an increasingly projectified society. Using an ethnographic approach, we investigated a Horizon 2020 innovation project and how its actors managed to establish the chicken sampling routine at the beginning of the project as fast as possible. In addition to the ostensive and performative aspect of routines, we identify a projective perspective that actors reflectively project and establish new routines in a layered process. We highlight the need to further explore when routines are born to better understand the lifecycle of organizational routines. In the end, we give practical suggestions to managers how the projective aspect of routines can be helpful in their day-to-day organizational life.

OMT: **Measuring Fluctuations of Complexity in Organizational Routines**

Author: **Bastian Wurm**, *WU Vienna U. of Economics and Business*
Author: **Thomas Grisold**, *U. of Liechtenstein*
Author: **Jan Mendling**, *WU Vienna U. of Economics and Business*
Author: **Jan Vom Brocke**, *U. of Liechtenstein*

Finalist for the OMT Division Best Paper Award

Organizational routines are generative and dynamic systems. It has been shown that routine complexity, conceptualized as the variety of ways in which a routine can be enacted from source to sink, can change in considerable and unanticipated ways over time. In this paper, we use digital trace data to investigate variations in complexity of two routines of two subsidiaries of a global manufacturing company. We measure complexity in two ways. Absolute complexity depicts the total number of available ways to enact the routine, whereas relative complexity measures the number of ways in relation to the number of enactments. Our research provides empirical evidence of how routine complexity develops in real-world organizational routines over time. We find steady fluctuations of complexity, and observe that the Covid-19 crisis had an impact on relative routine complexity. With this research, we extend prevailing conceptualizations of routine complexity to measure routines across different temporal scales and in relation to routine enactments.

OMT: **Towards a Diachronic Perspective on Coordinating Routines in Crisis: Enacting Temporal Elasticity**

Author: **Lisa Harborth**, *U. of Hamburg*
Author: **Daniel Geiger**, *U. of Hamburg*

This article examines how emergency response organizations coordinate routines in situations of long-lasting, enduring crises. To answer this question, we conducted a non-participant observation of the Ebola emergency response operation of the Uganda Red Cross Society, which aimed at preventing the spread of the Ebola Virus into the country and lasted for almost two years. We build on studies of routine dynamics and temporal coordination to understand how organizations coordinate multiple, highly interrelated routines under conditions of long-lasting crises that exhibit high degrees of temporal uncertainty. Our findings show that routine participants engaged in re-synchronizing, synchronizing and a-synchronizing activities in routine coordination. Hence, our study contributes to literature on coordinating routines in crisis in at least two ways: First, we contribute to research on coordinating in crisis by introducing the notion of a diachronic perspective on coordination, i.e. the simultaneous, elastic enactment of past, present and future. Second, we develop the idea of coordinating as a process of the dynamic interplay between re- and a-synchronization that is enacted in the present.

OMT: **Practical Intentionality: Injecting Analytical Theory of Agency Into Organizational Research**

Author: **Piotr Makowski**, *U. of Warsaw*

The concept of action is at the core of business-related research, yet relatively little has been written about how its theoretical foundations fit into (and improve) the specific domains of management and organizational studies. This article intends to fill that gap by showing how analytical theory of agency (ATA), a philosophical tradition overlooked by management scholarship, may advance action theorizing—and theory building—in various areas of the management field. To this end, it focuses on routines research, which still occupies a crucial place in organization and management theory, strategy and other areas of our research field. It elaborates the ideas of the spectrum of practical intentionality and kinds of action, which not only improve the precision of action-theoretical concepts and their explanatory benefits in organizational studies, routines research in particular, but also have the potential to balance the polarization between the practice and cognitive perspectives, currently the most popular approaches to action in business-related research. Using selected conceptual examples from routines research, the article outlines the developmental potential of ATA. It also discusses its limitations and prospects for future research.

Impression Management: Executives and Professionals *Impression Management*

OMT: When Behavior Does Not Conform: The Role of Status in Professionals' Image Conformity

Author: **Cleo Silvestri**, *Imperial College London*
Author: **Markus Perkmann**, *Imperial College London*
Author: **Klaus Weber**, *Northwestern U.*

Extant literature suggests the relationship between actors' status and their decision to publicly engage in nonconforming activities to take the form of an inverted U-shaped curve, so that middle-status actors are those more likely to conform with prescribed professional norms. In this scenario, actors' image is automatically constructed: those professionals who have engaged in a public nonconforming behavior will display a nonconforming professional image. However, often professionals engage in activities not observable to their audience, so that they can decide whether to withhold or disclose their engagement in nonconforming activities in the construction of their professional image. Drawing from the literature of impression management, we explore how status affects professionals' decision to construct a conforming professional image by withholding information of their engagement in nonconforming activities. We suggest a U-shaped relationship between status and professionals' image conformity. Furthermore, we find evidence for this results to be conditional upon the audience targeted: the more actors target an extraprofessional audience, the more such U-shaped curve will flip direction. We test and find support for our hypotheses on 420 faculty members employed at Imperial College London who have a university-based webpage and have signed private agreements with industry while employed at the university.

OMT: The Role of Gender Bias and Self-Presentation on Journalist-CEO Interactions

Author: **Margaret Ormiston**, *George Washington U.*
Author: **Elaine M. Wong**, *U. of California, Riverside*

Past research finds that journalists' perceptions guide what they convey to their audience resulting in biased reporting that shapes stakeholders' perceptions of CEOs. Less is understood about how these biases affect the questions journalists ask and, in turn, CEOs' responses to these implicit biases to shape their own narratives and others' perceptions. We build on past research on impression management and role congruity to understand how journalists and CEOs interact with one another. In a study of CEOs of Fortune 1000 firms we find that journalists approach interviews with more competence when interacting with female CEOs rather than with male CEOs, particularly when there are more female directors on the board. Female CEOs, in turn, present more competence than male CEOs particularly when there are more female directors on the board, and this relationship is mediated by journalist competence. Our work contributes to the larger body of work on gender, diversity and leadership in upper echelons by offering new insight into gender and leadership and contributes to the study of macro- and micro-processes in upper echelons.

OMT: Shrinking Horizons: The Cyclical Relationship Between CEO Change and Corporate Restructuring

Author: **Jiwook Jung**, *U. of Illinois at Urbana-Champaign*
Author: **Suyeon Kang**, *U. of Illinois at Urbana-Champaign*
Author: **Yin Lee**, *U. of Illinois at Urbana-Champaign*

While there is much theory and empirical research to suggest that newly appointed CEOs will undertake bold restructuring activities, there is not as much research about restructuring's consequences for CEOs and their careers. In this study, we demonstrate that there is a cyclical relationship between CEO change and restructuring, such that restructuring activities by newly appointed CEOs will undercut, instead of enhancing, their standing, resulting in their early departure. We test our argument with the case of asset divestiture and workforce downsizing. We present three related sets of findings using data on most listed U.S. companies between 2002 and 2018 as well as matched samples constructed using coarsened exact matching (CEM). First, firms are more likely to undertake both types of restructuring after CEO change. Second, firm performance declines in the subsequent years after both divestiture and downsizing. Lastly and as a result, restructuring activities increase the risk of CEO dismissal, especially when restructuring was initiated soon after CEO change. Taken together, our findings show how prompt response of new CEOs to market pressure can prompt their ouster, shortening their perceived time horizon within which they have to prove themselves and thereby making short-term-oriented CEO behavior more likely.

OMT: To Tweet or Not to Tweet: Examining CEO Impression Management on Twitter

Author: **Yangyang Zhang**, *Stevens Institute of Technology*
Author: **Ann Mooney Murphy**, *Stevens Institute of Technology*

CEOs engage in impression management to influence the perceptions of themselves and the firms they lead. The focus of past research on CEO impression management has been on the messages initiated by the CEO; scant attention has been paid to the role of the audience. In this paper, we consider the audience reactions to CEO impression management attempts on Twitter, a social media platform increasingly used by CEOs. We test our hypotheses with data gathered over a 10-year period from 102 CEOs on Twitter, which comprised of 9,120 CEO tweets, 19,531 user replies and 453 CEO replies. We found that CEOs who tweeted more frequently were perceived more favorably by the audience (social media users). However, those favorability benefits dissipated when CEO tweets were followed by more extensive subsequent discussions, both in the form of replies from the audience as well as replies from the CEOs themselves. These findings present promising evidence that target audiences have a critical influence on CEO impression management and shed light on the ways that upper echelons are starting to use social media in today's digital landscape. We discuss implications for future research and practice.

Considerations in CEO Recruitment *CEO Recruitment*

OMT: **See(k)ing a Strong Leader? How Evolutionary Biases Affect CEO Selection Decisions and the CEO/Board**

Author: **Krishnan Nair**, *Northwestern U.*
Author: **Edward J. Zajac**, *Northwestern U.*
Author: **Maryam Kouchaki**, *Northwestern Kellogg School of Management*

Corporate governance scholars have long been interested in understanding boards' selection of new CEOs and the ongoing Board/CEO relationship, with particular emphasis on how micro- and macro-social factors can shape (and bias) these critical decisions. We extend this research in behavioral corporate governance by advancing a complementary perspective rooted in evolutionary psychology, in which we identify potential biases in board-level decisions vis-à-vis perceptions of CEOs' physiological features, specifically formidability signals. We first suggest that these evolutionary biases will predict the likelihood of the board's selection of formidable CEOs, positing that situational conditions, by shifting the perceived cost/benefit trade-offs associated with CEO formidability, will lead boards to be more likely to hire formidable CEOs when threats from interfirm competition are salient, and less likely to hire such CEOs when threats from intrafirm misconduct are salient. We suggest that these evolutionary biases will also affect the board's structuring of the post-selection Board/CEO relationship. Specifically, where boards perceive a congruence between CEO formidability and the situation at hand, we expect a more collaborative Board/CEO relationship, and where boards perceive incongruence, we expect a more control-oriented Board/CEO relationship. We conclude by discussing the theoretical and empirical implications of our perspective for future governance research.

OMT: **CEO Intra-personal Experience Diversity and Strategic Change: Toward a Nuanced Understanding**

Author: **Philipp Mueller**, *U. of St. Gallen*
Author: **Winfried Ruigrok**, *U. of St. Gallen*
Author: **Dimitrios Georgakakis**, *U. of St. Gallen*

Are new CEOs with diverse career experience more likely to promote strategic change early after their appointment? We attempt to address this question by integrating seemingly opposing predictions in the managerial cognition literature. We argue that new CEOs with high and low levels of intra-personal experience diversity will promote higher strategic change early after taking charge – compared to those at relatively moderate levels. Analyzing 115 CEO successions, we find support for the theorized U-shaped relationship between intra-personal CEO experience diversity and strategic change. Furthermore, our results suggest that this relationship is influenced by post-CEO-succession TMT turnover. We contribute to the literature on strategic change by adding a more nuanced perspective to the emerging research on new CEO career experience diversity, and its effects on corporate strategy.

OMT: **Examining the Role of Homophily in the C-Suite for Strategic Decision-Making**

Author: **Johanna Alfs**, *WWU Muenster*

How firms differentiate their products from competitors is a fundamental strategic decision for the performance of a firm. From the broader upper echelons perspective, a firm's strategy is shaped by the Top Management Team (TMT), consisting of the Chief Executive Officer (CEO) and his top executives. The Chief Marketing Officer (CMO) is usually the driver of differentiation. We need to scrutinize CEO-CMO duos in terms of their demographics and experience to present the underlying drivers out of which differentiation emerges. According to homophily theory, executives prefer to work with others, which are similar to them. Therefore, we set out to examine differentiation decisions of homogenous CEO-CMO duos in terms of demographics and experience using a cross-industry panel of U.S. S&P 500 firms over 12 years. We show evidence, that homogenous duos, which are highly educated, marketing experienced or male positively influence differentiation. On the opposite duos, in which executives have limited firm-specific experience or less experience because of their age negatively influence differentiation. Based on this evidence we contribute to theory by stressing out the need to combine upper echelons and homophily theory to not neglect significant factors for decision making in TMTs. Furthermore, we contribute to practice by presenting so far unconsidered factors in recruiting and appointing CEOs as well as CMOs.

OMT: **Wrinkles of Change: CEO Succession and the Reproduction of Age Profiles in the Executive Suite**

Author: **Mariano L.M. Heyden**, *Monash Business School*
Author: **Heidi Wechtler**, *U. of Newcastle*
Author: **Sebastiaan Van Doorn**, *U. of Western Australia, UWA Business School*
Author: **Marko Reimer**, *WHU - Otto Beisheim School of Management*

We examine the reproduction of age profiles in the executive suite across CEO succession events. Counter to the trend of the general workforce becoming more age diverse, age profiles in the executive suite seem to become more homogenous and CEOs appear to be increasingly older at appointment. This is despite increasing frequency of CEO succession events, which represent opportunities for demographic change of top management to align with changing environments. Drawing on insights from homosocial reproduction theory, upper echelons theory, and executive succession research, we argue that the age profile of executives may be actually reproduced to reduce social uncertainty around CEO succession events, and that over time, age homophily is particularly reinforced under new outsider CEOs. Exploiting CEO turnover as an empirical identification strategy, we construct a unique sample of 391 successions in 297 S&P500 companies between 2000 and 2020 and apply a hierarchical linear modelling specification to test hypotheses. We find support for the overall notion that some age profiles are reproduced across CEO succession events. Notably, the overall age profile shifts upwards as CEOs are increasingly older at appointment, a tendency that is reinforced by outsider CEO successors. We discuss implications for age homophily in executive ranks, how outsider CEOs reinforce demographic similarity, and age-identity of corporate leadership roles.

Socio-economic discrimination based on class, race, and gender has been a subject of exploration for scholars of organization studies for many years (Amis, Mair & Munir, 2020; Bapuji, Ertug & Shaw, 2020). However, 'caste', a means of exploitation, subjugation and discrimination for centuries within and beyond the Indian subcontinent (Bapuji & Chrispal, 2020), has been overlooked and underexamined almost entirely in management research. In contrast, research in other disciplines has provided substantial evidence of both the prevalence and scale of caste-based discrimination, affecting individuals' social status and interactions as well as occupational choices and positioning in organizational life (Thorat & Joshi, 2015; Siddiqui, 2011). Caste is different from other forms of discrimination like race and class. For example, while discrimination based on race is embodied in colour and ethnic-origin, and discrimination based on class emerges from occupational and economic status, caste is deeply rooted in religious scriptures, traditions, and rituals, providing sacred justification for seeing and treating members of lower caste as 'untouchables', 'impure' and 'lesser than' (Chrispal, Bapuji & Zietsma, 2020). Overtime, caste has become a taken for granted institution restricting social and economic mobility of low-caste individuals. Given the perennial and widespread impact of caste, it is important to examine (a) 'caste' as an institution in itself exemplifying systemic power structures, social hierarchies, and suppression of agency of the lower caste individuals; and (b) practices that individuals use to reproduce, maintain or resist caste-based discrimination, which we refer to as 'caste work'. The series of papers presented in the symposium enables disentangling the concept of 'caste work' and its uniqueness, while also shedding light on the institution of caste. Collectively, these papers build toward a model of caste work that reifies a distinction between in-groups – the unsullied, who are deemed desirable and reliable by a particular community – and out-groups – the stigmatized, who are considered tainted, undesirable, and unreliable interaction partners. All of this works together in that low caste actors are the product of sanctified social evaluation by upper-caste actors, which creates and defends social structures. There are also stories of resistance by lower caste actors (e.g., Jagannathan, Bawa & Rai, 2020; Vikas, Varman & Belk, 2015). Research on caste work in organizations is only beginning to emerge. No systematic unpacking of distinct practices performed to maintain, reproduce or resist the institution of caste and its impact on inequalities at individual, organizational and societal levels, has yet emerged (Bapuji et al., 2020a; Chrispal et al., 2020; Haq, Klarsfeld, Komau & Ngunjiri, 2020). The symposium is put together to bring emerging scholarship that attempts to address this gap.

Participant: **Jessica Rae Methot**, *Rutgers U., School of Management and Labor Relations*
Participant: **Yong H. Kim**, *Texas A&M U.*

Social network analysis is a field of study that focuses on social relations among a set of actors—people, teams, and organizations—rather than focus on the attributes of the actors. Network researchers have developed a set of distinctive theoretical perspectives and methodological techniques for collecting data, statistical analysis, and visual representation. This PDW's goals are to: • Introduce members of the Academy of Management to social network theory and analysis • Discuss both micro and macro management research based in social network theory • Introduce participants to UCINET and other social network analysis tools • Guide participants on how to learn more about social network analysis

The purpose of this PDW is to create an ongoing forum for Academy members interested in teaching social networks to undergraduate, MBA, and executive audiences to share and learn practical insights on how to prepare and deliver individual sessions or entire courses on the topic. The PDW will be organized into two modules – substantive topics and roundtable discussions to take place virtually over Slack – that are designed to assist participants in transforming research on social networks into effective educational experiences. Whereas the substantive topics module will focus on how experienced faculty have leveraged network concepts to develop and deliver thematic courses, the roundtable module will focus on the issues, challenges, and questions that the participants have experienced or anticipate with teaching social network modules or courses.

Circular economy: The way forward?

ONE: Waste picking as social provisioning: constructing a socially regenerative circular economy

Author: **Melanie Valencia**, *KU Leuven*
Author: **María Fernanda Soliz**, *U. Andina Simón Bolívar*
Author: **Milena Alía Yezpez**, *U. Andina Simón Bolívar*

There is growing pressure to transition to a new economic model from ecological and feminist economics perspectives. Implementing a circular economy in Latin America can be an opportunity to include recyclers and other informal workers in the economy. The sensemaking of becoming a female waste reclaimer leader and how recyclers can fit in this model is explored through in-depth interviews with ten leaders from Colombia and Ecuador. The modifying effect of becoming part of an association is rooted in social provisioning communities formed to exchange material, training and create social safety nets. Through their testimonies, recyclers' demands to be recognized, access waste and be remunerated for their service, are shown to be equivalent to the recognition of care work. A framework that combines the 9Rs of the circular economy with the demands for recyclers' dignity, care-work counting, and environmental justice is presented to promote a socially restorative and regenerative circular economy.

Paper is Available to Meeting Registrants Only.

ONE: Business and Natural Environment in the Anthropocene: is the Circular Economy the Way forward?

Author: **Roberta De Angelis**, *Cardiff Business School*

As humanity has entered the Anthropocene - a new geological epoch marked by an unprecedented human impact upon planet Earth - questions arise about the relevance of extant management research in guiding environmentally sustainable corporate outcomes. Management studies have rarely looked beyond the boundaries of the social sciences disciplines to theorise about sustainable development. Yet for the latter to be achieved, more transdisciplinary efforts are required. This article draws on circular economy principles to suggest some constructs to build a theory of sustainability management research in the Anthropocene. By enlightening the correlation existing between circular economy principles and functional principles in nature, it also contributes to advance the conceptual foundations of the circular economy, which remain poorly investigated.

Paper is NOT Available. Please contact the author(s).

ONE: Framing Circular Economy: A Problematizing Review of the Assumptions

Author: **Tulin Dzhengiz**, *Aalto U. School of Business*
Author: **Elizabeth Miller**, *Aalto U. School of Business*
Author: **Jukka-Pekka Ovaska**, *Aalto U. School of Business*
Author: **Samuli Patala**, *Aalto U. School of Business*

This paper reviews the diagnostic, motivational and prognostic circular economy framing of business and management scholars and makes the assumptions embedded in their framing explicit benefiting from a problematizing review. The review demonstrates various in-house assumptions about the circular economy with emphasis business models, business case, circular economy-corporate sustainability relationship, root metaphor assumptions about circularity, industrial relationships resembling that of biological metabolisms, and waste, finally ideological assumptions of natural capitalism that guide scholarly thinking about growth, profit maximization, consumption, ownership. The paper discusses these assumptions' implications for the growing circular economy literature within business and management and opens this domain with new conversations drawing on ecological economics and industrial ecology.

Paper is Available to Meeting Registrants Only.

ONE: Circular business models: Antecedents, Moderators and Outcomes

Author: **Felicitas Pietrulla**, *HSG U. of St. Gallen*
Author: **Karolin Frankenberger**, *U. of St. Gallen*

Over the last years, the concept of circular business models, defined as firm activities to create and capture value in a circular manner, i.e., contributing to the material loop by, e.g., extending or continuously reusing product materials, has received increasing attention in management research. The emerging literature, however, lacks theoretical underpinning and empirical findings are not cumulative. Therefore, derived from the review of related domains such as Corporate Social Responsibility, Business Model Innovation, Ecosystem, and Circular Economy, this article analyzes existing and related research in much detail and presents a comprehensive research model on antecedents, moderators, and outcomes of circular business models. Gaps within and across the respective research streams are revealed, and relevant avenues for future research are suggested.

Family firms, formal and informal institutions, and environmental action

ONE: Do Family Firms Pollute Less? – Was an Incomplete Question

Author: **Serghei Musaji**, *U. of New Brunswick*

While prior research suggests that family firms pollute less, the key explanation we have is the socioemotional wealth perspective, which suggests that family firms are more careful with their toxic emissions due to subjectively higher reputational costs that may follow a harm discovery. At the same time, it is relevant to note that not all types of environmental performance are regulated or even monitored to turn on the loss aversion rationale. An example is the energy efficiency context where a common socioemotional wisdom would not give any preference to family-owned firms. Nevertheless, studying the electricity consumption of 1,683 Canadian firms over a 5-year period between 2012 and 2016, we find that family-managed firms still consume less energy to attain the same level of sales (holding industry and other resource consumption factors constant). This questions whether the reputational concerns of the owners is a key reason to a lower pollution in family firms and also rejects a common assumption that doing so has an efficiency cost. We provide an alternative rationale.

Paper is Available to Meeting Registrants Only.

ONE: Divergent Family Effects on Green Practices

Author: **Ivan Miroshnychenko**, *Free U. Bozen, Bolzano*

Author: **Danny Miller**, *HEC Montreal*

Author: **Isabelle Le Breton-Miller**, *HEC Montreal*

We examine pollution prevention, green supply chain management, and green product development practices of family and nonfamily firms from 29 countries and 19 industrial sectors over an 8-year period. We argue that due to the emotional connections between family members and their firms, the personal discretion of those family members, and the secrecy afforded some family firms, will cause them to exhibit either extremely positive or extremely negative approaches to their natural environments, depending on whether they adopt restricted family first versus extended shareholder priorities for their businesses. We confirm such differences, the magnitude of which depends on the type of firm, the industrial context, the type of economy, and the stages of the business cycle. These findings have implications for family firm and environmental strategy.

Paper is NOT Available. Please contact the author(s).

ONE: Do formal and informal institutions matter for firm-level strategic environmental actions?

Author: **Yousef Eiadat**, *U. College Dublin*

We developed an overarching multi-level mediation model using 199 responses from 53 companies from the industrial sector in Jordan to examine (1) the mediation effect of firm-level environmental climate on the relationship between formal regulatory institutions and firm-level strategic environmental actions, and (2) the role that informal institutions conveyed via political, normative, and business connections plays on the environment-related cognitions of top managers. At the 'within' level, our results indicate that top managers with strong political connections develop negative environment-related cognitions while those with strong normative and business connections develop positive environment-related cognitions. At the firm-level, our results reveal that firm-level environmental climate – as an aggregated measure of the 'within' level environmental cognitions of top managers – fully mediates the relationship between formal regulatory institutions and firm-level strategic environmental actions. This study demonstrates how multilevel research is used to enrich understanding of firm-level strategic environmental actions, with implications beyond Jordan.

Sustainability Determinants

ONE: **The Determinants of Sustainable Management in Organizations**

Author: **Logan Crace**, *Alberta School of Business*
Author: **Joel Gehman**, *U. of Alberta*

Why is there such great heterogeneity in the adoption of sustainable management practices by firms? Drawing on previous research in the locus of performance literature, we use variance partitioning methods to analyze the factors which most contribute to explaining the variation in Environment, Social, and Governance (ESG) performance. Our findings show that firm effects and CEO effects are strong determinants in all circumstances, but disaggregation of the multidimensional ESG construct shifts the saliency of the factors significantly. Our research contributes to understanding the complexities of the antecedents of sustainable management by organizations.

ONE: **Do honesty, SDO, and environmental concerns predict priorities of sustainable development?**

Author: **Frans Gerard Stel**, *U. of Twente*
Author: **Yuko Hayashi**, *yamaguchi U.*
Author: **Angela Ka-ye Leung**, *Singapore Management U.*

In 2015, the United Nations defined Sustainable Development Goals (SDGs). Whereas the SDGs have a global scope, the motivation to achieve these goals may depend on local priorities. We examined whether priorities of SDGs are influenced by an altruistic personality trait (Hon-esty-Humility or HH), social attitude (Social Dominance Orientation or SDO) and environmental concerns. We categorized sustainable development in three themes: satisfying human needs, ensuring social equity, and respecting environmental limits. Results from a large student sample (N=1976, 38 nationalities), made clear that globally climate change is prioritized. Two other issues relating to environmental limits (availability of resources, waste and pollution) scored globally low. Three items of satisfying human needs scored high (availability of food, energy, and water), while population-related issues were considered of low priority. Regarding ensuring social equity issues, poverty and human rights, usually got a medium priority, while religion a low priority. Results showed that HH had positive direct effects on the priorities of the SDGs of human rights and poverty (ensuring social equity) and negative effects on the SDG priorities of food, waste and religion. In addition, environmental concerns mediated the relationships between HH and the SDGs of food, energy, climate change, resources, waste, human rights and religion. SDO had positive direct effects on the priorities of the SDGs of energy and population and negative effects on the SDG priority of water (all three within the category of satisfying human needs). In addition, environmental concerns mediated the relationships between SDO and the SDGs of food, energy, water climate change waste and human rights. Our research refines previous research concerning the relationship between HH, SDO, and ecological behavior: only in case people with high HH have environmental concerns, they tend to respect the environmental limits of climate change, waste and resources. People with a SDO prioritize satisfying human needs over respecting environmental limits and ensuring social equity. SDO reduces a pro-environmentalist attitude but when people with high SDO have environmental concerns, they tend to respect the environmental limits of climate change and waste. On average in our research, issues concerning resources, waste and pollution were prioritized relatively low. More attention should be given to sustainable challenges regarding these topics. This paper increases the understanding of motivation to implement sustainable businesses on a global scale.

ONE: **Transitioning to sustainability by rejuvenating industries**

Author: **Guillaume Carton**, *EMLYON Business School*
Author: **Julia Parigot**, *Institut Supérieur de Gestion*

This article aims to understand how industries transition to sustainability by taking the case of natural resource depletion. For this purpose, by building on the literature on technological regimes and industry emergence, we study the process through which entrepreneurs have shifted the technology used within three given industries for sustainable purposes. We refer to this process as industry rejuvenation, which we define as the process through which sustainable entrepreneurs construct a new resource combination and then establish it by concomitantly reshaping the value of resources and reconstructing the industry. In doing so, this article offers an industrial perspective on grand challenges and introduces the concept of industry rejuvenation.

ONE: **Home-country determinants for the implementation of environmental management standards**

Author: **Pablo Arocena**, *U. Publica de Navarra*
Author: **Raquel Orcos**, *U. de La Rioja*
Author: **Ferdous Zouaghi**, *U. of Navarra*

This paper examines the scope of environmental management standards implementation within multinational enterprises (MNEs), measured by the percentage of sites where an MNE implement ISO 14001. It is argued that home-country features, namely, the pollution level, an emerging economic development, and public sector corruption largely determine the range of ISO 14001 implementation. Our contention is that these three country features increase the chance of MNEs experience the liability of origin, enhancing the appealing that they perceived from the signaling value of ISO 14001. We test our hypotheses on a multi-sectorial sample of 910 MNEs during the period 2004-2018. The findings show that MNEs from pollutant countries, emerging countries and countries with public sector corruption tend to certify a higher percentage of their sites with ISO 14001.

Ecological Sensemaking

ONE: Ecological sensemaking and technology in a natural resource industry: the New Zealand dairy industry  

Author: **Daniel Geoffrey Tisch**, *U. of Auckland*
Author: **Gail Whiteman**, *U. of Exeter Business School*
Author: **Jeremy Galbreath**, *Curtin U. of Technology*

Ecological sensemaking explains how individuals work with ecological material. In what ways can ecological sensemaking serve as an organising concept in natural resource industries? We adopted a sociomaterial view to examine the extent to which ecological material and technology in a natural resource industry were present in the enactment, selection and retention processes of actors. Using a single representative case with analytical refinement, we selected an industry with archival reports, experts and practitioners from which we could purposefully sample for interviewing. We found four organisational forms of sensemaking, one of which was ecocentric. We discuss the implications for the ecological sensemaking construct, state limitations and offer ways to study ecological sensemaking in other natural resource industries.

ONE: The Quantum Gap in Ecological Sensemaking: Why a Complementary Approach is Needed

Author: **Jason Good**, *Amsterdam school of International Business*

This theoretical paper elaborates how sensemaking in general, and ecological sensemaking in particular, adopts a classic Newtonian approach to knowledge processes, much as classical physics does. In this approach, interpretive processes involve separate and determinate entities that inter-act with one another, yet those inter-actions, and their outcomes, are determined by the properties of the preexisting entities (in other words, they exhibit 'object supervenience'). This sort of knowledge process is often structured, as Karen Barad has elaborated, as a 'representational tripartite apparatus,' and it is at the heart of our current understanding of ecological sensemaking. I then argue that this sort of apparatus, while well-equipped to make sense of uncertainty, is not capable of dealing with indeterminacy. I use a case example from an industrial ecological context (commercial fishing) to make this point, as well as to argue why a quantum mechanical ecological sensemaking apparatus is needed. I then offer recommendations for how scholars can take a quantum approach to ecological sensemaking.

ONE: Ecosystems in Places & Partnerships as Herding Spaces  

Author: **Tulin Dzhengiz**, *Aalto U. School of Business*
Author: **Samuli Patala**, *Aalto U. School of Business*

There has been a growing interest in explaining the role of place in different organisational settings. Yet, there is a lack of understanding of how a place can shape inter-organisational relations in partnerships and ecosystems. In this paper, we conceptually develop dynamic and recursive relationships between innovation ecosystems, cross-sector partnerships as herding spaces, and places that include the natural and regional environments. We demonstrate these dynamic relationships in the illustrative case of an emerging circular textile ecosystem in Southwest Finland, which was developed and nurtured by a cross-sector partnership. Drawing on our literature review and showcasing this illustrative case, we introduce a conceptual model and discuss how place can play an enabling or disabling role in the development of sustainable innovation ecosystems, and that the recursive relationships can be best understood with the creation of vicious and virtuous cycles. We emphasise the role of path dependence in the relationship between ecosystems and the places they are embedded, and in doing so we bridge the gap between innovation ecosystems and natural and regional environments. We position nature and regions as platial scales and highlight the crucial role of cross-sector partnerships as herding spaces to develop and nurture the sustainable innovation ecosystems that help the regeneration of places.

ONE: Life of Artefacts: an ecological Perspective. The Case of Living Root Bridges.

Author: **Costanza Sartoris**, *U. Ca' Foscari of Venice - Dept. of Management*
Author: **Warglien Massimo**, -

The dualism between natural and artificial is a fundamental, often implicit assumption over which most design activities rest in contemporary society. It shapes both practices and theories of how artefacts come into being. In this paper, we challenge such assumptions and suggest an alternative view based on the notion of artefactualness, a property defining a continuum of degrees of human vs non-human agency, and material synthesis. We define a framework in which humans and other non-human agents interact over different time and dimensional scales to shape the artefact's life story. Relying on the theory of ecological perception and the notion of umwelt, the framework provides a causal framework of "extended stigmery", where agents dwelling different umwelts interweave their actions while shaping the artefact. We illustrate this framework by analyzing the development process of artefacts that defy our conventional catalog of the world: living root bridges from the War tribal area in Meghalaya, India. Living root bridges are relational entities that help to rethink the role of human imagination and design into the more complex ecology of an artefact's life and to move from designing things to designing with things.

Climate Change and Low Carbon Futures

ONE: **A Multilevel Model of Organizational Adaptation to Climate Change**

Author: **Renata Peregrino De Brito**, *Pontificia U. Catolica de Rio de Janeiro*

Climate change is a much neglected and urgent matter for society. Over and above the challenge of reducing greenhouse gas emissions (GHG), society and organizations need to adapt to the impacts of climate change. This article presents a systematic review of climate adaptation literature and the analysis of the factors that influence the strategic decisions of organizations. The findings are organized in a multilevel model in which the factors are examined as to their individual, organizational and institutional contextual level. The model identifies risk perception, stakeholder pressure and partnerships, as well as public adaptation and organizational capabilities as being key contingent factors in the climate adaptation of organizations. Public policies and social demographic aspects, values and beliefs, individual experience and cognitive capacity are also important antecedents in the adaptation process. This study contributes to the literature by describing a model of climate adaptation capabilities and explaining the causal relationship between the constructs.

ONE: **A Climate Resource Approach to Weather and Climate Change**

Author: **Christopher Craig**, *Murray State U.*

Author: **Siyao Ma**, *U. of Arkansas*

Author: **Nicholas Poggioli**, *U. of Michigan*

Climate resources have profound effects on organizational performance, though are unutilized in the resource-based theory (RBT; Barney, 1991). Climate resources include meteorological variables and associated timescales: weather (days to weeks), climatic variability (months to years), and climate change (decades). The management discipline views weather and climatic conditions through the lens of climate change, predominantly using threat framings when describing the phenomenon. Rather than extend the threat framing, here we draw from tourism climatology and critical communication perspectives to theoretically and empirically establish climate resources within the RBT as potential contributors to organization performance and competitive advantage. To do so, we longitudinally and spatially explore the relationships climate resources share with organizational performance operationalized as tent and RV camping occupancy at 37 United States National Parks from 1984 to 2019. We demonstrate that the redistribution of climate resources as a process of climate change improved optimal camping conditions at the vast majority of parks with the exception of lower latitudes (e.g., Florida). Using regression and timeseries forecasting we also empirically demonstrate (1) climate resources are positively correlated with organizational performance and (2) forecasts with climate resources as a regressor are up to 22.74% more predictive of organizational performance (i.e., occupancy). Our results demonstrate that climate resource value and rareness are dependent on time and space and suggest that imitability affects the potential for climate resources to contribute to competitive advantage. Further, findings provide support for the inclusion of technical, scientific-based conceptions and applications of climate resources within management theory and practice.

ONE: **Visualization of Three Tourist Attractions in Three Minority Locations: Low-Carbon Transitions**

Author: **Fang Hu**, *Business School of Guangxi U.*

Author: **Thomas Li-Ping Tang**, *Middle Tennessee State U.*

Author: **Mingming Hu**, *Guangxi U.*

Author: **Caihong Su**, *South China U. of Technology*

Author: **David Lee Cook**, *Toubl Services, LLC*

The presence of millions of tourists and the absence of scientific evidence exacerbate the silence of alarming destruction of resources at China's minority tourist attractions. These destructive forces motivate us to develop a quantitative and assessment model for the low-carbon transition across time for the tourism industry. We apply the DPSIR framework to construct the measurement indices, the Cloud Analytic Hierarchy Process (CAHP) to obtain indicator weights, and the Cloud Model for transforming linguistic information to potential indicators. We collected data from multiple sources with multiple methods and evaluated the low-carbon tourism across three periods (2010, 2012, and 2017) at three Dong culture minority attractions in three provinces of China. Among tourist attractions, Liping and Huangdu have upgraded from fair ratings in 2010 and 2012 to good ratings in 2017, yet Chengyang has not yet changed during the same periods. We lay the foundation for measuring and visualizing the low-carbon transition, or the lack thereof, at three tourist attractions in minority locations over time. Our visualization of low-carbon transition helps policy-makers integrate theory and practice for a niche market, nudge managers and tourists to promote sustainable tourism in other sites globally and offer practical implications to the field of organizations and the natural environment

Public Service Contracting and Procurement

PNP: Counterfactual assessment methods and outcome-based contracts: A formal model approach

Author: **Sergio Giovanetti Lazzarini**, *Inspere Institute of Education and Research*
Author: **Sandro Cabral**, *Inspere Institute of Education and Research*
Author: **Sergio Firpo**, *Inspere Institute of Education and Research*
Author: **Thomaz Teodorovicz**, *Harvard U.*

Despite the increasing use of outcome-based contracts to incentivize effective private and nonprofit delivery of public services, imperfect assessment may trigger payments for outcomes that were not caused by the service providers. A possibility to mitigate this problem is linking these payments with measured outcomes that adjust for counterfactual assessment of what would have happened without the intervention, as in the case of randomized controlled trials and other impact evaluation methods comparing the outcomes of treated and control groups. However, few outcome-based contracts adopt payment rules based on counterfactual assessment techniques. A potential explanation emerging from the extant literature is that these techniques are costly, time-consuming, and complex. In this paper, we move beyond this explanation through a formal model that integrates the literatures of incentives and policy evaluation. We show that counterfactual assessment contracts may undermine effort when the number of treated subjects is small and there is limited investment per treated subject. Our formal model predicts that increased experience of the contract sponsors may reduce the adoption of counterfactual assessment. Evidence from computer simulation and from a worldwide database of outcome-based contracts are aligned with our predictions and suggest that counterfactual assessment contracts are not always optimal to reward private operators of public services. By identifying the boundary conditions under which counterfactual assessment methods are used in incentive contracts in the public sector, this work informs the literatures of outcome-based contracts and performance-based systems and highlights the importance of using formal models in developing theory on novel public administration phenomena

PNP: Terminating Contracts for Convenience: Agency, Administrative Discretion, and Mutual Dependence

Author: **Benjamin M. Brunjes**, *U. of Washington*
Author: **Lachezar Angelov**, *The Evergreen State College*

In the United States, governments retain the unilateral right to terminate contracts for convenience. This allows public organizations to end agreements with vendors when the government determines that it is in its best interest. The ability to terminate for convenience grants government agencies broad discretion over how to conclude contracts. For contracting officials, the decision to terminate for convenience involves a complex calculus about the relative importance of transaction costs, service quality, and vendor relationships. Contractors may be less interested in bidding on government contracts or may charge higher rates, knowing that their contract could be terminated any time. Using the lenses of administrative discretion and agency theory, this paper examines the delicate balance that administrators must navigate when assessing governmental priorities, individual motivations, and the pressures from contractor relationships. Analyzing data from the Federal Procurement Data System – Next Generation (FPDS-NG) on terminated federal professional service contracts from 2006 to 2018, we find that administrative discretion, contract management capacity, relationships, and political pressures influence how managers use terminations for convenience. When granted greater discretion, public managers are more likely to terminate contracts for cause or default, not for convenience, suggesting that professional standards may influence administrative decision-making.

PNP: Bringing Social Procurement into Public Management Research

Author: **Fatima Hafsa**, *Arizona State U.*
Author: **Nicole Darnall**, *Arizona State U.*
Author: **Stuart Bretschneider**, *Arizona State U.*

As the largest buyers in the economy, government have enormous purchasing power. Public procurement, therefore, can be leveraged for social outcomes, such as helping marginalized communities, and reducing negative environmental impacts. However, as yet, there is little understanding about the extent of social procurement research, how it has evolved, and how public management scholarship has assessed it. We provide a framework for organizing research around social public procurement. We conduct a systematic review of research on social public procurement to understand the state of knowledge and identify critical gaps and research opportunities for public managers and public management scholars.

Paper is Available to Meeting Registrants Only.

PNP: Contingent Professionalism of Third-Party Professionals in Public Service Delivery

Author: **Ruoting ZHENG**, *Chinese U. of Hong Kong*
Author: **Ning Liu**, *City U. of Hong Kong*

Procuring the services of third-party professionals via government contracting is vital to high-quality public service delivery. Yet, third-party professionals may compromise their professionalism and do not offer a desired level of quality service to the public when they depend on the powerful client—the state—for business and resources. This study tests and expands this powerful-client-driven explanation by focusing on the quality of service given by private lawyers to citizens through a government-initiated online public legal assistance program. We compiled a novel dataset containing 2,228 legal counseling cases with both citizens' inquiries and lawyers' responses taken from the public legal service e-platform of Guangdong, China, in 2016. We found that although law firms' dependence on the state (indicated by seats held in legislative and consultative institutions) sways the quality of legal information provided by individual lawyers to citizens, such negative effect disappears when the lawyer is female or highly educated, or when citizens perceive the lawyer as a legal expert and explicitly address him or her as such. Together, our findings underscore the importance of understanding interdependence among multiple actors in shaping third-party professionalism in dual-client settings and raise important implications for professionals engaged in public service delivery.

Diversity and Inclusion in Public and Nonprofit Organizations

PNP: Flipping the Coin: A SLR on Causes and Consequences of Workforce Homogeneity in the Public Sector

Author: **Iris Seidemann**, *U. of Hamburg*
Author: **Kristina Sabrina Weißmüller**, *U. of Bern*

Enhancing workforce diversity has become a key objective of personnel politics in the public sector worldwide while its mirror concept – workforce homogeneity – and its causes and consequences for public personnel management has received much less scientific attention. Based on a systematic literature review, we address this theoretical blind spot by identifying three dominant clusters of causes and four dominant clusters of consequences of public sector workforce homogeneity. By synthesizing how self-selection, personnel policies, and socialization create often implicit yet persistent practices that lead to workforce homogeneity, this article highlights areas of theoretical, methodological, and empirical focus. Linking these causes with both intended and unintended consequences of workforce homogeneity clarifies an important but neglected theoretical concept for public personnel management and identifies broad avenues for future research.

PNP: Personal Names and Human Resource Outcomes

Author: **Xiaoyu Huang**, *California State U. San Bernardino*
Author: **Lihua Zhang**, *Renmin U. of China*
Author: **G. Zachary Wilhoit**, *Ethnic Technologies*

Using a sample of approximately 80 percent of California public sector employees (6,384,292 person-year observations) working in 329 occupations in 582 organizations over the 2011-2018 period, this paper proposed and found empirical support for three distinct name-related effects: (1) gender and racial signaling effect, (2) name similarity effect, and (3) name-meaning effect. First, using a proprietary analytical algorithm, we found that the name-inferred gender pay gap is approximately 3.3 percent, and the black-white pay gap is about 5.3 percent in California public sector. People with white-sounding names are consistently more likely to hold managerial or executive positions than their counterparts with minority-sounding names. Second, supporting implicit egotism theory, we found a significant name similarity effect whereby the popularities of first and last names within organizations are positively related to pay and managerial attainment. Third, we introduced McClelland's implicit motivation theory as a theoretical framework for analyzing the meaning of first names. Our analysis of the top 5639 most popular first names in the United States shows that people with Power first names (i.e., first names with meaning connotating power) receive an average of 2.5 percent more in total compensation and are more likely to hold managerial or executive positions.

Paper is Available to Meeting Registrants Only.

PNP: Diversity Climate and Discrimination: The Moderating Roles of Social Identity and Team Composition

Author: **Zhongnan Jiang**, *Shanghai U. of Finance and Economics*

Many scholars have highlighted the importance of workforce diversity in advancing public organizations' legitimacy and responsiveness. During the past several decades, diversity recruitment efforts have considerably increased the ratios of women and ethnic minorities in the public sector. However, an increased ratio of minority employees may increase between-subgroup tension and discrimination within an organization, which has negative implications for employee work attitudes and well-being. This research attempts to understand the role of a positive diversity climate in reducing discrimination based on evidence from the law enforcement sector. Specially, this research examines the relationship between diversity climate and experienced discrimination at the team- and individual-level, using population data collected through multiple surveys from a law enforcement state agency. Results provide support for the relationship between workgroup diversity climate and group-level reports of discrimination, which is contingent on gender composition. Specifically, workgroup diversity climate has a more substantial impact on group-level reports of discrimination in a unit of a high ratio of women. Also, workgroup diversity climate has a negative association with individual reports of discrimination for women and nonwhite employees but not for men or white employees.

PNP: Structuring Equality: How Hiring Managers' Reliance on Structured Interviews Shape Hiring Outcomes

Author: **Jeraul Mackey**, *Harvard U.*

How do employers' tight coupling of fair-minded hiring policies and fair screening practices shape selection outcomes? Based on a 12-month ethnographic study of hiring entry-level roles at two national education nonprofits, this study identifies two consequences of using a fair candidate assessment tool – structured job interviews. Drawing on cultural matching and coupling theory, I show that constraining screener action may contribute to hiring inequality in unanticipated ways. Organizations gain legitimacy by implementing structured job interviews. Staff perceive the screening process as fair since it limits discretion and treats candidates uniformly. Yet, by constraining action, screeners rely on candidates' tacit knowledge of the hiring process which is unevenly distributed throughout the applicant pool. By failing to account for differences in cultural capital prior to the screening stage, fair hiring practices inadvertently reinforce hiring inequalities. Understanding the limits of constraining screener action helps explain why objective and fair practices may fail to attenuate unequal outcomes.

Building Trust and Legitimacy in Institutions

PNP: **Roots of Mistrust: The Legacy of the Slave Trade on Social Entrepreneurship in Africa**   

Author: **Ikenna Stanley-Pascal Uzuegbunam**, *Howard U.*
Author: **Dharm Kapletia**, *The Schumacher Institute*
Author: **Afam Icha-Ituma**, *Coal City U.*

The community interest is often at the center of social entrepreneurial action. Yet, few social enterprises invoke the community development approach in attending to social problems. Why do some social enterprises focus on community development, while others do not? Tensions related to the nature of ownership, leadership, and operating environment offer some insight. Yet, few studies consider the influence of historical context of the operating environment, in particular how age-long trauma can define patterns of modern entrepreneurial activity. We hypothesize that exposure to significant historical shocks might tend to fracture social cohesion and trust in societies, and thus will reduce the likelihood of community development enterprises. Leveraging the empirical background of the historic African slave trade that occurred between 1400 and 1900 AD, which resulted in the forced migration of indigenous Africans, we analyze the historical impact of slavery on the pattern of social enterprise in Africa. Our findings highlight how the impact of this historical shock is contingent on family and female embeddedness in the new venture. Given the importance of social enterprises in efforts to develop communities in least developed regions around the world, our research reveals the roots of inhibiting forces in modern societies and identify important caveats in these relationships. We conclude by parsing out implications for research, entrepreneurs, and policy makers.

PNP: **#FreeHigherEducation# in the Post-Apartheid Era: The Legitimacy Battle** 

Author: **Linda Du Plessis**, *North-West U.*
Author: **Hong Bui**, *U. of Bath*

Underpinned by institutional legitimacy, this study explores how South African public university executives struggled to maintain legitimacy during an unplanned radical change process. Universities faced a national upheaval of a violent student protest, by far the biggest disruption since the end of Apartheid; and the government introduced a free higher education policy in a sudden with a hope to stop the student #FeeMustFall# movement. We used phenomenology to collect data through interviews, observations, and documents and then thematically analyzed various institutional legitimacy forms. Our findings show that a radical change without proper planning can severely damage institutions in all aspects of normative, empirical, leadership, moral and pragmatic legitimacy. The study advances existing institutional legitimacy theories by illustrating how legitimacy can be ruined and create adverse effects during unplanned radical change. It also implies some good suggestions for policymakers and higher education managers in the management into learning and education for a sustainable world.

PNP: **What Drives SE Cognitive Legitimacy: Implications from Consumers' Legitimacy Judgement** 

Author: **Qian Jin**, *The Hong Kong Polytechnic U.*
Author: **Yanto Chandra**, *The Hong Kong Polytechnic U.*

Social enterprises, increasingly seen as an important player in delivering social and public services around the world, however, are still newcomers and legitimacy-deficient in the market. Consumers are a key audience group in enabling social enterprises' cognitive legitimacy. Unfortunately, extant research on social enterprises has only begun to study organizational legitimacy and ignored the role of consumers as the cognitive legitimacy conferrers. This paper seeks to fill in the “legitimacy-consumer” gap and answer the research question: What are the drivers of social enterprises' cognitive legitimacy assessment by consumers? We draw on the literature of cognitive legitimacy as the theoretical foundation. We adopt novel text mining approaches and performed two-layer analyses on 1692 consumer reviews on social enterprise restaurants. Our finding highlights four major types of discourses from social enterprise consumers' legitimacy judgements - utilitarian discourse, social discourse, ecological discourse and social relation discourse. Additionally, utilitarian discourse is significantly associated with higher cognitive legitimacy. The findings add insight not only for social enterprise practitioners to develop strategies to build legitimacy, but also for social entrepreneurship research to open up a new direction using computational techniques and bringing consumers into the research field.

PNP: An Institutional Analysis of the Rise of Benefit Corporations Outside of the US: The Case of Italy

Author: **Marika Arena**, *Politecnico di Milano*
Author: **Irene Bengo**, *Politecnico di Milano School of Management*
Author: **Francesco Gerli**, *Politecnico di Milano School of Management*

Abstract: This paper contributes to the current debate about Benefit Corporations, presenting the development of this organisational model in Italy, the first country to introduce this hybrid form after the US. Grounded on an institutional logic perspective, it provides a picture of the institutional dynamics that have characterised the rise of this new entrepreneurial form outside the US. The analysis provides an in-depth foundational study of the Italian case and highlights the relevant influence of different institutional pressures in explaining the rise of and constraints in the diffusion of Benefit Corporations. Empirically, it combines secondary data, available from different public sources, and primary data collected through interviews with a series of knowledgeable informants. Based upon the analysis, two aspects appear peculiar for the development of Benefit Corporations in Italy: the interplay between the Benefit Corporation legal form and the certified B Corp model, and the rise of tensions between social entrepreneurship and the third sector ecosystem. This paper concludes that the peculiar institutional pressures leading to the birth of Benefit Corporations in Italy may be source of permanent tensions and of concern for the diffusion of the model.

PNP: Align or Perish: Dynamic Social Enterprise Networks in Sub-Saharan Africa 

Author: **Christian Busch**, *New York U.*
Author: **Harry G. Barkema**, *London School of Economics*

Carlo Masini Award for Innovative Scholarship in the Fields of Public and Nonprofit Management

Carolyn Dexter Award Nominee

Previous research has established that networks are vital for developing and scaling the impact of social enterprises. However, at present, research has provided little systematic insight into which (different) types of networks are required over time, and why; that is, we know little about what explains potential changes as part of an overall successful scaling strategy, particularly in a developing-country context. Thus, theoretically sensitized by social network theory, our inductive study of six Kenyan social enterprises analyzed their stage-contingent network development in the Sub-Saharan African developing-country context. Our findings show how and why at earlier stages, establishing broader legitimacy and buy-in from (potential) stakeholders and circumventing social liability with regard to ineffective contacts (e.g., economically unproductive family members or middlemen) are important to allow for growth and to avoid over-embedding. Our findings further show that in later stages, aligning incentives based on stakeholder advancement as well as stakeholder self-image becomes necessary to be able to navigate whole social business ecosystems. We contribute to the literature a deeper understanding of how and why networks of successful social enterprises (in the Sub-Saharan African developing-country context) can be developed and aligned over time based on contextual challenges and resource needs.

PNP: Implementation of a Social Mission in Social Enterprise: Fit Among Content, Motivation and Practice   

Author: **Anna Akhmedova**, *U. Internacional de Catalunya*
Author: **Marta Mas-Machuca**, *U. Internacional de Catalunya*
Author: **Nina Magomedova**, *U. Internacional de Catalunya*

A mission statement is commonly considered a strategic tool in any organisation. While hybridity is what characterises the mission in a social enterprise, the centrality of the social component of the mission over the economic component is generally acknowledged. Only few investigations focus on achievement of social component of a mission. To close this gap, this study takes a configurational approach and empirically analyses 143 social enterprises using qualitative comparative analysis. We find that irrespective of the organisational form, SE companies should align the formal (content), motivational (stakeholder motivation) and dynamic (organizational practice) perspectives of their mission, fostering the fit among these three in order to fulfil a desired social impact. The simultaneous absence of (1) fit between mission content and organizational practice and (2) fit between mission content and stakeholder motivation was found to go in hand with social mission non-achievement. The results are consistent among different organisational forms, albeit, for different reasons.

PNP: How social enterprises overcome growth barrier? A capability view on cross-sectoral partnership 

Author: **Li-Hsiang Yi**, *National Tsing Hua U.*
Author: **Jingjing Weng**, *National Taiwan U. of Science and Technology*
Author: **Ying-Che Ali Hsieh**, *National Tsing Hua U.*
Author: **Shao-En Chang**, *NTHU iPhD*

Research on social enterprises is becoming increasingly popular in both practice and academia. The hybrid research context constructs different types of strategic alliances, business operations, and hybrid operating goals that differ from firms in the general business sector. Considering those specific features of social enterprises, it can also be demonstrated that social enterprise generally face severe barriers that limit their growth. In terms of the lack of research addressing how social enterprises deal with the scaling-up issue, this study explores how social enterprises can overcome barriers to growth through cross-sectoral social partnerships, adopting a capability-based view. Our study investigated 11 social enterprises in Taiwan, using qualitative research with a case-study approach to identify how growth capability can be developed through such a cross-sectoral collaboration process. We proposed a theoretical framework to show how collaboration stimulates social enterprises' growth capability, and how the issue of barriers to growth can be tackled through these capabilities. Our findings reveal that collaboration is not merely a channel that can be used to access external resources, but can also be utilized as a learning mechanism to foster social enterprises to develop their operation-expansion ability. Our contributions lie in the connection of capability studies to the hybrid context and the provision of a new perspective linking the collaboration and enterprise growth issue through a capability view, providing an in-depth insight to the existing literature on enterprise-growth theory.

Author: **Tamaki Onishi**, *U. of North Carolina, Greensboro*

Although the institutional logic perspective forms a main theoretical lens to analyze nonprofits that undertake hybrid activities—those often labeled entrepreneurial nonprofits—the extant literature has not fully answered whether “being entrepreneurial” affects the way nonprofits respond to mission-market tensions created by logic incompatibility. This study sheds light on the role of entrepreneurial orientation (EO) in shaping nonprofit experience with social-welfare and commercial logics. Analyses of four venture philanthropy organizations reveal that nonprofits with different levels of EO interpret the two logics differently (logics to be complementing, contesting, coexisting, isolating), thereby taking different hybrid models. This study proposes a new framework integrating the dimensions of EO and institutional complexity into four hybrid models (blended, blocked, assimilated, segmented/segregated) to extend existing nonprofit hybridity frameworks.

Citizen Engagement and Participation

PNP: Government Effectiveness from a Citizen View: Linking Public Participation and Information Sources

Author: **Julia Andrea Trautendorfer**, *Johannes Kepler U. Linz*
Author: **Lisa Schmidhuber**, *WU Vienna U. of Economics and Business*
Author: **Dennis Hilgers**, *Johannes Kepler U. Linz*

Recently, evaluations of government effectiveness gained a lot of scholarly attention and developed into a major research area in public and performance management research. This study builds on the rather new approach away from analyzing mere macroeconomic government performance indicators towards addressing the issue on a rather perceptual, citizen-based level. By combining the concepts of deliberative democracy and open government with media and communication theories (media richness, media malaise and virtuous circle), we argue that different forms of (i) getting engaged in decision-making processes and (ii) receiving public information can determine individually perceived government performance. Subsequently, interaction terms are established in order to analyze (iii) whether political participation possibilities can be linked to the consultation of different sources of information and in turn play a decisive role in influencing government effectiveness. Using data from the World Value Survey, multilevel regression estimates delivered significant outcomes for both interaction and main effects indicating that individual information source usage and patterns of political participation depend on each other and consequently affect levels of perceived government effectiveness.

PNP: The Fair Process Counter-Effect: Procedural Justice and Protests in China's School Admissions Reform

Author: **Fangsheng Zhu**, *Harvard U.*

How does procedural justice influence protest emergence? This question has been neglected as the procedural justice and social movement literatures have taken disparate approaches to explain people's response to substantive injustices. This paper fills this gap by developing a theory of fair process counter-effect, namely that procedural justice facilitates collective action. Based on longitudinal fieldwork conducted from 2010-2019 on school admissions in China, I find that a bureaucratization reform had the unintended consequences of inducing previously nonexistent collective protests. Characterized by transparency and equal treatment, the post-reform procedures improved procedural justice perception among parents while also inducing protests, as the procedures enabled parents to more directly perceive substantive injustices, use public information to form protest narratives, and mobilize through shared experiences and grievances. By identifying the fair process counter-effect, this study reveals that collective action is facilitated by fair procedures and suppressed by unfair procedures. In doing so, this study bridges the justice-based and mobilization-based perspectives in explaining responses to inequalities.

PNP: The Strategic Usage of Facebook by Local Governments: A Structural Topic Modelling Analysis

Author: **Diego Ravenda**, *TBS Business School*
Author: **Maika Valencia-Silva**, *EAE Business School*
Author: **Josep M. Argiles-Bosch**, *U. of Barcelona*
Author: **Josep García-Blandón**, *U. Ramón Llull, IQS School of Management*

We examine the content of official Facebook pages of 502 Italian municipalities over the period 2016-2018, in order to identify the main topics discussed and empirically infer the motivations that lead municipalities to use Facebook. By performing a structural topic modelling analysis, consisting in an unsupervised machine learning procedure, we find that Italian municipalities mostly post on 5 semantically different topics, on their Facebook pages, and that each topic prevalence is positively associated with the most related municipal expenses per capita by function. Furthermore, additional covariates significantly influence each topic prevalence. Within the framework of the legitimacy theory, these results suggest a strategic usage of Facebook by Italian municipalities for self-promotion and political marketing, aiming to enhance their political legitimacy and consensus among citizens. Our findings contribute to the literature on voluntary e-disclosures of local governments and interactions between local governments and their citizens through social media. Therefore, they could have practical implications for public regulators, managers and other users of social media.

PNP: Managing Crowdsourcing in the Public Sector: The Role of Government Feedback to Citizen Input

Author: **Lisa Schmidhuber**, *WU Vienna U. of Economics and Business*
Author: **Dennis Hilgers**, *Johannes Kepler U. Linz*
Author: **Krithika Randhawa**, *U. of Technology, Sydney*

Crowdsourcing is a participation mechanism by which organizations engage with an external crowd of individual solvers via digital platforms. Government organizations increasingly use crowdsourcing platforms to integrate citizen knowledge and inputs in designing and delivering public services. After receiving input, the government usually provides feedback to individual users on whether the input can be considered. Drawing on attribution theory, this study asks how government feedback affects citizens' future participation in crowdsourcing platforms. Using a 7-year dataset of both online reports from citizens to government and government feedback to citizen requests, we examine communication patterns and find that approximately 50 percent of first reports shared by citizens are rejected by the government. Our results show that being rejected the first time decreases citizens' continued participation behavior. Furthermore, future participation behavior is dependent on the reason for the rejection. This study contributes to research on digital interaction between citizens and the government and highlights the importance of rationale transparency and regular platform management to sustain citizen participation in the era of digital government.

RM: Polynomial Regression and Response Surface Methodology in Leadership Research

Author: **Chou-Yu Tsai**, *Binghamton U.-State U. of New York*
Author: **Jayoung Kim**, *Purdue U. Northwest*
Author: **FUHE JIN**, *Binghamton U.-State U. of New York*
Author: **Min Jong Jun**, *Binghamton U.-State U. of New York*
Author: **Minyoung Cheong**, *Pennsylvania State U., Great Valley*

Agreement/congruence/similarity represent a genre that has been an important research framework for many leadership research topics. Perhaps the most used methodological/statistical approach for testing this framework is polynomial regression analysis (PRA) with response surface methodology (RSM). As more than two decades have passed, we identify three main issues of using this approach in leadership research. To systematically investigate those notions, we firstly review how PRA and RSM have been used in various leadership studies. Next, we review the level of analysis and rater model assumptions prevalent in PRA in terms of multilevel techniques and choice of centering options. Finally, we review the usage of two main RSM features and summarize additional techniques to better understand the inconsistencies and variabilities possibly existing in leadership research. Taken together, we aim to promote this methodology within the study of agreement/congruence/similarity in leadership research by enhancing its capability in theory testing and building.

RM: Testing Explicit Mediation Models by Set-Theoretic Causal Complexity  

Author: **Yunzhou Du**, *Southeast U.*
Author: **Qiuchen Liu**, *Southeast U.*

Although the linear mediation model developed by Baron and Kenny (1986) has made great contributions to the study of linear mediation mechanism, it has not substantially contributed to complex causality. Especially, when interactions or interdependent effects of multiple variables may occur in mediation mechanism, linear mediation model only considers individual variable's separate mediation mechanism. Instead of a linear correlation, the explicit statement of necessity and sufficiency is needed for a falsifiable hypothesis in complex causality. In present article, we indicate the deficiencies of symmetry, simplification, and linearity relationship assumption in linear mediation model, and proposes a complex set-theoretic causality which can deal with asymmetry, complexity, and nonlinearity. Through the explicit discussion of various necessary or sufficient relationships of causal chains in complex causal mediation model, as well as the causal complexity characterized by conjunction and disjunction of multiple conditions, equivalent paths, asymmetric paths, the paper contributes to analyze the causal complexity of mediation mechanism. Instructions are provided on how to test complex causal mediation model.

RM: New Context-Specific Fit Criteria to Reveal Additional Insights in Structural Equation Modeling 

Author: **Nadine Schröder**, *Wu Wien*
Author: **Andreas Falke**, *U. of Regensburg*
Author: **Herbert Endres**, *U. of Regensburg*

Model (mis-)specification in structural equation modeling can cause researchers to arrive at wrong conclusions or missed insights. There are still contradictory results on how well fit criteria can detect misspecification. In two simulation studies and from empirical examples, we reveal two things. First, recommended fit criteria combinations only marginally cover model (mis-)specification because they still accept many misspecified models or reject too many correctly specified models. Second, the ability of fit criteria to detect (mis-)specification differs between confirmatory factor analysis and covariance-based structural equation modeling and is also subject to data and model characteristics. Therefore, we develop context-specific criteria combinations, which accept more correctly specified models than previous recommendations while rejecting the vast majority of misspecified models. Thus, researchers do not lose important insights but gain additional insights from their data. Beyond, we provide a tool to guide researchers on the appropriate/optimal selection of criteria combinations.

Introducing New Measures and Their Applications

RM: **The Job Engagement Scale: Development and Validation of a Short Form in English and French**  

Author: **Bruce Louis Rich**, *California State U., San Marcos*
Author: **Simon Houle**, *Concordia U.*
Author: **Caitlin Comeau**, *Canadian Department of National Defence*
Author: **Ann-Renée Blais**, *Canadian Department of National Defence*
Author: **Alexandre Morin**, *Concordia U.*

The original 18-item Job Engagement Scale (JES18) operationalizes a multidimensional hierarchical conceptualization of the investment and expression of an individual's preferred self-in-role performance. Encompassing three dimensions (i.e., physical, cognitive, and emotional), job engagement is a known predictor of organizational performance and personal outcomes. Using a sample (N = 7185) of military and civilian personnel nested within 59 work units in the Canadian Armed Forces (CAF) and Canadian Department of National Defence (DND), we developed and cross-validate a 9-item short-form (the JES9) of the original JES18 in English and French. Results demonstrated that both linguistic versions the JES9 and JES18 yielded comparable psychometric properties. The scales also displayed measurement invariance as a function of participants' sex (male/female), employee type (civilian/regular force/primary reserve), and role (supervisor/employee). Finally, the associations between scores on the JES9 and the JES18 and a series of covariates (i.e., employees' psychological needs for competence, autonomy, and relatedness, burnout, and turnover intentions) were assessed. Collectively, results highlight the strong psychometric soundness of the English and French versions of the JES9 and the JES18 for organizational practitioners and academics.

RM: **Measuring Diversity in the Workplace: An Extended and Unified Framework** 

Author: **Torsten Biemann**, *U. of Mannheim*
Author: **Kim De Meulenaere**, *U. of Antwerp/ Antwerp Management School*

Research on workplace diversity is proliferating. Inspired by Harrison and Klein's (2007) conceptualization of diversity into three types of diversity—separation, disparity, and variety—and their associated framework of measures, diversity scholars have paid increasing attention to the measurement of their diversity construct. In this paper, we argue that the widely used measurement framework of Harrison and Klein suffers from important limitations—that is, the separation measures assume non-linear effects, the disparity measures do not take into account left-skewed attribute distributions, and the proposed variety measures can be used for categorical variables only. To solve these issues, we take a distance-based approach to the three types of diversity and provide a unifying, easy-to-use framework of measures, including measures for diversity constructs for which no adequate measures were available yet. Using simulated data of work units, we show how our proposed measures behave and how they relate to the measures proposed by Harrison and Klein. This manuscript concludes with an accessible decision tree, easily guiding diversity scholars in when and how to use the different diversity measures. Our hope is that our framework contributes to Harrison and Klein's (2007) mission to improve the concept clarity, measurement, and empirical testing in the field of workplace diversity.

RM: **Let me Google that for you: Measuring Firm Internationalization Using Google Trends**  

Author: **Harald Pühr**, *WU Vienna*
Author: **Jakob Müllner**, *WU Vienna U. of Economics and Business*

In this research note, we propose Google Trends as a uniquely versatile and overlooked resource for International Business scholarship. Google search measures have been used successfully in other disciplines like epidemiology, finance, and political science. It offers highly reliable and finely grained data that not only provide a market-side complement to accounting based measures of firm internationalization in IB. Additionally, it opens entirely new research questions for IB research. In this research note, we survey the use of Google Trends in academic research, propose Google Trends-based measures of firm internationalization, discuss their empirical and conceptual benefits (and drawbacks) for IB research. We also provide an introduction to the R package *globaltrends* (Pühr, 2020) that accompanies this research note.

Conversational interruptions can carry negative connotations, yet prior research has consistently found positive associations between interruptions and attributions of leadership and social status. In this study we investigate simultaneous speech---interruptions and related behaviors---as a predictor of leader emergence, relying on a network perspective on communication to account for dependencies among individuals. Using a published data set, and starting from a published two-stage least squares model, we demonstrate that interruptions positively predict leader emergence. We demonstrate that a view of interruptions which includes multiple types of simultaneous speech and behavioral connections between actors provides information about group structure beyond that contained in speaking time. In an exponential random graph model analysis we find that simultaneous speech is not related to gender in a simple way, and that complexities are revealed by network analysis. We conclude that interruptions may provide a connection between relationship-based theories of leadership and leader communication.

Emerging Perspectives on Replication

RM: Reflexive Modeling: Revisiting Rorty and Feyerabend in Times of Crisis

Author: **Jukka Luoma**, *Aalto U.*
Author: **Joel Hietanen**, *U. of Helsinki*

This paper advances the notion of reflexivity in quantitative management and organization research. In doing so, we address an ongoing ‘crisis of legitimacy’ facing quantitative work. Scholars are increasingly doubting knowledge claims based on quantitative data and worrying about questionable research practices. Mainstream methodological discourse has moved to address these issues through increasingly elaborate rule-based control of data collection and analysis, to ensure objectivity. In contrast, what we present as reflexive modeling embraces the subjective and artefactual nature of quantitative research. Drawing from Rorty and Feyerabend, we call for dropping the representationalist ambitions of extant work and hope to draw attention to quantitative research as a pragmatic mode of engaging with the world of management and organizations, and those who study them. We also critique the mainstream view that describes appropriate methodological conduct in terms of strict rule-following. We argue solutions to the legitimacy crisis based on a rule-based view of quantitative research may fail to generate intended effects, hinder the production of creative discoveries, and foster a narrow view of research ethics. In our view, what is ultimately at stake in the crisis is not objectivity but solidarity toward our fellow researchers and other audiences.

RM: Cross-Study Reexamination: How Qualitative Research Can Contribute to Management’s Replication Goals

Author: **Tine Koehler**, *U. of Melbourne*
Author: **Catherine Lynelle Welch**, *U. Of Sydney*
Author: **Maria Rumyantseva**, *U. Of Sydney*

Driven by the broader ‘replication crisis’ in the sciences, the current debate about replication in qualitative research is focused on the differences between qualitative and quantitative traditions, and more specifically between quantitative cross-study replications and qualitative within-study re-examinations. This debate has so far not addressed another crucial use of qualitative replications, i.e., cross-study re-examinations. The latter have a long tradition in other disciplines (e.g., history, sociology, anthropology) and present considerable opportunities for a broader and more impactful application via re-theorizing in management research. We provide an overview of qualitative cross-study re-examination designs that can be found both in management and strategy research and in the social sciences more broadly. We argue for the strengths of these designs: at their best, they allow for theory extension and even groundbreaking theory development, above and beyond verifying or updating prior studies. We discuss important implications of cross-study re-examinations for re-theorizing in future qualitative and quantitative research – and for rethinking the nature of replication itself.

Paper is Available to Meeting Registrants Only.

RM: Unpacking Complex Phenomena through an Inductive Multi-Study Research Design

Author: **Christina Hoon**, *Bielefeld U.*
Author: **Alina McCandless Baluch**, *U. of St Andrews*

Inductive scholarship faces the challenge of engaging with complex social phenomena that are often large and messy, containing ill-defined and hard-to-measure concepts. Our central argument in this paper is that unpacking complex phenomena requires multiple arcs of inquiry and that these phenomena need to be addressed through multi-study research. We introduce the reader to an inductive multi-study design which entails the practice of conducting a series of distinct, yet complementary studies using an iterative-cyclical approach. Rather than in a sequential fashion, phenomena are studied in a holistic way through multiple inquiry arcs to accomplish more compelling theory building. Our roadmap highlights in four stages the iterative routes of inquiry that multi-study scholars can travel (discovery and extension) and illustrates these using examples from two published studies to highlight the benefits of a multi-study design. We maintain that this iterative-cyclical approach redresses the state of knowledge creation that emerges from piecemeal lines of inductive inquiry, thereby enhancing the process of horizontal knowledge accumulation in management and organization studies.

Addressing Challenges and Introducing Advances in Ethnography

Challenge and Advances in Ethnography

RM: **Rapid Field Research: How Short-Term Encounters in the Field Deliver Intense, Rapid Routes to Knowin**

Author: **Christina Hoon**, *Bielefeld U.*

Author: **Alina McCandless Baluch**, *U. of St Andrews*

Inductive field researchers are all too familiar with the ‘long march’. Slow and steady, researchers dive deep into the field to explore a complex phenomenon in a holistic fashion. In this paper, we call for more rapid, intense routes to knowing. A rapid approach is particularly needed to address disruptions and crises situations such as the Covid-19 pandemic in ‘real time’ or phenomena that may be only fleeting or captured in transient episodes of organizational life. By drawing on an idiographic logic, we offer a rapid field research approach which places an emphasis on a demarcated phenomenon in intense short-term encounters in the field that afford a deeper understanding in ‘real time’. We develop three core principles for rapid field research, namely ‘perceptive researcher’, ‘sensemaking in the field’, and ‘selectivity in telling the story’. We conduct a review of rapid ethnography studies in medical education and health research. Through this synthesis, we characterize the tenets of field research, which have the quality of intensity to support a rapid approach (demarcating the research focus, strategies for data intensity, simultaneous data collection and analysis, rapid writing). Our study considers the implications of valorising a rapid route to knowing for horizontal knowledge accumulation and revisits the requisite skills and professional norms of writing and publishing that may enable this rapid approach.

RM: **The (Undervalued) Role of Peer Debriefing in Organizational Ethnography**   

Author: **Guillaume Carton**, *EMLYON Business School*

Author: **Alexis Laszczuk**, *ESSCA School of Management*

This article aims to understand the role of peer debriefing in organizational ethnography. We define peer debriefing as extensive discussions that take place on a regular basis between an organizational ethnographer and one or more academic peers, which provide the ethnographer an opportunity for catharsis, relies on mutual trust and addresses the progress of the investigation and its outcomes. We show that this qualitative method is useful for improving data collection, helping organizational ethnographers find the right distance from the field, developing research outputs and improving mutual adjustment for collaboration between researchers. This research offers methodological and practical implications, especially for PhD students, practitioner researchers and organizational ethnographic teams.

Paper is Available to Meeting Registrants Only.

 RM: **Enactive Ethnography as Self-Work: Understanding by Performing the Phenomena under Study**

Author: **María Dolores Del Rio**, *U. Austral*

I propose enactive ethnography as self-work, which implies the fully embodied and emotional immersion of the researcher in fieldwork. Drawing on an ethnographic study at Good Samaritan Hospice, an end-of-life organization supporting poor, terminally ill patients, this article shows which the emotion’s interpretative function will be, recognizing that emotions have epistemological and methodological significance. I analyze the three elements of habitus proposed by Wacquant as captured through enactive ethnography (the cognitive, affective, and conative) concerning the fieldwork. The article identifies three sets of insights that enactive ethnography brings about the organizational setting from each of these aspects: narrative and sense-making; bodily sensations, feelings, and coping strategies; and experiences from performing tasks and roles. Doing this, this study reveals the corporeal dimensions and vulnerable exposure that the data collection and analysis involves, showing how vulnerability can be theoretically generative. In addition, I explore a processual view of involvement in enactive ethnography intending to overcome the so-called “paradox of involvement”.

Corporate Political Activity

SIM: Using Generalists or Specialists in Political Markets: An Analysis of the Strategy of Lobbying Firms

Author: **Lee Warren Brown**, *Texas Woman's U.*
Author: **Abdul Rasheed**, *U. of Texas At Arlington*
Author: **Yasar Mahmut**, *U. of Texas At Arlington*

Corporate lobbying firms have long played a primary role in firms' nonmarket strategy, but they have received minimal attention in the management literature. In this paper, we examine the political strategy of corporate lobbying firms. We suggest and find that corporate lobbying firms differ in their scope of lobbying efforts, their lobbying targets, and how they lobby in political markets. Drawing from Porter's generic strategy framework initially developed for market strategies, we show that the industry-wide – focus decision also applies to nonmarket strategy. Further, we find that the firm size, as measured by both number of lobbyists employed and the amount of lobbying revenue received each year, drives this strategy decision by corporate lobbying firms. Additionally, we find that the firms lobbying strategy, whether or not they are lobbying legislative or administrative targets, influences their overall focus. We also find that focused corporate lobbying firms are more effective at getting bills passed into law. We used a sample of 487 corporate lobbying firms over 21 years to test our hypotheses.

Paper is Available to Meeting Registrants Only.

SIM: Tribe and Ethnicity in Corporate Political Activity: Implications for Political Strategy Formulation

Author: **Tahiru Azaaviele Liedong**, *School of Management, U. of Bath*

There is a paucity of research about the role of informal institutions in corporate political activity (CPA). The few studies that have explored this topic have mainly focused on national cultural differences, thus overlooking the influence of sub-national cultural dynamics in CPA. Using rich qualitative data from Ghana - a tribally diverse country, I explore the role of tribal identity in political strategy development. I find that CPA is affected by tribal consonance (similarity) and tribal dissonance (difference) between executives and government actors. Also, I find that tribal identity gives rise to a new and informal level of political participation that has not been previously documented. Further, the data revealed that tribal identity constrains discretion and bounds managers on specific paths throughout the political strategy formulation process, resulting in liabilities of tribe and causing CPA decision-making to be path dependent. Leveraging these findings, I develop a model to show how sub-national cultural heterogeneity has a cascading impact on political strategization. My model has significant implications for the theory, practice and ethicality of CPA.

Paper is NOT Available. Please contact the author(s).

SIM: CEO Political Activity and CSR: The Impact of the Breadth and Depth of CEO Political Engagement

Author: **Yeongsu Kim**, *Western Kentucky U.*

There are two typical nonmarket strategies firms most engage in: corporate political activity (CPA) and corporate social responsibility (CSR). Despite a growing interest in CPA and CSR, the strategic relationship between these two nonmarket strategies is still very unclear. In particular, we know very little about the relationship between a CEO's political activity and their firm's CSR practices. This is surprising, as the CEO is one of the most influential people in an organization who makes critical strategic decisions. Unfortunately, CEO political activity has largely been ignored by current scholarship. To demystify this relationship between CEO political activity and their firm's CSR practices, we examine how and when CEO political activity influences their firm's CSR practices. We test this relationship through CEO political donations (e.g., lobbying), and find that a CEO's political activity (CPA) attenuates a firm's CSR practices; and this negative association is attenuated by the breadth of a CEO's political activity.

SIM: Boundary of accountability and the process of constructing political CSR: an ANT perspective

Author: **Bertrand Valiorgue**, *Clermont Auvergne U.*
Author: **Emilie Bourlier Bargues**, *ESC Clermont Graduate School of Management*
Author: **Kevin Metz**, *ESC Clermont Graduate School of Management*

This article proposes theoretical insights into how political CSR is shaped, based on the analytical framework of boundary work and the actor-network theory. More precisely, we analyze how executives react to stakeholder demands and stabilize the boundary of accountability of their companies. Based on the analytical developments of boundary work, we show that three strategies are possible: conservative political CSR, bilateral political CSR, or institutional political CSR. Developments in the actor-network theory shed light on how this is carried out as well as the key stages of each of these strategies. The theoretical proposals we develop contribute to the analysis of the micro-foundations of political CSR. These proposals also show the possible strategies of decision-makers (public and private) in terms of political CSR in a context where companies are seeing increasing pressure to reconsider their boundaries of accountability.

Ethical Shortfalls and Wrongdoing

SIM: Fall from grace: Ethical shortfalls and firm actions

Author: **Uisung David Park**, *Syracuse U.*
Author: **David M. Gomulya**, *Singapore Management U.*
Author: **Warren Boeker**, *U. of Washington, Seattle*

Financial misconduct damages and stigmatizes organizations because top management is perceived to have substantial control over such actions. The extent to which misconduct is considered egregious, however, may vary depending on the context of the ethical violation. This study introduces the idea that perceptions of and reactions to a firm's ethical performance are influenced by the conduct of its peers. Using data on S&P 1500 firms charged with financial misconduct between 2003 and 2012, we find that a firm's ethical underperformance relative to peers, which we label as ethical shortfall, predicts CEO dismissal following an ethical violation. Our study confirms that even egregious ethical violations are interpreted and acted on using a comparative yardstick. We also find that the media's reaction to the ethical shortfall moderates this relationship, with greater media attention strengthening the relationship between ethical shortfall and CEO dismissal. Finally, we demonstrate that the firm's past involvement and support for corporate social responsibility (CSR) initiatives act as a buffer, reducing the effect of the ethical shortfall on CEO dismissal. This finding indicates that the positive reputational benefits of CSR activities can help safeguard the firm in cases of comparative ethical lapses.

SIM: Machiavellian Leadership And Subordinates Corruption Behavior: A Moderated Mediation Model

Author: **Tasneem Fatima**, *International Islamic U., Islamabad, Pakistan*
Author: **Shahida Mariam**, *Management Sciences, International Islamic U., Islamabad, Pakistan*

This study explains how and when a Machiavellian leader induces corruption behavior among followers using the social cognitive theory of moral disengagement. We used eight mechanisms of moral disengagement and two boundary conditions namely followers' moral identity and anticipated guilt to explain this causal relationship. Using a time-lagged design data were obtained from 264 employees of public and private sector organizations of Pakistan. The results showed that Machiavellian leadership is positively linked with followers' corruption behavior and mechanisms of followers' moral disengagement mediate this relationship. The followers' moral identity significantly moderated the relationship of Machiavellian leadership with overall moral disengagement and its dimensions except for advantageous comparison, attribution of blame, and dehumanization. The effect of overall as well as eight mechanisms of moral disengagement on followers' corruption behavior was negatively moderated by the followers' anticipated guilt. The followers with lower levels of moral identity and anticipated guilt were more likely to be corruption-prone and vice versa. Overall findings could be useful in the prevention of corruption behavior through moral identity and anticipated guilt in organizational settings.

SIM: The reputation costs of executive misconduct accusations

Author: **Yassin Denis Bouzzine**, *Leuphana U. Lüneburg*
Author: **Rainer Lueg**, *Leuphana U. Lüneburg*

We examine how sexual harassment accusations against individual executives affect the stock returns of the affiliated organization. Taking an upper echelons and abuse of power perspective, we identify 372 high-profile sexual harassment accusations, of which 98 are relevant to this study. We employ event study methodology to detect abnormal stock reactions for the affiliated organization. As predicted, the results indicate that #MeToo accusations substantially harmed the stock returns of the organization despite the accusation relating to the misconduct of only a single executive. Surprisingly, we discover significant results only for executives at the parent organization. For this research, we first provide evidence that individual misconduct matters for organizations. Second, we enrich the upper echelons research by focusing on accusations of executive misconduct and examining how unethical values, abuse of power, and sexual harassment shape the organizational outcomes. We demonstrate that executive misconduct becomes particularly relevant when the executive holds significant managerial power, as indicated by employment at the parent organization. For practice, our findings provide two contributions that can help organizations prevent occurrences of sexual misconduct. First, we propose that organizations should screen executives more carefully for past incidents of misconduct before hiring them. Second, we suggest that organizations should have clear and deterrent anti-sexual harassment policies in place and rigorously align them with their internal control systems to ensure adherence to these policies. Finally, the establishment of a climate of permanent "nudges" should increase the awareness of the risk of sexual harassment.

SIM: Fear of Retaliation And Reporting Wrongdoing: The Impact Of Moral Courage And Ethical Leadership

Author: **Smita Gupta**, *Indian Institute of Technology, Delhi*
Author: **Kanika Tandon Bhal**, *Indian Institute of Technology, Delhi*

In response to a call for understanding the role of fear of retaliation in the whistleblowing process (Alleyne, Charles-Soverall, Broome, & Pierce, 2017) and integrating emotional components in rational decision-making models (e.g., Luan, Reb, & Gigerenzer, 2019), this paper examines the role of fear of retaliation on an individual's whistleblowing intention. Fear of retaliation is an anticipated negative reinforcement that is likely to weaken whistleblowing intention. Further, based on the context-driven nature of moral courage, we incorporate moral courage as a mediator between the fear of retaliation-whistleblowing intention relationship, where fear of retaliation is expected to erode moral courage which in turn is expected to reduce whistleblowing intention. At the same time, using the person-environment interaction framework, we examine the role of ethical leadership as a moderator, in reducing the negative impact of fear of retaliation on whistleblowing intention. Data gathered, on a structured questionnaire, from 202 employees of the IT sector was subjected to regression analysis for testing the proposed hypotheses. Results supported our hypotheses. Practical and theoretical implications alongwith limitations of the study and future directions of research are discussed.

Author: **Miguel Angel Alzola**, *Fordham U.*

Author: **Öykü Arkan**, *Rutgers Business School*

This paper explores the relationship between organizational characteristics and their relationship to whistleblowing in the Catholic Church. It aims to examine the role of ethical climate and wrongdoing characteristics as underlying mechanisms of whistleblowing. It offers a revised definition of whistleblowing, a comprehensive interdisciplinary literature review based on the major components of the definition, a conceptual model of whistleblowing, and an application of the model to compare reactions to the clergy sexual abuse and the financial misconduct scandals in the Catholic Church. The paper suggests that members of an ethical organization such as the Roman Catholic Church observing wrongdoing are more likely to stay silent when the wrong can seriously threaten the organization's core ideals (e.g., clergy abuse). Conversely, they will be more likely to blow the whistle when the wrongdoing is less connected to the identity of the organization (e.g., financial misconduct). The paper contributes to the normative and the empirical literature on whistleblowing, sexual harassment, and financial misconduct in the Catholic Church.

CSR in Weak Institutional Settings

SIM: Controlling Owner Type, State Capitalism and Social Responsibility in Weak Institutional Settings

Author: **Jimi Kim**, *U. of New South Wales*
Author: **Hoje Jo**, *Santa Clara U.*

In this article, we theorize tensions between the dual purposes of financial gains and social impact and examine how varieties of controlling owner type and state capitalism influence corporate social responsibility (CSR) practices in weak institutional settings. Specifically, we investigate the impact of the state as a majority investor– state-owned enterprises and the state as a strategic investor with government-owned vehicles such as sovereign wealth fund on CSR relative to private entities. We find that similar to private entities, state-owned enterprises are negatively associated with social and environmental practices. Yet, when the state serves as a strategic supporter and investor i.e., sovereign wealth funds, a firm tends to engage in higher CSR practices.

SIM: CSR Uptake in Non-Western Contexts: the Impact of Institutional Environment and Entrepreneurs

Author: **Petya Koleva**, *Coventry U.*
Author: **Lee Quinn**, *Centre for Business in Society*

The impact of institutional environment and institutional entrepreneurs for corporate social responsibility (CSR) uptake, practice and process in the context of Western countries has been extensively examined. However, while these examinations are insightful, it is not clear if other conditions and influencing factors in relation to the institutional environment and institutional entrepreneurs foreign to the West exist. If indeed they do, this raises questions related to the extent to which they may influence CSR practice and process. The paucity of such research restricts and prevents a more comprehensive understanding of the role and impact of institutional dynamics and underlying processes for CSR. From a practice perspective, CSR managers and organisational leaders miss the opportunity to utilise CSR as an instrument serving organisational interests and legitimacy. Consequently, this study investigates the impact of institutional environment and institutional entrepreneurs for CSR uptake, practice and process from a non-Western perspective. Employing an exploratory research design within a range of public and private sector organisations, we interrogate the phenomenon from the perspective of key actors involved in its formulation. The findings evidence a set of distinct institutional dynamics and institutional entrepreneurs that contribute to the formulation of specific CSR. The identified forms of CSR reveal organisational attempts for adaptation to the institutional dynamics and for preserving organisational legitimacy. Therefore, our work provides important contributions to the CSR debate by outlining factors and conditions specific for non-Western countries that result in context-driven forms of CSR. These findings offer a number of insightful and substantives considerations for practitioners and policy makers involved in the development of CSR.

SIM: Creating trust when public institutions are weak? A qualitative analysis of sharing institutions

Author: **Stefan Hielscher**, *School of Management, U. of Bath*
Author: **Sebastian Everding**, *Martin-Luther-U. Halle-Wittenberg*
Author: **Luis Dávila Aquines**, *EGADE Business School, Tecnológico de Monterrey*

We extend theories of sharing institutions in contexts of strong public institutions to analyze sharing institutions in contexts of weak public institutions. We posit that when weak public institutions suppress mutually beneficial exchange in service, labor and credit markets, sharing institutions can overcome these obstacles by creating trust on sharing markets. Drawing on qualitative data from a ride-sharing platform in Monterrey, Mexico, we find sharing institutions to enable mutually beneficial exchange in service-, credit- and labor-market relationships. First, we provide a fine-grained analysis of how sharing institutions can overcome these trust problems using rules and rule-enforcement mechanisms, including the monitoring, disclosure, and sanctioning mechanisms embedded in payment, feedback, admission and screening, loan financing, and pricing rules. Second, we find risks being associated with a lack of competition on platforms and between platforms, and political elites interfering with sharing institutions in an effort to create rents.

Corporate Political Activism

SIM: Corporate Socio-Political Activism and its Effects on Corporate Valuation

Author: **Hammad Ul Haq**, *U. of Groningen*
Author: **Dennis Winnebeck**, *Groningen U. (RuG)*

The field of Corporate Socio-Political Activism (CSA) literature is gaining attention as multinational corporations (MNCs) are increasingly taking stances in support or opposition of socio-political issues. This study aims to resolve a lack of outcome-based research in the CSA literature. It conducts a comparative examination of short-term consequences of CSA on corporate valuation, investigating diverging CSA stance intensities concentrating on the Black Lives Matter movement. Through the theoretical lenses of agency theory and signalling theory, this study explores shareholder reactions to CSA stances to provide strategic insights for theoretical and managerial practice. The event study focusses on public corporations listed in the S&P100 index, which issued statements concerning the socio-political issue of the Black Lives Matter. In order to assess and quantify the intensity and characteristics of CSA stances, we create a disclosure index through a grounded-theory approach. Two key findings emerge from this study: (1) CSA stances in this environment are not inherently value-creating, nor value-destructing in the short-term, yet (2) the reputation for previous social performance positively moderates the immediate response of the shareholder to a CSA stance.

SIM: Courageous Role Model or Dangerous Threat: A Parallel Mediation of Corporate and Citizen Activism

Author: **Moritz Appels**, *U. of Mannheim*
Author: **Laura Marie Edinger-Schons**, *U. of Mannheim*
Author: **Daniel Korschun**, *Drexel U.*

Through their sociopolitical activism, companies increasingly aim to convince consumers to take directional political action on morally divisive sociopolitical issues. This research proposes that companies can evoke this consumer behavior but run the risk of simultaneously inciting political participation among consumers who work against the company's envisioned political ends. The authors develop a conceptual model linking corporate sociopolitical activism to political participation via two distinct processes which are triggered contingent on the distance between the consumers' and the companies' espoused political identity. Specifically, the framework proposes that whereas politically congruent consumers perceive activist statements of a company to be morally courageous and are inspired to support the company's stance, consumers from the opposite political camp feel threatened by the company's activism and protect their own political identity by showing antagonistic behaviors. However, companies may succeed in increasing moral courage attributions without simultaneously affecting consumers' political identity threat by taking a leadership position in their activism. Two experimental studies, including an analysis of 30 real cases of corporate sociopolitical activism, lend support for the hypothesized framework. The results provide several implications for academic research as well as for corporate decision-makers who are considering taking a stand.

SIM: The Microfoundations of Responsible Corporate Political Action: A Conceptual Framework

Author: **Wendy Dobson**, *Gordon Institute of Business Science*

The concept of Responsible CPA is not well-defined despite the costs that CPA can impose on society. This is problematic for scholars investigating the political responsibilities of firms, as well as for practitioners interested in responsible conduct, and for citizens concerned with the political influence of corporations. A conceptual framework for exploring Responsible CPA based on the cognitive schemas of CPA practitioners is presented, building on work on related concepts by other scholars. This framework emphasises the microfoundations of Responsible CPA, thereby bringing the manager back in to explorations of the important topic.

CSR and Organizational Structuring

SIM: Legitimacy of Social Hybrids: Navigating the Ambiguity in Prosocial Category of B Corps

Author: **Leonardo Boni**, *Politecnico di Milano School of Management*
Author: **Riccardo Fini**, *U. of Bologna*
Author: **Laura Toschi**, *U. of Bologna*
Author: **Garima Sharma**, *Georgia State U.*

Hybrid organizations seeking social impact often pursue legitimation of their social commitment by aligning with a prosocial category -i.e. a context for entities aiming to prove the legitimacy of their social entrepreneurial attitude (Conger et al. 2018). However, hybrids often align with ambiguous categories - i.e. whose schema of norms and values allows very heterogeneous types of members to join (Durand and Paoletta 2013) – such as B-Corps. Despite prior literature argues that aligning with an ambiguous category does not yield the benefits of legitimacy, we do not fully know the mechanisms underlying this relationship, especially for social hybrids who often struggle to achieve legitimacy. In this study, we ask what are the consequences of becoming a member of an organizational category whose meaning is ambiguous, and the mechanisms by which this relationship is attenuate or amplified? To answer this question, we draw on a sample of 186 Italian social hybrid organizations, of which 157 became B Corps and 29 did not. We found that membership in ambiguous organizational category generally does not pay-off. We found two mechanisms explaining this relationship. First, the degree of alignment with the organizational category amplifies the downsides of the relationship, i.e., over time, the more a social hybrid aligned with an ambiguous category the lower the benefits. Second, audience affording legitimation forgave category ambiguity when they could construe the boundaries of the business's impact through its products/services. In other words, the level of concreteness of the product/services attenuated the negative implications of affiliating to the B-Corp category. We contribute to the literature on hybrid organizations by theorizing the mechanisms of alignment and boundary construal to explain when do audiences penalize hybrids aligning with ambiguous categories.

SIM: The CSR Department and Organizational Learning: Effects on Tax Strategy

Author: **Christian Hüning**, *Goethe U.*

Purpose – This paper addresses the question of how a CSR department and organizational learning processes affect a company's tax strategy. We argue that establishing a CSR department and developing a CSR tax strategy guideline lead to less aggressive tax avoidance. Design/methodology/approach – We test three hypotheses with linear, logistic and Poisson panel-regressions. Therefore, we use a dataset derived from the seven largest economies from the European Union and the UK for the timespan from 2011 to 2018. Our total dataset consists of 2,930 firm-year observations. Findings – The findings indicate that the establishment of a CSR department significantly reduces aggressive tax strategies. Additionally, codification of a socially responsible tax strategy has a significant effect on the reduction of illegal tax avoidance strategies like tax fraud, but no effect on overall tax avoidance. Originality/value – First, this study contributes to the literature by providing insights on the effects of organizational aspects on CSR. Second, the study addresses the question of how organizational learning affects CSR and companies' tax strategies. Third, it broadens the understanding of the relationship between CSR and tax strategy. Finally, it provides insights in the link of CSR and financial performance.

SIM: Navigating multidirectional CSR tensions: a micro perspective on CSR middle managerial practice

Author: **Christiane Marie Høvring**, *Aarhus U., Department of Management*
Author: **Sophie Esmann Andersen**, *Aarhus U., Department of Management*

Middle managers are positioned in a cross-pressure with conflicting expectations between top and lower levels. With the prevalence of CSR in corporate strategy, the middle manager faces new pressures between social goals and economic goals. Based on a micro-level case study, we illustrate how the CSR manager (as a middle manager) navigates and works through tensions inherent in everyday practices. The analysis illustrates how the CSR manager reacts emotionally to the tensions, how she uses different strategies to act on the tensions and employs so-called managerial buffers to cushion the tensions. We outline three contributions to the CSR middle management literature: 1) Tensions are not only experienced as constraining for the CSR manager, but also as fostering positive energy; 2) Tensions do not leave the CSR manager in a powerless void; rather they enable progression; and 3) Tensions are omnipresent and multidirectional, hence an inescapable premise of middle managerial practice in CSR contexts.

SIM: Contextualizing a Controlling Family's SEW in Firms' Response to Primary Stakeholders' Expectations

Author: **Yoonjeoung Heo**, *National U. of Singapore*
Author: **Chi-Nien Chung**, *National U. of Singapore*

Despite the prevalent empirical evidence on the effect of controlling families' SEW on a family firm's social engagement, we have limited understanding of how controlling families' conflicting desires across SEW dimensions affect the family firm's response to stakeholder expectations on social engagement. Therefore, we examine how a controlling family's conflicting SEW desires affect a family firm's response to its stakeholders' expectations. We suggest that family executives respond to stakeholders' expectations by assessing the negative effect of non-response and the costs of managing non-family shareholders' reactions to their responses. By decomposing stakeholder expectations based on regulative and normative dimensions, we find that the proportion of family executives in a firm's decision-making decreases both the firm's responses to normative expectations and its non-responses to regulative expectations. However, the participation of new generations in family firms moderates the relationships between the proportion of family executives and firms' responses, resulting in greater responsiveness to both regulative and normative expectations. These findings clarify the diverse effects of family SEW on a firm's responses depending on the mechanisms of stakeholder expectations, thus presenting the positive and negative valences of family SEW as the main drivers of firms' heterogeneous social engagement.

Author: **Kaushik Mukherjee**, *U. of Mississippi*

Author: **Hyun-Soo Woo**, *U. of Mississippi*

Author: **John Berns**, *U. of Mississippi*

Author: **Jisun Kim**, *U. of Mississippi*

Foreign entry modes are not equivocal and thus domestic firms' responses should correspondingly vary. We seek to ascertain whether the entry mode of foreign competition motivates different responses from domestic firms in the form of corporate social responsibility (CSR). We test our hypotheses using a sample of 780 firm-year observations and find that foreign entry via greenfield mode has no effect on domestic firm CSR while foreign entry through mergers and acquisitions (M&A) has a significantly positive effect on domestic firm CSR. We attribute these findings to the increased threat to domestic firms by foreign M&A, but not through greenfield entry where foreign entrants face significantly more challenges in host countries. Furthermore, we identified industry concentration as a boundary condition of our findings. Our findings have implications for theoreticians and practitioners interested in CSR, internationalization, and firm strategy.

Ethical Leadership and Organizational Practices

SIM: The (Electronic) Walls Between Us: How Electronic Monitoring Undermines Ethical Leadership

Author: **Chase Thiel**, *U. of Wyoming*
Author: **Nicholas Ryan Prince**, *U. of Wyoming*
Author: **Zhanna Sahatjian**, *California State U., Fresno*

Ethical leaders are highly sought after for their notable ability to inspire beneficial, ethical behaviors among their subordinates. The consistency by which these effects have been demonstrated in the ethical leadership literature suggests they are robust to most conditions. Yet, we argue that a primary mechanism by which ethical leaders influence subordinates (i.e., trust) is disrupted by a company practice that has become nearly as ubiquitous as emphasizing ethicality in hiring: employee electronic performance monitoring. Specifically, drawing from the ability, benevolence, and integrity model of trust, we propose that employee monitoring undermines an ethical leader's influence in the workplace because monitoring conveys messages that disrupt the formation of trust. We further propose that this moderating effect weakens the relationship between ethical leadership and key subordinate outcomes, including task performance, voice, and organizational citizenship behavior. We tested our moderated-mediation model with multi-wave data from an organizationally diverse field sample of supervisors and subordinates. The results provide support for our predictions. Accordingly, this research has important implications for the ethical leadership and monitoring literatures. Considering the widespread use of electronic monitoring systems, this research also provides critical insight for managers.

SIM: A Signaling Theory Approach to Ethical Leadership Behaviors

Author: **George Banks**, *UNC Charlotte*
Author: **Roxanne Ross**, *James Madison U.*
Author: **Allison Toth**, *UNC Charlotte*
Author: **Scott Tonidandel**, *UNC-Charlotte*
Author: **Wenwen Dou**, *U. of North Carolina Charlotte*
Author: **Atefeh Mahdavi Goloujeh**, *U. of North Carolina Charlotte*

The study of ethical leadership across disciplines uses an unintegrated mixture of theories, theoretically conflates leader behaviors with follower evaluations, and is plagued by endogeneity bias which prevents causal inferences, limiting the development of theory and practice. To advance ethical leadership with signaling theory as its foundation, the current work presents a mixture of inductive and deductive preregistered studies. Using a constant comparative analysis method, Study 1 involved coding CEO letters to shareholders (n=9,151 sentences), open-ended survey response text (n = 1,265 sentences), and speeches from celebrity leaders (n = 1,732 sentences). Eight verbal ethical leadership behaviors (ELBs) emerged and were associated with discrete emotions (e.g., righteous anger, pride). In Study 2, ELBs were experimentally manipulated to demonstrate that they cause perceptions of ethical leadership (n = 267; Cohen's d = .27). Study 3 illustrated that ELBs caused a reduction in financial theft (n = 434; Cohen's d = .20). Study 4 showed mixed results in that ELBs caused an improvement in task performance (n = 434; Cohen's d = .18) but had little effect on extra role behavior (Cohen's d = .06). Recommendations for theory and practice are discussed.

SIM: In the multitude of words sin is not lacking: An analysis of codes of ethics across Fortune 500

Author: **Matheus Dall Agnol**, *U. of Sao Paulo (FEA/USP)*
Author: **Luiz Ricardo Kabbach De Castro**, *U. de Navarra*
Author: **Dulce M. Redin**, -

Despite millions of dollars being deployed to compliance efforts, few studies have been able to address and measure the effectiveness of codes of ethics in reducing corporate misbehavior. In this article, we theorize that codes of ethics can be classified according to their content orientation. A legal orientation, based on rational decision-making and mainly focused on the institutional legal framework, and a behavioral orientation that draws upon the behavioral ethics literature. These two orientations create four theoretical categories: legal, behavioral, paper, and hybrid codes. To support our theorizing, we examine the codes of ethics of Fortune 500 companies that account for more than two-thirds of the U.S. GDP. We found that three code categories emerged: paper, legal, and behavioral codes. By evaluating the relationship between codes' legal and behavior orientation and corporate misbehavior, we found that companies with higher behavioral orientation tend to have a lower incidence of environmental, social, and governance (ESG) issues while legal orientation has a positive effect on ESG issues. We also examine the effect of codes' orientation on legal litigation. Legal orientation reduces the number of class actions, while behavioral orientation is positively related to it. Our theory and results shed new light on how to improve compliance policies. Incorporating behavior ethics into the analysis of legal compliance may improve its explanatory and predictive power – and, particularly, its policy implications.

SIM: Ethical Blindfolding At Work

Author: **Aishwarya Shahrawat**, *Doctoral Scholar at Indian Institute of Technology, Delhi*
Author: **Kanika Tandon Bhal**, *Indian Institute of Technology, Delhi*

Ethical Blindfolding, stated simply, is the act of turning a blind eye. Relating it to the literature on (un)ethical behavior, we propose and specially highlight its relation to passive unethical behavior. Further, by drawing upon Kuhn's paradigm shift (Kuhn, 1970), we establish its novelty by contrasting it against mirror constructs such as Ethical Blindness, Self-deception and Moral Muteness. We use Skinner's Radical Behaviorism and Bandura's Social-Cognitive Theory to argue for its theoretical foundations. Post this, we explain how Ethical Blindfolding occurs. By doing so, we also add to and propose an intentional pathway to amoral decision-making. Post this we highlight the practical importance of Ethical Blindfolding, specifically in relation to sexual harassment, whistleblowing and pro-environmental behavior. We conclude by proposing ways of reducing Ethical Blindfolding to avoid its non-desirable implications.

Paper is NOT Available. Please contact the author(s).

Author: **Sebastian Krakowski**, *Stockholm School of Economics*

Rapid advances in the development and use of artificial intelligence (AI) is having a profound effect both on organizations and society at large. While already used extensively in organizations to promote rational decision making, its emergence is also giving rise to profound ethical concerns. As such, we argue that organizational research has a crucial role to play in promoting beneficial development and use of this technology. Given the rapidly increasing autonomy and impact of AI systems, we draw attention to the fundamental importance goal setting and value alignment in determining the ethical desirability of outcomes from this development. Importantly, we claim that goal setting necessitates ethical considerations that are not amenable to technology. Further, while the pursuit of goals can be partially delegated to AI, challenges relating to the representation of goals and (ethical) constraints imply that human involvement is crucial in preventing unforeseen consequences. Finally, we discuss issues relating to the malicious misuse and heedless overuse of AI, arguing that the importance of human agency and inclusion in decision making in fact increases with adoption of the technology due to an escalating scale and impact of decisions made. Given the profound impact of these decisions on numerous stakeholders, we suggest that organizational research stands to contribute to the relevance, comprehensiveness, and integrity of AI ethics in the face of this revolutionary technology.

Sustainability Standards and Systems

SIM: The Legitimacy of Sustainability Standards: A Paradox Perspective

Author: **Andreas Rasche**, *Copenhagen Business School*

This conceptual paper discusses the diffusion-impact paradox of sustainability standards. While standards need to diffuse quickly to create perceptions of success and inevitability (cognitive legitimacy) and hence often have incentives to set low entry barriers, they, at the same time, also have to ensure that participants do not greenwash and create high levels of impact (moral legitimacy). We unpack this paradox and show that its salience for standard setters differs depending on (a) the growth trajectory of a standard and (b) the perceived intensity of the demands underlying the paradox. Based on this, we outline five response strategies that standard setters can use to cope with the paradox. We illustrate our theoretical remarks through a detailed case study of the UN Global Compact. Our arguments contribute to the literature on sustainability standards as well as the scholarly discussion of legitimacy in the context of socioenvironmental governance.

SIM: The Mediating Role of CSR in the Relationship between ERM systems and corporate reputation

Author: **Clara Pérez-Cornejo**, *U. de Burgos, Spain*
Author: **Esther De Quevedo-Puente**, *U. de Burgos*

A wide range of risks can lead companies into a crisis, where certain stakeholders fail to receive value or may even experience a negative impact. An enterprise risk management (ERM) system can minimise the likelihood that risks jeopardise corporate social responsibility (CSR) performance. ERM systems help companies to behave more responsibly and sustainably with each and every stakeholder. They also increase the likelihood of meeting stakeholder expectations, thereby enhancing corporate reputation. This paper analyses the relationship between ERM systems, CSR performance and corporate reputation. The analysis is based on a sample of Spanish companies over the period 2008 to 2015. The results confirm that ERM system quality is conducive to CSR performance. The results also reveal that ERM systems affect corporate reputation through their effect on CSR performance. Managers can link their risk management policies to CSR to achieve and maintain a sustainable distribution of value amongst stakeholders and thereby strengthen their firm's corporate reputation.

SIM: Prosocial Certification and Organizational Identity Change

Author: **Hyeonjin Cha**, *U. of Oregon*

Pursuing pro-social certifications has become an increasingly popular strategy for organizations to obtain social support from their audiences and build a positive reputation. However, although the literature has mostly focused on the impact of certification on perceptions of external audiences, little is known on how such an event brings about changes within an organization. This paper first reviews the recent literature on prosocial certification and organizational identity. The review reveals that the recent studies on identity change by organizations are limited to top managers' views of their firms, neglecting the collective nature of identity. The paper then develops the conceptual model of how prosocial certification may induce collective identity change, conditioned by the organization's motivation, fit, managerial response, and employee reception.

SIM: Integrated Reporting and Integrated thinking: Wagging the tail

Author: **Chao Ren**, *Monash Business School*

This paper aims to study the relationship between Integrated Reporting and integrated thinking. A qualitative case study is conducted in a company that focuses on decisions underpinned by different organizing principles. It explores how performance management practices represent and symbolize integrated thinking and whether Integrated Reporting fosters integrated thinking. This study contributes to a growing stream of literature Integrated Reporting and encourages future research into the reporting variations of other Integrated Reporting adopters and its performance management practices. The study also adds value to the performance management and control literature in the context of sustainability, pointing out the potential for performance management systems to enable or constrain the spread of Integrated Thinking in organizations.

Boards and diversity

SIM: Ethnicity and Corporate Boards: Evidence from a Developing Economy

Author: **Franklin Nakpodia**, *Durham U. Business School*
Author: **Emmanuel Afolabi Adegbite**, *U. of Nottingham*
Author: **Femi Olan**, *Newcastle Business School, Northumbria U.*
Author: **Folajimi Yesir Ashiru**, *Coventry Business School*

The literature on corporate governance and institutional theory suggests that corporate governance responds to a broad array of institutional influences. In extending this literature, we adopt the Nigerian multi-ethnic institutional setting to understand how ethnicity influences boards and corporate governance. Employing an interpretivist qualitative methodology that includes 21 semi-structured interviews with two key stakeholder groups, i.e., board directors and regulators, we find the prevalence of a board ethnicity logic in the Nigerian corporate governance system. We uncover the drivers of this logic to include ethnocentric inclinations, government policy, colonialism, and the informal business environment. Furthermore, we show why and how this ethnicity logic conflicts with the legal system/regulatory framework. This research also allows us to examine the effects of the ethnicity logic on boards and corporate governance mechanisms such as whistleblowing.

SIM: Not if, but when: Making organizations resilient through gender-diverse corporate boards

Author: **Marla White**, *UT Arlington*

U. S. regulators and key stakeholders (e.g., investment banks) continue to pressure organizations to increase female representation on their corporate boards. As such, scholars have taken an interest in understanding the impact of female representation on organizational outcomes. However, most research has focused on firm financial performance (e.g., return on assets, profitability). As a result, we know less about how female representation on corporate boards is related to other outcomes, such as organizational resilience (i.e., ability to mitigate loss and bounce back from adversity). With external pressures, such as globalization, technological advances, and governmental regulations, organizations will inevitably experience external disturbances threatening their survival during and after such events. Hence, it will be important for practitioners and scholars to understand the antecedents that may build organizational resilience. In this present study, I develop a theoretical model that posits gender-diverse boards (i.e., boards with a critical mass of 3+ women) are positively related to organizational resilience. Using resource dependence theory, I suggest women's experience in higher-level leader roles within organizations builds up their resilience capacity. Also, I propose that board interlocks strengthen the relationship between gender-diverse boards and organizational resilience. I conclude with suggestions for future research and practical implications.

SIM: Board Interlocks, Absorptive Capacity and Environmental Performance

Author: **Jing Lu**, *U. of Guelph*
Author: **Fereshteh Mahmoudian**, *Simon Fraser U.*
Author: **Dongning Yu**, *Ryerson U.*
Author: **Jamal Nazari**, *Simon Fraser U.*
Author: **Irene Marie Herremans**, *U. of Calgary*

Coupling resource dependence theory with absorptive capacity concepts, we analyze the role absorptive capacity plays as a potential facilitator between board interlocks and environmental performance. Board interlocks act as avenues for knowledge acquisition and assimilation reaching outside the organization for resources to improve environmental performance. However, an organization also needs the ability to transform and exploit knowledge to implement activities that lead to better environmental performance. Our results show that firms with a greater number of board interlocks, interlocks in the same and different industries, and interlocks with top performers achieve better environmental performance. Furthermore, we find that absorptive capacity, as measured by R&D intensity, moderates the relationship between board interlocks and environmental performance.

CSR and Top Management

SIM: Top Management Team Diversity and Employee Perceptions

Author: **Regina Michelle Taylor**, *Creighton U.*
Author: **Sijing Wei**, *Creighton U.*
Author: **Yiding Wang**, *U. of Oklahoma*

We investigate the impact women leaders have on employee ratings of a firm. Drawing on signaling theory and upper echelon theory, we argue that women leaders provide signals to employees about the firm and employees interpret these signals to develop perceptions about the various aspects of the firm's environment. Using a proprietary dataset of employee reviews from over 7,000 firms, we find employees' overall ratings of the firm are significantly higher in organizations when women are members of the top management team (TMT). Additionally, we find our results are strengthened in younger firms and firms with a more centralized operating structure. Interestingly, we find that our results are not industry dependent. This research contributes to the literature on women in TMTs by investigating the impact of their leadership on the important yet understudied stakeholder group, employees. Theoretical implications and suggestions for future research are discussed.

SIM: Taken for granted? The impact of stakeholder orientation on CSR and CEO's wealth and prominence

Author: **Jongsoo Kim**, *Hong Kong Baptist U.*
Author: **Jihye Ha**, *Sogang U.*

In this study, we assess the causal impact of stakeholder orientation on the impact of corporate social responsibility and CEO's wealth and prominence. To obtain exogenous variation in stakeholder orientation, we exploit the enactment of state-level constituency statutes, which allow corporate executives and directors to consider non-shareholders' interests when making business decisions. Using a cross-section of Texan firms during 2002-2012, we have found that the enactment of constituency statutes leads to significant increases in the quality of a firm's corporate social responsibility (CSR); however, the effect of CSR does not necessarily lead to superior firm performance or value. We further argue and provide evidence suggesting that the obligated stakeholder orientation decreases the impact of CSR on the CEO's compensation but increases the impact of CSR on the CEO's media exposure. Finally, we posit that the impact of non-shareholder orientation on the CEO's wealth and prominence is salient in non-consumer-focused industries, since the impact of CSR is depending upon the extent to how stakeholders take the value of it.

SIM: The effect of CEO tenure on external vs. internal CSR: The moderating effect of visibility and slack

Author: **Marwan Ahmad Alshammari**, *U. of Texas at Tyler*
Author: **Miguel Caldas**, *U. of Texas at Tyler*
Author: **Krist Swimberghe**, *U. of Texas at Tyler*
Author: **Soumendra Banerjee**, *Misericordia U.*

Building on the literature on stakeholder theory, upper echelons, CEO social capital, and the executive life cycle, we empirically investigate the longitudinal effect of CEO tenure on external and internal CSR. Using an 8-year sample of 299 U.S. firms from the S&P 500 list (N = 1791 firm-year observations), KLD data for CSR, and archival and publicly available sources for CEO, governance and financial data, the findings support our hypotheses that CEO tenure will be positively related to externally directed social investments while negatively related to internal social investments. Furthermore, we propose and test the moderating effect of two important contingencies relevant to the firm's social investments: firm visibility and slack availability and find that both variables affect the magnitude of the differential effects of CEO tenure on firm's CSR.

SIM: CEO-To-Worker Pay Ratio, Say On Pay Votes, and Executive Compensation

Author: **Etienne Develay**, *Nottingham Business School, Nottingham Trent U.*
Author: **Yan Wang**, *Nottingham Business School, Nottingham Trent U.*
Author: **Stephanie Giamporcaro**, *Nottingham Trent U.*

This study investigates the extent to which the CEO-to-Worker pay ratio affects shareholders' say on pay votes and consequently examine whether shareholder opposition to pay gaps influence future CEO compensation. The effects of the implementation of the CEO-to-Worker pay ratio disclosure rule (2017) and the Portland Surplus tax (2018) are also discussed. We employ a large and up-to-date sample of US Russell 3,000 companies with 13,885 firm-year observations from 2011 to 2018. We develop and employ a unique measure of the CEO-to-Worker pay ratio allowing us to study time-periods for which data is not available. Using different quantitative estimation methods, we found that the CEO-to-Worker pay ratio is significantly and positively associated with shareholder dissent votes and that a pay gap opposition from shareholders is negatively and significantly associated with future CEO compensation. In addition, mandatory disclosure of the CEO-to-Worker pay ratio has increased the number of shareholder dissent votes the year after its implementation in 2017. By contrast, companies identified by the Portland Surplus tax have not shown higher shareholder dissent votes nor lower future CEO compensation compared to the Russell 3,000 companies. This study has important implications for the corporate governance literature, corporate directors, and policymakers.

Labor-related Issues

SIM: When does Labor Unrest Impact Buyer-Supplier Relationships?

Author: **Yong H. Kim**, *Texas A&M U.*

Recent research suggests the opacity of global supply chains is the main reason firms are unable to make their supply chains accountable. Globally dispersed supply chains mean that labor abuses are often buried many layers back, giving firms the ability to deny labor unrest in their supply chain. Most external stakeholders do not have the ability to link a firm with its suppliers, and a firm's commitment to improve supply chain sustainability can only be recognized by stakeholders if the firm's commitment is made public. Drawing on the extant research on attention, visibility, and reputation, I study firms' responses to labor unrest targeting their direct component suppliers in the mobile phone industry. The main findings demonstrate that social media both enables greater visibility and amplifies the potential impact of labor unrest in supply chains. Suppliers' labor unrest does not affect buyers' decision to disengage from protested suppliers unless the unrest receives social media coverage. Firms' public commitment to promote social supply chain sustainability and hold suppliers accountable influences firms to disengage from protested suppliers. In post-hoc testing, I provide further suggestive evidence that the effect of social media on supplier disengagement is primarily driven by firms that made this public commitment. While the dispersed and opaque nature of global supply chains means that firms can ignore most labor unrest in their supply chains, this study suggests that social media and firms' public commitment can shed light on supply chain dynamics in the aftermath of suppliers' labor unrest.

SIM: Informal Labor Intermediation in Global Supply Chains: A Value Intermediation Perspective

Author: **Vivek Soundararajan**, *U. of Bath*
Author: **Andrew Crane**, *U. of Bath*
Author: **Michael Bloomfield**, *U. of Bath*
Author: **Laura J. Spence**, *Royal Holloway, U. of London*
Author: **Genevieve LeBaron**, *U. of Sheffield*

The majority of the existing literature portrays informal labor intermediation as irresponsible. Still, it remains an important route through which lower-tier suppliers in global supply chains recruit workers. There is only a limited understanding of the activities through which informal labor intermediation is performed and how these activities can be responsible. We address this gap through in-depth qualitative research of informal labor intermediation activities through which workers obtain employment in factories in a South Indian knitwear garment exporting cluster. We build on an economic-sociological understanding of value and value intermediation. Our findings demonstrate that local supply-side (worker community) and demand-side (suppliers) actors define responsible informal intermediation activities as those offering plural forms of value, namely transparency, accessibility, safety, autonomy, and boundary spanning. We find four mundane value intermediation activities through which responsible informal labor intermediation is performed, namely informal scoping, informal distributing, informal matchmaking, and informal consulting. Our study contributes to research on sustainable supply chains, labor governance in supply chains, and value intermediation.

SIM: Strategic Action Field at Play: Enhancing the labor participation of PwDs in India

Author: **Amit Jain**, *S P Jain Institute of Management and Research*
Author: **Shreyashi Chakraborty**, *XLRI-Xavier School of Management*

Employment for persons with disabilities (PwDs) in India has undergone a significant change since India's independence (1947) from the British empire and the adoption of the Constitution of India (1950). The Constitution of India prohibits discrimination (Article 15) and provides equality of opportunity in matters of public employment (Article 16) for groups, such as PwDs. However, the two laws that played a vital role in the integration of PwDs were the Persons with Disabilities Act, 1995, and its replacement the Rights of Persons with Disabilities Act, 2016. The laws have worked towards enhancing the field of disability employment through affirmative action and brought along changes in the field of education, increased access to public utilities and services for PwDs. This article delineates the events and the contributions of different actors who have been working simultaneously for creating and facilitating the increased access of employment opportunities for PwDs through their legal activism and other allied activities.

SIM: Are trade unions a stakeholder in corporate social responsibility? An empirical study

Author: **Anshul Mandliya**, *Indian Institute of Management, Indore*

Trade unions and CSR are two of the self-regulating outcomes of the exploitative intentions of for-profit corporations and business climate. These exploitative intentions have increasingly affected these organisations' social and environmental sustainability and have also brought them in negative limelight, which has harmed their social image and reputation. Its impacts are seen in further repulsion of external stakeholders and investors from these firms. To avoid falling in this rabbit hole of unsustainability and repulsion, many organizations have started looking for strategies to achieve a socially sustainable image. This study investigates whether higher levels of trade union representation can influence employee friendliness, natural resource use, and social controversies. Drawing from the existing literature on CSR, it also investigates the impact of management effectiveness and shareholders effectiveness on these constructs of CSR and social sustainability. It also further extend these relationships to explore their association with business ethics and CSR reporting. The results of the study demonstrate trade unions as a strategic resource in CSR and sustainability, along with management effectiveness and propose a further exploration of a collective framework between them to enhance environmental and social sustainability.

Partnerships for Sustainability

SIM: Drive corporate sustainability through effective strategic partnerships

Author: **Juan Valbuena Hernandez**, *Doctoral Student*
Author: **Natalia Ortiz-de-Mandojana**, *U. of Granada*

Despite the potential of strategic partnerships as an indispensable driver to achieve improvements in corporate sustainability, the characteristics that can improve their effectiveness in achieving this objective have been little studied. The purpose of this study is to establish which characteristics of partnerships could be related to greater improvements in corporate sustainability. To achieve this goal, we analyzed the sustainability reports published by Spanish listed firms. In particular, the characteristics included in the analysis were partnership aligned with the firm's core business, time frame of the partnership, and diversity of the social actors involved in the partnership. There was evidence that the diversity of the social actors involved in the partnership and partnership with a longer time frame improve corporate sustainability measures, but only in sectors that were considered responsive. By contrast, in non-responsive sectors, the diversity of actors and longer-tenure partnerships implied less improvement.

SIM: Volunteer Identity and Identification in Cross-Sector Partnerships

Author: **Priyanka Brunese**, *Purdue U., West Lafayette*
Author: **Meghana Rawat**, *Purdue U., West Lafayette*

We contribute to the discussion of interactional volunteer management, by expanding its concepts through the lens of an individual's volunteer identity and identification to a non-traditional voluntary organization called a cross-sector partnership (CSP). CSPs are formed to address complex social problems that cannot be addressed by a single sector in the community. Via in-depth interviews with members of two CSPs in midwestern United States, we explored how members identified volunteering identity manifested over time the influence of this identification process on their commitment to CSP goals. We found that individuals are 'attracted' to volunteer in CSPs because of their pre-existing identities. However, for these individuals to 'engage and stay engaged' in CSP's activities, they needed to identify with their contributing actions as an input-giver, doer and leader. Also, retaining their commitment required continuous negotiation with the tensions they faced throughout the lifecycle of the CSP.

SIM: Place, partnership structure and partner outcomes: large community sustainability partnerships

Author: **Valentina Castillo Cifuentes**, *U. of Waterloo*
Author: **Amelia C. Clarke**, *U. of Waterloo*
Author: **Eduardo Ordonez Ponce**, *Athabasca U.*
Author: **Ying Zhou**, *U. of Waterloo*

This study analyzes and compares the partnership structures of three large cross-sector partnerships, each from a different continent: Barcelona + Sustainable in Barcelona, Spain; Gwangju Council for Sustainable Development in Gwangju, South Korea; and Sustainable Montreal in Montreal, Canada. Also, based on a survey of the partners in each of the three partnerships, the partner outcomes are determined and compared. Building on these findings and using abductive analysis, the relationship between the partnership structural features and partner outcomes are considered. An updated set of eight structural features for studying large cross-sector partnerships is offered. The empirical findings show relatively few differences between the partnership designs and between the partner outcomes of the three partnerships, contradicting an assumption that place should strongly influence local partnership structures and partner outcomes, and instead making an argument for isomorphism. Also, the experiences of the civil society, private sector and public sector partners in each of the cases were relatively similar, showing that in large partnerships the sector is less relevant than in small partnerships. The differences that were found are discussed in depth.

SIM: How Do Social Partnerships Construct Social Problems? A Social-Symbolic Work Perspective

Author: **Ozgu Karakulak**, *U. of Sussex Business School*
Author: **Thomas B. Lawrence**, *Oxford U., Saïd Business School*

In the world of social partnerships, one important research puzzle that still remains is concerned with how partners construct the social problems that the partnership is intended to address. To explore this, we draw upon the social-symbolic work literature that defines it as purposeful work carried out by individuals or groups to influence social-symbolic objects (Lawrence & Phillips, 2019), and we ask the following: How does social-symbolic work influence the way in which partnership members construct the social problem? Also, how does this influence the outcomes of the partnerships? Comparing two case studies of social partnership that address gender inequality in Turkey, we found that relational and practice work influenced the social construction of the issue. Our findings illustrate that extensive relational work and in-depth practice work led to embedded social construction of the problem (i.e. where partnership considered the multi-layered interdependencies of social structures and complex societal and cultural dynamics surrounding the problem). In contrast, limited relational work and shallow practice work led to disembodied social construction of the problem, which overlooked the complex, interrelated social structures and cultural context that created, and consistently influenced, the problem. Overall, our research contributes to the research on social issues by unpacking the social construction process in partnerships and the social-symbolic work literature by highlighting the lived experience of social-symbolic work and emphasizing social-symbolic work as embodied and human work.

Social Entrepreneurship

SIM: **When Does Financial Performance of a Social Enterprise Translate to Social Performance?**

Author: **Yoojeong Shin**, *U. of North Carolina at Chapel Hill*

There has been a growing interest in social enterprise as an alternative to for-profit and non-profit organizations. By combining the characteristics of non-profits and for-profits, this hybrid organization aims to tackle societal problems while generating revenues to do so. Although scholars are increasingly noticing the complementary relationship between financial performance and social performance of social enterprises, the literature has been silent on what causes the inter-firm heterogeneity in this relationship. In this study, I focus on the governance structure of social enterprises and try to answer the following question: Which will be a more effective form of governance structure – between corporations and cooperatives – for social enterprises to translate financial profits into social impacts? I suggest two competing arguments and empirically test their validity. On the one hand, cooperative social enterprises can better convert their financial performance into social performance than corporations because cooperatives pay more attention to social goals than economic goals. On the other hand, cooperatives' democratic decision-making structures might delay decisions and thus hamper the efficient translation of financial profits to social impacts. Using the data on Korean social enterprises, I found that cooperative social enterprises have a lower tendency to reinvest financial profits for social purposes than corporation social enterprises. Mediated moderation analyses reveal that the negative moderating effect of cooperative governance structure is mediated by (i) managerial attention to social areas relative to economic areas and (ii) democratic decision-making structure of cooperatives. The implications for the social enterprise literature, comparative governance literature, and practice are discussed.

SIM: **Place and Social Entrepreneurship: Review and Research Agenda**

Author: **Manuel R. Montoya**, *U. of New Mexico*

Author: **Audriana Stark**, *U. of New Mexico*

Author: **Wellington Spetic**, *U. of New Mexico*

Despite the burgeoning literature on social enterprises, we do not fully understand place-based mechanisms underlying social enterprise models and impact. This omission is surprising given that social enterprises are contextually embedded, and address issues like homelessness and poverty, which are place-based. In this paper, we address this omission by reviewing the sparse literature that exists at the intersection of place and social entrepreneurship. We systematically coded 46 articles on social entrepreneurship for how they used place as a construct. Based on this coding, we delineate various ontologies of place and the mechanisms underlying the relationship between place and social impact. We juxtapose these ontologies and mechanisms with the rich literature on space/place from the field of cultural geography to propose four building blocks: movement, power, language and emergence. These building blocks provide direction for novel and impactful future research on this topic.

SIM: **Social Startups are growing as well as other startups: evidence from Italy**

Author: **Giuliano Sansone**, *Prague U. of Economics and Business*

Author: **Alessandro Laspia**, *Politecnico di Torino*

Author: **Davide Vigliani**, *Politecnico di Torino*

Author: **Paolo Landoni**, *Politecnico di Torino*

This paper aims at analysing the economic performance of Social Startups and the other startups to understand if there are any differences. To do this, a population of more than 10000 Italian innovative startups was analysed. Based on specific legislations, these Italian innovative startups were divided into two samples: Social Startups and other startups. Thanks to the data regarding Social Startups and the other startups from 2017 to 2018, this study presents several regression analyses to compare their revenue and employment growth. The regression analyses explain that Social Startups are as efficient as other startup in terms of economic growth, notwithstanding the Social Startups do not pursue only economic objectives. Some explanations of this result are presented in this study.

Paper is Available to Meeting Registrants Only.

SIM: **Legitimacy Tensions in Social Ventures**

Author: **Jeffrey Gauthier**, *SUNY Plattsburgh*

Author: **Jeffrey Kappen**, *Drake U.*

Prior research has greatly strengthened our understanding of organizations' legitimacy challenges, but there is a significant gap in our knowledge of the legitimacy challenges of social ventures. This research seeks to build a typology of the unique legitimacy challenges for social entrepreneurs through a narrative analysis of selected social ventures. In so doing, we examine the tensions between narrative logics and organizational models that social ventures are forced to navigate. Our research provides a framework social entrepreneurs can utilize to help identify potential legitimacy challenges, and suggests areas for future research at the intersection of narratives and legitimacy.

Paper is NOT Available. Please contact the author(s).

SIM: **Dehybridization of Social Enterprises: A Process Model**

Author: **Magdalena Plesa**, *U. of Oxford*

William H. Newman Award Nominee

In the world of hybrid organizations, an important and under-examined phenomenon is the process of transforming from a hybrid structure to an organizational form with fewer logics. In this paper, I introduce the concept of dehybridization, which I define as a process through which an organization transforms in a way that integrates fewer institutional logics than previously. To examine the phenomenon of dehybridization in the context of social enterprises I draw on the hybridity and hybrid organizations literature. This literature is integral in gaining a theoretical understanding of the challenges of hybrids and their transformations. Building upon this theory, I posit a process model of how dehybridization occurs in hybrid organizations and its influence over time. Illustrating dehybridization through a process model allows theorists and practitioners to recognize the transformational process from a hybrid to a less hybrid form and provides practical strategies for social entrepreneurs.

Microcredit and Microfinance

SIM: Homogeneity in Rural and Urban Areas and its Influence on Microcredit Group Performance

Author: **Denis John Griffin**, *U. of Otago*

Both microcredit groups and work place teams consist of members who work interdependently on a specific, common goal in order to achieve a desired result for their businesses. Some literature suggests that peer-group and community pressure that increase group repayment rates will be more prominent in rural areas. In rural areas a greater emphasis on harmonious social relations, such as group and community solidarity, may also increase repayment rates. This study compares social sanctions, harmonious social relations, loan repayments and financial capital formation between micro-business entrepreneurs in rural and urban environments of central Mexico. We utilise social categorisation theory to explain how the less diverse rural groups will obtain superior outcomes. A structural equation model based on 182 micro-entrepreneurs in distinct solidarity groups tests these constructs. Support is found for the presence of higher levels of harmonious social relations within rural microfinance groups. Also loan repayments and financial capital formation by micro-entrepreneurs are significantly higher in rural areas. However, surprisingly, social sanctions do not raise loan repayments in either rural or urban areas.

SIM: Who are Impact Investors?

Author: **Theodor Cojoianu**, *Queen's School of Management, Queen's U. Belfast*

Author: **Andreas Hoepner**, *U. College Dublin, Smurfit*

Author: **Yanan Lin**, *U. College Dublin*

Impact investing aims to simultaneously deliver two objectives: (i) social and environmental benefits and (ii) financial returns for a desired investment risk level. This dual objective function differentiates impact investing from other forms of investing that integrate environmental, social or governance (ESG) aspects which consider financial returns as primary objective with ESG outcomes being secondary ambitions. Despite being one of the fastest growing asset classes, academic studies of impact investing remain rare, and an extensive analysis of impact investor characteristics is yet to be undertaken. Using a large dataset of over eight thousand private markets investment (PMI) firms around the world, we are able to differentiate between impact investors, ESG and conventional PMI firms. We unveil differences in their ownership structure, their asset class preferences, their sectoral focus and the types of partnerships they pursue to deliver impact in addition to financial returns. We find that impact investing firms to be younger than ESG investment firms and more likely to be owned by governments. They invest over-proportionally in agriculture, cleantech and education sectors and under-proportionally in "sin" industries such as gambling or tobacco. Finally, in comparison to ESG investors, impact investors are more likely to forge partnerships towards delivering their investment model, particularly with academic institutions.

SIM: MICROFINANCE FUND DIVERSION: IF, WHEN and WHERE PEER MONITORING MATTERS?

Author: **Poornima Mishra**, *Jagran lakecity U.*

Author: **Saju Jose**, *college of business*

Author: **Nilesh Khare**, *Jagran lakecity U.*

Fund diversion by microfinance borrowers has serious consequences not only for microfinance institutions' health but also on the indebtedness of a borrower household. Indeed it can derail the microfinance intervention, and consequently the fight against poverty via financial inclusion. Peer monitoring, arguably, serves as the foundational rock for microfinance and is expected to prevent fund diversion. However, if, when, and where peer monitoring affects fund diversion remains under-researched. This paper finds that peer monitoring prevents fund diversion. However, despite peer monitoring, factors such as duration of association with MFI, the lack of autonomy in the financial decision at home, and other sources of stable income increase the likelihood of fund diversion. Additionally, the duration of association and an alternative source of income weaken the effect of peer monitoring on diversion. The study offers practical implications for MFI managers.

SIM: Tapping into the Potential of Social Banking in Germany

Author: **Moritz Johannes Mey**, *Grenoble Ecole de Management*

Author: **Pablo Collazzo**, *Danube-U. Krems*

In the 2008 banking crisis, social banks could show their resilience. What followed was a clear upward trend in the market with growth rates of up to 30%. Social bankers were sure: "Social banks become as well-known as organic food today" (Schürmann, CEO Triodos, 2010). 10 years later, social banks are still far from reaching their market potential. This explanatory study sets to identify whether attributes of social banks are relevant push or pull factors for customers. It aims to help understand the preferences of customers and its influence on the switching of bank accounts with exploratory elements. The results show that social banks may need to meet certain thresholds to enhance their competitive standing and enable customers to easily relate to their attributes of social banking.

SIM: Entrepreneurial Rhetoric in Education Crowdfunding: Gender and Innovation Dynamics

Author: **Robert J. Pidduck**, *Old Dominion U.*

Author: **Michael Cummings**, *U. of Arkansas*

Author: **Roary Snider**, *U. of Arkansas*

Female-centric sectors such as education show great promise as catalysts of entrepreneurial innovativeness, particularly in addressing funding challenges, making it ripe for probing the potential unique obstacles women may face in resource acquisition. Drawing on social role theory, on a sample of nearly 600,000 campaigns from the world's largest education crowdfunding platform, DonorsChoose.org, we examine how rhetoric known to reflect archetypal entrepreneurial qualities (i.e., narcissistic language) is influential for how innovators acquire resources. Unlike prior studies, we did not find that women were directly penalized for their narcissistic rhetoric. However, we find compelling evidence that more distal forms of gender-related perceptions (associated with academic subject areas) did influence teachers' fundraising performance. We discuss implications for how these findings may have wider implications for gender's relationship with innovation performance writ large.

CSR Practitioners

SIM: How CSR practitioners reformulate their calling through social-symbolic work practices over time

Author: **Enrico Fontana**, *Sasin Graduate Institute of Business Administration, Chulalongkorn U.*
Author: **Mette Morsing**, *professor*
Author: **Sanne Frandsen**, *Lund U., School of Economics and Management*

Calling has gained importance in the career and organization scholarship as a key concept to better explain the meaningfulness of work from a humanistic perspective. On the contrary, much debate remains about the ways a calling—and the meaningfulness intertwined with it—can transform over time. To respond to this problem in the literature, we investigate the calling of corporate social responsibility (CSR), thereby offering an analysis of sixty-six interviews with fifty-seven CSR practitioners working in Swedish international companies. Our paper indicates that the social-commercial tensions affecting CSR practitioners, exacerbated by the schism between their social aspirations and the commercial goals embedded in their work, prompt them to engage with social-symbolic work practices that have a bearing on the meaningfulness they assign to their CSR calling over time. As a result, we theorize three predominant sources of meaningfulness that CSR practitioners ascribe to their CSR calling—activistic purpose, win-win purpose and corporate purpose—and outline that CSR practitioners continuously reconstruct them as they engage with social-symbolic work practices throughout their early, mid and late career stage. Our article sheds new light on the existence of discrepant sources of meaningfulness behind a calling, specifying that these sources change depending on career stages. In so doing, it contributes to the career and organization scholarship as well as the literature on the professionalization of CSR.

SIM: A comparative examination of the tensions of sustainability managers in Korean and Japanese MNCs

Author: **Enrico Fontana**, *Sasin Graduate Institute of Business Administration, Chulalongkorn U.*
Author: **Hyemi Shin**, *Newcastle Business School, Northumbria U.*
Author: **Chikako Oka**, *London School of Economics*
Author: **Jos Gamble**, *U. of London*

Despite the growing attention on the conflicting dimensions of corporate sustainability, little is known about the tensions experienced by managers when adopting global corporate sustainability standards. In East Asia, more specifically, these standards are often viewed as strategic tools that differ from the indigenous and normative understanding of environmental and social contribution. In this paper we take a cultural viewpoint to examine and explain the tensions—and reactions to these tensions—of corporate sustainability managers in South Korean and Japanese multi-national corporations tasked with the implementation of global standards. Through 65 in-depth and comparative interviews conducted in Seoul and Tokyo between 2012 and 2017, we found that corporate sustainability managers in South Korea and Japan similarly encounter societal-commercial, traditional-new and individual-collective tensions. Nonetheless, our evidence indicates that they react to those tensions in contrary ways because of the roots of their indigenous sustainability, which are predicated upon different interpretations of Confucian ethics. This paper contributes to the literature on corporate sustainability by bringing into the analysis the tensions of corporate sustainability managers in East Asia.

Family Firms and other Organizational Structures

SIM: Corporate Social Responsibility and Sustainability in Family Firms: Review and Assessment

Author: **Sahar Nejadhossein Soudani**, *U. of Innsbruck*

This study presents an overview of the historical development and conceptual foundation of family businesses in the context of Corporate Social Responsibility (CSR) and Corporate Sustainability (CS) by providing a comprehensive review of 161 peer-reviewed journal articles published between 1987 and 2020. We aim to expand the current understanding of family firms in a social-environmental context by generating a theoretical model integrating family business and CSR/CS literature. Our findings help to better understand the core family aspects influencing CSR/CS activities as well as related outcomes. Ultimately, this paper identifies the main gaps and suggests avenues for further research.

Paper is NOT Available. Please contact the author(s).

SIM: Bribery in Family Firm: An Ability-Willingness Paradox

Author: **Yijie Min**, *Guanghua School of Management, Peking U.*
Author: **Shisong Jiang**, *Wuhan U.*

Bribery researchers recognize that bribery activities are highly contextual on firm natures. However, bribery in family firm context is still less explored. Drawing on socioemotional wealth (SEW) tradition, we propose an ability-willingness paradox for family firm bribery decision-making: restricted SEW focus provides family firms privacy and secrecy advantages and greater bribery ability; while extended SEW focus motivates family firms to preserve reputation and less willingness to bribe. Considering both the demand and supply side factors of bribery, we propose and examine an inverted U-shaped main effect between family management and bribery, as well as two moderation factors concerning family firms' political connection and province-level anti-corruption investigation. Evidence from Chinese listed firm context supports the above framework. Our findings provide more nuanced and contextual insights to answer why or why not firms bribe; meanwhile, we unveil the paradoxical mechanism of SEW sub-dimensions as well as the risk of abusing family-specific privacy and secrecy advantages.

SIM: Corporate Governance, Family Control & Corporate Sustainability: Evidences from Chinese Family Business

Author: **Weichu Xu**, *East Stroudsburg U.*
Author: **Yue Xi**, *East Stroudsburg U.*
Author: **Daisy Wang**, *East Stroudsburg U.*

The purpose of this paper is to examine how family ownership moderates the relationship between corporate governance measured by board structure (CEO and chair of boards of director duality, gender, education level of board members, etc.) and corporate sustainability measured by disclosure of different dimensions of corporate sustainability. The sample is 275 public Chinese firms traded in Shanghai Stock Exchange and Shenzhen Stock Exchange from 2011 to 2017. These firms have majority share owned by one person or several family members. First, this paper reviews the relevant concepts and current research in this field. Then, it further discusses and explores the field in development countries, particularly in China. Considering the characteristics of Chinese environment and Chinese family businesses (CFB), some hypotheses are tested about the relationship between corporate governance and corporate sustainability as well as how family control moderates this relationship. The results indicate that corporate governance does impact corporate sustainability in Chinese family businesses during the years 2011-2017. Characteristics of the board of directors are significantly related to corporate sustainability. The family control such as family involvement in management moderates relationships between corporate governance and corporate sustainability. From our sample, we found evidence to support some of our hypotheses. In general, good corporate governance improves corporate sustainability and low family involvement in management improve corporate sustainability further. At the end of the paper, we also discuss the limitations of this paper and further studies in the future.

Institutional Insights

SIM: Institutional mirror versus substitute: How regulations affect explicit CSR motivation

Author: **Anna Jasinenko**, *U. of Lausanne, HEC Lausanne*
Author: **Steven Brieger**, *U. of Sussex Business School*
Author: **Patrick Haack**, *U. of Lausanne, HEC Lausanne*

Prior literature proposes two opposing hypotheses of how national regulations could influence CSR motivation. The mirror hypothesis suggests that corporations will be more motivated to invest in CSR if there are strong and well enforced national CSR-related regulations because such institutional settings pressure CSR not only by direct regulations but also with normative pressures important for an organization's reputation and legitimacy. On the contrary, the substitute hypothesis proposes that there will be more CSR motivation in countries of lax CSR-related regulations because corporations would feel the need to fill the institutional void or to avoid stricter regulations in the future. We apply a multi-method design focusing on the micro-foundations of CSR motivation to further examine and resolve this contradiction. Specifically, we examine how institutional regulations affect individual-level CSR motivation and elaborate on the role of trust in regulating institutions as a crucial psychological variable in this process. We find that explicit CSR motivation is generally high in laxly regulated contexts but can be equally high in stringently regulated contexts if the trust in regulatory institutions is high. With our findings, we underline and clarify the strong role of regulatory institutions on CSR and the crucial role of trust in regulatory institutions in this process. We discuss theoretical and practical contributions for CSR management, the field of business and society, as well as international business.

SIM: Diverse Stakeholders, Fitness, and Legitimacy: An Isomorphism Mechanism  

Author: **Chia Yi Liu**, *Tunghai U.*

To develop a sustainable system that balances economic production, environmental ecology, and social equality in organic agriculture, the marginal stakeholders excluded from the mainstream certification mode took the initiative to form communities upholding exchange and cooperation to develop a new certification mode, called participatory guarantee system (PGS). To mitigate the challenge on the diffusion of PGS, this study adopts the isomorphism logic to explore the fitness of diverse PGS stakeholders for enhancing their recognition of the sustainable value on PGS. Based on 113 surveys for multilateral matching in green conservation label, the key research finding indicates that there are three types of stakeholder fitness, namely, similar background, external community, and professional complementarity. Supplementary with neo-institutional theory, which emphasizes the effect of institutional pressure on individual behavior, this study focuses on how marginal stakeholders diffuse a new institution by stakeholder alignment.

SIM: When Inclusive Business Meets the Kinship System: Institutional Work as a Coping Strategy

Author: **Sally Curtis**, *Australian National U.*
Author: **Andrew Penn Bradly**, *Australian National U.*

Despite increased interest in inclusive business, where firms engage the poor in the value chain, research that examines the reality of inclusive business from the perspective of the firm is lacking. An aspect of this reality is the tension between informal institutions and inclusive business. Building on empirical data from case study firms in the Pacific island country of Vanuatu, we present the on-the-ground reality of tensions between an informal institution common in poor communities, the kinship system, and inclusive business. The findings show how the tensions between the kinship system and inclusive business manifest as challenges for the firms engaged with the poor. We show how firms engage in institutional work as a way of coping with the challenges. The study contributes to understanding how informal institutions can undermine inclusive business. The findings suggest that managers engage in institutional work to overcome the challenges, steering us to connect the inclusive business and institutional work literature. Connecting these literature is important as it frames inclusive business as more than simply an attempt at improving livelihoods and providing access to goods and services to the poor, it encourages us to consider the implications of inclusive business for local social systems.

Technology and Innovation

SIM: Trust, Trustworthiness, and Trust-Free Technologies

Author: **Tobey Scharding**, *Rutgers U.*

The technology underlying most cryptocurrencies, blockchain, is well known for enabling “trust-free” financial transactions and for transforming the role of trust in financial transactions (Nakamoto, 2008). Since blockchains typically depend on the cryptocurrencies they underlie to pay users for monitoring and updating them, I investigate whether cryptocurrencies are also trust free. Based on a classic conception of trust (Rousseau, Sitkin, Burt, & Camerer, 1998), I define what it means for technologies to be trust dependent and trust free. I argue that blockchain is trust free, but that conventional currencies and cryptocurrencies are trust dependent. Then, I introduce a novel, probabilistic account of trustworthiness, adapted from Gambetta (1988b) to conform to Rousseau and colleagues’ (1998) account of trust and the research streams to which it has given rise. Based on this account, I argue that most conventional currencies are trustworthy but that most cryptocurrencies are untrustworthy. Finally, I investigate what my argument that most cryptocurrencies are untrustworthy entails regarding the question of whether cryptocurrencies are ethical. Drawing upon research regarding when cryptocurrencies are ethical and when a trustee’s trustworthiness demonstrates that the trustee is ethical, I argue that whether cryptocurrencies are ethical is independent of whether they are trustworthy.

SIM: Stablecoins and Business Ethics

Author: **Shan Meng**, *Xi'an Jiaotong U.*

Author: **Clara Zhou**, *Macquarie U.*

Author: **Martina K. Linnenluecke**, *Macquarie U.*

Author: **Xi Zhao**, *Xi'an Jiaotong U.*

As blockchain technology develops and advances, stablecoins, a new class of cryptocurrency, is attracting interest around the world. However, few studies have examined stablecoins from the perspective of business ethics. In this study, we examine the ethical issues of blockchain technology and stablecoins, as well as the potential impact of stablecoin applications from a business ethics perspective. We review the characteristics and classifications of blockchain technology and stablecoins and investigate their relationship with business ethics and risk. We analyze stablecoins using a multi-layered and multi-dimensional framework based on anticipatory technology ethics (ATE) framework focusing on the technology, artefacts, and application level of stablecoins. We also discuss the moral good, bad, and ambivalence of stablecoins, considering these questions in the context of individuals, corporations, and systems. We identify the risks associated with stablecoins and suggest possible ways to mitigate them, as well as proposing future research directions related to stablecoin applications.

SIM: Mobile-mission: Technology’s impact on social enterprises logics prioritisations

Author: **Cecilia Varendh Mansson**, *Oxford U., Saïd Business School*

Practitioner literature suggests that mobile financial services can help microfinance organisations increase financial inclusion while maintaining financial sustainability. Plaudits have been grounded in mobile financial services’ technical capabilities. However, basing mobile technology’s benefits for microfinance organisations solely on the technology’s capabilities is too simplistic. Organisations are different, abide to different logics and cultures and subsequently respond to realities associated with mobile technology adaptation differently. This paper emphasises that truly grasping mobile financial services’ opportunities and constraints for microfinance organisations requires an organisational theory lens. Henceforth, this paper quantitatively studies how mobile technology impacts microfinance organisations in Africa, expanding the institutional logics perspective and the affordance lens of technology. The paper’s conclusions contrast practitioner literature’s laudatory comments: Mobile financial services are shown to trigger a decrease in microfinance organisations’ social focus and increase their financial prioritisation, but where organisations’ most dominant logic influence the degree of change. Findings have practical importance but also add to organisational theory. Microfinance organisations are hybrid organisations that combine multiple logics in their business models. Existing literature has focused on the nature of organisational hybridity and recognised its prevalence and antecedents. That work has explored trade-offs and tensions originating from organisational hybridity, researched strategies to mitigate tensions, and hypothesised what contextual factors create trade-offs. However, technology’s impacts on hybrid organisations, their logics prioritisations and hybrid business models has not gained adequate attention, where this paper’s empirical conclusions address this oversight.

SIM: A Comprehensive Framework of Frugal Innovation – Antecedents, Moderators, and Consequences

Author: **Mokter Hossain**, *Qatar U.*

Author: **Nivedita Agarwal**, *U. of Stuttgart*

Author: **Yasser A. Bhatti**, *Oxford U., Saïd Business School*

Author: **Jarkko Levänen**, *LUT U. School of Energy Systems*

Frugal innovation as a research field has already been covered over 10 years of scholarship. The frugal innovation phenomenon shows how to serve low-income customers with affordable products and services. There are myriad factors that drive and moderate frugal innovation towards a range of outcomes. Based on 23 diverse frugal innovation cases and our close exploration of this phenomenon over the last decade, a comprehensive framework is developed to identify the antecedents, moderating factors, and outcomes of frugal innovation. Implications for theory, practice and policy are outlined along with avenues for future research.

Trust, Social Capital and Community

SIM: Moral legitimisation in science, technology and innovation policies

Author: **Itziar Castello**, -
Author: **Christian Fieseler**, *BI Norwegian Business School*
Author: **Santiago Uribe**, *BI Norwegian Business School*

Worldwide, governments and institutions are formulating AI strategies that try to square the aspiration of exploiting the potentials of machine learning with safeguarding their communities against the perceived ills of unchecked artificial systems. We make the claim that these new class of documents are an interesting showcase for a recent turn in policy work and formulation, that increasingly tries to intertwine moral sentiment with strategic dimensions. This process of moralizing is interesting and unprecedented coming from governmental actors, as these documents are guidance documents but not law. Given the significant leeway in development trajectories of open meta-technologies such as artificial intelligence, we argue that these more moralizing elements within policy documents are illustrative of a new class of policy writing, meant to catalyze and shape public opinion and thus by proxy development trajectories.

SIM: A critique of utilitarian trust: The case of the Dutch insurance sector

Author: **Erik Van Rietschoten**, *Vrije U. Amsterdam*
Author: **Koen Van Bommel**, *Vrije U. Amsterdam*

The organizational trust literature relies strongly on the notion of trust and trustworthiness as a calculative cause-and-effect relationship between actors. This utilitarian notion of trust has been critiqued by a more moral inspired body of work that focuses less on cause-and-effect relationships and more on trust values. This idea of intrinsic trust highlights construct inconsistencies related to utilitarian trust, which, it is argued, is deficient, incomplete and misleading. Our empirical study of the Dutch insurance sector reveals process inconsistencies that help to explain why the calculation of trust in a utilitarian sense is impossible in practice and is a barrier to the unambiguous assessment of individual needs and utility. We identify three mechanisms that underpin these process inconsistencies: insufficient information; complex behavioural dynamics; and a convoluted pattern of stakeholder influence on trust relationships. These empirical findings enable a categorization of the critiques so far and provide support for the stream of work on intrinsic trust.

SIM: Community Social Capital and Corporate Pollution: An Informal Governance

Author: **Cuili Qian**, *UT Dallas*
Author: **Jieyu Zhou**, *School of Management, Xiamen U.*
Author: **Zhenjiang Gu**, *City U. of Hong Kong*
Author: **Yangxin Yu**, *City U. of Hong Kong*

This study focuses on the influence of headquarters community social capital on facility-level corporate pollution. Our findings reveal that the level of pollution is lower for facilities whose headquarters are located in communities with higher social capital. Further, we find that firm's and CEO's long-term orientation helps to moderate the influence of community social capital on facility pollution, by affecting the extent to which firm value is aligned with community's cooperative norms. Facility-level contexts such as facility's geographic location also affect the effect of community social capital on facility pollution. Based on a sample of US firms during the period of 1998-2015, we find empirical support for our predictions.

SIM: Dynamics of radical flank effect in a never-ending conflict (WITHDRAWN)

Author: **Rajiv Maher**, *EGADE Business School, Tecnologico de Monterrey*
Author: **Nicolás Rojas**, *U. Alberto Hurtado*
Author: **Diego Galvez**, -

Abstract This study elucidates the long-term implications of applying multi-stakeholder initiatives (MSIs) on the radicalization of movements in conflicts between business and communities. We focus on the overlooked radical flank effect (RFE) to analyse the longitudinal archival and extensive fieldwork of a historical conflict between the forestry sector and Indigenous Mapuche communities in Chile. By 2013, the two largest firms had obtained Forestry Stewardship Council certification, although soon after violent attacks against these corporations have persistently increased. We explain this counterintuitive phenomenon by identifying three mechanisms of conflict dynamics in relation to the RFE: these include expectations; frustrations; repression that help explain why a negative RFE emerged unable to marginalize the radical flank, and instead managed to radicalize more moderates. We conclude that MSIs operating in contexts of historical conflict can contribute to exacerbating conflict. As such we call for a re-politicization of Political CSR and discuss the implications for MSIs that operate in such contexts.

Poverty and Inequality

SIM: **Regional Income Inequality, Social Capital and Corporate Giving**

Author: **Xueji Liang**, *School of Business, Sun Yat-sen U.*
Author: **Hongbiao Du**, *Business School, Sun Yat-Sen U.*

This study examines whether and how regional income inequality affects donations by the firms located in the region. Drawing upon the literature on institutional logic of corporate social responsibility (CSR), we develop a concept of regional logics. We focus on the regional logics regarding the value toward wealth redistribution performed by business firms and measure it by regional income inequality. Analyses of 398 Chinese listed firms from 2011 to 2015 provide strong empirical support for the hypothesis that regional income inequality decrease the amount of corporate giving by firms in the region. Additionally, we explore the moderating effect of social capital on the main relationship. The results show that in regions with higher level of social capital, the negative effect of income inequality on corporate giving is weakened. This paper contributes to the field-level institutional logics of CSR, and complements our understandings of antecedents of corporate giving.

SIM: **Firms and Inequality: A Regional Perspective**

Author: **Brett Gilbert**, *American U.*
Author: **Meredith Flowers Burnett**, *American U.*

The emerging conversation on inequality positions the firm as a central contributor to this growing societal problem. Our study builds on this work by extending the relationship between firms and inequality to the regional level. Specifically, we theorize how factors such as the composition of firms and industries, their growth patterns, employment relationships, in-region or extra-region hiring practices, the rates at which firms hire, and the compensation strategies they employ, influence the levels of inequality within regions. We argue that they concurrently render that region unequal to others, and are therefore, also drivers of inequality across regions. The overarching theory presented is a framework for understanding the firm's role in regional inequality.

SIM: **A Socio-Ecological Perspective on Poverty Alleviation and Environmental Protection at the BOP**

Author: **Federica Angeli**, *U. of York Management School*
Author: **Anand Jaiswal**, *Indian Institute of Management, Ahmedabad*

Base-of-the-pyramid (BOP) scholarship and practice have traditionally focused on poverty alleviation efforts, while concerns for environmental degradation within BOP business models have received far less attention. We bridge this gap by proposing a socio-ecological perspective to understand whether a product's low environmental impact enhances BOP users' product adoption, thereby reinforcing the poverty alleviation goals of BOP projects. Owing to the relevance of apt menstrual hygiene management to both socio-economic outcomes of BOP women and to environmental conservation, this study examines the case of sanitary napkins uptake. Results from a discrete-choice experiment involving 164 BOP women (n = 1148) in two Indian slums show that sanitary products' biodegradability is the most important attribute affecting women's preferences towards menstrual hygiene management solutions, which also significantly interacts with socio-economic and socio-cultural characteristics of women and their community. Our findings highlight the possibility for BOP business models to establish positive synergies between the apparently competing goals of environmental protection and poverty alleviation, renew the call for co-creation approaches in designing BOP solutions that are situated in a socio-ecological framework.

Human Rights, North/South and Business

SIM: **Global North and Global South Evaluations of Post-Rana Plaza Safety Initiatives (WITHDRAWN)**   

Author: **Erin Leitheiser**, *Copenhagen Business School*
Author: **Jette Steen Knudsen**, *Tufts U.*
Author: **Jeremy Moon**, *Copenhagen Business School*

This paper contributes to the literature on international supply chain governance through a comparative analysis of Global North and Global South media evaluations of supply chain initiatives in the Bangladesh ready-made garment industry, 2013–2019. It presents an analysis of media coverage of the initiatives over three periods (inception, operationalization, transition). It focuses on three main forms of evaluation: the relative amount of coverage given to the initiatives over the three periods (prominence); the normative assessment of the initiatives, whether positive, negative, neutral, or mixed (valence); and the focal issues of evaluation (themes). It finds significant variation in coverage. Global North media focused on coverage in the initiatives' inception phase with reference to the themes of responsibility, liability and ownership. In contrast, Global South media focused on the operationalization of the initiatives with reference to themes of remediation and compliance. We argue that these findings powerfully reflect imbalances in the de-sign of supply chain governance systems.

SIM: **Business and Human Rights: How NGO Orientation toward Local Communities Shapes Access to Remedy**  

Author: **Tricia Olsen**, *U. of Denver*
Author: **Kathleen Rehbein**, *Marquette U.*
Author: **Annie C. Snelson-Powell**, *U. of Bath*
Author: **Michelle Karen Westermann-Behaylo**, *U. of Amsterdam*

With respect to human rights, firms historically have incurred little government oversight domestically and internationally resulting in governance gaps. This has resulted in an emphasis and adoption of global governance structures as a mechanism for providing this much needed oversight. However, as we argue here, the emphasis on global governance structures overlooks opportunities for building state capacity and democratization by governing globally and not locally. In what follows, we offer another approach for dealing with the governance gaps of the existing approach to business and human rights and draw from unique empirical evidence to detail how domestic and international nongovernmental organizations (NGOs) operate to check corporate misbehavior. The empirical evidence indicates that NGOs classified as either community- or corporation-focused react differently in terms of shaping remedy solutions. Community focused organizations are more apt to help victims seek judicial and quasi-judicial mechanisms, thereby triggering positive effects to state capacity building and or entrenchment of democratization. Alternatively, corporate-focused NGOs are more likely to seek non-judicial outcomes that rarely result in material benefits for victims. We support our findings with case studies illustrating NGO activism and discerning its important implications for long-term capacity building and democratic institutional strength.

 SIM: **Systems Exploitations under the Name of Modern Slavery**  

Author: **Hong Bui**, *U. of Bath*

Employing a systems perspective on tensions and informed by modern slavery theory, this study's design involves theoretical, methodological, and data triangulation. It investigates a wicked issue of modern slavery in the Vietnamese immigrant nail-beauty community in the UK from multiple actors. The data were collected from nail bar owners, immigrant workers, their families in Vietnam, social workers, and court interpreters, and other sources of social media, and mass media. The blending strategies of zooming in and zooming out allow to understand the views of various stakeholders better and see the interconnectedness among those stakeholders. The rigorous data and multiple qualitative methods reveal patterns of exploitations among immigrants, business owners, and government systems under the name of modern slavery. The findings challenge the modern slavery theory by showing that it may not fully explain the phenomenon of modern slavery in a complex context. The tensions of the government's tackling modern slavery when linking to immigration management open door for the development of systems counterintuitive behaviors to explain the wicked issue of modern slavery.

 SIM: **Public and private governance in Business and Human Rights: A dynamic model of mutual influences** 

Author: **Judith Schrempf-Stirling**, *GSEM - U. of Geneva*
Author: **Florian Wettstein**, *U. of St. Gallen*

Carolyn Dexter Award Nominee

The last three decades have heralded a rise of private governance schemes and a respective transformation of traditional state-centered global governance. In this conceptual paper, we show that private governance and state-led governance are neither substitutes nor complements to each other. We frame their relation to each other as a dynamic process of mutual interaction, influence, and stimulation, which changes in form and direction along the different stages of the regulatory process. We illustrate how the (co-)existence and/or combination of private and state-led governance alters the mode of operation, focus, processes, and outlook of each of them. For the development of our framework, we focus on private and state-led governance approaches in the business and human rights domain. The paper contributes to the literature on global governance by conceptualizing the relationship between private and public governance as more dynamic and mutually reinforcing than currently discussed in the literature.

Paper is Available to Meeting Registrants Only.

Author: **Shengwen LI**, *Smith School of Business, Queen's U.*

Author: **Anthony Goerzen**, *Queen's U.*

As highlighted in the United Nations Sustainable Development Goals, addressing gender-based violence (GBV) has been identified not only as an essential avenue to achieve gender equality and better health but also as a way of “doing good” by multinational corporations (MNCs). While lead MNCs of global value chains (GVC) are pressed to improve social and environmental outcomes through GVCs governance, it remains a theoretical and empirical question as to the conditions under which various interventions are effective. Our study builds on the GVC social upgrading literature, status inconsistency theory, and social identity theory to examine the effects of specific initiatives to address GBV among artisanal mining communities in the D.R. of Congo by using a novel longitudinal dataset collected in 2019 and 2020. Our results show that interventions that incorporate educational components of GBV-related knowledge and promote social inclusion are more likely to reduce GBV in the furthest reaches of a GVC when local institutions are weak. However, these positive influences of these interventions diminished during the COVID-19 pandemic. These findings shed new light on the theoretical implications of GVC performance and practical guidance for project and policy design to combat GBV.

Stakeholders and Shareholders

SIM: **Decoding the dysfunctional effects of shareholder activism**

Author: **Hadi Shaheen**, *Queen's School of Business, Canada*
Author: **Kamyar Goudarzi**, *Smith School of Business, Queen's U.*
Author: **Abhirup Chakrabarti**, *Smith School of Business, Queen's U.*

Shareholder activism may not facilitate intended changes in firms. We examine how shareholder social and financial activism arise in firms, and if the resulting heterogeneity of demands can cause firms to limit their ESG disclosure or engage in financial fraud. Using a sample of 576 firms that received shareholder activist proposals between 2006-2018, we find that shareholder activist demands become heterogeneous over time. The effect of shareholder social activists on ESG disclosure is, however, lower for firms that are also subject to financial activism. Similarly, the effect of shareholder financial activism on financial fraud is lower for firms that are also subject to social activism. The results suggest that demands for managers to concurrently address multiple concerns can lead to dysfunctional effects.

Paper is Available to Meeting Registrants Only.

SIM: **Stakeholder Engagement analysis and performance over time**

Author: **Fabricio Stocker**, *Fundação Getúlio Vargas/EBAPE*
Author: **João Maurício Gama Boaventura**, *U. of Sao Paulo (FEA/USP)*

Despite the literature on stakeholder engagement states that cooperative relationships can be achieved through engagement this, there is no clear evidence to support the idea that higher levels of stakeholder engagement have a positive effect on the company's performance. This study aims to address that gap by analyzing the different engagement strategies and understanding how different nuances of stakeholder-organization relationships affect the quality of the engagement and its impact on firm performance over time. This study has two distinct methodological designs: i) qualitative stage: data collection from GRI sustainability reports and application of the content analysis method to the engagement actions over the 6 years. ii) quantitative stage: through panel data regression to assess the impact of engagement actions on the social (CSP), environmental (CEP), and financial (CFP) performance of companies over time. The results of this research are revealing and contrast with some of the theoretical arguments about financial, social and environmental gains and returns, while emphasizing that although performance over time is positive, when the different levels are evaluated and their effect on the short and in the long term, the most intense relationships with a high level of engagement do not have a positive relationship with social performance in the long term, but in the short term. The paper contributes by clarifying which strategies and actions have had a greater impact over time on company performance and can improve the management of companies and serve the interests of their stakeholders.

Paper is Available to Meeting Registrants Only.

SIM: **How the Silent Receivers Influence the Acting of Theater Performers**

Author: **Béatrice Toustou**, *SKEMA Business School*

The theater has a long, mirror-like tradition in which the artistic form resonates with audience's own experience. Our intention is to reverse the mirror by analyzing how an actor receives signals from a silent receiver, and what he or she does with them. This question is important because the digital society of the early 21st century too often obscures the reciprocal action that individuals exert on each other. This has been particularly acute during lockdowns, but the general tendency is to resort to digital tools at the expense of physical interactions. Through the social mirror, symbolic interactionism makes it possible to clarify the role played by the audience in theatre actors' performance. The comprehensive and microsociological approach taken by Interactionists means that their perspective is inductive. A qualitative methodology is appropriate, involving spending time with actors and collecting their testimonials. Initial data confirm that the audience plays a triple role in theatrical creation. First of all, through its presence, it brings shows to life. Second, a real exchange of signals takes place between the stage and the house, a process both of interaction, adjustment and social exchange with counter-gifts for the artists exposed to the public. The nature of an unintentional gift, which is interpreted and integrated into the acting response of the actor, can enrich social exchange theory. Finally, the audience plays a sanctioning role because it is its presence alone that makes it possible to validate whether the theatrical form successfully comes across as a creation. Symbolic Interactionism theory, rarely used in management science research, can help to better understand the sounding board of silent audiences whose reflective action influences performers. This better understanding of social interactions has implications for teacher-student exchanges, social interactions within organizations, and ultimately society as a whole.

SIM: **Value Distribution to Stakeholders: A Study on Power and Strategic Importance in TSX IPOs**

Author: **Maurício Mendonça De Araujo**, *U. of Sao Paulo (FEA/USP)*
Author: **Ronaldo Oliveira Santos Jhuniór**, *U. of Sao Paulo (FEA/USP)*
Author: **Mariana Torres Uchoa**, *U. of Sao Paulo (FEA/USP)*
Author: **João Maurício Gama Boaventura**, *U. of Sao Paulo (FEA/USP)*

Stakeholder theory has developed over the past few decades and has established an increasing presence in business studies. In this context, the concepts of stakeholders' power and strategic importance have been studied in the literature, however, some aspects remain unclear, such as the relationship between these concepts and the value distributed to stakeholders by companies. This research seeks to provide theoretical clarification based on empirical evidence about the distribution of value to stakeholders. Our purpose is to verify the association between the power and the strategic importance of stakeholders and the distribution of value to them by publicly-traded companies on the Toronto Stock Exchange (TSX). In order to obtain the information relevant to the treatment given by companies to their stakeholders, data collection took place in the prospectuses presented by companies for the TSX IPO process in the period from 2008 to 2019. 104 prospects were studied in which the data collection was done through content analysis with the aid of the Nvivo 12 software and the data analysis was done using ordinary least squares (OLS) regression to test our hypotheses. The results observed reveal that not only is power and strategic importance relevant to the distribution of value to Stakeholders but also that stakeholder's strategic importance has greater influence when compared to its Power.

Workplace Issues and Considerations

SIM: Sustainable Human Resource Management for Improved Environmental Performance

Author: **Florencio F. Portocarrero**, *U. of California, Irvine*
Author: **Anne-Laure P. Winkler**, *City U. of New York, Baruch College*

In this study, we examine the role that different types of human resource management (HRM) practices play on firms' environmental performance. We develop a model to evaluate the influence of managers' environmental performance evaluations and two types of internal corporate social responsibility (CSR) practices (socially responsible employee benefits and corporate volunteering practices) on organizations' environmental performance. In doing so, we go beyond the green HRM framework, which focuses on practices specifically designed to address environmental concerns, and we start integrating other aspects of the larger sustainable HRM area to improve our understanding of the effect of HRM practices on firms' environmental outcomes. To accomplish our goal, we analyze a sample of 142 manufacturing companies that have gone through B Lab's Impact Assessment process, one of the few independent certifications of social and environmental responsibility available to small and medium businesses. The results show that managers' performance evaluations on environmental goals not only have a direct impact on firms' environmental performance, but also strengthen the positive effect of environmental management practices on performance. Findings also support the influence of both types of internal CSR practices on environmental performance, which opens the door to explore whether and how different types of internal CSR have an effect on firms' environmental performance. Our study advances recent work on societal grand challenges in the field of management, pointing to specific people management practices by which businesses can move from being part of the environmental problem to being part of the solution.

SIM: Gossip 2.0: The Role of Social Media and Moral Attentiveness on Counterproductive Work Behavior

Author: **Ghulam Murtaza**, *Kedge Business School, France*
Author: **Jean Pierre Neveu**, *U. de pau et des pays de l'Adour*
Author: **Rahman Khan**, *Ghulam Ishaq Khan Institute of Engineering Sciences and Technology (GIKI)*
Author: **Qurat Ul Ain Talpur**, *ESSCA School of Management*

This paper examines the effects of negative workplace gossip (NWG) on counterproductive work behaviors (CWB) through emotional exhaustion. We seek to advance a more nuanced view of the negative gossip on CWB by exploring contingency roles of social media (SM) and moral attentiveness (MA). Using multisource, time-lagged data from 306 Information Technology (IT) professionals and their supervisors, we highlight the importance of SM and MA in understanding how individuals react to negative gossip. Our results indicate a positive relationship between negative gossip and CWB, which is mediated by emotional exhaustion. Notably, we find that the use of SM at the workplace strengthens the positive relationship between negative gossip and employees' emotional exhaustion. Also, indirect effect of gossip on CWB via exhaustion is further moderated by MA. We end with a discussion of implications and promising avenues for future research.

Paper is Available to Meeting Registrants Only.

SIM: The Dark Side of Workplace Reintegration: How Offender Reactions Influence Unethical Behavior

Author: **Natalie Liberman**, *Washington State U.*
Author: **Kenneth D. Butterfield**, *Washington State U.*
Author: **Thomas M. Tripp**, *Washington State U.*
Author: **Jerry Goodstein**, *Washington State U.*

Research on offender reintegration in the aftermath of workplace wrongdoing has emphasized a wide range of positive outcomes for the offender and the organization. However, little is known about the potential dark side outcomes of offender reintegration. Thus, we examine how reintegration influences unethical behavior intended to help the supervisor or workgroup (unethical pro-supervisor and pro-workgroup behavior) or harm the supervisor or workgroup (counterproductive work behavior and revenge). Results from two studies of full-time employees show that offender reintegration leads to these dark side outcomes, and shows that perceived victimization, perceived interactional justice, and supervisor identification consistently mediated these relationships. Implications for future research and for practicing managers are discussed.

CSR and Business & Society

SIM: Scale and Scope: Idiosyncratic CSR Strategies and Their Impact on Firm Financial Outcomes

Author: **Hao Lu**, *Saint Mary's U.*
Author: **Xiaoyu Liu**, *Saint Mary's U.*

Current research on CSR mainly treats CSR as an aggregated concept of scale, focusing on the overall goal of a firm's CSR strategy while ignoring the idiosyncratic nature of CSR strategies. This paper contributes to the theorization of CSR by treating it as a two-facet concept of both scale and scope, and, thus, measuring it using a matrix of performance. The scope of CSR represents how a firm distributes its resources among different CSR activities to achieve the goals of its CSR strategy. Using a sample of firms in the US retail industry between 2000 and 2015, we investigate whether the influence of idiosyncratic CSR strategies on firm financial outcomes are different when the scale and scope of CSR strategies vary. Our results suggest that firms with a broad CSR scope are more likely to financially benefit from a high CSR scale, whereas firms with a focused CSR scope may not benefit from a high CSR scale at all. This effect is consistent through both the profitability enhancement and the risk reduction mechanisms of CSR. Considering CSR as a matrix of idiosyncratic strategies provides significant practical implications for managers to effectively implement CSR strategies to achieve distinct corporate objectives.

SIM: Mapping the Evolution of the Business and Society field and Moving the Research Agenda Forward

Author: **Elisabet Garriga**, *EADA Business School*

In this paper, we map the business and society field from a relational approach that allow us to understand the direction, the pace and velocity at which the field has been evolving and to identify the three main trends; (1) the number of components included in the business and society approach, (2) the emergence effect (3) the level of analysis that explains all three, moving from functionally towards supra-functionally oriented approaches in the field of business and society. Based on these trends and following a problematization approach, we propose a new approach, the complete supra-functional approach (SCA) based on relational sociology (Donati and Archer, 2015) which challenges the main positivist and modernist assumptions in the field (the separation fallacy and the functionalism-positivistic concept of paradigm) following the problematization approach. We applied the SCA in the Covid-19 panorama as an example of how it works and what this entails in practice.

SIM: How do business leaders account for what shapes Responsible leadership? Lobbying for the SDGs

Author: **Matthew Gitsam**, *Hult International Business School - Ashridge*
Author: **Ajit Nayak**, *Southampton Business School, U. of Southampton*
Author: **Jonathan Gosling**, *U. of Exeter*

This paper focuses on the phenomenon of corporate lobbying for more ambitious government intervention to tackle sustainability challenges and explores how we can account for the occurrence of such activity. To do this it builds on both the Responsible Leadership literature and Ricoeur's theories of the self, motivated action and the ethical intention in the context of an empirical case – that of corporate lobbying for the UN Sustainable Development Goals over the period 2012-2015.

Paper is Available to Meeting Registrants Only.

SIM: A Conceptual Model of Sustainability Paradox Governance

Author: **Robert Simon Bikel**, *Pepperdine*

Managing sustainability in for-profit organizations can give rise to multiple tensions, including tensions between financial and social objectives and meeting competing stakeholder demands on the firm. Recent research into tensions created by sustainability issues suggests that framing those tensions paradoxically – as competing objectives that are interconnected and persist through time – has been shown to assist in managing those tensions and even promote innovative solutions. The purpose of this research will be to gauge how directors on boards for for-profit companies experience and embrace paradoxes related to sustainability. Specifically, it will examine how a “paradox mindset” – a willingness to embrace multiple tensions among competing objectives – relates to the types of sustainability paradoxes experienced by these board members. Based on the corporate governance, sustainability, and paradox literature, a new conceptual model and propositions are developed.

SIM: Making Sense of Corporate Water Usage Strategy and Performance

Author: **KATE HANLY**, *U. of Calgary*
Author: **Sharon L. O'Sullivan**, *Telfer School of Management, U. of Ottawa*
Author: **Daina Mazutis**, *Telfer School of Management, U. of Ottawa*
Author: **Mohamed Chelli**, *Telfer School of Management, U. of Ottawa*

Access to high quality and reliable freshwater resources is a global concern as demand for water continues to grow while its sustainable supply is at risk. In the face of mounting pressures, the need for sustainable corporate water use practices is paramount, yet businesses continue to operate with immense variation in their water usage strategies and performance. Our research is driven by the desire to better understand why this variation continues to persist, especially within a highly water-dependent industry such as the craft brewing industry. Using an interview-based qualitative approach, we seek to better understand how corporate managers, from breweries in Alberta and California, are making sense of water issues. Our empirical findings reveal that novel cognitive frames pertinent to making sense of water management decisions help to explain why corporate water usage performance differs between breweries, thereby enriching the cognitive framing and sensemaking literatures, and extending these into the sustainability context. In so doing, we offer the first empirical inquiry into how corporate managers' sensemaking processes are related to their firms' water management strategies, and, by extension, their water usage performance.

This PDW is a companion of the Business & Society special issue call for papers on “Stakeholder Engagement: Opening up Participation, Inclusion, and Democracy”. It has two objectives. First, the PDW aims to focus attention on the relevance of examining the conditions, processes, and consequences of various dimensions of stakeholder engagement. Second, it aims to help authors of manuscripts related to this theme develop their papers by benefiting from the knowledge and expertise of leading scholars in the field. In order to embrace diversity and live inclusion across time zones, we will run the proposed PDW as an asynchronous event that combines various formats. This will provide participants with a choice of live sessions in which they can interact with and receive feedback from leading scholars in the field.

STR: How Do Entrepreneurial Orientation and Political Ties Collectively Influence Corporate Reputation?

Author: **Aiqing Liu**, *School of Management, Xi'an Jiaotong U.*
Author: **Chengli Shu**, *Xi'an Jiaotong U.*
Author: **Zhenxin Xiao**, *Xi'an Jiaotong U.*

In transitional economies such as China, corporate reputations are usually built by addressing stakeholder interests related to the market and the government, which requires firms there to embrace an entrepreneurial orientation (EO) and establish political ties (PTs), respectively. However, as EO follows a market logic while PTs follow a state logic, a conflict between logics may occur and may further impair corporate reputations. This study examines how EO and PTs together influence corporate reputations and considers provincial government intervention and religious intensity as boundary conditions. Empirical results of an analysis of survey data and secondary data reveal that EO and PTs together have a negative relationship with corporate reputations, and this negative relationship is strengthened by government intervention but mitigated by religious intensity. This study thus extends the corporate reputation literature by clarifying how logic tensions derived from simultaneously embracing EO and PTs influence reputation.

STR: Institutional Antecedents to Shareholder Monitoring: The Liability of Localness in Shareholder Votes

Author: **Daisuke Uchida**, *Kyushu U.*
Author: **Toru Yoshikawa**, *Singapore Management U.*

This study explores how institutional forces shape the extent to which shareholders vigilantly monitor their invested firms. Using the context of the shareholder vote on director elections in Japan, especially focusing on a shift of institutional pressures, i.e., disclosure of voting records, we examine how its influence on the extent to which firms receive dissenting votes differs depending on their ownership structure. Drawing on institutional theory and on the concept of the liability of localness, we find that firms receive more dissenting votes after the disclosure as shareholdings by domestic investors who pay greater attention to the local constituents increase. We argue that this change derives from the liability of localness that domestic investors suffer. We further demonstrate that the relationship is pronounced under specific contingencies consistent with the agency theory principle that these constituents promote, i.e., low firm performance and the nomination of a nonindependent outside director.

STR: Keeping short sellers at bay through CPA: The deterring role of a firm's lobbying activity.

Author: **Mirzokhidjon Abdurakhmonov**, *U. of Nebraska, Lincoln*
Author: **Orhun Guldiken**, *Florida International U.*
Author: **Le Xu**, *Florida International U.*
Author: **Dasol Sim**, *Florida International U.*

Responding to recent calls in the strategic management literature to examine firm strategies that influence short sellers' decision to target firms, this study uses precepts from signaling theory to argue that lobbying activity of a firm – a critical form of non-market strategy that is part of corporate political activity (CPA) – acts as a signal that deters short sellers from targeting a focal firm. We also investigate the moderating roles of three factors – lobbying scope, industry regulation, and regulatory risk – that make lobbying firms more (or less) attractive as potential targets for short sellers. In a longitudinal sample of S&P 1500 firms from 2008 to 2018 and using supplementary interviews with short sellers, we find broad empirical support for our theoretical framework. Our study extends current CPA literature by investigating a more proximal but indirect benefit of lobbying and research on capital market investors by emphasizing the role of short capital market investors.

Paper is Available to Meeting Registrants Only.

STR: Do Political Ties Broaden or Narrow Firm Search? A Study on Publicly Listed Chinese Firms

Author: **Chudi Yang**, *Guanghua School of Management, Peking U.*

Besides the persistent debate on the impact of political connections on firm innovation, the heterogeneity in search decision and efforts also remains unclear. By distinguishing two types of managerial political ties, horizontal (i.e., block ties with regions) and vertical (i.e., line ties with departments), we examine the opposite effects of political ties on firm search breadth. Moreover, we propose that these effects are contingent on the foreignness of the context. Through analysis of a sample of publicly listed Chinese firms from 2004 to 2014, we find that firms whose executives have block tend to conduct broader search than those without such ties, while the line ties are negatively related to the search breadth of the focal firm. The effects of the two types of political ties can be particularly stronger when the firms are have higher proportion of oversea business. Our research contributes to the literature on the relationship between political ties and firm innovation, the heterogeneity of political ties, and the literatures on the liability of foreignness.

External Relations, Renewal and Redeployment

STR: Coopetition in Yin-Yang and Dialectic Perspectives

Author: **Ruijia Liu**, *School of Management, Xi'an Jiaotong U.*
Author: **Jianjun Yang**, *Xi'an Jiaotong U.*
Author: **Sascha Albers**, *U. of Antwerp/ Antwerp Management School*

In pursuing economic goals, firms involve in coopetition. Coopetition is an advanced relationship for firms to play dual roles as cooperators and competitors for common development. This paper considers that the essence of coopetition is a pursuit of common value creation and private value appropriation, with the inevitable cooperative contradiction. How to maximize the common and private benefits of each cooperative firm at the same time is the core concern of both academics and practitioners in the coopetition field. The goal of this paper, therefore, is to offer a renewed understanding of inter-firm coopetition based on the paradox theory, distinguishing the paradox of coopetition under two different perspectives—Yin-Yang and dialectic with East and West culture backgrounds. Building the two dynamic models of Yin-Yang and dialectic perspectives, the paper provides a new way for future research and business practices to deal with inter-firm coopetition.

Paper is Available to Meeting Registrants Only.

STR: Strategic Renewal of Hollywood Movies by TMT as Agents of Change:Examining the Franchise Performance 

Author: **Avimanyu Datta**, *Illinois State U.*
Author: **Smita Srivastava**, *Wichita State U.*
Author: **Arvin Sahaym**, *Washington State U.*

This study examines how a top management team (TMT) influence the strategic renewal process of Hollywood franchises. Specifically, in the context of motion picture industry where the revenue cycle is short, we explore how changes in TMT can motivate cognition-based renewal via narrative transformation, which in turn can affect movie franchises' financial performance. Such renewal is based on the TMT's cognition of the contemporary social demographic and market environment, and the depth and breadth of prior knowledge, experience, and vision about the franchise's trajectory. We tested our longitudinal data for franchises' financial performance using a sample of 1,120 movies nested among 337 franchises produced from 1948 through 2019 (over 71 years). Our results show that sequels or prequels made by updated TMTs motivate narrative transformation and attract audiences, generating superior revenue. We contribute to the literature on change in the upper echelon, specifically TMT and cognition-based strategic renewal. A critical theoretical and practical implication is that TMT changes at regular intervals can strategically renew a franchise by bringing fresh and unique perspectives.

STR: Regulatory alignment capability and corporate political activity

Author: **Christopher G. Pryor**, *U. of Florida*

Firms are devoting increasingly significant time and capital to influence their legal/political environments. Researchers have attempted to understand how and why firms may rely on corporate political activities (CPA), and while this research has led to important findings, the theoretical and empirical link between CPA and firm performance remains elusive. Therefore, scholars have called for a finer-grained understanding of the mechanisms that link CPA to performance. In response, this paper explains how firms use CPA to loosen their regulatory bonds in order to exploit a greater number of opportunities, and, in turn, obtain performance benefits. We also explain why firms exhibit various levels of benefits from their CPA – namely, firms may develop and deploy regulatory alignment capability, which is composed of a set of activities that helps them work with, understand, and comply with government agents. Hypotheses are tested on a sample of 257 commercial banks, and findings suggest that deploying regulatory alignment capability may help firms obtain performance benefits from opportunity exploitation, regulatory alignment capability tends to reduce the initial number of opportunities exploited.

STR: Where Does Resource Redeployment Flexibility Come From? The Role of Resource Divisibility

Author: **Ghahhar Zavosh**, *HEC Montreal*

The theory of resource redeployment (RR theory) explains how firms create value from being flexible in the redeployment of their resources. This fast-growing theory, however, remains limited in providing explanation about the sources of this resource redeployment flexibility and only scrutinizes the flexibility which is rooted in the resources relatedness among a firm's different businesses. In this study, we introduce resource divisibility as another dimension for gaining resource redeployment flexibility and examine and compare the flexibility accruing from these two dimensions under different contingencies.

Behavioral Strategy at Any Time

STR: Strategic Topics and Strategic Changes: From the Perspective of Attentional Engagement 

Author: **Jaemin Kim**, *Oakland U.*

Strategic topics communicated by executives have been less studied in the area of attentional engagement. Understanding strategic topics consisting of vocabularies is crucial to exploring attentional engagement in the pipeline of a communication channel. Using shareholder letters issued by S&P 100 listed companies, this study investigates the syntactic and semantic features of strategic topics in public documents – topic variety and content – that could affect a firm's strategic changes and suggests the conditions that strategic topics are translated into strategic changes. For textual analysis of shareholder letters, this study adopted LDA topic modeling and supervised learning-based text classification as well as semantic validation. The findings empirically support the presence of attentional fatigue that overshadows attentional synergy.

Paper is Available to Meeting Registrants Only.

STR: The Effect of CEO Sudden Death on A Competitor CEO's Risk-Taking 

Author: **Samyul Cho**, *Oregon State U.*

Author: **Yohan Choi**, *Southern Illinois U., Edwardsville*

This study examines how the sudden death of peer CEOs influences competitor CEOs' risk-taking. This study finds that competitor CEOs who have witnessed peer CEOs' sudden death tend to take on more risks in the post-death period. This study also finds that competitor CEOs' risk-taking becomes stronger when similarity in resource allocation profiles between a peer CEO firm and a competitor CEO firm is greater. Consistent with the prediction of terror management theory, the findings suggest that mortality salience can promote CEOs' risk-taking by strengthening their motivation to bolster their worldviews and self-esteem. This study contributes to the literature on strategic leadership by shedding light on the sudden death of peer CEOs can play an important role in affecting competitor CEOs' decision-making.

Paper is NOT Available. Please contact the author(s).

STR: Strategic Initiatives in the Intraorganizational Ecology: An Investigation of Multi-level Goals  

Author: **Erim Ergene**, *Bryant U.*

Author: **Steven W Floyd**, *U. of Massachusetts, Amherst*

Strategic initiatives are temporary group undertakings intending to add or renew organizational capabilities and include projects focused on new product development, capital investment, operational efficiency or market growth. The development of strategic initiatives is susceptible to a variety of goals at the individual, departmental, organizational and initiative levels. Despite these multi-level goals, research on strategic initiatives does not take a holistic perspective and either assumes the initiative team to be a cohesive whole or focuses on the team itself and ignores the presence of multi-level goals acting on the team altogether. In this paper, our objective is to understand the impact of multi-level goals for the development of strategic initiatives within the intraorganizational context. We take a configurational approach to classify goals at different levels and argue that advancing the initiative in the resource allocation process requires specific team processes to manage different multi-level goal configurations. We also argue that such advancement can in turn influence both the variety and diversity of goal differences in the team. Our theory building contributes to behavioral theory, and specifically contributes to research on strategic initiatives and goals.

STR: The Role of Time in Organizational Aspirations: Past- and Future-Oriented Performance Feedback 

Author: **Fabian Nagel**, *RWTH Aachen U.*

Research in the tradition of the Behavioral Theory of the Firm (BTF) has long analyzed organizations' reactions to discrepancies between aspiration and actual performance – yet largely overlooked the formative role of time. We contribute to organizational aspirations literature by theorizing and empirically testing two temporal dimensions in a single study: (a) the impact of time-persistent innovative under- and overperformance on engagement in external corporate venturing (ECV) and (b) the moderating effect of future financial performance expectations. We develop our hypotheses on temporal dynamics of managerial cognition around performance feedback by integrating insights from momentum theory and strategic reference point theory. We test our hypotheses on a sample of high-tech firms in the U.S., combining patent-based innovation data with ECV deal data and security analyst estimates from 2005 to 2016. We find that firms first decrease and then increase their engagement in ECV with persistent innovative underperformance; and vice versa for persistent innovative overperformance. We also find evidence for the moderating role of future performance expectations on firms' reactions to time-persistent innovative performance feedback. The importance of temporal dynamics to managerial cognition that we uncover can help to explain conflicting empirical findings on innovative search reactions to performance feedback.

The Role of Corporate Leaders in Firm Responses to Environmental Change
Managers and the firm-environment relationship

Moderator: **Jinyong Daniel Zyung**, *Southern Methodist U.*
Moderator: **Wei Shi**, *U. of Miami*
Panelist: **Guoli Chen**, *INSEAD*
Panelist: **Cynthia E. Devers**, *Texas A&M U., College Station*
Panelist: **Scott Graffin**, *U. of Georgia*
Panelist: **Timothy J. Quigley**, *U. of Georgia*

This symposium centers on the theme of CEO characteristics and firm reactions to environmental change. Specifically, we seek to focus on questions that ask how firms' strategic reactions to internal and external stimuli can hinge on the differences in CEOs' individual characteristics. Especially given the ongoing macroeconomic and industry-level changes as well as internal disruptions that we are currently experiencing, this subject matter is of vital importance for strategy scholars and practitioners alike. Our panelists will discuss how personality traits, gender differences, and other CEO traits can shape firm responses to various internal and external events, such as stakeholder evaluations, external expectations regarding gender-based leadership roles, death events, and disasters.

New Views on Industry Emergence

TIM: **Toward a Triangulated Analysis of Chaotic Systems: Semiconductor and Biotechnology Industries**

Author: **Shih-Chang Hung**, *National Tsing Hua U.*
Author: **Jiun-Yan Lai**, *Shanghai U.*

This paper examines how industry changes through the nonlinear view of chaos theory. Chaos theory implies that a dynamic system is nonlinear. Accordingly, we developed a triangulated analysis constituted by five mathematical approaches, including the BDS test, Hurst exponent, correlation dimension, Lyapunov exponent, and local Lyapunov exponent, to explore industry change as a nonlinear dynamic system. Empirically, we choose to compare the semiconductor industry and the biotechnology industry, using data collected from the Philadelphia Semiconductor Index and the NASDAQ Biotechnology Index. We found and confirmed that both industries evolved in a nonlinear manner, with the semiconductor industry being less unpredictable, more path-dependent, more sensitive to initial conditions, and has more time-paced incremental innovations than the biotechnology industry. We then complement this analysis with historical case studies that in turn leads us to argue that such differences have much to do with the inherent nature of the industries themselves. While the presence of Moore's Law as a roadmap projects the semiconductor industry into a more predictable path, the distributed nature of biotechnology coupled with the lack of a dominant technology directs the industry towards a system with greater volatilities and nonlinearities.

Paper is NOT Available. Please contact the author(s).

TIM: **How unicorns emerge? Influence of Business model and Technology change on opportunity realizations**

Author: **Soongoo Ahn**, *No Affiliation*

As a precursor of entrepreneurship, scholars have usefully revealed different types of opportunities, including discovery, creation and imagination. However, surprisingly less is known about how an entrepreneur can better realise a given opportunity in hand. Strategy research has found that successful unicorn companies are frequently based on advanced technologies and/or novel business models. Integrating the strategy research insight with entrepreneurship, this study explores whether and how changes in business model and technology may influence opportunity realisation, interpreted as the emergence of unicorn ventures. Using a sample of 50 unicorn companies across the world, QCA results revealed that unicorn ventures based on opportunity discovery are mainly associated with incremental changes in business model and technology. In contrast, unicorn ventures with creative and imaginative opportunities are associated with radical changes in both business model and technology. With results, this piece contributes to the ongoing development of the opportunity concept in entrepreneurship by revealing different value creation-capture mechanisms and showing performative aspects of the opportune concept.

TIM: **Learning to Swim in the Pool Before Surfing in the Sea A Study of Local Innovation Experimentation**

Author: **Jin Han**, *U. of Twente*
Author: **Sandor Lowik**, *U. of Twente*
Author: **Haibo Zhou**, *U. of Nottingham, China*
Author: **Petra C. De Weerd-Nederhof**, *U. of Twente*
Author: **Yanmin Wang**, *Beijing Normal U.*

Successful development of complex innovations require firms and key partners to perform a series of experimentation activities at local small-scale society at first, which we define such strategic process as Local Innovation Experimentation (LIE). Doing so helps managers grasp a complete map of technical and non-technical dimensions about the proposed innovation, around which build viable innovation ecosystems to gain advantages. To know what could affect the extent to which managers have high level of LIE performance, we adopt the managerial dynamic capabilities framework. Using a sample of 111 Chinese innovative firms, we find significant relationships among managers' capability portfolio, local innovation support, and LIE. PLS-SEM results indicate that managers with greater metacognitive capability, networking capability, learning agility have better LIE performance. Besides, (1) frequent attending local networking events and networking capability, (2) frequent use of innovation facilities and learning agility, interact in their positive effects on, and therefore result in, better LIE performance. Based on these findings, our core theoretical contribution lies in that a capability portfolio perspective at the lower (firm) level contributes to a better understanding of innovation ecosystem birth at higher (ecosystem) level.

Paper is Available to Meeting Registrants Only.

TIM: **Beyond the Technology Roadmap: TSMC's Response to Discontinuous Change**

Author: **Jiun-Yan Lai**, *Shanghai U.*

In this paper, we aim to study how process innovators could respond to discontinuous change of product innovation. Theoretically, we draw upon the product-process innovation model by Utterback and Abernathy (1975), in which the dynamics of industry is interpreted as the interplay between product and process innovation. Empirically, we conduct a qualitative case study, choosing to study TSMC - a Taiwan-based semiconductor company. As a process innovator providing manufacturing capacities and technologies for clients, TSMC has to manage the discontinuity between computers and communication. We found that TSMC built up its monopolistic advantage in the existing product (GPU) by using half-node process innovation of 40nm and 28nm, which are surprising and unexpected in the taken-for-granted roadmap of Moore's Law. By doing so, TSMC could adapt to the emerging product (ARM-based processor) after discontinuous change. We conclude by providing implications for research on technological innovation, institutional theory, and chaos theory, as well as managerial practice.

Innovation and Competition: Degrees of Openness

TIM: The determinants of openness to competitors: An integrated perspective of capacity and rational views

Author: **Chris Yao**, *Durham U. Business School*
Author: **Christos Dimitris Tsinopoulos**, *Durham U.*
Author: **Ji Yan**, *Durham U. Business School*

Absorptive capacity view suggests that innovation failure as an activation trigger will intensify a firm's capacity to outsource from external relationships. This view appears to be challenged when applying to competitive contexts whereby the firm may be sensitive to competitors' threats. We examine two modes of openness to competitors – bilateral (i.e., formal cooperation) and unilateral (i.e., external search) – which differ in the extent to which the focal firm is bound up with competitors and thereby face different levels of competitive threats. Using a panel data of Spanish manufacturing and service firms, we show that firms with high absorptive capacity, operationalized by more R&D investments, are more likely to open with competitors in forms of both external search and formal cooperation. However, we find that firms tend to be rational in the respect of selecting specific modes – they prefer unilateral modes (i.e., external search) over bilateral ones (i.e., formal cooperation), especially when they experienced innovation failures. Our work integrates the absorptive capacity view, which deems R&D investment and innovation failure to be the drivers of firm openness, with a rational view (transaction cost economics), which highlights firm's rationality of risk aversion in selecting openness modes.

TIM: Open with competitors to innovate? A temporal perspective on the paradox of openness

Author: **Chris Yao**, *Durham U. Business School*
Author: **Christos Dimitris Tsinopoulos**, *Durham U.*
Author: **Ji Yan**, *Durham U. Business School*

Using a longitudinal panel data of Spanish manufacturing and service firms during 2006-2016, we examine whether firms of higher absorptive capacity (ACAP) can rely on openness to competitors to innovate, as well as the importance of knowledge protection. We draw upon a temporal perspective of ACAP view and conceptualize an innovation process with competitors into two stages – potential stage (i.e., knowledge acquisition) and realized stage (i.e., knowledge transformation). We show that firms with higher technological investment (which forms the base of ACAP) can improve innovation performance by drawing more knowledge from, and cooperate with, competitors. Moreover, knowledge-protection mechanisms play different roles pertaining to the stages: they strengthen a firm's ability to open with competitors in the potential stage, whereas they weaken the efficiency of openness in fostering innovation in the realized stage. Our findings extend the ACAP view to competitor contexts and contribute to open innovation literature by reconciling the debate on the paradox of openness versus knowledge protection.

Paper is Available to Meeting Registrants Only.

TIM: Educational Level of Researchers in R&D Institutes and External Technology Acquisition 

Author: **Qian Wang**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*
Author: **Luqun Xie**, *Shanghai Jiao Tong U.*
Author: **Lili Jia**, *Tsinghua U.*

Firms have increasingly sourced knowledge beyond their boundaries. External technologies complement firms' internal knowledge stock with multiple benefits, but these benefits come with considerable economic and cognitive costs. Thus, the incentive of firms to source external technologies relies on the trade-off between its benefits and costs. Our study aims to explore how the educational level of researchers in research and development (R&D) institutes held by firms influences external technology acquisition. We argue that a higher educational level of researchers in R&D institutes helps reduce costs and capture value from external technologies, thus promoting firms to acquire technologies externally. Furthermore, the positive effect of the educational level of researchers in R&D institutes will be amplified when faced with high task intensity or intense market competition. By contrast, the effect will be weakened when the industry R&D intensity is high or when the technology transaction norms are strong. Using the unique data of manufacturing firms in an eastern province of China, we validate our theoretical framework empirically and offer several managerial and policy implications.

Paper is Available to Meeting Registrants Only.

TIM: The Impact of Cooperation in Innovation Contests: Poison Pill, Placebo, or Tonic?

Author: **Christoph Grimpe**, *Copenhagen Business School*
Author: **Marion Kristin Poetz**, *Copenhagen Business School*
Author: **Nathan Rietzler**, *Copenhagen Business School*
Author: **Florian Waldner**, *Copenhagen Business School, Denmark*

Recent applications of crowdsourcing integrate structures where contestants compete against each other, yet are also allowed to see and comment on others' contributions. While literature on knowledge recombination in cooperation and competition on problem-solving is ample, the interplay is not. Whether or not allowing for cooperation under competition is a poison pill, placebo, or tonic for idea generation performance remains a puzzle. We explore this interplay and investigate further boundary conditions that influence the outcomes of these relationships. Evidence from a lab experiment with 294 individuals and qualitative coding of the cooperation processes suggests that letting participants cooperate causes mixed effects. The overall innovativeness, novelty, and usefulness of the submitted ideas do not increase through cooperation. However, cooperation has a negative effect on idea feasibility. The results also show that cooperation under low competition increases the benefit a solution offers to users. Content analysis of the cooperation process reveals that participants are influenced by both the feedback comments and the ability to see others' ideas, but mostly depend on feedback comments that offered no substantially new knowledge when revising ideas. Our results contribute to a better theoretical understanding of cooperation under competition in crowdsourcing contests.

Crowdfunding & Innovation

TIM: Can Blockchain Technology-based Crowdfunding advance the Social Value Creation

Author: **Thinh Gia Hoang**, *RMIT International U. Vietnam*
Author: **Giang Ngo Tinh Nguyen**, *U. of Newcastle, Australia*
Author: **Anh Van Nguyen**, *RMIT International U. Vietnam*

This paper explores the hands-on applications of blockchain technology in social crowdfunding platforms (SCPs). The emergence of blockchain technology in financial world promise a promising solution for the current difficulties, and facilitate the development of SCPs. By conducting a qualitative research, we shed the lights on how blockchain technology can be employed to facilitate the social value creation of crowdfunding. To the end, we identified facilitators of the social value creation process through blockchain technology such as reducing operational costs, increasing trust and transparency, and facilitating a broader crowdfunding community, and the barriers of this application in terms of development costs and legal requirements.

TIM: Reward-Based Crowdfunding: The role of Product and Reward Types on Backers Intentions to Pledge

Author: **Francesco Cappa**, *Luiss Guido Carli U.*
Author: **Stefano Franco**, *Luiss Guido Carli U.*
Author: **Edoardo Ferrucci**, *Department of Business and Management, LUISS Guido Carli U.*
Author: **Riccardo Maiolini**, *John Cabot U.*

Based on Signaling Theory, in this research we have analyze the effect of product types, i.e., based on individual ownership or temporary use, and types of rewards, i.e., prototype, branded promotional item, special edition and discount on backers' intention to pledge reward-based crowdfunding (RBCF) campaigns. Through a survey-based experiment methodology, we find that backers are more likely to fund individual ownership products. Moreover, some rewards are more effective than others in attracting backers' funds. The results extend the application of Signaling Theory in the context of RBCF, because backers are more influenced by signals linked to both product and reward types because, and of Self-Determination Theory, because backers are mainly driven by the satisfaction of supporting what they consider valuable RBCF campaigns. The outcomes advance the understanding of RBCF, providing advice for entrepreneurs on how to attract more funds by properly designing their projects.

TIM: Do Externality Affect Your Project? An Empirical Study of Reward-based Crowdfunding

Author: **Yinghuan Wang**, *School of Business, Renmin U. of China*
Author: **Baolin Wang**, *School of Business, Renmin U. of China*
Author: **Yan Yan**, *School of Business, Renmin U. of China*

The connections among crowdfunding projects are considered important for entrepreneurial performance. This study focuses on the effect of externalities on the performance of reward-based crowdfunding projects. Based on the externality theory, we theorize and test the impacts of existing similar projects on the performance of new ones. We extend the source of externalities to projects that are similar to each other and consider three variables—the quantity, quality, and effort of these similar projects—which reflect the number, average performance, and average effort of similar projects, respectively. We also explore the time effects of these externalities. We examine a sample of 20,092 technology reward-based crowdfunding projects on Kickstarter from 2009 to 2018. We find that the quality of similar projects is positively related to project performance, whereas the quantity and effort are negatively related. Furthermore, the negative impacts of quantity and effort on project performance are weakened by the time interval, but the moderating effect of the time interval on the positive impact of quality is not supported. These findings have implications not only for policy and practice but also for research on entrepreneurial performance, externality theory, and crowdfunding strategy.

TIM: How to Tell the Timelines? Exploring the Role of Rhetorical Signals in Crowdfunding

Author: **Yinghuan Wang**, *School of Business, Renmin U. of China*
Author: **Baolin Wang**, *School of Business, Renmin U. of China*
Author: **Yan Yan**, *School of Business, Renmin U. of China*

Information asymmetry is a common phenomenon in entrepreneurship, and existing research and practice have proved signal theory effective. However, we notice the contradiction between traditional signal theory and management research. The former believes that low-cost rhetorical signals are invalid, while the latter suggests that entrepreneurs' linguistic style affects how investors evaluate the firm value. Besides, the assumption that signals are isolated in traditional signal theory has also been challenged by complex environments. To fulfill these gaps, based on a reward-based crowdfunding environment with high uncertainty and high noise, we analyze 20,090 technology projects on Kickstarter from 2009 to 2018 and focus on timeline signals. The results show that rhetorical signal is valid in this environment, and the strength and validity are in an inverted-U shaped relationship. A too weak and too strong signal may lose its validity. Moreover, we adopt signal portfolios and study the joint effect of substantive and rhetorical signals. We find that substantive signals affect the validity of rhetorical signals, and whether the validity is enhanced or weakened depends on the effect of the substantive signals. Our findings contribute to the signal theory, entrepreneurship research, and crowdfunding.

University Tech Transfer Mechanisms

TIM: Effect of research orientation on university-industry collaborative projects' performances

Author: **Quentin Plantec**, *MINES ParisTech, PSL U., Centre for Management Science, i3 UMR CNRS*
Author: **Benjamin Cabanes**, -
Author: **Pascal Le Masson**, *Mines ParisTech*
Author: **Benoit Weil**, *MINES ParisTech, PSL U., Centre for Management Science, i3 UMR CNRS*

There is abundant literature on the consequences of academic engagement with the industry, on overall scientists' commercialization and scientific performances. Nevertheless, the literature remains silent on how those performances are contingent on the research orientation's choice at the project level. This paper aims to fill this gap by exploring different research orientations in the context of university-industry collaborative Ph.D., a topic of interest as private companies are becoming more involved in Ph.D. training. To do so, we relied on a unique dataset comprising of 635 Collaborative Ph.D. projects through the CIFRE program in France. We classified the projects' ex-ante research directions: market-pull-oriented (MPO), research-push-oriented (RPO), and simultaneous-discovery-invention-oriented (SDI), and we observed their ex-post performances. First, as expected, an orientation towards industry needs conduct to higher commercialization performances. However, counter-intuitively, those projects are also prone to have similar scientific performances than those oriented towards scientific discoveries. Second, while SDI projects were considered over-performing other research orientations, they led to more significant scientific performances than traditional orientations but generated as many patents as MPO projects. Finally, we highlight that initial research orientation is a crucial determinant variable of scientific and commercialization performances, and our paper opens rooms for further research to the literature on academic engagement, university-industry collaborations, and Collaborative Ph.D.

TIM: University technology transfer offices in the post-covid-19 era  

Author: **Jason Jahir Roncancio**, *Vrije U. Brussel*
Author: **Maribel Guerrero**, *Newcastle Business School, Northumbria U.*

This paper investigates how University Technology Transfer Offices (UTTOs) adapt to support those in need due to the COVID 19 pandemic. We argue that UTTOs can support social enterprises and innovations within the university, even though these do not always pursue commercial purposes or depend on intellectual property (IP). To realize our paper's main objective, we use the theoretical lens of dynamic capabilities to develop our arguments in a qualitative study among UTTOs located in the COVID-19 most affected countries in Europe, North America, and Latin America. We carry out qualitative research on semi-structured interviews with officials from UTTOs and experts in the domain of innovation, technology transfer, and entrepreneurship. We shed light on how university technology transfer offices understand, support, and promote commercial and non-commercial social innovations as well as entrepreneurial initiatives. Our findings suggest that universities' strategic vision and the intellectual property mechanisms available at UTTOs can be adapted to capture new forms of value brought to support social innovation and entrepreneurship to alleviate the pandemic catastrophic effects in society.

TIM: How and When University-Industry Collaborations Make New Products More Attractive to Consumers

Author: **Lukas Maier**, *FAU Erlangen-Nürnberg*
Author: **Martin Schreier**, *WirtschaftsU. Wien*
Author: **Christian V. Baccarella**, *FAU Erlangen-Nürnberg*
Author: **Kai-Ingo Voigt**, *Friedrich-Alexander U. of Erlangen-Nürnberg*

Firms increasingly collaborate with universities to find innovation success. This research is the first to investigate how consumers perceive university-co-developed products. A series of lab and field studies validates a positive inferential process such that consumers experience products co-developed with a university to be more sophisticated and trustworthy compared to firm-internally developed products or products co-developed with merely another firm. Consequently, consumers are more eager to purchase and more likely to recommend university-co-developed products to others. A field study demonstrates that this effect unfolds even after an actual product trial. Furthermore, an Instagram field experiment utilizing a video that did (vs. did not) refer to the university-industry collaboration brought about higher click-through rates and more pronounced post engagement levels. The studies finally show that the positive university effect (1) is attenuated for consumers with a low belief in science and (2) fully reverses in cases when the co-development focuses on aesthetics (vs. technology). Taken together, this research advances our theoretical understanding of university-industry collaborations by highlighting how and when involving universities as an innovation partner might not only be beneficial for innovation but also marketing purposes.

TIM: Commercialising circular economy innovations: a taxonomy of academic spin-offs 

Author: **Phuc Hong Huynh**, *Nord U. Business School*
Author: **Einar Rasmussen**, *Nord U. Business School*
Author: **Oleg Nenadic**, *Nord U. Business School*

Innovation and the commercialization of new technology are seen as an important driver for the transition to more sustainable development. An actionable strategy to achieve this is outlined in the EU strategy on resource efficiency and the development of a circular economy (CE). This paper seeks to gain a more systematic understanding of the role that academic spin-offs (ASOs) can play in commercialising CE innovations. ASOs are based on scientific research and are a potential source of radical innovations, but their role in the sustainability transition has not been systematically examined. We rely on a unique dataset covering the population of ASOs in Norway and coded newspaper articles to identify potential CE-related innovations being commercialized by these firms. Using multiple correspondence analysis and clustering analysis, we find that the CE-related innovations commercialized by ASOs can be classified along two main dimensions, related to the type of innovation (product or process) and the type of CE principle (narrow, slow, or close the loop). Moreover, we identify five clusters of CE-related ASOs having specific roles in the CE transition. We conclude by outlining an agenda for further research and implications for how policies can harness the innovation potential of ASOs for realising a more CE.

Disclosure & Discovery

TIM: Who gains and loses from more information in technology markets? Evidence from Affordable Care Act

Author: **Lee Branstetter**, *Carnegie Mellon U.*
Author: **Raffaele Conti**, *ESSEC Business School*
Author: **Samir Mamadehussene**, *U. of Texas at Dallas - Jindal School of Management*
Author: **Huiyan Zhang**, *Carnegie Mellon/ Catolica Lisbon*

Several scholars have emphasized how uncertainty and a lack of information impede the functioning of markets for technology. However, previous research has generally neglected the fact that the advantages of more public information do not accrue equally to all firms. One might intuit that an improvement in the informational environment will particularly benefit those firms that frequently rely on external collaborations. Instead, our theoretical model predicts that the opposite will happen. We show that, when firms differ in the extent of their private information about the pool of external collaborators and ideas, an improvement in the informational environment achieved through mandatory disclosure of collaborations reduces the comparative advantage of those firms that were provided with better private information prior to the mandated disclosure. These were precisely the firms that used to collaborate to a great extent with external inventors. These firms will experience a relative decline in both the quantity and quality of ideas developed in collaboration with external inventors—especially with those collaborators not yet publicly known for the quality of their previous work—with respect to the firms that collaborated less extensively before mandatory disclosure. To test our theory, we construct a unique panel dataset on 276 publicly traded companies in the medical device industry, which is a sector in which physicians often collaborate with firms to generate and market new inventions. Then we assess the effect on innovation of an exogenous increase in information induced by the Physician Payment Sunshine Act, which was passed into law as part of the Affordable Care Act. Results are largely consistent with our theoretical predictions.

TIM: The Role of Science in Drug Development Decisions

Author: **Linde Colen**, *U Hasselt*
Author: **Rene Belderbos**, *KU Leuven*
Author: **Stijn Kelchtermans**, *KU Leuven*
Author: **Bart Leten**, *KU Leuven*

The number of new drug launches in the pharmaceutical industry has not kept pace with soaring R&D expenditures. A potential target for increased efficiency that has so far received little attention is the extreme selectivity in the early stages of drug development, as the vast majority of patented drug candidates do not enter clinical trials. We analyze whether the likelihood of take-up in clinical development is affected by the basic and applied scientific base of patented drug candidates—and who was responsible for that scientific research. We study whether a drug candidate enters clinical trials and whether the patent owner or another firm leads such development. In the latter cases, the drug candidate is handed over to another firm through the market for technology. We hypothesize that both basic and applied research underlying a drug candidate are important for take-up, but that internally conducted basic research would predominantly be associated with internal take-up due to the associated stronger barriers to knowledge transfer across firm boundaries. Examining 18,360 drug candidates patented by 140 pharmaceutical firms we find qualified support for these hypotheses. We also confirm that drug candidates grounded in in-house basic research exhibit a higher success rate in clinical development, underlining the importance of a ‘rational drug design’ approach that explicitly builds on scientific research. Our findings highlight the potential downside of pervasive organizational specialization in either (basic) scientific research or clinical development in the life sciences.

TIM: Does Competition Affect the Likelihood, Speed and Tenor of Mandatory R&D Disclosures?

Author: **Chandrika Rathee**, *IE Business School*
Author: **Sumeet Malik**, *IE Business School*
Author: **Rossella Salandra**, *School of Management, U. of Bath*

The information about R&D activities can shift the competitive landscape and carry a substantial strategic value for firms. However, most of our understanding of R&D disclosures is either for early-stage projects (i.e., patents) or when firms voluntarily share their information. Mandatory disclosures of development projects, such as clinical drug trials, demanded by regulators often put firms in a paradoxical situation - on the one hand, they face regulatory pressures to comply, and on the other hand, they fear informing competitors of internal developments. By integrating the theories of knowledge management and strategic responses to institutional forces, we propose that firms under intense competition would be reluctant to comply and share the results of their clinical trials. However, when they do share their results, they would do so quickly to deter competition. Further, firms would also use rhetoric in their scientific publications linked to the clinical trials to paint a favorable picture to competitors. We test our theoretical model with 7,731 completed clinical trials under a US Act (FDAAA 801) purview between the years 2008-2019 (both inclusive) and find confirming results overall. We discuss the broader implications of our findings on both theory and practice.

TIM: Incentive or Disincentive for Research Data Disclosure? A Large-Scale Empirical Analysis (WITHDRAWN)

Author: **Seokbeom Kwon**, *U. of Tokyo*
Author: **Kazuyuki Motohashi**, *U. of Tokyo*

When researchers disclose their original data, they can enhance the visibility of their research works and gain more academic credits (credit effect) as a result. In contrast, doing so may accelerate the knowledge replacement process which dissipates the academic credit that their research works may receive otherwise (competition effect). In this study, we examine whether and to what extent scientists benefit in gaining academic credit for their research works by publicly disclosing their data. Our reconciliation of various range of literature hypothesizes that data disclosing research gains more academic credit than non-data disclosing research in the early period. However, this difference gradually disappears and is reversed later as the competition effect emerges. This pattern is expected to systematically differ by the academic reputation of the journals where the data disclosing research are published. We empirically test the derived hypotheses by analyzing the metadata of over 310,000 Web of Science Core Collection (WoS CC)-indexed journal articles published in 2010. Our analysis finds supportive evidence of both hypotheses. The present study contributes to on-going policy discussion concerning the need for institutional measures to promote disclosure of research data by scientists.

Family Firms

TIM: [Internet Exposure and Desire for Family Control: Institutional Logics Perspective](#)    

Author: **Bin Liu**, *School of Management, Xiamen U.*

Author: **Peng Wang**, *BNU-HKBU United International College*

While prior studies pinpoint that Internet can reduce communicational costs thus help expand potential markets, few studies have examined whether and how Internet would alter incumbent managerial routines and logics. The examination of family firms (FFs) presents an important agenda since they are known as reluctant to dilute controlling powers but also embrace the Internet technology that calls for opposite logics. To understand whether and how Internet influences the family's desires for control, we invoked institutional logics theory and argue that the strength of the desires is a matter of balance between multiple institutional logics. Specifically, we proposed that FFs with greater Internet exposure should present relaxed desires for family control whereas the power of family logics manifested by the current (i.e. family ownership) and transgenerational (i.e. intention of intra-family succession) control should drag down the changes toward open logics. Based on a recent Chinese national survey data, we found strong supports for the hypotheses except the moderating effect of transgenerational control. Overall, the study contributes to the literature by pinpointing the additional effects of Internet exposure onto managerial routines while introducing additional antecedents of professionalization for FFs. It also presents new evidence of institutional logics pluralism by sketching the interactions between technological changes and family logic.

TIM: [How Family Involvement Affects Proactive R&D Management Capability](#)

Author: **Ying-Jiuan Wong**, *National Kaohsiung U. of Science and Technology*

Author: **Cheng-Yu Lee**, *Southern Taiwan U. of Science and Technology*

This study incorporates the perspective of social embeddedness to investigate how family involvement affects the capabilities of proactive R&D management. We further reveal how board capital breadth and depth affect the relationship between proactive R&D management capabilities and family involvement. Our findings show that family involvement has an inverted U-shaped relationship with the capabilities of proactive R&D management. We also find that board capital breadth mitigates the negative effects of excessive family involvement on the proactive R&D management capabilities but has an insignificant effect at low or moderate levels of family involvement. On the other hand, board capital depth increases the disadvantages of excessive family involvement on the proactive R&D management capabilities, with an insignificant effect on proactive R&D management capabilities at low or moderate levels of family involvement.

TIM: [Are Family Successors Born for Conservatism? Evidence on CEO Succession and Exploratory Ventures](#) 

Author: **Pi Hui Chung**, *National Taiwan U.*

Author: **Hsueh Liang Wu**, *National Taiwan U.*

Author: **Cheng-Yu Lee**, *Southern Taiwan U. of Science and Technology*

Author: **Chia-Jung Lee**, *Tunghai U.*

The literature of CEO succession in family firms has long been accumulating but the findings are still inconclusive. Some question the performance implication of CEO origin while others suggest the importance of the contextual approach to the post-succession performance effects. Drawing from the agency and socioemotional wealth perspectives on the micro-foundation of firm strategy, this study aims to revisit the family successor effect on the post-succession exploratory ventures, and how this relationship is conditioned by individual-, board-, and organizational-level factors. In a sample of 487 CEO succession of Taiwan family firms in traditional industries over the period of 2001~2013, the empirical results show that family CEOs are more exploratory-oriented than non-family CEOs. However, relay succession or family involvement in board negatively moderates family CEO effect on a focal firm's pursuit of exploratory ventures. Also, the post-succession exploratory strategy is more significant among firms of larger size. This study contributes to the family business literature by clarifying the mixed findings with greater attention to the behavioral side of successions.

Paper is Available to Meeting Registrants Only.

TIM: [The role of technology management and connectedness in the product innovation of family firms](#)  

Author: **Abel Lucena**, *U. of the Balearic Islands*

Author: **Vanessa Diaz Moriana**, *U. of the Balearic Islands*

Author: **Nadine Kammerlander**, *WHU - Otto Beisheim School of Management*

There has been much debate concerning product innovation in family firms given its importance for their continuity across generations. However, most prior research has focused on comparing family and non-family firms neglecting the reasons behind why family firms attempt product innovation. As a result, our study aims to understand product innovation in family firms and the mechanisms by which it manifests. Drawing on the long-term orientation perspective, we employ a panel data from 2,132 Spanish manufacturing companies for the period 2006~2016 to show that the distinct innovative output behavior of family firms can be attributed, in part, to two factors, namely technology management and connectedness. We develop a mediation model to explain the relationship between family firms and product innovation therefore contributing to a more fine-grained understanding of innovation behavior in family firms.

Algorithms

TIM: Decision-Making Algorithms and us: why do we delegate?

Author: **MATEUS RODRIGUES COIMBRA**, *Coppead/UFRJ - Federal U. of Rio de Janeiro*
Author: **Paula Chimenti**, *Coppead/UFRJ - Federal U. of Rio de Janeiro*
Author: **Roberto Nogueira**, -

Experts have expressed concern about the excessive use of social media, with people systematically entering social networks for a specific purpose but leaving hours later after diving into the “rabbit hole.” This overuse has been associated with the ability of platform recommendation algorithms to assign content of interest. The combination of machine learning algorithms and big data have increased the predictive power of these recommendation systems, leading to new perspectives for people to interact with the platforms. Against this backdrop, the present article studied how the human-machine interaction mechanism works as well as the motivators of this process. We integrated different perspectives found in the literature into a comprehensive model in an attempt to explain which factors would help to understand this mechanism of interaction in social networks. The study was carried out through a survey with 297 YouTube users. The proposed model presented different findings in the presence of two paths of interaction with different motivators (main and peripheral route). Escapism was the only motivator for both routes. Both routes had impacts in terms of satisfaction and dependence, but with exchanged impacts. Finally, the model showed that the type of content watched on the social network did not influence the interaction mechanism. This article shows the possible emergence of a new paradigm where decision-making will be done entirely by algorithms.

Paper is NOT Available. Please contact the author(s).

TIM: Managing Algorithms: partial automation of middle management and its implications for gig worker 

Author: **Diana Enriquez**, *Princeton U.*
Author: **Janet Vertesi**, *Princeton*

Platforms for gig work like Uber advertise their job opportunities as “entrepreneurial work” to potential workers and their company as technologically innovative to potential investors. One of the central features of these platforms is a layer of automated middle management in the form of a coordinating algorithm that interacts with workers completing tasks through the platform. The algorithmic middle management is useful to the platform as a status signaling tool to investors, a cost cutting measure, and a rhetorical tool for separating themselves further from their workforce. In practice, however, algorithms are limited in how well they can coordinate a widespread workforce and the extra management work falls to the workers themselves to manage. Using data from 41 interviews with Uber, Amazon, and Lyft gig workers, we examine the tasks that algorithm completes vs. the middle management tasks that fall to gig workers to complete on their own. We find that “entrepreneurial work” for these gig workers means that they must absorb several types of middle management tasks in addition to the tasks they were explicitly hired to do. Gig workers also bear the costs associated with representing a platform and themselves when there is any contrast between the projected expectations of the customer and the completed service.

TIM: Organizational moderators of the effect of autonomous technology on organizational error prevention  

Author: **Peter Micah Madsen**, *Brigham Young U.*
Author: **Robin Dillon-Merrill**, *Georgetown U.*
Author: **Konstantinos Triantis**, *Virginia Tech*
Author: **Bart Roets**, *INFRABEL*
Author: **Taylan Topcu**, *George Washington U.*

One of the earliest forms of artificial intelligence to be widely adopted in organizations is autonomous decision-making systems (ADS)—advanced automation designed to make human-like decisions that lead to real-world action. ADS technologies are designed with the goal of reducing error, but in complex systems, organizational factors will contribute to the ability of the ADS to achieve this goal. Theories of organizational error have not yet considered how organizational factors will moderate the benefit of ADS use for organizational error avoidance. The present work aims to fill this gap in the literature by integrating theories of organizational error with theory on human-automation interaction to theorize the effects of organizational factors on ADS use and the corresponding relevance to organizational error commission. We hypothesize that ADS use generally decreases error rates, but that some organizational features moderate the value of ADS for error prevention. Among the organizational characteristics that we hypothesize will reduce the error-prevention benefits of ADS are operator experience, task complexity, and interpersonal interdependence. We test these hypotheses on a unique data set from a large, European rail system operator that has recently adopted ADS technology, finding broad support for our theoretical framework.

TIM: Automated Contracts and the Lawyers Who Don't Review Them: Motivating Use of Machine Learning Tech   

Author: **Beverly Rich**, *U. of Southern California*

Firms' transitions from existing technologies to new technologies are often challenging and incremental. Machine learning (ML) is distinct from many technologies in that it is a general purpose technology (GPT) and thus co-invention and coordination costs are associated with its use. However, the growth and diffusion of ML can be inhibited by individual level factors such as individual users' uncertainty and lack of incentives to use the technology. To explore the endogenous process of ML adoption within a firm and how to motivate employees' ML use, I use a unique data set from a company with ML contract automation technology that includes eighty onboarding calls from thirty customer firms, employee usage data, customer firm renewal data, and interviews. Based on topic modeling analysis of the call transcripts, I develop propositions that discuss how focusing on the long-term value added to the employees and to the firm, instead of on the short term efficiency gains to a specific task, can motivate employees to use ML. To ensure that firms capture value from new technologies, given employee uncertainty, I propose that managers should focus on the long-term value added to the firm and to the employees' skills when certain tasks are automated, rather than focusing on short-term efficiency gains from automating one task. I also theorize about how employees' motivations to use ML can change by learning more about the technology. I conduct preliminary tests of the propositions and find support.

Intellectual Property Strategy

TIM: Patent Disclosure and Firm New Product Performance – Evidence from China 

Author: **Dandan XIA**, *IESE Business School*

We investigate the effect of information disclosed from patents on firms' new product performance and its heterogeneous effects across firms. We exploit a patent subsidy program in China as a quasi-natural experiment. With a staggered difference-in-difference method, we find that firms have a significant increase in their sales revenue from new products after the enactment of the patent subsidy policy. The mechanisms we propose is patent subsidies have caused firms to file more patents and more information is disclosed publicly, which can be read and learned by other firms to improve their new products. Leading innovative firms that are highly innovative benefit less from disclosed information in patents than those that are closely following them. This is because frontier firms reveal more advanced technologies through patents, and they may already have access to frontier technological information in their areas other than patents.

TIM: State Advances and Private Sector Retreats? State Entry and Privately Owned Enterprises' Innovation   

Author: **Kenneth Guang-Lih Huang**, *National U. of Singapore*
Author: **Cyndi Man Zhang**, *Singapore Management U.*

The trend of state involvement in private firms in China is increasing, which represents the country's major policy reversal of the early era of market reform and privatization of firms. We explore whether state entry into privately owned enterprises (POEs) affects the innovation performance of POEs. We show that state entry has a significant and negative impact on the quantity of general patented innovations but has little effect on the novel patented innovations produced by POEs. We also find that in emerging strategic industries identified by the state, POEs can continue ramping up the quantity of general innovations despite significant state entry; POEs with a high level of accumulated technological capabilities in producing high novelty innovations continue to generate a greater proportion of novel innovations.

Paper is Available to Meeting Registrants Only.

TIM: Intellectual Property Strategy and Reverse Innovation 

Author: **Kelvin Willoughby**, *Skolkovo Institute of Science and Technology*
Author: **Nadezda Mullina**, *Skolkovo Institute of Science and Technology*

In this paper, we compare the role of outward-bound international patenting in “reverse innovation” and in conventional international modes of innovation. Through analysis of panel data from 148 countries over 18 years, we reveal that, while all countries may in principle appropriate economic benefits from endogenous technological innovation by increasing their level of outward-bound international patenting, the ability of a country to do so may be hampered by the pre-existing level of its economy. We classify countries in to four strategic innovation quadrants—Inventors, Innovators, Traders, and Slow Movers—based on the relative change over time in their competitiveness in international patenting and their per capita wealth. The mix of wealthy countries and less wealthy countries varies greatly between quadrants, with the wealthy countries dominating the Innovators quadrant and the less wealthy countries exhibiting inertia in translating invention in to innovation. We conclude that, for lower income countries to improve their success in appropriating the benefits of reverse innovation, innovators and would-be innovators based in those countries need to develop sophistication and prowess in international patenting strategy and intellectual property management tailored to the unique conditions of each country.

 **TIM: Identifying Crisis-Critical Intellectual Property Challenges during the Covid-19 Pandemic**

Author: **Alexander Moerchel**, *Institute for Manufacturing, Engineering Department, U. of Cambridge*
Author: **Frank Tietze**, *U. of Cambridge Department of Engineering*
Author: **Leonidas Aristodemou**, *U. of Cambridge*
Author: **Pratheeba Vimalnath**, *U. of Cambridge*

The Covid-19 pandemic exposed firms, organisations and their respective supply chains to unprecedented challenges, thus triggering the formation of new relationships in a short period of time. More specifically, Firms from other sectors, such as automotive, luxury and home appliances, have entered into the Crisis-Critical Sector in order to support the effort to upscale incumbent manufacturing capacities, thereby creating new relationships and thus introducing Intellectual Property (IP) related dynamics and challenges. We apply an innovation ecosystem perspective to three industrial firm entry strategies identified by Tietze, Vimalnath, Aristodemou and Molloy (2020) and adopt a novel visual mapping approach to identify IP associated challenges and IP specific dynamics during and potentially beyond the crisis. In this paper, we contribute to the IP management literature in the open innovation context by proposing paragon IP as a novel IP type. Finally, we deduce managerial implications for IP management practitioners at both incumbent firms and new entrants for navigating innovation ecosystems subject to crisis-induced dynamic shifts.

R&D Collaboration

TIM: Is Bigger Better? A Deeper Look on Size and Innovation Performance of Multi-actor R&D Projects  

Author: **Svetlana Klessova**, *U. Côte d'Azur, CNRS, GREDEG, France*
Author: **Catherine Thomas**, *U. Côte d'Azur, CNRS, GREDEG, France*
Author: **Sebastian Engell**, *TU Dortmund U.*

This paper deals with collaborative R&D projects, with a considerable number of organizational actors, which generate both new knowledge and innovations, market upstream. It is generally assumed that a large knowledge base is beneficial for knowledge generation due to more possibilities for recombination. But, under the pressure of project constraints, are bigger multi-actor projects indeed 'better', in terms of their innovation performance, measured by the number of their research and innovation outputs? The extant literature is contradictory on this topic. This paper sheds light on the relationship between the size of the projects and their research and innovation outputs, using an exploratory inductive multi-case study of multi-actor R&D projects funded by the latest European Union's Research and Innovation Programmes. We provide evidence that over 95% of 185 research and innovation outputs in the studied projects were developed in small stable groups, or individually, independent of the project size: large knowledge base can be beneficial after the project but was not within the project. Nevertheless, the generation of meta-knowledge, a non-conventional project output not identified in the literature, may be a benefit of a larger project size in specific settings.

TIM: A Framework for Measuring Market-upstream Innovations and Innovation Performance in R&D Projects  

Author: **Svetlana Klessova**, *U. Côte d'Azur, CNRS, GREDEG, France*
Author: **Sebastian Engell**, *TU Dortmund U.*
Author: **Catherine Thomas**, *U. Côte d'Azur, CNRS, GREDEG, France*

The number of publicly funded collaborative and pre-competitive multi-actor R&D projects is growing. In such projects, a considerable number of organizational actors from academia and industry generate both new knowledge and innovations. Innovations often start from existing foundations; they are often not patented. Taken together, the full set of developed innovations reflects innovation performance of the project. The established measurement systems are inadequate to fully assess such market-upstream innovations at the end of the projects: existing assessments up to now lack completeness (the set of outputs is much larger than what is traditionally assessed) and precision (the existing Technology Readiness Scale for assessing maturity of innovations, is too coarse). The paper aspires to develop new perspectives on measurement of market-upstream innovations and thus collective innovation performance in multi-actor R&D projects, using a multi-case study of 5 projects with 67 organizations, funded by the latest European Union's Research and Innovation Programmes. The 5 cases served firstly as an inspiration to generate the framework based on existing theoretical foundations, and then as an illustration to test the proposed framework and calibrate it, based on the empirical data. We studied the projects on the basis of over 900 pages of documentation, and additional data from 38 semi-structured interviews with project actors. We identified 54 innovations across the five projects, classified them according to the proposed typology, developed a measurement framework, based on both the numbers of innovations and on advancement of their maturity, and implemented the framework in the projects under study, to illustrate its applicability.

TIM: How corporate venture capital investors search external knowledge to bridge internal knowledge gaps 

Author: **Sven Veismann**, *Chair of Innovation Management, TU Dortmund U.*
Author: **Corinna Vera Hedwig Schmidt**, *Chair for Technology & Management, TU Dortmund U.*

Real options theory implies a difficult trade-off for CVC investors engaging in external knowledge search to diversify their own knowledge: CVC investors with low internal knowledge diversity would benefit greatly from access to diverse external knowledge, but limited experience with different knowledge areas makes diverse CVC portfolios infeasible. To resolve this trade-off between minimizing redundancies and maximizing synergies in a CVC portfolio, we extend real options reasoning with organizational learning theory and examine how a CVC investor's knowledge diversity shapes its CVC portfolio diversity. Based on both theories, we identify positive and negative portfolio effects that change investors' motivation to diversify. These effects provide theoretical argumentation that the investor's internal knowledge diversity is related to the diversity of its CVC portfolio in an inverted U-shaped relationship. Using a sample of 968 firm-year observations between 2000 and 2018, we find support for our hypothesis. We further show how this relationship is bounded by conditions of high R&D intensity, high exploration focus as well as high technological uncertainty. The moderating effects of all three boundary conditions are strong enough to flatten the relationship between internal knowledge diversity and CVC portfolio diversity to a straight line.

TIM: Corporate Science, Cooperation with Research Organizations and Eco-innovation

Author: **Maria Teresa Bolivar-Ramos**, *Autonomous U. of Barcelona*

Environmental innovation plays a crucial role nowadays, as it promotes sustainable growth. To develop environmental innovations, firms can rely on key internal resources such as corporate science –i.e. basic scientific research that promotes the development of the knowledge and capabilities needed to sustain long-term strategies. In addition, collaborations with universities and research institutions can be particularly relevant in extracting value from corporate science when seeking to foster eco-innovations, thanks to continuously engaging in R&D projects and increasingly adopting an eco-friendly vision. Based on a longitudinal analysis of technology firms, this study confirms that corporate science investments spur eco-innovations. Moreover, only collaborations with universities positively moderates the relation between corporate science and eco-innovation.

Non-market influences on Innovation

TIM: No News is Bad News: Political Corruption, News Deserts, and the Decline of the Fourth Estate  

Author: **Ted Matherly**, *Tulane U.*
Author: **Brad Greenwood**, *George Mason U.*

The newspaper industry is perhaps the most notable casualty of the rise of the digital age. In this work, we examine how the decline of local reporting capacity which accompanied the emergence of digital newsrooms and content aggregators influences local levels of political corruption. As is well known, newspapers are viewed as an important investigative arm of local communities. It is therefore possible that the decline of local media will embolden corrupt actors who believe they are less likely to be detected, and create the potential for substantial deadweight loss in the economy. To examine these relationships, we leverage a novel dataset of federal charging documents of corruption and daily newspaper closures using a difference in difference approach. Results indicate a significant rise in federal corruption charges when major newspapers close in a federal district. Strikingly, we observe no evidence that the rise in online newsvendors is able to ameliorate this effect. This highlights the important role of the traditional “fourth estate” in inhibiting corruption in governance.

Paper is Available to Meeting Registrants Only.

TIM: Democracy, Legal Systems, and Renewable Energy and Storage Technology Innovations  

Author: **Kerrigan Marie Machado Unter**, *George Washington U.*
Author: **Jorge Rivera**, *George Washington U.*

Compared to other types of technology innovations, green technology (GT) innovations produce additional public good benefits in the form of improved environmental quality enjoyed by all people in general. Yet, GT innovations tend to be undersupplied precisely because the firms inventing them are less likely to be rewarded for the enhanced environmental public goods produced by the use of these GT innovations. Hence, the institutional country context needs to be considered because it can greatly determine how firms can take advantage of the public good benefits produced by their GT innovations. We examine the impact of the political and judicial institutions on the production of renewable energy and storage technology innovations and breakthroughs in those same GT innovations with a total sample of 7,298 patents applied for between the years 1972 and 2006 across 48 countries, resulting in a total of 1,680 country-year observations. We find that civil law acts as a moderator weakening the positive effect democracy has on inducing renewable energy and storage technology innovations. It is essential for firms to understand how differences in the political and judicial systems across countries can be exploited to gain an advantage in developing GT innovations. Institutional differences can impact both sources of knowledge as well as R&D funding for firms developing GT innovations allowing them to develop technologies that produce public good benefits.

TIM: New Walls in a Flat World? A Legal Perspective toward the Border Puzzle in Cumulative Innovation 

Author: **Yanfeng Zheng**, *U. of hong kong*
Author: **Qinyu Wang**, *The Hong Kong Polytechnic U.*

Recent studies revealed a puzzling trend: cumulative innovation has become more nationally bounded in a globalization era. We contend that it is primarily driven by the global harmonization of intellectual property rights (IPRs) and the IPR strengthening in emerging economies. Integrating insights from the literatures on IPRs, international business, and the geography of innovation, we develop a theoretical framework with an analytic model to examine the effect of global IPRs on international technological trajectories. We contend that when deciding on whether to follow a foreign trajectory, domestic firms consider hold-up threats and legal costs imposed by cross-country prior patents. Following this framework, we hypothesize that after a foreign precursor obtains a cross-country patent in a target country, citations to the patented invention from that country will decrease. This deterring effect is more salient for target countries with stronger IPRs such as the US. However, when countries with weaker IPRs like China improve over time, the effect gap will diminish. Using 37,914 and 25,388 inventions originating from Europe during 2001-2010 that obtained cross-country patents in the US or China, we find strong evidence supporting our hypotheses. Our study offers a fresh perspective on how international IPRs shape global innovation landscapes.

TIM: European Privacy Law and Global Markets for Data 

Author: **Michail Batikas**, *Rennes School of Business*
Author: **Christian Peukert**, *Faculty of Business and Economics (HEC Lausanne), U. of Lausanne*
Author: **Stefan Bechtold**, *ETH Zürich*
Author: **Tobias Kretschmer**, *LMU Munich*

We demonstrate how privacy law interacts with competition and trade policy in the context of the European General Data Protection Regulation (GDPR). We follow more than 110,000 websites for 18 months to show that websites reduced their connections to web technology providers after GDPR became effective, especially regarding requests involving personal data. This also holds for websites catering to non-EU audiences and therefore not bound by GDPR. We further document an increase in market concentration in web technology services after the introduction of GDPR. While most firms lose market share, the leading firm, Google, significantly increases market share.

TIM: Systems Integrators' Search in the Supplier base: The Case of Mature and Emerging Technologies

Author: **Jose-Mauricio Galli Geleilate**, *UMass Lowell*

Systems integrators are firms that coordinate and integrate several different component technologies into complex products. Despite research evidence that these firms develop a broad knowledge base encompassing not only internalized components but also those outsourced to suppliers, we still know little about how these firms obtain external technological knowledge. Drawing from the concept of innovation search, we seek to understand how systems integrators search and generate new inventions by searching its supplier base. Moreover, since individual component technologies evolve unevenly within products, we pay attention to the differences between emerging and mature component technologies. Drawing from a longitudinal sample of all major global automotive manufacturers and their most relevant components, we provide empirical evidence that systems integrators intensify their search in suppliers in the context of emerging technologies. Yet, they also attain more successful innovations when increasing search in suppliers in both mature and emerging component technologies. However, while vertical integration leverages this relationship in mature component technologies, it has a dampening effect on the benefits of search in suppliers in the context of emerging component technologies.

Paper is Available to Meeting Registrants Only.

TIM: Being the best one can be: The influence of organizational virtue orientation on firms' innovation   

Author: **Kathrin Haubner**, *Westfälische Wilhelms-U. Münster*

Innovation as key driver of success has been widely studied. Despite the influence of firm and top management team characteristics little is known about the underlying mechanisms that promote and inhibit innovative behavior in companies. Going beyond classical innovation research, we analyze the underlying virtuous mechanism by evaluating the relation between firms' organizational virtue orientation and innovation. We find that the dimensions of OVO influence innovative behavior in firms and highlight the contrary effects when differentiating between high- and low-tech firms. Additionally, by examining the moderation effect of technology diversification, we find implications that the relationship between OVO and innovation in high-tech firms is strongly influenced by the level of technological diversification. We base our study on secondary data of S&P 500 U.S. manufacturing firms accounting for 1,520 firm-year observations. For our analysis we utilize a unique and comprehensive set of data: We determine innovation as output measures via hand-collected product announcements, derive a measure of OVO based on computer-aided text analysis of MD&A sections and utilize patents data for the derivation of technological diversification.

TIM: Reliance on Technology from the Demand Side Market: Demand Driven Innovation After China Joined WTO  

Author: **Xiaoshu Bei**, *U. of Colorado, Boulder*
Author: **Fu Ouyang**, *The U. of Queensland*

How does opening up the Chinese market to US firms affect innovation? Drawing from the demand-driven innovation perspective, we propose: cost spreading associated with new demand opportunities encourages firms to innovate; user innovation encourages US firms to adopt technologies that originated from China when they innovate. We examine a sample taken from Compustat-listed firms' innovation activity following China joining the World Trade Organization (WTO) in 2001. Using both difference-in-differences (DID) and instrumental variable (IV) analyses, we show that US firms generate more patents and are more likely to cite patents that originated in China when facing the new market demand opportunity. The effect becomes stronger as the level of US exports to China increases, and is weaker for firms with larger scale or scope.

Mitigating Risk

TIM: Seekers' and Solvers' Interaction Design Preferences for Open Innovation Platforms  

Author: **Anja Leckel**, *RWTH Aachen U.*
Author: **Krithika Randhawa**, *U. of Technology, Sydney*
Author: **Frank T. Piller**, *RWTH Aachen U.*

Crowdsourcing is an open innovation mechanism by which organizations (solution seekers) engage in knowledge exchange with individual problem solvers via digital platforms. This study applies a discrete choice experiment with 842 respondents to examine seekers' and solvers' preferences for designing the interaction on open innovation platforms, and how these preferences shape the processes for creating and capturing value. More specifically, we investigate under which conditions seekers are inclined to accept the platform design features that are important for solvers to create and capture value. Taking a microfoundations perspective, we explore the role of social trust, risk aversion and the need for cognition of seekers and solvers in their choice on how to engage in open innovation activities on platforms. We explore potentially contradicting interaction design preferences of seekers and solvers in order to balance value creation and value capture to sustain their platform participation. In doing so, we contribute to our limited understanding of the microfoundations of open innovation. With our empirical approach, we propose a way to conceptualize, operationalize and measure open innovation value processes in a crowdsourcing context from a social exchange perspective. Social exchange theory provides a novel angle for addressing the interaction between seekers and solvers to improve the balance and sustainability of open innovation value processes.

TIM: The hidden risks of incumbent open innovation: A reappraisal of the US national innovation ecosystem  

Author: **Ibrahim Shaikh**, *U. of New Brunswick*
Author: **Krithika Randhawa**, *U. of Technology, Sydney*

Innovation scholars over the years have highlighted several benefits of using a more Open Innovation (OI) approach to commercialize industrial R&D. In this study, however, we ask if there are any systemic risks incurred when incumbent R&D organizations use OI without considering its long-run societal and economic implications? Our answer is yes. Specifically, we assert that OI practices have a strong potential to jeopardize sustainable technical change at the level of the national innovation system in the imminent future. We use a historical case study of the US ecosystem to highlight three types of social costs incurred on the national innovation system through incumbent OI, and three key social benefits the entrepreneurial network state exerts over the ecosystem that are equally important for OI. We document how the most recent wave of industrial R&D also corresponds with a techno-economic paradigm that increases the rate of invention but skews the direction of innovation towards short-term profits. As such, a key insight of this study is that unless technology managers embrace a more long-term stakeholder orientation, OI will continue to lead to externalizing the riskiest aspects of R&D to the taxpayers, while privatizing the rewards for industrial R&D executives and shareholders at the expense of what is best for society. A number of implications follow for public policy to create a more stakeholder friendly national innovation system.

TIM: The Military-Civilian Symbiosis: Evidence of Civil Innovation from the Global Drone Industry 

Author: **Katrin Marike Smolka**, *Warwick Business School*

Private parties operating in the civil domain are not always capable of engendering innovation and new industry creation because of lacking complementary assets, short-term horizons, underinvestment in fundamental research, and limited 'translational' capacity. In this study, we theorize and demonstrate that important innovations often have their roots in an institutional realm that can compensate for these shortcomings: the military. We hypothesize that the military is capable of fostering private sector innovation through technological and human-capital spillover, investments in high-risk innovation projects, and building vital innovation infrastructure. We test our hypotheses in the context of the global drone industry, using a unique longitudinal database tracking the emergence of the industry between 2006 and 2016. Our sample consists of 1341 civil drone systems created by 473 producers situated in 52 countries. We employ survival analysis to test the influence of national-level military drone production, overall military expenditure and arms imports on civil drone market-readiness. Our results show that the military plays an integral role in civil innovation and new industry creation in this setting. As one of the first studies in management to provide systematic, non-anecdotal evidence on the civil innovation role of the military, our work contributes to the institutions-for-innovation and innovation policy literatures.

TIM: Dystopia or utopia in live streaming influencer marketing during COVID-19 pandemic: case from china

Author: **Leqin Xu**, *Shanghai U. of International Business and Economics*
Author: **Jiayin Qi**, *Shanghai U. of International Business and Economics*

In the background of COVID-19 pandemic, the economy of the whole world has been strongly hit. Due to the forced adjustment of business models, the development of the online industry has been accelerated and provided an important impetus for economic recovery. Live streaming influencer marketing is one of the tools. In this research, we will analyze the live streaming influencer marketing during the COVID-19 pandemic from two stages. The first stage describes the positive first-order effect based on customer engagement theory, and the second stage describes the negative reflection based on the second-order effect theory. We will integrate the two stages and discuss them in three paradoxes: long term versus short term, return versus risk and coordination versus competition, and show whether live streaming influencer marketing will be utopia or dystopia when the post pandemic era comes.

Firm Innovative Strategy 1

TIM: When does servitization promote product innovation?     

Author: **Wengao Huang**, *School of Management, Xi'an Jiaotong U.*
Author: **Qining Jia**, *School of Management, Xi'an Jiaotong U.*
Author: **Lulu Sun**, *Xi'an Jiaotong U.*
Author: **Zelong Wei**, *Xi'an Jiaotong U.*

Although servitization has attracted heavy research attention, its impact on product innovation remains controversial. Addressing this gap, we examine the effects of servitization on exploitative innovation and exploratory innovation by integrating organizational knowledge creation theory and organizational inertia theory. We further explore how the effects vary with product modularization and organization formalization. We find that servitization has a positive relationship with exploitative innovation while a U-shaped relationship with exploratory innovation. Moreover, product modularization strengthens the U-shaped relationship between servitization and exploratory innovation; Organization formalization strengthens the positive relationship between servitization and exploitative innovation while weakens the U-shaped relationship between servitization and exploratory innovation. This study contributes to the literature by disentangling the impact of servitization on product innovation.

Paper is Available to Meeting Registrants Only.

TIM: Complementary Assets and Managerial Cognition in Surviving Technological Change 

Author: **Ei Shu**, *ESLSCA Business School Paris*

Despite the terminology describing the role of complementary assets on incumbent firms' responses to technological change, the interaction between complementary assets and other organizational antecedents is scarcely understood. This study juxtaposes the complementary asset argument with managerial cognition perspective, specifically exploring how managerial cognition influences an incumbent firm's investment decisions to pursue specific complementary assets and how this decision logic ultimately led to the failure to explore emerging "windows of opportunity" in policy-driven markets.

Paper is NOT Available. Please contact the author(s).

TIM: The Effect of Managerial Capabilities on Firm-Level Innovation 

Author: **J. Nils Foegel**, *Leibniz U. Hannover*
Author: **David Lohmar**, *Westfälische Wilhelms-U. Münster*
Author: **Stephan Nüesch**, *Westfälische Wilhelms-U. Münster*

This study investigates the link between managerial capabilities and firms' long-term innovation performance. Drawing on the concept of resource orchestration, we argue that top managers' ability to structure, bundle, and leverage firms' resources is critical to creating new combinations of resources, i.e., innovations, that enable their firms to capture emerging market opportunities. Hence, top managers' capabilities to make decisions with regards to the allocation and deployment of resources ensure the strategic fit between the firms' resource endowments and the environment. Acknowledging that such decisions depend on the internal and external context of the firm, we further introduce the tenure of the chief executive officer (CEO) and the turbulences in the firm's environment as two critical boundary conditions for this link. To test our conceptual model, we collected data on 1,270 U.S.-listed firms from 1992 to 2015. Our results support our theoretical premise that managerial capabilities enhance firms' innovation performance in the long run and that this relationship is attenuated by CEO tenure and amplified by environmental turbulences.

Paper is Available to Meeting Registrants Only.

TIM: Marketing Capabilities, Technological Innovation, and Management Innovation: An Outside-in Approach

Author: **Jiahui Liu**, *School of Management, Xi'an Jiaotong U.*
Author: **Chen Han**, *School of Management, Xi'an Jiaotong U.*
Author: **Shuman Zhang**, *School of Management, Xi'an Jiaotong U.*
Author: **Bo Nielsen**, *U. Of Sydney*

This study builds a theoretical model between marketing capabilities, radical and incremental technological innovations, and management innovation through an outside-in approach. We employed 272 pairs of survey questionnaires collected from Chinese firms in the empirical tests. Results indicate that marketing capabilities enhance management innovation through the mediating effect of radical technological innovation, whereas the mediating effect of incremental technological innovation is not statistically significant by contrast. It is further uncovered that the mediating effect of incremental technological innovation is contingent upon the level of technological turbulence.

Organizing for Creativity

TIM: Daily Creativity: The Role of Personal Resources and Daily Negative Incidents

Author: **Julia Backmann**, *U. College Dublin*

Author: **Julia Katharina de Groot**, *WHU - Otto Beisheim School of Management*

Being required to be creative during most of their working days is a daily challenge for innovators. Prior research indicated that innovator's personal resources may help them to be creative in their working environments. This study examines two very different personal resources. Specifically, we examine an innovator's resilience and sensor-processing sensitivity as potential drivers for their daily creativity. In an aim to also investigate when these two personal resources are most (or least) beneficial, we also include the moderating role of experienced daily negative incidents. As this study examines the effects of more stable personal resources (i.e., resilience and sensor-processing sensitivity) on daily creativity, we applied an experience sampling research design to collect our data. 138 innovators responded to our baseline survey capturing the stable constructs and to at least two daily survey entries. The results indicate that high levels of resilience could help employees to be creative and that this relationship is not moderated by daily negative incidents. We did not find a significant relationship between sensitivity and daily creativity, but when an individual is exposed to negative incidents on a given day, sensitivity is negatively related to creativity.

Paper is Available to Meeting Registrants Only.

TIM: How Champions Win Commitment for Their Ideas

Author: **Joshua Mahaney**, *Grenoble Ecole de Management*

Author: **Thomas Gillier**, *Grenoble Ecole de Management*

Author: **Fiona Maria Schweitzer**, *Grenoble Ecole de Management*

Sometimes champions are needed in organizations to push ideas toward the new product development process. This paper draws from the help-seeking and issue-selling literature to pose that champions, who look for commitment for their ideas, can gain colleagues' support by asking them to contribute to the ideas. In three experimental lab studies, I show that colleagues who contribute to champions' ideas develop psychological ownership for them and are more likely to commit to them. In addition, I also find that contributing to ideas leads colleagues to exhibit territoriality, referred to as the behavioral 'dark' side of psychological ownership. To avoid the pitfalls associated with territoriality, but still gain commitment, idea champions can present their ideas in a narrative format. While it may be helpful for ideas to be presented in this way, I also show some evidence that, incongruent with the initial two studies' findings, colleagues who contribute to idea champions' narrative ideas are paradoxically less committed to them.

Paper is NOT Available. Please contact the author(s).

TIM: Exploring the Impact of Crowd Members' Motivation on Idea Quality in Online Innovation Communities

Author: **Ulrich Bretschneider**, *U. of Kassel*

Since many years, several firms host Virtual Idea Communities (VIC), in which the crowd focuses on voluntarily developing ideas for new product development (NPD). Both, scholars and practitioners share a strong interest in understanding the factors that enhance crowd members' individual ideation outcome, meaning the quality of ideas, since the value of user ideas is not only essential for the survival of a VIC, but it also directly affects the innovation effects of firm's NPD. Although there exist first insights on what influences idea quality, empirical studies that provide evidence of which forms of crowd members motivations are positively linked to higher ideation outcome are neglected. In this research, we build a theoretical model explaining which motives of crowd members for engaging in ideation have a positive impact on the quality of ideas they developed. To test our theory, we employed empirical data from users of the VIC by the software manufacturer SAP. For the first time, we found that crowd members of VIC are motivated to send capability signals through their ideas and thus be more creative. Further, crowd members with higher levels of fun and learning motivation produce ideas of higher quality, whereas this association depends on their level of flow experience. Our empirical results provide important contributions to IS research and practice. On the basis of our findings it is possible to design socio-technical artefacts for VICs that stimulate users' capability-, fun- and learning motives and in turn will lead to ideas of higher quality.

TIM: Creative AI-based inventions: How incumbents strategically renew their invention portfolios

Author: **Michael Wustmans**, *U. of Bonn*

Author: **Quentin Plantec**, *MINES ParisTech, PSL U., Centre for Management Science, i3 UMR CNRS*

Author: **Anna Waßenhoven**, *U. of Bonn*

Author: **Clément Sternberger**, *U. of Paris Sud*

Author: **Mei Yun Lai**, *U. of Bremen, Institute of Project Management and Innovation*

Author: **Stefanie Bröring**, *U. of Bonn*

Artificial Intelligence (AI) is often considered a general purpose technology with the potential for disruption in most existing markets. When facing a substantial technological disruption, it has been shown that incumbents are confronted with many challenges to develop new products (conflicting customer incentives, cognitive lock-in, lack of complementary assets), despite that this activity is critical to ensure companies' survival. Overcoming those issues lies with companies' capacity to strategically renew their resources and remain competitive in their market. However, while the literature has shown how incumbents used AI technologies to increase efficiency or productivity, little is known about how they rely on AI technologies in their inventive process. It has also been observed that companies broadly vary in the ways they are embracing AI technologies, but most studies approach AI-based inventions as homogeneous. Hence, to cope with this research gap, we adopted a strategic renewal perspective (e.g., Agarwal & Helfat, 2009), and we conceptualized a new taxonomy of different types of AI technology usages in companies' inventive processes. Creative AI-based inventions focus on implementing AI technologies that serve new-to-company applications and open up new technological paths. Follow-up creative AI-based inventions indicate the company's efforts in following the newly created technological path. Low AI-based inventions specify the usage of AI to extend the existing technology portfolio without disrupting the current business of the company. By drawing upon an example from the agricultural sector, we developed techniques relying on patent data to implement our taxonomy by dealing with 39,000 utility patents in companies' top-19 companies. First, we explored how incumbents and new entrants from different industry origins relied on different AI technology usages with different adoption patterns. Second, by relying on patent indicators, we reviewed the performances of the different types of AI technology usages in companies' inventive process. We contribute to strategic renewal theory by revealing that incumbents from the industry we focus on others rely on AI to renew their patent portfolio to strategically develop new business. Second, we demonstrated the co-existence of different usages of AI technologies in companies' inventive processes to complement incumbents' portfolios and open new innovative paths. Consequently, companies should plan which type of strategic renewal is appropriate for their organisations based on their strategic playing field to achieve the desired outcome.

Recombining and Reusing Knowledge

TIM: A Prophet Has No Honor in His Hometown? Repurposing in the Mobile App Industry

Author: **Camellia Li-Yun Cheng**, *UCLA Anderson School of Management*
Author: **Wenpin Tsai**, *Pennsylvania State U.*
Author: **William Lin**, *WISKEY CAPITAL/ National Taiwan U.*

Through discovering new uses of existing products or services, repurposing is a useful innovation approach that allows firms to reach new customers in a different market category. Moving from a prior market category to a new one, repurposing combines knowledge from these categories. We argue that the rarer (less frequently) similar recombination has occurred in the past, the more likely a repurposing will gain market attention in the new market category. We also argue that the effect of rarity of combination on market attention will be strengthened if the repurposing engages in a targeted search by moving from a vague market category to a more specific category. Using data collected from Google's mobile app platform, we identify key characteristics of repurposing based on the prior and destination market categories associated with the repurposing and show how such characteristics may influence market attention to the repurposing. Our findings contribute to both the innovation and strategy literature and inform practitioners of key factors that drive successful repurposing.

Paper is Available to Meeting Registrants Only.

TIM: The Effects of Interdisciplinarity on R&D Performance: The Efficacy of Knowledge Recombination

Author: **Daniel Laufs**, *Kiel U.*
Author: **Tetyana Melnychuk**, -
Author: **Carsten Schultz**, *Christian-Albrechts-U. of Kiel*

Successful knowledge application from distant disciplines drives the performance of R&D projects, in particular in the case of breakthrough technologies. To translate knowledge recombination into innovations, organizations engage in interdisciplinary research projects. Applying a knowledge-based view, we investigate whether and under which conditions the degree of interdisciplinarity increases R&D performance. We consider different types of interdisciplinarity and argue that research results diversity (distance of covered technological concepts in research results) enhances R&D performance but team diversity (functional diversity of involved researchers) and knowledge base diversity (research field diversity of integrated prior literature) add to the knowledge recombination complexity inhibiting R&D performance. Following a mixed method approach, we ground our hypotheses in a qualitative pre-study within the context of an interdisciplinary project utilizing algae extracts for medical applications and employ bibliometric data in the biomarine field. Our results show a positive effect of research results diversity on R&D performance with diminishing returns (inverted U-shape). Team diversity has no direct effect on performance but complicates the recombination of knowledge in interdisciplinary projects (negative interaction). Knowledge base diversity has a negative impact on R&D performance. To foster innovations, organizations should pro-actively recombine knowledge from diverse research domains in collaboration projects, yet, stay focused.

Paper is Available to Meeting Registrants Only.

TIM: Recombination and the role of personality, knowledge sourcing and organizational diversification

Author: **Stefan Wagner**, *ESMT Berlin*
Author: **Karin Hoisl**, *U. of Mannheim*

Inventors recombine existing knowledge elements to identify new technological solutions and novel inventions. We study how inventors' reliance on different sources of knowledge, their personality traits, and the diversification of the organizational knowledge of their employers jointly determine recombination outcomes. In our theorizing, we distinguish inventors' overall recombination success from the share of technologically novel recombinations. Our predictions are tested relying on a large-scale survey of 1,327 industrial inventors, enhanced with patent-based measures of recombination outcomes. The results confirm earlier findings that access to a diverse set of knowledge is positively related to both recombination success and the rate of novel recombinations. Further, we are able to show that this clear relation holds only for inventors employed by firms with low knowledge diversification. Finally, personality dominates the effect of inventors' reliance on different sources of knowledge and is relatively more important.

Paper is Available to Meeting Registrants Only.

TIM: Value Creation through Recombination in Ecosystems: The Role of Users in the Smart Home Industry

Author: **Kathrin Borner**, *Vrije U. Amsterdam*
Author: **Hans Berends**, *Vrije U. Amsterdam*
Author: **Fleur Deken**, *Vrije U. Amsterdam*
Author: **Frans Feldberg**, *KIN Research, VU Amsterdam*

The value that products and services have for users increasingly depends on their complementarity with other products and services, organized in ecosystems. This study is situated in the smart home industry where digital products offer innumerable possibilities for combination, so that it is difficult or even impossible for firms to address them all. This leads to a coordination challenge in ecosystems. Through a multi-method comparative case study, we found that users are active players who not only select combinations designed by companies or simply mix and match products, but also design novel combinations that are of value to them, and share these with others. We find that users design more combinations than firms, but that firm-designed combinations have on average more users. By doing so, users contribute to value creation in ecosystems as they turn potential complementarity into actual, specific complementarity. We discuss implications for research on innovation ecosystems and user innovation.

Human Capital's Role in Innovation

TIM: Jack of all trades: cross-functional CEOs and organizational ambidexterity 

Author: **Florence Karaba Stadler**, *School of Management, U. of Bath*
Author: **Christian Stadler**, *Warwick Business School*

Relying on the insights from cognitive scientists we propose that analogical reasoning enables CEOs to draw on direct or vicarious experience from settings with similar but different features when they try to reduce the trade-off that occurs when firms grow exploration and exploitation activities. Based on a partly hand-collected dataset from the upstream oil industry we are able to show that CEOs with cross-functional expertise facilitate ambidexterity. We theorize that cross-functional expertise helps them to better differentiate and integrate competing demands, which is central to achieving ambidexterity. Further we are able to show that this ability of cross-functional CEOs is subject to managerial discretion. More specifically we concentrate on a firm's technological capabilities in a technology focused industry, thereby extending previous insights from an upper echelon perspective that the ability of managers to shape outcomes is limited if a firm does not have sufficient resources.

TIM: Earnings pressure and innovation: The effects of CEO power and competitive intensity 

Author: **Cheng-Yu Lee**, *Southern Taiwan U. of Science and Technology*
Author: **Quang Anh Le**, *Southern Taiwan U. of Science and Technology*

Research on the impact of stock analysts on firms is on the rise. Among various effects from stock analysts, their earnings forecasts are regarded as one of the critical external pressures on corporate behaviors/outcomes, including a firm's innovation investment. To enrich the literature, this study further explores additional contingency factors not yet covered in the existing studies of earnings pressure-innovation investment relationship. The empirical findings indicate that the negative relationship between earnings pressure and innovation can be separately reduced and enhanced by the moderating effects of CEO power and competitive intensity; and the configurational effect reveals that CEO power can mitigate the negative moderating effect of competitive intensity on the earnings pressure-innovation investment relationship.

TIM: The Depleting Effects of Task Idiosyncratic Deals in the Context of Innovation

Author: **Wai Hung Thomas Ng**, *U. of hong kong*
Author: **Yinuo Zou**, *U. of hong kong*
Author: **HAOYANG CHEN**, *The U. of Hong Kong*
Author: **Chang Su**, *U. of hong kong*

Innovative behavior, or the generation, dissemination, and implementation of new and useful ideas, might have some unintended negative consequences for employees, but these negative consequences are largely unknown to both researchers and practitioners. Guided by a resource depletion perspective, this study suggests that innovative behavior can strain individuals' resources, thereby contributing to greater insomnia. This is especially true for employees who believe that it is important to demonstrate their worth to others through displaying strong innovative behavior, such as those who have received task-related idiosyncratic deals and those who are mindful about how others react to such special arrangements. A three-wave longitudinal dataset collected over a 10-month period showed that greater innovative behavior at Time 1 was related to greater insomnia at Time 2, which in turn was sustained through Time 3. This mediation relationship was stronger for employees who reported high levels of both task-related idiosyncratic deals and (peer) perspective taking. Taken together, these findings support the premise that innovative behavior might create dysfunctional outcomes for some employees.

TIM: Knowledge assets and radical/incremental innovation performance: The role of organizational agility

Author: **Sebastian Eisele**, *RWTH Aachen U.*
Author: **Andrea Greven**, *RWTH Aachen U.*

To achieve and sustain radical and incremental innovation performance in today's fast-paced environments, firms need to develop dynamic capabilities, like organizational agility, that allow them to quickly sense and respond to opportunities. Therefore, a better understanding of enabling assets and mechanisms is important for theory and practice. Drawing on the knowledge-based view and dynamic capability theory, this study investigates how specific knowledge assets enhance sensing and responding agility, which, in turn, advance radical and incremental innovation performance. Based on survey data from 385 firms, this study offers nuanced insights. First, human and social capital are positively related to sensing agility. Second, social and organizational capital are positively related to responding agility. Third, sensing agility mediates the relationships between both human and social capital and radical innovation performance, whereas responding agility mediates the link between both social and organizational capital and incremental innovation performance. Hence, this study contributes to innovation and strategic management literature by empirically validating specific knowledge assets as important antecedents of organizational agility's underlying dimensions. Additionally, our findings substantiate dynamic capability theory as pivotal theoretical lens to explain the mechanisms underlying the relationships between a firm's knowledge assets and radical/incremental innovation performance.

Innovative Behavior

TIM: The temporal effects of R&D subsidies on R&D, innovation and innovation behaviour: evidence from UK

Author: **Chris Dimos**, *U. of Bath*
Author: **Felicia Fai**, *U. of Bath*
Author: **Philip Robert Tomlinson**, -

This study contributes to the understanding of the temporal dimension of the effects of R&D subsidies on R&D inputs, outputs and innovation behaviour. We argue that while the time dimension of the effects on R&D inputs (i.e. input additionality; IA) tightly relates to public support programmes' requirement of private contribution in R&D spending, the effects on innovation (i.e. output additionality; OA) and innovation behaviour (i.e. behavioural additionality; BA) are temporally delayed, linked to the explorative nature of learning associated with publicly funded projects, and obstacles to changes in the innovation behaviour of firms. We empirically test our theoretical framework for a sample of highly R&D intensive, UK firms to find that while IA occurs in the year following receipt of R&D subsidies, BA takes three years after receipt of R&D subsidies to occur. We also find some evidence that OA is mainly driven by process innovation and it takes (at least) three years to occur. In measuring BA, we employ for the first time, a 'classical' treatment and control group evaluation without relying on firms' perceptions of how the receipt of public subsidies affected their innovation behaviour. Our findings have significant implications for both policy and evaluation.

TIM: Effective Adoption and Implementation of AI Principles

Author: **Stephanie Kelley**, *Queen's School of Business, Canada*

The study examines employee perceptions on the adoption and implementation of artificial intelligence (AI) principles in organizations. 49 interviews were conducted with employees of 24 organizations, across 11 countries. Participants all worked directly with AI and represented a range of positions from junior data scientist to Chief Analytics Officer. The study found that there are eleven components that could impact the effective adoption and implementation of AI principles in organizations: communication, management support, training, ethics office(r), reporting mechanism, enforcement, measurement, accompanying technical processes, sufficient technical infrastructure, organizational structure, and an interdisciplinary approach. The components are discussed in the context of the research on business code effectiveness. The findings offer a first step in understanding the impact of adoption and implementation on the effectiveness of AI principles in organizations. They suggest that simply having AI principles will not be enough to prevent unethical AI outcomes but that several adoption and implementation components uncovered in the study could help address this.

TIM: Online Interactive Innovation: Learning from Customer Knowledge

Author: **Biao Huang**, *LSE*
Author: **Jonathan Liebenau**, *London School of Economics and Political Science*

New practices to benefit from customers' knowledge have boosted innovation for Xiaomi in smartphones and Tesla in electrical vehicles, but its mechanism cannot be explained by existing theories such as lead users (von Hippel, 1986) or open innovation (Chesbrough, 2003). We develop a new concept of 'online interactive innovation' [OII] to examine how this new practice works by comparing 11 Chinese firms. The model is tested on Xiaomi, a company that entered Fortune 500 in only 9 years from its establishment. Multilevel modeling and longitudinal data analyses are used to analyze the panel data from Xiaomi about customer feedback between 2012 and 2018. We find there are positive relationships among the weekly number of customers' suggestions, replies from Xiaomi's employees and other customers, functions changes in the operating system, annual patent applications and shipments of smartphones. OII changes innovation significantly by shifting the product diffusion curve to the left, causing growth to accelerate much earlier and more quickly than otherwise. It also helps firms to realize mass-customization, enact fast iteration techniques, enhance users' experience and trust, reduce costs and improve productivity. OII works well for Xiaomi not only in China but also in other countries such as India.

TIM: SME modes of innovation: The impact of STI and DUI drivers on technological innovation

Author: **Jose-luis Hervas-oliver**, *U. Politècnica de València*
Author: **Francisca Sempere**, *Polytechnic U. of Valencia*
Author: **Davide Parrilli**, *bournemouth U. UK*

At the intersection of SME innovation and innovation systems, this study investigates the characteristics of SME innovation modes in catching-up European countries (Southern, and Central and Eastern European) vis-à-vis some of the most advanced countries in Europe. Distinguishing between STI (Science, Technology and Innovation) and DUI (learning-by-Doing, Using and Interacting) innovation drivers, and analyzing their impact on technological innovation we study 29,834 SMEs innovation in 15 countries. We argue that the most effective SME innovation modes in catching-up countries differ substantially from those in advanced economies. Results show how their economic, institutional and innovation context influence SME forms of knowledge and learning. In particular, catching-up countries show effective DUI-type collaborations for process innovations, while showing more limited returns than advanced countries from the STI mode of innovation.

Decisions and Criteria

TIM: The Impact of Intra-Organizational Knowledge configuration on the Termination of Patented Inventions 

Author: **Tianyu HOU**, *City U. of Hong Kong*
Author: **Juan Li**, *City U. of Hong Kong*

This paper examines how intra-organizational knowledge configuration, and specifically cohesion among knowledge components, influences an organization's decision to terminate patented inventions. We differentiate cohesion among knowledge components at local and global levels and argue that local and global knowledge cohesion have differing effects on invention termination. We matched two datasets to test our hypotheses. Using a longitudinal dataset consisting of the patenting activities of 417 U.S. pharmaceutical firms, we constructed organizational knowledge networks and identified local and global cohesion features. We then used patent maintenance data to specify invention termination by tracking non-payment of patent renewal fees. We found that local knowledge cohesion facilitates the retention of patented inventions, while global knowledge cohesion is positively associated with the termination of patented inventions. Theoretical and practical implications are discussed.

TIM: Causal Machine Learning and Business Decision Making  

Author: **Paul Huernmund**, *Copenhagen Business School*
Author: **Jermain Christopher Kaminski**, *Maastricht U., School of Business & Economics*
Author: **Carla Schmitt**, *Maastricht U., School of Business & Economics*

Causal knowledge is critical for strategic and organizational decision making. By contrast, standard machine learning approaches remain purely pattern and prediction-based, rendering them unsuitable for being applied to a wide variety of managerial decision problems. Taking a mixed-methods approach, which relies on multiple sources, including semi-structured interviews with data scientists and decision makers, as well as quantitative survey data, this study makes a first attempt at delineating causality as a critical boundary condition for the application of machine learning in business. It highlights the crucial role of theory in causal inference and offers a new perspective on human-machine interaction for data-augmented decision making.

TIM: Strategic Choices with Artificial Intelligence  

Author: **Sukwoong Choi**, *MIT Sloan School of Management*
Author: **Namil Kim**, *School of Management, Harbin Institute of Technology*
Author: **Junsik Kim**, *Korea Advanced Institute of Science and Technology (KAIST)*

Artificial intelligence (AI) is expected to provide choices to yield better outcomes. Considering that evaluating given strategic choices and making strategic decisions is an essential skill for managers, how could their decision-making process be influenced by AI's introduction? This study attempts to answer this question with the context of professional Go players where was unexpectedly but drastically transformed since the invention of AlphaGo in the late 2010s. We investigate the impact of the AI-powered Go program (APG) on the moves within the game between human players and AI by comparing AI suggestions before and after the initial public release of APG. We reveal that AI improves the Go performances of professional Go players by suggesting a greater winning probability for each move and new opening strategy, instead of suggesting traditional sequences that humans have believed to be the best norms for hundreds of years. However, we find this effect is constrained at the initial stage of the game. Besides, we reveal that young players are more similar to the choices AI suggests than old players, leading to winning the game for young players. Our results imply how much professionals have the heuristics and routines of their decision-making and how AI leads them to better decisions—mitigating their errors and mistakes. Lastly, AI's complement effect could be weakened as the environment is more complicated.

TIM: Institutionally Bounded Identities: Digital Engineers and Digital Creatives in Mobile Games 

Author: **Cornelia Storz**, *Goethe U.*
Author: **Marcela Miozzo**, *King's College London*
Author: **Steven Casper**, *Keck Graduate Institute*

Through a comparative multiple case study of 55 firms in the mobile games industry in Japan and the United States of America, we examine how new firms in new industries in different national institutional contexts develop their organizational identity. Our analysis suggests that national institutions act as an important filter through which new firms develop their organizational identity by sifting the influence of founders' characteristics and motivations, on the one hand, and the industry technology and knowledge base, on the other. We show that these influences result in two distinctive types of organizational identity—"digital engineers" and "digital creatives"—that are closely associated with the different national institutional environments. The organizational identity of digital engineers emphasizes quality, consistency, and speed, whereas that of digital creatives emphasizes novelty, experimentation, and data analytics. New firms in new industries adopt strategic decisions that reflect and reinforce these identities, especially organizational actions regarding firm boundaries, human resources practices, and corporate development. We propose an emergent framework to explore how institutionally bounded organizational identities develop in a new digital industry.

Behavioral Insights into Innovation

TIM: Enriching External Validity in Innovation-Decision Theory: Findings from Nudging Field Experiments 

Author: **Erich Renz**, *U. of Regensburg*

Many innovations fail because they are not accepted due to significant changes in the way people think, feel, or act. Consumers often respond to this change with a particular resistance reaction. I therefore investigate whether a simple behavioral intervention without additional costs can increase innovation adoption. In two studies with an interval of one year, I find that a nudging treatment leads to significantly more pro-innovation adoption decisions than a control condition. I provide evidence that status quo satisfaction with existing processes and a generally negative assessment of the innovation dampens innovation adoption in Study 2. In addition, I observe that the information deficit is linked to the formation of active innovation resistance. My findings in both studies demonstrate that the intended behavior towards innovation in the control groups is almost identical to the treatment groups' actual behavior. Overall, I show that cost-effective nudges can be beneficial in the field of innovation research and practice. By using nudges, the consumers' freedom of choice can be preserved, and the acceptance of innovations promoted at the same time.

TIM: Designing Ethical Nudges For E-Commerce Sites: A Pilot Study 

Author: **Ja-Nae Duane**, *Bentley U.*

E-commerce experiences have seen a rise in consumer usage since the beginning of COVID. These websites and their design have come under scrutiny over the past decade for their use of cognitive biases and heuristics to influence consumer behavior in a manner that maximizes shareholder value. Researchers have been examining who should be held accountable for processes and experiences that may cause consumers harm. This paper explores the role of the e-commerce website designer to understand better if they are best positioned to adopt ethical nudges within e-commerce design. This pilot study uses the Archer design methodology to construct a prototype which is then evaluated through a qualitative analysis from an expert panel to assess the feasibility of implementing ethical nudges within the e-commerce experience.

TIM: Threatened by AI: Analyzing Users' Responses to the Introduction of AI in a Crowd-sourcing Platform

Author: **Mikhail Lysyakov**, *U. of Maryland College Park*

Author: **Siva Viswanathan**, *Robert H. Smith School of Business, U. of Maryland*

As Artificial Intelligence (AI) solutions are being rapidly deployed, they increasingly compete with human labor. This study examines users' responses to the introduction of an AI system for logo design in a decentralized crowdsourcing marketplace for design tasks. We focus on contestants (i.e., designers) who were active both before and after the introduction of the AI system. We find that designers who had primarily participated in contests for lower-tier, less-complex logo-design contests continue to participate in these contests, while designers who had some prior exposure to more-complex logo-design contests and non-logo contests, increasingly switch to those contests after the AI launch. Using propensity score matching (PSM) with difference-in-differences methods (DiD) we find that the successful designers become more focused (i.e., they increase the number of re-submissions per contest) and more quality-oriented (i.e., they increase emotional content and complexity of their design submissions), after the AI launch. In contrast, the unsuccessful designers increase participation across multiple contests, but do not change the quality (emotional content and complexity) of their design submissions after the AI launch. These findings have important implications for research on the impacts of AI on participants' behaviors and for the design of such crowdsourcing platforms.

Paper is Available to Meeting Registrants Only.

TIM: Privacy-Seeking Behavior in the Personal Data Market 

Author: **Joy Zhouyu Wu**, *Cornell U. and LMU Munich*

Firms are looking to commercialize, trade, and monetize the personal data they collect and receive from consumers. Internet users regularly choose to disclose and share their personal data in return for goods and services. This study examines whether a data recipient's ability to exploit data in a secondary market can motivate users' privacy behavior. An online experiment elicited individuals' reservation prices for sharing their personally-identifiable psychometric data. I found that individuals' information disclosure behaviors were misaligned with their willingness to allow data recipients to monetize their data and trade with a third party. Subjects behaved more privately—by refusing to share data or demanding greater benefits in exchange for privacy losses—when they became more aware of a data recipient's ability to sell their data for money. Moreover, when individuals considered exposing their data to thirty data recipients (rather than one), the privacy responses were weaker than the responses to a recipient's exploitation abilities.

Institutions and Institutional Context

TIM: Institutional and organizational antecedents of personnel motivation in Knowledge Transfer Offices  

Author: **Anna Pohle**, *Fraunhofer Center for International Management and Knowledge Economy IMW*
Author: **Elisa Villani**, *Department of management, Bologna U.*
Author: **Rosa Grimaldi**, *Alma Mater Studiorum U. di Bologna*

Knowledge Transfer Offices (KTOs) have become key actors in driving technology transfer and thus economic growth, innovation as well as the social and technological progress. So far, the variation in relative KTO performance has only been explained at the macro level by environmental and institutional variables and surprisingly scant attention has been paid to micro dynamics and behavioral aspects taking place within KTOs. Our study uses qualitative data from successful KTOs of three Italian Universities to examine the motivations of KTO personnel and their antecedents. Based on the self-determination theory we link the three basic needs (relatedness, competence and autonomy) that underlie intrinsic motivation to its institutional and organizational antecedents. We show how university governments can address the satisfaction of the need for autonomy by adjusting public body regulations according to the hybrid demands of KTO. On the other hand, organizational antecedents are more valuable to address the need for competence and relatedness.

Paper is Available to Meeting Registrants Only.

TIM: Self-efficacy, resilience and individual ambidexterity: The effects of economic institutions

Author: **Jing A. Zhang**, *U. of Otago*
Author: **Tao Bai**, *U. of Queensland*
Author: **Fiona Edgar**, *U. of Otago*
Author: **Steven Grover**, *Macquarie U.*
Author: **Guoquan Chen**, *The School of Economics and Management, Tsinghua U.*

The extant literature highlights the importance of individual ambidexterity, however little is known about its antecedents. Buoyed by recent calls for research to explore psychological explanations of individual ambidexterity, this study develops a conceptual model which examines the effects of psychological self-efficacy and resilience. Specifically, by building on social cognitive and dynamic capability perspectives of ambidexterity, we propose a pathway that sees psychological self-efficacy precipitate resilience and, in turn, individual ambidexterity. Additionally, by exploring the indirect relationship of psychological self-efficacy with individual ambidexterity through resilience, we explore whether this relationship is contingent on two institutional factors: degrees of economic freedom and marketization. Analyzing data from a sample of 1907 knowledge workers from different regions of China, New Zealand and Australia, using both symmetric (PLS-SEM) and asymmetric approaches (fsQCA), results show that psychological self-efficacy enhances resilience, with this in turn facilitating individual ambidexterity. The psychological self-efficacy-resilience-individual ambidexterity relationship is also found to be stronger in regions with a low degree of economic freedom and a relatively higher degree of marketization. Additionally, results from the fsQCA provide supplementary evidence of how configurations of psychological self-efficacy, resilience, and characteristics related to the institution's economic context and personal demography promulgate individual ambidexterity. These findings shed new light on individual-level psychological explanations for ambidexterity.

Paper is Available to Meeting Registrants Only.

TIM: Innovation and Ambidextrous Transition: The Implications for China and Beyond

Author: **Ying Huang**, -
Author: **William C Zhou**, *U. of Massachusetts, Lowell*

Intrigued by recent scandals of Chinese public firms in manipulating earning reports, this paper examines the relationship between managerial choices of exploitation vs. exploration, earnings management, and firm risk in China. Building on Teece's PFI framework and the innovation ambidexterity literature, we propose the term of ambidextrous transition to encapsulate the dynamic process of deploying exploitation and exploration to changing environments. Using a large Chinese dataset consisting of 10,122 firm-year observations (2,430 public firms) spanning from 2007 to 2017, we find that an exploitation-dominant strategy in China helps curb earnings management and that ambidextrous transition helps mitigate firm risk. Results from this study offer important implications for our understanding of the innovation strategies adopted by firms in China and other emerging economies with similar institutional limitations.

Paper is Available to Meeting Registrants Only.

TIM: Integrating multiple goals in university-industry collaborations  

Author: **Irina Isaeva**, *Nord U. Business School*
Author: **Thomas André Lauvås**, *Nord U. Business School*
Author: **Marianne Terese Steinmo**, *U. of Nordland*
Author: **Einar Rasmussen**, *Nord U. Business School*

Pursuing multiple goals is difficult for organizations because goals can conflict with one another and some goals may not be seen as feasible or desirable to pursue. Whereas some academic institutions successfully contribute to both high quality research and industrial innovation, new collaborations often struggle to balance between these multiple goals. We study the process of establishing six university-industry research centers and explore how the academic partners pursued goals related to innovation in addition to the traditional goals of academic research. We found that during the initial phase of the collaboration the innovation-oriented goals were not prioritized, and the research organizations were bolstering their research-oriented goals. Increasing pressure from industry partners forced the research organizations to develop new hybrid practices that also incorporated innovation-oriented goals alongside the academic ones. By outlining how multiple goals were integrated to create hybrid innovation practices we provide novel theorizing on how university-industry collaborations are formed and we contribute to the literature on how organizations integrate multiple and partly contradictory goals.

Paper is NOT Available. Please contact the author(s).

Organization theorists acknowledge that digital technologies can create affordances that foster novel forms of organizing, thereby shaping a symbiotic relationship between the technology and organization. In contrast to this treatment of technology and organization as separate entities, we argue that the blockchain innovation, as an institutional technology, for the first time, synthesizes both organizational and technological features in its system architectural core. A blockchain system core embeds an organizational architecture in a technology architecture, exhibiting a duality that tells blockchain apart from other digital technologies. Consequently, blockchain displays heterogeneous adoption patterns—actor-centric adoption driven by the diffusion of technology features (manifested as distributed ledger technology, DLT) versus technology-centric adoption driven by the diffusion of decentralized and self-governing organizational features (manifested as decentralized autonomous organization, DAO). We identify three diffusion patterns enabled (as well as constrained) by various boundary designs based on permeability and transparency. Taking an actor-oriented approach to theorize about the pathways leading to distinct adoption patterns, we shed new light on literature on innovation adoption by integrating organization design perspectives.

Learning to Innovate

TIM: Learning by doing: Knowledge acquisition and Middle Managers' Dynamic Capabilities

Author: **Antonio Crupi**, *Scuola Superiore Sant'Anna*
Author: **Alberto Di Minin**, *UC Berkeley*
Author: **Letizia Mortara**, *Institute for Manufacturing, Engineering Department, U. of Cambridge*
Author: **Andrea Piccaluga**, *Scuola Superiore Sant'Anna*

Companies are pushed in looking for more sources of external knowledge as a source of competitive advantage. One of these sources is universities with whose companies engage by performing Open Innovation strategies. Accordingly, this paper examines how OI environments, such as university-industry consortia, intervene in reducing managers' external knowledge acquisition barriers by improving their dynamic capabilities. The research is based on a longitudinal study case to observe how managers interact within a university-led consortium. The study has been conducted within the Strategic and Technology Innovation Management Consortium of the University of Cambridge. Data have been collected via interviews, documents, and ethnographic observations in the company and seven consortium meetings in 2019 and 2020. The observations and the data collected supported the idea that managers' interactions with scholars and other managers stimulate the absorption of relevant information that triggers their dynamic capabilities. Precisely, exploring theoretical approaches and learning from others' practical experiences sharpens managers' abilities to identify appropriate sources of knowledge, adopt innovative solutions in different contexts, and gain adequate skills to transfer the knowledge developed within the consortium internally.

Paper is Available to Meeting Registrants Only.

TIM: R&D Collaboration: Competitive & Non-competitive External Actors for Innovation Performance

Author: **Kyung Suk Lee**, *Columbia U.*

This study examines how R&D collaboration with different external actors correlates in different magnitudes in terms of the focal firm's probability for innovation performance. One stream of studies in R&D collaboration literature focuses on each relationship between various types of external actors, such as university, suppliers, customers, and competitors, and its effect on focal firm's innovation performance. However, prior studies do not fully address the fact that focal firms may choose to engage in R&D collaboration with several external actors simultaneously. In order to address this gap, current study provides an alternative view that each distinct actor can be grouped and characterized into two external actors; competitive and non-competitive actors. Based on different types of organizational learning; competitive and non-competitive learning, present study examines the correlation between competitive and non-competitive actors and focal firms' innovation performance by examining both radical and incremental innovation outputs. Current study also analyses how internal organizational innovative effort and external government aid could moderate the probability of focal firms' innovation performance. The results of the current research demonstrate that if firms are to benefit the most from forming a collaboration to improve their innovation performance, R&D collaboration with non-competitive actors may serve as the most viable option. In addition, to intensify the outcome of R&D collaboration, this study argues that focal firms should organize a collaborative learning environment and be open to receiving government aid to further promote innovation performance.

TIM: Propensity and Performance of Task Exploration in Crowdsourced New Product Development

Author: **Zhiyi Wang**, *U. of Colorado, Boulder*
Author: **Lusi Yang**, *U. of Arizona*

Crowdsourcing has widely been used as a strategy for sourcing ideas and efforts to facilitate innovation. Existing literature suggests that crowdsourcing not only attracts experts with specialized knowledge to perform a task (i.e., exploitation), but also motivates participants to explore new knowledge and expand skills base (i.e., exploration). Given the importance of exploration/exploitation in crowdsourcing, our understanding of how to motivate contributors' exploration and exploitation remains incomplete. This would be the focus of our study. In particular, we examine the effects of the incentive mechanism through contributions selected by the platform on the quantity and quality of contributors' exploration behavior. Using a unique dataset from a new product development crowdsourcing platform, our empirical analyses reveal that number of contributions selected by the platform positively affect the propensity for task exploration but negatively affect the performance of exploration. Complexity of task environment moderates the relationship between selected contribution and exploration performance. The findings provide valuable insights for understanding the contributors' motivation and experiential learning in crowdsourcing. The practical implications are also discussed.

Paper is NOT Available. Please contact the author(s).

TIM: Differential Effects of a Firm's Product Development Experience for Product Performance

Author: **Jae Kyun Yoo**, *U. of Illinois at Urbana-Champaign*

This study examines the effects of a firm's new product introduction experience and its product redesign experience on its product performance, measured by the owner satisfaction ratings. The research setting includes major (U.S. domestic and international) automobile firms competing in the U.S. market from 2005 to 2017. My analyses show empirically that an automobile firm's product redesign experience results in lower owner satisfaction ratings across its fleet of automobiles. However, an automobile firm's new product introduction experience, when combined with its product redesign experience, positively affects the owner satisfaction ratings across its fleet of automobiles. These empirical findings highlight the differential effects of a firm's product development experience (i.e., new product introduction and product redesign) on its product performance across its fleet of automobiles.

Improving Performance

TIM: Open Innovation-Innovation Performance: Do Entrepreneurial Orientation and IT Capability Moderate?

Author: **Tobias D. Herbst**, *Osnabrück U.*
Author: **Piet Hausberg**, *Osnabrück U.*

Open innovation (OI) describes how firms open their innovation process interacting with other stakeholders, and capitalize on exploiting external knowledge. Research on OI shows that firms yield varying results in adapting OI. Furthermore, research suggests an optimum OI level using the concept of external search strategy - namely, two perspectives external search breadth and depth. However, prior studies missed appreciating the antecedents of external search strategies and their relationship with innovation performance. This empirical paper sheds light on the antecedents moderating OI's effectiveness and its impact on innovation performance. Specifically, this paper explores how information technology (IT) capability and entrepreneurial orientation (EO) influence firms' external search strategies and their direct and moderating impact on innovation performance. Using a survey approach among 146 German listed firms, we found no support for a curvilinear relationship between open external search strategies on innovation performance, unlike prior research. Moreover, our results provide no support for our primary assumption that IT capability positively affects the relationship between external search strategy openness and innovation performance. In place, results suggest a negative moderating impact of IT capability. Hence, we may question the general business value of IT capability. Furthermore, the study findings propose differential moderating and direct effects of EO on external search strategy effectiveness and its collective impact on innovation performance. Thus, this study substantially contributes to understanding external search strategies, information systems research, and antecedents moderating the effectiveness of external search strategies' impact on innovation performance.

TIM: How Innovation Input Impacts Innovation Disclosure?—An Optimal Distinctiveness Perspective

Author: **Hai Guo**, *Renmin U. of China*
Author: **Xiaoyu Li**, *School of Business, Renmin U. of China*
Author: **Qinyue Chen**, *School of Business, Renmin U. of China*

Innovation disclosure, as a signal of innovation capability, could help firms gain legitimacy from key stakeholders. However, it also entails spillover risk, resulting in the potential loss of firm competitive advantage. What then determines the innovation disclosure of firms? Previous studies highlight the role played by firm innovation input, but the findings are inconsistent. While the bulk of studies regard innovation input as a key enabler of innovation disclosure, a few studies see it as an obstacle. Drawing on the insights from the optimal distinctiveness perspective, the present study endeavors to examine the relationship between innovation input and innovation information disclosure. The results show that there is an inverted U-shaped relationship between innovation input and innovation disclosure. Moreover, industrial and regional innovation moderate this relationship in different ways. Our findings inject fresh insights into the literature on the antecedent of firm innovation disclosure and optimal distinctiveness.

TIM: How can Digital Investment Affect a Firm's Innovation Efficiency and Innovation Quality

Author: **Jianghua Zhou**, *Beijing Normal U.*
Author: **Chenrui Liu**, *Beijing Normal U.*
Author: **Ning Gu**, *Beijing Normal U.*
Author: **Yifan Liu**, *School of Economics and Management, Tsinghua U.*

This study examines the effect of digital investment on a firm's innovation efficiency and innovation quality. Based on a longitude dataset of Chinese listed firms from 2011-2017, the findings show that digital investment has positive effect on both firm's innovation efficiency and innovation quality. Moreover, our study builds a contingency model to further explore the moderating effect of provincial-level integration of informatization and industrialization and competitive intensity. The empirical results indicate that the extent of integration plays a positive moderating role in both the "investment-innovation efficiency" relationship and the "investment-innovation quality" relationship. Meanwhile, the competitive intensity strengthens the positive effect of digital investment on innovation efficiency, but it would weaken the positive effect of digital investment on innovation quality. Furthermore, the positive moderating effect of integration on the "digital investment -innovation efficiency" relationship would be strengthened by competitive intensity. Our study enriches the understanding of the effectiveness of digital investment and has implications for further research.

TIM: The Impact of Price on Firm Reputation

Author: **Oren Reshef**, *Washington U. in St. Louis, Olin Business School*
Author: **Mike Luca**, -

While a business's reputation can impact its pricing, prices can also impact its reputation. To explore the effect of prices on reputation, we investigate daily data on menu prices and online ratings from a large rating and ordering platform. We find that a price increase of 1% leads to a decrease of 3%-5% in the average rating. Consistent with this, the overall distribution of ratings for cheaper restaurants is similar to that of more expensive restaurants. Finally, these effects don't seem to be driven by consumer retaliation against price changes, but by changes in absolute price levels.

Changing Technology

TIM: Using Machine Learning to Predict Technology Generality

Author: **Sen Chai**, *ESSEC Business School*
Author: **Anoop Menon**, *The Wharton School, U. of Pennsylvania*
Author: **Haris Tabakovic**, *Harvard Business School*
Author: **Clarence Lee**, *Cornell U.*

The future generality of technologies is hard to determine. The sources of these difficulties lie not only in technological factors, but also cognitive and organizational ones. However, with the advent of artificial intelligence (AI), can machine learning (ML) techniques be used to predict general purpose technologies? We find that an ensemble of deep learning models that analyze both the text of patents and their bibliometric information can ex-ante identify such technologies, accurately identifying 80 of the top 100 high generality patents in the hold-out sample. This ability to identify and adopt promising general technologies early in nascent stages can be highly valuable for firms and society as a whole, with implications for firm competitive advantage as well as national technology policy and R&D strategies.

TIM: Time and the value of data

Author: **Ehsan Valavi**, *Harvard Business School, Harvard U., USA*
Author: **Joel Hestness**, *Cerebras Systems*
Author: **Newsha Ardalani**, *Baidu Research*
Author: **Marco Iansiti**, *Harvard Business School*

This paper investigates the effectiveness of time-dependent data in improving the quality of AI-based products and services. Time-dependency means that data loses its relevance to problems over time. This loss causes deterioration in the algorithm's performance and, thereby, a decline in created business value. We model time-dependency as a shift in the probability distribution and derive several counter-intuitive results. We, theoretically, prove that even an infinite amount of data collected over time may have limited substance for predicting the future, and an algorithm that is trained on a current dataset of bounded size can attain a similar performance. Moreover, we prove that increasing data volume by including older datasets may put a company in a disadvantageous position. Having these results, we answer questions on how data volume creates a competitive advantage. We argue that time-dependency weakens the barrier to entry that data volume creates for a business. So much that competing firms equipped with a limited, but sufficient, amount of current data can attain better performance. This result, together with the fact that older datasets may deteriorate algorithms' performance, casts doubt on the significance of first-mover advantage in AI-based markets. We complement our theoretical results with an experiment. In the experiment, we empirically measure the value loss in text data for the next word prediction task. The empirical measurements confirm the significance of time-dependency and value depreciation in AI-based businesses. For example, after seven years, 100MB of text data becomes as useful as 50MB of current data for the next word prediction task.

TIM: Historical Dynamics of Disruption in Science and Technology

Author: **Michael Park**, *U. of Minnesota*
Author: **Erin Leahey**, *U. of Arizona*
Author: **Russell James Funk**, *U. of Minnesota*

Theories of scientific and technological change largely view discovery and invention as recombinative processes, wherein prior accumulated knowledge serves as the basis for future progress. Recent decades have witnessed exponential growth in the volume of new scientific and technological knowledge, thereby creating conditions that should in principle be ripe for fostering major advances in science and technology. Yet contrary to this view, a growing stream of literature reports evidence of slowing rates of discovery and invention. To reconcile this tension, we examine changes in the nature of contributions to science and technology using large-scale data on 25 million research papers and 4 million patents published over more than 6 decades. Using novel bibliometric and text-based measures, we observe a consistent pattern such that over time, papers and patents are increasingly less likely to propel science and technology in new directions by disrupting existing streams of knowledge. Further, we find an inverse relationship between the growth of knowledge and its utilization; as the volume of scientific and technological knowledge increases, scientists and technologists focus their attention on increasingly narrow spectra of prior work. These changes in utilization may help account for the simultaneous growth of scientific and technological knowledge alongside slowing progress in discovery and invention.

TIM: An Approach to AI-Enhanced Patent Analysis for Emerging Advanced Technology Industries

Author: **Zeki Can Seskir**, *Middle East Technical U. (ODTU)*
Author: **Kelvin Willoughby**, *Skolkovo Institute of Science and Technology*

We utilized an AI-enhanced patent search tool and demonstrated its applicability to an emerging technological field where searches relying upon CPC codes and keywords may generate high numbers of false positives. We have chosen quantum technology as the technical domain for this study because it contains various sub-fields of technology that cannot be neatly classified within CPC classes. To demonstrate the power of our AI-enhanced approach we produced insights from the dataset generated by the AI tool to analyze the distribution of international technical knowledge and the relative positions of global competitors in the patent landscape of quantum technology.

Participant: **Laurina Zhang**, *Boston U. Questrom School of Business*
Participant: **Thomas M. Klueter**, *IESE Business School*

Are you tired of working from home? Are you missing the interactions with friends and colleagues? Looking to unwind? Join us for the TIM Social! Bring along your favorite beverage and enjoy great conversations with friends and colleagues. We will have several breakout rooms to discuss hobbies, travel, new projects or simply meet with like-minded scholars you would typically run into at AoM. Feel free to explore the different breakout rooms during the session. Since we missed out on Philadelphia as a venue: Here are three Philadelphia-inspired cocktail recipes to help get you in the mood for the TIM Social!

For the “cocktail-novice”

Last Call in Rittenhouse

3/4 oz Rittenhouse Rye (**An award-winning whiskey with a heritage that commemorates Philadelphia's famous Rittenhouse Square*)

3/4 oz Aperol

1/4 oz Angostura bitters

1/4 oz Lime

Shake and double strain, serve up.

For the “cocktail-connoisseur”

City Hall Cocktail

1 oz Laird's bonded

1 oz Rittenhouse

3/4 oz Rare Wine Co. Franklin Reserve Bual Madiera (**This particular Madeira was made to honor Benjamin Franklin, a native of Philadelphia, who famously wanted to be put in a barrel of Madeira when he died*)

1/4 oz Cynar

Serve up, chilled, with lemon twist.

For the “cocktail-risk-taker”

Dirty Salty Liberty

3 oz Bluecoat Gin (**Made by Philadelphia Distilling, the first craft Distillery in the state of Pennsylvania since Prohibition*)

1/2 oz olive juice

Splash of beef stock

Garnished with a cube of aged cheddar wrapped with beef jerky and a sprig of thyme (yes, you read that correctly).

*Recipes are from [Philadelphia Magazine](#).

The field of research on R&D management has substantially evolved over the last 50 years, especially in terms of main topics and themes. What started as a focus on corporate research and development labs has evolved to a diverse investigation of innovation activities across different organizational forms, networks, and ecosystems. Currently R&D management research covers a wide range of topics in research, development, design and innovation, and related strategic and human resource issues - from exploratory science to commercial exploitation – with a broad outlook to social, economic and environmental implications. The PDW “Research in R&D Management: Past Experiences and Future Trends” will bring together the active scholars and editors that have contributed to the latest evolution of R&D and innovation management, grounding on their experience of the R&D Management (a journal with 50-year track record, published by Wiley) and RADMA (the R&D Management Association). The PDW provides a forum through which researchers, together with people who have an active editorial and influencer role in this area, can share reflections, solicit feedback, and develop a better understanding of the directions that this discipline is taking. Participants will join the session with a preliminary draft of their research, including a well-defined set of research questions, as well as an idea about methods and intended contribution. In the end of, the participants will leave the session with insightful feedback to advance their study, as well as potential new co-authorship and publication opportunities and ideas.

Business Undergraduates as Non-Profit Management Consultants *Undergraduates as Non-Profit Consultants*

Participant: **Patrick McGurk**, *Queen Mary U. of London*

This session will explore the potential benefits and issues of integrating non-profit management consulting projects into undergraduate business programmes. Using case study vignettes from a London-based business school, participants will discuss the value and practicalities of designing and running non-profit undergraduate consulting projects as a strategy for empowering Millennial graduates to meet future employer needs in a socially purposeful way. The speed and scale of the challenges facing today's graduates signal the need for an urgent, radical shift in undergraduate business education - away from the more traditional academic activities and towards authentic learning strategies that develop and practice the ability to work effectively together in teams to interpret vast new sets of data, while also being able to generate creative, innovative solutions to fast-changing and complex organisational problems. Crucially, the key lies in the integration of such hard and soft skills, rather than developing each in isolation (Accenture, 2017; Nesta, 2017). At the same time, there is an imperative on business schools to respond more seriously to wider responsibilities to promote social purpose and value (AACSB, 2017; CABS, 2014, 2019; Financial Times, 21 October 2019). Student consulting projects appear ideally suited as opportunities to develop the integrated skill-sets required by the future workplace. In this session, participants will examine recent examples from London and critically discuss the possibilities offered by undergraduate management consulting projects with community-based, non-profit partners to develop students' workplace skills, while also promoting the social objectives of business schools and their students' increasing interest in learning about 'business with purpose'.

The ROTE Framework of Engagement – A Relational Model for Teaching Excellence in Crisis *The ROTE Framework for teaching excellence*

Facilitator: **Margaret E. Heffernan**, *School of Management, RMIT U.*
Presenter: **Joan Richardson**, *School of Accounting, Information Systems and Supply Chain, RMIT U.*
Presenter: **Meredith Tharapos**, *School of Accounting, Information Systems and Supply Chain, RMIT U.*
Presenter: **Kwok Hung Lau**, *School of Accounting, Information Systems and Supply Chain, RMIT U.*
Presenter: **Konrad Peszynski**, *College of Business and Law, RMIT U.*

The COVID-19 pandemic resulted in faculty facing challenges with student engagement and outcomes through their unpreparedness for delivering curriculum in an unprecedented crisis context. This challenge amplified when staff were confronted with a university prioritizing environmental and organisational impacts of the crisis, whilst trying to balance the pedagogical needs of culturally diverse student cohorts, many without the requisite capacity or technology to learn in a wholly digital environment. This session shares a multi-dimensional ROTE (Relational, Organisational, Technical, Environmental) framework underpinned by relational pedagogy. You will experience how using the student voice drives learning and teaching innovations, resulting in the process exceeding prior student engagement and performance metrics as the 2020 pandemic escalated. The session comprises 5 key segments through the themes of Equity, diversity, and inclusion in education; Measurement of learning effects; Remote/hybrid teaching and learning; Technology in the classroom. In an asynchronous format leveraged through pre-session, session and post session interactive activities and resources, including a community of practice of learning and engagement for ongoing networking, peer support and collaboration, you will leave with a Tool Kit of practical strategies for building student engagement. Through a deeper understanding of the power of prioritizing 'relational' pedagogy the missteps of 2020 can be minimized. It is critical that the Higher Education sector rapidly recover from the effects of COVID-19 and innovate to engage our students in new relational norms and equip them to be digitally empowered managers.

**Faculty & Alumni Perspectives: Success Stories from an Online
7-Week Capstone Project Course**
Success Stories: Online 7-week Capstone Projects

Presenter: **Noelle Scuderi**, *U. of Hartford*
Panelist: **Jeanette Butcher**, *Chick-fil-A Austin Franchise*
Panelist: **Meredith Campbell**, *Libbey, Inc*
Panelist: **Christopher C. Linke**, -
Panelist: **Emma McKee**, *Per Scholas, Inc*
Panelist: **Stephen Reznak**, *MTF Biologics*

This session features the best-practices for the design and management of an online 7-week Capstone project course for professional, working Masters students in organizational psychology. The Capstone project comprises a well-written literature review on the topic of the students' choice followed by a proposed practical application of reviewed research findings to organizational contexts. Students successfully complete Capstone project papers in 7-weeks through a well-structured online course with a student-faculty ratio of 5:1. First, an overview of the Capstone project guidelines, the Canvas-based course design, and the teaching/advisement philosophy will be provided by program faculty. Then, invited alumni will present executive summaries of their projects and applications, followed by a brief Q&A featuring what aspects of the course, advisement, and/or their own personal strategies best contributed to their success.

**Bringing Humor to Management Education: Lessons from Collaborating
with a Stand-up Comedian** 
Bringing Humor to Management Education

Presenter: **David Stolin**, *tbs*

The beneficial impact of humor on learning is well known to business academics. Our novel approach was to create educational video content through a close collaboration between academics and a professional comedian. The key challenge – which we overcame through countless discussions and extensive experimentation – was to not only reconcile but to synergize two distinct imperatives: to educate and to entertain. We have made over a dozen videos on topics ranging from organizational behavior to marketing to finance (with all of our videos and associated educational resources available at no cost on our e-learning site). The session will describe our collaboration in detail, drawing on numerous multimedia examples from our work, so as to allow other educators to learn from, adopt and build on our practice. We will provide guidelines for blending educational content with professional-grade humor in general, as well as in specific instances suggested by participants.

Reflect, refine, repeat: Using an agile methodology to teach leadership theory and skills

An agile method for the teaching of leadership

Presenter: **Gretchen Lina Schaupp**, *Ohio U.*

Although many students of Masters of Business Administration programs seek to enhance their leadership skills, the “managing of human capital competencies” often remains a formal learning objective that is not thoroughly incorporated into MBA curricula. On a similar token, though now widespread in business practice and highly relevant in uncertain times, agile methodologies are often difficult to apply to management courses. The teaching method demonstrated in this session offers instructors an assignment with which the active learning of both leadership theory and skills can be achieved via an agile methodology that supports students in self-reflection and development of their individual leadership competencies. The method is appropriate for both live and online learning environments, and it requires limited time and materials. The method presented here can also be adapted to courses focusing on other social (soft) skills within management curriculum.

**Building Leadership Judgment: Teaching Complex Problem Solving
Processes in Management Education**
Building Leadership Judgment

Presenter: **Anna B. Kayes**, *Stevenson U.*
Presenter: **D Christopher Kayes**, *George Washington U.*

In this workshop, we outline four processes of problem solving that build on experiential learning theory and the concept of reflective judgment to solve complex and ill-structured problems. We demonstrate how the model can be used to analyze specific cases that we designed but can be applied to other cases or situations too. We present three complex problem-based cases from current events to frame the discussion and to encourage management educators to play the role of students facing a complex, ill-structured problem.

How to Write Great Cases – Even Under Quarantine

How to Write Great Cases

Presenter: **Brent D. Beal**, *U. of Texas at Tyler*
Presenter: **Karen MacMillan**, *Wilfrid Laurier U.*
Presenter: **Meredith J. Woodwark**, *Wilfrid Laurier U.*
Participant: **Karin Schnarr**, *Wilfrid Laurier U.*

Educators who can write effective cases have the power to: fill in worrisome voids in a teaching plan; engage students with relevant, current material; gain a competitive edge by tailoring executive education programs; develop research ideas with practitioners; and, increasingly, receive publishing credit applicable to tenure decisions. Royalty payments can also make writing best-selling cases profitable. This dynamic, interactive session will offer practical advice on how to tackle each step of the case writing process, including: determining what kind of case to write; finding leads in the field; collecting data; writing a well-liked case and teaching note; getting the case released and tested; publishing the case; and doing all this even under quarantine.

Organizer: **Emilio Marti**, *Erasmus U. Rotterdam*

During this PDW the SIM Exploratory Committee will briefly present findings from feedback and focus groups with SIM members, and moderate conversations with participants to continue generating insights and ideas. The Exploratory Committee was launched by the SIM Division in Fall 2020 in order to obtain (1) a deeper understanding of SIM's unique contribution within the Academy; and, (2) an actionable sense of "who we aspire to be" as a Division for the future. The Exploratory Committee has collected survey input, facilitated public conversations with members, and conducted several focus groups and one-on-one discussions. Representation considerations include areas of research expertise, career stage, and geographical background, among others. During this PDW we will share some of our main findings from this exploratory initiative and engage with members to further generate ideas about how the Division can best serve and support its members.

MED Consortium

Organizer: **Preeti Wadhwa**, *Cal Poly Pomona*
Organizer: **Robert Lee Bonner**, *San Francisco State U.*

The MED consortium aims to facilitate the professional development of junior faculty (five years or less since the first faculty position) and doctoral students who are aiming for a successful career as a management faculty. This consortium is open to all AOM attendees across all divisions. As a part of the consortium, participants would choose to attend THREE professional development workshops (PDWs) from a range of PDWs offered by MED at the AOM's annual meeting this year.

In addition to the PDW sessions, attendees will also participate in two bookend events. The goal of these bookend events is to provide participants with a platform to network with each other, create a community, and reflect on their learning and takeaways from the PDWs. The first bookend event will be offered on Friday, July 30. The second bookend event will be offered across two timeslots on Monday, August 2, and Tuesday August 3. See session 1657, 1658, and 1659 for more information on the bookends.

On successful completion, participants' will be awarded a certificate from MED-AOM. Please [click on this link](#) for more details.

To participate in the consortium, please [click on this link](#) to complete a short form.

Speaker: **Nadine Degannes**, *Ivey Business School*

Please join Ivey Business School's Assistant Professor Managerial Accounting and Control & Sustainability; Nadine de Gannes and Ivey's Director, Culture and Inclusion; Erin Huner for a discussion about the case method and the future of it's role in building the inclusive classroom of the 21st century. The conversation will examine what it means to engage in diversity, how and why it is important to rebuild the system and the power of discomfort in learning.

Case Discussion with Award-Winning Case Author, Rob Austin, Professor at Ivey Business School
Meeting with Award-Winning Case Author, Rob Austin

Speaker: **Robert Austin**, *Ivey Business School*
Host: **Matt Quin**, -

Join us for a conversation with Matt Quin, Director of Ivey Publishing and renowned case author, Rob Austin, from Ivey Business School and affiliated faculty at Harvard Medical School, as they discuss the case writing process for Rob's best-selling case of 2020-2021: Digital Transformation at GE: What Went Wrong? This best-seller examines the digital transformation that GE had been attempting since 2011 and the challenges faced throughout the transformation. The case addresses the reasons why established companies might attempt digital transformation, the outcomes firms aim to achieve through digital transformation, and the difficulties and risks inherent in such ambitious change programs.

Teaching with Alternate Reality Courseware: Increased Impact, Engagement, and Outcomes *Teaching with Alternate Reality Courseware*

Speaker: **Ethan Mollick**, *The Wharton School, U. of Pennsylvania*

Prof. Ethan Mollick, cofounder of Wharton Interactive, will discuss Alternate Reality Courseware, and the way it can be used to improve the classroom experience for both instructors and students. In this highly interactive session, he will demonstrate how ARC systems work, how they can be quickly integrated into classes across a range of disciplines and will share preliminary data on outcomes and performance. Come see how Wharton's new initiative is integrating games, pedagogy, and classroom education.

FitBarre+Deep Stretch *FitBarre+Deep Stretch*

Presenter: **Robin Bray**, *Robin Bray's Fitness Barre*

Transform your body and balance your mind in this 60-minute full-body workout! With an emphasis on proper form and alignment, you'll target your muscles with focused, tiny movements that will leave you shaking! End with a mindful cool down and stretch incorporating elements of yoga, breathwork, and relaxation.

***PROPS FOR CLASS - Something stable to use as your "barre", heavy + light set of weights (substitute with anything you have around the house, i.e. water bottles), yoga mat, and towel.

Structural Equation Modeling Using Stata *SEM Using Stata*

Speaker: **Chuck Hubber**, -

This talk will introduce the concepts and jargon of structural equation modeling (SEM), including path diagrams, endogenous and exogenous variables, and latent variables. We will then demonstrate how to fit models using Stata's sem and gsem commands and describe the similarities and differences between them.

Meet the Adam Smith Business School: Networking with our faculty, job opportunities, and more
Meet the Adam Smith Business School

Organizer: **Stephan Von Delft**, *U. of Glasgow Adam Smith Business School*
Organizer: **John Finch**, *U. of Glasgow*

Meet the University of Glasgow Adam Smith Business School! In this session, led by Dean Prof John Finch, you will learn about working at our school and living in one of Scotland's most vibrant cities: Glasgow. You will also have the opportunity to connect to our faculty and we will share the latest developments from the Adam Smith Business School, including vacancies, with you. The session is open to all; we especially welcome early career researchers and PhD students in their final year. Looking forward seeing you!
