Participant: **Danielle Zandee**, *Nyenrode Business U.*

Action research offers a unique perspective in bringing the manager back into inquiry, change management and organization development and change precisely because it engages managers in meaningful action and knowledge generation in a collaborative manner. As such it bridges the theory-practice gap in a unique manner. One of the premises of this PDW is that action research can play an important role in addressing today's pressing issues by developing new knowledge for organizational and societal change. It is directed to doctoral students and managers who undertake action research out of a desire to address 'red and hot' organizational/management challenges. Each brings to the inquiry distinct knowledge, insights and experiences. The collaborative inquiry effort-by-design establishes the platform for deeper level understanding and action (Shani & Coghlan, 2021). At the start of this PDW session, participants will be invited to focus on their own action research experiences, ambitions and questions, as a starting point of a collaborative exploration of action research principles, design choices and potentials for knowledge creation. Participants will leave with an increased awareness of how to undertake and/or supervise action research as a mode of practitioner-scholarship while increasing understanding of organizations' capabilities to learn and change.

Organizations and Social Movements *Social Movements*

Digital Session Chair: **Patrick Tinguely**, *ETH Zürich*

OMT: **Black Lives Matter! Organizational Resilience in the Face of Social Movements**

Author: **Patrick Tinguely**, *ETH Zürich*
Author: **Yash Raj Shrestha**, *ETH Zürich*
Author: **Georg von Krogh**, *ETH Zürich*

The summer of 2020 witnessed a rapid development of the Black Lives Matter (BLM) movement in the unique context of the ongoing COVID-19 pandemic. Due to social distancing measures and strict restrictions against physical protests, social media platforms emerged as a de novo and de facto setting for social movements, which complicates organizational response to collective claims. We build theory on social movement and organizational resilience using a novel inductive method that combines exploratory data analysis, algorithm-supported induction, and a multi-case qualitative study. Our holistic model reveals the mechanisms under which social movements emerge, spread and interact with organizations in social media. Specifically, we showed how collective claims specific to an event translate into broader societal claims to eventually target prominent organizations and found that message sentiment was the most important predictor for the type of organizational response. We developed a novel theoretical model that describes how some organizations dynamically build organizational resilience in recalibrating their response to meet the activists' reformulated contentious claims against them.

OMT: **Friend or Foe: How Social Movement Tactics Impact Firm Innovation**

Author: **Kate Odziemkowska**, *Rice U.*
Author: **Yiyang Zhu**, *Rice U.*

We investigate the impact social movements have on firm-level innovation through private politics. We distinguish between contentious private politics, or contentious targeting of firms by activists, and cooperative private politics, when activists engage firms in formal collaborations. Combining insights from behavioral theory and social movement theory, we theorize that both contentious and cooperative private politics impact innovation but in different ways. Contentious private politics is a more effective catalyst for innovation quantity because it threatens material or symbolic damage, and in so doing, promotes risk-taking by decision makers. In comparison, cooperative private politics which triggers gain framing of problems leads to less innovation overall, but by providing firms access to new knowledge and triggering distant search, is more effective at driving novel innovations. We test our arguments in a matched sample of firms contentiously targeted, and with activist collaborations, on climate change issues, and firms that were not targets of private politics on those issues but had otherwise similar environmental performance and relationships with climate change and other environmental movements. We find contentiously targeted firms increase the number of patents on the issue advocated by the movement by 7% the following year, while firms that collaborate with activists have 12% greater novel patents. Our study contributes to stakeholder perspectives on innovation by theorizing how social movements catalyze firm-level innovation. To research on movements and markets, this study offers the first comparative analysis of the impacts of contentious and cooperative private politics on firm outcomes.

OMT: **Creating and Sustaining a Moral Market Adapting the Commons Framework**

Author: **Daniel Arenas**, *ESADE Business School*
Author: **Juan Rodon**, *ESADE*
Author: **Mireia Yter**, *U. Ramon Llull, ESADE Business School*

Most studies at the intersection between social movements and markets focus on target selection and tactics used by activists, as well as the outcomes of these tactics. Others have studied the role of social movements in the emergence of 'moral markets'. Yet, usually they explain how social movements are unable to keep control of the market they have helped create. Through a case study, we show that activists can sustain a newly created market segment through different processes. Most notably, we underline the translation and adoption of the common-pool resource framework from Ostrom to the field of telecommunications, in connection with previously unrelated elements, in order to create a shared understanding of the initiative and develop governance mechanisms. We also uncover obstacles, favoring conditions and undesired dynamics of this process.

OMT: **To Tweet or Not to Tweet? The Role of Social Media Boycotts on Stock Market Reactions**

Author: **Joel Andrus**, *U. of Missouri*
Author: **Yan Chen**, *U. of Missouri*
Author: **Xinran Joyce Wang**, *U. of Missouri*
Author: **Rhonda K. Reger**, *U. of North Texas*

The ability of boycotts to affect firm strategies and outcomes has long held the interest of organizational scholars. However, with the rise of social media in the last decade, our understanding of how social movements influence firms is limited as social movement research typically emphasizes the role of traditional media. The advent of social media makes it easier for informal activist organizations and even individuals to drive social movements, as well as reducing the control that traditional media outlets have over information. As a result, social movements may not be as reliant on traditional media as they have been in the past. In this paper, we develop and test theory about how social media tenor surrounding the announcement of a boycott impacts stock market reaction. We find that the stock market does react to information provided over social media, suggesting that our understanding of how social movements influence stock price returns may be limited in the social media age.

OMT: Before Shooting Star Fade Out: Positive Status Shifts and Formation of Status Heterophilous Ties

Author: **Azusa Nakamura**, *Bocconi U.*
Author: **Aneesh Datar**, *Bocconi U.*
Author: **Fabrizio Castellucci**, *Bocconi U.*

We investigate how social actors who become high-status select status of partners. Literature on status homophily explains that high-status actors work with same status ones. By doing so, they can avoid perceptions of low quality of product especially when uncertainty is high. However, literature on status heterophily explains that high- status partners can make a tie with low-status ones when they need to extract efforts from low-status ones. In this paper, we focus on the status heterophilous tie formation by considering when social actors just become high-status. After becoming high-status, they receive extraordinary amount of recognition, so that they want to avoid competing with other high-status actors for their recognition. To do so, we expect that these actors prefer to work with low-status actors. We also consider visibility of their product and brokerage positions of these actors and that can increase the effects of high-status actors on formation of status heterophilous ties. We test these hypotheses by collecting data on Oscar winner directors and nominees as their counterfactuals with difference-in-differences analysis.

OMT: Are Political Ties Political Capital? A Perspective From Social Networks 

Author: **Danyang Chen**, *National U. of Singapore*

This study distinguishes two concepts: political ties and political capital. Based on the perspective of social network and social capital, we describe a two-stage period of political tie activation. We propose that connected firms may not have actual political resources to support their interest-seeking activities. To attain the activated political tie, connected firms have to comply with a part of government demands for legitimacy, which makes them sacrifice their economic interests. Entering the second stage, connected firms can instrumentalize the activated ties for their own purposes. Under the context of the Chinese capital market, we collect data about Chinese listed firms' financial misconduct. We found that connected firms with clean records on misreporting have a high likelihood to obtain government subsidy and then engage in more insider trading and other private misconducts than others. The compliance and instrumentalization effect will change based on the tie strengthen of their previous ties and the status of connected officials.

OMT: Intersectional Homophily: A New Measure of Multi-Dimensional Homophily in Social Network

Author: **Masoomeh Kalantari**, *McGill U. - Desautels Faculty of Management*

Homophily in social life has been an increasingly important focus of social network research. However, most studies only measure homophily one dimension at a time, reducing an individual's identity to only one attribute. In reality, individuals belong to multiple social groups simultaneously. Knowing that homophily in one dimension usually spills over into homophily in a correlated dimension, recent scholarly works call for explicitly examining multiple dimensions simultaneously and also refining homophily measures to better match the theoretical intent. I use intersectionality as the theoretical foundation to bring socially constructed meaning among multiple social identities into homophily literature. I use a random data generator process to develop and test a new homophily measure that can simultaneously measure homophily on multiple dimensions such as race, gender, and age. The findings in this simulated setting provide evidence that intersectionality affects homophily because of intersecting identities; multiple identities interact in a complex way rather as opposed to being simple additives. In addition, I examine my newly developed measure on actual network datasets and the findings are consistent with those of the simulated scenarios. I conclude with a discussion of the implications of this measure and how this measure contributes to the deepening of our understanding of social interactions and the processes that create sociodemographic structures.

OMT: Heeding Small-scale Disruptions: The Benefits of Network Fragmentation

Author: **Nevena Ivanovic**, *Faculty of Economics and Business, U. of Groningen*
Author: **Thomas Arend De Vries**, *U. of Groningen, Faculty of Economics and Business*
Author: **Gerben S. Van Der Vegt**, *U. of Groningen*

Organizations operate in increasingly turbulent environments requiring them to stay resilient in the face of setbacks, i.e., to maintain desired levels of performance when faced with disruptions. Small-scale disruptions happen frequently in most organizations, and therefore they often co-occur or overlap in time. This creates a significant cognitive burden for the employees because they often need to resolve multiple disruptions at the same time. Despite the fact that small-scale disruptions are so common, most resilience literature to date has not recognized the implications of small-scale disruptions when they co-occur, and has not offered any organizational response strategies for dealing with this challenge. To account for this, we rely on the task-switching literature and suggest that dealing with co-occurring disruptions resembles a task-switching problem for the employees. We propose that increased disruption co-occurrence increases time to recovery from the disruptions, i.e., negatively impacts organizational resilience. Further, we propose that assuring that different groups of employees can work on different disruptions, i.e., increasing the fragmentation of the information-sharing network, dampens the positive relationship between disruption co-occurrence and time to recovery. These hypotheses were supported on a sample of 2,009 situations of co-occurring disruptions in a public water supply company. This study advances knowledge on the effects of the small-scale disruptions on organizational resilience, and suggests that network fragmentation can be a successful organizational strategy to sustain resilience under increased disruption co-occurrence. Keywords: Organizational resilience; small-scale disruptions; information-sharing network; task-switching; network fragmentation

Identity Dynamics in Crisis Contexts

Identity Dynamics in Crises

Organizer: **Eunice Eun**, *Yale School of Management*
Organizer: **Amy Wrzesniewski**, *Yale U.*
Discussant: **Michael G. Pratt**, *Boston College*
Presenter: **Stephanie J. Creary**, *The Wharton School, U. of Pennsylvania*
Presenter: **Brianna Barker Caza**, *U. of North Carolina at Greensboro*
Presenter: **Heather Ciara Vough**, *George Mason U.*
Presenter: **Achira Sedari Mudiyansele**, *U. of Cincinnati*

Organizations now face more crises, from global pandemics and economic depressions to business catastrophes – all of which can strain operational processes and performance (Wright et al., 2020; Williams et al., 2017). Research has shown that crises can engender organizational growth, learning, and identity (Fink et al., 1971), and such dynamics can trickle down to the individual and group levels. Scholars describe organizational identification as an alignment between individual and collective identities, resulting in a sense of unity between the person and their organization (e.g., Ashforth et al., 2008; Gutierrez et al., 2010) – even amidst “a backdrop of change and ‘outside’ elements” (Cheney and Thompkins, 1987: 5). The ways in which a group identity can shape and be shaped by individual and organizational effects in crisis contexts, however, remain largely underexplored. This symposium brings together four field-based investigations of the interplay of individual, group, and organizational identity dynamics. First, Creary examines different identity strategies that organizational members used to prevent the organizational death of a community hospital. Second, Caza and colleagues unpack independent workers’ experiences during the pandemic, and how they created a greater sense of resilience during this time of crisis. Third, Mudiyansele and Vough consider the effects the COVID-19 pandemic had on teachers’ identities, centering on identity instability. Finally, Eun and Wrzesniewski focus on identity dynamics for those caring for the most ill patients across two units in a major academic medical hospital during the COVID-19 crisis, and how this process affected identity transitions and outcomes. Michael Pratt, a distinguished scholar with influential research on identity, identification, and meaning, will serve as the discussant to provide both theoretical and practical implications as well as future research directions.

The premise of this proposed session is that “Centers of Excellence” associated with business ethics and other responsible management and leadership disciplines within business schools are faced with numerous challenges affecting their ability to: 1) provide utility to students and faculty members, 2) generate added value to universities and, 3) serve a positive role for external community and business stakeholders. More specifically, these challenges involve getting access to resources and funding, staying relevant to the business community and adapting to their rapidly changing needs, productively engaging with university faculty, and improving ethics education. The workshop is led by representatives of the Humanistic Management Centers of Excellence Consortium, officially formed through the International Humanistic Management Association (IHMA) in 2018. Our Centers are in a unique position to be able to assess and improve business ethics and responsible management instructional techniques and can serve as the impetus of efforts to integrate ethics and responsibility across business school curricula. In this PDW, we propose that associated Centers of Excellence promote humanistic management principles and models to their strategic plans for the ultimate goal of collaborating on research, pedagogical, and corporate outreach programs. Using an appreciative inquiry process approach, our presenters and facilitators will help facilitate joint projects that imagine the possibilities for advancing more humanistic impact through the work of our centers.

Panelist: **Grazia D. Santangelo**, *Copenhagen Business School*

Panelist: **Laszlo Tihanyi**, *Rice U.*

Organizer: **Alvaro Cuervo-Cazurra**, *Northeastern U.*

Organizer: **Grazia D. Santangelo**, *Copenhagen Business School*

This symposium aims to contribute and boost the conversation on the impact of management research in helping companies living up to societal expectations. There are increasing concerns on the role of firms in tackling Grand Challenges, i.e., complex problems that affect the world and have no easy solutions. Grand Challenges, such as global health issues, food security, forced migration, or climate change, have been usually discussed as being the purview of governments. However, companies are increasingly confronting a civil society expecting that corporate actors promote human rights, proactively fight human trafficking and slavery along the value chain, and engage in a race to the top in labor and environmental. These increasing societal demands for responsible corporate citizenship and long-standing global initiatives have put pressure on firms to rethink their responsible conduct as an integral part of their strategy. This symposium aims to identify how management scholars can guide companies in addressing pressing social challenges and, thus, offering solutions to society.

Managing Remote Work

Managing Remote Work

Organizer: **Viktorie Sevcenko**, *INSEAD*
Organizer: **Prithwiraj Choudhury**, *Harvard U.*
Organizer: **Tarun Khanna**, *Harvard U.*
Panelist: **Nicholas Bloom**, -
Panelist: **Pamela Hinds**, *Stanford U.*
Panelist: **Phanish Puranam**, *INSEAD*
Panelist: **Nancy Rothbard**, *U. of Pennsylvania*

The Covid-19 pandemic has led to a dramatic rise in the adoption of remote work practices. Even after the pandemic ends, many organizations and workers are likely to adopt remote work practices on a more permanent basis, due to the reported productivity increases, improved flexibility, and reduced stigma around perceptions of remote work. In this PDW, we bring together experts whose work has shaped the literature on remote and distributed work – Nick Bloom (Stanford), Pamela Hinds (Stanford), Phanish Puranam (INSEAD) and Nancy Rothbard (Wharton) – as well as industry experts managing remote work practices in their firms, who along with the organizers Prithwiraj (Raj) Choudhury (HBS), Tarun Khanna (HBS) and Victoria Sevcenko (INSEAD) will help to set the agenda for future research on remote work and management, and provide feedback on participants’ research proposals. We believe this workshop will be of particular interest to members in Strategic Management (STR), Organization Behaviour (OB), Organizational Communication and Information Systems (OCIS), and Technology and Innovation Management (TIM) divisions.

This workshop will include a panel discussion open to all conference registrants followed by a shorter paper feedback session in breakout rooms that will be by invitation only. To apply to the paper feedback session, please submit a paper abstract (up to 350 words) to pchoudhury@hbs.edu and victoria.sevcenko@insead.edu by 1st July 2021 with the subject “AOM PDW on Managing Remote Work – Paper Session Application”. Selected participants will be notified two weeks prior to the scheduled workshop.

Presenter: **Robert Channing Seamans**, *NYU Stern*
Discussant: **Aija Elina Leiponen**, *Cornell U.*

Artificial intelligence (AI) and machine learning (ML) represent general purpose technologies that are rapidly diffusing among businesses. These technologies have the potential to transform industries and to impact the performance of firms. They also present important challenges for managers. Firms investing in general purpose technologies like AI require complements to realize value from them and to align with unique firm needs. In this symposium we bring together four papers that examine various aspects of the diffusion of impact of AI and ML in businesses and how these are affected by the presence of complements at the individual, organizational, and ecosystem level. Together these papers will shed new light on the implications of managerial decisions related to this important set of technologies.

Participant: **Ramana Nanda**, *Imperial College London*
Participant: **Ruiqing Cao**, -

We propose to examine how ideas are evaluated when innovators are diverse and the implications on organizational and individual-level outcomes. This question is timely because managers from more organizations are beginning to evaluate novel ideas and innovators. Organizations finance early stage ventures (e.g. Duschnitsky, 2012; Cohen, Fehder, Hochberg, & Murray, 2019; Lerner & Nanda, 2020), access new ideas via broadcast search (e.g. Jeppesen & Lakhani, 2010; Lifschitz-Assaf, 2018), or directly employ intrapreneurs (Nielson, Peters, & Hisrich, 1985). Managers are increasingly conscious about the diversity of innovators in their networks in part due to growing political and social interest (Dobbin, Kalev, & Kim, 2011; Luo & Zhang, 2020). We propose to bring together five papers presented by a panel of Aleksandra Kacperczyk (London Business School), Rembrand Koning (Harvard Business School), Amisha Miller (Boston University), Dan Wang (Columbia Business School), Nataliya Langburd Wright (Harvard Business School), and Peter Younkin (University of Oregon), which examine the evaluation of ideas from diverse innovators. We will identify novel organizational mechanisms that could affect the diversity of innovators, as well as the implications of evaluation processes on organizations, innovators' careers, and the direction of innovation.

Performance Management Process and Effects

Digital Session Chair: **Heidi Marie Baumann**, *Bradley U.*

HR: Two Hats Are Better Than One: How Managers' Role Identity Complexity Impacts Performance Management

Author: **Heidi Marie Baumann**, *Bradley U.*
Author: **Deidra J. Schleicher**, *Iowa State U.*
Author: **Jennifer Robin**, *Bradley U.*
Author: **David W. Sullivan**, *U. of Houston*
Author: **Junhyok Yim**, *City U. of Hong Kong*

We introduce the concept of performance management (PM) identity complexity, integrating research on identity, work identity complexity, and perspective-taking with managers' PM-related responsibilities, and propose that managers' PM identity complexity acts as a resource that benefits PM effectiveness. We extend extant PM research that has primarily positioned managers in a PM giver role (i.e., as raters) to suggest that managers navigate multiple roles, including both PM giver and PM receiver, as part of PM. That is, managers not only provide ratings and feedback to direct reports during PM, they also receive evaluation and feedback from their own supervisors. When a manager has a salient, or activated, PM receiver identity while enacting the role of PM giver, we define this as greater PM identity complexity, and we expect managers vary with regard to their level of PM identity complexity. The current research examines the implications of managers' PM identity complexity for both evaluative (i.e., ratings) and developmental (i.e., feedback) PM across two studies, a longitudinal field study and an experimental study. Results are largely supportive of our hypotheses positioning managers' PM identity complexity as an important predictor of rating quality, through perceived difficulty reactions, as well as a key contextual factor moderating the relationship between direct reports' feedback orientation and feedback seeking behaviors.

HR: The Role of Transparency & Fairness in Performance Management - A Review and a Research Agenda

Author: **Nicolas Tichy**, *LMU Munich School of Management*

Transparency is a hot topic in management scholarship and is often cited to solve organizational problems. One critical problem in many organizations is the perceived unfairness and consequently ineffectiveness of performance management systems. It remains unclear, however, how and to what extent transparency influences the perception of fairness in performance management systems. This provides the occasion for a thorough review, which finds that explicit considerations of transparency are virtually non-existent in the literature. However, it is uncovered that transparency is implicitly both a critical antecedent and component of organizational justice perceptions in the context of performance management systems. Based on this result, I identify open research questions and derive fruitful research propositions.

HR: When do performance management practices improve firm performance? The role of stakeholder groups

Author: **Yin Lee**, *U. of Illinois at Urbana-Champaign*

This paper examines the firm-level outcome of performance management practices. Using a Korean firm-level panel data from 2007 to 2017, this study tests the main effect of performance management practices on firm performance. More importantly, this study develops a political contingency perspective and suggests that the effectiveness of performance management practices is contingent on the interests, preferences, and power of the relevant stakeholder groups – that is, family owners, professional CEOs, HR professionals, and labor unions. The fixed-effects regression results reveal that performance management practices improve firm performance. Also, the results show that the effects of performance management practices on firm performance are greater when professional CEOs have greater relative power than family owners and when there is a high number of HR professionals. The findings provide new insights into the strategic human resource management (SHRM) literature by illuminating the importance of the underexplored political context.

Paper is Available to Meeting Registrants Only.

HR: Too Close to Call: Can Structured Practices Improve Accuracy of Relational Managers' Evaluations?

Author: **Brittany Bond**, *Cornell U.*

Close relationships between managers and employees can enhance organizational productivity. However, manager bias for particular relationships may compromise organizational aims. One form of managerial bias is inflating performance evaluations. This inflation can weaken employee incentives for meeting expectations, compromise talent data, and misallocate scarce personnel resources. Using a vignette experiment combined with rich survey data on managers in a large U.S. corporation, I find that managers with close, trusting, and cooperative relationships with their employees are more likely to give a higher rating to an under-performing employee than is objectively justified. Structured managers on the other hand, who apply a more specific, formal, frequent or explicit approach to managing, are less likely to inflate the rating of an under-performing employee. Importantly, I find evidence that more relational management is not crowded out by structured management, but rather, more structured practices enhance performance evaluation accuracy regardless of how relational the manager is, reconciling a concern that the modes are incompatible.

Advances in Paradox Theorizing   
Paradox Theorizing

Digital Session Chair: **Marc Krautzberger**, *U. of St. Gallen*

OMT: **Managing Interlinked Paradoxes Through Boundary Work** 

Author: **Marc Krautzberger**, *U. of St. Gallen*
Author: **Ann Langley**, *HEC Montreal*
Author: **Thomas Schumacher**, *U. of St. Gallen*

The literature on paradox has repeatedly emphasized the value of cycling between practices of differentiation (keeping elements apart) and integration (bringing them together) to sustain paradoxical goals simultaneously. This suggests that “boundary work,” – i.e., purposeful effort to influence the boundaries and distinctions affecting groups, occupations, and organizations – might play a role in managing paradox. Accordingly, in this paper, we consider how the creation and management of “spaces” generated through the purposeful configuration and reconfiguration of boundaries over time can contribute to the management of paradoxes generally and interlinked paradoxes in particular. We draw on a case study of a startup in the digital-fabrication sector where the cofounders embedded two interlinked paradoxes into their strategic goals. We develop a process model that explains how configurational boundary work contributes to the management of interlinked paradoxes by creating “hybrid spaces” in which competing demands can, in some cases, be brought together to turn tensions into synergies. The model advances the understanding of boundary work as an approach to paradox, and illustrates how the inter-relatedness of paradoxes may offer opportunities rather than barriers to managing them.

OMT: **Paradox as Analytical Tool for Managing Organizational Complexity: A Novel Typology and Paths Forward** 

Author: **Ghita Dragsdahl Lauritzen**, *U. of Copenhagen*
Author: **Anders La Cour**, *Copenhagen Business School, Denmark*

In light of increased organizational and environmental complexity, research turns ever more often to the notion of paradox to investigate how managers can navigate conflicting demands. However, the internal dynamics of paradox remain unclear, making it difficult to understand what exactly is meant by the concept, and how it can be managed in practice. This article notes that the full potential of paradox as an analytical tool for understanding complex situations of organizational life has not been reached and reveals instances of organizational complexity that appear even more radical than current definitions of paradox posit. Using a systems theory perspective, we unfold the complexity of such situations and develop a typology that includes a novel and more complex type of nested paradox that appears underexplored. We add to paradox theory by showing how different types of paradoxes and their respective relations can relate and transform over time, thereby, expanding on dominant (both/and) explanations of paradox dynamics. Thereby, we also engage with calls for more vibrant and polyphonic theory-building. We discuss our findings and managerial implications and point towards future research.

OMT: **Harnessing Infinity: Explaining the Persistence of Organizational Paradox through Morphogenesis**

Author: **Ferran Torres**, *U. Ramon Llull, ESADE Business School*
Author: **Tobias Hahn**, *ESADE Business School*

Paradoxical tensions are an inextricable part of organizations. Organizational paradoxes have been defined as synergic contradictions persisting over time, which underscores the temporal dimension of their nature. However, the persistence of paradoxes remains an elusive aspect. Persistence is understood differently depending on the ontological approach underpinning its articulation: a social constructionist approach explains persistence through the repeated experience of salient paradoxes; in contrast, an inherent approach articulates persistence through the latent dimension of paradox. In this article, we articulate persistence through the interplay of both salience and latency. To unpack the underlying processes explaining persistence we apply a morphogenetic lens, an explanatory framework that explains the processes through which systems are reproduced or transformed. The interplay between salience and latency is discussed in relation to structure, culture, and agency. Our morphogenetic approach to persistence offers a process explanation that shows how latency and salience affect one another through the conditioned, but reflective work of agents, leading toward a tendency to reproduce or transform the paradox.

Paper is NOT Available. Please contact the author(s).

OMT: **A Journey to the Upside Down: Challenging the Paradox Debate Through Problemization**

Author: **Iris Seidemann**, *U. of Hamburg*

This paper aims at questioning the general assumptions underlying the current paradox debate in the field of organization studies. Building on the method of problemization, the paper identifies central assumptions in the paradox discourse, and develops alternative viewpoints that challenge taken for granted perspectives. The construction of contrasting assumptions allows posing new research questions that aim at extending and developing a future research agenda for the paradox community. Reexamining the unquestioned superiority of both/and approaches and the role of actors in paradox response highlights the importance of a more transparent communication of assumptions that is essential when comparing findings and evaluating research gaps. Moreover, the paper contributes to the integration of currently deviating research streams such as the “dark sides” of paradoxes into the debate and argues for a more holistic perspective in the paradox discourse highlighting the interconnectedness of assumptions made at different levels of analysis and paradox stages.

Author: **Diana Santistevan**, *EM Normandie*

Author: **Linh Chi Vo**, *ESDES, U. Catholique de Lyon*

Understanding individual responses is inherent part of the study of paradox. While extant research has focused on the nature of individual responses and the cognition associated with it, little is known about the specific role of emotions and the interrelationship of emotion and cognition working together to trigger a response. This study addresses this issue. We identify two types of paradoxes (belonging-organizing and performing) that interact with three emotional reactions and two cognitive reflections. Different combinations lead actors down five unique paths to different coping strategies (leading, challenging, and accepting). Our results contribute to the literature by identifying specific emotions and cognition and explaining how the relationship between emotions, cognition, and type of paradoxes influence individual responses.

Coaching Managers To Enhance Employees Influence And Impact

Coaching Managers To Enhance Employee Impact

Participant: **William H. Berman**, -

Many people who are struggling in their job are not focused on the most essential, mission-critical business and cultural priorities that give them the most influence and impact. Whether one is a manager of a small team, or the leader of a whole business, the objective is the same. For managers to be successful, their people – one, ten, or ten thousand – need to be successful. Coaching direct reports and skip-level reports to grow their organizational influence requires helping them understand the strategies and tactics of their role, and the cultural requirements of the organization. This drives how they spend their time, how they think about their job, and how they do that job. And just as important, the way they do their job must be consistent with the culture and mores of the organization. This PDW will use role play and self-development tools to identify ways to build influence and impact in one's team or organization.

**Language in International Management: Facilitating
Interdisciplinary Conversation**
Language in International Management

Organizer: **Midam Kim**, *U. of Kansas*
Organizer: **Helene Tenzer**, *U. of Tuebingen*
Presenter: **Ann Bradlow**, *Northwestern U.*
Presenter: **Sid Horton**, *Northwestern U.*
Presenter: **Tailan Chi**, *U. of Wisconsin, Milwaukee*
Presenter: **Vincent L. Barker**, *U. of Kansas*

The study of language in international management has been rapidly growing in recent years, revealing new empirical phenomena and opportunities for theory development. However, given the multifaceted influence of language on globalized business, this promise can only be realized by integrating international business and management research with theories and methods from linguistics and cognitive psychology. These synergies have not been sufficiently realized so far due to different traditions of the disciplines. This Professional Development Workshop will stimulate interdisciplinary exchange by providing participants with a forum to learn about state-of-art research in international management, linguistics, cognitive psychology, and strategic management, to discuss theoretical and methodological challenges in language-related international management research, to collectively explore new research directions, and to develop collaborations with multiple theoretical approaches and multiple methods.

Panelist: **Wendy Heckelman**, *WLH Consulting*
Panelist: **Robert J. Easton**, *Case Western Reserve U.*

Perhaps at no other time in the recent past has the concept of empathy assumed as much significance as it has in the pandemic age, and indications are that its role will continue to persist post-pandemic. This panel symposium will showcase diverse ideas and perspectives on empathy—from academics in different disciplines as well as from practitioners in different industries—in ways that address its role and significance in contemporary managerial practice. The proposed symposium relates well to the theme of the 2021 conference, “Bringing the Manager Back in Management” as it brings a sharp focus on an important aspect of an individual manager’s capacity to pursue actions that reflect empathy in this age of major uncertainty and ambiguity. The symposium also brings a focus on how new technologies (AI/robotics) can augment managers’ (particularly frontline managers’) capabilities to pursue empathetic action in diverse industry contexts.

Increasingly, institutions of higher learning are being required to become more entrepreneurial and transform themselves into engines of economic and social development in the local communities and regions in which they are situated. This requires business schools to adopt a Third Mission that goes beyond the traditional missions of teaching and research. In order to embrace the Third Mission, business schools must dramatically adjust their operational strategies, structures, systems, culture, and leadership. Using a virtual world cafe format, participants will identify the barriers and obstacles that must be addressed and overcome if business schools are to effectively operationalize the Third Mission. Participants will acquire critical judgements and competencies to assist their institutions in adopting this new paradigm.

Frontiers in Institutional Logics  
Institutional Logics Frontier

Digital Session Chair: **Bandita Deka Kalita**, *U. of Alberta School of Management*

OMT: Remaking Worth: A Process Study of Transformation of Institutional Logics

Author: **Bandita Deka Kalita**, *U. of Alberta School of Management*
Author: **Joel Gehman**, *U. of Alberta*

Institutional logics are the materials, symbols, values and practices undergirding action within particular social worlds. Extant empirical examinations of logics have explained how actors are guided by cognitive or emotive mechanisms as particular logics are made salient. Yet we still lack a theory of utility formation across transnational orders capable of explaining the constitution of institutional logics themselves. Here, we conduct a longitudinal, inductive study of the transformation of the oil and gas sector in Alberta, Canada between 1938 and 2019. We theorize utility formation as involving a process of remaking worth, characterized by the erosion of existing and the construction of new bases of worth, which we define as criteria for justifying and demonstrating utility that provide a legitimate basis for value and constitute a logic's substance (Friedland, 2013). A core process constituting our theory of remaking worth entails continuous evaluations of worth through problematization and justification. A key contribution of our study is the observation that institutional logics are inherently undergirded by bases of worth, a core aspect of the value-laden nature of logics that has been overlooked in the literature.

OMT: Strategic Drift: Institutional Pluralism, Specialization and Organizational Growth 

Author: **Tommaso Ramus**, *UCP - Católica Lisbon School of Business & Economics*
Author: **Matthew Lee**, *New York U.*

We develop a theory of organizational growth under conditions of institutional pluralism based on analysis of the 27-year growth trajectory of ALPI, an Italian workforce integration organization. In contrast to the suggestion of prior research that organizations respond to institutional pluralism by blending or balancing between logics, ALPI grew via multiple phases of institutional specialization, each characterized by the temporary specialization of ALPI's internal structures to align with a different institutional domain and its corresponding logic. To theorize about this unexpected pattern, we build on Penrose's (1959) Theory of the Growth of the Firm to analyze why and how ALPI transitioned between these multiple phases of growth. We find that transitions were supported by the continuous development of a stock of versatile resources across phases: when the organization achieved its growth limit within one institutional domain, it used resources to pursue growth opportunities in an alternative domain. We further find that such transitions required the reconceptualization of resources and realignment of internal structures to the alternative domain. Based on our findings, we conceptualize a model of "strategic drift" that characterizes this trajectory of imbalanced growth.

OMT: The Influence of Commercial and Family Logics on Organizational Founding Attempts

Author: **Joseph Dwomoh Owusu**, *U. of Alberta School of Management*
Author: **Marvin Washington**, *Portland State U.*

Finalist for the OMT Division Best Paper on Entrepreneurship Award

This article explores whether the institutional logics founding groups are embedded in influence their chances of establishing their ventures. Building on competing logics scholarship, this paper shows that founding teams embedded in a family logic are more likely to succeed in their organizational founding attempts than those embedded in a commercial logic. High embeddedness in commercial logics is found to negatively impact the transition from pre-entry stage to becoming a fully established member of a population of operational organizations. While embeddedness in both logics improves establishment rates, a period of environmental uncertainty erodes those benefits. By linking logics to organizational foundings, this study advances understanding of how logics impact entrepreneurship and performance broadly.

Paper is NOT Available. Please contact the author(s).

OMT: Legitimacy Evaluations of Organizational Configurations: Does Hybrid Form or Logic Content Matter

Author: **Jared Peifer**, *City U. of New York, Baruch College*
Author: **Jing Liu**, *Northern Kentucky U.*

Hybridity scholarship has considered the various effects of organizational hybridity, including evaluations from external audience members. We theorize and test whether hybrids organizations that blends a charity and business logic are penalized because the blended logics reduce evaluators' perceived cognitive legitimacy of the organization. We also test whether the organization's presence of the market logic is a reason it is penalized, mediated by decreased moral legitimacy. We borrow economic sociology's moral markets scholarship to hypothesize two dimensions of moral il-legitimacy; the diminishment of social welfare and the contamination of something sacred. In a 2x2 online experiment, participants read about a health care organization that is randomly presented as a for-profit core hybrid, a for-profit business, a nonprofit core hybrid or a nonprofit organization. We find the presence of market logic decreases pragmatic legitimacy, mediated through social welfare diminishing (and not contaminating) moral il-legitimacy. In other words, we find evidence that logic content matters. We conclude with our contributions to hybridity scholarship.

Participant: **Mark Vancauteren**, *Hasselt U.*

Researchers and practitioners alike have noted the changing landscape of research and development (R&D) in firms over the last several decades, but little consensus has been built around how and why the nature of corporate R&D has changed over time. The three paper presentations in this symposium advance this exciting research agenda by putting forth several explanations of how and why the rate and direction of firm innovation have shifted over time. Through these studies, diverse groups of scholars leverage unique theoretical lenses, novel data sources and methodological advancements to identify important trends in the internal and external environment of a firm and how these trends shape the processes and outcomes of R&D activities. Collectively, we demonstrate that the temporal shifts in the nature of firm R&D are associated with fundamental changes in the flows of capital, knowledge, and talent over time. This symposium will conclude with research commentary by an expert in this area and interactive discussions between audiences and presenters.

Have I Got a Story for You! Using Children's Literature to Teach Management Concepts

Using stories to teach management concepts

Chair: **Jennifer Lynn Schultz**, *Saint Mary's U. of Minnesota*
Chair: **Debra Comer**, *Hofstra U.*
Presenter: **Robert L. Holbrook**, *Ohio U.*
Presenter: **Gail A. Dawson**, *U. of TN At Chattanooga*
Coordinator: **Elizabeth Cooper**, *U. of Rhode Island*

This teaching and learning session will provide attendees with practical, low-cost, high-impact teaching activities that use children's literature to demonstrate abstract management concepts. Presenters from a variety of institutions and content areas will share their innovative pragmatic teaching strategies. Topics include: group behavior/decision making (sub-topics: authority decisions, Asch effect, Mum effect, groupthink, escalation of commitment), diversity and inclusion, anchoring, confirmation bias, Rashomon effect, and faulty generalizations. Presenters will share vetted teaching materials that can be used with little or no modifications. This session is interactive and attendees will be encouraged to ask questions. Presenters and chairs collectively have decades of experience using popular culture in the management classroom. Attendees will have an opportunity to gain presenters' input and recommendations for developing additional activities, based on children's literature, to teach management concepts of their choice. Teaching materials will be made available via a free open-access website.

Designing Customised Executive Education Programs: An Outcome-Based Approach

An Integrated Framework for Customised Programs

Participant: **Aindrila Chatterjee**, *Doctoral Scholar*

Participant: **Arun Pererira**, *Chaifetz School of Business, Saint Louis U.*

Continuing education, particularly customised executive education programs, as a field of teaching and learning, is facing unprecedented interest and focus, from both the supply and demand sides. There is a boom in the number of providers—be it b-schools or a variety of start-ups, and an explosion of platforms and technologies for delivery and content curation. Also, there is a growing call to focus on outcomes and impact of customised programmes—be it learning transfer from training programs to the workplace, or business impact and return on investment. To address the issues of value and impact of such programs, this paper provides an integrated framework that draws on three established research streams: training evaluation, transfer of learning, and knowledge creation and dissemination within organizations. The comprehensive framework addresses issues from participant selection to learning transfer and learning dissemination, and from business impact to ROI measurement. The framework can be usefully applied by organizations to ensure value and impact from customised programs, and by providers to better design, deliver, and market their offerings.

Creating a Friendly, Supportive, Inclusive, and Engaging Remote Learning Environment

Supportive, Inclusive, & Engaging virtual learning

Facilitator: **Binhua Eva Huang**, *Wilfrid Laurier U.*
Facilitator: **Anita Boey**, *Wilfrid Laurier U.*

Unlike a face-to-face class where students can see and interact with each other, it is harder for students to establish relationships and engage in a remote learning environment. Therefore, it is critical for educators to know how to cultivate a supportive learning environment to help students establish and build relationships in a remote learning environment as well as strategies to engage students for better learning outcomes. This dynamic, interactive session will provide practical suggestions on how to build a friendly, inclusive, and engaging learning community in a virtual classroom. Through various activities of poll, chat, class discussion and breakout room discussion, participants will learn how to: 1) adopt a flipped classroom; 2) use class music and warm-up activities to cultivate relationships and connections among students; and 3) use various in-class activities, techniques, and strategies to engage students with enhanced learning outcomes. Participants will take away slides, information on strategies for preparing for pre-recorded lectures, a list of songs, themes and information on warm-up activities, information on various in-class activities and strategies. These takeaways will be useful for participants to foster their own friendly, inclusive, and engaging virtual classes.

Evidence-Based Intervention: Developing Leadership Skills

Development of Leadership Skills

Chair: **Kumaran Rajaram**, *Nanyang Technological U.*

Due to different internal and external changes in the business world, firms must re-think the requirements of young professionals that they want to recruit. Acting in complex and dynamic markets requires experienced managers knowing exactly what they need, what their next step is and how their global strategy looks like. Moreover, the technological progress and new economic developments put a lot of pressure on companies and their management. Managers must hit the needs of the firm's stakeholders and have to guide the firm successfully under (un)stable market conditions. Therefore, young professionals should also have global leadership skills to manage international acting firms successfully besides the traditional technical, social or methodological competences (Hensen, 2016; Wang, 2014). From the academic literature, no clear and precise definition of global leadership can be found. However, a lot of different understandings of global leadership do exist. For instance, Morrison (2000) defines global leadership as the possession of four competencies organized around the characteristics of attitudes, leadership, interaction and cultural understanding enabling the effective management of operations that span a world of diverse cultures, capabilities and customers. Thus, competencies are understood as personal traits, behaviours, skills, attitudes, knowledge and beliefs. Global leadership entails the interrelationships that exist among the endogenous and the exogenous process of influencing and being effective in the context of global business operations and management characterized by heterogeneity and complexity. Nevertheless, global leadership has become a hot topic in the practical business world, but also in academia. Therefore, existing curriculum programs have to be enriched with lectures of global leadership using innovative methods to educate future global business leaders (Henson, 2016; Methews, 2016; Thakkar 2018). In the 21st century, higher education institutions have to be highly receptive and adaptable to the rapidly changing technological landscape, hence requiring students to enter an increasingly global economy. Innovative approaches and new technological tools have been changing the way professors teach and students learn. These developments offer a wide range of possibilities for academic institutions, such as redesign of learning spaces, teaching global virtual students teams located in different universities around the world or the usage of MOOCs for the global classroom (Adams Becker et al., 2018; Ifenthaler et al., 2014; Wade et al., 2013; Wang, 2014). Empirical studies have concentrated on various tools in higher education and many methods have been tested (Adams Becker et al., 2018; Ifenthaler/Schumacher, 2016). However, little attention has been paid to integrate the key essentials into a practical format that can be used by educators effectively when teaching global leadership. Nevertheless, not every new approach fits to the students' needs, to the lecturing content or to the curriculum (Honal et al., 2017; Mishra/Koehler, 2006; Wang, 2014). There is a need to identify effective teaching techniques and best-practice-approaches that have already been confirmed to be successful in increasing students' motivation and learning outcomes and educating global leaders successfully (Hensen, 2016; Honal et al., 2018; Parker/Pearson, 2013; Rajaram, 2015). Another trend is that college classrooms are becoming increasingly diverse, so that the educators commonly adopt multicultural approaches to facilitate management subjects. Despite the intended benefits of exposing students from diverse backgrounds to different perspectives, lecturers are often confronted to challenges and complaints about unprofessional behaviours and free riding amongst members of the group (Honal et al., 2017; Rajaram, 2015). Therefore, clear advice and actionable recommendations for the educators are needed. With this interactive PDW, the participants should receive a 'best-of-collection' of practical approaches and innovative methods that professors and other academic staff can use at their institution to teach global leadership. Furthermore, the PDW will offer a roundtable discussion in which participants can share the specific problems they face in their daily work and the solutions they have adopted so far. Finally, a plenary discussion will summarize the key learnings of the session.

Is Artificial Intelligence Your New Member of the Corporate Board?
Is AI Your New Corporate Board Member?

Organizer: **Imen Ameer**, *Hult International Business School*
Organizer: **Bella Butler**, *Curtin U.*

This caucus is an opportunity for academics and practitioners showing interest in innovative governance models based on artificial intelligence. It is an opportunity to debate the value-added of AI, and the associated ethical risks. We will present considerations for a governance framework aiming to balance corporate results and ethical concerns.

Modern Workplace Cognitions: Impostor Syndrome, Overconfidence, and Dis(Trust)

Digital Session Chair: **Basima Tewfik**, *MIT Sloan School of Management*

MOC: Impostor phenomenon revisited: Presenting a self-affirmation theory of workplace impostor thoughts

Author: **Basima Tewfik**, *MIT Sloan School of Management*

William H. Newman Award Nominee

A phenomenon popularly referred to as impostor syndrome remains understudied by organizational scholars, even though 70% of employees experience it at work. To draw much-needed attention to the phenomenon, I revisit seminal theorizing in clinical psychology, which highlighted the phenomenon's socio-cognitive origins, to advance the construct of workplace impostor thoughts. I define workplace impostor thoughts as the belief that others overestimate one's competence at work. Integrating self-affirmation theory with research on person perception, I outline how and why having workplace impostor thoughts may lead to greater interpersonal effectiveness—a critical workplace outcome given that work is more socially embedded than ever before. I test my model in three field and lab studies that together incorporate survey, experimental, and video data from employees at an investment advisory firm, physicians-in-training, and a cross-industry sample of employees. I find that having workplace impostor thoughts is positively associated with interpersonal effectiveness at work because those high in workplace impostor thoughts adopt a more other-focused orientation. In documenting this interpersonal upside, I challenge prevailing wisdom that the impostor phenomenon is uniformly detrimental. I conclude by delineating how my findings meaningfully redirect existing scholarship and upend practitioner discourse.

MOC: Overconfidence: A Review and Directions for Future Research

Author: **Irina Maria Karthaus**, *Chair of Innovation Management, TU Dortmund U.*

Overconfidence is a cognitive bias which is of high interest to both scholars and practitioners. Its definition includes three distinct terms: overestimation of the own abilities, overplacement of oneself relative to others, and overprecision regarding the own knowledge. Although overconfidence is widely researched by scholars, the related terminology is not clearly established. This paper synthesizes existing research and offers a comprehensive review on overconfidence in the context of corporations, entrepreneurship, and investing. First, we develop and evaluate clusters in research. Second, we synthesize existing research to outline antecedents and outcomes of overconfidence. Third, we propose potential avenues for future research on the subject. This review aspires to encourage scholars to further develop theory and the empirical applications of overconfidence.

MOC: Once Bitten, Twice Shy: The Negative Spillover Effect of Trust Betrayal

Author: **Yu Wei Hsu**, *U. of Hong Kong*

Author: **Eileen Chou**, *U. of Virginia*

Author: **Noah Myung**, *U. of Virginia*

From financial improprieties to fraudulent claims, charity scandals can alienate their supporters and incite feelings of betrayal. Is it possible for one charity's indiscretions to encroach how people perceive others in the same sector and erode trust in charities not involved in the scandals as well? We conducted three studies to investigate whether people generalize the experience of betrayal and can negatively affect subsequent intentions and behavior to trust other entities. Study 1 employed economic games to demonstrate that experiencing betrayal at the beginning of the game would decrease trust in a different trustee who merely shares a nominal group membership with the original trust transgressor. Study 2 demonstrated this generalized betrayal effect in a real-world charitable giving simulation by measuring people's actual donation behavior. Study 3 further tested the proposed model and examined two critical mechanisms – expectancy violation and violation of a just-world belief – that would drive the generalized betrayal effect. By systematically investigating whether and to what extent generalized betrayal can subsequently contaminate generalized trust development, this research provides a deeper and broadened understanding on how one may be vicariously affected by other entities' indiscretions.

MOC: The Love of Body Cameras: Evaluating Surveillance Through Factors of Distrust and Control

Author: **Elizabeth Hood**, *Boston College*

Author: **Jacqueline N. Hood**, *U. of New Mexico*

Author: **Lyndon Earl Garrett**, *Boston College*

Due to advancing technologies, surveillance is ever increasing in the workplace. Surveillance is typically viewed as negative by those under surveillance and useful to those conducting surveillance. Surveillance is often thought of as a dichotomy of either helpful or harmful for the employees. Yet, there is little research examining how exactly surveilled individuals evaluate surveillance. We engaged in a qualitative inductive study of police officers to understand the process of evaluating surveillance in the form of body cameras. We suggest that perceptions of surveillance are informed by two factors: distrust and control. We posit that surveillance is initiated through a distrust of the employees. Our findings indicate that this results in a cycle of distrust between the surveilled and those conducting the surveillance. This in turn increases the use of surveillance. On the other hand, surveillance is often a way to remove control from employees. However, we found that employees can regain their control through taking ownership over the surveillance. Through using the surveillance as a tool, employees have the opportunity to fight the distrust against them. This ultimately can lead to positive evaluations of surveillance. Our study helps to examine the question of how individuals evaluate and utilize surveillance.

Groups and Teams Research: New Perspectives

Digital Session Chair: **Adriane MacDonald**, *John Molson School of Business, Concordia U.*

MOC: **Bridging Representational Gaps: The Role of Tension and Multimodal Tools**

Author: **Adriane MacDonald**, *John Molson School of Business, Concordia U.*

Author: **Stephen Dann**, *The Australian National U.*

Author: **Margaret M. Luciano**, *Penn State U.*

The human capacity to address complex problems depends on the ability and willingness to effectively engage and problem-solve with individuals who hold different views from one's own. Bridging representational gaps by creating a shared understanding of these complex problems is critically important because in its absence, collaborators cannot generate viable solutions and, therefore, risk making the problem worse. Yet it is unclear how the process of bridging these gaps occurs and whether the use of multimodal tools may be useful in the process. Thus, we adopt an abductive approach to examining how and why do multimodal tools influence bridging representational gaps. Audio, video, and survey data were collected from 102 individuals who participated in one of fourteen workshops. The participants in each workshop were placed in two teams with opposing representations of the same problem and led through a series of structured meaning-making and knowledge sharing exercises centered on the use of toy building blocks to facilitate communication among team members. The results of our study demonstrate that improved communication across knowledge boundaries can be achieved by using multimodal tools to reify concepts. In leveraging the use of visual metaphors in their explanations, participants were better able to recognize areas of divergence and dependence between teams. This recognition enabled participants to transcend conflicting problem representations by constructing a third solution of mutual benefit, integrating ideas through a process that acknowledges the inherent tensions of collaborator diversity while encouraging shared understanding and creative problem-solving. Implications, limitations, and future directions are discussed.

MOC: **The Development of the Five Factor Shared Mental Models Scale**

Author: **Jandre Jansen Van Rensburg**, *Maastricht U., School of Business & Economics*

Author: **Catarina Marques Santos**, *Maastricht U. School of Business and Economics*

Author: **Simon Barend De Jong**, *Maastricht U., School of Business & Economics*

Author: **Sjir Uitdewilligen**, *Maastricht U.*

Literature on Shared Mental Models (SMMs) has been burgeoning in recent years. Although this has provided increasingly detailed insight and evidence into the importance of SMMs across contexts, it has also become apparent that there are key limitations which might hinder future development. First, SMMs are operationalized and measured via in-depth, context dependent measures, which complicates the creation of a coherent body of knowledge. Second, different conceptualizations of the dimensionality of SMMs exist, which may complicate the comparison findings from different studies. We argue that the field of SMMs has now matured enough that it is possible to take a deductive approach and evaluate the prior studies in order to refine the key SMMs dimensions and operationalizations. Hence, we take a three-stage approach to distil measurement items from the literature, using four samples to do so. Ultimately, this leads to a 30-item five-dimensional scale (i.e., equipment, task execution, interaction, team composition, and temporal SMMs) which provides scholars with a tool which enables the measurement, and comparison, of SMMs across diverse team contexts. It offers practitioners the option to straightforwardly assess SMMs in their teams, allowing them to more readily identify challenges in their teams and design appropriate interventions for improvement.

MOC: **Shared or Divergent Mental Models? The Role of Key Employees in Problem Solving**

Author: **Michela Carraro**, *Department of Economics and Management, U. of Padova*

Author: **Andrea Furlan**, *Department of Economics and Management, U. of Padova*

We conduct a multi-agent simulation to understand how key employees contribute to team problem solving by leading the identification of effective responses to emerging issues. We find that placing a central coordinator, i.e. key employee, at the head of teams composed by individuals holding divergent mental models allows to avoid mutual confusion and enhances their likelihood of selecting compatible high value alternatives. Similarly, when teammates share their cognitive structures, we find that the presence of a key employee tends to increase the team probability of achieving superior solutions to problems. However, when team members with similar mental models fail to recognize jointly effective options early in the process, they are unable to select viable responses. Our findings suggest that the presence of a key employee is not sufficient to avoid joint myopia: on the contrary, it may become detrimental to team problem solving, amplifying "groupthink" effect and impeding teammates to explore potentially working – even though suboptimal – options.

MOC: **Cognitive Fit in Recruitment and Group Dynamics**

Author: **Gayanga Bandara Herath**, *U. of Southern Denmark*

Author: **Davide Secchi**, *U. of Southern Denmark*

This study presents a cognitive perspective on the recruitment and selection of new employees in small teams. In doing so the article builds on a distributed cognitive theoretical framework and is inspired by current Person-environment fit (P-E fit) measurements. At the same time, the work presented in this article is an attempt to move forward traditional P-E fit measures by emphasizing the dynamic nature of a constantly evolving team environment. To explore the utility of such a perspective and to investigate its feasibility, the article presents an Agent-Based computational simulation Model (ABM). The results indicate that such an approach may be advisable for recruitment, particularly when dealing with a highly docile team environment and highly docile potential candidates.

Although research shows that collective mindfulness may have significant organizational consequences, studies have not adequately addressed how collective mindfulness is manifested in organizational sub-units such as groups and teams. Nor have these studies addressed the question- what affects collective mindfulness in teams. Using survey data from a housing finance organization, we explore how 'team mindfulness' is affected by two antecedents, namely- organizational constraints, and the connectedness of team members with people outside the team. We find that constraints, particularly those which are interpersonal in nature, negatively affect team mindfulness, while connectedness moderates these relationships. By exploring the antecedents of team mindfulness, we contribute to a deeper understanding of collective mindfulness in organizations. We discuss the implications of this study for theory and practice. Keywords: team mindfulness; constraints; connectedness

MOC: Business Model Innovation in Established Firms: Conceptual Challenges and How to Manage Them

Author: **Emil Oscar Åkesson**, *Lund U.*

Author: **Kajsa Ahlgren Ode**, *Lund U.*

Author: **Lars G. Bengtsson**, *Lund U.*

Technology leaps and demands for environmental sustainability are putting increasing pressure on managers to change not just their way of doing business but also their thinking. As cognitive constructs, business models are at the core of these challenges. But successfully innovating business models is not easy. New models are not conceived fully formed, but emerge from a lengthy process of developing components in a structurally meaningful way. In this paper, we recognize these components as concepts and investigated their role empirically in interviews with managers engaged in business model innovation at five established firms. Our findings suggest that the conceptual challenges that managers face are not primarily individual, but manifest critically on a collective level, implying difficulties in 'hand-over' of new business models between those actively engaged in their formulation and others who are nevertheless key to their implementation. In this light, we have reviewed what tools are available to managers, and conclude that the business model literature should focus more on a category of procedural tools we label 'model-based facilitation'; a category of tools that have been developed in parallel in strategic management and system dynamics, but as we discuss, needs adaptation to appropriately fit the business model context.

MOC: Different Curvilinear Trajectories of Individual Knowledge Bases in the Innovation Process

Author: **Siwei Zhu**, *Minnesota State U., Moorhead*

Author: **Baris Morkan**, *Stevens Institute of Technology*

Knowledge depth and knowledge breadth, as the two dimensions of individual knowledge bases, serve as the most fundamental source of innovation. Following a mixed-method approach with both qualitative and quantitative phases, we collect first-hand data from top chemical scientists in the R&D department of a leading US oil & gas company and investigate how individuals leverage their knowledge bases in the innovation process. In analyzing the findings of the qualitative study, we present the innovation process as multi-stage innovation outcomes and label two distinct groups of individuals as "Young Geniuses" with high knowledge depth and "Old Masters" with high knowledge breadth. In the quantitative phase, our analysis shows two different curvilinear trajectories toward the innovation process: the diminishing return between knowledge depth and early-stage knowledge combinations for "Young Geniuses" is characterized by an early inflection point; the curvilinear relationship between knowledge breadth and late-stage commercialization for "Old Masters" is characterized by a late inflection point. Our study further shows that expanding knowledge breadth shifts the early inflection point of knowledge depth to the right in the innovation process. We demonstrate that individuals, who better comprehend the timing and relative pace of innovation activities, can navigate the innovation process to achieve fruitful outcomes.

MOC: Dynamic Managerial Cognitive Capabilities: Exploring the Micro Foundation of a Firm's Innovation

Author: **Shufeng Xiao**, *Peking U.*

Author: **Ting Xiao**, *Peking U.*

Author: **Zhixue Zhang**, *Peking U.*

Despite research begin to investigate the micro-macro link between a very important yet under-investigated capabilities—a firm's dynamic managerial cognitive capabilities—and its macro-level outcomes, they focus on particular types of cognitive capabilities, offering a partial picture for the working mechanisms of dynamic managerial cognitive capabilities. In this study, we systematically investigate how a firm's dynamic managerial cognitive capabilities are decomposed into different subdimensions respectively and functioning as a whole in affecting an entrepreneurial firm's innovation. By conducting three studies including simulation, content analysis, survey, and second-hand data, the consistent results show that cognitive-related sensing capability negatively, while cognitive-related seizing and reconfiguring capabilities positively affect an entrepreneurial firm's innovation performance. Our findings provide a more complete and fine-grained view of the effects of micro-level dynamic managerial cognitive capabilities on a firm's macro-level innovation.

Paper is Available to Meeting Registrants Only.

MOC: Focusing On Learning Or Performance? How Goal Orientation Influences BMI In Dynamic Environments

Author: **Maria Rita Micheli**, *IESEG*

Business model innovation (BMI) is a radical innovation process, requiring managers to focus on specific goals and to implement complex choices over time. In this paper, we explore the consequences of managers' learning and performance orientation on BMI, explaining their relevance in dynamic environments. We explore these themes in the context of creative industries, delivering a survey to managers across the sectors of design, architecture and gaming. We show the positive influence of learning orientation on BMI, and we explain how the dynamism in the environment stimulates this positive effect. Our study mainly contributes to business model innovation research, exploring the triggers of BMI and showing its specific characteristics as innovative process. In addition, we contribute to goal orientation research, showing the consequences of different goal orientations for radical innovation processes in dynamic environments.

Author: **Yusaku Takeda**, *Harvard U.*

This article theorizes how top management's strategic frame evolves over the lifespan of technology and how such frame evolution transforms the organization over time. Combining proprietary archival and extensive interview data, this study traces the historical transformation of Fujifilm, a Japan-based multinational company, over the thirty-three years of the rise and fall of the digital photography industry. Fujifilm, as one of the largest color film manufacturers in the world, not only survived from the growth of the digital imaging technology but also reoriented its existing capabilities in diverse industries such as industrial materials, document solutions, pharmaceuticals, and even cosmetics—resulting in its highest revenue in 2018. Analysis found four modes of frame alteration—incorporating, expanding, shifting, and focusing—that top management underwent and corresponding cognitive mechanisms that shaped each of the four modes of frame alteration and Fujifilm's resulting adaptive strategies. These findings highlight the critical role of continuous and flexible revisions and adjustments of predominant strategic frames to ensure incumbent organizations' long-term competitiveness; and invite future studies on frame evolution that treats strategic frames as dynamic, rather than static, strategic managerial assets.

Developments in Organizational Identity

Organizational Identity

Digital Session Chair: **Ying Li**, *U. of Illinois at Urbana-Champaign*

OMT: **The Role of Organizational Values in Art Houses' Identity-violating Transformation during COVID-19**

Author: **Ying Li**, *U. of Illinois at Urbana-Champaign*

Winner of the OMT Division Best Student Paper Award

Literature has established that organizational change is challenging when it is deemed as contradictory to “who we are as an organization.” Consequently, rarely do organizations carry out changes that violate their identity. However, organizations must change or die when sudden and dramatic restructuring of environmental conditions make it impossible for an entire organizational form to continue business in taken-for-granted ways. The important question is how organizations quickly revise their cognitive beliefs to embrace identity-violating changes. This qualitative study, with data collected in real time on American art house theaters’ response to COVID-19 pandemic, reveals one mechanism that organizations rely on when carrying out identity-violating changes. Organizations decouple their identity into values and technology and consider their identity-violating changes as violating only the technological part of their identity while preserving the more important, value-based part of identity. Committing to values (as opposed to technology) enables organizations to experiment with a new, identity-violating technology and enact it in a way that can be consistent with values and be complementary with their previous technology. This study sheds light on the motivating and guiding role of values in navigating identity-violating organizational changes. It also has practical implications for organizations transforming under extraordinary circumstances.

Paper is Available to Meeting Registrants Only.

OMT: **We Do What We Are: How Companies Use Organizational Identity Agentially for Strategy Making**

Author: **Luca Manelli**, *Politecnico di Milano School of Management*

Author: **Josip Kotlar**, *Politecnico di Milano School of Management*

Author: **Federico Frattini**, *Politecnico di Milano School of Management*

Most of organizational identity research has emphasized the constraining mechanisms on strategy making, such as path dependence and the sclerotization of cognitive frames. Considerably less research has studied the generative aspects that bind organizational identity and strategy making. Our paper aims at studying the socially constructed mechanisms that enable companies to leverage organizational identity for the development of novel strategies and the agentic reconfiguration of conventional market boundaries. In order to do so, we develop a single case study of Moleskine, the Italian brand company, which, during its history, successfully spanned across different and distant product categories because of its organizational identity. Our findings unearth the generative potential of organizational identity through two mechanisms: symbolic distancing and symbolic resemblance. Furthermore, we also show the double role that “spiritual founders” have in enabling these mechanisms: on the one hand, by infusing value and translating their personal identity into the company and its products, and, on the other hand, by imagining potential, multiple expressions of the same strategic self.

Paper is NOT Available. Please contact the author(s).

OMT: **Incongruent Patterns of Organizational Identity Crafting by Different Organizational Actors**

Author: **Franziska Hein-Pensel**, *Ilmenau U. of Technology*

Author: **Karin Knorr**, *Chair of Organizational Behavior, U. of Paderborn*

Author: **Simon Oertel**, *TU Ilmenau*

Author: **Kirsten Thommes**, *Chair of Organizational Behavior, U. of Paderborn*

Organizational identity research emphasizes that multiple identities can coexist in an organization. With a qualitative study of four firms in the German watchmaking industry, we analyze how and why multiple identities emerge. Our findings show that the orchestration of organizational identity claims differs regarding the organization as a social actor and the organizational members. Moreover, we find that differences in the conceptualization of identity claims by both levels of actors are less competing but rather have a symbiotic relationship in the sense of reinforcing the firm’s uniqueness. Exploring this finding in more detail, we observe that rhetorical history is not only applied by incorporating different episodes but also that episodes are emphasized differently with respect to the rhetorician.

OMT: **Since Albert and Whetten: The Dissemination of their Conceptualization of Organizational Identity**

Author: **Karin Knorr**, *Chair of Organizational Behavior, U. of Paderborn*

Author: **Franziska Hein-Pensel**, *Ilmenau U. of Technology*

Since the seminal work by Albert and Whetten (1985) organizational identity has become a widely spread concept that is of high relevance in several fields. This study provides a systematic review on how Albert and Whetten’s (1985) seminal work has disseminated within business as well as into other research fields. Combining quantitative and qualitative text analysis, we analyze a sample of 793 papers that cite the study by Albert and Whetten (1985). Results show that the conceptualization of organizational identity by Albert and Whetten (1985) is often only partially adopted. By conducting a systematic literature analysis, we can show the dissemination of specific elements introduced by them and in this way shed light on elements that have so far gained less attention in research. Based on these findings, our study contributes to organizational identity research by offering further research questions based on the organizational identity conceptualization of Albert and Whetten (1985).

Board Activism and Inclusiveness *Board Activism & Inclusiveness*

Digital Session Chair: **Anna Eileen McKean**, *Northwestern U.*

OMT: **Moving Towards a Stakeholder Orientation: Evidence from the Analyses of Chief Executive Dismissal**

Author: **Shoonchul Shin**, *Richard Ivey School of Business*
Author: **Juyoung Lee**, *Ivey Business School*
Author: **Pratima Bansal**, *Ivey Business School*

In the recent two decades, U.S. business has been increasingly taking a stakeholder orientation, which poses an ideological challenge to the shareholder value logic. However, little is known about how this challenge affected the way corporations are governed. We study the historical evolution of the determinants of chief executive officer (CEO) dismissal in large U.S. firms during 1980-2015. Using event history models, we test for changes over time in the role prior engagement in shareholder-oriented practices (such as business refocusing and workforce downsizing) or corporate social responsibility (CSR) plays in the relationship between poor financial performance and CEO dismissal. We find that, in the late 1980s and 1990s, CEOs were less heavily penalized for poor performance when refocusing and downsizing the corporation and more heavily penalized for CSR activity. In the post-Enron era, CEOs were less heavily penalized for CSR activity, and were not rewarded for refocusing and downsizing. We provide evidence of the evolution of U.S. corporations from a shareholder primacy model towards a more stakeholder-oriented one. We discuss implications for the literatures on institutional theory, performativity, and corporate governance.

OMT: **When Ideologies Align: Examining Factors Behind Progressive Corporate Activism**

Author: **Anna Eileen McKean**, *Northwestern U.*
Author: **Brayden G. King**, *Northwestern U.*

This paper examines the recent trend in corporate political activism in which firms actively and publicly support progressive causes. In particular, it focuses on firm participation in letter campaigns related to legislative proposals regarding social and environmental causes. Unlike other forms of corporate political activity, this form of activism is not directly linked to companies' core business operations. We suggest that this phenomenon reflects the ideological views of both the upper echelon leaders of the firm as well as those of the broader organizational membership. Our findings indicate that progressive activism is a result of alignment between a firm's top management's and employees' political ideologies. The paper concludes with a discussion of implications for our understanding of corporate progressive activism and nonmarket strategy.

Paper is Available to Meeting Registrants Only.

OMT: **Managerial Short-Termism, Board Gender Diversity, Analyst Coverage and Their Effects on CSP**

Author: **Didier Cossin**, *International Institute for Management Development - IMD*
Author: **Stephen Smulowitz**, *International Institute for Management Development - IMD*
Author: **Abraham Lu**, *International Institute for Management Development - IMD*

While commentators have long decried managerial short-termism, no prior research has examined the deleterious effects of managerial short-termism on corporate social performance (CSP), nor how to ameliorate that negative effect. Moreover, due to the difficulty of unobtrusively measuring what is fundamentally a cognition in firms, empirical evidence at the organizational level of short-termism's effect on firm outcomes is relatively sparse. Here, we measure managerial short-termism by content analyzing firms' publicly filed annual reports (10-Ks). Using a combined dataset for 1,703 U.S. firms for the period 2000-2013, we show that managerial short-termism is negatively associated with CSP. However, we also show that this effect can be reduced through increased monitoring by important stakeholders who value CSP, specifically through increasing board gender diversity and analyst coverage.

OMT: **Foreign Competition Threat and Ethnic Minority Inclusion in the Board**

Author: **Yonghoon Lee**, *Hong Kong U. of Science and Technology*
Author: **Heejung Jung**, *Imperial College London*
Author: **Jim Goldman**, *U. of Toronto*

The underrepresentation of ethnic minorities among directors of corporate boards has been widely recognized as a challenging issue for Corporate America. In this paper, we draw on a branch of social categorization theory and argue that competition threat from a foreign source enhances ethnic minority inclusion in the board by lowering existing intergroup bias. Foreign competition threat blurs the boundaries between ingroup (white directors) and outgroup (minority directors) and makes the common domestic identity and fate more salient. Leveraging the exogenous shock that increased foreign competition threats — that is, China's accession to the WTO in late 2001 and the predetermined industry variation in the importation costs — we devise a difference-in-differences study where we predict that the U.S. manufacturing firms facing greater competition threats from Chinese imports are more likely to have minority directors on their boards. The results support our theory, where firms exposed to high foreign competition threats are 15% more likely to include minority directors on their board than the unconditional probability. In line with the theory, our supplementary analysis shows that those exposed firms also express more "oneness" after the shock as they increase the usage of the collective pronoun "we" in their annual report. A series of robustness tests and supplementary analyses support our theory on ethnic minority inclusion and address potential alternative explanations.

Status Hierarchies: Dynamics of Ties

Status Hierarchies and Ties

Digital Session Chair: **Lisha Liu**, *Cornell U.*

OMT: **Matchmaking Only for Equals? Cross-Network Influence of Status Distance on Triadic Closure**

Author: **Lisha Liu**, *Cornell U.*

Finalist for the OMT Division Best Student Paper Award

This paper examines the cross-network influence on triadic closure in interorganizational networks. In particular, I theorize status distance as a crucial antecedent of triad closure: from the status distance between a pair of potential partners the common third party infers how sustainable their future cooperation is likely to be, which influence the common third party's decision on whether to facilitate triadic closure. Using a longitudinal dataset of interlocking directorates and loan guarantees between Chinese publicly listed firms in the period 2007-2016, I find that triadic closure in the loan guarantee networks is less likely to happen when the indirectly connected parties have a large status distance in the interlocking directorate network. The weakening effect of status distance on triad closure is attenuated when the common third party has more alternative partners – because the common third party is less concerned about potential damages to its relationships with the two parties. I also find that pairs of status distance are less likely to have reciprocal guarantees, showing why common third parties use status distance to infer the likelihood of sustainable cooperation. If a common third party facilitated triadic closure in the first place, the focal pair is then more likely to follow the cooperative norm of reciprocity. This study instills a greater appreciation for the forward-looking orientation of common third parties in evaluating potential challenges in the cooperation between its partners, and thus its decision on whether to help with closing an open triad.

OMT: **How Status Inconsistency Leads to Avoidance of Status-Threatening Ties in NCAA Basketball**

Author: **Keehyuk Ra**, *Yonsei U.*
Author: **Bo Kyung Kim**, *Yonsei U.*

This study examines the effect of status inconsistency on an organization's status-conscious behavior. We argue that status inconsistency stemming from the nesting nature of status positions, in which an organization's status is composed of not only individual-level status, but also group-level status, is likely to restrict organizations from attempting to reduce status inconsistency. Status inconsistency in both directions—cases in which the actor's status is below and above the belonging group's status—triggers status anxiety and avoidance of status-threatening ties because of the pressure to justify occupying the social position that the organization believes it deserves. We also argue that how a prestigious-group membership and a recent outstanding achievement weaken the negative effect of status inconsistency by making organizations less status-anxious. We test our hypotheses in NCAA Division I men's basketball from 2000 to 2019. The statistical analyses support our arguments that the difference between a team status and its conference status led to a lower likelihood of scheduling games with non-Division I teams, one of status-threatening activities. Moreover, these effects of status inconsistency were weaker both for teams belonging to the "Power Six" conferences and for teams recently having played in the NCAA Tournament.

OMT: **Status Homophily in Negative Strategic Interactions**

Author: **Aneesh Datar**, *Bocconi U.*
Author: **Mario Daniele Amore**, *Bocconi U.*
Author: **Fabrizio Castellucci**, *Bocconi U.*

We examine how firm status determines patent litigation and its consequences for firms. Literature on social status has demonstrated numerous benefits associated with a high-status position and that status transfers through affiliations. Taken together, high-status firms generally engage in transactions with each other rather than with low-status firms. Therefore, we argue that status homophily in firms, i.e. similarity in status, will also occur in patent litigation, i.e. a negative interaction. Consistent with status literature, we argue that uncertainty amplifies the effect of status: uncertainty from the plaintiff side negatively moderates status homophily in patent lawsuits. Research on alleged wrongdoing has demonstrated negative penalties such as decreased evaluations for firms accused of wrongdoing. Moreover, as audiences have a level of uncertainty about the wrongdoing, which the accusers' status will likely decrease. Thus, we argue that a firm faces financial loss soon after a high-status firm files a patent infringement lawsuit against it. We find support for our hypotheses, suggesting that status homophily has negative outcomes and belonging to an elite group does not protect firms from penalties from audiences.

OMT: **Hazardous Connections: Conflictual Ties, Common Intermediary, and Tie Dissolution**

Author: **Brian Kim**, *Emory U., Gozuieta Bus Sch*

Although the positive role of a common third-party organization in the formation and the maintenance of relationships between two organizations is well documented, recent studies reveal that connections to a common third-party organization may sometimes be perceived as liabilities. In this paper, I explore interorganizational conflict between two organizations as a key driver that propels them to negatively evaluate their existing connections to the common third-party organization. Conceptualizing interorganizational ties as informational conduits, I argue that connections to a common third-party organization may serve as indirect channels of leaking private and sensitive information to the opponent organization in on-going conflict. I hypothesize that organizations will subsequently engage in a defensive strategy to sever their connections to a common third-party organization when it is also connected to the opponents in conflict. I test my idea in the empirical context of corporate litigation events among U.S. public firms and the subsequent termination of their relationships with intermediary firms in the market for political influence (i.e., lobbying firms) between 1998 and 2018.

New Applications, Techniques, and Concerns in Content Analysis

Digital Session Chair: **Lakshmi Balachandran Nair**, *Luiss Guido Carli U.*

RM: **Roles of Online Spaces in Management Research Data Collection**

Author: **Lakshmi Balachandran Nair**, *Luiss Guido Carli U.*

Management researchers nowadays use digital data and online spaces in their investigations to understand various managerial phenomena. However, the terms “digital” and “online spaces” subsume various applications and features, which make their meaning and use in management research very diverse and often ambiguous. We clarify this ambiguity by content analyzing qualitative management research articles published over two decades (2000-2019). Based on our qualitative content analysis, we develop a categorization of online spaces, focusing mainly on the roles played by the spaces in management research data collection. In addition, we explore the overlaps between the roles of these online spaces in individual studies. The roles played by researchers in these online spaces are also investigated peripherally. Lastly, based on our findings, we provide a four-step road map for guiding management researchers who are interested in using online spaces in their data collection. Our categorization and the resultant road map will help management researchers in understanding and adapting the use of online spaces in their research.

RM: **Using Text Analysis and Machine Learning to Classify U.S. Governors’ COVID-19 Press Briefings**

Author: **Jason Marshall**, *Binghamton U.-State U. of New York*
Author: **Francis J. Yammario**, *Binghamton U.-State U. of New York*
Author: **Srikanth Parameswaran**, *Binghamton U.-State U. of New York*
Author: **Minyoung Cheong**, *Pennsylvania State U., Great Valley*

Increased computing power and greater access to online data have led to rapid growth in the use of computer-aided text analysis (CATA) and machine learning methods. Using “Big Data”, researchers have not only advanced new streams of research, but also new research methodologies. Noting this trend, while simultaneously recognizing the value of traditional research methods, we lay out a methodology to bridge the gap between old and new approaches. With a combination of web scraping, CATA, and supervised machine learning, using ground truth data, we train a model to predict CIP (Charismatic-Ideological-Pragmatic) leadership styles from running text. To illustrate this method, we apply the model to classify U.S. state governors’ COVID-19 press briefings according to their CIP leadership style. In addition, we demonstrate content and convergent validity of the method.

RM: **You Say Potato and I Say Potahto: Making Sense of Management Content Analysis Research**

Author: **Rhonda K. Reger**, *U. of North Texas*
Author: **Paula Ann Kincaid**, *U. of North Texas*

Content analysis is burgeoning in management research as researchers seek to study complex and subtle phenomenon. Our review of almost 300 studies published over the last four decades in eleven top tier management journals uncovered many promising trends, but also identified some inconsistent and potentially confusing terminology that may be impeding research progress. We provide an overview of how content analytic methods have been used in management research including qualitative analyses (such as grounded theorizing, narrative analysis, discourse analysis, rhetorical analysis, and multimodal analysis) and quantitative analyses (such as dictionary-based approaches, topic modelling, and natural language processing). We contribute to methodology research by 1) suggesting key criteria for choosing content analytic methods to answer a variety of research questions; 2) categorizing data collection and analysis approaches, 3) reviewing steps in a prototypical content analysis, and 4) discussing issues in creating coding manuals and dictionaries. Our goal is not to impose one set of terms and procedures across all of management research, but rather, to increase understanding of best practices across the abundance of content analytic methods available to management scholars.

Paper is Available to Meeting Registrants Only.

RM: **Exploring Structural and Discursive Boundaries: Combining Blockmodeling and Word Embedding Analysis**

Author: **Charles Kirschbaum**, *Inspire Institute of Education and Research*
Author: **Fabio Ayres**, *Inspire Institute of Education and Research*
Author: **Gabriela Luz Antibas**, *Inspire Institute of Education and Research*

The success of social network analysis within management research has also attracted criticism concerned with the lack of acknowledgement of meaning as constitutive of ties. Recent advances in digital data collection and analysis have provided an opportunity to rekindle this discussion, as online data frequently entails both relational and textual data. Specifically, computer-based approaches have enabled researchers to escalate their analyses to large textual corpora, offering the prospect of unearthing hidden meanings associated to online behavior. Throughout this research, we offer a roadmap to combine blockmodeling techniques to social networks with word embedding (word2vec). We complement our study with an in-depth analysis of selected documents. We illustrate this protocol by applying its steps on a corpora collected with Facebook’s users’ comments on Fashion brands. We conclude the paper by discussing the contributions and implications for the interfaces between network, computer-based text, and in-depth discursive analyses.

Racial Justice and Business Ethics   
Racial Justice and Business Ethics

Organizer: **Robbin Derry**, *Dhillon School of Business, U. of Lethbridge*
Organizer: **Paul Terrance Harper**, *U. of Pittsburgh*
Organizer: **Gregory Fairchild**, *U. of Virginia*

Business schools are being called upon, along with universities more broadly, to address systemic racism and other forms of injustice. As business scholars, we have the opportunity to look more deeply into the ways that our teaching and scholarship have neglected honest scrutiny of racial injustice within our educational institutions as well as in the business and organizational structures that we study. In this workshop we aim to provide guidance for researchers to integrate greater awareness of racial justice issues, to critically assess contemporary approaches to managing diversity, to interrogate dominant theories of justice, and to conceive racial justice interventions as scholars and educators.

The first hour of this PDW on Racial Justice will include presentations and discussions about what we are looking for in the Journal of Business Ethics Special Issue on Racial Justice (submissions due Oct 1, 2021), along with Q & A. The first hour is open to anyone. The second hour will consist of small group meetings with editors, reviewing draft papers submitted in advance. Draft manuscripts are due by June 15 to robbin.derry@uleth.ca. Confirmation of inclusion of draft papers to be reviewed in the second hour will be sent by June 30. We encourage Ph.D. students, as well as experienced scholars, to submit, attend and participate. Participation in this PDW is NOT a requirement for submission to the JBE Special Issue.

Panelist: **Wei Shi**, *U. of Miami*
Panelist: **Mary Triana**, *Owen Graduate School of Management Vanderbilt U.*
Panelist: **Kendall Cox Park**, *Vanderbilt U.*

Recent years have seen an upsurge in shareholder activism, or the actions taken by shareholders to influence firm policies and practices. As boards of directors are responsible for fundamental decisions that affect change in a firm's strategy, activist shareholders rely on board representation as the primary mechanism for promoting their vision in the firms they target. However, despite the prevalence of activist board representation, management research has thus far lagged behind in addressing theory regarding its implication for firms. This panel symposium aims to expand the theoretical conversation surrounding shareholder activism and boards to new and interesting areas, as well as to promote dialogue regarding how we may advance our understanding of this phenomena.

Panelist: **Andrew Yu**, *U. of Melbourne*
Panelist: **Cynthia S. Wang**, *Northwestern Kellogg School of Management*

This session is open to all Academy members interested in learning how to navigate the final stages of the job search process. Formalized training to navigate these stages is rarely provided. Instead, doctoral students negotiating their first academic position or faculty moving to a new institution often rely on their personal network of peers and advisors to seek advice. Moreover, job candidates are often reluctant to negotiate with prospective colleagues (new Department Chair or Dean) for fear of appearing aggressive. Without a systematic understanding of all the issues that can be negotiated and how to address one's unique needs creatively and professionally, job candidates may accept an offer that leaves them wondering if they could have done better or inadvertently offended a prospective new colleague by the tactics used. This PDW is designed to demystify the negotiation process for doctoral students and current junior faculty beginning a job search process. The focus of this PDW is to 1) generate awareness of features of the job offer that are negotiable, 2) learn from techniques used by our panelists and their successes and challenges, 3) gain insight on effective and ineffective tactics as perceived by Department Chairs and individuals in the Dean's office, and 4) learn the basics of negotiation planning, preparation, and strategies that can be productively applied to this important personal context. The format will include short presentations, Q&A, small group discussions, and an experiential exercise.

**A Knowledge Café To Discuss The Development of
Research That Impacts the Entrepreneurial Ecosystem**
Research that Impacts the Ent. Ecosystem

Host: **Kenneth A. Grant**, *Ryerson U.*
Presenter: **Erik Monsen**, *U. of Vermont*
Organizer: **Lincoln Brown**, *Southwestern Oklahoma State U.*
Organizer: **Gilberto Sarfati**, *FGV-EAESP*
Participant: **John Martin Mueller**, *St. Edward's U.*
Participant: **Thomas J. Mierzwa**, *U. of Maryland*

This Professional Development Workshop will help entrepreneurship scholars develop research of relevance to the entrepreneurial ecosystem. It supports the overall theme of this year's conference by considering the needs of all the players in the entrepreneurial ecosystem, with particular relevance to responses to the impacts, both positive and negative, of the COVID-19 Pandemic. It uses the Knowledge Café approach, a technique demonstrated to maximise the involvement and personal development of its participants.

Our goal in this PDW is to offer tools to teachers, researchers and outreach actors of Family Entrepreneurship (FE) in their endeavors to support the digitalization of Family Businesses (FBs), while at the same time remaining true to their core values. Indeed, the proper of FBs is the involvement of the family, and the operations of many FBs reflect a dedication to proximity with employees and external stakeholders. As a consequence, FBs are often less digitalized than their non-family counterparts, which can ultimately lead to decreased performance and jeopardizing the firm's longevity. Keeping the manager in management while digitalizing the firm is a paradox that must be managed on the long run, but its urgency is crucial at the present moment due to the pandemic and accelerated digitalization that ensued. Finding a balance requires bringing this paradox to light and offering means to change mentalities, from trade-off to synergy. In order to support this, our PDW will have two parts. In a first part (asynchronous), attendees will view pre-recorded videos by representatives of FE (teaching, research, and outreach) who share their tips and best practices. In a second part (synchronous), attendees will discuss in themed break out rooms with experts and with each other. This session will provide first an excellent opportunity for current actors of FE to connect and second to collectively create a foundation of tools and practices to manage this paradox, in order to support the digitalization of FBs while keeping the manager in management.

Leading Employee Learning

Leading Employee Learning

Organizer: **Michele Rigolizzo**, *Montclair State U.*
Presenter: **Jean-François Harvey**, *HEC Montreal*
Presenter: **D Christopher Kayes**, *George Washington U.*
Discussant: **Raymond A Noe**, *Ohio State U.*
Discussant: **Kurt Kraiger**, *U. of Memphis*
Presenter: **Phil Wirtz**, *George Washington U.*

If one thing has been made clear in the events of 2020, it is that organizations, teams, and individuals must continually adapt to change. In other words, the need for continual learning is in high demand. This session will focus on the understudied role of the manager in leading employee learning. In the first presentation, Rigolizzo, Zhu & Cruz evaluate the role that perceptions of school have on employees' motivation to engage in learning behaviors. Traditionally, when managers consider employees' time in school, they focus solely on the degree achieved and the content of the learning. However, this empirical study demonstrates that, in school, individuals develop attitudes towards learning that influence their behavior in learning tasks years later. The second presentation provides new insight into the managerial factors that impact effective team feedback. Team feedback research has traditionally focused on feedback valence as a predictor of team outcomes, though with inconclusive and contradictory findings. In this paper, we propose that the informational content of the feedback may play a vital role in the effect of constructive feedback on teams. Finally, Kayes & Bürgi-Tian will present a paper that explores learning-based experiences, which are attitudes that individual employees associate with progress and frustration in learning situations. We use qualitative and quantitative data on learning-related experience 'episodes' to provide a better understanding of experiences that are associated with progress on learning and frustration with learning to provide insights into how to sustain learning and improvement efforts.

Corporate Social Responsibility, Trust, and Using History to Develop Managers

Digital Session Chair: **Andrew D A Smith**, *U. of Liverpool*

MH: Effective Strategies to Promote the Teaching of History in Business Schools  

Author: **Andrew D A Smith**, *U. of Liverpool*
Author: **Suwen Chen**, *U. of Edinburgh business school*
Author: **John Millar**, -

The recent historic turn in management has seen scholars debate whether, why, and how history can be useful to managers (Wadhvani, Suddaby, Mordhorst, & Popp, 2018; Argyres, De Massis, Foss, Frattini, Jones, & Silverman, 2019). Many business schools, including elite ones in the United States, now include history in the curriculum at the undergraduate, postgraduate, and MBA levels (Friedman & Jones, 2017). Much of the extant research on the place of history in the management school curriculum is informed by the belief that the acquisition of at least some types of historical knowledge is useful because it improves the ability of managers to make decisions. Unfortunately, the existing literature on the teaching of history in business schools does not give us a clear understanding of precisely how and why teaching history would improve the subsequent job performance of management learners. Moreover, we currently lack an understanding of how business-school students and their prospective employers perceive the inclusion of different types of history in the business-school curriculum. This paper remedies these important gaps in the literature. In this paper, we discuss a major initiative to promote the teaching of history to management students in a number of countries. This project is worthy of an extended and systematic study because it has survived a number of market tests and has attracted students in different national contexts. We used interviews with the teachers and students to learn more about why management learners value the course associated with this project. We also offer an explanation as to why this initiative to teach history to management learners has been successful. We then establish broader lessons for the ongoing debate about whether, why, and how history should be taught to future and current business people. We tentatively conclude that student and external stakeholder support for an increase in the amount of historical instruction in management schools will be maximized if curriculum designers focus on the teaching of domain-specific historical knowledge.

MH: Who do you trust? Human Relations and Social Embeddedness

Author: **Jeffrey Muldoon**, *Emporia State U.*
Author: **Laura Singleton**, *Eckerd College*
Author: **Richard H. Jonsen**, *Rowan U.*

Our purpose is to compare the thinking of Chester Barnard and Elton Mayo, two of the major figures in the Human Relations movement. Drawing upon their writings and correspondence, as well as prior work by others, we focus on their ideas regarding the development and maintenance of cooperation, a key theme of their writings. Against the context of labor strife, both men recognized the need for the establishment of incentives and routines to build trust between management and labor. Much of their work underlies arguments that later organizational behavior theorists have used, especially in their criticisms of economic incentives as a sole stimulus for cooperation. From their arguments, we can see the importance of social embeddedness as an important consideration in determining cooperation.

Paper is Available to Meeting Registrants Only.

MH: The Historicity of Corporate Social Responsibility in the United States and Britain 

Author: **Michael Heller**, *Brunel U.*
Author: **Kevin D. Tennent**, *U. of York*
Author: **Jeffrey Muldoon**, *Emporia State U.*

Our purpose is to examine the historical nature of Corporate Social Responsibility (CSR), a pillar of business practice, strategy, and research. Traditional narratives place the development of CSR as a response to the post-World War II world, where an educated public demanded business to pursue more ethical policies. The genesis of this movement is Bowen's seminal book on CSR, published in 1953. However, we offer a counter-narrative. We argue that the real genesis of CSR in both Great Britain and the United States was an attempt by business to gain legitimacy from employees as the work relationship switched from transitory workers to permanent employees at the end of the nineteenth century. Early CSR was an attempt to reduce information asymmetries, gain worker loyalty and trust, and reduce labor costs such as theft, destruction of property and absenteeism. This was not an altruistic response, but an example of enlightened self-interest, as well as a more nefarious response to reduce industrial action among workers.

Creativity, Interruptions, and Time Pressure

Digital Session Chair: **Theodore Charles Masters-Waage**, *Singapore Management U.*

OB: Zen and the Art of Interruptions: The Role of Mindfulness in Buffering Against Interruptions 

Author: **Theodore Charles Masters-Waage**, *Singapore Management U.*

Author: **Charis Loo**, *Singapore Management U.*

Author: **Jochen Matthias Reb**, *Singapore Management U.*

Author: **Eva Peters**, *Singapore Management U.*

Author: **Sophie Leroy**, *U. of Washington, Bothell*

In the post-pandemic work context, one of the key challenges employees face is managing interruptions while working from home – whether that be childcare duties, impromptu family interactions, or notifications from social media. Work interruptions can have several negative consequences including the loss of productivity, decreased well-being, and an impaired capacity to flourish in these challenging times. This paper examines whether mindfulness could buffer against these negative impacts. By adopting a bi-dimensional view of mindfulness, we hypothesized that mindful monitoring (i.e. awareness) would moderate the effect of interruptions on individual's work impairment (i.e. their inability to maintain focus on work tasks) and thus perform effectively (Hypothesis 1) and mindful acceptance would moderate the effect of interruptions on negative affect and thus job satisfaction and work engagement (Hypothesis 2; see Figure 1). Study 1 (N=197) provided support for both hypotheses using a two-wave field survey in which between-subject differences in dispositional mindfulness moderated the effect of interruptions on workplace outcomes in the expected directions. Study 2 (N=121) tested the same model using an experience-sampling approach run over 10 days (pre-registered at <https://osf.io/98rk7>). Results from multi-level modeling analyses found consistent support for the complementary role of mindful awareness and acceptance in reducing the negative impacts of interruptions on individuals. Taken together, these studies provide evidence for the distinct and complementary role of the two mindfulness dimensions on managing interruptions at work, suggesting that mindfulness may play an even more important role in promoting flourishing in the “new normal”.

Paper is Available to Meeting Registrants Only.

OB: An Alter-Centric Perspective on Employee Creativity

Author: **Rohit Subhash Piplani**, *U. of Connecticut*

Author: **Travis Grosser**, *U. of Connecticut*

Most social network research on employee creativity and innovation has solely examined focal employees' (egos) network structure, leaving us largely uninformed about the role that network characteristics of employee's social network contacts (alters) play in impacting his or her creativity. Therefore, this paper conceptualizes an alter-centric perspective to understand how alters with relevant network characteristics can facilitate ego's creativity in the various phases of the creative process (i.e., idea generation, idea development, and idea championing). Drawing on social resources theory, we propose that 1) alters with external structural holes (secondhand external brokerage) facilitate the generation of creative ideas by ego, 2) alters with internal structural holes (secondhand internal brokerage) facilitate the development of those ideas, and 3) alters with a degree of internal network oscillation between brokerage and closure (secondhand network oscillation) facilitate ego's idea championing. Additionally, we identify pertinent boundary conditions (ego's integrative complexity, ego's psychological ownership, and scope of idea), which are critical in deciding whether the creative idea successfully moves from one phase to another. By integrating the social network and creativity literatures, this article advances our understanding of each of the phases of the front end of the creative process and highlights the importance of well-connected alters in enhancing employee creativity.

OB: Creative through Time Pressure? A Cross-Level View on Creative Self-Efficacy & Knowledge Sharing 

Author: **Niklas Dreyman**, *U. of Göttingen*

Author: **Lea-Therese Strobel**, *Technical U. of Munich*

Creative ideas – and the innovations they enable – are key competitive advantages for organizations. However, as organizations need to innovate faster than their competitors in order to survive, the creative processes of individuals and teams are increasingly subject to time constraints. Drawing on the social cognitive theory and the social exchange theory, we investigate the relationship between time pressure and creativity at the individual and team level integrating two opposing mechanisms. We propose that at the individual level a motivational mechanism (namely creative self-efficacy) leads to a positive influence of time pressure on creativity, while on the team level a social mechanism (namely the lack of knowledge sharing) leads to a negative influence. We collected multi-source data from 138 team members and 27 supervisors participating in two product development programs. A multilevel analysis approach did not yield significant results, potentially due to insufficient statistical power. However, exploratory post hoc analyses revealed promising results: The individuals' creative self-efficacy partially mediated this relationship. Team time pressure had a negative indirect effect on team creativity via team knowledge sharing. We discuss the implications of the findings for future research and organizations.

OB: Pressure to Be Creative: How Organizational Creativity Pressure Influences Employee Work Engagement

Author: **Hye Jung Eun**, *Singapore Management U.*

Author: **Roy Yong Joo Chua**, *Singapore Management U.*

Creativity and innovation are vital for organizational growth and success, driving many organizations to increase pressure for employee creativity. Yet, researchers have neglected investigating how employees respond to creativity pressure at the workplace. This paper introduces the concept of organizational creativity pressure – the pressure on employees to continually develop novel and useful ideas and solutions – and investigates how employees respond to this pressure. Drawing on the transactional theory of stress (Lazarus & Folkman, 1984) and the need-based theory of work motivation (Green, Finkel, Fitzsimons, & Gino, 2017), we theorize that organizational creativity pressure, as a form of workplace stressor, is appraised as a challenge stressor and promotes work engagement in employees. Building on the emerging research on gender and creativity, we further theorize that the positive effects of organizational creativity pressure on challenge appraisal and work engagement are stronger for men than for women. An experimental study and a field survey found evidence consistent with our theory. Unexpectedly, the pattern of interaction is such that men are significantly less engaged than women at low organizational creativity pressure. At high organizational creativity pressure, there is no significant gender difference in engagement. These findings have important theoretical contributions for research in creativity, gender and workplace stress as well as practical implications for modern organizations in which creativity is an important performance imperative.

OCIS: **Algorithmic Face-ism: Uncovering and Mitigating Algorithmic Bias in Facial Recognition Systems**

Author: **Dawei Wang**, *Northwestern Kellogg School of Management*
Author: **Hatim A. Rahman**, *Northwestern Kellogg School of Management*

How do some of the most advanced machine learning facial recognition algorithms make important decisions, such as whom to hire or who is considered a leader? Existing research suggests advances in machine learning methods can use facial features in an image—facial morphology—to accurately and objectively predict answers to such questions. We show, however, that even after implementing state-of-the-art models, decision-based facial recognition algorithms are not as objective as previously claimed. Unpacking the “black box” of an existing facial recognition algorithm revealed the algorithm did not rely on facial morphology to make decisions. Instead, when covariates such as attractiveness were accounted for, the algorithm relied mostly on “leftover” transient features, such as clothing, hairstyle, or background lighting for decision-making. We identify the specific stages—sampling, preprocessing, model implementation, and model functioning stage—in which algorithmic focus bias and interpretation bias are likely to arise in facial recognition algorithms. These results suggest that decision-based facial recognition algorithms are biased in ways that researchers have overlooked, with troubling implications for their use by governments, organizations, and researchers. We introduce the concept of “algorithmic face-ism,” in which (1) machine learning algorithms unfairly express an inherent preference for specific facial morphologies, and (2) researchers mistakenly attribute behavioral predictions to facial morphologies. This paper thus demonstrates how leading decision-based facial recognition systems are biased and how previously taken-for-granted factors contribute to this pattern of bias. We conclude by discussing how bias can be mitigated in such facial recognition algorithms.

OCIS: **Liability Attribution in the Context of AI Use**

Author: **Jingyao Li**, *Bentley U.*

AI (artificial intelligence) systems represent a double-bladed sword. AI brings both benefits and harms to our society. When adverse consequences are produced by AI use in practice, responsibility gaps emerge, due to the opacity and complex nature of these sociotechnical systems. In this study, we propose that assigning liabilities collectively among AI actors can bridge the responsibility gap, hence promoting justice and ethical uses of AI in society. We do so by drawing on the field of philosophy and attempting to answer the question of how (to whom and to what extent) responsibility can be allocated to reduce accountability gaps in the AI context. We generate a set of propositions that lay out the ground for future research this important interdisciplinary domain.

OCIS: **Crowdsourcing Behavior in Reporting Civic Issues: The Case of Boston's 311 Systems**

Author: **Myeong Lee**, *George Mason U.*
Author: **Jieshu Wang**, *Arizona State U.*
Author: **Shawn Janzen**, *U. of Maryland, College Park*
Author: **Susan Winter**, *U. of Maryland*
Author: **John Harlow**, *Emerson College*

Many cities in the United States use civic technologies like 311 systems as part of their public service systems for monitoring non-emergency civic issues. These systems have enhanced the city's monitoring capability by diversifying communication channels. However, the data created through these systems is often biased because of differences in people's use of technology (i.e., digital divide) and individuals' behavioral patterns in providing types of information to the systems. If civic data is used by local governments in making informed decisions, these data-driven services could be skewed towards the heavy technology users, and not reflect citizens' diverse needs. If individuals share similar behavioral patterns or cultural norms by neighborhood in reporting civic issues, socio-economic or regional inequality could be exacerbated due to the uneven provision of service. This paper aims to explore these aspects of civic technologies by examining the relationship between community characteristics, individuals' data contribution behavior, and the formation of data types. We report results based on Boston's 311 data as a case study.

Formal Modeling in Management Research: Generating Insights for Theory and Practice

Formal Modeling in Management Research

Organizer: **Elena Plaksenkova**, *The Ohio State U. Fisher College of Business*

Organizer: **Liyue Yan**, *Robert H. Smith School of Business, U. of Maryland*

Speaker: **Olivier Chatain**, *HEC Paris*

Speaker: **Nan Jia**, *U. of Southern California*

Speaker: **Richard Makadok**, *Purdue U., West Lafayette*

Speaker: **Michael D Ryall**, *U. of Toronto*

Speaker: **Brian Wu**, *U. of Michigan*

The purpose of this PDW is to enhance participants' understanding of formal modeling, examine the role of formal modeling in management research, and explore how formal models can contribute to both management theory and practice. The PDW aims to promote the effective use and consumption of formal modeling to a larger audience, identify future avenues for the use of formal modeling in management research, examine the ways formal models can generate managerial implications, facilitate a conversation between experts and learners, and create a community of learning for those interested in formal modeling. The PDW consists of two parts: a 90-minute panel session and a 30-minute breakout room session. Invited participants are scholars who have extensive experience in formal modeling as producers, consumers or reviewers.

Strengths and perils of hybrid teaching for international classrooms

Hybrid teaching for international classrooms

Presenter: **Katarzyna Bachnik**, *Hult International Business School*

Presenter: **Pamela Campagna**, *Hult International Business School*

Presenter: **Tessa Misiaszek**, *Hult International Business School*

Presenter: **Robert Neer**, *Hult International Business School*

Presenter: **Rajendra Shirole**, *Hult International Business School*

The global pandemic created unparalleled challenges for higher education – causing the majority of institutions to have to pivot to an online teaching format for the remainder of the Spring 2020 semester. Teaching at an international college with 85% of our students from outside the United States, we faced additional obstacles from evolving policies related to student visas to students zooming into class from time zones around the world. In the Fall, we launched a hybrid format of teaching undergraduate students, defined as students in the classroom and simultaneously on Zoom in multiple time zones around the world. The session will focus on actual teacher behavior inside a classroom that generates increased student satisfaction and its concomitant higher motivation and engagement. The goal of the session is to convey the collective learnings from our experiences – challenges and successes - over the past year teaching undergraduate students in hybrid format, which we will be accomplishing by delivering the session using the same technology from our technologically advanced classroom and using the teaching tools we leveraged in our teaching. We will also focus on ways we converted traditional “live” teaching experiences such as field trips, improving classroom engagement, and efforts used to ensure an equitable experience for the online and classroom-based students. The outcome of the session for participants will include a toolkit for how to create an engaged classroom environment in a hybrid setting with tactical ways to create learning experience for online students, as well as those in the classroom.

The Student Case Writing Project: A How-To Guide for Instructors

The Student Case Writing Project

Presenter: **Meredith J. Woodwark**, *Wilfrid Laurier U.*
Presenter: **Karin Schnarr**, *Wilfrid Laurier U.*
Presenter: **Karen MacMillan**, *Wilfrid Laurier U.*
Presenter: **Brent D. Beal**, *U. of Texas at Tyler*

In this session, we will examine how to use case writing as a pedagogical tool to increase student engagement and learning. Case writing as a student assignment asks students to move from a mostly passive analyst role to take on a variety of roles – researcher, interviewer, writer, and, ultimately, teacher. We will address each component of the student case-writing process including: preparing students for case writing, customizing the assignment to fit class learning objectives, requiring incremental work, addressing unique challenges associated with case writing as a student project, facilitating peer critique, providing feedback on incremental assignments, grading finished cases, managing student teams, and assessing publication options. Importantly, we will outline how this project can be completed through remote learning.

The Art Gallery Classroom: Using Art for Experiential Learning

The Art Gallery Classroom

Facilitator: **Anita Boey**, *Wilfrid Laurier U.*

Facilitator: **Binhua Eva Huang**, *Wilfrid Laurier U.*

Oftentimes, educators and students find it difficult to teach and learn abstract or challenging concepts. This session will explore the benefits of using art to teach and learn such abstract and challenging course concepts. Arts allow educators and learners to access abstract concepts, express personal connections to course concepts, all the while building a stronger community with peers. This session will feature the qualitative arts-informed methodology as a teaching and learning approach to undergraduate and/or graduate courses, highlighting its potential for contribution and limitations. Participants will be encouraged to join with the presenter for an interactive, hands-on activity, putting to practice arts-informed methodology in their own courses. Participants will take away from this session several strong approaches for integrating arts into their (virtual) classes, for example the “art gallery” activity that will be conducted in the session. Participants’ first-hand experience of creating art and teaching through their own artwork will be a valuable takeaway as they can leave the session with new ideas and inspiration for their own classes.

Equity, Diversity, & Inclusivity Planning: Advancing Inclusive Management Skills Begins Internally
Equity, Diversity, & Inclusivity Planning

Presenter: **Aimee Williamson**, *Suffolk U.*
Presenter: **Brenda J. Bond**, *Suffolk U.*

Calls for racial justice, equity, and diversity have become more widespread and urgent for individuals, communities, businesses, and other organizations during recent years. Widely shared videos of police brutality against Black men and women, along with the disproportionate impact of the COVID-19 pandemic on communities of color, have shined a bright light on racial injustice issues, sparking more pervasive recognition, condemnation, and related calls to action. Organizations are making commitments to further their efforts through strategic planning efforts and dedicated Equity, Diversity, and Inclusion (EDI) plans. As management educators, we must ensure our students are prepared to equitably and inclusively manage and lead organizations in this environment. Doing so requires that we focus internally, ensuring our own academic department services and education practices are in line with our EDI values. This workshop will share with participants how to construct, implement, and track an EDI Plan at the department level, across curricula and non-curricular efforts, to work towards a more equitable, diverse, and inclusive environment for students, faculty, staff and community partners.

Panelist: **Logan Macray Steele**, *U. of South Florida*

Given the substantial overlap between I-O psychology and various business areas (e.g., organizational behavior, human resource management, research methods), industrial-organizational (I-O) psychologists are increasingly pursuing business school careers (Aguinis, Bradley, & Brodersen, 2014). Despite the interest in this career path, there are limited resources to help prospective I-O psychologists learn about the nuances of working within a business school. I-O psychologists, who are typically trained within psychology departments, may encounter different requirements and culture when transitioning to business school environments. In this session, we seek to aid I-O psychologists interested in business school careers on these differences by providing insights on identifying and navigating such challenges. To this goal, we assembled a diverse panel of business school faculty with a psychology educational background who represent various ranks (i.e., Assistant, Associate, Full Professor), roles (i.e., faculty, Chair, Dean), and foci (i.e., from research, teaching institutions). The session will include short introductions, roundtable discussions, and a question-and-answer (Q&A) session, focusing on various aspects of working within a business school. We aim to benefit both job candidates and business schools by providing a realistic job preview of this career path, and a recognition of the differences between the disciplines both parties can expect to encounter.

Chair: **Tom Elwood Culham**, *Beedie School of Business Simon Fraser U.*
Speaker: **Richard Jackson Major**, *Institut de Gestion Sociale Paris*
Speaker: **Richard Peregoy**, *U. of Dallas*, *Satish & Yasmin Gupta College of Business*

We are both rational and emotional. As far back as 2002, John Kotter emphasized the critical role of emotions in successful change programs and in business education. In 2004, Mintzberg proposed that MBA programs need to rebalance teaching in the classroom with greater emphasis on the emotional, caring, feeling side of our nature. Yet a majority of programs continue to focus on developing logical and analytical left-brain thinking, rather than intuitive and emotional right-brain thinking. The Covid-19 pandemic has shown us that managers need to manage teams even when high turbulence hits our eco-systems, in ever-changing contexts, which requires creative thinking and emotional intelligence beyond exclusively pursuing the bottom line. What can we, as educators, do to bring the wise, ethical manager back into management, a manager who uses her full cerebral hemisphere as per contextual requirements? Through this PDW we aim to contextualize research that suggests that this is an essential stepping stone for leaders to grow and succeed in our current globalized economy and society. The purpose and expected outcome of this PDW is to advance participants' competency in developing self-awareness and working with emotions skillfully. Presenters will share experiential pedagogies that can be enriching such as meditation, emotional intelligence exercises and journaling. Furthermore, participants will be encouraged to delve into an emotional space through demonstrations of vulnerability, which is critical for developing self-awareness. By modeling these learnings in the classroom, it is hoped that faculty will favorably influence business students to draw on left and right-brain thinking, and to apply this as future leaders. Key words: Ethical leader, MBA pedagogy, self-awareness, left and right brain, TPN, DMN

Research in management and organizations aims to produce work that is theoretically grounded and practically useful. One promising and increasingly popular research method that strikes a balance between theory and practice is intervention-based research. Despite the potential of intervention-based research, several challenging questions currently limit the promise of this methodology: When should researchers use an intervention study? How do researchers design and implement good interventions? And how do researchers evaluate their results and make sound conclusions? In this symposium, we seek to provide important insight into the practice of intervention-based organizational research. Our symposium consists of a panel of six leading researchers who have rich and diverse experiences with designing and conducting empirical research using interventions. Our intent is that an audience interested in doing this kind of research will benefit from hearing about the choice points and reasoning of these scholars who have profound knowledge of and deep experiences with conducting interventions. This symposium will highlight important insights into the issues confronting scholars interested in using interventions in their research and provide guidelines and tips on effective intervention-based research, which we hope will guide future organizational research using interventions.

The objective of this PDW session is to respond to the call for relevance of the 2021 theme – Bringing the Manager Back in Management – through providing a platform sharing and conceptualizing the practices and scholarly work of professional doctorates. As professional doctorates gather executives from companies and institutions willing to increase their knowledge about research in management, they stand as an ideal platform for bringing the manager back to management research. Doing so, professional doctorate programs provide an opportunity for management researchers to understand the current challenges faced by managers in person, rather than reading surveys always liable to methodological bias. In a way, professional doctorates are giving voice to the managers in management research. They provide an occasion for management researchers to become the advocate of the managers in management research, starting research programs with the current problems faces by companies. However, despite the potential of professional doctorates for overcoming the gap between academic discourse and managerial realities, academic communities have made little attempts to engage with and establish relationships with professional doctorate students in a structured way. Through a doctoral consortium format, this PDW aims at providing a platform upon which academics and professional doctoral students can engage in a dialogue for mutual benefit. More precisely, the format intends to stimulate discussions of challenge-led professional doctorate research with leading academics from the AOM community. Furthermore, this platform would also increase the AOM impact on the practitioner world by attracting a growing number of companies and institutions to engage with AOM through professional doctorates.

In this PDW workshop, Professional Doctorate and DBA students will be given the opportunity to receive feedback from experienced academics with a particular view on publishing their work in academic and practice-oriented outlets. Participation is by invitation only, and requires an abstract to be submitted to the organizers by June 1st, 2021. For further information, please send an email to c.backhaus@napier.ac.uk, bonnet@iseor.com, or monod@suipe.edu.cn.

Celebrating Winners: This is a two-part PDW. Part 1 will announce and celebrate the 21 winners and finalists of the 2021 Responsible Research in Management Awards, sponsored by AOM Fellows Group. [Click here](#) to view winning authors and links to their award-winning works. Authors of winning papers and books will summarize their work and engage in dialogue with PDW participants about the challenges and rewards of conducting research that is beneficial to society, credible, and useful to practitioners. Two executives who helped select the winners will explain what made these research studies especially valuable to them.

Passing the Torch: In part 2 of the PDW, participants will interact in small groups with authors of award-winning research studies, AOM Fellows, and executive reviewers. Discussions will address how important problems were chosen, challenges faced in doing and publishing the work, surprising or inspiring outcomes, and impacts on authors' research identity. Panels of award winners and Fellows who evaluated the works nominated for the award will reflect on lessons learned. Please join us to celebrate management research that changes the world for the better.

The Big Scam? What's Wrong with Business Schools, Business School Faculty, and the Study of Management *The Big Scam?*

Distinguished Speaker: **Sydney Finkelstein**, *Dartmouth College*
Program Chair: **Amy Hillman**, *Arizona State U.*

Industry after industry has seen disruption and transformation, yet business schools and business school faculty continue as they have for decades. The unfortunate result is our business model is dangerously out of tune with the expectations and demands of key stakeholders. The research we do seldom connects to the real challenges that managers encounter in their work, but even if it did these managers would barely know what the business school research enterprise is up to. The teaching we do continues to be seen by too many academics as a necessary evil, characterized by “commodity” teaching and a fundamental inattention to communicating and disseminating our ideas to wider audiences. And our employers – business schools – have enabled all of this via outmoded incentives systems and cultural norms while simultaneously ignoring warning signs of how our competitive advantage is eroding. The result: we are happily ensconced in our protective bubble while our schools, our jobs, and our research enterprise are in crisis.

Participant: **PABLO RUIZ-PALOMINO**, *U. de Castilla-La Mancha*

This symposium will explore how authentic leadership choices change according to the stage of life and career development of the leader as well as the organizational context. The symposium will consider the challenges and opportunities for authentic leadership that executives grapple with throughout their careers. We will use an interview format and in the actual panel, one of the professors will engage two CEOs in an interview on their authentic leadership choices throughout their career. One of the CEOs will be a senior Indigenous leader from the First Nations of Canada, and the other will be the former CEO of one of the world's largest aviation multinationals. The panelists will also consider issues of identity and authentic leadership for example in the context of women entrepreneurs. Many women entrepreneurs opt-out of corporate or industry positions to lead more authentically as entrepreneurs. However, female authentic leaders, as well as other underrepresented groups, both in corporate, or entrepreneurial contexts, face unique challenges. The panel will also consider issues of crucibles and life triggering events that contribute to authentic leadership development. Finally, the panel will discuss the building blocks of authentic leadership, specifically looking at emotional intelligence, mindfulness, and resiliency.

Methodological innovations for socio-political risk research
Methodological innovations for SPR research

Organizer: **Crystal Xiangwen Jiang**, *Bryant U.*
Participant: **Asda Chintakananda**, *National Institute of Development Administration (NIDA)*
Participant: **George O. White**, *U. of Michigan, Flint*
Participant: **Irem Demirkan**, *Loyola U. Maryland*
Participant: **Andreea Mihalache-O'Keef**, *Roanoke College*
Participant: **Aierken Gulidanan**, *Southern New Hampshire U.*
Participant: **Qin Yang**, *Robert Morris U.*
Organizer: **Tatiana Vashchilko (Lukoianova)**, *Haskayne School of Business, U. of Calgary*
Participant: **Yong Wang**, *Western New England U.*

This caucus targets to bring together scholars whose research include discipline-specific and interdisciplinary methodologies for studying socio-political risks (SPRs) and to provide a more granular understanding of methodological issues in complex, unpredictable and fast-changing global contexts.

This caucus meeting intends to offer a platform and forum for scholars to facilitate an interdisciplinary conversation over novel methodologies in examining SPRs and MNE strategic responses to the complexities of international and national operating environments. Considering the strong research interest in socio-political risks among AOM members, we'd like to use this caucus to connect the scholars who are specifically interested in the (1) the systematic examination of pros and cons of a range of novel qualitative and quantitative methodologies for advancement of SPR knowledge; (2) the identification of state-of-the-art analytical tools across disciplines to study different types of SPR in diverse contexts; and (3) theoretical enrichment of SPR scholarship with appropriate choices and applications of innovative methodological approaches.

Strategic Change, Adaptation, & Adjustment

Digital Session Chair: **Andrew Sarta**, *Ivey Business School*

MOC: **Technological Prisms: A Fuzzy-Set Analysis of Cognition, Robo-Advice, and Adaptation**

Author: **Andrew Sarta**, *Ivey Business School*

Directions of attention, particularly when directed toward new technology, is a critical component of incumbents adapting to technological change; however, new technology is often ambiguous at its core, skewing the interpretations associated with attending to technological change. As a result, organizations may attend to emerging technologies, but attention may differ between organization depending on how a single technological change is interpreted. Technological changes, therefore, are analogous to prisms that emit different signals with organizations recognizing few, but not all signals. Unique interpretations by organizations subsequently impact the adoption of technology and the degree to which organizations sufficiently adapt to technological change. I study the complex combinations of attentional direction, interpretations, and technological adoption by combining the computational method of topic modeling with a fuzzy-set Qualitative Comparison Analysis to uncover unique cognitive and decision-making combinations that lead to organizational adaptation. In the context of the Canadian Wealth Management industry, I outline unique cognitive interpretations of robo-advice, a technology that automates financial advice, among 15 incumbent organizations in combination with technological adoption decisions and find 3 unique paths to adaptation. The results highlight that not all directions of attention toward emerging technologies are fruitful for adaptation and that organizations hold the capacity to creatively adapt in the absence of both attention and technological adoption.

MOC: **Understanding the Complexities of Psychological and Sociocultural Factors in Expatriates' Adjustment**

Author: **Sana Mumtaz**, *FAST National U. of Computer and Emerging Sciences, Islamabad*
Author: **Sadia Nadeem**, *National U. of Computer and Emerging Sciences, Islamabad, Pakistan*

The literature has predominantly focused on socio-cultural factors for understanding expatriates' adjustment. The current study extends this discussion by incorporating the role of psychological factors in the expatriates' adjustment process using the anxiety uncertainty management (AUM) model. It also contributes towards understanding the mechanism of expatriates' adjustment over time. Using generalized qualitative methods, semi-structured interviews were conducted of 55 Chinese expatriates working in Pakistan. After the verbatim transcription of all the interviews, data were double coded by two researchers in the NVivo software, and analyzed using thematic analysis. The results highlighted the various socio-cultural and psychological factors that facilitated or inhibited the Chinese expatriates in their adjustment in Pakistan. The main psychological factors impeding adjustment included a lack of, or delay in, building cognition-based trust, identity crisis, and negative impact on self-esteem, while the factors facilitating psychological adjustment consisted of future career prospects, emotional support from host country nationals (HCNs), and affect-based trust. The current study contributes to the literature in the fields of sociology, psychology and international business by presenting two complementary models – the general model of adjustment and the AUM model of adjustment – for bridging the gap between socio-cultural and psychological adjustment factors of expatriates' adjustment in a cross-cultural context. In view of the findings, the researchers suggest 'mindfulness' as the optimum stage of adjustment for expatriates working in ethnocentric organizations.

MOC: **Navigating paradoxical tensions through the interplay of temporal structures**

Author: **Jack Lewis Fraser**, *Saïd Business School*

Organizations at the boundary of two institutional fields are often required to meet contradictory but interrelated demands. While transcendence – accepting both sets of demands as necessary and complementary – has been shown to be an important response to such paradoxes, achieving it places significant cognitive and behavioural strain on managers. Despite the importance of 'and/both' approaches for the survival of institutionally pluralistic organizations, we still know little about the practices that managers resort to when initial efforts to achieve transcendence break down. Through a longitudinal study of a joint-venture spanning two institutional fields, we demonstrate that managers can address otherwise insurmountable paradoxical tensions through an emphasis on the interplay of their temporal structures. By deconstructing conflicting demands into their respective temporal qualities of temporal depth – defined as the span into the past and future that they typically consider – and temporal horizons – measured by the frequency of milestones within this span – managers can process paradoxical demands in novel ways. Through a process of temporal work, managers on both sides of the institutional divide were able to negotiate a new, shared temporal depth that accommodated the temporal horizons of both sides. We show that this process enabled managers to achieve a form of transcendence, providing a structure within which to consider the demands on both sides as necessary and complementary, which was not previously possible. We suggest that 'zooming in' to focus on the complexity of temporal structures can unveil novel and surprising sensemaking processes amongst managers navigating paradoxes.

MOC: **The Reputational Consequences of M&As**

Author: **Tian Han**, *Henley Business School, U. of Reading*
Author: **Abby Ghobadian**, *Henley Business School, U. of Reading*

In this study we theorise and test the mechanism through which mergers and acquisitions (M&As) affect the corporate reputation of acquiring firms. We theorise two channels – the outcome- and the intention-based channel. Further we argue that the announcement returns of M&As provide stakeholders with the outcome cues to make reputation judgements, and that M&As' deal characteristics signal the acquirers' intentions. Hence, the corporate reputation of acquiring firms will be enhanced if the acquisition outcomes or signalled intentions coincide with the stakeholders' interests. By conducting a content analysis on news articles, we produce firm-level reputation indexes based on the tone of news related specifically to the analyst comments. The empirical results largely support the hypotheses. We find that announcement returns are positively related to the corporate reputation of acquiring firms following the acquisition announcements. We also find that diversifying deals and acquisitions with a relatively larger size are likely to generate reputation gains for acquirers. As such, this study develops the reputation antecedent research, moreover, provides a more balanced assessment for M&A success by investigating the "soft" (i.e. reputational) consequences of M&As.

Author: **Aoife Brophy Haney**, *U. of Oxford*

Author: **Fanny Frei**, *ETH Zürich*

Author: **Joern Hoppmann**, *U. of Oldenburg*

We investigate the drivers of individuals' perception of organizational capabilities in times of environmental change. Prior research suggests that organizations need to reconfigure their capabilities in times of environmental change and that the outcome of this process is strongly affected by which (potential) capabilities organizational members are aware of in the process of organizational change. Thus far, however, there is a lack of studies that provide systematic, quantitative evidence of how organizational members differ in their perception of organizational capabilities and why. To address this shortcoming, we draw on unique data from a two-stage survey among 357 organizational members of an incumbent electric utility company during the energy transition to test which factors influence whether organizational members perceive capabilities associated with the new versus the old world. We show that individuals who perceive changes in organizational routines and a more exploratory ideal organizational identity are more likely to perceive novel capabilities. Contrary to expectations, we do not find evidence that differences in the perception of the current organizational identity explain differences in capability perception. Our study advances the literature on the micro-foundations of capabilities, which has started to investigate the relationship between cognition and capabilities. Moreover, by shedding light on the antecedents of capability cognition, our study bears important implications for the literatures on organizational change and identity.

Dark-side Leadership Research: Humility, Narcissism, Dark Triad Traits, & Immorality

Digital Session Chair: **Dritjon Gruda**, *National U. of Ireland, Maynooth*

MOC: Leader Narcissism and Follower Engagement - A Machine Learning Approach  

Author: **Dritjon Gruda**, *National U. of Ireland, Maynooth*
Author: **Dimitra Karanatsiou**, *Aristotle U. of Thessaloniki*
Author: **Paul Hanges**, *U. of Maryland*
Author: **Jennifer Goldbeck**, *U. of Maryland*
Author: **Athena Vakali**, *Aristotle U. of Thessaloniki*

Although research interest in the dark triad traits, and in particular, leader narcissism, has been on the rise over the past few years, the prior literature has predominantly discussed leader narcissism from a leader-centric perspective. In this paper, we provide a relational-based perspective of leader narcissism by examining the interaction between follower personality traits and leader narcissism on follower engagement in an online context. We apply a machine learning (ML) approach to predict the personality traits of 424 leaders and 43,633 engaged followers and analyze hypothesized interactions using multilevel regressions, also accounting for leader demographic moderation effects, namely leader gender. Firstly, we find that the interaction between leader narcissism and follower agreeableness and follower neuroticism positively predicts follower engagement, while the interaction between leader narcissism and follower openness negatively predicts follower engagement. We do not find a significant interaction between narcissistic followers and narcissistic leaders with regard to follower engagement. Thirdly, we find that leader gender plays an important moderating role, in that male narcissistic leaders seem to benefit from more follower engagement from highly agreeable and neurotic followers. Limitations and implications are discussed and recommendations for future studies are outlined.

MOC: Distinguishing Between Dark Triad Leaders Using Influence and Organizational Citizenship Behaviors   

Author: **Alexander Marbut**, *U. of Alabama*

Current trends in research suggest that the trait approach to leadership is in great peril. Theoretical divergence within personality psychology has generated a schism wherein some researchers claim that broader traits are best for predicting behavior, while others claim that narrower traits are best for predicting behavior. This divergence is herein identified as an argument that has been ongoing for nearly a century. It is argued that both sides have their merits and that the true danger lies in ignoring the other side, with special attention given to arguments that theoretically distinct traits are not distinct. These conceptual arguments are paired with Nicomachean Ethics to invert the dark triad and argue for the utility in distinguishing between how dark triad leaders exercise their leadership and impact their organizations through propensities toward different forms of prosocial behavior.

MOC: Leaders on a moral pedestal     

Author: **Shiyu Yang**, *U. of Illinois at Urbana-Champaign*
Author: **Qiongjing Hu**, *Zhejiang U.*
Author: **Jihyeon Kim**, *Purdue U.*

Morality has long been recognized as critical to leadership. However, compared to a leader's (im)moral conduct in the professional domain (i.e., professional morality), there has been relatively less attention paid to leadership morality in the personal domain (i.e., private morality); whether and how much lay people care about the (im)morality in a leader's personal life remains largely underexplored. Drawing upon a culturally attuned perspective on leadership, in six studies (N = 1668) we found that compared to the individualistic culture of North America, the collectivistic culture of East Asia tends to place greater emphasis on a leader's private morality. Using both measurement of mediation and controlled experiments, we identified people's conception of an organization (i.e., declarative cultural knowledge) and thinking style (i.e., procedural cultural knowledge) as the mechanisms underlying the differences. Specifically, we found that compared to the North Americans, East Asians are more likely to adopt a relational (vs. transactional) view of an organization and think more holistically (vs. analytically), which in turn lead to greater importance ascribed to leadership private morality. This paper extends prior theory by advancing our understandings of how cultural knowledge shapes people's lay theories of leadership.

MOC: The Potential Dark Side of Humble Leader Behavior: A Decision-making Perspective

Author: **Zhang Yue**, *Fudan U., School of Management*
Author: **Wei Hu**, *Renmin U. of China*

Extant research has demonstrated the positive effect of leader humble behavior is beneficial for employees, teams, and organizations. However, based on resource allocation theory, our research challenges previous wisdom by identifying the potential dark side of humble leader behavior. We propose that when environmental dynamism is high, humble leader behavior is negatively related to team decision-making speed, which in turn decreases team capability. Data from a multi-time and multi-source survey of 210 leader-follower dyads supported our hypothesized model. Our research reveals the perils of leader humble behavior and highlight the importance of examining environmental dynamism in this unique leadership process.

OMT: The Double-Edge Sword of a Female Political Leader: Diversity-Enhancing and Reducing Effect  

Author: **Aleksandra Joanna Kacperczyk**, -

Author: **Sukhun Kang**, *London Business School*

Author: **Yongwook Paik**, *KAIST College of Business*

A firm's ability to attract and sustain diverse employees with respect to gender is critical to a firm's performance and long-term competitive advantage. Despite the potential influence of female political leadership on women's representation in the workplace, surprisingly little research has considered the effects of outside-firm female leadership. In this study, we theorize that the election of a top female political leader is a double-edged sword, leading to two countervailing effects. On the one hand, electing a top female political leader will generate a diversity-enhancing effect, thereby leading to a higher representation of women in upper-level positions in organizations. On the other hand, electing a top female political leader can also generate a diversity-reducing effect, thereby leading to a disproportionate outflow of women from wage employment to entrepreneurship. Finally, the strength of the two effects, diversity-enhancing and diversity-reducing, will arise differently under different conditions depending on employment experience. We test our theoretical arguments using a plausibly exogenous election result (i.e., the election of the first female president in South Korea) and find broad support for our hypotheses. Our study contributes to a nuanced understanding of the relationship between women's leadership and female representation in the workplace.

OMT: The Impact of National Culture on Firm Gender Diversity   

Author: **Tatiana Lluent**, *ESMT Berlin*

Extant literature in organizational inequality shows that environmental forces affect firm gender equality outcomes. While there is evidence that national gender culture affects individual economic outcomes, little is known about the influence of national gender culture at the firm-level. In this article, I use the context of cross-border acquisitions to study how national culture shapes firms' arrangements towards gender equality as I explore how foreign acquisitions affect workplace gender equality at acquired firms. I use restricted-access employer-employee data from France matched to M&A data. I use a generalized differences-in-differences approach to estimate the impact of acquirer national gender culture on gender equality outcomes at acquired firms after an acquisition. I find that firms acquired by acquirers from more gender egalitarian countries see a larger increase in female representation in management and larger decrease in gender pay gap post-acquisition, compared to firms that get acquired by acquirers from less gender egalitarian countries. This main effect is stronger when the post-acquisition integration process is more thorough and when a new CEO is appointed at the acquired firm.

OMT: Are We Welcome or Not? Institutional Contradiction in Diversity and Inclusion Programmes     

Author: **Tania Jain**, *London School of Economics*

This paper examines the limited success of diversity and inclusion programmes in organisations in recent times. In particular, we conceptualise a multi-level manifestation of the institutional contradiction between empowerment and marginalisation emerging from D&I programmes. The setting for this ethnographic study is a private school in New Delhi, India with class, gender, and religious desegregated classrooms. The intersectional actors we focus on are female Muslim worker class students for whom the institutional contradiction is most salient. In contextually theorising this contradiction, the paper contributes to the organisational diversity and institutional theory literatures. We propose an explanation for the failure of diversity programmes by revisiting the deterministic foundations of institutional theory and studying the institutional theory foundations of inequality.

OMT: Board Diversity as Firms' Adaptation to Stakeholder Norms: The Roles of Social Embeddedness in India

Author: **Suyash Garg**, *PhD Student*

Author: **Zhiang Lin**, *U. of Texas at Dallas*

Stakeholder norms influence firms' board composition including board diversity. However, less is known on how firms in emerging economies, specifically India—a heterogeneous institutional context where selection of directors exhibits distinct social embeddedness in firm-related network relations as well extra-network affiliations (e.g., religion/caste). Bridging the stakeholder perspective with the institutional perspective, we study Indian firms' board diversity as a strategic adaptation to stakeholder norms from developed economies. Using panel regression analyses on 842 firm-year observations between 2013 and 2018, we find that in the Indian institutional environment, such an adaptation is subject to social embeddedness in ongoing relationships between firms and governments/public agencies, as well as firms' positions in the interlocking network. The findings have important implications for corporate governance in emerging economies.

Panelist: **Gabriela Gutierrez Huerter O**, *Assistant Professor, King's Business School*

Sustainability, or meeting the needs of the present without compromising the ability of future generations to meet their own needs, can be perceived to occur at many levels of human experience and scale. From the level of personal/individual sustainability in which a sole person's values and actions are considered, through United Nations Sustainable Development Goals and behaviors of our entire species globally, human decisions and actions about sustainability appear ubiquitous and present at many levels. How much, if any, fossil fuel should be consumed in one's home or workplace, community, nation, or anywhere on the planet, given the fossil fuel/global greenhouse gas-induced climate emergency the planet faces now and into the foreseeable future? Individual efforts to address climate and other sustainability issues seem paltry and their vast global challenges seems so daunting that resolution, if even possible, can be elusive. One approach to prevent being stymied into inaction and despair is to identify how problems can be managed at multiple levels of human organization, learning lessons at one level to be applied at others. For example, the health issue of tobacco smoking has been addressed at the individual level (via psychotherapy), at the organizational level (through the designation of non-smoking areas), and at the societal level (with public information campaigns of medical associations as examples). This workshop highlights several multi-level sustainability management values, practices, and outcomes, focusing a significant amount of attention on how the participants propose that the climate emergency issue be managed on at least two levels.

Discussant: **Thomas D'Aunno**, *New York U.*

The challenges facing the health care sector are not just clinical: strategic and organizational factors play a crucial role in the provision of effective and high-quality health care. This symposium investigates how health care processes, outcomes, and innovation are influenced by organization-level strategic decisions and corporate reconfiguration, and by physician-level decisions, such as referral relationships and adoption of new practices and technologies. The five papers showcase research that applies strategic and organizational management theory and methods to study the health care sector. Ultimately, this symposium helps develop a research agenda at the intersection between health care and strategy.

Now more than ever it is critical for scholars to deepen their understanding of organizational learning in hospitals: a setting that enables us to explore conditioning factors that make organizational learning especially difficult. Our symposium addresses both the theoretical and empirical gaps in our understanding of organizational learning in this crucial context. Our keynote speaker, Amy Edmondson (Harvard Business School), an expert on organizational learning in healthcare organizations, will explore key trends and issues for this important area of research going forward. The four empirical papers included in this symposium will examine the relationship between technology, structure, employee-driven innovation, failure experience, and learning in hospitals. We aim to open up new avenues of research for scholars interested in organization learning and healthcare.

Please reach out to Sunkee Lee (sunkeele@cmu.edu) for any questions on this symposium.

Techniques for increasing meaningful connections in the remote learning environment
Meaningful connections in remote learning

Participant: **Kyle Ingram**, *U. of California, Riverside*
Participant: **Hodar Lam**, *U. of Amsterdam*
Participant: **Jonathan Lim**, *U. of California Riverside*

In an effort to increase meaningful connections with students during a forced period of remote learning, the authors draw on social penetration theory, social exchange theory, and social presence theory in the design and implementation of techniques used in their respective courses. We theorize and discuss evidence revealing the capacity for mental health, assessment design, and technology to improve upon the student-professor relationship. Preliminary results reflecting the relationship between assessment design and student engagement will be unveiled.

A How-To Guide for Taking the Case Method Live *Live Cases*

Presenter: **Meredith J. Woodwark**, *Wilfrid Laurier U.*

Presenter: **Karin Schnarr**, *Wilfrid Laurier U.*

Presenter: **Brent D. Beal**, *U. of Texas at Tyler*

This session will introduce case writers to the concept of live cases, clearly describe how they differ from traditional case writing, provide a step-by-step guide to creating a live case, and suggest how they are most effectively used in a classroom. Our session will cover both live cases based solely on secondary data as well as those based on proprietary data provided by a live case partner company. Writing live cases with companies provides opportunities for live case writers to tailor the case to mimic real world examples, better preparing business students for scenarios they could face upon entering the workforce. Importantly, we will outline how live cases can be done remotely via ZOOM.

Reimagining an Introductory Management Course: Lessons from a Self-Managed Teaming Impact Initiative
Self-Managed Teaming Impact Initiative

Participant: **Matthew Eriksen**, *Providence College, School of Business*
Participant: **Arati Srinivasan**, *Providence College*
Participant: **Thomas R. King**, -
Participant: **Morgan Perry**, *Providence College*
Participant: **Elyse Pereira**, *Providence College*

Teamwork, collaboration and interpersonal communication skills have been consistently ranked as the top skills companies look for in job applicants. We believe that in order to develop these teaming skills, faculty need to employ experiential learning opportunities in realistic settings that enable students to experience team development and management processes. Our primary objective in this session is to present how faculty can move away from lecture-based, content-centered learning to an experiential student-centered learning environment, one that facilitates students' development as managers, leaders, and team members. We will present the experience and impact of the introductory course we piloted including a discussion of possible faculty concerns and fears and how they could overcome these to incorporate a similar experience into their courses.

Engaging Students Using Social Media and Aristotelian Rhetoric as a Tool for Critical Thinking *Discovering Your Inner Aristotle*

Presenter: **Lucy Gill-Simmen**, *Royal Holloway, U. of London*

Abstract 'It is the mark of an educated mind to be able to entertain a thought without accepting it'. - Aristotle Critical thinking is knowing when to ask questions and knowing what questions to ask. Daniel Kahneman, in *Thinking: Fast and Slow*, suggests we are predisposed to jump to conclusions and employ cognitive bias, or selective hearing, to defend such conclusions (Kahneman, 2011). Indeed, many students are hesitant to think critically, yet such skills are highly sought after in the workplace. As such, this begs the question, as educators, how do we teach students critical thinking skills and how can we do this in an engaging and inspiring way? One way to do this is to draw on the work of Aristotle's rhetoric. Rhetoric is based on proofs, syllogisms and arguments, which activate the mental ability of humans and therefore promote creative and critical thinking. This session introduces a fun and out of the box technique to engage students in critical thinking drawing on Aristotelian rhetoric as a framework.

Earnings Over Time

Digital Session Chair: **Lusi Wu**, *U. of Electronic Science and Technology of China*

HR: The Moderated Curvilinear Relationship Between Work Experience diversity and salary

Author: **Lusi Wu**, *U. of Electronic Science and Technology of China*

Author: **Jian Gao**, *Northwestern Kellogg School of Management*

Author: **Tao Zhou**, *U. of Electronic Science and Technology of China*

Prior research on work experience diversity yields inconsistent findings regarding its effects on employment outcomes: some conclude that experience diversity discounts (e.g., Ferguson & Hasan, 2013; Zuckerman, Kim, Ukanwa, & Rittmann, 2003), whereas some highlight its benefits (e.g., Lazear, 2004; Custodio, Ferreira, & Matos, 2013). Using resume data of over one million individuals, the current study aims to account for this inconsistency by first differentiating functional diversity and industrial diversity in evaluating work experience diversity, and proposing an inverted U-shaped relationship between functional diversity and salary, which is moderated by industrial diversity. Specially, we focus on the socio-cognitive distances between different job functions and industries in assessing diversity. With all hypotheses supported by the results, our study provides a finer-grained understanding on how work experience diversity influences salary.

HR: Altruism and Inequality: How Pro-social Pay Discounts Offset the College Pay Premium

Author: **Nathan Wilmers**, *Massachusetts Institute of Technology*

Author: **Letian Zhang**, *Harvard Business School*

In an era of substantial labor market inequality, employers increasingly invoke pro-social mission, corporate responsibility and organizational purpose. Many commentators criticize these prosocial commitments as ineffectual and insincere. In this paper, we argue on the contrary that these employer commitments inadvertently reduce earnings inequality. Building on research on job values, we hypothesize that college graduates are more willing to sacrifice pay for pro-social impact. So employers' increased emphasis on pro-social job amenity will lower pay disproportionately for higher skill workers. We test this theory with data on the near-universe of online US job postings. We find that pro-social jobs which require a college degree post 10 percent lower wages than standard postings with exactly the same job requirements. Wages at pro-social, but low-education jobs, are no different from comparable regular jobs. This gap reduces the aggregate college wage premium by around 5 percent. We present a variety of supplementary evidence using resumes, survey data and an online experiment with hiring managers. The findings show that employers' embrace of pro-social messages can offset macro-level inequality.

Paper is Available to Meeting Registrants Only.

HR: Ties That Bind but Pay: The Consequences of Noncompete Agreements on Compensation

Author: **Kwan Seung Lee**, *U. of Houston, Victoria*

The author conducts an organizational-level analysis of how noncompete agreements (NCAs) and employee hiring paths may affect compensation. Instead of relying on a proxy measure of organizational NCA use, the author collected 423 instances of NCAs between Standard & Poor's 500 firms and their CEOs appointed during 1996-2015. Findings show that CEOs who signed an NCA receive more compensation than others without one and that among those who signed an NCA, external hires receive more compensation than internally promoted counterparts. More importantly, their compensation increase due to NCAs shows different patterns by hiring path. Compensation increases for NCA-signed external hires includes more cash but less equity compensation than those for internally promoted CEOs with an NCA. Revealing the separate and collective impacts of restrictive employment practices and employee careers on compensation, the author contributes to the literature on employee mobility and growing NCA research.

Strategy and Innovation Field Experiments: How to Design and Run Experiments with Firms

Strategy and Innovation Field Experiments

Organizer: **Hyunjin Kim**, *INSEAD*
Organizer: **Rembrand Michael Koning**, *Harvard Business School*
Speaker: **Charlotte Blank**, -
Speaker: **Eva Guinan**, *Harvard Medical School*
Speaker: **Karim R. Lakhani**, *Harvard U.*
Speaker: **Grace Lee**, *AES*
Speaker: **Lamar Pierce**, *Washington U. in St. Louis*
Speaker: **Nina Teng**, *London Business School*
Participant: **Jasjit Singh**, *INSEAD*

In this PDW, participants will receive practical insights on how to design field experiments with companies for strategy and innovation research. This 2.5-hour workshop will consist of two parts: (1) a 100-minute panel and Q&A session where 4 scholars in dialogue with 4 representatives from firms they have collaborated with successfully will share their experiences working together to design and run field experiments; (2) a 30-minute session where pre-registered PhD students and faculty will receive feedback on ideas for field experiments and advice on challenges that they are experiencing in collaborating with companies. By providing scholars with insights on how to collaborate on field experiments with firms and building connections between researchers who are interested in running experiments, this PDW aims to build and grow a community around field experimental research in strategy.

Scientific research has for a long time been the domain of professional scientists, often working within the confines of academic or corporate labs. However, there are increasing calls from funding agencies, policy makers, and civil society to involve “crowds” and “citizens” in the research process. The hope is that such involvement can increase the productivity of research as well as the relevance and societal adoption of the knowledge that is produced. A growing number of crowd science projects now operate in fields as diverse as astronomy, biology, history, medicine, and physics. Results have been published in top tier journals such as Nature, Science, and PNAS. However, most of these projects “use” crowds for empirical tasks such as collecting and coding data (e.g., Zooniverse), or for problem solving (e.g., Foldit). There are only few efforts to involve crowds in earlier, “agenda setting” stages of scientific research such as the identification of research questions, the selection of problems that should be investigated, or the development, evaluation and funding of research proposals. To gain a deeper understanding of this emerging topic, distinguished panel members including scholars of science and science policy, as well as experts on crowdsourcing and open innovation, organizers of real-world efforts to involve citizens in agenda setting and interested AoM members discuss why crowd involvement in setting research agendas is, so far, more limited, whether crowds should get more involved in setting research agendas and if so, how this could be organized, and what the boundary conditions for crowd involvement in setting research agendas are.

Workshop experience will be best if participants use a computer with a keyboard to engage in the collective brainwriting part of the symposium.

Using a 360-degree performance appraisal method to a cultivate high-performance learning culture
The 360-degree appraisal method in remote teaching

Facilitator: **Binhua Eva Huang**, *Wilfrid Laurier U.*
Facilitator: **Anita Boey**, *Wilfrid Laurier U.*

Remote teaching has posed a challenge for instructors to engage students and build a high-performance learning culture. In a face-to-face class, students' class engagement can be easily observed. In a remote class, it is often quite hard to tell whether students are fully engaged. This dynamic and interactive session will provide practical suggestions on how to build a high-performance culture and engage students using a 360-degree performance appraisal method in remote teaching. Through various activities of poll, chat, class discussion and breakout room, participants will learn how to: 1) set up different management roles in class; 2) design performance criteria; 3) conduct class manager evaluation, group leader evaluation, students self-evaluation, and instructor evaluation; 4) provide training to students in different roles; and 5) facilitate feedback and enhance communication between teachers and students. Participants will take away slides and samples of performance criteria, evaluation forms for the class manager, group leader, and students as well as some constructive feedback and communication examples between the instructor and students. These takeaways will help participants develop a tailored 360-degree appraisal approach which can enhance class engagement in a virtual class setting.

Entrepreneurship: A Strategic Approach

Entrepreneurial Strategy

Chair: **Erin L. Scott**, *Massachusetts Institute of Technology*

Chair: **Scott Stern**, *Massachusetts Institute of Technology*

Panelist: **Abhishek Nagaraj**, *U. of California, Berkeley*

Panelist: **Vera Rocha**, *Copenhagen Business School*

Panelist: **Michael J. Leiblein**, *Ohio State U.*

Panelist: **Joshua Gans**, *U. of Toronto*

Building on over two decades of award-winning research, more than a decade of classroom development, and working with hundreds of start-ups, the Entrepreneurial Strategy framework not only synthesizes but reconceptualizes and reorients practical and academic insights to focus squarely on the practical and grounded choices facing founding teams. These course materials offer students and entrepreneurs a practical and systematic approach for how to undertake the process of exploring and evaluating the core choices that entrepreneurs need to make as they translate their ideas into a reality. By putting founder choices center stage, Entrepreneurial Strategy offers a guide for entrepreneurs as they make the key decisions shaping their ventures, and a process for making choices in a way that enhances the potential for venture scalability and success. This TLC@AOM session will introduce a range of new tools and techniques, including tools for the process of entrepreneurial decision-making (Test Two Choose One) and a novel start-up strategy template (The Entrepreneurial Strategy Compass). After an introduction to the framework and course materials, leading entrepreneurship and strategy educators will share their perspectives on incorporating these resources into their courses – a junior faculty who successfully launched the full course as a first teaching experience, experienced scholars who supplemented their established entrepreneurship and innovation strategy courses to enhance their courses, and an academic leader within an entrepreneurship program who used these materials to guide seed-stage, science- and technology-based startups. A series of breakout tracks will provide ample opportunity for participants' engagement and discussion.

Short Bursts: Quick Pedagogical Interventions for In-class Team-Skill Development

Quick Interventions for In-class Team-skills

Presenter: **Kimberly Carlson**, *Virginia Tech*
Presenter: **Elizabeth Jamison**, *Virginia Tech*

Many classes within business majors rely on team projects to prepare students for their future careers where most of them will work in teams. However, few faculty members can afford to spend much, if any, time teaching their students teamwork skills when "teamwork skills" fall outside the course curriculum. Relatedly, students often report struggling in team projects and report negative experiences from working in teams, such as poor communication and uneven workloads across team members. This is important because critical team skills have been found to have positive effects on team performance (Hanson 2006, Mennenga 2012). In Spring semester 2019, we conducted a study to test if it was possible to increase positive outcomes in students' team-based skills and satisfaction by providing several short interventions delivered throughout a semester. We surveyed participants in sixteen sections of a capstone business course with seven participating faculty. Four of the sixteen sections required six short (ten minutes or less) interventions designed to encourage positive team behaviors. All sections completed a survey at the end of the semester. Results indicate that treatment groups had greater positive impact with their team experience than the control groups in team-based concepts of trust, conflict, accountability, and satisfaction when compared to non-treatment groups. In this teaching and learning session, we will share our short-burst interventions to demonstrate how to incorporate these small but meaningful tools to improve team dynamics and management.

OMT: One China: When Do Multinational Corporations Concede to Nationalistic Activism

Author: **Huidi Lu**, *Hong Kong U. of Science and Technology*
Author: **Kaixian Mao**, *Hong Kong U. of Science and Technology*
Author: **Lori Qingyuan Yue**, *Columbia Business School*

We extend King's (2008) corporate-context perspective that explains corporations' concessions to social movement activists into the international context in order to explain multinational corporations' concessions to nationalistic activists in their host countries. While King argues that both the market and nonmarket pressures in the corporate context make corporations more willing to concede to activists' requests, we suggest that the influence of nonmarket pressure can be divergent from that of market pressure because the former develops from a specific geopolitical context while the latter is universal. Conceding to nationalistic activism from an authoritarian country can be a liability to corporate reputation, and thus multinational corporations with good reputation or those facing non-market pressures from democratic countries are less likely to concede. We find support for our theory in a 2018 quasi-field experiment of the Global Fortune 500 firms that were targeted by Chinese nationalists for violating the "One China" principal in the regional indications on their websites. While targeted corporations that experience market performance declines are more likely to change their websites according to activists' requests, those with better reputation and those facing activism challenges from more democratic countries are less likely to do so.

OMT: Policies Without Plans? Sequential CSR Responses and the Role of Resources for Policy Implementation

Author: **Nikolas Rathert**, *Tilburg U.*
Author: **Georg Wernicke**, *HEC Paris*

Research on organizational responsiveness to stakeholder pressure has often assumed that firms are capable of intentionally selecting symbolic or substantive responses as such pressures occur. As such, decoupling – gaps between policy adoption and implementation – results from strategic considerations by managers. In this paper, we rethink these assumptions and develop a theory of sequential responses to stakeholder pressure. We show that sequential responses – whereby firms exhibit time gaps between policy adoption and their implementation and decoupling is temporary – are a common empirical occurrence. Focusing on the key role of organizational resources, we hypothesize that the likelihood of sequential responses and the timing of implementation depend on the availability of structural and attentional resources that enable firms to implement policies faster. We find considerable support for our hypotheses using a sample of US firms in the issue domain of consumer safety.

OMT: Getting Ahead of Yourself: How to Close the Gap Between What Organizations Say and Do

Author: **Marlon Fernandes Rodrigues Alves**, *Federal Institute of Education, Science and Technology of São Paulo*
Author: **Larissa Marchiori Pacheco**, *Northeastern U.*
Author: **Nahyun Kim**, *Ivey Business School*
Author: **Oana Branzei**, *Ivey Business School*
Author: **Adriana Cristina Ferreira Caldana**, *U. of Sao Paulo (FEA-RP/USP)*
Author: **Neusa Santos**, *PUCSP*

In response to stakeholder pressures, organizations make public commitments to CSR and often fail to keep their promises. Much of the research on this topic is focused on decoupling activities, originating from the gap between CSR communication and CSR implementation. Little is known regarding whether and when the discrepancy between the two might be an instrument to improve or create future CSR. Departing from the idea that firms must stretch their time-horizons to match the scale of environmental issues, we take advantage of a setting that resembles a natural experiment and investigate the organizational responses to the Sustainable Development Goals Compass in the energy sector, from 2014 to 2018. Based on a multi-case investigation, we applied computer-aided text analysis to track CSR communication and fuzzy-set qualitative comparative analysis to track CSR implementation. We find three configurations that close the gap between communication and implementation: tempered exploration, tempestuous exploration, and turbulent exploration. Also, we find that increased long-term orientation and decreased continuity in communication predicts successful CSR implementation. Overall, our study suggests that communication is a stronger driver of attentional engagement patterns and that integration is a key activity for CSR implementation. Boundary conditions and future research suggestions are further discussed.

Paper is NOT Available. Please contact the author(s).

OMT: A Longitudinal Analysis of Board of Director Busyness and Firms' Ambidextrous Orientation

Author: **Mariano L.M. Heyden**, *Monash Business School*
Author: **Ralf Wilden**, *Macquarie Business School*
Author: **Sebastian Fourne**, *Wilfrid Laurier U.*
Author: **Valentina V. Tarkovska**, *U. of Witten/Herdecke*
Author: **Lane Matthews**, *Queen's U. Belfast*

Although studies highlight the informational upside of a board's connections to its external environment, we develop the idea of "busyness" as an important boundary condition in directors' (in)ability to apply their external knowledge to assist a focal firm. We relate this notion to the extent to which strategy is characterized by an ambidextrous orientation, which research links positively to performance, yet is also a particularly complex strategic orientation that imposes greater information processing demands (i.e., knowledge exchange and integration) on directors. Our results from a longitudinal panel analysis of publicly listed UK firms provide novel and robust evidence that busy non-executives have a negative influence on the ambidextrous orientation of firms, whereas busy executive directors do not seem to exert an influence. We further find that busy women directors show an inverted U-shaped relation with ambidextrous orientation. We discuss implications for busy boards as a microfoundational antecedent of ambidextrous orientation, the hidden cost of high-quality boards, cascading influences of different types of directors on firms' ambidextrous orientation, and managing the external workloads of different directors.

Participant: **Svetlana S. Holt**, *Woodbury U.*
Participant: **Susan Brownlee**, -
Participant: **Adam Wood**, *Woodbury U.*
Participant: **Ayesha Sengupta**, *Ph.D. Candidate at Maharishi International U.*

The societal concerns of our times are not new, but have become painfully amplified in light of a global pandemic that changed everything we used to take for granted. As the managers of our lives, and in every setting where we exert a supervisory role, we now have an opportunity to elevate our awareness and induce constructive change. This PDW assumes that all participants to the annual AOM conference are managers, whether pertaining to their own lives or to supervisory positions of others. The PDW will explore in an interactive mode, three phenomena that impact human interactions, and therefore also managerial decisions: mental models, implicit biases, and spiritual reflections. The first two concepts are interrelated, and will be briefly discussed at the beginning of the session, after which some existing examples of these concepts will be discussed, followed by a process of deliberation on spiritual models toward improvement through greater mutual respect, acceptance, and inclusion.

Ecology of Digital Platforms and Open Source Communities

Digital Session Chair: **Maximilian Schreieck**, *The Wharton School, U. of Pennsylvania*

OCIS: **Building Blocks of Digital Platform Ecosystems and Their Implications for Inter-Platform Governance**

Author: **Maximilian Schreieck**, *The Wharton School, U. of Pennsylvania*
Author: **Manuel Wiesche**, *TU Dortmund U.*
Author: **Jan Ondrus**, *ESSEC Business School*
Author: **Helmut Kremer**, *TUM School of Management, Technische U. München*

Digital platform ecosystems—sets of organizational actors that form around one or more digital platforms—have become hugely successful. However, there is still confusion about what digital platform ecosystems are and how they can be governed successfully by their orchestrators. What seems to be clear is that the most successful digital platform ecosystems such as the ones driven by Google, Apple, and Tencent include many digital platforms and not just one. To better understand digital platform ecosystems, we suggest breaking them down into three building blocks: (1) exchange platforms, (2) innovation platforms, and (3) community platforms. While only one of those could be enough to form a digital platform ecosystem, most successful digital platform ecosystems combine all three. This has implications for the orchestrator's approach to platform governance, which no longer addresses one digital platform but needs to consider the various digital platforms—a phenomenon we term inter-platform governance. By using the example of Tencent, we illustrate how breaking down the overall digital platform ecosystem into a system of inter-linked digital platforms helps to get a better understanding of platform governance.

OCIS: **Understanding the Reactive Practices of Third-party Developers**

Author: **Jiali Qi**, *Stevens Institute of Technology*
Author: **Aron Lindberg**, *Stevens Institute of Technology*

Increasingly, building software systems by using third-party modules is recognized as a crucial success factor for the software industry. Much research looks at how software platforms should be configured to stimulate the development of third-party software. Yet, there is a lack of research on third-party software developers' actual activities in relation to the platform ecosystem they work within. As a result, our understanding of the platform-centric ecosystem is limited. This paper aims to understand the nature of third-party software developers' work by conducting a systematic investigation of this workforce from a practice perspective. In particular, we pay close attention to third-party software developers' behavioral responses towards platform changes. Through a case study, we identify four reactive practices enacted by third-party developers: recognizing, processing, adapting, and influencing. We generalize the observation into a model of the reactive mechanism. The study contributes to the theorizing of platform-centric ecosystems by highlighting the critical role of third-party developers.

OCIS: **Network Effects in Public Blockchain Ecosystems: A Layer-Subsystem Perspective**

Author: **Yukun Yang**, *Georgia State U.*
Author: **Likoebe Maruping**, *Georgia State U.*

Existing research on platform-enabled ecosystems has placed a great deal of emphasis on platforms with centralized forms of authority while paying less attention to ones with highly decentralized forms. To unfold the functioning of decentralized platform-enabled ecosystems, we introduce layer-subsystems as an important structure of the public blockchain ecosystem. Informed by the theoretical perspective of value co-creation, we theorize how activities within each subsystem react to each other with distinct value co-creation processes and how subsystems interact on the same layer or across different layers. We collect weekly data of a leading public blockchain ecosystem and use a time-series analysis to examine our hypotheses. Our findings reveal that the network effects in the public blockchain ecosystem are unbalanced (mutual vs. unidirectional) and asymmetric (short-term vs. long-term). We also find that the within-subsystem effects tend to show immediately, while the between-subsystem across layers usually take time to manifest. We discuss both the theoretical and practical implications of these findings.

Paper is Available to Meeting Registrants Only.

OCIS: **Centralized Vs. Distributed Governance of Platform Ecosystems**

Author: **Zhen Zhu**, *China U. of Geosciences (Wuhan)*
Author: **Xinlin Tang**, *Florida State U.*
Author: **Ping Wang**, *U. of Maryland*

Platform-based ecosystems attract diverse independent actors to pool their creativity and generate complementary innovations that may bring more value to the users than they get from conventional, vertically integrated organizations. Yet, the generativity of platform ecosystems may also increase the variance in product quality, leading to user dissatisfaction and poor sales. This so-called "generativity tension," between innovation and quality, may be eased by effective governance. The literature on ecosystem governance focuses primarily on centralized control by platform owners. We contend that control may be distributed so ecosystem participants can also help control product quality. By analyzing international package tours at Trip.com, we have found that both centralized control (e.g., platform-assessed quality ratings) and distributed control (e.g., customer-generated quality ratings) can be effective in improving sales. Further analysis indicates that centralized control complements distributed control and their relative effectiveness reverses when the volume of customer reviews changes. This finding demonstrates that the utility of control in platform ecosystem governance lies in not just the intensity but also the spread of control among platform owner and ecosystem participants. Hence, the study expands the concept of distributed governance from its original focus on decision rights partitioning to the realm of control portfolio configuration, where managers can pursue opportunities to foster innovations without compromising quality in platform ecosystems.

In Open Source Software (OSS) communities, coordination happens based on artifact-mediated interactions among geographically dispersed individuals. Prior literature on OSS and software evolution argues that the coordination structures that emerge from dyadic coordination relationships may emerge from endogenous non-random relational mechanisms. The objective of this research is to understand whether and how relational endogenous mechanisms predict the formation of coordination relationships in evolving networks of software developers. We implemented an Exponential Random Graph Model (p^*) and studied the significance of antecedent factors of coordination patterns among software developers. Our empirical analysis encompasses five years of development activity between 2012 and 2016 involving 619 developers in Nova, one of the oldest packages in OpenStack. In contrast to other network formation process, we find evidence of non-linear rather than linear preferential attachment among software developers. Knowledge similarity of two developers also has a significantly positive effect on the formation of coordination relationships. Both mechanisms unfold differently over time: While non-linear preferential attachment explains the formation of coordination relationships across different evolutionary periods, does knowledge similarity only sustain its effect in the early stages of OSS coordination. Our findings contribute to the scholarship on OSS and online communities more broadly.

Getting Managers Better Data to Help Them Manage: A Workshop on Scale Development and Validation *Scale Development Workshop*

Organizer: **Stephanie L. Castro**, *Florida Atlantic U.*
Panelist: **Claudia Cogliser**, *Texas Tech U.*
Panelist: **Lisa Schurer Lambert**, *Oklahoma State U.*
Panelist: **Larry J. Williams**, *Texas Tech U.*

In all scientific fields, accurate measurement of the constructs we study is critical to the advancement of knowledge. Over the years, multiple reviews have criticized research in management for a general lack of attention to construct measurement validity, with particular criticism of survey measurement scales. We believe this criticism is accurate, and hope to improve the state of our field by providing researchers a simple, psychometrically-sound programmatic approach to help them establish construct validity for new scales (and evaluate the validity of existing scales). The first half of the session will focus on establishing a general understanding of construct validity as well as best practice approaches to evaluating construct validity. The second half of the session will be “hands-on”, conducted in small break-out groups, providing participants an opportunity to apply this information and work on their own measures as well as the ability to pose any questions they may have to facilitators.

Discussions that Build Community, not just a Letter Grade - How to Stop being 'Darth Grader'

Discussions that Build Community

Presenter: **Tawnya Means**, *U. of Nebraska, Lincoln*
Presenter: **Brian Verdine**, *Yellowdig*

Creating and fostering a dynamic learning environment in management curricula is of paramount importance in today's management education. Unlike other business disciplines, management's multidisciplinary nature beseeches instructors to engage students on a variety of core competencies, all while trying to connect what is happening "in the text" to what the students are seeing from the "real world." Consequently, "discussion" becomes a crucial component of such courses. Whether it be via the LMS discussion boards, external tools or asynchronous platforms, and/or virtual synchronous sessions, many of the widely adopted practices are still leaving faculty looking for more opportunities to engage with students, especially ways to build social presence and encourage more student to student interaction. In this interactive session, the lead presenter will share experiences from teaching undergraduate and graduate management courses to solve the challenges of facilitating a community of conversations without micromanaging students. The resulting data from these courses (and other courses) will be used to highlight the differences in student behavior in different discussion paradigms. The session is especially relevant for any professor who finds they are spending too much time grading weekly discussions, for faculty teaching in courses who are struggling to engage with learners at-scale or at a distance, or for administrators exploring options to enhance online, remote, blended, and technology-enhanced synchronous and asynchronous courses.

**Introducing Failure As A Deliberate Instruction Design Strategy For
Enhanced Learning Outcomes**
Failure As A Deliberate Strategy For learning

Participant: **Sandeep Rambhatla**, *Amrita School of Business*

Participant: **Deepak Gupta**, *Amrita School of Business, Amrita Vishwa Vidyapeetham*

Engaging the 21st-century learner and measuring their competency requires an approach that is akin to the corporate world's practices. Traditional methods of direct assessments only measure what a student has learnt or not learnt and typically tap students recall or utmost basic demonstration of skills. They fail to capture the students learning progress along the epistemic frame of a profession. While in startups and large organisations failure is seen as an important ingredient for learning and success, in academia it generally has a negative connotation. I would like therefore showcase the possibilities of introducing failure as a deliberate instructional design strategy in classroom settings by designing epistemic games. The session would be a hands-on workshop, where participants will get an idea of designing a simple epistemic game, understand design considerations, and process of embedding failure opportunities for measuring learning outcomes. Participants will get an end to end of view of translating a managerial problem into an epistemic game that allows for failure and measures learning outcome.

The Global Experience Initiative 
The Global Experience Initiative

Participant: **Iris Berdrow**, *Bentley U.*

This presentation describes a comprehensive curriculum design for global experiences that can be offered across all programs to all students. The Global Experience Initiative is a comprehensive program that supports faculty and students in offering and completing global experiences in a variety of modalities. The Global Experience Initiative incorporates the following components: Three student requirements: 1. A Culture in Business & Society Workshop 2. One of 5 suggested Global Experience Options 3. An End of Program Reflection Module Four supporting elements: 1. Global Experience Coaches for students on Study Abroad 2. Global Experience Workshop for faculty running Faculty Led Programs and Modern Languages Experiences 3. Program Coordinator for International Service Learning Experiences 4. End of Program Reflection coordinator This session will present the mandate for designing transformational learning experiences, describe each component of this initiative, and allow participants to consider how this might be useful in their own institutions.

An Experiential Learning Group Project for Virtual or In-person HRM Courses
HRM Group Project

Presenter: **Jennifer Komar**, *Wilfrid Laurier U.*
Presenter: **Shawn G. Komar**, *Wilfrid Laurier U.*
Presenter: **Samantha Hancock**, *Wilfrid Laurier U.*

In this session, the authors will present an experiential learning group project primarily designed for introductory Human Resource Management (HRM) courses, but which can be adapted for specialized HRM courses. The project facilitates “hands-on” learning of the core concepts of an intro to HRM course (e.g., recruitment, selection, and performance appraisal) through an engaging and dynamic term-long process that sees students design and execute their own mini HRM system within the context of the classroom environment. The authors will describe the format of the project activities, reflection paper, and feedback needed to facilitate a successful experience for students both remotely and in-person. Key learning outcomes of the project include understanding the inter-connected nature of human resource activities, appreciation for the challenges involved in designing effective human resource practices that are valid and legally defensible, and practice of competencies required of human resource professionals. Session participants will take away a copy of the materials needed to facilitate the project and a rubric for grading the reflection paper.

Firm Identity, Values, and Climate

Digital Session Chair: **Katie Sinclair**, *U. of Dundee*

HR: Internal Employer Branding in Global Organisations: An Identity Perspective

Author: **Katie Sinclair**, *U. of Dundee*

Author: **Graeme Martin**, *U. of Dundee*

Author: **Stacey Bushfield**, *Edinburgh Napier U.*

An increasing number of organizations are turning to employer branding to attract and recruit potential applicants, as well as engage and retain existing employees. But what we know about the impact of employer brands on current employees and their organizational experience is limited. This study expands both theoretical and practical understandings of the employer brand concept by focusing on the experience of current employees. Through a qualitative case study situated in a global Medical Technology organization, our findings show how existing employees socially construct employer brands through their personal identity motives and identity work, leading to collective organizational identity work. By developing a process model, we found that industry identity can cause organizational members to form divergent views towards their employing organization as a place to work. We explore causes for these differences, and the process by which individuals experience employer brands through their personal, social and collective identity membership.

HR: Work Values in 21st Century Europe: Impact of Age and Generation

Author: **Iveta Ludviga**, *RISEBA U. of Business Arts and Technologies*

Author: **Joanna Niezurawska**, *WSB U. in Torun*

Author: **Nelson Duarte**, *Porto Politechnic*

Author: **Carla Pereira**, *CIICESI, ESTG, Politécnico do Porto*

Author: **Inese Sluka**, *RISEBA U. of Business Arts and Technologies*

The nature of work has changed over the last decades and a new generation of workers have entered the workplace. Understanding individuals' work values would help organizations to gain insight into what motivates their workers and create work environments that will enable their employees to be more productive. We aim to update the Minnesota Importance Questionnaire by adding new items related to the contemporary work values and to test it in the selected European countries Poland, Latvia, and Portugal (n=1195). Exploratory factor analysis found that seven workplace-related value dimensions: achievement, supervision, comfort, altruism, independence, excitement, and technologies. Our results show that the traditional work-related values of the four studied generations are similar. Only three out of seven values are impacted by generation - Independence is more important for older generations, while Excitement and Technologies are more important for younger generations.

HR: "U-Turn not a Road-bump": Adaption and Validation of Group-level Safety Climate Scale

Author: **Muhammad Zeeshan Mirza**, *National U. of Sciences & Technology*

Author: **Mumtaz Ali Memon**, *NUST Business School National U. of Sciences & Technology*

Author: **Muhammad Umair Javaid**, *Lahore Garrison U.*

Author: **Masood Raza**, *National U. of Sciences & Technology*

Zohar's (2000) scale of group-level safety-climate has extensively been employed in a number of studies. However, contemporary literature raises serious questions on the inclusion of negatively worded items in a positive construct like safety climate. Despite these reservations, limited efforts have been made to address such a shortcoming. The present study aims to adapt and empirically validate Zohar's group level safety climate scale by converting the five negatively worded items into a positive tenner. First, an exploratory factor analysis (EFA) was conducted using one hundred thirty-five samples (135). The results showed good reliability of the revised scale. Subsequently, the revised scale which was also translated in Malay was then used in a time-lagged study on safety climate (T1) and safety behaviors (T2) with a sample of one hundred and seventy-three (173) production workers from six (6) oil and gas organizations operating in Malaysia. Partial Least Squares Structural Equation Modeling was used for data analysis. The results showed strong support for our hypotheses and confirmed the authenticity of our revised safety climate scale. The limitations of the study and future research directions are also discussed.

HR: Employer Attractiveness from an employee perspective: A systematic literature review

Author: **Anke Dassler**, *Vrije U. Amsterdam*

Author: **Evgenia Lysova**, *Vrije U. Amsterdam*

Author: **Svetlana Khapova**, *Vrije U. Amsterdam*

Author: **Konstantin Korotov**, *ESMT European School of Management and Technology*

There is a growing interest in the concept of employer attractiveness. Yet, research appears to be unsystematic in how it conceptualizes and studies the phenomenon. In this paper, we argue that thus far most research on employer attractiveness has combined perspectives about employer attractiveness of both prospective employees and for exiting employees, making there-fore little differentiation with a reference to the question: For whom is the employer attractive? In this paper, we argue that this is problematic considering existing evidence signaling that there are differences in the employer attractiveness attributes between the two groups. With this paper, we aim to extend the literature on employer attractiveness by shifting the conversation to the perceptions of employees. We systematically review 48 articles on employer attractiveness from the employee perspective, and offer a model, capturing Inputs, Mediators and Outputs (IMO) of the concept. The paper concludes with a discussion of what our findings mean for future research and practice.

Women academics face challenging circumstances in their professional lives. Relative to their male colleagues, they can expect longer review times (Hengel, 2016), less credit for their research contributions when working in a team (Sarsons, 2017), biased evaluations of their teaching from students (Mengel, et al., 2017; Boring, et al., 2016), and cultures that are more likely to frame men through a professional lens and women through personal and physical lenses (Wu, 2017; Wolfers, 2017; Rivera, 2017). In the face of this rough terrain facing women in academia, it can be easy to lose sight of the institutionalized barriers to success as a women academic and personalize negative experiences. Through this PDW, we offer a three-pronged approach to helping women academics and allies broaden their sight to develop and grow a feeling of community, support, and self-efficacy. This approach has proven effective in overcoming barriers that prevent clear understanding of bias in business schools: barriers of isolation, ignorance, shame, and silence. This PDW builds off the success of the past three years of “Nevertheless she persisted” PDWs to bring focus on how we manage our own careers. Further, many speakers and facilitators will reflect on how success as a woman academic informs managerial practice and vice versa.

TIM: Innovation under Regulatory Uncertainty and the Role of Expectations: Evidence from the Drone Market

Author: **Virginia Herbst**, *Technical U. of Munich*
Author: **Joachim Henkel**, *Technical U. of Munich*

The regulatory uncertainty that characterizes many nascent markets is known to affect innovation activities. However, what we observe in studying the U.S. commercial drone industry, a sector that has recently seen the introduction of new regulations and that shows considerable innovation activity, contradicts existing theory. By combining quantitative analyses of 727 firms in the U.S. drone market with qualitative insights from interviews, we provide evidence that innovative startups enter the market despite uncertainty while established firms are hesitant to innovate, and that upon resolution of uncertainty the locus of innovative activity shifts to established firms that frequently acquire startups. We argue that firm type – startup vs. established firm – moderates the expectations that firms build in phases of uncertainty regarding future regulation, and how firms act on their expectations.

TIM: Institutionalizing Outer Space: A sociotechnical explication of the Comsat-Intelsat actor-network

Author: **Robert Anthony Edgell**, *State U. of New York Polytechnic Institute*
Author: **Jeffrey Olney**, *Oregon Health and Science U.*

Humans once again stand poised to institutionally transcend possible harmful economic and social stagnation arising from earthbound limitations by becoming a space faring species. The resurgent public interest in the economic and cultural potential of outer space reflects the convergence of actants such as advancements in technology, deepening public interest in expanding human presence, and concern about the earth's sustainability. Yet there exists limited institutional research about this important phenomenon. The aim of our sociotechnical research is to explicate critical institutionalizing effects of the historic Comsat actor-network since it was the first-ever attempt by humans to commercialize outer space. We use actor network theory (ANT) coupled with discourse analysis as our method. Our findings suggest that the Comsat-Intelsat network is a positive deviant case in that it is a unique public-private network which successfully initiates an institutional pathway to outer space. Our work provides a robust typology of institutions, syndicates, and actors involved in space commercialization. We highlight several Insights about various translation phases, actor relations, and assembling challenges. Moreover, we delineate and describe a framework of fourteen controversies then construct an anatomy of institutional work with five discourse topics and embedded narrative themes: Commercialization, stabilization, prognostication, systematization, and universalization. We theorize that successful space commercialization initiatives require all five discourses to be robustly and concurrently activated across multi-constituent heterogenous actor-networks.

TIM: From Early Curiosity to Space Wide Web: Emergence of the Small Satellite Innovation Ecosystem

Author: **Yue Song**, *Auburn U.*
Author: **Devi R. Gnyawali**, *Virginia Tech*
Author: **Lihong Qian**, *Portland State U.*

Much of the existing literature on ecosystems has focused on established ecosystems, but we know little about how an ecosystem actually emerges and evolves in the first place. We layout four stages of ecosystem development, integrate two critical ecosystem concepts of multilateral interdependence and non-generic complementarity, and delineate a typical trajectory along which multilateral non-generic complementarity develops across the stages. We develop theoretical insights on how the gradual process of multilateral non-generic complementarity development enables materialization of a coherent, customer-centric, economic value proposition in an innovation ecosystem. To illustrate our theoretical framework, we conduct a longitudinal case study of the modern small satellite innovation ecosystem from its inception to now. Our analysis uncovers the dynamic process of how small satellites evolved from a seed innovation with unclear value proposition to become an innovation ecosystem that delivers strong modern space capabilities. Our paper provides deeper insight on ecosystem emergence and evolution and has important implications for ecosystem strategizing by firms both individually and collectively.

**Implementing Free/Open Educational Resources into
Management Education**
Implementing Free/Open Educational Resources

Presenter: **Anthony Alan Pina**, *Sullivan U.*
Presenter: **Kenneth Allen Moran**, *Sullivan U.*

The rising cost of higher education presents challenges to the success of many students—particularly students of color and those from economically disadvantaged backgrounds. One strategy that is proving to be successful is the incorporation of free/open educational resources (OER) in place of expensive textbooks and add-on publisher resources. Emerging research within management education, and many other disciplines, indicates that the use of OER is associated with positive outcomes for students and faculty. Notwithstanding its successes, challenges and barriers to OER implementation remain. In this interactive session, the presenters will share research and best practices and demonstrations to promote the use of OER in management education. Participants will participate in a hands-on activity to help them find relevant OER for their own use. Participants will leave with over 50 sources for free/open educational resources that can be used to enhance education at their institutions.

Teaching Generation Z in a Post-Pandemic World   
Gen Z in a Post-Pandemic World

Participant: **Fran McKee-Ryan**, *U. of Nevada, Reno*

According to the Pew Center, “Generation Z” (Gen Z) includes individuals born in or after 1997. The typical college-age student today belongs to Gen Z, a generation defined by 9-11, the proliferation of technology and social media, political and racial unrest, and COVID-19. As plans emerge for post-pandemic online and in-person instruction, a return to campus life, and shifting economic and career realities, however, professors and administrators must identify the unique needs of Generation-Z students and formulate focused strategies to ensure their longer term education and career success. This interactive session is designed to 1) present research on the unique characteristics of Gen Z students and to explore the critical role of resilience in Gen Z students, 2) to discuss and identify best practices for Curriculum & Teaching in the post-pandemic world, and 3) to summarize key trends and highlight innovative practices for Career Development & Placement of Gen Z students.

Teaching Ideation and Developing a Pitch in a Virtual Setting

Teaching Ideation in a Virtual Setting

Presenter: **Tammi Redd**, *Ramapo College of New Jersey*

This session will demonstrate the teaching technologies used in a virtual classroom for an ideation and innovation course. Developing oral communication skills, idea development, and how to organize an online platform for delivering a team “pitch” for the entrepreneurial classroom will be discussed. Participants will experience an abbreviated version of the ideation process, learn how to give, receive, and store feedback as data, as well as discuss techniques for analyzing the feedback received. By creating sales pitches as a team, participants will learn how incorporating an iterative presentation process which can be beneficial for both idea development and oral communication skills development. Qualitative data from two semesters in the form of student feedback and comments will be shared as well as sample student assignments.

**Constructive Deconstruction: Engaging Productive
Discourses on Gender in Management Education**
Discourses on Gender in Management Education

Participant: **Julie Ellen Benesh**, *Chicago School of Professional Psychology*

Established and legitimate complexities of management and gender are reflected in practical problems of how to be an effective manager or report and pedagogical problems of how to provide management education in a way that is truly gender inclusive when organizations may themselves lack this sophistication. This workshop begins to deconstruct leadership as the human side of management, whether dependent or independent of gender, as well as to make gender-based perceptions more conscious and expose them to critical reflection and inquiry. It uses a dynamic, sense-making process that incorporates theoretical and empirical data with experiential learning that models a process that management educators can use in the classroom. Using a series of user-friendly two by two-grids, and a circumplex, augmented with popular media and simple reflective exercises this workshop demystifies conscious and unconscious, social and personal issues related to gender to create a map of a complex and dynamic terrain without oversimplifying or diluting it.

A Positive and Engaged Workplace

Digital Session Chair: **Ayushi Shukla**, -

HR: Developing Work Passion: an interactive study 

Author: **Ayushi Shukla**, -

The purpose of this study is to understand the personal and environmental factors that influence the development of employee work passion. Self-determination theory is used to study the antecedents of employee work passion in the presence of servant leadership. Specifically, this paper demonstrates that servant leadership moderates the relationship between conscientiousness and work passion and the relationship between strengths use and work passion. Both these relationships are also hypothesized to be mediated by employee's work self-efficacy. Data collected from 120 employees of an Indian manufacturing company is used and tested using Stata. This study contributes to the literature in several ways. First, it adds to the literature by establishing a Big-5 personality trait as an antecedent of work passion. Second, this is the first study that examines the influence of an employee-focused leadership style on work passion. Third, it answers calls made by scholars to study how personal and environmental factors together influence work passion.

HR: Integrating Humanity into Human Resource Practices: Scale Development and Construct Validation

Author: **Qing Qu**, *Tsinghua U.*

Author: **Ping Ping Fu**, *U. of Nottingham Ningbo Chiina*

Author: **Qianqian Hu**, *Tsinghua SEM*

The purpose of this paper is to promote humanity as a key component of human resource practices to fill the gap in the literature and to meet the growing trend to soften human resource practices in the real world. We conducted three studies to explore humanistic human resource practices in companies, develop the full scale of "high humanity human resource practices" (HHHRP) and finally empirically validate the construct. The results show support for the 5-dimension HHHRP scale used as an antecedent of employee well-being and organizational citizenship behavior (OCB) through the mediation of perceived meaningfulness of work. Scale reliability and evidence for construct validity are reported. Implications for future research and practices are also provided.

HR: Adapting to Organizational Change: The Role of Positive Affect Change 

Author: **Zhonghao Wang**, *Michigan State U.*

Author: **Jason Huang**, *Michigan State U.*

Author: **Xin-an Zhang**, *Shanghai Jiao Tong U.*

Author: **Ke Zhou**, *Shanghai Jiao Tong U.*

Job affect can influence work behaviors, especially in the context of organizational change that is characterized by challenges and uncertainties. As employees navigate the upcoming changes, they may experience changes of affective states in the adaptation process. Based on affective events theory (Weiss & Cropanzano, 1996) and broaden-and-build theory of positive emotions (Fredrickson, 1998, 2001), the present study investigates the role of positive affect change, beyond positive affect level, in providing additional resources to help employees adapt to organizational change initiatives. Using seven waves of monthly longitudinal data collected from 110 full-time sales employees at a Chinese regional bank that was undergoing reforms of its incentive structure, we found that increase in positive affect over 5 months was positively related to employee adaptive performance and negatively related to post-change counterproductive work behavior. Moreover, the joint effect of employee's task-contingent conscientiousness and intrinsic motivation predicted interindividual difference in intraindividual positive affect change, and their indirect effect on employee behavioral outcomes was mediated by positive affect change. The findings provide initial evidence of positive affect change in facilitating the process of employee adaptation.

HR: Cultivating Thriving Environments: Exploring Self-Worth as a Key to Hiring and Developing Employees  

Author: **Kristen Thornton**, *Zillow Group, Inc*

Author: **Shannon Fletcher**, *Northwest U.*

The purpose of this paper is to present the results of a qualitative study with 17 senior leaders across eight industries exploring which employee behaviors contribute to a thriving work environment (i.e., one that is healthy and productive). The paper outlines six propositions based on prior literature and then examines how the exploratory study aligns and diverges from previous research. Fourteen behaviors emerged that described thriving employees (e.g., Engage the Mess, Play, and Contextual Awareness) and 13 behaviors were coded for non-thriving or toxic behavior (e.g., Manipulation, Entitled, and Isolated). The results of this study seek to close the gap between practical needs of companies to build a strong workforce and tangible behaviors that can be identified and developed.

HR: In Search of an Ideal Modern Knowledge Worker

Author: **Ilona Toth**, *LUT U.*

Author: **Sanna Heinänen**, *LUT U., School of Business and Management*

Author: **Laura Olkkonen**, *LUT U., School of Business and Management*

What is the role of personal resources and challenging work role demands in work engagement development? We address this question through a mixed-methods research design using two studies. Both studies were conducted among highly specialized knowledge workers. Based on a literature review and a qualitative interview study (Study 1), we identified two personal resources and four challenging work role demands associated with work engagement development. In a consequent quantitative survey (Study 2), we developed and tested a theoretical model proposing that personal resources are positively related to work engagement development and that challenging work role demands moderate these relationships. We used hierarchical cluster analysis to divide our respondents (N = 391) into three work role clusters based on creativity, curiosity, flexibility, and self-reported initiative. Analysis of covariance was applied for testing the influence of entrepreneurial passion and life satisfaction on work engagement with the interaction of work role clusters. Our results confirmed that both personal resources and challenging work role demands are drivers of work engagement and that the drivers of work engagement significantly differ among individual knowledge workers.

**Caught in the Middle: Understanding the Spiritual and Religious
Tensions Facing the Middle Manager**
Spiritual/Religious Tensions for Middle Managers

Organizer: **Christina Walker**, *Lenoir-Rhyne U.*
Organizer: **Susan Brownlee**, -
Organizer: **Sharlene Buszka**, *Daemen College*
Panelist: **Joan F. Marques**, *Woodbury U.*
Panelist: **Tim Ewest**, *Houston Baptist U.*

Middle managers occupy an essential position in organizations and have a profound impact on an organization's success. From a strategic perspective, middle managers often must hold organizational tensions. For example, they are responsible for implementing broad strategic plans developed by senior leaders while at the same time ensuring junior staff are accomplishing their tasks and feeling fulfilled in their roles. Research has shown a positive connection between workplace spirituality and employee engagement, employee health, and innovation. However, this may not be good news for middle managers who have to add the task of supporting workplace spirituality efforts to an already full plate of tension filled management. In light of the Academy of Management theme "Bringing the Manager Back in Management," we have gathered a panel to explore how academics and practitioners can respond with research and action to support middle managers as they hold this middle space.

Platforms

Digital Session Chair: **Johannes Meuer**, *ETH Zürich*

TIM: Beyond digital platforms: Exploring the design and competitive dynamics of cyber-physical platforms   

Author: **Johannes Meuer**, *ETH Zürich*
Author: **Giacomo Melegati**, *ETH Zürich*
Author: **Stefano Goiro**, *Enel X e-city*

Interest in platforms has rapidly proliferated during the last decade. Yet, research has thus far exclusively focused on purely digital platforms and has failed to offer insights into so-called cyber-physical platform that integrate the digital space with the physical world. In this paper, we introduce the notion of cyber-physical platforms and contribute to research on platforms by asking what cyber-physical platforms are. Additionally, through an in-depth case study of Yourban, the Enel X cyber-physical platform for municipalities and public administrations to integrate and manage smart city services, we explore how their essential features influence the technological architecture, competitive dynamics and ecosystem management of cyber-physical platforms. Our findings show how the physical components pose a significant entry barrier, protecting incumbents while limiting the growth potential of cyber-physical platforms. We also explain why density rather than network effects appear to be more important for cyber-physical platforms than for digital platforms and why platform openness is a necessity rather than a choice for platform providers. Together, our article provides contributions to research on platforms and outlines possible directions for future research.

TIM: Local News, UGC and Professionals: Evidence from Citizen Journalism 

Author: **Jörg Claussen**, *LMU Munich & Copenhagen Business School*
Author: **Pedro Ferreira**, *Heinz College - Carnegie Mellon U.*
Author: **Tom Grad**, *Copenhagen Business School*
Author: **Ananya Sen**, *Heinz College - Carnegie Mellon U.*

Today many platforms host user generated content (UGC) and content by professionals side-by-side. However, their behavior is mostly studied in isolation. In this paper we study the spillover effects from UGC on content from professionals in the context of the news industry. We use an exogenous shock to the supply of user generated content to study spillover effects on the output of professionals as well as the implications for the business model of online platforms. Using data from an online news platform, we find that in response to the reduction in supply of user generated news, which mainly is driven by reduced output from experienced users, inexperienced professionals significantly increase their output. However, we find a decrease in overall content on the platform which is especially pronounced for local news. We further show that this likely has detrimental effects on the business model of the online platform with a decrease in viewership and articles as well as an increase in the number of paid professionals. Thus, our work contributes to the literature of user generated content and online platforms as well as the literature on local news.

TIM: Peer-to-Peer Platforms and the Substitution of Incumbents' Complementary Assets

Author: **Tim Meyer**, *LMU Munich School of Management*
Author: **Erdem Yilmaz**, *Faculty of Business and Economics (HEC Lausanne), U. of Lausanne*

In this paper, we study how the entry of peer-to-peer platforms affects incumbents' performance by changing the way incumbents transact with consumers. We argue that the increasing supply of potential substitutes for incumbents' core assets on peer-to-peer platforms results in increasing competitive pressure, which pushes incumbents to find new ways to promote their own core assets. At the same time, with the entry of peer-to-peer platforms, more offerings are available for consumers on digital platforms, and their incentives to look for opportunities to transact through digital platforms increase. Together, these two effects result in a shift towards more business between incumbents and consumers being done on digital platforms. This, in turn, poses a major challenge for incumbents because digital platforms act as a substitute for the complementary downstream assets that many incumbents have traditionally benefited from to capture (and protect) value in the market. Using data from the hotel industry in the state of Texas, we show that peer-to-peer do not only affect incumbents operating in the same market segment, but also those whose complementary downstream assets will become less valuable as more business is shifted to digital platforms.

TIM: Limits to Decentralized Modular Evolution in Large Digitally Enabled Systems  

Author: **Robert C. Wood**, *San Jose State U.*
Author: **Joel West**, *Keck Graduate Institute*

Recent research on digitally enabled systems has emphasized modular approaches that lead to decentralized innovation. Yet there are reasons to believe that some digital systems cannot evolve optimally under fully decentralized modular architectures, and important opportunities for value creation may exist through building of more centralized systems. We explore the nature of such opportunity by examining the development of systems for cancer radiation therapy, where ability to cure with safety improved dramatically as a leading firm developed a more comprehensive system, taking a considerable degree of control over modular evolution. At least three characteristics of the radiation therapy industry could have slowed advance if modular evolution had not been more centrally directed: first, unmanaged, incompletely specified interfaces coupled with rapid change and the need for increasing doses of dangerous radiation could have caused injuries; second, the inability of players with key capabilities to develop their products and expand adequately could have prevented them from providing full value as independent firms, and third, difficulties in providing comprehensive customer support for a highly modularized system could have reduced customer benefits. We conclude that in today's digital economy, opportunities for firms to achieve strong performance through creation of centrally directed modular systems is likely to be significant.

Qualitative Studies of Cognition and Affect

Digital Session Chair: **Koustab Ghosh**, *Indian Institute of Management, Rohtak*

OB: Slackwire While Cleaning the Dirt: How Emotional Caregivers “Make Sense” in Emotional Dirty Work   

Author: **Koustab Ghosh**, *Indian Institute of Management, Rohtak*
Author: **Ayesha Irum**, *Indian Institute of Management, Rohtak*

Though we have witnessed a growing interest in emotional dirty work, little is known about how occupational agents work and construe meaning out of emotional labor mandated by their occupation. The purpose of this study is to examine how the emotional caregivers as the agents of cleaning emotional dirt experience ambivalence related to occupation and make a sense out of it. Undertaking a qualitative inquiry through twenty-one in-depth interviews of counselors, we find that the agents' ambivalence towards the occupation is managed through both individual and collective sensemaking processes which are performed at the personal, occupational-group, and social level respectively. This work as the first of its kind converges the literature on ambivalence, sensemaking and emotional dirt. Additionally, we demonstrate through our study that emotional dirty occupations represent a unique interface between the occupational agents' emotional dirt and emotional labor.

OB: Consent and dissent among platform-based workers: How symbolism steers Uber drivers' motivation   

Author: **Corentin Curchod**, *U. of Edinburgh*
Author: **Stephanie Giamporcaro**, *Nottingham Trent U.*
Author: **George Kuk**, *Nottingham Trent U.*

Online platforms have opened up new opportunities for workers who strive to become 'their own boss', while creating new constraints and difficult working environments that fall outside traditional, more secure employment relationships. This article investigates the mechanisms through which workers on online platforms consent to their working conditions, and the mechanisms that motivate their dissent. Interviews with 58 actors linked to the expansion of Uber in Cape Town, South Africa, revealed that platforms are loaded with meaningful symbols, and that symbolism plays a great role in the motivation of platform workers. Our findings contribute new theoretical insights about how platforms, by enacting several interactions simultaneously, convey meanings and emotions that either coalesce into workers' positive perception of their working conditions, or collapse into negative behavior and demotivation.

OB: A Moral Perspective of Performance Pressure: The Role of Moral Decoupling 

Author: **Julie N.Y. Zhu**, *U. of Macau*
Author: **Long Wai Lam**, *U. of Macau*
Author: **Yan Liu**, *Wuhan U.*
Author: **Wenqi Jiang**, *Wuhan U.*

Performance pressure is becoming prevalent among employees. Previous studies have yielded important insights about how performance pressure influences employees. However, they did not take moral mechanisms into account. Our research attempts to extend the understanding of performance pressure from a moral perspective. Specifically, we hypothesize that performance pressure is related to employee expediency via moral decoupling. We further hypothesize dialectical thinking and moral identity as moderators for the mediating role of moral decoupling. The analyses of data collected from 229 employees in three waves support all the hypotheses but one (the moderating role of moral identity). Our research makes several contributions to deeper understandings of performance pressure and unethical behavior, and have implications for management as well.

OB: Life in Limbo: Identity Bootstrapping in the Kutupalong Refugee Camp 

Author: **SMMusa**, *Erasmus U. Rotterdam*
Author: **Luca Berchicci**, *Erasmus U. Rotterdam*

Drawing on extended ethnographic fieldwork in the Kutupalong Rohingya Refugee camp in Bangladesh, we use grounded theory approach to develop a process model of identity bootstrapping observed amongst some refugees. Refugees face continuous challenges to keep their lives meaningful and identities vital. When most refugees fall victim of mortification, some come out successful in constructing a positive identity against the totalitarian assaults on their self-concepts. To the Rohingya refugees, identity bootstrapping involves their active search for a 'dignified' and 'meaningful' identity that differentiate themselves from thousands nameless others. We theorize that a successful identity bootstrapping requires constructing a figured world in presentism that inspires agentic actions to develop identity resistance to face identity assaults and elaborate on prospective identities to claim a valued identity in the camp. We show that to construct a positive identity and keep it alive in the camp context one needs to continuously improvise one's ideational as well as material resources and at the same time create new identity resources to secure an identity. We argue that in the contested space, that is a refugee camp, identity bootstrapping becomes refugees' expression of resistance, resilience, and an attempt to regain some lost sense of self-worth. While not every refugee manages to engage successfully in identity bootstrapping, we document several cases in which individuals manage to reconstrue a positive identity even amongst the deleterious conditions found in Kutupalong. Keywords: Refugee Camp, Total Institution, Identity Bootstrapping, Identity Resistance.

Autocratic and Ethical Leadership

Digital Session Chair: **Sirio Lonati**, *Faculty of Business and Economics (HEC Lausanne), U. of Lausanne*

OB: Support for Autocratic Leadership: Context, Culture, and Transmission 

Author: **Sirio Lonati**, *Faculty of Business and Economics (HEC Lausanne), U. of Lausanne*

Differences in national culture are commonly invoked to explain cross-country variability in the support for autocratic leaders, that is, leaders who concentrate all decision power in their hands. However, national culture—broadly defined as the prevailing beliefs that are transmitted across generations in a country—correlates with many other contextual factors (e.g., formal institutions), making it complex to isolate purely cultural effects from related confounds. To model how national culture affects the support for autocratic leadership over time and across contexts, this study employs an empirical strategy based on migrants' data, that is, individuals with different cultural backgrounds who now live in the same country. I first construct a novel measure of support for autocratic leadership using secondary data, showing its correlation with validated measures of autocratic organizational leadership, centralized organizational structures, and acceptance of hierarchy. Then, I show that migrants' support for autocratic leadership correlates with the culturally-endorsed autocratic implicit leadership theories prevalent in migrants' countries of birth. Additional analyses on children of migrants confirm a similar pattern, suggesting also an inter-generational transmission of the support for autocratic leadership. These relationships—based on more than 7,000 individuals representing more than 50 national cultures—hold after controlling for several covariates and country fixed effects, and indicate that deeply held cultural beliefs can affect the support for autocratic leadership even in the case of substantial and swift contextual changes.

OB: The Choice of a Leader: CEO Sociopolitical Activism as a Signal of Authentic leadership  

Author: **Moritz Appels**, *U. of Mannheim*

Moral approaches to leadership have flourished mirroring employees' increasing demand for meaningful work. Yet, extant theory provides little guidance on how employers could signal such leadership to job seekers. To fill this void, this paper focuses on CEO authentic leadership and investigates the signaling efficacy of salient value expressions by the most externally visible leader of a company. Drawing from signaling theory and the literature on follower attributions of authentic leadership, the authors propose CEO sociopolitical activism as an effective signal for CEO's authentic leadership. Two experiments, including a parallel design for causal mediation inferences, support that authentic leadership attributions to the CEO mediate the positive impact of CEOs' activism on employer attractiveness perceptions by job seekers. Value congruence of the CEO and job seeker is further identified as a contingency to this mediation, thus illuminating its role both for CEO activism and authentic leadership perceptions. This paper contributes to signaling theory and leadership research as well as to practitioners seeking to benefit a social cause without jeopardizing their bottom line.

OB: Moral identity: why perceived self-interested work environment facilitates leaders to omit rewards 

Author: **Jih-Yu Mao**, *Southwestern U. of Finance and Economics*

Author: **Xinyan Mu**, *Southwestern U. of Finance and Economics*

Author: **Fong T. Keng**, *Nanyang Technological U.*

Author: **Jack Ting-Ju Chiang**, *Peking U.*

A self-interested work environment is characterized by employees prioritizing personal interests and gains before those of the organization and the larger collective. Although it is not uncommon for employees to act self-interestingly, self-interested values are largely against those of moral leaders who have a high regard for organizational and others' welfare. The current study draws on moral development and person-environment fit theories to examine how leaders with a strong moral identity are likely to react to perceptions of a self-interested environment. We suggest that perceptions of a self-interested environment are likely to result in moral dissatisfaction for leaders with a strong moral identity, who subsequently omit employees' rewards in order to remedy the self-interested values that pervade the work environment. The results of a time-lagged, multi-source survey study provide support for our hypotheses. Insights for theory, practice, and future studies are also discussed.

Author: **Hefu Liu**, *U. of Science and Technology of China*

Carolyn Dexter Award Nominee

Electronic sports (e-Sports) is gaining popularity with more and more individuals participating as players or spectators. To win in professional tournaments, the deliberate selection of team players with diverse experience is necessary to ensure an element of surprise while maintaining a certain degree of coordination. Building on the faultlines perspective, we posit experience-based faultlines as a focal determinant of team performance in e-Sports tournaments. Through a comprehensive review of extant literature, we derive a typology of experience attributes that are implicit to e-Sports teams and from which experience-based faultlines could emerge. Analyzing data gathered from a leading e-Sports platform on 71,195 teams, this study yields novel insights into how experience-based faultlines affect team performance. Particularly, we discovered an inverted U-shaped relationship between experience-based faultlines and team coordination effectiveness, which in turn exerts a significantly positive impact on team performance. Additionally, results revealed an inverted U-shaped relationship between experience-based faultlines and team coordination instability, which in turn exerts a significantly negative impact on team performance. Implications for faultlines theory, experience, and team coordination research are discussed.

OCIS: Establishing And Maintaining Legitimacy For Digital Platform Innovations

Author: **Julian Lehmann**, *Vrije U. Amsterdam*
Author: **Karl Werder**, *U. of Cologne*
Author: **Yash Babar**, *U. of Wisconsin, Madison*
Author: **Nicholas Berente**, *U. of Notre Dame*

Platform organizations continually seek novel ways to generate value for multiple sides of their markets and need to attract different stakeholder groups to become and remain successful. As such, they continually generate new innovations and need to establish these innovations as viable and legitimate. The introduction of new innovations, however, poses new challenges to platform organizations as they need to legitimize them towards various, diverse stakeholders. In this study, we conduct a qualitative case study of a highly innovative and fast-growing esports platform to unpack four distinct processes through which the platform organization draws on its existing legitimacy to generate legitimacy for new innovations. These four processes are legitimacy by inheritance, legitimacy by association, legitimacy through amplification, legitimacy through recombination. This research unpacks these processes how platform organizations establish and manage legitimacy for novel innovations towards various stakeholders, and theoretical implications for the literature on digital platforms and organizational legitimacy.

OCIS: How Do Boundary-Shifting Moves in Digital Innovation Shape Competitive Responses

Author: **Hengqi Tian**, *Georgia State U.*
Author: **Arun Rai**, *Georgia State U.*
Author: **Jing Zhao**, *China U. of Geosciences (Wuhan), Wuhan, China*

OCIS Best Student Paper Award Finalist

To better guide app developers to effectively innovate and compete in hypercompetitive app markets, we (i) draw on the digital innovation literature to advance a novel conceptualization of boundary-shifting moves (BSMs) and (ii) integrate it with the lens of competitive dynamics to theorize the relationships between BSMs and rival response speed, as well as the distinction between existing rivals vs. new rivals in responding to different types of BSMs. We choose 260 iOS apps from Apple's App Store in China from January 2011 to December 2019 as our empirical context. We operationalize our variables by combining data from multiple data sources and applying text mining methods. We use Cox proportional hazard models to evaluate our theoretical model. Our findings reveal that BSMs consist of (i) functionality addition moves that add new functionalities to expand the scope and personalize the interactions of an app and (ii) stack modularization moves that encapsulate functionalities through standardized interfaces at high- vs. low-level of an app's technology stack. Furthermore, we substantiate that new rivals respond expediently to functionality addition moves while existing rivals do so to moves related to technical functionality modularization. The research findings on asymmetric competitive response patterns in digital innovation have significant implications for theory and practice related to digital innovation and competitive dynamics.

Author: **Rupashree Baral**, *IIT Madras*

Author: **Hariharan Sukumar**, *IIT Madras*

Gamification has become one of the most significant techno-social trends of the last decade. It has been employed to positively affect human behavior and society at large through affording “gameful” psychological states and behaviors through “gameful” design. However, there appears to exist a little consensus on what “gameful experience” means and how it can be conceptualized and operationalized. Therefore, this paper reviews the current corpus of literature that has attempted to conceptualize gameful experience in various ways. Consequently, this paper proposes a parsimonious conceptual definition of “gameful experience” and aids further research on gamification and other game-related experiences. As the success of gamification depends on the quality of gameful experience, it is essential to delve deeper into this construct and the proposed definition could mark a beginning towards this.

Emotions, Algorithms and the Future of Work

Emotions, Algorithms and the Future of Work

Chair: **Fade R. Eadeh**, *Carnegie Mellon U. - Tepper School of Business*
Participant: **Jonathan Gratch**, *U. of Southern California*
Participant: **Mindy Krischer Shoss**, *U. of Central Florida*
Participant: **Nathanael Fast**, *U. of Southern California*

Technology driven by algorithms is finding its way into multiple pockets within organizations. Some view the incorporation of algorithms as a means of avoiding the “problems” created by human emotion, such as bias, boredom, or modulation in performance. However, a growing body of research points to the importance and benefits of incorporating emotion into organizational life. Can algorithms and emotions co-exist? If so, how?

Leadership Influences on Employee Outcomes

Digital Session Chair: **Haina Zhang**, *U. of Aberdeen*

HR: Relational Leadership and Work-life balance: The Moderated Mediating Role of Relational Energy

Author: **Haina Zhang**, *U. of Aberdeen*

Author: **Wei Sun**, *School of Management, Shandong U.*

Author: **Guiyao Tang**, *Shandong U.*

Work-life balance is becoming increasingly important to employees in contemporary society with demands from different roles in life. This paper investigates how employees' work-life balance can be improved by examining relational perspectives of leadership and human energy. By drawing on social contagion theory, our research provides a theoretical framework to investigate the moderating mediation effect of influences of relational leadership on work-life balance through the mediating role of relational energy and the moderating role of core self-evaluation. The findings from a three-wave survey of 432 employees demonstrate that relational leadership exerts a positive effect on employees' work-life balance through the mechanism of employees' relational energy. Core self-evaluation strengthens this mediating effect of relational energy on the relationship between relational leadership and work-life balance in such a way that the mediating effect is stronger with high core self-evaluation. The paper offers both theoretical importance by confirming the novel energizing pathway for employees' work-life balance and its boundary condition (i.e., employees' core self-evaluation) and managerial implications for how employees' work-life balance can be enhanced through managers' leadership practice.

HR: How Digital Transformation Influences Employee Outcomes: The Moderating Role of CEO Experience

Author: **Joonghak Lee**, *U. of Reading*

Author: **Youngsang Kim**, *Sungkyunkwan U.*

Author: **Steven Kim**, *California State U., Monterey Bay*

This study examines whether a firm's use of digital transformation influences employee work-related outcomes such as affective commitment, psychological safety, and change-oriented organizational citizenship behavior and how chief executive officer (CEO) challenge experience alters the relationship between digital transformation and the employee outcomes. Based on 947 employees nested in 46 subsidiary firms, our multilevel analysis shows that, on average, the usage of a firm's digital transformation is negatively related to employee's affective commitment and change-oriented organizational citizenship behavior. However, we find that the negative effects of digital transformation on the three employee outcomes are buffered when the firms have a CEO with more challenge experiences. Our theory and findings suggest that the employment of CEOs with more challenge experiences can play an important role in weakening the negative effect of digital transformation on employee outcomes under the fourth industrial revolution, contributing to the literature on digital transformation, stress, and CEO experiences.

HR: How Does CEO Entrepreneurial Orientation Impact on Employee Innovative and Proactive Behavior?

Author: **Yueyue Liu**, *Nanjing U.*

Author: **Danxia Wei**, *Nanjing U.*

Author: **Meng Xi**, *Nanjing U.*

CEO entrepreneurial orientation is a recent important issue in entrepreneurship research. Drawing on the attention-based theory and institutional logics, this study aims to contribute to the innovation implication of CEO entrepreneurial orientation. To be specific, we argue that CEO entrepreneurial orientation positively predict employee innovative and proactive behavior via adopting human resource management (HRM) practices; and the indirect effect of CEO entrepreneurial orientation on employee innovative and proactive behavior via increased HRM practices is moderated by HRM importance and employee self-efficacy. Using a multi-level and multi-source sample from 90 Chinese firms with 90 firm-level data and 1062 individual-level data, this study found CEO entrepreneurial orientation positively led to HRM practices, employee innovative and proactive behavior; the indirect effect CEO entrepreneurial orientation on employee proactive behavior via HRM practices is strongest when both human resource management importance and employee self-efficacy are high. Our study makes important contributions to entrepreneurial orientation literature and has important practical implications.

HR: How and When Does Leader Humility Enhance Employee Proactive Career Behavior

Author: **Jie Zhong**, *Harbin Institute of Technology*

Author: **Chao Ma**, *The Australian National U.*

Author: **Zhen-Xiong Chen**, *Australian National U.*

Author: **Li Zhang**, *Harbin Institute of Technology*

In this research, we drew upon implicit leadership theory to examine the joint effects of leader humility, follower power distance, and follower narcissism on proactive career behavior via perceived leader competence. Specifically, we proposed that leader humility would be perceived as more competent for the employees with lower power distance; we also proposed two competing predictions about the interactive effect of leader humility and follower narcissism on leader competence from two different theoretical perspectives (i.e., opposite-attraction perspective vs. similar-attraction perspective). We tested our hypotheses using a multi-waves and time-lagged survey with 281 subordinate-supervisor dyads from 87 teams. The results of our studies demonstrate that the followers with low power distance and low narcissism are more likely to perceive higher leader humility to be more competent and thus increase their proactive career behavior. We discuss the theoretical and practical implications of these findings.

Author: **Hendrik Huettermann**, *U. of St. Gallen*

Author: **Heike Bruch**, *U. of St. Gallen*

Despite the increasing usage of information and communication technology (ICT) at the workplace the effects of leaders' after-hours work-related smartphone use on organizational norms and employees' well-being are unclear. Moreover, previous research on ICT usage has focused nearly exclusively on the individual level of analysis. Building on climate models of organizational functioning and the conservation of resources theory, we develop and test an organizational-level model which explains how and when leaders' after-hours work-related smartphone use is likely to influence employees' well-being. We hypothesized a positive indirect relationship via the new construct climate of universal availability which is moderated by employees' collective boundary control. Hypotheses were tested using large-scale survey data from 11,703 employees and 99 HR-representatives collected in 99 German small-and-medium-sized companies from multiple industries. Findings support the assumed relationship: Leaders' after-hours work-related smartphone use affects collective emotional exhaustion through the climate of universal availability. The positive indirect effect is weakened when employees' collective boundary control is high. Critical implications for future theorizing and research on leaders' ICT usage are discussed. Keywords: leadership; technology; electronic communication; well-being

OB: How Followers Navigate Leader Self-Disclosure: Examining Leader Self-Disclosure Depth

Author: **Eunhee Bae**, *U. of Washington*

Self-disclosure, the act of sharing information about the self to others which can at times entail intimate information, provides disclosers with many advantages such as increased intrinsic reward and feeling closer to recipients. However, previous research on self-disclosure has not taken into account the perspective of recipients who are obligated to reciprocate to the discloser regardless of whether they find the disclosure favorable or not. This unforeseen cost from the recipient perspective is even more accentuated within the workplace where relationships are formed involuntarily based on assignments and hierarchy, and where the pursuit of instrumental goals takes precedence before that of socioemotional goals. Thus, high depth self-disclosure, or self-disclosure with intimate information, may not be an effective relationship behavior within the workplace as currently theorized. In this paper, I theorize on the consequences of leader self-disclosure depth within the workplace, a context where instrumental motives outrank the socio-emotional motives. Drawing from social exchange theory, I posit that a leader disclosing high depth information to a follower influences the follower recipient to experience LMX or role overload as a function of the degree to which the information shared is scarce. Furthermore, I explain how these perceptions motivate interpersonal citizenship behavior and interaction avoidance, respectively. Overall, I establish a distinct recipient-based model of self-disclosure.

OB: Implicit Motives and Visionary Leadership

Author: **Hugo M. Kehr**, *TUM School of Management, Technical U. of Munich*
Author: **Falk Julian Voigt**, *TUM School of Management, Technical U. of Munich*
Author: **Maika Rawolle**, *HMKW U. of the Applied Sciences Berlin*

An unresolved question in visionary leadership research is, why do visions need to be high in imagery in order to cause affective reactions and be motivationally effective? Research in motivation psychology has shown that pictorial cues can arouse a person's implicit motives. It would thus be reasonable to expect that pictorial cues from vision-induced imagery arouse a follower's implicit motives just like a real image. Hence, our fundamental proposition was that a vision high in imagery arouses a follower's implicit motives. We developed the proposition that arousal of implicit motives, in turn, moderates the effects of a vision on a follower's intrinsic motivation and subsequent vision pursuit. We also integrate the special case of negative visions into our theorizing, with the central proposition that a negative vision arouses a follower's implicit fear motives, and that aroused implicit fear motives moderate the indirect effects of the negative vision on the follower's vision-induced fear-related behaviors through increased avoidance motivation. Lastly, based on the distinction between mono- and multithematic visions, the latter of which with the potential to arouse more than one implicit motive simultaneously, we outline the expected interactive effects of a follower's implicit motives as moderators of the vision-intrinsic motivation-vision pursuit effect chain.

OB: How good can bad leaders be? The opportunity costs of leader selection

Author: **Matthieu Légeret**, *ORGANIZATIONAL BEHAVIOR*
Author: **Benjamin Tur**, *U. of Lausanne, HEC Lausanne*

Although a large body of research investigates what characterizes good leaders and how to best select them, internal promotions in organizations often yield underperforming leaders. The leadership literature provides several explanations for why "bad" leaders exist. However, all this work builds on the premise that the choice of an inefficient leader is a failure of the selection process. In this paper, we take a different stance and suggest that—in some cases—organizations might select underperforming leaders because it is efficient to do so. In essence, we argue that selecting a leader within a fixed group of individuals is similar to allocating any other limited resource. Leader selection has an opportunity cost because the leader is no longer available as a follower. We identify cases in which it is optimal not to select the most competent individual as leader. Finally, we propose to use tournament theory to efficiently select leaders and discuss how to set incentives within a group to identify competencies and to select the most appropriate leader accounting for the context in which the group operates.

OB: The Indirect Effects of Reluctant Staying on Laissez-faire Leadership and Leader Delegation

Author: **Xueqing Fan**, *Rutgers U.*
Author: **Danni Wang**, *Rutgers Business School*
Author: **Fuxi Wang**, *U. of International Business and Economics*
Author: **Maria Kraimer**, *Rutgers U., School of Management and Labor Relations*

Leaders who desire to leave their current organizations are sometimes forced to stay. The leadership behaviors of these leaders are underexplored in prior research. Building on proximal withdrawal states theory and the theories of the meaning of work, this study examines how and when laissez-faire leadership and delegation emerge among leaders who are reluctant to stay in their current organizations. Using three-wave data from 100 leaders and 313 employees, we found that reluctant staying was indirectly associated with laissez-faire leadership via reduced perception of task significance and indirectly associated with delegation through increased bottom-line mentality. Moreover, we found that job clarity strengthened the indirect effects of reluctant staying on the two types of leadership behaviors. We discussed the implications of our findings for theory, practices, and future research regarding how to manage leaders who stay reluctantly in the organizations.

Career Adaptability

Digital Session Chair: **Mohammed Al Waqfi**, *United Arab Emirates U.*

CAR: **Career adaptability as a predictor of job search intentions and career readiness in the UAE**   

Author: **Mohammed Al Waqfi**, *United Arab Emirates U.*

Author: **Hayfaa A. Tlaiss**, *Alfaisal U.*

Author: **Kilani Ghoudi**, *United Arab Emirates U.*

This study examined the career construction theory in an Arab Middle Eastern context by assessing the effects of career adaptability on job search intentions and career readiness of young adults. Given the widespread interest of researchers and career counselors in the career construction theory and the career adapt-abilities scale (CAAS) recently, it is believed that the CAAS has a potential to be used as a tool for internationalization of career development research and practice. The current paper contributes to the existing literature in this field by 1) validating the Arabic version of the CAAS scale, and 2) examining the effects of career adaptability on job search intentions and career readiness of young adults. Using data from a sample of 635 senior students at two universities in the United Arab Emirates (UAE), this study found that the CAAS-Arabic Form is valid in this context. The findings indicate that career adaptability has a positive impact on two measures of career readiness including career decidedness and perceived employability. The findings also indicate that career adaptability, as expected, predicted two relevant career adaptive responses in this context including intentions to seek Wasta and willingness to work in the private sector (WWPS). We further found that WWPS mediates the relationship between career adaptability and perceived employability. Theoretical and practical implications of these findings are discussed.

CAR: **The Sound of Music in Job Search: Music Preferences, Career Adaptability, and Job Search Outcomes**  

Author: **Bin Ling**, *Hohai U.*

The purpose of this research is to explore the mediation mechanism of how music preference may influence personal stress and knowledge-skill development when searching for a job based on the theory of career adaptation. We designed a two-wave procedure to collect data and test our hypotheses (a sample of 337 participants attended at the first wave while 240 among them attended the second wave). A total of 182 participants were kept as our final sample after matching two samples. The findings revealed that: (1) music preference and its dimensions had negative effects on job search stress and positive effects on knowledge-skill development; (2) music preference and its dimensions (except for upbeat and conventional) had positive effects on career adaptability; (3) career adaptability played significant mediating effects on the links between musical preference and job search stress and knowledge-skill development. However, at dimensional level of music preference, the mediation effect of career adaptability on job search stress and knowledge-skill development only existed for the intense and rebellious and the energetic and rhythmic dimension.

CAR: **Downshifting: A Career Construction Perspective** 

Author: **Raymond C.H. Loi**, *U. of Macau*

Author: **Yan Liu**, *Wuhan U.*

Author: **Huihui Tang**, *U. of Macau*

Author: **Hang Yue Ngo**, *Chinese U. of Hong Kong*

Downshifting is a phenomenon that has attracted growing attention during the last two decades. However, we still have limited knowledge about what downshifting means, why it occurs, and how it affects individuals in both career and life domains. In this paper, we conceptualize downshifting as the career decision by which an employee either takes a downward movement in the career ladder or changes to a less paid career with the aim to achieve meaning in life. Drawing upon career construction theory, we develop a conceptual model to examine its antecedents and outcomes. Downshifting is viewed as a discretionary vocational behavior, which is expected to be affected by some person-relevant variables, including eudaimonic orientation, internal locus of control, and career adaptability. We also propose that downshifting enhances individuals' career satisfaction and life satisfaction. Our discussion advances understanding about the motivation behind downshifting as well as its consequences for individuals.

Minority Entrepreneurship

Digital Session Chair: **Muhibul Haq**, *Huddersfield Business School, U. of Huddersfield*

ENT: Toward a Culture-Induced Entrepreneurship Model in Ethnic Minority Microenterprises  

Author: **Muhibul Haq**, *Huddersfield Business School, U. of Huddersfield*
Author: **Martin Johanson**, *Huddersfield Business School, U. of Huddersfield, UK*
Author: **Julie Davies**, *Manchester Metropolitan U.*
Author: **Leo Dana**, *Montpellier Business School*

We respond to calls in Entrepreneurship Theory and Practice for theorizing on ethnic minority microentrepreneurship (Miller & Le Breton-Miller, 2017; Welter, Baker, Audretsch et al., 2017; Wiklund, Wright, & Zahra, 2019) and adopting qualitative research methods (Van Burg, Cornelissen, Stam et al., 2020). Building on the resource-based view and thematic analysis of 43 in-depth interviews with owner-managers and employee-managers, we offer a novel culture-induced entrepreneurship model. Our model shows that coethnic culture shapes human capital resources which in turn inform microenterprise sustainable success. We provide nuanced insights for scholars, policymakers, and practitioners to frame challenges for post-pandemic recovery.

ENT: The best of two worlds? Ethnic minority entrepreneurs and family in entrepreneurial activities

Author: **Leona Achtenhagen**, *Jonkoping International Business School*
Author: **Marcela Ramirez-Pasillas**, *Jonkoping International Business School*

Ethnic minority entrepreneurs navigate between at least two different cultures. This can bring a number of advantages for their entrepreneurial endeavors, not least if those are based on ethnic-specific competences, such as ethnic cuisine. But they can also represent a challenge, for example when peers from the same group expect preferential treatment. Prior research has often pointed at the important role of family involvement for ethnic minority entrepreneurs, but has typically considered the family and/or business as the unit of analysis. In this study, we instead focus on the level of ethnic minority entrepreneurs and explore their perceptions about the role of family for creating and sustaining entrepreneurial activities. Based on an interview study with 34 ethnic minority entrepreneurs in Sweden, we identify three patterns and coping strategies for navigating between different cultures and expectations. These patterns include entrepreneurial ethnic loners, ethnic offspring entrepreneurs and ethnic recourse entrepreneurs.

ENT: Business Group Competitive Advantage & Export Performance: The Case of Africa's Minority Entrepreneur    

Author: **Mahdi Tajeddin**, *Sobey School of Business, Saint Mary's U.*
Author: **Michael Carney**, *Concordia U., Montreal*

To facilitate interfirm trust and exchange, business groups typically organize along an axis of solidarity such as kinship, religion, or political identity. In this paper, we consider whether business group solidarity based upon the minority identity of affiliate owners can be a basis for business group competitive advantage. Based upon World Bank enterprise surveys in 24 sub-Saharan African countries of over 8000 firms, we identify uncharacteristic affiliate performance effects upon the self-identified ethnicity of firm owners. We find affiliates owned by Indian, Middle-Eastern, and European entrepreneurs do not show the expected superior export performance compared with indigenous African owned firms. A finding suggests that long-established and exclusionary ethnic groups may either become less exclusive, consistent with the mixed embeddedness thesis. In contrast, our findings show that Chinese owners of group-affiliated firms significantly outperform both independent firms and other business group affiliates with non-Chinese owners. We contribute to understanding the origins of business group heterogeneity and the evolving basis of entrepreneurs' competitive advantage.

ENT: Push-Pull Theory in Black and White: racial differences in entrepreneurship during the Great Recession 

Author: **Rachel Atkins**, *NYU Stern*

Though African Americans suffered disproportionately high unemployment, housing, and wealth losses during the Great Recession, little is known about the recession's impact on black entrepreneurship. In this study I use data from the PSID to estimate the difference in probability of starting a business before and after the recession for black and white households. I find that while the likelihood of starting a business declined for whites after the great recession there were no statistically significant changes in the rate of firm starts among blacks. Furthermore, there is evidence of the recession push hypothesis at work for white but not black entrepreneurs.

ENT: Coworkers' Entrepreneurial Performance and Employee Entrepreneurship: A Social Learning Perspective

Author: **Kai Zeng**, *School of Management, Zhejiang U. of Technology*
Author: **Duanxu Wang**, *Zhejiang U.*
Author: **Cindy Millman**, *Birmingham City Business School, Birmingham City U., Birmingham, UK*
Author: **Zhengwei Li**, *School of Management, Zhejiang U. of Technology*
Author: **Yujing Xu**, *School of Management, Zhejiang U. of Technology*

How employee entrepreneurship spreads through interpersonal influence (interaction between coworkers and employee) in organization becomes an important issue which remained unsolved. Drawing on social learning theory, the purpose of this study is to test and verify how former coworkers' entrepreneurial performance impact current employee entrepreneurship, what role does employee's entrepreneurial self-efficacy play and what the role will be when it is vary in the similarity of entrepreneurial resources between coworkers and employee and employee's risk propensity. Surveys data collected from 218 full-time employees working in China at two different time points with three-week interval. This study found that employee's entrepreneurial self-efficacy mediated the positive relationship between coworkers' entrepreneurial performance and employee entrepreneurship intention. And this mediating effect was exacerbated by the similarity of entrepreneurial resources and employee's risk propensity. Moreover, a joint moderated mediation model of similarity of entrepreneurial resources and employee's risk propensity was supported. Theoretical contributions and practical implications were discussed.

ENT: The Impact of Novelty Creation and IPO Success on Exploration Behavior in Serial Entrepreneurship

Author: **YoonKyung Kim**, *KAIST*
Author: **Hyun Ju Jung**, *KAIST*

Serial entrepreneurs are presumably influenced by prior venture experience, which helps improve their performance in subsequent venture. However, the impact of prior venture experience on serial entrepreneurs' behavior in subsequent venture has not been specifically studied. Therefore, we explore how prior experience influences serial entrepreneurs' behavior in subsequent venture, especially exploration behavior. We find that the greater the novelty creation in prior venture, the more the local search in subsequent venture. However, due to IPO success, serial entrepreneurs may do fewer local search in subsequent venture, and the effect of prior venture's novelty creation on exploration behavior decreases. Using data on entrepreneurs and ventures around the world as well as patent data, we find support for our theories. The results have meaningful implications for the study on serial entrepreneurship and a broader impact on the study on organizational learning.

Paper is Available to Meeting Registrants Only.

ENT: When Does Entrepreneurial Failure Help the Next Tech-Based Start-Up?

Author: **DAEHYUN KIM**, *KAIST College of Business*
Author: **Wonjoon Kim**, *KAIST*
Author: **Aaron Chatterji**, *Duke U.*

How entrepreneurs respond to previous start-up failure has important implications for subsequent start-up performance. As part of the research about entrepreneurial failure experience, prior researchers have examined the antecedents of learning from entrepreneurial failure. We extend the literature by focusing on changes in business model and technology after a previous start-up failure, which are crucial antecedents to understand learning mechanisms from entrepreneurial failure. To understand whether a failed entrepreneur who changed a business model or technology shows a performance advantage in a subsequent start-up or not, we build our hypotheses based on a behavior theory of firms. Using data on early-stage technology-based firms, we find several notable results. First, start-ups that change their internal business aspects (business model or technology) after previous start-up failures perform better than other start-ups that do not change their business model after previous start-up failure. Second, start-ups that change internal business aspects (business model or technology) after previous start-up failure show higher performance than other start-ups that change internal business aspects (business model or technology) after previous start-up success. Thus, the results have important implications for the study of learning antecedents from entrepreneurial failure experience.

ENT: Prospecting, balancing and reversing: entrepreneurial learning from positive and negative events

Author: **Michela Loi**, *U. of Cagliari*
Author: **Emanuele Castriotta**, *U. of Cagliari*
Author: **Elona Marku**, *U. of Cagliari*
Author: **Maria Chiara Di Guardo**, *U. of Cagliari*
Author: **Gerardo Patriotta**, *U. of Warwick*

This study investigates the entrepreneurial learning process by focusing on events' valence assessment by entrepreneurs and connecting it to subsequent emotional and behavioral reactions that culminate in new knowledge. Current studies are nebulous in representing how everyday events, different from failure, might generate learning, from its criticality recognition to reactions' trajectories enacting learning. Our work addresses this gap by exploring the experiences of 38 entrepreneurs through in-depth interviews. By unfolding micro-dynamics that relate critical events to the learning process, integrating events valence, and elucidating its affective influence on entrepreneurial learning, this study brings new insights for an event-based theory of entrepreneurial learning.

Entrepreneurial Orientation 2

Digital Session Chair: **Jeldrik Pulm**, *Chair of Innovation Management, TU Dortmund U.*

ENT: After Going Public: How Entrepreneurial Orientation Turns into Strategic Decisions

Author: **Jeldrik Pulm**, *Chair of Innovation Management, TU Dortmund U.*
Author: **Steffen Strese**, *TU Dortmund U.*

Initial public offerings (IPOs) provide an opportunity for firms to shake off financial constraints. This new access to resources enables newly public firms to finance growth through acquisitions. At the same time, liberation from financial constraints enables firms to follow their entrepreneurial orientation (EO). However, it remains unclear how EO translates into strategic decisions and shapes acquisition strategies precisely when constraints are relaxed at the IPO. Consequently, this study aims to investigate the relationship between EO at the IPO and the acquisition behavior of newly public firms. We argue that firms with a high level of EO thoroughly choose their strategy and engage in resource-intensive actions that they rate as valuable. Based on this, we hypothesize that these firms acquire more selectively but more intensely. Moreover, we hypothesize that boundary conditions such as the competitive environment and rivals' strategic flexibility moderate this relationship. We empirically investigate our hypotheses for a sample of 2,292 IPOs between 1996 and 2014 resulting in 11,316 firm-year observations. We find support for our hypotheses. This study advances the literature on how strategic orientations—such as EO—shape the strategies of newly public firms. Our study has practical implications for shareholders and investors of IPO firms.

Paper is NOT Available. Please contact the author(s).

ENT: The Combined Impact of EO and GO on Firm Profitability under Different Institutional Contexts

Author: **Jingxu Zhao**, *Xi'an Jiaotong U.*
Author: **Chengli Shu**, *Xi'an Jiaotong U.*
Author: **Feifei Jiang**, *Xi'an Jiaotong U.*

To benefit from green entrepreneurship, firms need to simultaneously possess an entrepreneurial orientation (EO) and a green orientation (GO) which in fact may conflict with each other as they aim to address potentially contradictory interests from different stakeholders. This study develops a contingent view of the effects of interaction between EO and GO on firm profitability by considering three institutional factors—provincial government opacity, provincial gross domestic product (GDP) per capita, and religious intensity—as boundary conditions. The results obtained by analyzing first- and second-hand data support a non-significant interaction effect of EO and GO; such an interaction effect was positive when firms are located in provinces with low GDP per capita or in places with low religious intensity, but was negative when provincial government opacity is low or when religious intensity is high.

Paper is Available to Meeting Registrants Only.

ENT: Growing up but still be entrepreneurial? The entrepreneurial orientation–performance relationship

Author: **Lena Murawski**, *U. of Passau*
Author: **Suleika Bort**, *U. of Passau*

The relationship between entrepreneurial orientation (EO) and performance has received significant attention within entrepreneurship research. Yet, the mechanisms that underpin the EO-performance relationship are not fully understood. Recent developments such as an improved theoretical understanding of the manifestation and pervasiveness of EO highlight the need for a more nuanced understanding of EO by investigating nonmanagerial employees' behaviors and attitudes of EO. Via an in-depth case study of a high-tech venture in Germany, we examine a set of proactive, innovative, and risk-taking behavioral patterns that contribute to the proliferation of EO within firms as they grow. Our study reveals that the employee's more inwardly focused orientation is directed towards coping with challenges the firm faces during growth-related organizational transformations, rather than introducing innovations in the business or experimenting with opportunities. We conclude that EO is an individual-level construct and a key element in the causal link between organizational performance.

ENT: Entrepreneurial orientation, experience, and opportunity identification of smallholder farmers

Author: **Etriya Etriya**, *IPB U.*
Author: **Victor Egbert Scholten**, *Delft U. of Technology*
Author: **Emiel F.M. Wubben**, *Wageningen U.*
Author: **Onno Omta**, *Wageningen U.*

Although previous studies on agricultural entrepreneurship have paid attention to the role of farmers' knowledge in identifying opportunities, the findings remain inconclusive in explaining how entrepreneurial-oriented smallholder farmers utilize knowledge integrated with their experience to identify opportunities coming from business environmental changes. This paper investigates the mediating effect of entrepreneurial orientation on the relationships between experience (in linking to modern markets, suppliers, and supporting organizations) and opportunity identification of vegetable farmers in West Java, Indonesia. The data obtained from a survey of 302 vegetable farmers in West Java, Indonesia. The results of partial least squares-structural equation modeling (PLS-SEM) analysis demonstrate that entrepreneurial orientation mediates the relationships between farmers' experience (in linking to modern markets and supporting organizations) and opportunity identification. These findings confirm that being entrepreneurial oriented enables smallholder farmers to benefit from environmental changes by using their experience to identify opportunities. This paper contributes to the literature of agricultural entrepreneurship by addressing the mechanisms enabling smallholder farmers to identify opportunities beyond their existing farm businesses.

ENT: Did Government Venture Capital Fund Innovative but Less Profitable companies? Evidence from China  

Author: **Jing Zhang**, *Old Dominion U.*
Author: **Yueqi Fan**, *City U. of Hong Kong*
Author: **Ye Liu**, *Nanjing U.*

Governmental venture capital (GVC) is a typical dual-purpose hybrid entity, which aims to increase social welfares as well as making profits for investors. Yet little is known about how the dual purposes shape GVC's investment strategies that interact with private venture capital's (PVC). Applying a two-sided matching model, we develop a structural model to examine whether GVCs invested in innovative but less profitable companies that ignored by PVCs. Using the data of Chinese VC industry in 2000-2012, we find supports for our hypotheses. These fresh results suggest that GVC commendably fulfill their social mission while pursuing economic benefits in a competitive environment. Moreover, GVCs are at least not worse than PVCs in nurturing companies in term of achieving IPO/M&A, and they support company innovation effectively in term of patent application.

Paper is Available to Meeting Registrants Only.

ENT: The Willingness of PVCs to Invest GVCs Backed Ventures: The Role of Institutional Logics 

Author: **Yifei Song**, *U. of Nottingham, China*
Author: **Jin Chen**, *U. of Nottingham, China*
Author: **Haibo Zhou**, *U. of Nottingham, China*
Author: **Weiqi Dai**, *ZHEJIANG U. OF FINANCE AND ECONOMICS*

It is important to evaluate whether public direct intervention in the form of governmental venture capitalists (GVCs) have bridged the equity gap by stimulating more investments from private venture capitalists (PVCs). However, empirical evidence for this relationship is inconclusive. Drawing on institutional logic perspective and organizational tensions literature, we hypothesize that PVCs are less likely to invest in a venture whose prior round is backed by GVCs, owing to the conflicts or tensions between PVCs' professional logic and GVCs' state logic. To substantiate our argument, we further examine two moderators that revise either GVCs' or PVCs' conformity to their logics: limited partnership (LP) and VC status. We hypothesize that the negative relationship between GVCs' investments and follow-on PVCs' investments will be weakened when the GVC is less complied with the state logic by taking the form of LP and delegating the investment decisions to professional fund managers. In contrast, the negative relationship will be strengthened when the follow-on PVC holds a superior status in the VC industry which reinforces its professional logic. The results based on a sample of 2,680 VC investment deals rendered strong support to our hypotheses. Our study adds to the literature by providing a nuanced perspective of logic tensions to explain why public direct intervention in entrepreneurial finance may impede follow-on investments from private sectors.

Paper is Available to Meeting Registrants Only.

ENT: Heterogeneity in search and investment behavior among corporate venture capital units

Author: **Raj Krishnan Shankar**, *Nord U. Business School*
Author: **Magnus Schüeckes**, *U. of Mannheim*
Author: **Tobias Gutmann**, *EBS Business School*

There is growing need to understand how heterogenous organizational search behaviors manifest. This is especially critical when executed beyond organizational boundaries. Corporate venture capital (CVC), a well-established form of corporate engagement with startups, is one way in which such search is empirically implemented. Prior CVC research implicitly assumes CVC manifestations to be homogenous which limits our understanding of how and why organizations run CVC programs and to what end. Our qualitative study of five CVC units reveals that corporations manage CVC via one of two distinct pathways—order-taker or free-bird. Our two-pathway model deconstructs the core CVC processes, explains how and why the two pathways result in different outcomes, and provide indications of greater heterogeneity and hybridity within CVC designs. Our findings have implications for the advancement of CVC, external corporate venturing, and organizational search literatures.

Paper is Available to Meeting Registrants Only.

ENT: Corporate Venture Capital (CVC) Investment Timing, Strategic Misalignment, and CVC Value Addition

Author: **Jukyeong Han**, *U. of Kansas*
Author: **Minyoung Kim**, *U. of Kansas*
Author: **Jongkuk Lee**, *Ewha Womans U.*

This study investigates the relationship between CVC investment timing and CVC value addition. Drawing on the path dependence theory, we theorize that timing of CVC investment influences the extent of strategic misalignment between CVCs and ventures, which would, in turn, affects the extent of CVC value addition. We maintain that there is a U-shape relationship between CVC investment timing and CVC value addition. Results of empirical analysis with data of 450 US-based biotechnology ventures corroborate the main thesis of the current study that CVCs' investment timing plays an important role in influencing performance and behavioral outcomes of CVC value addition.

Participant: **Melody J. Zhang**, *City U. of Hong Kong*
Presenter: **Chenggang Duan**, *Xi'an Jiaotong U.*
Participant: **Jinxin Li**, *Guangzhou U.*
Presenter: **Shelly Lev-Koren**, *Technion - Israel Institute of Technology*

Overqualification is an essential topic in the management field (Erdogan & Bauer, 2021; Feldman, 1996). Scholars debated the mixed effects of overqualification mostly on the individual level (Lee, Erdogan, Tian, Willis, & Cao, 2020). Although several studies recently started to focus on this topic from the team level (Hu, Erdogan, Bauer, Jiang, Liu, & Li, 2015), research on overqualification at within-person and firm levels is still lacking. Echoing Sierra (2011)'s call on multilevel examination and considering the cross-level effects overqualification caused in reality, we prepare this symposium to understand how overqualification manifests itself and has impacts across levels in the organizations. We organize this symposium with five papers, and each represents a critical research question at various levels of analysis. Another noticeable element of this symposium is that we took time into consideration, in the examples of looking at newcomers' socialization, dyadic support over time, and leadership emergence.

ODC: An Integrated Realist Evaluation Model to Evaluate Organisational Interventions

Author: **Hamid Roodbari**, *U. of Sheffield*
Author: **Karina Nielsen**, *U. of Sheffield*
Author: **Carolyn Axtell**, *U. of Sheffield*

Organisational interventions are the recommended approach for improving employees' health and wellbeing, but evaluating these complex interventions is challenging. Realist evaluation is a promising approach to evaluate interventions; it aims to answer the question of 'what works for whom in which circumstances?' by studying how the mechanisms of an intervention work in a certain context to bring about certain outcomes in Context-Mechanism-Outcome (CMO) configurations. Based on realist evaluation, Nielsen and Abildgaard (2013) proposed a five-phase model to evaluate organisational interventions. We extend the five-phase model to capture more intervention components and align better with realist evaluation. First, to include further crucial intervention components to evaluate, we integrate the content of the RE-AIM framework into the five-phase model. Second, we provide guidance on when and how to develop and test CMO configurations for each intervention component. Thus, we develop an 'integrated realist evaluation model'. Also, we review the most recent evidence in the literature regarding the intervention components and develop an example of a CMO configuration for each component. As such, this article contributes to the understanding of 'how to' evaluate complex organisational interventions that can be used to design, implement, and evaluate future organisational interventions.

Paper is Available to Meeting Registrants Only.

ODC: Smart working experiences in the Public Sector before and after the COVID-19 pandemic

Author: **Andrea Tomo**, *U. of Napoli Federico II, Italy*
Author: **Lucio Todisco**, *U. of Napoli Federico II, Italy*
Author: **Paolo Canonico**, *U. degli Studi di Napoli Federico II*
Author: **Gianluigi Mangia**, *U. degli Studi di Napoli Federico II*

The paper explores the strengths and weaknesses of Smart Working before and after the COVID-19 emergency in the public sector. In more detail, the aim is to understand how the spread of COVID-19 influenced public employees' perception of smart working and its application during the pandemic. We interviewed 27 public employees from Italian local and central administrations already employing smart working before the pandemic to deepen positive and negative aspects of smart working and how these changed after the spread of COVID-19. The findings highlight a widespread positive impact on organizational flexibility and the degree of response and resilience of Italian public organizations to the health emergency. However, some critical factors emerged, such as the right to disconnect and the impact on work-life balance. In doing so, the paper provides many theoretical, managerial and policy implications relatively to the use of smart working in public administrations.

Paper is Available to Meeting Registrants Only.

ODC: Creating Mindfulness at Stressed Environment Work-Places through a Self-Training Intervention

Author: **Shilpi Kalwani**, *PhD Research Scholar BITS Pilani*
Author: **Jayashree Mahesh**, *Birla Institute of Technology & Science, Pilani*
Author: **Anil Kumar Bhat**, *Birla Institute of Technology & Science, Pilani*

Does it take a pandemic to make us realize when our mind is full of anxiety and when we need to protect ourselves by being alert in a state of mindfulness at stressed environment workplaces? With an explosion of scholarly interest in the concept of mindfulness and its uniqueness from the allied concepts in management learning, the effectiveness of organizational mindfulness interventions need further investigation (Reb and Atkins, 2015). There is a lack of convenient and effective mindfulness interventions that could be applied at the futuristic workplaces (Lomas et al., 2017). We attempt to design and test a self-training mindfulness intervention. In this paper we discuss at the outset the importance of mindfulness in constantly evolving organizations and then outline our research study where the effectiveness of the designed self-training intervention is statistically tested. Our intervention comprises of a 4-week module that was introduced among a group of 117 respondents that included doctors, nurses and medical staff from a government hospital. Their mindfulness scores were recorded before and after the implementation of the 4 weeks' intervention module using the MAAS (Mindfulness Attention and Awareness Scale). The results indicate that the mindfulness intervention caused a significant increase in the mindfulness quotient enhancing overall employee wellbeing. This intervention can be an important tool in enhancing the wellbeing of employees in current organizations that are shrouded by high levels of uncertainty and stress. Keywords: Futuristic Workplaces, Mindfulness, Positive Intervention, Wellbeing, Stress

ODC: How to Live? How to Manage? : Theory V and Self-realization

Author: **Boo-Ho Rho**, *Sogang U.*

The problem with the current management is low engagement and high stress. This phenomenon occurs perhaps because people don't know how to live. We have to live a life of self-realization. Thus, the purpose of management should be the self-realization of people. Self consists of character and talent. Self-realization is the development of character and talent. The development of talent depends on the character. Character is determined by values that are developed through "consciousness reform". Consciousness reform is basically contemplating life asking fundamental questions like what's the right way to live a life. It is important to develop and reinforce character after consciousness reform for the management of self-realization. Factors responsible for character reinforcement are vision, autonomy, culture, recognition, and leadership. A new management model explained above is proposed as Theory V. Theory V supports the idea that an organization has to be a community organization where people work together harmoniously with a shared vision. Theory V is a more humanistic management model than Theory X and Theory Y because it treats people as an end, makes them work with intrinsic motivation, and engages them on a spiritual dimension.

CSR and Employee Issues

Digital Session Chair: **Anna Marrucci**, *U. of Pisa*

SIM: How Do Employee Underpayment and CSR Shape Labor Productivity: A Signal Incongruence Perspective

Author: **Frank Deng**, *Northwestern Polytechnical U.*
Author: **Jia Ming**, *Northwestern Polytechnical U.*
Author: **Zhang Zhe**, *Xi'an Jiaotong U.*

Extant research in management and strategy is increasingly recognizing the benefits of employee corporate social responsibility (CSR) on regulating employee behaviors and the drawback of pay gap (PG) between top executives and employees on eliciting the perception of distribution unfairness as well as evoking employees' negative emotions. However, few studies have considered the two factors together and explored their interaction effects on employee behaviors. In this paper, we treat PG and employee-related CSR disclosure as two incongruent signals employees may refer to as indicators of how organizations treat them and examine their influence on employee productivity. Building on signaling theory, we propose that the consequence of incongruent signals depends on the diversified CSR activities. Specifically, while PG arouses a silent issue of unfairness among employees and decreases employee productivity through generating negative emotions, economic-based CSR disclosure directly rectifies this issue to mitigate the negative relation between PG and employee productivity. By contrast, relationship-based CSR disclosure has no such effect. We find support for our hypotheses through an empirical analysis based on a sample of Chinese public listed firms and a laboratory experimental study. Thus, this study contributes to the literature on the interpretation of incongruent signals and the specificity of the insurance-like effect of CSR.

Paper is Available to Meeting Registrants Only.

SIM: Professional Identity Development of Interns

Author: **Reem Ahmad Karaja Obeid**, *U. of Almeria*
Author: **Ana Maria Bojica**, *U. of Granada*
Author: **Pilar Jerez-Gómez**, *U. of Almeria*

Through a qualitative study of 23 interns (students during or after their first internship made abroad), we examine how interns construct their professional image in the workplace, how they discover and respond to various types of conflicts using new strategies for image management and how it relates to different forms of outcomes and their professional identity development. We found that interns' image discrepancies (identity devaluation and positive discrepancy), resulting from interns' expectations about their professional image, drive interns to engage in new impression management strategies (in-group differentiation, assimilation and positive image maintenance) to meet expectations related to their desired professional image. We discovered a number of outcomes in terms of self-discovery, self-confidence, interpersonal and career management. Building on these findings, we present a process model of professional identity discovery that manifests how interns' image management leads to possible identity development. Implications of our findings for both theory and practice are discussed.

SIM: CEO Social Class Perception and Employee-Related CSR: Evidence from Chinese Privately Owned Firms

Author: **Ma Zicheng**, *Lingnan U. / Sun Yat-sen U.*
Author: **Heng Liu**, *Sun Yat-Sen U.*
Author: **Wenwen An**, *Guangdong U. of Technology*
Author: **Liang Wang**, *U. of San Francisco*

Despite recent progress, the existing literature still contains inadequate knowledge about the internal determinants of employee-related corporate social responsibility (CSR), particularly regarding the effect of the chief executive officer (CEO). Integrating upper echelon theory with social class literature, this study examines how CEO social class perception may influence private firms' employee-related CSR. Based on a unique dataset from the Nationwide Private Firms Survey of China, this study empirically identifies that higher CEO social class perception will promote a higher level of employee-related CSR activities in private firms. Additionally, this positive impact of CEO social class perception on employee-related CSR may be amplified among younger firms and firms with a smaller amount of intangible resources. Our study contributes to the current literature by enriching our understanding of the antecedents of employee-related CSR from the perspective of the CEO's cognition of his/her social class and revealing the related informative boundary conditions.

Paper is Available to Meeting Registrants Only.

SIM: Caring for or Involving the Employee? The Multiple Pathways of Internal CSR Making Work Meaningful

Author: **Ramona Demasi**, *U. of Zurich*
Author: **Christian Stutz**, *U. of Jyväskylä School of Business*
Author: **Sybille Sachs**, *U. of Applied Sciences, Zurich*

Research suggests that, if an employer assumes responsibility for its workforce's interest, work becomes more meaningful for individual employees. Yet, unexplored issues remain regarding how and when such organizational practices—commonly termed “internal CSR”—create conditions that enable individuals to find meaningful work. To elucidate these issues, we build a theoretical framework that captures the multiple pathways of how internal CSR engenders meaningful work. Our central argument is that employers should approach internal CSR from two distinct perspectives—a caring or an involving one—if they strive to foster meaningfulness. Either approach is undergirded by varying degrees of control and care that are ever-present in employer-employee relationships. Our framework further explains why either approach is more or less effective under different conditions, varying on New Work affordances and employee expectations. Overall, this paper unites as of yet disconnected efforts of meaningful work and micro-CSR scholars, and reorient their focus to differences in New Work affordances and aspects of control and care in employer-employee relationships.

Author: **Cristiano Ciappei**, *U. of Florence*

Author: **Lamberto Zollo**, *U. of Florence*

Author: **Riccardo Rialti**, *U. of Pisa*

Emergency-related transformative situations require businesses to react with courage and rapidness to address the incipient challenges. The recent COVID-19 crisis deeply affected world's economies, consequently imposing a re-thinking of work activity and a re-organization of work environments themselves. The proliferation of virtual relationships, as a response to the digitalization of work, could increase the distance between the economy and real life. Companies are relational networks having a central role in the development of our society; indeed, if companies lost the profound human meaning of cohesion and innovation, the fabric of the society itself would be lost. Virtual relationships have disrupted existing routines. Therefore, social distance has increased the employees' alienation. In this division between emergency situations and social development, the necessity to rediscover the role of human relations, conceptualized as relational goods, has emerged. Starting from this gap, the research aims to observe how relational goods -which derive from inter-subjectivity and reflexivity deriving from social relationships in the workplace- could increase the willingness to share information with colleagues and reduce turnover intention. Covariance-based structural equation modelling (CB-SEM) was used on a sample of Italian SME employees to empirically validate the Relational Goods construct and test the hypothesized relationships. Theoretical and managerial implications were provided to highlight significant avenues for future research on reflexive and inter-subjective relationships on the workplace.

Sourcing Ideas: Partners and others

Digital Session Chair: **Linde Colen**, *UHasselt*

TIM: The guiding role of collaboration partner in firms' entry into new research areas

Author: **Linde Colen**, *UHasselt*

As science is continuously evolving, it is essential for the sustainability of firms' competitive position to recognize and act upon opportunities in new research areas. Firms are likely unequipped to process the overwhelming amount of, often, incomplete scientific output on their own. Hence, they might benefit from social connections to scientists who can pass through helpful information by, either, being active in the research area themselves or by knowing others who are. This study examines the role of these social connections on firms' ability to act upon scientific developments. The empirical analysis examines the entry behaviour of 133 biopharmaceutical companies within 290 disease areas between 1995 and 2002. The results signal that outsiders, scientists who do not publish in the area themselves, are inferior access points for information due to a lack of affinity, credibility, and information flow. In contrast, the information gathered from insiders - scientists actively publishing within the focal area - appear to strongly influence firms' probability on entry. While this information can directly originate from the insider, it can also reach the firm indirectly originating from the insider's co-authors in the area. In respect to this indirect information, the results signal that insiders are effective brokers, arguably thanks to their affinity with the area and the peer-review character of the scientific community. In sum, the study suggests that firms with ties to highly-connected insiders are more likely to pursue opportunities within a new research area.

TIM: New partners crowd out old partners: the moderating role of network chasm

Author: **Wei Chen**, *School of Business, Renmin U. of China*

Author: **Yan Yan**, *School of Business, Renmin U. of China*

Both the entry and withdrawal of partners have received considerable attention in the venture capital (VC) literature. However, they have been viewed as more or less isolated dynamic choices. In this study, we filled this research gap by analyzing the relationship between new partner addition and old partner withdrawal in VC syndicates. We hypothesized a U-shaped relationship between the syndicate's portfolio similarity with new partners and its old partners' withdrawal possibility. Furthermore, we considered the negative moderating role of partner network characteristics, namely, the relational and structural chasm. We tested our hypotheses using the U.S. VC data during 1985–2016.

Paper is NOT Available. Please contact the author(s).

TIM: In search for new knowledge: When does hiring foreign R&D workers foster exploration?

Author: **Wolf-Hendrik Uhlbach**, *Copenhagen Business School*

Author: **Paul-Emmanuel Anckaert**, *SKEMA Business School, U. Côte d'Azur, GREDEG*

This paper examines how firms' recruitment of high-skilled foreign R&D workers affects firm-level exploration. We argue that by hiring foreign R&D workers, firms are more likely to gain access to novel and complementary knowledge, which will foster exploration. Examining a sample of 376 Danish R&D active firms over the period from 2001 to 2013, we show the effect is most pronounced when foreign R&D hires originate from geographical backgrounds that are represented to a lesser extent within firms' incumbent R&D workforce. Moreover, we show that this effect holds, even when the cognitive distance between these new hires and firms' incumbent R&D workforce is low. Finally, we highlight the temporary nature of this "exploration premium" as these results only hold for newly hired foreign workers.

Paper is Available to Meeting Registrants Only.

TIM: Initiating adoption through salespeople: Stronger selling capabilities are not always better 🌐 🖨

Author: **Herbert Endres**, *U. of Regensburg*

Author: **Julia Auburger**, *U. of Regensburg*

Author: **Roland Helm**, *U. of Regensburg*

Customers often have a critical attitude towards a new product and resist its adoption because of the associated uncertainties. One barrier is the initial stage of the customers' product adoption process, the customers' adoption of knowledge about the new offering, which has hardly been studied. It is mainly the salespeople who can mitigate the uncertainties perceived by the customer. Therefore, we focus on salespeople's selling capability, i.e., the capability of individuals to perform salespeople's tasks, addressing the two research questions: (i) "What degree of selling capability serves customers' knowledge adoption best?", and (ii) "How does customers' innovativeness and the perceived degree of innovation affect the impact of the selling capability on customers' knowledge adoption?" For this purpose, we collected survey and objective innovation purchase data from business customers of a German professional electrical tool's supplier. Our study provides three major contributions. First, we reveal that there is an optimum level of selling capability that should not be undercut nor exceeded. Second, we find that salespeople need to adapt the use of selling capability on two contingencies: the perceived degree of innovation and innovativeness of the customer. Third, we empirically prove that customers' knowledge adoption mediates the relationship between salespeople's selling capability and in-novation purchases. Sales managers, innovation managers, and marketing managers have now a more profound understanding in initiating new product adoption through salespeople.

ENT: The enabling power of transport infrastructure: A case of entrepreneurship in China

Author: **Daxin Sun**, *Shanghai Jiao Tong U.*
Author: **Saixing Zeng**, *Shanghai Jiao Tong U.*

Prior literature on economic geography highlights the role of transport infrastructure in shaping economic growth, while its implications for entrepreneurship have received less attention. Shedding new light on the decision-making processes of entrepreneurs, this paper examines how transport infrastructure affects entrepreneurship and explores potential mechanisms beyond the focal relationship. Based on the construction of high-speed railways (HSRs) in China, we find that local cities' connections to HSR networks increase the probability of individuals' entrepreneurship. Furthermore, we find that this positive relationship will be stronger for people with fewer social networks and no migration experience, revealing a substitute effect of HSRs. Our study contributes to the literature on transport infrastructure and research on entrepreneurship ecosystems by linking HSRs and personal decision making in entrepreneurship. We also provide a more comprehensive understanding of the information asymmetry and complementary asset mechanisms involved, which in turn explains the spillover of improved transport infrastructure. Finally, the findings of this study provide insight into the geography of entrepreneurial policies in coordinating "regional" transportation and "local" entrepreneurs.

Paper is NOT Available. Please contact the author(s).

ENT: What about my family? The role of negative family feedback in entrepreneurial opportunity evaluation 

Author: **Izuchukwu Evans Mbaraonye**, *U. of Nebraska, Lincoln*
Author: **Andrew A. Hanna**, *U. of Nebraska, Lincoln*
Author: **Varkey Titus**, *U. of Nebraska, Lincoln*

Scholars have discussed numerous potential explanations for why entrepreneurial opportunities ultimately go unexploited (Kirzner, 1997; Shane & Venkataraman, 2000). In particular, research on entrepreneurs' decisions to exploit opportunities has shown promise by examining the impact of entrepreneurs' life characteristics (Aldrich & Cliff, 2003), specifically as they relate to family demands (Hsu, Wiklund, Anderson, & Coffey, 2016). Representing a vital social institution within which entrepreneurs operate, the influence of family elements such as family structure and infrequent life events have been supported as playing crucial roles in the entrepreneurial process (Jaskiewicz, Combs, Shanine, & Kacmar). However, research into the impact of family characteristics has done little to consider how the frequent, dynamic feedback presented by the family unit might also affect resulting assessments of opportunities. As such, we draw insights from family systems theory (Bowen, 1978) to propose that entrepreneurs' assessments of new venture opportunities depend on relevant feedback from family members. Additionally, we implement moral foundations theory (Bavelas & Segal, 1982) to suggest that this relationship is moderated by the value placed by entrepreneurs on key facets of their moral foundations. Utilizing a sample of entrepreneurs from a Midwest-based entrepreneurial ecosystem, an initial study and potential implications are discussed.

ENT: Towards a Strategy for Resource Mobilization to Generate High Funding during New Venture Creation  

Author: **Ann-Carolin Ritter**, *Technical U. of Munich*
Author: **Theresa Treffers**, *TUM School of Management, Technische U. München*
Author: **Andreas Hein**, *Technical U. of Munich*
Author: **Jörg Weking**, *Technical U. of Munich*
Author: **Sebastian Hermes**, *Technical U. of Munich*
Author: **Dr. Markus Böhm**, *Technical U. of Munich*
Author: **Helmut Kremer**, *TUM School of Management, Technische U. München*

Even though funding is important for new venture creation, new ventures often struggle to secure funding. Additional complexity arises because new ventures mobilize resources from different actors in an ecosystem during new venture creation and collaborations with different actors are shown to influence funding decisions. Our study addresses this challenge and explores how new ventures can form a strategy to mobilize resources from different actors to generate high funding during new venture creation. Building on innovation ecosystem research, our study particularly explores the type of resources (physical, human and relational resources) that other actors in an ecosystem provide and the combinations of resources provided by different actors during new venture creation that support or hinder funding. Following an explorative two-step research approach, we conducted a qualitative content analysis based on interviews with 49 entrepreneurs of new ventures and a fuzzy set qualitative comparative analysis based on a survey with 42 entrepreneurs of new ventures. Our results show that actors with an established ecosystem (e.g., established firms) are more relevant for new ventures when creating the dimensions market and offering than less established actors (e.g., other new ventures). Furthermore, new ventures generate more funding when considering the diversity of actors in market, offering, operations, and organization instead of collaborating with convenient actors. Overall, this study contributes to research on entrepreneurial resource mobilization and innovation ecosystems by presenting a framework towards a strategy of how entrepreneurs mobilize resources from multiple different actors to generate high funding and by presenting possible solution paths.

Author: **Crista Plak**, *U. of Limoges*

Author: **Aki Harima**, *U. of Bremen, Germany*

Author: **Vincent Lagarde**, *U. of Limoges*

Refugee camps often develop an idiosyncratic space for entrepreneurial activities, which enrich not only the life of camp inhabitants but also the local economy. In resource-scarce settings, refugees utilize their entrepreneurial capacity to develop businesses. Their entrepreneurial activities are intertwined with the camp contexts and the economy in surrounding areas, which result in the emergence of a unique entrepreneurial space. However, in previous studies, interactions between entrepreneurial agents and spatial factors are not thoroughly investigated. By highlighting the uniqueness of refugee camps, this study aims at understanding the evolution of a refugee-camp entrepreneurial ecosystem. We selected the Umkulu refugee camp in Eritrea as the empirical case. Based on 30 in-depth interviews and field observation, we identified two opposite mechanisms from the resource perspective that thrive or hinder the refugee-camp entrepreneurial ecosystem's evolution. This study advances the understanding of refugee camp economies and the ongoing scholarly discussions on spatial contexts' role in entrepreneurial activities.

Positive Leader Behavior and Dysfunctional Outcomes

Digital Session Chair: **Jessica (Yongyi) Liang**, *school of management, Jinan U.*

OB: Investigating the Relationship Between Leader Group Prototypicality and Intergroup Conflict

Author: **Jessica (Yongyi) Liang**, *school of management, Jinan U.*
Author: **Haibo Wang**, *Jinan U. Management School*
Author: **Ming Nick Yan**, *Jinan U.*
Author: **Hanjing Chen**, *Guangdong U. of Foreign Studies*

Although a number of studies have examined the positive effects of leader group prototypicality, the negative effects have been understudied. Drawing from social identity theory, this study investigates the potential dysfunctional effects (i.e., intergroup conflict) and contextual factors of leader group prototypicality. Multi-phase, multi-source, multi-level survey data showed that leader group prototypicality would engender intergroup conflict via intergroup distinctiveness. Further, the leaders' benchmarking behaviour moderated this indirect effect. In particular, leader group prototypicality resulted in higher intergroup distinctiveness and intergroup conflict only when the leaders' benchmarking behaviour was higher rather than lower. Implications for the leadership literature and management practices are discussed.

OB: Crowns Too Heavy: How Top Managers' Empowerment Leads to Middle Managers' Abusive Supervision

Author: **Zhijun Chen**, *Shanghai U. of Finance and Economics*
Author: **Wang Yating**, *Shanghai U. of Finance and Economics*
Author: **Siyu Tian**, *College of Business, Shanghai U. of Finance and Economics*
Author: **Mingjian Zhou**, *Harbin Institute of Technology at Shenzhen*

A plethora of studies have shown the benefits of empowering leadership on organizational effectiveness, including positive implications to the person being empowered. As an extension, our study joins in this discussion by demonstrating and theorizing an unexpected effect of top managers' empowering leadership upon middle managers' abusive supervision toward frontline employees. Integrating the consent-based theory of power and a self-regulatory perspective, we propose that middle managers will perceive a strong performance pressure in facing top managers' empowering leadership, which then activates their abusive supervision toward their own followers. Results from one scenario manipulation and a multilevel field study provided consistent support for our predictions and further showed that these effects were more pronounced when the middle manager supervised a team with performance deficiency. Implications of our study for the leadership research are discussed, accordingly.

Paper is Available to Meeting Registrants Only.

OB: Not the Time to Be Humble: The Dark Side of Humble Leader Behavior in Uncertain Environments

Author: **Zhang Yue**, *Fudan U., School of Management*
Author: **Jih-Yu Mao**, *Southwestern U. of Finance and Economics*
Author: **Shengming Liu**, *Fudan U.*

While previous studies have demonstrated that humble leader behavior is effective in organizations, we challenge this positive conclusion by investigating specific circumstances under which such behavior can have a potential "dark side." Based on implicit leadership theory, we explore how humble leader behavior in uncertain environments affects perceived leader indecisiveness and effectiveness. Results from an experiment and a field study show that humble leader behavior is negatively related to leader effectiveness, as demonstrated by the followers' perceived leader indecisiveness when environmental uncertainty is high. Our research reveals the potential cost of humble leader behavior under high-uncertainty environments, thus contributing to literature on humble leader behavior.

Digital Session Chair: **Nastaran Hajiheydari**, *U. of Sheffield*

OCIS: **Why People Collaborate in Civic Crowdfunding Platforms: Configurational Analysis of Citizens Profile**

Author: **Nastaran Hajiheydari**, *U. of Sheffield*
Author: **Mohammad Soltani Delgosha**, *UWE Bristol*

Digital platforms are revolutionising how value is created and exchanged. The convergence of anytime-anywhere has fuelled the emergence of online networks that recently expanded their domain into promoting collective actions for addressing common issues and creating public goods. This paper taps on the less studied type of social mission platform and seeks to advance our understanding of users' participation in Civic Crowdfunding Platforms (CCPs). To this aim, we utilised theoretical multiplicity approach for developing a configurational theoretical framework that integrates two dominant behavioural theories (VBN and TPB) to empirically test citizen's motive for participating in a CCP. By adopting person-centred approach and using fuzzy set qualitative comparative analysis (fsQCA) for examining 537 respondents' data, this study explores the constellations of causal factors underlying citizens' participation in CCPs. The results demonstrate that our integrative proposed model of values, beliefs, norms and demographic variables can explain the variance of citizens' motive for engaging in a CCP. This empirical study contributes to the CCP literature by highlighting how the conjunction of socio-psychological and demographic variables forms citizens' participation in a civic campaign. We propose a configurational emergent model that enhances our understanding of different citizens' profile who collaborate in a CCP. Through bridging the body of knowledge on configurational perspectives and behavioural theories, this study uncovers five latent profiles (Social Justice Advocates, Communal Citizens, Benevolent Supporters, Self-centered Contributor and Outcome-oriented Volunteers) that characterise bakers of civic crowdfunding projects. By examining several equifinal pathways, this study also contributes to practice by proposing pragmatic knowledge on the combination of factors that are essential in stimulating collaboration in CCPs.

OCIS: **Knowledge co-creation for a complex concept on a digital platform**

Author: **Kirsimarja Blomqvist**, *LUT U.*
Author: **Matti A. Vartiainen**, *Aalto U.*

This study examines temporary expert group knowledge co-creation on digital platforms. Our ethnographic study focuses on digital organizing and more specifically on temporary expert team knowledge co-creation on a digital platform. Based on the rich data from micro-level digital traces, we study how a complex concept is co-designed. Temporary team's knowledge co-creation process is supported by project leads' weaving work and co-created digital scaffolds. The emerging concept design is a result of the cyclical knowledge co-creation process where experts apply their personal knowledge in repeating cycles leading to complex concept co-design. Experts share their personal knowledge by inspiring and informing others with the help of visual artifacts. Visual artifacts become boundary objects when others engage in a digital dialogue through articulating, asking and challenging the knowledge co-creation process supported by socio-emotional communication. Research contributes to digital organizing of expertise by providing a nuanced understanding of the knowledge co-creation process and the use of digital artifacts as boundary objects in asynchronous collaboration for complex problem solving.

OCIS: **ambiguous, misinterpreted, but essential: conceptualization of the "digital mindset"**

Author: **Yannick Hildebrandt**, *Otto-Friedrich U. Bamberg*
Author: **Daniel Beimborn**, *U. of Bamberg*

The way people how act and think is mentioned frequently as one of the most essential factors to consider regarding successful digitalization. However, although we frequently talk about the 'digital mindset', the literature lacks a distinct, holistic and detailed definition of what this way of thinking is actually representing. Through an analysis and synthesis of the fields of psychology and digitalization literature, this conceptual paper pursues the goal to address the question of how a digital mindset can be conceptualized from a holistic perspective. As a re-sult, three main findings contribute to the research of the human side of digitalization and pave the way for future research avenues. First, a general definition of digital mindset is formed as thinking patterns, epitomized through cognitive processes, filters, and core convictions of humans constituted of cognitive mechanisms and knowledge structures, that affect and foster digital innovation and transformation to accomplish digitalization. Secondly, 19 concrete thinking patterns are derived that typify a digital mindset and can be differentiated between newly developed thinking patterns and remained or modified thinking patterns. Thirdly, the conceptualization reveals that the development of a (digital) mindset is based on knowledge as a prime component.

OCIS: **Predictors and outcomes of individual knowledge on early-stage pandemic**

Author: **Yash Chawla**, *Wroclaw U. of Science and Technology*
Author: **Agnieszka Radziwon**, *U. of California, Berkeley & Aarhus U.*
Author: **Laurent SCARINGELLA**, *Rennes School of Business*
Author: **Ewa Lazarczyk Carlson**, *Reykjavik U.*
Author: **Marco Greco**, *U. of Cassino and Southern Lazio*
Author: **Paulo Duarte Silveira**, *Polytechnic Institute of Setubal, Portugal*
Author: **Eduardo Pestana De Aguiar**, *Federal U. of Juiz de Fora, Brazil*
Author: **QingYang Shen**, *Chengdu U. of Information Technology, China*
Author: **Markus Will**, *Zittau/Görlitz U. of Applied Sciences, Germany*
Author: **Anna Kowalska-Pyzalska**, *Wroclaw U. of Science and Technology*

This study explores how individuals obtain knowledge, perceive information sources, behave, and form opinions while facing a pandemic at an early stage. We develop a conceptual model linking the predictors of individuals' knowledge with people's behavior and opinions. The model is empirically tested through a large-scale global survey of 15,552 respondents from 123 countries. Our results indicate that relying on one source of information does not lead to favorable behavior towards curbing the pandemic. Furthermore, we need to educate people and control misinformation spread on policy and social network platforms to curb emergencies collectively.

Corporate Investment & Corporate Investment Decisions

Digital Session Chair: **Stijn Kelchtermans**, *KU Leuven*

TIM: Dipping a Toe? The Relation between CVC Investments and Entry into New Technology Domains

Author: **Stijn Kelchtermans**, *KU Leuven*
Author: **Hamzeh Obeid**, *KU Leuven*
Author: **Maarten Rabijns**, *KU Leuven*

Existing research has prescribed corporate venture capital (CVC) investments as effective tools for firms to explore new technologies. However, it remains unclear to what extent firms can use CVC investments to build capabilities to create technology in previously unfamiliar domains as this requires that they go through an extensive learning process. This paper argues that CVC investment not only allows exploring new technologies but sets in motion a chain of learning events linked by four stages in a knowledge absorption framework, and which is moderated by investee quality and the presence of other corporate investors. We test our propositions using a panel of 244 large pharmaceutical firms that make 847 unique CVC investments during 2000-2015 in ventures patenting in technology domains in which the firms were not active in the 5 years preceding the investment. We show that firms who make CVC investments in ventures active in technology domains which are unfamiliar to them, have a higher likelihood to subsequently start patenting in these new domains. Furthermore, we show that this likelihood is positively moderated by the average quality of the investee, the presence of investment syndicates and the relatedness of the technology to the firm's existing knowledge base. These results add to the literature on CVC investments and technological entry by furthering our understanding on the role of CVC investments not only as a tool for technological exploration, but also as an effective vehicle for technological exploitation through learning.

TIM: Corporate Venture Capital, Big Data, and Privacy Regulation

Author: **Meitong Li**, *Harvard Business School*

Firms face a choice over the types of assets they own, especially complementary assets with specificity when making corporate venture capital (CVC) investments. As data has become an increasingly important type of asset, this paper explores the role of data in the formulation of CVC investments. Due to constraints arising from the context in which data is collected, and the intended use of the data, we find that data can enhance complementarities between competitors. Using a regulation in China, which prohibits transactions of personal data, as an exogenous shock, we find that, as the cost of obtaining data increases, more CVC investments are made between former competitors. Furthermore, we find this effect to be stronger for companies that are already using data as their core asset, and this effect can be mitigated by the availability of other information acquisition channels, such as common ownership between the company pair.

TIM: Angels and Demons: The Negative Effect of Employees' Angel Investments on Corporate Innovation

Author: **Santanu Kundu**, *U. of Mannheim*
Author: **Clemens Mueller**, *U. of Mannheim*

A firm's economic value of patents decreases by 3.3% - 5% when its employees are investing their personal wealth in start-ups. We refer to such angel investors employed at public corporations as angel employees. We establish causality with matching and instrumental variable regressions, which rely on quasi-exogenous competition in the early-stage financing market. The negative relationship is stronger for angel employees in innovation-related roles, if the linked start-ups are more time consuming, and for exploratory patents. Start-ups financed by angel employees are more likely to successfully exit. Our results indicate that angel employees divert time and effort from their employers to their personal start-up investments. Overall, we highlight unexplored negative effects of angel investors in our economy.

TIM: Blinded by the Person? Field Experimental Evidence from Idea Evaluation in a Multinational Company

Author: **Linus Dahlander**, *ESMT European School of Management and Technology*
Author: **Arne Thomas**, *ESMT Berlin*
Author: **Martin Wallin**, *Chalmers U. of Technology*
Author: **Rebecka Cedering Ångström**, *Stockholm School of Economics*

Seeking causal evidence of how the relationship between proposers and evaluators affects idea evaluation outcomes, our field experiment manipulates the process in which innovation managers evaluate ideas proposed by their colleagues in a large multinational company. We vary the information that the managers receive on the proposers, creating two conditions: (1) a blind evaluation, where managers receive no proposer information, and (2) a non-blind evaluation, where they receive the proposer's name, organizational unit, and location. We analyze how blind evaluation changes scores and whether the effect depends on order, gender, organizational unit, and location. We find little evidence that blinding substantially changes idea evaluations, discuss how the non-finding may arise, and how it enriches cumulative knowledge on corporate idea evaluations.

A growing number of management scholars aim to combine their academic research with real-world impact, through taking a stance on pressing societal issues and combining activism with scientific rigor (e.g., Tihanyi, 2020; Alvesson et al., 2017). Scholars' focus can vary from prioritizing their “activist” role or their “scientist” role. In this PDW, we explore how research may engage in societal change not only through the traditional instruments of activism (e.g., protests, demonstrations, public education) but also through the traditional instruments of science (e.g., conducting scientific research to advance knowledge). The purpose of this PDW is to initiate a more structured discussion about being in the spectrum from “Scientific Activist” to “Activist Scientist” with the aim of establishing rigorous methods for engaging closely with managers as a commonly accepted practice. We do so by offering a platform for scholars to debate and discuss its different forms of such activities with each other. We structure the PDW in two parts. Part 1 is a panel of three leading management researchers as well as a practitioner panelist who have engaged in different types of science and activism. Part 2 includes several breakout-room roundtable discussions that allow emerging researchers as well as scholars that are new to the area to dive deeper into the different aspects. Overall, the PDW aims to empower researchers to effectively engage with practitioners and design research to better serve practicing managers to deal with the challenges they face.

CAR: The Hen-Egg Problem of Informal Workplace Learning & Work Design: The Mediating Role of Job Crafting

Author: **Julian Decius**, *Paderborn U.*
Author: **Niclas Schaper**, *U. of Paderborn*
Author: **Andreas Seifert**, *U. of Paderborn*

Informal workplace learning (IWL) is the predominant form of vocational learning. In striving to foster IWL, the focus of previous research has been on work design: According to the active learning hypothesis from the Job-Demand Control Model, job control and demands will lead to learning. IWL research has so far agreed with this assumption but has hardly investigated it longitudinally. The alternative active shaper hypothesis suggests that engagement in learning leads to more job control and demands. The underlying process may be proactive behavior such as job crafting. In this article we present the results of two longitudinal studies. In Study 1, we use a cross-lagged panel design with structural equation modelling to analyze our two-wave data with a 1.5-year interval among 129 blue-collar workers. The results show that IWL leads to job control and demands; the reverse causal direction is not significant. Hence, study 1 provides support for the active shaper hypothesis. In study 2, we use three-wave data with a 3-week interval among 79 white-collar workers to examine potential mediating effects of job crafting within the relationship of IWL on work characteristics. We found full mediation effects of task crafting and relational crafting for the “IWL ? Job control” relationship, but no effect of cognitive crafting. However, we did not find any mediating effects for the “IWL ? Demands” relationship. The findings contradict the predominant active learning hypothesis and have broad implications for workplace learning research and personnel development in organizations.

CAR: Female Leadership Program Evaluation in Higher Education: A Strategy for Female Career

Author: **Annie He**, *U. of Leeds*
Author: **Katie Leeman**, *U. of Leeds*

This article explored female under-representation on leadership role and female career development in the context of higher education in the United Kingdom. Despite female participation continuously growing in global workforce and female leadership value being recognized, there was a disproportionately high rate of male on senior role and a scarcity of theoretical basis for female leadership building. Especially in higher education field, obstacles for women advancement have received less attention due to the perception of female dominance in this field. Organizations have delivered various training programs to develop female leadership capacity. However, the evaluations of such programs were generally unsatisfactory. The return on organization and impact on personal development still remain unclear. This study was based on interview results of 11 female leaders who have participated in leadership training program in a Russell group university. Kirkpatrick model was adopted in this study to evaluate program effectiveness. Findings presented that female leaders shared humble leadership style and they were benefited from leadership training program by enhancing professional skills, building network and motivating leadership aspiration. Results also suggested leadership program played a pivotal role in building confidence and developing female career. This paper additionally gave the suggestions about how to better design and evaluate female leadership program.

CAR: Out of the Shade, into the Light: Star Absence as an Opportunity for Non-Stars

Author: **Arne Thomas**, *ESMT Berlin*

To develop a deeper understanding of how star employees affect their colleagues, this paper investigates temporary star absence and its effect on the productivity of non-stars. Exploiting quasi-experiments induced by injuries of star players in the National Basketball Association (NBA), I analyze changes in the offensive output of non-star players while the star is absent and after he has come back. Compared to the pre-absence phase, non-stars increase their offensive output while the star is absent. After long absences, this effect becomes lasting and non-stars can sustain an increased level of production even when the star has come back. Further analyses reveal that junior employees particularly benefit from star absence, especially those in the middle of the talent distribution. The key mechanism underlying these effects is that non-stars get more opportunities to perform in the absence of the star. Star absence thus provides new development possibilities for employees who are usually overshadowed by the dominant star.

New Product Development

Digital Session Chair: **Lorenzo Skade**, *European Uni Viadrina, Frankfurt (Oder)*

ENT: “Do as we say and you’ll be successful”: Accelerators as Organizations of Entrepreneurial Dressage

Author: **Lorenzo Skade**, *European Uni Viadrina, Frankfurt (Oder)*

Author: **Matthias Wenzel**, *Leuphana U. Lüneburg*

Author: **Jochen Koch**, *European Uni Viadrina, Frankfurt (Oder)*

Entrepreneurs in educational organizations such as accelerators are those who create the new, the yet-to-come that differs from the here-and-now. But how do these organizations actually help them to accomplish this process? This paper extends the burgeoning literatures on accelerators and entrepreneurship by exploring the practices of becoming an entrepreneur in an accelerator. Based on a Foucault-inspired discourse analysis of ethnographic data gathered at a Berlin-based startup accelerator, we identified three practices—observing, exercising, and punishing—through which the accelerator’s staff ensured that startup founders would adopt a specific dominant style of entrepreneurship, one that reproduces growth-oriented and profit-focused themes. Through such powerful disciplining, they were able to make founders comply with such a style of entrepreneurship. The main contribution of our study is to advance an understanding of accelerators as organizations of entrepreneurial dressage. Furthermore, we add to the understanding of the mundane power dynamics of entrepreneurship through which actors mobilize dominant entrepreneurship themes to help others learn to become entrepreneurs.

Paper is Available to Meeting Registrants Only.

ENT: Telling “White Lies”: How Rationalized Knowledge Hiding Influences New Product Development

Author: **Chang Xiong**, *Xi’an Jiaotong-Liverpool U.*

Author: **Leven Jianwen Zheng**, *U. of Liverpool*

Knowledge hiding studies have largely focused on its dark side, while we theorize the potential positive effect of rationalized knowledge hiding in the context of entrepreneurial firms’ new product development speed. By extending and integrating theoretical perspectives of rationalized knowledge hiding and trust, we theorize that rationalized knowledge hiding accelerates the new product development speed of entrepreneurial firms that has been cognized as a critical component that matters firm survival and growth. To test this assumption, we developed and analyzed a pair data of founder-CEO and the founder-CTO of 137 high technology entrepreneurial firms in China. The empirical results suggest that CTO’s rationalized knowledge hiding in CEO accelerates the new product development speed of high technology entrepreneurial firms. Our analysis also shows that such acceleration would be slower when a CEO’s affective trust in the CTO is higher, while the acceleration would be faster when a CEO’s cognitive trust in CTO is higher. Overall, we theorize that rationalized knowledge hiding produces positive effect on the new product development speed of entrepreneurial firms.

ENT: Unpacking the Negative Impact of Initial Informality on Innovation: The Roles of R&D and Training

Author: **Dawit Assefa**, *U. of Messina*

Author: **Ching T. Liao**, *NEOMA Business School*

Author: **Bisrat Misganaw**, *NEOMA Business School*

This article identifies the underlying mechanism explaining why firms starting unregistered (initial informality) are less innovative. We argue that resource allocation patterns developed during a firm’s early stage are likely to persist. Firms with initial informality are less likely to invest in R&D and employee training compared to firms starting registered. This explains their low innovativeness. Using data from the World Bank Enterprise Survey, we analyze firms from 30 countries in Sub-Saharan Africa. Our empirical evidence shows that R&D investment and employee training mediate the negative relationship between initial informality and innovation. This finding has significant policy and managerial implications. While transitioning from informal to formal firm status, it is essential to put in place policy instruments encouraging investment in R&D and employee training. Nascent entrepreneurs should take into consideration the lasting impacts of initial informality on firm development when making decisions.

Paper is Available to Meeting Registrants Only.

ENT: The Formation and Evolution of a Startup’s Intellectual Property Strategy

Author: **Alexander Fink**, *Swiss Federal Institute of Technology Zurich, ETH*

Author: **Stephan M. Wagner**, *Swiss Federal Institute of Technology Zurich, ETH*

Startups face a tension to simultaneously protect and share intellectual property (IP) in a collaboration. In this grounded theory study, we examine how startups deal with this tension to protect their IP. To this end, we investigate the formation and evolution of the IP protection (IPP) strategy. We draw on a unique longitudinal dataset that comprises 70 interviews as well as observational and archival data. We show that startups’ IPP strategies are not predetermined but evolve dynamically. Startups may change their protection strategy entirely with the formation of a collaboration with a key customer.

ENT: Meant to be a generator or adaptor: How founder birth order influences innovation?

Author: **Leven Jianwen Zheng**, *U. of Liverpool*

Author: **Youqing FAN**, *Western Sydney U.*

An individual’s birth order has been suggested as one of fundamental and engrained human early-life family-domain experiences that shape his or her behaviors in adulthood. In spite of the importance of birth order, very little understood at how birth order influences an individual’s innovation preferences. By integrating sibling rivalry theory and social identity theory, we propose that later-born founders generate more product innovation generation, while earlier-born founders produce more product innovation adoption. We further theorize that the former relationship will be negatively moderated by the extent of sibling rivalry and positively moderated by founder social identity, while the later relationship will be positively moderating by both the extent of sibling rivalry and founder social identity. Based on the analysis of 186 high technology entrepreneurial firms, the empirical results support our theorizing and provide valuable practical implications for entrepreneurs to link their childhood experience with their entrepreneurial goals in product innovation. Our theorizing and findings advance understanding in both birth order and entrepreneurial innovation literatures.

Digital Session Chair: **Pi-Shen Seet**, *Edith Cowan U.*

ENT: Transforming Self-Employability & Entrepreneurship for Mothers via Mobile Sharing Economy Platforms 

Author: **Pi-Shen Seet**, *Edith Cowan U.*

Author: **Helen Cripps**, *Edith Cowan U.*

Author: **Uma Jogulu**, *Edith Cowan U.*

Author: **Mehran Nejati**, *School of Business and Law, Edith Cowan U.*

This research focuses on the extent sharing economy transforms employability for women impacted by domestic and reproductive work. We explore the experience of mothers, of how digital peer-to-peer (P2P) platforms can affect their real and perceived employability by unlocking human capital, through technology acceptance. It incorporates a case study research design with the Gioia methodology. A semi-structured telephone survey collected data to explore the decisions around usage of a new mobile P2P app, aimed to support employability among mothers. Analysis was conducted inductively using Leximancer, thematic analysis and Partial Least Squares Structural Equation Modelling (PLS-SEM). We found that mothers experience high rates of continued labor market attachment on a casual or part-time basis, difficulty in juggling family and work, and high levels of concern both about future employment/ entrepreneurial opportunities and expected stress in balancing dual roles of carer and earner. While they are interested in using new sharing economy technologies to reduce skills deterioration and improve signaling, there were both technology and non-technology related barriers. These included trust and security, life-stage mismatch, time poverty and limitation of service offerings. This exploratory study contributes to research by illustrating how sharing economy platforms can offer women a means to overcome the issues of signaling and skills deterioration in relation to aspects of human capital theory, and additionally, how the social interactions between mothers, through technology adoption, can provide a basis for improving future self-employment and entrepreneurship. Keywords: Self-employment, mumpreneurship, self-perceived employability, sharing economy, P2P platforms, technology acceptance, signaling, skills deterioration.

ENT: Sustainable Entrepreneurs: What Drives Them to Engage in Different Crowdfunding Types? 

Author: **Ghassan Yacoub**, *IESEG School of Management*

Author: **Paulami Mitra**, *assistant professor*

Author: **Tiago Ratinho**, *IESEG School of Management*

Author: **Faustine Fatalot**, *IESEG School of Management*

The crowdfunding of entrepreneurial opportunities has received a growing and emergent scholarly interest in primarily tackling the antecedents and consequences of crowdfunding success as well as entrepreneurial characteristics that attract crowdfunding. However, there is limited knowledge on the crowdfunding of sustainable entrepreneurship and particularly the reasons that drive sustainable entrepreneurs to participate in crowdfunding. This issue is timely and merits special attention given the urgency and relevance of sustainable development for companies and society alike in the years to come. Based on data collected from sustainable entrepreneurs based in France, this study investigates the drivers that lead sustainable entrepreneurs to engage in crowdfunding. Building on our qualitative case study, we develop a conceptual framework outlining the key drivers and additional drivers that guide sustainable entrepreneurs to crowdfunding types. We discuss contributions, implications and future research on the crowdfunding and sustainable entrepreneurship literature.

Paper is NOT Available. Please contact the author(s).

ENT: Motivation for Sustainability in Family Businesses: A Latent Profile Analysis

Author: **Maike Gerken**, *U. of Witten/Herdecke*

Author: **Robin-Alexander Ernst**, *U. of Witten/Herdecke*

Author: **Marcel Hillsbeck**, *U. of Witten/Herdecke*

Author: **Pramodita Sharma**, *U. of Vermont*

Author: **Sanjay Sharma**, *U. of Vermont*

Research on sustainability in family firms has become increasingly multifaceted with the number of influencing factors that promote sustainability activities. The purpose of this study is to explore the motivation for sustainability using latent profile analysis. The analysis identified three distinctive profiles among a family firm sample of N=387. The results show that each of these profiles has different priorities in adjusting sustainability strategies. While reactive family firms primarily consider sustainability to be a cost factor, proactive family firms combine business model innovation and sustainability and see it as an opportunity to give back to society, while profiting economically. Family firms that are stuck in the middle commit only to selected areas of sustainability because they face significant resource restrictions. Findings demonstrate the importance of the authentic motivation to sustainability that requires family businesses to base all economic activity on sustainability, without disregarding certain areas of sustainability.

ENT: Exploring Managerial and Social Media Practices in Family Businesses: Effects on Performance

Author: **Timothy Pett**, *Rollins College*

Author: **Laurent Sie**, *ESC Pau Business School*

Author: **Kip Kiefer**, *Rollins College*

Author: **Gautam Nagpal**, *ESC Pau BS & UPPA, E2S UPPA, CNRS, TREE, Pau, France*

Author: **Frederic Dosquet**, *ESC Pau Business School*

This study examines the influence of high performing organization (HPO) management principles and social media marketing strategies on firms' performance, as reflected in firms' triple bottom line (TBL). The study examines profit, planet and people – and whether or not HPO managerial and social media marketing strategies present differences in TBL performance outcomes for firms that are family businesses relative to those that are not family businesses. Employing a survey of 392 businesses, we conduct confirmatory, factor and regression analyses to explore the impact of managerial practices and social media marketing on firms' performance (family and non-family) exploring both financial and non-financial outcomes. Findings suggest that HPO managerial practices and social media marketing strategies influence TBL outcomes and that performance outcome differences do exist between family and non-family firms. A discussion regarding practice implications, study limitations, prospective future research directions and concluding thoughts are provided.

Digital Session Chair: **Young-Choon Kim**, *Ulsan National Institute of Science and Technology*

ENT: **Commercialization Speed and Licensing Performance: Evidence from of University-Originated Invention**

Author: **Young-Choon Kim**, *Ulsan National Institute of Science and Technology*
Author: **Yoon-Ho Jeong**, *Korea Evaluation Institute of Industrial Technology*
Author: **Kyung Baek Toni Min**, *Ulsan National Institute of Science and Technology*

This paper examines the relationship between innovation speed and performance in the context of commercialization of university-originated inventions. Focusing on the commercialization speed, defined as the rate of speed at which a lab-scale invention can be developed for commercial sales, we investigate whether there is any systematic association between commercialization speed and the revenue generated by university-originated inventions. Analyzing a sample of inventions from Stanford University, we find that commercialization speed of the invention, measured by pre- and postlicensing speed, is indeed positively associated with its licensing revenue. We also find that the positive relationship between postlicensing speed of commercialization and licensing revenue is contingent on the inventor's orientation for university-industry collaboration. We discuss the implications of our findings as well as the future avenue of research in technological commercialization.

ENT: **The Effects of Academic Entrepreneurship on Scientific Research Productivity: Evidence from NSF**

Author: **JuYeong Lee**, *Korea Advanced Institute of Science and Technology (KAIST), College of Business*
Author: **Byungchae Jin**, *Korea Advanced Institute of Science and Technology (KAIST)*

A call to action by the National Academy of Sciences to close the gap between academia and practice has changed the innovation landscape in academic research, encouraging academic scientists to have an entrepreneurial mindset. While there is a widely accepted belief that individual scientific entrepreneurs play a key role in closing the knowledge gap between academia and practice, it is necessary to empirically understand how the rising trend of academic entrepreneurship changes scientists' research directions because policymakers and universities widely advocate academic entrepreneurship. We assess the impact of academic entrepreneurship training program on a scientist's research productivity by using a unique set of data from the National Science Foundation Innovation Corps (I-Corps) program. The results show that scientists who participated in the I-Corps file for more patents but publish fewer articles in academic journals. This research makes two contributions. First, it sheds light on how entrepreneurship rearranges the future research directions of entrepreneurial faculty. Second, the findings provide insight for policymakers that potential sides effects should be considered for the future regulatory compliance.

Paper is Available to Meeting Registrants Only.

ENT: **Policies for Innovative Entrepreneurship: Exploration and Exploitation at Work?**

Author: **Nikolaus Seitz**, *LMU School of Management, Ludwigs-Maximilians-U. Munich*
Author: **Erik Lehmann**, *U. of Augsburg*
Author: **Matthias Menter**, *Friedrich Schiller U. Jena*

Different types of policy instruments are implemented to enhance innovative entrepreneurship. Despite the wide range of measures, the impact and synergistic effects of entrepreneurship policies remain an open question. These policies focus either on contexts encouraging people to invest in research and the development of new technologies (exploration policies) or on the commercialization and recombination of existing knowledge (exploitation policies). Set in the German context, this study investigates the cross-fertilization of exploration and exploitation policies. Our results suggest that although beneficial on their own, the combination of exploration and exploitation policies leads only to augmented levels of entrepreneurship, but not innovative entrepreneurship. These findings give impetus to more nuanced policy approaches that take a better account of the specific policy context.

Paper is Available to Meeting Registrants Only.

ENT: **Non-commercial academic entrepreneurship: The influence of human capital in social value creation**

Author: **Jason Jahir Roncancio**, *Vrije U. Brussel*
Author: **Nikolay Anguelov Dentchev**, *Vrije U. Brussel*
Author: **Maribel Guerrero**, *Newcastle Business School, Northumbria U.*
Author: **Abel Diaz Gonzalez**, *Vrije U. Brussel*

Most of the relevant studies in Academic Entrepreneurship attempt to explain the importance of universities in economic growth. A reason for the above is that universities generate research-based intellectual property, which can be later transferred to the industry or transformed into a university spin-off company. However, the scientific literature on Academic Entrepreneurship is limited when academic entrepreneurial initiatives seek to tackle social challenges without looking for economic profit. This research uses the theoretical lens of human capital to argue that universities can address social challenges by promoting not only the traditional academic entrepreneurship based on research results, but also the non-commercial one that seeks social value creation. Our findings are based on empirical qualitative data obtained from 55 semi-structured interviews, 6 focus groups, 10 observation panel, conducted among university staff (managers, teachers, and students), located in the countries of Bolivia, Colombia, and Ecuador.

Digital Session Chair: **Ashley Yerves Roccapriore**, *U. of Tennessee, Knoxville*

ENT: **Express yourself: A meta-analytic study of investor funding decisions based on varying signals** 

Author: **Ashley Yerves Roccapriore**, *U. of Tennessee, Knoxville*
Author: **Thomas R. Crook**, *U. of Tennessee, Knoxville*
Author: **Melissa S. Cardon**, *U. of Tennessee*

Entrepreneurs express many things to potential investors, including both objective signals such as their preparedness and experience, and subjective signals such as their passion, coachability, and trustworthiness. While these and other signals can be important to some investors, evidence in the literature is fragmented and mixed. As a result, we have virtually no comparative knowledge concerning which signals matter more, or which lead to greater funding success with different types of investors. We build hypotheses based on signaling and information processing theory, then employ meta-analytical structural equation analysis to synthesize and organize the growing literature. Based on analysis of 87 studies with 45,362,436 investor decisions, we find that while both objective signals and subjective signals result in more successful funding outcomes, objective signals lead to 1.7 times as many successful funding outcomes. Further, investor social capital plays more of a role in investment decisions than investor experience or the objective signals sent by entrepreneurs.

Paper is NOT Available. Please contact the author(s).

ENT: **Referrals and their effect on Venture Capital Due Diligence**  

Author: **Christina Guenther**, *WHU - Otto Beisheim School of Management*
Author: **Serden Ozcan**, *Associate Dean for Corporate Connections WHU - Otto Beisheim School of Management*
Author: **Dirk Sassmannshausen**, *WHU - Otto Beisheim School of Management*

Venture capital is a socially embedded business where VCs refer investment opportunities to one another. While we know that these referrals increase the chances of a start-up passing the initial screening process, we investigate to what extent the intensity of relational embeddedness between referrer and referee relates to the length of the due diligence process of the start-up being referred. Building on social exchange theory, we find that referees do not take the referral as a simple heuristic cue to shortcut the due diligence process, but rather reciprocate the favor by commitment towards the relationship and expending additional time on due diligence. Moreover, we find that the individual investment manager's current performance and experience moderate this relationship.

ENT: **A Process Perspective on Venture Capitalists' Investment Decision-Making**

Author: **Yaro Wolff**, *U. of St. Gallen*
Author: **Manuel Hess**, *U. of St. Gallen*
Author: **Joakim Wincent**, *Luleå U. of Technology*
Author: **Dietmar Grichnik**, *U. of St. Gallen*

While venture capitalists' (VCs) investment decision-making is a prominent research topic since decades, prior research neglects potential dynamics in agency problems that appear particularly along the multi-stage investment decision process up to the point of investment contract negotiation (also called the screening and evaluation process). To fill this research gap, this study focuses on the decrease of information asymmetry between the investors and the entrepreneurs along the multi-stage investment decision process and investigates how and when the common investment criteria (e.g., team, business model, market, product) reach relevance and affect decision-making along those stages. Our agency framework explains the deduction and evaluation of information (i.e., involving junior and senior lead decision makers) and the substituting signals for missing information (i.e., (real) quality deal flow) and their effect on changing criteria importance along the process. In testing our hypothesis, we utilize data on 16,676 actual venture deal proposals managed by a European based venture capital firm.

ENT: **Signal sequences: Venture Capital, IPO and Valuation of Entrepreneurial Ventures at Acquisitions**

Author: **Massimo Colombo**, *Politecnico di Milano*
Author: **Benedetta Montanaro**, *Politecnico di Milano School of Management*

This paper studies how a sequence composed of multiple signals influences the valuation that entrepreneurial ventures receive at acquisition. Along the venture life-cycle, startups generally first obtain capital from VCs and then go through an IPO. In particular, the strength of the former signal influences the way receiver perceive the latter signal and may become a double edged sword. We argue that, after receiving a strong signal relating to the type of VCs that are backing a focal startup, prospect investors set a high aspiration level about the quality of the startup. Consequently, a subsequent weak signal relating to the type of stock market in which the startup is listed can trigger a problemistic search that leads prospect investors to readjust their investment decisions, with detrimental effect on firm's valuation. We test our hypotheses performing a difference-in-difference model on a sample of 2080 European entrepreneurial ventures. Results show that a strong signal related to being VC-backed will make market observers set their expectations on the firm's quality at a higher level, so that subsequently becoming public on a low reputable market will negatively impact the valuation.

Spin-offs and Spin-outs

Digital Session Chair: **Aliasghar Bahoo Torodi**, *Bocconi U.*

ENT: Technological and Marketing Capabilities of Incumbent Firms as Sources of Opportunities for Spinouts

Author: **Aliasghar Bahoo Torodi**, *Bocconi U.*

Author: **Keld Laursen**, *Copenhagen Business School*

Author: **Salvatore Torrisi**, *U. of Milano-Bicocca*

Entrepreneurship literature on spin-outs (new ventures by ex-employees of incumbent firms) suggests that increases in either the level of incumbent firms' technological or market knowledge enhance the likelihood of spin-outs' entry. Conditional on spawning new ventures, in this paper we examine whether the knowledge structure of incumbent firms would affect the strategic direction of ventures spawned. Analyses of data from the biotech industry supported our hypotheses linking the focus of incumbents' technological and market portfolio to their spin-outs' pattern of entry to the same (or different) technological fields or market segments as their parent firms. Our results contribute to the strategy and entrepreneurship literatures by providing a novel perspective on incumbent firms as source of new venture formation and their post-entry strategy.

ENT: Survival and performance of strategic restructuring spin-offs and necessity spin-offs

Author: **Thomas Roslyng Olesen**, *Copenhagen Business School*

Author: **Agnieszka Nowinska**, *Aalborg U., Department of Business and Management*

In the past decade, researchers have increasingly explored the performance of spin-offs created by events that adversely affected the incumbent. Extant literature has, however, mainly focused on employee made necessity spin-offs, while the post entry performance of incumbent made strategic restructuring spin-offs has largely been ignored. This may result in an overestimation of the performance of the former type of spin off. In the current study, we explore the post entry performance and survivability of 26 strategic restructuring and necessity spin-offs from four Danish shipyard closures over almost four decades. We find that strategic restructuring spin-offs outperform necessity spin-offs on several growth parameters including turnover and employment. Surprisingly, we also find strategic restructuring spin offs to have higher survival rate than the necessity spin-offs. The study adds to our knowledge on the relationship between spin-off type and firm growth and suggest that further attention should be given to spin-offs created in strategic restructurings.

ENT: A theory-driven model of the spin-off creation process: A Social Information Processing perspective

Author: **Matteo Opizzi**, *department of economics and business - U. of Cagliari*

Author: **Michela Loi**, *U. of Cagliari*

This work contributes to the field of Academic Entrepreneurship by providing a theory-driven explanation of spin-off creation, conceptualized as a process that includes the following phases: opportunity identification, entrepreneurial intentions and spin-off creation. Illuminated by the Social Information Processing Theory, it looks at the role of individual and organizational factors in the process of spin-off creation. Based on a Systematic Literature Review- we highlight how each process' phase has been studied and which individual and organizational factors are more relevant in influencing the spin-off creation process. Drawing from our results, we elaborate a conceptual framework that proposes a research agenda for the mechanisms connecting individual and organizational issues in the process of spin-off creation.

Presenter: **Rembrand Michael Koning**, *Harvard Business School*

How do the strategies of startups differ from those of the established organizations? It is important to understand two fundamental liabilities of new ventures to find answers to this inquiry. First, because founders tend to have prior work experience from other companies in the same industry, and they are already enculturated to the industry norm, it is difficult for entrepreneurs to differentiate their organizational form, culture and identity, and products and services from their potential competitors. Second, many new ventures start their businesses in the markets where established players dominate. The stability of new ventures is often questioned, and they also lack the status of larger established firms, so resource mobilization is extremely challenging. This symposium aims to investigate the strategies that startups can take to leverage these two fundamental burdens, so that they turn into advantages instead. To that end, we invite scholars whose respective work falls under one of the following two categories: startup strategies to (a) gain and create resources and (b) organize activities.

OB: Motivational Primacy of Proactive Employees Under Different Configurations of Proactive Personality

Author: **Xinxin Lu**, *U. of Illinois at Chicago*
Author: **Arjun Mitra**, *California State U., Los Angeles*

Drawing on the motivational hierarchy theory, the present research seeks to explore multiple motives underlying proactive personality and the moderation of team proactive personality differentiation. With a three-wave study among 496 employees from 65 teams, we found that individual proactive personality is positively related to individual knowledge sharing via organizational concern, whereas it is negatively related to knowledge sharing via impression management motive. Proactive personality differentiation strengthens the indirect effect of proactive personality on knowledge sharing via impression management motives and weakens the indirect effect via organizational concern. We further elaborate on the configuration of proactive personality differentiation and showed that the indirect effect via impression management motives is positive only in bimodal configuration, the indirect effect via prosocial motivation is significant only in minority configuration, and the indirect effect via organizational concern is significant only in the shared configuration. This research sheds light on the multiple motives behind proactive personality and the role of the magnitude and configurations of proactive personality differentiation in determining the motivational primacy.

OB: Sleep Well, Be Proactive: A Within-Person Model of Sleep Quality, Optimism, and Proactive Behavior

Author: **Yaxian Zhou**, *The U. of Hong Kong*
Author: **Bonnie Cheng**, *The U. of Hong Kong (HKU)*

Although a large body of research has linked sleep to positive work outcomes, little is known about how and when nightly sleep quality prompts proactivity at work. Building on the model of proactive motivation and taking a resource perspective, we propose that sleep, as a daily resource-restorative activity, is conducive to employees' work engagement (reason to motivation), vigor (energized to motivation), and organization-based self-esteem (can do motivation), which provide motivational resources for proactive behaviors. On the basis of positive psychology, we posit that optimism as positive psychological resource, specifies when sleep prompts the proactive process. Through a 15-day experience-sampling study, we found support for our predictions. Theoretical and practical implications for sleep and proactivity are discussed.

OB: Coworkers' Support and Resistance Behaviors to Proactive Change Behaviors

Author: **Mustafa Akben**, *Fox School of Business, Temple U.*

Drawing on cognitive appraisal theory and theorizing from the organizational change literature, this paper examine the mechanisms of coworker support and resistance behaviors in response to proactive change events. It is hypothesized that coworkers who perceive proactive work behaviors as harmful tend to resist, those who perceive such behaviors as beneficial tend to support. Additionally, individual need for change and supervisor support for proactive behaviors are important boundary conditions: when coworkers believe they need a change event alike, they perceive an event as being related to their goals, thereby strengthening their appraisals as either beneficial or harmful. When a supervisor supports a proactive event, coworkers believe it more likely to occur, thereby strengthening their appraisal of the event. Finally, coworkers' participation in decision-making about proactive events moderates their active or passive support and resistance behaviors. When they have the opportunity for participation, they feel more control over the course of action and engage more in resistance or support behavior. Employing an online-survey method incorporated with a critical incident technique, this paper tested the hypothesized model from a sample of 390 participants and presents the theoretical and practical implications of the research.

OB: The Key To Happiness In Collaborative Workplaces. Evidence From Coworking Spaces

Author: **Domenico Berdicchia**, *U. of Ferrara*
Author: **Fulvio Fortezza**, *U. of Ferrara*
Author: **Giovanni Masino**, *U. of Ferrara*

This quantitative study explores some significant psychological and behavioral dynamics in coworking spaces, an increasingly popular type of work organization especially among freelancers, professionals and entrepreneurs. We collected data from a sample of 175 people working in coworking spaces and we found that a more cooperative organizational climate increases the workers' happiness. We also found that such relationship is positively moderated by several job crafting behaviors. In other words, when workers experience work proactively they are more likely to benefit from the potential advantages (resources, challenges, networking opportunities, etc) that cooperation-oriented work settings provide, which, in turn, amplifies the positive effect of cooperative work settings on individual happiness. These findings represent a useful contribution for both the sparse literature on coworking spaces, and on the more general job crafting literature, as there are still very limited contributions on behavioral dynamics that are specific to coworking spaces, and on the role played by job crafting in influencing workers' happiness as well.

Tackling Grand Challenges Strategically: Legitimate Processes and Processes of Legitimation

Tackling Grand Challenges Strategically

Digital Session Chair: **Gary Thomas Burke**, *Aston U.*

SAP: Assessing the Unintended Consequences of Legitimizing Responses to Grand Challenges

Author: **Fannie Couture**, *U. of Sydney Business School*

Author: **Paula Jarzabkowski**, *City U. London*

Author: **Jane Kirsten Le**, *WHU - Otto Beisheim School of Management*

SAP Best Paper Award

Carolyn Dexter Award Nominee

Our study shows that legitimating processes involved in responding to grand challenges can have detrimental consequences for how these challenges are addressed. Findings from our in-depth case study reveal the dynamics of a multi-stakeholder partnership established to address water health issues in a critical river basin located in Australia's Great Barrier Reef region. While organizational actors involved in this partnership successfully legitimated their response to the grand challenge, this response became increasingly disconnected from the worsening conditions the partnership intended to address. This disconnect was driven by an imbalance between outputs produced by the partnership and outcomes with regard to the grand challenge. Our study reveals a cumulative and reinforcing (de)legitimizing process whereby organizational actors can become increasingly skilled in legitimating their collective response while simultaneously moving further away from addressing the worsening grand challenge itself. Drawing on our findings, we develop a (de)legitimizing process model which enables a better understanding of how legitimating processes shape efforts to address grand challenges.

SAP: Construing a Future for Construction: Textual Characteristics of an Industry-Level Strategy Document

Author: **Marius Andersson**, *BI Norwegian Business School*

While the important role of textual artefacts such as strategic plans within organizations have long been recognized in the literature on strategy discourse, less is known about such documents occurring in extra-organizational domains. Similarly, a related literature on how constructions of the future come to be established and realized in organizations has yet to examine how such imagined futures may be constructed beyond the boundaries of individual organizations. In an attempt to address these gaps, this paper relies on a case study of a single document represented as an 'industry-level strategic plan' that articulates an imagined future for an entire industry. By employing a critical discourse analysis approach, the study identifies within the document four key 'discursive moves' through which the industry-level future is constructed.

SAP: How Nascent Organizations Overcome Unfavorable Legitimacy Judgments to Form Partnerships

Author: **Kenneth Goh**, *Singapore Management U.*

Author: **Daniel Z. Mack**, *Singapore Management U.*

Author: **Gerard George**, *Georgetown U., McDonough School of Business*

Collaboration amongst stakeholders is imperative to addressing grand challenges. However, nascent organizations, that are often the source of new ideas, suffer from unfavorable legitimacy judgments by incumbent stakeholders which can impede partnership formation. How do nascent organizations that adopt new practices and build legitimacy to partner with incumbents? We address this question through an inductive examination of online platforms in an Asian country for crowd-funded donations—which are often perceived negatively by mainstream social services—and how the crowdfunding platforms eventually form collaborative partnerships with incumbent social service organizations. Our findings reveal how case workers in crowdfunding platforms improved legitimacy judgments towards crowd-funded donations by enacting three interrelated practices that differentiated and replicated aspects of incumbent social workers' practices—(1) enacting value complementarity, (2) upholding professional values through differentiated practices, and (3) replicating governance practices. These legitimacy-enhancing practices enabled case workers to introduce a new way of social welfare provisioning, while also reducing sanctioning by incumbent social services organizations and fostering interagency collaboration.

SAP: Grand Challenges – What We Know and a Process Model of How Organizations Tackle Them

Author: **Madalina Stoicovici Pop**, *Aarhus BSS, Aarhus U.*

Author: **Annabeth Aagaard**, *Aarhus BSS, Aarhus U.*

During the last decade, grand challenges (GCs) have received increasing interest in organization and management studies. However, this has led to a growing, broad, and highly unconnected body of knowledge with articles across streams using different terms for the same concept and not drawing on each other's findings, leaving a number of research gaps. This article provides a literature overview and a conceptualization of the concept of GCs in addressing these research gaps. Additionally, in order to facilitate knowledge building across the field, a process model is inductively built from nascent literature of how organizations make sense of and act toward GCs. The model identified shows how in tackling GCs, organizations have to deal with diverse tensions and paradoxes stemming from the complex nature of GCs.

SIM: Coping with Difficult Place Characteristics: Insights from a Cross-Sector Partnership

Author: **Lea Stadler**, *Grenoble Ecole de Management*
Author: **Luk Van Wassenhove**, *INSEAD*

We seek to advance place-sensitive theory on cross-sector partnerships (CSPs) by investigating how partners may cope with difficult place characteristics that affect their collaboration. To this end, we examine a disaster relief CSP in which the partners had to cope with the place intensity of disaster settings and the multiple risks involved, as well as with the place diversity of pre- and post-disaster settings in which attention risked diverting to each partner's own agenda and organizational activities. Our findings illustrate how the partners navigated between these settings by acknowledging their collaborative effects and by leveraging their cross-fertilizing potential. They did so by engaging in two practices of "place work": They used the resources of pre- and post-disaster settings to anticipate and prepare for the place intensity, and projected such intensity to sustain collaborative commitment in pre- and post-disaster settings. These insights advance CSP research by juxtaposing the collaborative effects that place intensity and diversity tend to trigger, and by identifying practices of CSP place work whereby partners turn places into a management tool to better handle their adverse effects.

SIM: B2N Partnerships – Nested Systems of Transformation and Interaction: A Systematic Literature Review

Author: **Julia Herzum**, *U. of Mannheim*
Author: **Bernd Helmig**, *U. of Mannheim*
Author: **Benedikt Englert**, *U. of Mannheim*

As different sectors possess distinct and idiosyncratic resources, partnerships between business and nonprofit organizations (B2N) allow solutions to be found to challenges that are too complex to be handled alone. Accordingly, such partnerships form an integral part of the United Nations sustainable development agenda and have resulted in a series of research projects over the last decade that now requires to be systematized. For this reason, the present paper reviews the existing literature concerning B2N partnerships and aims at developing an integrated research agenda. The review's focus is to identify the determinants enabling a successful partnership between for-profit and nonprofit actors. To this end, we develop a dyadic framework, postulating that B2N partnerships are nested systems of transformation and interaction. The transformation-based perspective allows us to consider the partnership process and the associated transformation of inputs into outputs. By complementing this view with an interaction-based perspective, we shed light on the interrelationships between the institutional, organizational, individual, and partnership levels. Such a comprehensive, integrated analysis enables us to holistically capture the B2N's manifold challenges and success factors. Accordingly, the article concludes by delineating a theory-grounded framework combining the critical determinants to build and maintain an alliance on diverse analysis levels.

SIM: Functional diversity of alliance portfolio and corporate social responsibility

Author: **Qing Dai**, *Nottingham U. Business School China*
Author: **Liang Wang**, *Nottingham U. Business School China*

This paper seeks to bridge them by exploring the impact of a firm's alliance portfolio on its CSR. Drawing from the organizational learning lens, we propose that alliance portfolio represents an important source of knowledge and insights that are necessary for a firm to adopt and implement various CSR practices. As the functional diversity of a firm's alliance portfolio increases, it can gain more distinctive CSR-related knowledge, and its CSR performance will reasonably increase. Further, we propose that the learning from alliance portfolio demonstrates an incremental nature and is contingent upon the governance structure of a firm's alliances. The empirical findings in the sample of 521 public firms in China strongly support the positive linkage between functional diversity of alliance portfolio and CSR. The findings also reveal that this relationship weakens for firms with more prior alliances and a higher reputation – two variables we employ to indicate the incremental effects of learning from alliance portfolio. And the relationship becomes stronger as a firm's portfolio includes more equity-based alliances.

SIM: A Cross-Sector Study of Co-Creating Social Responsibility Capability

Author: **Piotr Wojcik**, *Kozminski U.*
Author: **Krzysztof Obloj**, *Kozminski U.*
Author: **Anthony F. Buono**, *Bentley U.*

The paper examines the evolution of a corporate social responsibility initiative, from initial philanthropic efforts to building capability that is directly linked to the firm's core business. We investigate this issue through an inductive case study of a cross-sector collaboration, drawing on the perspectives of both the firm and its non-profit partner. The research explores the underlying dynamics of how the company in question captures new resources and develops new capability during the collaboration process. The findings illustrate how cross-sector collaboration can act as a catalyst to co-create capability to social responsibility, generating mutually beneficial outcomes.

SIM: **Walking together on the way to CSR: A study on how companies select CSR partners** 

Author: **Jingjing Weng**, *National Taiwan U. of Science and Technology*

Author: **Ching-Hui Tang**, *National Tsing Hua U.*

Author: **Li-Hsiang Yi**, *National Tsing Hua U.*

Author: **Ying-Che Ali Hsieh**, *National Tsing Hua U.*

Various researchers have demonstrated the importance of having suitable partners for effective CSR implementation, making the selection of appropriate CSR partners an increasingly important issue for companies' CSR development. However, most of the existing research on CSR partnerships tends to focus on the collaboration between corporations and non-profit organizations, with less attention paid to the diverse partnerships between different types of organizations. This research explores how companies choose their partners and methods of collaboration under different CSR partnerships with in-depth case studies of three leading companies in Taiwan that have been actively engaged in CSR. The findings of this research led to the proposal of a CSR Partner Selection model, which reveals the dynamic processes and specific criteria of screening and selecting suitable partner(s) for companies' CSR projects. This research contributes to the existing literature by expanding our knowledge regarding cross-organization CSR partnerships, and also provides important implications for organizations seeking CSR partnerships in practice.

CMS: Out with the new, and in with the old? Bourdieu, crisis, and the (in)equitable future of work

Author: **Senia Kalfa**, *Macquarie U.*

Author: **Layla Jayne Branicki**, *The Open U. Business School*

Author: **Stephen Brammer**, *U. of Bath*

The COVID-19 pandemic, as a multi-dimensional crisis, is having profound impacts on the field of work. Despite a proliferation of claims that it will usher in a new and better normal in workplaces, the crisis has generated a range of adverse impacts for employees and work, and it remains unclear how enduring any positive impacts of the crisis will be. Drawing on Bourdieu's conceptual architecture, we examine the impact of the pandemic on the field of work through 43 in-depth phone interviews with human resource (HR) managers conducted between April and September 2020. Our evidence illustrates that COVID-19 has surfaced competing orthodox and heterodox discourses, the former based on employee monitoring and a separation of work from home and the latter on trust, flexibility and the blended workplace. We find that the HR managers we interviewed make sense of their new environment based on their habitus and on their capacity to decipher the newly established social context. We draw on Bourdieu's concept of hysteresis - a temporary state in which the opportunity of field-change sits at odds with actors' habitus - to explain why the COVID-19 pandemic presents both the opportunity for a radical transformation towards a more inclusive future of work, and the risk of a regressive and exclusionary alternative. Our findings highlight the central role played by managers in their everyday work in determining how the current crisis will impact work as both a field and a lived reality.

CMS: Toward a Critical Attribution Theory: An illustrative case and agenda for future research

Author: **Benedetta Colaiacovo**, *U. degli Studi di Milano*

Author: **Marco Guerri**, *U. degli Studi di Milano*

Author: **Silvia Gilardi**, *U. degli Studi di Milano*

Organization and HRM research had count on different psychological theories to predict a people's reactions to relevant events at work. In this perspective, a great interest has been devoted towards Attribution Theory (AT). However, a critical analysis reveals that the application of attribution theory in organization and HRM research has been informed by some assumptions of the neoliberal ideology. Therefore, this paper adopts a critical approach to provide an overview of how the application of mainstream attribution theory in organization and HRM studies has been oriented by instrumentality and individualism and propose a critical attribution theory as a viable alternative. Finally, an illustrative case is presented to show how critical attribution theory can be successfully applied with respect to digital technologies implementation.

CMS: The Ethics of Algorithmic Work: A Baradian Exploration of Inequalities in Digital Platform Labor

Author: **Alice Ro Sofie Wickström**, *Aalto U., Department of Management Studies*

Author: **Ari Kuusmin**, *Aalto U., School of Business*

Author: **Saija Katila**, *Dr.Sc. (Econ. & Bus. Adm.) Senior Lecturer*

In this paper, we explore inequalities within digital platform labor, and algorithmic management through Karen Barad's feminist materialist understanding of ethicality, how values matter and get materialized. Grounded in an entangled approach to the world, Barad focuses on the enactment of cuts that determine what comes to matter, and what is excluded from mattering, which shape bodies, discourses, subjectivities and relations. Following this, we analyze the algorithmic technology of a digital platform for takeaway deliveries, Foodora, and show how it orients workers' bodies in particular disembodied, and at times even cruel, ways, while also privileging reactivity over relationality, and individuality over collectivism. We argue that the algorithmic function can be understood as an apparatus that 'cuts-in' and 'cuts-out' certain practices, dispositions and affects, which shapes how the work(er) comes to matter in a way which privileges capital over the laboring bodies. This implies that it is not a neutral, or equal, technology but a part of broader capitalist-entanglement that reproduces sameness, excludes difference and thus relational ethicality. We contribute to the growing critical literature on digital labor platforms by emphasizing the need to account for the agency of materiality, and to the sociomaterial literature in management- and organization studies by further elaborating on the ethical implications of relational thinking. We shed light on how algorithmic management, and digital platform labor, reflect and (re)produce already existing inequalities and injustices related to class and race, and explore how feminist materialist theorizing can open up for more ethical form(s) of knowledge-production.

CMS: The theology of gamification

Author: **Nick Butler**, *Stockholm U.*

Author: **Sverre Spoelstra**, *Lund U., School of Economics and Management*

Coined in 2002, the term 'gamification' refers to the application of game-elements to non-game contexts, most notably the sphere of work. Spearheaded by consultancy firms such as BunchBall and Badgeville, the aim of gamification is to make work seem like - or even become - its opposite: play. Two basic criticisms have been made about gamification. First, gamification is said to bear no resemblance to the true richness and variety of videogames. Second, gamification is said to be a neo-Tayloristic management technique that exploits workers beneath the surface of a videogame. Both criticisms imply that work could be made more meaningful and humane if only organizations were infused with a genuine play-spirit - either by designing better gamified systems or by developing subversive forms of counter-gamification. In other words, while the two main critical perspectives question the method or objectives of corporate gamification, they rarely challenge its most fundamental assumption: that true play will set work free. In this paper, we challenge this view. By teasing out the implicit theological dimensions of gamification, we raise ethical questions about the moral privileging of play over work in contemporary organizations.

Corporate Social Responsibility (CSR): Implementation Challenges and Opportunities

Digital Session Chair: **Marine Hadengue**, *SKEMA Business School, U. Côte d'Azur (GREDEG)*

MED: Reshaping Management Education at the Time of the Anthropocene: A Proposal

Author: **Marine Hadengue**, *SKEMA Business School, U. Côte d'Azur (GREDEG)*
Author: **Yoann Guntzburger**, *SKEMA Business School, U. Côte d'Azur (GREDEG)*

Corporations are in a legitimacy crisis. They face growing concerns about their role and responsibilities in driving modern societies beyond most of the planetary boundaries. This legitimacy crisis of the core global business organizations has not left its educational institutions unscathed, and business schools have also been regularly criticized, especially in the last few years. Both corporations and business schools have developed and integrated frameworks, such as CSR or PRME as attempts to answer these concerns. The results remain, however, disappointing and a paradigm shift has yet to take place (Pirson, 2020, Tourish, 2020, Snelson-Powell et al. 2020). As an attempt to renew management education and to restore the legitimacy of business schools, propositions based on a deep paradigm shift have been recently published. Among them, the humanistic narrative developed by Pirson appears to be innovative and relevant (see Pirson, 2020, Pirson & Lawrence, 2010). In this paper, we aim to contribute to this debate by proposing a practical model of Humanistic Management Education (HME), organized around and organizing three interdependent dimensions – Youths, Organizations, and Technological Changes – within global dynamics. HME aims to transcend utilitarian goals and enables the development of every individual's potential to live together sustainably and increase the quality of social ties. We argue that such an approach may support management that allows human organizations to face responsibly the challenges of the Anthropocene.

MED: Interdisciplinarity at the grassroots: cultivating T-shaped sustainability skills   

Author: **Gabriela Gutierrez Huerter O**, *Assistant Professor, King's Business School*
Author: **Sarah Glozer**, *School of Management, U. of Bath*
Author: **Anica Zeyen**, *Royal Holloway, U. of London*

Amid calls for business and management schools to engage with the 'grand challenges' of sustainability, this empirical research paper asks how do early-career researchers cultivate interdisciplinarity sustainability competences within business school contexts? Distinct from previous work that has examined 'top-down' approaches to fostering interdisciplinarity in the context of sustainability (e.g., institutional structures and curricula), our paper draws attention to a student-led bottom up sustainability initiative. Using a collaborative auto-ethnography approach, we examine the unique case of the 'Sustainability Research Network' (SRN); a network of early-career researchers (ECR) formed within a UK university with the primary purpose of building interdisciplinarity in sustainability research and teaching. Drawing from a constructivist theory of learning and integrating insights from sociological systems theory, our findings showcase how ECRs navigate various communicative practices as they build sustainability competences. In doing so, we build a 'Sustainability Skills Futures Framework' (SSFF), comprising four sustainability competences that harness interdisciplinary thinking through 'T-shaped' skills (depth and breadth of knowledge). Premised upon communication, our framework stimulates timely reflection within management research education on the performative potential of communicative practices of sustainability within business school contexts.

MED: Measuring the Complexity of Students' Cognitive Maps of Corporate Social Responsibility   

Author: **Lutz Preuss**, *Kedge Business School*
Author: **Isabel Fischer**, *Isabel.fischer@wbs.ac.uk*
Author: **John Luiz**, *U. of Sussex*

Decision-makers in industry, government and NGOs have to deal with a multitude of tensions and uncertainties; not least, this applies in the context of corporate social responsibility (CSR) and sustainability. Interdisciplinary thinking is recognised as an essential prerequisite for tackling such complex problems. Many business schools therefore pride themselves to be encouraging students' interdisciplinary thinking. Using an undergraduate business degree capstone module, taught at a research-active university in South-East England, we analyse the interdisciplinary thinking of business students by measuring the structure of cognitive maps through which these students synthesised their knowledge of CSR. We find a range of demographic differences, for example female students outperforming male students in the complexity of their maps. We also find a 'lecturer effect' associated with the amount of real-world experience of lecturers. Overall, however, our results point to a lack of students' interdisciplinary thinking. Drawing on sensemaking literature, we examine how we can deepen students' understanding of the complexities associated with CSR; not least, unpacking the importance of moving beyond scanning for information, towards interpreting and developing meaning, and finally responding on that basis.

MED: Integrated Pedagogy for Sustainable Entrepreneurship and Innovation: The Case of EIT Climate KIC  

Author: **Rita Gertrud Klapper**, *Manchester Metropolitan U. Business School*
Author: **Theresa Oberstrass**, *Leuphana U. Lüneburg*
Author: **Paul Upham**, *SPRU U. of Sussex UK*

There is to date rather little research on the pedagogy of sustainable entrepreneurship and innovation education. This study illustrates the value of an integrated pedagogical approach to sustainable entrepreneurship and innovation education: one that acknowledges all three dimensions of head (abstract knowledge), hands (practical competence), and heart (affect and motivation). It also illustrates the challenges of doing so. To these ends, the study applies a simple, integrated approach to transformational learning to the exemplar case of summer school training offered by the European Institute of Innovation & Technology (EIT) Climate KIC education programme, a European Commission-funded initiative to develop sustainability-oriented entrepreneurs. The study uses repertory grid-based interviews to understand and compare the perspectives of a sample of participants, with a view to providing in depth, mostly qualitative insights. We find that, as proposed a priori, all three educational elements (head, hands and heart) are viewed as valuable by participants, about half of whom had already established an entrepreneurial venture or intended to in the next five years. However, we also find that the often-neglected Heart dimension of learning seems to have had the greatest impact on the participants.

 **OMT: Assessing and Extending the Unique Contributions of Chinese Management Studies** 

Author: **Wenjie Liu, Erasmus U. Rotterdam**
Author: **Pursey Heugens, Erasmus U. Rotterdam**
Author: **Frank Wijen, Erasmus U. Rotterdam**
Author: **Marc Van Essen, U. of South Carolina**

Finalist for the OMT Division Best International Paper Award

The field of Chinese management studies has grown tremendously over the past four decades. Despite an increasing interest in uniquely Chinese phenomena, Western management theories have long been the dominant perspectives for understanding Chinese firms and managers. Yet, the explanatory potential of our current theoretical toolkit remains unelucidated in non-Western contexts. Through a matched-samples meta-analysis, which integrates matching techniques into meta-analysis, we compare the mean effect sizes for five classic Western management theories (i.e. institutional theory, resource dependence theory, the resource-based view, agency theory, transaction cost theory) on 452 matched samples drawn from 1,028 U.S. and Chinese studies. Results show that, contrary to popular belief, Chinese firms (a) are less responsive to coercive and mimetic pressures yet more subject to normative forces, (b) are less focused on establishing relational ties when faced with resource dependencies and transaction costs, (c) are better at managing strategic resources for profit, and (d) respond better to pay incentives than their U.S. counterparts. To understand the specificities of Chinese management practices, we furthermore conduct a focused review of the emerging literature on China-endemic explanations: political institutional imprinting theory, a specifically Chinese take on sustainable development, and a China-specific theory of corporate governance.

OMT: How Mythical Constructs Inhabit Theorizing Spaces: A Critique of Dynamic Capabilities

Author: **Alex Wright, U. of Sheffield Management School**

One significant problem organization and management theory (OMT) faces is a dearth of new emergent theories. This issue is approached in a novel manner. This paper presents a critical review of the strategic management concept dynamic capabilities (DCs) and concludes that the construct has so little theoretical merit and practical relevance that theorizing on the topic should end and be abandoned. Discarding redundant constructs open up new theorizing spaces. This conclusion is arrived at by conducting a critical review of over 25 years of DCs research, including 16 review articles published over 13 years. The DCs literature is characterized by a casting around for relevance, empirical problems and criticisms ignored. The notion of DCs is then framed as a mythical authoritative text and this is drawn from to demonstrate how texts of this type can act in authorizing research that emboldens the construct and rewards those associated with it, without ever materializing it in the way that is claimed. It is conjectured that OMT is likely to be replete with constructs that are better understood as mythical authoritative texts and that if laid to rest would free up theorizing spaces allowing new theories to emerge.

OMT: What Types of Novelty Are Most Disruptive? 

Author: **Erin Leahey, U. of Arizona**
Author: **Jina Lee, U. of Arizona**
Author: **Russell James Funk, U. of Minnesota**

Finalist for the Louis R. Pondy Best Paper Based on a Dissertation Award

This work builds on recent advances in the study of novelty and impact to investigate whether novel scientific papers tend to disrupt the scientific literature, and whether some types of novelty are more disruptive than others. We develop a computational measure to capture the ways in which scientific articles are novel (e.g., developing a new method or presenting a new result). We also utilize Funk and Owen-Smith's (2017) CD index to capture the different ways an article can influence a stream of literature: by consolidating (C) or disrupting (D) the status quo. Drawing upon classic sociology of science scholarship on the distinction between cumulative normal science research and non-cumulative paradigm shifts (Kuhn 1962; 1977), we develop hypotheses about which type of novelty is more likely to disrupt knowledge streams and which is more likely to consolidate them. By integrating data from the Web of Science (to measure the nature of scientific influence) with reflective essays written by authors of Citation Classics (to access novelty claims) and by joining computational text analysis with statistical analyses, we demonstrate clear and robust patterns between type of novelty and the nature of scientific influence. As we expected, articles that develop and present a new method tend to be more disruptive, likely because they tend to cross disciplinary divides, which boost creative insight and alters citation patterns (Abbott 2004; Koppman & Leahey 2019). To our surprise, new theory (especially the most abstract kind of theory) is associated with a more consolidating type of influence. This may be attributable to the nature of theory and theory-building, which tends to involve synthesis and bricolage.

OMT: Decoupling in the Editorial Boards of Scientific Management Journals in Brazil

Author: **Altieres De Oliveira Silva, ESPM, Sao Paulo, Brazil AND Centro U. UNICURITIBA**
Author: **Ilan Avrichir, ESPM, Sao Paulo, Brazil**

This work aims to analyze how editorial boards of scientific journals in Management in Brazil function. It focuses on understanding what editorial boards they formally declare to have, and if these boards effectively perform the role they are assumed to or if they are ceremonial, in which case, they would be, according to a concept popularized in Organizational Theory by neo-institutionalizing, be decoupling. Decoupling is a theme that has been increasingly being studied, but knowledge about its relation to isomorphism and how entire populations are impacted by it is not yet sufficiently understood. The research is a multiple case study complemented by quantitative analyses. From a theoretical point of view, the research allows the refinement and expansion of the conceptual domain in which the phenomenon of decoupling has already been studied. From a practical side, it makes available to policy formulators access to aspects of journals reality that are not easily accessed and problematize specific policies.

STR: Paying Attention to Informal Peers: Informal Competition and Time Assigned For Innovation

Author: **BIBEK BHATTACHARYA**, *Indian Institute of Management, Bangalore*

Despite their ubiquity in emerging economies, informal firms have received scant attention in strategic management literature. Given the salience of informal sector competition for formal firms in emerging economies, a nascent stream of literature has investigated the role of innovation as a potential response. Studies examining this relationship have however not accounted for a) formal firms which pursue a combination of technological and non-technological innovation and b) formal firms which may have engaged in innovation-activities but did not achieve desired innovation outcomes within a specific observation period. Additionally, prior innovation research also suggests that the impact of an antecedent may be different on innovation inputs as compared to innovation outputs. In this article, we address these gaps by examining the effect of informal competition on a generic upstream innovation input: time. Drawing on the attention-based view, we predict that the level of informal competition increases the propensity of formal firms to assign time to its employees for innovation. We also argue that this relationship is contingent on two important firm conditions: numerical labor flexibility and location in special economic zones. Results from our empirical analysis, using data from a large sample of Indian firms, provide support for our hypotheses.

STR: Alert! Treating the language game in competitive interaction seriously

Author: **Khoa Ngoc Duy Nguyen**, *U. of Jyväskylä School of Business*
Author: **Tomi Samuli Nokelainen**, *Framery Oy*

Competitive dynamics research has recently conceptualized, in line with Wittgensteinian tradition, competitive interaction between rival firms as a “language game” – interaction in which speech acts play a visible and influential role. However, extant competitive dynamics research comprises two separate streams of research: the language game school which focuses on rivalry as verbal challenges and responses, and the traditional, theoretically more developed school which studies rivalry as an exchange of “concrete” actions while occasionally including a bulk “signaling” category for speech acts. Our purpose in this paper is to lay groundwork for rigorous and nuanced theorization about why and how companies use speech acts. We present an initial attempt to bring the language school of competitive dynamics research to an equal footing with the traditional school.

STR: The Global Dynamics of Technology-Intensive Sectors: Are we Seeing Hypercompetition?

Author: **Annesofie Lindskov**, *Roskilde U.*
Author: **Kristian Johan Sund**, *Roskilde U.*
Author: **Johannes K. Dreyer**, *Roskilde U.*
Author: **Jiang Yu**, *Chinese Academy of Sciences*

We test whether global technology-intensive sectors have become hypercompetitive over the 1980-2018 period. This is what numerous scholars have suggested, yet few have tested. Based on data from the United States, Europe, Japan, and China, we find no indication of a generalized increase in business performance volatility across regions. We instead find regional differences, such as a declining stability in the performance of Japanese firms over the study period, and in US firms leading up to the burst of the dotcom bubble. A structural break analysis helps us identify that hypercompetition is a “local” phenomenon in both location, time, and industry. We conclude that there is a lack of evidence supporting assumptions of widespread hypercompetition in technology-intensive sectors.

STR: Hypercompetition: A Review and Agenda for Future Research

Author: **Annesofie Lindskov**, *Roskilde U.*

Over the past three decades, hypercompetition – the rapidly escalating competition with a constant changing industry structure and temporary competitive advantages – has attracted significant interest from both economists and management scholars. Despite the common use of the phenomenon in explaining competitive environment by scholars from various research streams, the literature on hypercompetition has developed in a more isolated manner. This article offers a systematic review of the literature on hypercompetition by analysing a sample of 125 articles published or presented at a conference between year 1996 and 2019. The objective for this review is threefold: (1) to give an overview of the empirical and conceptual work in the literature of hypercompetition; (2) to identify the components of hypercompetition drawing from a prolific but fragmented body of empirical findings; and (3) to propose a framework model incorporating the causes and presumed consequences of hypercompetition. The review aims to facilitate a broader understanding of hypercompetition that can help advance the knowledge on hypercompetition and give suggestions for future research.

Author: **Roxanne Jaffe**, *U. of Maryland R.H. Smith School of Business*

This paper examines the relationship between location traits, firm capabilities—including firm financial pressure—and expansion timing and location choice in a competitive environment. I first build a formal model of firm expansion and entry timing based on Cournot competition that is driven by heterogeneity in firm, location, and competitor traits. Using Monte-Carlo simulation, I identify firm best responses and Nash Equilibrium which serve as predictions for empirical inquiry. I then consider how changes in firm traits and location traits lead to different expansion outcomes including whether firms expand at all, whether firms enter a market early or later, and which geographical location firms choose. There are trade-offs to each expansion outcome. While similar firms will have similar monopoly and duopoly rents, as firm relative capabilities differ so too do their ability to extract rents. Staggered entry becomes more appealing as firm relative capabilities and financial conditions change. Additionally, expansion strategy becomes more nuanced when considering the interaction between firm, competitor, and location traits. For instance, I find that less capable firms prefer to expand after more capable firms, but pressure for revenues may push less capable firms to expand earlier than they would prefer. I discuss one set of propositions that can be explored given my empirical setting. I test predictions from the model using a unique hand-collected dataset of firm expansion in the micro-mobility industry including all firms operating scooter, bike, and moped share businesses in the U.S. Increased financing from venture capital funding and the increased quality and availability of platform technologies have led to rapid expansionary behavior in industries with a large start-up presence. The empirical results support some model predictions and illustrate the importance of different levels of data in explaining expansion strategy. The data also highlights several areas to extend the model.

Conflict, Politics, and Coalitions

Digital Session Chair: **Dries Bourgois**, *KU Leuven*

STR: Cash Holdings and Firm Hiring: A Coalitional View  

Author: **Dries Bourgois**, *KU Leuven*
Author: **Veroniek Collewaert**, *Vlerick Business School & KU Leuven*
Author: **Ine Paeleman**, *U. of Antwerp*
Author: **Tom R. Vanacker**, *Ghent U. and U. of Exeter*

Drawing on a coalitional view in the Behavioral Theory of the Firm, we focus on how employees affect the allocation of cash holdings in firms. Specifically, we argue that the bargaining power of employees will affect the extent to which cash holdings are allocated to new hires. Using panel data from 62,608 firms, we show a positive, but decreasing effect of cash holdings on new hires. This relationship is strengthened for subgroups of employees which hold more power because firms are more dependent on them and an exogenous law change grants them stronger protection against employers. As such, this study sheds light on the role of employees, as important but under-examined coalition members, in the allocation of cash holdings within firms.

STR: Is the Boss Always Right? Discerning the Effects of Hierarchy on Exploration and Exploitation 

Author: **Anindya Ghosh**, *Tilburg U.*
Author: **Kyeonggook Park**, *City U. of Hong Kong*
Author: **Lori Rosenkopf**, *U. of Pennsylvania*

The literature on antecedents and consequences of exploration and exploitation behavior in organization learning, while extensive, uses both a wide variety of context-dependent operationalizations and also exhibits a clear methodological tradeoff between the strong causal inference of models and the realism of field and archival studies. Experiments with human subjects raise the promise of examining actual human behavior under controls that strengthen causal inference. To design an experiment with these properties, we focused on a structural determinant of exploration and exploitation behavior and analyzed the effect of hierarchical authority on team behavior and performance in a simple multi-armed bandit game. Consistent with extant literature, hierarchy increases exploitation behavior. Importantly, while models of simple multi-armed bandit games predict convergence on strategies that maximize performance, our experiments with humans demonstrated that hierarchical authority reduced convergence despite this increase in exploitation behavior. Post-hoc analyses demonstrate that hierarchical conditions yield more convergence on sub-optimal strategies than non-hierarchical conditions. These results demonstrate the importance of testing modeling assumptions about human behavior in experimental conditions, and we conclude by offering an agenda for further research in this area.

STR: Executive Sent-Down Experiences and Corporate Poverty Alleviation  

Author: **Fangwen Lin**, *National U. of Singapore*
Author: **Yishu CAI**, *City U. of Hong Kong*

In this study we investigate whether an executive's downward mobility experiences in early life affect corporate antipoverty initiatives. Drawing upon insights of social mobility literature and imprinting theory, we argue that executives with early experiences in a downwardly mobile context compared to those without, tend to foster cognitive proximity to the poor by attributing the poverty to structural rather than individual factors, which motivates them to undertake more poverty alleviation initiatives afterwards. We exploit a natural experiment, the Send-Down Movement in China, to examine our theory. The results indicate that the experiences of being sent down from urban to rural substantially prompt the executives' later engagements in poverty alleviation. We also find such effect decays as these sent-down executives received elite education and operated business in tier-one cities. Our findings contribute to the theorizing about social class mobility among upper echelons and the understanding of poverty alleviation.

STR: Micro-foundations for Competitive Orientation: How Social Welfare inside the Firm Matters 

Author: **Manuel Bueno Garcia**, *U. of Granada*
Author: **Flore Bridoux**, *Erasmus U.*
Author: **Juan-Alberto Aragon-Correa**, *U. of Granada*
Author: **Blanca Delgado-Marquez**, *U. of Granada*

Management literature has become more interested in the influence of human capital on a firm's social orientation. We propose that abundance of employees who used to participate in the organizational competitive process affect positively a firm's social innovation; however, their competitive orientation conducts to a negative relationship with a firm's stakeholder engagement. Using a sample of 10,564 employees from 94 of S&P100 companies, we found support for our hypotheses. Moreover, our results show that a higher level of pay dispersion in the firm reinforces the negative effect of the competitive orientation on a firm's stakeholder engagement. This paper provides key insights for a micro-foundational conceptualization of the effects of human capital on a firm's social orientation and their different implications for engagement and current innovation.

Teams 1

Digital Session Chair: **Fakher Omezzine**, *Grenoble Ecole de Management*

ENT: **How fast can you go? the impact of the founding team's history on the time to reach unicorn status** 

Author: **Fakher Omezzine**, *Grenoble Ecole de Management*
Author: **Isabel-Maria Bodas-Freitas**, *Grenoble Ecole de Management*

This paper attempts to answer the question “how do some new ventures grow faster than others?”. Building on the group composition and entrepreneurship literatures, we understand entrepreneurial team members as both carriers of distinct functional skills and personal experiences. Hence, we argue that the entrepreneurial team’s composition, in terms of both the diversity of the team’s functional skills and the familiarity among members, influence new venture performance, in particular growth speed. We use original data on 248 unicorn ventures and their respective founders to test our hypotheses. Our findings suggest that the diversity of the founding team’s skills decreases the time it takes the venture to reach unicorn status, but only up to a threshold after which, increases in team diversity increase the time it takes the venture to reach a billion-dollar valuation. Our findings also suggest that joint experiences among the founding team’s members not only accentuate the positive effect of low-levels of skills’ diversity on the duration to achieve unicorn status, but it also attenuates the negative effect of high levels of skills’ diversity on this duration. We discuss the implications of these results for theory and practice.

ENT: **Driving and Inhibiting Effects on Formation of TMS in Entrepreneurial Teams**

Author: **Wei Li**, *Chongqing U. of Technology*
Author: **Zhuzhu Feng**, *Chongqing U. of Technology*
Author: **Keke Sun**, -

This study embed the research of transactive memory system(TMS) in the entrepreneurial context, from the perspective of team leadership and internal and external factors configuration matching, explore the driving and inhibiting configuration effects of the formation of TMS in entrepreneurial teams. Through the qualitative comparative analysis based on fuzzy sets, it is found that there are two main paths that drive the formation of TMS in entrepreneurial teams, and three main paths that inhibit the formation of TMS in entrepreneurial teams. Entrepreneurship orientation, relationship commitment, and technical turbulence match the transactional leadership characterized by "Focusing Interests" is conducive to the formation of TMS; Entrepreneurial orientation, competition intensity, and technical turbulence match the transformational leadership characterized by “Emphasizing Values” can drive the formation of TMS. In the uncertain environment, if the entrepreneurial team leader does not actively play a leading role, TMS in entrepreneurial teams will not be formed. Thus, new ventures should match team leadership characterized by "Emphasizing Values" or "Focusing Interests" according to different internal and external environment to drive the formation of TMS in entrepreneurial teams, while avoiding the factors that inhibiting the formation of TMS in entrepreneurial teams.

ENT: **Power to the she: how gender homogeneity among nascent entrepreneurial teams influences innovation** 

Author: **Diana Maria Hechavarria**, *U. of South Florida*
Author: **Agnieszka Kwapisz**, *Montana State U.*
Author: **Katie Brownell**, *Indiana U. - Kelley School of Business*
Author: **Zhihao Yu**, *U. of South Florida*
Author: **Kenneth Hamner**, *U. of South Florida*

Innovative entrepreneurship among female entrepreneurs is vital for sustainable economic growth and societal evolution, yet most of the research on innovation in entrepreneurship focuses on high-tech industries which are primarily dominated by heterogenous male-led top management teams. The primary purpose of this paper is to augment the existing literature by exploring how gender differences in the structure of new venture teams influences venture-level innovation through research and development. Our results submit that all-female top management teams and teams with females in general management positions are less likely to be focused on innovative activities, but that teams with females in technical or research positions within the top management team structure are more likely to be focused on innovative activities. Additionally, we investigate the relationships between top management team members to show that all-female teams focused on innovation tend to have more diverse ownership and closer relationships across team members. We apply the lens of upper echelons theory to conjecture that how female entrepreneurs structure their new ventures teams at the onset of venture creation has far-reaching and long-term impacts on innovation throughout the lifecycle of the venture.

Implications of AI for HR

Digital Session Chair: **Arup Varma**, *Loyola U. Chicago*

HR: Artificial Intelligence and People Management: A Critical Assessment Through the Ethical Lens

Author: **Arup Varma**, *Loyola U. Chicago*

Author: **Cedric Dawkins**, *Loyola U. Chicago*

Author: **Kaushik Chaudhuri**, *Shiv Nadar U.*

The dramatic increase in the use of Artificial Intelligence (AI) in workplaces around the world can be attributed to the potential for increased profitability. While AI has numerous useful applications and can help speed up business processes or transform systems, its use in human resources (HR) processes and systems presents a complex series of pros and cons requiring organizational leaders to tread with caution. AI is helping transform the nature of jobs and workplace employment relationships. Robots can replace humans as employees, while platforms are able to supervise human employees. However, organizations employing AI to manage their people will need to be accountable for improving the employee experience, increasing investments in their skill development, building organizational competency, and enhancing transparency to ensure responsible usage. In this paper, we discuss the possible misuses of AI algorithms and argue that these could adversely impact the organization's human resources, if not devised and implemented with caution. In reviewing the literature linking AI and HR through the ethical lens, we discuss how AI is now an integral part of the HR architecture, and why it must be deployed with caution. If AI is to co-exist with humans, organizations will need to assure that their corporate philosophies honor their obligations to the social contract with stakeholders by implementing responsible HR policies and practices.

HR: Feeling treated fairly? Employee reactions toward AI in career development systems

Author: **Alina Köchling**, *Heinrich-Heine U. of Dusseldorf*

Author: **Marius Wehner**, *Heinrich-Heine U. of Dusseldorf*

Author: **Sascha Alexander Ruhle**, *Heinrich-Heine U. of Dusseldorf*

Organizations increasingly implement AI for career development to enhance efficiency. However, there are concerns about employees' acceptance of AI. Integrating justice theory, we investigate the effects of the deciding entity (human, human and AI, and AI) and the impact of the data source (internal data, external data) on employees' reactions. Using a scenario-based between-subject design and displaying a common situation in organizations (N = 280), we examined whether a decrease of human involvement in decision making diminishes employees' perceived fairness and satisfaction with the career development process and increases the perceived privacy intrusion. Although we also considered data sources to moderate the proposed relationships, we found no support for interaction effects. Finally, fairness and privacy intrusion mediated the influence of the deciding entity and data source on turnover intention and employer attractiveness, while satisfaction with the process did not.

HR: The Dark Side of AI-HRM on Employees Based on Algorithmic Features

Author: **Lijun Wang**, *Renmin U. of China*

Author: **Yu Zhou**, *Renmin U. of China*

Nowadays, Artificial Intelligence begins to be applied in a series of human resources management practices and has drawn more and more attention from researchers and practitioners. As the old saying goes, "every coin has two sides". While AI-HRM exerts positive effects, it also triggers negative influences. Have a better known of its dark side is of great significance to the enrichment of related theoretical research as well as the effective application of AI-HRM in practice. However, there is a lack of systematic summary of AI-HRM's dark sides, especially its negative effects on employees. In this study, take the three algorithmic features (algorithmic control, algorithmic bias, and algorithmic opaque) as a framework, we provide a rigorous and systematic review and integration of different types of published literature in the AI-HRM field to identify what is known about the negative effects of AI-HRM. For each algorithmic feature, this study also links organizational behavior theory to AI-HRM research and elaborates the potential theoretical mechanism of the negative effects of AI-HRM on employees. Finally, future research directions are discussed.

Innovation and Knowledge in International Management

Digital Session Chair: **Selma Saracevic**, *WU Vienna U. of Economics and Business*

This session focuses on the topic of innovation and knowledge in international management. It includes papers on digital innovation and distance in virtual cross-border alliances, MNE knowledge sourcing in host countries, how cultural context influences product innovation and performance, and whether foreign firms benefit from local agglomeration.

IM: **Digital Innovation: Does distance matter in virtual cross-border R&D Alliances?**

Author: **Viktor Fredrich**, *U. of Bayreuth*
Author: **Ricarda B. Bouncken**, *U. of Bayreuth*
Author: **Noemi Sinkovics**, *U. of Auckland*
Author: **Rudolf R. Sinkovics**, *U. of Auckland*

Our study examines the conditions under which cross-border digital innovation alliances are effective. Specifically, we investigate the moderating effect of technological, cultural, and geographic distance. The findings indicate that, although important, relative absorptive capacity is not a sufficient condition for effective collaboration in a cross-border, digital innovation context. Firms need to consider the optimum technological distance as well as the combined effect of technological distance with the effect of cultural and geographic distance. Specifically, a high level of cultural distance can be beneficial in combination with high relative absorptive capacity and low technological distance. Alternatively, a high absorptive capacity also leads to high digital intensity if both the cultural and the technological distances are low. Conversely, a high level of absorptive capacity does not yield positive results when the technological distance is high regardless of the degree of the cultural distance between the partner firms. Further, when the technological distance between two firms is low, a higher geographic distance may strengthen the positive impact of firms' high absorptive capacity on digital innovation outcomes.

IM: **The Impact of Cultural Context on Product Innovation and Firm Performance**

Author: **Zhenzhong Ma**, *U. of Windsor*
Author: **Lei Jing**, *Jilin U.*
Author: **Fan Yang**, *Odette School of Business, U. of Windsor*

Product innovation in different cultural contexts has become more important in the increasingly globalized market, and it is essential to examine how cultural context affects the relationship between product innovation activities and firm performance in the global market. Based on the analysis on more than one thousand manufacturing companies that have been involved in innovative activities in China, this study compares the effects of product innovation strategies and institutional factors on firm performance for international joint ventures and domestic firms in China. The results show that supportive innovation policies, high-level of infrastructure, well-developed local talent market, and large R&D investment all positively affect a firm's product innovation performance in China's domestic companies, but a defender innovation strategy is negatively related to their innovation performance. When international joint ventures are considered, only R&D investments and the level of infrastructure are positively related to international joint ventures' product innovation performance, in part due to high cultural context in China. Implications of the results are then discussed.

Paper is Available to Meeting Registrants Only.

IM: **Scope and Scale of Technology Challenge and MNE Knowledge Sourcing in Host Countries**

Author: **Michael Murphree**, *U. of South Carolina*
Author: **Bui K. Petersen**, *Memorial U. of Newfoundland*
Author: **Peter Warrrian**, *U. of Toronto*
Author: **Ray Gosine**, *Memorial U. of Newfoundland*

Current research has emphasized the role that industry characteristics play in MNEs knowledge sourcing decisions. However, much remains to be understood regarding the specific circumstances uncertain which MNEs opt for internal, external, local or global sources of knowledge, especially within a single industry. Using a study of MNE knowledge sourcing and creation in the offshore oil industry in Newfoundland, Canada, we find that MNEs source knowledge in accordance with the geographic scope and complexity scale of the technology challenges being faced. MNEs tend to source knowledge through established partners – their headquarters or other MNE subsidiaries – for localized and small-scale challenges as well as for global and large-scale ones. In contrast, localized large-scale challenges and global small-scale ones result in greater rates of knowledge sourcing from host region suppliers or research institutions. This understanding helps clarify how MNEs choose their sources of knowledge and breaks with the existing dichotomy of traditional versus fast-paced industries.

IM: **Do Foreign Firms Benefit from Local Agglomeration?**

Author: **Fan Xia**, *Rennes School of Business*
Author: **Gordon Walker**, *Southern Methodist U.*

In this paper we contrast two conflicting theories of foreign direct investment in regional clusters. The first argues that foreign firms enter clustered regions to access technological and market-related knowledge through agglomeration-based spillovers. The second is that foreign firms suffer from a liability of foreignness and therefore are excluded from the regional networks through which local knowledge is passed. We test these alternative theories by estimating agglomeration effects within logit regressions for local and foreign firms separately in lagged first differences and test for the comparability of these effects across the regressions. Also, we speculate that foreign firms that are culturally closer to host country markets will suffer a lower liability than foreign firms that are culturally more distant. Our results consistently support the liability of newness argument. For robustness, assuming that local firms do experience agglomeration benefits (something we show), we test whether joint ventures between foreign and local firms experience these benefits and also find no evidence for such an effect. We analyze a panel data set of 29 Chinese manufacturing industries over 30 regions and 10 years.

MSR Morning Meditation *MSR Morning Meditation*

Chair: **Richard Peregoy**, *U. of Dallas, Satish & Yasmin Gupta College of Business*
Chair: **Gerald Biberman**, *U. of Scranton*

The practice of meditation (either individual or collective) has the common objective to still/silence the mind and allow the unconscious reality to emerge, open and unfold. Many variations of meditation exist. In this conference five different forms will be introduced—a different form will be introduced each day during the conference. The idea is for those new to meditation to sample, and for those who find a familiar meditation to expand their experience. These five meditations can be accomplished in a few minutes or longer as you wish.

Creativity Considerations

Digital Session Chair: **Martha Topete**, *Amsterdam Business School, U. of Amsterdam*

TIM: Position Power and Joint Creativity

Author: **Martha Topete**, *Amsterdam Business School, U. of Amsterdam*
Author: **Nathan Betancourt**, *Amsterdam Business School, U. of Amsterdam*
Author: **Flore Bridoux**, *Erasmus U.*

Creativity in the workplace is usually a collective endeavor. Given its influence on social interactions and its pervasiveness in organizations, position power – the power deriving from individuals' role – can be expected to affect joint creativity in the workplace. Surprisingly, work on this relationship is scarce. We hypothesized that power struggles, or competition for formal and informal control, would interact with position power to affect joint creativity via autonomous motivation to help. We tested these ideas in a laboratory experiment in which position power was manipulated and participants worked in dyads on a joint creativity task. The collaborations were recorded and power struggles were coded from these videos. We found that when power struggles are low, high (vs low) position power collaborations achieve higher joint creativity via autonomous motivation to help. In contrast, when power struggles are high, low (vs high) power collaborations achieve higher joint creativity via autonomous motivation to help. Our work advances our understanding of position power's effect on joint creativity by simultaneously assessing behavioral and motivational attributes featured in collaborations.

TIM: How creative versus technical constraints affect exploring a design space

Author: **Victor Seidel**, *Babson College*
Author: **Christoph Riedl**, *Northeastern U.*

The creative design process can be conceptualized as the repeated search for highly-evaluated novel solutions within a design space of possibilities. Such design spaces are bounded by creative constraints of what are considered appropriate solutions as well as technical constraints of what solutions are possible given the tools in place. Past research on the role of constraints in creative design and innovation have found mixed results, hindered in part by not separating out the type of constraint—creative versus technical—and in part by focusing on singular projects that neglect the learning effects of repeated exploration of a design space. We analyzed ten years of data from an online innovation community hosting repeated creative design competitions, and we examined how creative and technical constraints in a design space affected how individuals learned to improve their performance as evaluated by their audience. We find that creative constraints lead to high rates of learning only if technical constraints are sufficiently relaxed. Our findings have implications for the management of creative design work in both online and offline settings.

TIM: Oscar Curse in the Open Innovation Community? The Effect of Awards on User-innovators' Performance

Author: **Erdem Yilmaz**, *Faculty of Business and Economics (HEC Lausanne), U. of Lausanne*
Author: **Shanming Liu**, *ESSEC Business School*
Author: **Ivana Naumovska**, *INSEAD*

This study investigates the effect of awards on user-innovators' subsequent innovation performance within an open innovation community of 3D-printable design context. Drawing on self-efficacy theory, we argue that user-innovators gain higher self-efficacy after their work is recognized with an award, which increases the subsequent innovation performance of experienced user-innovators. However, such an award-induced increase in self-efficacy will undermine the subsequent innovation performance of inexperienced user-innovators. We find support for our predictions using a two-way fixed effects difference-in-differences analyses within a matched sample. Our study identifies an individual-level contingency that determines the nature of the awards–performance relationship, and identifies an unintended negative consequence of awards' on inexperienced user-innovators' performance.

TIM: Social Networks and Problem-solving in the Context of Biopharmaceutical Research and Development

Author: **David J. McBee**, *Kenan-Flagler Business School, U. of North Carolina at Chapel Hill*

Problem-solving is a vital aspect of scientific innovation. It is especially important in the biopharmaceutical field which, despite its innovative reputation, faces high project failure rates. To cope with research obstacles, these organizations utilize an evolving matrix structure with structured turnover of cross-functional (interdisciplinary) research teams. Problem-solving becomes social and relies on scientists' ability to activate network contacts. What kind of social network contact facilitates problem-solving? Two different theoretical perspectives set different expectations. The needs perspective suggests specific types of resources are useful at different problem-solving phases. Different types of resources are locked into different types of social network ties. As problem-solving progresses and the required resources change, profiles of network contacts change. Turnover should be greatest between problem-identification, which calls for interpersonal support and familiarity, and problem-understanding, which calls for new knowledge and formal authority. In contrast, what I call the strong core perspective posits a stable core of multi-purpose network contacts. In terms of the types of network contacts, the needs perspective expects problem-solving phases to be independent; the strong core perspective expects path dependence. To explore network contact characteristics associated problem-solving phases and test for path dependence, I surveyed members of the American Association of Pharmaceutical Scientists, the largest pharmaceutical professional organization, about the contacts they utilized while dealing with the most serious research obstacle they encountered in the past year and which contacts were useful for identification and understanding. A multi-level path model copes with the nested data structure and tests for path-dependence. Results support the strong core perspective; strong path dependence indicates that scientists utilize contacts associated with strong tie strength and competence-based trust for both problem-identification and problem-understanding. Scientists form stable sets of social contacts during nascent problem-solving phases.

Leadership Behaviors and LMX

Digital Session Chair: **Katrina Jia Lin**, *Hong Kong Polytechnic U.*

OB: Daily delegation as an antidote to the negative consequences of ego depletion  

Author: **Katrina Jia Lin**, *Hong Kong Polytechnic U.*
Author: **Su-Ying Pan**, *Macau U. of Science and Technology*
Author: **Fenghao Wang**, *Hong Kong Polytechnic U.*

Effective leadership requires constant exertion of self-control at work. Yet, it is not always the case that leaders can wake up on the right side of the bed, feeling recharged and energized. In this study, we examine whether and how leaders' experiences of ego depletion before work influence their perceived work goal progress, and what they can do on a daily basis to counteract these effects. Drawing from integrated self-control model and research on delegation, we argue that before-work ego depletion negatively influences leaders' attention at work, and further hinders their work goal progress. We further theorize that daily delegation can mitigate the negative consequences of before-work ego depletion. Across two studies using experience sampling methodology, our hypotheses are supported with data collected from leaders in China and the United Kingdom. Theoretical and practical implications are discussed.

OB: Leader-Follower Ratings of Employer-Provided Training: Moderating Effects of Mandatory Participation

Author: **Min Jong Jun**, *Binghamton U.-State U. of New York*

The previous literature on the positive relationship between training and attitudinal outcomes has paid little attention to a group leader's perception of training and the different natures of voluntary and mandatory participation in training. To deal with these research gaps, this study examines the effects of leader-follower (in)congruence in ratings of employer-provided training on followers' job satisfaction and organizational commitment. Also, I test the moderating effects of mandatory participation in training on the relationship between leader-follower (in)congruence in ratings of training and follower's two attitudinal outcomes. Using multilevel polynomial regression models, I analyzed a sample of 861 employees and their group leaders from the Human Capital Corporate Panel (HCCP) survey in 2017. The results overall supported my hypotheses; (1) a leader-follower congruence in ratings of employer-provided training at a high level is associated with higher attitudinal outcomes than that at a low level, (2) a follower's higher rating than that of the leader is related to high attitudinal outcomes, and (3) mandatory participation in training moderates those relationships between leader-follower (in)congruence in ratings of the training and attitudinal outcomes. I discuss the implications of these findings.

OB: Curvilinear Relationship between Constructive Feedback and Behavioral Outcomes via Felt Obligation

Author: **Mansik Yun**, *Central Michigan U.*
Author: **Nga Do**, *Central Michigan U.*

Leader's providing constructive feedback has been deemed a desirable behavior for preventing negative outcomes. Yet, previous studies found mixed effects suggesting a potential curvilinearity based on the extent of feedback. Grounded in social exchange theory and the too-much-of-a-good-thing effect, we proposed and tested a possibility of curvilinear relationships between constructive feedback citizenship behaviors and task performance, that are mediated by felt obligation. We further reasoned that the reciprocity norm between constructive feedback and felt obligation would be affected by followers' interpretation of leader's behavior. The current research used relational attributions and relational identification to test the moderating effect. To test our hypotheses, we conducted two studies. In Study 1, three-wave (10 days interval) data was collected from two construction companies from South Korea (N = 207) and the U.S. (N = 205). However, the results indicated that no significant effect was found in curvilinearity and moderating effect of relational attributions. In Study 2, we collected 10 days of three-wave (10 hours) data from a construction company from South Korea. 108 employees completed a total of 756 questionnaires. Although the curvilinearity was not found at the within-person level, we found the curvilinear relationship between constructive feedback and felt obligation at between-person level. Also the curvilinear associations between constructive feedback and OCB and task performance were mediated by felt obligation. While relational identification did not moderate the curvilinearity, relational attributions were found to neutralize the curvilinearity. The implications of our findings for both theory and practice were discussed.

Paper is Available to Meeting Registrants Only.

OB: How and When Leader-Member Exchange Social Comparison Hinders Employee Creativity 

Author: **Kashmala Latif**, *school of management, USTC*
Author: **Muhammad Yousaf Malik**, *ISSCAD, National School of Development*
Author: **Abdul Hameed Pitafi**, *Hefei U. of Technology Hefei China*

This research contributes to the growing research on the antecedents of creativity in the hospitality industry. Utilizing social comparison perspective, this study examines the indirect—via knowledge hiding behavior—relationship between employees perceived upward leader-member exchange (LMX) social comparison and their creativity. Moreover, this study proposes the moderating role of power distance orientation of an individual employee between the association of upward LMX social comparison and their creativity via knowledge hiding behavior. Based on time-lagged and multi-source data (n=308) collected from hospitality employees of tourist hotels, the findings of study revealed that upward LMX social comparison hinders employees' creativity via their knowledge hiding behavior. Additionally, the indirect effect of upward LMX social comparison on employee creativity was statistically significant for employees with low power distance orientation, but it was not significant for employees with high power distance. Based on the study findings, implications for theory and practice are discussed.

Growth Strategies as a Practice: From Entrepreneurship to Ownership

Growth Strategies as a Practice

Digital Session Chair: **Fannie Couture**, *U. of Sydney Business School*

SAP: **Outsiders in the Valley: The Navigational Strategies of Black Tech Entrepreneurs**  

Author: **Alicia Sheares**, *UC Berkeley*

Black tech workers face numerous racial barriers in the technology industry, from their extreme underrepresentation to blocked advancement on the job. These challenges are compounded in entrepreneurship as less than one percent of venture capital dollars - \$130 billion in 2018 – went to Black tech entrepreneurs. Yet there are some Black tech professionals who do find success, which raises questions about how they understand and navigate this unequal landscape to achieve their professional goals. I explore this question through an empirical case study of Black tech entrepreneurs in Silicon Valley. By linking insights about strategic action and racial matching, I present a theory of racialized legitimacy - the process through which members of racially minoritized groups must consider both systemic racism and field specific organizational logics in their individual decision making processes. Through in-depth interviews, I find that Black tech entrepreneurs structure their actions in accordance to the process of racialized legitimacy. However, these approaches were not uniform. Instead, strategies varied depending upon one's placement within the field of Silicon Valley. This article makes numerous contributions to the academic literature. Substantively, it expands current scholarly knowledge on Black entrepreneurship, which to date largely concentrates on those in the service sector. Theoretically, it spotlights systemic racism as a foundational organizational logic within elite fields. In doing so, it also underscores the covert and insidious way that racism reproduces systemic inequality within elite fields.

SAP: **Derivative or Puzzle Piecing: Forming Nascent Strategy in Emerging Insurance Technology Ventures**  

Author: **Qian Li**, *U. of Dundee*

How nascent high-technology ventures form strategies as they emerge? To answer the question, I conducted a longitudinal in-depth comparative case study of four insurance technology (Insurtech) ventures from 2017 to 2019. Whilst two of the ventures engaged in a derivative approach by tuning in a pivoting methodology and leveraging resources for multiple purposes, the other two adopted a puzzle-piecing approach by emphasizing a testing methodology and assembling resources in an attempt to reach their imagined strategy. Comparing these patterns reveals the importance of entrepreneurs' tacit rules of using resources and pacing their growth. Derivative entrepreneurs assume a pluralist view on resource use and conform to a hypergrowth technology venture narrative. In contrast, puzzle piecing entrepreneurs hold a unitarist view on resource use—seeking one particular outcome from one resource—and self-pace the growth of their ventures—distancing from hypergrowth. I propose that entrepreneurs' tacit rules of resource use and growing pace and their reactions to the dominant technology venture narratives contribute to the distinct strategy forming processes as ventures emerge.

SAP: **Making a Difference: A Literature Review of Management Practices in Owner-Managed Companies**  

Author: **Tobias Michael Palm**, *PhD Candidate, U. of St. Gallen*

This paper provides an in-depth analysis of research on management practices in owner-managed companies. The systematic review of 116 articles from 30 years (1990-2020) reveals three key themes: (1) effects attributable to historical, developing, and idiosyncratic factors on industry, company, owner-manager, and management practice level shape the practice configuration in a given owner-managed company, (2) owner-managed companies are not badly managed, the management practices implemented are only more informal, shaped by resource-constraints and highly dependent on the owner-manager, (3) many differences between studies on performance implications of variables can be explained by differences in variable operationalization. This paper's central contributions are the provision of an overview on 30 years of management practice research, an elaboration on a cumulative capabilities model for management practices, and the proposal of an integrating perspective on practices – the teleological practice perspective.

SAP: **The Co-Evolutionary Process Model of Organizational Identity and Firm Strategy**

Author: **Suvi-Tuuli Helin**, *Aalto U.*

In our longitudinal study, we investigated organizational identity and strategy related processes that ConsultingCo went through to become a reputable player in Finland in the management consulting market. We investigated the company for seventeen years from its establishment to the first leadership succession. We build an evolutionary process model that illustrates the three-stage -process: (1) emerging, (2) formalizing, and (3) institutionalizing. These stages show how organizational identity emerged and co-evolved together with firm strategy work. Organizational identity work evolved from anti-identity to social identity, and finally to strengths-based identity work. Simultaneously strategy work evolved from visionary to comparative, and finally, as strengths-based strategy work. Our study contributes to the strategy-identity nexus -literature by illustrating the continuous co-evolution of the firm strategy and organizational identity.

Employability and Sustainable Careers

Digital Session Chair: **Joohan Lee**, *U. of Texas At Arlington*

CAR: How Does Career Success Drive Employees' Work Behaviors? Roles of Career Optimism and Employability

Author: **Joohan Lee**, *U. of Texas At Arlington*
Author: **Huong Le**, *Deakin U.*
Author: **Zhou Jiang**, *Flinders U.*
Author: **Ingrid Nielsen**, *Monash U., Australia*

This study sheds light on the behavioral outcomes of subjective career success and the mediating mechanisms underlying the relationships between subjective career success and individuals' organization citizenship behavior and counterproductive work behavior. Data were collected on the three-time lag sample of employees (T1N = 360; T2N = 320, and T3N = 261). Results show that employability and career optimism mediate the relationship between subjective career success and OCB. While employability also mediates the relationship between subjective career success and counterproductive work behavior, career optimism did not mediate this relationship. We provide theoretical and practical implications for the career management and the career counseling literature.

Paper is NOT Available. Please contact the author(s).

CAR: The Generalism Advantage: How search firms shape the effect of specialization on employability

Author: **Olga Ivanova**, *HEC Paris*

I study how labor market intermediaries, such as search firms, shape employment outcomes for candidates with different career profiles in the context of middle management jobs. I suggest and find evidence that in a mediated labor market, generalists, workers whose career history spans multiple job categories, are more likely than specialists, workers whose career history is concentrated in one category, to gain access to the final employer. The generalism advantage is notably strong when generalists prevail in the candidate pool of the vacancy they are being considered for but are simultaneously rare in the professional labor market. This effect is explained by the strategic behavior of a search firm, which has several reasons to promote generalists rather than specialists to an employer. Headhunters may prefer generalists not only because they are a better fit for middle management jobs but also because they are more easily transferable to a new employer and more dependent on headhunters' mediation. Moreover, preferences towards generalists, especially when they are rare in the market, might be an attempt to cope with competitive pressure. These findings have implications for the literature on labor market intermediaries and the studies of employability and external labor markets.

Paper is Available to Meeting Registrants Only.

CAR: How does perceived investments in employee development affect turnover intentions?

Author: **Mattia Martini**, *U. of Milano-Bicocca*
Author: **Tiziano Gerosa**, *U. of Milano-Bicocca*
Author: **Dario Cavenago**, *U. of Milano-Bicocca*

There is a debate in the managerial literature on the risks for the organization related to investments in employee. Building on attribution and social exchange theories we explore the relationship between perceived investments in employee development (PIED) and turnover intentions by testing simultaneously different paths where affective commitment, perceived internal employability and perceived external employability are included as potential mediators. The study adopted a mixed method approach comprising a survey of 336 employees and 19 semi-structured interviews with the HR staff undertaken across two private companies. The results show that the overall effect of PIED on turnover intentions is negative and it is fully mediated by external employability and affective commitment, while the path through internal employability was not supported. More specifically, PIED increases commitment, which in turn limits the risk of turnover. Although perceived external employability is positively associated with turnover intentions, PIED seems to contain this effect, by negatively affecting the employees' perceptions of marketability in the labour market. The multi-group analysis confirmed the overall path from PIED to turnover intentions, while some organizational conditions affect the relationship between PIED and perceived employability. The study supports the assumptions of the social exchange theory in explaining turnover behaviour as consequence of employee development support and, at the same time, it questions the existence of the employability paradox not finding a turnover risk via perceived external employability.

Paper is NOT Available. Please contact the author(s).

CAR: Enabling Recovery Experiences to Forge a More Sustainable Career

Author: **Peter Heslin**, *UNSW Sydney*

Sustainable careers involve maintaining at least some degree of productivity, health, and happiness across the career lifespan. For many, the sometimes severe social, financial, and physical deprivations and restrictions imposed, as well as physical and psychological health risks heralded by the COVID-10 pandemic, have massively increased the challenge of forging a sustainable career. Against this stressful backdrop and motivated by an impulse to help people address their prevailing career challenges, we propose that attempts to enact a sustainable career may be facilitated by drawing on the rich literature in occupational health psychology on recovering from stressful experiences. After briefly reviewing the flourishing literature on initiatives that organizations, leaders, and individuals can take to support sustainable careers, we propose that enabling oneself to have rich recovery experiences may foster career sustainability. We develop this notion by outlining how five different empirically-ground approaches to accessing richer recovery experiences may enable career sustainability, each crystallized in a related proposition. We then discuss implications for sustainable career research and practice, aiming to thereby support those striving for career sustainability amidst the array of stressors flowing from the COVID-19 pandemic.

Paper is Available to Meeting Registrants Only.

Author: **Maria Mouratidou**, *U. of Cumbria, UK*

Author: **Mirit K. Grabarski**, *U. of Western Ontario*

The sustainable careers framework proposes that careers are sustainable if they are characterized by three main indicators: health, happiness, and productivity, when responsibility for these career outcomes is shared between individuals and organizations. The COVID-19 pandemic has created a major career disruption for many individuals due to layoffs, reduced work hours and increased work-life conflict. Using a mixed methods design, we explore how individuals perceive their careers, and specifically indicators of sustainability, during the first lockdown in the UK. In the qualitative Study 1 we identify themes that characterize the common experiences during this early stage of the pandemic, namely employer support, careful optimism and strengthened relationships. Then, in the quantitative Study 2, we empirically test a research model that links the concept of employer support with indicators of sustainable careers. We investigate the mediating role of career empowerment, which is a motivational cognitive construct that captures individual cognitions of agentic control over one's career. In addition, we investigate the moderating role of agreeableness in the relationship between the individual and the organization. Our research provides a rich snapshot that depicts perceptions of careers in crisis, which has both theoretical and practical implications.

Management scholars have neglected teaching how to establish polycentric self-governing organisations described by Ostrom as a way for sharing life-sustaining common resources among competing interests. Teaching this knowledge is urgent to quickly counter tragedies of the global commons arising from pollution, biodiversity losses and from many other existential risks.

We are not aware of any education program to teach executives how to establish polycentric self-governing organisations. BlackRock has created a global demand for such organisations by wanting “A new model of corporate governance”. As the largest asset manager in the world, BlackRock stated, “companies must benefit all their stakeholders”. This would convert corporations into what Ostrom describes as a “Common Pool Resource” (CPR). Examples of polycentric bottom-up self-governing organisations are provided by, The John Lewis Partnership in the UK, VISA International Inc in the US, and other stakeholder governed firms like the cooperatives located around Mondragon in Spain. Polycentric self-governance also exists in civic, sporting and agricultural organisations. Polycentric self-governed organisations, demonstrate that no changes in public law need be required. Changes are required in the private law of corporate charters to introduce multiple control centres. How and why these provide operating advantages are presented in Table 1. This is another neglected area of management education. Figure 1 presents a generic illustration of polycentric self-governance. Ostrom identified how the tragedy of overexploiting natural resources has been avoided between competing interests to deny them for everyone since pre-modern times. In her 2009 Nobel Prize speech, Ostrom presented eight design principles for introducing polycentric self-governance for CPRs without the need for markets or a State. Many social science scholars find it difficult to comprehend how any organisation could be reliably managed efficiently and sustainably for any time without any central controller. Neurologists understand because our brains have no CEO neuron. Different parts of our brains are designed to make different decisions. They both compete and cooperative for relevancy according to our internal needs and external risks and opportunities. Australian Aboriginals have self-governed their CPRs longer than any other existing culture. Systems scientists also understand how to simplify complexity with distributed decision-making centres. This is how they design software and self-governing automobiles. It is this knowledge that management scholars need to adapt and teach to executives. To maximise opportunities for Caucus participants to explore and develop such ideas over half the time will be Q&A. Breakout sessions could explore how participants’ own research could be adapted, how the design of course materials need to be modified, and how to develop the political attraction of enriching and localizing bottom-up democracy around the world by citizen stakeholders privatising regulation. The Caucus objective is to encourage the development of the emergent topic of global risks and so expands the conference theme by providing a global context for the role of managers. The topic introduces to management education the idea of polycentric governance with the need for scholars to teach the theories and practices of System Science developed by natural scientists. In this way it forces interdisciplinary collaboration and the free exchange of ideas. Existential risks not only concern AOM members but all humanity. The outcome is to educate scholars and the global public how to participate in the control of existential risks to achieve the goal of future sustainability for the environment and humanity.

Organizer: **Kristin Samantha Williams**, *UEF Business School, U. of Eastern Finland*

The year 2020 was defined by crises and reflection. Three crises of a deteriorating natural environment, attacks on democracy, and pandemic realities have called upon each of us to question old securities. These have led us to a heightened sense of vulnerability in how we go about our lives. This workshop explores the shared experiences of ‘just about managing’ concerning the crises defining the past and present year through collaborative autoethnographic writing. Calls to write differently (Pullen et al., 2020) are increasing within Management and Organization Studies, encouraging new ways to imagine how research is carried out and presented. Denzin (2013/2016) has emphasized the importance of making the autoethnographic project relevant at a societal level. Therefore, by exploring the common, yet differently lived, crises that participants have experienced, the writing exercises of this workshop will become continuing conversations that will move from private experiences to addressing wider societal questions. By turning the autoethnographic mission into a collaborative one, personal stories become mirrored through each other, providing a ground for identifying commonalities and raising political questions for further theorizing.

To participate in the workshop, please send an autobiographical reflection, fictional imagination or poem of max. 500 words to sara.persson@sh.se AND Marjana.Johansson@glasgow.ac.uk AND kristin.williams@uef.fi by latest 1st June 2021. We encourage you to send in texts as soon as you can since we will accept participants on a first-come basis and places are limited to 40. Writings should broadly be on the on the theme ‘Just About Managing’, linked to one or several of the three defining crises of 2020/2021: environment/ pandemic/ democracy (including social equity and justice). Participants will be notified in end of June, when access will be provided to a Padlet set up for sharing pictures, texts and videos as pre-workshop inspirational material. Participants will then get access to each other’s submitted texts, for pre-PDW review and reflection. If you would like to get in touch before submitting, feel free to email Sara, Marjana and Kristin.

Digital Session Chair: **Nicole Gottschalck**, *WHU - Otto Beisheim School of Management*

ENT: **Not That Emotional After All. An Exploratory Study of the Calculative Commitment of Family Firm CEOs**

Author: **Nicole Gottschalck**, *WHU - Otto Beisheim School of Management*
Author: **Lisa Rolan**, *UNC Charlotte*
Author: **Franz Kellermanns**, *U. of North Carolina, Charlotte*

We explore the relationship between the calculative commitment of family firm CEOs and cohesion in family firms and discuss how this relationship is affected by the interplay of calculative commitment and firm performance. In doing so, we underline the relevance of rational cost-benefit analyses in the context of family firms and highlight family cohesion as a tool to secure personal and family wealth. Our findings suggest that the higher the calculative commitment of family firm CEOs and the higher the performance of the firm, the higher the stakes to sustain cohesion as a tool to secure personal investments and claims on accumulated firm outcomes. By demonstrating how social considerations about the business family are affected by the interplay of CEO calculative commitment and firm performance, we add to a better understanding of the complex nature of family firms.

ENT: **Family Influence and Firm Performance: Evidence from the Covid-19 pandemic**

Author: **Ivan Miroshnychenko**, *Free U. Bozen, Bolzano*
Author: **Giorgio Vocalelli**, *U. of Rome Tor Vergata*
Author: **Alfredo De Massis**, *Free U. of Bozen-Bolzano (Italy) and Lancaster U. (UK)*
Author: **Stefano Grassi**, *U. of Rome Tor Vergata*
Author: **Francesco Ravazzolo**, *Free U. of Bozen-Bolzano*

The Covid-19 pandemic has spread with a speed and scale never seen before. Stock prices of all the market indices fell at a pace and level not seen since the Great Depression. This is the first study examining the financial performance of family and nonfamily firms around the world during the Covid-19 pandemic. Using a longitudinal sample of 791,928 firm-day observations for 3,882 firms in 43 countries and 10 industrial sectors, we show that financial performance of family firms has been significantly higher during the Covid-19 pandemic, as compared to their nonfamily counterparts. The economic impact of the family effect on firm performance is substantial: the return spread between family and nonfamily firms equals almost 8.7% given the growth in the Covid-19 cases worldwide. However, the magnitude of the effect depends on the type of family influence on the firm, geographical location and industry concentration. These findings have important implications for both management theory and practice.

ENT: **How can Selling Families increase their Firms' Valuation? Non-Family Managers as Signal of Quality**

Author: **Martin Tao-Schuchardt**, *Doctoral Candidate - WHU Otto Beisheim School of Management*

Based on agency theory and the resource based view, prior research has explained the differences in family firm valuation by differentiating among other factors the level of family involvement in management. However, the important case of fully professionalized managements in family firms, and its association with firm valuations, has not been explored. To fill this research gap, I draw from the acquisition context and argue based on signaling theory that the absence of family managers in family firms generates a relevant, costly, and visible signal for potential acquirors to infer more positive and less negative family firm characteristics, resulting in higher price paid by acquirors. Furthermore, I argue that the signal is expected to be interpreted more positively by financial institutions and investment firms and further strengthened in situations characterized by a high degree of information asymmetry – in particular, by lower statutory disclosure standards and non-industry relatedness between acquirors and targets. Based on a sample of German and Italian acquisitions, I find support for most of the developed hypotheses in line with signaling theory. The results provide evidence for the view that firm valuation is not only driven by family firm heterogeneity but also different investor heterogeneity.

ENT: **Risk-Taking in Family Firms: The Paradoxical Role of CEO Narcissism and Humility**

Author: **Paul Sanchez Ruiz**, *DePaul U. Kellstadt Graduate School of Management*
Author: **Josh Daspit**, *Texas State U.*
Author: **Robert J. Pidduck**, *Old Dominion U.*

In response to recent calls to examine how multiple CEO personalities may work together in their effects, we build on leader paradox theory and examine how narcissism and humility interact to predict the family firm's risk-taking behavior. Our empirical analyses, based on linguistic personality profiles of 76 CEOs of S&P 500 family firms, indicate that CEO narcissism and humility positively influence risk-taking and that this effect is amplified when CEOs hold greater informal power. These findings demonstrate that upper echelon-based predictions of CEO personalities in response to risk-taking are enhanced by integrating insights from leader paradox literature.

ENT: Startup Experience and the Mobilization of Human Capital Resources in New Ventures   

Author: **Vera Rocha**, *Copenhagen Business School*
Author: **Dario Pozzoli**, *Copenhagen Business School, Department of Economics*

Human capital resources are a foundation of organizational performance, yet highly difficult to mobilize in new ventures. Given the central role of founders' past experiences in new venture strategy formation, we investigate whether and how their prior startup experience influences employee mobilization, depending on the outcomes of earlier endeavors. Integrating behavioral theories of the firm with regulatory focus theory, we suggest that serial founders who failed earlier are more likely to be prevention oriented and change their employee mobilization strategies towards a more targeted hiring approach. Using Danish register data, we compare the employee sourcing practices of a sample of serial entrepreneurs to a control group of novice founders who later engage in serial venturing. We find suggestive evidence of trial-and-error learning in hiring strategies among serial entrepreneurs who have discontinued previous ventures. Alternative mechanisms such as selection effects, stigma of failure, and demand-side constraints, are also tested but not empirically supported.

ENT: The Private Value of Entrepreneurial Control: Evidence from a Discrete Choice Experiment

Author: **Marius Berger**, *Centre for European Economic Research (ZEW)*
Author: **Thorsten Doherr**, *Centre for European Economic Research (ZEW)*
Author: **Sandra Gottschalk**, *Centre for European Economic Research (ZEW)*
Author: **Maikel Pellens**, *UGent*

We study how much entrepreneurs value being in control over their ventures. Even though control and independence are widely believed to be an important reward to entrepreneurship, and despite the importance of control rights for venture capital contract design, it remains unknown how much entrepreneurs value being in control. In order to establish how much entrepreneurs value control, we perform a discrete choice experiment with a representative sample of entrepreneurs in Germany to estimate the value of control in the setting of venture capital investment. In the experiment, participants have to choose between hypothetical investment offers that carry different equity stakes, control rights, and VC value-added activities. We find that entrepreneurs highly value control: In a hypothetical VC contracts, entrepreneurs are willing to give an additional 38% of equity shares to investors to avoid the highest level of control, a voting majority. We additionally estimate entrepreneurs' valuations of VC value-added activities. We find that these carry a premium, reaching 12% of equity when the investor offers market access support. Our findings hint that control requirements form important entry barriers for entrepreneurs to venture capital financing.

ENT: The Role of Values in Strategic Entrepreneurial Shifts During a Pandemic

Author: **Luc Glasbeek**, *Vrije U. Amsterdam*
Author: **Martin Van Der Vijver**, *Vrije U. Amsterdam*

Our ongoing longitudinal research on entrepreneurship examines how firms in the Dutch floriculture sector—the third-largest exporter in the Netherlands, generating 9.2 billion euros in revenue in 2018—strategically respond to the implications of Covid-19. We aim for a contribution to the strategic entrepreneurship literature, examining how personal value systems shape strategic decision-making in times of crisis. To date, we have examined 14 Dutch floriculture wholesale companies, and we expect that the next 6 to 8 months will provide critical opportunities for additional data collection. We plan to have a comprehensive working paper available in June 2021, incorporating the views of 45 director-level informants.

ENT: Childhood Roots of Entrepreneurship: Parental Divorce, Entrepreneurial Entry and Performance 

Author: **Mateja Andric**, *U. of St. Gallen*
Author: **Wei-Jun Hsueh**, *U. of St. Gallen*
Author: **Isabella Hatak**, *U. of St. Gallen*
Author: **Thomas Markus Zellweger**, *U. of St. Gallen*

We examine the roots of entrepreneurship in childhood by studying how parental divorce affects entrepreneurial entry and performance in adulthood. Drawing on life course theory, we theorize that parental divorce impairs children's socialization and accumulation of human capital in consequence to deprived family resources, which affects children's likelihood to become entrepreneurs and their performance in entrepreneurship. Based on data from the United States from the 1979-2016 waves of the National Longitudinal Survey of Youth (NLSY79) and applying a quasi-experimental design, we find that parental divorce in childhood increases the odds of entrepreneurial entry while at the same time negatively affecting entrepreneurial performance in adulthood. We also find that the impact of parental divorce on entrepreneurial entry and performance strengthens with increasing family socio-economic status, suggesting that entering entrepreneurship can constitute a path of downward social mobility for individuals from high socio-economic status families who experienced parental divorce in their childhood.

Incubation and acceleration

Digital Session Chair: **Veronika Ermilina**, *Old Dominion U.*

ENT: **Digging Into Selection Criteria For Accelerator Acceptance: What Kind of Owners Are More Attractive?**  

Author: **Veronika Ermilina**, *Old Dominion U.*
Author: **Matthew Farrell**, *Old Dominion U.*
Author: **Fatemeh Askarzadeh**, *Old Dominion U.*

Drawing on signaling theory, we aid in the identification of the rarely acknowledged impact of business owner's features on acceptance to accelerator programs. Using a multi-national sample of 10,298 observations for startups in 166 countries over 2016-2018, we show that accelerators do not evaluate applicants uniformly. We find that entrepreneurs from developing countries are less likely to be accepted by accelerators than entrepreneurs from developed economies. Counterintuitively, we also find an advantage for female entrepreneurs in accelerator acceptance. Further, our results suggest a positive impact of education. Accelerators are a growing provider of entrepreneurial resources and a main driver of growth and innovativeness. Despite the extant literature demonstrating the benefits of accelerators, determinants of acceptance to these programs, particularly at the individual level, are underexplored. Here, we extend entrepreneurship literature and show some sources of variation in access to international accelerator programs. Our comparative study enhances business owners' insight for application to entrepreneurial resources.

ENT: **Managing the Process of Turning Researchers into Knowledge-Intensive Entrepreneurs**   

Author: **Linus Brunnström**, *School of Business, Economics and Law U. of Gothenburg*
Author: **Maureen McKelvey**, *U. of Gothenburg*

Universities are increasingly engaged with a diverse set of activities, aimed at impacting the surrounding society, including starting firms based on research. But how do university incubators manage researchers? In this paper, the empirical setting is Sweden, where previous research suggests that the Swedish institutional context likely leads to a prioritization of commercialization by firm creation, rather than licensing or sales of IP. The reason is that the individual researcher owns all research outcomes in Sweden and not the university or state. Therefore, our paper explores how incubator and technology transfer office managers (hereafter innovation managers) reason when trying to manage researchers to reach the goal of creating knowledge-intensive entrepreneurial (KIE) firms. Two findings are of particular relevance for the literature. The first finding relates to how interviewed managers view researchers. Although expected from previous research, we provide more detailed understanding of why innovation managers perceive these researchers as being slow, less eager to start a business, and stuck on technical improvements, but also that their ideas are viewed as high-impact ones. Our second finding provides more detailed insights into how these managers developed a number of alternative paths to deal with researchers as potential entrepreneurs and still achieve commercialization. With or without the active participation of the researcher owning the ideas, we detail how these managers pursue two paths towards utilizing researchers' ideas in order to impact society – namely actively seeking ways to start a KIE firm or actively seeking ways to transfer and distribute the ideas more widely.

ENT: **From Co-founders to Founding Team: A Longitudinal Study of Mechanisms That Enable the Transition**

Author: **Eleni Georgiadou**, *Nord U. Business School*
Author: **Raj Krishnan Shankar**, *Nord U. Business School*
Author: **Tommy Clausen**, *Nord U. Business School*

This study explores the mechanisms that enable a group of co-founders to successfully transition to a founding team. Employing techniques of process research—grounded theory and temporal bracketing—we study five groups of co-founders who banded together during an entrepreneurship learning program in Norway to start a venture. Following these groups from the beginning of their formation throughout a period of 17 months, we observe the conditions that stimulate members' bonding processes. Our findings suggest a complex and dynamic interplay of mechanisms and properties that guide the transition from a group of co-founders to a founding team. These properties emerge as collective entities that team members cultivate as result of their interaction over time and significantly affects the content of team processes. Keywords: Co-founders; groups and teams; new venture development; team development

ENT: **The Spatial Distribution of High Growth Entrepreneurship: Generative Mechanisms of Heavy Tails**

Author: **Tejaswi Channagiri Ajit**, *U. of Florida*
Author: **Gwendolyn Kuo-fang Lee**, *U. of Florida*

Why does a disproportionate amount of high-growth entrepreneurship concentrate in a small number of geographical areas? Our research question is motivated by the heavy tails in the frequency-size distributions of high-growth entrepreneurship—the number of early-stage financing rounds, acquisitions among firms that received early-stage financing, and initial public offerings (IPOs)—in a metropolitan or micropolitan statistical area (MSA). The heavy tails could result from either of two distinct processes, but the existing research on entrepreneurship and agglomeration cannot tell the two processes apart. In this paper, we apply technical advances from complexity science and analyze which process is the more likely generative mechanism for the observed heavy tails. Using data from Crunchbase, our analysis covers 129,949 financing rounds of 58,517 unique firms across 657 MSAs, 10,145 acquisitions, and 4,614 IPOs. We find the multiplicative process to be the more likely mechanism, compared to the rich-get-richer process, which has been posited in the literature as a driver of regional advantage. For research, our finding changes the way we theorize and study agglomeration and entrepreneurship. For government policy, our research enhances the efficacy of interventions—in the form of tax breaks, business incubators, or grants aiming to stimulate entrepreneurial activity, spur innovation and create new jobs—by revealing the generative mechanism for the emergence of a region's advantage in high-growth entrepreneurship. For entrepreneurs, our research informs whether and how the choice of where to locate the start-ups may have implications for the likelihood of obtaining early-stage financing, becoming acquired, and going public.

Cognition and bias in entrepreneurship

Digital Session Chair: **Barbara Burkhard**, *Aalto U.*

ENT: **A Meta-analysis of Entrepreneurs' Overconfidence on Entrepreneurial Action and Venture Performance**

Author: **Barbara Burkhard**, *Aalto U.*
Author: **Dean Shepherd**, *U. of Notre Dame*
Author: **Joakim Wincent**, *Luleå U. of Technology*
Author: **Dietmar Grichnik**, *U. of St. Gallen*

Entrepreneurs often exhibit overconfidence, which appears to promote entrepreneurial action but can also lead to negative venture outcomes. Although many believe overconfidence is universal among entrepreneurs, there is likely substantial variation in the strength of entrepreneurs' overconfidence and the resulting relationships. To develop and explain this variation, we build on entrepreneurial agency to develop a model of entrepreneurs' overconfidence and use a meta-analytic approach to test our hypotheses based on 31 studies across 16 countries. We theorize on a core difference between overconfident entrepreneurs and their less confident counterparts—namely, that overconfident entrepreneurs are more agentic than less overconfident entrepreneurs because of their overly positive perceptions of themselves. Our findings largely support our theorizing that national institutions that impose fewer constraints on entrepreneurial agency magnify the effect of overconfidence on entrepreneurial action and venture performance. Thus, our theorizing and findings provide new insights into when entrepreneurs' overconfidence has the greatest impact on their action. Finally, our study provides information about the effect of different measures of entrepreneurs' overconfidence.

ENT: **Impact Evaluation in Early Stage Impact Investing**

Author: **Fabian Scholda**, *WU Vienna*
Author: **Peter Vandro**, *WU Vienna U. of Economics and Business*
Author: **Reinhard Millner**, *WU Vienna U. of Economics and Business*
Author: **Michael Meyer**, *WU Vienna U. of Economics and Business*

In recent years, impact investing has seen remarkable growth rates in the investment market. A share of this market is concerned with funding social enterprises, often in an early stage of development, promising investors financial returns as well as the creation of measurable social impact. For investors, an important step in the investment process is the selection of suitable investment opportunities. Prior research has suggested that the anticipated impact of a social venture is a central criterion of most impact investors' in such selection processes. However, little is known about how impact investors form ex-ante assessments about the impact potential of a venture in absence of hard evidence as it is typically only provided by ex-post impact assessments. Working with 20 verbal protocols of assessments provided by seven experienced impact investors this paper sheds light on the cognitive processes used by impact investors to form ex-ante assessments of the social impact potential. Our findings suggest that impact investors draw from a set of specific cognitive patterns and heuristics for assessing impact. We identify 23 distinct cognitive patterns used to assess impact that were not previously described in research on heuristics of for-profit investors. These findings underscore the distinctiveness of impact investing as a practice (as compared to commercial investing) and highlight the important role of individual cognition in the selection process.

ENT: **Success Lies in the Eye of the Beholder: Personality Traits, Negativity Bias and Equity Crowdfunding**

Author: **Andrew Jay Isaak**, *Heinrich-Heine U. of Dusseldorf*
Author: **Julia Neuhaus**, *Heinrich-Heine U. of Dusseldorf*
Author: **Denefa Bostandzic**, *Heinrich-Heine U. of Dusseldorf*

Expressed personality traits can play a pivotal role in shaping how the entrepreneurs' narratives are perceived by investors. Using a sample of 709 campaigns collected from four leading US-based equity crowdfunding websites and enriched with corresponding pitch videos and S.E.C. data, this study investigates the relationship between personality traits signaled by entrepreneurs to investors and subsequent funding success of equity crowdfunding campaigns. Of the Big Five personality traits, in particular, we find that higher conscientiousness, lower neuroticism, extraversion, and surprisingly lower openness seem to serve as signals of equity crowdfunding success, significantly affecting both the funding amount received and the number of investors attracted by campaigns. Moreover, we find that the information volume of a given campaign amplifies the negative effect of perceived neuroticism on funding success, suggesting a role for negativity bias. Partly challenging conventional wisdom, this study extends the literature on the relationship between personality and entrepreneurial finance by providing new input to a longstanding and central debate on the impact of individual-level components upon entrepreneurial outcomes in the underexplored alternative finance market and by demonstrating the context-dependent nature of personality signals within their respective investment contexts.

ENT: **Media Mentions as Rose-Colored Glasses: Availability Bias in Venture Formation**

Author: **Dana Kanze**, *London Business School*
Author: **Mark Conley**, *Stockholm School of Economics*

Despite its rarity, venture capital raising has captured the media's attention rather than the far more common occurrence of venture death. We shed light on a situational factor that influences why founders overoptimistically believe they can beat the odds of failure when already familiar with the low base rates of market entry success. Drawing upon the entrepreneurial cognition literature regarding the availability heuristic, we theorize that frequent media mentions make information about fundraising more "available" to prospective entrepreneurs, increasing their motivation to start a venture by causing them to overestimate the magnitude of funding they will be able to raise. We find significant support for this theory through a mixed methods approach—encompassing a ten-year archival study, a randomized experiment (N=317), and an entrepreneur survey (N=110)—that accounts for macroeconomic factors and personal characteristics, including levels of dispositional optimism and prior knowledge. Implications for both theory and practice are considered.

Author: **Yong Kyu Lew**, *Hankuk U. of Foreign Studies*

Author: **Nadia Zahoor**, *U. of Strathclyde*

Author: **Francis Donbesuur**, *Loughborough U., School of Business and Economics*

This study proposes and tests a framework of how and when entrepreneurial alertness manifest into international success of small and medium-sized enterprises (SMEs). Specifically, using a survey data from 214 SMEs in UAE, this study investigates relationship between entrepreneurial alertness, business model innovation, and international scope of SMEs. Findings from the survey data indicates that business model innovation (i.e. entrepreneurial action) provides a significant mediating mechanism through which entrepreneurial alertness (i.e. entrepreneurial capability) impacts on SMEs' international scope (i.e. international performance). When perceived domestic market dynamism is high, the effect of business model innovation on international scope is strengthened. From these findings, we discuss the theoretical contributions for international entrepreneurship research and the practical implications for managers and owners of SMEs.

Resiliency Versus Burn-out: Well-being at Work

Digital Session Chair: **Shihan Li**, *Heinz College - Carnegie Mellon U.*

Well-being and Resiliency

HCM: Stronger through Agreement: The Role of Consensus in Social Influence on Work-related Stress

Author: **Shihan Li**, *Heinz College - Carnegie Mellon U.*

Author: **Nynke Niezink**, *Carnegie Mellon U. - Dietrich College of Humanities and Social Sciences*

Stress in the workplace is prevalent and an important concern in organizational practice. Apart from being shaped by situational factors and individual propensities, people's stress experiences are affected by their social contacts via interactions. Little is known about how compositional features of one's local network amplify or dampen the strength of this social force. Adopting a network perspective, we propose that the degree of peer consensus in stress perceptions positively moderates individuals' susceptibility to peer influence. We conducted a 6-month longitudinal study of the coevolution of psychological stress and social ties applying stochastic actor-oriented models. Our analysis supported the moderation hypothesis: The higher the variance of stress scores among peers was (i.e., the lower the consensus), the less the focal person was influenced by his/her peers' stress. Our work establishes that consensus amplifies the power of peer influence on stress development.

Paper is Available to Meeting Registrants Only.

HCM: Resource Depletion a Significant Issue for Junior Medical Officers - A Case Study

Author: **Afshan Rauf**, *U. of Wollongong*

Author: **Shamika Almeida**, *U. of Wollongong*

Author: **Laura Rook**, *U. of Wollongong*

Junior medical officers (JMOs) report many mental health concerns, including stress and overall poor wellbeing. Given that they are often considered the 'public face' of the medical frontline, it is essential to examine the issues that they face during their training program. This study aims to use the conservation of resources (COR) approach to examine the factors that influence the resource depletion of JMOs and organizational practices that mitigate resource loss of the JMOs within an Australian public hospital. The study used 49 semi-structured interviews with healthcare professionals, including 11 junior medical officers working in an Australian regional hospital. Overall, the resource loss of JMOs occurred due to 'job-related challenges' and 'person-related challenges'. The job-related challenges included conflicting job demands, job-related emotional strain and unmanageable workloads, while person-related challenges included occupational conflict with senior staff and communication difficulties with both patients and supervisors. On the contrary, limited resource gains could be identified such as peer debriefing and learning different skills. Healthcare sector can proactively invest in wellbeing interventions through manager support to minimize resource depletion of JMOs during the internship. The strengths-based approaches and the development of cross-disciplinary team-based approach are most likely to assist JMOs develop, maintain and sustain their wellbeing. The findings of this research emphasize the importance of developing soft skills in healthcare professionals to support resource investment and help create a more nurturing healthcare work environment that fosters resource creation and sustenance for JMOs. Keywords: Resource depletion, junior medical officers, challenges, conservation of resource theory

HCM: Interplay of Start-of-workday (SWP) and At-work Presenteeism (AWP): A Daily Diary Study

Author: **Neha Tripathi**, *Assistant Professor Indian Institute of Management Ahmedabad*

Author: **Jayanth Narayanan**, *National U. of Singapore*

Presenteeism—attending to work in sickness is associated with deleterious effects on individuals and organizations. In the past decade, presenteeism has gained considerable scholarly attention from the researchers and the practitioners worldwide. Nevertheless, how within-person variation in presenteeism affects work outcomes is not very well understood. Drawing on a decision-making theoretical perspective, we develop a model describing the interplay of start-of-workday presenteeism (SWP) and at-work presenteeism (AWP) on daily emotional anxiety, which evokes malicious social emotion of schadenfreude resulting in daily gossip behaviors targeted at the peers and the supervisor. The results from a ten-wave twice-a-day daily diary study with full time working professionals spanning a period of two weeks (N = 59, total matched morning-evening daily observations = 528) provided empirical evidence for the hypothesized model. By studying the dynamics of presenteeism on employee's daily emotional experiences and social behaviors from a decision-making perspective, we present novel insights to the management and occupational health researchers, as well as the public policy analysts and practitioners.

HCM: The Influence of Baby Boomers' Perception of Well-Being Elements on Their Post-Retirement Residence

Author: **Eric J. Emerson**, *Acuity, Advisors to Senior Housing*

Author: **Robert C. Ford**, *UCF & Roy E. Crummer School of Business, Rollins College*

Author: **Koray Simsek**, *Crummer Graduate School of Business, Rollins College*

This study was premised on the idea that baby boomers, like anyone else, desire to maximize their well-being. That is, they seek situations that provide positive emotion, engagement, relationships, meaning and accomplishment (PERMA) which determine their personal appraisal of well-being based on both objective and subjective measures. Thus, the purpose of the research was to identify the most important PERMA elements of well-being that the baby boomer cohort who have decided to retire but have not yet done so (i.e., pre-retirees), seek in their preference in post-retirement residence. Moreover, this study investigates the degree to which this group sees that choice being influenced by their affinity for technology. The data for this correlational study was collected through a survey instrument administered to respondents electronically. The responses were analyzed utilizing logistic regression to generate research findings and implications. The results of this study suggest there is a relationship between the PERMA elements of well-being, singly and collectively, and their preference in post-retirement residence. Further, when considering the impact of affinity for technology on these two variables, the hypothesis of moderation was not significant. Lastly, the impact of Coronavirus (COVID-19) on baby boomers' preference in post-retirement residence was also considered. Future research in these areas is warranted as technological innovations continue to impact the delivery of the elements of well-being, and as baby boomers move through their retirement years, to consider the potential impact on their preference in post-retirement residence.

Author: **Tera Webb**, *U. of Alabama, Birmingham*

Author: **Anthony C. Hood**, *U. of Alabama, Birmingham*

Background: Psychological safety is the key to learning from failures and teaming effectively. The purpose of this study was to explore how the construct of psychological safety has been incorporated in healthcare literature in order to guide future application within the healthcare context. Given the extensiveness of psychological safety research in healthcare, a scoping review was the best approach for exploring the breadth of studies, evidence, and gaps identified over the past 20 years. Methods: A scoping review of peer-reviewed, published research was conducted using PubMed, Scopus, PsycINFO, Cumulative Index of Nursing and Allied Health (CINAHL), EMBASE, and Medline databases. Results: 134 studies were included in this review. Discussion: Studies are predominantly individual-level, cross-sectional, nursing centered, and largely atheoretical. There is a need for more theory application, empirical rigor, and systematic and meta-analytical reviews. Conclusion: Since Edmondson's seminal work on psychological safety in 1999, this is the first review of psychological safety in the healthcare context. This is a significant contribution to health services research as this review presents collective insight into psychological safety in order to inform future theoretical and empirical research. Keywords: quality, psychological safety

HCM: Matched Delegation: When the Leader Delegates the Right Tasks, How does the Team Benefit?

Author: **Kameron Carter**, *Penn State U.*
Author: **Greg L. Stewart**, *U. of Iowa*
Author: **Samantha Solimeo**, *U.S. Department of Veterans Affairs*

Delegation research has traditionally focused on delegation as a whole—how much or how little a leader or supervisor is willing to allocate tasks to their subordinates. Although past research has indicated the importance of delegation for team performance, it has often overlooked one of the main aspects touted by practitioners, choosing the right person for the job. In an effort to provide a more nuanced view of delegation and if the right person is being chosen for the job, this research introduces the concept of matched delegation: delegating a task to the individual whose abilities most closely match the demands of the task where individuals receive decision-making authority for tasks that neither exceeds nor discounts their abilities, but rather most closely matches the extent of their abilities. We take a leader-centric view and investigate how the leader giving up control of their non-central tasks and central tasks influences their own and team member effectiveness, and subsequent team performance. Hypotheses were tested using a sample of 495 primary care professionals (PCPs) and their surrounding team members (i.e., a registered nurse, a licensed practical nurse, and an administrative associate) from patient aligned care teams from the Veteran's Health Administration (VHA). Results showed that leader delegation of their non-central tasks positive influenced leader effectiveness, team member effectiveness, and team performance, results that were not found through leader delegation of their central tasks. Theoretical and practical implications are discussed as well as the limitations and directions for future research within the VHA as well as for research studying delegators' decisions and team processes and performance.

HCM: Hope, Commitment, and Stress Mediating Between Leadership, Financial Resources and CAHP Performance

Author: **Choiwai Maggie Chak**, *U. of Twente*
Author: **Lara Carminati**, *U. of Twente*
Author: **Celeste P.M. Wilderom**, *U. of Twente*

Combining the goal setting and job demands-resources (JD-R) theory, we examined how highly collaborative leadership and ample financial resources affect high project performance in community-academic health partnerships (CAHPs) through three mediators: individual project workers' hope, goal commitment and stress levels. With a sequential explanatory mixed-method research design we collected and analyzed survey data (N = 318) and held semi-structured interviews (N = 21). The hypothesized three-path mediation model was tested using structural equation modelling with bootstrapping. Project workers' hope, goal commitment and stress: (1) fully mediate between highly collaborative leadership and high project performance; and (2) partially mediate the relationship between ample financial resources and high project performance. The qualitative data corroborated these findings, revealing the crucial role of hope as a cognitive-motivational mechanism that facilitates project workers' coping strategies during the various challenges of the diverse CAHP projects. These findings contribute to the project management and CAHP literatures by accounting for the effects of project workers' hope in enabling high CAHP project performance as well as for two other under-researched CAHP project resources (ample financial resources and collaborative leadership). Moreover, we show the applicability of combining goal-setting and JD-R theory in networked health-promotion projects that link academic to community work.

HCM: Boundary Work in Public Teaching Hospitals in Europe: The Role of Perceived Ethical Leadership

Author: **Teresa Carla Oliveira**, *U. of Coimbra*
Author: **Filipa Cartaxo**, *unaffiliated*

Managing employment relationships in complex organization undergoing constant change such as a hospital is demanding for all stakeholders. Retaining staff requires enhancing coordination of mutual needs and benefits, in particular when this involves as much task flow as work relations and boundary changes. Drawing upon both signaling and social exchange theories we developed a model exploring how perceived ethical leadership (PEL) can benefit employees and organizations. We test our model in a cross-sectional exploratory study using a questionnaire to collect dyads among a sample of chief nurses and nurses working in different services in a European teaching hospital which, over two decades, has undergone major changes in both its internal and external environments. Our results show that organisations gain from signaling concern to enhance employee's affective commitment, overall job satisfaction and resourcefulness and that this has a positive impact on both performance and wellbeing. Keywords: Public teaching hospital; changing boundaries; perceived ethical leadership; team work process

Innovation in International Management

Digital Session Chair: **Michael Murphree**, *U. of South Carolina*

This session examines the topic of innovation in international management. It includes papers on learning by exporting via organizational innovation, rapid internationalization and innovation performance, communication technologies and the management of innovation, and emerging market firms' persistence with failed innovations.

IM: Learning by exporting via organizational innovation

Author: **Romina Guri**, *U. of Groningen*
Author: **Florian Noseleit**, *U. of Groningen*
Author: **Pedro Faria**, *U. of Groningen*

The benefits of learning by exporting are examined in the light of productivity or technological innovation improvements and the existing evidence is controversial. We suggest that firms can also learn in export markets how to better manage and organize their activities, and therefore introduce organizational innovation (OI). Moreover, we argue that learning-by-exporting would depend on the competition from abroad that firms face domestically and the technological status of the industry in which they operate. We test our prediction using six waves of the German Community Innovation survey (CIS) covering the period from 2006 to 2016. Our findings show that exporting is associated with the introduction of organizational innovation and this effect is less pronounced if firms face strong competition from abroad, especially for those that operate in technologically lagging industries.

IM: Rapid internationalization and innovation performance

Author: **Xiaobo Wu**, *Zhejiang U.*
Author: **Yanan Fu**, *Zhejiang U.*
Author: **Jing Li**, *School of management, Zhejiang U.*

Although internationalization is an inherently dynamic process, the time dimension of international expansion has rarely been a major focus of international business research. Using an organizational learning perspective, we attempt to explain how time-based international expansion patterns influence parent companies' innovation performance in emerging markets. We consider that the internationalization process could generate potential benefits attributable to knowledge transfer while being influenced by time compression diseconomies. Based on these two mechanisms, we test four hypotheses regarding parent companies' innovation performance: 1) internationalization speed (main effect); 2) internationalization rhythm (two-way interaction); 3) organizational slack; and 4) competitive intensity (three-way interaction). Using unbalanced panel data of Chinese multinational enterprises between 2008 and 2014, we find a negative relationship between parent companies' internationalization speed and innovation performance, and this relationship is stronger if the internationalization rhythm is irregular. The negative moderating effect of an irregular rhythm weakens with an increase in internal organizational slack and strengthens with an increase in external competitive intensity. These results suggest that firms should assess their internal capabilities and external competitive environment to judge whether a certain international pattern is feasible or necessary.

IM: Communication Technologies and the Management of Innovation

Author: **Luis Ballesteros**, *George Washington U.*
Author: **Catherine Magelssen**, *London Business School*
Author: **Casidhe Horan Troyer**, *London Business School*

We examine the effects of the introduction of broadband technology on innovation within firms. Managing innovation across geographically dispersed locations is one of the most important challenges confronting firms. We contribute to the literature on the management of R&D activities by studying how control rights affect innovation within the firm. Using a shock to communication and matched sample analyses, we find evidence that whether the parent or a subsidiary holds control rights over an R&D subsidiary's activities is important for innovation outcomes. Specifically, parent-controlled R&D units have significantly smaller changes in innovation quantity, quality, and are less likely to integrate new knowledge or collaborate after the introduction of broadband technology relative to subsidiary-controlled R&D units. These results are concentrated amongst firms that have greater information processing constraints – such as in large firms, and when the parent must invest more effort to broker collaboration and perform higher-quality monitoring such as when there is greater distance in technological expertise, and when there is cultural distance and different language between R&D subsidiaries and controlling entities. Our findings suggest that the parent does not merely fail to leverage the potential advantages of communication to foster innovation but may use it to exert greater control in a way that stifles innovation.

IM: Emerging market firm's persistence with failed innovations

Author: **Sarah Edris**, *Maastricht U., School of Business & Economics*
Author: **Thorsten Wahle**, *Alliance Manchester Business School*
Author: **Stijn Horck**, *Maastricht U., School of Business & Economics*
Author: **Ajai Singh Gaur**, *Rutgers U.*

We explore the conditions under which firms persist with failed innovations. While prior literature suggested firm's persistence with failure may vary by their experience with novel vs incremental innovations, we argue the institutional experience of the innovating firm can explain their persistence via their ability to interpret failure events. Firms from advanced economies may react to failure by persisting with innovations after setback, whereas firms from emerging markets may react to failure by abandoning failed innovations. Additionally, emerging market firms may transform negative feedback from one type of innovation into developments for another (i.e., switch the type of innovations they undertake). We test hypotheses using FDA-approved drugs (1998-2019). Our analysis provides insights on learning from failure and innovation efforts in an international business context, and their consequences.

**International, Transnational, and Transitional
Entrepreneurship**
Transitional Entrepreneurship

Chair: **Kaveh Moghaddam**, *U. of Houston, Victoria*
Organizer: **George Nakos**, *Clayton State U.*
Distinguished Speaker: **Anil Nair**, *Old Dominion U.*
Panelist: **Majid Ghorbani**, *Renmin U. of China*
Panelist: **Sarika Pruthi**, *San Jose State U.*

The distinction of International Entrepreneurship and Transnational Entrepreneurship may not be clear cut. International Entrepreneurship is predominantly concerned with the firm as a unit of analysis, while Transnational Entrepreneurship usually examines the dual nature of the firm and individual entrepreneurs. Transnational Entrepreneurship entails migrant entrepreneurs who leverage opportunities that arise from their dual networks and optimizing resources in their host and home countries. Consistent with the 2021 AOM conference theme of “Bringing the Manager Back in Management”, the aim of this Panel Symposium is to examine how immigrant entrepreneurs manage their ventures in a global market.

Ethics in Management Education: Imagination, Integrity and Responsibility

Digital Session Chair: **Henriette Lundgren**, *George Washington U.*

MED: **Facilitating Ethical Reflective Practice in the Context of Experiential Learning**   

Author: **Henriette Lundgren**, *George Washington U.*

Author: **Emily Morrison**, *George Washington U.*

Author: **SeoYoon Sung**, *Rutgers U.*

MED Junior Faculty Best Paper Award. Sponsored by SAGE/Journal of Leadership and Organizational Studies for the most significant contribution to management education by a Junior Faculty authorship team (all earned doctorates since 2014 or working on it).

Recognizing the benefits and shortcomings of experiential learning for its participants, less is known about how experiential learning facilitators (i.e., teachers, coaches, leaders) reflect on, make sense of, and learn from experiential learning activities in their own practice. The purpose of this study is to explore the complexities of critical incidents that arise in experiential learning and teaching using an enactive lens. The enactive lens allows for more nuanced, complex insights than constructivist lenses allow. We show that facilitators are affected in multiple ways by their experiential teaching experiences, around the themes of validation, preparedness, control, emotions, and framing/reframing. We show experiential learning as a relational and embodied practice while discussing the importance of contextualizing experiential learning in safe-to-fail spaces and workplaces. We further develop a practical understanding of what it means to facilitate ethical reflective practice in experiential learning and teaching. By doing so we add to the body of experiential learning theory and pedagogy by encouraging facilitators to grow their experiential expertise by reflecting on their own critical incidents and engaging in more sharing with colleagues through experiential-teaching communities of practice.

Paper is Available to Meeting Registrants Only.

MED: **Responsible Management Education: The Risk of Responsibility**    

Author: **Paul Hibbert**, *U. of St Andrews*

This essay takes a particular perspective on Responsible Management Education (RME), focusing on problems identified in recent research. The problematic issues are related to a lack of clarity associated with the key terms, and consequential impacts of RME that might be missed because of this lack of clarity. As an illustration of the consequences, the essay discusses moral injury, an experience of the betrayal of one's fundamental values that leads to ongoing, debilitating anguish. The essay argues that moral injury might also be a hazard faced by managers, expected to act responsibly in challenging and constraining contexts, after completing an RME program. As a response to this problem, the essay encourages further fundamental research in the field.

Paper is NOT Available. Please contact the author(s).

MED: **Teaching Moral Imagination Through Theatre Pedagogy** 

Author: **Rachel Dickinson**, *Warwick Business School*

Author: **Demetris Hadjimichael**, *Warwick Business School*

Global Forum Best Paper Award for the paper that best creates the opportunity to address global issues of significance to management education and/or development.

Moral imagination can be understood as a process of self-reflecting that enables one to step back and become more aware of a given situation so as to imaginatively and evaluatively identify possibilities of ethically responding. Indeed, several studies have highlighted that the moral imagination is key to dealing with ethically challenging situations in organizations. The purpose of this paper is to introduce a theatre-informed pedagogical approach for teaching business ethics with a focus on exercising and developing the moral imagination. Specifically, following a brief review of the relevant literature, we describe the undergraduate course Acting Responsibly and explain how its design and delivery enables development of the moral imagination. Moreover, we reflectively discuss the course's underlying design principles and suggest ways in which they can be leveraged within the context of traditional ethics classes.

MED: **Down the Slippery Slope: Moral Disengagement and Academic Integrity's Grey Areas**  

Author: **Kelley Packalen**, *Smith School of Business, Queen's U.*

Author: **Kate Rowbotham**, *Queen's School of Business, Canada*

Most students do not engage in serious cheating, but many engage in seemingly insignificant transgressions. While these small misgivings may be brushed aside as trivial, prior research shows that major ethical violations tend to follow small, common violations – the so-called slippery slope effect. In this study we combine computer-facilitated focus groups, an online survey and open-ended responses to identify when and why students think it is acceptable to engage in both specific minor academic integrity violations and violations more generally. We also demonstrate that the slippery slope effect occurs in academia as students who find it acceptable to violate academic integrity in more “grey area” situations also engage in more trivial and non-trivial academic integrity violations in general. We analyze our findings using mechanisms of moral disengagement and neutralization theory to categorize why students violate academic integrity and find that the mechanisms they use to justify engaging in specific trivial violations differ from those they use to justify violating academic integrity more generally. We conclude with recommendations that directly address ways that faculty and administration can neutralize the mechanisms that students use to morally disengage both in relation to specific trivial violations as well as more generally.

Social Ties at Work

Digital Session Chair: **Thomas Joseph Zagenczyk**, *Clemson U.*

OB: Friendship, Advice and Distant Ties with Leaders and Similarity in Citizenship Behavior

Author: **Thomas Joseph Zagenczyk**, *Clemson U.*
Author: **Sara Krivacek**, *Clemson U.*
Author: **William L. Gardner**, *Texas Tech U.*
Author: **Kevin S. Cruz**, *Georgia Southern U.*
Author: **Claudia Cogliser**, *Texas Tech U.*
Author: **Debbie Laverie**, *Texas Tech U.*

We adopt the view of leadership as a relational phenomenon and draw on social influence theories to investigate whether leaders motivate followers to engage in similar interpersonal citizenship behavior (ICB) as leaders. We argue that employees will demonstrate ICB similar to leaders with whom they have advice and distant ties (when employees consider coworkers to be leaders but do not have direct ties with those leaders), whereas employees will have dissimilar ICB to leaders with whom they have friendship ties. Results of a social network study of 132 employees in the business college of a large southwestern university indicate that employees have similar levels of interpersonal citizenship behavior to leaders with whom they have advice ties and dissimilar levels of interpersonal citizenship behavior to leaders with whom they have friendship ties. We find distant ties with leaders have no effect on interpersonal citizenship behavior. Theoretical and practical implications are discussed.

OB: Social Networks and Citizenship Behavior: The Mediating Effect of Organizational Identification

Author: **Thomas Joseph Zagenczyk**, *Clemson U.*
Author: **E. Erin Powell**, *North Carolina State U.*

Are employees more likely to identify with their organization and engage in helping behaviors on its behalf if the coworkers who make up their social networks identify strongly and help the organization? Despite origins in social psychological research, prior studies of the antecedents of organizational identification have focused primarily on individual-level psychological and perceptual factors. This has limited our understanding of how OI forms and how it relates to the attitudes and behaviors it shapes. We reconceptualize organizational identification as a social phenomenon influenced by structural (similarity with respect to structural position) and relational (advice and friendship ties) dimensions of social networks. This allows us to theorize two distinct social influence paths through which OI affects organizational citizenship behavior: a direct path whereby social information processing and social learning affect OCB, and an indirect path in which social influence affects OCB through its effect on OI. We conducted a social network study of employees in a construction company. The theory we develop departs from most prior work in arguing that OI is neither a matter of individual perceptions generated in isolation, nor a simple function of the number of ties that an employee has, but that it is in important ways instead an outcome of relations and interactions with co-workers, as reflected in the social structure of the employing organization. Our arguments thereby relocate a primary source of organizational identification from perceptual to structural and relational factors. We discuss important implications for both theory and practice.

OB: Workplace Gossip and the Evolution of Friendship Relations: The Role of Complex Contagion

Author: **José Luis Estévez**, *Linköping U.*
Author: **Rafael Wittek**, *U. of Groningen*
Author: **Francesca Giardini**, *U. of Groningen*
Author: **Lea Ellwardt**, *U. of Cologne*
Author: **Robert W. Krause**, *Freie U. Berlin*

Complex contagion theory is used to develop novel hypotheses on the effects of workplace gossip on expressive relations. It is argued that hearing gossip from multiple senders or about multiple targets impacts receivers' friendships with gossip targets. Hypotheses are tested in a two-wave sociometric panel study among 148 employees of three units in a Dutch childcare organisation. Stochastic Actor-oriented Models yield only very weak support for simple contagion processes, with positive gossip fostering receiver-target friendships in one, and negative gossip significantly decreasing them in another of the three Departments. No support was found for complex contagion effects based on multiple senders. Findings for complex contagion based on multiple targets were inconsistent. Implications for theories of gossip and reputation are discussed.

OB: Is it about time? Counteracting the Negative Effect of Virtuality on Performance with Team Density

Author: **Martijn Jungst**, *EDHEC Business School*
Author: **Lorraine Marie Uhlaner**, *uhlaner*

The use of virtual tools has become the norm in organizations to remain competitive in a global and dynamic environment. To understand the impact of these tools on team performance, we examine virtuality through an episodic lens. We develop a temporal model that links virtuality processes and the emergent state of team density with team performance over time, and test the hypothesized relationship in 36 temporary teams. Random coefficient growth modeling shows that team density attenuates the negative relationship between virtuality and team performance, highlighting the importance of a configurational approach to understand the impact of team processes on team performance over time. We discuss the theoretical implications of conceptualizing virtuality in a time- and context-sensitive perspective.

Leader Support for Recovery and Coping

Digital Session Chair: **Charlotte Foerster**, *Johannes Kepler U. Linz*

OB: Leadership behaviors that reduce psychological distance and increase adaptive coping and performance   

Author: **Anders Friis Marstand**, *Birkbeck, U. of London*
Author: **Olga Eptropaki**, *Durham U.*

During the COVID-19 pandemic, millions of employees have found themselves working from home, physically separated from their leaders and work teams. Drawing from construal level and conservation of resources theories, our study focused on the psychological distance employees experience from their manager as a key explanatory mechanism for employee coping and task performance during the pandemic. We specifically examined the role of three leadership behaviors (initiating structure, consideration, and vision communication) on employees' perceptions of psychological distance from their manager and the subsequent effects on employee task, emotion, and avoidance coping and task performance. Using data from a four-wave time-lagged online study of remotely working participants (N = 343) conducted in April-May 2020, we found that consideration and vision communication reduced employees' perceptions of psychological distance from their manager, while psychological distance decreased task coping. Support for a serial mediation model was also found, with consideration and vision communication positively and indirectly influencing task performance via psychological distance and then via task coping. Results from our study provide insights into how leaders can stay psychologically close to their employees despite their physical separation and the implications of psychological distance from the leader for employees' coping responses and performance.

OB: Paradoxical leadership behavior: How leaders contribute to organizational resilience 

Author: **Charlotte Foerster**, *Johannes Kepler U. Linz*
Author: **Stephanie Duchek**, *BTU Cottbus-Senftenberg*
Author: **Caroline Paparella**, -
Author: **Wolfgang H. Guettel**, *TU Wien*

Living and operating in a global world, the risk for a global economic crisis has never been greater. As the ongoing events in terms of the COVID-19 crisis show, organizations need to be highly resilient to survive in a crises-prone world. Acknowledging the central role of leaders during organizational crisis, we examine how leaders handle existence-threatening organizational crisis, and how this is affecting organizational resilience. As part of a larger research project on crisis management, we conducted 37 interviews with leaders operating in organizations that were faced with such a major crisis. By telling their own crisis story, our leaders were able to reconstruct their behaviors very precisely. Resulting from our inductive analysis approach, we found that our leaders' behavior during these major crises was not straightforward but somehow paradox. In sum, we identified seven pairs of paradoxical leaders' behaviors in all three phases of the organization's resilience process (i.e., anticipation, coping, adaptation). Nonetheless and even while leaders also need to balance paradox demands before and after critical situations, this need was particularly relevant during crisis. By shedding light on how leaders handle major organizational crisis and how this behavior is affecting organizational resilience, we do not only provide important implications for future resilience research but also derive crucial practical implications for crisis management.

Paper is Available to Meeting Registrants Only.

OB: What Leaders Do Matters: Supervisor Support for Recovery and Employee Recovery  

Author: **Ze Zhu**, *George Mason U.*
Author: **Julia Baines**, *George Mason U.*
Author: **Lauren Kuykendall**, -
Author: **Bo Zhang**, *Texas A&MU, College Station*

Research suggests that leaders play an important role in employees' recovery from work stress. Very little research to date has examined leader behaviors that promote or inhibit employees' recovery. This study aims to better understand the nature and impacts of recovery-supportive supervisory behaviors. Specifically, we (1) proposed an expanded conceptualization of supervisor support for recovery, (2) developed and validated a measure consistent with this expanded conceptualization, and (3) examined the effect of supervisor support for recovery on employee recovery. In Study 1, we conducted a qualitative study to identify the dimensional structure of supervisor support for recovery. Based on the qualitative data, we conceptualized it as a multidimensional construct with four dimensions: not communicating about work during nonwork time, not requiring work during nonwork time, modeling recovery, and encouraging recovery. In Studies 2 and 3, we developed and validated a scale to measure supervisor support for recovery. We found that supervisor support for recovery was distinct from other leadership constructs (e.g., perceived supervisor support, family supportive supervisor behaviors, and transformational leadership) and explained additional variances in psychological detachment and burnout above and beyond the three similar leadership constructs. Relative importance analysis suggested that supervisor support for recovery was more important than the other three similar constructs in predicting psychological detachment, but perceived supervisor support was the most important predictor in predicting burnout. Implications for future research are discussed.

Presenter: **Fadel Khalil Matta**, *U. of Georgia*
Presenter: **Min-Hsuan Tu**, *U. at Buffalo, The State U. of New York*

Since the Affective Revolution declared by Barsade, Brief, and Spataro (2003), interest in the role of affect and emotions has become “de rigueur” (Ashkanasy & Dorris, 2017: 67) for organizational scholars. In summarizing the past two decades of this literature, a series of reviews (e.g., Ashkanasy & Ashton-James, 2005; Ashkanasy & Dorris, 2017; Ashkanasy & Humphrey, 2011; Brief & Weiss, 2002; van Knippenberg & van Kleef, 2016) note three common trends: 1) the Affective Event Theory (AET) is at the core of research on emotions, 2) it is important to examine the interaction of AET with emotion-laden topics (e.g., emotional labor, emotional intelligence), and 3) leaders serve as “mood managers” who actively influence their followers’ feelings and emotions. On the precipice of the third decade of the affective revolution, this symposium showcases a recent stream of research projects on affect and emotions that extend these previous trends both in isolation and together. By highlighting the contemporary and ongoing approach that advances these trends in one or more ways, each of the papers in this symposium set a research agenda for the future.

Carolyn Dexter Award Nominee

The literature on strategy practice as a historically embedded phenomenon is scant. To fill this gap, this study expands the strategy-as-practice (SAP) literature by examining the meaning of historical embeddedness in the evolution of strategy practice. We draw on the framework of strategic planning as a social practice presented by Langley and Lusia (2015) and the notion of *modus operandi* (Chia & Holt, 2006). We use a longitudinal case study design combined with historical methods to examine the evolving and historically embedded strategic planning practice of a healthcare organization throughout its lifespan. Our results show that historical embeddedness appears in structures and routines, materiality, positioning, and reflecting, representing an internalized way of acting. We show that reflection is essential for the evolution of strategy practice and contribute to theory development by demonstrating that strategic planning is a continuous development process and that, in this evolution, history provides continuity yet also facilitates the evolutionary process. Keywords: Evolution; historical embeddedness; strategic planning; strategy-as-practice

ODC: **Achieving an Organizational Sustainability Transformations through Aggregating Micro-Level Changes**

Author: **Kim Strunk**, *U. of Passau*
Author: **Susanne Kiener**, *U. of Passau*
Author: **Anna Will**, *U. of Passau*
Author: **Laura Ziegltrum**, *U. of Passau*
Author: **Marina Fiedler**, *U. of Passau*

Organizations struggle to initiate change for sustainability and particularly in identifying relevant projects and creating engagement for sustainability. Therefore, organizational sustainability transformation (OST), meaning a substantial rather than a symbolic shift in the organization's operations, values and goals to extensively incorporate sustainability concerns, is not a one-time project but requires a long-term attention to the issue. However, little attention has so far been given to implement micro-level changes towards sustainability. Extant literature emphasizes the importance of micro-level changes in an OST, yet it remains widely unclear how to aggregate these micro-level changes to support a substantial and large-scale sustainability transformation. This is however crucial for enhancing our understanding of how micro-level changes add up to a large-scale transformation over time. Building on a qualitative inductive study with key informants, we reveal how an OST can be achieved through emergent evolutionary continuous micro-level changes. We provide a model to understand OST better, by explaining how the decentralized micro-level changes, integrated in a clear sustainability vision, but without a detailed planned change agenda, can be achieved collectively. We identify three inter-related cycles illustrating the organizational dynamics of the OST, revealing opportunities for supporting an OST and showing where an OST can possibly fail when the dynamics are neglected. In addition, we derive recommendations for managerial actions in an OST.

ODC: **The Endogenous Mechanisms and Dynamics of the Business Ecosystem Evolution: A Process Study**

Author: **Fengbin Wang**, *School of Business, Renmin U. of China*
Author: **Xue Zhang**, *Renmin U. of China*

A business ecosystem is a complex dynamic system within which components interact with each other to drive the changes of other components and the whole ecosystem. Although dynamics has been widely identified as a core feature of the ecosystem, how the actual interactions among the components happen and aggregate to drive the self-evolution of the ecosystem have been rarely studied. Adopting a longitudinal inductive case study approach, this study disentangles the interactions among ecosystem components and delineates a temporal recursive pattern of six-phase paths of the business ecosystem evolution. We find that the generative mechanisms underlying business ecosystem evolution are the successive negation of the negation of phases (meso-level explanation) and the self-governing regulators (micro-level explanation) that continually trigger new phases. This explorative inductive study unveils how interactions of components accumulate to drive the ecosystem evolution, which provides a transparent and deeper understanding of the micro-macro linking process.

ODC: **Starting with a Completed Canvas: Layering as A Mechanism for Change During Emerging Hybridity**

Author: **Nora Rosendahl**, *Aalto U., Department of Industrial Engineering and Management*
Author: **Jane Seppälä**, *Aalto U., Department of Industrial Engineering and Management*
Author: **Timo Olavi Vuori**, *Aalto U.*

Organizations increasingly need to respond to conflicting demands, simultaneously. Scholars have thus described strategies that involve blending or recombination of institutional logics. This paper examines a change approach we label "layering" – where, in the presence of significant institutional constraints, two institutional logics are blended not through replacement or recombination, but through addition: by layering the new on top of the old. Based on a case of an infrastructure hardware and software provider, where practices from the agile software logic were layered on top of legacy practices, we seek to increase understanding of how and why layering can occur. Layering seems to be strongly associated with hybridity – combining conflicting identities, forms, or logics – but, in comparison to prior scholarship, is likely to emerge when hybridity emerges gradually over time, and when actors are constrained in their hybridization strategies by existing institutional arrangements and power structures. Our central contribution is to detail layering in organizational sciences, and the dual change cycles this prompted: one change defeating, the other change strengthening. In doing so, we shine a light on the under-developed role of historical institutional legacies, sequencing, and power structures in shaping organizational responses to conflicting institutional demands.

Bureaucracy and Knowledge Management

Bureaucracy and Knowledge

Digital Session Chair: **Pedro Monteiro**, *Copenhagen Business School*

OMT: **Mechanisms of Governance and Knowledge Sharing Behavior**

Author: **Stefano Miraglia**, *UCL*
Author: **Jens Roehrich**, *U. of Bath*
Author: **Mostafa Safar**, *U. College London*
Author: **Mihai Talmatchi**, *U. College London*

Understanding how formal and informal mechanisms of governance produce a combined effect on the knowledge sharing behavior of organizational members is a problem which is yet to be resolved in organization studies. Contradictory and inconsistent findings have so far prevented the identification of a set of constructs that can be used to explain the causal linkages between governance decisions and individual knowledge sharing behavior. We addressed this problem through an inductive, multiple-case study of organizations from different industries. We found that, consistently across the cases, three dichotomous theoretical dimensions explicated two opposing patterns of relationships – one on each side of the dichotomy – whereby: (1) a condition of cognitive and normative alignment/misalignment of individuals mediated the influence of (2) concerted/unconcerted governance on (3) effectual/ineffectual knowledge sharing behaviors. By modelling these dimensions and their interrelationships, we are able to lay down the foundations of a theoretical framework for the governance of knowledge sharing in organizational settings.

OMT: **Bureaucracy Is Dead, Long Live Bureaucracy: A Review for Taking Stock and Moving Forward**

Author: **Pedro Monteiro**, *Copenhagen Business School*
Author: **Paul S. Adler**, *U. of Southern California*

The present review aims to redress the growing gap between the receding discourse on bureaucracy and bureaucracy's persistent reality by clarifying conceptual issues. In doing so, we aim to renew and expand our understanding of bureaucracy as a dominant feature of our organizational landscape. First, we review the organizational research and find three main perspectives of research on bureaucracy, which emerged in succession but persist in parallel. Turning to the state of contemporary research, we note several factors that help explain the shrinking scholarly attention devoted to bureaucracy and the resulting difficulty in making sense of new trends like uberization and holacracy. We conclude by offering four strategies for overcoming these shortcomings.

OMT: **Bureaucratic Cartographies of Expertise: The Organization of Specialist Domains in Complex Settings**

Author: **Pedro Monteiro**, *Copenhagen Business School*

How and with what consequences is expertise organized? More specifically, how the multiple formal arrangements in complex settings configure specialist domains and its implications for management of knowledge. I examine this question through a case study of PlaneCo, a blue-chip aeronautical company where the organization of expertise was a core concern and many formal organization arrangements were in place to chart and manage it. Conceptualizing these arrangements as bureaucratic cartographies I draw on 15 months of ethnographic fieldwork in the company's engineering unit and find that they crystalize conceptualizations of expertise, catalyze the formation of specialist domains, and compound distinct experts together. These processes in turn have a downstream effect in the management of knowledge to the extent that they influence the resources afforded to specialists and the flow of knowledge. Unveiling these processes bring contributions to our understanding of knowledge specialization and integration as well as the interplay of bureaucratic organization and expertise.

OMT: **Kingdom of Bureaucracy. A Governmental-Political Interpretation of Modern Management**

Author: **Enrico Beltrami**, *Notre Dame de Namur U.*

In this article I place management theory in conversation with Giorgio Agamben's political theology with the dual scope of offering (1) an Agambenian interpretation of management, and (2) a framework that may be useful to illuminate and eventually explain the nature of some decisive and persistent weaknesses of the discipline. The main argument is that Agamben's theological genealogy of economy transforms the discourse on management from a matter of value to one of control. In the first section, I introduce Agamben's political theological project and I discuss how his project can change the way scholars look at management. In the second, I list three fundamental weaknesses of management as a discipline that an Agambenian interpretation of management can make intelligible.

Performativity, Persuasion and Power

Performativity and Persuasion

Digital Session Chair: **Frithjof E. Wegener**, *Delft U. of Technology*

OMT: **On the Performativity of Design Theories for Organizing**   

Author: **Frithjof E. Wegener**, *Delft U. of Technology*
Author: **Vern Glaser**, *U. of Alberta*

Organization design is at the core of organization studies. In this paper, we explore organizational design by examining the performativity of design theories for organizing. We build on insights from performativity to suggest that a theory of design often impels organizational actors to engage in particular types of actions that influence how organizational design initiatives change organizations. Specifically, we depict how three theories of organizational design—Scientific Management, Design Science, and Pragmatism—influence organizing. We develop an argument that shows how adopting these theories of design influence organizational design by providing organizational actors with different expectations of the roles played by users and designers, establishing core principles of action, generating learning mechanisms, and shaping political dynamics.

OMT: **"Putting People in Little Boxes": How Scripting Processes Perform New Organizations**  

Author: **Alaric Bourgoin**, *HEC Montreal*
Author: **Samer Faraj**, *McGill U.*
Author: **Paolo Vincenzo Leone**, *McGill U.*

This paper explores the intertwining of power, technology, and organizing, unpacking the performative dynamics through which technological tools foster the creation of new organizations. Through an autoethnographic study of a high-stakes consulting assignment dedicated to the restructuring of a large energy group, we investigated the role and effects of a piece of software that was specifically designed to help the consultant navigate the analytical complexity and political ferocity of the context. Advancing the notion of "scripting process", we shed light on how a novel organizational structure unfolded through a performative process wherein the piece of software acted as a scripting device, framing, feeding, fitting, and realizing the future organization by respectively inscribing, confronting, aligning, and actualizing the interests at play.

Paper is Available to Meeting Registrants Only.

OMT: **Performing Categories through Material, Spatial and Verbal Practices: the case of "Historical Shops"**

Author: **Camilla Ferri**, *U. Ca' Foscari of Venice*

Categories make intelligible our world by classifying and labelling objects, actors and events around us. Sometimes categories are created by some promoters re-interpreting already existing entities to re-orientate meaning systems according to strategic goals. This phenomenon is particularly spread in urban and cultural contexts, where policy-makers often found labels to re-qualify, valorise or preserve specific areas of interest. Adopting a qualitative methodology and a multiple nested case study, I analyse the case of creation of the Historical Shops category in two Italian cities with the aim of understanding the conditions and the mechanisms through which a category takes life, is acknowledged and performed on a daily basis, and the ones that, instead, hinder this process. Findings show that the interaction of material, spatial and verbal practices enacted within categorial boundaries co-create an externally perceived experience of the category, which, in turn reinforce the categorial members' identification with the category, hence sustaining category performance. The initial acts of category creation and actions of category promoters and intermediaries may support or undermine the whole process. The study contributes to categorization studies by providing a situated view on categorization where materiality, place, experience and categorial members' identification have a fundamental role.

OMT: **Evoking the Leap of Faith Online: An Exploration of the Inner Workings of Trust Signals** 

Author: **Theresia Harrer**, *Middlesex U. London*

Research has so far largely overlooked trust building processes in online contexts. Specifically, while previous research has shed light on relevant signals as antecedents, little attention has been paid to how such signals are actively induced in one-way communication – that is when no prior interaction is given, and reactions cannot be observed immediately. This paper addresses this gap by adopting Goffman's logic in Presentation of Self (1959). I explore how cues and dramaturgical mechanisms are used to evoke signals which relate to three dimensions of trust: ability, benevolence, or integrity. I analyze 19 campaign videos on the largest reward-based crowdfunding platform – Kickstarter – and extract bundles of visual and verbal cues that are enacted via dramaturgical mechanisms. This leads me to three dramaturgical strategies that foster online trust, in particular the leap of faith. The study contributes to trust literature by offering early evidence into how the leap of faith is created online and by providing insights into the creation of trust signals. It also contributes to crowdfunding literature by a more nuanced understanding of signaling.

Finalist for the Responsible Research Award

The face is a significant locus of power upon which judgements concerning a person’s status, worth and attractiveness are made. This study contributes to knowledge of facial norms’ shifting performative power in daily organizing, theorizing facial beauty as a communicatively constituted authoritative text. We achieve this through blending Butlerian and communication as constitutive of organization theorizing. This allows us to enrich understandings of power and performativity’s necessarily entangled and co-constitutive unfolding, as we trace how a normative understanding of facial beauty becomes more and/or less performatively powerful through embodied-textual processes. Our theorizing is generated from an ethnography of a UK cosmetics firm and demonstrates how facial beauty functions as a (figurative) authoritative text that corporealizes, subjectivizes, and is resisted by makeup artists within a confluence of (concrete) text and conversation. We show how through communicative, citational and embodied processes of corporealization, regulation and subjection, everyday performances like makeup applications become performatively powerful on the ground level of interaction. Further, returning authoritative texts to their original figurative formulation uncovers something of how their transformative power shapes organizing’s ongoing accomplishment.

Community partnerships for progressing sustainability

Digital Session Chair: **Raquel Antolin-Lopez**, *U. of Almeria*

ONE: Local Community members' motivations to partner for social impact: A mixed-methods approach

Author: **Raquel Antolin-Lopez**, *U. of Almeria*

Author: **Pilar Jerez-Gómez**, *U. of Almeria*

Author: **Susana B. Rengel**, *Susana*

This article aims to extend the boundaries of extant research on inter-organizational relationships for social impact by identifying the motivational factors that can foster an active collaboration of local communities with a nonprofit organization. Specifically, we focus on the Natural Park and Integrated Management Natural Area (PN-ANMI) of the Serranía del Iñao in Bolivia where 45 communities that collaborate with the PN-ANMI Management Committee are located. The PN-ANMI Management Committee is a nonprofit organization aimed at preserving biodiversity and enhancing local people's social well-being through the collaboration with different stakeholders. We follow a mixed-methods approach. First, we conduct an inductive study primarily based on the interviews with the 45 local community representatives. Next, we perform a binary logistic regression in a sample consisting of the responses of 799 community members that collaborate with the Management Committee (e.g., micro family farms, micro businesses, producers unions, local associations for conservation, and regular dwellers) to validate the findings from the qualitative analysis. Our results show the relevance of ten motivational factors that we aggregated into four theoretical dimensions (environmental preservation, community well-being, self-esteem, and organizational effectiveness).

Paper is NOT Available. Please contact the author(s).

ONE: Local leaders and the environment: little resilience/influence to produce a sustainable environment

Author: **Gustavo Cordeiro**, *Fundação Getulio Vargas - EAESP*

Author: **Paulo Arvate**, *FGV-EAESP*

The Legal Amazon region (LAR) consists on a complex area where multiple actors coexist with conflicting interests. Indigenous population, agribusiness entrepreneurs and small producers are examples of individuals with different behaviors concerning the economic development and deforestation of the area. In this sense, research has been conducted in order to evaluate the impacts of agricultural development and the rise of deforestation levels, the influence of economic incentives on economic development and deforestation and the impact of institutional incentives on deforestation reduction. However, the role of local leadership on these matters has not been analyzed so far. An efficient local leader would be the one who is resilient (e.g. promote both economic development and deforestation reduction on his municipality). Therefore, in our study we test if local leaders are resilient in the Legal Amazon environment, whether or not they make use of economic and/or institutional incentive to promote economic development and deforestation reduction and whether or not sustainable top leaders (e.g. state governors) influence the actions of local leaders (e.g. mayors). For this, we use a Regression Discontinuity methodology and a quasi-randomized experiment (elections with a margin of victory close to zero). Our sample comes from multiple databases and includes over 18000 observations from 755 LAR distinct municipalities for the period between 1996 and 2016. Amongst our results, we identify that local farmer leaders promote economic development but do not produce significant changes on deforestation levels. We also identify that economic incentives are used by these local leaders, but institutional incentives are not. Finally, we identify that top level leaders do not influence local leaders on their actions on behalf of being resilient.

ONE: To ally and innovate for sustainability: Food retailers and their external partners

Author: **Andra Riandita**, *U. of Stavanger Business School*

Firms ally with various organizations to address social and environmental issues. The existing literature has discussed the success factors for and opportunities arising from such alliances, but few studies have provided a systematic overview of the use of alliances in the context of firms' sustainability initiatives. This study investigated such sustainability alliances, with a focus on the alliances' strategic purposes and choices of partner over time. Applying content analysis methods, data was collected from 12 large food retailers in the EU from 2014 to 2018. The analysis showed that, over this period, the frequency of alliances to support philanthropic endeavors declined. At the same time, retailers increasingly leverage their alliances to engage in sustainability-oriented innovation. Retailers allied themselves with sustainability ventures, while the frequency of cross-sector alliances with NGOs declined. These changes in purpose and choice of partner may reflect efforts by retailers to move from providing more passive support for system-wide change to actively engaging with sustainability initiatives related to their core business activities through product and process innovation.

ONE: Health Benefits of Local Government Sustainability Efforts: A Social Cognitive Perspective

Author: **Hyun Jung Ji**, *U. of Alabama*

Author: **Su Hyun Shin**, *U. of Utah*

Since climate change presents an unprecedented threat to public health, creating environmentally sustainable communities has become an important policy goal. Many local governments have voluntarily implemented sustainability practices to mitigate and adapt to climate change at community levels. Because of the potential benefits, scholars and practitioners are paying increasing attention to the sustainability practices of local government. This study provides evidence for their health benefits after analyzing data of more than 3,000 older adults between 2012 and 2016. Our findings suggest that incentives for energy-efficient buildings are associated with an increased likelihood that older adults will view life expectancy optimistically. Moreover, incentivizing resource conservation behaviors and installing charging stations for electric vehicles are associated with increased physical activities. Our findings have important implications for local governments by linking climate change and community health issues.

Managing Grand Challenges: Theoretical, Empirical, and Methodological Perspectives

Managing Grand Challenges

Organizer: **Kerstin Neumann**, *U. of Innsbruck*
Organizer: **Lilach Trabelsi**, *U. of Innsbruck*
Presenter: **Sinziana Dorobantu**, *New York U.*
Presenter: **Anne Jacqueminet**, *Bocconi U.*
Presenter: **Frank Wijen**, *Erasmus U. Rotterdam*
Presenter: **Maurizio Zollo**, *Imperial College Business School*
Presenter: **Uriel Stettner**, *Tel Aviv U.*

An important emerging question in strategy and organization literature is how do managers navigate their firms through increasing levels of environmental uncertainty and ambiguity. Such rising levels of uncertainty and ambiguity are particularly associated with grand societal challenges, including climate change, the dramatic increase of socially divisive forces, inequality, and social unrest, and, most recently, global pandemics. The objective of this symposium is to address theoretically, empirically, and methodologically the question of how firms can manage such complexities and, at the same time, help tackling grand challenges.

Presenter: **Lucrezia Nava**, *Cambridge Judge Business School*
Presenter: **Kala Viswanathan**, *Harvard U.*

Climate change presents a clear and present danger to our society. Businesses and the civil society have made strong commitments and collaborative efforts to address climate change, yet the problem has become increasingly severe. There have recently been growing scholarly interests to understand the barriers of how to effectively deal with current grand challenges, and how such barriers can be overcome. However, important questions remain to identify the best path forward. This symposium brings together leading and emerging scholars in the area to discuss some of these important questions. The four papers in the symposium illustrate unintended consequences from efforts in addressing climate change across different contexts and emphasize the need for strong collaboration at a global scale. The papers suggest solutions to the problem and offer important implications to academics, policies and practices, setting an agenda for future research. The symposium discusses empirical and theoretical connections of research across contexts including institutions, industries, businesses, and organizations' decision makers, and offer management scholars promising opportunities for future exploration.

Partnerships and Collaborations

Digital Session Chair: **Mohammad Moshitari**, *Tampere U.*

PNP: **Innovation Networks for Social Impact: A Multi-Actor Role on Smart City Projects in Brazil**   

Author: **Emilene Leite**, *Örebro U. School of Business*

We investigate how business and socio-political actors contribute and collaborate, within a network, to develop technologies for a social impact. Based on the innovation networks literature and insights gained from two cases of smart city innovation, our study demonstrates that the innovation process in a city context is complex, nonlinear, dynamic, and socially constructed. Moreover, the innovation network is driven by the activities of searching, acting, and convincing of an opportunity to develop smart city solutions. Yet, four roles associated with these activities were revealed: coordinators, contributors, facilitators, and builders. Hence, innovation for smart cities requires different types of actors (business and socio-political), drivers (economic and social), resources (technological and non-technological), and roles in both development and implementation. This study contributes to public and academic discussion on networks by showing that actors' roles and specific innovation activities contribute to a type of innovation network formation that positively impacts business and society.

PNP: **NGO–Business Partnerships in the Humanitarian Aid Context: Types and Formation Process**   

Author: **Mohammad Moshitari**, *Tampere U.*

Author: **Evelyne Vanpoucke**, *ULB - Solvay Brussels School of Economics and Management*

Given the immense impact of natural and human-caused disasters, organizations, such as businesses and NGOs, are under increasing pressure to contribute to humanitarian responses. One way to increase the effectiveness of an organization's contribution is through cross-sectoral partnerships. This is also emphasized by the United Nations as: 'the SDGs can only be realized with strong global partnerships and cooperation (www.un.org).' Consequently, new NGO-business partnerships are developed within the humanitarian context. Because of these developments, it becomes important to clearly identify the various types of NGO-business partnerships and the different benefits of engaging in them. To this end, we explore twelve partnership cases between businesses and humanitarian NGOs, suggesting six forms of partnerships, elaborating on the resources provided by businesses and the particular benefits for both NGOs and businesses. In addition, we discuss the implications of this framework for the formation process of NGO-business partnerships.

PNP: **Bad Company? Exploring Cross-Sector Partnerships as Potential Threats to Nonprofit Identity**

Author: **Indira Jana Kandel**, *Leibniz U. Hannover*

Author: **Alina McCandless Baluch**, *U. of St Andrews*

Author: **Erk Peter Piening**, *Leibniz U. Hannover*

Nonprofit organizations frequently engage in partnerships with for-profit businesses in order to fulfil their social mission. Although these partnerships can equip nonprofit organizations with access to funding or other resources, they are also a common source of intra-organizational controversy and conflict when social objectives clash with business interests. In this paper, we take an identity threat perspective on cross-sector partnership and assess the conditions under which these partnerships may emerge as threats to the organizational identity of nonprofit organizations. In drawing from arguments from the literature on organizational identity, organizational identity threats, strategic alliances and cross-sector partnerships, we highlight how inter- and intra-organizational influences interact to create, heighten or ease perceptions of organizational identity threats arising from these partnerships. We thereby offer a contingency perspective on organizational identity threats that adds to the wider understanding of how interactions within an organization's network affect and co-construct organizational identity.

PNP: **The Interactive Dynamics of International Actors Before and During a Global Pandemic**   

Author: **Ryan Federo**, *U. de les Illes Balears*

Author: **Xavier Bustamante**, *U. Politècnica de Catalunya-BarcelonaTech*

The rapid spread of the coronavirus disease (COVID-19) continues to claim lives worldwide and has become a global pandemic, a distinctive type of societal grand challenge that entails instantaneous, but persisting, catastrophe. This paper sets out to explore the interorganizational network of international actors—comprising multinational companies, intergovernmental organizations, and nongovernmental organizations—by disentangling their interactive dynamics whilst a global pandemic unfolds. Using a unique GDELT big dataset, we draw on the theory of networks to analyze the interorganizational interactions of international actors before and after the World Health Organization announced that the COVID-19 outbreak was a public health emergency of international concern. Due to the immediate and large-scale impact of COVID-19, prevailing theories would expect concerned actors to build a goal-directed network and facilitate more cooperation. However, we find that international actors continuously have a serendipitous interorganizational network and generally have greater conflictive interactions with one another during a global pandemic. Our findings provide novel insights from big data, and we discuss the implications of our discoveries to understand the network of international actors during an ongoing global health crisis.

Technology, Data, and Public Organizations

Digital Session Chair: **Thi Hong Nhung Hoang**, *SKEMA Business School - U. Côte d'Azur*

PNP: **Artificializing Numbers: An Empirical Evidence from a US Intergovernmental Organization**      

Author: **Thi Hong Nhung Hoang**, *SKEMA Business School - U. Côte d'Azur*

Prior studies examining the role of accounting information reveal a research gap on how people utilize the contested accounting information to make sense and indeed legitimate their decision making. This study investigates how do people use accounting numbers to make sense in a complex environment and to legitimize their action? Using the sensemaking perspective framework, the paper shows how the two teams (Management Accounting and Human Resources) make sense (count) differently the same reality (staffing). Data from the field study at a Managerial Accounting team at an Intergovernmental Organization headquartered in US indicate different forms of sensemaking cues, which I term as, 'fading cues' and 'compressed cues'. Fading cues preexist and evolve overtime but its importance is gradually fading in managers' strategic decision making. However, co-existing compressed cues emerge subsequently but play a more important role in managers' action enactment. Managers exploit the multiplicity of cues, which is likely harmful to managers' decision making because of increasing ambiguity, to legitimate their strategic agenda. In this case of a budget implementation, the social process of constructing compressed cues or artificial artefacts, which are neither false nor correct, neither 'soft' or 'hard', not quite useful for people's sensemaking, but used to legitimate managers' strategic decisions, is referred to as artificializing accounting numbers. The artificializing process explains the decoupling of and people's resistance in policy implementation. This paper also highlights the role of systematic power or corporate power in the sensemaking process.

PNP: **Viral tweets to fight the virus: How authenticity and confidence impact information diffusion**

Author: **Lea Rüsich**, *Kühne Logistics U.*

Author: **Niels Van Quaquebeke**, *Kühne Logistics U.*

Author: **Maria Besiou**, *Kühne Logistics U.*

To safeguard the diffusion of verified health advice during the pandemic, researchers and practitioners jointly call for experts' confident and authentic communication through social media. Yet, research in Organizational Behavior highlights both - confidence and authenticity - as meaningful sources for endorsement and social influence. However, despite its practical and theoretical relevance, theory so far has not scrutinised the concepts' interplay. Our study seeks to close this gap by pitting authenticity and confidence against each other. Analyzing Twitter data, we find, that experts' authentic tweets, concerning actionable information regarding the pandemic, increases endorsement and information diffusion. Confidence, in contrast, seems to diminish these positive effects. Based on these results, we seek to develop a unified theory of confidence and authenticity as a new domain of influence.

PNP: **Antecedents of Adoption of Smart City Solutions: The Case of Millennials** 

Author: **Yulia Malchenko**, *Graduate School of Management Saint Petersburg State U.*

The purpose of this study is to develop and suggest a model for determining consumer adoption of smart city solutions (SCS). The authors collect and interpret quantitative data to develop a theoretical model that contributes to understanding the factors influencing consumer attitude towards the concept of SCS. Socially responsible consumption involvement has an indirect positive influence on adoption through attitude towards the concept of SCS. In turn, socially responsible consumption involvement is positive influenced by citizen participation and joy which millennials experience living in the city. Innovativeness has an indirect effect on adoption of SCS through attitude. Citizen participation, apart from abovementioned, has a positive impact on adoption.

PNP: **More Money, More Digital? The Impact of Public Financial Grants on Digital Transformation in SMEs**

Author: **Jasmin Seitz**, *U. of Regensburg*

Author: **Michael Dowling**, *U. of Regensburg*

In this paper, we theoretically and empirically analyse the impact of state financial grants on the digital transformation of small and medium-sized enterprises (SMEs). Building on a behavioral perspective, we hypothesize that state financial grants will nudge companies' digital transformation regardless of the size of the grant. We collected data from 1,935 SMEs including funded and non-funded companies, which applied for a state grant program in a German federal state. Our results suggest that state financial grants have a significant positive impact on the progress of the digital transformation of companies that received state grants; however, an increase of the state grant amount does not lead to more progress in the digital transformation of companies. Our findings have important implications for research on digital transformation in the context of SMEs as well as for public policy research regarding the firm-level effects of nudging policies.

Corporate Social Irresponsibility

Digital Session Chair: **Stephen Brammer**, *U. of Bath*

SIM: Selective Social Remembering: Social Irresponsibility, Organisational Salience, and Firm Reputation

Author: **Stephen Brammer**, *U. of Bath*
Author: **Giulio Nardella**, *Loughborough U., School of Business and Economics*
Author: **Irina Minodora Surdu**, *Warwick Business School*

Organization memory studies have theorized that firms should manage their stakeholders' collective memories following instances of corporate social irresponsibility (CSI), as not doing so, may negatively influence organizational outcomes. Yet, research exploring the relationship between stakeholders' collective memory, CSI and corporate reputation, is underdeveloped. Drawing on the availability bias literature and attribution theory, we theorize that social remembering by stakeholders is strongly 'selective' when recalling the CSI behavior of salient firms - organizations which are readily available for recall in their stakeholders' collective memory - compared to less salient firms, which increases the reputation risk of CSI for organizations which are considered salient. Using a unique dataset of 1,518 company-year CSI events, this paper confirms the strong moderating effect of organizational salience on the relationship between CSI and changes in corporate reputation.

SIM: How does corporate social irresponsibility affect transaction costs? Evidence from China

Author: **Feng Tianli**, *U. of Electronic Science and Technology of China*
Author: **Fan Yang**, *Master student of UESTC*
Author: **Tan Biao**, *U. of Electronic Science and Technology of China*

Corporate social irresponsibility (CSIR) scandals frequently reported in China, which has a huge impact on enterprises and even society. This paper examines the effect of CSIR on the transaction cost of Chinese private enterprises by focusing on the irresponsible behavior of enterprises. By introducing listed companies, crisis management capacity, we further studied whether CSIR behaviors of enterprises with high visibility bring higher costs, and how enterprises reduce the impact of CSIR on transaction costs under the unique institutional environment of China. Based on data from the 2018 National Survey of Private Entrepreneurs Survey, we found that CSIR increases the transaction cost for firms, especially in listed companies. Moreover, crisis management capacity plays a moderating role in reducing the threat. The conclusion of this study contributes to the understanding of CSIR behavior and its influencing mechanism, as well as the sustainable development strategy of enterprises.

Paper is Available to Meeting Registrants Only.

SIM: The firm is irresponsible, so what?

Author: **Corentin Hericher**, *UCLouvain*
Author: **Flore Bridoux**, *Erasmus U.*

While the body of literature on employees' reactions to their employer's corporate social responsibility (CSR) has grown fast over the last decade, we know little about employees' reactions to corporate social irresponsibility (CSiR). Yet, employees are unlikely to respond to irresponsibility as they do to low CSR because CSiR is a specific action, rather than a set of policies and practices, that involves the intentional violation of a moral standard, while low CSR does not. Building on the literature about people's reactions to moral transgressions and using a multimethod, multisample design (two experiments and one field study), we provide evidence that other-condemning and other-suffering moral emotions are important mechanisms explaining employees' response to CSiR towards other stakeholders, which can take the form of punishing, as often discussed in the organization-centric research, but also of compensating the victim of the CSiR, a behavior rarely studied in the management literature. We also show that CSR towards other stakeholders and gratitude towards the organization weaken the relationships between CSiR and employees' responses, providing an explanation for why employees seem to often fail to react to CSiR.

SIM: Acting with Impunity? Assessing the Performance Effects of Corporate Social Irresponsibility

Author: **Nicola Croxton**, *Robert Gordon U.*
Author: **Raquel García-García**, *U. of Oviedo*
Author: **Thomas Lawton**, *U. College Cork*

This study examines whether corporate social irresponsibility (CSiR) negatively impacts firm performance, both financial (proxied using Tobin's q) and non-financial (measured through corporate social performance scores). Building on instrumental stakeholder theory (IST), we consider the moderating role of corporate political activity (CPA) to investigate if firms' political actions buffer or intensify the potential negative effect of CSiR. Our analysis of a sample of S&P 500 firms for the period 2007-2017 finds that CSiR does not influence a firm's Tobin's q. But CSiR does diminish corporate social performance, a negative effect that is intensified by firms engaging in financial and relational CPA.

This paper examines the relationship between CEO compensation and corporate social irresponsibility (CSiR) by examining the perceptions of fairness or unfairness of CEO compensation structure. Infusing the integrative model of organizational trust with the bounded self-interest agency theory and the stakeholder-agency theory, we progress the distributive unfairness hypothesis and the procedural unfairness hypothesis to suggest that perceptions of distributive and procedural unfairness in compensation structure influence the severity with which CEOs view firms as opportunistic towards them. Using a sample of 8,873 observations across 849 U.S. firms between 2001-2018 and sophisticated empirics, we theorize and empirically demonstrate how CEO perceptions of firm opportunism trigger negative reciprocity behaviours, manifesting in increased firm-level CSiR. Furthermore, we find the prevalence of reinforcing and counter-balancing effects through which the interactions between distributive and procedural unfairness impact the CEO compensation-CSiR relationship. Our paper contributes to the literatures on CEO compensation and corporate misconduct and has important implications for the design of executive compensation packages.

Panelist: **Barbara Scheck**, *Munich Business School*
Panelist: **Othmar Manfred Lehner**, *Hanken School of Economics*

Impact Investing, an investment approach that aims to achieve a combination of social and commercial outcomes and thus create blended value, has gained significant momentum over the last decade. It is often heralded as a panacea because of the urgent need to tackle pressing societal and environmental issues despite global governmental austerity measures and a bleak economic outlook. While we have seen tremendous progress in creating an early-stage impact investing market, the recent COVID-19 pandemic with its political and normative pressures has highlighted that we might not yet fully understand how and whether impact investing actually works, and for whom. While this knowledge gap might be due to the pre-paradigmatic (theory-building) state of the impact investing field, in this symposium we also consider how existing theories might inform our understanding and what we need to look out for when applying theories to the highly heterogeneous context of impact investing. We discuss among others that ideas of social justice, progress and cultural individualism might not be recognized accordingly in existing research, and thus that important criteria for impact investing success might be overlooked. This symposium brings together experts from theory and practice and critically examines the nature of impact investing, as well as ways to manage and measure the inherent and manifold heterogeneous logics in these investments. After disentangling what we do (not) know about impact investing the symposium ultimately offers ways forward to research an investment approach that truly recognizes the centrality of beliefs and normative thinking.

Digital Session Chair: **Kunyuan Qiao**, *Cornell U.*

STR: Historical Government Regulations and Firms' Innovation Input  

Author: **Kunyuan Qiao**, *Cornell U.*

I argue that founding and initial public offering (IPO) are sensitive periods when organizations imprinted by their environment. Stronger government interventions during these sensitive periods imprint firms with a more diversified research and development (R&D) structure and a focus that downplays competition and highlights government intervention, which in turn discourages R&D investment. Moreover, the subsequent sensitive period, IPO, modifies imprinting effects formed during founding. Further, founding is a stronger sensitive period than IPO regarding the magnitude of imprinting effect. I test the regulatory imprinting of (1) U.S. firms based on industry and (2) worldwide firms based on location and find supportive evidence. My research contributes to imprinting theory by (1) showing potential mechanisms through which government interventions in history affect firms' R&D and (2) articulating organizational sensitive periods in terms of imprinting dynamics and heterogeneity.

STR: The Corporate Social Responsibility Price Premium as an Enabler of Substantive CSR (WITHDRAWN)

Author: **Leandro Nardi**, *HEC Paris*

While consumers' willingness to pay a CSR-price premium is a key economic driver of CSR investments, the literature is relatively silent on whether and how the CSR-price premium affects firms' choice between symbolic and substantive CSR engagement. To shed light on this question, I propose a game-theoretical framework that accounts for both supply- and demand-side factors influencing CSR engagement decisions and socio-environmental performance. Using this model, I establish sufficient conditions under which the CSR-price premium functions as an enabler of substantive CSR investments. I also examine how social performance monitoring, product differentiation, and competitors' CSR engagement choices moderate this enabling effect of the CSR-price premium. My framework suggests that social performance monitoring may either strengthen or weaken the enabling effect of the CSR-price premium, depending on the social performance of substantive CSR, as well as on demand-side conditions. Product differentiation, in turn, nonlinearly impacts the effect of the CSR-price premium, depending also on the CSR engagement choices of competitors. This paper contributes to the literatures on substantive versus symbolic CSR, stakeholder monitoring, and the relationship between competition and social performance.

STR: Spelling out the "R" in CSR-Assessing the Impact of Radical Transparency on Gig Workers' Motivation   

Author: **Anna Szerb**, *INSEAD*

Author: **Matthew Lee**, *New York U.*

We study how transparency regarding the negative societal impacts of an employer's activities influences the performance and effort of gig workers on an online labor platform. Building on research that transparency is central to the formation and maintenance of stakeholder trust, we explore across multiple experiments if, and how, such "radical transparency" elicits favorable employee performance and effort. We find that radical transparency is associated with increased employee trust relative to a generic corporate social responsibility (CSR) condition, which mediates a positive effect on worker performance and effort, but that overall, radical transparency does not increase worker motivation compared with CSR alone. However, we also identify conditions under which radical transparency combined with CSR elicits higher worker performance compared with CSR alone. These findings have important implications for research on corporate social responsibility, transparency, and greenwashing.

STR: How does decarbonization impact the business strategy-performance nexus?

Author: **Alexandra França**, *U. of Vigo*

Author: **António Sartal**, *U. of Vigo*

Author: **Xosé H. Vázquez**, *U. of Vigo*

We address how increasing requirements for decarbonization are affecting the impact of competitive strategies on financial performance. Analyzing a cross-national sample of corporations from 2005 to 2019, our results show that CO2 abatement enhances performance outcomes of differentiation strategies but, conversely, cost leaders find their financial performance compromised. Our study extends the existing strategic management literature and contributes to the ongoing debate stimulated by the question: "Does it pay to be green?" Specifically, it provides a deeper understanding on the reluctance of corporate response to effectively act to climate change grand challenge in spite of growing regulatory pressure. Our results highlight the importance of incorporating business strategy, as a significant ex ante variable, when debating the benefits of carbon management on business performance.

The purpose of this symposium is to foster and accelerate scholarly conversations around the relationship between science and firm strategy. Our goal not only includes surveying existing literature, but also involves contributing to the emergence of new ideas and research agendas, in light of recent advances in novel identification strategies; new bibliometric data on patent citations to science. We bring together five senior scholars with expertise in technological innovation, entrepreneurship, and strategy that share an interest in the relationship between science and firm strategy. We have organized this panel symposium with three ends in mind. First, to provide attendees an overview of recent advances in the literature. Second, to hear from experts regarding future avenues for research and new research tools/datasets for the topic. Third, to create an interactive forum that fosters idea generation and research collaboration for addressing gaps in the literature.

External Communication in the Context of Mergers and Acquisitions

Digital Session Chair: **Katsuhiko Shimizu**, *Keio U. Japan*

STR: Short- and Long-Term Consequences of a Signal to Multiple Stakeholders: Evidence from Japanese Firms   

Author: **Katsuhiko Shimizu**, *Keio U. Japan*
Author: **Daisuke Uchida**, *Kyushu U.*

Mergers and acquisitions (M&As) are increasingly important globally. In this environment, we observe that Japanese firms have started voluntarily announcing M&A budgets since the 2000s. Given that such announcements may be intended as an anticipatory impression management technique, what are the consequences of such specific announcements from the perspectives of multiple stakeholders both in the short and long run? In the spirit of phenomenon-based research, we address the question by drawing on the research concerning signaling and organizational impression management and by considering the business and social contexts in Japan. We test our hypotheses mainly by using a sample of 895 firms listed on the TOPIX 1000 of the Tokyo Stock Exchange from 2004 to 2017.

STR: Investor Response to Military Language in Strategy Disclosures    

Author: **Joao Cotter Salvado**, *Catolica Lisbon School of Business and Economics*
Author: **Donal Crilly**, *London Business School*

Corporate executives frequently communicate their strategies in terms of battles, offensives, and victories. Nonetheless, it is unclear whether the use of military language affects stakeholder reactions. Building on insights from cognitive linguistics and prospect theory, we explore how this particular form of metaphorical communication affects investors' reactions to strategic announcements. Specifically, we theorize that executives' use of military language generates negative reactions from investors because it highlights the risks inherent to the strategy being announced. However, consistent with prospect theory, when firms are making losses, the kind of risky strategy conveyed by military language may be viewed as more appropriate. In short, whereas reactions to military language are generally negative, investors react positively to military language used by weak-performing firms. We find consistent evidence for these hypotheses in an archival study and an experiment. The former uses data from 1,371 corporate acquisition announcements; the latter is an experiment involving a targeted sample of 209 participants with prior experience in finance or business administration. Our findings advance a cognitive-linguistic perspective on investor response to strategy disclosures and complement extant work on strategic communication and resource acquisition.

STR: Information through Intermediaries: Influence of Venture Capital in M&A 

Author: **Supradeep Dutta**, *U. at Buffalo, The State U. of New York*

This study investigates the influence of indirect relationship between the buyer and seller linked through common (shared) intermediary on the ex-ante acquisition choice and the ex-post acquisition integration outcomes. Prior M&A research has typically focused on the influence of direct ties of entities affiliated either with the buyer or with the seller. In contrast, we build on inter-organizational relationships research to examine how specialized information obtained through an intermediary entity connecting the acquirer-target dyad, influence value creation in acquisition deals. Using acquisition deals of VC-backed technology ventures, we empirically examine the impact of common venture capital affiliations shared between the acquired and acquiring firms on the likelihood of acquisition and post-acquisition management and knowledge integration. We find that acquirer-target dyads with common VC connection are more likely to be selected and more likely to achieve post-acquisition integration and the integration effect is amplified when the common VC is an industry specialist in the acquirer's focal industry.

STR: Merger and acquisition purposes and external communication strategy

Author: **Tao Han**, *EMLYON Business School*
Author: **Xavier Martin**, *Tilburg U.*

We study under what conditions an acquirer actively conveys information about its deal via a conference call. Drawing upon literatures on communication and competition, we theorize about how the intent of an acquisition is associated with (a) whether a conference call is held and (b) how vague the communication is. If a firm seeks unique synergy through an acquisition, we predict that it will seek to preserve confidentiality and avoid informing rivals, and thus the acquirer will communicate less. Conversely, if a firm seeks to initiate greater industry concentration, it will communicate more extensively by holding a conference call and using more precise language to encourage rivals to follow suit. Empirically, we examine the conference call decisions and transcript contents for domestic acquisitions made by U.S. listed firms (2003-2018), finding support for most of the predictions. The paper thereby opens new research avenues on the strategic use of corporate communication.

Institutional Theory and Nonmarket Strategy

Digital Session Chair: **Tony Lizhang He**, *The Wharton School, U. of Pennsylvania*

STR: Institutional Constraints on the Value of Corporate Political Connections  

Author: **Tony Lizhang He**, *The Wharton School, U. of Pennsylvania*

This paper examines the contingent financial value of corporate political connections and the strategic choice of firms to hold such connections in different institutional environments. I construct a novel dataset by linking (1) the names of top managers and board members from 6,805 public firms across 30 European countries; (2) information on public procurement contracts worth about €97.6 billion in Europe from 2009 to 2017; and (3) proprietary data on the identities of persons with political connections. Using a model with firm fixed effects to control for time-invariant firm heterogeneity and exploiting variation in the political connectedness of a firm's managers and board members across time, I show that political connections increase the value of procurement contracts that firms win from government agencies. However, this value of political connectedness is moderated by stronger national institutions that enable different branches or entities of government to check one another's power, with the model suggesting a €10.8 million difference in the effect of a political connection on procurement contracts between countries with the weakest and strongest of such institutions in 2017. Finally, I show that firms are more likely to hire and retain a politically connected manager or board member when these institutions are weaker. This paper answers calls to identify the value of corporate political connections across multi-country contexts and extends the empirical literature on nonmarket strategy by linking the institutional environment not only to financial value but also to personnel decisions.

STR: Incidence of Activist Actions on Politically Connected Companies: Examining a 'Cost' of Connection

Author: **Debtanu Lahiri**, *HEC Paris*

Despite both politicians and activists residing in the non-market sphere, research at their interface has been scarce. Our understanding of the dynamics of the firm's relationship with these non-market stakeholders is inadequate. This study partly addresses this void by arguing that the presence of board political connections (BPC) results in the firm being preferred as a target by activists. Two mechanisms are suggested: i. association with politicians imposes higher normative expectations on the firm, resulting in it being held more accountable for violations, ii. violations by such firms generate higher media interest, thereby drawing the attention of other activists – resulting in the lowering of the costs of mobilization, as well as the risks of reprisal for the activist(s) involved in the action(s). For empirical analysis, I utilize, among others, a novel dataset covering activist actions from the years 2010 to 2016. I restricted my analysis to firms located in the US and employed a variety of identification techniques to alleviate endogeneity concerns. The results reveal that politically connected firms are more likely to receive activist actions and face greater number of actions. Moreover, actions on such firms are likely to elicit harsher criticism from activists and also generate higher media coverage.

STR: Should I Stay or Should I Go? Theorizing on Private Standard Decertification

Author: **Ivan Montiel**, *City U. of New York, Baruch College*

Author: **Remy Balarezo**, *U. de Piura*

Author: **Elena Vidal**, *City U. of New York, Baruch College*

Author: **Petra Christmann**, *Rutgers U.*

Firms pursue third-party certification to private standards to reduce firm-level information asymmetries of certain unobservable characteristics and thus obtain legitimacy. However, when the private standard's legitimacy dilutes, those same firms have reasons to abandon certifications voluntarily – i.e., decertify. Yet our inductive decertification study reveals a more complex set of dynamics beyond legitimacy dilution, which also facilitates decertification behavior. We identify certification-level information asymmetries associated with the ambiguity of the certification per-se that allows firms to act opportunistically and decertify silently. Finally, our findings also unveil that even in the absence of certification-level information asymmetries between the firm and certain stakeholders, firms are oftentimes granted certification waivers, which create an easier path towards decertification.

STR: The Cost of Dancing with Government Officials: How does Political Networking Affect CEO Burnout? 

Author: **Haiyin Tu**, *Nanjing U.*

Author: **Yuandong Gu**, *Nanjing U. of Finance & Economics*

Author: **Wenli Zhou**, *Nanjing U. of Finance & Economics*

Author: **Shuhuai Peng**, *southwest U. of political science and law*

Despite the existing studies have confirmed that burnout exists in all kinds of occupations, few studies focus on chief executive officer's (CEO's) burnout and its antecedents. Drawing on job demands–resources (JD-R) theory, we investigate the influence of political networking on CEO burnout and the moderating roles of firm performance, differentiation strategy and government effectiveness. Using a sample of 552 CEOs in Chinese firms, we show that political networking is positively related with CEO burnout. That is to say, engaging in political networking activities leads to CEO burnout. Moreover, we find that firm performance and government effectiveness ameliorate the influence of political networking on CEO burnout. By contrast, our results show that differentiation strategy aggravates the impact of political network on CEO burnout. We discuss the implications of our research for theory and practices.

Applying and Extending the RBV

Digital Session Chair: **Swetketu Patnaik**, *Anglia Ruskin U.*

STR: **Extending RBV through the lens of IBV: A longitudinal case study of an Indian Educational Group**

Author: **Swetketu Patnaik**, *Anglia Ruskin U.*
Author: **Surender Munjal**, *U. of Leeds*
Author: **Sujay Sinha**, *U. of East London*

Scholars of the resource-based view of the firm have argued that the unique combination of an organization's resources, especially human resources, can contribute to the competitive advantage. In this paper, we draw upon a case study of a privately owned and operated educational institution in India to analyze how immobile resources and managerial acumen can contribute to the successful implementation of strategy and ability to capitalize on opportunity. To do this, we draw upon the institution-based view, as government regulations and organizational agility combined to allow the educational institution to carve out a spot for themselves in the new space. We discuss implications for educational institutions and other organizations, in India and beyond, and offer suggestions for future research

Paper is Available to Meeting Registrants Only.

STR: **The Creation and Performance Implications of Firm-Level Human Capital Resources**

Author: **Ryan Cooper**, *U. of Maryland, College Park*
Author: **Timothy Gubler**, *Brigham Young U.*

We investigate how the degree of alignment between individual and firm-level human capital resources influences performance. We argue that a high degree of alignment between firm and individual-level human capital profiles increases human capital utilization, coordination, and human capital transfer. This consequently improves performance, and the benefits increase with firm size. For nascent firms, this alignment is created through similarity of individual-level human capital profiles. Drawing on Utah residential real estate data from 1996-2014 and using novel measures to dynamically capture individual- and firm-level human capital profiles, we find that brokerages with higher brokerage-agent human capital alignment represent more home sellers and buyers than brokerages with lower alignment. These benefits increase with firm size. We also find that agent-agent human capital similarity in the first year significantly influences brokerage-agent human capital alignment (and consequently performance) in subsequent years. These results suggest that managers from founding onward must carefully craft and manage firm-level human capital resources to ensure high levels of alignment and utilization. Firms that better manage their general human capital may enjoy persistent performance advantages that are resistant to turnover and difficult for competitors to replicate.

Paper is Available to Meeting Registrants Only.

STR: **Do Employee Absences Help Managers Evaluate Individual Contributions to Team Production?**

Author: **Seth Carnahan**, *Washington U. in St. Louis, Olin Business School*
Author: **Jose Uribe**, *U. of Michigan*
Author: **John Meluso**, *U. of Vermont*
Author: **Jesse Austin-Breneman**, *U. of Michigan*

Subjective performance evaluations and team production both pervade organizations. However, we have little understanding of how supervisors arrive at their subjective evaluations of employee performance when employees produce output in teams. Guided by the causal inference literature, we posit that managers use worker absences to help infer individual contributions to team production. If a team's production improves or declines while a worker is absent, relative to when the worker is present, this pattern may provide managers with important information about the worker's individual contribution to the team's performance. We find support for this idea using data from a mid-sized manufacturing firm in the United States. We find that this pattern is stronger in situations where the information provided by absences will be especially valuable for supervisors.

STR: **Holding the Best and Worst Hand: A Two-Sided Matching Approach to Seller-Intermediary Relationships**

Author: **Yeon Ju Baik**, *U. of Wisconsin, Madison*
Author: **Darcy Kathryn Fudge Kamal**, *Sacramento State*
Author: **Madhu Viswanathan**, *Indian School of Business*

We study the interplay between partner selection, firm resources, and resource concentration in the Thoroughbred horse industry, focusing on seller-intermediary relationships and a given portfolio of products. Theory predicts that partners are more likely to be selected for high-quality resources. However, when an upstream partner has multiple goods to allocate, the focal partner may bundle high-quality resources with low-quality resources. We analyze this problem using a dataset of breeder-consignment relationships formed from 2005 to 2008 to sell horses. Our modeling approach incorporates the selection of partner decisions, allowing us to account for the diversity of goods for each side and recover the cost of transactions. Our results indicate that differences in resource portfolios result in an increased concentration of business with intermediaries.

Optimal Distinctiveness, Business Models, and firm Performance

Digital Session Chair: **Joey Van Angeren**, *Vrije U. Amsterdam*

STR: **Optimal Distinctiveness across Revenue Models: Differentiation of Paid and Free Mobile Apps** 

Author: **Joey Van Angeren**, *Vrije U. Amsterdam*
Author: **Govert Vroom**, *IESE Business School*
Author: **Brian T. McCann**, *Vanderbilt U.*
Author: **Ksenia Podoymitsyna**, *JADS, Joint Graduate School of Tilburg U. and Eindhoven U. of Tech.*
Author: **Fred Langerak**, *Eindhoven U. of Technology*

A critical strategic choice facing firms is how to position products within market categories. The optimal distinctiveness literature highlights a fundamental trade-off in this choice: products should be distinct from other products in order to minimize competition, but similar to other products in order to build legitimacy. In an attempt to resolve mixed evidence about the optimal level of distinctiveness, research has recently begun to investigate how the distinctiveness-performance relationship varies across different contexts. We add to this debate as we link this literature with the business model literature to argue that the shape of the distinctiveness-performance relationship depends on products' revenue models. More specifically, we argue that differences in revenue models affect customer expectations, and this leads us to predict that the distinctiveness-performance relationship varies fundamentally for paid versus free products. Within the class of free products, we further contend that the shape of the distinctiveness-performance relationship depends on whether the free product adopts a freemium revenue model. Hypotheses are tested in a sample of over 250,000 mobile apps from the Apple iOS App Store. We find an inverted U-shaped relationship for paid products and a U-shaped relationship for free products, which becomes flatter for free products using a freemium revenue model.

STR: **Uncertainty, Status, and Networks: A Relational Approach to Optimal Distinctiveness Theory**  

Author: **Cristina Boari**, *Department of management, Bologna U.*
Author: **Raffaele Corrado**, *Department of management, Bologna U.*
Author: **Charles Kirschbaum**, *Inspire Institute of Education and Research*

Throughout this paper, we suggest and operationalize a relational approach to the Optimal Distinctiveness Theory (ODT). By building a longitudinal model of network evolution between art galleries and artists between 2002 and 2004, we explain the emergence of peer alignment between galleries. We hypothesize and find that both galleries' status differentials and uncertainty impact peer alignment between galleries. High-status galleries preserve their status by avoiding aligning with low-status galleries, whereas under heightened uncertainty conditions, galleries show an overall higher propensity of aligning with peers. Uncertainty and status differential have a joint effect on peer-alignment. Under uncertainty conditions, high-status galleries show yet lower odds of aligning with lower-status peers. Thus, the paper brings a novel approach to operationalization of peer alignment within social network modeling and contributes to the understanding the role of status and uncertainty to explain the emergence of ties, under the lens of Optimal Distinctiveness Theory.

STR: **How optimal distinctiveness in business model affects SMEs performance? A contingency perspective**

Author: **Jiaping Han**, *School of Business, Renmin U. of China*

In recent years, the question about how business models contribute to competitive advantage and improve firm performance, has been fully discussed by strategic scholars. However, there coexist two controversial forces for SMEs in business model design: legitimacy and competitive pressure. How SMEs balance the tension between legitimacy and competitive pressures in business model design is an important issue which is less appreciated in prior work. In this article, we apply the concept of optimal distinctiveness to test how distinctiveness in business model affects SMEs performance. We apply the topic model methodology to the texts of business model sections in 2943 annual reports of SMEs listing on National Equities Exchange and Quotations (NEEQ) market in China, to measure the distinctiveness in each SME's business model relative to industry average. Results show an inverted U-shape between distinctiveness in business model and SMEs performance. Further, this U-shaped effect is attenuated by firm age, whereas category heterogeneity (as well as nascent market) and subcategory distinctiveness strengthen the relevance of optimal distinctiveness in business model. These findings inject fresh insights into both business model literatures and the optimal distinctiveness perspective.

Paper is Available to Meeting Registrants Only.

STR: **How does Business Model Matter for Technology-based SMEs? An Optimal Distinctiveness Perspective**

Author: **Hai Guo**, *Renmin U. of China*
Author: **Jiaping Han**, *School of Business, Renmin U. of China*

In this article, we introduce the optimal distinctiveness perspective to the business model literature. We argue that distinctiveness in business model design have a nonlinear effect on performance of technology-based SMEs. Specifically, we highlight the distinctiveness in efficiency-centered and novelty-centered business model designs, which are two critical themes attracted the attention of many mainstream researches. To test our hypotheses, we develop a dataset that measures the distinctiveness in efficiency-centered and novelty-centered business model design of 385 technology-based SMEs in nascent market listed on National Equities Exchange and Quotations (NEEQ) market in China. Results show a U-shaped effect of distinctiveness in efficiency-centered business model design and an inverted U-shaped effect of distinctiveness in novelty-centered business model design on performance of technology-based SMEs. In addition, the local density within the industry positively moderates these relationships. These findings provide new insights into business model literatures and the optimal distinctiveness perspective

The Personal Influence of CEOs

Digital Session Chair: **Dayuan Li**, *Central South U.*

STR: Once Bitten, Twice Shy: How CEO Famine Experience affects Firm Risk-taking

Author: **Dayuan Li**, *Central South U.*
Author: **Chen Huang**, *Central South U.*
Author: **Lu Zhang**, *Central South U.*

To comprehend the influence of CEOs' early life experience on corporate strategic decision-making, this study examines the impact of CEOs who experienced the Great Chinese Famine during their sensitive period on firm risk-taking. With a longitudinal data of Chinese publicly listed companies from 2006 to 2017, it is postulated that CEOs who experienced the three-year famine are more risk-averse. In addition, the negative relationship between the CEOs' early life experience of the famine and firm risk-taking is found to be stronger for non-state-owned enterprises and companies located in more liberalized markets, whereas the negative relationship is not affected by whether the CEOs have political connections. This article provides a new theoretical and practical perspective for the study of CEOs' early famine experience and firm risk-taking.

STR: The Dark Knight Rises, but Where? A Meta-Analysis of Executive Personality and Firm Performance    

Author: **Promila Agarwal**, *Indian Institute of Management, Ahmedabad*
Author: **Ashneet Kaur**, *Doctoral Student at IIM Ahmedabad*
Author: **Sudhanshu Maheshwari**, *Indian Institute of Management, Ahmedabad*

Research on performance effects of top executives' personality has followed traditional approaches to personality research and has categorized traits based on their performance effects as bright and dark traits. While there is support for the positive effects for bright and negative effects for dark traits on performance, emerging evidence on executive personality traits challenges these claims. We meta-analyze 75 independent samples with observations from over 30 years of research on executive personality to reconcile the current debate on the performance effects of bright and dark traits. To clarify some of the inconclusive findings on the performance effects of executive personality, we identify country-level indicators as boundary conditions. Our findings demonstrate that though there are variations among individual traits, at a broad level both bright and dark traits are positively related to firm performance. The moderation effects of country-level factors such as board efficacy, auditing standards, and R&D spending suggest that trait centric view of investigating bright-dark trait and firm performance link is limited in its scope as it ignores the situational factors that trigger the expression of traits.

STR: Ex-Military CEOs and Portfolio Restructuring Strategies: An Empirical Investigation 

Author: **Guadalupe Solano**, *U. of Texas Rio Grande Valley*
Author: **Michael A. Abebe**, *U. of Texas Rio Grande Valley*

Given the increasingly turbulent nature of the business environment, the potential utility of CEO military experience is receiving recent scholarly attention. In this study, we explore the link between ex-military CEOs and portfolio restructuring strategies (divestitures and asset sell-offs). By virtue of its unique value-based training and intense socialization, military service has a capacity to not only profoundly shape a person's character but also professional decision-making. Drawing insights from the upper echelons theory, we argue that CEO military experience is positively related to the likelihood and frequency of portfolio restructuring strategies given the benefit these strategies provide in refocusing the firm to its core business. Furthermore, we propose that CEO tenure serves as a boundary condition whereby the positive relationship between ex-military CEOs and portfolio restructuring declines over time as they become entrenched in their position. We empirically tested our predictions using a panel data of S&P 500 firms between 2014-2018. The findings paint a mixed picture; firms led by ex-military CEOs have a higher likelihood and frequency of asset sell-offs. Further, this relationship turns negative among longer-tenured CEOs. Contrary to our predictions, CEO military experience is not associated with divestiture activities. Implications for research and practice are discussed.

STR: Keeping nice in check: When a nice CEO is not so nice for the firm

Author: **Andrew B. Blake**, *U. of Arkansas*
Author: **Oleg V. Petrenko**, *U. of Arkansas*
Author: **Federico Aime**, *Oklahoma State U.*
Author: **Theodore Waldron**, *Texas Tech U.*
Author: **Mahbuba Akter**, *U. of Arkansas Sam M. Walton College of Business*

In this study we argue that agreeableness, a personality trait that describes a set of behavioral patterns associated with getting along with others including compassionate, polite, and nice behaviors, is an important determinant of CEO decision making and subsequent firm performance. We use self-reported CEO agreeableness from 141 CEOs collected in partnership with an internationally recognized personality assessment firm to show that CEO agreeableness positively influences firm performance and that this relationship is weakened/strengthened by external and internal contexts of the organization. Our models show that technologically intensive industries weaken the relationship between agreeableness and firm performance while positive attainment discrepancy strengthens that relationship. Supplemental qualitative interviews from 10 top executives support our findings.

Behavioral Perspectives on Boards of Directors

Digital Session Chair: **Stephen Smulowitz**, *International Institute for Management Development - IMD*

STR: Board Demographic Diversity and Innovation: The Moderating Effects of Aspirations and Available Slack  

Author: **Stephen Smulowitz**, *International Institute for Management Development - IMD*
Author: **Didier Cossin**, *International Institute for Management Development - IMD*

Previous research has examined both the effect of demographic diversity, and performance relative to aspirations (PRA), on innovation intensity. We begin to integrate these two different lines of research by showing how demographically diverse boards of directors respond differently in terms of innovation intensity to the information that PRA provides. More specifically, we theorize that diverse boards will more effectively use the information from problemistic search to engage in innovation, due to information-processing and decision-making processes. Similarly, diverse boards will more effectively use slack search to develop innovation. However, in contrast, diverse boards will respond to positive PRA by reducing innovation even more than less diverse boards. Testing these predictions using a panel dataset of 18,161 observations for 2,012 S&P 1500 firms for the period 2006-2016, we provide robust empirical support for most of our predictions.

STR: Director Election, Shareholder Dissent, and Earnings Management 

Author: **Jiatao Li**, *Hong Kong U. of Science and Technology*
Author: **Xinhao QIAO**, *Hong Kong U. of Science and Technology*
Author: **Xueying Bian**, *Singapore Management U.*

Shareholders can voice their opinions primarily by voting in director election. The potential effects of their voting behavior on subsequent board monitoring were examined using data on S&P 500 firms spanning 2003 to 2019. Voting results were found to correlate strongly with a board's monitoring of upward earnings management. A high percentage of dissenting votes in the election of directors predicts weaker subsequent monitoring, as does a large difference in the number of dissenting votes among the different nominees. These effects are more pronounced when the directors perceive the board's operation to be unjust and when the directors' personal characteristics are more similar.

STR: CEO or Board Dominance? Uncovering the strategy-making process 

Author: **MOHAMMADS ADEGH HASHEMI**, *postdoctoral Research Fellow HEC Montreal*
Author: **Amin Moeinian**, *U. of Tehran*
Author: **Mahdi Ebrahimi**, *assistant Professor of Business Management at the U. of Allameh*
Author: **Taieb Hafsi**, *HEC Montreal*

Many firms have either CEO or board as the upper hand in their strategy-making process. Which configuration leads to a better strategy-making? This study tries to open the black box of CEO-board power relations to answer the question. To conduct a multiple-case-study of six banks in an overly politicized context of Iran, we interviewed 49 board members, CEOs, and top executives. We based our theory-building on within and cross-case analysis. Our observations revealed that, contrary to agency theory, board dominance harms the strategy-making process more significantly than the CEO dominance, at least in the Iranian context. Nevertheless, this research shows the multifaceted and complicated nature of power relations, thus alarms to give linear answers and sweeping prescriptions to such a question. Our attempt led to the development of a conceptual model including concepts and their proposed relationships based on three levels of analysis, including individual (e.g., personality, sense of belonging), group (e.g., trust, cohesiveness), and organizational (e.g., managerial stability, strategic change). Our contribution is providing a more contingent picture of CEO/board dominances and their effects on the strategy-making process. Furthermore, more details are explored and explained about personality and trust dynamics compared to the existing literature.

Paper is Available to Meeting Registrants Only.

STR: Team Sports outside the Work, Teamwork at the Board

Author: **Sadi Koray Demircan**, *U. of Victoria*

Building on spillover, social exchange, and similarity-attraction theories, in this study, I hypothesize that CEO engagement with team sports is positively associated with firm financial performance, and this relationship is further accentuated in innovative industries. CEO engagement with team sports as a non-work activity affects their cognitions and, consequently, their workplace behaviors and leadership styles. The contiguous nature of CEO leadership style at the CEO-TMT interface further cascades throughout the organization and affects both organizational processes and outcomes. This study contributes to the research on upper echelons theory (UET) by explicating the potential outcomes of CEO engagement with team sports as an unexplored phenomenon.

STR: A Manager's Pursuit of Ambidexterity in New Technology Implementation Contexts 

Author: **Kyootai Lee**, *Sogang U.*
Author: **Han-Gyun Woo**, *Ulsan National Institute of Science and Technology*
Author: **Tae-Young Park**, -

The regulatory focus of individuals tends to influence ambidexterity pursuits; however, the underlying mechanism has remained unclear. This study investigates the role of regulatory focus induced by promotion- and prevention-framed messages for ambidexterity pursuits. We conducted three experiments with above middle-level managers in the new technology innovation context. The results indicate that managers with situationally induced (SI) promotion (prevention) focus tend to have higher opportunity (threat) appraisal (Experiment 1). Opportunity appraisal (but not threat appraisal) mediates the relationship between SI regulatory focus and ambidexterity pursuits (Experiment 2). Organizational risk-taking strategy moderates the links from SI regulatory focus to opportunity appraisal to ambidexterity (Experiment 3). This study provides new insights on the role of regulatory focus for ambidexterity pursuit. It theoretically contributes to the understanding of the mechanisms of how managers can have different cognitive processes in the ambidexterity pursuits when they are responding to the changes in technological environments.

STR: What Directs Search? Behavioral Evidence on the Role of Performance Stability      

Author: **Sheen S. Levine**, *U. of Texas at Dallas*
Author: **Charlotte Reypens**, *U. of Texas at Dallas*
Author: **Christoph Riedl**, *Northeastern U.*
Author: **Felix Mauersberger**, *U. of Bonn*

Search is fundamental to entrepreneurs, managers, and their organizations. It is a cornerstone of the behavioral theory of the firm. But although theory and firm-level evidence rely on presumed individual mechanisms, these remain untested or contested. We join the effort to uncover the micro-processes of search by theorizing about and testing the effect of performance stability and variability. We expect that searchers treat stability as an indicator of reliability, considering it alongside aspiration-performance gaps when embarking on exploration. We take a multimethod approach, combining qualitative evidence, incentivized behavioral simulations, and a preregistered experiment (n=4750 decisions). The findings confirm that stability triggers exploration separately from an aspiration-performance gap. We propose that searchers are not only reactive, responding to immediate negative experiences—but also proactive—accumulating and processing feedback before acting. We discuss how the evidence adds to the debate on managerial perceptions of risk and individual vs. organizational search.

STR: Two Faces of Decomposability in Search: Evidence from the Recorded Music Industry 1995-2015 

Author: **Sungyong Chang**, *London Business School*

We propose that decomposability may generate a trade-off across different stages of search. We compare (1) decomposed search, the process of searching by producing a decomposed module, and (2) integrated search, the process of searching by producing a full-scale product. In the variation generation stage, decomposability can allow firms to experiment with more alternatives at the same time than an integrated search. However, in the selection and retention stages, a decomposed search may be more vulnerable to imperfect evaluation than an integrated search. It may increase the chance of missing out on promising alternatives after the first evaluation because the low cost of a decomposed search makes firms less committed to each alternative. We test our theory with a unique empirical setting, the recorded music industry, where singles (i.e., decomposed products) and albums (i.e., integrated products) have coexisted since the early twentieth century. In the variation generation stage, single-producing firms experiment with 35.22% more new artists than album-only-producing firms. In the selection and retention stage, single-producing firms are 69.57% more likely to neglect top-tier artists who failed in their first releases because single-producing firms have a higher performance target (i.e., lower commitment) than album-only-producing firms.

STR: Machine Learning in Strategic Search: Alleviating and Aggravating Local Search

Author: **Jane Seppälä**, *Aalto U., Department of Industrial Engineering and Management*
Author: **Timo Olavi Vuori**, *Aalto U.*

Machine learning technologies could direct executives' scarce attention to improve the quality of decision making and, in particular, improve the search for strategic options. However, the use of such technologies could also amplify bias or induce local search. We draw from literature on local search as well as literature on managerial implications of artificial intelligence in general and machine learning in particular to specify how the use of machine learning could affect search in the context of strategic decision-making. We propose how machine learning applications can broaden or distort search space, change how cues are noted, and affect the interpretation of alternatives. We further detail what factors are likely to shape these dynamics. We thus contribute to the literature on heuristics in management by detailing how technologies might alleviate or aggravate local search, and to the literature on algorithmic decision-making by suggesting how the use of these technologies influences the quality of search.

New Frontiers in Ecosystem Research

Digital Session Chair: **PuayKhoon Toh**, *U. of Texas at Austin*

STR: Generative or Exclusionary? How Ecosystems Evolve with Coordination and Standardization 

Author: **PuayKhoon Toh**, *U. of Texas at Austin*
Author: **Cameron Miller**, *Syracuse U.*

The literature typically depicts ecosystem evolution as “generative”, with coordination fueling growth in complements and complementors. We suggest that it could instead be “exclusionary”, where complements increase but complementors do not grow meaningfully and core component owners dominate the complementary areas with their own complements. Using a descriptive approach and data on ICT ecosystems adopting standard setting as coordination mechanism, we systematically trace how ecosystems evolve alongside standardization, indicating signs of “exclusionary” growth. We further describe how exclusionary growth occurs – core component owners exploit standardization and litigation to crowd out other complementors over time. Findings suggest that core component owners’ strategy to coordinate across complementors is interdependent with their choice to integrate into complementary areas, and that standardization is not merely a coordination mechanism but can be used strategically to stifle competition from complementors. Findings also help substantiate the practical threat that core components owners could exhibit monopolistic behavior in ecosystems.

STR: The Ecosystem Penalty: Value Creation Technologies and Incentive Misalignmen 

Author: **Olivier Chatain**, *HEC Paris*
Author: **Elena Plaksenkova**, *The Ohio State U. Fisher College of Business*

When are the incentives of a business ecosystem’s participants aligned with its growth? How is the technology of value creation affecting this alignment? To answer these questions we formally model how value creation determines value capture in a business ecosystem. We find that alignment is typically imperfect compared to an integrated benchmark, highlighting an “ecosystem penalty” whereby participants’ returns to value creation are lower than that of the ecosystem. The occurrence of this penalty depends on whether the technology is loosely coupled (value additive in inputs), exhibits bottlenecks (value constrained by the weaker input), or is strongly supermodular (value multiplicative in inputs). Contrary to conventional wisdom, we find it can be severe for the participants who are constraining the system the most.

STR: Architects and Bottlenecks: Ecosystem Roles in the Solar Photovoltaic Industry  

Author: **Nathan Furr**, *INSEAD*
Author: **Anna Szerb**, *INSEAD*

Although ecosystems play a critical role in a focal firm’s ability to create and capture value, we have limited understanding of how the roles non-focal firms play contribute to their own performance. In the context of the maturing solar photovoltaic industry, we examine how the choice to produce bottleneck, non-bottleneck, and architectural components or complements for focal firms impacts the survival of these non-focal firms. We observe that the larger ecosystem follows a different lifecycle than that of the focal industry, expanding while the focal industry contracts following a dominant design. Furthermore, we find that although producing bottleneck and architectural ecosystem elements has survival benefits relative to producing standard elements, producing elements that combine both has the greatest survival benefit among the specific ecosystem roles.

Paper is Available to Meeting Registrants Only.

STR: Towards an ecosystem-based view of the firm

Author: **Nudrat Mahmood**, *Schulich School of Business*
Author: **Anoop Madhok**, *Schulich School of Business*

In this paper we use a generativity lens to develop an ecosystem-based view of the firm. In doing so we extend the domain of firm analysis to a context where valuable resources exist at the level of the ecosystem and are largely unknown to the focal firm ex ante. We suggest that by virtue of being both apart from as well as an essential part of the ecosystem, the platform firm plays the dual role of ecosystem designer and ecosystem governor. As the ecosystem designer, it develops a generative platform that allows it to attract towards itself complementors that possess potentially superior resources, and in doing so seed generativity within the ecosystem. As the ecosystem governor, the firm governs the value co-creation activities that take place and in doing so fosters generativity within the ecosystem. We contend that by conducting its dual role as apart from and a part of the ecosystem effectively, as designer-cum-governor, the firm can ultimately leverage the fruits of generativity to its advantage. Ultimately, we suggest that an ecosystem perspective requires a more holistic approach to assess competitive advantage; one in which the interplay between the firm, complementors and consumers creates the means through which firm-level advantage is created.

Platforms, Platform Characteristics, and Complementor Performance and Strategy
Complementor Competition on Digital Platforms

Chair: **Carmelo Cennamo**, *Copenhagen Business School*
Participant: **Kevin Boudreau**, *Northeastern & NBER*
Participant: **Manav Raj**, *New York U.*
Participant: **Joost Rietveld**, *UCL School of Management*
Participant: **Feng Zhu**, *Harvard U.*

Following the introduction of the Internet in the 1990s, digital markets and platforms have grown in size and prevalence over the last three decades. Consumers can now purchase clothes and household supplies through Amazon, groceries through Instacart, transportation through Uber or Lyft, lodging from Airbnb, takeout from Grubhub, and entertainment offerings from YouTube, Netflix, or Spotify. Digital platforms enable greater exchange and reduce the cost of consumption but change the organization of markets and alter the strategic choices that firms face. In this symposium, we compile research that examines what the implications of platforms and certain platform characteristics are for the providers competing on them. In doing so, we will allow for a greater understanding of the unique challenges and opportunities facing firms competing in such markets.

What's Next for Narratives? A Prospective Look Theoretically, Methodologically, and Pragmatically

What's next for narratives?

Moderator: **Mercedes McBride**, *Case Western Reserve U.*
Panelist: **Richard J. Boland**, *Case Western Reserve U.*
Panelist: **Hans Hansen**, *Texas Tech U.*
Panelist: **Daved Barry**, *Clarkson U.*
Panelist: **David M. Boje**, *Emeritus*
Panelist: **Grace Ann Rosile**, *New Mexico State U.*
Panelist: **Alice De Koning**, *Haskayne School of Business, U. of Calgary*

Narratives have a rich history in the Academy, helping us to cognitively organize and cohere meaning in organizations, and—farther yet—understand the construction of the organization itself. Vaara, Sonenshein, and Boje (2016) explored what the future holds for narratives in the context of organizational stability and change, asking prescient questions regarding theoretical and methodological approaches. This panel symposium aims to extend their prospective project via an interactive discussion between narrative scholars, asking what could be next for narratives in Management. Are existing theories of narrative adequate for furthering our understanding of organizational phenomena? Or are there emerging forms of narrative theory that hold greater promise? Methodologically, how can we research narratives in new and different ways that remain rigorous yet honor the symbolic and interpretivist traditions in which narratives are primarily situated? And pragmatically, what are emerging approaches for applying narrative practices in an organizational system? To bring the manager back to management, how can these frameworks help address contemporary and emerging managerial challenges? The proposed Panel Symposium will ask these questions and more of our panelists, whose pioneering voices in narratives and narrative theory span well over thirty years.

TIM: Modelling webs of innovation value chains in the light of complexity theory

Author: **Evgueni Vinogradov**, *Nordland Research Institute*

Author: **Minh Thu Nhien Nguyen**, *NTNU*

Author: **Are Jensen**, *Nordland Research Institute*

The concept of Innovation Value Chains (IVCs) has been applied to studying innovation processes both on the abstract theoretical level and in particular industries. The recent studies suggest that various IVCs may co-exist forming interrelated networks where innovation in one area boost multiple innovations in other areas. This paper analyses the resulting webs of IVCs (WIVCs) in the light of complexity theory calling for the respective methodological approaches, including agent-based modelling (ABM). ABM has been previously used to study innovation processes and this paper suggests the next step in developing of such models. It describes how interrelated IVCs may be modelled and studied as complex dynamic systems. The model description is structured in accordance with ODD+D protocol. Referring to the complexity theory, the paper culminates with testable propositions and concludes with implications for researchers and practitioners.

TIM: Commercializing Emerging Technologies through Networks: Insights from UK Nanotechnology SMEs

Author: **Fatemeh Salehi**, *Lecturer in Enterprise, Alliance Manchester Business School*

Author: **Philip Shapira**, *Alliance Manchester Business School*

Author: **Judy Zolkiewski**, *Professor in Marketing, Alliance Manchester Business School*

This research investigates how small and midsize enterprises (SMEs) manage in networks for commercializing emerging technologies. Contrasting network types and their influences on commercialization outcomes are probed in the context of SME value chain positions. We build on literature on SMEs and innovation, networks, and how innovation occurs within collaborative arrangements. In a multiple case approach, 20 UK nanotechnology SMEs and their value-chain positions and strategic nets for commercialization are examined. Data are collected through 40 semi-structured primary interviews with managers and informants and from secondary business databases and other sources. We consider roles of SME agency and strategy to put forward a refined six-part framework of network types. Commercialization outcomes are found to vary by SME strategic net type and value chain positioning. SMEs can proactively create incumbent-oriented, SME-oriented or broker-oriented nets that aid commercialization. Incumbent-oriented nets with proactive SMEs enable successful commercialization of upstream and midstream products. SME-oriented nets are used for downstream commercialization. Broker-oriented nets facilitate commercialization in the upstream part of the value chain. Hybrid nets are used where SMEs pursue multiple commercialization strategies. Reactive approaches to networking and interrupted nets are unfavourable for commercialization. The study's conceptual and managerial implications are discussed.

TIM: Toward a socially embedded view of disruptive technology emergence

Author: **Elisabeth S.C. Berger**, *Johannes Kepler U. Linz*

Author: **Leif Brändle**, *U. of Hohenheim*

Author: **Michael Deane Howard**, *Texas A&MU., College Station*

While prior literature emphasizes that technological discontinuities influence firms' collaboration activities, it remains unclear how technology collaboration networks emerge and evolve. Drawing on models of different stages of technological change, we examine how firms' rules of attachment evolve along technological discontinuities. Specifically, we theorize on the social embeddedness of technology emergence by focusing on the transferability of status mechanisms and tie closure across established and disruptive technology networks. The evolution of monoclonal antibodies in the cancer treatment provides a unique research context to test our theorized model. Results are based on a social network analysis spanning 20 years and 523 firms and emphasize that alliance formation dynamics in emerging disruptive technology collaboration networks are driven by status transfers from the established technology network. However, as the disruptive technology matures, status signals from the disruptive technology network start to become relevant to tie formation in both networks. In addition, our findings indicate that dual network triadic closure bridges the boundaries between the established and disruptive technology networks.

TIM: Hype and Lock-in: The Dynamics of the Early Adoption of Ambiguous Technology (WITHDRAWN)

Author: **Lien De Cuyper**, *ETH Zürich*

Author: **Bart Clarysse**, *ETH Zürich*

In this study, we investigate how a venture makes sense of and adopts an emerging technology surrounded by hype during the early stages of its development. To do so, we draw on an inductive, qualitative study of a Swiss fintech start-up that adopted blockchain technology. The model we develop shows that there are three phases during which distinct aspects of the technology are highlighted, and different dynamics play out: (1) technology idealization, (2) technology internalization and (3) technology disassociation. We find that the motivation for using an emerging hyped technology changes over time, as different ideological and functional characteristics become important. Our model also shows that emerging technologies surrounded by hype are first used symbolically, and only later are they structurally embedded in the venture. We also show how, in some cases, a venture may become locked into an unsuitable technology by the hype and may resort to decoupling from the technology, in order to move away from it behind the scenes.

Presenter: **Gemma Newlands**, *BI Norwegian Business School*
Presenter: **Mareike Mohlmann**, *Bentley U.*
Discussant: **Thomas J. Donaldson**, *The Wharton School, U. of Pennsylvania*

Recent years have seen a rapid uptake of algorithms in the workplace, both in standard employment settings and in new types of work such as the gig economy. Algorithmic management, defined as a system of control that relies on machine-readable data and software algorithms that support and/or automate managerial decision-making about work, has been introduced in the human-computer interaction (HCI) literature in the context of Uber and gradually adopted by business and management community. However, research on algorithmic management is still in its infancy: Most research on algorithmic management has focused narrowly on the gig economy, neglecting algorithmic management in standard employment settings. More importantly, research on algorithmic management has prospered in different research communities, including HCI, information systems, industrial relations, HRM and communication, but often lacks cross-disciplinary dialogue. Our workshop strives at bringing together researchers from different sub-fields of management who work on algorithmic management. After setting the stage with four expert presentations by leading academics from different fields of inquiry, participants will join breakout groups that mix disciplinary backgrounds. Then, the panel will include a summary by a discussant and a plenary group discussion that synthesizes the expert presentations and the breakout groups.

Institutional Convergence / Divergence and the Future of Chinese and US Business

Institutional differences between US and China

Chair: **Michael Young**, *Appalachian State U.*
Organizer: **Xinran Joyce Wang**, *U. of Missouri*
Presenter: **Wei-Ping Wu**, *Hong Kong Baptist U.*
Presenter: **Arif Mahmood**, *Beijing Normal U.-Hong Kong Baptist U. United International College*
Presenter: **Xiaoyu Yu**, *Shanghai U.*
Presenter: **Hongjuan Zhang**, *Tianjin U.*

This professional development workshop (PDW) is designed to exchange ideas on the increasingly important topic of Chinese and US business institutional differences and how to deal with them. Recent events, from the trade wars to the Covid-19 pandemic, emphasize more than ever the institutional differences that exist between the US and China. It was initially thought that China's entry into the WTO would lead to institutional convergence and increased compatibility among organizations and businesses. However, that has not played out in practice and currently it appears that divergence is the new consensus. The fact is that both countries are experiencing institutional turbulence and each side is learning how to navigate this increasing divide. The topic is of importance as US-China tensions have introduced complications for multinational firms amid increasing political animosity (e.g. the dispute regarding Huawei market access and disputes over intellectual property rights differences). The Chinese economy has now grown to the point that it is larger than that of the US in terms of purchasing power parity (PPP). As the world's two largest economies, it is the best interests of the entire world to increase resource exchange, global cooperation and market entry for between the US and China. In this environment, it is important for researchers to understand the institutional differences and how managers from both countries can deal with them. In that regard, this workshop seeks to encourage constructive dialogue regarding institutional arrangements and Chinese and US business cooperation. The intention is to provide a spectrum of topics and viewpoints. It will include both theoretical and practical components. The objective is to promote dialogue by finding common ground and providing advice for practitioners on how to deal with the differences.

Family Ownership, Entrepreneurship and Privatization Issues in International Management

Digital Session Chair: **Pallavi Shukla**, *Rutgers Business School*

This session includes interrelated papers related to issues of family ownership, entrepreneurship and privatization. The papers include a review of the international entrepreneurship literature. Two papers focus on family firms examining the moderating effect of social capital on the entrepreneurial internationalization of family-owned firms, and how family ownership and family management affect family firm multinationality. A final paper in the session examines whether privatization affects internationalization strategy.

IM: **Addressing internationalization under International Entrepreneurship mainstreams and Risk Evolution**

Author: **Salman Kimiagari**, *Thompson Rivers U.*
Author: **Iman Rakhshani**, *Senman U.*

By an in-depth analysis of peer-reviewed journal papers (2002 to 2020), this article systematically reviews internationalization under two main IE streams (behavioral strategy and cross-national opportunism) and risk evolvability, through institutional views. The results show that (a) risk evolvability matrices are considered heterogeneous as per behavioral strategy and international opportunism; (b) thus, risk is considered an integral part of the developmental process of firms; (c) in examining the mechanism of determinants and theories, internationalization is often viewed as cross-national opportunism; (d) industrial determinants fall short in the literature; (e) few studies opt for comparative approaches; and (f) a strong correlation exists between dynamism, opportunism and institutionalism. The study contributes to understanding the (a) interconnection between the domains by an isolated view of the two streams, (b) fuller manifestations of risk, (c) interplay of institutional perspectives, (d) research structure conceptualization, (e) interconnections at the interplay, and (f) future research directions.

Paper is Available to Meeting Registrants Only.

IM: **Multinationalization of family firms: The influence of family ownership and family management**

Author: **Arindam Mondal**, *XLRI-Xavier School of Management*
Author: **Somnath Lahiri**, *Illinois State U.*
Author: **Sougata Ray**, *Indian Institute of Management, Calcutta*

Drawing on family business, international business, and emerging market literature we theorize in this study how family ownership and family management affect important dimensions of family firm multinationality. Results of empirical analysis involving a sample of Indian family firms demonstrate that family ownership and family management impact three dimensions of multinationality (scale, scope, and location choice) somewhat differently. By offering findings that are new to the literature our study extends the growing literature on international expansion of family firms in general, and those from India in particular.

Paper is Available to Meeting Registrants Only.

IM: **The moderating effect of social capital on the entrepreneurial internationalization of Family Owned**

Author: **Christian Keen**, *U. Laval*
Author: **Valeriano Sanchez-Famoso**, *U. of the Basque Country UPV/EHU*
Author: **Leo Dana**, *Montpellier Business School*

Family owned businesses (FOBs) are the most dominant type of business organization. New technologies, pressure to have access to key resources, and markets make internationalization a crucial entrepreneurial strategy for FOBs survival. The literature remains inconclusive about the internationalization of FOBs. To address this research deficit, this paper analyses the relationship between entrepreneurial orientation (EO) and their internationalization of FOB and the moderating effect of family social capital (FSC). To answer this question, we built an original database of Spanish FOBs and tested our research model using Partial Least Squares regression. Our results showed a positive relationship of entrepreneurial orientation on the internationalization of FOBs and positive mediating effect of FSC on the internationalization of FOBs. This paper contributes to the existing literature by providing a detailed literature review on the internationalization of FBOs, EO and FSC. Empirical contributions extend the inconclusive body of research on the relationship between EO and internationalization of FOBs to include the moderating effect of FSC.

Paper is NOT Available. Please contact the author(s).

IM: **Does Privatization Affect Internationalization Strategy?**

Author: **Zheyang Wu**, *Fudan U.*

The International Business literature has well documented the substantial differences between state-owned firms and privately owned firms in their international strategy, particularly in the setting of Chinese enterprises. However, a state-owned firm may transform its ownership and become a privately-owned firm. In this case, we do not know whether the privatized firm makes international strategies like other private firms. To explore the impact of privatization, we study the market entry decisions made by Chinese listed firms from 2000 to 2018. We categorize all firms into three types: the state-owned, the privatized, and the originally private firms. We find that privatized firms are less averse to the political risks of a host country when entering a market than originally private firms. The former firms' market entry decision is more consistent with that of state-owned firms. This organizational inertia experienced by privatized firms can be partially attributed to their experience in the host country before the privatization. Interestingly, their prior direct connection with the government does not influence their decisions any longer even though this connection mitigates political risks for state-owned firms. We therefore call for more research into the impact of privatization on firms' international strategy.

As global economic competition becomes increasingly innovation-driven, policymakers in both government and business are actively searching for ways to increase innovation at all levels of society. Past research on innovation policy tended to take a piece-meal investigative approach with focus on a single or narrow set of explanatory variables, resulting in limited or ineffective policy recommendations. The proposed PDW seeks to develop a programmatic, cross-national research agenda to investigate the respective roles of a nation's formal and informal institutions, knowledge infrastructure, and firm capabilities in affecting innovative performance at multiple levels of analysis and examine policy implications for governments, businesses, entrepreneurs, and other stakeholder groups. The session will be highly interactive with keynote speakers, panel commentators, and participants engaging in small group discussions to develop a preliminary research agenda that combines individual members' research interests with the aim of forming a global research network for follow-on collaboration.

As we begin to fully experience the era of the digital organization, one of the questions critical to the field of management consulting is, how is the practice and research of management consulting affected by the epoch of the internet of things, biotechnology, materials science, data science and big data, and quantum computing? The upcoming volume of Research in Management Consulting, Management Consulting in the Era of the Digital Organization, addresses this question. The purpose of this professional development workshop is to provide participants with a venue for sharing and exploring knowledge about management consulting in a virtual world. Contributing authors of the forthcoming volume share their observations about new consulting processes and techniques and interact with attendees interested in either enhancing their practice or developing their research agendas. The session brings together established scholars, practitioners, scholar-practitioners, and doctoral students, creating a forum through which practice and research ideas can be shared and research partnerships that emphasize inquiry into the field of management consulting during a time of profound change.

Participant: **Jinyoung Sohn**, *U. of Maryland - College Park*

Employees experience a wide range of positive and negative emotions at work, and their effects on performance and wellbeing could be beneficial or detrimental. In this symposium, we highlight how adequately understanding, utilizing, and regulating emotions can help us harness the benefits and guard against potential downsides of emotions at work. Across five empirical papers using diverse empirical approaches across various contexts, this symposium examines how individuals can deploy and manage emotions to facilitate performance, wellbeing, and social relationships. Discussant Myeong-gu Seo will offer implications and future directions in the study of workplace emotions and emotional intelligence. In doing so, we seek to generate novel and relevant insights about the cognitive, behavioral, and social implications of everyday attempts at understanding, using, and managing our own emotions and the emotions of others at work.

Participant: **Michel Anteby**, *Boston U. Questrom School of Business*

Occupations have become stabilizing fixtures of modern-day employment, providing employees with a set of established cultural tools, norms, values, and beliefs that offer meaning to employees and guide their workplace interpretations and action. Yet, as employees perform their occupations “on the ground”, they frequently encounter situations that challenge these occupational meaning systems. This symposium showcases four papers that develop novel theory about how individuals respond to incongruities between situational demands, environmental constraints, and audiences’ expectations, on the one hand, and occupational norms, values, and beliefs, on the other hand. More specifically, we examine (1) how workers counter harmful occupational cultures, (2) how women in male-dominated occupations transcend their status as female “tokens”; (3) how employees respond to labels (e.g., “hero”) cast upon their occupation by external audiences; and (4) how employees manage frequent exposure to tasks that conflict with their occupational ideologies extolling the nature and necessity of the work. Taken together, our papers and discussion endeavor to contribute to and generate future research on contemporary occupational dynamics, as well as deliver actionable insights for managers.

New Frontiers in Behavioral Strategy 
Behavioral Strategy

Organizer: **Luke Rhee**, *U. of California, Irvine*
Panelist: **Pino G. Audia**, *Dartmouth College*
Panelist: **Stefano Brusoni**, *ETH Zürich*
Panelist: **Donal Crilly**, *London Business School*
Panelist: **Vibha Gaba**, *INSEAD*

Behavioral strategy has long been a central subject in organizational and strategy research. The goal of this panel symposium is to highlight theoretical and empirical gaps in the behavioral strategy literature and propose future directions to advance our understanding for the human element in strategy. Specifically, our distinguished group of panelists will discuss 1) intra-psychic mechanisms from the perspectives of cognitive and social psychology and neuroscience, 2) the situated and structural aspects of behavioral strategy in a multi-level context, and 3) how firm strategists make decisions at the collective level and communicate with stakeholders.

Merging Identity and Spirituality Through a Success Scenario

Merging Identity and Spirituality

Participant: **Eric Gautier**, *U. Paris Nanterre*
Participant: **Catherine Voynnet Fourboul**, *U. Pantheon-Assas (Paris II)*
Participant: **Patrick Mathieu**, *Patrick Mathieu Singularity*
Participant: **Richard Jackson Major**, *Institut de Gestion Sociale Paris*

The aim of the workshop is to discover the existence of a singular success scenario for each participant. Deciphering the steps of one's own success scenario gives each person access to a spiritual dimension and acquire a better awareness of his or her singularity, i.e. the stable part of identity (Goffman, 1963). Success is understood as the achievement of a positive impact for oneself, for others and in society in general. It can be contextualized with the theory of derailment (Lombardo & Eichinger, 1989), i.e., when a person deviates from his or her success scenario. This inquiry requires us to search for what is deepest in ourselves; we suggest this is an exercise of existential hygiene and spiritual health. Thus, we may improve the coherence between our identity and our inner spiritual dimension. However, success scenarios are usually not conscious for the individuals, even if they may approach them when reflecting on personal and professional successes and failures. As academics and practitioners, we have developed an original method to identify individual success scenarios when we accompany leadership transitions, by relating them to the concept of singularity. The workshop will demonstrate the singularity method developed by a consultant (Gautier, Voynnet-Fourboul, 2019) in order to provide the means to decrypt one's success scenario (Mathieu & Monneyron, 2015), as well as the reasons for potential derailment (Lombardo & Eichinger, 1989).

Employees play a critical part in promoting work group and organizational ethical decision-making: They can do so by engaging in ethical voice behavior, communicating concerns, information, ideas, or suggestions about ethical issues in the workplace. Over the years, several streams of research have emerged and evolved, with the focus on ethical voice, such as whistle-blowing, moral objection and rebellion, verbal reactions to third-party injustice, and social issue selling. In this symposium, we seek to capture and integrate some of the new empirical and theoretical developments in ethical voice research and offer insights into future research on this topic.

Critical Questions in Qualitative Research: Addressing Who, What, When, Where, and Why

Critical Questions in Qualitative Research

Organizer: **Luke Hedden**, *Boston College*
Participant: **Michel Anteby**, *Boston U. Questrom School of Business*
Participant: **Blake E. Ashforth**, *Arizona State U.*
Participant: **Julia DiBenigno**, *Yale School of Management*
Participant: **Jennifer Howard-Grenville**, *Cambridge Judge Business School*
Participant: **Michael G. Pratt**, *Boston College*

This PDW will highlight how scholars can address key decisions throughout the qualitative research process. By drawing from the expertise of researchers who exemplify skill in qualitative research (Michel Anteby, Blake Ashforth, Julia DiBenigno, Jennifer Howard-Grenville, and Michael Pratt), this session will address a broad set of interconnected questions that paint a picture of the qualitative research process as a whole. A set of five brief presentations will move chronologically through the main decisions that qualitative scholars must address. In these brief presentations, successful scholars will share their expertise and experiences regarding how they have addressed these questions in their own research—making the session both inspirational and educational for qualitative researchers at all stages of their careers. In addition to the presentations, this PDW will allow attendees to discuss their own “critical questions” with other qualitative researchers in a highly interactive format. Attendees will therefore be encouraged to bring questions stemming from their own research. Through the presentations and the interactive discussions, this PDW will provide opportunities for scholars to share their ideas and experiences with one another in order to make tangible progress on their own research.

How Temporality and Space Shape and Are Shaped by Strategy-Making

Temporality and Space in Strategy-Making

Digital Session Chair: **Kathrin Sele**, *Aalto U. School of Business*

SAP: **Enacted Clock-Time: How Temporal Agency Structures Strategic Activity**

Author: **Vikas N. Prabhu**, *Indian Institute of Management, Bangalore*

SAP Best Practice-Oriented Paper Award

Agents strategizing in a specific context engage in an ongoing process of temporal structuring that regulates, and reflects, their strategic activity (Orlikowski & Yates, 2002). My study attempts to unpack the temporal structuring process to understand the interplay between temporal agency and strategic activity. Using a phenomenological approach (Interpretative Phenomenological Analysis, as per Smith & Osborn, 2008), I investigated the research-oriented strategic activities of a set of doctoral students in different stages of their respective programs at an elite management institute. Consistent with the structuration perspective, I observed dynamism in the temporalities underlying individuals' strategic activities, characterized by shifting temporal structuring patterns in response to their evolving contexts. Importantly, I found that temporal agents attempt to control their strategic context through enacting temporal discipline. Abstracting from my findings, I propose a process model of temporal enactment that substantiates the role of temporal agency in effecting strategic outcomes. By elaborating the process of temporal structuring, this study contributes at the intersection of temporality and strategy-as-practice literatures.

SAP: **Temporal Reflexivity When Striving to Be a Strategic Actor**

Author: **Liisa Valikangas**, *Technical U. of Denmark*
Author: **Eero Vaara**, *U. of Oxford*

In this paper, we argue that temporal reflexivity is a key, but as of yet poorly understood, part of strategic actorhood and agency. We propose a view of strategic actorhood that acknowledges the key role of reflexivity in time and space when striving to be a strategic actor. By placing temporal reflexivity at the front and center of strategic agency, our analysis adds to a key component to recent discussions about actorhood and agency in strategic management research. In particular, we identify and elaborate on five key aspects of temporal reflexivity that each warrant attention and together for a framework for a better understanding of what temporal reflexivity means in practice. By so doing, our analysis also advances research on temporality in management and organization studies more generally.

Paper is Available to Meeting Registrants Only.

SAP: **Storying Organizational Identity and Strategy: An Antenarrative Analysis**

Author: **Etieno S. Enang**, *Coventry U.*
Author: **Harry Sminia**, *U. of Strathclyde Business School*
Author: **Ying Zhang**, *U. of Strathclyde*

The different temporal focus of strategy and of organizational identity (OI) raises questions about how the temporal discrepancies between the two can be overcome. Antenarratives are useful for making sense of complexity in organization studies, making them particularly suitable for understanding temporality in organizational becoming. We present, as our main theoretical contribution, four mutually constitutive temporal discursive strategies that are based on antenarrative and deal with coherence and incoherence between strategy and OI over time. We label these practices as reiterating the past, projecting the past, reinforcing the past, and adapting to the future. Our study tracks the storying over a period of 20 years to explore how a family-owned firm searched for novel solutions in their past and future in a manner that enabled strategy and OI to flow together. We show how the firm's incremental change emerged when they engaged 'before' 'bet' and 'beneath' antenarratives. However, 'between' antenarratives made more radical change plausible.

SAP: **Shaping the Buildings That Shape Us: Restoring Coordination Following a Disruption**

Author: **Samer Faraj**, *McGill U.*
Author: **Karla Sayegh**, *U. of Cambridge*

The move to a new, state-of-the-art building is a momentous occasion in the life of an organization as it offers the rare opportunity to establish novel ways of working and organizing. However, when long established coordination practices can no longer be carried out in the new space, costly breakdowns may occur, necessitating effortful repair work to re-establish coordination. Through a two-year ethnographic study, we examine how coordination was disrupted and restored following the relocation of a leading hospital into a newly built and equipped state-of-the-art building. We show how established care coordination practices could no longer be sustained in the new setting and how the urgency of addressing situations of breakdown forced a reconstitution of coordination arrangements to better align with the new space. Our findings highlight the importance of the situation, rather than external environments, in guiding shared action and the importance of organizing boundaries and scripts in reassembling a novel coordination ordering. Thus, we suggest a move away from the notion of "coordination as social structure" toward a performative view of coordination that foregrounds the situation, the joint effects of material arrangements and boundaries and scripts.

STR Plenary - Managing Tensions between Stakeholder and Shareholder Objectives *STR Plenary*

Participant: **Timothy B. Folta**, *U. of Connecticut*
Panelist: **Jay B. Barney**, *U. of Utah, David Eccles School of Business*
Panelist: **Subramanian Rangan**, *INSEAD*
Panelist: **Jim Snabe**, -
Panelist: **Davis Smith**, -

There are increasing pressures for firm strategies to better balance tensions between markets and society, humans and nature, and the present and the future. These tensions introduce enormous complexity for CEOs and have huge implications for strategy research on firm performance. This plenary features a discussion between two leading CEOs (Jim Snabe - Chairman of Maersk and Siemens, and Davis Smith - CEO of Cotopaxi) who have effectively managed this complexity, and two leading scholars (Jay Barney - University of Utah, and Subi Rangan - INSEAD) who push the boundary of our understanding of this topic.

Presenter: **Valentina Tartari**, *Copenhagen Business School*

This workshop is aimed at scholars interested in research on universities and public science. We will focus on exploring the impact of universities on their economic and social environment, a topic of particular interest to management researchers. As stakeholders are calling for more impact, this raises several issues for research. First, as universities are challenged to be engines of innovation, more research is needed on how intra-scientific progress can be reconciled with the external relevance of academic science. Second, it draws attention to the pathways and organizational forms for achieving this, including new ways in which university-knowledge is transferred or co-produced besides the established mechanisms. Third, it highlights the diversity of stakeholders with a claim on the use of scientific knowledge. Overall, then, there are rich opportunities for management researchers to assess the impact of university science, the pathways conveying such impact, and the way in which different stakeholders are involved. This workshop provides an opportunity for participants to learn about recent work, different approaches, theories, data sources, and methods available for the study of the impact of academic science both on science itself and its wider environment. In doing so, the workshop aims to respond to the annual meeting theme, by shedding light on how domain-specific outcomes could be valued by multiple stakeholders. This PDW will be useful to both early career and experienced faculty to identify promising research opportunities, as well as to explore conceptual approaches and methodological challenges in this area.

Sustainability in Management Education: Exploring the Role of Cultural Context
Role of Culture in Sustainability Pedagogy

Participant: **Sarah Easter**, *Abilene Christian U.*
Participant: **Kim Ceulemans**, *TBS Business School*
Participant: **Matthew Murphy**, *U. of Victoria*
Participant: **Ashish Aggarwal**, *Indian Institute of Management, Lucknow*
Participant: **Andrea Maria Prado**, *INCAE Business School*
Discussant: **Dror Etzion**, *McGill U.*
Discussant: **Fiona Moore**, *U. of London*

Sustainability has become a popular teaching topic in business schools around the world. Yet, there has been very little mention of the role of culture in relation to embedding sustainability in business education. This lacuna is surprising given that researchers have noted the crucial role that culture plays in variation in sustainability adoption across contexts. In response, this 2021 symposium is designed to begin to explore the role that culture plays in sustainability-focused management pedagogies by bringing together academics that teach sustainability in a variety of different contexts. Rather than trying to determine universal or aggregate dimensions of culture that can be generalized without significant regard for differentiated contexts, we take the view that culture can best be understood in respect to specific settings, and, therefore, a high level of contextualization is imperative. Thus, our desire is to begin a conversation to understand sustainability-focused pedagogical practices in a grounded manner and how they may vary across differentiated contexts.

Supervisor and Coworker Support

Digital Session Chair: **Virajanand Varma**, *Indian Institute of Management, Ranchi*

OB: Daily supervisor support, engagement, and extra-role behaviors: The role of psychological attachment

Author: **Jeffrey Joseph Haynie**, *Louisiana Tech U.*
Author: **Virajanand Varma**, *Indian Institute of Management, Ranchi*
Author: **Elizabeth Ragland**, *Doctoral Student*

In this paper, we integrate conservation of resources and relational cohesion theories, and test the mediating role of daily job engagement in the relationships of daily supervisor support (SupS) with prosocial behaviors such as interpersonal justice treatment and individually-directed organizational citizenship behaviors (OCBI). Additionally, we propose employees' turnover intentions to minimize these effects when high. Employees of a small credit union were recruited to participate in a repeated survey spanning ten days of a two-week workday period. 50 employees (59.52% response rate) with a total of 293 survey responses contained usable responses that were used in our hypothesis tests. Daily job engagement was found to mediate the relationships of daily SupS with OCBI, not interpersonal justice treatment. Turnover intentions were also found to reduce the SupS-job engagement relationship and offset the indirect effect with OCBI only. The implications of these findings for future research are then discussed.

OB: The Impact of Cross-Domain Attention Residue and Buffering Effect of a Family Supportive Supervisor

Author: **Marcie LePine**, *Arizona State U.*
Author: **Soohyun Yoon**, *Arizona State U.*

Research on attention residue, or thoughts about one task persisting while performing another task, has predominantly focused on switching from one work task to another work task and its effect on work performance. We extend this literature by focusing on cross-domain attention residue, switching between work and family tasks while working from home, and examine the impact of cross-domain attention residue on work-family conflict and work and family performance. In addition, we examine whether management practices, specifically family supportive supervisor behaviors, may buffer the negative effects of cross-domain attention residue on work-family conflict and work and family performance. In a sample of 95 working from home matched participant-partner pairs, we tested and found support for our hypotheses. Our study highlights the need to examine the unique challenges that work from home employees face as they juggle work and family tasks, and the role that managers may play in buffering the negative effects of those challenges.

OB: Follower Thriving and Job Performance Despite Leader Incivility? Dual Effects of Coworkers' Support

Author: **Ridwan Saptoto**, *Ph.D Student*
Author: **Desiree Van Dun**, *U. of Twente*
Author: **Celeste P.M. Wilderom**, *U. of Twente*

This study examines the mechanisms through which uncivil leader behavior can still lead to followers thriving and performing well in their jobs. We combine tenets of the conservation of resources, job demands-resources, broaden-and-build, and threat to self-esteem theories to develop the hypotheses. Leader incivility behaviors were expected to reduce follower positive affect and, in turn, to thwart thriving and job performance. To counteract those negative leader effects we derived two other, paradoxical hypotheses about the role of coworkers' support: such support was expected to both intensify and reduce the negative follower effects of leader incivility. On invoking a survey design, we collected data from Indonesian employees (n = 226), in three waves (separated by three weeks), and tested the mediated moderation hypotheses with structural equation modeling. The relationship between leader incivility behaviors and job performance was indeed mediated by employee positive affect and thriving in a series. Moreover, we established the intensifying effect of coworkers' support to leader incivility behaviors, and coworkers' support also compensated for the negative leader effect by providing solace to the victimized peer. In the future, similar models need to be examined in actual work settings where coworker relations are outright competitive or otherwise dissimilar.

OB: Remotely stressed: Investigating remote work stressors, employee burnout, and supervisor support

Author: **Kayla Lacey**, *U. of Nebraska at Omaha*
Author: **Cheryl Gray**, *U. of South Florida*
Author: **Paul E. Spector**, *U. of South Florida*

Remote work is rapidly increasing in popularity, and much remains to be known about this new means of working. Across three studies using disparate methodologies, this research investigates remote work stressors, their relations with employee burnout, and the role of supervisor support. Study 1 provides a qualitative investigation of stressors experienced by 44 remote employees from an executive coaching company. A content analysis reveals eight stressors that are specific to or exacerbated by remote work. Study 2 begins to develop and evaluate a quantitative scale of remote work stressors based on the taxonomy established in Study 1. Using the new scale, a survey study (N = 196) demonstrates that each of the remote work stressors is positively associated with employee burnout, particularly excessive autonomy, work-life conflict, and diminished visibility. Study 3 replicates the results of Study 2 using a sample of university staff employees who transitioned to working remotely due to COVID-19 (N = 226). Study 3 also examines the role of supervisor support, finding that some unhelpful forms of supervisor support may act as additional stressors to remote workers. Drawing from the stressor-strain model, the findings provide valuable insights relevant to the future of remote work.

Employee Deviance Behaviors

Digital Session Chair: **Andrea Pittarello**, *Virginia Tech*

OB: If It's Broken, Fix It: The Effectiveness of Moral Reminders Depends on Prior Behavior

Author: **Andrea Pittarello**, *Virginia Tech*
Author: **Thekla Schmidt**, *WHU-Otto Beisheim School of Management*
Author: **Assaf Segel**, *Hebrew U. of Jerusalem*
Author: **Ruth Mayo**, *Hebrew U. of Jerusalem*

It is still unclear whether moral reminders promote, hinder, or have no effect on behavior. In a field study measuring dishonesty and three experiments on reciprocity, we varied whether the reminder was phrased with an affirmation or a negation and whether it depicted people hurt by dishonesty. We also tested the type of behavior targeted by the reminder being first time or repeated. While depicting people hurt by dishonesty had no effect, affirmative reminders were more effective than negated ones. Crucially, we show that prior behavior is the main predictor of the effectiveness of reminders: While reminders are effective for first time behaviors, in repeated contexts they increase morality only for people who initially don't comply. Our findings offer insights that may explain inconsistencies in past work and encourage practitioners to consider people's behavior before implementing any interventions.

OB: The Effects of Work-Related Electronic Communication during NonWork Time on Workplace Deviance

Author: **Huan Cheng**, *Huazhong U. of Science and Technology*
Author: **Weili Zheng**, *Wuhan U. of Technology*
Author: **Jinfan Zhou**, *Nanjing U.*
Author: **Beijing Tan**, *Huazhong U. of Science and Technology*

Advances in electronic communication technologies have made organizations more efficient and flexible. However, such technologies have not only changed the way employees work but also blurred the lines between work and nonwork domains. Drawing from relative deprivation theory and moral disengagement theory, the current study investigates when and how work-related electronic communication received during nonwork time leads to negative cognitive and behavioral consequences of employees. Using a daily survey across two work weeks, we found that work-related electronic communication during nonwork time enhanced one's tendency of moral disengagement, which in turn resulted in increased workplace deviance in the next day. Moreover, segmentation preference, a stable personal factor, strengthened the relation between work-related electronic communication during nonwork time and enhanced moral disengagement. Implications of these findings for theory, practice and future research on work-related electronic communication during nonwork time are discussed.

OB: What are They Talking About: Exploring the Effects of Linguistic Ostracism on Proactive Behavior

Author: **Guanglei Zhang**, *Wuhan U. of Technology*
Author: **Weili Zheng**, *Wuhan U. of Technology*
Author: **Mingze Li**, *Wuhan U. of Technology*

Economic globalization increases opportunities for people speaking different languages to work together, making linguistic ostracism almost inevitable in the workplace. However, research offers only limited insight into its mechanisms. To help address this research gap, we draw on group engagement model, and apply an analysis of multi-source, multi-wave data from different samples to demonstrate a negative relationship between linguistic ostracism and employee proactive behavior. Findings also indicate that belongingness need satisfaction mediates the negative relationship between linguistic ostracism and employee proactive behavior, which explains how the internal mechanisms of linguistic ostracism result in low employee proactive behavior. In addition, findings show that employees with high trait social standing uncertainty will likely experience less belongingness need satisfaction and less likely to participate in proactive behavior when experiencing linguistic ostracism.

Paper is Available to Meeting Registrants Only.

OB: Self-Threatening Discretionary Behavior: Conceptualization, Measurement Development, and Validation

Author: **Ilanit SimanTov-Nachlieli**, *Tel Aviv U.*
Author: **Peter Bamberger**, *Tel Aviv U.*
Author: **Songqi Liu**, *Georgia State U.*
Author: **Mo Wang**, *U. of Florida*
Author: **Jingju Chen**, *Shanghai Jiao Tong U.*

The current research develops and validates a measure of employee Self-Threatening Discretionary Behavior (STDB), a new construct capturing a novel form of employee discretionary behavior which, while presumed to enhance one's performance, also poses physical threats to one's well-being. To assess STDB, we refined and validated a 7-item scale using six samples of individuals employed in various lines of work in three countries (USA, Israel, and China). Findings indicate that the STDB scale: (a) demonstrates high reliability and content validity; (b) is positively correlated, yet distinct from, other established employee discretionary work behaviors such as organizational citizenship behavior, pro-social rule breaking behavior, and working excessively; and (c) demonstrates incremental validity in the prediction of important employee outcomes including physical health, resource depletion, work exhaustion, and supervisor-rated performance, over and above demographics and other related discretionary work behaviors. We also identify situational (work pressure) and personality (conscientiousness and neuroticism) factors as antecedents of STDB. The theoretical and empirical implications of capturing this novel form of employee discretionary work behavior are discussed.

Sustainability governance: Risk and reporting,

Digital Session Chair: **Anshul Mandliya**, *Indian Institute of Management, Indore*

ONE: Understanding Environmental Social and Governance controversies: A Moderated Mediation Model

Author: **Anshul Mandliya**, *Indian Institute of Management, Indore*
Author: **Jatin Pandey**, *Indian Institute of Management, Indore*

In the last few decades, attention towards organizational controversies has grown manifold due to the increased activism of media houses, rating agencies, and lawmakers. This increase in attention has brought controversies at the disposal of internal and external stakeholders of the firm. These stakeholders which majorly include stockholders, investors, customers, governing bodies, and, employees of the firm are observed to respond negatively to such controversies. Little attention has been paid to explore the antecedents and consequences of these controversies in the extant literature. Thus, the study aims to explore the relationship between corporate governance, ESG controversies, and workforce satisfaction across the manufacturing sector in the world. Results of the study show that firms with low governance level are seen to observe higher ESG controversies which further negatively affect their workforce satisfaction levels. Additionally, environmental management teams and product responsibility at the organizational level are seen to moderate the relationship between corporate governance and ESG controversies, while their indirect effects are also observed on workforce satisfaction. Organizational image and social identity theory are used as theoretical anchors to explain the key relationships between these constructs. The results of the study are primarily useful for organizations and policymakers to reduce ESG controversies and scandals. The result would also contribute to research in workforce satisfaction from the perspective of organizational controversies and other CSR-related constructs.

Paper is Available to Meeting Registrants Only.

ONE: Beacon of Hope or Ships in the Night? A systematic assessment of changes in corporate reports

Author: **Keith Whittingham**, *Crummer Graduate School of Business, Rollins College*
Author: **Andrew Earle**, *U. of New Hampshire*
Author: **Dante Ignacio Leyva-de La Hiz**, *Montpellier Business School*
Author: **Alessia Argiolas**, *U. Cattolica del Sacro Cuore*

While the importance of achieving global sustainable development has been in the United Nations (UN) agenda for decades, the role of the private sector in such political agenda has been largely ignored. However, current urgency about global warming and increasing inequalities has made the UN to ask for a massive collaboration from a variety of actors, among which businesses play a key role given their ability to develop new and bold ideas to tackle social and environmental issues. As a result of this, the UN launched the Sustainable Development Goals (SDGs) in 2015, a year that may represent a major shift in the way business is conducted. Taking that year 2015 as a reference, we took 164 large corporations from the S&P Sustainability Yearbook and analyzed their pre-SDGs and post-SDGs sustainability reports to see if they actually changed their sustainability practices. Our results show that there is indeed a change from the pre- and post-reports over the average of firms, and across some industries and geo-institutional groups.

ONE: Sincerity not Hypocrisy: Green M&A and Corporate environmental Governance

Author: **Xiaoyue Zhao**, *Northwestern Polytechnical U.*
Author: **Jia Ming**, *Northwestern Polytechnical U.*
Author: **Zhe Zhang**, *Xi'an Jiaotong U.*

Although governments in China has introduced a serious of environmental police and measures to ensure the improvement in corporate green management such as green merger and acquisition (green M&A), we find that part of green M&A firms still pollute environment. This cast doubt on assertions that green M&A expect to have a positive impact on reducing corporate environmental pollution. To explain this tension, we use both perspectives of legitimacy-benefit and illegitimacy-penalty to discuss when organizations will take green M&A as a sincere greening action rather than hypocritical greenwashing in environmental governance. We thus argue that media scrutiny and state-owned enterprise (SOE) influence the likelihood that an organization will take green M&A as a sincere substantive strategic action. To be specific, we investigate that the positive relationship between green M&A and corporate environmental governance is stronger for firms in localities with greater media scrutiny, as these firms face more legitimacy-benefit and illegitimacy-penalty. While state-owned enterprises (SOEs) weaken it, as SOEs have natural political connections to undermine legitimacy-benefit and avoid illegitimacy-penalty. Empirical analyses using data on Chinese heavy-polluting firms listed on stock exchange from 2009 to 2017 support these arguments.

Paper is Available to Meeting Registrants Only.

ONE: Corporate Resilience During Crisis: The Role of Sustainability, Risk Management, and COVID-washing

Author: **Ariela Caglio**, *Bocconi U.*
Author: **Gaia Melloni**, *Faculty of Business and Economics (HEC Lausanne), U. of Lausanne*
Author: **Janet Su**, *U. of Lausanne*

Resilience is the ability of an organization to anticipate, prepare for and respond to sudden disruptions. Using the COVID-19 pandemic as a research context, we study the relationships between corporate sustainability and resilience in times of crisis. Indeed, it is debatable whether the so-called environmental, social and governance (ESG) initiatives do or do not immunize stocks against crises such as the COVID-19 pandemic. Moreover, despite the importance of risk management for crisis management efforts and the potential for "COVID-washing," there is no evidence that either lead to greater resilience. In our paper, we analyse global firms which disclose about COVID. Results from multivariate regression analyses show that top ESG performers fare better during the crisis but worse during the recovery period. We also find evidence that firms with more advanced risk management approaches handle the crisis better. Lastly, COVID-washing, though beneficial in the short-term, does not pay off in the long-term. In this respect, we address important knowledge gaps for managers, investors, and other non-financial stakeholders by offering robust empirical evidence on predictors of corporate resilience and the effects of corporate sustainability, risk management, and COVID-washing on financial performance.

Many forms of risk, uncertainty, and possibility face individuals and organizations today. At the same time, the industry 4.0 digital transformation of science, business, and society has unlocked many affordances for sustainable resilience. This symposium presents four emerging convergence research papers, together with invited commentary from leading management scholars, to explore how organizations behave and can use technology to co-create scalable social and economic value. We also explore how digital innovation can accelerate interdisciplinary scholarship and on-the-ground action from a variety of perspectives. Together, this symposium articulates a next-generation, solution-oriented, cross-disciplinary paradigm where management can play a central role.

CEOs and Corporate Strategy

Digital Session Chair: **Katsushi Suzuki**, *Hitotsubashi U.*

STR: Newly Appointed CEOs and Strategic Change: The Impact of Social Ties 

Author: **Katsushi Suzuki**, *Hitotsubashi U.*

Author: **Yoichiro Nishimura**, *CHUO U.*

Author: **Margarethe F Wiersema**, *U. of California, Irvine*

Demographic characteristics of newly appointed CEOs have been shown to influence the extent of strategic change they pursue, but our understanding of the role of social capital is more limited. In this study, we seek to provide insight into the role of social capital on executive decision making by examining the influence of social ties between the newly appointed CEO and the prior CEO. We find that in firms with newly appointed CEOs with social ties, there was significantly less strategic change than in firms with new CEOs without social ties. Further, we find that poor firm performance and CEO power result in more strategic change for new CEOs with no social ties but does not have a significant effect on new CEOs with social ties. Our study contributes to our knowledge on the role of social capital in influencing whether executive succession leads to strategic change.

Paper is NOT Available. Please contact the author(s).

STR: CEO's Industry Experience and Firm Performance: The Effects of Corruption and Political Uncertainty

Author: **Juan Carlos Morales**, *U. of Kansas*

Author: **Vincent L. Barker**, *U. of Kansas*

We examine how CEO's industry-specific experience influences firm performance in emerging markets. Drawing from upper echelons theory and a learning perspective, we argue that as CEOs accumulate industry-specific experience, they increase their understanding of the environmental dynamics within emerging markets, strengthen intra-industry connections to key suppliers, creditors, regulators, and influential resource networks that helps firms acquire and maintain access to critical resources. As such, firm performance should increase as its CEO gains industry knowledge. However, we also argue that as CEOs acquire industry-specific experience, they develop commitment to industry practices and the value of older knowledge gained from their early years in the industry decreases, hurting firm performance. Therefore, we posit that an inverted U-shaped relationship exists between CEOs' industry-specific experience and firm performance. We also examine the effect of two important moderators in the context of emerging markets: corruption and political instability. We argue that the increased environmental uncertainty and complexity caused by corruption or political instability accelerate CEO learning effects making for greater performance gains and steeper performance declines with increasing CEO industry experience. We test our hypotheses using data from the World Bank's Enterprise Survey of firms in emerging economies from 2006 to 2019 covering 143 countries. The results largely support our hypotheses. We conclude by discussing the implications of this research for CEO learning, CEO experience, and firms in lesser-developed institutional environments.

STR: Do Social Media Influence CEOs' Strategic Decisions? CEOs' Twitter Activity and Subsequent M&As 

Author: **Amirhossein Zohrehvand**, *Leiden U.*

Social media have introduced entirely new ways in which CEOs can communicate; however, our understanding of the impacts of social media communication on CEOs and their decisions has remained limited. I argue that CEOs' social media activity increases their confidence, risk-taking, and M&A activity and decreases their organic growth expenditure. I argue that social media activity can be confusing for external stakeholders, resulting in less favorable market reactions to this increased M&A behavior. I test my theory using the M&A activity of a sample of CEOs from S&P1500. I found that CEOs who are active on Twitter engage in 800 million dollars more expensive deals than before they joined. This effect increases by 1 million dollars for every ten extra tweets. For every thousand tweets, investors' reactions to this increased M&A activity is one percent less positive. I discuss the implications for the literature on M&A and CEO social media communication.

STR: CEO Power Motive and Propensity for Real Options Strategy: Evidence from New Industry Entry Mode Choice between Acquisition and Corporate Venture Capital 

Author: **Boshuo Li**, *U. of Miami*

Real options theory posits that firms pursue a real options approach in investment to reduce uncertainty. Yet, top executives may exhibit heterogeneous motives to mitigate uncertainty. We propose that CEOs' power motive—the motive to exert impact, influence, and control over others—can influence their uncertainty avoidance propensity and thereby affect whether they will take a real options approach in decision making. To test our argument, we consider whether firms choose to enter a new industry through acquisition (a non-real options mode) or corporate venture capital (CVC) (a real options mode). We find that CEOs with a stronger power motive are more likely to enter a new industry through CVCs rather than acquisitions. In addition, this relationship is stronger in the presence of high decision uncertainty reflected by boards' lack of experience in the new industry and a salient threat from short sellers. This study extends real options theory by highlighting the importance of CEO power motive in shaping whether firms will adopt a real options strategy in decision making.

Antecedents, Management, and Outcomes of Interfirm Collaboration

Digital Session Chair: **David Joel Skandera**, *U. of Central Florida*

STR: The role of corporate social responsibility in the formation of strategic alliances

Author: **David Joel Skandera**, *U. of Central Florida*

Author: **Dane Patrick Blevins**, *U. of Central Florida*

Firms that pursue more corporate social responsibility (CSR) are perceived as operating with more integrity and should thus be more attractive strategic alliance partners. It remains unknown, however, whether this attractiveness actually translates into more new alliances and how the relationship between CSR and alliances differs for different types of CSR. Drawing from signaling theory, we present novel theorizing about the unique signaling properties of the three core dimensions of CSR— environmental, social, and governance responsibility — and explain how the salience of any type of CSR as a signal depends on the institutional setting. Relying on 17 years of data spanning 2,291 observations across 354 U.S. firms, we find that environmental and social responsibility have a positive impact on the number of new alliances firms enter, but that governance responsibility has a negative impact. Further, we find that the relationships between alliance formation and environmental and governance responsibility, respectively, are attenuated by the extent to which the respective type of CSR is institutionally prescribed in the organizational field. Our study adds important nuance to knowledge about the signaling properties of CSR and contributes by explaining the impact of various dimensions of CSR on another key strategic activity that firms pursue — the participation in alliances. We also contribute to understanding of signaling theory by introducing a novel boundary condition that defines the salience of an activity as a signal: institutional norms for the activity.

STR: Can Alliance Substitute Acquisition? The Evidence from Natural Experiment

Author: **Jaemin Lee**, *Imperial College Business School*

Author: **Joon Mahn Lee**, *Korea U. Business School*

We utilize a quasi-experimental setting that exogenously changes costs to acquire the targeted firm, which allows us to examine the relationship between the costs of acquisitions and decisions to pursue alliances. We find that firms with increased acquisition costs, due to the increased takeover protection, are more likely to experience alliances than their comparison group and that equity alliances are more likely to be adopted to substitute for acquisitions than non-equity alliances. Our post-hoc analyses also reveal that when the cost of acquisition increases, acquisitions indeed become less likely and that the sequential investment relationship of alliances and acquisitions becomes less likely. Finally, we show that following an increase in takeover protection, alliance performance decreases and acquisition premium increases.

STR: Relational Capabilities: Is it an influencer to business financial performance?

Author: **MD Pigola**, *U. Nove de Julho - UNINOVE - São Paulo*

Author: **Fernando A R Serra**, *U. Nove de Julho - UNINOVE - São Paulo*

Author: **Priscila Rezende Da Costa**, *U. Nove de Julho*

Author: **Geciane Silveira Porto**, *U. of Sao Paulo (FEA/USP)*

Relational Capabilities (RC) building is a key research area, including decisions heuristics, management of collective uncertainty or any situation that affects more than one actor. It is valuable not only for performance as a whole but also as an asset that generates profitability as well. In this direction, the study conducted a meta-analytic investigation of the association of RC with firm's financial performance from the RC literature. The study also examined the role of moderating factors – knowledge management and partners integration - in influencing this association. For the meta-analytic review, 54 empirical studies that had examined the link between RC and firm's financial performance were sampled. The study adopted the 'random-effects' model using weighted mean of raw correlation coefficient as a measure of the effect size and calculating the path effects using moderator's meta-regression. The results showed the existence of direct and positive association of RC on firm's financial performance and the existence of moderators, partner integration and knowledge management, impact this association revealing that at an aggregate level there is a higher positive association between RC and firm's financial performance.

STR: Competition, Coordination, and Civic Wealth Creation

Author: **Devin Stein**, *Syracuse U.*

"Civic wealth" emerges from the joint efforts of many stakeholders. Yet, while governments are tasked with investing in civic organizations (i.e. fire and police departments, schools, and homeless shelters) to improve community well-being, some local actors are able to capture disproportionate benefits. We propose a model of how competitive and coordinative incentives faced by civic organizations moderate the effectiveness of external support on community outcomes. We suggest that coordination improves outcomes for the community, but organizational incentives to coordinate eventually level-out with increasing organizational density, while incentives to rent seek increase because of greater competition over resource dependencies. Therefore, we hypothesize an inverted-U shaped relationship where the effectiveness of external resources increases with more civic organizations up to a point, beyond which it declines as competition for survival exceeds incentives to cooperate. Further, we hypothesize that this relationship is moderated by the incentives faced by different types of organizations (i.e. public, private, and nonprofit organizations). To test our theory, we construct an original longitudinal dataset linking civic organizations in communities at high-risk of wildfires in Northern California to their government grants for fire prevention, and subsequent outcomes in terms of property loss. Our results provide evidence that the effectiveness of external support is indeed moderated both by the number and type of organizations in a community.

Navigating Organizational Change

Digital Session Chair: **Yao Ma**, *U. of Neuchâtel*

STR: New CEO Succession Origin and Strategic Change in Turnaround Situations: A Relational Perspective

Author: **Yao Ma**, *U. of Neuchâtel*

Author: **Dimitrios Georgakakis**, *U. of St. Gallen*

Author: **Claudia D. Jonczyk**, *U. of Neuchâtel*

We study the effect of new CEO succession origin on strategic change in firms facing turnaround situations. Taking a ‘relational perspective’ of CEO succession, we argue that the degree to which outside CEO succession associates with strategic change depends on the relational network between the outside CEO and key incumbent executives prior to succession. Using data from 108 companies with new CEOs in turnaround situations between 1993 and 2015, we find that high CEO outsidership has a negative effect on strategic change in firms facing turnaround conditions – while this effect is weaker in the later years of the new CEO’s tenure. We further find that outsider CEOs with more connected intra-TMT network brings a higher degree of strategic change to the firm early after succession. Overall, our paper contributes to the extant literature on CEO succession by underscoring the important role of the relational CEO-TMT interface when a new CEO takes charge with the mandate to bring about strategic change (i.e., in turnaround conditions).

STR: The impact of corporate label change on shareholder reaction: Evidence from South Korean firms

Author: **KwangWook Gang**, *Salisbury U.*

Author: **Jihyun Eun**, *Salisbury U.*

Author: **Byungchul Choi**, *Hankuk U. of Foreign Studies*

This study probes the impacts of corporate label change (CLC) on shareholder value. We try to address two research questions: (1) how shareholders respond when investing companies change their corporate label; and (2) what are the factors of firm heterogeneities deviate shareholder reactions? The findings from South Korean companies reveal that corporate label change itself does not significantly affect shareholder value. However, two firm-level heterogeneities—size and prior CLC experience—show inverted U-shaped relationships with the shareholder reactions. Furthermore, the negative and significant interaction between the firm size and prior CLC experience illustrate more dynamic contingencies of how shareholder react depending on the two conditions. Key academic and practical implications are highlighted.

STR: Spaces for Creativity: The Role of Physical Environment in Creative Problem Solving

Author: **Sunkee Lee**, *Carnegie Mellon U. - Tepper School of Business*

Author: **Manuel Sosa**, *INSEAD*

Previous literature has studied how the physical space influences organizational processes and outcomes, and recent studies have delved deeper into this topic by examining the impact of organizational decisions such as relocating offices, reconfiguring into open-office layouts, and adopting flexible seating arrangements. However, the literature has often overlooked the role that the actual visual features of physical space could have on organizational members’ behaviors or performance in important areas such as creativity. We investigate whether a visually stimulating physical environment (as a whole) has a causal effect on individual-level creativity. Specifically, we study how two contrasting physical spaces (visually “quiet” vs. visually stimulating spaces) influence the two most widely recognized types of creative thinking—convergent and divergent creative thinking. Taking a controlled experiment approach, we randomly assigned 116 participants to either a visually “quiet” or visually stimulating space and asked them to solve a convergent or divergent creative thinking task. We found that participants performed better in the convergent creative thinking task in the visually stimulating space and that participants performed better in the divergent creative thinking task in the visually “quiet” space. The implications of our findings for organization designers challenge the wide-spread belief that creative workspaces with many visual stimuli serve as silver bullets for fostering creative problem solving.

STR: Middle Managers’ Resistance to Strategy Implementation: The Impact of Managers’ Shared Realities

Author: **Benedikt Alexander Schuler**, *U. of St. Gallen*

Author: **Kevin Orr**, *U. of Hull*

Although much is known about the impact of middle managers’ cognition on strategy implementation, little is known about the impact of middle managers’ social cognition on strategy implementation. By studying the top-down implementation of a strategy in the plant of a multinational German engineering company using a qualitative approach, we propose a social cognitive model of middle managers’ resistance to strategy implementation. This model shows how middle managers construct shared realities—subjectively experienced commonalities with others’ inner states—about a new strategy based on information that is socially shared by other middle managers during their sensemaking of the new strategy. As the experience of shared realities socially validates middle managers’ negative inner states about the new strategy, middle managers exert cognitive and behavioral resistance to the implementation of the new strategy. In contrast, middle managers who do not experience shared realities but the same negative inner states about the new strategy do not exert cognitive or behavioral resistance to the implementation of the new strategy. Our study contributes to research on strategy implementation by providing a social cognitive explanation for the question why middle managers resist strategy implementation.

Complexity and Cognition in Organizations and Markets

Digital Session Chair: **Shavin Malhotra**, *U. of Waterloo*

STR: CEO Cognitive Complexity, Industry Conditions, and Firm Performance

Author: **Shavin Malhotra**, *U. of Waterloo*
Author: **Joseph Harrison**, *Texas Christian U.*

Research in strategic leadership has pointed to cognitive complexity as a critical dimension of CEO cognition, generally assuming it should be beneficial for CEOs and their firms. We question this assumption and posit a more nuanced effect based on the industry conditions facing the firm. Using a recently developed linguistic tool to assess CEO cognitive complexity in a sample of S&P 1500 firms, we argue and find that the nature of the relationship between CEO cognitive complexity and firm performance is contingent on the levels of complexity, dynamism, and munificence of the industry in which a firm operates. CEO cognitive complexity is positively related to performance in industries characterized by high complexity, low dynamism, and high munificence, but negatively related to performance in less complex, more dynamic, and more hostile industries. Our theory and findings contribute to a more complete understanding of the role of CEO cognition in performance outcomes of firms, and specifically help to clarify the boundary conditions under which cognitive complexity may be a benefit or a burden, with implications for strategic decision making processes.

Paper is Available to Meeting Registrants Only.

STR: Psychology of Resource Pricing Decisions in Strategic Factor Markets

Author: **Ipek Koparan**, *Bentley U.*
Author: **Federico Aime**, *Oklahoma State U.*

Strategic resources mostly have unestablished market prices. In this paper, we recognize that making better predictions on how much strategic resources are worth in corresponding factor markets is as critical as forming more accurate expectations on how valuable such resources are when used in firm-specific resource bundles. By focusing on the latter and disregarding the former, extant literature presents an incomplete story about factor market activities and their probable effects on value generation from resources. How do firms make predictions about market prices of strategic resources? What factors do determine how much to pay for a resource in a corresponding factor market? In an attempt to answer these questions, we focus on two factors that affect the psychology of resource pricing decisions. First is the similarity between focal resource and earlier resource pricing experiences. The second is organizational wealth. We conducted an experiment and an archival analysis in soccer leagues. We find that increased similarity increases accuracy in pricing decisions, but this positive relationship is not linear representing an upper bound on accuracy. Our results also demonstrate a quadratic relationship with decision speed. We find that similarity increases response time up to a certain level. After repeated practice in a relevant domain, decision-makers may develop intuitive expertise or find effective heuristic strategies, which speeds up decisions. Our study results further show that higher wealth may negatively affect precision and speed in resource pricing decisions. Wealthy companies may improve decision quality by constraining the financial resources allocated to resource acquisition. We finally discuss the theoretical and practical implications of study findings and extend future research directions.

STR: Hierarchical complexity and corporate opaqueness

Author: **Zhengyi Zhao**, *Beijing Information Science and Technology U.*
Author: **Dirk Boehe**, *Massey U.*
Author: **Ralf Zurbrugg**, *U. of Adelaide*
Author: **Jean Canil**, *U. of Adelaide*

This study examines the impact of hierarchical complexity on corporate opaqueness and how this relationship varies under the moderating effect of corporate diversification. We hypothesise that increases in firms' hierarchical complexity are related to greater corporate opaqueness between the firm and outside investors on the capital market. Using a sample of U.S. firms spanning 5 years from 2012 to 2016, we find a statistically and economically significant, positive relationship between hierarchical complexity and corporate opaqueness. The results of the study further imply that the impact of hierarchical complexity on opaqueness is alleviated when there is related corporate diversification involved in firms' business operations and structures.

Paper is Available to Meeting Registrants Only.

STR: New Insights on the Firm-Specific Human Capital Debate: Theoretically Decoupling KSAOs from Tasks

Author: **Thorsten Grohsjean**, *Bocconi U.*
Author: **David Kryscynski**, *Brigham Young U.*
Author: **Shad S. Morris**, *Brigham Young U.*

In this paper we try to reconcile the conflicting positions in the strategic human capital literature about the implications of firm-specific human capital by suggesting that human capital results from the complementarity that emerges when employee knowledge, skills, abilities, and other characteristics (KSAOs) match the tasks the firm requires to produce economic value. Doing so allows us to introduce a new human capital typology that can be expressed in a two-by-two matrix where the level of specificity of KSAOs to tasks is compared to the specificity of tasks to firms. The two-by-two matrix allows us to organize extant human capital research into three of the four cells, but also highlights an under-theorized cell that we call mobile firm-specific human capital. This type of human capital is characterized by tasks that are specific to the firm, but that only require highly general KSAOs. We then discuss how our framework helps us to revisit the firm-specific human capital debate but also its implications for the HR architecture that has set firm boundaries based on traditional notions of valuable and unique human capital, as well as aggregation issues related to the emergence of human capital resources within the firm.

Dynamic Capabilities, Survival, and Performance

Digital Session Chair: **Peiran Su**, *Oxford Brookes U.*

STR: Dynamic Capabilities of Cowan & Sons, Papermakers, Penicuik, 1779-1965 

Author: **Ying Ding**, *U. of the West of Scotland*
Author: **Peiran Su**, *Oxford Brookes U.*

We applied Teece's dynamic capabilities framework to understand the long-term prosperity of Cowan & Sons. Cowan was a successful Scottish papermaker founded in 1779 and acquired in 1965 as a profitable entity. We divided the firm's 187-year history into four periods (1779-1830-1914-1945-1965) based on critical technological, economic, and social changes in the external environment. We discussed the evidence of sensing, seizing, and transforming capacities to demonstrate how the firm reacted to the external changes. While dynamic capabilities explained Cowan's longevity and success, the historical evidence fed back to the understanding of dynamic capabilities.

STR: Why Co-working Spaces in an Analogical Context Exhibit Different Recovery Abilities after COVID-19?

Author: **Wanyue Wei**, *Chengdu U.*
Author: **Zheng He**, *U. of Electronic Science and Technology of China*
Author: **Lez Rayman-Bacchus**, *Winchester Business School, U. of Winchester, SO22 HT UK*
Author: **Tingting Jiang**, *U. of Electronic Science and Technology of China*

Despite co-working spaces as a typical type of platform organizations have attracted much attention in the era of sharing economy, little is known about why these spaces faced with an analogical environment showcase obvious differences in recovery ability when sudden shocks like the COVID-19 pandemic occur. To better understand this novel phenomenon, we collect data from Chengdu high-tech zone and employ fuzzy set qualitative comparative analysis (fsQCA) to identify causal configurations that are likely to lead to a high level of organizational resilience. Our findings reveal that: (1) there are five antecedent configurations multi-morphologically lead to the same outcome; (2) compared with other antecedent conditions, networking ability and diverse value co-creation with customers play more important roles in the formation of a high level of organizational resilience; (3) under certain circumstances, there is a substitutional relationship between industrial experience and communication ability. This study mainly contributes to organizational resilience literature and co-working space research. Some practical suggestions for pursuing co-working spaces' sustainable development are also provided. This paper is extremely useful for researchers and practitioners to understand organizational resilience in an unpredictable business environment.

STR: Dynamic managerial capabilities and entrant survival: insights from the solar PV industry life cycle

Author: **Ionna Trofimova Elliot**, *Association for Borderless Renewables*
Author: **Omar Al-Tabbaa**, *U. of Kent, Canterbury*

This study identifies the dynamic management capabilities which command firms' survival in their entries into both new and uncertain industries at the maturity stage of an industry lifecycle. Through quantitative data analysis, we reveal that the effect of these capabilities is asymmetrical: whilst dynamic management capabilities (reflected by prior industry experience of executive management) do not assist in entry during the evolution stage, more so, the length of prior industry experience available to entrants at a time of entry correlates to post-entry mortality rates, these capabilities are important to succeed in market entry during the maturity stage of an ILC. Our analysis comprises data from the energy sector during the evolution and maturity stages of solar photovoltaic industry. The empirical setting of the energy sector over the last three decades provides a fresh and ideal domain in which to test the success of entry timing decisions at various stage of an industry lifecycle in uncertain industry. Our results overwhelmingly support our central thesis regarding the specific impact of dynamic management capabilities on post-entry survival. We test and find a partial support for our hypotheses by analysing the acquisitions and joint ventures of 149 energy firms in years between 1997 and 2016. These findings have important implications for the literature on entry timing and dynamic management capabilities.

STR: Digital Transformation: meet or evade the Challenge? A Case Study in the Maritime Industry  

Author: **Beniamino Callegari**, *Høyskolen Kristiania*
Author: **Alessandra Luzzi**, *BI Norwegian Business School*
Author: **Ingvald Martinsen**, *BI Norwegian Business School*
Author: **Elise Walla**, *BI Norwegian Business School*

As the digital transformation wave expands, more and more existing firms find themselves lacking the capabilities required to cope with the transition. Management faces the question of developing new routines, resources and organizational structures without either damaging existing capabilities or missing current opportunities. We explore the issue through a case study of a large firm in the maritime industry, an industry leader in the digital transformation process. Our study uncovers a structural approach to the development of dynamic capabilities, focused on creating new organizations adjacent to the old structure, minimizing present interferences and attrition while simultaneously preparing the conditions for a sudden, controlled disruption process to take place in the medium term, timed to happen simultaneously with a structural change in market demand. Rather than digitally transform the existing firm, it appears preferable to build up a "born digital" structure from the ground up, benefitting from the domain expertise and the business network managed by the parent company. We argue that such approach may ease many of the tensions associated with digital transformation of oligopolistic incumbent firms and could be replicated widely outside the narrow confines of the maritime sector.

The Influence of Board Networks

Digital Session Chair: **Pardeep Maheshwaree**, *Aalto U.*

STR: The role of board members' networks in acquiring and using information for outsider CEO selection

Author: **Pardeep Maheshwaree**, *Aalto U.*

Author: **Jens Schmidt**, *Aalto U.*

Outsider CEO selection is one of the most difficult decisions for boards due to lack of information for evaluating suitable candidates. We hypothesize and find evidence that boards use their professional networks to obtain information about outsider CEO candidates in a sample of 318 outsider CEO appointments in S&P 1500 firms from 2004-2013. Our hypothesis that direct ties provide more reliable information and are thus more likely to lead to a candidate being selected than indirect ties was supported. We did not find support for the hypothesis that ties to members of the nominating committee or to more senior board members increase the likelihood of being selected, which indicates that in outsider CEO selection information quality matters more than individual board members' role or status.

Paper is Available to Meeting Registrants Only.

STR: Born Elite, Always Elite? How Board Chairs Gain Access to the Inner Circle of the Corporate Elite

Author: **Simone Maria Eulitz**, *LMU Munich*

Author: **Anja Christine Tuschke**, *LMU Munich*

In this study we examine the effects of board chairs' social class background on becoming a part of the inner circle of the corporate elite. We define the inner circle to consist of those directors best connected among the upper echelons by holding multiple board seats. In line with sociological research we argue that individuals with an upper class upbringing are more likely to be part of the inner circle of the corporate elite. Through an upper class upbringing directors learn the implicit social codes dominating behavior in the inner circle of the corporate elite and are therefore able to swiftly interact within this sublime circle. We further argue that disadvantages arising from not being socialized with such elite social codes can partly be compensated by offering superior qualification, i.e. a high level of human capital. Understanding the interacting dynamics of social class background and human capital might be a step towards opening the corporate elite to more diverse backgrounds.

STR: A Multidisciplinary Mapping of Political Connections Research: Looking Back and Looking Ahead

Author: **Qiao (Stella) Wei**, *Business School, U. of New South Wales, Sydney*

Existing studies on political connections reflect fragmentations, with scholars within one discipline failing to appreciate how the insights from other scholarship can advance research further. Also, existing political connection literature has largely been viewed as an area nested in other research streams such as nonmarket strategy and corporate political activity, while a systematic and specific review for the upgoing political connections literature remains needed. Relying on science mapping, this study offers a big picture displaying 1,537 systematically identified political connection literature published in 645 multidisciplinary journals over more than 28 years. In doing so, I identify (1) the intellectual structure of political connections based on the most influential works and (2) the research topics of political connections which are reflected in the highly discussed terms. Specifically, I map both the overall status and the evolution of these two aspects. To provide a range of research opportunities for political connections scholars, I describe the clusters in the maps with emphasis on the intellectual structure and research topics that have yet to explore.

Paper is Available to Meeting Registrants Only.

STR: The Co-Evolution of Board Networks and Corporate Strategic Action

Author: **Steffen Triebel**, *Leibniz U. Hannover*

Author: **Christiana Weber**, *Leibniz U. Hannover*

Author: **Julia Brennecke**, *U. of Liverpool*

Network dynamics and network outcomes are two popular research streams in management studies. However, even when assessing the same phenomenon, these research streams are usually treated separately. Using the example of interlocking directorates and corporate strategic actions in the form of acquisitions and divestitures, we model dynamics and outcomes as a co-evolution process. We show that, while acquisitions and divestitures influence changes in the focal firm's network, they are also explained by the focal firm's network position. Our results suggest that co-evolution approaches offer a more nuanced view than traditional analysis and have merit for the field of management studies.

Adapting to Disruptive Change

Digital Session Chair: **Joseph Simpson**, *Virginia Tech*

STR: Firm Security Orientation: Strategically Responding to an Increasingly Disruptive World

Author: **Joseph Simpson**, *Virginia Tech*
Author: **Richard Hunt**, *Virginia Tech*
Author: **David Matthew Townsend**, *Virginia Tech*
Author: **Maximilian Stallkamp**, *Virginia Tech*

Severe data breaches and cyber-attacks have heightened the salience of security issues facing firms as well as their suppliers, alliance partners, and customers. However, cyber-security is simply one of the many security challenges large firms face in pursuing growth while simultaneously forestalling attacks upon physical assets, intellectual property, supply chains, resources, employees, and customers. Paradoxically, precise strategic levers critical for firm growth – alliances, open innovation, emerging markets, cloud-based big data solutions, and others – are drivers of heightened security threats. Thus, security management issues have taken center stage in efforts to develop strategic responses to a disruptive world, especially as firms attempt to manage their growth objectives within an increasing complex threat environment. To frame these issues for strategy research, we propose and test a novel construct we have labeled “Firm Security Orientation” to assess firms’ ability and willingness to navigate growth-threat paradoxes.

Paper is Available to Meeting Registrants Only.

STR: Novelty and the Onset of Strategic Agenda Shifts: A Bayesian Perspective

Author: **Andrew Sarta**, *Ivey Business School*

The ability to adapt to novel technologies is crucial to strategic management yet challenging for incumbent organizations. Prior experience with technology among decision-makers is believed to ease the process of adaptation since familiarity channels attention toward technological terrains, which enables novel technologies to be detected and prioritized more readily. Paradoxically, familiarity with technology also suggests that experienced decision-makers would be increasingly aware that few novel technologies succeed, therefore, making them less likely to be prioritized strategically. By applying an attention-based view to the emergence of FinTech in financial services, I show the paradoxical nature of familiarity. Through an analysis of 1,400 earnings call transcripts, I leverage topic modeling and Bayesian regression to uncover that increased technological experience generally leads to increased prioritization of FinTech for incumbents; however, the increased prioritization of FinTech occurs when novelty is low. As both technological experience and novel technologies increase together, the probability of FinTech being deprioritized approaches 90%. The findings point to the importance of context in attention-based decision-making and that greater consideration should be given to the nature of stimulus in adaptation research.

STR: How Do Family Firms Respond Strategically to the Digital Transformation Trend?

Author: **Zixu Liu**, *Tsinghua U.*

Digitalization has been identified as one of the major trends changing society and business. Incumbent firms need to respond strategically to such a digital transformation trend in different forms. The results of our study on Chinese listed companies demonstrated that, as family firms have stronger needs for legitimacy, and are sensitive to invest in uncertain projects, they, compared with their nonfamily counterparts, are more likely to communicate more visions of digitalization, whereas less likely to invest substantively on digitalization, i.e., emphasizing digitalization in their annual reports a lot while making fewer digital investments. Furthermore, we also investigated firm-level and provincial-level contingencies. Specifically, we show that, the family firms that are located in provinces with better digital infrastructure are more likely to communicate more visions of digitalization and invest more substantively in digitalization. Also, the family firms that have finished the intergenerational succession process are more likely to communicate more visions of digitalization.

STR: Intuition, Reflection and Organizational Adaptation to Discontinuous Change

Author: **Marlon Fernandes Rodrigues Alves**, *Federal Institute of Education, Science and Technology of São Paulo*
Author: **Vincenzo Vastola**, *Montpellier Business School*
Author: **Simone Galina**, *U. of Sao Paulo (FEA/USP)*
Author: **Maurizio Zollo**, *Imperial College Business School*

The phenomenon of adaptation to discontinuous change is a subject of long-standing inquiry in organizational theory. A key source of variation in organizational adaptation is managerial cognition, as it engenders both routine inertia and change. Yet, empirical research on the role of cognitive processing types (Type 1-intuition and Type 2-reflection) in organizational adaptation to discontinuous change is nonexistent. To close this gap, we theorize and show the causal effect of cognitive processing types on group adaptation under different ambiguity conditions. Using a longitudinal, behavioral, no-deception, between-groups experimental design, we introduce a discontinuous change that makes previous routines obsolete to observe how groups adapt. Analyzing behavioral data from 80 groups of experienced managers, we find that: (1) priming Type 1 processing increases organizational adaptation more than Type 2; (2) this effect is stronger in conditions of high ambiguity; and (3) there is no difference between cognitive types when ambiguity is low. Therefore, our findings suggest not only that the nature of change imposes specific cognitive challenges for organizational adaptation, but also that the level of ambiguity of the environment influences the efficacy of the cognitive processing types. Overall, our study advances the understanding of the interplay between managerial cognition and environmental ambiguity on organizational adaptation to discontinuous change.

Evolution of Platforms and Bottlenecks

Digital Session Chair: **Ksenia Podoyntsyna**, *JADS, Joint Graduate School of Tilburg U. and Eindhoven U. of Tech.*

STR: Bottlenecks as Drivers of Evolution in Innovation Ecosystems - A Systematic Literature Review

Author: **Thomas Draschbacher**, *Graz U. of Technology*

Author: **Michael Rachinger**, *Graz U. of Technology*

Bottlenecks have recently emerged as one of the key objects of inquiry in research on ecosystems. However, as the concept of ecosystems in management research and business strategy suffers from a lack of theoretical clarity and rigor in application, definitions of bottlenecks used by different scholars often diverge dramatically. Additionally, despite the high potential significance of the topic to practitioners in today's interconnected business reality, existing literature on strategies to address bottlenecks in ecosystems is disparate and yet to be unified under the roof of an overarching research agenda. We aim to solve this fragmentation by synthesizing existing literature on bottlenecks in the specific case of innovation ecosystems. The results of this study aim to contribute to the research strand of innovation ecosystems in business strategy by (1) offering a clear definition of bottlenecks in innovation ecosystems, (2) by providing a typology to distinguish different types of bottlenecks in innovation ecosystems, (3) by describing overarching strategies that actors can apply to address these bottlenecks, and (4) by conceptualizing bottlenecks as drivers of evolution in innovation ecosystems.

STR: A Complementor Strategy Based on Fit With Platforms and Competition Among Products

Author: **Vera Verwijmeren**, *Jheronimus Academy of Data Science*

Author: **Ksenia Podoyntsyna**, *JADS, Joint Graduate School of Tilburg U. and Eindhoven U. of Tech.*

Within platform markets, research is dominated by the platform owner's perspective. This study takes the complementor perspective and investigates how complementors can decrease the timeframe needed to sell their products on the platform. Products could have various degrees of fit with different platforms, ranging from bad to excellent. Therefore, we introduce a new concept, namely fit between a product and platform, and develop two distinct measures for it: the number of subcategories and the number of details in product presentation on the platforms. Based on survival analyses and Rubin's potential outcomes framework, we observe a negative relationship of fit with the timeframe needed to sell a product. More specific, complementors will be able to sell 10% faster when aligning their products to the more appropriate platforms. Another element that is researched in this study is the competition among products. We identify an inverted U-shaped relationship, signaling that the benefits of indirect network externalities only hold up to a certain extent for complementors, after which the disadvantages of crowdedness dominate. This contradicts current literature from the platform owner's perspective, which mentions that the benefits of indirect network externalities take place without boundaries.

Paper is NOT Available. Please contact the author(s).

STR: The Shape-Shifting Dynamics of Digital Platform Disruption: How Grab Leveraged Established Players

Author: **Nina Teng**, *London Business School*

Author: **Michael G Jacobides**, *London Business School*

Through our historical case study of the Southeast Asian digital ride-hailing platform ecosystem, we find evidence that incumbents faced with an innovative platform entrant first ignore and then accommodate them, rather than repelling them. This is because there is no clear sense of who is an entrant or incumbent, friend or foe, as industry boundaries are effaced and proactively reconstructed over time. The digital platform entrant we studied, Grab, had the advantage of being able to morph and transform itself. Rather than trying to adapt to the existing industry architecture, it repositioned its business model with little regard for the focal industry or its incumbents, who ultimately clamored to support the disruptive digital platform entrant. Our study contributes a novel perspective on incumbent-entrant dynamics to research on disruptive innovation and digital platform ecosystems.

STR: Yes, Get Closer to Your Enemies: Rivals' Product Entry and Focal Firm's Shifts in Exploration Focus

Author: **Kinde M. Wubneh**, *U. of Texas at Austin*

Extant research has long noted the criticality of firms successfully shifting between exploitation and exploration to secure a sustainable competitive advantage. In focusing on internally driven tradeoffs these firms may face, we do not yet have a more comprehensive understanding of the external drivers affecting a firm's exploitation and exploration decisions. Some studies focusing on the influence the environment may have on a firm's decision to exploit and explore note for example market dynamism as predominant stimuli. Yet, we postulate that firms' shifts from exploitation to exploration may be driven due to a specific actor — rivals. Based on FDA medical devices data from 1990 – 2020, we show that exploratory rival entry in a product area prompts domain and firm specific reasons for firms to shift to exploratory entry into that domain as well. Furthermore, this study also finds that several rivals entering, will however reduce this likelihood of entry, while firms with low technological diversity are more likely to develop additional exploratory products in that focal domain.

Value Creation and Appropriation in Firms: Methodological Challenges and Research Opportunities *VCA in Firms: Challenges and Opportunities*

Coordinator: **Gerhard Schnyder**, *Loughborough U.*
Panelist: **Marvin B Lieberman**, *UCLA Anderson School of Management*
Panelist: **Natarajan Balasubramanian**, *Syracuse U.*
Panelist: **Philipp Kern**, *Loughborough U.*
Panelist: **Blanche Segrestin**, *Mines ParisTech*
Panelist: **Jeroen Veldman**, *Cass Business School, City U. London*

The stakeholder value creation and appropriation (VCA) approach is a new lens for understanding how the economic value created through the firm's activities is shared among its immediate stakeholders—employees, customers, suppliers, government, and capital owners. A series of recent articles in the *Strategic Management Journal* have conceptualized the approach, developed the method, and shown its application in comparative case study analysis (Garcia-Castro and Aguilera, 2015; Lieberman, Garcia-Castro and Balasubramanian, 2017; Lieberman, Balasubramanian and Garcia-Castro, 2018; Kern and Gospel, 2020). The approach holds potential beyond the Strategy field: as a tool for investigating how firm-level decisions and practices create winners and losers, but also as a new way of linking these micro-level patterns to macro-level pressures and outcomes, thereby helping Management scholars contribute to addressing one of the world's grand challenges. The need to better understand inequality in and around organizations has been acknowledged in recent years (Suddaby, Bruton and Walsh, 2018; Amis, Mair and Munir, 2020; Bapuji, Ertug and Shaw, 2020) but has been laid bare in particular during the Covid crisis (Bapuji et al., 2020; Munir, 2020). The goal of this panel symposium is therefore to take stock of how the stakeholder VCA approach has been used so far, reflect on considerations and practicalities of applying it to new empirical settings and research questions, and engage in a discussion of how it could be used to help us unpack the complex relationship between organizations and inequality. To this end, we bring together scholars who are experts on the approach with those who are pursuing research that could stand to benefit from it.

**Strategic Decision Making and the Pursuit of Conflicting Goals:
Taking Stock and Looking Ahead**
Strategic Decision Making and Conflicting Goals

Organizer: **Cha Li**, *U. of Michigan*
Organizer: **Tara (Fengchun) Li**, *Drexel U.*
Panelist: **Felipe Csaszar**, *U. of Michigan*
Panelist: **Vibha Gaba**, *INSEAD*
Panelist: **Metin Sengul**, *Boston College*
Panelist: **Jack A. Nickerson**, *Washington U.*

Strategy and organization research has long recognized that decisions in firms are rife with conflicting goals and interests. However, despite the ubiquity of conflicting goals and the importance to manage them effectively, existing research on strategic decision making largely assumes unitary goals. As a result, there is still a lack of understanding on how conflicting goals influence strategic decision making and how firms can better manage them. This panel symposium brings together a group of distinguished scholars who do cutting-edge research in this area and employ diverse methodologies (e.g., conceptual, empirical, and simulation-based). In particular, the panelists will discuss how taking into account conflicting goals generates new insights on several key aspects of strategic decision making, including (i) search in a complex environment, (ii) responses to performance feedback, (iii) adaptation to disturbances, and (iv) design of organizational structure and processes. Overall, this symposium aims to facilitate research that offers a more fine-grained understanding of how conflicting goals influence strategic decision making and provides practical implications on how firms can effectively deal with conflicting goals.

Networks and Performance

Digital Session Chair: **Caio César Medeiros-Costa**, *U. of Brasilia*

PNP: **Political and Technical Information Exchange in Adversarial Policy Networks (WITHDRAWN)** 

Author: **Jeongyoon Lee**, *U. of Kentucky*
Author: **Kun Huang**, *U. of New Mexico*

Information exchange is one of the essential elements of learning processes in policy subsystems or networks. The role of scientific and technical information in structuring policy subsystems or networks is a foundational tenet of the Advocacy Coalition Framework. Previous research focuses on trust and political influence as drivers of information exchange between actors in networks or subsystems. Few studies examine how low levels of trust and political power disparity, common in adversarial policy networks, are associated with information exchange. Using the quadratic assignment procedure multiple regression, we analyze political and technical information flows in an adversarial local hydraulic fracturing policy network in New York. We found that low levels of trust between policy actors increase political information exchange, and a larger power disparity constrains political information exchange, despite existing informal collaborative relationships. Also, low levels of trust strengthen technical information exchange between collaborative actors in the network. These findings extend research on policy networks and ACF scholarship by pinpointing novel contingencies of political and technical information exchange in an adversarial network.

PNP: **Do what you want or what you are told? The effect of forced collaboration on governmental performance** 

Author: **Caio César Medeiros-Costa**, *U. of Brasilia*
Author: **Marcelo Marchesini Da Costa**, *Inspere Institute of Education and Research*
Author: **Alexandre Rabelo Patury**, *U. of Brasilia - Brazil*

Collaboration is an important topic in government studies but collaboration does not always produce the intended results. One of the factors differentiating collaboration between public agencies is the motivation and initial conditions of these arrangements. This paper investigates the effects of forced collaboration on police inquiries in Brazil. Using a unique dataset with all enquires conducted in 2017 and 2018, besides interviews with police chiefs, this paper indicates that inquiries demanded by an external partner have a higher rate of success but take longer to finish. Additionally, forced collaboration interacts with police chiefs' experience to improve performance indicators. On the other hand, forced collaboration interacts with police squads/units based in state capitals, leading to worse results. This paper raises insights to discuss the effectiveness of collaboration between public agencies imposed by legislation. These forced collaborations may align government organizations, but can also compromise efficiency and create additional accountability challenges.

Paper is Available to Meeting Registrants Only.

PNP: **Knowledge-based Resources and Public-Nonprofit Partnership Performance** 

Author: **Aline Santos**, *Fundação Getúlio Vargas/EBAPE*
Author: **Alketa Peci**, *EBAPE/FGV*

Prior research recognizes that both formal and relational factors, defined here as intangible resources, play a role in public-nonprofit partnership (PNP) performance. However, studies overlook the specific role of knowledge-based resources in PNP performance. This study contributes to theory on the role of intangible resources in PNP performance by adopting a resource-based view (RBV) of partnerships to investigate how knowledge-based resources influence PNP performance. Using a unique panel dataset of 108 PNPs with philanthropic hospitals in Minas Gerais, a Brazilian state, we adopt a plural approach to PNP performance as evidence of positive outcomes. Our results suggest that overall, knowledge-based resources are positively correlated with both dimensions of PNP performance, collaborative and productivity performance. The findings show that collaborative experience in PNPs helps increase the rates of hospitalizations, one objective measure of productivity performance. While experienced philanthropic hospitals leverage more funding, experienced local governments face issues in funding routines due to nonprofits' competition for funding. We detect a strong relationship between partnership age and PNP performance: older PNPs tend to gather more funding and deliver more health care services. Our findings support the role of knowledge-based resources in PNP performance and shed light on the role of knowledge resources in value creation in collaborations.

 PNP: **Purpose-oriented Networks and their Environment: A Population Ecology of Network Domains**

Author: **Branda Nowell**, *North Carolina State U.*
Author: **Kate Albrecht**, *U. of Illinois at Chicago*

Charles H. Levine Award for the Best Conference Paper in the Public and Nonprofit Division

Purpose-oriented networks have arisen to center-stage in the field of public management as a crucial, and increasingly prevalent, forum for addressing complex or wicked public issues in local communities. Recently, scholars have identified the need for greater theorizing on environmental factors and their influence on purpose-oriented networks. Theories of population ecology aim to understand population level dynamics within organizational settings. In this study, we apply theories of population ecology to advance scholarship of network domains. Network domains are defined as populations of purpose-oriented networks active within the same mission and geographic area. Using a longitudinal bipartite dataset of 74 different purpose-oriented networks nested in three different geographic areas, we test a series of hypotheses drawn from population ecology concerning the impact of domain saturation on organizational and network-level outcomes. Analysis employs a combination of dynamic network modeling using stochastic agent-oriented models, as well as case study and standard OLS regression techniques. Findings offer support for the relevance of population level dynamics in explaining network change over time. Specifically, findings indicate that the introduction of new networks into the domain attracts members away from existing networks and can lead to network dissolution. Findings further suggest that this effect is more pronounced in more saturated network domains. Implications for advancing a population ecology of networks is discussed as well as a cautionary tale for public and philanthropic initiatives which require the introduction of new networks as a requirement of funding.

The contextual embedded influence of religion on women entrepreneurial leadership in Africa, Latin America, and South Pacific.

ContextReligionWomenEntrepreneursAfricaLACPacific

Participant: **Caren Brenda Scheepers**, *Gordon Institute of Business Science*
Participant: **Ethne Swartz**, *Montclair State U.*
Participant: **Daniela Alejandra Gimenez Jimenez**, *TU Dortmund U.*
Participant: **Ofer Zwikael**, *Australian National U.*

Participant: **Nasima Mohamed Hoosen Carrim**, *GDO*
Participant: **Shumaila Yousafzai**, *Cardiff U.*
Participant: **Birgit Muskat**, *The Australian National U.*

Our PDW focuses on the Contextual Embedded Influence of Religion on Women Entrepreneurial Leadership in three emerging market regions, namely Sub-Saharan Africa (SSA), Latin America and Caribbean (LAC), and the South Pacific region. This PDW involves women entrepreneurship scholars from these three regions. Building on New Institutional Theory, we highlight that religion as an informal institution, shapes gender roles, which in turn affects women entrepreneurs' choice of business (traditionally female activities such as retail and foodservice versus non-traditional activities such as engineering or manufacturing); role models, and the role of social capital in conferring access to funding and available business networks. The three regions under discussion represent the world's major religions (Islam, Hinduism, Christianity, both Pentecostal and Catholicism traditions, and traditional African and indigenous religions) and offer an opportunity for deeper exploration of the influence of these informal institutions on women entrepreneurial leadership. Using Welter's contextual entrepreneurship framework, we consider the influence of socio-spatial geographical regions and post-colonial periods with the resultant patriarchal traditional religious norms on women entrepreneurship in the three regions. Our research question revolves around how religion might restrain or promote women entrepreneurial leadership in these three regions. Aligned with the 81th Annual AOM theme for 2021 on managers, our PDW endeavours to enhance the ability of women to manage resources strategically in their entrepreneurial activities. Our PDW offers an opportunity for AOM scholars in participating in building a vibrant entrepreneurial ecosystem for women entrepreneurs in these three regions.

Fit and Embeddedness

Digital Session Chair: **Aichia Chuang**, *U. of North Carolina, Greensboro*

CAR: **Psychological and Neurological Correlates of Perceived Person-Environment Relational & Rational Fit**  

Author: **Aichia Chuang**, *U. of North Carolina, Greensboro*

Author: **Yu-Ping Chen**, *National Taiwan U.*

Author: **Tsung-Ren Huang**, *National Taiwan U.*

Author: **Hsu Min Lee**, *National Taiwan U.*

Current theorizing of person–environment fit rests predominantly on investigations performed according to psychological methods. The current study advances fit research by exploring the meaning and antecedents of perceived fit via the neuroscientific method of functional magnetic resonance imaging (fMRI). Using brain images of trait-like and state-like activities of 62 participants in Taiwan, we found that the participants’ engagement in relational-fit and rational-fit contexts corresponded to four brain regions: the posterior cingulate cortex, the precuneus, the medial prefrontal cortex, and the bilateral temporoparietal junction. These regions involve social constructs (e.g., mentalizing, perspective-taking, empathy) and drive cognitive, emotional, and social processing. In our study, the regions exhibited greater activation when participants engaged in relational-fit contexts than in rational-fit contexts. We also found that participants’ emotional intelligence predicted their person–group fit (PG fit) and that their cognitive intelligence predicted their person–job fit (PJ fit), the latter relationship being further mediated by cognition-related brain connectivities in the frontoparietal network (FPN). Our research advances the debate over the affective vs. cognitive roots of perceived fit, provides possible construct validation for perceived fit, identifies a potential neurological antecedent for PJ fit, and presents promising directions for future neuroscientific investigations into fit.

CAR: **Should I stay or should I go? Examining Occupational Culture Fit of the Manufacturing Labor Force**

Author: **Enrique Barreiro**, *Trident U. International*

Author: **Indira Rita Guzman**, *Trident U. International*

Understanding the reasons why manufacturing workers may leave or stay in an occupation is a topic of importance amongst researchers and the manufacturing world. Although extensive research has been conducted on organizational culture, turnover intentions, and commitment, the impact of Occupational Culture Fit on employees’ decision to stay or leave the occupation remains unclear. Building on the theories of Group and Grid Dimensions of Occupational Culture Fit, Social Identity, Social Exchange, and Image Theory, this study examines the link between Occupational Culture Fit, Occupational Global Job Embeddedness, Occupational Commitment, and Occupational Turnover Intention. Using Smart PLS for measurement and structural model analysis, a model was tested with 201 responses from individuals working in manufacturing organizations located in the Midwest of the United States. The findings of this study indicate that there is a positive relationship between Occupational Culture Fit, Occupational Global Job Embeddedness, and Occupational Commitment; and Occupational Commitment and Occupational Turnover Intentions. The findings extend the theoretical study of Group and Grid Dimensions of Occupational Culture Fit, Social Identity, Social Exchange, and Image Theory by improving our understanding of the impact of Occupational Culture Fit, and Occupational Job Embeddedness on Occupational Turnover Intentions and Occupational Commitment.

Paper is Available to Meeting Registrants Only.

CAR: **Working on the Edge: Precarious Employment in Organizational Research**

Author: **Kurt Kraiger**, *U. of Memphis*

Author: **Rachel Muhammad**, *Federal Express*

Research in the organizational sciences routinely assumes that the relationship between the worker and the organization is both relatively permanent and reciprocal. In this paper we define and discuss the construct of precarious employment – a work arrangement that, from the perspective of the employee, lacks stability and creates unpredictability, uncertainty, and risk from the perspective of the worker. We explore a relatively new way of measuring precarious employment and then propose and test whether precarious employment moderates the relationship between person-job fit and turnover intentions. We do this to illustrate the importance of considering and testing whether traditional findings and models in organizational research may differ between precarious workers and those in more stable positions. We found that the precarious employment scores were internally consistent and predictive of job attitudes such as job satisfaction and career satisfaction. Person-job fit scores were negatively correlated with turnover intentions (as predicted), but the effect was weak and non-significant. Crucial to our central purpose, employment precarious scores significantly moderated the relationship between fit and turnover intentions, albeit in a different form than expected. Limitations of the design and suggestions for future research were provided.

CAR: **How Do High Performance Work Practices Shape Organizational and Occupational Embeddedness?**  

Author: **Romila Singh**, *U. of Wisconsin, Milwaukee*

Author: **Xiaoxia Zhu**, *U. of Wisconsin - Milwaukee*

Author: **Megha Yadav**, *U. of Wisconsin, Milwaukee*

Author: **Nadya Fouad**, *U. of Wisconsin, Milwaukee*

Embeddedness refers to the forces that keeps an employee in the job, organization or occupation. However, extant research on different foci of embeddedness has predominantly focused on organizational embeddedness and relatively little attention has been paid to other form of embeddedness. In this study, we focus on the nature of the relationship between organizational and occupational embeddedness. Following Kiazad, Holtom, Hom, and Newman’s (2015) conceptual model that proposed antecedents and outcomes associated with different foci of embeddedness, we use Conservation Of Resources (COR) theory, to examine the differential relationships between High Performance Work Practices (HPWPs) and two forms of embeddedness - organizational embeddedness and occupational embeddedness. We further extend Kiazad et al.’s (2015) model to pose research questions that explored whether organizational embeddedness mediated the relationships between HPWPs and occupational embeddedness, as well as whether there were gender differences in the relationship between HPWPs and organizational and occupational embeddedness. Using data from 1,925 engineers, we demonstrated that HPWPs have a direct influence on both organizational embeddedness and occupational embeddedness. However, the effects of all three forms of HPWPs were stronger on organizational embeddedness than on occupational embeddedness. Further, we found that organizational embeddedness fully mediated the effects of HPWPs on occupational embeddedness. Finally, we did not find any gender differences in the relationships between HPWPs and organizational and occupational embeddedness. Theoretical and practical implications of this research are discussed.

Social Class and Gender in Working Lives Across the Globe: An Intersectional Perspective

Class and Gender in Working Lives Across the Globe

Organizer: **Lea Katharina Reiss**, *WU Vienna*
Organizer: **Wolfgang Mayrhofer**, *WU Vienna*
Discussant: **Kathleen L. McGinn**, *Harvard U.*

Against the backdrop of enduring gender and class inequalities, this symposium explores the relationship between social class and gender in various facets of working lives in different national and professional settings from an intersectional perspective. While career, HRM and gender issues have long been in the focus of management scholars, related research on impacts of social class and the interplay of gender and class is still scarce. This symposium assembles different perspectives from Africa (Nigeria), Asia (India), Europe (UK), North America (USA), and South America (Brazil) to provide fine-grained insights into the complexity of gendered and classed life experiences and address related challenges at the individual, organizational, and societal level.

Presenter: **Mindy Truong**, *U. of Southern California*

If there is one thing that recent events have shown, it is that systemic inequality needs to be addressed. From a systems perspective, solving inequalities will require a diverse group of stakeholders to understand what fuels and maintains inequality—ideally informed by empirical findings. This symposium presents five empirical papers that, together, provide a framework for individuals to start to understand inequality from three different lenses—income, power, and culture—and how they can take action against inequality in the workplace. We start with resource-based differences (i.e., income); Hauser and colleagues will show how providing unconditional cash transfers can impact well-being, cognitive capacity, and physical health, and its implications in the workplace. Next, du Plessis et al. will pivot to look at how one's structural position in the power hierarchy (i.e., power inequality) shapes a person's trust and cooperation. Then, the last three papers will examine inequality through a cultural lens—an outcome of a cultural divide between mainstream institutions and the social groups that participate in them. Han and colleagues will demonstrate the importance of subtle environmental cues at work for the sense of belonging of individuals who come from working-class backgrounds. Fourth, Dittmann et al. will expand on the importance of cultural mismatch to show that organizational values, both espoused and enacted, are crucial to mitigating inequality and harnessing the potential of individuals who come from working-class backgrounds. Fifth, Truong and Townsend will show that people from working-class backgrounds may bring a unique set of cultural competencies that convey advantages in organizational life. Phillips will serve as the discussant and make the case for why managers and organizations should care about solving inequality. Together, this symposium presents a theoretically-driven framework to understand social class inequality, and discuss possible ways managers can mitigate its negative impact in organizations.

‘Not everything that is faced can be changed, but nothing can be changed until it is faced’. – James Baldwin (1962) The purpose of this symposium is to broaden and intensify the discussion of ways humanity might disengage from the putative imperative of unbridled economic growth. Central to this discussion is the critical re-examination of economic and social relations in organizations and relations between organizations and the natural environment. Hence, for this panel symposium, we invited scholars that participated in a special issue for Organization on organizations and organizing in a post-growth era to reflect on how economic growth is conceptualized (implicitly or explicitly) in existing theoretical frameworks and in the paradigmatic underpinnings (often functionalist) of these frameworks. Relatedly, we think it is essential to reimagine organizations and their impacts under macro-economic conditions characterized by decoupling of resources, the steady-state economy, or even conscious degrowth—which requires a radical paradigm shift and other fundamental changes that can elevate human happiness, well-being, quality of life and other non-economic criteria from the periphery to the center of organizational analysis. We approach this challenge first by discussing the hegemonic properties of growth ideology and second by sketching an alternative political economy as a context for reimagining social and economic relations within planetary capacities in a post-growth era. Drawing on degrowth literature in ecological economics, sociology and political ecology, we identify key principles relevant to processes of organizing for a more just and environmentally sustainable future: frugal abundance, conviviality, care, and open relocation. We conclude by introducing some thoughts about theorizing policy and regulatory changes needed to generate transformational change and a future research agenda beyond growth.

Recent scholarly work on necessity entrepreneurship has highlighted shortcomings in theoretical development underlying the construct and, by extension, limitations in our understanding of the behaviors of individuals we assign to this category. While necessity entrepreneurs compose a sizable proportion of the world's entrepreneurs (approximately 30% according to Global Entrepreneurship Monitor data), theory about their behavior remains sparse, and our understanding of who they are, their motivations and their outcomes remains limited. Often conceptualized within a push-pull framework, necessity entrepreneurship occurs when individuals are pushed into entrepreneurship by negative forces, as opposed to opportunity-motivated entrepreneurship, which occurs when individuals are pulled into founding a venture by the attractiveness of an opportunity. This push-pull framework has resulted in a dichotomous view that, despite being widely used, some scholars have described as over-simplified, and unable to account for the wide array of antecedents, processes and outcomes. In this symposium, we convene established scholars who routinely use these constructs in the field. We highlight recent work to develop the constructs, identify use cases where a dichotomous framing of entrepreneurial motivation is insufficient, and suggest ways to develop a more meaningful framework moving forward. This symposium aims to contribute by further developing our understanding of the necessity entrepreneur, by considering new frameworks to better explain the nuance in nascent entrepreneurial motivation, and by discussing practical steps for measuring these constructs in the field.

ENT: **Social Exclusion and Financial Barriers to Entrepreneurship**

Author: **Arzi Adbi**, *NUS Business School*

Author: **Siddharth Natarajan**, *Chinese U. of Hong Kong*

Although extant theory highlights the importance of access to sources of entrepreneurial finance, it provides less insight into how marginalized individuals' financial barriers to entrepreneurship are influenced by the adoption of digital financial technologies such as mobile money. We reconceptualize financial barriers to entrepreneurship as a combination of access to sources of finance and frictions in financial transactions. We argue that adoption of mobile money by individuals increases their entrepreneurial intentions particularly when individuals face higher social exclusion, and that mobile money and bank accounts work in a complementary manner particularly when individuals face higher social exclusion. Analyzing recent data from the Global Findex Database on a large sample of 154,472 adults across 144 countries, we find support for our core arguments. Overall, we extend theory on financial barriers to entrepreneurship, and enrich the emerging narrative on mobile money by highlighting the importance of complementarity between mobile money and bank accounts.

ENT: **Are the Futures Computable? Knightian Uncertainty & Artificial Intelligence**

Author: **David Matthew Townsend**, *Virginia Tech*

Author: **Richard Hunt**, *Virginia Tech*

The growing sophistication of artificial intelligence (AI) tools promises to revolutionize organizing processes in the near future, transforming how firms identify, gather, analyze, and utilize information from their internal and external operating environments. The business venturing process, however, presents a unique set of challenges for AI tools since entrepreneurs often must navigate informational environments characterized by Knightian Uncertainty, defined as an unbounded set of future possibilities which cannot be measured or predicted. Because these uncertainties are by definition, unmeasurable using probabilistic tools, the presence of unmeasurable sources of Knightian Uncertainty logically raises questions about the long-term viability and relevance of AI tools to the field of entrepreneurship. In this study, we examine these questions through the lens of computational theory – namely the Church-Turing computability thesis – to examine the extent to which particular classes of AI tools are capable of addressing the unique epistemic problems intrinsic to Knightian Uncertainty in entrepreneurship. In doing so, our comprehensive analysis of the organizational implications of AI tools through the lens of modern computational theory allows us to identify the effective limits and boundary conditions of AI tools to navigate entrepreneurial environments characterized by Knightian Uncertainty. We conclude the paper with a robust future research agenda at the intersection of artificial intelligence and entrepreneurship theory.

ENT: **Quantum computing, quantum innovation and entrepreneurial opportunities**

Author: **Ataullah Kiani**, *U. of Science and Technology of China*

Quantum computing and information processing use quantum phenomena such as quantum state superposition and entanglement to exponentially perform calculations with high-level accuracy. Progress towards the development of the large-scale quantum computer is becoming a reality and these events mean the 21st century could be called “The Quantum Age.” Innovation in quantum technologies is one of the hot topics and intricate challenges to the scientific and business community to cope with modern economic and entrepreneurship goals. To have a strong business market and entrepreneurship, we need to have a strong awareness of the latest technological aspects and developments, particularly quantum innovation which is one of the highest economic sinks in advanced countries. Although the largest economies of the world are devoting large amounts of government funds to develop quantum technologies, countries are competing to establish themselves as leaders in quantum innovation, but still, it's very early to claim who will win the race. This paper is dedicated to outlining the entrepreneurship challenges and opportunities for the next quantum technology and innovation decades. Quantum devices have a very wide range of real-time applications e.g., defense, agriculture, interdisciplinary and fundamental research, health and medicines, artificial intelligence, geographical and geological implementation, space and upper atmosphere control and manipulation. The most noteworthy revolutions and discoveries of our time are gradually expected to be evident at Quantum levels. Numerous examples of varying Quantum technologies offer noteworthy results to present worldwide challenges in countless critical parts of the human endeavor and may also present outstanding prospects for active, courageous and scientifically knowledge entrepreneurs, innovators and investors.

ENT: **Beyond Fundraising—Token Dispersion and Venture Performance in Initial Coin Offerings**

Author: **Christian Schaefer**, *Chair of Innovation Management, TU Dortmund U.*

Author: **Steffen Strese**, *TU Dortmund U.*

During the funding campaign of an early-stage venture, investments by the team in their own venture are considered a signal of value indicating a promising future. However, emerging funding models such as initial coin offerings (ICOs) present challenges to established theories due to their unique characteristics. In particular, utility tokens issued in an ICO, which sometimes raise millions of dollars for the issuing venture, are listed on exchanges—just like shares—while they may also be utilized within the venture's ecosystem. Combining signaling theory and the resource-based view in the context of ICOs, this study investigates signals of post-funding venture performance. In contrast to established signaling theory concepts, we reveal a positive association between higher token dispersion (i.e., lower retention by insiders) and post-funding venture performance. We explain this with the unique features of tokens as both investment and utility tools. Further, we show that a venture's efforts to increase transparency regarding its strategy amplifies the relation between token dispersion and post-funding venture performance. We contribute to signaling theory and entrepreneurial finance literature by theorizing and demonstrating why in the context of an emerging funding model, a signal's direction of efficacy opposes the predictions of established theoretical concepts.

Founders and Family Firms

Digital Session Chair: **Martí Guasch**, *ESADE Business School*

ENT: Manager's Body Expansiveness, Investor Perceptions, and Firm Forecast Errors and Valuation

Author: **Martí Guasch**, *ESADE Business School*
Author: **Tony Davila**, *Faculty of Business and Economics (HEC Lausanne), U. of Lausanne*

We examine the relation between a measure of managers' physical display—body expansiveness—and favorable reporting practices (in firm forecasts and valuation information) and performance (survival and financing success). We videotaped a sample of 154 entrepreneurs pitching their business idea and obtain 2D skeletal information about speakers' physical joints. We show that physical expansiveness correlate with higher forecast errors and proposed firm valuations, lower rates of survival, yet higher likelihood of funding success. We argue that investors do not correctly incorporate the informational value of nonverbal communication, and propose a behavioral argumentation. In the cross section, results dissipate for older and VC-backed companies (governance). We further corroborate the proposed mechanism by studying entrepreneurs' personal characteristics. Altogether, we shed light on an overlooked information set—nonverbal behavior—and relate it to firm forecasting, valuation, survival and financing success; important factors in the assessment of investment opportunities, deal structure, and ex-post monitoring.

ENT: Displaying and negotiating entrepreneuring expertise in context: A practice theory perspective

Author: **Betsy Campbell**, *Pennsylvania State U.*
Author: **Neil Aaron Thompson**, *Vrije U. Amsterdam*

In this paper, we use practice theory to expand what is known about entrepreneurial expertise. The study presents evidence suggesting that expertise is accomplished by entrepreneurial team members for and by themselves in ordinary workplace interactions. We discuss four types of expertise that reveal how entrepreneuring practitioners establish and assess knowledge positions given uncertainty constraints, integrate external abstract knowledge into their situation, and reject or replace their lived experiences with abstract knowledge. The study advances theory on entrepreneurial expertise and contributes to the literature of the entrepreneurship-as-practice.

ENT: Family events and new venture survival: effects of positive and negative affect on entrepreneurs

Author: **Pi-Shen Seet**, *Edith Cowan U.*
Author: **Alex Tai Loong Tan**, *National U. of Singapore*
Author: **Wee-Liang Tan**, *Singapore Management U.*

This paper investigates how family events impact founding entrepreneurs' psychological affect during the new venture creation process and whether their ventures commenced before such events continue to be viable. We also explore the impact of the interaction of family events and overconfidence on new venture survival. We use panel data drawn from the Australian Household, Income and Labor Dynamics (HILDA) survey, focusing on non-venture related, family event-induced psychological affect that entrepreneurs may experience as a predictor of their new venture survival. Our accelerated failure time model results are consistent with past arguments in the social psychology literature, that ceteris parabis, positive events have a positive influence and negative events have a negative influence on survival. However, when entrepreneurial overconfidence is considered, although the interaction between negative family events and entrepreneur overconfidence spurs cautious behaviour to a small degree as anticipated, it is positive events interacting with overconfidence that makes the biggest impact (negative) on the new venture. The research contributes to our understanding of the embeddedness of family in the entrepreneurial process – specifically how major family events, such as the birth and death of a child and marriage and divorce, which seemingly have little or nothing to do with the new venture, can impact its survival. New founders experiencing a major family event(s) can be psychologically affected through their feelings, emotions and moods. The viability of the startups they helm depend on their ability to manage these stressors. It challenges past assumptions by revealing how positive family events can have comparatively greater negative impact on new venture survival than negative ones. Keywords: Family events; psychological affect; overconfidence; new venture survival; affect spin

ENT: Homogamy or Heterogamy: The Effects Of CEO Marriage on Family Firm Performance

Author: **Xi Yang**, *East Stroudsburg U.*
Author: **Wanrong Hou**, *U. of Texas Rio Grande Valley*
Author: **Wencang Zhou**, *Montclair State U.*

By integrating the complementary needs theory of mate selection and the notion of complementary assets into the research of family business, we propose that three components of spousal capital complement each other. We elaborate on how homogamy and heterogamy in terms of various socioeconomic and psychological factors can affect family business performance through its impact on marital conflict—an individual-level lens. The empirical analysis on the questionnaires conducted to CEOs of small and medium-sized family firms in the U.S. shows that occupational homogamy and religion homogamy have a positive effect on family-business firm performance, while psychological heterogamy has a positive effect on family-business firm performance. Our research extends the extant studies on spousal involvement in new ventures and copreneurs by revealing the strategic significance of marriage.

Gender 1

Digital Session Chair: **Imge Kaya Sabanci**, *IE Business School*

ENT: Is Being Trustworthy Always Rewarded? Think Twice! Trust Penalty for Women Entrepreneurs

Author: **Imge Kaya Sabanci**, *IE Business School*
Author: **Rachida Justo**, *IE Business School*

Our study explores an understudied mechanism, trustworthiness, through which gender-based inequality is created and perpetuated in entrepreneur - investor relationships. Drawing on stereotypes literature, we propose an inverse U-shaped relationship between trustworthiness and investment for women entrepreneurs. We suggest that while moderate levels -compared to low levels- of trustworthiness positively affect the investment decisions for both women and men, high levels of trustworthiness have adverse effects for women. We also consider macro-contextual factors moderating this relationship. Specifically, we expect the mechanisms, through which women suffer a trustworthiness penalty, to be more prevalent in societal contexts where women are less represented in entrepreneurship. Contrary to common sense and empirical evidence indicating that perceived trustworthiness is good for all- entrepreneurs in investment decisions, our results show that investors' evaluations of trustworthiness depend on the gender of the trustee. Men benefit from being highly trustworthy, while women are penalized. Results also reveal that there is a difference between what respondents claim that they will do (intention) and what they really do (investment amount). In other words, investors talk the talk but do not actually walk the talk. Overall, by bridging the macro-micro divide and employing a sociopsychological lens, we highlight the dark side of trust and conceptualize trustworthiness as a parameter that contributes to and reproduce investment gap between female and male entrepreneurs.

ENT: Differential Effects of External Enablers on Entrepreneurship based on Gender

Author: **Parul Manocha**, *Virginia Tech*

External enablers (EEs) are exogenous macro-environmental forces that influence the rate, extent, and substance of entrepreneurial activity. A steadily increasing body of empirical research has sought to identify, describe, and predict the aggregate impact of EEs, yet few studies have assessed whether EEs exert the same or different effects across societal groups, and none to date have sought to ascertain whether or not EEs function in a gender-neutral fashion. The issue is important to address since it is common for governmental entities to implement policies designed to leverage or mitigate the influence of EEs. Absent knowledge regarding the differential effects of EEs, policies may be enacted with an aggregate intent, but which may routinely disadvantage female entrepreneurs. To investigate the gender effects of EEs, we develop and test new theory in the context of internet access, employing a longitudinal research design. Our results suggest that increased internet access is, in the aggregate, associated with heightened entrepreneurial activity, but that the favorable effects for male entrepreneurs is markedly greater than for female entrepreneurs. The findings reveal that EEs can magnify the impact of underlying gender discrimination. We assert that gender-based disaggregation is critical to assessing the lasting influence of EEs.

ENT: The Boundaries of Crowdfunding in Democratizing Innovation for Women: A Role Congruity Perspective

Author: **Benedikt David Christian Seigner**, *TUM School of Management, Technical U. of Munich*
Author: **Hana Milanov**, *TUM School of Management, Technical U. of Munich*

Research has documented that crowdfunding helps to overcome the fundraising gender gap and thereby democratizes innovation. However, research documenting female advantages has limited its investigation to entrepreneurs' sexes as a binary characteristic, leaving gaps in understanding whether these advantages hold for feminine gender if examined more holistically. We employ role congruity theorizing to study several gender-related congruity factors. In a sample of 7,454 Kickstarter campaigns, we show that crowdfunding indeed favors women. However, we also demonstrate boundary conditions to this effect for attractive women, whose attractiveness exaggerates their femininity, if they highlight the innovativeness of their projects, and, surprisingly, in female-dominated project categories. Our findings speak to the complexity of gendered expectations and encourage more nuanced conversations on conditions under which crowdfunding can democratize innovation.

Paper is Available to Meeting Registrants Only.

ENT: Start-up entrepreneurial finance of women-owned firms in the United States

Author: **Maria Figueroa-Armijos**, *EDHEC Business School*

Using a comprehensive national microdata sample, this study unveils the individual and firm characteristics of U.S. women-owned firms that influence their odds of receiving venture capital or public financing during the firm's lifespan. Following an institutional approach to policy design, the findings are further compared across U.S. regions to identify differences that can inform strategic policy for innovative entrepreneurial financing. Results indicate that receiving public financing positively influences the odds of women-owned firms to also secure venture capital. Women-owned businesses which are classified as family businesses are less likely to seek venture capital but are more likely to seek out public financing. Education and Hispanic ethnicity increase the odds of receiving public financing.

Paper is NOT Available. Please contact the author(s).

ENT: Mapping Women's Geography of Fear onto the Entrepreneurial Landscape

Author: **Sara Alshareef**, *Department of Business Administration, King Abdulaziz U. Jeddah, KSA*

In studies of emotion in entrepreneurship, the link between gender and geography and the effects of both on women's decisions about whether or not to engage in business-related activities, are areas relatively unexplored. In response to this identified research gap, we have conducted a study that proposes the concept of the 'geography of fear' and examines female entrepreneurs' relationships with, and use of, physical places and spaces needed for business social activities. Previous studies that address the fear of harm in entrepreneurship and the associated gendered norms regarding women's use of space, are rare. Semi-structured interviews were conducted with 23 female nascent entrepreneurs. Based on participants' narratives, it is the perception of others tied with gender norms, proneness to vulnerability and coping mechanisms, which in the context of women entrepreneurship contribute to the development of the geography of women entrepreneurs' fear and to understanding the intersection between emotions, gender and geography in influencing women's entrepreneurial decisions in their use of space.

Institutional Context 4

Digital Session Chair: **Hugo Gómez**, *U. del Desarrollo*

ENT: **Institutional Metamorphosis and Creative Destruction in the Era of Crisis**

Author: **Hugo Gómez**, *U. del Desarrollo*
Author: **Maribel Guerrero**, *Newcastle Business School, Northumbria U.*
Author: **Daniel Lerner**, *IE Business School*
Author: **Jean Sepúlveda**, *U. del Desarrollo*

Research regarding entrepreneurship and crisis has typically focused on how entrepreneurs are affected by catastrophic events, how they respond to external shakeouts, how they learn from failure, and how they build resilience to recover from adversity. However, despite this recent accumulation of knowledge, little is known about external shakeouts re-configure or transform the “rules of the game”. Based on this research gap, we theorize the conditions under which an economic shakeout motivates an institutional metamorphosis. In doing this, we proposed a model based on a retrospective/longitudinal cryptomarket case that emerged in the aftermath of the 2008 Global Financial Crisis. Results suggest that a new digital currency, new transaction-oriented technologies, trust mechanisms, and shared values led to an institutional metamorphosis. By understanding the conditions that have led to institutional metamorphosis, several implications emerged oriented to policymakers, entrepreneurs, and society.

ENT: **Entrepreneurial identity and strategic response in the informal economy**

Author: **SHELTER SELORM TEYI**, *Copenhagen Business School, Denmark*
Author: **Marcus Møller Larsen**, *Copenhagen Business School*
Author: **Rebecca Namatovu**, *Copenhagen Business School*

While entrepreneurs generally confront many challenges in running their businesses, those in the informal economy must do so outside the boundaries and support of formal institutions. The nuances of the informal economy means that entrepreneurs operating in such environments may have to rely on different mechanisms in dealing with adversity than their formal counterparts. Applying the lens of entrepreneurial bricolage, this article sheds light on how entrepreneurs respond to contexts of adversity in the informal economy. As a result of our exploratory research of informal entrepreneurs in Ghana, we find that their response is closely associated with their entrepreneurial identity. We discuss the theoretical and practical implications of these findings. Keywords: Entrepreneurship, entrepreneurial identity, informal economy, exploratory research design, Ghana.

Paper is Available to Meeting Registrants Only.

ENT: **Does Entrepreneur’s social and environmental Activism Pay off?**

Author: **Shuaijun Zhang**, *UTRGV*

In this paper, we investigate a phenomenon of entrepreneur’s activism (verbal or action on social and environmental issues) and its consequences. Drawing on the strategic management and marketing literature, we argue that entrepreneur’s social and environmental activism may positively affects venture outcomes. Synthesizing stakeholder theory and neo-institutional theory, we propose that entrepreneur’s social and environmental activism help firms gain external legitimacy and thus affects venture outcomes. We also investigate the moderating effect of ex-ante industry activism (e.g., boycotts/buycotts). We found that when there has been boycott/buycott activism in certain industries, the impact of entrepreneur’s social and environmental activism on venture outcomes is stronger. We conclude with discussion and implication for theory and research.

Paper is Available to Meeting Registrants Only.

ENT: **Organizational responses in a rationalized institutional context**

Author: **Cagla Yavuz**, *Yeditepe U.*
Author: **Mine Karatas-Ozkan**, *U. of Southampton*
Author: **Vadim Grinevich**, *Southampton Business School, U. of Southampton*
Author: **Serdal Temel**, *Ege U.*
Author: **Jeremy Howells**, *Portsmouth U.*
Author: **Linda Baines**, *U. of Southampton*
Author: **Stratos Ramoglou**, *U. of Southampton*

There is a growing research interest in the role of Technology Transfer Offices (TTOs) in facilitating academic entrepreneurship (Clarysse et al., 2005; 2011; Wright et al., 2007). Extant scholarship has studied how TTOs influence entrepreneurial outcomes of university research via supporting patenting, licensing and spin-off activities. (Clarysse et al, 2011); establishing and overseeing intellectual property (IP) policies (Welsh et al. 2008; McAdam et al. 2017); and developing relationships with industry (Lee and Win 2004; Hsu et al. 2015; Miller et al. 2014; McAdam et al. 2017). TTO are therefore operating in increasingly rationalized yet complex institutional contexts, governed by prescriptions and expectations emerging from very diverse stakeholders, including the university, government and industry amongst others. These institutional contexts may not necessarily be considered effective by TTOs for achieving their objectives. There is very limited knowledge about the ways in which TTOs can cope with such contexts, although the evidence from elsewhere indicates that organizations may, for instance, choose to comply with practices that help them survive an institutionally demanding context, in spite of the fact that these practices do not align with the ends that the organizations are meant to serve (Bromley and Powell, 2012). Hence, the aim of this paper is to advance our understanding of TTO responses to highly rationalized institutional contexts, complicated by multiplicity of stakeholders, expectations and practices. We make several empirical and theoretical contributions. First, we provide systematic categorisation of TTO responses within a complex and rationalized institutional environment. Second, we demonstrate how combination of several institutional dynamics matter in developing response strategies and associated tactics. Third, we develop policy insights for pertinent stakeholders, illuminating managerial challenges faced by TTOs when achieving top-down metrics.

ENT: How Are Entrepreneurial Opportunities Novel? Hierarchical Analysis of New Venture Ideas

Author: **Ugur Uygur**, *Loyola U. Chicago*

Novelty is a distinctive quality of new venture ideas, which are core components of entrepreneurial opportunities. However, our understanding of novelty is unidimensional: a vague sense of degree. This paper offers a hierarchical model to unpack novelty in both kind and degree. The consequent framework dissects the novelty of the new venture idea into two components. The structural location of novelty has implications for the entire venture creation process including: upper level novelty will lead to more innovative ventures but encounter more uncertainty, a more complex creation process, more indirect and legal challenges, less direct competition, and less direct retaliation by the incumbents.

Paper is NOT Available. Please contact the author(s).

ENT: Entrepreneurial Experience and Opportunity Exploitation: How Does the Context Matter? 

Author: **Mehmet Nasih Tag**, *Mersin U.*

We develop and test a multi-level framework postulating that both property rights institutions and entrepreneurial opportunities moderate the positive influence of prior entrepreneurial experience on opportunity-motivated entrepreneurship. We analyze this framework by exploiting a hierarchical dataset that spans 92 countries and a period of 16 years. Using the multi-level logit regression in conjunction with the instrumental variables approach, we find that the exogenous variation in property rights protection has both a direct and an indirect—through entrepreneurial experience—positive influence on the likelihood of becoming an opportunity-motivated entrepreneur. On the other hand, we find that while entrepreneurial opportunities increase the odds of observing opportunity-motivated entrepreneurs, they nevertheless weaken the positive effect of entrepreneurial experience on the likelihood of becoming an opportunity-motivated entrepreneur.

Paper is Available to Meeting Registrants Only.

ENT: The Pursuit of Legitimacy: How do AI Startups Navigate Between Institutional Environments?

Author: **Andreas Clark**, *HEC Montreal*

Author: **Mai Thai**, *HEC Montreal*

Startups need legitimacy to acquire resources from their environment to survive and thrive. In a born-global industry such as artificial intelligence (AI), startups' legitimacy building is subject to pressures from institutions that are constantly evolving at both macro and meso levels due to AI's huge potentials for creating positive and negative impacts. Yet, we do not know how AI startups deal with such an institutional context because prior studies mostly explored startups in established or static institutional environments. From our embedded multiple-case study of six AI startups based in Montreal (Canada) and Kuala Lumpur (Malaysia), we found that informal norms largely guide AI entrepreneurs despite governments' efforts to influence startup operating frameworks. In the case of weak formal regulations, AI startups purposefully rely on industry norms over other institutions. When corporate social responsibility (CSR) is embedded in meso-level norms, startups are more likely to proactively engage in CSR activities. We also found that industry leaders play a primary role in establishing the governing rules in AI, which in turn inform national policy development. Our study results provide interesting insights for players in emerging industries who want to know about CSR strategies when the industry is writing its rules. Furthermore, our study has implications that help policymakers in their efforts to influence normative institutions with the aim of creating an environment conducive to responsible practices. All in all, our study contributes to the literature a better understanding of entrepreneurs' legitimacy building through CSR in dynamic institutional settings.

ENT: A Timely Take-off. Human Capital, Age, and Entrepreneurial Process Duration

Author: **Tomasz Marek Mickiewicz**, *Aston Business School*

Author: **Syed Rizwan Shahid Pirzada**, *Aston Business School*

Author: **Anna Rebmann**, *King's College London*

Author: **Paul D Reynolds**, *Aston U.*

We examine the impact of nascent entrepreneurs' human capital, both general and specific, and of their age, on the duration of the business start-up process until a positive (profitable) outcome. We argue why higher knowledge and older age of entrepreneurs may be associated either with shorter or with longer duration of the entrepreneurial process to a profitable outcome. Using the harmonised PSED dataset, and applying competing risks Cox models, we find that higher educational attainment trumps other forms of human capital being associated with the fastest venture creation process towards a profitable outcome, especially for hi-tech start up projects. Age has a sinusoidal relationship with the speed of the start-up process.

ENT: Who Is Devaluing Females in S&T Entrepreneurship? The Buffering Role of Token Identity   

Author: **Anthea (Yan) Zhang**, *Rice U.*

Author: **Lun Li**, *School of Economics and Management Tsinghua U.*

Author: **Jizhen Li**, *Tsinghua U.*

Males have been blamed for their prejudice towards females, and existing literature has dominantly advised increasing the proportion of females into authoritative positions as a remedy to mitigate gender inequality. Drawing on a unique dataset consisting of applicants and evaluating panelists from the Science & Technology Venture Program (STVP), we examine whether female evaluating panelists favor female applicants in S&T entrepreneurship and further explore the extent to which evaluating panelists' token identity strengthens or weakens such gender bias. We found that female evaluating panelists discounted female applicants in S&T entrepreneurship while male evaluating panelist not. In addition, we evidenced that not all female evaluating panelists deal with gender identity threat in the same manner. Specifically, when the female evaluating panelist was a token, namely, the only female, the only novice, or the one with the non-tech background in the evaluating panel, such rating penalties towards female applicants were mitigated. Our research contributes to the literature on gender inequality, token, minority, as well as funding decisions in S&T entrepreneurship.

ENT: The Relationship Between Entrepreneurial Orientation and Firm Performance for Black Entrepreneurs 

Author: **Ronald Leonardo Pegram**, *U. of Wisconsin, Whitewater*

Author: **K. Praveen Parboteeah**, *U. of Wisconsin, Whitewater*

This study evaluates the relationship between entrepreneurial orientation (EO) and firm performance for Black American entrepreneurs to propose a possible suggestion for the persistent performance gap between Black American entrepreneurs and others, particularly white entrepreneurs. The dominant explanations for this trend in the literature have tended to structural inequalities in access to funding and in wealth levels, resulting in an uneven playing field that places Black entrepreneurs at a considerable disadvantage. This review appears to offer a novel contribution in that EO is applied to test its connection to firm performance for Black entrepreneurs, and to evaluate how EO influences the development of social capital for Black entrepreneurs. Using a panel of self-reported business owners, we conduct a series of analyses including multivariate regression, hierarchical linear regression, and tests of mediation to discover that EO influences the development of social capital for the Black entrepreneur, and that the relationship between EO and firm performance is significant and positive for the Black entrepreneur but completely mediated by social capital, particularly that of external connections. The implication is that Black entrepreneurs need access to connections to fully realize the EO / firm performance relationship.

ENT: Entrepreneurial team diversity, performance and disruption: Insights from a simulation model

Author: **Karl J. Wennberg**, *Linköping U.*

Author: **Vivek Kumar Sundriyal**, *Linköping U.*

Author: **Axel Norgen**, *Linköping U.*

While team diversity is believed to increase both cognitive conflict (performance-enhancing) and risk of affective conflict (disruption-enhancing), examining this trade-off in entrepreneurship settings is hampered by the lack of data allowing for joint assessments of diversity, performance and disruption over time in new venture teams. Drawing upon research in psychology and small group research, we develop a simulation model formalizing how different levels of entrepreneurial team diversity may influence team performance and disruption over time. Experimenting with different scenarios related to the diversity-performance and diversity-disruption relationships, our model generates insights how team diversity act as a double-edged sword where teams with greater diversity are more likely to create high-performing ventures, but also more exposed to the risk of disruption. Explicating the boundary conditions under which diversity maximize long-term team performance conditional on team survival, we contribute to the discussion on entrepreneurial team composition, behavior, and performance.

Paper is Available to Meeting Registrants Only.

ENT: Avoiding the Familiarity Trap: How entrepreneurs reach beyond their network to attract co-founders 

Author: **Steven Gray**, *U. of Texas at Austin*

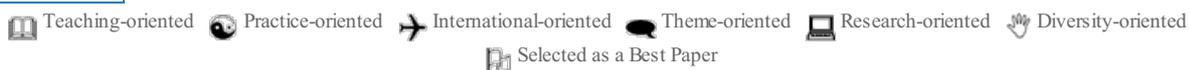

Author: **Esther Sackett**, *Santa Clara U.*

Author: **Travis Howell**, *UC Irvine*

Entrepreneurs assemble teams almost exclusively composed of people they already know, even though there are potential benefits of adding someone from beyond their personal network. Despite the proliferation of new programs and platforms aimed at giving entrepreneurs access to vastly broader pools of potential team members, entrepreneurs likely struggle to attract unfamiliar others to the venture. By integrating similarity attraction theory with research on surface-level and deep-level diversity, we explain how entrepreneurs can better attract unfamiliar others to their venture if they share deep-level similarity (e.g., personality, goals), rather than surface-level similarity (e.g., ethnicity, gender). We test our theory using survey and archival data from a sample of entrepreneurs and potential team members enrolled in an incubator program designed to help entrepreneurs form a team and launch their venture. Our model and results show that entrepreneurs can attract unfamiliar others to their venture when they are similar on less-visible dimensions and that adding a team member from beyond the entrepreneur's network promotes early venture success.

Entrepreneurship and Emotions 3

Digital Session Chair: **Leidy Yurani Cubillos Pinilla**, *TUM School of Management, Technical U. of Munich*

ENT: I make my own rules! A multi-method analysis of individual antecedents of entrepreneurial intention    

Author: **Leidy Yurani Cubillos Pinilla**, *TUM School of Management, Technical U. of Munich*
Author: **Sylvia Hubner**, *Free U. of Bozen-Bolzano*
Author: **Franziska Emmerling**, *Technische U. München*

We propose a cognitive-personality-ethic model of entrepreneurial intention, which is based on a multi-method analysis. Our model integrates conditional rule-breaking – the cognitive skill to follow or break a rule according to the expected consequence and self-interests – as well as personality traits and ethical orientations as antecedents of entrepreneurial intention. The model bridges different theoretical perspectives and overcomes methodological flaws of previous entrepreneurial intention research. We argue that conditional rule-breaking is likely to be linked to entrepreneurial intention in individuals with high openness or low relativism, and that narcissism is related to conditional rule-breaking and entrepreneurial intention. Our study (N = 108), in which we assess individuals' conditional rule-breaking skill in a computerised task, and their personality traits and ethical orientations in a questionnaire, supports our predictions. Our research contributes to entrepreneurship and organisational behaviour literature by (1) introducing conditional rule-breaking, and its behavioural measurement in a computerized task, as an antecedent of entrepreneurial intention, and (2) considering the interplay of individual characteristics in an integrative model of antecedents of entrepreneurial intention.

ENT: How planned behavior drives employee intentions to pursue new product and service development 

Author: **Katarina Ingrid Blomkvist**, *Uppsala U.*
Author: **Jeanette Veronika Engzell**, *Dept of Business Studies Uppsala U.*
Author: **Philip Kappen**, *Uppsala U.*
Author: **Ivo Zander**, *Uppsala U.*

We draw on the theory of planned behavior to develop and test a set of hypotheses about the drivers of employee intentions to become engaged in the development of new products and services. The results from a survey of 3,435 employees of Swedish companies, including small, medium-sized, and large firms, reveal a number of factors related to attitudes, subjective norms, and perceived behavioral control that have an either positive or negative influence on the presence of such intentions. We further show how the strength of the identified relationships varies with firm size. Overall, the findings suggest that firms may differ substantially in terms of their ability to support employee initiatives that are critical for sustained introduction of new products and services.

ENT: Collectivistic Personal Values, Entrepreneurial Intention, Motivation and Behavior 

Author: **Susana Correia Santos**, *Rowan U.*
Author: **Xaver Neumeyer**, *U. of North Carolina, Wilmington*
Author: **Antonio Caetano**, *ISCTE - Instituto U. de Lisboa*
Author: **Francisco Liñán**, *U. of Sevilla*

This study examines the role of entrepreneurial intentions and motivations in the interplay between collectivistic personal values and self-employment career options. Our analysis of a sample of individuals throughout two different points in time uncovers how and when collectivistic personal values (i.e., conservation and self-transcendence) lead to self-employment. Results suggest that entrepreneurial intentions function as a mechanism that triggers self-employment decisions for individuals with collectivistic personal values and that this effect is stronger when they engage in opportunity-based entrepreneurship. We conclude by discussing the implications of our results on the entrepreneurship literature and the values - intention - action links.

Paper is NOT Available. Please contact the author(s).

ENT: From Committed Employees to Aspiring Entrepreneurs: A Conditional Process Analysis

Author: **Qinglin Liu**, *Rensselaer Polytechnic Institute*
Author: **Hao Zhao**, *Rensselaer Polytechnic Institute*

Extending previous research on antisocial rule-breaking in high school and entrepreneurship, we study a different form of rule-breaking—prosocial rule-breaking (PSRB) in the workplace. Based on the stewardship theory, we expect that employees' affective organizational commitment will lead to employees' PSRB, which, under some conditions, is related to entrepreneurial intentions to start new businesses. Our moderated mediation analysis on time-lagged data from 122 employees supported an indirect effect between affective organizational commitment and entrepreneurial intentions that is mediated by PSRB and moderated by age and entrepreneurial self-efficacy simultaneously. We discuss theoretical and practical implications.

Women's Entrepreneurship: Cultural, Institutional, and Global Perspectives

Women's Entrepreneurship

Distinguished Speaker: **Amanda Brickman Elam**, *Babson College*
Organizer: **Vishal K. Gupta**, *U. of Alabama*
Organizer: **Golshan Javadian**, *Morgan State U.*
Organizer: **Crystal Lynn Dobratz**, *Howard U.*
Organizer: **Alka Gupta**, *Bernard M. and Ruth R. Bass Center for Leadership Studies*

Much of research on women entrepreneurship has been focused on individual-level factors that serve to keep women out of achievement-oriented domains like entrepreneurship or limit their access to resources they need to grow their business (Brush and Jennings, 2013). This is while institutional-level contributors to gender-level inequality have often been overlooked. This is problematic because systematic or institutional factors can have a profound influence on individual-level psychological processes (Konig and Muller, 1986). The purpose of this symposium is to highlight the unrecognized institutional-level factor that influence woman entrepreneurship in either positive or negative ways.

In recent years, effectuation has gained prominence in the entrepreneurship literature as a theory for understanding and conceptualizing entrepreneurial decision-making and action. Despite the breadth of findings related to effectuation and overall progress in the literature, significant gaps still exist in our understanding of effectuation processes. The papers presented in this symposium and the ensuing discussion aim to advance our understanding of effectuation by addressing the following questions: what makes effectuation effective? When, why, and how do entrepreneurs shift from effectuation to causation techniques? When, why and how do practitioners apply effectuation techniques and under which circumstances is the use of effectuation valuable for practitioners? How can effectuation interact with entrepreneurial team dynamics? The ensuing discussions between presenters, discussants, and audience will capture the interests of academics and practitioners alike.

Solutions That Work: How to Combat Gender Inequality in Business Schools

Recommendations for greater gender equality in HE

Organizer: **Tina Miedtank**, *Erasmus U. Rotterdam*
Panelist: **Joana Vassilopoulou**, *Rotterdam School of Management, Erasmus U.*
Panelist: **Anna Ginès I Fabrellas**, *Esade Law School*
Panelist: **Janka Kottulová**, *Comenius U. in Bratislava*
Panelist: **Hanneke Takkenberg**, *Erasmus U. Rotterdam*

Whereas in the past, gender equality was especially recognized as an issue in the field of science, technology, engineering and maths (STEM), it is now also more and more being recognized by AHMSSBL institutions. This PDW aims to provide an opportunity for panelists and participants to discuss and share best practices and HR tools promoting greater gender equality in business and management schools and higher education overall. Through a panel presentation and four round table discussions the goal of the PDW is to develop a more nuanced understanding of the various organizational and institutional contexts, experiences, challenges to and consequences of gender inequality in business and management schools. It brings together international scholars in order to discuss ways to address the challenges faced and offer a way forward. The online workshop is planned to consist of two parts, first a panel discussion focusing on the challenges and opportunities in developing solutions for combating inequality in higher education. Panelists will share their experience of their 'Equality 4 Europe' research project within their institution, including the challenges faced. The second part consists of four round tables where panelists and attending participants discuss different thematic areas, share their insights, critiques, and institutional challenges into the respective topics and particularly discuss possible solutions and measure fostering gender equality in academia. The round tables will be lead each by one of the panelists.

Working Together: Organizational Perspectives on Integrating Efforts to Improve Health Care Delivery

Digital Session Chair: **Robert J Weech-Maldonado**, *U. of Alabama, Birmingham*

Integrating Individual, Interpersonal, and Interorganizational Efforts to Improve Health Care Delivery

HCM: High-Minority Nursing Homes Disproportionately Affected by COVID-19 Deaths  

Author: **Robert J Weech-Maldonado**, *U. of Alabama, Birmingham*
Author: **Justin Lord**, *Louisiana State U. Shreveport*
Author: **Ganisher K. Davlyatov**, *U. of Oklahoma Health Sciences Center*
Author: **Akbar Ghiasi**, *U. of the Incarnate Word*
Author: **Gregory N. Orewa**, *U. of Alabama, Birmingham*

Racial/ethnic disparities in healthcare have been highlighted by the recent COVID-19 pandemic. Using the Centers for Medicare and Medicaid Services' Nursing Home COVID-19 Public File, we examined the relationship between nursing home racial/ethnic mix and COVID-19 resident mortality. As of October 25, 2020, high minority nursing homes reported 6.5 COVID-19 deaths as compared to 2.6 deaths for nursing homes that had no racial/ethnic minorities. After controlling for interstate differences, facility-level resident characteristics and resource availability, high-minority nursing homes had 61% more COVID-19 deaths (Incidence Rate Ratio [IRR] = 1.61; $p < 0.001$) as compared to nursing facilities with no minorities. From a policy perspective, nursing homes, that serve primarily minority populations, may need additional resources, such as, funding for staffing and personal protective equipment in the face of the pandemic. The COVID-19 pandemic has sharpened the focus on healthcare disparities and societal inequalities in the delivery of long-term care.

HCM: Interprofessional Teamwork for Infection Prevention: Development of a Model and Solutions 

Author: **Megan Gregory**, *The Ohio State U. College of Medicine*
Author: **Sarah MacEwan**, *Ohio State U.*
Author: **Lindsey Sova**, *Ohio State U.*
Author: **Alice Gaughan**, *Ohio State U.*
Author: **Ann Scheck McAlearney**, *Ohio State U.*

Healthcare-associated infections (HAIs) are associated with patient mortality and high costs to the healthcare system. These HAIs are largely preventable by practices such as prompt removal of lines and Foley catheters. While seemingly straightforward, these practices are complicated in that they require interprofessional teamwork between physicians and nurses to be enacted successfully. Yet, it is unknown how interprofessional teamwork occurs in the HAI prevention context. As part of a larger project on HAI prevention, we interviewed 420 participants (physicians, nursing, others) across 18 hospitals about interprofessional collaboration in this context. From these findings, we propose an input-mediator-outcome-input (IMOI) model of interprofessional teamwork in the context of HAI prevention, suggesting that various organizational processes and structures facilitate specific teamwork attitudes, behaviors, and cognitions, which subsequently lead to HAI prevention outcomes including timeliness of line and Foley removal, and ensuring sterile technique and hand hygiene. We discuss the extent to which these results are actionable for managers, and propose specific strategies that managers adopt to improve interprofessional teamwork around HAI prevention.

HCM: Impact Assessment of "Community Training Program" on Dengue Prevention and Control 

Author: **Swati Alok**, *Assistant Professor Birla Institute of Technology (BITS-Pilani)*
Author: **Samrun Nessa**, *PhD Student*
Author: **Sajeli Begum**, *Associate Professor*
Author: **Rishi Kumar**, *assistant professor*

Context: The global threat of dengue has burdened the health systems of underdeveloped and developing countries. In such a scenario, 'community training programme' has become the only remedy for vector-borne diseases like dengue. Program: The authors strongly believe that a personalised/ customised training programme designed for a set of population has the potential to bring a significant impact on behavioural change in the masses. The present study prospects in empathizing the knowledge, attitude and practice of a community in general and add a pragmatic value to the policy-makers in designing effective strategies to control dengue. Implementation: A two-step methodology was followed for designing the training materials viz., (i) accessing baseline knowledge through KAP survey, entomological survey and spatial survey and (ii) survey outcome-based designing of training materials which included personalized videos, PowerPoint presentations, poster & pamphlets, games, activity sheets, demos, etc. The customised materials mentioned were used during the training programme, and its effectiveness was evaluated after six months using "Difference in differences" (DID) methodology. Evaluation: The significant and positive DID coefficients 1.079, 0.599 and 1.7 indicated remarkable improvement in attitude, risk perception and knowledge respectively. Also, there was a significant behavioural change (1.50) in mosquito reduction practices post-intervention. Discussion: The results revealed a positive impact of the customized and tailor-made training materials on knowledge, attitude, risk perception and preventive practices scores. The encouraging outcome concerning behavioural change among the common masses could be attributed to the customised materials used for the training.

HCM: Health System Responses to COVID-19: A Multi-level Systematic Review of Primary Qualitative Studies ✈

Author: **Simon Turner**, *U. de los Andes, Colombia*

Author: **Natalia Botero-Tovar**, *Uniandes*

Author: **Maria Alejandra Herrera**, *Uniandes*

Author: **Juan Pablo Borda**, *Uniandes*

Author: **Francisco Ortiz**, *Uniandes*

Author: **Jean Carlo Ramirez**, *Uniandes*

Author: **Luisa Fernanda Maldonado**, *Uniandes*

COVID-19 had presented challenges to the healthcare systems and healthcare professionals in all countries. After one year of the pandemic, the evidence begins to consolidate, and the literature demands the documentation of the experiences lived by healthcare professionals and other frontline actors. This systematic review of primary qualitative studies depicts the experiences and perceptions of organizations and actors at multiple levels of health systems internationally in responding to COVID-19. Six main databases of biomedical information, public health and health administration research were searched over the period 1 October 2019 to 21 October 2020. Information extracted from included studies was analysed thematically. Twenty-two articles were selected for full assessment. Considering the professional level experiences, the most predominant themes of the studies consisted of the new roles and responsibilities of healthcare workers, burnout and distress, unseen healthcare workers, and positive changes and emergent solutions amid the crisis. Recommendations of the studies discussed mainly about the urge to provide psychological support, and leadership for managers and health authorities. Continuous training, regulation of working conditions, providing supportive resources, coordinating a diversity of actors, and reviewing and updating regulations were recommendations of a wider system support. The experiences of frontline healthcare workers had been the focus of attention of primary qualitative studies as of October 2020. Knowledge gaps and the need for primary research were identified in the organisational and national levels that could answer to the needs of the workforce.

Paper is Available to Meeting Registrants Only.

HCM: Service Duplication and Local Hospital System Membership

Author: **Hanh Q. Trinh**, *U. of Wisconsin, Milwaukee*

Purpose: To assess the influence of organizational characteristics on service duplication of 1,183 hospitals that affiliate with local hospital systems in U.S. core based statistical areas (CBSA) in 2015. Methodology: Ordinary least square regression is used to estimate the relationship between organizational characteristics in 2013 and service duplication in 2015. Findings: The results show that hospitals affiliated with either centralized hospital systems or with decentralized hospital systems duplicate more services than those in independent hospital systems. Hospitals duplicate more services if they are large, teaching, and have high case mix severity. Hospitals duplicate fewer services if they are for-profit and affiliated with large systems. Practice Implications: System management should be aware of member hospital management's concerns about the reduction in decision making autonomy and should strive to coordinate services among all members in a way which assures members that the benefits of cooperation are greater than the costs of losing some autonomy. Key words: Hospital systems, hospital services, duplication of services, integrated health systems

HCM Division Best International Paper **HCM Division Best Theory to Practice Paper**

The environment of healthcare organizations is becoming increasingly uncertain. Emergent environmental threats such as the recent COVID-19 pandemic pose imminent and real risks to our societies and require healthcare organizations to adapt rapidly and continuously. To understand how healthcare organizations can cope with such deep uncertainty, we conducted a multiple case study of five hospitals during the COVID-19 crisis in a heavily hit region of the Netherlands. We find that hospitals made adaptations in six key categories, namely; reorganization, decision-making, staffing, well-being, resources, and planning. These adaptations offer insights into the core capabilities needed by healthcare organizations to cope with dynamic uncertainty. Our findings highlight the need for agility (e.g. reconfiguring staff and bed capacities) and a long-term orientation (e.g. strategic decision-making, forecasting and planning) in order to sense and respond to environmental change. Furthermore, a learning mindset allows organizations to seize opportunities and be resilient in the face of ongoing uncertainty. We make recommendations on how healthcare organizations can build these capabilities and address the core challenges and dilemmas they face in this pursuit.

HCM: Lessons from the Brazilian National Patient Safety Program for Building Safety Culture in Hospitals

Author: **Barbara Caldas**, *National School of Public Health, Oswaldo Cruz Foundation*
Author: **Margareth Portela**, *National School of Public Health, Oswaldo Cruz Foundation*
Author: **Emma-Louise Aveling**, *Harvard U.*

Carolyn Dexter Award Nominee

Strong safety culture is foundational to improving patient safety. National or large-scale, multi-organizational programs combining organization-level components with targeted clinical components may be particularly suited to strengthening hospital safety culture. In 2013, Brazil's Ministry of Health launched the National Patient Safety Program (NPSP), involving national incident reporting, hospital-level safety teams and targeted safety protocols. We conducted in-depth qualitative case studies (including documents, interviews and observations) of NPSP implementation in two public hospitals, to identify lessons for optimizing the impact of large-scale programs on safety culture strengthening. Using Singer and Vogus' Safety Culture Framework, we examined how program implementation at organization- and department-levels affected the enabling, enacting and elaborating processes that produce and sustain safety culture. Findings highlight the critical role of enabling processes, and the important interplay of multi-level processes in strengthening safety culture. Both hospitals experienced challenging starting conditions. While NPSP provided critical enablers for hospital-level action, external mandates alone were insufficient. Internal enabling failures (e.g. little safety-relevant senior leadership) hindered enactment at organization-level (e.g. safety teams unable to institute plans) and department-level (e.g. difficulties deploying safety protocols). Limited enactment and weak elaboration processes (e.g. bureaucratic monitoring, limited resources for improvements) in turn failed to institutionalize protocol use and stymied safety culture. Optimizing the safety culture impact of large-scale patient safety programs requires effective enabling at all levels and capitalizing on the productive potential of interacting national- and local-level influences to address resource constraints, develop local leadership capacity and avoid bureaucratic implementation approaches that overlook significant sociocultural challenges.

HCM: Masked and Distanced: How Personal Protective Equipment Affects Teamwork in Emergency Care

Author: **Tuna Cem Hayirli**, *Harvard Business School*
Author: **Nicholas Stark**, *U. of California, San Francisco*
Author: **Aditi Bhanja**, *Harvard T.H. Chan School of Public Health*
Author: **James Hardy**, *U. of California, San Francisco*
Author: **Christopher Peabody**, *U. of California, San Francisco*
Author: **Michaela Kerrissey**, *Harvard U.*

Newly intensified and widespread use of personal protective equipment (PPE) as a result of the COVID-19 pandemic in emergency departments presents teamwork challenges affecting the quality and safety of care at the frontlines. We conducted a qualitative study to categorize and describe barriers to teamwork posed by PPE in the emergency setting. We conducted semi-structured interviews with 55 personnel from two emergency departments serving in a variety of roles. We then performed a thematic analysis to identify and construct patterns of teamwork challenges into themes. We discovered two types of challenges to teamwork: material barriers related to wearing masks, gowns, and powered air purifying respirators, and spatial barriers implemented to conserve PPE and limit coronavirus exposure. Both material and spatial barriers resulted in disrupted communication, roles, and interpersonal relationships, but did so in unique ways. Material barriers muffled information flow, impeded team member recognition and role/task division, and reduced belonging and cohesion while increasing interpersonal strain. Spatial barriers resulted in mediated communication, and added physical and emotional distance between teammates and patients. Our findings identify specific aspects of how intensified PPE use disrupts teamwork, and can inform efforts to ensure care quality and safety in emergency settings as PPE use continues during and, potentially beyond, the COVID-19 pandemic.

Author: **Sophie Higgins**, *Harvard T.H. Chan School of Public Health*

Author: **Alex Haynes**, *U. of Texas at Austin*

Author: **Raffaella Sadun**, *Harvard Business School*

Safety culture, shared values with regard to safety management, is a key driver of high-quality health care delivery. The Safe Surgery Checklist (SSC) is an innovative tool for improving surgical care safety, but evidence about SSC effectiveness is mixed. While a structured implementation and management commitment are considered important, limited evidence exists about what managerial practices support safety culture, and how SSC implementation can impact the organization's managerial practices and safety culture. We examined the relationship between management practices and perceived safety culture and the way checklist implementation induces change in both. Using a pre-posttest design and survey methods, we evaluated the implementation of SSC in a national sample of 42 general acute care hospitals affiliated with a leading hospital system. We measured perceived management practices among management (n=99) using the World Management Survey. We administered the Safe Surgical Practice Survey to clinical operating room personnel to measure perception of pre-operative safety and safety culture (N= 2380 in 2016 and N= 1433 in 2017). Data was collected in two consecutive years. Linear regression analysis demonstrated a significant relationship between changes in management practices and overall safety culture and perceived teamwork following SSC implementation.

Institutions, Innovation, Intellectual Property and Entrepreneurship

Digital Session Chair: **Navin Kumar Saxena**, *Indian Institute of Management Raipur*

This session examines topics broadly associated with institutions and their impact on innovation, intellectual property and entrepreneurship in international contexts. The first paper presents a stakeholder-based view of the evolution of intellectual property institutions. This is followed by an analysis of relationships between institutional transitions, research and development, and exports in India. Additional papers examine how a country's institutional environment shapes the relationship between firm risk and innovation and the impact of intergovernmental organizations on entrepreneurship.

IM: A Stakeholder-Based View of the Evolution of Intellectual Property Institutions (WITHDRAWN)

Author: **Dan G. Prud'homme**, *EMLV*

Author: **Tony Tong**, *U. of Colorado, Boulder*

Author: **Nianchen Han**, *U. of Colorado, Boulder*

In this article, we address several limitations of prior international business (IB) studies that investigate how and why intellectual property rights (IPR) institutions evolve in ways of consequence to multinationals. To do this, we develop a dynamic stakeholder-based view (SBV) of micro- and macro-processes shaping the evolution of formal institutions. The SBV micro-processes include (1) establishment of endogenous and exogenous stakeholders, (2) formation of stakeholders' interests, (3) evaluation of stakeholders' salience, (4) governance of the focal institution, and (5) interpretation of the impacts from institutional governance. The SBV macro-processes include (1) feedback loops among the micro-processes and (2) the stickiness of each stakeholder process. We demonstrate the explanatory power of our framework by offering historical examples of how and why the SBV processes have shaped the heterogeneous evolution of IPR institutions in China, the U.S., and other countries. We argue that IPR institutions, despite experiencing significant convergence in places, diverge across countries in ways of consequence to multinationals due to the stickiness of stakeholder processes. We also illustrate that the third SBV micro-process, evaluation of stakeholders' salience, most immediately explains IPR institutions' evolution. Our work challenges recent assertions about the evolution of IPR institutions and what this means for multinational firms doing business across borders.

IM: Institutional Transitions, Research and Development (R&D), and Exports in India

Author: **Nishant Kathuria**, *U. of Texas at Dallas - Jindal School of Management*

Author: **Sumit Majumdar**, *U. of Texas at Dallas*

Author: **Mike W. Peng**, *U. of Texas at Dallas*

Scholars have identified that investing in research and development (R&D) capabilities enables firms to export more. Left underexplored is the question: Does the positive relationship between R&D and exports continue to hold during institutional transitions, which are fundamental and comprehensive changes introduced to the rules of the game? In the context of India's market-oriented institutional transitions, the implementation of Foreign Exchange Management Act (FEMA) in the year 2000 provides a natural experiment that helps us examine this question. We find evidence that although FEMA enabled innovative firms to generate more exports relative to the prior constrained environment, the relationship between R&D and exports ceases during the post-FEMA period. Theoretically, we shed light on how uncertainties that arise due to institutional transitions drive firms towards short-term orientation, which prevents the firms to building R&D capabilities.

IM: How Does a Country's Institutional Environment Shape the Relationship between Firm Risk & Innovation

Author: **Irina Stoyneva**, *Thomas Jefferson U.*

In this study, I propose a theoretical link between risk and innovation. Using arguments grounded in prospect theory and agency theory, I propose a model that conceptualizes the firm level risk as an antecedent to innovation. I then anticipate that the institutional environment will influence the relationship between risk and innovation, so that greater firm level risk will negatively impact innovation. I further expect that certain institutional environment factors will moderate the negative relationship between risk and innovation such that the effect will be weaker in the context of strong pro-market orientation of the country vs. strong pro-social orientation. I test the proposed model in a sample of 1037 firms from countries in the EU and North America.

IM: The Impact of Intergovernmental Organizations on Entrepreneurship

Author: **Elizabeth Marie Moore**, *Northeastern U.*

Author: **Luis Alfonso Dau**, *Northeastern U.*

Author: **Kristin Brandl**, -

Intergovernmental organizations (IGOs) aim to promote stability, development, and security for member states and their citizens via supranational institutional influences. However, their role and their impact on individuals has been questioned due to political, social, and economic uncertainties and the high detachment of the supranational IGO level and the individual level. For example, it is not clear how IGOs impact entrepreneurs and their strategic decisions to formalize entrepreneurial activities or remain informal. Thus, we study the impact of IGOs on entrepreneurial decision making, by considering the supranational institutional level, the national institutional ecology, and individual decision making. Through a study of 68 countries, their entrepreneurial environment, and their connection to IGOs, we find that IGOs generally cultivate a positive environment for entrepreneurship. Moreover, IGOs encourage different strategic decisions, i.e., encouraging formal entrepreneurship while discouraging informal entrepreneurship. We argue that a key mechanism of these impacts is the strength of the institutional ecology of member states and find that national institutional environments mediate the relationship between IGOs and entrepreneurship, further reducing informal and enhancing formal entrepreneurship. We combine international relations, institutional theory, and strategic entrepreneurship and interconnect supranational institutions, national institutional ecologies, and the individual's entrepreneurial decision-making.

Foreign Direct Investment (FDI) inflows to emerging nations exhibit a big variation. To what extent do host-country regulatory and institutional variables attract or repel FDI? We integrate various theoretical perspectives: transaction cost economics, global value chain analysis and liability of foreignness to examine the impact of formal regulations, rule-of-law, property rights, procedural bottlenecks and infrastructure on the attractiveness of an emerging market for the period 2004 to 2016. We seek to identify which of the many regulatory variables most influence the FDI decision. We find that countries with more efficient start-up regulations, stronger protection of minority investment, and better procedures and infrastructure for international trade across their borders attract more FDI. These results have important implications for policy reform in emerging markets, as well as for multinationals selecting which nations to invest in.

International Management Consulting Post-Pandemic

Presenter: **József Poór**, *J.Selye U.*
Presenter: **Eric Sanders**, *Elmhurst U.*
Presenter: **Kinga Kerekes**, *Babes-Bolyai U.*

Management consulting has grown both in revenue and importance consistently for the past 150 years. It has helped organizations through other pandemics and many economic recessions. What is the same and what is different this time, with the COVID-19 pandemic and its accompanying global recession? In the USA and Eastern and Central Europe, a greater focus will be on Diversity, Equity, and Inclusion, as well as managing a remote workforce. How will management consulting adapt and assist managers and leaders to get back to the business of running their organizations? A global panel will set the context with thoughts from their various countries, along with discussion among the attendees to address their questions and concerns.

NEU Best Paper Award

This paper explores the connection between mental structures shaped by past events and managerial action targeted to manifest an uncertain future and does so in the light of artificial intelligence (AI). By drawing on predictive brain theory, the paper conceptualizes that prospective sensemaking is increasingly required for managers. To shed light on prospective sensemaking in uncertain times, we draw on the concept of network pictures to conceptualize managers' sensemaking and consequent actions based on the notion of companies being embedded in a context (network) affecting strategies and their outcome. The network pictures managers form through sensemaking reflect the presence or the past, but what happens when we take the notion of a future that is inherently different from the past as the guiding light for present actions seriously? The paper contributes to research by extending the network picture concept and interlinking it with neuroscience and specifically AI as a motor of change, and as challenging the human thought with machine learning

NEU: **Physiological Synchrony and Newly-formed Groups' Outcomes: The Moderating Effects of Leader Justice**

Author: **Nir Milstein**, *Bar-Ilan U.*
Author: **Ilanit Gordon**, *Bar Ilan U.*

NEU Best Student Paper Award

Extant evidence supports the relationship between group social alignment processes (e.g., synchrony) and group performance. Nevertheless, to date, most studies examined such processes at late stages of group development, assuming that members must be well-acquainted to form social alignment. In today's organizations, however, individuals often work on short-term project teams, in which individuals are expected to be socially-aligned as soon as they join the team. Consistent with social identification theory, we argue here that group synchrony may be evident, yet covert, early in the life of a group even before it manifests in overt behavior. Furthermore, because members are unfamiliar with each other at this early stage, we expect them to seek guidance from external sources, in particular from leaders who treat them fairly. Given that leaders signal and align individuals to endorse collective goals, we expect their intervention to channel group synchrony toward effective group-functioning. To capture deep-seated synchrony, we assessed members' electrodermal activity (EDA), also known as galvanic skin response. Fifty 3-person groups (N = 150) were engaged in a problem-solving task while their EDA was monitored. Half of the groups were treated fairly by the experimenter, while the other half were treated unfairly. Results indicated that EDA physiological synchrony was positively related to improved performance, only when the leader treated group members fairly. Our findings provide evidence for the importance of applying neuroscience and physiological measures to address key research questions in management. We discuss other implications of our approach to both theory and practice.

NEU: **The spotty progress of neuroscience in the management fields**

Author: **Maria Cristina Cinici**, *U. of Messina*
Author: **Daniela Baglieri**, *U. of Messina*
Author: **Alba Marino**, *U. of Messina*
Author: **Luca Pareschi**, *U. of Rome Tor Vergata*

The domain of neuroscience is differently spreading in management fields and little retrospective work on this spotty evolution has been made so far. This paper presents a thorough bibliometric and topic modeling analysis that scrutinize the progress of neuroscience in management. Firstly, we identified 151 published studies and provided a description of the research area by identifying the publishing trend in the number of studies on the topic and the most impactful sources and publications. Secondly, we used bibliometrics and data mapping techniques to graphically represent established and emergent research clusters (i.e., co-authorship, keywords co-occurrence and co-cited references). Thirdly and finally, a more thorough content analysis thorough topic modeling identified key research topics for each of the management branches in which neuroscience has developed so far. We draw on the systematic review's results to identify the factors that have limited the progress of neuroscience in several management fields and suggest a new approach that can overcome those limits.

Teams, Emotions, Aspirations and Green HR

Digital Session Chair: **Paul Baldassari**, *WU Vienna U. of Economics and Business*

ONE: The Role of Person-Group Fit and Supervisor-Fit for Team Leaders' and Team Members' OCBE and WGGA

Author: **Paul Baldassari**, *WU Vienna U. of Economics and Business*
Author: **Lisa Obereder**, *WU Vienna U. of Economics and Business*
Author: **Michael Schiffinger**, *WU Vienna*
Author: **Raik Thiele**, *WirtschaftsU. Wien*
Author: **Susan E. Jackson**, *Rutgers U., New Brunswick*
Author: **Michael Muller-Camen**, *WU Vienna*

Organizational citizenship behavior for the environment (OCBE) and workgroup green advocacy (WGGA) have been researched as a proxy of environmental performance of organizations as well as a potential way for companies to assess the impact of their environmental strategies and initiatives. We build on leader-member exchange (LMX) theory, examining the influence of supervisor support within team structures by testing interlinkages of OCBE and WGGA of leaders and members. We surveyed 597 employees from 89 teams in 6 countries working in one multinational company. The results show (1) strong correlations of OCBE and WGGA within the team structure. While we predict a positively moderating effect of perceived person-supervisor fit (PSF) and person-group fit (PGF) on these relationships, our data did not support these hypotheses. Yet, we further reveal that (2) PSF and PGF could act as drivers for team members' OCBE and WGGA, (3) as well that team leader and member PGF correlate with leaders' OCBE and WGGA. These results point to the importance of pro environmental behaviors of group leaders and their influence on group members. Also, the perceived fit of group members (PGF) could provide potential steps for successful green initiatives in organizations and for implementing their environmental strategies.

ONE: Aspirational Presentation: Do Aspirational Talks Always Induce Environmentally Responsible Actions?

Author: **Jaemin Kim**, *Oakland U.*
Author: **Ruihua Joy Jiang**, *Strategy & International Business*

When executives are put into the situation that they feel held accountable to make effort towards what they presented about environmental topics, in what way do they put their communication into action? To answer this question, we combine a behavioral theory of the firm and communicative constitution of organizations and apply them to executive presentations made for their institutional investors and analysts. Using 800 conference presentation transcripts from 88 sampled firms in the polluting industries, we found that aspirational presentations were linked with capability-enhancing environmental actions while they did not affect legitimacy-seeking ones. This study will contribute to a behavioral theory of the firm by exploring the aspiration of unobtrusive and difficult-to-measure performance.

Paper is Available to Meeting Registrants Only.

ONE: Mediated Mediation Model to Examine the Role of Green HRM

Author: **Jatinder Kumar Jha**, *XLRI-Xavier School of Management*
Author: **Manjari Singh**, *Indian Institute of Management, Ahmedabad*

Green HRM has gained significance in organizations, be it as a social good or under institutional pressure or for strategic considerations such as employer branding. The focus has been on green outcomes to establish the importance of Green HRM. However, for Green HRM to gain widespread acceptability in the organization, employee perception regarding its intent and implementation would play a critical role. This would, in turn, affect work-related non-green outcomes. Embedded in the Attribution Theory, the mediated mediation model of Green HRM in this study empirically examines the following three aspects: one, the link between Green HRM and one of the non-green outcomes (work engagement); two, mechanism facilitating this relationship (organizational identification); and three, social context of the organization (ethical climate) that fosters Green HRM and its impact. The study has important implications for the top management teams, HR centres of expertise, and HR business partners.

ONE: A Self-expansion Model of Contact with Nature at Work

Author: **Pok Man Tang**, *Texas A&M U., Mays Business School*
Author: **Anthony Klotz**, *Texas A&M U.*
Author: **Shawn T. McClean**, *U. of Oklahoma Price College of Business*
Author: **Randy Xue Ren Lee**, *National U. of Singapore*

Self-expansion theory posits that interpersonal relationships broaden individuals' sense of self by facilitating the attainment of new perspectives. This theory and empirical tests of it have shed light on the nature and consequences of self-expansion emanating from interpersonal interactions; however, the magnitude and consequences that non-interpersonal sources of self-expansion caused are not well understood, and this oversight is particularly glaring as it relates to the work domain. In this research, we extend the tenets of self-expansion theory to theorize that when employees come into contact with a specific element of their physical work environment—nature at work—they will experience a broadening of their sense of selves. Extending this theory, we go on to predict that when they experience self-expansion, employees should be especially prone to engaging in creativity at work. Finally, we describe for whom the self-expanding effects of contact with nature on creativity should be stronger. Across an experiment and a field study, we find that contact with nature at work positively affects employee creativity via the mediating effect of self-expansion, and that this relationship is strengthened for those who are higher on openness to experience. We conclude by discussing the theoretical and practical implications of our work.

Social value and the Social Good

Digital Session Chair: **Vidya Oruganti**, *Grenoble Ecole de Management*

SIM: Organising and Governing for Collective Social Good

Author: **Vidya Oruganti**, *Grenoble Ecole de Management*

In recent times, there is a growing demand for firms to develop their innovations in a way that could support UN's SDGs or societal Grand Challenges. The governance of firms' corporate social activities, such as financial donations vs playing an active role, has been often explained as dependent on the type of firm resources used (generic vs specific) and how these activities can enhance a firm's performance. There is a lack of attention towards if, and how, the nature and type of social project can influence the extent of firm's engagement and its governance choices. Building on the governance literature, which accounts for both the capability and transaction costs considerations of firms, we conceptualize firms' governance decision of social good as dependent on the structure of the social project addressing a social problem as well as firm's resources required to support that problem. Empirically, we explore this issue through an in-depth qualitative case study of an incumbent firm and examining the relationship dynamics with six of its key social projects. Our findings highlight that the structure of the social project allows for a firm to decide ex-ante its potential role and extent of involvement, and the costs and capabilities associated with the involvement guides the governance choices associated with the potential role a firm can play within a social project. In doing so, we highlight the contexts where a firm may foster collective participation of their value-chain partners in the design and provision of social good.

SIM: A Review of Social Value Research in the Management Literature: A Citation and Co-Citation analysis

Author: **Ghita Lkhoyaali**, *HEC Montreal*

Research on social value became a growing interest in management and organization research. However, the disciplines of investigation are rather large and heterogeneous. The purpose of this contribution is to provide an overview of the current state of research on social value. For doing so, we employ content analysis and bibliometric analysis to analyse the research on social value published during the last decade, between 2010 and 2019, in the management and organization field. We employ methods of citation analysis, document co-citation analysis, and cluster visualization to identify major themes studied. The paper explores the assumptions underlying the core concept of social value in organization and management research. Thereby, we analyse 1,117 papers containing 55,059 cited references and uncover the structure, or intellectual base, of research on social value. We identify six distinct clusters of social value research that are grounded in multiple disciplines; (1) marketing and social psychology, (2) economy, (3) development studies, (4) medicine, (5) strategy and social entrepreneurship, and (6) social responsible investing. The assumptions found in these clusters can be grouped into three categories that conceptualize social value (1) as an individual/and or commodity characteristic, (2) as an asset of communities, and (3) as a matter of organizing.

Paper is NOT Available. Please contact the author(s).

SIM: Social Value in Business: An Interdisciplinary Integrative Review, Typology, and Research Agenda

Author: **Marcelo De La Cruz**, *Ludwig Maximilian U. of Munich (LMU)*

Author: **Jelena Spanjol**, *Ludwig Maximilian U. of Munich (LMU)*

Although the concept of "social value" has been present in business and management literature for more than 100 years, it lacks a definitional consensus, is often imprecise and subjective, and has not been sufficiently theorized. To address these conceptual and theoretical deficiencies and create a more precise understanding of social value, we conduct an integrative review comprising 135 articles drawn from leading peer-reviewed journals across business disciplines. We identify and integrate heterogeneous conceptual perspectives by developing a polythetic typology of social value. The proposed typology identifies five approaches to understanding and managing social value in business: maximizing approach, individualistic approach, stakeholder approach, virtuous approach and normative approach. This typology synthesizes the many conceptualizations about the nature of value and social as well as underlying value creation and value capturing mechanisms. We further derive future research priorities for the scholarly business and management community highlighting important, currently unanswered research questions. We believe that this typology offers scholars and practitioners new ways of thinking about social value and helps to structure and unify the various conceptualizations of social value into a more holistic understanding supporting researchers to position their work within the broad literature.

SIM: Health is Everyone's Business: A Review and An Overdue Research Agenda

Author: **Junghoon Park**, *Baruch College & The Graduate Center, CUNY*

Author: **Bryan W. Husted**, *Tecnologico de Monterrey*

Author: **Ivan Montiel**, *City U. of New York, Baruch College*

Author: **Remy Balarezo**, *U. de Piura*

Business and human health are intrinsically connected. From occupational health and healthcare policy to the health of consumers and surrounding communities, business can only thrive if their stakeholders enjoy good health and well-being. Yet our literature review of the business-health nexus reveals that scholars have mainly paid attention to internal stakeholders and healthcare policies as they directly affect business, while overlooking the impact of business on the health of external stakeholders such as consumers and communities. Considering the urgency of improving health globally and the ambitious health targets set by the United Nations' Sustainable Development Goals (SDGs), we propose an overdue research agenda for the post-pandemic era. We recommend moving from a mere focus on direct health effects on internal stakeholders to analyze the more indirect health impacts of business on external stakeholders. This change of focus acknowledges health as a grand challenge and recognizes the business institution as a key actor to achieve the SDG health targets.

Social and Sustainability Enterprises

Digital Session Chair: **Bert D'Espallier**, *KULeuven*

SIM: Donors talk: the signaling and imprinting effects of giving to social enterprises

Author: **Bert D'Espallier**, *KULeuven*
Author: **Marek Hudon**, *ULB - Solvay Brussels School; CERMI*
Author: **Susanna Khavul**, *SJSU/LSE*
Author: **Ariane Szafarz**, *ULB - Solvay Brussels School of Economics and Management*

How should donors fund microfinance enterprises and maximize social impact? Should they spread contributions across organizations or concentrate them? We address this thorny issue by assessing separately how the act of giving a donation and the amount donated affect the social performance of MFOs worldwide. Drawing on signaling theory, we hypothesize that the act of giving has a more significant impact on social performance than the actual amount donated. Moreover, we show an imprinting effect on social performance that persists even when donations dry up. That is, the enhanced social performance observed during subsidized periods is not reversed during subsequent unsubsidized periods. The persistence of subsidy-linked social performance suggests that designing smart-subsidy strategies is appropriate for the microfinance industry in order to maximize social benefits while keeping market distortions under control. Further, the global social impact of diversified donor contributions across many organizations may be greater than that of concentrated funding in a few.

SIM: Growth of Sustainability-driven ventures: Insights from Exploratory case studies of Nordic ventures

Author: **Paula Linna**, *U. of Vaasa*

We employ a partly-inductive multiple-case study that capture the growth stories of Nordic sustainability-driven ventures which have successfully applied crowdfunding to scale up their businesses. Our results suggest that these types of ventures can have high-growth since inception. They have identified their customers segments based on deeply analyzing mega-trends and changing consumer habits. While they emphasize social and ecological objectives, they still use more conventional financial-based metrics to attract investors in their crowdfunding campaigns. We link our findings to the growing field of sustainable ventures and how to can scale up them successfully.

SIM: Managing Scaling Tensions: A Case Study on Social Enterprises in Germany

Author: **Anna-Lena Maier**, *U. of Hamburg*
Author: **Dirk Ulrich Gilbert**, *U. of Hamburg*
Author: **Marc Doerlemann**, *U. of Hamburg*
Author: **Lisa Hartmann**, *None*

We explore how tensions emerge during scaling processes of social enterprises and how these organizations manage scaling tensions to avoid a possible mission drift. The results of our case study show that scaling tensions emerge as social-business tensions and social-social tensions, and are dealt with by either integration (scaling in line with the social mission) or separation (scaling at the expense of the social mission). Whilst the existing social entrepreneurship literature tends to focus on social-business tensions that result from institutional hybridity, we particularly explore how social-social tensions emerge during scaling. We aim to extend the emergent literature on social entrepreneurship, maintaining hybridity in hybrid organizations and scaling of social enterprises by introducing an integrated scaling tension model.

SIM: Review of Social Entrepreneurship Literature: Developments from 2009 to 2019

Author: **Yunchul Shin**, *Samsung Electronics*
Author: **Moon Gyu Kim**, *Korea Advanced Institute of Science and Technology (KAIST), College of Business*

Social entrepreneurship has seen significant growth in number and impact in the past decade, establishing itself as a significant part of modern society. How has academic research on social entrepreneurship changed meanwhile? The current research utilizes both quantitative, bibliometric analysis and qualitative content analysis of 51 articles published in top management journals (i.e., as of UTD's list) to review the developments of the social entrepreneurship literature. We find evidences of significant developments and diversification in social entrepreneurship research and provide outlooks for future directions.

Exploring the USTPO

Digital Session Chair: **GULZAT ZHUMAMURAT**, *Ewha Womans U.*

TIM: When do firms (dis)engage in technological innovation for environmental issues? 

Author: **GULZAT ZHUMAMURAT**, *Ewha Womans U.*

This study delves into the question as to how corporate environmental responsibility (CER) can bring environmental innovation. Since the activities for CSR and the activities to develop technologies to tackle environmental issues are compatible, it is straightforward to state CER will automatically lead to technological innovation for environment (TIE). However, in this study, we argue that the pathway from CER to TIE may not attest our general perception on it. There are two possible mechanisms for the causal link. One is that CER can push forward innovation projects to reinforce the activities that firms strategize to tackle environmental issues. The other is that CER can be a constraint on innovative activities because with their experience, firms find themselves fulfill their responsibilities in a timely manner; thus, there is little incentive to do technological environment innovations. In this sense, we illuminate two moderators which can manifest the mechanisms engaged in the CER-TIE relationship: social consciousness and socioemotional wealth. To test these ideas, multiple databases, such as Compustat, ISS, KLD, and the USPTO database, are used. After integrating these multiple databases, data of 619 firms between 1998 and 2010 was collected. We find that if a firm has a great level of social consciousness, the relation between CER and TIE can be facilitated, as with social consciousness, firms can take initiatives and develop particular technology to further address environmental issues. In contrast, firms with socioemotional wealth would not build advanced technologies due to the protection of their own identity.

TIM: Patenting Inventions or Inventing Patents? Strategic Use of Continuations at the USPTO

Author: **Cesare Righi**, *U. Pompeu Fabra and Barcelona GSE*

Author: **Tim Simcoe**, *Boston U.*

Continuations allow inventors to claim technology developed after the original filing date of a patent, leading to concerns about inadvertent infringement and hold-up. For researchers seeking to study this practice, a key challenge is the difficulty of linking patent applications to potentially infringing technology. We use the link created by disclosure of standard essential patents (SEPs) to analyze the relationship between standard publication – a key observable milestone in technology development – and continuation filing. More than half of the SEPs in our data are filed after standard publication. There is a substantial increase in continuation filings immediately after standard publication, and this increase is larger when the initial patent examiner is more lenient. We also find that claims in SEP continuations are more likely to be rejected for double patenting (indicating an effort to change the scope of previous patents), and that keywords in the claims of SEPs linked to the same standard become more similar after standard publication. Overall, these findings suggest widespread use of continuation procedures to opportunistically "invent patents" that are infringed by already-published standards.

TIM: How does patent litigation by Patent Assertion Entities impact invention activity? 

Author: **Aija Elina Leiponen**, *Cornell U.*

Author: **Zhe Xue**, *Cornell U.-The Charles H. Dyson School of Applied Economics and Management*

Patent Assertion Entities (PAEs) can enhance invention by creating a market for patents or reduce invention by making the returns to invention uncertain. We empirically examine the impact of patent enforcement by different types of entities, including Patent Assertion Entities, on invention in US patent classes. We construct a new database of litigation and invention and estimate difference-in-difference models to identify the net impact of patent litigation on invention. We find that, in the current US economy and legal system, patent litigation within specific technology classes reduces invention in the same classes. We also find that litigation by PAEs leads to a significantly larger negative impact on invention, compared to litigation by product companies, and suggest that this is because PAEs' interest in financial rather than in-kind settlements reduces the available internal finance for invention. The negative impact of litigation has grown in recent years.

Paper is Available to Meeting Registrants Only.

TIM: Inventor Disruption in the Wake of Patent Litigation 

Author: **Dutt Dev Harsha Tadikonda**, *Indian School of Business*

Author: **Francisco Javier Morales**, *U. Diego Portales*

Prior research on inventor collaboration and their mobility has emphasized how disruptive events such as technological acquisitions or the death of collaborators can impact inventors. However, the impact of adverse events like patent litigation has largely been ignored. It is likely that being in a firm that is embroiled in litigation imposes substantial reputational and opportunity costs to the inventor and affects knowledge creation activities. We fill this gap by first examining the impact of patent litigation on inventors' mobility between firms. We suggest that the prospects of sued inventors to move to rival firms are damaged as subsequent inventions are scrutinized for possible use of litigated technology. Additionally, we examine the impact of formation of collaborative relationships between sued inventors and inventors that they are collaborating with for the first time, as well as the collaborative relationships between sued inventors and inventors that were known to the sued inventor prior to the litigation. Specifically, we suggest that patent litigation increases the cost of collaboration with sued inventors and heterogeneously impacts the formation of subsequent relationships with new and previous collaborators within the firm.

Paper is Available to Meeting Registrants Only.

TIM: Patent Enforcement and Innovation  

Author: **Marek Giebel**, *Copenhagen Business School*

This paper analyzes the effect of patent enforcement on cumulative innovation. While one of the main functions of the patent system is to foster innovation, the actual impact of the enforcement of patent rights on innovation is still under debate. I exploit patent infringement litigation in the United States to identify the effect of patent enforcement on cumulative innovation. The results imply that citations by subsequent patents increase after a case is filed in a court. While citations increase during the litigation period, the relative effect size decreases in the years following the closure of the case. The degree of the increase of subsequent citations depends on the nature of the technology and the degree of protection. Thus, it is particularly pronounced for litigated patents that are either more novel, narrower or held by practicing entities. Although there is a general positive effect, subsequent patents are close to the litigated patents in terms of technological proximity and general similarity. This points towards an elevated citation count by patents of a limited degree of novelty.

Paper is Available to Meeting Registrants Only.

Presenter: **Vrinda Nayak**, *U. of Exeter*
Presenter: **Lauren A. Turner**, *U. of Massachusetts, Lowell*

The months since society witnessed the horrific real time murder of George Floyd have the potential to be transformational in many areas, including for the academy. Many academics, including universities and colleges, joined the Black Lives Matter (#BLM) movement and renewed their pledges to do better. Many racialized scholars have been tasked by their institutions with leading institutional change efforts in combating anti-Black systemic racism. Although many AOM members are also GDO scholars, few have experiences in leading DEI efforts on campus. This PDW aims to raise awareness and develop the skills of recently appointed or those who are interested in becoming DEI champions in the areas of: (1) understanding the DEI landscape on campus, (2) overcoming barriers and resistant to DEI initiatives, (3) setting goals and developing programs for change, and (4) rallying support and locating resources to assist with DEI work. The 90 minute PDW includes five mini-workshops on various "leading DEI" topics facilitated by established GDO scholars who are also DEI leaders (e.g., Chief Diversity Officers and Associate Deans) on campus. The mini-workshops are intended to be developmental with presenter directed activities and interactive learning/sharing. This format will enable presenters to offer advice, share experiences, and impart skills to current and prospective DEI champions. The PDW will also help participants establish a network of DEI scholars as academic practitioners.

All are welcome.

Panelist: **Mary J. Waller**, *Colorado State U.*
Discussant: **John S Carroll**, *Massachusetts Institute of Technology*

In times of crisis, organizations face a dilemma. How should organizations balance between making profits and minimizing losses, and acting for the benefit of all stakeholders and society-at-large? The recent reality of COVID-19 highlights the tension of this dilemma in crisis, with roughly four billion people (50 percent of the world's population) asked to stay at home, classrooms for nearly 90 percent of the world's students closed at the height of the crisis, millions managing virtual organizations to minimize long-term losses, and millions being newly unemployed. While the traditional approach in the crisis management literature has focused on survivability via profitability and financial metrics, we believe organizations must also prioritize other factors, including responding to the human needs of both their employees and society at large. We thus bring together an internationally recognized group of scholars who have expertise on the subject, to explore this tension from the perspectives of crisis, survivability, and the human needs of all stakeholders and to suggest frameworks and tools that may be used to resolve this dilemma. Building upon a pluralistic approach, this symposium will take a significant step in advancing knowledge and provoking new directions for future research on crisis management.

This symposium aims to challenge existing knowledge and develop new insights on how the reception (i.e., evaluation and consumption) of cultural goods shape its production by bringing leading scholars in the study of creative industries. Our symposium brings together cutting-edge research investigating the mechanisms by which audiences and evaluators of cultural goods facilitate or alter producers' production strategies. We use different disciplinary lenses from economic sociology to social psychology to expand and deepen our understanding of the relationship between the field of reception and the field of production of cultural goods and contribute to the development of this emerging literature. We believe this symposium will generate an insightful discussion and fuel further inquiry into the role of audiences and evaluators in shaping cultural production.

Panelist: **Hannes Leroy**, *Erasmus Research Institute of Management*

Publications in top-tier journals are an important means by which our work is improved (through the review process) and disseminated to our colleagues. Such publications are additionally important for career purposes, namely for the tenure and promotion process. While many scholars are familiar with the US-based top-tier journals and consider them as a primary outlet, international management journals have risen in the academic rankings and have developed a reputation of excellence. Several international journals have thus evolved into outlets equally attractive for rigorous and impactful research. At the same time, international journals differ from US-based journals in subtle but important ways. Awareness of these differences is important for scholars who consider these international journals as a potential conduit for their work. The goal of this PDW is to share information and have a discussion regarding publishing in top international management journals. We bring together a panel of editors and associate editors from six top international journals. Each will introduce their journal's editorial policies, as well as highlight differences between their journals and leading US-based journals. This session will combine individual presentations by panelists, a general Q&A session with the audience, and breakout discussions.

There is a growing research interest in the concept of silence that is broadly understood as employees' self-censorship in communication with their managers. Though the phenomenon is important for many organizations and attracts the interest of scholars, the field remains theoretically fragmented and predominantly conveys a rather narrow interest in how employees use silence in adverse organizational environments. Yet, an increasing number of research studies demonstrate that silence is not a uniform concept: it can play a variety of roles and lead to both favorable and unfavorable effects for employees and organizations. Therefore, in this symposium, we introduce a broader perspective and open up new frontiers of studying silence in organizations. A nationally diverse team of scholars will represent several theoretical approaches and discuss both positive and negative roles of silence in and around organizations. More specifically, we will 1) report novel empirical insights about the dynamic nature of silence and its relationship with leadership; 2) share conceptual developments in psychological safety and silence in teams; 3) theorize about the communicative constitution of silence; 4) propose the reconfiguration of a theory dealing with silent employee responses to adverse conditions at work; 5) and, lastly, present an analysis of the methodological challenges that hinder theoretical developments and suggest ways in which these challenges might be addressed. Finally, the discussant Amy Edmondson will provide the commentaries, discuss the state of the field, and propose future research directions.

Current State and Future of Strategic Leadership and Governance Theory and Practice

Strategic Leadership & Governance Theory-Practice

Chair: **Irene M. Duhaime**, *Georgia State U.*
Organizer: **Michael A. Hitt**, *Texas A&M U.*
Facilitator: **Marjorie A. Lyles**, *Florida International U.*
Panelist: **Donald C. Hambrick**, *Pennsylvania State U.*
Panelist: **Margarethe F Wiersema**, *U. of California, Irvine*
Panelist: **James D. Westphal**, *U. of Michigan*
Panelist: **Sam Garg**, *Hong Kong U. of Science and Technology*
Panelist: **Ruth V. Aguilera**, *Northeastern U.*

This panel symposium will focus on our current state of knowledge about strategic leadership and the governance that oversees, supports and engages with strategic leaders and will explore promising directions for future knowledge development and practice in strategic leadership and governance. Managerial and executive decision-making are major foci of the STR domain, along with strategic leadership (including top management teams and boards of directors) and governance of strategic decision-making. The symposium focuses on strategic choice (managers' strategic decisions) and organizational governance, both major foci in the OMT domain. Similarly, these topics are major foci in the ENT domain, with particular emphasis on decision-making under uncertainty and on governance in the context of new venture firm growth. Distinguished scholars and prolific researchers in strategic leadership and governance have agreed to serve as panelists: Donald C. Hambrick, Margarethe F. Wiersema, James D. Westphal, Sam Garg, and Ruth V. Aguilera. These panelists are also closely connected to practicing managers, including top executives. The symposium has been designed to provide a brief opening statement by each panelist regarding our current knowledge of the strategic leadership or governance topic(s) they believe to be most critical; a significant period of discussion divided between discussions based on audience questions and discussion among the panel, responding to other panelists' statements; and a brief statement by each panelist on the strategic leadership or governance topic(s) they believe to be important for the development of future knowledge and/or practice.

HR Analytics and Algorithms

Digital Session Chair: **Irmela Koch-Bayram**, *U. of Mannheim*

HR: **Algorithms in Personnel Selection, Applicants' Attributions and Organizational Attractiveness**

Author: **Irmela Koch-Bayram**, *U. of Mannheim*

Author: **Chris Kaibel**, *U. of Mannheim*

Author: **Torsten Biemann**, *U. of Mannheim*

Machine-learning algorithms used in personnel selection procedures seem to be a promising avenue for companies for several reasons. In our manuscript, we investigate the reasons (prospective) employees attribute regarding why an organization uses algorithms in the employee selection process. Based on the HR attributions framework, signaling theory, and the scant literature that exists on the perceptions of algorithmic and human decision-makers, we theorize that using algorithms affects the four different internal HR attributions of intent and, in turn, organizational attractiveness. In two experimental studies, we test our hypotheses in the initial applicant screening stage. The results of our experimental studies indicate that control-focused attributions such as cost saving and applicant exploitation are stronger when algorithms are used, whereas commitment-focused attributions such as quality enhancement and applicant well-being are stronger when human experts make selection decisions in the applicant screening process. We also find that algorithms have a negative effect on organizational attractiveness that can be partly explained by these attributions. Our findings have far reaching implications for practitioners and academics.

HR: **Can I perform? Affective responses to algorithmic decision-making in the recruitment process**

Author: **Marius Wehner**, *Heinrich-Heine U. of Dusseldorf*

Author: **Alina Köchling**, *Heinrich-Heine U. of Dusseldorf*

Author: **Josephine Warkocz**, *Westfälische Wilhelms-U. Münster*

Companies increasingly use artificial intelligence (AI) and algorithmic decision-making for their recruitment and selection process for cost and efficiency reasons. However, knowledge about the affective responses to the selection process is still limited when AI supports different selection process stages (i.e., preselection, telephone, and video interview). Using a scenario-based between-subject design (N = 160) in Study 1, we found that AI-support at later stages of the selection process (i.e., telephone and video interview) decreases the opportunity to perform and increases emotional creepiness. In turn, the opportunity to perform and emotional creepiness mediate the association of AI-support in telephone/ video interviews and organizational attractiveness. Conversely, we did not find negative affective responses to AI-support in the preselection. In Study 2, we examined whether hiding the information about AI-support in preselection negatively influences applicant reactions after the selection process has ended. The hide of information about AI-support decreases procedural justice, trust, and organizational attractiveness. As we offer evidence for possible adverse reactions, this study provides important practical and theoretical implications.

Paper is Available to Meeting Registrants Only.

HR: **Bringing the algorithmic HR manager in: Behavioral responses to algorithmic HRM**

Author: **Isabella Scheibmayr**, *U. of Salzburg*

Author: **Astrid Reichel**, *U. of Salzburg*

The application of AI systems in Human Resource Management promises increasing objectivity of personnel decisions, decreasing administrative tasks for HR managers and automating HR decisions. Especially the application of algorithmic HRM, i.e. automating certain HRM practices by using algorithms, has been discussed as a way to fulfill HRM's strategic potential. The behavioral response of workers to algorithmic HRM and its relationship to performance has not been investigated. We close this research gap by providing empirical evidence from a mixed-methods study conducting a lab experiment on an algorithmic personnel evaluation system. We find (a) experimental evidence for behavioral responses changing the underlying statistical relationships of algorithmic HRM with consequential effects on performance, (b) low overall acceptance of algorithmic HRM as well as attribution to human actors and (c) no relationship between attitudinal and behavioral responses to algorithmic HRM.

Paper is Available to Meeting Registrants Only.

HR: **Look Back and Leap Forward: A Review of Human Resources Analytics Literature**

Author: **Lijun Wang**, *Renmin U. of China*

Author: **Yuan Cheng**, *School of Business, Renmin U. of China*

While HR analytics has seen a dramatic increase in scholarly attention over the last decade, the lack of a system narrative motivated us to construct a literature review on this topic. In this paper, we provide a comprehensive review of 68 published, peer-reviewed articles on HR analytics spanning from 1975 to 2020. We extend HR analytics literature in several ways. First, we map the nomological network of HR analytics in relation to its measures, theory foundations, antecedents, and outcomes. Second, we propose a "PAIL" model, which consists of 15 elements in four categories, to refine the framework of the determinants of HR analytics implementation success. Third, we offer an overall summary of how HR analytics can be applied to HR practices. Finally, we present a detailed agenda for future research. Our review paints a holistic picture of the existing literature and how HR analytics should proceed into the future.

Paper is NOT Available. Please contact the author(s).

Author: **Pat Downes**, *U. of Kansas*

Author: **Brad Harris**, *Texas Christian U.*

Author: **David G. Allen**, *Texas Christian U.*

A major problem—if not the most significant problem—in human capital analytics (HCA) involves swaying organizational decision makers to actually use the predictive model (i.e., HCA implementation). Although a number of practical considerations have been proposed elsewhere, one solution that has yet to be tested in the selection context involves allowing end users to modify models' predictions. Allowing end users to slightly modify model predictions may increase their adoption and increase their reliance on a more valid model (even if the model is no longer optimally valid given they have edited it). We conduct three studies to explore the potential of end user modification to improve HCA implementation in the selection context. In Study 1, we test whether model modification indeed increases decision-maker reliance on the HCA model. In Study 2, we design a simulation to understand the loss of predictive validity associated with allowing decision makers to modify the model. In Study 3, we simulate the potential bias and discrimination consequences of increasing adoption through model modification. Our results suggest end user modifiability may improve HCA implementation, substantially improving overall selection validity and slightly reducing bias against discriminated groups, but only if the HCA model is more valid and less biased than the average decision maker left to his or her own devices.

This symposium brings together a panel of experts who have researched the indigenous cultures and embodied ways of learning, to share their work. The earth friendly sustainable practices of these ancient cultures are marginalised and suppressed with a history of colonial invaders dominating the socio-economic norms with their consumeristic and exploitative, and often violent ways of being. Post-covid world needs more sustainable and planet friendly ways of managing. Covid has revealed the many failings of the Western (Eurocentric, British and American) methods of managing. This panel offers exemplars of some of the ways of knowing and being from the indigenous cultural practices, of dance and poetry, and decolonisation of mind and education systems. Management education and research need to elevate these ancient and yet new to management research and education ways of sensemaking.

The Boss is Terrible! Dysfunctional Leadership and Gossip

Digital Session Chair: **Jason Marshall**, *Binghamton U.-State U. of New York*

OB: **Machiavellianism: Past, Present, and Future of the Construct**

Author: **Jason Marshall**, *Binghamton U.-State U. of New York*
Author: **Francis J. Yammarino**, *Binghamton U.-State U. of New York*

Machiavellianism is an element of dark leadership, which has received increasing research attention. Despite past theoretical and empirical work, in this review, we identify problems with the conceptualization, definition, and measurement of Machiavellianism. To address these concerns, we offer potential solutions and provide a path forward for Machiavellianism research.

OB: **Schadenfreude, envy and derogation towards observed organisational (in)justice**

Author: **Xiaomin Xu**, *U. of Liverpool*

Although human beings are expected to be sympathetic when seeing others suffer and happy when seeing others gain, some research has found the opposite. Based on the zero-sum framework (Von Neumann & Morgenstern, 1944) and appraisal theory (Lazarus, 1991b; Lazarus & Smith, 1988), this study examines how contextual and individual factors intensify or mitigate observers' malicious reactions towards colleagues' experience. Using a 2 (competition vs. non-competition) × 2 (abusive supervision vs. respectful supervision) between-subject design, we examine the roles of competition at work and individuals' self-esteem in observers' malicious reactions (i.e., schadenfreude, envy, and derogation) to observed (in)justice (i.e., abusive/respectful supervision). 316 employees from the United States participated in the experiment. Results demonstrated that competition at work promotes schadenfreude, envy and explicit derogation to observed (in)justice, and self-esteem has both functional and dysfunctional effects. This study suggests that competition at work as a critical contextual factor and observer self-esteem as an important individual difference that impact malicious reactions to observed (in)justice under competition.

Paper is Available to Meeting Registrants Only.

OB: **The joint effects of a manager's level of narcissism and incentive scheme on employee effort (WITHDRAWN)**

Author: **Miriam Maske**, *U. Bundeswehr, Munich*
Author: **Matthias Sohn**, *European Uni Viadrina, Frankfurt (Oder)*
Author: **Bernhard Hirsch**, *Bundeswehr U. Munich*

Narcissism has become the most heavily discussed personality trait in recent times. However, accounting research on managerial narcissism and its implications for management control system choices, such as incentive schemes, is scarce. Based on Christ and Vance's (2018) "cascading controls" framework, we propose that employees' work effort depends upon their manager's level of narcissism and compensation scheme. In an experiment with 329 employees, we manipulate the description of the managers' level of narcissism (high or low) and the framing of managers' compensation scheme (bonus or penalty) and examine the joint effect of these two factors on employee effort to help the manager reach her or his objectives (obtain a bonus or avoid a penalty). The results show that employees invest less (more) effort to help the manager when the manager's narcissism is high (low). This relation is partially mediated by employees' perception of the relationship quality with their manager and negative feelings towards the narcissistic manager. Importantly, we also show that relative to a manager's bonus contract, a penalty contract has a negative effect on employee effort when the manager's narcissism is high. Our results underline the negative consequences of narcissism for leader-follower relations and have important implications for management compensation design in business practice.

OB: **The Role of Team Gossip in Mitigating the Detrimental Consequences of Team Abusive Supervision**

Author: **Rui Zhong**, *Sauder School of Business, U. of British Columbia*
Author: **Lingtao Yu**, *U. of British Columbia*
Author: **Jinlong Zhu**, *Renmin U. of China*

Previous studies have found that team abusive supervision causes detrimental consequences for team effectiveness. Yet, they have provided little insight regarding what team members can do to alleviate these consequences. Drawing from the social functional theory of gossip and recent theoretical advancement in abusive supervision in teams, we identify team gossip—team members' aggregated levels of engagement of negative gossip about the team leader—as an "antidote" for team abusive supervision and develop a novel theoretical model that accounts for its safeguarding role against the abusive leader's adverse impact on team effectiveness. Specifically, we theorize that team gossip buffers the adverse effects of team abusive supervision on team outcomes, team performance and team voluntary turnover, via a dual-path mechanism: Aggressive team norms and affective team trust. To test our hypotheses, we conducted a multi-wave, multi-source field study with a sample of 111 work teams. The results largely supported our model, showing that team members' negative gossip about the abusive team leader is a powerful tool to mitigate abusive supervision's detrimental consequences for team effectiveness. We conclude with a discussion on the theoretical and practical implications.

OB: A Multilevel Model of Individual Flourishing-at-Work: A Systematic Literature Review

Author: **Rizqi Nur'aini A'yunnisa**, *U. of Twente*
Author: **Lara Carminati**, *U. of Twente*
Author: **Celeste P.M. Wilderom**, *U. of Twente*

Flourishing is a state of individual mental health and/or well-being which can occur in many work and organizational settings. Despite its known benefits to individuals, teams and organizations, the literature on flourishing-at-work is still underdeveloped. The current review analyzed 29 independent studies involving a total of 12,612 people at work. Through an inductive, grounded theory approach, we identified the theoretical frameworks and variables used. After integrating the findings and frames, we developed a new multilevel model, with matching propositions, to advance our knowledge on individual job flourishing. We suggest this model can be tested both independently and in conjunction with other similar or related constructs in the literature of positive organizational behavior/scholarship as well as with contrasting individual states at work related to incivility-at-work, boredom, negative affect at work, etc. By aiming to enrich states of mental health and/or well-being at work, which has been shown to bring positive work-related outcomes to both the workers, their teams and organizations, we close the paper with the recommendation to find out what it takes for managers (beyond people skills, associated norms and values, and sometimes also guts) to prioritize job flourishing in their work units or organizations.

OB: How subordinates appraisal and cope with supervisor bottom-line mentality?

Author: **Yun Zhang**, *Wuzhou U.*
Author: **Jun Xie**, *Guangdong U. of Foreign Studies*
Author: **Huiying Zhang**, *Guangdong U. of Foreign Studies*

Bases on transactional model of stress and coping, this study examines how supervisor bottom-line mentality (BLM) influences subordinate unethical pro-organizational behavior (UPB), considering the mediating role of subordinate job insecurity and the moderating role of supervisory power. The results shows that subordinate job insecurity mediate the positive relationship between supervisor BLM and subordinate UPB. Furthermore, for supervisors with high power, the indirect positive relationship between supervisor BLM and subordinate UPB were both strengthened.

OB: The effects of felt public gratitude on essential worker recovery activities during COVID-19

Author: **Hee Young Kim**, *Rider U.*
Author: **Sarah Doyle**, *U. of Arizona*
Author: **Taeya Howell**, *Brigham Young U.*
Author: **Sijun Kim**, *U. of Arizona*
Author: **Julia Coff**, -
Author: **Nathan Pettit**, *New York U.*
Author: **Michael Bizzarro**, *Penn Medicine*

COVID-19 has been defined by an unusual outpouring of public gratitude to many, but not all, essential workers. So, we ask: what impact do these expressions of gratitude have on those who do or do not receive them? We examine how felt public gratitude affects the recovery activities of essential workers in underappreciated occupations during the COVID-19 pandemic. In a sample of 186 corrections officers, we find that felt public gratitude negatively relates to maladaptive recovery activities (e.g., overdrinking, overeating) and positively relates to adaptive recovery activities (e.g., exercise, meditation). Further, we examine the psychological processes (i.e., felt invisibility, perceived prosocial impact, negative/positive affect) through which felt public gratitude affects recovery activities. Finally, we investigate a contextual moderator (i.e., self-isolation) of these relationships. Results show that self-isolation strengthens the negative relationship between felt gratitude and maladaptive activities, but not the positive relationship between felt gratitude and adaptive activities.

OB: The Interactive Pattern Between Challenges and Hindrances at the Work-to-Nonwork Intersection

Author: **Stefan Razinkas**, *Freie U. Berlin*
Author: **Julia Backmann**, *U. College Dublin*
Author: **K. Praveen Parboteeah**, *U. of Wisconsin, Whitewater*

The intersection between the work and nonwork domains is increasingly blurred, which calls for scrutiny of how the latter can be enriched by demands faced at work. The literature suggests that work challenges can enhance, and hindrances tend to conflict with, the nonwork domain. However, the literature is silent on the interactive pattern between challenges and hindrances, and, more importantly, the role that attitudes toward learning play in work demands interfering with the nonwork domain. We theorize that the more learning-oriented individuals are, the easier they find it to leverage the nonwork-benefit potential of challenges and avoid the nonwork-threatening potential of hindrances in the presence of the respective other. We used hierarchical linear modeling on experience sampling data of 1,134 paired evening-morning observations of 144 professionals to test our theoretical assumptions. Our multilevel analyses confirm not only that challenges enrich, and hindrances conflict with, the nonwork domain, but also that both may spill over via the other's mechanism as a function of the other. More specifically, on particularly challenging days, highly learning-oriented individuals are found to even enrich their nonwork life through the experience of hindrances. The resulting theoretical and practical implications are discussed.

Motivated by Failure and Injustice

Digital Session Chair: **Frida Feyer**, *BI Norwegian Business School*

OB: Cross-task Motivation - A Review of the Literature Using a Meta-Narrative Approach

Author: **Frida Feyer**, *BI Norwegian Business School*

Substantial research on work motivation over the years has identified motivation to be essential to important work outcomes such as employee wellbeing and performance. Yet, research on work motivation at the task level has been sparse, and even less research has investigated how motivation for one task affect motivation in a subsequent task. The aim of the current systematic review is to identify and analyze research conducted on cross-task motivation and synthesize findings into a meta-theory of underlying processes. Using a predetermined search strategy, a systematic search was carried out in Web of Science, API/Inform, and Emerald Insight, yielding 1501 documents of which 15 were selected. Selected papers were analyzed using the meta-narrative approach. The included papers came from traditions of psychology, organization, neuroscience, and educational research. Four key meta-narratives were identified, all of which contributed information from different research traditions. Synthesizing findings from these four meta-narratives, a meta-theoretical framework for understanding cross-task motivation was proposed. Implications for practitioners include the possibility of designing sequences of tasks that maximize positive motivational outcomes. Limitations and possibilities of future research are discussed.

OB: Observed organisational (in)justice: A review and integration of the literature

Author: **Xiaomin Xu**, *U. of Liverpool*

For the last several decades, organisational justice has been shown across many studies to be an important construct for understanding organisational effectiveness. Traditionally, research on justice paid great attention to the recipient/victim perspective. In recent years, justice researchers have called for more studies on the other two actors: the justice agent (or perpetrator) and the observer. Particularly, research on the observer perspective in organisational justice has started to grow. Observers witness their colleagues being treated fairly or unfairly (aka indirect experience) instead of directly experiencing the treatment at first hand. These indirect experience of (in)justice can affect observers' work attitudes and behaviour. Given that the number of observers is likely to be large, observer reactions towards (in)justice can have strong impacts on organisational functioning. Therefore, understanding observer reactions is vital for organisation management. This review seeks to bring clarity to the state of knowledge about observed organisational (in)justice and provide directions for future research.

OB: How Challenge and Hindrance Appraisal Jointly Affect Employee Performance?

Author: **Xinxin Lu**, *U. of Illinois at Chicago*

Author: **Donald H. Kluepfer**, *U. of Illinois at Chicago*

Author: **Yidong Tu**, *School of Economics and Management of Wuhan U.*

Challenge and hindrance appraisals are two interrelated dimensions of demanding situations. However, it is much unknown whether and how the two dimensions jointly predict employee performance. Integrating need satisfaction theory and goal orientation theory, the current study seeks to explore the optimal and suboptimal motivational processes by which the interaction between challenge and hindrance appraisal affects employee task performance and the moderation of individual goal orientations. In a diary study among 96 employees over 10 executive workdays (N Occasion = 960, N Employee = 96), we tested the three-way mediation and moderated mediation hypotheses. The results show that challenge appraisal, hindrance appraisal, and performance-approach goal orientation jointly predict employee perceived job meaningfulness and the resulting task performance, while challenge appraisal, hindrance appraisal, and learning goal orientation jointly predict employee challenge crafting and the resulting task performance. The research findings contribute to a nuanced understanding of demanding situations and how these situations affect employee performance.

OB: Learning from Rare Failures: Opportunity and Motivation

Author: **Mary Parkinson**, *U. College Dublin*

Author: **Mark Pagell**, *U. College Dublin*

Author: **John Gray**, *Ohio State U.*

Author: **Frank Wiengarten**, *ESADE Business School*

In the organizational learning literature, organizations are typically expected to learn from experience, especially failures. Failures provide valuable learning opportunities, if those opportunities can be exploited (Dahlin, Chuang and Roulet, 2018). However, learning from failure may be contingent on having both motivation and opportunity to learn. The current study addresses 1) whether organizations generally learn from rare failures, and 2) the role of opportunity and motivation in learning from rare failures. We examine the relationship between cumulative past and current rare failures using a large sample of secondary longitudinal worker accident data for organizations situated in Oregon, U.S.A. We find that overall organizations do not learn from rare failures, but that this depends on both organizational motivation and opportunity to learn.

Post-doc positions in management have long been a stepping-stone for academic positions. In fact, many successful and productive management scholars started their academic career in post-doc positions. However, the conversation about post-docs is mostly absent from The Academy of Management (AoM) Annual Meeting but can nevertheless benefit many Ph.D. students. This PDW is designed to help Ph.D. students who are considering (or starting) a post-doc position to gain the most of their positions. It is intended to provide informal career advice from a diverse set of academic scholars regarding how to be successful during, and after, a post-doc position. More specifically, this PDW will address three main questions: (1) What are the long-term career benefits of post-doc positions? (2) What does it mean to be successful as a post-doc, including being productive and well-positioned to find an academic job? and (3) How can Ph.D. students obtain a post-doc position? All invited presenters previously held, or currently hold, academic post-doc positions. They represent a diverse set of career stages, geographic locations, research interests, and academic institutions that are intended to provide a rich set of perspectives about post-doc positions and beyond.

The purpose of this PDW is to provide a platform for support, networking, and career advice to doctoral students and recent Ph.D. graduates regarding attaining and being successful in post-doc positions. The PDW includes presentations, interactive Q&A, and round-table discussion in zoom breakout rooms. These diverse components will allow attendees to benefit from both general and specific career advice. It will also provide a more dynamic and intimate setting for attendees to ask questions, network, and engage with presenters.

Water Sustainability

Digital Session Chair: **Robson Rocha**, *Aarhus U.*

ONE: Bending coercive institutions: toward water sustainability in Brazil

Author: **Robson Rocha**, *Aarhus U.*

The management of natural resources by industry is coming under increasing public scrutiny. This article investigates the responses of firms in two industrial textile clusters in Brazil to the enforcement of water management legislation. Its findings demonstrate a divergence in typologies that reflects the ecological limits, law-enforcement policies and firms' resources. The article extends our understanding of the agency of organizations to respond to institutional pressures to become ecologically sustainable organizations. Our findings provide insights for policy design in times of increasingly catastrophic pollution in regions that are immersed in global competition. We describe successful strategies of development policy that are capable of creating a space in which to negotiate the gradual enforcement of environmental legislation. We also show that strict law enforcement strategies can drive firms into the informalization of their economic activities, a highly problematic strategic response in achieving sustainability in emerging markets.

ONE: Irresponsible Corporate Water Actions – Cognitive Judgments and Reactions by Shareholders

Author: **Rafia Afrin**, *Queen Mary U. of London*

Author: **Ni Peng**, *Queen Mary U. of London*

Author: **Frances Bowen**, *U. of East Anglia*

Extant literature suggests that cognitive judgements associated with corporate social irresponsibility (CSiR) are distinct and need to be analyzed separately from corporate social responsibility (CSR). This paper specifically focuses on analyzing impact of corporate irresponsibility, within the scope of water actions. We investigate how shareholders evaluate and react to irresponsible corporate water actions by developing a conceptual model. Our model identifies that stakeholder orientation of current irresponsible action, and also of prior CSR and CSiR performance by firms, affect market reactions. Shareholders interpret irresponsible actions towards secondary stakeholders to carry less effects for firms and remain indifferent to such actions, but react negatively when primary and legal stakeholders are affected. We propose that prior primary CSR/CSiR performance mainly drives positive/negative capability reputation, and prior secondary CSR/CSiR performance mainly drives positive/negative character reputation. We further theorize that positive character reputation of secondary CSR performance stimulates insurance-like benefit against earnings loss following an irresponsible event. On the other hand, capability reputation of primary CSR/CSiR performance stimulates greater effects of expectancy violation/conformity. We conduct an event study on negative water news featuring S&P 500 firms during the years 2005 to 2017, to provide some empirical evidence in support of our conceptual model.

ONE: Collective cognitive frames of UN CEO Water Mandate: Managerial Sensemaking

Author: **Laura Albareda**, *LUT U., School of Business and Management*

Author: **Jaan-Pauli Kimpimäki**, *LUT U., School of Business and Management*

Cognitive construction of competitive environments has long been of interest for researchers seeking to understand the effects of the environment on strategic decision-making. Drawing on the literature on managerial cognition and corporate sustainability, in this article, we develop causal maps of CEOs involved across their core industries through a shared collaborative context—the UN CEO Water Mandate—in an effort to understand how collective strategy frames develop. We study how these frames affect novel strategic environments at firm and industry in the context of sustainability extending the research on managerial sensemaking and collective cognitive frames. Our findings suggest CEOs can and do reach outside of their primary industries through shared contexts reaching evolving patterns and collaboration toward a process of innovation in order to resolve grand challenges at collective level.

Panelist: **Forrest Briscoe**, *Pennsylvania State U.*
Panelist: **Vanessa Burbano**, *Columbia Business School*
Panelist: **Aharon Cohen Mohliver**, *London Business School*

Firms and their executives are increasingly taking a stand on socio-politically salient yet contentious issues such as racial equality, global warming, gun control, immigration, and LGBTQ rights. Yet, our scholarly understanding on the antecedents and consequences of this growing phenomenon of corporate activism remains relatively limited. The goal of this panel is to explore key research questions to be answered and future directions and opportunities for research on corporate activism. The panel includes scholars who are actively researching this topic and have made important contributions to our understanding of corporate activism. Panelists will share insights and engage with the audience on both the promise and potential pitfalls of studying this topic, as well as how a study of corporate activism can build not only from the nonmarket literatures on social movements, stakeholder theory, corporate social responsibility, but also from related strategy literatures, such as resource-based theory.

SIM: How do female directors, managers and CEO affect firm sustainability? A review and research agenda

Author: **Emilia Filippi**, *U. of Trento*
Author: **Mariasole Bannò**, *U. of Brescia*
Author: **Sandro Trento**, *U. of Trento*

The purpose of this article is to review and systematize prior works that investigate how the presence of women in leading roles of firms affects sustainability and to open up an agenda to guide future research into this promising area. A structured literature review was conducted and 84 relevant publications were identified. The study shows that the presence of women in the board of directors and/or top management team is associated with a greater engagement in social and environmental projects and a better use of scarce resources towards them; it also positively influences the environmental and social performance and it increases the level, quality, and transparency of sustainability disclosure. Furthermore, the presence of women in leading positions and the implementation of sustainable activities improve the financial performance of the company and its value. Despite these positive effects, conflicting results have also emerged. On the basis of these findings, research gaps and future research agenda were identified and presented.

Paper is Available to Meeting Registrants Only.

SIM: The Multifaceted Effect of CEO Age on Firm Social and Environmental Practices

Author: **Miha Sajko**, *U. of Antwerp*
Author: **Christophe Boone**, *U. of Antwerp*
Author: **Georg Wernicke**, *HEC Paris*

Why do top executives differ in their values, and how is this heterogeneity reflected in organizational outcomes? To answer this question, we build on the dual aspect of an important CEO characteristic, namely age, to simultaneously examine how stable differences in values between executives and changes in values within executives over time affect firms' social and environmental practices (SEPs). On the one hand, executives' concern for stakeholders changes with age as they advance through their careers and thereby shift their priorities. On the other hand, age also reflects stable differences in values between adjacent birth cohorts who grew up in different historical periods. In this study, we integrate time-stable and time-variant perspectives on executives' values by theorizing about how age simultaneously determines which SEPs initiatives CEOs prioritize more and the extent to which CEOs invest in SEPs. Our study provides important implications for research focused on the relationship between executives' values and organizational outcomes.

SIM: Caste Identity, Board Norms, and Corporate Social Responsibility

Author: **Nishant Kathuria**, *U. of Texas at Dallas - Jindal School of Management*
Author: **Mike W. Peng**, *U. of Texas at Dallas*
Author: **Cuili Qian**, *UT Dallas*
Author: **Livia Markoczy**, *U. of Texas at Dallas*

As a part of the "rules of the game" with ancient roots, the caste system is a rigid social stratification system that continues to be relevant in management today. We build on social identity theory to develop predictions regarding the impact of directors' caste on corporate social responsibility (CSR) activities. Extending the institution-based view, we posit that caste as an informal institution influences CSR engagement through informal norms on the board. We leverage a dataset of 12,274 firm-year observations on CSR projects in 5,012 Indian firms from 2014 to 2018. In contrast to most of the prior literature that shows the presence of minorities on the board increases CSR performance, our findings suggest that this may not always be the case. Specifically, an increase in board diversity, in the form of the ratio of lower-caste directors on the board, may reduce the likelihood that the firms will select CSR activities targeted at lower-caste communities. Such firms will also commit less to CSR activities overall. These effects may be even more profound for lower-caste independent directors.

Paper is Available to Meeting Registrants Only.

SIM: Why and how Sen's capability approach should deal with corporate governance

Author: **Magali Fia**, *U. of Bologna-Yunus Social Business Centre*
Author: **Lorenzo Sacconi**, *U. degli Studi di Milano*
Author: **Massimiliano Vatterio**, *UniTn (Italy), and USI (Switzerland)*

The hierarchical nature of the firm affects stakeholders' well-being. This is our main motivation in analysing the firm through the perspective of Sen's capability approach—a social justice theory for the evaluation of any institution, organization or policy aimed at providing well-beings. In order to work out the inherent relation between the capability approach and the economic analysis of the law, we show the strict link between capabilities and entitlements, which we call capabilities-as-entitlements, and investigate if and how corporate governance, i.e., the configuration of entitlements in a firm, enhances or diminishes capabilities of stakeholders. We underline the role that the public use of reason and a sufficientarian criterion play in mitigating conflicts among stakeholders, permitting the reach of a balance amongst all of them and the identification of the capabilities that allow stakeholders to exercise democratic citizenship in corporation. We build several indexes that are able to measure and compare capabilities developed within and between corporate governance regimes.

Political Connections and Corporate Governance in the Context of MNEs

Digital Session Chair: **Tatenda Marume Geoffrey Pasipanodya**, *Washington U. in St. Louis, Olin Business School*

STR: **Herfindahl Revisited**

Author: **Tatenda Marume Geoffrey Pasipanodya**, *Washington U. in St. Louis, Olin Business School*
Author: **Anne Marie Knott**, *Washington U. in St. Louis*

The Herfindahl-Hirschman Index (HHI) is one of the more commonly used measures in the Strategy and Economics literatures. While its principal uses are measuring market concentration or firm diversification, it has been extended beyond that. One concern with the measure is that an infinite set of distributions can have the same HHI. We assess whether that affects inferences. To do so, we replicate a prior study which employs HHI to test the impact of geographic diversification on firm value. We find that results with HHI are not robust across samples. We further find that decomposing HHI into its count and shape components reveals greater insights. In particular, we find that firm value increases in the number of units, and the similarity across them.

STR: **Strategic Response to Corporate Governance Reform of Family Business Groups**

Author: **Chien-Nan Chen**, *National Dong Hwa U.*
Author: **Byung Min**, *Griffith Business School, Griffith U.*
Author: **Jun-You Lin**, *National Open U.*

Based on the scheme of principal-principal conflicts, we investigate family business groups' strategic response to a board regulation requiring appointment of independent directors and the effects of proactive compliance with this regulation on performance. Empirical results from Taiwan show that family-controlled business groups are less likely to adopt proactive compliance. Controlling shareholders' excess control has a negative effect on a firm's adoption of proactive compliance; foreign ownership has a positive effect. The family business group affiliation weakens the positive effect of foreign ownership on the adoption of proactive compliance. We also found that improved firm performance is directly and positively affected by the proactive response. Thus, this study concludes that the responsiveness of firms to institutional pressures depends on which control mechanisms they are situated in and the power relations within the key stakeholders.

STR: **Seamless Experiences: Firms' Product Diversification In Response To Platform-enabled Modularity-in-use**

Author: **Najoung Lim**, *U. of Maryland*

The paper examines how a new digital platform that connects previously independent products affects incumbent firms' product portfolio reconfiguration. When a standardized interface enables customers to mix and match products from different vendors, such modularity-in-use gives rise to customers' demand heterogeneity. Following an abductive approach with quantitative and qualitative data in the U.S. medical imaging device industry (1985-2013), I find that in face of the increased dependencies with competitors' products via a standardized interface, incumbent firms diverged in repositioning depending on whether they owned platform or not. While firms without platform specialized under standardization, firms with platform diversified into the complementary product spaces and became integrators to create customized systems designed to work better together and cater to human factors that were not amenable to being modularized. While the prior discussion on modularity has been reduced to the implication on manufacturing and innovation efficiencies, this study suggests that the modularity-in-use implies another route for a strategic implication to the firms, which is product diversification.

STR: **Mobilizing Managerial Political Ties Toward Business Partners**

Author: **Lucy Sojung Lee**, *Seoul National U.*

Firms, when venturing in an emerging market, are often advised to mobilize their top managers' personal ties with local governmental officers for advancing their organizational goals. Yet, little research has examined the consequences of such tie utilization. Drawing on the social identity literature, we argue that a manufacturer's utilization of its managerial political ties towards its distributor weakens the latter's identification with the former, an intermediate mechanism jeopardizing their exchange relationship. This downside effect is much stronger for foreign manufacturers and when the involved governmental officers have a high degree of arbitrariness. Analyses of a matched sample of 335 manufacturer-distributor dyads in China have largely supported our thesis. This study enhances our understanding of the complex triadic relationship among business partners and governmental officers in an international context.

Antecedents of Corporate Social Responsibility (CSR)

Digital Session Chair: **Jisun Kim**, *U. of Mississippi*

STR: Dark Side of a Bright Vision? An Integrated Vision-Action Model of CSR and Managerial Proactivity 

Author: **Jisun Kim**, *U. of Mississippi*

Author: **He Gao**, *Michigan State U.*

Author: **Luiz F. Mesquita**, *Arizona State U.*

Author: **Glenn Hoetker**, *Melbourne Business School, U. of Melbourne*

Does it suffice to say your company is green, or must you also behave accordingly? Drawing from prior theories on the use of language and vision in strategic management, we address this well-known dilemma with a theoretical model in which corporate social responsibility (CSR) inspired vision statements and actions impart emotional (pride) and cognitive (goal clarity) effects and enhance managerial proactivity. Testing hypotheses on a large multi-year survey with 24,915 managers from 302 companies as well as an online experiment, we find robust results that pride and goal clarity significantly mediate the effect of CSR actions onto managerial proactivity, although these mediating effects are not found for CSR vision statements. To further ascertain if vision statements matter at all for managerial proactivity, we also build and test interaction hypotheses between CSR vision statements and actions, finding a positive effect via goal clarity, but not via pride. We draw implications for CSR-related strategic management research and managerial practice.

STR: Being Good or Being Bad? A Demand-based View of Customer Demand Landscape and Corporate Social (Ir) Responsibility

Author: **Lizhen Wang**, *Guanghua School of Management, Peking U.*

Author: **Weiguo Zhong**, *Peking U.*

Author: **Anni Chen**, *Peking U.*

While researches on the disclosure of corporate social responsibility (CSR) and irresponsibility (CSIr) recognize the influence of between stakeholder group heterogeneity and multiplicity, less attention has been given to the within stakeholder sub-group demand heterogeneity and the relative importance of these demands. We develop a framework wherein CSR reporting is viewed as an organizational response to features of one of the most significant stakeholder groups of a firm—its customers. Drawing upon the demand-based view and stakeholder theory, we argue that two fundamental dimensions of customer base—customer heterogeneity and customer concentration—help explain how firms make balance along multiple social demands. We propose that customer heterogeneity drives firms to invest in diverse types of CSR activities (i.e., higher level of CSR strength) and restricts CSIr activities (i.e., lower level of CSIr strength) to gain customer legitimacy and support. While customer concentration allows firms to invest in limited CSR activities (i.e., lower level of CSR strength) and initiate more types of CSIr activities (i.e., higher level of CSIr strength) for efficiency considerations. Our framework was supported through a longitudinal analysis between 1991 and 2008. Our study contributes to the literature on strategic CSR, stakeholder theory, and demand-based view.

STR: Two Routes to CSR: Mixing Religion, State, and Market 

Author: **Anni Chen**, *Peking U.*

Author: **Lizhen Wang**, *Guanghua School of Management, Peking U.*

Author: **Lanbing She**, *Guanghua School of Management, Peking U.*

Religion, as a critical component in both personal value system and wider institutional order, is relatively under-investigated in strategic management. Drawing on institutional complexity and Weber's classical thinking, we propose that firms with religious top executives are embedded in the tension of religion, market, and state logic, which further shapes their conflicting interpretations of external institutional pressures and variation in practicing CSR. Based on a matched two-year survey of firms across multiple industries and regions, we find that religious CEOs perceive lower normative pressure from industry peers but higher coercive pressure from the government, which mediate the different effects of CEO religiosity on corporate social responsibilities (CSR). Furthermore, we find that when firms are positioned in the hub of a business ecosystem, both the negative effect of religious belief on normative pressure and positive effect on coercive pressure becomes weaker; when firms are located in the environment with high regional marketization, only the negative effect of religious belief on normative pressure becomes weaker. We contribute by uncovering a more complicated but nuanced mechanisms through which CEO religiosity affect CSR and revealing the double-edged nature of business embeddedness with religious categories.

Asynchronous Discussions of Organization Design Solutions Within and Across Firms

Digital Session Chair: **Tetsuya Aoki**, *Hitotsubashi U.*

STR: Cooperation Strategy of Complementors on The Platform: A Study in The YouTube

Author: **Tetsuya Aoki**, *Hitotsubashi U.*

In this paper, I explore the cooperation strategies among complementors on platforms, which have not been sufficiently analyzed so far despite their importance. In previous studies focusing on platforms, it has been implicitly assumed that firms in the same complementors are in a competitive relationship with each other. However, firms in the same market not only compete, but also cooperate. Particularly on platforms, cooperative behavior often occurs among complementors, since there is a common goal of countering platformers. Therefore, this study identifies the cooperative strategies among complementors on the platform based on a co-branding study, which explores the cooperative strategies among firms. The results of the empirical analysis using YouTube as a case study show that cooperation among complements with similar attributes in the short run and cooperation among firms with different attributes in the long run perform better on the platform.

STR: Formation, Size, and Stability of Coalitions within Organizations

Author: **Tomas Lego**, *U. of Vienna*

Author: **Helge JD Klapper**, *Erasmus U. Rotterdam*

Author: **Markus Reitzig**, *U. of Vienna*

This paper investigates the link between coalitions, i.e. informal organizational structures, and individual learning in organizations. Building on the canonical Garbage Can Model (Cohen et al., 1972), we develop an agent-based model that allows us to analyze how organizational members' learning about others' preferences enables the emergence of coalitions. Altering the concentration (extremeness) of individuals' preferences, we find differences in the precision of learning. We observe how large and stable coalitions get as a result of this learning process and how the presence of this informal structure can benefit the overall organization. Subsequently, we find that the organizational benefit of coalitions is greatest for low concentration setups. In exploiting this interplay, this paper also takes a first stab at integrating two hitherto disjointed lines of thinking on learning and bargaining.

STR: Corporate Proximity, Firm Risk, and Entry Timing of New Technologies

Author: **Punit Sharma**, *U. of California, Irvine*

This study examines the effects of corporate proximity and firm risk on the entry timing of new technologies. Using quarterly product-level data on the world's major mobile handset manufacturers for the period 1994–2008, we analyze how a business unit's proximity to the corporate office, in terms of hierarchical distance, and firm risk influence technology entry timing following a pioneering firm. We argue that corporate proximity influences entry timing in two ways: directly through oversight and indirectly by shaping managerial response to firm risk. We find that in firms where the business unit responsible for handsets is far from the corporate office, the probability of entry increases substantially with firm risk. When the business unit is proximate to the corporate office, the probability of entry decreases slightly with greater firm risk. Our results indicate that the interaction between organizational structure and firm risk is critical for understanding entry timing and contributes to theories of entry timing, risk, and organization design.

STR: The Road to El Dorado – Strategic Alliances as a Tool for Enhancing Firm Legitimacy

Author: **Holly Loncarich**, *Kansas State U.*

Author: **Jonathan Johnson**, *U. of Arkansas*

Author: **Alan E Ellstrand**, *U. of Arkansas*

Author: **Hansin Bilgili**, *Kansas State U.*

Strategic alliances have long been recognized as important tools that firms can utilize to enhance their competitiveness. Much of the literature has emphasized the resource dependence perspective whereby firms partner with one another in order to codevelop new resources and competencies. However, the literature has also begun to recognize that firms may form alliances for reasons beyond resource access. Legitimacy represents an important, yet understudied, consequence of alliance formation. In this paper, we investigate the legitimacy outcomes of strategic alliance formation. We find that an inverted-U relationship exists between the number of alliances formed and normative legitimacy as measured by media perceptions. We also show that status asymmetry along with the overarching environmental context of alliance formation itself also serve as important moderators of the alliance formation and legitimacy relationship. In conducting this study, we expand upon the institutional perspective of alliance formation and contribute to the broader alliance literature by examining the legitimacy-based outcomes of alliance formation.

Responding to Competitive Feedback

Digital Session Chair: **Steffen Burkert**, *LMU Munich*

STR: Relative Performance Evaluation, Strategy Imitation, and Firm Performance

Author: **Steffen Burkert**, *LMU Munich*

Author: **Nina Schwaiger**, *LMU Munich School of Management*

The objective of this study is to introduce relative performance evaluation (RPE) into the strategy literature. RPE ties top executives' compensation to the performance of a peer group and has become a central component of executives' compensation contracts (Bizjak, Kalpathy, Li, & Young, 2020; Feichter, Moers, & Timmemanns, 2020). We argue that RPE directs managers' attention towards the selected peers, increasing the awareness of inter-firm relationships and the motivation to outperform peers. As managers usually act in uncertain environments with unknown action-output relations, we predict that RPE induces firms to imitate their peers, which is especially pronounced in case firms are reciprocally tied by RPE. We then link strategic conformity with competitors to firm performance and argue that conformity may endanger competitive advantages, as it hinders firms to explore new niches within a market. Our findings support these predictions. Using executive compensation data from the largest U.S. firms in the time-period 2006 to 2017, we document that firms imitate strategic practices of peer firms with which they are connected through performance peer groups. This behavior is especially pronounced in case firms are reciprocally connected and if firms operate in more uncertain industries. Moreover, we find that strategic conformity is detrimental in terms of firm performance. Our study has important implications for the design of executive compensation contracts and extends our understanding of corporate strategic behavior.

STR: Product quality cues and firm performance enhancement: the case of the auto industry

Author: **Seung-Hyun Lee**, *U. of Texas at Dallas*

Author: **Soo Jung Kim**, *Texas A&M U. Central Texas*

Author: **Yun Dong Yeo**, *UT Dallas*

The current study highlights the importance of minute cues for quality at the product level in firm performance. Using data in the U.S. auto industry, our results demonstrate that product cues with the highest positive evaluation have a greater impact on improving firm performance due to its ability to reveal the uppermost capability. We also find that the consistency of the highest product cue over time corroborates the credibility of the signal. In addition, we find that the effect of consistency of the highest product cue over time (which enhances firm performance) strengthens when the auto firm suffers from a poor reputation. The findings in this research suggest that it is important to determine how quality evaluations are distributed across the product line. By doing so, firms suffering from a poor reputation can asymmetrically allocate their resources to produce the highest ratings in order to improve their performance.

Paper is Available to Meeting Registrants Only.

STR: The Value of Competitor Information: Evidence from a Field Experiment

Author: **Hyunjin Kim**, *INSEAD*

Data on competitors have become increasingly accessible in recent years, raising the potential for firms to inform their decisions with a better understanding of the competitive environment. To what extent are firms aware of readily available information on key competitor decisions, and how does this information impact firms' strategic choices? I explore these questions through a field experiment in collaboration with Yelp across 3,218 businesses in the personal care industry, where treatment firms receive easily accessible information on their competitors' prices. At baseline, over 46% of firms are not aware of their competitors' prices. However, once firms receive this information, they are 17% more likely to change their prices, and do so by aligning their prices with competitor offerings. If competitor information is both decision-relevant and easily accessible, why had firms not invested in this information on their own? Evidence from interviews and a follow-up experiment across control firms suggests that managers appear to have underestimated the value of paying attention to competitor information. These findings suggest that managerial inattention may be a key barrier that leads firms to fail to realize gains from even readily accessible data.

Paper is Available to Meeting Registrants Only.

STR: Performance Feedback and Firms' Relative Strategic Emphasis

Author: **Lulu Cheng**, *School of Management, Xi'an Jiaotong U.*

Author: **Nan Mei**, *Tongji U.*

Author: **Alex Junyi Fang**, *School of Economics & Management, Tongji U.*

Author: **En Xie**, *Tongji U.*

The study investigates how performance feedback—the discrepancy between actual performance and the aspiration level—relates to firms' relative strategic emphasis on value-creation (VC) over value-appropriation (VA), and how this relationship is contingent on two mechanisms: board independence and media coverage. By using a sample of 7460 firm-year observations covering 1558 publicly-listed Chinese companies during 2011—2017, we find that as a firm's performance falls below aspiration, it is more likely for it to put its strategic emphasis on VC over VA. However, as performance rises above aspiration, the firm's probability of emphasizing more on VC over VA increases up to a certain point after which it decreases, showing up an inverted U-shaped relationship. The results also show that board independence and media coverage moderate the relationship between performance feedback and firms' relative strategic emphasis on VC over VA. Specifically, board independence weakens the negative effect of negative performance feedback and strengthens the inverted U-shaped effect of positive performance feedback; while media coverage strengthens the negative effect of negative performance feedback and weakens the inverted U-shaped effect of positive performance feedback.

Reconfiguration of Corporate Scope and Resources

Digital Session Chair: **Anand Kangala**, *U. of North Carolina, Charlotte*

STR: A review of dynamic capabilities, organizational ambidexterity, and firm performance

Author: **Anand Kangala**, *U. of North Carolina, Charlotte*

Firms must continually reinvent themselves to survive and outperform competition during environmental turbulence. The concepts of dynamic capabilities (DC) and organizational ambidexterity (OA) provide a framework for firms to renew and adapt their organizational competencies and capabilities to achieve congruence with the changing market environment for superior performance and sustained competitive advantage. Despite its relevance and strong theoretical roots from the resource-based view (RBV) and strategic positioning, the DC and OA are under scrutiny by strategy theorists over the last two decades. In this review, we synthesize the extant literature of DC and OA with an integrated conceptual framework and provide a deeper understanding of their interplay in the context of environmental dynamism.

STR: Corporate diversification, economies of scope, and the risk-return relationship 

Author: **Arkady V. Sakhartov**, *U. of Illinois at Urbana-Champaign*

Corporate diversification was believed to enhance returns and reduce risk. Empirical research was split between supporting and rejecting speculations about the resulting favorable combination of high returns and low risk. The lack of theory in this regard and the empirical controversy made researchers conclude that the favorable risk-return performance is impossible. This study uses a formal model to develop the missing theory of the risk-return relationship in corporate diversification. The model involves two types of economies of scope, intra-temporal economies from resource sharing and inter-temporal economies from resource redeployment. The model demonstrates that, when both economies are present, firms sustain the negative risk-return relationship and can achieve the favorable combination of high returns and low risk. The model carefully explains mechanisms underlying these results.

Paper is Available to Meeting Registrants Only.

STR: Microfoundations of Firm Resource Reconfiguration: The Role of Hiring Former Consultants as Managers  

Author: **Andreas Distel**, *Rotterdam School of Management, Erasmus U.*

Author: **John Källström**, *Copenhagen Business School*

Author: **Torben Schubert**, *Lund U. and Fraunhofer ISI*

Author: **Wolfgang Sofka**, *Copenhagen Business School*

The scarcity of skilled managers for finding superior resource configurations is a central constraint to theory and practice of resource-based strategies of firms. We theorize that firms can overcome this shortage by hiring managers from management consultancies, since this particular work experience allows individuals to train and reveal resource orchestration skills while working with various clients. Theoretically, we integrate mechanisms from the transferability of scarce, valuable human capital across organizational contexts into microfoundational models of resource-based advantages. We analyze 102,639 Swedish firms from 2010 until 2015 and find that firms hiring former consultants as managers initiate more resource reconfigurations and experience higher performance effects from them. Then again, effects depreciate quickly as the context of the hiring firm homogenizes the particular skills of former consultants.

Entrepreneurship, Experimentation, and Learning

Digital Session Chair: **John S. Chen**, *U. of Florida*

STR: Pivot Rules for (Overconfident) Entrepreneurs

Author: **John S. Chen**, *U. of Florida*
Author: **Daniel Walter Effenbein**, *Washington U. in St. Louis*
Author: **Hart E. Posen**, *U. of Wisconsin, Madison*
Author: **Ming Zhu Wang**, *Washington U. in St. Louis, Olin Business School*

We develop a computational simulation of entrepreneurial learning and decision-making to investigate four emergent propositions from the lean startup movement: (1) entrepreneurs should be prepared to pivot rather than commit to a single idea, (2) they should pivot often, (3) they should pivot early rather than wait to pivot, and (4) that pivoting is a remedy for bias. We find that, across a range of pivoting policies, entrepreneurs that consider pivoting perform better than those who do not. For unbiased entrepreneurs, however, a conservative pivot strategy, which leads to less frequent pivots, outperforms more aggressive approaches. Similarly, unbiased entrepreneurs optimally spend more time examining an initial idea before pivoting than the lean startup literature might seem to suggest. Finally, our model shows that pivoting does serve as a remedy for bias, and that overconfident entrepreneurs perform better when following more aggressive pivoting rules than their unbiased counterparts.

STR: Lighting the Way: Illuminating How New Ventures in Nascent Industries Experiment

Author: **Hyeonsuh Lee**, *U. of Illinois at Urbana-Champaign*
Author: **Sonali Shah**, *U. of Illinois at Urbana-Champaign*

Experimentation enables new ventures to illuminate areas of uncertainty and leads to improved decision-making and performance. Experiments are often studied as stand-alone events, however, scholars are increasingly interested in understanding how experiments are supported by organizational characteristics and choices. Using an inductive, theory-building approach, we seek to illuminate the organizational models that accompany and support experiments, as well as their antecedent conditions and performance effects. We find that new ventures follow one of two strikingly different experimentation models: “generative” and “focused” experimentation. Generative experimentation involves knowledge sharing and/or collaborative experimentation with external actors, building idea-centered organizations, conducting experiments across multiple knowledge domains (technological, market, and business model), and external experiments. In contrast, focused experimentation tends to involve little knowledge exchange with external actors, a focus on executing a specific product idea, and conducting internal experiments focused on the product/technology. Generative experimentation is more likely to result in better performance than focused experimentation for the new ventures in our sample. Three antecedent conditions—having at least one founder with prior entrepreneurial exposure, knowledge of multiple industries, and an orientation towards technologies (rather than products)—are associated with new ventures’ decision to pursue generative, rather than focused, experimentation. This study examines new ventures in the nascent smart lighting industry and is grounded in detailed interview data collected from founders.

Paper is NOT Available. Please contact the author(s).

STR: Many Hands Make Light Work: How and Why New Ventures in Nascent Industries Engage in Collaborative Experimentation

Author: **Hyeonsuh Lee**, *U. of Illinois at Urbana-Champaign*

In a nascent industry, new ventures engage in experiments to mitigate uncertainties by gathering feedback and validating their assumptions or questions. Existing research studies extensively focus on experimentation undertaken by a new venture independently, whose results are typically kept as proprietary knowledge. Accordingly, we lack full understanding concerning whether and how new ventures gain benefits from engaging in collaborative experimentation in a nascent industry, and what drives these new ventures to do so. This study examines the impact of new ventures’ heterogeneous prior knowledge and experience on their likelihood to engage in collaborative experimentation, and the influence of their engagement in collaborative experimentation on new venture survival. By adopting a mixed-method design, this study uncovers both associations between key constructs and underpinning mechanisms of each relationship. My findings illuminate that different prior knowledge and experience create unique knowledge gaps and comparative advantages that new ventures face, which influence their likelihood to engage in collaborative experimentation. Further, the results suggest that engaging in collaborative experimentation is positively associated with higher survival rates of new ventures. My findings are grounded in both detailed interview data collected from founders in the smart lighting industry and rich archival data.

STR: Gibrat’s Law, Incremental Innovation and Firm Growth Dynamics in Natural Resource Industries

Author: **Angel Sevil**, *U. del Desarrollo*
Author: **Alfonso Cruz-Novoa**, *Pontificia U. Católica de Chile*
Author: **Tomas Reyes**, *Pontificia U. Católica de Chile*
Author: **Roberto Vassolo**, *IAE Business School, Argentina AND Pontificia U. Católica de Chile, Ingeniería Industrial*

This paper examines firm growth dynamics in natural resource industries. In these industries, innovation is mainly based on processes in the form of incremental changes, and adoption of innovations has significant sunk costs. We argue that, in a steady state before an incremental process innovation, firm growth is directly proportional to firm size. However, in the presence of incremental innovation events firm growth is indirectly proportional to firm size, since smaller firms pose higher strategic flexibility and are able to adopt innovations faster. Our findings confirm the dependency of growth rate on firm size, highlighting the relevance of incremental innovation as a determinant factor of firm growth, rejecting Gibrat’s Law of Proportionate Effect.

Governance and Competition

Digital Session Chair: **Lin Shi**, *Huaqiao U.*

STR: Attention Stability, Strategic Stability, and Firm Performance in Hypercompetitive Environments

Author: **Lin Shi**, *Huaqiao U.*
Author: **Haibin Yang**, *City U. of Hong Kong*

This study contributes to the attention-based view of the firm by examining the influence of attention stability (i.e., stability of attention allocation to key strategic issues) on firm performance. We investigate the mediating effect that strategic stability (i.e., stability of resource allocation throughout the firm's strategic profile) has on the process by which attention stability influences firm performance. Using longitudinal data of sample firms from Standard & Poor (S&P) 500, we find that attention stability positively affects strategic stability, and that strategic stability has an inverted U-shaped effect on firm performance in hypercompetitive environments. This mediation effect does not exist for firms in non-hypercompetitive settings.

STR: When the Going Gets Tough, the Books Get Cooked: Product Market Competition and Financial Misconduct (WITHDRAWN)

Author: **Yajing Li**, *Rice U.*
Author: **Alessandro Piazza**, *Rice U.*

This paper extends the research on financial misconduct by developing a new perspective based on general strain theory, and more specifically on the strain effect of product market competition. Previous literature suggests that product market competition can provide incentives for managers, but we argue that it can also lead to financial misconduct. In so doing, we take a strain perspective in making the argument that product market competition should be positively associated with the occurrence of misconduct, as it magnifies the threat arising from the possibility of firm liquidation and executive dismissal. We also examine the effect of internal governance mechanisms that are commonly deployed to minimize the agency problem. We argue that CEO option pay will negatively moderate the relationship between product market competition and the occurrence of financial misconduct, in line with the prevailing wisdom of corporate governance research. By contrast, while board independence has often been proposed as an effective governance mechanism to reduce the number of undesirable managerial behaviors, we argue it can exacerbate the threat of executive dismissal resulting from competition, creating incentives for fraudulent behavior. An empirical study of U.S. manufacturing firms provides broad support for our arguments.

Paper is NOT Available. Please contact the author(s).

STR: Class actions: The impact of CEO social class origin on firm competitive repertoires

Author: **Pavithra Balaji**, *U. of Texas at Dallas*
Author: **Livia Markoczy**, *U. of Texas at Dallas*
Author: **Aten Zaandam**, *Kent State U.*

We build on upper-echelons theory to argue that CEO social class impacts firm competitive repertoires. Specifically, we suggest that CEO social class origin impacts whether CEOs favor complex versus simpler competitive actions and competitive conformity versus non-conformity, based on their early experiences and the associated preferences. We further suggest that the effect of CEO social class on competitive actions is strengthened when CEOs face threats to their social status. We test our hypotheses using primary survey data on CEO social class origin and secondary data on firm competitive actions, with a sample of 601 firm-year observations and find support for our predictions. Our paper offers important contributions to research on upper-echelons, social class and competitive dynamics.

STR: Do Chief Strategy Officers Matter? Strategic Activity and Long-Term Firm Performance

Author: **Carolyn Link**, *Heinrich-Heine U. of Dusseldorf*
Author: **Andreas Engelen**, *U. of Dortmund*

Do Chief Strategy Officers (CSOs) impact firm performance? Although the CSO has become an established role in the top management team (TMT), academic research remains inconclusive regarding its performance implications (Breene, Nunes, & Shill, 2007; Menz & Scheef, 2014). Based on the upper echelons and contingency theory, we argue that the benefit of CSO presence to firm performance depends on the level of strategic activity a firm engages in. We derive how certain CSO capabilities are relevant to firm performance and argue that the number of organizational strategic moves moderates the effect. Specifically, we test for an organizations' number of strategic acquisitions, joint ventures (JVs), and market entries relative to industry peers. We test our model on a multi-source dataset of more than 300 firms from the S&P 500 between 2005 and 2019. Our findings indicate that CSO presence is not beneficial per se but is especially beneficial for firms engaging in a high number of JVs and market entries. This study contributes to the upper echelons theory, the literature on organizational embeddedness of strategic decision-making, and reconciles the existing literature on the performance implications of CSOs.

Regulatory Focus and Exploration

Digital Session Chair: **David Weng**, *California State U., Fullerton*

STR: Playing Defense or Playing Offense? CEO Regulatory Focus on Firm Exploratory Innovation 

Author: **David Weng**, *California State U., Fullerton*

This study draws on the regulatory focus theory to postulate that CEOs who are predominantly promotion focused would demonstrate more innovation in novel technological areas, while CEOs who are predominantly prevention focused would not do so. We further investigate contextual factors would moderate the effect of CEO relative regulatory focus including CEO education, firm absorptive capacity, and industry technological uncertainty. Results based on three high-technology industries in the U.S. suggest that the extent to which a CEO is more promotion than prevention focused will motivate the CEO to generate innovation in new technological fields. Our results also indicate that this effect is contingent on certain boundary conditions including CEO education, firm absorptive capacity, and industry technical uncertainty. The findings suggest that the degree to which a CEO is relatively promotion focused influences his or her motivation in engaging in exploratory innovation.

STR: The Joint Effects of Regulatory and Temporal Focus on Firm Survival During Industry Discontinuity  

Author: **Alexander Janotte**, *U. of St. Gallen*

Author: **Tomi MMLaamanen**, *U. of St. Gallen*

Regulatory focus theory has been used in prior research to explain how motivations guide strategic action. This study examines the previously unexamined link between the top management regulatory focus and organizational mortality. We argue and find that the effects of regulatory focus unfold over time as companies addressing a discontinuous change in the industry. Using a sample of 116 private banks from 2009 to 2018, we find that prevention focus reduces mortality at the inception, while promotion focus becomes a more important determinant for firm survival as the change unfolds. In addition, we argue that top management's temporal focus moderates these effects. We find that future focus strengthens the effects of promotion focus on mortality. Contrary to our expectations, however, past focus does not strengthen, but instead weakens the effect of prevention focus on mortality. Our findings provide novel insights on the interactive effects of regulatory and temporal focus on organizational survival during industry discontinuities.

STR: A Longitudinal Study on How Status Gain Affects Individual Exploration 

Author: **Shibo Zhou**, *Georgia Institute of Technology*

Author: **Jiani Zhu**, *Georgia Institute of Technology*

We develop and test a model examining how status gain impacts individual exploration activities and subsequent performance. The model is tested using longitudinal data in a sample of book authors. Results indicate that status gain is associated with a higher level of exploration activities, and the effect is more pronounced when the quantity of production is low rather than high. The exploration activities, however, are negatively associated with subsequent performance. This research contributes to exploration and exploitation literature by demonstrating the unique effect of status gain on individual-level exploration and adding to the evidence on how these two activities are present at the individual level.

STR: CEO Regulatory Focus, Decision Frames, and Earnings Management 

Author: **Shinhye Gloria Ahn**, *Seoul National U.*

Author: **Theresa Cho**, *Seoul National U.*

Author: **Seok-Hyun (Stephen) Hwang**, *Hong Kong Baptist U.*

Author: **Cecile K. Cho**, *Korea U.*

Strategy scholars have increasingly noted the influence of the psychological characteristics of executives on corporate strategy and performance. Synthesizing theories on regulatory focus and framing effect, in this study we examine the role of CEO regulatory focus (i.e., promotion and prevention focus) and decision frames (i.e., gain and loss frames) reflected in earnings management decisions. Specifically, we predict that under two conditions, promotion focus under a gain frame and prevention focus under a loss frame, a CEO's subjective utilities and probabilities of the attainable gains in earnings management become heightened. This, in turn, ultimately leads to his/her intensified tendency to manipulate earnings. Conversely, a CEO's promotion (prevention) focus under a loss (gain) frame decreases his/her perceived utilities and probabilities of the attainable gains in earnings management, subsequently leading to diminished tendency to manipulate earnings. Using a seven-year panel data of U.S. manufacturing firms between 2011 and 2017, we find general support for our hypotheses. The results indicate that the psychological characteristics of CEOs, along with their framing of performance, have a significant impact on their earnings management decisions. Overall, our study highlights the importance of understanding the psychological underpinnings of the earnings management behavior.

Innovation, Collaboration, and Knowledge Transfer

Digital Session Chair: **Yang Liu**, *Cornell SC Johnson College of Business*

STR: Does External Governance Hinder or Improve Firm Innovation? Evidence from the Short Selling Pressure 

Author: **Yang Liu**, *Cornell SC Johnson College of Business*
Author: **Gautam Ahuja**, *Cornell U.*

This study adds to the debate about the influence of external governance on publicly traded firms by focusing on how a specific source of external governance, i.e., the short selling pressure, affects firm innovation, a crucial dimension associated with firms' long-term success. Drawing on external governance and innovation literatures, we consider the dual facets of innovation, i.e., innovation efforts and output, and argue that the presence of short selling pressure may lead firms to decrease innovation input but simultaneously increase innovation output. We use a difference-in-differences design based on a policy experiment that relaxes short selling constraints, and find supporting evidence of our theory. By showing the seemingly conflicting outcome of the short selling pressure, we contribute to the innovation literature and deepen our understanding of external governance.

STR: The Effect of Internal Collaboration on Inventor Mobility 

Author: **Eunkwang Seo**, *U. of Illinois at Urbana-Champaign*

While previous research has examined the role of collaboration for value creation in firms' innovation, little is known about how collaboration affects value capture from firms' knowledge resources. This paper examines how collaboration among inventors within firms affects their mobility, a key influence on firms' ability to capture value from knowledge assets. In contrast to conventional wisdom that collaboration may decrease mobility due to the development of relational capital, I propose that collaboration may facilitate inventor mobility, via three channels: (1) developing general human capital, (2) providing "pro-social" signals, and (3) expanding interpersonal contacts. These hypotheses are tested using an inventor-year panel that combines patent and LinkedIn data, which are complemented by interviews with R&D managers. To address inventors' endogenous self-selection into collaboration, I use a novel research design that leverages a quasi-exogenous source of variation in inventors' collaboration within firms: increased collaboration opportunities from office consolidation. The empirical findings are consistent with the hypothesis that collaboration increases inventors' mobility, and with the three proposed channels. These results make significant contributions to the literatures on employee mobility and collaborative innovation.

STR: Can Transfer Methods Skew Knowledge Adoption? Experiments on Transferring Multiple Knowledge Inputs   

Author: **Thomaz Teodorovicz**, *Harvard U.*

In this paper, I examine how knowledge transfer methods may skew the adoption of multiple knowledge inputs. I propose that transfer methods vary in their potential to trigger cognitive heuristics used by individuals to form ex ante assessments about the value of multiple information stimuli. Such differences affect how knowledge receivers focus (or disperse) cognitive resources across inputs within a knowledge set. This mechanism skews knowledge transfer towards some (and away from other) knowledge inputs. I also advance that pre-transfer experience may magnify this effect as experience enables the use of informational cues to make ex ante value assessments. I test and find empirical support for my predictions in two experiments - an online experiment with 383 gig workers and a field experiment with 516 managers from a large retail company. Both experiments vary whether individuals receive multiple knowledge inputs via knowledge transfer methods that display more or less informational cues about the value of individual knowledge inputs. This paper contributes to the literature on how transfer methods affect knowledge transfer and on how perceptions about knowledge content affect human capital formation. Results also have a practical implication by showing that transfer methods designed to facilitate knowledge flows may carry trade-offs in terms of which knowledge inputs are successfully transferred.

STR: Uncovering the Link from Customer Heterogeneity to Innovation-based Competitive Strategy

Author: **Amali Wijekoon**, *Queensland U. of Technology*
Author: **Sandeep Salunke**, *Queensland U. of Technology*

This study examines the nexus between downstream resources (in particular customer heterogeneity) and innovation-based competitive strategy, focusing on the role of knowledge integration in achieving modular and architectural innovation. In the innovation literature, there has been a two-pronged discussion that relates to the use of customer-related downstream resources - one concerns the use of customer resources in service design and organisational structure-related aspects (such as involvement of customers in new service development); the other concerns the use of customer resources towards development of organisational capabilities (such as knowledge integration). However, from an organisational standpoint both these perspectives are valuable and make sense, as they are interconnected - an organisation's service design or structure can facilitate or hinder the effective functioning of capabilities or the flow of knowledge - thus both need to be examined together. This study addresses this knowledge gap by examining the interrelationships between customer heterogeneity, integrative capabilities, service design-related innovations (i.e., modular and architectural innovations) and firm performance together to understand how customers can be a productive resource for a firm. We conducted a survey in the Australian services sector and the data were analysed using SmartPLS. The findings supported the notion that customer heterogeneity-based strategies generate competitive advantage.

Author: **Ed Saiedi**, *BI Norwegian Business School*

Author: **Vikash Kumar Sinha**, *Aalto U. School of Business*

Emerging research has unraveled complementarities between certain innovation forms, of product, process and organizational innovations. However, there is little consensus on how various innovation configurations and key institutional contexts and characteristics might interact to lead to superior or inferior performance. The aim of this paper is to investigate which sets of innovation configurations empower firms to attain greater performance given key institutional contexts (regulatory intensity and knowledge- vs. research-intensity of industries) and firm characteristics (firm size). We argue that innovation is a causally-complex phenomenon characterized by multifaceted interdependencies and equifinality. We employ the German Community Service Innovation survey, which consists of a broad array of innovation-related questions. We utilize the fuzzy-set qualitative comparative analysis, a set-theoretic configurational method that enables discovering complex patterns in a simultaneous and iterative processes. We find that in lightly-regulated industries, successful firms largely conform to product-marketing and process-organizational innovation pairings. Crucially, regulation demands high-performing firms to supplement these pairings with a third, i.e. respectively organizational or product, innovation form; The exception being small service firms who need to focus on one organizational form.

How can we prepare ourselves for the future requirements of business education?

Future of higher education in management

Organizer: **Bella Butler**, *Curtin U.*

Organizer: **Imen Ameer**, *Hult International Business School*

Ever-changing societal and technological environment constantly challenges the entire workforce to continuously test, experiment and learn new business models and ways of work. These new ways require creating new jobs, upskilling of existing employees and potentially create new opportunities for higher education and business training. We aim to understand and prepare ourselves and our courses to the new requirements in organisations and businesses as these requirements are perceived by both academics and industry leaders. By identifying the required industry skills and capabilities we will develop recommendations on the required adaptation of educational programs in business and management and development of new courses, including executive education programs. This interactive session will offer an opportunity for practitioners and academics to discuss new organisational challenges and teaching needs, to receive industry insights that allow to adapt the content and learning outcomes of their courses to the industry needs. The session will also discuss how to design courses based on the future needs of industry and incorporate innovative teaching practices in delivery of these courses. We aim to generate recommendations on how to continuously improve the curricula and align it with the evolving industry needs so that students can become industry ready.

Based on interviews with industry leaders, we identified the following inter-related clusters of major factors that impact working forces and required skills and capabilities. We will use these factors as a starting point of discussions of industry requirements to develop new and up-skills existing capabilities and how they can be developed in management courses.

CMS: Psychic and Affective Practices of Female Neoliberal Spiritual Subject in New Organisational Forms

Author: **Melissa Louise Carr**, *Bournemouth U.*
Author: **Elisabeth K. Kelan**, *U. of Essex, Essex Business School*

This article analyses the contours of the female neoliberal spiritual subject in new organisational formations by analysing psychic and affective practices. The psychic life of neoliberalism compels women to develop the right mind-set to be successful while the affective practices determine how women are allowed to feel. The article draws on empirical data collected in a gig economy context where individual women both consume and sell beauty products in a network marketing company. The article highlights how neoliberal spirituality is used as a psychic and affective practice, which compels women to cultivate the right mind-set by developing self-belief, being positive and showing gratitude, and as an affective practice which structures how women are allowed to feel. The psychic and affective practices act in concert to hide the precarity and inequalities that characterise this type of work. This article contributes to understanding how neoliberal spirituality is used in new forms of organising to constitute gendered subjects and normalise inequalities and precariousness.

CMS: The Discursive Work of Populist Politicians: An Historical Perspective on English Populism

Author: **Ron Kerr**, *U. of Edinburgh*
Author: **Sarah Robinson**, *U. of Glasgow*
Author: **Martyna Sliwa**, *U. of Essex*

This paper argues that populist politics involves discursive work performed by maverick elite fractions. Bringing together literature on elites and populism and applying a methodology of discursive juxtaposition, we historicise four waves of English right-wing populist discourse: the British Brothers League (BBL) (1901-23), the British Union of Fascists (BUF) (1930-40), Conservative politician Enoch Powell's anti-immigration campaigns (1968-75), and pro-Leave Brexit campaigns. On this basis, we identify the ontological presuppositions shared by the Brexit elite with three previous waves of right-wing populism from 20th C English history. In addressing the questions: who are the populists? and what do populist politicians do?, we demonstrate how, in all of these cases, outsider elite fractions engage in the discursive political work of constructing internal and external threats to the nation and its people. We contribute to the study of elites and of populism through identifying a specific populist political ontology and an associated political methodology operationalised by maverick elite fractions to unsettle established power relations in the field of national politics.

CMS: Management and Alternative Accounting of Violence, Silence, and Gender  

Author: **Sandra Maria Silva**, *UEFS/FAT*
Author: **Silvia Pereira De Castro Casa Nova**, *USP*
Author: **Cheryl Lehman**, *Hofstra U.*
Author: **Fernanda Filgueiras Sauerbronn**, *Federal U. of Rio de Janeiro*

Management and accounting give visibility to certain activities, making them known to others. However, conventional communication methods – management and accounting reports – are problematic and should be challenged because quantifications are subtle in the constitution of subjects and social formations. When naming, assessing, and designating linkages, management and accounting incorporate relationships, becoming a social discourse that shapes beliefs. It impels us to investigate the role of management and accounting reports in data visualization and records of violence against women. Critical management and accounting research is especially suited to explore the relationships between reports, quantification, women, symbolic and physical violence. We argue that what is not measured is silenced and forgotten, removed from discussion and debate. Our goal is to harness management and accounting's emancipatory potential as a tool for resistance and social change by recovering a tradition of giving voice to the marginalized thru counter accounts. For doing so, we examine the Global Gender Gap Report (GGGR, 2006-2020), adopting decolonial and black feminist perspectives. Additionally, we dealt with several counter accounts, particularly from the Brazilian case, to illustrate violence and silencing. We argue that the GGGR oppresses by hiding the colonization process's intersectionality that substantiates gender violence in Brazil.

CMS: How National Populism Crafts Legitimacy: Militaristic Management as a post-bureaucratic paradigm

Author: **Greice Martins Gomes**, *Matr*
Author: **Daniel Da Silva Lacerda**, -

In recent years, conservative populist movements emerged worldwide, and soon scholars realized the need to understand, conceptualize and examine their implications to management studies. Investigating the Brazilian regime led by president Bolsonaro, we argue here that national populism produces the erosion of bureaucracy by redefining the bases of the legitimacy of social action and social organization. What we call militarism, interpreted as an ideal type (Weber, 2012), is a way of understanding society as better governed based on military doctrine and system. Militarism emerges in Brazil as a form of rationalizing fears and establishes a post-bureaucratic paradigm of organization, with critical organizational implications. This discussion contributes more generally with analyzing the political aspects that influence new types of state administration and domination.

MSR: Can Yoga Based Practices Strengthen Capacity for Creative Problem Solving?

Author: **Chirag Dagar**, *Indian Institute of Technology, Bombay*
Author: **Ashish Pandey**, *Indian Institute of Technology, Bombay*

Given the centrality of creative problem solving (CPS) for organizations, we examined the association of interoceptive awareness (IA) and self-transcendence (ST) with CPS and that Yoga Based Practices (YBP), a holistic intervention, impact IA and ST. To test the hypotheses, two studies were conducted with a sample of graduate students having professional experience enrolled in a top-tier management program in India. The results of Study 1 (n=200), a survey design, supported the theoretical model of IA and ST as antecedents of CPS, and study 2 (n=103), an experimental design, indicated the significant positive impact of YBP on IA and ST. The study augments the research on workplace spirituality and CPS training, and discusses the theoretical and practical implications for desirable results (positive change) in organizations and management education. Limitations of the study and directions for future research are discussed.

MSR: Does authentic leadership need leaders? Exploring the implications of Quaker decision-making

Author: **Antony Froggett**, *Newcastle Business School, Northumbria U.*

This paper critiques the concept of Authentic Leadership (AL) using the example of Quaker leadership. There are a number of similarities between AL and the Quaker approach, such as a commitment to transparency and truthfulness. However, there are significant differences. Quakers do not see authenticity as located within the individual leader. Using a Quaker lens authenticity might be viewed as 'fidelity to process', in which decisions are made collectively in order to find 'unity'. This notion of fidelity to process is not a panacea to the problems in creating more inclusive organizations. Quakers view their own practices in a reflexive and self-critical way, pointing to tensions and failures, which suggests that cooperation and inclusion are constantly having to be grappled with and cannot simply be achieved through the application of an idealistic model of leadership.

MSR: Black Mothers at Work: A Contemplative & Anti-Oppressive Approach to Dismantle Workplace Oppression

Author: **Nicole Dillard**, *Northern Kentucky U.*
Author: **Christina Walker**, *Lenoir-Rhyne U.*

The purpose of this article is to explore two research questions: In what ways do Black mothers experience workplace oppression? and How can anti-oppressive practices informed by contemplative practices appropriately and effectively address workplace oppression experienced by Black mothers? Grounding our qualitative research in Black Feminist Thought, an analysis of participants' semi-structured interviews concluded that power is a central component of workplace oppression. In fact, when answering the first research question the data suggests that Black mothers experience workplace oppression through four central themes related to power: (1) privilege, (2) being an outsider, (3) non-traditional career roles, and (4) ownership. In addressing the second research question, we offer a new framework, Contemplative Anti-Oppressive Practice (CAOP), which combines Clifford's anti-oppressive practice with the two aspects of contemplative practice: "stillness" (being) and "action" (doing). We explore this framework in light of the narratives provided by our participants as an approach for both employees and managers to dismantle workplace oppression. Keywords: anti-oppressive practice, contemplative practice, management, workplace oppression, mothers, Black Feminist Thought

Panelist: **Adam K. Thiel**, -
Panelist: **Scott Tornek**, -
Panelist: **Dawn Holden Woods**, -

The novel coronavirus pandemic (COVID-19) has caused massive disruption to societies around the world, and has put enormous pressures on public and nonprofit organizations to both respond to the pandemic while also enduring fiscal and personnel-related challenges. Many employees have had to quickly learn and adapt to the use of new technologies and adjust to working from home while managing other aspects of life such as child care, schooling, adult care, or other family responsibilities. Essential employees who could not socially distance and were required to work in-person faced increased stress and uncertainty as they sought to provide public goods and services while simultaneously taking on considerable health risks. Taken together, the COVID-19 pandemic brought critical issues to the fore regarding organizational resiliency, employee stress, and employee coping. The 2021 AOM PNP plenary panel will discuss these challenges from both academic and practitioner points of view. Academic panel members will speak on conceptual and empirical research on issues of employee resilience and burnout in critical public and non-profit functions. Practitioners from across the public and nonprofit sectors, all of which employ essential front-line workers and were forced to adapt to significant challenges, embrace change, and consider the health, welfare, and resiliency of their work force, will discuss their concrete and palpable experiences. Panelists include: Dawn-Holden Woods, MPA Chief Social Services Officer Public Health Management Corporation, Inc. Ulrich Jensen, Ph.D. Assistant Professor Arizona State University Elizabeth Linos, Ph.D. Assistant Professor of Public Policy University of California Berkeley Adam Thiel, MPA Fire Commissioner and Director, Office of Emergency Management City of Philadelphia Scott Tornek, MBA Chief Strategy Officer Penn Center for Community Health Workers

Organizer: **Olga Igorevna Ryazanova**, *Maynooth U.*
Organizer: **April L. Wright**, *U. of Queensland*

This paper development workshop is focused on the AMLE Special Issue on COVID-19. Our interest lies in theorizing how management learning and education at the individual, organizational, and institutional levels, adapts to, and learns from, the perils and possibilities that the COVID-19 pandemic affords. We are After all, learning often occurs when routine habits are disrupted (Dewey, 1992), and little doubt exists that the COVID-19 pandemic marks a major disruption. Contributions to this special issue should provide new theoretical understandings, reached through examination of the dynamics of the management learning and education processes, or new ways of organizing business schools, that were mobilized to support change during the COVID-19 crisis. Due to the broad nature of the topic, relevant insights from other disciplines that can be connected with the theme and the core interests of the journal may be appropriate, in addition to more conventional approaches. In this PDW, we encourage those with early-stage ideas to submit a short outline paper of 5-10 pages, to gain feedback from peers and AMLE editors to help guide the development of the full paper. The deadline for full paper submissions for the special issue is the end of April 2022, and the call is available at <https://aom.org/research/publishing-with-aom/submission>.

TIM: Does Technology Make Employees Happier?-Job Demands-Resources Model

Author: **Min-shi Liu**, *National Chung Cheng U., Taiwan*

Does technology make employees happier? In the 21st century, information and communications technologies (ICTs) have been widely adopted by business organizations, significantly assisting in improving organizational performance and employee work efficiency. Have there been any downsides, though? These technologies have prompted changes in work arrangements and workplace transitions, permeating individuals' jobs and everyday lives by enabling employees to complete their work anytime and anywhere or by using devices outside of the traditional workplace. So that technostress overflow problems extend across organizational boundaries, and the mental and emotional negative impacts to the employees are severe, which decreases happiness of the employees. Therefore, this study was to investigate the relationship between job demands, job resources, technostress, and happiness. Finally, the study concludes: Organizations should focus on the existing problems of technostress on employees, and should thinking about how to use management strategies to reduce the technostress and its effects in order to enhance the happiness of employees.

TIM: Firm Responses to Media Coverage: The Moderating Role of the Dominant Business Model Design

Author: **Sascha Pascal Klein**, *U. of Kassel*

Author: **Patrick Spieth**, *U. of Kassel*

Manifold changes in a firm's environment urge executives of incumbents to make decisions on adapting the firm's strategy and structures. An institutional perspective suggests the media to influence firm behavior, acting as infomediaries to stakeholders. As such, negative media coverage might evoke firm reactions to repair or maintain legitimacy, mostly associated with strategic change. Despite CEO characteristics causing heterogeneous responses to these pressures (as mostly investigated and found in prior research), firm-specific aspects might account for different reactions to similar pressures caused by negative media coverage. However, research lacks a comprehensive understanding of these characteristics despite rather unspecific features like organizational resources, firm size or age. We close this gap by investigating the role of the dominant business model design, comprising a firm's boundary-spanning activities of value creation and capture, for initiating strategic change as a reaction to negative media coverage. In detail, we collected data by triangulating different data sources like databases, annual reports, and media articles resulting in a longitudinal dataset with 208 observations of large, public German companies. We analyzed the data with generalized estimating equation modeling and found that negative media coverage evokes firms to initiate strategic change. We contribute by finding that an efficiency-centered business model impedes this relationship, while an innovative, novelty-centered business model shows no influence. The empirical findings contribute to gain a more comprehensive understanding of the interaction of drivers of strategic change and explain heterogeneous responses to negative media coverage with the dominant business model design.

TIM: Balancing Organizational Identity through Mission Statements: A Topic Modeling Analysis

Author: **Axel Hund**, *Neu-Ulm U. of Applied Sciences*

Author: **Heinrich Graser**, *U. of Bamberg*

Author: **Heinz-Theo Wagner**, *HNU*

Author: **Daniel Beimborn**, *U. of Bamberg*

Author: **Tim Weitzel**, *U. of Bamberg*

Organizational identities define how organizations are perceived inside and outside the organizational boundaries. Because organizational identity is deeply embedded in an organization's routines and processes, a continuous identity provides stability, whereas changes in organizational identity are risky and difficult to manage. Yet, digital innovation leads to frequent changes in the external environment, resulting in conflicting requirements and the need to manage changes in the organizational identity. To do so, organizations therefore rely on narratives such as mission statements to communicate and balance their identity in the face of frequent change and often conflicting demands. We examine the mission statements of the top 1000 R&D spenders and uncover 18 topics that are part of such narratives. We discuss our findings in the context of research on digital innovation and conclude by identifying promising avenues for future research.

TIM: Organization Structure of Development and Firm Innovation

Author: **Jiho Yang**, *Imperial College Business School*

Author: **Paola Criscuolo**, *Imperial College London*

Research and development have different goals and challenges, and organization structure may have different influences on research and development. However, we argue that previous research's predictions and findings on the effect of organization structure on innovative outcomes of a firm are less applicable to development than to research. Drawing on the literature on organization structure and coordination, we articulate mechanisms through which organization structure of development activities influences innovation. Specifically, we hypothesize that centralization of development helps firms produce standardized technologies and reduce duplication in development efforts by enabling coordination of development activities across business units. We also hypothesize that centralization of development hampers coordination of development activities with downstream functions performed by business units such as marketing and manufacturing, which negatively affects the willingness of business units to implement centrally developed inventions into their products. We test the hypotheses using a unique dataset which comprises all inventions submitted to a global ICT company where organization structure governing development activities shifted from a decentralized structure to a centralized one. We conclude with discussing our study's contributions to the research on R&D organization structure, corporate strategy, and product platforms.

Out and About...Lessons Learned from Multi-Country Research Programs - 5C, Cranet and GLOBE Plenary *Multi-Country Research Program Plenary*

Organizer: **Richard Cotton**, *U. of Victoria*
Presenter: **Jon P. Briscoe**, *Northern Illinois U.*
Presenter: **Michael Dickman**, *Cranfield U.*
Presenter: **Peter W. Dorfman**, *New Mexico State U.*
Presenter: **Mansour Javidan**, *Thunderbird School of Global Management at ASU*
Presenter: **Mila Borislavova Lazarova**, *Simon Fraser U.*
Presenter: **Emma Parry**, *Cranfield U.*

This year's conference is completely virtual but still offers global opportunities! Therefore, we decided to have a plenary for the Careers Division that will expand our horizons when it comes to exploring multi-country research - not just in careers but in human resource management as well as in the fields of culture and leadership. We are taking this opportunity to have a discussion with leaders from three interesting and different multi-country research programs - 5C (Cross-Cultural Collaboration on Contemporary Careers), the Cranet International Research Network on Human Resource Management and GLOBE (Global Leadership and Organizational Behavior Effectiveness). The discussion will offer comparative project information and insights on topics including structure, membership, goals, accomplishments, challenges and lessons learned along with LIVE Q&A with leaders from each of these research programs. This session will be of interest not only to careers scholars but to the broader HRM and management scholarly community. Please join us for a thought provoking and inspiring discussion on international research particularly as it relates to expanding multi-country, comparative research to other domains as suits your interest. Please log in and join!

When and Why Do We Value Dishonesty? Moral Conflicts of Honesty, Cooperation, and Loyalty

Moral Conflicts of Honesty, Cooperation, Loyalty

Presenter: **Michael Slepian**, *Columbia Business School*
Participant: **Eric VanEpps**, *U. of Utah, David Eccles School of Business*

Honesty is considered a virtue in most circumstances, whereas dishonesty is often considered immoral and costly. In the symposium, we challenge this assumption and identify contexts in which dishonesty is perceived as more moral than honesty. We focus on situations in which honesty conflicts not only with self-interest, but with other moral principles such as benevolence, altruism, and loyalty: Situations in which honesty can harm others whereas dishonesty may be helpful to others, collaborative contexts in which our partners lie, and choosing to tell versus keep others' secrets. This symposium showcases novel research studies, using different methodologies, that identify and test people's beliefs about when and why they themselves and others should be honest versus dishonest. Across research papers, we demonstrate that in many cases individuals may judge honesty as less ethical than dishonesty. We identify the emotional, cognitive, and social processes that underlie individuals' decisions and judgments of honesty and dishonesty. We underscore the importance of emotions and competing moral values in determining the ethical and interpersonal implications of honesty and dishonesty. The symposium aims to provide a broad perspective on the nature of honesty beyond its conflict with self-interest, and to advance our understanding of when and why dishonesty may be moral.

Crowdfunding 2

Digital Session Chair: **Ye Zhang**, *Loughborough U.*

ENT: Lead investors' Human Capital and Fundraising Performance: Mediating Role of Reputation

Author: **Ye Zhang**, *Loughborough U.*
Author: **Louise Scholes**, *Loughborough U.*
Author: **Kun Fu**, *Loughborough U.*
Author: **Mathew Hughes**, *Loughborough U.*

Equity crowdfunding syndicate emerged in recent years characterised as crowd investors (co-investors) using online platforms to co-invest with other professional investors (lead investors). We investigate the effects of lead investors' general human capital and specialised human capital on their fundraising performance. We also examine the role of reputation in mediating the relationship between human capital and fundraising performance. Result indicates that lead investors' specialised human capital is indeed mediated by their reputation.

ENT: How crowdfunders are influenced by entrepreneurial passion A dual information processing perspective

Author: **Chiara Franzoni**, *Politecnico di Milano*
Author: **Francesca Tenca**, *Politecnico di Milano School of Management*

We incorporate Entrepreneurial Passion into a dual theory of information processing and theorize that passion can be used as information in analytical thinking, and as an heuristic, in intuitive thinking. This conceptual framework leads us to predict that passion is associated to more positive judgments, but also at identifying moderating factors that predict when passion is less likely to do so. We test the role of two factors in the context of crowdfunding. The correlational evidence is consistent with predictions that passion is less influential if displayed in combination with low preparedness, i.e. in conditions of incoherence/disfluency, and when the judgment is important for the decision maker. This conceptual framework reconciles some of the contradictory findings of prior evidence and improves the predictive power of the Entrepreneurial Passion theory. The results also suggest that affective cues have the power to influence decisions in contexts, such as crowdfunding, characterized by large numbers of non-professional investors.

ENT: The Role of the Information Environment in Entrepreneurial Fundraising

Author: **Daniel Blaseg**, *ESADE Business School*
Author: **Chien-Sheng Richard Chan**, *Stony Brook U.-State U. of New York*

Management, and especially entrepreneurship, research usually assumes that the effects of quality signals are robust across different information environments. Indeed, theoretically and commonly assumed, investors should tend to rely more strongly on quality signals as cues to make decisions in a more complex and noisy information environment. However, in a real-world and cognitively demanding environment, the potential of quality signals to resolve information asymmetries may dissipate, because available quality signals might simply not be recognized. In this study, we inspect the indirect effects of the signaling environment on the relationship between quality signals and the outcomes of fundraising efforts of entrepreneurial ventures using the market of Initial Coin Offerings (ICOs) as empirical setting. We postulate that two dimensions of signaling environment (i.e., higher information amount and information variation) result in less favorable funding outcomes for entrepreneurial ventures because these dimensions increase cognitive costs for investors, presumably resulting in choice overload, and finally making investors hesitate to provide funding. A unique sample of 1,104 ICO projects provides support for our hypotheses.

ENT: To Provide Support or Not: Exploring Internal Social Capital and Reciprocity in Crowdfunding

Author: **Chandresh Baid**, *Grand Valley State U.*
Author: **Arvin Sahaym**, *Washington State U.*

In this paper, we examine crowdfunding platforms as self-sustaining online communities of entrepreneurs, based on social capital and social exchange theories. Campaigns seeking funds on crowdfunding platforms do not operate in isolation; they are influenced by the dynamics at play between creators and backers on the platform. We examine resource acquisition patterns between creators operating on a crowdfunding platform. Exchange of financial resources between creators on crowdfunding platforms can result in the acquisition of social capital within the platform. We argue that financial resource exchange and the resulting internal social capital on the platform may establish norms of reciprocity among the community of creators. Moreover, we propose reciprocity is the mechanism through which the internal social capital acquired by a creator can influence the funding success of a campaign. The results of empirical analysis of 655 first-time creators on Kickstarter provide evidence for the existence of norms of reciprocity in a community of creators who operate on crowdfunding platforms. More importantly, we find support for our proposition, that reciprocity mediates the influence of internal social capital on funding success. The implications of this research on theory and practice are discussed.

ENT: Do Founders Need a Second-in-Command?

Author: **Travis Howell**, *UC Irvine*
Author: **Bradley Hendricks**, *U. of North Carolina, Chapel Hill*

To compensate for their professional limitations, founders that hold the CEO position in large firms are often encouraged to hire a “second-in-command” (i.e., a COO or President). Surprisingly, however, little is known about the prevalence of a second-in-command in founder-led firms, or its influence on firm performance (if any). Using novel methods and a sample of over 2,000 IPO firms, we address these gaps. We find that founder-led firms are more likely to have a second-in-command relative to firms without founder CEOs. In contrast to firms without founder CEOs, whose performance is adversely affected by the presence of a second-in-command, we find that founder-led firms perform better when a second-in-command is present. Collectively, our findings add fresh contributions to the entrepreneurship and upper echelons literatures.

ENT: From the Throne to the Kingdom: Employee Empowerment in Owner-Managed Firms

Author: **Matthias Wuersten**, *U. of St. Gallen*

I develop a model explaining procedural aspects of employee empowerment in owner-managed companies. Based on 22 interviews with representatives from six owner-managed firms active in the Swiss main- and ancillary construction industry, I find that firm complexity and resource necessity act as a regulator for growth ambitions forcing these firms to empower their employees. I find that employee empowerment in owner-managed firms can be executed through mechanisms of participative leadership, professionalization of collaboration and ownership dispersion. Furthermore, my study sheds light on effects of employee empowerment such as benefits tied to reduced owner-manager dependence or downsides linked to increased agency costs. My model thus presents integrative theorizing of the drivers, mechanisms, and effects of employee empowerment in owner-manager firms.

ENT: Entrepreneurial Leadership and New Venture Innovativeness: The Moderating Role of Employee Ownership

Author: **Christoph Brütting**, *Chair for Technology & Management, TU Dortmund U.*
Author: **Tessa Christina Flatten**, *TU Dortmund U.*

Research on entrepreneurial leadership is nascent. Yet, little is known about contextual factors that influence how founder managers’ leadership capabilities affect organizational innovativeness. To fill this gap, we introduce a model that integrates direct effects and indirect effects moderated by employee ownership. By drawing from Amabile’s model of creativity and innovation in organizations, we illustrate how leaders determine innovation on organizational level. Beyond that, we contend that employee ownership affects particularly intrinsic and extrinsic motivation as a component on the individual level. Optimally incentivized employees may thus strengthen the linkage between entrepreneurial leadership and innovativeness. We test the predicted effects with a dataset of the German Startup Monitor survey covering 503 new ventures in Germany. Our findings confirm the positive relationship between entrepreneurial leadership and organizational innovation. We further show that the existence and strength of the moderator, employee ownership, depends on its configuration. With our research, we contribute to the nascent literature on entrepreneurial leadership and employee ownership in the new venture context. Besides generalizing previous findings on innovation outcomes of entrepreneurial leadership, we identify an important moderator on the link. By integrating Amabile’s model, we help to place research in both fields on a more solid theoretical basis.

ENT: Reverse accountability and leadership: The next generation social entrepreneurial design

Author: **Ananya Rajagopal**, *U. Anahuac Mexico*

This study provides a qualitative analysis of collective entrepreneurial business design based on leadership styles of social enterprise and attributes of stakeholder driven reverse accountability. This study has been conducted using qualitative research method, by applying in-depth interviews to the entrepreneurial leaders of 25 start-up enterprises in Mexico. The content analysis was done to summarize the open-ended questions using software NVivo version 11. The study revealed that collective leadership is more effective as compared to an individualistic leader-driven entrepreneurial design. Social enterprises are transitioning to collective leadership models through implementation of organizational design based on reverse accountability. This study contributes to the existing literature by analyzing the impact of reverse accountability and collective leadership patterns on decision-making process of social enterprises.

Immigrant Entrepreneurs 1

Digital Session Chair: **Bryan Malki**, *Jönköping International Business School*

ENT: Financial Ambidexterity of the Immigrant Entrepreneurs: Boundary Work and Behavioral Complexity

Author: **Bryan Malki**, *Jönköping International Business School*

A considerable amount of research describes the limited financing choices of Immigrant entrepreneurs (IEs) in hosting countries, and the various challenges they face in accessing the necessary resources out of their co-ethnic networks. However, little is known about how IEs, at their startup level, make it to survive these financing challenges in hosting countries. Therefore, this paper theoretically argues IEs to acquire certain level of financial ambidexterity in order to overcome their financing struggle in hosting countries. Namely, their ability to flexibly switch their exploration and exploitation for formal and informal financing between the multiple contexts where they are embedded. Thus, the paper proposes four mechanisms to derive the IEs' financial ambidexterity, and argues boundary work and acquisitions of a behavioral complexity to be the decisive driver for the IEs' financial ambidexterity. Finally, the paper discusses different theoretical contributions, in addition to empirical and practical implications for future research.

Paper is Available to Meeting Registrants Only.

ENT: Seeing the World from an Outsider's Perspective: Opportunity Recognition by Immigrant Entrepreneurs

Author: **Sadi Koray Demircan**, *U. of Victoria*

Author: **Wade Danis**, *U. of Victoria*

Author: **Andreea Noemi Kiss**, *Lehigh U.*

This study contributes to the opportunity recognition literature by an inductive content analysis of the entrepreneurial journeys of 52 immigrant entrepreneurs in the Boston area. The theoretical framework derived from our narrative data depicts the opportunity recognition processes of immigrant entrepreneurs and highlights the role of the meso context, embedded in the broader macro institutional context, as a source of external resources, motivators, and opportunity signals. The model also elaborates the role of idiosyncratic internal motivators for immigrant entrepreneurs during their opportunity recognition processes. The study contributes to the entrepreneurship literature by showing that immigrant entrepreneurs, due to their extended exposures to different national contexts, have a comparative mindset, and this mindset plays a unique role in shaping their alertness to entrepreneurial opportunities in their new contexts.

Paper is Available to Meeting Registrants Only.

ENT: Staying In or Stepping Out? Growth Strategies of Second Generation Immigrant Entrepreneurs

Author: **Sarika Pruthi**, *San Jose State U.*

Author: **Misagh Tasavori**, *Sharif U. of Technology*

Second generation immigrants in developed economies have contributed to the emergence of new areas of immigrant business activity, especially in information technology and the creative industries; however, an understanding of their growth strategies is limited. Compared to native entrepreneurs, immigrant entrepreneurs are more likely to have human and social capital resources needed to start international new ventures, and potentially global firms competing against multinational enterprises. Using case studies, we examine the growth strategies, and the factors influencing choice, of 12 SGIEs of South Asian origin in the UK. Our findings reveal that SGIEs are heterogeneous in their pursuit of inward and outward internationalization, geographic and product-related growth, contingent on their start-up context and use of social ties. In linking founder and successor SGIEs' use of co-ethnic (family and non-family) and non-co-ethnic ties with the product and geographic scope of their ventures, these findings contribute to the immigrant entrepreneurship, international entrepreneurship and international business literatures. Keywords: Second generation immigrant entrepreneurs; immigrant entrepreneurs; growth strategies; internationalization

Paper is Available to Meeting Registrants Only.

ENT: Financing for Business Growth or Not: How Do Immigrant SMEs Differ from Native SMEs?

Author: **Zonghui Li**, *Jacksonville U.*

Much debate persists regarding how immigrant founded small and medium sized enterprises (SMEs) differ from their native counterparts on financing for business growth. Drawing on the resource-based view, this study examines how SME owners' immigrant status, combined with other characteristics (e.g., family involvement, owner involvement, owner education), has an impact on the use of internal and external capital for business expansion. Using microdata from the 2007 U.S. Survey of Business Owners (SBO), this study employs multinomial logistic regression modeling to test the hypothesized relationships. Results show that immigrant SMEs are more likely than their native counterparts to use internal capital and less likely to use external capital for business expansion. Furthermore, family involvement, owner involvement, and owner education positively moderate the relationship between immigrant status and use of internal/external capital for business expansion. This study contributes to the literature on both immigrant entrepreneurship and small business financing by suggesting that immigrant SMEs have resource endowments and constraints regarding use of internal and external capital for business expansion and that family/owner related characteristics (e.g., family involvement, owner involvement, and owner education) strengthen the resource endowments and/or mitigate the resource constraints that are associated with immigrant status.

Informal Entrepreneurship

Digital Session Chair: **Giacomo Ciambotti**, *U. Cattolica del Sacro Cuore*

ENT: Operating in quicksand: dark sides of informal entrepreneurship in extreme poverty contexts  

Author: **Giacomo Ciambotti**, *U. Cattolica del Sacro Cuore*
Author: **Flavia Cau**, *U. Cattolica del Sacro Cuore*
Author: **Andrea Sottini**, *U. Cattolica del Sacro Cuore*

Literature on informal economy largely debated on the positive role of informal entrepreneurs toward poverty alleviation in developing countries. However, such contexts are characterized by extreme poverty conditions with institutional voids and resource constraints that affect the entrepreneurial operations. While scholars documented why informality persists in developing countries, and what lead informal entrepreneurs to avoid the transition to formal economy, we currently miss the mechanisms by which informal entrepreneurs can effectively operate in contexts of extreme poverty. Our paper addresses this gap through a qualitative research based on 58 informal entrepreneurs in Uganda and Ghana. We discovered that informal entrepreneurs operate through practices of embeddedness in community to get necessary resources and creating informal institutions to fill institutional voids. However, such entrepreneurial practices generate also dark side effects, which also reinforce each other in a cross-bracing mechanism. We then theorized such dynamic of a cross-braced interplay between community embeddedness and informal institutions revealing how informal entrepreneurs are trapped in operating in a 'quicksand', which is the main cause of persistence in poverty condition. With our paper, we contribute to the literature on informal entrepreneurship in extreme-poor contexts, and especially we extend literature on the entrepreneurial processes which lead entrepreneurs to persist in informality. Future research and limitations are offered as well.

Paper is Available to Meeting Registrants Only.

ENT: Towards the Transition of Informal Sectors to the Formal Economy

Author: **Mauricio Mercado**, *Iowa State U.*

Due to its growing importance and presence in the global economy researchers have attempted to demystify informal entrepreneurship, its motivations, processes, and outcomes. Recent scholarship, however, has focused on identifying how to transition informal actors into the formal sector. Nonetheless, extant literature is inconclusive in providing guidance on how informal entrepreneurs can best traverse a path to formality. To bridge previous gaps in the literature, we leverage the institutional entrepreneurship framework, the cultural entrepreneurship process, and the resource-based view to identify microprocesses entrepreneurs in the informal sector can employ to transition to formality and achieve legitimization. We postulate that informal economy sectors that are experiencing growth meet the enabling conditions to warrant an institutional change. By using stories and symbols in a consistent way, that emphasizes alignment with formal norms and beliefs, informal entities in transition can construct an identity that is legitimate and accepted by formal institutions. Importantly, in the face of their resource-constrained nature, we argue that digital technologies can potentiate informal entities' successful transition to formality. Our paper offers several contributions to advancing informal entrepreneurship research by answering calls regarding the process for informal ventures to construct and achieve legitimacy. Moreover, we offer guidance to settle the institutional plurality dilemma that plagues an informal entity's transition towards formality. Third, we recognize how digitalization transforms the nature and structure of entrepreneurial agency and actions in the context of the informal sector. Overall, we underline the specific microprocesses that precede the integration of digital technologies to foster institutional change and formalization of informal sectors.

ENT: Sight Unseen: Selective Visibility in the Informal Economy

Author: **Sophie Catherine Bacq**, *Indiana U. - Kelley School of Business*
Author: **Robert Nason**, *McGill U. - Desautels Faculty of Management*
Author: **Siddharth Vedula**, *TUM School of Management, Technische U. München*
Author: **Joel Bothello**, *John Molson School of Business, Concordia U.*

Management and entrepreneurship research treats venture visibility as a strategic imperative but derives this prescription from the study of privileged Western firms operating in the formal economy. In the informal economy, visibility comes with unique hazards of attracting undesirable state, criminal, and community attention. We identify a visibility paradox: as informal economy ventures seek to increase visibility to garner support from resource-providing stakeholders, they also risk over-exposing their ventures to resource-extracting stakeholders. We adopt an inductive quantitative approach leveraging a unique, hand-collected, census of all enterprises in the township of Delft South in Cape Town, South Africa. We find an inverted U-shape relationship between venture visibility and monthly net cash. We draw on this finding to develop the concept of selective visibility—a strategy to make an organization more visible to some stakeholders and simultaneously less visible to others—and explore the prevalence of visibility configurations as well as their associations with financial performance. Our study enhances theoretical understanding of venture visibility and derives new insights from the informal economy. More broadly, we seek to redirect conversations about the promise of entrepreneurship to alleviate poverty by connecting it to more reflective and critical conversations about decolonizing economic development.

Paper is Available to Meeting Registrants Only.

ENT: Informal Entrepreneurship: An Integrative Literature Review 

Author: **Esther Salvi**, *TUM School of Management, Technische U. München*
Author: **Frank-Martin Belz**, *Technical U. of Munich*

Informal entrepreneurship (IE) represents the process of opportunity recognition and exploitation in the informal economy, i.e. outside of formal institutional boundaries (laws, regulations), yet within informal institutional boundaries (norms, beliefs). This includes entrepreneurial activities that, while not complying with formal laws and regulations, remain legitimate for many entrepreneur's stakeholders, including customers, suppliers, and employees. In this paper we review the stream of literature on IE, drawing on the multilevel causal mechanism framework. We employ a systematic and integrative literature review to synthesize the existing literature, identifying situational, action-formation, and transformational causal mechanism on three different levels (micro, meso, macro) for the puzzling phenomenon of IE. The multilevel mechanism framework generates new perspectives on IE. To advance theory in this field further, we propose some directions for future research on IE.

Digital Session Chair: **Adam K. Frost**, *Harvard U.*

ENT: **Entrepreneurship in Socialist China** 

Author: **Adam K. Frost**, *Harvard U.*

William H. Newman Award Nominee

China's socialist era (1957–1980) is often described as having been void of entrepreneurial activity. Generations of scholars have argued that after the completion of "socialist transformation" in 1957, private entrepreneurship was effectively purged from the Chinese economy and only began to reemerge after the start of market-oriented reforms in the late 1970s. This paper draws on new evidence from grassroots sources that were acquired from Chinese flea markets to reassess the nature of economic activity in socialist China. Specifically, it develops and analyses original datasets based on more than 2,600 cases of "speculation and profiteering" prosecuted by local government agencies in the 1960s and 1970s. Combining this grassroots data with national statistics, the paper provides robust empirical evidence for the following three propositions: 1) the Chinese socialist state was never successful in suppressing private entrepreneurial activity; 2) entrepreneurship under Chinese socialism was far greater in scale and scope that previous scholarship would lead us to believe; and 3) the central and local governments were not unified in their efforts to enforce formal socialist institutions. Collectively, these findings overturn longstanding ideas about China's socialist economy and reveal important historical antecedents of China's market-oriented reforms.

ENT: **Employee entrepreneurship in response to non-compete enforceability**  

Author: **Sepideh Yeganegi**, *Wilfrid Laurier U.*

Author: **Andre O. Laplume**, *Ted Rogers School of Management, Ryerson U.*

Employee entrepreneurship is an important source of new ventures and economic development. However, employee entrepreneurship is affected by formal institutions such as non-compete agreements. Non-compete agreements stipulate that an employee may not work for a competitor or create a new competing venture, for some period of time and limited scope. We argue from the institutional perspective that employee responses to non-competes can range from compliance, compromise, defiance, avoidance, to manipulation. We test hypotheses predicting four of these five potential responses using a cross-country measure of non-compete enforceability and sample of employee entrepreneurs. Our results indicate that a country's non-compete enforceability is associated with increased intrapreneurship, reduced spinout entrepreneurship, and more spinouts involving new products or services, especially when employees enter the same industry as their parent firm. These results help to clarify the influence that non-competes can have on the paths that employee entrepreneurs take.

ENT: **Hegemonic policy discourses on entrepreneurship: A comparison between the Netherlands and Kosovo**  

Author: **Dillon Berjani**, *Vrije U. Amsterdam*

Author: **Elco Van Burg**, *Vrije U. Amsterdam*

Author: **Karen Verduyn**, *U. of Amsterdam*

Policymakers have prioritized conventional forms and understandings of entrepreneurship in their political agendas, enforcing a rhetoric that seems to be bound to the promise of economic progression. This rhetoric has often helped generate hegemonic discourses of entrepreneurship that seem to be difficult to challenge. This paper combines textual analysis techniques and critical discourse analysis to analyze political agendas in the Netherlands and Kosovo to research the specific hegemonic workings of such discourses on entrepreneurship and problematize their consequences. We found that these political agendas invoke hegemonic discourses of (economic) power, discourses of protectorate, and discourses of enterprise. We also found that the prominence of such hegemonic discourses diverge between contrasting social settings and are more apparent in a precarious context. While the discourses of (economic) power and the discourse of protectorate are most explicit in the case of Kosovo, the discourse of enterprise is present in both countries. This paper contributes to the literature taking a critical approach to entrepreneurship, questioning the hegemonic allure given to entrepreneurship, and highlighting the consequences of such hegemony in shaping the entrepreneurship image by uncovering and problematizing ideological discourses invoked by policy discourses.

ENT: **Self-employment, entrepreneurship and barriers to healthcare access across Europe** 

Author: **Giulio Bosio**, *ODM HR Consulting*

Author: **Tommaso Minola**, *U. of Bergamo*

Author: **Federica Origo**, *U. of Bergamo*

In this paper we study the relationship between access to healthcare and different types of self-employment (distinguishing between solo self-employed and entrepreneurs, that is self-employed with employees), focusing on the main reasons and conditions behind unmet healthcare needs. The empirical analysis is based on individual data for 17 European countries from the European Social Survey (ESS) complemented with country-level indicators of health systems. We find that, conditional on a rich set of observable characteristics, it is just the solo self-employed that are significantly more likely than employees to report unmet medical needs. Barriers related to affordability are relevant especially for solo self-employed, while acceptability-related reasons matter for all the employment groups considered, albeit with different nuances. Multilevel estimates complement these results by highlighting the relevance of the interaction between individual types of self-employment status and country-level characteristics of the health systems in influencing perceived barriers in healthcare access.

Research Challenges

Digital Session Chair: **Martin Ruef**, *Duke U.*

ENT: **What Can Outliers Teach Us About Entrepreneurial Success?**

Author: **Martin Ruef**, *Duke U.*
Author: **Colin Birkhead**, *Duke U.*

Case studies of entrepreneurs and their startups offer detailed information on the process of creating a new enterprise, but are often unusual examples of entrepreneurial efforts at large. By developing a novel approach to outlier analysis, this paper seeks to combine inductive insights from such case studies with hypothetico-deductive perspectives that have typically been applied to more general samples of firms. The approach pairs the case-based identification of mechanisms that may lead to entrepreneurial success with robust statistical analysis of a comparison group of entrepreneurs that have been sampled irrespective of their performance or persistence. Following the iterative refinement of case-based mechanisms, repeated tests using the comparison data, and analysis of residuals and outlier diagnostics, the process of theoretical and empirical examination concludes once all hypotheses generated by a case study have been evaluated and the case does not exert undue influence on the conclusions that are being drawn. We illustrate our approach to outlier analysis using a prominent case from economic history: the House of Rothschild, which emerged in Frankfurt's Jewish enclave during the 18th century and became the most famous investment bank in Europe.

Paper is Available to Meeting Registrants Only.

ENT: **Black Entrepreneurship: Theoretical Contributions, Challenges, and Opportunities**

Author: **Antonio Benedito De Oliveira Junior**, *FEI - Centro U. FEI*
Author: **Edson Sadao Iizuka**, *Centro U. FEI*
Author: **Pedro Jaime**, *FEI - Centro U. FEI*

Although research into entrepreneurship has become of great significance in the area of Management, little attention has been paid to black entrepreneurship. Black entrepreneurship is a form empowerment of black identity, which is of immense social benefit in reducing racial discrimination. This study has three main objectives. First, to carry out a bibliometric analysis through social networks to identify the leading authors in this field - so far, no one has done this. Secondly, to examine the results of a qualitative research carried out with nine case studies to show the main factors that affect black entrepreneurship. Third, to propose a model for black entrepreneurship in Brasil. Eight factors have emerged from these results: (1) black empowerment as an affirmation of black identity, (2) opportunities in an underexplored business niche, (3) product differentiation, (4) focus on black people, (5) social networks and word of mouth, (6) lack of financ, (7) little business experience, and (8) racism. In this work make two contributions. First, we have established a theoretical framework about black entrepreneurship using bibliometric analysis, an issue that researchers into management have neglected. Second, to point out the eight main factors that impact black entrepreneurship to propose a model.

Paper is Available to Meeting Registrants Only.

ENT: **Who Avoids Entrepreneurship Scholarship?**

Author: **Alex Stewart**, *Memorial U. of Newfoundland*

Some scholars assert that entrepreneurship has attained "considerable" legitimacy. Others assert that it "is still fighting" for complete acceptance. This study explores the question, extrapolating from studies of an "elite effect" in which the publications of the highest ranked schools differ from other research intensive schools. It finds that the legitimacy deficit is highly specific. Compared with major research business schools, the most elite business schools in the U.S., but not the U.K., are found to allocate significantly more publications to mathematically sophisticated "analytical" fields such as economics and finance, rather than entrepreneurship and other "managerial" fields. The U.S. elites do not look down upon entrepreneurship as such. They look down upon journals that lack high mathematics content. Leading entrepreneurship journals, except Small Business Economics (SBE), are particularly lacking. The conclusion argues that SBE can help the field's legitimacy, but that other journals should not imitate analytical paradigms.

ENT: **Defining Healthcare Entrepreneurship: A Delphi Study**

Author: **Wiljeana Jackson Glover**, *Babson College*
Author: **Alia Crocker**, *Babson College*
Author: **Candida G Brush**, *Babson College*

Healthcare entrepreneurship is a growing area of interest for researchers and practitioners in entrepreneurship and healthcare alike. Given the global pandemic and COVID-19, we have recently seen a significant increase in healthcare startups, particularly with a focus on data, wearables, artificial intelligence, and virtual reality, that make care more accessible. However, healthcare entrepreneurship as a domain of research is not well defined and studies are disparate across disciplines. Defining the domain of healthcare entrepreneurship can not only have an important impact on society, but stimulate research and bring together stakeholders from multiple disciplines to investigate key questions. Therefore, we pose two questions: Is healthcare entrepreneurship a sub-domain within the broader domain of entrepreneurship? And: How can healthcare entrepreneurship be defined, including its leading theories, boundaries, and outcomes? We leverage the existing literature to illustrate the factors that appear to be novel for healthcare entrepreneurship compared to its parent domains and we conducted a Delphi study to gather the definitions, theories, boundaries, and outcomes of healthcare entrepreneurship with scholars across multiple fields. This article provides a working definition and research framework of healthcare entrepreneurship, proposes future research questions, and offers insights into the Delphi methodology based on our coding approach.

Author: **Jean-Yves Ottmann**, *Freeland Group; U. Paris-Dauphine PSL*
Author: **Ludvig Levasseur**, *Indian Institute of Management, Bangalore*
Author: **Dominique Mahut**, *CNRS*
Author: **David Audretsch**, *Indiana U., Bloomington*

Our knowledge of the solo self-employment dynamic is limited. Moreover, we also lack knowledge about the relationships between the duration of self-employment, workload, and related income. The present study follows two steps: First, panel data from highly skilled French individuals engaged in a self-employment business activity allows us to shed light on the differences between self-employment profiles (or clusters), providing a fine-grained comprehension of various transitional self-employment dynamics. We identify five distinctive self-employment career dynamics. Second, we analyze longitudinal dynamics in terms of workload and income. We show that the self-employed who earned the highest and the lowest income had the shortest self-employment activity.

ENT: **The Power of Perception: Why Employees of Small Firms Choose Entrepreneurship**

Author: **Alona Martiarena**, *IE Business School, IE U.*

This study investigates how the size of the organization influences employees' perceptions of their skills and ability to start a new business and their attitudes toward entrepreneurship, with the goal of understanding the mechanism through which small firms disproportionately spawn entrepreneurs. An analysis of a sample of employees and entrepreneurs from the United Kingdom suggests that the transition from small-firm employment to entrepreneurship is more likely driven by the enhanced value associated with entrepreneurship than by perceptions of improved skillsets or ability to identify new business opportunities.

Paper is NOT Available. Please contact the author(s).

ENT: **Entrepreneurial community development: Longitudinal SNA of cross-promotional behavior**

Author: **Elena Kennedy**, *Elon U.*

Entrepreneurial communities can serve as important regimes of support necessary for enterprise growth and the creation of broader civic wealth. This research seeks to contribute to the existing literature on community entrepreneurship and entrepreneurial support mechanisms by explicating the development of a locally oriented entrepreneurial community. Leveraging a longitudinal application of social network analysis, this research provides a view of the evolving structure of an entrepreneurial community and the strategies employed by its members as it grew. Utilizing a ten-year data set of 7565 cross-promoting Facebook posts from 35 members of a locally oriented entrepreneurial community, we find that there is initially a heavy reliance on other members of the entrepreneurial, but this decreases and becomes more reciprocal over time as members establish their brands. The most central nodes within the community serve as marquee businesses—drawing in a range of customers—or are community events—serving as bridges across the community and attracting large numbers of customers to the area. These practices help members overcome one of greatest challenges new firms in rural locations face—the attraction of customers—and are important to the overall success of the community, particularly in the early years of entrepreneurial community development.

ENT: **When Employees think to be self-employed: Person-Environment Fit Perspective**

Author: **Muhammad Arshad**, *U. of Lahore*
Author: **Mujtaba Ahsan**, *San Diego State U.*
Author: **Omer Farooq**, *Zayed U.*

This research examines the factors that affect entrepreneurial intentions of employees. Utilizing insights from the person-environment fit theory we build a theoretical model and test our hypotheses using data collected from 342 employees in Pakistan. The findings reveal that lack of person-job fit and person-organization fit adversely affects employees' job stress, which leads to entrepreneurial intentions. Our results further demonstrate that entrepreneurial self-efficacy moderates this relationship and increases entrepreneurial intentions.

Social Entrepreneurship 2

Digital Session Chair: **Asma Zafar**, *Brock U.*

ENT: **Oppression, Entrepreneurship, and Emancipation: types of entrepreneurs and emancipatory outcomes**   

Author: **Asma Zafar**, *Brock U.*

Author: **Maria Paola Ometto**, *California State U., San Marcos*

Entrepreneurship-as-emancipation has been integral in illuminating the wide-ranging impacts of entrepreneurial activity. However, despite recent advancement in the literature concerning the emancipatory potential of entrepreneurship, the scholarship in the domain has not grown as expected. We posit that one reason for the limited advancement of scholarship in this domain is the lack of understanding of how emancipation differs across different kinds of ventures and types of entrepreneurs. Any potential variations in the emancipatory outcomes of entrepreneurial activity have either been ignored or, at best, passively acknowledged. This is surprising, given that the literature has also pointed out that different entrepreneurs and entrepreneurial ventures may experience/lead to different outcomes of entrepreneurship. In this paper, we build on the broader entrepreneurship literature to further unpack the notion of entrepreneurship-as-emancipation. Specifically, we theorize the emancipatory outcomes of entrepreneurship along a two-dimensional framework, with the type of entrepreneur (mainstream or marginalized) along the x-axis, and the type of the entrepreneurial venture (social or commercial) along the y-axis. We argue that different venture and entrepreneur combinations may result in different forms of emancipation. Therefore, we contribute to the literature on entrepreneurship-as-emancipation by presenting a clearer view of emancipatory outcomes. We also explain how three ecosystem elements, mostly absent from the mainstream entrepreneurship literature, might be essential in explaining the different emancipatory outcomes for different entrepreneur – venture combinations. We expect that our typology will facilitate the proliferation of research in the domain. We further anticipate that these three ecosystem elements will be taken into more serious consideration in entrepreneurship research.

ENT: **Toward a Normative Theory of Social Entrepreneurship**

Author: **Ryan C. Bailey**, *U. of Oklahoma Price College of Business*

Social entrepreneurship (SE) has rapidly emerged as a growing phenomenon of interest among researchers and practitioners to solve complex societal issues. Yet despite a rapidly expanding body of research, SE remains under-theorized and highly contested with poorly defined constructs and weak conceptual boundaries. This lack of strong theoretical development within SE may be leading researchers into a competency trap by over-utilizing theories from multiple phenomena (Shepherd, 2015). As such, I propose a normative theory of SE to explain both “why” and “how” SE differs from commercial entrepreneurship (CE) in terms of competing exchange systems and the value creation process from a system level of analysis. Although value creation is commonly conceptualized at the societal level (Santos, 2012), I define and illustrate the interactive relationship between the enterprise as a producer of value creation and the community and retail markets as value consumers. I also examine the enterprise’s integrative application of community enablement activities as a value-supportive mechanism for addressing the institutional voids that perpetuate unmet social needs. I further propose a theoretical model and research propositions to test the empirical differences between CE and SE and their corresponding modes of organizing—i.e., traditional for-profits, corporate social responsibility, integrated hybrids, and differentiated hybrids.

ENT: **Institutional Theory in Social Entrepreneurship: A Systematic Review**

Author: **Xing Li**, *Utrecht U. School of Economics*

Author: **Niels Bosma**, *Utrecht U.*

Over the past years, institutional theory has become an increasingly utilized theoretical lens for social entrepreneurship (SE) research. However, while there is a rapid growth of SE research that employs an institutional perspective, researchers have yet to systematically understand the wide-ranging application of institutional theory to SE study. Thus, a review of existing SE literature that employs institutional theory seems warranted and timely. Accordingly, we initially review the current use of institutional theory in SE research based on 101 peer-reviewed articles published between 2008 and 2020. More specifically, drawing on four critical institutional perspectives that have long been used in entrepreneurship research (including institutional context, legitimacy, institutional logic, and institutional entrepreneurship), we provide the first comprehensive analysis of the uses of institutional theory in SE literature. We then offer a comparative analysis of the application of institutional theory to SE and commercial entrepreneurship based on these four institutional perspectives, especially considering the similarities and differences between social and commercial entrepreneurship. Based on our review, we finally identify gaps in the existing SE study and provide several promising avenues for future SE study, as well as contribute to advancing institutional theory development.

ENT: **Making The World A Better Place With You?** 

Author: **Timo Hans Van Balen**, *Erasmus U., RSM*

Author: **Murat Tarakci**, *Erasmus U.*

Entrepreneurs communicate social visions to convince talent to join their venture. Social visions present a future where the venture addresses environmental and/or societal issues. In line with the rising interest in for-profit social ventures, prior research has documented the benefits of social vision communication, albeit in established organizations, thus overlooking how social visions attract talent in entrepreneurial contexts. With results from two complementary studies, we challenge the positive stance in prior research. Using data from a job board for start-up ventures we show that social visions attract less talent. In a field experiment with 102 job seekers, we find that this is because social visions limit job seekers’ perceived opportunity for achievement at the venture, prompting higher salary demands. These findings advance research on entrepreneurship, human resources and vision communication, and caution entrepreneurs against social vision communication as a recruitment strategy.

ENT: **The Other Side of the Coin: The Negative Influence of Investor Involvement on Eudaimonic Well-Being**

Author: **Konstanze Maria Fuchs**, *Chair of Innovation Management, TU Dortmund U.*
Author: **Corinna Vera Hedwig Schmidt**, *Chair for Technology & Management, TU Dortmund U.*

Research surrounding entrepreneurs' well-being is burgeoning. While eudaimonic feelings of self-actualization, vitality, and energy are of high value for entrepreneurs, we know little about which factors in the entrepreneurial context impact well-being. This study investigates the influence of work characteristics on eudaimonic well-being. Drawing on self-determination theory, we develop a mediation model in which perceived autonomy mediates the relationship between investor involvement and entrepreneurs' eudaimonic well-being. We hypothesize that the two forms of investor involvement—formation and evaluation involvement—negatively impact entrepreneurs' autonomy and thereby reduce entrepreneurs' eudaimonic well-being. We estimate this model on a sample of 336 entrepreneurs who received capital from an investor. Surprisingly, we find only evaluation involvement to be negatively related to autonomy and, in turn, to be negatively related to eudaimonic well-being. Evaluation involvement constrains the extent to which tasks are perceived as self-chosen and reduces entrepreneurs' energy. This study contributes to well-being research by introducing investor involvement as a constraining factor for autonomy and, in turn, eudaimonic well-being. We expand the understanding of eudaimonic well-being and self-determination theory and advance our knowledge of the entrepreneur-investor relationship beyond financial exchange.

ENT: **Entrepreneurial Hope**

Author: **Dan K. Hsu**, *North Dakota State U.*
Author: **Charles Murnieks**, *U. of Missouri - Kansas City*

This paper proposes a theory of entrepreneurial hope. We identify the gap in the current theory of entrepreneurship and suggest that entrepreneurial hope is particularly relevant to entrepreneurship given that both emphasize uncertainty. We review hope theories in psychology and hope studies in entrepreneurship and then outline three types of entrepreneurial hope, hope of recovery, hope of survival, and hope of financial success. We then identify several routes to these hopes. Theoretical implications and practical application are discussed at the end.

We study how entrepreneurs and their well-being are impacted by crises and which entrepreneurs are able to safeguard their well-being. We examine the impact of the Covid-19 pandemic in a multilevel study of 3,149 entrepreneurs from 20 countries and draw attention to entrepreneur agility (flexible and adaptive action) both as a crisis response strategy and as a possible way for entrepreneurs to protect their well-being. We find that agile entrepreneurs, especially those that recognized new opportunities for their business in the pandemic, had better well-being during the pandemic (life satisfaction and vitality). Our findings offer further insights into agility as a response to adversity and whether it is enabled by cultural contexts supporting agility and entrepreneurs' human capital.

ENT: **Obesity and Self-Employment. Health and Social Mechanisms of the Transition to Self-Employment.** 

Author: **Frank M. Fossen**, *U. of Nevada, Reno*

Author: **Stela Ivanova**, *U. of Exeter*

In 2016, worldwide 39% of adults aged 18 years and over were overweight and 13% were obese (WHO). Existing evidence paints a gloomy picture for career development and employment opportunities for growth of obese individuals. However, current literature on entrepreneurship suggests that for many, who similarly to overweight and obese people suffer from adverse employment outcomes, self-employment could be a likely alternative career choice. This paper investigates the intention to transition to self-employment and actual self-employment entry of obese individuals. Considering that obesity represents a health condition and a social classification, we propose two different mechanisms that could be at play: a health-based mechanism through poor health and a social mechanism through poor psychosocial conditions at work, experienced by obese individuals. We test the indirect effects of obesity on self-employment intent and entry via health and psychosocial work conditions using the German Socioeconomic Panel (SOEP). Our findings provide support for a dual pathway between obesity and intentions to transition to self-employment as well as actual self-employment transition through health and social mechanisms. This study has important theoretical implication for research on entrepreneurial careers.

ENT: **Social Entrepreneurs: Driven by Mission, but Doomed to Burn Out?**

Author: **Peter Vandro**, *WU Vienna U. of Economics and Business*

Author: **Michael Meyer**, *WU Vienna U. of Economics and Business*

This paper explores the effect of mission-orientation on well-being – measured as burnout prevalence – among entrepreneurs. Investigating the effect of mission-orientation on stress, ascriptions of meaning to work, and burnout, it tests two conflicting sets of hypotheses in an international sample of entrepreneurs (n = 821). Our results reveal that mission-oriented entrepreneurs experience significantly higher levels of role overload and role conflict than commercial entrepreneurs, but perceive their work as more meaningful. Findings show that these perceptions of meaning balance out the detrimental effects of stress on social entrepreneurs' burnout and provide novel insights and implications for entrepreneurship research and practice.

GDO: **Emotional Distancing Identity Work by Sri Lankan Skilled Immigrant Women in Australian Workplaces**  

Author: **Gayani Gunasekera**, *U. of Wollongong*
Author: **Mario Fernando**, *U. of Wollongong*
Author: **James Reveley**, *U. of Wollongong*

The identities of skilled immigrant women are often challenged and threatened as they enter the host country workforce. Skilled immigrant women hence seek avenues to stabilize their identities to acquire a more socially acceptable self as they navigate the host country workforce. This study draws on 31 in-depth interviews data of Sri Lankan skilled immigrant women in Australian workplaces to understand the identity work strategies employed in the sensemaking process through which they establish their identities. We find that Sri Lankan skilled immigrant women in their attempts to secure the first employment opportunity in Australian workforce engaged in emotional distancing from the initial identities they held when they arrived in Australia. Our analysis further discusses the identity negotiation process moving from sensebreaking to sensemaking with identity work posited as the intermediate process between the two stages. We contribute to identity scholarship by furthering the understanding of identity work strategies employed by skilled immigrant women in their early stages of the migration and propose a future research agenda regarding immigrants' identity work in host country work places.

GDO: **Do immigrants increase team productivity? A study in blue-collar teams**

Author: **Anna Apostolidou**, *U. of Konstanz*

Immigration has changed the workforce demographics in many Western states and has raised concerns about its impact on team productivity. However, the literature on teams comprised of migrant workers is scarce. While diversity studies propose a negative effect of migrant team members on team productivity, I propose a positive curvilinear relationship between the team's percentage of migrant workers and team productivity. Borrowing arguments from economics and sociology research, I use signaling, migration motivation theories and the stereotype content model to explain the potential differences among migrant groups based on country of origin. Using a time-lagged sample of 629 teams in a large Swiss company, the analyses confirm the quadratic relationship between migrants' percentage and team productivity, as well as the moderating effect of the migrants' origin from high-income countries.

GDO: **Conceptualising refugees' pathways into work: A systematic literature review**     

Author: **Almina Besic**, *Johannes Kepler U. Linz*
Author: **Erna Szabo**, *Johannes Kepler U. Linz*
Author: **Nicole Kronberger**, *Johannes Kepler U. Linz*
Author: **Olga Kostoula**, *Johannes Kepler U. Linz*

Employment of refugees is high on the agenda of researchers and policy makers alike. Research has shown that employment is a key factor towards successful participation in society. Given the importance of employment for refugees, there is surprisingly little knowledge regarding the pathways into work for these at the organisational level. While several aspects at the individual and macro level may affect refugees' employment, their pathways into work occur in a specific organisational context with several actors involved in this process. In this study, we aim to analyse how refugees' pathways into work are conceptualised in the relevant literature and what can be learnt from these for research about refugees in organisations, and what are the implications for managerial practice. To address these points, we carried out a systematic literature review of publications in four major databases (Business Source Premier, EconLIT, SocIndex and PsycInfo) published up to the end of June 2020. The search resulted in 259 publications, addressing refugees' pathways into work. In our analysis, we followed a three-step iterative process, conducting both descriptive statistical as well as qualitative thematic analysis of full-texts addressing refugees in organisations. Proposing a so-called 'Toblerone model' of refugees' pathways into work, we aim to provide a more coherent representation of the pathways emphasising 1) the co-construction of such pathways, 2) the heterogeneity between actors and factors impacting these pathways, 3) the interrelatedness between actors involved at the macro, organisational as well as individual level and 4) dynamic development over time.

GDO: **Doing Inclusion as Counter-Conduct: Navigating the Complexities of Organizing for Refugee Inclusion**

Author: **Laura Kangas-Müller**, *Aalto U., Department of Management Studies*
Author: **Johanna K. Moisander**, *Aalto U.*
Author: **Kirsi Eräranta**, *Aalto U.*

This paper advances knowledge in the emerging scholarly field of critical inclusion studies by exploring and critically examining how organizations deal with the complexities and ambiguities of doing inclusion in practice. Based on ethnographic fieldwork carried out in three civil society organizations that aim to foster social inclusion of refugees, the paper shows how the organizations engage in what is theorized as dissident counter-conduct: critique of the 'normal' or taken-for-granted ways of doing inclusion that paradoxically (re)produce marginalization and exclusion. More specifically, we identify and scrutinize three such practices of counter-conduct: 1) challenging categorization of refugees; 2) resisting reproduction of refugees' subordinate position; and 3) rejecting expectations of cultural assimilation. Our analysis shows that these practices were conducive to creating conditions of possibility for inventing more emancipatory forms of subjectivity and less hierarchic forms of inter-personal relationships. However, they also had contradictory exclusionary effects and countering these effects implied returning to the ways of 'doing inclusion' that had first been challenged, turning the counter-conducts back upon themselves. The paper contributes to literature on critical inclusion studies by shedding light on the possibilities and limitations of doing inclusion as geared towards creating a 'new normal' and demonstrating how the contextualization of inclusion within the socio-political struggles of marginalized groups shapes the practices and their effects, calling for perpetual vigilance and self-adjustment from organizations doing inclusion.

GDO: Well but Unwanted: The Subtle Backlash Against Prioritizing Mental Wellbeing at Work

Author: **Andrea Freund**, *Stanford Graduate School of Business*
Author: **Margaret A. Neale**, *Stanford U.*
Author: **Ashley E. Martin**, *Stanford Graduate School of Business*

Organizations are investing more into mental wellbeing initiatives than ever before, seeking to become more inclusive workplaces and combat rising employee stress. Yet 75% of employees still struggle with mental health and many hesitate to use these initiatives over fear of backlash. Our research suggests this fear is warranted, and that the nature of this backlash is particularly nuanced. Across 4 studies (N=2,107), we show that although displays of overt discrimination may be less common, employees who prioritize their mental wellbeing experience subtle forms of backlash, including social aversion (Study 2) and feedback withholding (Studies 1, 3). Although mental wellbeing prioritization violates the “ideal worker norm,” we demonstrate that political correctness norms (specifically concerns about appearing discriminatory) both lead evaluators to suppress overt backlash and simultaneously engage in subtle backlash (Study 4). Together, these results suggest that while prioritizing mental wellbeing may leave employees well, it may also lead them to be unwanted. We discuss the implications of this paradox for scholarship on social norms and wellbeing interventions in modern organizations.

GDO: Risky Business: Leveraging Psychological Safety in the Pursuit of Workplace Equity

Author: **Jessica Diaz**, *Claremont Graduate U.*

Following the tidal wave of racial unrest in the summer of 2020, organizations doubled down on their commitment to eradicate racism. However, organizations lack a thorough understanding of the psychological mechanisms that thwart or facilitate diversity, equity, and inclusion (DEI). Psychological safety, defined as the feeling it is safe to take interpersonal risks (Edmondson, 1999), represents a critical intermediary between discrimination and essential individual and organizational outcomes for BIPOC (Black, Indigenous, people of color) employees. In this review, I expand the classic conceptualization of psychological safety to include identity-based risks for BIPOC employees. Additionally, I explore how identity-based risks plague White employees engaged in important DEI work. Ultimately, this review aims to reposition psychological safety as a tool to address organizational racism by broadening its understanding of risk. Borrowing from classical research on the antecedents of psychological safety, I discuss how organizations might leverage this vital mechanism to eradicate inequity. I also provide recommendations for future research on psychological safety and organizational equity.

GDO: Invisibility of Social Privilege to Those Who Have It

Author: **Kaidi Wu**, *Rady School of Management, U. of California San Diego*

William H. Newman Award Nominee

Dominant social groups often lack awareness of their own privilege, failing to perceive the extent of discrimination experienced by subordinate groups. We unravel an underlying cognitive process: advantaged social groups suffer from hypocognition—the absence of being schematic—of everyday hassles experienced by non-privileged groups. Right-handers generated fewer handedness-related hassles than left-handers (Study 1). Men generated fewer gender discrimination instances than women, recalled fewer precautions against assault, and showed poorer recognition of gender discrimination examples from a TEDx talk (Studies 2a-2c). Whites generated fewer racial discrimination instances than Blacks and recalled fewer such instances (Studies 3a-3b). Whites also generated fewer discrimination examples than Asians and reacted more slowly when classifying examples as discriminatory (Study 4). Hypocognition of privilege persisted whether privilege was framed as the absence of disadvantages or presence of advantages (Study 5). Whites showed hypocognition whether discrimination was made salient or not, suggesting hypocognition is unlikely fueled by motivated denial (Study 6). After watching a transgender woman describe her discrimination experience living as a woman, both men and women showed increased privilege awareness and discrimination perception (Study 7). Findings suggest that the invisibility of one’s privilege need not solely reflect identity-defensive motivations, but may also stem from cognitive deficits in conceptual knowledge about privilege and discrimination.

GDO: When Receipt of Gratitude Impacts Work Outcomes via Emotional Regulation amongst Coworkers

Author: **Olivier D. Boncoeur**, *U. of Notre Dame*
Author: **Hun Whee Lee**, *The Ohio State U. Fisher College of Business*
Author: **Orlando C. Richard**, *UMass Amherst*
Author: **LaStarr Hollie**, *UMass Amherst*

Employees engage in emotional regulation not only with customers, but also with coworkers despite the fact that very little is known about emotional labor such as surface and deep acting in coworker relationships. Furthermore, an omission in the literature exists regarding antecedents to emotional regulation. To address these limitations, we suggest how receiving gratitude serves as an antecedent to emotional labor within the underexplored context of coworker exchange relationships. Additionally, the gender of the employee receiving gratitude is an important moderator whereby social norms influencing emotional displays may accentuate the effects on surface acting for women, while strengthening them on deep acting for men. Lastly, we examine downstream consequences for emotional labor that sustain organizations (work withdrawal and work goal progress). We test these assertions with an experiment (Study 1) and two multilevel experience sampling studies (Study 2 and Study 3) and discuss the implications of our findings.

Care Delivery

HCM: **Physician Network Structure and Hospital Efficiency**

Author: **Matthew Crespi**, *Heinz College - Carnegie Mellon U.*
Author: **David Krackhardt**, *Carnegie Mellon U.*

This paper examines the relationship between physician network structure within hospitals and the efficiency with which those hospitals operate. By combining publicly available datasets from Medicare, we extract hospital-level networks in which two physicians are connected if they frequently share patients per Medicare's physician referral network data. We then calculate the average distance between physicians within each hospital. Incorporating these network measures with traditional hospital observables, we employ a regression-based approach and find that hospital efficiency is positively predicted by a shorter average distance between physicians. The finding is robust to many specifications and implies that more compact network shapes are being used to direct patients more effectively. We also interviewed physicians to better understand referral processes, and implications for hospital management and patient routing are discussed.

HCM: **Hospitalist and Specialist Role Differentiation: Patients, Practice Patterns, and Performance**

Author: **Leeann Comfort**, *Harvard T.H. Chan School of Public Health*
Author: **Elizabeth Bambury**, *Harvard T.H. Chan School of Public Health*
Author: **Mariam Krikorian Atkinson**, *Harvard U.*

Background: While the field of hospital medicine has grown since its establishment in the 1990s, much of the research on these inpatient physicians has been grounded in comparisons to community-based providers. Little is known about how hospitalists have differentiated themselves from other inpatient physicians. Purpose: This study explores how hospitalists compare to other inpatient physicians for patient cases of overlapping expertise, focusing on differences in patient populations, practice patterns, and performance on cost and quality metrics. Methodology: We use mixed effect multilevel models and mediation models to analyze disaggregated billing data for all relevant admissions to a large urban pediatric hospital occurring between January 1, 2009, and August 31, 2015. Results: In areas of overlapping physician expertise, patients with more ambiguous diagnoses and multiple chronic conditions have higher likelihood of being assigned to a hospitalist. Controlling for differences in patient populations, hospitalists order laboratory tests and medications at lower rates than specialists. Hospitalists' lower laboratory test order rate had a significant mediating role in hospitalists' lower total charges and lower odds of their patients experiencing any non-surgical adverse events compared to specialists, though hospitalists did not differ from specialists in 30- and 90-day readmission rates. Practice Implications: For inpatient cases that can be treated by either hospitalists or other specialists, assigning patients to hospitalists is associated with more efficiency and lower rates of adverse events. Decision rules on physician assignment should consider these potential benefits to patients given case type and practice pattern differences between hospitalists and specialists.

HCM: **Towards Patient-Centeredness? Media Frames on Shared Decision-Making for Healthcare Treatment**

Author: **Amy Vogel**, *Freie U. Berlin*
Author: **Daniel Fuerstenau**, *Freie U. Berlin*

The literature on healthcare management and innovation has long noted that shared decision-making (SDM), a practice of organizing joint decisions between healthcare professionals and patients, should improve healthcare outcomes by increasing patient engagement and autonomy, and thus fostering patient-centeredness and equality. While SDM projects are increasingly implemented across Europe and worldwide, the diffusion of the practice remains partial. The healthcare management and innovation literature explores SDM through the underlying assumption that its diffusion constraints result from an information problem, implying objective criteria and rational behavior. The purpose of this research is to conduct a study on the social construction of SDM and underlying rationales using the case of one of the largest healthcare markets worldwide – Germany. To capture the complexity of SDM, a frame analysis is conducted on its medial representations. Media are both influential in shaping public opinion as well as generating public discourses. This enables to elaborate the different facets of the construct, to capture inherent patterns and to explore the consequences for the acceptance and diffusion of SDM in Germany. Three facilitating and three obstructive frames were assessed. The polarities of these findings range from the questioning of one's own decision-making authority to the perception of individual competence and decision-making agency. Moreover, this study reflects on how physicians' and patients' role for SDM is conceived. Regarding physicians these alternate between the perception of the 'demigod in white' and the loss of decision-making authority. Regarding the patients these alternate between the perception of the 'layman' and the competent patient, eager to participate in decision-making.

HCM: Attributes in Primary Care Practices that Promote High Value Care for Patients with High Need

Author: **Maike Vanessa Tietschert**, *Vrije U. Amsterdam*
Author: **Bianca Mulaney**, *Stanford U.*
Author: **Andrew Old**, *Stanford U.*
Author: **Jill Glassman**, *Stanford U.*
Author: **Alan Glaseroff**, *Stanford U.*
Author: **Sara Kelly**, *Stanford U.*
Author: **Grace Joseph**, *Stanford U.*
Author: **Jose Figueroa**, *Harvard T.H. Chan School of Public Health*

Previous research has identified attributes of healthcare delivery that are likely to improve the value of care. Yet, despite policy reforms introducing alternative payment contracts which seek to promote value, no rigorous analysis has associated attributes of primary care with value. This study examines how value-oriented care attributes of primary care practices relate to practices' cost and quality performance of health care in three types of patients with high need, including patients with major complex chronic conditions, older adults with frailty, and adults under 65 with disability. Our results show that the way care is organized does not differ significantly across patients with different types of need. The observed variation in cost and quality across these groups is likely a result of different patient characteristics. However, when holding patient characteristics constant, our results show that care management, screening for risk factors, and screening for mental health needs result in significant reduction of cost and improvement in quality. For primary care practices, our results suggest ways of organizing, managing and providing care for patients with high need that will likely result in reduced costs and improved quality. Keywords: High need, high costs, care attributes, primary care, vulnerable patients

HCM: Identifying Teaming in Chronic Pain Management Interventions in Primary Care: A Systematic Review 

Author: **Karleen F. Giannitrapani**, *Stanford U. / VA Palo Alto*
Author: **Natalie Connell**, *Stanford U. / VA Palo Alto*
Author: **Pallavi Prathivadi**, *Monash U., Australia*
Author: **Sophia Zupanc**, *Stanford U.*
Author: **Hong-Nei Wong**, *Stanford U.*
Author: **Karl Lorenz**, *Stanford U. / VA Palo Alto*

Background: Current pain management recommendations emphasize leveraging interdisciplinary care models, which rely on communication, coordination, and collaboration (i.e., teaming) among multiple providers. We aimed to identify key features of interdisciplinary teaming structures and processes that facilitate improved pain outcomes for patients experiencing chronic pain in primary care settings. Methods: We searched PubMed, EMBASE, CINAHL, and the Cochrane Library for randomized studies published after 2009. Included studies had to report patient-reported pain outcomes (i.e., BPI total pain), include primary care as an intervention setting, and demonstrate sufficient evidence of teaming (i.e., ongoing collaboration, coordination, or communication processes among providers and with patients). We assessed study quality with the Cochrane Risk of Bias tool. We qualitatively synthesized intervention characteristics related to teaming processes and categorized findings by positive or negative patient-reported pain outcomes. Results: We included 13 randomized studies with 14 total interventions in our review, of which 7 reported one or more significantly improved pain outcome compared to controls over 6 to 12 months of observation. No included studies had a high risk of bias. Interventions with positive pain outcomes often described regularly scheduled patient contact, but there were few identified similarities about the communication, coordination, and collaboration processes among intervention providers. Care management and patient follow-up schedules were identified as key characteristics of teaming in the interventions associated with improved pain outcomes. Discussion: Despite widespread emphasis on interdisciplinary teams for pain management, high quality evidence about relevant teaming structures and processes remains limited.

This symposium brings together ongoing research projects focused on the challenges and changes in health care provision in response to the COVID-19 pandemic. The COVID-19 pandemic has been one of the most trenchant grand challenges that the world has faced in the last five decades and impacted almost every organization and individual. The healthcare sector across the world had to respond very quickly to an unknown virus with no preparation. This symposium seeks to create new knowledge by sharing insights from different projects on how healthcare organizations confronted this challenge. These projects, all focused on the response to COVID-19, are located in different contexts and operate at different units of analyses: ward-level practice changes in a US hospital, organizational-level collaboration in a UK hospital trust, changes to health care provision amongst US general practitioners, and an international community of practice that seeks to create and share knowledge within their wider network. The researchers adopted qualitative and quantitative research designs and drew on different literatures to help explain how different health care organizations responded to the COVID-19 challenge. This symposium, which is both relevant and topical, will contribute to our knowledge of how organizations organize and collaborate to manage risks, ambiguity, and uncertainty in times of crises. It should have immense usefulness for both researchers and managers looking to improve the effectiveness of their crisis response. We hope that this symposium will provide a forum for discussion about insights into how organizations responded to the COVID-19 challenge, what we can learn from this for other grand challenges, and by provoking insights into future directions for research.

Developing Management Theory from Historical Case Studies

Developing Management Theory from Historical Cases

Organizer: **Rohin Borpujari**, *London Business School*
Panelist: **Gino Cattani**, *New York U.*
Panelist: **Roy R. Suddaby**, *U. of Victoria*
Panelist: **JoAnne Yates**, *MIT Sloan School of Management*

This PDW is aimed at stimulating an interactive and developmental exchange between scholars engaged in inductive research using historical case studies, who are aiming to publish in prominent management journals. The workshop will feature a panel of experts with a track record of publishing historical case studies in premier management and organizational studies journals. The goal of the workshop will be to help scholars learn how to develop and publish management theory from historical case studies. To this end, the core question that this PDW aims to unpack is – how do you build timeless theory from the study of time-bound historical cases? In the first half of the workshop, the panelists will lead exchanges around topics such as which research questions are best suited to historical case studies; how to balance the needs for contextualization vs. generalization in the process of theorizing; and how to write up a historical case study for publication in management journals. In the second half of the workshop, shortlisted participants will have the opportunity to engage in quick, entrepreneur-style “pitches” to one of the experts, with a view to receiving developmental feedback specific to their projects.

The PDW will start with discussions with the panelists, followed by breakout rooms. In these breakout rooms, participants will have the opportunity to “pitch” project ideas / progress to one of the panelists and receive quick feedback. For students who wish to participate in these feedback sessions, please reach out to rborpujari@london.edu.

Mindfulness

Digital Session Chair: **Adam Austen Kay**, *U. of Queensland*

OB: Mindfully outraged: Mindfulness increases retribution via moral outrage at third-party injustice 

Author: **Adam Austen Kay**, *U. of Queensland*
Author: **Theodore Charles Masters-Waage**, *Singapore Management U.*
Author: **Pavlos Vlachos**, *ALBA Graduate Business School*
Author: **Jochen Matthias Reb**, *Singapore Management U.*

Injustice is pervasive, but it is far more common to witness it perpetrated against others than to experience it oneself. Responding to injustice perpetrated against others is vital for the social regulation of injustice in organizations and society at large. It is therefore important to know what makes individuals more vs. less likely to punish perpetrators of third-party injustice. In this paper, we examine a counter-intuitive amplifier of third-party reactions to injustice: mindfulness. Developing theory that mindfulness helps people both attend to injustice in the world around them and the moral outrage it stirs within them, we introduce a novel perspective to the literature on mindful emotion regulation and prosocial behavior. In contrast to prior research showing that mindfulness tempers reactions to injustice perpetrated by or against the self, we show that mindfulness heightens moral outrage in witnesses of injustice perpetrated by others against others. Across three studies, we demonstrate that mindfulness increases moral outrage in witnesses of third-party injustice, leading them to exact greater retribution against offenders. In so doing, we open a new line of theory and research on mindfulness in the moral domain, highlighting implications for employees, consumers, and regulators alike.

There is growing evidence that, in organizational settings, mindfulness brings both intra- and inter-individual benefits for employees. Recent years have seen an increase in research on mindfulness specifically within leadership contexts. In this study, we draw on self-determination theory (SDT) to assess the influence of leaders' mindfulness on both follower and leader effectiveness outcomes (performance, resources/viability, and wellbeing). Using state-of-the-art two-stage structural equation modelling, we meta-analytically assess the role of leadership processes that reflect an autonomy-supportive approach (e.g., values-based leadership, transformational leadership, and leader-follower relations) in mediating these effects. Our meta-analytic findings across 51 longitudinal and correlational studies of workplace leaders (393 effect sizes; 9,425 participants) provide support for the hypothesized mediation. Across 25 intervention studies (182 effect sizes; n = 1,254 participants) we find corroborating evidence for the effect of mindfulness interventions on autonomy-supportive leadership processes and leader effectiveness outcomes. We highlight substantive and methodological issues that need to be addressed in order to advance this line of research.

OB: An Examination of the Antecedents and Consequences of Leader Mindfulness: A Meta-Analysis

Author: **Yuyang Zhou**, *Florida International U.*
Author: **Hock-Peng Sin**, *Florida International U.*
Author: **Chen Wang**, *Western Michigan U.*

Leaders occupy the most critical roles in organizations. A growing body of research on mindfulness in the field of leadership suggests that mindfulness is a highly relevant and beneficial factor for comprehensive leader and organizational outcomes. However, the current literature presents much ambiguities with regards to the conceptualization of leader mindfulness, as well as its correlates and consequences. The purpose of this study is to quantitatively review the research related to leader mindfulness. Specifically, we are able to investigate and present evidence of the importance of leader trait mindfulness and mindfulness intervention targeting at leaders. Meta-analytic results from 53 independent samples and 8,134 leaders suggest that leader trait mindfulness significantly relates to both leaders' and followers' well-being (e.g., leaders' reduced anxiety, depression, and stress; followers' enhanced job satisfaction and decreased emotional exhaustion). Other important workplace correlates of leader trait mindfulness include leaders' leadership styles (e.g., more transformational and authentic, while less abusive) and higher quality of leader-member relationships. In addition, leader mindfulness also enhances followers' job performance (in-role, extra-role, overall job performance). While results fail to support the malleability of leader trait mindfulness through mindfulness intervention, findings indicate the apparent effectiveness of mindfulness intervention on leaders' stress reduction. This quantitative review lays a solid foundation for advancing research on leader mindfulness.

OB: **Unpacking Mindfulness: The Role of Monitoring and Acceptance on Workplace Stress** 

Author: **Theodore Charles Masters-Waage**, *Singapore Management U.*

Author: **Yizhen Lu**, *National U. of Singapore (NUS)*

Author: **Sankalp Chaturvedi**, *Imperial College London*

Author: **Jayanth Narayanan**, *National U. of Singapore*

A canonical finding in the mindfulness literature is that mindfulness reduces stress. The literature on mindfulness has focused on the main effects of mindfulness. We introduce the bi-dimensional model of mindfulness to the organizational literature which outlines awareness and acceptance as two distinct dimensions of mindfulness. Building on the bi-dimensional model of mindfulness, we propose that mindfulness may moderate the relationship between workload and stress and subsequently, stress to workplace outcomes. Specifically, across two studies using the experiencing sampling methodology, we find that the acceptance dimension of mindfulness moderates the relationship between workload and stress. Furthermore, the awareness dimension of mindfulness moderates the relationship between stress and workplace outcomes. These findings show the distinct paths through which mindfulness impacts organizational processes. In doing so, we provide organizational scholars greater theoretical precision with which the effects of mindfulness can be understood.

Research pertaining to work-nonwork spillover proposes that individuals' experiences are linked across domains in a variety of ways (Edwards & Rothbard, 2000; Greenhaus & Beutell, 1985; Greenhaus & Powell, 2006). Although research on this topic has grown, one aspect that is less studied is how individuals' interpersonal relationships and experiences shape such spillover processes, for better or for worse. Our proposed presenter symposium explores how our complex interpersonal relationships at work and home shape employees' experiences across domains, with such experiences including recovery, emotions, well-being, and helping behaviors at work, as well as how individuals cope with significant global events such as the COVID-19 pandemic. Encompassing both empirical and theoretical research, our symposium provides new perspectives and insights into individuals' well-being and behavior both at work and home.

This symposium explores the concepts of vigilantism and violence as they relate to the defense of social order. Positioned at the intersection of enforcement, punishment, and actorhood, vigilantes appear to play critical roles in defending social order when the state or other actors with authority are absent or withdrawn. Despite a growing number of articles exploring triggers and tactics of vigilantism in a variety of organizational and institutional contexts, we continue to know very little about vigilantes and the roles they play. Who are these vigilantes? What tactics do they use? How do they experience their own state of vigilantism? What perceptions do others have of them? Are they saviors, rogue agents, or something else altogether? In what ways can vigilantes and the use of violence help us better understand the defense of social order? To address these questions, we bring together four studies which place vigilantism and violence at center stage, three of which empirically examine vigilantes in contexts of pedophile hunting teams, workplaces, and pandemic responses, and one that conceptually offers a fresh look at violence and physical force when it comes to defending social order. Bookended by a brief introduction on vigilantism and violence at the beginning, and a Q&A between participants and audience members at the end, this symposium also offers fruitful linkages between research on vigilantism and violence and other organizational phenomena, including emotions, multimodality, paradox, custodianship, stigma, and extreme practices.

OSCM: Supplier's Network Churn, Buyer-Supplier Embeddedness, and Transaction Price Outcomes

Author: **Pankaj Kumar**, *Virginia Tech*

Author: **Agnieszka Nowinska**, *Aalborg U., Department of Business and Management*

Author: **Hans-Joachim Schramm**, *WirtschaftsU. Wien*

Supply chain management and marketing scholars have extensively studied the benefits of long-term buyer-supplier relationships and exchange outcomes. They have assumed, however, the availability of complete information regarding the long-term viability of exchange partners. Highlighting the information frictions in partner evaluations and using a network lens, we theorize that the network churn of the supplier in question and the buyer-supplier embeddedness play a pivotal role in whether the focal buyer pays a 'premium' to the supplier in terms of the price per unit in an exchange. Using a dataset of 1,775 unique dyads formed by 160 buyers (shippers) and 249 suppliers (vessel owners or operators) during the 2000-2019 period in the container shipping chartering market, we find that a) supplier's churn is negatively associated with the price per unit paid by the buyer, b) buyer-supplier embeddedness is positively associated with the price per unit paid by the buyer, and c) buyer-supplier embeddedness attenuates the negative influence of supplier's churn. Our study makes a novel contribution in developing supplier's churn, i.e., other buyer's turnover in a supplier's network from one period to the other, as a salient heuristic for a focal buyer's decision-making.

OSCM: Humanitarian Organizations in the Public Sphere: How Type of Funding Predicts Cooperation

Author: **Lea Rüsich**, *Kühne Logistics U.*

Author: **Maria Besiou**, *Kühne Logistics U.*

Humanitarian organizations (HOs) face a dilemma. On the one hand, they need to engage in inter-organizational cooperation in order to amplify their aid efforts to the public. On the other hand, they compete with each other over the scarce (social) media attention in order to attract more donors to their cause. Against this background, previous research further qualified and found that, because private funding is more volatile than public funding, privately funded humanitarian organizations (HOs) are generally less cooperative in the media sphere than publicly funded organizations. With the present research, we replicate and critically extend these findings. Specifically, we argue that even publicly funded HOs' cooperation is restricted in that other HOs' funding type will affect whether they are cooperated with (if from an ingroup, i.e. public funding) or not (if from an outgroup, i.e. private funding). Analyzing Twitter interactions in 780 organizational dyads over 28 months (2018-2020), we find support for our hypothesis. Our findings highlight the relevance to be more nuanced when trying to explain humanitarian operations' cooperative versus competitive behaviors as a function of funding type.

OSCM: Does regulatory approval speed impact product quality? Evidence from the US pharmaceutical industry (WITHDRAWN)

Author: **Hanu Tyagi**, *U. of Minnesota Carlson School of Management*

Author: **Rachna Shah**, *U. of Minnesota Twin Cities*

The trade-off between speed to market and product quality is a well-studied phenomenon in the new product development literature. However, there is little evidence of how supply chain stakeholders beyond the focal firm can impact the speed-quality trade-off. Moreover, the impact of speed to market on performance parameters outside the firm—such as consumer safety and surplus, or social welfare—is unclear. We address both these gaps in the literature by studying speed to market from a regulatory perspective and analyzing the impact of speed to market on safety-related construct. Rooted in the context of the US pharmaceutical drug industry, our study evaluates the impact of four expedited drug approval programs by the USFDA on the quality of the newly launched pharmaceutical drugs in the US. These programs are designed to provide speedier access to those novel drugs which address a large unmet clinical need for the patients. We operationalize product quality as the number of adverse events and show that drugs approved under expedited programs could result in as high as 131% more number of adverse events and 167% more number of serious adverse events. Our study makes important theoretical and practical contributions. Theoretically, this is the first study in the NPD literature that, to the best of our knowledge, examines the impact of regulatory speed on the product quality. Practically, our study highlights critical unintended consequences of expediting the drug approval process for the regulators.

OSCM: Implications of Temporal Orientation for Sustainability Risk

Author: **Alok Choudhary**, *Loughborough U., School of Business and Economics*

Author: **Nouri Najjar**, *Ivey Business School*

Author: **Robert D Klassen**, *U. of Western Ontario*

Firms having a short-term temporal orientation has been stressed as a key underlying cause of many sustainability problems, such as poor labour practices in the supply chain, pollution spills, ongoing depletion of natural resources, and inadequate responses to climate change. Yet, negligible evidence has emerged to demonstrate that a longer-term orientation genuinely improves sustainability-related outcomes and risk. The paucity of research may be due to difficulties in measuring and quantifying firm-level data for both the temporal orientation and sustainability risk. Furthermore, establishing a causal relationship between temporal orientation and sustainability risk is challenging due to potential unobservable firm-level attributes and issues related to endogeneity. We synthesize prior research and propose a structured approach using an operations lens that taps into distinct dimensions of temporal orientation, focusing on product-related and other on process-related investment horizons. Using a novel unbalanced panel data of North American manufacturing firms for the period 2007-17 to quantify sustainability risk, we construct and exploit measures for both combined and individual elements of sustainability risk. Using an instrumental variable approach, we find significant evidence that sustainability risk is negatively associated with long-term product and long-term process orientation, and that jointly the two create a reinforcing effect. Thus, our research informs the managerial community for their long-term investment decisions to proactively mitigate sustainability risk.

In recent years, corporate activism has increasingly become an important avenue by which firms and their internal stakeholders are able to communicate their views on sociopolitical and environmental issues, often as a means to precipitate change within the organization and/or society at large. However, the term “corporate activism” is a contested one with no established consensus. By simply searching the term, one might come across examples of shareholders advocating for changes, CEOs speaking out on sociopolitical issues, advertising campaigns connected to controversial societal topics, or corporations signing petitions advocating a given sociopolitical position. In addition to presentations of current research in these areas, this symposium will include corporate activists as guests in the discussion to share their first-hand perspectives and insights. The purpose of this symposium is to (1) elucidate the different forms of corporate activism, (2) explore how this phenomenon is reshaping expectations of corporations and corporations’ expectations of themselves, (3) consider the impact of corporate activism on society, and (4) develop a future research agenda for this evolving literature.

Artificial Intelligence in Organizations: Debates on the Possibility for Human-Machine Cooperation

Artificial Intelligence in Organizations

Organizer: **Fabrizio Dell'Acqua**, *Columbia Business School*
Organizer: **Bruce Kogut**, *Columbia Business School*
Participant: **Erik Brynjolfsson**, *Stanford U.*
Participant: **Gary Marcus**, *New York U.*
Participant: **Natalia Levina**, *New York U.*
Participant: **Susan Helper**, *Case Western Reserve U.*

In line with this year's Academy's theme, we propose a panel symposium to discuss how artificial intelligence and human-machine interaction will challenge managers and the organizations and teams they run. In the context of artificial intelligence, we take to heart Herbert Simon's observation that "(...) a highly automated man-machine system, and the nature of management will surely be conditioned by the character of the system being managed" (Simon, 1960). Will managers become obsolete, because of the unmatched predictive capabilities of AI, and what space will human judgment have in a world of superior machines? Can managers learn to play a role in this transformation? Our panel consists of academics from diverse disciplines (economics, psychology, information systems, strategic management) to discuss, and debate, the questions surrounding AI in the context of human-machine interactions within organizations. The symposium is built upon the participants' empirical research, but will not be formal paper presentations. The panel discussion seeks to clarify the many great debates over AI and machine learning with the goal of sharpening the agenda of the re-emergent topicality of human-machine interactions. The debate will then be open to broader discussion including the audience.

Loneliness is increasingly recognized as a public health problem, especially under Covid-19 when social distancing has disrupted people's way of living and working. Not only is loneliness detrimental for health, but growing evidence shows that it is associated with a range of undesirable workplace outcomes. Our symposium puts together four papers that discuss antecedents, outcomes and possible intervention strategies to alleviate loneliness in the workplace. It is timely in terms of encouraging meaningful conversations and sharing research around loneliness in the workplace. Overall, the presentations contribute to an emerging and important literature base on how loneliness intersects with organizational life. Loneliness tends to be a taboo subject yet data supports the notion that it is a "real" phenomenon amongst workers. The starting point, as illustrated with the proposed presentations, is to develop an understanding of the experience of loneliness in the workplace, and to use this understanding to develop multi-faceted interventions to help alleviate the distress, taking into account the individual and the organizational context.

Dysfunctional Leader Behavior

Digital Session Chair: **Erik Hoempler**, *Texas A&M U., Mays Business School*

OB: Interpreting the Hunger Games: Introducing Forced Competition Theory

Author: **Erik Hoempler**, *Texas A&M U., Mays Business School*

The effects of abusive leadership have been studied in many ways, most heavily exploring effects on employee attitudes, performance, and behavior. Uniquely, this research focuses on individual or workgroup performance rather than the potential impact on interpersonal relationships and treatment or the types of climates resulting from different types of abusive supervision. This paper introduces the construct of Forced Competition, in which a supervisor pits unwilling employees against each other in a competition within their workgroup. This concept therefore integrates literature on abusive supervision, competition, and organizational climate to propose a theory of employee behavior and climate development. This paper introduces a model illustrating two potential paths of behavior and workgroup climates that may emerge because of this type of abusive supervisor behavior: a climate of distrust or a climate of healthy competition. Further, I propose an important moderator that influences which of these climates are likely to emerge: the severity of the competition outcome.

OB: Leader pre- and procrastination, temporal resource utilization, and leader-follower relationship

Author: **Jie Guo**, *Carolina U.*

With emergent attention on pre-crastination (PRE), together with a familiar and widely discussed proclivity – procrastination (PRO), a growing need is evident to examine these constructs – their definitions, conceptualizations, and manifestations of paradoxical nature, especially when these seemingly maladaptive behaviors displayed by managerial roles in organizations. Given the central role of time embedded in PRE/PRO, and the importance of temporal activities in organizational settings, the present work integrates literature in PRE and PRO, leadership, and temporal resource utilization to present a framework mapping PRE/PRO to time in four conditions: temporal resource compression, temporal resource suppression, temporal resource exploitation, and temporal resource exploration. Built on this foundation, the second half of this work proposes a multiphase process model explaining how temporal variances initiated by leaders could shape followers' perception of, responses to, and evaluation of the leaders and leader-follower relationships. The present work thus advances the literature by infusing PRE/PRO-related temporal characteristics into leadership research, providing a perceptual framework that explains followers' reactions, investigating the role of temporal resource utilization as salient contextual factors in altering followers' perceptions, and offering new propositions that have the potential to provide a more complete understanding of the integrative literature and its implications for organizations.

OB: The Order in Disorder: The Effects of Leader Sequence in Job Rotation 

Author: **Helen Hailin Zhao**, *U. of hong kong*

Author: **Shuning Liu**, *U. of hong kong*

Author: **Jingyang Gu**, *U. of hong kong*

Author: **Mingyu Zhang**, *Beijing Jiaotong U.*

Author: **Yuhuan Xia**, *Beijing Jiaotong U.*

In job rotation programs, higher level managers or human resource specialists often assign multiple leaders to an employee following a random sequence, because they have no method or no prior knowledge about this decision. In this paper, we focus on a destructive leader experience—working with an abusive leader. Random leader sequence in job rotation implies that some employees are assigned with an abusive supervisor early on while others are assigned with one late in the process. It thus creates an interesting theoretical tension: is it better off to have primacy-based leader sequence (i.e., abusive supervisors should appear early in the sequence) or recency-based leader sequence (i.e., abusive supervisors should appear late in the sequence)? Based on a 4-month job rotation program that involves 291 nurses and 513 nurse supervisors, we found that a primacy-based abusive supervision sequence consistently has a positive effect on both proximal rotation outcome (i.e., qualified exam performance and job performance) and distal rotation outcomes (i.e., job performance and bonus). The model not only adds a new inquiry of the leader sequence problem to leadership and job rotation research, but also offers much needed action implications to managers about how to assign leaders in job rotation.

OB: The Impact of Unethical Leader-requests on Employee's Family Withdrawal 

Author: **Feng Qiu**, *U. of Massachusetts, Amherst*

Author: **Debra L. Shapiro**, *U. of Maryland*

Although unethical leader-requests (ULR) are prevalent in organizations, their consequences have been largely overlooked by organizational researchers. Via a multi-wave field survey involving 254 employees (in Study 1) and a multi-source experience sampling method involving 42 employees and their spouse (in Study 2), we examine how employees' perception of ULR affects employees' emotional-response (i.e., anxiety-level) and behavioral-response (i.e., withdrawal from family interactions). As hypothesized, in both studies we found employees' perception of ULR to be significantly positively associated with their anxiety-level and, in turn, their withdrawal from family interactions. Also as predicted, the tendency for ULR to be positively associated with employees' anxiety was significantly moderated (weakened) when employees had a stronger (rather than weaker) propensity to displace responsibility for their unethical acts. Theoretical and practical implications are discussed.

Participant: **Bobby Pakzad-Hurson**, *Brown U.*

Substantial scholarship explores how the employment relationship has changed since the 1970s, but most research focuses on large-scale causes, such as globalization and changing labor market institutions, and how they have reshaped the distribution of rewards across society. At the same, however, organizational pay practices themselves have developed in response to competitive forces, new management theories, and regulatory requirements. These changes in pay practices have distinctive effects on pay outcomes, including the wage distribution and gender inequality. This Presenter Symposium will explore changes in pay practices—including the shift from job evaluations to market-benchmarking, the rise of merit pay, and the adoption of pay transparency—and how these practices have reshaped pay outcomes across organizations.

Resource-based Theory and Corporate Diversification

Digital Session Chair: **Yue Maggie Zhou**, *U. of Michigan*

STR: The dynamics of related diversification: Evidence from the health insurance industry

Author: **Yue Maggie Zhou**, *U. of Michigan*
Author: **Weikun YANG**, *Ross School of Business, U. of Michigan*
Author: **Sendil Ethiraj**, *London Business School*

The literature has focused on synergistic benefits or coordination costs in driving diversifying entry. A remaining puzzle that remains inadequately explained is the high levels of entry and exit by related diversifiers. We build on the existing literature to outline a formal model of the entry and exit decisions followed by an empirical test of the key implications of the model. We first observe a selection effect at entry: Facing business opportunities in a new segment, low capability firms from a more related segment expect to benefit from more synergies and are therefore more likely to enter than firms with similar capability but from less related segments. Second, we observe a reverse selection effect conditional on entry. Unfavorable shocks post entry in the new segment will tighten the survival criteria and drive some more related but low capability firms out. These predictions are supported using data on U.S. health insurance firms' entry into and exit from the Affordable Care Act market during 2013 to 2017.

STR: Building bridges: A Network-based Merger and Acquisition Research Agenda

Author: **Elio Shijaku**, *U. of Barcelona*
Author: **David R. King**, *Florida State U.*

We provide a systematic review of the diverse literature concerning the relationship between networks and M&A. This is significant since current contributions on the topic are very heterogeneous and present a lack of integration across theoretical perspectives. We provide detailed selection criteria for the sampled studies and synthesize them into a framework based on the direct and indirect effects that influence both networks and M&A processes. Additionally, we highlight potential shortcomings of extant literature as well as propose theoretical and empirical directions for future research.

STR: The Transmission of Economic Shocks in Multi-Divisional Firms → 🖨

Author: **Timo Sohl**, *U. Pompeu Fabra*
Author: **Brian T. McCann**, *Vanderbilt U.*
Author: **Govert Vroom**, *IESE Business School*

The role of corporate parents in transferring resources to support divisional performance has long been of interest in strategy research. However, relatively little is known about conditions under which parent-division links also serve as conduits for the transfer of negative events. We begin by arguing that the effects of parent-specific crises spread to divisions, resulting in significantly reduced sales growth in these divisions compared to divisions for which the parent is not exposed to a crisis. We contend, however, that the intensity of shock transmission is attenuated when divisions have greater direct and indirect experience, better access to external capital, and when parents are more diversified. Analyses of 2,073 geographic divisions of multinational retailers across 94 host countries provides evidence largely supportive of our arguments.

Paper is NOT Available. Please contact the author(s).

STR: Changes in political affinity and firms' subsidiary investments → 🖨

Author: **Gilbert Kofi Adarkwah**, *BI Norwegian Business School*
Author: **Christopher Albert Sabel**, *BI Norwegian Business School*
Author: **Fladina Zilja**, *Copenhagen Business School*

Firms' foreign investments are to a large extent influenced by the political environment in their foreign locations. A recent stream of literature has focused on the bilateral relations between countries as antecedents of multinational firms' new investments. So far, this literature has not examined changes in existing investments due to the ongoing development of political relations. Thus, we investigate the effect of changes in countries' bilateral political affinity on multinational firms' foreign subsidiary investments. Political affinity is defined as the extent to which countries have similar national interests in global affairs. We argue that firms' decision to increase or decrease subsidiary investments is significantly influenced by political risk embedded in the political relationship between home country and subsidiary country. Changes in political affinity between a firm's home and subsidiary country can lead to increased subsidiary coordination costs and heightened expropriation risk. Analyzing 1606 US public firms and their ties to 142 different subsidiary countries from 2000 to 2015, we find that a positive (negative) change in political affinity leads to an increase (decrease) in firms' foreign subsidiary investment. We further explore these effects, finding that a more stable (unstable) political environment in the foreign location positively (negatively) moderates these effects.

Risk, Speed, and Platforms

Digital Session Chair: **Kenan Guler**, *Rochester Institute of Technology*

STR: **Micro-Foundations of Platform Ecosystems**   

Author: **Kenan Guler**, *Rochester Institute of Technology*
Author: **Clyde Erikur Hull**, *Rochester Institute of Technology*

The popularity of digital platform ecosystems has soared due, at least in part, to how they empower individual complementors to interact and transact with each other. Many studies investigate their performance based on macro-platform and firm-level characteristics, but, little attention has been paid to the effects of complementors' individual characteristics on their performance. Collecting a large-scale Airbnb hospitality dataset, we investigate the performance implications of host gender, social responsibility, and neighborhood racial diversity. We find that female gender is negatively associated, but complementor social responsibility and neighborhood racial diversity are positively associated with complementor performance. Our results also indicate that complementor social responsibility strengthens, while neighborhood racial diversity weakens, the negative effects of female gender on complementor performance.

Paper is Available to Meeting Registrants Only.

STR: **An Evolutionary Model of Platform Organizations** 

Author: **Kenan Guler**, *Rochester Institute of Technology*
Author: **David McIntyre**, *Providence College*

Despite recent increasing interest in platforms and platform ecosystems, we still know relatively little about the evolution of platform organizations. Conducting a grounded theory-building study on 52 publicly available interviews with platform entrepreneurs, managers, and venture capitalists and 34 review, forum, and analyst articles, we explore the evolution of platform organizations. We develop a theory and a process model showing that the evolution of platform organizations consists of the following elements: platform growth, competition, contextual factors, adaptive behaviors, sustainability, and failure. We contribute to the literature by constructing an evolutionary model of platform organizations, suggesting that the "winner-take-all" assumption should not be taken for granted, illustrating how certain platform companies sustain competitive advantage, and discussing the factors leading to platform failure.

STR: **Integrating Returns and Costs in Examining Faster Firm Speed**

Author: **Minjae Lee**, *Southern Connecticut State U.*

Firm speed has long been a construct of interest among managers and researchers. Although observed firm speed is determined by both the cost effect and the return effect, practitioners and academic scholars have typically focused on either cost effect or return effect, but not both, in seeking to understand the reasons behind faster firm speed. To address this shortcoming, I first develop a theoretical framework integrating both cost and return effect into an examination of faster firm speed. This developed framework enables us to discern whether increasing returns or decreasing costs leads to faster speed. Second, I show how to apply my developed framework to empirical analysis by analyzing actual firm data in the Liquefied Natural Gas (LNG) industry from 1996 to 2007. In this way, the current paper contributes to the literature by providing a more comprehensive understanding of faster firm speed.

STR: **Routines, dynamic capabilities and predictability: A contingency approach to risk and uncertainty**

Author: **Emre Karali**, *Ozyegin U.*
Author: **Jatinder Singh Sidhu**, *Leeds U. Business School*

Research on risk and uncertainty has been vital to understand how organizations should maneuver their environment. Recently, uncertainty has received increasing attention alongside risk, due to its explanatory value for contemporary business strategy. An important issue is that scholars have mainly focused on describing how organizations could operate in settings that are strictly either risky or uncertain. By researching both concepts in isolation, scholars have overlooked that risk and uncertainty may be two ends of a predictability spectrum. In fact, many settings can be characterized by both risk and uncertainty simultaneously, thereby comprising both predictability and unpredictability at the same time. In this study, we apply a contingency approach to risk and uncertainty, to explain how organizations can address settings of varying levels of predictability. For this, we draw from the routines and dynamic capabilities literatures. To present a stylistic organizational structure that may be able to withstand setting of varying levels of predictability, we take on a design perspective.

Family Business, Strategy, and Performance

Digital Session Chair: **Heechun Kim**, *U. of Calgary*

STR: Family CEOs, Acquisition Premiums, and Stock Market Performance of Domestic Acquisitions  

Author: **Heechun Kim**, *U. of Calgary*

Author: **Xiaoying Wang**, *U. of Calgary*

Author: **Jinyong Daniel Zyung**, *Southern Methodist U.*

Our study suggests an important but often overlooked explanation for why so many acquirers pay high acquisition premiums for their acquisition targets, and who is more to blame for the winner's curse. We propose an ownership bias theory of acquisition premiums to test the idea that many acquisitions are overpaid because loss-averse family chief executive officers (CEOs) of both acquiring and target companies are particularly prone to ownership biases widely known as pseudo-endowment and endowment effects, respectively. Adopting a bonding perspective, we also predict that bidder shareholders are likely to react more negatively to overpaid acquisitions of non-family CEOs than to those of family CEOs. We find strong evidence in support of these hypotheses from an analysis of a sample of 1,344 domestic acquisitions that involve 588 acquiring firms and 719 target firms in China from 1998 to 2019.

STR: Inflexible and Stubborn? Analyst evaluations of long-term orientation in family and nonfamily firms

Author: **Christina Walker Robichaud**, *U. of Kansas*

Financial analysts provide recommendations about a firm's earnings potential based on relevant aspects of a firm's strategy. Despite the dangers of myopic short-termism, analysts may look unfavorably upon a firm's long-term orientation (LTO)—up-front investments in property, plant, and equipment that can develop a firm's operational capabilities. Using agency and resource-based perspectives, we argue that analysts will give worse recommendations as firms increase capital LTO because it signals principal-agent problems, excess capacity, and a stubborn commitment to inflexible structure. Moreover, analysts may have differing attributions based on context, such as family ownership, because capital LTO may signal principal-principal conflicts, prioritization of the family's noneconomic goals over financial goals, and/or mismanagement. Using a sample of US manufacturing firms from 2007-2016, results indicate that capital LTO is negatively related to mean recommendations. Family ownership provided interesting and significant results. While nonfamily firms demonstrated a linear negative relationship, family firms had a quadratic relationship—an initial increase as family firms increased capital LTO to median industry levels and then decreasing when capital LTO was much longer than industry peers. Firms should consider the trade-offs of developing long-term capabilities with potential unfavorable analyst recommendations, and family firms should consider the signals that family ownership can send in combination with investment strategies.

STR: Dynamic Managerial Capability and the Longevity of a Family Business

Author: **Marta Fabiano Sambiasi**, *U. Presbiteriana MacKenzie*

Author: **Juliana Assolari Cortez**, *U. Presbiteriana MacKenzie*

This study is motivated by evidence that entrepreneur capacity influence business opportunities detection and a manager's capability to manage a company's resources by adapting business to changes in sector, economy, and market. Strategy studies also argue that we should look at individuals and not only at organizational strategy, seeking to broaden the understanding of the phenomenon of strategic management. This way, owner's agency, especially concerning family businesses in a developing country's economic environment, can be a differential regarding business longevity. In this context, this study aims to identify What is the participation of the managerial capability for the longevity of a family business operating in the Brazilian industrial market for 30 years. The managerial capability are based on three main management factors: human capital, social capital, and cognition (Adner & Helfat, 2003). To develop this study, a qualitative case study was conducted with a family firm active in the hospital products sector. The dynamic aspect of the combination, transfer and recombination of resources is dealt with by the analysis of the company's trajectory throughout its existence. The results point that the individual capabilities of the members' family orchestrate the business strategy in a complementary manner composing the firm managerial capability.

STR: A Real Options View on Minority Acquisitions by Family Firms

Author: **Wunnam Basit Issah**, *U. of Witten/Herdecke*

Author: **Thomas Clauss**, *Philipps-U. Marburg*

Acquisitions involve high levels of uncertainty because resources are committed to risky acquisition activities even before the actual performance outcomes of these investments are known. In this study we examine the likelihood of using minority acquisitions as a risk reducing mechanism by family firms. Based on an analysis of a panel dataset of S&P 500 firms, we find that the acquisition decisions of family firms are consistent with the real options theory. We observe that family firms engage in related minority acquisitions because of their limited downside risk on socioemotional wealth.

Technology and Innovation

Digital Session Chair: **Valentina Assenova**, *The Wharton School, U. of Pennsylvania*

STR: Institutions and Innovation by New Entrants: Cross-National and Firm-Level Evidence from 136 Nations  

Author: **Valentina Assenova**, *The Wharton School, U. of Pennsylvania*

This study evaluates the institutional determinants of firm-level innovation output. It draws on theories of institutional development to argue that historical conditions affecting preferences for inclusive institutions contributed to higher rates of innovation by new entrants. The analyses evaluate these arguments using data from 212 nations (countries and autonomous territories) over 1960-2019 and nationally-representative samples of 28,335 new entrants in 136 nations over 2004-2019. The models instrument for institutions using data on historical conditions (pathogens and natural disasters) affecting institutional development. The findings show that inclusive institutions facilitating startup entry, growth, and exit are first-order determinants of national and firm-level innovation. At a national level, these institutions contributed to 33% higher rates of new entry, 102% higher scientific and technical knowledge production, 3.34% higher rates of patent applications, 205% higher value of high-technology products, and 313% higher receipts for intellectual property use. At a firm level, these institutions contributed to 27.64% higher rates of new product introductions, 11.50% higher rates of new process development, and 5.67% higher rates of R&D spending by new entrants.

STR: Entrepreneurial Learning and Strategic Foresight   

Author: **Aticus Peterson**, *Harvard Business School*

Author: **Andy Wu**, *Harvard Business School*

We study how learning by experience across projects affects an entrepreneur's strategic foresight. In a quantitative study of 314 entrepreneurs across 722 crowdfunding projects supplemented with a program of qualitative interviews, we counterintuitively find that entrepreneurs make less accurate predictions as they gain experience: they miss their predicted deadline to bring a product to market by nearly 6 additional weeks on each successive project. While learning should improve prediction accuracy in principal, we argue that entrepreneurs also learn of opportunities to augment each successive product, which drastically expands the interdependencies beyond what a boundedly rational entrepreneur can anticipate. We find that in a subsequent project, entrepreneurs encounter more unforeseen interdependencies in areas such as manufacturing and logistics, and they sacrifice on-time delivery to address these interdependencies.

Paper is Available to Meeting Registrants Only.

STR: Uncertainty and the Dynamics of Technological Competition  

Author: **Dongil Daniel Keum**, *Columbia Business School*

We show that the effect of uncertainty on innovation depends on a firm's competitive position. In R&D races, the gap in the rate of innovation, rather than the absolute rate, determines the winner. As a result, to the extent that leaders become cautious and slow their innovation, periods of uncertainty provide an opportune window for laggards to challenge leaders and decrease their dominance. We present evidence that uncertainty in economic policy increases the rate of innovation by laggards relative to leaders, with stronger effects in industries that depend more heavily on government spending and those that better approximate the features of R&D races. This study introduces competitive interactions as a novel channel through which uncertainty affects innovation and technological competition beyond prior considerations of real options effects. More generally, it provides a firm-level, uncertainty-based account of short- to mid-term fluctuations in competitive dynamism and industry concentration.

STR: AI Adoption and Firm Performance: Management versus IT 

Author: **Liudmila Alekseeva**, *IESE Business School*

Author: **Mireia Gine**, *IESE Business School*

Author: **Sampa Samila**, *IESE Business School*

Author: **Bledi Taska**, *Burning Glass Technologies*

We examine the impact of AI adoption on firm growth, productivity, and investment decisions and explore whether the impact on firm size and policies stems from AI adoption among management ranks or IT specialists. We measure the firm-level AI adoption using the demand for AI-related skills in online job postings. First, we document a positive association between the firm-level AI adoption and the firm's size, Capex, R&D, and total investments. We do not find robust relationships with productivity measures. Second, we find that the adoption of AI skills among managers drives the positive association with growth in sales and market capitalization, as well as with R&D and Capex. AI adoption among IT specialists does not show any robust association with firm outcomes.

Career Trajectory of Corporate Leaders

Digital Session Chair: **Wei Chi**, *Tsinghua U.*

STR: When do board chairs have their personal imprints on firm strategies? 

Author: **Wei Chi**, *Tsinghua U.*
Author: **Wei Shen**, *Arizona State U.*
Author: **Jing Zhou**, *Rice U.*

Inspired by recent research revealing significant board chair effect on firm performance, we explore whether and when board chairs have their personal imprints on firm strategies by investigating the relationship between board chairs' career variety and firm R&D intensity. We theorize that board chairs' career variety is positively related to R&D intensity in a country where they generally have high latitude of objectives. We further theorize this positive relationship to be moderated by board chairs' latitude of objectives at the firm level, and identify three firm-specific factors that either enhance or diminish board chairs' latitude of objectives. Specifically, board chairs' founder status and ownership are enhancers, whereas ownership by other large shareholders is a diminisher. Using data from a sample of Chinese firms, we find empirical support for the above predictions. Our study has important implications for research on strategic leadership and corporate governance.

STR: Institution-specific Skills and CEO Career Outcomes: A 20 year study of Chinese SOEs

Author: **Jue Gao**, *Peking U.*

This study introduces a new dimension of human capital, institution-specific skills, which captures the working experience under a specific institutional environment. We argue institution-specific skill is the fourth type of human capital in addition to generic, industry-specific, and firm-specific skills. Based on human capital theory, we argue that institution-specific skills extend CEOs' understanding of the focal firms. Thus we propose that institution-specific skills decrease the risk of CEO non-routine departure, and increase the likelihood of internal and external promotions, especially for outsiders. Results based on analyses of CEO turnovers in Chinese state-owned enterprises during the 20 years period from 2000 to 2019 provide strong support for our theory.

STR: Does the Director Labor Market Settle Up? Examining Directorships for Fired CEOs

Author: **James Grabowski**, *U. of Kansas*
Author: **Donald Joseph Schepker**, *U. of South Carolina*
Author: **Vincent L. Barker**, *U. of Kansas*

Prior research finds that dismissed CEOs suffer consequences in the executive labor market, such as fewer employment opportunities and reduced subsequent compensation. Such research suggests dismissed CEOs face stigma and ex post settling up in the executive labor market due to their poor executive ability. We extend such theory to argue that these processes extend to an alternative labor market: public company directorships. We argue, however, that the reduced odds of dismissed CEOs of gaining directorships is influenced by two considerations: 1) causal accounts for CEO dismissal related to violations of fiduciary duty and personal conduct and 2) the accumulated social, human, and reputational capital of the CEO. Following 280 dismissed CEOs, we find that CEOs dismissed with causal accounts suggesting fiduciary duty violations receive fewer future board appointments. For those without such stigmatizing causal accounts, we find evidence that social, human, and reputational capital enhance perceptions of the CEO's ability, reducing the penalties faced in the director labor market. Our findings suggest that dismissed CEOs have future employment chances as board members, but those directorship opportunities are shaped by the reasons for their dismissal and the assets and skills they may bring to any future board as a director.

STR: Elevating the CEO: The Consequences of Firm Efforts to Promote their New CEO 

Author: **Elle Hyunjung Yoon**, *U. of Georgia*
Author: **Daniel Gamache**, *U. of Georgia*
Author: **Jason Kiley**, *Oklahoma State U.*

Firms often put significant effort into developing and managing external perceptions using their communication and impression management strategy. With these efforts, firms vary substantially in how much of an emphasis they place on promoting their CEO, as compared to turn their efforts to promote the company as a whole. As a result, while some CEOs are well-known household names, others remain relatively unknown. Efforts to promote the CEO are likely most important for new CEOs as they may have a cumulative effect that builds the CEO's social evaluations over time. Therefore, we develop theory to explain the short-term and long-term consequences associated with efforts firms take to promote a new CEO. On the one hand, elevating the prominence of new CEOs may be beneficial for their firms in the short-run in the form of increased analyst ratings. On the other hand, elevating the prominence of new CEOs may result in more nuanced long-run consequences for their firms such as higher CEO relative overcompensation, reduced likelihood of CEO turnover, and an increased number of outside board directorships held by the CEOs. We test our hypotheses using 556 CEO succession events of U.S. firms between 2009 and 2013. Using a novel data set that includes both firm press releases and firm tweets, we find strong support for our hypotheses.

Performance Feedback and the Effect of Time

Digital Session Chair: **Serhan Kotiloglu**, *California State U., San Marcos*

STR: Considering the Manager in Performance Feedback Theory: Towards a Multi-Level Theory 

Author: **Serhan Kotiloglu**, *California State U., San Marcos*
Author: **Thomas Lechler**, *Stevens Institute of Technology*
Author: **Daniela Blettner**, *Simon Fraser U.*

The Performance Feedback Theory (PFT) explains how organizational responses are motivated by organizational performance above and below aspirations. As such, it is formulated as an organization-level theory. However, numerous researchers directly or implicitly refer to individual-level theories and factors when developing empirical models or interpreting empirical results. Drawing on 114 empirical PFT studies, we address these incongruences and explore the empirical PFT literature to better understand the role of an individual-level perspective in explaining organizational performance feedback. Our review of the empirical PFT literature highlights the confusion about the role of the individual decision-maker in PFT models. We perform a meta-analysis to quantitatively separate effects of individual-level factors (and theories) from organizational-level factors (and theories) on organizational responses to performance feedback. We demonstrate that the effects of individual and organizational factors differ for performance above and below aspirations. We present empirical evidence suggesting the conceptual necessity for a multi-level theory (individual and organizational) to more precisely explain the organizational performance feedback process. This result provides an opportunity for future empirical studies to further explore specific individual-level factors and to extend the PFT.

STR: Different types of performance feedback and their distinct influence on CSR engagement

Author: **Sofia Angelidou**, *U. of Liverpool Management School*
Author: **Charalampos Saridakis**, *Leeds U. Business School*

Drawing on the behavioral theory of the firm, and particularly on performance feedback, we tested the influence of discrepancies between corporate financial performance and aspirations on the decision to engage in corporate social responsibility. Our findings highlight the importance of performance feedback in stimulating varying firm decisions when setting the level of their social engagement. Our empirical evidence shows that as financial performance rises above historical or falls below social aspiration, the firm's engagement in CSR activities decreases, whereas as financial performance rises above social or falls below historical aspiration, the firm's engagement in CSR activities increases. Our findings shed light on the underlying mechanisms that lead to opposing interpretations of achievement and variations in the perception of risk- an issue that has received very little attention in prior empirical research.

STR: CEO Succession, CEO Temporal Depth, and Top Management Team Change 

Author: **Maximilian Weis**, *WU Vienna*
Author: **Patricia Klärner**, *WU Vienna U. of Economics and Business*

In this paper we study the implications of new CEOs' temporal depth on the pace and extent of top management team (TMT) change. We suggest that based on their temporal depth, new CEOs leverage their impact to change the TMT. We propose that new CEOs with a longer temporal depth will initiate slower and fewer TMT changes, whereas CEOs with a shorter temporal depth will initiate faster and more TMT changes. Our paper contributes to research on time in strategic management which has mainly studied organizational consequences of executives' temporal dispositions by shedding light on the role of CEO temporal depth in TMT changes. It also contributes to upper echelons research by introducing temporal depth as an important temporal disposition of new CEOs that influences how they change the TMT after taking office. Specifically, we highlight how CEOs' temporal depth influences the pace and extent of TMT changes and how CEO duality moderates these relationships. Finally, we contribute to TMT turnover research by investigating the dimensions of pace and extent of TMT changes.

Balancing Exploration and Exploitation

Digital Session Chair: **Zhiyuan Yu**, *Syracuse U. Whitman School of Management*

STR: Path Dependency of Firm Innovation: Government Funding and the Exploitation-Exploration Balance

Author: **Zhiyuan Yu**, *Syracuse U. Whitman School of Management*

Subject to governmental policy purposes, private firms that receive government funding for innovation have to endure limited strategic discretion in government-funded innovation activities. However, this limitation raises the question of how private firms respond to an external stimulus that might alter the firms' innovation trajectory. This paper employs U.S. patent data to explore the relations between government funding and the funded firm's exploitation/exploration tendency in its entirety. The baseline finding implies that merely focusing on funded projects might be incomplete: I find that in contrast to the funded projects' technological direction (exploitation and exploration), the non-funded projects of the funded firms are less exploitative and more exploratory. I further find that funded firms demonstrate path dependency on their funding history in terms of technological direction. This paper extends the research scope of government funding to firms' strategy in maintaining the balance between exploitation and exploration at the firm level. It also illustrates firms' complex responsive strategies when they encounter external opportunities that might act as a double-edged sword.

STR: Exploration and Exploitation in Dynamic Environments: How much versus how broad 

Author: **Lei Zheng**, *College of Business, Shanghai U. of Finance and Economics*

Author: **Tiberiu Sergiu Ungureanu**, *Ohio State U.*

Author: **Kannan Srikanth**, *The Ohio State U. Fisher College of Business*

In dynamic environments it is critical to find the correct balance between exploration and exploitation. However, both the empirical and theoretical literature offer contradictory advice regarding on how firms should change their exploration in the face of environmental change. Although prior work has distinguished between different facets of exploration, such as exploration intensity and exploration breadth, we currently do not know how environmental turbulence affects these aspects. We use a formal model to show that as environmental dynamism increases, better performing firms reduce exploration intensity while simultaneously increasing exploration breadth. This insight has significant implications for empirical research and management practice.

STR: Facilitating the evaluation of distant opportunities: Bridging back after leaping forward

Author: **Natalya Vinokurova**, *The Wharton School, U. of Pennsylvania*

Strategy scholars have argued that the pursuit of cognitively distant opportunities contributes to the sustainability of a firm's competitive advantage. Success in this pursuit requires the firms not just to identify distant opportunities, but also correctly evaluate the opportunities' potential. The research on distant search to date has considered how firms can identify distant opportunities, however, we know less about how firms evaluate such opportunities. Drawing on a historical case study of the emergence, evolution, and acceptance of mortgage-backed securities (MBS) in the United States between 1970 and 1983, this paper considers the process by which firms evaluate distant opportunities. My findings suggest that in evaluating distant opportunities decision makers can face two types of distance between the innovation domain and the domain of existing products—distance between two domains that share dimensions and distance between two domains that do not. In the former case, the distance between the domains can be evaluated along the shared dimension, thus, enabling the evaluation of the distant opportunity in question. In the latter case, the introduction of a dimension shared by the two domains is an important prerequisite for evaluating the distant opportunity in question.

Resisting   

Digital Session Chair: **Angelo Benozzo**, *U. of Valle d'Aosta*

CMS: **Narratives of Trans people in the workplace: Possibilities for subverting the Heterosexual matrix**

Author: **Angelo Benozzo**, *U. of Valle d'Aosta*
Author: **David Watson**, -
Author: **Roberta Fida**, *U. of East Anglia, Norwich Business School*

The article is inspired by the use of the term subversion in Chambers and Carver's comments of Judy Butler's work and it aims to explore the possibility of subversion of gender matrix by some trans people in the workplace. The article grounds its argument in queer theory and in the notions of gender performativity, hetero gender matrix and heteronormativity and analysis qualitative material generated through conversations with trans people working in Italy. Drawing on insights from Judith Butler's writing on gender we present, analyze and discuss three employees' cases (Alessandra, Gabriel and Lucia) to grasp how they construct (un)intelligible subject positions which potentially subvert disciplinary powerful and normative idea of gender. In the analysis we focus on how these trans people –through their narratives, their body, their actions, their practices...– within their heteronormative workplace contexts potentially subvert gender and heterosexual matrix. We highlight three possible ways of subversion – subversion through wondrous; subversion through incoherence; subversion through betrayal. In the conclusion we connect the idea of potential subversion with the concept of unheimlich which can open up site/sights in organization/organizing processes.

CMS: **Resisting and conforming to imposed identities – An autoethnography on the academic motherhood** 

Author: **Isabella M. Krysa**, *Fairleigh Dickinson U.*
Author: **Marke Kivijärvi**, *U. of Jyväskylä*

This paper is an autoethnography attempting to make sense of the experiences of two academic females who become mothers. The autoethnographic method allows us to discuss cultural phenomena through personal reflections and experiences. This paper explores contemporary motherhood discourse(s) and its discursive practices by drawing on Foucault's elaborations on discourses and its relation to knowledge and truth. Our personal experiences combined with intellectual elaborations lead us to believe the role of the mother continues to be dominated by gendered discursive practices. Once women become mothers, they are othered through societal and organizational practices because they constitute a visible deviation from the masculine norm in the organizational setting. Finally, we discuss possibilities of resistance in the Foucauldian sense towards the contemporary motherhood discourse(s).

CMS: **Diaries of Quarantine: Reframing the masculine logos through melancholia, nostalgia, and mourning**

Author: **Emmanouela Mandalaki**, *NEOMA Business School*

Challenging the bodily-detached logos that qualifies as perfect knowledge in academia, in the current account, I expose diary reflections, which I discuss in the context of critical literature debates, to make sense of how the neoliberal 'success story' further exposes academic and broader subjectivities, vulnerable embodied and psychological states, under conditions of worldwide lock-downs related to the COVID-19 pandemic. My diary reflections unveil conflated feelings of melancholia, inadequacy, helplessness, and guilt for not being able to satisfy the ideal of the perfect worker, under this crisis. Yet, they also radiate a hopeful sense of nostalgia, which, I experienced as a creative transition from melancholia towards a regenerative practice of mourning. By interweaving these diary notes with literature insights on the inter-connections between melancholia, nostalgia and mourning, I propose academic writing as a mourning practice, with heightened relational, ethical and aesthetical possibilities.

CMS: **Critical Management Studies and resisting degeneration**

Author: **Orestis Varkarolis**, *Nottingham Trent U.*
Author: **Maria Daskalaki**, *U. of Southampton*

Best Critical paper sponsored by the journal Organization.

Critical organization scholars have focused on the possibilities of cooperatives breaking away from the various deterministic and pessimistic degeneration laws of the past. This research contributes to this stream of literature by fleshing out a general theory of the degeneration threat. The lack of such a theory was abductively identified as a critical gap in the literature by the author who has a yearlong experience participating and researching the Worker Cooperatives' Network of Athens (WCNA). We argue that developing a general theory for the degeneration threat is critical for an enhanced understanding of the complexity of degeneration. To this end, conducting a processual analysis of WCNA attempts to resist degeneration using grounded theory techniques and abductively revisiting literature based on deviant/critical cases were considered a great fit for the task at hand. That is because they enabled the integration of various degeneration threats and theorizing their interrelations. In terms of implications, theory was developed that both better explains empirical phenomena and improves the ability to foresee the complexity of degeneration (threats).

Family Business 3

Digital Session Chair: **Tommaso Minola**, *U. of Bergamo*

ENT: Slack and Performance in Family Owned SMEs: An Agency Theory Perspective

Author: **Tommaso Minola**, *U. of Bergamo*
Author: **Massimo Bau'**, *Jonkoping International Business School*
Author: **Philipp Sieger**, *U. of Bern*
Author: **Alfredo De Massis**, *Free U. Bozen, Bolzano and Lancaster U.*
Author: **Francesco Chirico**, *Macquarie Business School, Macquarie U.*

Building on the notion that unabsorbed, absorbed, and potential slack resources positively affect financial performance in small and medium enterprises (SMEs), we take a family firm angle and theorize from an agency theory perspective that these relationships are weaker when SMEs are family-owned. Delving deeper into family firm heterogeneity, we then investigate how founding-generation board control and the presence of a family CEO moderate the slack-performance relationships in family-owned SMEs. A longitudinal analysis of a panel dataset of Italian SMEs largely confirms our expectations while also revealing counterintuitive findings that offer important contributions to existing literature.

ENT: Migrating Family Owners and Strategic Change Performance: Unpacking the Imprinting Effects

Author: **Victor Zitian Chen**, *U. of North Carolina, Charlotte*
Author: **Yilei Zhang**, *U. of North Carolina at Charlotte*
Author: **Rosalyn Grace Sandoval**, *U. of N.C. At Charlotte*
Author: **Laura June Stanley**, *UNC Charlotte*
Author: **Franz Kellermanns**, *U. of North Carolina, Charlotte*
Author: **Kimberly A. Eddleston**, *Northeastern U.*

The U.S. is an attractive melting pot for immigrants and has some of the highest domestic migration rates. A notable migration group is family business owners whose first-generation wealth makers business headquarters originated from other regions or countries. These businesses have migrated from their home headquarters, exposing their family businesses to the imprinting effects of the family migration history. This history represents an essential aspect of the family business that can influence how the family responds to environmental changes and informs their strategic performance. Using panel data from 3,369 family-firm-year observations to examine how the migration history of the family business influenced the firm's strategic performance. Our results indicate that the family migration history of family blockholders influences a firm's strategic performance through family governance characteristics and industry environmental uncertainty. These results illustrate how the family migration history influences the firm's adaption and imprints onto the organization, influencing future strategic changes.

ENT: The King is Dead! Owner-Managers' Sudden Death, Financial Distress, and the Role of the Successor

Author: **Kimberly A. Eddleston**, *Northeastern U.*
Author: **Philipp Sieger**, *U. of Bern*
Author: **Francesco Chirico**, *Macquarie Business School, Macquarie U.*
Author: **Massimo Bau'**, *Jonkoping International Business School*

When the owner-manager of a privately-held firm suddenly dies, which is a tragic event that happens more often than one would expect, a crucial yet unanswered question is who should ideally take over to reduce the likelihood of firm failure. Integrating the resource-based view and research on grief recovery, we theorize that the owner-manager's sudden death leads to a firm's financial distress and that there is an inverse U-shaped relationship between the time passed after sudden death and the firm's financial distress. We also propose that the successor's resource endowment originating from her/his embeddedness in the firm, local community, and family, moderates this non-linear relationship. Using a longitudinal, matched sample of privately-held Swedish firms, we offer important theoretical and practical contributions.

ENT: It is my turn: Involuntary transgenerational succession in a South African family business

Author: **Michelle Amy Montague-Mfuni**, *PhD student at U. of Memphis*
Author: **James Vardaman**, *U. of Memphis*

Transgenerational succession remains one of the most often-studied topics in the family business literature. Despite this attention, little is known about a particular type of succession, one in which the child successor involuntarily supplants the parental incumbent. Given that children can and do push their parents out of businesses, insight into the process through which involuntary transgenerational succession occurs is needed. In order to gain this insight, we engaged in a 12-month qualitative study of a family-owned South African garment maker in which such a succession took place. With insights derived from intergenerational solidarity theory, our findings show that cohesive family relationships fostered involuntary succession. The cohesive bonds between the founder mother and successor daughter gave the successor both the skills and desire to take over the business and created family dynamics that allowed for the family to remain cohesive during and after the transition. The implications of these findings for theory and research are discussed.

The world is undergoing dramatic transformations. Many of the grand societal challenges we currently face underscore the need for scholarly research — including management studies — that can help us best sort out and solve them. Yet, organizational behavior scholars and management scholars more broadly struggle to produce concrete solutions or to communicate how their research can help to tackle these grand societal challenges. Many in the management scholarly community have called for a serious reexamination of the relevance and impact of our research, including AOM. This PDW aims to help scholars who want to “make a difference” by outlining how they can systematically enlarge and extend research projects to amplify their impact to address the challenges societies face. We review five forms of impact (scholarly, practical, societal, policy, and educational) and, for each, provide concrete suggestions for getting started and possible outlets (Wickert et al., 2020), thereby stimulating management and organization scholars to think more broadly about and to begin more often producing impactful research, which we define as that which influences through multifaceted forms and channels how organizations and individuals think, behave, or perform.

Organizational and Social Applications of Artificial Intelligence

Digital Session Chair: **Thiemo Wambsganss**, *U. of St. Gallen*

OCIS: **AI-based Argumentation Tutoring – A Novel System Class to Improve Learners' Argumentation Skills**   

Author: **Thiemo Wambsganss**, *U. of St. Gallen*
Author: **Andreas Janson**, *U. of St. Gallen*
Author: **Matthias Soellner**, *U. of Kassel*
Author: **Jan Marco Leimeister**, *U. of St. Gallen and U. of Kassel*

Argumentation is an omnipresent foundation of our daily communication and thinking. The ability to form convincing arguments is not only the fundament for persuading an audience of novel ideas but also plays a major role in strategic decision-making, negotiation, and productive civil discourse. However, students often struggle to develop argumentation skills due to a lack of individual and instant feedback in their learning journey, since providing feedback on the individual argumentation skills of learners is very time consuming and not scalable if conducted manually by educators. Following a design science research approach, we propose a new class of argumentation learning systems that provide students with individual and ongoing tutoring to support them in learning how to argue. We build our socio-technical design on a combination of user-centered design principles, a conceptualization of argumentation structures in student-written text, and Natural Language Processing and Machine Learning classifiers to provide individual feedback. To investigate if the new system class of AI-based argumentation tutoring systems helps students to improve their argumentation skills, we evaluated the novel artifact class in two empirical studies in comparison to traditional argumentation learning systems. In a laboratory experiment (study 1), as well as in a field experiment in a large-scale lecture over three months (study 2), we found that AI-based argumentation tutoring systems based on our design principles, argumentation schemes, and algorithms improve the short- and long-term argumentation skills of students significantly compared to the traditional argumentation learning approaches.

OCIS: **Identity-Based Motivations for Providing the Unpaid Labor That Makes AI Technologies Work** 

Author: **Camille Endacott**, *UC Santa Barbara*
Author: **Paul Leonardi**, *UC Santa Barbara*

OCIS Best Student Paper Award Finalist

With the proliferation of digital technologies that distribute work to crowds across time and space, the last decade has ushered in new forms of external labor possibilities for organizations. One form that is becoming more common as organizations develop and market artificially intelligent (AI) technologies is the widescale involvement of users in training machine learning algorithms (MLAs). Although MLAs that undergird AI applications promise to improve the technology's functionality over time, organizations benefit from early adopters' willingness to use algorithms that are still imperfect. This study focuses on why users are motivated to provide unpaid labor to improve MLAs and how organizations sustain this work. Drawing on a field study of developers and users of two AI scheduling tools, we find that designers' choices about whether to foreground tools' AI capabilities attracted users looking to enact different identities. The tool in which AI was foregrounded attracted users who were willing to provide much unpaid labor to train the tool to be seen as technology enthusiasts, but this work was not sustained when use of the tool threatened other identities. The organization that deployed that tool in which the AI capabilities were hidden could sustain users' identities as master schedulers but could not learn as broadly. After showing how these differences in identity construction shaped people's motivations to contribute unpaid labor and what effects these contributions had for the organizations that built these tools, we discuss the implications for the role that identity plays in motivating and sustaining unpaid labor in the context of AI technologies.

OCIS: **Dual Information Technology Strategy and Firm Performance: Insights from a Deep Learning Approach** 

Author: **Yi Yang**, *The Hong Kong U. of Science and Technology*
Author: **Chewei Liu**, *Indiana U. - Kelley School of Business*
Author: **Sunil Mithas**, *U. of South Florida*

This study provides new insights on how dual information technology (IT) strategy and other investments such as IT investments and selling, general and administrative (SGA) investments jointly influence profitability of the firm. Following recent work, we conceptualize IT strategy in terms of revenue emphasis, cost emphasis, or a dual-emphasis in which both revenue and emphasis goals are simultaneously pursued. We use the novel and AI-based state-of-the-art textual analysis technique, the BERT model, to infer firms' IT strategies from corporate disclosures, including annual reports Form 10-Ks, and earnings conference call transcripts. We fine-tune Google's BERT model on manually annotated IT strategy statements and achieve satisfactory classification accuracy on hold-out dataset. We replicate prior findings using survey-based IT strategy variable by using the inferred IT strategies based on BERT to provide confidence in the new BERT measure of IT strategy. We then extend prior work by assessing how dual IT strategy helps to leverage high SGA investments for superior profitability. Our analyses suggest that IT strategic emphasis plays an important role in moderating the relationship between SGA investments and firm performance such that dual-emphasis firms also have a steeper SGA-profitability relationship than either revenue- or cost-emphasis firms. Overall, these findings imply that at higher levels of SGA investment, dual-emphasis in IT strategy has higher pay offs. From a methodological perspective, this study shows the value of the novel AI method for inferring IT strategy that complements prior survey-based approaches.

Author: **Yang Pan**, *Tulane U.*

Author: **Rudy Hirschheim**, *Louisiana State U.*

While artificial intelligence is robotizing customer service at an unprecedented pace, there is great concern that “robotized” customer service could undermine customer satisfaction. This study searches for a solution that humanizes customer service to address this concern. Aiming to increase humanization, U.S. telecom giant T-Mobile recently added personal identities to its human social media customer service representatives on Twitter. Leveraging this exogenous change in which customers observe the personal identity while interacting with T-Mobile’s social media customer service representative, we identify a natural experimental setting and adopt the difference-in-differences specification as our main identification strategy. Our findings suggest that personal identity cues in the profile of social media customer service representatives lead to an increase in sentiment in public tweets, fewer number of complaint tweets, and a high probability of customer satisfaction in interacting with customer service representatives. A set of robustness tests safeguard our results from alternative explanations. Further, additional analyses suggest that the effects of the humanized profile are strong for verified Twitter users and female users. We also discuss the implications for research and practice.

ODC: Organizational Change and its Impacts Through Counterproductive Work Behaviors

Author: **Michael Freres**, *Leadership and Organizational Change*

Author: **Indira Rita Guzman**, *Trident U. International*

Author: **Kenneth Cromer**, -

The United States Armed Forces is similar to and different from other complex business organizations in the United States. The difference is that the Armed Forces have a unique traditional culture. When this is interfered with through counterproductive work behaviors, both the organization and national security are threatened. This work focused on the relationship between counterproductive work behaviors, selected negative personality characteristics, employee voice, and organizational change in the United States Armed Forces. The three personality traits were psychopathy, narcissism and Machiavellianism. Although the effects of these traits on organizations have been studied, no study has been conducted with participants from the United States Armed Forces. Three theories were used for the theoretical foundation: social identity theory, social exchange theory, and organizational support theory. Seven research questions and seven hypotheses were formulated. A total of 241 volunteer veterans or retired military personnel in the Armed Forces participated with a 77-item researcher-designed survey based on published questionnaires. The data were analyzed with quantitative methods, specifically descriptive statistics, confirmatory factor analysis, multiple regression analysis, and structural equation modeling. All hypotheses were supported. The results showed that psychopathy, narcissism and Machiavellianism related positively to counterproductive work behaviors (H1, H2, H3). Organizational change moderated the relationships between psychopathy, narcissism, and Machiavellianism (H4, H5, H6). Employee voice related negatively to counterproductive work behaviors (H7). Implications include further quantitative research with other samples and the variables studied, as well as qualitative research. Recommendations for leaders at all levels of organizations to gain a greater understanding of the variables in this study can help leaders take steps to mitigate counterproductive work behaviors in relation to negative personality traits and organizational change for greater organizational effectiveness.

ODC: How Inconsistency in Leaders' Charismatic and Commitment Signals Undermines Employee Change Support  

Author: **Anastasia Kieliszek**, *LMU School of Management, Ludwigs-Maximilians-U. Munich*

Author: **Rouven Kanitz**, *LMU Munich School of Management*

Author: **Nicolas Bastardo**, *U. of Zurich*

Winner of ODC Division Best Doctoral Student Paper

Prior research has emphasized how leaders use charismatic communication to motivate employee support for organizational change. But beyond inspirational visions, employees also pay attention to whether a leader's actual behaviors signal leader commitment to change. However, it remains under-explored how leaders can communicate true commitment and how a leader's charismatic communication and commitment behaviors jointly shape support for change. Taking a signaling perspective on change leadership, we suggest that a specific combination of leader behaviors—high charisma and low commitment—will undermine support for change because it triggers perceptions of inconsistency between what leaders say and do. We argue that this inconsistency effect will be particularly strong among employees who are dispositionally resistant to change, and is channeled through perceptions of leader integrity. We find partial evidence for our predictions in an experimental vignette study using behavioral measures of change support. Our study reveals the limitations of examining charismatic communication to motivate change in isolation, with important implications for leadership and change researchers, as well as practitioners. We call for research that explores the interactive effects of multiple leader signals to motivate organizational change.

ODC: When Reality Exceeds Expectations – Employees' Justice Appraisals and Emotional Reactions to Change

Author: **Christina Hagl**, *LMU Munich*

Author: **Martin Hoegl**, *LMU Munich*

Organizational justice plays a central role in managing change. However, despite research widely recognizing the emotion-laden character of justice appraisals, research rather focused on negative effects of perceived (in)justice. To cover the full continuum of justice appraisals, we additionally need to consider perceptions of being treated more fairly than expected, and we know surprisingly little about how various types of justice appraisals shape different forms of emotional reactions to change. Using data from a 3-wave longitudinal study within an HR Service Provider undergoing a major reorganization, we show that employees' procedural, interpersonal, and informational justice appraisals are associated with later emotional reactions. In particular, increased interpersonal justice appraisals seem to play a critical role in shaping low activating emotions to change (e.g., sadness, calm), and increased informational justice appraisals shape high activating emotions to change (e.g., anger, excitement). Moreover, we show that the relationship between justice appraisals and emotions depends on individual's dispositional resistance to change. Our work contributes to current debates on employee emotions in organizational change and the role of organizational justice during change.

ODC: Engagement or Depletion: The Relationship between Change and Work Engagement  

Author: **Jill Waymire Paine**, *IE Business School*

Author: **Karen Jansen**, *Henley Business School, U. of Reading*

Author: **Myeong-gu Seo**, *U. of Maryland*

ODC Division Best Paper Finalist

As organizations undertake significant transformation to compete and survive in today's dynamic business environment, employees are required to engage their personal energies, not only in their day-to-day work but also in one or more change initiatives within their organization. Yet, we know little about how individuals devote energy to both the demands of change and to day-to-day work. Drawing on the job demands-resources model (JD-R), we develop and test theory that explains how employees direct and invest energy toward the pursuit of organizational change goals and how this engagement in change may affect subsequent engagement in work role activities. Results of a three-wave study conducted in a sample of 144 employees undergoing a significant organizational transformation revealed a positive relationship between work engagement and change engagement, which is particularly strong when employees experience the key resources of value congruence and perceived organizational support. Similarly, the relationship between change engagement and subsequent work engagement is also positive overall but strongest when employees are highly engaged in the change and highly involved in the transformation.

Collecting Data with Interviews: Concerns and Guidance for Researchers

Digital Session Chair: **Anne D. Smith**, *U. of Tennessee, Knoxville*

RM: Bringing Back the Researcher: Dominance and Silences of Interviews in Qualitative Research

Author: **Anne D. Smith**, *U. of Tennessee, Knoxville*
Author: **Anna Stevenson**, *Lund U., School of Economics and Management*
Author: **Benjamin Nathan Alexander**, *California Polytechnic State U.*
Author: **Hans Hansen**, *Texas Tech U.*
Author: **Marcos Pereira Fernandes De Barros**, *Grenoble Ecole de Management*
Author: **Sara R. S. T. A. Elias**, *U. of Victoria*

This paper problematizes the current use of interviews in qualitative research, questioning whether interview data might have become privileged over other types of data. Seeking to explore how interviews have been used in top-tier qualitative research, our study is grounded in a systematic analysis of 353 empirical articles that use interviews published in *Academy of Management Journal* and *Administrative Science Quarterly* between 1986 and 2020. Our analysis resulted in four interrelated themes—hierarchy of data, marginalization of the researcher, disappearing contexts, and loss of subjectivity—that we view as “silences” related to the use and predominance of interviews in qualitative research. Building from our presentation of each theme, we conclude with a way forward in how researchers may engage with interviews to develop more impactful and interesting theoretical contributions.

RM: Constructing Mode-enhanced Transcriptions to Facilitating Theorizing from Interview Data (WITHDRAWN)

Author: **Qian Li**, *U. of Dundee*

Qualitative researchers often work with transcriptions from interviews. The transcribing practice has been taken unproblematically in management, without further examining the processes and implications on theorizing. Grounded in the social constructivist tradition, the paper proposes a mode-enhanced transcribing practice to help researchers contextualize the empirical material they have collected in the social and cultural sphere, facilitate the meaning-making process of analyzing qualitative data, and generate the potential perspectives for further theorizing. It also suggests that a mode-enhanced transcription as material means of representation reflects a sense of ‘reality status.’ Presenting such a transcription helps increase the transparency of analyzing interview-based qualitative data.

RM: Building Theories From Qualitative Interview Research: How Many Interviews Do I Need?

Author: **Kasper Elmhødt**, *Aalborg U.*
Author: **Michael John Gill**, *U. of Oxford*
Author: **Jeppe Agger Nielsen**, *Aalborg U.*

Sage Publications/RM Division Best Paper Award

Qualitative researchers seeking to understand how many interviews are required to support a robust theoretical contribution face ambiguous and often contradictory recommendations. We argue existing recommendations fall into one of three ideal-type categories: (i) a pre-determined number or range of numbers, (ii) a number informed by specific criteria, such as the research purpose and duration of the study, or (iii) a methodologically principled number rooted in epistemological assumptions. Despite longstanding tensions between these categories, there is little investigation of how differing recommendations compare with the actual number of interviews conducted in high quality scholarship. We conducted a systematic review of qualitative studies (n = 260) in top-tier management journals (*AMJ*, *ASQ*, *Org. Sci.*, and *SMJ*) over a 10-year period (2010–2019). Drawing on our analysis, we demonstrate how each of the three categories of recommendations fails to explain the number of interviews reported in published articles. We develop a set of guiding questions and “guardrails” to support researchers in developing, and reviewers in respecting, differing justifications of interview sample sizes.

Spinoffs and Strategic Reconfiguration Across Firms

Digital Session Chair: **Elham Asgari**, *Michigan Technological U.*

STR: Emergence and Evolution of An Industry: Exploration of Distinct Roles of Demand Pull and Supply Push 

Author: **Elham Asgari**, *Michigan Technological U.*

Innovation is the main driver of emergence and evolution of industries. Generation and dissemination of innovation points to the vital importance of knowledge exchange among multiple, socially-situated actors and a wide variety of organizations, including firms, trade associations, universities, governmental and non-governmental institutions, and – though they are often omitted from explicit consideration – consumers, as well. The importance of these supply-side and demand-side interactions is particularly pronounced in emergent sectors characterized by extreme dynamism in the generation, accumulation, exchange, and evolution of knowledge. Despite the symbiotic nature of supply-side and demand-side forces, skepticism has persisted regarding the determinative impact of demand-side forces, a bias that has constrained purposeful investigation of the manner in which demand-side forces shape innovation and influence the trajectory of sector emergence and evolution. Addressing this gap, this study examines how and to what extent supply and demand side forces in a high technology emergent context –i.e., small satellite industry— contribute to innovation over the industry lifecycle. The results suggest that demand is an indispensable contributor to emergence and evolution of technologies and new sectors; and the nature of its contribution varies over the industry lifecycle.

STR: Environmental Turbulence and Adaptive Capacity: A Review and Research Agenda

Author: **Samuel Wilson**, *PhD student at Old Dominion U.*
Author: **Chris Hugh Willis**, *Old Dominion U.*

This paper conducts a systematic literature on the relationship between environmental turbulence (ET) and adaptive capacity (AC). Through a conceptual analysis of the competitive and non-competitive dimensions of ET, and the internal and external dimensions of AC, this study demonstrates how unique forms of turbulent disruption in the competitive markets of firms require strategic adaptive responses generated in connection with the internal stakeholders of the firm, while turbulence in the larger social, political, and economic environment of the firm requires strategic adaptive responses related to the organization's external stakeholders. Contributing to the ongoing development of stakeholder theory, this paper develops an original conceptual model concerning the relationship between environmental turbulence and adaptive capacity, distills the key concepts in this relationship in order to generate new insights, and highlights potential paths for further research in this area. Implications for strategic management scholars and practitioners are also discussed.

STR: Lifelines and Sinking Ships: Investor Reactions to Divestments During Industry Change 

Author: **Julianne Sellin**, *Fox School of Business, Temple U.*
Author: **Todd Schifeling**, *Fox School of Business, Temple U.*

Navigating a period of industry change can be challenging for incumbent firms. In this paper, we consider an important barrier to adaptation – technological commitment – and analyze how investors react to a firm's departure from its core position. We argue that, over time, cost efficiency concerns and shareholder advocacy potentially moderate the negative impact of commitment to a fading technology on market valuation. Building on the industry change and corporate divestment literatures, we argue that it will be increasingly difficult for incumbents with greater technological commitment to exit from this position even as the transition becomes more inevitable, unless investors formally pressure the firm to do so. We find support for our arguments from an event study of announcements of coal plant retirements by U.S. public electric utilities from 2007 to 2019. Our results contribute to understanding challenges with incumbent adaptation to environmental disruptions, as well as the urgent issue of climate change mitigation.

STR: Incumbent Performance Facing Digital Evolution: The Role of Asset Reconfiguration 

Author: **Shihui Wang**, *Peking U.*
Author: **Xuanli Xie**, *Peking U.*

“Digital revolution” presents great challenges to incumbent firms in many industries. How could incumbents successfully renew the assets and capabilities in digital innovation shocks is a question remains unanswered. Drawing on strategic adaptation and asset reconfiguration literature, we take a finer grained approach draw a distinction between retrenchment-oriented reconfiguration, and growth-oriented reconfiguration. Using commercial banks' divestiture of offline branches and adoption of online innovation as the empirical context, our results suggest that incumbents could benefit from divesting devalued legacy assets, while the innovation adoption could contribute to the performance only when the incumbents are also engaging in legacy divestiture simultaneously.

Bringing the Manager Back In: GLOBE 2020 Exploratory Incubator

GLOBE 2020 Exploratory Incubator

Organizer: **Richard Cotton**, *U. of Victoria*

Organizer: **Mansour Javidan**, *Thunderbird School of Global Management at ASU*

This caucus will revisit the GLOBE 2020 research design, structure, and accomplishments and will share preliminary findings while also providing a forum to discuss potential collaborations. The primary audience for this caucus is the over 500 researchers (known as Country Co-Investigators) worldwide who constitute the most inclusive GLOBE 2020 study to date by gathering cultural dimension, trust and ideal leadership data from managers and professionals in over 120 countries representing over 99% of the world's population and over 97% of world GDP. We have a rigorous data cleaning and retention protocol to ensure all retained respondents are qualified informants about their countries, and have over 35,000 usable survey responses as of January 9, 2021. The deadline for completion of data collection is February 28, 2021.

Cooperation and Partnership in Public and Nonprofit Sectors

Digital Session Chair: **Kate Albrecht**, *U. of Illinois at Chicago*

PNP: Toward a Unified Approach to Studying the Role of Nonprofits in Public Service Delivery

Author: **Saman Shafiq**, *U. of Illinois at Chicago*
Author: **Kate Albrecht**, *U. of Illinois at Chicago*
Author: **Kelly LeRoux**, *U. of Illinois at Chicago*

Both public and nonprofit management and urban governance scholars have studied the dynamics of nonprofit-government collaboration. Some of the theories utilized to examine this relationship are similar but some are unique to each tradition. More importantly, both traditions have heavily relied on qualitative and relatively small size cross-sectional datasets to draw conclusions about various aspects – such as drivers, processes and outcomes - of this collaboration. This practice has not only created theoretical gaps but has also prompted hinderance in fully understanding the role of nonprofits in public service delivery. Through a literature review specific to each research tradition, we find that both sets of scholars have only looked at limited types of services that local governments and nonprofits collaborate for and have not yet paid attention to how this collaboration may change over time. This paper fills these gaps by using a longitudinal dataset to descriptively examine several different service types. The paper also identifies ways in which these research traditions can be unified by posing a number of propositions for future research.

PNP: Government's Trust Building Tactics to Renew Relationships with Community-based Organizations

Author: **Yuan Cheng**, *U. of Minnesota Twin Cities*
Author: **Jodi Sandfort**, *U. of Washington*

Institutional racism embedded in the existing public management practices has systematically created distrust between community-based organizations serving Black, Indigenous, and other people of color (BIPOC). However, little is known about how the government could reform public bureaucracies to renew their relationship with these important community-based organizations. Through a process-oriented inductive study of Minnesota's 2-Generation Policy Network, we find that government's intentional tactics both inside the bureaucracy and with BIPOC community-based organizations allowed them to create new collaborative infrastructure that both changed organizational routines and built power to address racial inequities in the existing human service system. This study documents the importance of public managers' intentionality in addressing the historical legacy that is an outgrowth of conventional practice and assessing their own identities to assess and challenge the mechanism of traditional, bureaucratic authority. Trust between the government and BIPOC community-based organizations needs to be earned and rebuilt.

PNP: Understanding Professional Associations as a Mechanism to Inter-Governmental Collaboration

Author: **Zheng Yang**, *California State U., Dominguez Hills*
Author: **Thy Merritt**, *Claremont Graduate U.*

To date, there is limited empirical research in public management literature exploring the consequences of professional associations and their impacts on inter-governmental relationships. Drawing on network perspectives and recent managerial networking literature, this study aims to bridge the gap of literature in professional associations by examining the case of Los Angeles County Management Council (LACMC) and how informal networking facilitates inter-governmental collaboration in local governments. Results from the analysis highlight the role of informal networking through professional associations in building relational comfort, promoting social learning, building a global perspective, promoting system awareness, establishing professional contacts, and providing open opportunities and serendipities, which are perceived to lead to improved inter-governmental collaboration. These findings point to the importance to further understand the distinctiveness of informal networking and the role of professional associations in public administration.

Paper is Available to Meeting Registrants Only.

PNP: A Dynamic Relational View of Cross-Sector Collaborations

Author: **Marco Antonio Rocha Galo**, *ESSEC Business School*
Author: **Ha Hoang**, *ESSEC Business School*

In this paper, we question how some of the taken-for-granted assumptions from the interorganizational alliance literature apply for collaborations between hybrid partners – i.e., actors with distinctive institutional logics – and that inherently generate positive externalities. Specifically, we look at how the dynamic relational view (Dyer, Singh, & Hesterly, 2018) applies to cross-sector collaborations (CSCs) – i.e., associations between nonprofit, for-profit, and/or public organizations. We offer a framework that details how these hybrid associations' intrinsic characteristics affect some assumptions of the dynamic model. First, we show that, besides the interdependence of the partners' resources, both the actors' different institutional logics and the collaborations' emphasis on tackling social issues also influence the collaborations' governance choices. Second, we propose that, for many CSCs, the interdependence and the nature of the partners' assets will not be the critical factor in deciding the initial investments on either relation-specific assets or knowledge-sharing routines. Instead, the prevalence of an institutional logic will be more relevant to determine these investments. To conclude, we argue that the cross-sector collaborations' intrinsic characteristics can also accelerate, delay, or compromise the future investments in these sources of competitive advantages and the development of informal governance mechanisms, both critical to creating relational rents. Altogether, we develop a model that provides a temporal explanation for how the nature of cross-sector collaborations affects the development of their drivers of competitive advantages and the generation of relational rents.

Presenter: **Heinrich Peters**, *Columbia U.*

The goal of this symposium is to understand how sudden exogenous shocks (such as the COVID-19 pandemic and resulting social distancing restrictions) affect the role that culture plays in shaping individual, group, and organizational life. In this way, the four papers in this symposium aim to: (i) use the sudden and pervasive impact of the pandemic on work to advance group and organizational culture research, and (ii) leverage novel computational techniques and Big Data to assess the dynamics of culture in an era when traditional research methods (e.g., laboratory experiments) are not feasible.

Sustainability pedagogy

Digital Session Chair: **Jose M. Manuel Alcaraz**, *ESDES, U. Catholique de Lyon*

ONE: Digital Storytelling as a Pedagogical Tool for Global Sustainability

Author: **Jose M. Manuel Alcaraz**, *ESDES, U. Catholique de Lyon*

Author: **Keary Shandler**, *Murdoch U. Dubai*

Author: **Mark Edwards**, *Jonkoping International Business School*

Recent developments from the natural sciences have provided extremely relevant approaches to conceive and address global sustainability. Among those developments, the Planetary Boundaries (PBs) concept (Rockström et al, 2009; Steffen et al, 2015) has brought an urge to understand and address the biophysical limits of the planet, issues on the complex links between the economy, society and the environment, on time and place scales, on complex governance, and on environmental values. In this instructional innovation paper, we argue that sustainability in management education (SiME) needs to address those tenets, through hands-on approaches that foster deep learning and transform knowledge, skills and emotions. Here we explore the value of digital storytelling (the merger between traditional storytelling and multimedia technology) for that quest. Based on our three-year experience across three continents (in the cities of Perth, Singapore, Dubai and Munich, where we involved almost three hundred students), we offer a detailed instructional practice to foster learning on the PBs, and we elaborate on the deep learning “mechanisms” behind it. In so doing, our paper introduces a pedagogical (experiential) approach to the PBs in business schools, and advances the use of digital storytelling for SiME.

ONE: A Faculty-Student Collaborative Study of Employee Selection Practices In Sustainable Organizations

Author: **Patricia G Martinez**, *Loyola Marymount U.*

Author: **Lauren Anderson Llanos**, *Loyola Marymount U.*

Author: **Jonathan Rojas**, *Whistle, Inc*

This paper presents an example of a research collaboration examining sustainable organizations that facilitates both faculty and students’ achievement of professional and educational goals. Given that our current student generation, “Gen Z,” desires to make a positive impact and are passionate about environmental causes, studying sustainable organizations provides opportunities for this type of collaboration. This project combines students’ senior theses, independent research projects and a faculty member’s research in employee selection practices. We focus on how sustainable organizations can use behavioral interviews and pro-environmental behavior survey measures during their employee selection processes to assess person-organization (P-O) fit and thus, values alignment between individuals and organizations. We argue that this results in the strategic hiring of individuals who will support the organization’s sustainability efforts. In Study 1, we interview ten hiring managers about the role of P-O fit in their selection processes and how they assess this alignment. In Study 2, we develop and pilot test measures of pro-environmental behavior for recycling and water conservation behaviors (N=98). Finally, we discuss how this collaboration contributes to the study of HRM in sustainable organizations, specifically hiring processes, a topic that sustainability researchers continue to overlook.

The worsening and urgency of societal challenges, such as the climate emergency and biodiversity loss, have triggered questioning of the effectiveness of business sustainability teaching and the capabilities business students acquire. Multiple scholars have now called for a systems approach to business sustainability education to provide business students with a more holistic and relational understanding of firms as situated within complex adaptive systems. Yet, for many business educators, this may entail engaging with relatively unfamiliar theory and shifting deeply ingrained teaching habits. We aim to help educators overcome these hurdles to adopting a systems approach in their classrooms. First, we identify six concepts central to business sustainability courses. Second, we utilize the concepts to unpack a systems approach to teaching business sustainability and compare it to a traditional firm-centric approach. Finally, we offer four pedagogical practices that are aligned with the systems approach to teaching business sustainability and illustrate these with a variety of examples.

Business ethics has emerged as one of the most critical issues confronting society, and a substantial literature in behavioral ethics provides important insights into ethical decision making in organizations. In this symposium, we challenge some of the fundamental assumptions and insights in this literature. In a series of papers, we demonstrate that though prior research provides important insights into ethical perceptions, ethical decision making, and unethical behavior in organizations, many characteristics and relationships remain uncertain. In all, our symposium pushes the boundaries of the field of behavioral ethics, raises important theoretical, empirical, and methodological questions, and prompts the need for more research on ethical decision making and unethical behavior in organizations.

Author: **Agne Gadeikiene**, *Kaunas U. of Technology, School of Economics and Business*

Author: **Jurgita Giniuniene**, *Kaunas U. of Technology*

The pandemic of COVID-19 urged healthcare ecosystem to expedite the deployment and use of digital healthcare services. Digital healthcare services by nature require the integration of diverse external and internal knowledge provided by multiple stakeholders of the healthcare ecosystem. Thus, open innovation could significantly contribute to value-based digital healthcare performance. This article illustrates how different open innovation strategies contribute to different types of value created by digital healthcare services. Healthcare providers, policymakers and insurance companies while seeking to utilize digital healthcare services need to leverage between different strategies of open innovation (e.g., inside-out or inside-in). While orchestration of the strategies might provide the optimal results, special attention needs to be given to inside-in open innovation processes.

HCM: Consequences of Virtual Visit Implementation: Considerations for Supporting Collaborative Work

Author: **Matthew John DePuccio**, *Rush U.*

Author: **Alice Gaughan**, *Ohio State U.*

Author: **Daniel M. Walker**, *Ohio State U.*

Author: **Cynthia Sieck**, *Ohio State U.*

Author: **Ann Scheck McAlearney**, *Ohio State U.*

Background: The use of virtual visits (i.e., phone- and video-based physician visits) has increased dramatically as a result of the COVID-19 pandemic. However, previous research indicates that implementation of this new model of care is difficult. Focusing on the work processes of patients and providers can provide important information about opportunities to optimize virtual visits so that patients and providers can experience better outcomes. Methods: We conducted a qualitative study to explore the perspectives of primary care physicians working at a large academic medical center (AMC) who used telemedicine, including virtual visits, during the COVID-19 pandemic. Semi-structured interviews with 20 physicians were conducted between July and August 2020. Interview questions asked about physicians' challenges using telemedicine, the impacts of telemedicine on primary care work, and what helped them deliver care via telemedicine. All interviews were recorded, transcribed, coded, and rigorously analyzed using deductive thematic analysis guided by the Systems Engineering Initiative for Patient Safety 2.0 (SEIPS 2.0) framework to examine the impact of virtual visit implementation on work processes. Results: According to physicians, the use of virtual visits had positive and negative impacts on providers and patients. On one hand, virtual visits could (1) enable greater work-life balance, (2) allow for more flexibility as to when patient visits take place, (3) reduce some barriers to care and coordination of visits, (4) make patients feel comfortable interacting with their provider, (5) maintain patient-physician connections, and (6) get family members involved with the patient's care. On the other hand, the use of virtual visits poses some challenges because they (1) necessitate coordination around "virtual rooming" and virtual visit appointments, (2) require some augmentation of virtual visits with in-person care, (3) may require a recalibration of patient expectations about virtual visits, (4) will need patients to access and use other tools to monitor their health and engage in care, (5) do not seamlessly integrate with interpreter services, and (6) infrequent interdisciplinary communication and consultations can hinder collaborative work. Conclusion: Virtual visits have been a critical element of the response to the COVID-19 pandemic, but our findings suggest the need to consider how we can retain the positive elements of this shift to virtual care while addressing issues that can reduce the negative consequences for providers and patients.

HCM: The Landscape of Hospital Competition for Technology Adoption: A New Medical Arms Race

Author: **Ahreum Han**, *Trinity U.*

Author: **Neeraj Puro**, *Florida Atlantic U.*

The objective of our study is to explore the dual influences of market competition and the prevalence of technology in the market on a hospital's level of medical technology. Following the core tenets of contingency theory and institutional theory, we hypothesized a positive influence of both the increasing level of hospital competition in the market and the peer hospital's level of technology in the market on the hospital's greater level of medical technology. With a multilevel modeling with random effects, we analyzed 13,217 general acute care hospitals in the U.S. between the years 2012-2018, which exclude critical access hospitals and federally-governed hospitals. We expect this paper can help administrators and policymakers balance between the costs and potential benefits of technology utilization for better health outcomes. The findings of our study indicate that a hospital's medical technology level corresponds not only to competitiveness in the market but also to its competitor's behaviors with respect to instituting advanced medical technology. It is surprising that hospitals tend to be less responsive to the market or societal needs. We suggest that health care managers need to be more attentive to societal needs when making investment decisions. Health policymakers may take hospitals' lack of social responsiveness into consideration in order to guide them toward adequate and appropriate medical technology adoption strategies that may increase social welfare, assure quality, and establish a safer healthcare environment.

Author: **David Foord**, *U. of New Brunswick*

This article examines models of science-based innovation, embedded research and translational research in development of biomedical devices. While the applicability of linear models of innovation in product development have been widely questioned, studies have yet to explain how science-based biomedical knowledge production is reduced to practice in development of new devices. To understand how this occurs I investigated concepts of science-based innovation, embedded research and translational research in the context of commercial product development in the powered prosthetic arm industry from 1945 to 2020. I found that development of commercial powered prosthetic arms was strongly influenced by scientific research, with a majority of cases involving the originating researcher contributing to first reduction to practice in new commercial products. Instead of integrated knowledge translation practices, embedded research followed university research in many of the cases. The focus on a biomedical engineering industry limits the generalizability of the findings. Future research directions include examination of other historical and contemporary case studies, and identification of effective practices in embedding knowledge production projects in locations-of-use.

HCM: Do Cash-For-Care Schemes Increase Care Users' Experience of Empowerment? A Systematic Review

Author: **Eva Lilie Josephine Pattyn**, *U. of Ghent*

Author: **Paul Gemmel**, *Ghent U.*

Author: **Sophie Vandepitte**, *U. of Ghent*

Author: **Jeroen Trybou**, *Ghent U.*

In cash-for-care schemes, care users are granted a budget or voucher to purchase care services, assuming this will enable care users to become engaged and empowered customers, leading to more person-centered care. However, opponents argue that cash-for-care schemes transfer the responsibility of the care organization from the Government to the care user, thus reducing care users' feelings of empowerment. The tension between these opposite discourses feeds the assumption that other factors affect care users' experience of empowerment. Therefore, this review explores which antecedents influence the level of empowerment as experienced by care users in cash-for-care schemes. A systematic review on empowerment and person-centered care in cash-for-care schemes was conducted, searching seven databases until March 10, 2020. Included articles needed to be peer-reviewed, written in English or French, and containing empirical evidence of the experience of empowerment of budget holders. The initial search identified 8261 records of which 75 articles were retained for inclusion. The results show that several contextual and personal characteristics determine whether cash-for-care schemes increase empowerment. The identified contextual factors are establishing a culture of change, the financial climate, the regulatory framework, and access to support and information. The identified personal characteristics refer to the financial, social, and personal resources of a care user. This review confirms that multiple factors affect care users' experience of empowerment. However, active cooperation and communication between care user and care provider are essential if policy makers want to increase care users' experience of empowerment.

HCM: Tracing Non-linearity between Economic Freedom and National Health Innovation System Efficiency

Author: **Marie Gabel**, *WWU Münster*

Author: **Christopher Jung**, *WWU Münster*

Author: **Stephan Nüesch**, *Westfälische Wilhelms-U. Münster*

Economic freedom, i.e., the freedom of companies to pursue their business activities, is a vital determinant of societal health, wealth, and economic progress. Despite the high societal and economic relevance, the relationship between economic freedom and the performance of national health innovation systems (NHIS) is poorly understood. While prior studies assume direct linear effects between economic freedom and innovation performance, we argue that economic freedom is only beneficial to a certain extent. We theorize on the costs and benefits of economic freedom and examine potential non-linearity in the relationship between economic freedom and NHIS efficiency. Moreover, we propose a contingency perspective and argue that the relationship between economic freedom and NHIS efficiency is dependent on the volatility of the level of economic freedom over time. Varying levels of economic freedom require constant adjustments to the regulatory environment, which ultimately affects the costs and benefits of economic freedom so that under high volatility, the peak NHIS efficiency is lower. Using a panel dataset of 70 countries over ten years, we combine data envelopment analysis and regression analysis. Our results support our theorizing showing an inverted U-shaped relationship between economic freedom and NHIS efficiency and provide initial evidence on the associated boundary conditions.

HCM: Two Sides to Every Coin: Assessing the Effects of Moving Physicians to Employment Contracts

Author: **Rachel Gifford**, *Maastricht U.*

Author: **Eric Molleman**, *U. of Groningen*

Author: **Taco Van Der Vaart**, *Groningen U. (RuG)*

There is a growing trend of physicians becoming employees of hospital systems and physician employment is viewed as a mechanism to increase hospital-physician alignment and improve quality and cost outcomes. Yet, the research is mixed on the effects of moving physicians to salaried employment and payment reform remains difficult to accomplish. While the literature has traditionally placed such forms of bureaucratic control in opposition to professional autonomy, it has often overlooked the effects on professional values at multiple levels and literature on payment reform has largely focused on financial or cost outcomes while overlooking relational effects. To address these gaps, we conducted a mixed method study at one hospital that recently moved all formerly self-employed physicians to employment contracts. We interviewed physicians to understand how payment reform affected their interactions with patients, their relation with and within the organization, and their expression of professional values. We then conducted a follow-up survey across both formerly salaried and self-employed physicians to further test our initial findings. We find both positive and negative effects at different levels, offering insights into the mixed results found in the current literature.

HCM: The Relationship between Accreditation and Performance among Federally Qualified Health Centers

Author: **Henry Thompson**, *U. of Alabama at Birmingham*

Author: **William Opoku-Agyeman**, *U. of North Carolina, Wilmington*

Author: **Nancy Borkowski**, *U. of Alabama, Birmingham*

Author: **S Robert Hernandez**, *U. of Alabama, Birmingham*

While past studies have examined the relationship between accreditation and hospital performance, no previous studies have evaluated the relationship between Joint Commission accreditation and Federal Qualified Health Center (FQHC) performance. Data from secondary sources for 1,355 FQHCs in 2016 were analyzed to evaluate the association between Joint Commission accreditation and organizational and environmental market factors and clinical and non-clinical performance outcome measures. The study's findings reflect the positive relationship between Joint Commission accreditation and certain organizational factors (patients at 200% of federal poverty level, uninsured patients, patients with Medicaid and/or CHIP coverage, and FQHC size) and environmental market factor (target population), and a number of performance measures (adolescent weight screening, adult weight screening, cholesterol treatment, and total grant expenditure). While past studies have examined the relationship between accreditation and hospital and other health organizations performance, no previous studies have evaluated the relationship between The Joint Commission accreditation and Federal Qualified Health Center (FQHC) performance. This study filled a gap in the literature because research remains limited among FQHCs.

Participant: **Caroline Straub**, *Bern U. of Applied Sciences*
Participant: **Clara Zwettler**, *U. of Bern, Work and Organisational Psychology*
Discussant: **Caroline Straub**, *Bern U. of Applied Sciences*

This symposium consists of four presentations. Presentation 1-3 provide insights into recent research findings on the topic of gig work relevant in the context of careers, organizational behavior, and human resources management. Presentation 4 – a systematic literature review – provides an overview on existing studies on gig work, and an agenda for future research. Contributions investigate the gig work phenomenon in different countries using a variety of methodologies such as literature review, qualitative interviews, text analysis, participant observation approach, and survey method. The symposium ends with an interactive discussion designed to facilitate proactive exchanges between participants and audience members, as well as networking.

Organizing becomes difficult when people do not see eye to eye. For instance, we often assume that others think and feel about us in the same way that we think and feel about them. These assumptions are often inaccurate, and yet people tend to act on their assumptions before they learn of their (in)accuracy. As a result, employees who misperceive others' behavior may act in ways that disrupt coordination, reduce productivity, and tarnish relationships. Central to all of these issues is understanding how different people perceive the same behavior as enacted by a given individual. To deepen our understanding of interpersonal (mis)perception in organizations, the presentations in this symposium examine how behaviors of interest to employers are viewed from multiple vantage points (e.g., expressor versus recipient; recipient versus observer). Our first two presentations examine actor-observer differences in perceptions of consent and social sexual behavior; our third presentation examines dyadic meta-accuracy in flirting behavior; our fourth presentation examines self-other differences in perceptions of creative idea generation; our fifth presentation examines interpersonal perception in the context of goal attainment.

Gender 3 

Digital Session Chair: **Ipek Kocoglu**, *Kean U.*

ENT: Do Female Entrepreneurs Take Higher Risks in Extreme Contexts?  

Author: **Ipek Kocoglu**, *Kean U.*

We investigate if environmental threats affect gender-inequality in entrepreneurial innovation. Building on role congruity theory and evolutionary psychology, we theorize that while women-led ventures are less likely to take risks and innovate due to the gendered view of risk-taking, evolutionary adaptations triggered by environmental threats increase their risk-taking and experimentation. Using the context of terrorism in Pakistan, we found that compared to ventures led by men, women-led ventures were more innovative in regions with frequent terrorist attacks than in regions with fewer attacks. Although a large workforce decreased risk-taking and innovation due to the reinforcement of social constraints, women collaborators buffered women-led ventures from these constraints. We show that environmental threats trigger evolutionary adaptations that enable women-led ventures to overcome the limitations of role incongruence.

ENT: Exploring the Role of National Gender Inequality in Female Family Business Succession Intentions 

Author: **Farhad Uddin Ahmed**, *Swansea U.*

Author: **Colm O'Gorman**, *Dublin City U.*

Author: **Roisin Lyons**, *Dublin City U. Business School*

Author: **Eric Clinton**, *Dublin City U.*

In this study, we examine the drivers of family business succession intentions of early and pre-career daughters of family business owners. Using a dataset of 7,798 daughters of family business owners from 44 countries (Global University Entrepreneurial Spirits' Students' Survey), our study finds that parental instrumental support and family business work experience positively influence succession intentions of daughters of family business owners. There is a positive moderating effect of subjective norms on these relationships, indicating the pivotal role parents and social groups play in the formation of succession intentions of daughters. A national gender gap moderates the relationship between family business exposure and succession intentions; such that, the effect of exposure to the family firm was a stronger predictor of succession intentions in countries with lower gender gaps. Comparing these model results to a parallel sample of male succession candidates, the effect of the national gender gap was not found to weaken the model relationships. Taken together, our results point to a systemic national effect which may have bearing on female succession rates in the family business context.

ENT: Cultural Institutions, Women Entrepreneurs and High-Growth Entrepreneurship 

Author: **Sharon Simmons**, *Jackson State U.*

Author: **Chong Kyoong Lee**, *James Madison U.*

Author: **Susan L. Young**, *Kennesaw State U.*

Author: **MaQueba Massey**, *Jackson State U.*

In this study, we set out to address important research questions: How do economic, political, education and health gender gaps influence total entrepreneurial activity? How do social costs of failure affect the relationship between gender gaps and total entrepreneurship activity? Are these effects the same for the distinct and important facet of high growth entrepreneurship? We applied a legitimacy theory framework, reasoning that smaller gender gaps connote the legitimacy of women entrepreneurs. We further conjectured that preexisting perceptions and challenges to the fit of women in the entrepreneurship domain are magnified in institutional contexts with high social costs of failure. We found that in societies with smaller gender gaps, there are increased levels of both total entrepreneurship activity and high-growth entrepreneurship activity, and that these relationships are moderated by the social costs of failure.

ENT: Gender Role Congruity and Quality Signals: How does Gender Influence the Effectiveness of Signals

Author: **Yin-Chi Liao**, *U. of South Carolina at Upstate*

Combining signaling theory and gender role congruity theory, this study examines if the quality signals of entrepreneurs and their ventures are perceived differently as a result of their gender, which, in turn, affects the crowdfunding performance. In a sample of 14,729 campaigns in Kickstarter, this study shows that gender affects the effectiveness of signals in enhancing funding performance, but not definitely to the disadvantage of women. While females are rewarded less with the signals of competence, they benefit more from signals of social tie and concrete rhetoric, which are congruent with the gender role. This study provides implications for entrepreneurial project evaluation and approaches to crafting an effective pitch.

Network 1  

Digital Session Chair: **Josh Feng**, *U. of Utah, David Eccles School of Business*

ENT: Social Push and the Direction of Innovation

Author: **Josh Feng**, *U. of Utah, David Eccles School of Business*
Author: **Xavier Jaravel**, *London School of Economics*
Author: **Elias Einio**, *VATT Institute for Economic Research*

Innovators' personal experience and social networks may affect their familiarity with customer needs, and in turn the types of products they bring to market. Consistent with this channel, we document that innovators create products that are more likely to be purchased by customers similar to them along observable dimensions including gender, age, and socio-economic status. With scanner data and a new phone applications database, we find that these homophily patterns hold even within detailed industries. Using quasi-random assignment of individuals to dorms during military service, we provide causal evidence that being exposed to peers from a lower income group increases an entrepreneur's propensity to create necessity products. We find similar results using an alternative research design leveraging idiosyncratic within-school variation in peer composition across classes and cohorts. Because innovators are predominantly men from privileged backgrounds, the social push channel implies that the gains from innovation are unequally distributed across customer groups, which we quantify in a growth model.

Paper is Available to Meeting Registrants Only.

ENT: Fostering organizational innovations through social capital and customer demands 

Author: **Hoa Do**, *Nottingham Trent U.*
Author: **Bach Nguyen**, *Aston Business School*

Drawing upon social capital theory, this study examines the underlying mechanism between interpersonal/interorganizational social capital and innovations, and also explores the boundary conditions of customer demands surrounding such a mechanism. Analyzing a sample of more than 15 thousands firm-year observations of Vietnamese small businesses in 11 years indicates that (1) both interpersonal and interorganizational social capital networks are positively associated with new product and new process innovations, respectively; and (2) when customer demands are high, the relationships between interorganizational social capital and innovations are significantly strengthened whereas the relationships between interpersonal social capital and innovations are weakened. The study is among the first to explore both interpersonal and interorganizational social capital networks as well as boundary conditions of customer demands in understanding the social capital-innovation relationship. The results provide both theoretically informed insights for academics and valuable practical implications for policy-makers who have their voice and influence on the policy-making process.

Paper is Available to Meeting Registrants Only.

ENT: Factors influencing the extent of category spanning in new ventures: The role of density 

Author: **Jan Goldenstein**, *Friedrich Schiller U. Jena*
Author: **Michael Hunoldt**, *Friedrich Schiller U. Jena*
Author: **Simon Oertel**, *TU Ilmenau*

The success of new ventures is largely determined by their strategic market positioning. Category research centers on this topic but has largely neglected the contextual conditions that influence this initial entrepreneurial decision. Studying 3,712 metal bands founded in the UK, we address this research gap by investigating density effects. Findings show that an increasing category density lowers the extent of category spanning but that this effect is attenuated by an increasing category fuzziness and a rising number of new ventures entering a market. We facilitate theory building regarding strategic categorization decisions and the evolution of the categorical system of markets.

Paper is NOT Available. Please contact the author(s).

ENT: Innovation Networks & High-Growth Entrepreneurship

Author: **Daniel L. Bennett**, *U. of Louisville*
Author: **Gary Wagner**, *U. of Louisiana at Lafayette*
Author: **Michael Araki**, *U. of Louisville*

We explore the role of regional innovation networks (RINs) in facilitating high-growth entrepreneurship (HGE). Building on the knowledge spillover theory of entrepreneurship, we theorize that RINs serve as a conduit for the spillovers of complex knowledge from inventors who create it to entrepreneurs who seek to exploit it through the creation of innovative ventures. We further theorize that the relationship is stronger in regions with stronger external innovation networks, more entrepreneurs, and greater venture capital availability. Using a novel longitudinal dataset covering 358 U.S. MSAs over period 2003-2014, we find evidence that RINs can be crucial for spurring high-growth potential ventures, and that the effect of RINs on HGE is conditional on the entrepreneur rate.

Discussant: **Martin Geiger**, *Carleton U.*
Discussant: **Monder Ram**, *Aston U.*
Discussant: **Thomas Cooney**, *Technological U. Dublin*

Mobile talent diffuses knowledge, both directly and indirectly across borders. This can boost global innovation performance, with benefits accruing to both sending and receiving countries. "It is clear that mobility is leading to an increasing level of labour-market internationalization and integration, and competition for talent is now influencing innovation policy initiatives across the globe. Consequently, most countries offer a range of policies focused on assisting and encouraging mobility, although few have a specific and coherent mobility strategy. Many nations aim to attract the same pool of highly skilled talent; thus, relying on international flows to fill existing or future gaps in supply may entail risks. Addressing shortcomings in national policies that may limit the domestic supply of skilled workers, and ensuring that the wider environment for innovation and scientific endeavour is sound, are key policy challenges for countries. (OECD, 2008)". In this symposium, we include five empirical papers that explore new talent corridors in emerging markets as well as globally.

Effectuation 2

Digital Session Chair: **Nivedita Agarwal**, *U. of Stuttgart*

ENT: **Linking Frugal Innovation to Frugal Entrepreneurship through Effectuation, Causation, and Bricolage**

Author: **Nivedita Agarwal**, *U. of Stuttgart*
Author: **Yasser A. Bhatti**, *Oxford U., Saïd Business School*
Author: **Jarkko Levänen**, *LUT U. School of Energy Systems*

This study links frugal innovation, from the hitherto focus on ideation and development, to the next phase of venture formation through frugal entrepreneurship. This study explores how theories of entrepreneurship explain resource-mobilization and resource-use in 23 diverse cases of frugal innovation. The results reveal three paths that explain the direction of process flow between frugal innovation activity and frugal entrepreneurship and how the various cases support different principles of effectuation, bricolage, and causation. There is a prevalence of effectuation, followed by bricolage and some overlap with principles of causation. Although the effectuation and bricolage approaches generally align well with those suggested in mainstream entrepreneurship, our findings also suggest that certain aspects of bricolage and causation, which have not yet received much attention in the literature, are also particularly suitable for frugal entrepreneurship activity in resource constrained environments. We develop a model of frugal entrepreneurship based on the entrepreneurial approaches predominantly reflected in our cases. Implications for entrepreneurship theory and practice are outlined followed by a future research agenda.

ENT: **Entrepreneurial bricolage with users and implications for firm performance**

Author: **Xiumei Li**, *Asper School of business, U. of Manitoba*

The entrepreneurial bricolage perspective offers a distinctive explanation for how entrepreneurs address resource constraints. Although entrepreneurial bricolage is commonly observed, its performance implication is far from clear. By noting the heterogeneity of individual bricolage behavior and shifting from a bundling perspective to a fine-grained perspective, our study introduces one type of bricolage behavior—open bricolage—and examines its performance outcome. Using data of software startups that build businesses on Steam, the dominant digital distribution platform for PC video games, we empirically studied the open bricolage behavior—opening a product to users for user involvement, in which the unconventional resource—the labor input by unpaid users—is activated. We found a positive effect of the opening-to-user-involvement behavior on firm market performance. This study contributes to the entrepreneurial bricolage perspective and the entrepreneurship literature at large.

ENT: **Innovativeness In New Ventures: Influences Of Social Capital And Entrepreneurial Processes**

Author: **Parisa Haim Faridian**, *San Diego State U., Fowler College of Business*
Author: **Donald Neubaum**, *Florida Atlantic U.*
Author: **Siri Ann Terjesen**, *Florida Atlantic U.*
Author: **Roland E. Kidwell**, *Florida Atlantic U.*

This study investigates the effect of contingencies related to the choice of entrepreneurial processes, meaning causation as opposed to effectuation, on the relationship between innovativeness and three dimensions of social capital, namely relational, structural, and cognitive. First, we draw on theories of causation and effectuation, in addition to the social networks and social capital literature, to conceptualize the adverse effect of the causal approach on innovativeness in new ventures. Second, we examine the moderation effect of the causal approach on the link between dimensions of social capital and new venture innovativeness. This effect is explained based on the logic that causal approaches can diminish the conducive effect of social capital on innovativeness. To empirically investigate the proposed theoretical arguments, this study utilizes a dataset of responses from 1,214 entrepreneurs involved in new ventures in the U.S. The findings in this study offer insights on the possible adverse effect of the causal approach on innovativeness in new ventures. Further, we contribute to the ongoing scholarly, theoretical, and methodological, debate on entrepreneurial processes, and the causal-effectual distinction.

ENT: **Internationalization performance effects of causation and effectuation: a contingency approach**

Author: **Nenad Apostoloski**, *Central European U.*
Author: **Yusaf Akbar**, *Central European U.*
Author: **Desislava Dikova**, *WU Vienna U. of Economics and Business*
Author: **Anna Veselova**, *National Research U. Higher School of Economics*

Our study addresses a fundamental research question at the heart of IB and IE research: what specific configurations of internal (organizational) characteristics, external contingencies and entry mode choice drive organizational performance? We incorporated insights from the literature on cognitive micro-foundations in the internationalization process model that allowed us to include effectuation logics in the analysis of entry mode decision making of MNEs and performance of an internationalizing firm. We also explored the combined and simultaneous effects of endogenous and exogenous factors on the firm's performance, such as the decision-making logic (effectuation and causation), the actual entry mode decision, entrepreneurial and international experience of the decision makers as well as exogenous factors such as the psychic distance of the host country. Examined through fuzzy set Qualitative Comparative Analysis (QCA), we look at the simultaneous effect of the endogenous and exogenous variables on a firm's performance offering a holistic view and a more nuanced understanding of the possible configurations that lead to superior performance.

Identity 2

Digital Session Chair: **Shashwatashish Pattnaik**, *U. of North Texas*

ENT: Am I an environmental entrepreneur? On the evolution of entrepreneurial identity.

Author: **Chiara De Bernardi**, *IUSS Pavia*
Author: **Alisa Sydow**, *ESCP Business School*

Environmental entrepreneurship as a field had gained attention in recent years, yet, although it represents a growing field of research, we still know little about identity of environmental entrepreneurs. On the foundations of identity theory and by applying the lens of identity work, the study investigates how entrepreneurial identity evolves over time. Drawing on semi-structured interviews and additional data from 36 entrepreneurs from the Italian wine industry, the findings highlight entrepreneurial identity evolves from an initial appearance to a developed self-consciousness as environmental entrepreneurs. This identity work includes moments of identity contestation and/or elaboration, triggered by the interplay of environmental and place identity. The article contributes to research on environmental entrepreneurship and identity work.

ENT: How Identification and Self- and Other Guides Influence Enthusiasm for Academic Entrepreneurship

Author: **Shashwatashish Pattnaik**, *U. of North Texas*
Author: **Nick A. Mmbaga**, *Butler U.*
Author: **Thomas Daniel White**, *United States Air Force Academy*
Author: **Rhonda K. Reger**, *U. of North Texas*

Recognizing the commercial potential of university-based inventions and discoveries, legislators and administrators have called upon academic scientists to become academic entrepreneurs. Yet, apparently few academic scientists are enthusiastic about taking on entrepreneurial activities. The intrinsic reasons underlying the lack of enthusiasm are poorly understood. We use social identity theory to compare the effects of identification with scientist and academic entrepreneur identities on entrepreneurial enthusiasm. We further extend research by applying self-discrepancy theory to explore the role of self and other guides on enthusiasm for academic entrepreneurship. We test our model on a sample of National Science Foundation (NSF) funded academic scientists who participated in the Innovation Corps (I-Corps) entrepreneurship training program. We find identification with an entrepreneur identity increases entrepreneurial enthusiasm while identification with a scientist identity decreases entrepreneurial enthusiasm. Additionally, academic scientists' self-guides influence their enthusiasm for academic entrepreneurship, while interestingly, their other-guides do not. Our paper contributes to the academic entrepreneurship literature by developing and testing a framework that integrates self-discrepancy theory with social identity theory for a nuanced understanding of academic scientists' thought processes regarding engaging in entrepreneurial activities.

ENT: Disentangling Identity Transitions in Founder Identity Construction

Author: **Sarah Fitz-Koch**, *Jönköping International Business School*
Author: **Thomas Cyron**, *Jönköping International Business School*

Understanding the processes underlying founder identity construction is central to entrepreneurship because founders establish and grow their firms based on identity. When individuals construct a founder identity, they need to identify with new roles (macro transitions) and also to manage multiple roles (micro transitions) subsequently. Although entrepreneurship literature agrees on the importance of founder identity, it has largely overlooked how founder identity is constructed. Through a longitudinal field study of 21 founders, we present a model that portrays founder identity construction as an interplay of micro and macro role transitions, where identities carried over from prior occupations impact the individual identity construction process. Newly adopted roles can trigger substantial changes in definitions of self because comparisons with previously held identities can support or hinder founder identity construction. Our contributions extend founder identity theory by illuminating how multiple identities and identity management strategies influence founder identity construction and what it means to be a founder.

ENT: Social entrepreneurs' opportunity recognition in response to wicked problems: the role of identity

Author: **Margo Enthoven**, *Stockholm School of Economics*
Author: **Emma Catharina Folmer**, *Groningen U. (RuG)*

Wicked problems such as persistent poverty, climate change and biodiversity loss are some of the greatest challenges that humankind faces, because they span national boundaries, are prone to contestation and are highly complex. Social entrepreneurs can address these problems and fuel change, but to do so, they need to recognize entrepreneurial opportunities. The relationship between the recognition of a problem and the recognition of a related opportunity has been conceptualised as a linear one, which does not do justice to the complexity of the process. Therefore, we investigate the process whereby problem recognition is transformed into opportunity recognition. We use an identity-based perspective to uncover how social entrepreneurs recognize opportunities in relation to wicked problems. We use an abductive, qualitative approach, and analyse interviews with 26 social entrepreneurs. Our findings show that the opportunity recognition process for wicked problems consists of four stages: (1) the recognition of a wicked problem, (2) the reinforcement of a prosocial identity, (3) the translation of a wicked to a specific problem, and, (4) the connection of the specific problem to an identity. We contribute to the entrepreneurship literature by unpacking the opportunity recognition process of social entrepreneurs in relation to wicked problems.

Class, Caste and Socioeconomic Status

Digital Session Chair: **Emily Sue Corwin**, *U. of Arkansas*

GDO: Cultural Capital Diversification: The Development and Validation of a Scale

Author: **Emily Sue Corwin**, *U. of Arkansas*

Author: **Lauren Simon**, *U. of Arkansas*

Author: **Jacqueline Tilton**, *Appalachian State U.*

Although prominent in the sociology and education literatures, the concept of cultural capital (e.g., knowledge, skills, interests, hobbies, etc.) has also recently garnered interest from management scholars. Theory suggests that employees may rely upon cultural tools (e.g., behaviors and worldviews) acquired from experiences in various social class cultures, and that possessing these tools may have work-related benefits. However, to investigate this claim, it is necessary to first develop conceptual clarity around and a valid measure of this cultural “toolkit.” Thus, we introduce the term cultural capital diversification—defined as an individual’s developmental tendency to switch adaptively between social class contexts—and develop and validate a measure consistent with this definition. In particular, we first assess content validity of the measure among a sample of subject matter experts. Then, across two additional samples, we examine the measure’s psychometric properties including factor structure, reliability, convergent and discriminant validity. Further efforts are underway to examine the nomological network of our scale. Together, these studies provide support for the validity of our nine-item cultural capital diversification scale.

GDO: Consequences of the Accident of Birth: A Multi-level Examination of Employee Caste Status

Author: **Smriti Anand**, *Illinois Institute of Technology Stuart School of Business*

Author: **Prajya Rakshit Vidyarthi**, *U. of Texas at El Paso*

Author: **Farid Jahantab**, *Pennsylvania State U., Worthington-Scranton*

Today’s multicultural workforce demands organizations to navigate through a wide range of cultural values, many of which are yet to be explored by diversity research. Employees such as those from India are both custodians of and are burdened by a unique social hierarchical system called caste. Given that the caste system affects over 1 billion people worldwide, and many more by association, we endeavor to mainstream this under covered yet potent facet of employee diversity. Drawing upon social identity and self-categorization theories, we propose a process and context model linking employee caste status to work performance. Specifically, we assert that employee caste is a key social identity such that higher status caste confers a more central position in workgroup influence network, and the accrued resources translate into enhanced job performance and citizenship behaviors. We further assert that owing to self-categorization the contextual factors of leader caste status and workgroup team orientation shape the effects of employee caste status. Multi-level modeling using time-lagged, three-source data from 352 employees, 321 peers, and 31 managers showed support for our hypotheses. Our research reveals the mechanism underlying perpetuation of caste based advantages in the workplace and suggests directions for future research.

GDO: Paradoxical Role of Work for Indian Middle-Class Working Women Who Experience Partner Abuse

Author: **Smita Kumar**, *Al Akhawayn U.*

Work is a source of financial and psychological empowerment for middle-class women in intimate partner violence (IPV), but work can also exacerbate their vulnerabilities. Drawing on ethics of vulnerability, this study addressed the paradoxical yet integral role of work in the lives of Indian middle-class women who experience IPV. Using a hermeneutic phenomenological methodology, the study showed that Indian middle-class women in IPV experienced safety and support at work, but also experienced sexual harassment and discrimination. Work fostered autonomy and agency, but women experienced control and pressure. As work allowed them to experience transformation, it also disenfranchised them in their vulnerability. These findings not only highlight the complex nature of work for Indian middle-class women in IPV but also raise pertinent questions on who takes care of those in need. Drawing upon the model of organizational caregiving, this study makes a compelling argument for organizations to assume the moral obligation to genuinely engage in caring for their employees in IPV.

Panelist: **Yusaku Takeda**, *Harvard U.*

Management scholars across the academy are using history in their work, and the scholars in the Management History division are conducting research that spans the entire academy. In this Management History plenary session we will showcase some of the fascinating history work that is being done by management scholars in other divisions and foster connections between the Management History division and other divisions. Each of our panellists will introduce their history work, and Trish McLaren, MH Program Chair, will facilitate a discussion amongst all panellists and attendees about doing history work in divisions other than MH.

Participant: **Michele Williams**, *U. of Iowa*
Participant: **Ashli Carter**, *NYU Stern School of Business*

Every day people encounter situations at work with varying demands. How do people navigate changing demands across different situations? Construal level theory argues that people use abstract construals to address distant demands and concrete construals to respond to immediate demands. Decades of psychology research have shown the value of construal level theory in explaining and predicting people's attitudes and behaviors. More recent research has applied construal level to studying organizational-relevant phenomena. This symposium presents five lines of research that use diverse methodologies and samples to explore the antecedents and consequences of communication abstraction and cognitive construal, including gender, audience engagement, performance, and information processing and trust in groups. This symposium aims to provide an opportunity for knowledge sharing and discussion among researchers who are interested in construal level in organizational research.

Can Adaptability be Developed? The Perspective of Cognitive Psychology and Neuroscience.

Adaptability from Perspective of Neuropsychology

Organizer: **Steven Poelmans**, *U. of Antwerp/ Antwerp Management School*
Participant: **Elaine D Pulakos**, *Personnel Dec Res Inst*

In this symposium the focus will be on individual adaptation in the context of organizations, also referred to as adaptability (Ployhart, 2006) or adaptive performance (Pulakos, 2000; 2002). Our goal is to reflect on the central research question: Can the capability for adaptation be developed? Therefore we will study the antecedents and process of adaptation. To find and offer inspiration, different presenters in this symposium will draw on different fields: developmental cognitive psychology, occupational health psychology, and cognitive neuroscience.

Not in a vacuum: How extra-organizational crises influence identities and relationships

Crises, identity, and work relationships

Organizer: **Gabriel Robert Sala**, *Boston College*

Organizer: **Eliana Crosina**, *Babson College*

Organizer: **Beth Schinoff**, *Boston College*

Discussant: **Blake E. Ashforth**, *Arizona State U.*

Panelist: **Kris Byron**, *Georgia State U.*

Panelist: **Dean Shepherd**, *U. of Notre Dame*

Organizations and their members frequently face extra-organizational crises of various magnitudes. While several bodies of literature have focused on how individuals react to crises that occur within one's organization, we know less about how crises that are external to a given organization influence internal dynamics. However, as the COVID-19 pandemic has made evident, external crises can shape not only the type of work people may be able to pursue, but also how they may go about doing it, including how they see themselves and relate to others. In the proposed symposium, we ask a group of esteemed panelists to reflect on their work to discuss the various ways in which extra-organizational crises may influence individuals' work identities, relationships, as well as their organizing efforts, within established firms or entrepreneurial ventures. We then follow this with general thoughts from a discussant and a subsequent Q&A with the audience.

“Who we are” at work is heavily influenced by not only “with whom” we work but also “with whom” we share our lives (Ashforth, Rogers, & Corley, 2011; Sluss & Ashforth, 2007). Across five (5) papers, we draw from a vast assortment of contexts to explore how intra- work and extra-work relationships influence a wide array of identity and identification processes – working mothers, “number 2” organizational roles, interrelating differences that negatively influence identification processes, striving for a committed personal relationship, and finally, the leader—follower role relationship. The collective findings indicate that relational identity dynamics create a strong theoretical base upon which to explore and understand how organizational members make sense of and behave within the organizational context. Together, these papers extend our understanding and generate fresh new research directions on how both intra-work and extra-work relationships influence our identity and identification at work.

Evaluation and selection of creative ideas in organizations

Evaluation and selection of creative ideas

Discussant: **Jing Zhou**, *Rice U.*
Organizer: **Jiani Zhu**, *Georgia Institute of Technology*
Organizer: **Qing Gong**, *Georgia Institute of Technology*
Organizer: **Haoyue Zhang**, *Washington U. in St. Louis, Olin Business School*

Creativity scholars suggest that innovation involves idea generation, idea evaluation and selection, and finally, idea implementation. Yet, until recently, creativity research has mostly focused on idea generation. While work on idea generation has provided influential insights, it paints an incomplete picture of innovation in organizations. This is because only a small subset of the generated ideas ever reach the implementation stage, and numerous types of biases can hinder the identification of the best ideas. The purpose of this symposium is to discuss new theory and research on the evaluation and selection of creative ideas in organizations. The papers in this symposium highlight different biases in the evaluation process and how they could be mitigated. The compound of the papers provides a comprehensive view of the evaluation and selection of creative ideas at multiple levels of analysis (i.e., individual, dyadic, group), with a variety of methods (i.e., grounded theory, laboratory experiments, archival study), and across a range of contexts (e.g., internal idea selection panels, leader-member creative collaborations, and crowdfunding platforms).

Society faces an increasing number of problems whose scale and complexity are growing exponentially (e.g. global warming, global health crisis/pandemic, food distribution etc.). The advent of artificial intelligence (AI) holds the promise to help us bring together the knowledge and associated action to solve them. However, our ability to tap into the distributed creative potential of humans and AI necessarily involves figuring out how to make them work together as a collective. In this symposium, we bring together diverse perspectives from cross-disciplinary scholars attacking this problem using diverse theoretical lenses and research methods. Together these five papers (qualitative, computational, empirical, and theoretical) create an opportunity to discuss multiple ways for leveraging AI for augmenting individual cognition, interactive processes, and collective functioning. Our goal is to provoke discussion at the intersection of computational social science, complexity sciences, information science, and management science to stimulate progress toward the human-AI systems that provide the greatest hope of solving the major problems threatening humanity.

Interacting Productively with Paradox Theory in Practice - Education, Interventions & Dissemination
Interacting Productively with Paradox Theory

Presenter: **Rikke Kristine Nielsen**, *Aalborg U.*
Presenter: **Jean M. Bartunek**, *Boston College*
Presenter: **Wendy K. Smith**, *U. of Delaware*
Presenter: **Josh Keller**, *U. of New South Wales*
Presenter: **Camille Pradies**, *EDHEC Business School*
Presenter: **Michael Pingel Hansen**, -
Presenter: **Danielle Bjerre Lyndgaard**, *Confederation of Danish Industry*
Presenter: **Angela Greco**, *U. of Groningen*
Presenter: **Nkechinyem Omeife**, *Technological U. Dublin*

Taking our point of departure in organizational paradox theory, this PDW explores pathways for productive interactions (Spaapen & Van Drooge, 2011) between complex theory and actionable practice. A group of experienced scholars, educators and practitioners discuss and share their experiences, tactics and tools for facilitating reflection and action through education, interventions and organizational development-initiatives informed by paradox theory. We pose the questions: How can we as scholars and practitioners realize the practical impact potential of paradox theory? And how can we as scholars and educators assist managers and other learners to pass the learning thresholds of paradox theory? This highly interactive session makes full use of the opportunities for participant involvement in a virtual conference format, including collaborative workspaces and small-group discussion. This workshop is particularly relevant for the paradox scholar community and well as other communities interested in accelerating the relevance and actionability of complex research. Knowledge-sharing and community building is central to the workshop design, and take-aways are distributed to participants after the workshop.

Organizer: **Asma Zafar**, *Brock U.*
Presenter: **Tamar Gross**, *New York U.*
Presenter: **Michael Smets**, *U. of Oxford*
Presenter: **Mark de Rond**, *U. of Cambridge*
Presenter: **Pedro Monteiro**, *Copenhagen Business School*
Presenter: **Emily Dunham Heaphy**, *U. of Massachusetts, Amherst*
Presenter: **Bryant A. Hudson**, *IÉSEG School of Management*

This PDW is the fourth iteration of a highly popular (pre-registration quickly filled with a long waiting list following shortly; standing room only; very positive reviews) 'Behind the Scenes' conducted over the last six years. This PDW brings together several of the top ethnographers in organizational studies with the aim of disseminating their ethnographic experiences across organizational ethnographers. Relevant to the scholars of organizations with interest in immersive research approaches, this workshop provides an interactive environment in which to address issues and challenges pertaining to ethnographic research in and around organizations. Building on previous gatherings, our panelists will reflect individually on exciting and impactful newer works, respond to audience questions in a panel discussion, and engage in candid conversation during thematic round-table discussions. Pre-registration is required; registrants will be asked to submit a question that they would like to have addressed during the panel discussion and to indicate their preference for round-tables. This year's PDW also brings an exciting opportunity to network with other registered participants; willing participants will also be asked to create a brief profile to introduce themselves to other participants (more details included in the google form at the link below). We require that interested participants indicate kindly fill out a google form at this link: <https://forms.gle/GL9JM07dXLjAP8CL7>

Bounded Bosses or Dysfunctional Directors? The Role of Managers in Less Hierarchical Organizations *Managers in Less Hierarchical Organizations*

Organizer: **Trevor Daniel Young-Hyman**, *U. of Pittsburgh*
Organizer: **Michael Yanche Lee**, *INSEAD*
Panelist: **Paul S. Adler**, *U. of Southern California*
Panelist: **Julie Battilana**, *Harvard U.*
Panelist: **Nicolai J. Foss**, *Copenhagen Business School*
Panelist: **Gianpiero Petriglieri**, *INSEAD*

This panel examines challenges and strategies for management in less hierarchical organizations. There is widespread and growing interest in organizations that distribute power more widely than conventional firms. However, in the absence of traditional managerial fiat, it is not clear how less hierarchical organizations efficiently coordinate and resolve conflict. This panel will bring together four leading scholars of less hierarchical organizations, contributing perspectives from different disciplinary backgrounds.

Sustainability Issues in OSCM I

Digital Session Chair: **Md Shoaib Ahmed**, *U. of Essex*

OSCM: **Accounting for Normalizing Oppression in the Global Supply Chain of Fast Fashion**  

Author: **Md Shoaib Ahmed**, *U. of Essex*

Accounting and its relation to oppression, i.e., why and how a workforce in the global supply chain has been systematically, structurally and institutionally oppressed, is inadequately investigated in the accounting literature. This study enhances our understanding by delineating the association of accounting and management practices with normalizing oppression beyond the protected characteristics of a social group. It shows that oppression of workers begins with the exploitative subcontracting business model and the hegemony of Western retailers towards manufacturing countries because of widespread power differences. The multifaceted oppression such as abuse, punish, humiliation, sexual harassment, physical assault, and even killing of workers are normalized through accounting controls, social and cultural norms, state laws and regulations and state-led violence in manufacturing factories. It appears that oppression becomes normalized when accounting (and absence of accounting) practices rationalize, socialize, and institutionalize the oppressive business model of supply chain and hegemonic managerial styles of local factories to secure the benefits of big retailers, capitalists, manufacturers, politicians, and state legislators of an undemocratic/less-democratic country. Sustainable accounting practices, accountability, and good governance with vigilant laws thus are required to eradicate oppression from the global supply chain.

OSCM: **Moving Beyond the Four Walls: The Impact of Supply Chain Sustainability on Firm Value**

Author: **Zachary S. Rogers**, -

Author: **Craig R. Carter**, *W. P. Carey School of Business, Arizona State U.*

Author: **Sina Golar**, *Massachusetts Institute of Technology*

Stakeholders are increasingly holding firms accountable for the sustainability performance of their supply chains, calling for increased levels of transparency and higher standards of social and environmental sustainability. Yet the empirical relationship between various aspects of supply chain sustainability – positive versus negative events, differences between environmental and social events, and events over time – and firm value has not been investigated comprehensively, in a single study. Similarly, the impact on firm value (measured as abnormal stock market returns) of supplier sustainability relative to that of its customer (the focal firm) has not been established. This research focuses on the relationship between supplier sustainability and focal firm value, and whether it differs from the relationship between focal firm sustainability and focal firm value. The authors use an event study methodology to investigate 3,986 positive and negative environmental and social sustainability event announcements from 1994-2013. The results suggest that supplier sustainability performance was not related to focal firm value at the beginning of this time period. However, after the turn of the millennium the authors find a significant relationship between supplier social sustainability – particularly safety – and focal firm value. Interestingly, focal firm value is not as heavily affected by supplier environmental performance. Our study provides empirical evidence that resources should be allocated to specific categories of supplier sustainability and not just towards the sustainability performance of the focal firm.

OSCM: **From Supplier Diversity to Economic Inclusion: A Sustainable Model Driving Social and Business Value**   

Author: **Andrea Sordi**, *U. of Tennessee, Haslam College of Business*

Author: **Wendy Tate**, *U. of Tennessee*

Author: **Feigao Huang**, *U. of Tennessee, Knoxville*

Companies have been launching supplier diversity programs for decades. However, these programs are not a truly sustainable inclusion ecosystem fostering competitive advantage for buyers, suppliers and society. Companies are recognizing the potential of supplier diversity programs in business growth, such as response to the changing demographics and benefits including innovation and flexibility. Yet, challenges remain. Utilizing seven pillars of economic inclusion borrowed from the sports literature, this research aims to help companies develop sustainable diversity programs. This comes through development of an inclusive culture, procurement competencies, strategies, ecosystem, appropriate governance and structure, planning for and being able to measure inclusivity, and communication with stakeholders. Interviews with companies engaged in supplier diversity programs and also a number of supplier diversity councils were conducted. Secondary data were then collected to understand how companies are faring along the seven pillars of inclusivity. A maturity model is proposed to help companies build a sustainable supplier diversity and economic inclusion mindset to achieve social and business value.

OSCM: **The Influence of Supply Network Structure on Firm Sustainability Performance**

Author: **Jilin Qiu**, *Cranfield School of Management*

Author: **Leila Alinaghian**, *Cranfield School of Management*

This study investigates the structural properties of supply network and examines the relationship between a firm's degree centrality and local density and its sustainability performance. Furthermore, we examine the potential moderating effects of sustainability capability and a firm's closeness centrality on sustainability performance. The hypotheses were tested using a secondary supply network dataset consisting of 18943 companies and 103,632 contractual links between them from the automotive industry. We use social network analysis approach for calculating each structural property. Upon that, we also retrieved the sustainability performance data using Eikon database and 304 companies were returned for the further regression analysis. Our results unravel that local density of a firm's supply network has a significant relationship with its sustainability performance. The results also indicate that sustainability capability weakens the relationship between a firm's upstream supplier degree centrality on sustainability performance. Moreover, the association between a firm's local density and sustainability performance may be strengthened by the firm's closeness centrality. In this light, this study contributes to supply chain research and sustainability management by accounting for the embedded nature of visible and often-invisible connectivity patterns in supply networks and showing how these structural properties influence the embedded firms to achieve their sustainability performance.

Networks, Groups, and Interfirm Collaboration

Digital Session Chair: **Hannah Fabry**, *RWTH Aachen U.*

STR: Keeping up with the reference group(s) The effects of geographic and economic reference groups

Author: **Hannah Fabry**, *RWTH Aachen U.*

Author: **Fabian Peter Louwen**, *RWTH Aachen U.*

The behavioral theory of the firm highlights the importance of social reference groups. Yet, the selection of social reference groups and their impact on organizational change has received little attention and theoretical development. In this paper, we distinguish two different reference groups. The geographical reference group entails geographically proximate organizations. The economic reference group consists of organizations that are comparable in terms of size and resources. Both reference groups provide valuable, yet different information and –in combination– provide a holistic picture of the organization's performance. However, geographic and economic reference groups have distinct characteristics, norms and values making them more or less susceptible to organizational change. Therefore, we posit that performance feedbacks coming from either of the two reference group differ in their effect on organizational change. We test our hypotheses in the German cooperative banking group from 2014 to 2017. We find that organizations' responses to geographic and economic performance feedback differ significantly. The results show that the distinct characteristics of the social reference group plays a crucial role in organizations' response to performance below or above aspirations.

STR: Channel Redundancy and the Limits of the Performance Effects of Interfirm Ties

Author: **Pavel Ivanov Zhelyazkov**, *Hong Kong U. of Science and Technology*

Author: **Umit Ozmel**, *Purdue U., West Lafayette*

Author: **Valentina Assenova**, *The Wharton School, U. of Pennsylvania*

Organizational actors often access private information through social connections in the service of making sound investment decisions. These connections are generally assumed to improve the quality of selected offerings, enabling organizations to identify high-return opportunities, while avoiding low-return ones. However, an important gap in the literature on interorganizational relationships concerns the boundary conditions on the value of social connections for selecting high-return opportunities. This study investigates these boundary conditions by examining how the informational value of social ties varies with alternative pathways for accessing information, including through: i) an actor's accumulated knowledge and investment experience, ii) an actor's network centrality, and iii) an actor's geographic distance to prospective opportunities. We find support for our predictions in a longitudinal study of institutional investors (limited partners) investing in private equity funds to which they have social connections via other limited partners or private equity firms. Our findings show vital substitution effects between the benefits of different information pathways for the realized returns from private equity fund investments, and the role of actors' absorptive capacity in the informational value of social connections.

Paper is Available to Meeting Registrants Only.

STR: How Will Competition Network and Cooperation Network Influence A Company's CVC Investment Intensity?

Author: **Chenlu YIN**, *Tilburg U.*

This conceptual work reveals how information propagates across competitive connections by proposing a theory of network-level competitive dynamics. Specifically, the work reveals that centrality and cohesion of competition network influence a company's CVC investment intensity in a systematic way by integrating the "awareness-motivation-capability" framework with the network architecture perspective.

STR: News Co-Coverage-Based Strategic Groups

Author: **Tian Han**, *Henley Business School, U. of Reading*

Author: **Abby Ghobadian**, *Henley Business School, U. of Reading*

Author: **Andrew Yim**, *Cass Business School, City U. London*

Author: **Ran Tao**, *Henley Business School, U. of Reading*

Strategic groups are often delineated by attribute similarities or cognitive maps. The former is criticised for producing methodological artefacts, while the latter has cognitive limitations. To address the deficiencies of existing approaches, we propose a news-co-coverage-based approach, which yields two advantages. First, the groups are identified by interorganisational relationships; hence they are not statistical artefacts. Second, the news is a third-party assessment; as such we minimise cognitive limitations. The proposed methodology is applied to a sample collected from the US high-tech sector between 2001 and 2017. Testing the robustness of the group solutions, in several key strategic dimensions, we document strong intra-group similarities and inter-group differences. We also find that firms in the same groups are more likely to be cited as competitors in news articles, suggesting the proposed approach is effective in capturing rivals.

Innovating by Experimenting

Digital Session Chair: **Lakshmi Goyal**, *Indian Institute of Management, Indore*

STR: Innovative search post performance shortfall: the effects of institutional imprinting

Author: **Lakshmi Goyal**, *Indian Institute of Management, Indore*
Author: **Manish Popli**, *Indian Institute of Management, Indore*

Integrating insights from the organizational imprinting theory with the problemistic search literature, we inquire how historical environments of firms affect the adaptive process of innovative search by firms from emerging economies during periods of performance shortfall. Utilizing the context of institutional transitions in the emerging economy of India, we surmise that imprints inscribed by the inhibitory and protectionist policy environment in the pre-liberalization period deter firms from focusing on innovation and precludes the development of innovation routines, which impedes innovative search by firms facing performance shortfall in the post-liberalization era. Additionally, we postulate that firms' strategic choices and exogenous conditions of active and passive technological exposure, respectively, attenuate the effects of imprints stamped by the pre-liberalization institutional epoch on the relationship between performance shortfall and innovative search. We test and find considerable support for our predictions on a large dataset of 9088 firm-year observations belonging to the Indian manufacturing industry during 1995 – 2010. Our findings unravel the salience of historical institutional environments in explaining the innovative search behavior of emerging market firms facing performance shortfall.

STR: "Chief Innovation Officers": An empirical study of behavioral and institutional antecedents

Author: **Aras Can Aktan**, *Department of Management and Technology, Bocconi U.*
Author: **Fabrizio Castellucci**, *Bocconi U.*
Author: **Markus Menz**, *U. of Geneva*

In order to better manage the opportunities and threats around innovation, many firms created a Chief Innovation Officer (CINO) position in their top management teams (TMTs). Using insights from behavioral theory of the firm and institutional theory, we investigate how performance feedback and legitimacy considerations are important drivers of CINO presence in TMTs. We analyze the data of 280 science-oriented firms from the Standard & Poor's Index between 2008 and 2017 to assess how those factors influence CINO presence in TMTs and find convincing results. When a firm's innovation performance falls below its "social" aspirations, that firm becomes more likely to have a CINO in its TMTs. Similarly, when a firm underperforms with regard to its "historical" market aspirations, the probability of a CINO presence in its TMT increases. Also, CINO prevalence in a firm's industry significantly affects that firm's decision to have a CINO in its TMT. The findings of this study present important contributions into upper echelons, behavioral theory of the firm and innovation governance literatures.

STR: Think Before You Act: The Unintended Consequences of Inexpensive Business Experimentation

Author: **Sourobh Ghosh**, *Harvard Business School*

William H. Newman Award Nominee

Scholars and practitioners recommend the use of inexpensive business experiments to evaluate new and uncertain strategic alternatives. While current thinking recommends that strategic alternatives be tested as a series of independent changes across many experiments, this contradicts scholarly understanding of strategy as the formulation of interdependent activities that when combined together drive superior performance. To evaluate the tension between testing interdependent and independent changes in experimentation, I first conduct an exploratory analysis of 31,716 business experiments run on using the web experimentation platform, Optimizely. Contrary to popular wisdom, not only does testing a larger set of interdependent changes in an experiment associate with breakthrough performance, it also associates with reduced performance failure. Despite these benefits, I find that a plurality of experiments feature little to no interdependent change. To explain why firms vary in whether they test interdependent changes, I develop and test theory for how access to testing resources influences the design of interdependent changes in experimentation. I find that greater access to testing leads firms to test experiments with fewer interdependent changes. In contrast, when access to testing is limited, I find that firms increase interdependent changes per experiment. This suggests a potential solution to alleviate an organization's cognitive limits when experimenting: by restricting access to testing resources, firms can focus on testing interdependent activities that have the potential to deliver outstanding performance. Overall, my findings demonstrate the underappreciated value of interdependent changes and its performance benefits for business experimentation.

Social Pressures: Conflicts of Interest, Social Comparisons, and Gender

Digital Session Chair: **Sara Elizabeth Parker Lue**, *Rutgers Business School*

STR: Influences of Social Comparisons and Multiple Goal Interdependency on R&D Responses to Performance  

Author: **Elizabeth Lim**, *Georgia State U.*

By connecting performance feedback theory to the social comparison literature, we investigated how diversified firms adapted research and development (R&D) spending in response to downward, lateral, and upward social comparisons during corporate performance shortfalls. We argued corporate offices that used similar and advantaged peers as peer groups responded to performance shortfalls by increasing R&D spending whereas those that benchmarked against disadvantaged peers decreased R&D. We further analyzed the impact of multiple goal interdependency across corporate and business unit levels on R&D decisions. We argued responses to feedback on higher-level corporate goal vary with feedback on lower-level goal amongst low- versus high-performing units. Empirical testing of 306 diversified firms in the information and communications technology sector from 1998 through 2006 showed our hypotheses were largely supported.

STR: Peer Effects in the Efficacy of Disclosure of Conflicts of Interest

Author: **Sara Elizabeth Parker Lue**, *Rutgers Business School*

The judgment of employees is a critical component of human capital for all firms, but particularly in markets for expertise such as health care. Thus the potential for conflicts of interest to cloud workers' judgment is of significant concern, and has led to increasing popularity of disclosure policies. The Physician Payment Sunshine Act of 2010 mandated that pharmaceutical manufacturers disclose the payments and gifts given to physicians with the intention of containing rising drug prices. The belief that undergirded this legislation, as with disclosure policies generally, is that physicians would be shamed by disclosure into cost consciousness (namely, prescribing generic rather than branded drugs). Research since then has shown that disclosure has not had the desired effect of reducing the use of branded drugs. I use data on all hospital admissions in New Jersey from 2008 to 2010 to examine how "monitoring" by peers can offset this. I find that physicians disclosed for receiving payments from pharmaceutical manufacturers have a significantly lower likelihood of prescribing branded drugs when working on cases with another physician, relative to their own behavior on cases where they are working alone; the effect varies with the relative status of the other physician (e.g., surgeon vs. resident). Thus while disclosure of these payments was meant to modify behavior by revealing information to the general public, these results suggest that this is not the relevant audience. I discuss the implications of this for the health care industry specifically, as well as implications in the market for expertise more generally.

Paper is Available to Meeting Registrants Only.

STR: Female Representation in TMTs and the Use of Innovation-oriented Intangible Assets    

Author: **Jooyoung Kim**, *Michigan State U.*

Do firms possessing a high volume of innovation-oriented intangible assets—such as highly advanced technological knowledge, strong innovative culture, and diverse workforce—perform better? We suggest that the relationship between innovation-oriented intangible assets and firm performance may be more complex than what has been assumed. Drawing on insights from the resource-based view and from the upper echelons literature, we suggest that the use of innovation-oriented intangible assets entail various challenges, and that top managers' capability to deal with these challenges determines the extent to which economic value is generated from these assets. Specifically, we theorize that top management teams (TMTs) with female representation can have such capability. The theory is tested by using panel data of 201 Korean firms spanning a 10-year period (2008–2017) and field survey data from 102 middle managers in the United Kingdom. Collectively, the results reveal that female representation in TMTs, by contributing to information elaboration and internal integration capabilities, can help drive higher firm profitability in utilizing innovation-oriented intangible assets.

Adaptation to Turbulence and Crises

Digital Session Chair: **Jacob Andrew Klopp**, *Penn State Smeal College of Business*

STR: Striking a Balance During Economic Crisis: An Empirical Application of Strategic Balance Theory

Author: **Yijung Hong**, *yonsei*
Author: **Kyung Min Park**, *Yonsei U.*

This paper examines the generalizability of the strategic balance theory in the context of economic crisis by empirically investigating the relationship between strategic similarity and firm performance during economic recessions. Analyzing the WRDS Compustat data for the U.S. manufacturing firms from 1984 to 2019 by using a firm-specified fixed effect panel data model, we show that the strategic balance mechanism is strengthened in the context of economic crisis. We also find that the strategic balance mechanism is weakened for technological leaders. This study contributes to the current literature by investigating the boundary conditions of the strategic balance theory and revealing how the strategic balance mechanism changes in different contexts.

STR: A Strategic Choice Model of Dynamic Capabilities Development

Author: **Jacob Andrew Klopp**, *Penn State Smeal College of Business*

The positive link between dynamic capabilities and firm performance is well understood. Given this link, recent research has highlighted the practical and theoretical importance of understanding how dynamic capabilities are developed. However, the evolutionary learning assumptions that underlie much dynamic capabilities research leave little room to explore the antecedents of dynamic capabilities development in terms of the reasoned and intentional actions of managers, i.e., their strategic choices. Consequently, it is unclear how a strategic choice view should approach the development of routines that constitute dynamic capabilities given a prior focus on selection pressure over behavioral variation. To address these concerns, I propose a strategic choice model to explain how managers can contribute to the development of dynamic capabilities. By drawing on the resource-based view, the knowledge-based view, and institutional theory, I surface the creation of “learning spaces” as a key moderator that explains how managers may take steps to develop dynamic capabilities for a firm facing conditions of increasing environmental dynamism. This article contributes to the dynamic capabilities literature by answering recent calls to explain how dynamic capabilities are developed, to further elaborate assumptions about managerial agency, and to integrate new and relevant insights from institutional theory.

STR: Dynamic capabilities and drivers of innovation: a meta-analytical review

Author: **Xiaoshi Xu**, *Aalto U. School of Business*
Author: **Valentina Arrieta**, *Aalto U. School of Business*
Author: **Carl Fey**, *Aalto U. School of Business*

Innovation is a complex non-linear process that requires not only investment, but also effective management of firm resources. Leveraging the dynamic capability perspective, we identify and meta-analyze a wide range of dynamic capabilities represented by managerial levers that allow firms to be more innovative. Based on 324,118 companies, our study makes several key contributions. First, our study explores the relative effects of a broad set of managerial levers and identifies which are most important for driving innovation. We also provide stronger theoretical explanations leveraging the dynamic capability perspective. Second, our study contributes to resolving past inconsistent results by defining dynamic capabilities driving innovation as specific routines and practices and testing the moderating role of organizational, industrial, and institutional contingencies in the dynamic capabilities-innovation link. Third, our findings contribute to the international business literature by confirming the moderating effect of regulative and normative institutions on the dynamic capabilities-innovation relationship.

STR: Adaptation or Exaptation? Search and Resource Redeployment as a Response to Environmental Shocks

Author: **Juha Uotila**, *U. of Warwick*
Author: **Xena Welch Guerra**, *Erasmus U. Rotterdam*

Environmental shocks can significantly alter the organization’s opportunity landscape and trigger the search for new solutions. However, adaptive search is frequently insufficient to recover from a major disruptive shock. We analyze an alternative search method, exaptive search – applying existing solutions to new problems – as a potentially useful response to such shocks, using an NK model of exaptive and adaptive search. We find that the optimal search response to disruptive shocks is that of an initial phase of exaptive search, wherein organizations repurpose their existing resource bundles to address the suddenly changed needs of the business environment, followed by adaptive search to adjust these resource bundles to their new uses. We further find that exaptive search is particularly fruitful in relatedly diversified organizations.

New models of innovation reflect the combined forces of a global pandemic, and enhanced reliance of digital platforms, new partnerships that reflect the changing locus of creative activity, and the demand for new solutions. This panel will consider a range of emerging technologies and different settings to explore how technological innovation can help solve important societal challenges. In particular, we discuss the changing locus of innovation and new forms of organizing for innovation to give food for thought for future research opportunities. Speakers from the White House, the Competence Center on Technology Transfer of the European Commission, the National Aeronautics and Space Agency (NASA), and a prolific academic entrepreneur will share their perspectives.

Big thanks to our generous Sponsor ESSEC Business School for their support of the plenary.

HR: How COVID-Induced Job Search Anxiety Affects New Labor Market Entrants' Job Search and Well-Being.

Author: **Rebecca MacGowan**, *U. of Arizona*
Author: **Mahira Ganster**, *U. of Arizona*
Author: **Jerel Slaughter**, *U. of Arizona*

New labor market entrants (i.e., first-time job seekers) face significant hurdles when searching for a job for the first time, with these stressors likely amplified during the COVID-19 pandemic. In the current investigation, we consider the maladaptive and adaptive consequences of COVID-induced job search anxiety, defined as feeling anxious and tense in one's job search due to issues imposed by the pandemic. We theorize that this state of anxiety can prompt job seekers to engage in affect-focused rumination (maladaptive) and problem-solving pondering (adaptive) week-to-week. We further argue that COVID-induced job search anxiety will affect job seekers' subsequent striving for their dream job and insomnia (i.e., both performance and well-being implications). Finally, we consider how stable beliefs relevant to life in the COVID-19 pandemic (i.e., beliefs in conspiracy theories; beliefs in COVID-19 being a public health crisis) have the potential to affect the aforementioned within-person relationships. Using a sample of 162 new labor market entrants who provided 816 weekly data points, results indicated that COVID-induced job search anxiety positively related to affect-focused rumination and problem-solving pondering; affect-focused rumination hindered striving for one's dream job and promoted insomnia the next week, whereas problem-solving pondering helped encourage striving for one's dream job. Further, the detrimental effects of COVID-induced job search anxiety via affect-focused rumination were amplified for those who held higher levels of conspiracy theory beliefs.

HR: Does Financial Strain Reduce Subjective-well-being of Unemployed Individuals During Covid-19?

Author: **Zahid Hameed**, *Prince Mohammad Bin Fahd U.*
Author: **Thomas Garavan**, *School of Business, National College of Ireland, Dublin, Republic of Ireland*
Author: **Rana Muhammad Naeem**, *U. of Science and Technology of China*
Author: **Muhammad Burhan**, *Coventry Business School, Coventry U.*
Author: **Ghulam Ali Arain**,

The sudden outbreak of COVID-19 has engendered unprecedented challenges and disruptions in nearly every field across the globe. The destabilized economic conditions have resulted in large-scale downsizing and layoffs, particularly in the hospitality and tourism sector which is the focus of the study. This scenario has prompted financial strain and reduced subjective well-being among those individuals who were laid off. Using the conservation of resources (COR) theory, we investigated the impact of financial strain on the subjective well-being of the laid off employees (N=284) in the hospitality and tourism sector through the mediating mechanism of negative affectivity. We also investigated the extent to which this mediated relationship is moderated by the individuals' core-self evaluations. The results provided support for the hypothesized relationships in the study. We discuss the theoretical and practical implications of our research.

HR: Pandemonium: How Crisis-Induced Role Novelty Affects Global Employees' Resource Accumulation 🌐 ✈️ 🗨️ 🖥️

Author: **Sina Alessa Kraus**, *ESCP Business School*
Author: **Benjamin D. Blake**, *U. of Oklahoma*
Author: **Marion Festing**, *ESCP Business School*
Author: **Margaret A. Shaffer**, *U. of Oklahoma*

The ongoing COVID-19 pandemic and associated workplace restrictions have severe consequences for the world's workforce. Under such difficult circumstances, global employees' capacity to leverage personal resources for goal attainment is critical. Applying the resource investment principle of conservation of resources theory, we propose a moderated-mediation model whereby crisis-induced role novelty hinders resource accumulation and subsequent goal attainment. Using three waves of panel data from 311 global employees collected in 2020, prior to and following the initial pandemic lockdown, we found support for our hypotheses that crisis-induced role novelty weakened the relationship between positive psychological capital (PsyCap) and both job engagement and job security. As expected, it also served as a boundary condition for the indirect relationship between PsyCap and burnout, via job security; we did not find support for the hypothesized relationship with job satisfaction, via job engagement. Moreover, when PsyCap was low, crisis-induced role novelty seemed to compensate for the deficient resource of PsyCap in fostering job engagement, which contradicts our view on crisis-induced role novelty as an unambiguous hindrance to global employees' goal attainment. We discuss the implications of our findings as well as our contributions to international human resource management scholarship and practice.

HR: A push from host and a pull from home, is that all? Revisiting the push-pull theory amid COVID-19 🌐 ✈️ 🗨️ 🖥️

Author: **Mudit Shukla**, *Indian Institute of Management, Indore*
Author: **Divya Tyagi**, *Indian Institute of Management, Indore*

The COVID-19 pandemic has brought with it a wave of deliberation, introspection, and re-evaluation, especially for the individuals residing far away from their home countries. So, our study aims to explore the effects of the COVID-19 pandemic on how the expatriates appraise their life in a host country and their desire to return to their home country. Our findings elucidate that factors, such as expatriates' perceptions regarding the riskiness arising due to the immanent attributes, expeditiousness in the response of the administration, state of the healthcare system, obligations towards family, fairness in how people have been treated, and considerations regarding lifestyle and career, pertaining to their home and host countries helped the expatriates in choosing between their home and host countries. Interestingly, these factors took the shape of push and pull forces from the home country and the host country. Based on our findings, we revisit the two widely held assumptions. One that there are only two factors that drive individuals' across national borders. Two that a single factor can only act either as a push force or a pull force.

ENT: Is home where the heart is? Investigating the relationship between 'home' and entrepreneurship

Author: **George Redhead**, *U. of East Anglia (UEA)*
Author: **Zografia Bika**, *U. of East Anglia (UEA)*

The little attention 'home' has received in the entrepreneurial sphere has focused on location choices and their effects on performance rather than what 'home' may mean contextually and experientially for entrepreneurs and place itself. Research has shown that entrepreneurial activities are strongly influenced by the context in which they occur. It is therefore important to understand the differentiated ways in which entrepreneurs may engage with a 'home' place to better understand the nature of 'home' and how it can impact upon the entrepreneurship process for both locals and non-locals. This paper attempts to broaden the understanding of 'home' engaging in context-sensitive theorising from the findings of a qualitative case study in Norwich, a city within East Anglia, in England. Through introducing the mechanisms of 'degrees of localness' and 'the boomerang effect' we delve deeper into what 'home' means to varying entrepreneurs, how this impacts upon their micro-level entrepreneurial efforts, and how it reflects a much more complex and nuanced understanding of 'home' beyond mere location used instrumentally to advance the entrepreneurship process.

ENT: Dependent, Autonomous or Adaptive? Unpacking Spatial Embeddedness and Women Entrepreneurial Behavior

Author: **Sara Alshareef**, *Department of Business Administration, King Abdulaziz U. Jeddah, KSA*

The purpose of this paper is to extend understandings of the influences of the spatial context within which women entrepreneurs are embedded. The exploration of the spatial context was informed by gender and geography studies, and undertaken through interviews with 27 Saudi women entrepreneurs. This study found that the spatial context of women entrepreneurs influenced the embedded nature of gender societal norms. Therefore, this study makes a theoretical contribution by promoting the spatial context as a key concept in theorising women's entrepreneurial behaviour, through the exploration of the influences and impacts of location on individual women entrepreneurs. This study found that locational stability and spatial mobility contributed to the spatial context, from which a novel typology of women entrepreneurs was developed. This typology captured previously unexplored heterogeneity associated with women Domestic Entrepreneurs (DEs), Transnational Entrepreneurs (TEs), and Returnee Entrepreneurs (REs). The spatial context was found to be of considerable significance to understanding different degrees of embeddedness, and thus to understandings of place-specific entrepreneurial behaviours that supported/ constrained the agency of the women entrepreneur participants.

ENT: Entrepreneurial support seeking and affordances in online communities during the COVID-19 pandemic

Author: **Marie Madeleine Meurer**, *EBS U. of Business and Law*
Author: **Matthias Waldkirch**, *EBS Business School*
Author: **Peter Kalum Schou**, *NHH Norwegian School of Economics*
Author: **Eliane Bucher**, *BI Norwegian Business School*
Author: **Katrin Burmeister-Lamp**, *EBS U. of Business and Law*

The COVID-19 crisis has caused significant and unforeseen problems for entrepreneurs. Normally, entrepreneurs would seek social support in their networks to help deal with these issues. However, due to social distancing, physical networking is more difficult, and instead, entrepreneurs have to turn to alternative support sources, such as online communities. We, therefore, investigate support-seeking in online communities during the COVID-19 pandemic, and thereby uncover action possibilities that online communities offer to entrepreneurs. We analyze conversation data from an online community of entrepreneurs on Reddit (*r/startups*) between January 1st and July 7th, 2020, totaling 64,718 community posts. Through a qualitative analysis, we outline what types of support entrepreneurs seek, how support-seeking unfolds, and discover four action possibilities that online communities offer: Online communities help entrepreneurs to resolve problems, reframe their problems, reflect on their situation and refocus thinking and efforts. Our paper contributes to (1) the debate around entrepreneurs' support during the COVID-19 pandemic; (2) the knowledge about digital entrepreneurial support-seeking and (3) the growing interest in the digital affordances that entrepreneurs can access, such as online communities.

Paper is Available to Meeting Registrants Only.

ENT: Networked Micro-Clusters for Firm Evolution

Author: **Gregory Theyel**, *California State U., East Bay*

This paper addresses firm movement within an industry cluster and how this movement is related to firm evolution. This research assembles a picture of the San Francisco Bay Area biomedical industry cluster using biomedical firm populations for 2015 and 2020 and location quotients for 45 cities that make up the cluster, and qualitative data includes interviews with biomedical executives and other cluster stakeholders. While the San Francisco Bay Area has the largest biomedical cluster in the world, the industry is not spread evenly, nor are the resources the same across the region. Instead, there are distinct micro-clusters that play different roles in firm innovation and entrepreneurship, and the relationships between the different parts of the industry cluster offer firms resources as they evolve.

OB: Don't sleep on it: new perspectives and insights on organizational sleep

Author: **Elio Shijaku**, *U. of Barcelona*
Author: **Ryan Armstrong**, -

Despite significant research on sleep and sleep-related phenomena in organizations, management scholars have remained entrenched along disciplinary lines in their approach, neglecting points of connection which increasingly drive conflict and challenge at work. In this paper, we use a multilevel perspective to integrate what we know about sleep and organization. We argue that an extended understanding of the concept of sleep can have important implications for management that will take on a new importance in an increasingly digital, interconnected context. In so doing, we complement the existing theory of sleep management in three ways. First, we use a depth ontology to extend the concept of sleep to the meso and macro levels, presenting a hierarchical perspective from which the notion of organizational sleep emerges. Second, we consider how sleep actors possess spatial-temporal properties which are constantly moving in and out of states of dysregulation. While these patterns are natural and even beneficial, if mismanaged, organizational actors can enter various states of critical dysregulation which can threaten organizational well-being. We offer several propositions to guide research and practice using this integrated perspective.

OB: Investment in Emotional Labor: Daily Resource Spirals and Recovery

Author: **Gordon Matthew Sayre**, *EMLYON Business School*
Author: **Nai-Wen Chi**, *National Sun Yat-Sen U.*
Author: **Alicia A. Grandey**, *Pennsylvania State U.*

Service workers perform emotional labor with customers by surface acting (modifying expressions) or deep acting (modifying mood). Surface acting clearly has more costs and fewer gains than deep acting, but it is less clear how those daily costs and gains contribute to the performance of emotional labor over time. Based on emotional labor theorizing and conservation of resources (COR) theory, daily investment of resources (i.e., emotional and cognitive) are needed for surface and deep acting, which result in that day's net resource loss or gain, respectively. We argue that over time, this creates accumulating resource losses or gain (i.e., spirals) that predict future strategy use, unless one recovers those resources after work. We conduct a novel and rigorous test of this idea, using two experience sampling methodology (ESM) studies of service workers, and applying latent difference score models to capture resource accumulation over time. Across both studies, results supported resource gain and loss spirals: Deep acting required an investment of emotional resources that created increasingly greater resource gains, while surface acting had accumulating losses to emotional resources each day, making it harder and harder to invest in deep acting in future days. Importantly, recovery after work, specifically low-effort activities, mitigated resource loss spirals from surface acting and enhanced resource gain spirals via deep acting. Results offer new evidence for untested theoretical assumptions about emotional labor and COR, while providing recommendations for how to replenish and protect service workers' emotional resources over time.

OB: Interpersonal peer justice and sleep problems: the role of negative affect and optimism

Author: **Mark Ohana**, *Kedge Business School, France*

Although research has shown the link between unfair treatment and sleep disorders (e.g., Kim et al., 2011), several questions remain about this relationship. First, while most studies consider sleep as mediator between organizational justice and health outcomes, little is known about the underlying mechanisms linking justice and sleep. In our study, we explore whether emotions can explain why people who are treated unfairly sleep poorly. Additionally, we investigate whether optimists suffer less negative emotions when treated unfairly. The results from a 10-day diary study involving 220 employees and a vignette study involving 837 participants confirm our hypotheses on the effects of negative affectivity and trait optimism.

Paper is Available to Meeting Registrants Only.

OB: Firefighters' Emotional Demands and Off-Duty Unhealthy Behaviors: Social Resources as Moderators

Author: **Lucille Headrick**, *U. of Illinois at Urbana-Champaign*

Unhealthy eating and alcohol use have been linked to numerous adverse health and well-being outcomes. However, work-related predictors of these behaviors have been largely ignored. One possible explanation why individuals may eat unhealthy foods and use alcohol is to cope with emotional job demands and their associated negative affect at the end of their shift. This may be especially relevant for firefighters as this occupation has been associated with high levels of stress, alcoholism, and obesity. In response, we conducted a between-person structured diary study on 228 firefighters to test the effects of emotional demands during the shift on unhealthy eating and alcohol use during off-duty time via negative affect at the end of the shift. The social influences of those at work (i.e., organizational healthy eating and alcohol use climates) and those at home (i.e., partner support for healthy eating and alcohol use) are tested as moderators that could serve as protective or risk factors. Path analysis results show that emotional demands during the shift are positively related to negative affect at the end of the shift which, in turn, relates to increases in unhealthy eating and alcohol use during their off-duty time. Also, partner support for healthy eating (reported by the target firefighter's significant other) moderates the relationship between negative affect and unhealthy eating, thereby weakening the indirect effect of emotional demands on unhealthy eating. Theoretical and practical implications are discussed.

Managing for the Distant Future: A Research Agenda for the Fight Against Climate Change *Distant Future Research Agenda*

Organizer: **Majken Schultz**, *Copenhagen Business School*
Panelist: **Tor Hernes**, *Copenhagen Business School*
Panelist: **Daniel Nyberg**, *U. of Newcastle*
Panelist: **Juliane Reinecke**, *King's College London*
Panelist: **Klaus Weber**, *Northwestern U.*
Discussant: **Pratima Bansal**, *Ivey Business School*

As it is becoming clear that companies must be much more consequential in the fight against climate change, we need to know more about how organizational actors navigate in this fight. Although international institutions and climate agencies have warned about the implications of climate change for decades, it is only recently that companies are making more specific commitments that reach into the distant futures, such as to become carbon neutral by 2030 (e.g. Apple, Google, Microsoft, P&G), 2040 (e.g. Amazon), or 2050 (e.g. BP, Dow). For most companies this implies that they have to overcome pressure from short-term performance and go well beyond their habitual strategic time horizons into unknown territories. This symposium brings together experienced scholars discussing how we may study and conceptualize the challenges that confront managers, as they begin to integrate concerns for distant future climate change into their ongoing solutions.

Chair: **Michael A. Hitt**, *Texas A&M U.*

This symposium explores a new blueprint of knowledge synthesis in business and management. The cumulation of scientific knowledge is difficult to implement in the absence of a convergent and integrated knowledge system. The current technologies, outlets, and incentives of business and management scholarship emphasize discipline-based, reductionist research, and are relatively incapable of solving complex social problems concerning management. As an unintended consequence, the universe of data, knowledge, and communities is becoming exceedingly fragmented. This symposium gathers editors of elite review journals and elite journals with review issues, whose missions emphasize knowledge synthesis, to explore what new technologies and infrastructures are needed to accumulate fragmented knowledge scholarship into timely, widely accessible, and actionable collective wisdom.

STR: Auditor Independence and Outsourcing: Aligning Incentives to Mitigate Shilling and Shirking  

Author: **Ashley Palmarozzo**, *Harvard Business School*
Author: **Jodi Short**, *UC Hastings School of Law*
Author: **Michael Toffel**, *Harvard Business School*

Multinational corporations (MNCs) hire auditors to assess their business partners' compliance with quality, working conditions, and environmental standards. Independent third-party auditors are widely assumed to outperform second-party auditors employed and thus controlled by MNCs. Synthesizing literatures on auditor independence and outsourcing decisions, we compare how independence and control can affect auditor performance. Using proprietary data from a global apparel brand, we find that second-party auditors outperform independent third-party auditors, and that third-party auditors' performance improves when MNCs concurrent source audits, using both second- and third-party auditors. However, both second- and third-party auditors perform better with more independence from the entities they audit—specifically, when auditing factories most recently audited by a different firm. These findings yield important insights for more effective monitoring of business partners.

STR: Differential Incentives for Portfolio Expansion: Internal versus External Complementary Assets   

Author: **Siddharth Natarajan**, *Chinese U. of Hong Kong*
Author: **Ishtiaq Pasha Mahmood**, -
Author: **William G. Mitchell**, *U. of Toronto*

Prior research highlights that complementary assets provide incentives for portfolio expansion, but has not compared internal complementary assets, which are owned by focal firms, with external complementary assets, which are owned by external entities. We argue that internal complementary assets provide stronger incentives for introducing new features in existing products, compared to external complementary assets. However, for new products, external complementary assets provide stronger incentives, with the difference in incentives conditioned by the scope of complementary assets. Finally, we argue that external complementary assets can endogenously provide incentives for expanding internal complementary assets. Empirical analysis of portfolio expansions by Android smartphone vendors from 2010 to 2018 supports our predictions. Overall, the paper shows how internal and external complementary assets have differential consequences for portfolio expansions.

STR: What do you know and how much does it matter? A QCA/NCA study of knowledge and supplier performance  

Author: **Glenn Hoetker**, *Melbourne Business School, U. of Melbourne*
Author: **Sarah Maria Bruhs**, *Aarhus U., Department of Management*
Author: **Thomas Mellewig**, *Freie U. Berlin*

While interorganizational research has emphasized the role of governance mechanisms in managing the performance of suppliers that provide critical input components, scholarship consistently assumes that these governance mechanisms work independent of how much the supplier knows or how much the buyer knows. Contributing to this body of work, we explore two important boundary conditions to the association between governance mechanisms and supplier performance: the buyer's knowledge of the outsourced component and the supplier's technical expertise. In doing so, our theory integrates recent insights from the literature on concurrent sourcing, which acknowledges that firms often make and buy the same input. Methodologically, we draw on configurational methods of fuzzy set Qualitative Comparative Analysis (fsQCA) and Necessary Conditional Analysis (NCA), given that conventional regression techniques fall short in analyzing the complex interrelationships predicted by our theory. Our analysis provides interesting and novel insights. Broadly, we find that deploying concurrent sourcing in conjunction with formal and relational governance mechanisms leads to high supplier performance, even when the supplier himself is less technical capable. However, concurrent sourcing is no guarantee for high performance, as a concurrent sourcing firm who deals with a non-expert supplier is doomed to low performance when relational governance mechanisms are absent. Overall, our analysis of firm and supplier knowledge in orchestration with established governance mechanisms underscores the value of configurational approaches to management research.

STR: Effects of Uncertainty, Munificence, and Interorganizational network on Firm's Vertical Integration 

Author: **Maia Barnabishvili**, *U. of Miami*
Author: **John Mezas**, *U. of Miami*

This paper treats dramatic changes in the US healthcare regulatory framework as a natural experiment to investigate how the interplay between contextual factors from both environmental and inter-organizational dimensions affects firms' degree of vertical integration. Using a cross-industry sample of US healthcare sector firms, findings support hypotheses that greater levels of sector-level environmental uncertainty foster exploitation of vertically integrated structures as an efficient adaptation mechanism. This effect is contingent on levels of local environmental munificence and firms' embeddedness in interorganizational networks. Further, managerial network composition along dimensions of partner type, country, and industry of operation are shown to be significant boundary conditions for how social networks affect vertical integration decisions in uncertain setting. Findings also demonstrate that a joint focus on environmental attributes and interorganizational networks can significantly advance our understanding of processes driving vertical integration decisions.

New Pathways in Workplace Religiosity and Spirituality

Digital Session Chair: **Denver Bingski Dumanil Daradar**, *De La Salle U., Manila, Philippines*

MSR: Exploring the Understanding of Followership in Christian Faith-Based Organisations  

Author: **Krystin Zigan**, *U. of Kent*
Author: **YingFei Héliot**, *U. of Surrey*
Author: **Alan Le Gry**, *U. of Kent*

Emerging research on followership has overwhelmingly been focused on for-profit organisations. This research investigates the meaning of volunteer followership in a faith-based context by exploring four Christian denominational congregations and how they socially construct their role of being a follower. Using implicit followership theory, we explore their perceptions on ideal followership and how these shape the relationship to leaders. By conducting 25 semi-structured interviews we found that volunteer followers across the different denominations developed different understanding of followership and particularly valued relational attributes. We further found a dialectic relationship between individual personality, institutional norms and the social system which shape the way followership is constructed. Thus, we advance current understandings of the role of volunteer followers in faith-based organisations.

MSR: Religiosity & Work-Family Conflict in Japan: Role of self-construal, work & spouse demands     

Author: **T. T. Rajan Selvarajan**, *California State U., East Bay*
Author: **Barjinder Singh**, *Elon U.*
Author: **Donna Y. Stringer**, *U. of Houston, Clear Lake*

Based on the job demands and resources model, we propose that work and spouse demands are positively related to work-family conflict and that religiosity, which acts as a personal resource, mediates the relationship between both forms of demands and work-family conflict. Further, we also propose that interdependent self-construal is positively related to the conflict in the work-family interface and religiosity mediates this relationship. We test these hypotheses using a large midlife development sample of individuals in Japan (N=1027). Results provide support for the main effects for job and spouse demands on work-family conflict, as well as mediating effects of religiosity. In addition, we also found support for hypotheses pertaining to main and indirect effects of interdependent self-construal. Our results reveal that within the family domain, religiosity is viewed as a demand. We discuss the implications of this research for the theory and practice of religiosity and work-family conflict in organizations.

While there is no shortage of calls for academic research to study management concepts within actual organizations, there is far too little guidance on how to exactly accomplish this feat. This issue of conducting research in the field is especially important—yet, more challenging to navigate—in today’s ever uncertain and unprecedented environment. While researchers are consistently called on to go there and embrace the complexity that exists within today’s organizations, there is little discussion on best practices for doing so. With this Professional Development Workshop (PDW), we intend to have a discussion with scholars that are very effective at gaining access to organizations and conducting high-quality, field-based research in order to provide guidance and offer insights to junior scholars and seasoned researchers who aim to improve upon their current research practices. To accomplish this, the proposed PDW includes: 1) opening commentary presenting an overview of field research methods and recommendations, 2) a set of scholarly panels with scholars that have been successful conducting field research, and 3) breakout groups with top scholars and attendees discussing more specific questions.

Organizational Issue in Contemporary Work Settings

Digital Session Chair: **Robert Fuller**, *U. of Tennessee, Knoxville*

OCIS: Virtual Team Decision Making: The Value of Team Intuition and its Enabling Media Capabilities

Author: **Robert Fuller**, *U. of Tennessee, Knoxville*
Author: **Dusya Vera**, *U. of Houston-Main Campus*
Author: **Codou Samba**, *U. of Tennessee*
Author: **David W. Williams**, *U. of Tennessee*

We challenge the body of knowledge on virtual team decision making, which has largely portrayed comprehensive and stepwise approaches to decision making in virtual teams. In contrast, we propose that virtual teams can develop team intuition and can benefit from it, in terms of decision quality and decision speed, particularly when virtual teams are facing the decision-making challenges of cognitive diversity, information inadequacy compounded with information and communication technology inadequacy, and time pressure. We describe four forms of virtual team intuition and leverage Media Synchronicity Theory to propose the communication task elements, media capabilities, and synchronicity levels needed to enable each form of virtual team intuition.

OCIS: Involving or informing? Negotiating employee participation in organizational change

Author: **Pekka Pälli**, *Aalto U. School of Business*
Author: **Ari Kuusimäki**, *Aalto U., School of Business*

Language and communication are fundamental for management attempts to engage employees in decision-making on organizational change. However, we still know little about how the meaning of employee participation is negotiated between different organizational groups, and how this effects joint decision-making. Adopting an organizational discourse perspective, our ethnographic study of a relocation of a Nordic University shows how management and employees battle for the control of discourse about employee participation by employing and renegotiating the contextual meanings of communicational practices that foster employee involvement in decision-making. As a contribution, we demonstrate the discursively constructed character of employee participation and illustrate how it can act as a source of both consensus and dissensus in decision-making on organizational change issues.

OCIS: Role of Power and LMX on the use of Upward Impression Management Tactics

Author: **Priyanka Jaiswal**, *Indian Institute of Foreign Trade, New Delhi*

The human being is full of emotions and expressions. An individual expresses his/her emotion through certain behavior and expect that others would be able to understand his/her emotion. People generally able to capture the exact emotion of the person based on expressed behavior. Impression management is also a behavior that reflects or articulates the image of an individual. In present scenario, individuals are more inclined towards building their image at the workplace. Therefore, they use various impression management for projecting different image. However, there are several factors, which affect the selection of a particulate impression tactic. This research paper is based on an experimental study, which is designed to assess the impact of the leader's perceived power and leader member-exchange (LMX) on the selection of impression management tactics by subordinates for getting positive performance rating from their leaders. To the best of our knowledge, the impact of the perceived power of the leader and LMX on IM tactics is being assessed for the first time. Leader's power and LMX, are manipulated through video clips. This experimental study was conducted on graduate and postgraduate students. Results show that the use of IM by subordinates significantly depends on the relationship between leader and subordinate as well as the perceived leaders' power by the subordinates. As results state that subordinates use positive impression management tactics (ingratiation and self-promotion) more for the leaders with high LMX & high perceived power. Subordinates may also use negative impression management tactics (supplication and intimidation) for the leaders with low LMX & low perceived power for receiving positive performance rating. Keywords: Perceived leader's power; leader member exchange; impression management tactics

Management Issues in Law Enforcement

Digital Session Chair: **Ben Rissing**, *Cornell U.*

 **PNP: Premium Processing or Processing Premiums? The Role of Selective Persistence in Regulatory Outcomes**   

Author: **Ben Rissing**, *Cornell U.*
Author: **Laura Carver**, *Cornell U.*

Organizations often employ indirect and circuitous strategies to shape regulatory outcomes in their favor. This said, key regulatory programs increasingly allow regulated organizations to directly shape their own case prioritization and evaluation deadlines, generally for a fee. Such expedited regulatory evaluations often have superior outcomes, but less understood is why. We address this gap by examining U.S. Citizenship and Immigration Services (CIS) agents' assessments of immigrant H-1B visa applications, which can be expedited for \$1,000. Through analysis of Freedom of Information Act records for all 5.2 million H-1B visa evaluations from 2001 to 2016, we find that expedited applications are more often approved than standard cases. To explain this gap, we test multiple theoretical accounts and find that organizations, not regulators, are the key actors shaping approval rate differences. We contend that organizations disproportionately use expedited processing for strategically valuable activities, and thus withdraw or abandon these applications less frequently relative to standard cases. This primarily explains the relative success of expedited applications over their standard counterparts. These findings emphasize organizational agency as an underappreciated factor shaping regulatory outcomes in fee-dependent regimes.

PNP: Examining the Impact of Community and Organizational Relationships on Police Work Perspectives

Author: **Alexander Henderson**, *Marist College*
Author: **James Melitski**, *Marist College*

In many front-line professions, especially those in public safety, the people-centered nature of the job and work relationships are essential considerations. Law enforcement is one such intrinsically relational public service, characterized by significant interpersonal interactions both inside police departments and with the public. The relationships among citizens, constituents, or other service recipients and the state are particularly critical to shaping the outcomes of important public policies. The purpose of this paper is to explore the relational nature of work in policing, foregrounding community relationships, leadership, coworker relationships, and role-based considerations and the impact of these on job-related attitudes of satisfaction and organizational commitment, both of which are related to individual performance, motivation, and other key individual and organizational outcomes. We use a web-based survey to collect data from sworn law enforcement officials across the United States on perspectives of roles and of work. Findings here indicate that community relationships, transformational leadership, coworker trust, and public service motivation are positively related to both job satisfaction and organizational commitment. Implications for theory, practice, and future research are discussed, followed by concluding comments on the future of policing.

 **PNP: Role-Redefining Reforms**

Author: **Renee M. Rinehart**, *George Mason U.*

Scholars across a range of disciplines have examined why successful reform remains so elusive in the public sector, yet these views often overlook or underestimate the inherently social and emotional nature of public sector work, particularly among front-line workers. Drawing on theories from organizational behavior and institutional theory, this paper examines how a subset of correctional officers in a new restorative justice unit were able to take on fundamentally new roles that conflicted with core elements of the traditional correctional officer identity. Data came from 25 interviews with correctional officers, operational managers, and senior leaders, as well as 56 hours of observation of routine work activities, staff meetings, and training sessions, totaling nearly 100 hours in the field. Findings indicated that this role-redefining reform succeeded when front-line workers were already engaging in a form of emotional labor similar to what was required in their new roles, when they had strong social support from colleagues, supervisors, and subordinates, and when the leader of the reform embodied the ideal, "fantasmic" images of both the old and new role identities. Together, these findings offer contributions to our understanding of how deeper social and emotional factors shape responses to reform in ways that are both conscious and nonconscious, as well as new theoretical approaches for uncovering the impact of these factors.

Global ecosystemic change, big tech, multisided platforms, media oligarchs, outsourced public services, AI and machine learning, and the blurring boundaries between commerce, science, and politics are just some of the forces that afford oligopolies and monopolies a growing influence. This reality raises many questions. For example, how should institutions operate and address economic and societal dilemmas when their authority or scope is challenged (e.g. via cultural wars) or simply because they seem to work less well than hitherto? And how might political and societal shifts impact on organizations that have honed their capabilities to operate on principles of free market economy, especially in responding to competitors deploying non market strategies? A panel of scholars will debate these and other questions and identify new priorities for research and policy, exploring tensions, contradictions and opportunities in present and emerging theorizing on the firm and society.

Panelist: **Matthew A. Cronin**, *George Mason U.*
Panelist: **James Andrew Grand**, *U. of Maryland*
Panelist: **Kyle Lewis**, *U. of California, Santa Barbara*

Team cognition enables members' diverse expertise and knowledge to be recognized, shared, and harnessed in teams. Over the past 30 years, the team cognition field has been regarded as an interdisciplinary success story. The empirically established team cognition – team performance link has also been noted as one of the most exciting developments in team research. Although there is much to celebrate, a careful evaluation of this literature reveals a surprising lack of shared cognition about team cognition, including little cross-integration across the multiple forms of team cognition (e.g., team mental models, transactive memory systems, team learning, cross-understanding, representational gaps). Moreover, team cognition measurement continues to be a significant challenge. How do we make intersections across previously siloed literatures normative rather than rare? How do we move from an emphasis on team aggregated measurement to more advanced techniques to permit answers to more expansive and nuanced research questions? Responding to these key issues, the panel will discuss the state-of-the-art in team cognition research and help craft a theoretical, methodological, and empirical agenda for future studies with audience participation.

Presenter: **Greg Fetzer**, *Boston College*

The most influential theories of creativity, from Wallas (1926) to Amabile (1983) and beyond, have emphasized the processes of creativity, often through a stage model of creativity over time. Central (though often implicit) in these conceptualizations is the role of time, yet temporal perspectives remain relatively unexplored in research on creativity. Despite the recent recognition of time's importance within the creativity literature, many important questions still remain. Time is especially critical for organizational scholars of creativity; organizations generally create temporal structures, such as schedules, timelines, routines, and deadlines, that shape how individuals work. Our symposium will present some emerging work taking a temporal perspective on creativity—from facilitators of creativity at different stages of the idea journey to how creative workers handle extreme time pressure—and help advance the scholarly conversation around creative processes in organizations.

OCB, CWB, and Ostracism

Digital Session Chair: **Yahua Cai**, *Shanghai U. of Finance and Economics*

OB: The interactive effect of abusive supervision and leaders' prototypicality on coworkers' ostracism

Author: **Yahua Cai**, *Shanghai U. of Finance and Economics*
Author: **Fufu Sun**, *Shanghai U. of Finance and Economics*
Author: **Jin Song Li**, *Shanghai U. of Finance and Economics*

Despite several studies on coworkers' reactions to abusive supervision of a coworker, little is known about whether and how leaders' characteristics may influence these effects. Building on social information processing theory and the social identity model of organizational leadership, we purported that coworkers would ostracize abused employees, but this effect would critically depend on leaders' in-group prototypicality. We further expected that abusive supervision and coworkers' ostracism would result in lower creativity of the target employee. Results from a multi-wave survey involving three data sources support the proposed model. Specifically, abusive supervision was positively related to coworkers' ostracism and to lower employee creativity. However, these effects only emerged for leaders who were high in in-group prototypicality. By contrast, leaders' abusive supervision was unrelated to ostracism and lowered creativity for leaders with low in-group prototypicality. Theoretical and managerial implications are discussed.

OB: Risk propensity as a common antecedent for OCBs and CWBs

Author: **Don Zhang**, *Louisiana State U.*
Author: **Clare Barratt**, -
Author: **Rachel Williamson Smith**, *Georgia Southern U.*

Although organizational citizenship behaviors (OCBs) and counterproductive work behaviors (CWBs) are traditionally conceptualized as opposite ends of the contextual performance spectrum, emergent research suggests that they may derive from similar psychological processes. In this paper, we conceptualize OCBs and CWBs as manifestations of risk taking at work and argue that individual differences in risk propensity may serve as a common antecedent to both outcomes. In a three-wave panel survey study of working adults ($n = 244$), we found that risk propensity positively predicted both OCBs and CWBs targeted at organizations, but not individuals. Using an item-level approach, we also found that the predictive validity of risk propensity was stronger for behaviors that external raters judged as more (vs. less) risky. Finally, we found the association between risk propensity and CWBs was moderated by individual differences in self-monitoring, where the positive association was weakened for people high on self-monitoring. Taken together, our findings suggest that risk-seeking employees may simultaneously be an asset and a liability, but risk-seekers who are also high on self-monitoring are less likely to engage in counterproductive behaviors.

OB: Psychological Ownership and Ambivalent Employee Behaviors: A Moderated Mediation Model

Author: **Ah Jung Kim**, *Ewha Womans U.*
Author: **Myung-Ho Chung**, *Ewha Womans U.*

This study explored two faces of psychological ownership. Specifically, we focused on the psychological process wherein two different routes via disparate mediators led to two seemingly contradictory outcomes: organizational citizenship behavior (OCB) and workplace aggressive behavior (WAB). In addition, we also examined the moderating role of a structural factor (i.e., network position) in the mediation process. Drawing on social exchange theory and social network theory, we proposed that psychological ownership would produce both OCB and WAB through organization-based self-esteem and psychological entitlement respectively, and an individual's network position would moderate the effects of this process. Data from 189 nurses from a general hospital in Korea revealed that psychological ownership was positively related to two ambivalent outcomes, OCB and WAB. Further, a central position in a friendship network among nurses strengthened the positive relationship between psychological ownership and OCB. Overall, this study showed that psychological ownership was like a double-edged sword. We discussed the theoretical and practical implications of this finding.

OB: A Meta-Analytic Integration of Mechanisms Linking Workplace Ostracism and OCB

Author: **Denise Law**, *U. of Waterloo*
Author: **Rukhsana (Roxy) Merkan**, *U. of Waterloo*
Author: **Winnie Shen**, *Schulich School of Business, York U.*
Author: **Douglas J. Brown**, *U. of Waterloo*

Evidence indicates that victims of workplace ostracism typically engage in fewer organizational citizenship behaviors (OCB). Not surprisingly, researchers have sought to understand why workplace ostracism is negatively related to OCB. Three perspectives have been offered in the literature, but are typically tested in isolation. Consequently, the relative merit of each perspective is largely unknown. To address these issues, we highlight how all three mechanisms can be subsumed within a need-threat/need-fortification framework of workplace ostracism and conduct meta-analytic structural equation modelling to test the three mechanisms simultaneously with enhanced statistical power. Consistent with theoretical and empirical work indicating that workplace ostracism is a painful experience, we found that workplace ostracism harms employees' belongingness, self-perceptions, and well-being, which each uniquely in turn, leads to less OCB. Further, well-being was the mechanism with the strongest explanatory power that underlies the negative relationship between workplace ostracism and OCB. Implications and future research directions will be discussed.

Valuing and Compensating CEO Performance *CEO Performance*

Digital Session Chair: **Chengwei Liu, ESMT Berlin**

OMT: **The Variance of Variance**

Author: **Chengwei Liu, ESMT Berlin**

Author: **Chia-Jung Tsay, U. College London**

Finalist for the OMT Division Best Paper Award

Chance models—mechanisms that explain empirical regularities through unsystematic variance—have a long tradition in the sciences but have been historically marginalized in management scholarship. An exception is the work of James G. March and his coauthors, who proposed a variety of chance models that explain important management phenomena, including the careers of top executives, managerial risk taking, and organizational anarchy, learning, and adaptation. This paper serves as a tribute to the beauty of these “little ideas” and demonstrates how they can be recombined to generate novel implications. In particular, we focus on the example of an inverted V-shaped performance association among the executives featured in one of the most prominent lists of executives, Barron’s annual list of Top 30 chief executive officers. A reanalysis of March and Shapira’s 1992 model provides a novel explanation for why many of the executives’ exceptional performances did not persist. In contrast to the usual explanations of complacency, hubris, and statistical regression, the results show that declines may result from these executives’ slow adaptation, incompetence, and self-reinforced risk taking. We conclude by elaborating on the normative implications of Jim’s chance models, which address many modern management and societal challenges. We further encourage the continued development of chance models to help explain performance differences, shifting from accounts that favor heroic stories of corporate leaders toward accounts that favor those leaders’ changing fortunes.

OMT: **Would “No More Counting Dollars Be Counting Stars”? : CEO Compensation and Spatial-Temporal Cognition**

Author: **Ali Radfard, Aston Business School**

Prior research on corporate governance has paid little attention to the cognitive consequences of compensation for CEOs. This paper studies how compensation affects the most basic aspect of cognition, i.e., spatial-temporal cognition of CEOs. Drawing from prior theory and research, it is argued that money reduces the relevance of spatial-temporal constraints on CEOs’ cognition of reality by increasing the sense of control over space-time. Further, this main effect reduces as CEO compensation becomes more contingent upon firm performance. Using a content-intensive sample of 713 CEO-year observations of public corporations, and through content-analysis and simultaneous equation modeling, the hypotheses are tested. The results provide support for the theory put forward in the present paper. The moderating effect somewhat but partially alter the main effect. Most interestingly, these findings point to a potential paradox in that compensation that is long believed to be essential for aligning the interests of CEOs with the owners’ interests, acts against such alignment by biasing CEOs’ cognitive representation of reality. The implications of the paper’s findings are discussed for the research on CEO compensation, CEO cognition, incentive alignment and diversification/merger/acquisition.

Paper is Available to Meeting Registrants Only.

OMT: **The Renegotiations on Organizational Goals**

Author: **Murad A. Mithani, Rutgers U., Camden**

Organizational goals represent negotiated agreements between divergent interests. But how are those agreements maintained when an organization fails to meet goal aspiration? In this study, I argue that the CEO and executives closely aligned with the CEO prefer renegotiations on privileges rather than on aspiration. They do so through the use of substantive and symbolic side payments. Using a sample of 1,546 executives across 160 manufacturing firms, I show that as the difference between performance and aspiration increased, side payments to unaligned executives increased either to pay for current favors or to fulfill past promises. This effect was strengthened in the presence of slack, which increased the capacity for immediate payments in the face of performance shortfalls. The findings show that it is executives unaligned with the CEO rather than those closer to the CEO who benefit most from a difference between performance and aspiration, and slack. The study explains how side payments stabilize goals by identifying the conditions, beneficiaries, temporality, and the form in which they are traded between executives.

Paper is Available to Meeting Registrants Only.

OMT: **Value Creation Across Disciplines**

Author: **Sheldon Dunn, SHIDLER COLLEGE OF BUSINESS**

Without value creation, firms cannot exist. However, the concept value creation and value often receive different philosophical treatment within different literature streams. This paper uses qualitative analyses to determine the predominant uses of the concepts of value and value creation within economics, finance, accounting, strategy, management, human resource management, marketing, and international business. The philosophical approaches to value are deconstructed into two dimensions based on the answer to two questions: 1) what is value (intrinsic vs. socially constructed)? Who benefits from value creation (firm-facing vs market-facing)? An intermediate category is also identified in each dimension, i.e., value can be relative, and the value creation event can benefit both the market and the firm at the point of exchange (co-creation).

Inter-organizational Relationships

Digital Session Chair: **Renate Taubeneder**, *U. of Bath*

OSCM: **Interpartner Legitimacy Building for a Multiparty Alliance**

Author: **Renate Taubeneder**, *U. of Bath*
Author: **Jens Roehrich**, *U. of Bath*
Author: **Brian Squire**, *U. of Bath*

Drawing on supply chain collaboration, institutional theory and alliance literatures, we explore how a large buyer builds interpartner legitimacy to gain supplier commitment to a multiparty alliance (MPA). Prior literature offers very little insights into how a buyer builds moral and pragmatic interpartner legitimacy to motivate supplier participation during the formation of a MPA, and the dynamics of the interpartner legitimacy building process during this stage. Interpartner legitimacy is important to consider in this context, as suppliers may not have worked together before or are competitors. We build on rich data sets comprising meeting observations, interviews and archival data. Our study contributes to extant research by deriving a number of buyer actions to build moral and pragmatic interpartner legitimacy. We also shed light on two underexplored areas within the OSCM literature namely the formation stage of supply chain collaboration and collaboration involving multiple suppliers.

OSCM: **Managing Inter-organizational Relations on Complex Projects: Project Owner Commercial Strategy**

Author: **Graham M. Winch**, *Alliance Manchester Business School*
Author: **Natalya Sergeeva**, *The Bartlett School of Construction & Project Management (UCL)*
Author: **David Lowe**, *Alliance Manchester Business School*

Our paper uses an intervention-based research method to develop a conceptual framework for explaining the development of commercial strategy by the owners of complex projects. It thereby makes a contribution to theory for analysing vertical inter-organizational relationships. Traditionally, research in the area draws heavily on transaction cost economics with a focus on the nature of the transaction between owner and supplier. Issues such as the structure of the supply market, the point in the economic cycle, and the institutional context are largely ignored. This paper thereby moves on from TCE.

Paper is Available to Meeting Registrants Only.

OSCM: **Procurement's Professional Identity and its Impact on Decisions**

Author: **Beverly Osborn**, *The Ohio State U. Fisher College of Business*
Author: **James Hill**, *The Ohio State U. Fisher College of Business*

We apply a social identity lens to the professional identity of procurement. We conduct semi-structured interviews with procurement professionals to gather information on how they define their professional identities, how they perceive others to understand their professional identities, their level of identification with the procurement profession, and their group's status within the organization. We conduct an experiment to observe how group identification, group status and group image affect decision-making in a realistic cross-functional scenario. We find evidence that strong identification with the procurement function can cause an increased emphasis on costs and offer managerial recommendations to mitigate this effect. We find evidence that the public perception of procurement's identity can also affect decision-making. We observe that many procurement professionals perceive their profession to be negatively stereotyped as cost-focused and transactional, and we promote the alternative group images used by our interview participants.

Paper is Available to Meeting Registrants Only.

OSCM: **Operational Control and Trust Dynamics**

Author: **Chris Long**, *St. John's U., New York*

This paper demonstrates that the ways managers combine particular applications operational controls and trust-building activities directly influence their subordinates' trust and control perceptions. When managers either apply outcome controls and demonstrate credibility or apply clan controls and demonstrate consideration, they increase levels of subordinate trust and decrease subordinate perceptions that they are being controlled by their managers. However, when managers apply behavior controls and demonstrate their capability, managers decrease levels of subordinate trust and increase subordinate perceptions that they are being controlled by their managers. We argue that a key element determining these relationships is the level of behavioral autonomy that managers provide to their subordinates. The paper concludes with a discussion of how this perspective advances research on organizational control, organizational trust, and control-trust dynamics.

STR: Post-IPO Scaling Challenge and Delisting      

Author: **David M. Gomulya**, *Singapore Management U.*
Author: **Eucman Lee**, *Nanyang Business School*

Scaling up is important for many reasons. Yet, growth may bring not only the benefits of scaling but also its potential complications. This study examines the relationship between firm growth rate and survival especially focusing on how it could be influenced by business model complexity. Examining this question in internet firms circa 2000s, this study offers new insights on the effect of fast growth rate of post-IPO ventures. We found that in general a faster growth rate can improve survival but that relationship beyond a certain point, will reverse. Having a business model that operates in a multi-sided market, having a high level of complexity, also increases failure risk and shifts the optimal growth rate to be lower compared to operating in a single-sided market.

STR: Ordinary capabilities and firm performance: The role of capital market development    

Author: **Nycil George**, *Indian Institute of Management, Kozhikode*

Ordinary capabilities support the primary activities of a firm and are key to attaining competitive advantages. Past research indicates that there are limits to the contributions of ordinary capabilities to firm performance but has largely explored it via contingent effects of the industry context. We argue that these limits are also a function of the development of market-supporting institutions. Adopting an unbundling approach, we specifically investigate the role of developing capital markets. We argue that evolutionary pressures brought about by pro-market reforms in capital markets have a negative effect on a firm's use of its ordinary capabilities. We trace the heterogeneity of this effect for two key firm resource attributes, investments in R&D and financial slack. We test our three-way interaction model using a sample of Indian firms over a twenty-year period of institutional reforms. Our findings contribute to integrating the organizational capability and institutional theory literature and advancing research on the sustainability of firm profits in emerging economies.

STR: Free-Float Liquidity and Trading Constraints: Enhancing Family Firms' Financing Decisions 

Author: **Daniel Dupuis**, *American U. of Sharjah*
Author: **Virginia Bodolica**, *American U. of Sharjah*
Author: **Martin Spraggon**, *Mohammed Bin Rashid School of Government*

Volume-based liquidity ratios suffer from potential measurement bias due to share restriction and may misrepresent actual liquidity. To address this issue, we develop a modified metric, the free-float liquidity ratio. We argue that this measure is well suited to estimate liquidity in the presence of trading constraints as can be found in closely-held/state-owned entities, IPOs/SEOs with lockup restrictions, dual-class share structures, and family-owned businesses. Traditional measures understate illiquidity (overstate liquidity) as the fraction of free trading shares is limited by design or circumstances. Our empirical testing indicates that the free-float liquidity ratio compares favorably with other volume-based methods. Furthermore, we use family firms as a restricted-share setting to demonstrate the validity of the free-float liquidity ratio. The proposed metric offers informational gains for family leaders to aid in their financing decisions and for non-family outsiders to guide their investment choice. As a constrained free float inhibits price discovery processes, we also discuss how restricted stock issuers may alleviate the attendant negative effects on governance and information opacity.

STR: Why Do IPO Firms Choose Dual-Class Structures? 

Author: **Nitin Kumar Singh**, *Missouri Western State U.*
Author: **Susanna Khavul**, *SJSU/LSE*

Dual-class structure (DCS) can endow control of the firm to the minority shareholders by allocation of voting rights in proportions greater than the number of equity shares owned by them. The use of DCS can lead to failure of market for corporate control and may increase the principal-principal agency cost. Based on a hand-collected sample of IPO firms, we find that firms that pursue high-risk growth strategies with long-term horizons, such as internationalization, acquisition, and innovation, are more likely to adopt DCS. We propose that DCS is largely adopted to protect firms from the short termism of public markets and to avoid control contests in the market for corporate control.

Competitive Interactions

Digital Session Chair: **Xia Han**, *Dongwu Business School, Soochow U. China*

STR: Dynamic Competition Strategies: The Impacts of Ex ante and Ex post Heterogeneities 

Author: **Xia Han**, *Dongwu Business School, Soochow U. China*
Author: **Gaoyang Cai**, *Northwestern Kellogg School of Management*

The paper studies dynamic strategies of heterogeneous firms cooperating with competitors. We consider firms' ex ante heterogeneity and ex post heterogeneity in a two-period, two-player game theoretical model. Firstly, we focus on ex ante heterogeneity, i.e., asymmetric initial characteristics of firms, which results in unequal distribution of the synergistic value created through cooperation. And we take ex post heterogeneity, especially referred to learning effects, and the incentives of firms into account. Both ex ante and ex post heterogeneities help us figure out optimal competition strategies of firms, via investigating their competition game. Secondly, we introduce external value creation promoted by competition, and external value capture derived from cooperation into our model to study their single and interactive effects on competition incentives of each firm. The analyses enrich the dichotomy imposed in literature between "cooperation - value creation" and "competition - value capture" by providing a unified interaction perspective between cooperation, competition, value creation as well as value capture. Our model attempts to explain why and how would different types of firms cooperate with their competitors in a dynamic context.

STR: The Power of Words: Word Responses in Multimarket Competition

Author: **He Gao**, *Michigan State U.*
Author: **Tieying Yu**, *Boston College*
Author: **Hyun-Soo Woo**, *U. of Mississippi*
Author: **Albert Cannella**, *Texas A&M U., College Station*

In the multimarket competition literature, the maintenance of mutual forbearance depends on how firms respond when the mutual forbearance is disturbed. While previous research highlights the importance of using action responses to force offenders to back down from aggression, we argue that such retaliation may risk escalating the rivalry into a multimarket war, thus creating incentives for the use of an alternative form of response that has been largely overlooked—word responses. Drawing from expectancy theory, we theorize that high multimarket contact (MMC) with an attacker increases a focal firm's likelihood of using a word response when mutual forbearance between the two firms is upset. However, such a relationship will be moderated by the focal firm's perceptions regarding the intent of the attacker. The clearer the attacker's intent to disrupt the mutual forbearance, as evidenced by the importance of the market being attacked to the focal firm and the scope of the attack, the weaker the effect of MMC on the likelihood of word responses. Evidence from our sample of 20 global consumer electronics (CE) manufacturers between 2007 to 2014 supports our predictions.

STR: Hybrid games in strategy analysis: Bargaining in the shadow of competition

Author: **Joachim Henkel**, *Technical U. of Munich*

In the analysis of value capture, it is central to understand what value each group of players can capture when leaving the negotiation table. Frequently, this will entail engaging in competition, i.e., non-negotiated, strategic interactions with the other players. For instance, if merger talks fail, parties may instead compete on the market. I propose to analyze such situations using a combination of cooperative and noncooperative games, which I refer to as hybrid games. Applications demonstrate how the nature and intensity of the non-negotiated interactions determine value capture, and that a correct delineation of negotiation groups is essential for a realistic analysis. I also show that bifirm hybrid games feature a type of value-based business strategy in which the stage-one actions literally change the game.

Investor Reaction to Leadership Changes

Digital Session Chair: **Jason Cavich**, *Nova Southeastern U.*

STR: The Heterogeneity Of Institutional Investor Activists And Their Tactical Interactions

Author: **Jason Cavich**, *Nova Southeastern U.*

Research Question: Institutional investor activism is a powerful, yet not fully understood phenomenon that has had equivocal findings in prior research. This study introduces a novel theoretical framework that examines the heterogeneity of institutional investor activists and their tactics to elicit positive firm responses from their portfolio firms. Research Findings: I undertake an empirical test of a novel framework looking at the effects of institutional investor heterogeneity on portfolio firm responses using ordinal logistic regression. The author found predicted support for hedge funds and public pension funds to receive favorable firm responses. In addition, private multiemployer funds found support for the counter-intuitively predicted negative favorable responses, and proxy-based tactics negatively impacted the influence of public pension funds. The latter two items are counter to most research. Theoretical Implications: Following the traditions of stakeholder salience theory, the author contends that some institutional investor activists and tactics have more power, legitimacy, and urgency than others. Counter-intuitively, their interaction terms can result in negative, not additive effects as the author incorporates refinements of stakeholder salience theory. Practical Implications: Institutional investors activists may be better served to focus on non-proxy-based activism as proxy-based activism may have inconsequential or negative effects in their attempts to influence portfolio firms.

STR: Crash and Burn: Investor Perceptions of CEO/CFO Dismissal Following a Stock Price Crash

Author: **Matthew Mount**, *Deakin U.*

Author: **Ferdinand Gul**, *Deakin U.*

Author: **Karen Lai**, *Deakin U.*

Prior studies on the consequences of executive dismissal following a performance failure on investor reactions are contradictory. However, the literature has been silent on whether and how the actual responsibilities of the dismissed executives studied could influence investor reactions. Drawing on signaling theory and role theory, we examine how CEO dismissal and CFO dismissal following a stock price crash might be differentially perceived by investors as distinct executive roles. We propose that the fit between a dismissed executive's role (CEO versus CFO) as a signal of blame, and the specific circumstances surrounding a stock price crash failure, will be fundamental in shaping investor reactions. We find support for our theorizing across two studies. Study 1 is an archival study of U.S. firms spanning the period 1992–2014 that comprised 29,242 firm-year observations. Study 2 is an experiment that conceptually replicates our first study to address causality concerns using two samples: 820 participants with investment experience and 297 professional investors. Our findings indicate that executive role, and the fit between role and circumstances of failure, are important considerations when using executive dismissal to restore investor confidence.

STR: Investor Reactions to Minority CEO Appointments: The Intersection of Race-Ethnicity and Gender

Author: **Seung-Hwan Jeong**, *U. of Georgia*

Author: **Ann Mooney Murphy**, *Stevens Institute of Technology*

Author: **Yangyang Zhang**, *Stevens Institute of Technology*

Despite growing attention to the disadvantages experienced by racial-ethnic minorities in society, there is limited understanding of how race-ethnicity affects strategic leaders. We develop theory about how investors react to the appointment of racial-ethnic minority CEOs, and consider the intersection of race/ethnicity and gender (i.e., female racial-ethnic minority CEOs) as well as CEO turnover contexts which would mitigate investors' potential implicit biases against racial-ethnic minority CEOs. We test our hypotheses using an event study involving reactions to the appointments of 3,119 CEOs and 242 racial-ethnic minority CEOs over a 24 year period. Consistent with theories of intersectionality, we find that investor reactions toward racial-ethnic minority CEOs (compared to White CEOs) are more negative when the CEO is also female, and even more so for Black female CEOs. We also find that weaker prior firm performance and outside status of the incoming CEO mitigates the negative view and amplifies the positive view of racial-ethnic minority CEOs in the eyes of investors.

STR: Director Motivational Orientations: How New Director Regulatory Focus Shapes Market Reactions

Author: **Hadi Faqih**, *Michigan State U.*

Author: **Daniel Gamache**, *U. of Georgia*

Author: **Gerry M. McNamara**, *Michigan State U.*

Author: **Jennifer J. Lee**, *Michigan State U.*

We draw on regulatory focus theory and the governance literature to examine how and when shareholders react to the motivational orientations of newly appointed directors. We theorize that because directors high in promotion focus are likely to orient to the firm toward growth and maximize shareholder value, their appointments will generate positive market reactions. We also theorize that because the vigilance of directors high in prevention is likely to increase managerial risk-aversion and lead the firm to miss out on growth opportunities, the market will react negatively to their appointments. Further, we examine the moderating role of financial slack and industry munificence. Using a sample of 374 new director appointments by S&P 500 firms between 2004 and 2013, we find that shareholders favor directors high in promotion focus, and their reactions are amplified when financial slack is high. We also find that market reactions to directors high in prevention focus are contingent on whether the firm operates in industries high or low in munificence.

Institutional Perspective of Corporate Governance

Digital Session Chair: **Punit Arora**, *City U. of New York*

STR: Ownership and Environmental Irresponsibility: A Contingency Model of Corporate Governance   

Author: **Punit Arora**, *City U. of New York*

Ownership concentration as a mechanism for mitigating agency problem is one of the core tenets of corporate governance. In this study, we examine the contextual nature of its effect on corporate environmental irresponsibility (CEI). We argue that the effect of ownership concentration on CEI is contingent on other internal and external governance mechanisms in place. Using a sample of 16,286 observations for 3,275 firms across 43 countries during 2008 to 2017 with dynamic panel regressions, we find robust evidence to support our predictions. We find that the effect of ownership concentration varies by the quality of regulatory institutions. We also find evidence to support the complementarity between external and internal governance mechanisms and the configurational approach by examining how the simultaneous presence of external and internal corporate governance mechanisms can alter the relationship between ownership concentration and CEI. Our study has important managerial and public policy implications for policymakers looking to use governance as a mechanism to promote sustainability.

STR: Analyst Forecast Optimism and Corporate Innovation: An Institution-based View   

Author: **Lerong He**, *State U. of New York, College at Brockport*

Author: **Jing Chen**, *Fudan U., School of Management*

This paper investigates the influence of analyst forecasts on firm innovation from behavioral and institutional perspectives. We argue that optimistic analyst revenue forecasts raise firm expectation on feasibility and effectiveness of implementing an innovation strategy, thus prompt firms to invest more in innovation. We also posit that subnational differences in institutional environment in terms of factor market development, intellectual property rights protections, and government corruption all affect firm perception on return on innovation, and consequently moderate firm decision to invest in innovation. These hypotheses are tested using a longitudinal sample of Chinese listed firms between 2003 and 2017. We document that optimistic analyst revenue forecasts increase firm R&D investment intensity. This relationship is stronger when forecast dispersion is small, when firms are in regions with more advanced factor markets, stronger intellectual property protection, and less corrupted government.

STR: Game on: CEO Political Ideology and the Numbers Game

Author: **Marc Kowalick**, *U. of Mannheim*

Author: **Michael Woywode**, *U. of Mannheim*

It is commonly known that CEOs manage corporate earnings and thus expose their firm, its shareholders, and stakeholders to potential harm for their personal benefit. To better understand the drivers of such unethical behavior, we take an upper echelons perspective and consider CEOs' political ideology, i.e., their stance on the liberal-conservative continuum, as a fundamental determinant of personal preference that becomes reflected in firms' earnings management. Analyzing a panel dataset of 872 S&P 1500 CEOs, we find considerable support for our arguments that more liberal CEOs prefer to improve (and more conservative CEOs to diminish) reported earnings and show how this inclination varies along a set of contextual characteristics demarcating the diverse preferences as CEOs' dedication to the firm and its performance endures, increases, and escalates.

STR: Executive and Organizational Determinants of CEO Sociopolitical Activism

Author: **Keshab Acharya**, *Central Connecticut State U.*

Author: **Michael A. Abebe**, *U. of Texas Rio Grande Valley*

The recent rise of CEO sociopolitical activism—CEOs' public expression of opinion on controversial sociopolitical issues of the day—is attracting scholarly attention as researchers seek to understand the phenomenon and its implications for strategic choices and firm performance. CEO sociopolitical activism can be a 'double-edged sword'; while it may garner the praises of increasingly vocal stakeholders (e.g., employees, customers, investors), it could potentially backfire by alienating others, especially if the CEO's position on these issues is inconsistent with these stakeholders. Despite the inherent risk, CEO sociopolitical activism is on the rise. This begs the question: why do some CEOs become sociopolitical activists while others remain on the 'sidelines'? This study seeks to address this question by exploring the executive and organizational determinants of CEO sociopolitical activism. Drawing from the status and reputation literatures, we explore the effect of CEO power, CEO celebrity status, firm reputation, and firm political activity as predictors of CEO sociopolitical activism. In doing so, we focus on the "bully pulpit" explanation by arguing that high status CEOs are more likely to use their professional position and visibility to advocate for or against controversial sociopolitical issues. Our analysis of data from 178 matched pair S&P 500 firms from 2008-2017 provides support for our predictions. Implications for research and practice are discussed.

Strategic Cognition and Communication

Digital Session Chair: **Sheen S. Levine**, *U. of Texas at Dallas*

STR: The Development of Strategic Cognition: Performance & Inequality      

Author: **Sheen S. Levine**, *U. of Texas at Dallas*
Author: **Felix Mauersberger**, *U. of Bonn*

Strategy scholars have long supposed that individual cognition can boost competitive advantage, but causal evidence is scarce. Here we empirically explore the competitive role of strategic cognition as expressed in two competencies: strategic intelligence and analytic skill. We begin by documenting their heterogeneous distribution, even among those trained in management. Then, we introduce highly competitive markets, in which participants vie for cash. We find that performance is well predicted by the skills. Next, we ask whether some form of strategic cognition can be developed to affect performance. We introduce a simple treatment, anchored in strategy theory. Treated participants perform much better than the control group. What is more: Markets with treated participants manifest lower inequality in individual outcomes. If cognitive skills can be developed, it can herald a prescriptive approach to the development of better strategists — and better markets.

STR: The Manager in Communication: The Effect of CEOs on Conference Calls   

Author: **Shyam Kumar**, *Lally School of Management, Rensselaer Polytechnic Institute*
Author: **Sen Li**, *Lally School of Management, Rensselaer Polytechnic Institute*
Author: **Xinying Qu**, *Lally School of Management, Rensselaer Polytechnic Institute*

To what extent do CEOs influence communication with external stakeholders, and how large is their influence relative to firm level determinants of communication? We address these questions by conducting a variance partitioning analysis of four communication measures extracted from earnings conference calls: the tone of communication, the degree of forward-looking information, concreteness, and the external focus of communication. Our results suggest the CEO effect accounts for 18.9 percent to 30.6 percent of the variance in these measures in conference calls, while the firm effect accounts for 10.7 percent to 20.8 percent. These findings reaffirm that CEOs have a large and independent role to play in influencing communication, while suggesting that their cognitive capabilities are critical in shaping external perceptions related to the firm.

STR: Performance Heterogeneity in Competitive Markets and the Cognitive Theory of Commitment

Author: **Rogério Santos Victor**, *U. of Connecticut*

The objective of this paper is to contribute to the explanation of performance heterogeneity in competitive markets. The aim is to predict configurations of firm performance that challenge established economic notions of competitive dynamics. The study emphasizes the relevance of adopting cognitive assumptions in developing a theory of commitment in the strategic management discipline. Further, we identify intellectual skills applied to investment projects as the most relevant resource underlying recurrent performance differentials. We highlight ways in which the adaptive regulation of strategy affects the expected outcomes of competition through the ability of firms to influence the convergence mechanism of markets and adjust the speed with which the competitive process operates. Firms with average rates of return above the market are able to keep rates of persistence high (i.e., capable of slowing the convergence process), while firms with average rates of return below the market are able to keep rates of persistence low (i.e., capable of speeding the convergence process). The result is the identification of an asymmetric structural pattern in the rate of persistence of abnormal profits that has relevant implications for both theory and practice. Empirical tests rely on autoregressive models developed by the persistence-of-profit research program applied to a large panel data composed of more than 3,000 firms from 11 home countries and 5 macro-industrial sectors covering a period of more than a decade.

Paper is Available to Meeting Registrants Only.

STR: The Interaction of Top Management's Strategic Planning and Management Control Fosters Innovation

Author: **Jan-Thomas Bachmann**, *Hochschule Trier*

A survey of 289 top managers in nine countries identifies outcome, bureaucratic, and clan controls to be important boundary conditions for the relationship between top management's strategic planning and innovation output. Outcome controls and bureaucratic controls are shown to enhance the effects of top management's strategic planning and clan controls are shown to reduce them. We also show that the relationship between innovation output and firm performance strengthens under conditions of strong clan control. Thus, top managers learn how to combine the tools of strategic planning and management control to enhance innovation output, and which control mechanism to employ to transform innovation output into firm performance.

Why We All Should Be Bayesians: An Introduction to Bayesian Analysis

Why We All Should Be Bayesians

Organizer: **David Krackhardt**, *Carnegie Mellon U.*
Organizer: **Andreas Schwab**, *Iowa State U.*
Organizer: **William H. Starbuck**, *U. of Oregon*

The purpose of this symposium is to introduce management researchers to the opportunities of Bayesian statistics for empirical research in the management sciences. We will outline the fundamental features of the Bayesian method without delving into the mathematical details. Instead, we will outline the conceptual differences and potential advantages of a Bayesian approach compared to traditional statistical analyses involving null-hypothesis statistical significance tests. We will then introduce an illustrative example from empirical management research that illustrates opportunities for the useful application of Bayesian data analysis and introduces participants on how to interpret the outcomes of Bayesian analyses for causal inference. Finally, we will discuss why in spite of strong arguments supporting the use of Bayesian statistics, the field of management research has been very reluctant considering Bayesian analysis as an alternative and how management scholars can support related methodological change efforts. The purpose of this symposium is to convince participants of the potential opportunities Bayesian methods can provide and to motivate organizational researchers to consider Bayesian statistics as an alternative in future research.

A Conversation on Business Models and Cognition
Business Models and Cognition

Organizer: **Kristian Johan Sund**, *Roskilde U.*
Panelist: **Marcel Bogers**, *Eindhoven U. of Technology*
Panelist: **Yuliya Snihur**, *Toulouse Business School*
Panelist: **Lien Denoo**, *Tilburg U.*
Panelist: **Ted Ladd**, *Hult International Business School*
Panelist: **Sea Matilda Bez**, *UC Berkeley*

In this fourth annual panel symposium exploring new horizons in managerial and organizational cognition research, we propose a conversation at the cross-roads of business model and cognition research streams. Numerous studies of business models and business model innovation have accentuated the cognitive underpinnings of the construct or pointed to the role of cognitions in shaping business models and business model change. For example business models can be studied as a form of cognitive structure, mental map, or schema, of how the firm creates value. The question we ask is: In the emerging cognitive perspective of business models and business model innovation, what are the interesting conversations and findings? Join us as we explore.

Mobility and Career Consequences

Digital Session Chair: **Jennifer Hui-Han Gao**, *U. of Melbourne*

CAR: Enhancing employment and work-life satisfaction through acculturation for international workers 

Author: **Jennifer Hui-Han Gao**, *U. of Melbourne*
Author: **Shuwei Hsu**, *National Taiwan Normal U.*

Driven by globalisation trends, self-organised international work is becoming increasingly prevalent around the world. We apply the acculturation theory in exploring employment experiences among previous working holidaymakers, who self-initiated their temporary international work and relocation from Taiwan to Australia. Through in-depth, narrative interviews, we identify four dimensions of work-related outcomes enhanced by acculturation including geographical mobility, increased employment opportunities, enhanced employment conditions and increased work-life satisfaction. Drawing on the model of acculturation strategies, we find that while the separation strategy only contributes towards geographical mobility and increased employment opportunities, the integration strategy can contribute across all four dimensions of enhanced employment and outcomes, particularly work-life satisfaction, which results from emancipating people from their previously socialised cultural values. Moreover, international workers may perceive job quality as a relative concept through comparing work practices experienced in their home and host environments. Our study contributes to the international careers literature by demonstrating how international workers' experiences of enhanced employment quality may be perceived as a process of accumulating and leveraging sociocultural resources within the host culture.

CAR: Using Big Data to test labor market stability vs dynamism: What career path leads to better outcomes  

Author: **Yehuda Baruch**, *Southampton Business School, U. of Southampton*
Author: **David S. A. Guttormsen**, *USN School of Business, U. of South-Eastern Norway*
Author: **Stanley Gyoshev**, *U. of Exeter Business School*
Author: **Trifon Pavkov**, *U. of Exeter Business School*
Author: **Miana Plesca**, *U. of Guelph*

In recent decades, longstanding questions that have been broadly debated in the career management literature, remain unresolved: are careers becoming dynamic or stable, which leads to how to optimize career progress—via dynamic moves or stable employment. We address conflicting findings and aim to advance career theory in three ways. Theoretically, we offer empirical support for both boundaryless career and career ecosystem theories and expand the career ecosystem theory and provide new evidence to key scholarly debates regarding new careers. We offer practical advice to individuals regarding their career strategy. Utilizing an extensive database of 3,000,000 individuals, comprising one country's entire working population, and their 300,000 employers, we find support for a dynamic labor market characterized by three different career boundary crossings: job, employer, and sector change across eleven years. We identify distinctive clusters of career transitions that we associate with career outcomes. We find a moderating effect of birth cohort, the share of stayers, leavers, managerial and professional employees, firm size, and gender, and differences between the impact of boundary-crossing and both wage level and wage growth, with contrasting patterns for each. We demonstrate that in most cases, opting for frequent career moves would offer better outcomes compared to stable employment. The theoretical contribution and their implications for our understanding of career motives and career dynamism are discussed.

CAR: Executives' Career Mobility within an Organizational Field and the Relationship with Career Success  

Author: **Andreas Dominic Koch**, *U. of Mannheim*
Author: **Katja Dlouhy**, *U. of Mannheim*
Author: **Ricardo Rodrigues**, *King's College London*

In this paper, we examine the careers of top executives in the organizational field of professional services. Our aim is to determine whether inter-organizational career mobility brings greater career rewards than career stability. Building on institutional theory and boundary theory, we moreover examine how crossing boundaries within and outside the organizational field affects executives' objective career success. Furthermore, we examine patterns of career moves across boundaries of organizations within and outside the organizational field. Our results show that individuals who have higher inter-organizational mobility need less time to reach an executive position. We further find that inter-organizational mobility within the organizational field reduces the time to reach an executive position more than inter-organizational mobility outside the organizational field. Moreover, we identify different mobility patterns to the top of central and peripheral organizations in an organizational field.

CAR: When Experience Mitigates Gender in Punishment for Misconduct on Wall Street    

Author: **Pooria Assadi**, *California State U. Sacramento*

I examine how different types of misconduct affect the careers of professionals in the U.S. securities industry and investigate the disparities in labor market reactions to violations of professional norms. I specifically examine the career consequences of customer-facing misconduct (i.e., misconduct that primarily harms the customers) and regulator-facing misconduct (i.e., misconduct that primarily harms the regulators), and investigate whether these career consequences depend on the experience and gender of those who got caught for misconduct. Analyzing data from a large random sample of U.S. stockbrokers, I find that customer-facing misconduct is punished, but regulator-facing misconduct is rewarded by the labor market. I also show that greater tenure weakens the punishment after customer-facing misconduct and that it weakens the reward after regulator-facing misconduct. Furthermore, I find evidence that male brokers later in their careers are punished more for customer-facing misconduct and punished less for regulator-facing misconduct than female brokers later in their careers. Together, these findings advance our understanding of what tenure means for women versus men pertaining to punishment for misconduct, and what punishment regime might be more effective in inhibiting misconduct.

Networking, Mentoring and Social Capital

Digital Session Chair: **Lara Bertola**, *ESCP Business School*

CAR: Is perceiving the same as believing? The minds of women and men on networking behavior 

Author: **Lara Bertola**, *ESCP Business School*

Networking is an essential professional strategy which is critical for professional success. Individuals build their networks based on others' perceptions, and individuals differ in how accurately they perceive their social environment. The literature provides contrasting predictions about whether certain individuals perceive networks accurately than do others. This paper examines these differences through a gender lens. Professionals develop various perceptions, expectations, and ways of building networks which tend to evolve with their career progression. This empirical paper examines the professional networking strategies of a few individuals operating within firms. The quantitative findings rule out the possibility that underlying differences in brokerage positions may explain the observed gender-based differences in how women and men interpret brokerage networks psychologically. In the case of women but not men, perceived control mediates the relationship between brokerage and self-esteem. We investigate networking behavior employing a grounded theory building approach and a set of core categories.

CAR: The Ready-made Network: Networking and Exchange Activity of Independent Workers in Coworking Spaces

Author: **Clarissa E. Weber**, *U. of Goettingen*

Author: **Jennifer Klutt**, *U. of Goettingen*

Coworking spaces are often said to be breeding grounds for networking and exchange activity by providing their users with direct access to a large and diverse network. Building on prior research on independent workers' networking and the upcoming literature on coworking spaces as organizational phenomena, we conduct an exploratory study on networking and exchange activity of independent workers working in coworking spaces. Based on qualitative data consisting of 104 interviews and 44 informal talks with coworkers, observations and archival data, we introduce and develop the idea of coworking spaces as ready-made networks. We map the structural network and the different kinds of collaborative activity that take place in coworking spaces and explore how coworking spaces create the conditions for such activity. Our findings depict how 1) spatial proximity and infrastructural means provide the physical opportunity, 2) a collaborative organizational ethos provides the cognitive basis, and 3) default trust among coworkers provides the relational basis for networking and exchange activity in coworking spaces.

Paper is NOT Available. Please contact the author(s).

CAR: Mentor Departure and Work Engagement: The Roles of Trait Positive Affect and Focus on Opportunities

Author: **Mengyi Li**, *Renmin U. of China*

Author: **Wenxia Zhou**, *Renmin U. of China*

Author: **Xixi Chu**, *Renmin U. of China*

Author: **Lu Xin**, *Beijing U. of Chemical Technology*

The turnover literature focuses mainly on the reasons and consequences of turnover, as well as the strategies for reducing employee turnover, paying limited attention to the effect of employee turnover on stayers. In using the social cognitive framework and a time-lagged research design, this study put forward a moderated mediation model and found that: 1) mentor departure was positively associated with focus on opportunities (i.e., the positive aspect of occupational future time perspective); 2) focus on opportunities was positively associated with work engagement; 3) focus on opportunities mediated the relationship between mentor departure and work engagement; 4) trait positive affect enhanced the association of mentor departure with focus on opportunities as well as the whole indirect relationship. This study highlighted the positive effect of mentor departure as well as the effect of personality traits (i.e., trait positive affect) on one's career development. Theoretical and practical implications were discussed.

Paper is NOT Available. Please contact the author(s).

 **CAR: Gender Differences in the Use of Social Contacts in the Job Search Process**

Author: **Kira Choi**, *London Business School*

William H. Newman Award Nominee

Who is more likely to use social contacts to search for jobs, and why is this the case? Despite substantial evidence that social contacts improve individuals' success in the process of job-seeking in various ways, previous studies point out that individuals with more social capital are not more likely to use social contacts to search for jobs than those with less social capital. By using records of job search activities on an online hiring platform, this paper seeks to explore variations in job seekers' decisions to use recommendation letters in their job search process as well as their implications. Specifically, I propose that female applicants who may face bias, and hence, feel disadvantaged in the labor market utilize recommendation letters more than male applicants. I also posit that when recommendation letters are used, their effect is more substantial for female applicants than for male applicants in positively affecting their job search outcomes. The results suggest that female applicants use recommendation letters as a mitigation strategy for their labor market disadvantage while also providing additional information; thus, signaling the applicants' qualities in the job search process.

Organizer: **Alexandra Bristow**, *The Open U. Business School*
Organizer: **Paulina Segarra**, *U. Anáhuac México*
Participant: **Arturo E. Osorio**, *Rutgers U.*

While academic conferences have been places to share research and exchange ideas, collaborate, and meet colleagues, they offer opportunities to reflect on and respond to the ongoing tensions, challenges, and issues as academic communities. As academics we face considerable challenges, yet these challenges differ greatly globally and exacerbated by raced, gendered, and class-based inequalities across countries and communities. In universities conservative managerial pressure over the purpose of universities because of neoliberalism and marketization in many parts of the world is resulting in mass precarity and attacks against critical scholarship. Against this backdrop this session at the virtual conference is organized with the CMS executive team. The purpose of this session is not only to address the impact of the pandemic at a societal and organizational level but also to facilitate a discussion by the community for the community. Based on the three related themes, exec team members will share a brief talk and invite the community for reflection, discussion and (potential) action. Given the complexity of the issues, it is impossible to come up with specific solutions. Yet, we value the opportunity of coming together for solidarity, naming the problems we face and seeking ways of interventions collectively as the CMS community. We invite all the CMS community to take part in this session.

Ageism and Age Discrimination

Digital Session Chair: **Serge P. Da Motta Veiga**, *EDHEC Business School*

GDO: **Changes in Perceived Age Discrimination Over Time: Patterns, Covariates, and Consequences**

Author: **Ariane Froidevaux**, *U. of Texas At Arlington*
Author: **Serge P. Da Motta Veiga**, *EDHEC Business School*
Author: **Ieva Urbanaviciute**, *U. of Lausanne*
Author: **Franciska Krings**, *U. of Lausanne*
Author: **Jérôme Rossier**, *U. of Lausanne*

Age discrimination is one of the most prevalent types of discrimination in the workplace and as such represents a major challenge for many workers. Although prior work suggests that perceived age discrimination is a dynamic process leading to detrimental effects on job- and health-related outcomes, little is known about how it changes over time. Drawing on classical psychological stressor-strain theory, the current study examines different patterns of changes in perceived age discrimination, their relationships with age, gender, and organizational justice, and effect on job satisfaction, work strain, and perceived employability. Using longitudinal data from 1,100 workers aged 27-57 in a prospective design over six years, we find three patterns characterized by low stable, increasing, and decreasing levels of perceived age discrimination change at work over time. We further observe that older employees and women (but not older women), as well as employees reporting lower levels of organizational justice, are more likely to belong to the increasing age discrimination change pattern. Finally, we demonstrate that workers belonging to the low stable age discrimination pattern are more likely to benefit from higher job satisfaction, perceived employability, and lower work strain. The theoretical and practical implications of these findings are discussed.

GDO: **Attitudes on hiring Middle-Aged Employees: The Impact of Social Climate and Rater's Employability**

Author: **Yael Brender-Ilan**, *Ariel U. Department of Economics and Business Administration, Israel*
Author: **Galy Binyamin**, *Ariel U. Department of Economics and Business Administration, Israel*

As global workforce ages, organizations face unprecedented challenges, especially managing effective communication between generations. The phenomenon of middle ageism (i.e., discriminating against middle aged employees based on their age) has become more prevalent. We examined how contextual settings and communication affect attitudes toward middle-aged employees and hiring intentions. Results showed that attitudes toward middle-aged employees mediated the relationship between social climate (of shared codes and language) and hiring intentions. However, social climate was related positively to attitudes toward their adaptability, but negatively to attitudes toward their ability. Also, decision-makers' own perceived employability moderated the relationship between attitudes toward employees' adaptability and hiring intentions, and the indirect relationship between social climate and hiring intentions. In an era where diversity and inclusion dominate human resource management decision making, this study contributes to the literature on the underexplored domain of age diversity.

GDO: **Younger Adults as Leaders and Followers: Age Stereotypes and Leader/Follower Role (In)Congruity**

Author: **Christoph Daldrop**, *Christian-Albrechts-U. of Kiel*
Author: **Astrid Carlotta Homan**, *U. of Amsterdam*
Author: **Claudia Buengeler**, *Kiel U.*

Younger adults face challenges in their perception as (effective) leaders, as evident in an underrepresentation in leadership positions and less favorable leader evaluations. However, little is known about the origin of a leadership age bias towards younger adults. We argue for a perceived incongruity of younger adults with leader roles as a potential antecedent. This incongruity originates from stereotypes of lower competence for younger adults (compared to middle-aged and older adults), in particular when observers are older themselves. Further, we predict that the leader role incongruity is increased given congruity with the follower role for younger adults. Data from two experimental studies (N = 197 and 648) together provide overall support for our predictions. Our research has important implications as it reveals a potential antecedent of a negative leadership age bias for younger adults, in particular when observers are relatively older themselves.

GDO: **Am I Too Old for This? Age-based Stereotypes & Older Job-Seekers**

Author: **Benjamin Thomas**, *Radford U.*
Author: **Benjamin Biermeier-Hanson**, *Radford U.*

Older people will continue to comprise a substantial, growing portion of the professional workforce. Organizations' capacity to attract and acquire the best talent will drive the success of companies in their strategic staffing practices. Evidence indicates age-based stereotypes, the stereotypes about older workers, factor into organizational decision-makers' evaluations of candidates, often to the detriment of older employees. But recruitment and selection are each two-party processes, involving the company and the applicant. The current research approaches recruitment and selection from older workers' perspectives and it uses two studies to explore how age-based stereotypes may pose boundaries to older workers' chances at successfully acquiring the jobs for which they are qualified. In the first study, we demonstrate the extent to which actual recruitment messages contain age-based stereotypic content, especially related to the worker traits and job tasks involving technology and virtual work characteristics. Study 2 provides support that age-based stereotype threat can affect older job applicants encountering hiring tests. Together, our results pose implications for staffing practices in light of the future of work—where (a) older workers will comprise a larger portion of the talent pools organizations rely upon and (b) work demands and requirements increasingly involve technology and virtual factors.

Identities, Threats and Visibility

Digital Session Chair: **Angelica Leigh**, *Fuqua School of Business, Duke U.*

GDO: Am I Next? The Spillover Effects of Mega-Threats on Identity Threat, Identity Labor, and Withdrawal

Author: **Angelica Leigh**, *Fuqua School of Business, Duke U.*
Author: **Shimul Melwani**, *U. of North Carolina, Chapel Hill*

Mega-threats – negative, identity-relevant events that receive significant media attention – are frequent occurrences in society, yet the influence of these events on individuals at work remains unclear. Drawing on theories of identity threat, and authenticity, we explain the process whereby exposure to mega-threats leads to higher levels of work withdrawal. We hypothesize and find, across two studies centered upon various mega-threats, including anti-immigrant tweets, police shootings of Black civilians and the Coronavirus pandemic, that event observers who share social identities with victims of mega-threats experience higher levels of identity threat. As professional organizational standards prevent the expression of this threat, these employees then engage in a process of cognitive and emotional suppression, that we characterize as identity labor. We also theorize and find that identity labor consumes psychological resources leading to higher levels of task and interpersonal withdrawal, but when discussions related to mega-threats are deemed safe in the workplace it acts as a buffer to this effect. The current research contributes to our understanding of the consequences of mega-threats for individuals at work, and yields important practical insights that can assist managers in predicting and reducing the detrimental effects of mega-threats on their employees.

GDO: Rethinking the Basics: A Critical Review of How and Why to Update the Use of Demographic Variables

Author: **Sarah Ku**, *Georgia State U.*
Author: **Leigh Anne Liu**, *Georgia State U.*
Author: **Ying-yi Hong**, *Nanyang Technological U.*

Demographic diversity is ubiquitous now more than ever. As the global population continues to grow and evolve, individuals who are demographically diverse require updated research for theoretical and managerial implications. We present multidisciplinary dimensions of choice and visibility to explain disparate organizational outcomes when utilizing demographics as predictive, control, and moderating variables. We demonstrate that demographic characteristics have complexities within and between each other, causing interdependent relationships that must be considered upon designing, measuring, and implementing these variables in our theories and methodologies. Additionally, the common practice of self-reporting demographics must also be updated to appreciate the inconsistencies between self-identification and perceived identification. Our model reveals an integrated, interdisciplinary perspective to confront the inconsistencies of historic categorizations of demographics and diversity. We provide theoretical evidence that individuals' degree of choice and visibility surrounding their demographics significantly interacts with their context and can either shape or be shaped by external perceptions. We also explore theoretical and methodological implications for organizational outcomes.

GDO: Diversity in Leadership across Canada: Exploring Barriers to Inclusion

Author: **Wendy Cukier**, *Ryerson U.*
Author: **Akalya Atputharajah**, *U. of Ottawa*
Author: **Ruby Latif**, -

Diversity is an important component of management studies, as it is not only an indicator of social equality, but acknowledged as a crucial factor in organizational success. While diversity in management studies has focused on representation in leadership, this focus has thus far been narrowed and mostly looked at the exclusion of women and racialized people. In the process, diversity in management studies has overlooked the underrepresentation of other, less visible groups. Using critical identity theory, this study broadens conceptualizations of diversity to include these overlooked groups, using 36 in-depth interviews with people who self-identify as Indigenous/ Métis, people with disabilities and LGBTQ2S+, to explore their experiences with leadership and governance, the barriers that they face due to their identities, and the possible strategies that could be used to promote their representation. This study finds that barriers to the representation of these communities include the narrow focus on larger populations – women and racialized minorities – and the comparative invisibility of their identities and subsequent silences; the unconscious biases which they face; and organizations' shallow and short-term commitments to diversity and inclusion, all of which have implications for practice.

GDO: An identity conflict perspective on female expatriate work adjustment

Author: **Lu Yu**, *U. of Wisconsin, Milwaukee*
Author: **Hong Ren**, *U. of Wisconsin, Milwaukee*

This study aims to develop a model for female expatriate work adjustment from the identity conflict perspective. We study female expatriates' adjustment processes in the work domain from the identity conflict perspective. Namely, we categorize female expatriates' identities in the work domain into gender identity and a work-related role identity cluster and propose that when gender identity is salient, unsupportive national and organizational cultures will lead to gender-work role identity conflict and eventually result in maladjustment in the work domain. We first suggest that female expatriates' work role identities can form a cluster of expatriate roles, managerial roles, and occupational role identities. We further theorize how female expatriates' gender role identity and work-related role identity cluster interact to influence work adjustment. Second, we explore two contingency factors—host organizational culture and host national culture—and explain how they influence the interaction between female expatriates' gender and work-related role identities. Finally, we introduce the concept of gender-work role identity conflict and theorize how it serves as the underlying mechanism linking female expatriate identity patterns and work adjustment.

COVID and Employee Well-Being

Digital Session Chair: **Edna Rabenu**, *Netanya Academic College*

HR: Back to routine after the Coronavirus pandemic lockdown- A proposal from a psychological perspective

Author: **Edna Rabenu**, *Netanya Academic College*

Author: **Aharon Tziner**, *Peres Academic Center & Netanya Academic College*

Scholars are working on models that will assist decision-makers to reach informed decisions about the new future routine deriving from the Corona pandemic. Unfortunately, the models suggested so far do not adequately take into account psychological considerations. Accordingly, we assert that it is imperative to integrate psychological, social, and related costs into these models. Moreover, we believe that there is a need for strategic HR initiatives that might assist organizations get 'back to business' as soon as possible in order to decrease potential burnout of employees. With these sentiments in mind, this article, which first delves in more depth into the present-day psychological difficulties of COVID-19 and the world of work, offers a functional, theory-based proposal for the new routine that, with due consideration of workers' medical considerations, underscores the psychological costs of lockdown.

HR: Exhausted by Social Distancing at Work: Understanding the Effects of COVID-19 Pandemic in Workgroups

Author: **Farid Jahantab**, *Pennsylvania State U., Worthington-Scranton*

Author: **Smriti Anand**, *Illinois Institute of Technology Stuart School of Business*

Author: **Prajya Rakshit Vidyarthi**, *U. of Texas at El Paso*

In the new post COVID-19 work order, we propose a multi-level model of how individual level social distancing interacts with workgroup level socio-structural support to influence employee exhaustion and performance. Drawing upon job demands-resources (JD-R) theory, we assert that workplace social distancing presents new job demands that emotionally exhaust employees and hinder their task and change-oriented performance. We further assert that job resources in the form of workgroup task interdependence and support for innovation mitigate these negative effects of social distancing. Per our expectations, multi-level modeling using time-lagged multi-source data from 231 employees and 34 managers revealed a significant relationship between social distancing and employee performance via emotional exhaustion. Further, the positive relationship between social distancing and emotional exhaustion was attenuated by workgroup task interdependence and support for innovation. Finally, moderated mediation path analyses showed that the indirect negative effect of social distancing on employee performance was weaker in workgroups with high task interdependence and high support for innovation.

HR: How Employers' Handling of COVID-19 Influences Perceptions of Hypocrisy and Psychological Withdrawal

Author: **Pamela Gu**, *U. of Wisconsin, Madison*

Author: **Mary Triana**, *Owen Graduate School of Management Vanderbilt U.*

Author: **Seo-Young Byun**, *Ball State U.*

Author: **Tanja Rabl**, *Technische U. Kaiserslautern*

The COVID-19 pandemic has created unimaginable death tolls globally, and handling the pandemic has resulted in challenges for countries and companies alike. The present study measures how well employees believe their employers handled the COVID-19 pandemic as well as perceptions of organizational hypocrisy and employee psychological withdrawal. We propose and find that perceived organizational support influences the relationship between how well an employer handled COVID-19 and employees' psychological withdrawal from their jobs, though we do not find support for the direct effect of how an organization handled the COVID-19 pandemic on employee psychological withdrawal. Moreover, we find that perceptions of organizational hypocrisy serve as a mechanism that transmits the effects of how employers handled COVID-19 to employee psychological withdrawal. To empirically test our hypotheses, we conducted two field surveys of employees, resulting in 984 observations across the two samples. The results were generally supportive of our hypotheses and shed light on how handling the COVID-19 pandemic has influenced employees and what organizations may learn from this to better handle future crises.

HR: Alleviating Pandemic Panic: The Role of Organizations in Reducing Job Insecurity and COVID-19 Fear

Author: **Julia Stevenson-Street**, *Purdue U., West Lafayette*

Author: **Catherine Kleshinski**, *Indiana U. - Kelley School of Business*

Author: **Brian R. Dineen**, *Purdue U.*

The Coronavirus (COVID-19) pandemic has sent shockwaves of fear around the globe. In particular, with the unprecedented and long-term health impact, not to mention the number of layoffs and deaths, both job- and health-related fears have dominated employees' lives. Past research suggests that individuals begin to adapt to fear after a negative shock or experience, and that certain signals in their environment can facilitate this adaptation process. We integrate hedonic adaptation and signaling theories to hypothesize that stable interactional justice from the organization and employee-directed corporate social responsibility (CSR-E) will accentuate the downward trajectories of employees' job insecurity and COVID-19 fear. To test our predictions, we conducted a five-wave biweekly study of employees (N = 365) across a range of industries during a 10-week period in which the majority of U.S. states implemented stay-at-home orders (April 24-July 7, 2020). Results of growth curve analyses using random coefficient modeling revealed that job insecurity and COVID-19 fear decreased over time, but only for employees whose organization exhibited higher levels of organizational interactional justice stability and CSR-E, respectively. Our findings highlight unique insights into the role organizations can play in facilitating employee adaptation to stressors not only during the COVID-19 pandemic, but also in the face of other shocks and crises.

HR: Effect of Fear of Pandemic Infection on Employee Psychological Wellbeing:

Author: **Zaheer Abbas**, *Aix-Marseille Graduate School of Management – IAE, France*

Author: **Carolina Serrano Archimi**, *Aix-Marseille Graduate School of Management – IAE, France*

In this paper, we studied the impact of fear of pandemic (COVID-19) on employee psychological wellbeing. We hypothesized that the direct relationship between these two variables was mediated by rumination and moderated by employee job embeddedness and perceived organizational support. To test this moderated-mediation model, we collected the study data from 307 respondents working in Pakistan's banking and healthcare organizations. We used structural equation modelling and Process MACRO for analysis of the data. The study results confirmed that pandemic fear had a significant adverse effect on employees' psychological well-being. Further, this relationship was mediated by employee rumination and moderated by perceived organizational support, as hypothesized. However, contrary to our initial hypothesis, and previous research findings of a recent study, the conditional indirect effect of the organizational embeddedness positively affected employee psychological wellbeing. The current study significantly contributed to job embeddedness theory which affirms that the job embeddedness provides resources that help improve employee well-being. Finally, the paper presents the practical implications, limitation and future research directions.

Unethical but Prosocial Behavior

Digital Session Chair: **Alyssa Birnbaum**, -

OB: The Psychological Mediators Between Abusive Supervision and Unethical Pro-Organizational Behavior

Author: **Alyssa Birnbaum**, -
Author: **Christopher Chow**, *Claremont Graduate U.*
Author: **Stephen Gilliland**, *Claremont Graduate U.*

To understand why employees commit unethical pro-organizational behavior (UPB), research often focuses on social exchange and organizational identification. This research examines why employees who work under abusive supervisors still conduct UPB, even though there are few reasons to reciprocate by acting in ways that benefit the organization when their supervisors treat them poorly. Through two studies, we examine the positive relationship between abusive supervision and UPB, and explore three potential mediators: organizational identification, moral decoupling, and fear of retribution. In Study 1, we found support that abusive supervision is positively related to UPB, but organizational identification did not mediate the relationship. However, when we included all measures in Study 2, we found support for two mediators: organizational identification and moral decoupling mediations. We discuss theoretical implications and methodological challenges of studying low frequency abusive behaviors.

Paper is Available to Meeting Registrants Only.

OB: The contaminating effect of social capital: How upper-class networks increase unethical behavior

Author: **Siyu Yu**, *New York U.*
Author: **Jiyin Cao**, *Stony Brook U.-State U. of New York*
Author: **Aharon Cohen Mohliver**, *London Business School*
Author: **Adam Galinsky**, *Columbia U.*

Having friends in high places is often considered necessary to achieve success. Indeed, connections with upper-class individuals has been identified as a key component of social capital. Despite the tangible benefits upper-class network contacts can offer, we find that these networks have a dark side: the increased potential for unethical behavior, over and above one's own social class. We propose that because upper-class individuals are less constrained by social norms, individuals with many upper-class contacts will perceive their network as having looser social norms. As a result, individuals with upper-class network ties will view morality as more relative and will be more likely to engage in unethical behavior. To test our core hypothesis that having upper-class contacts increases unethical behavior, we conducted five multi-method (archival, field, quasi-experimental, and experimental) studies involving a range of samples (CEOs, nationally representative adults, student roommates) in multiple cultures. This research takes a property of networks (its class composition), links it to perceptions of that network (the perceived norm looseness of one's network contacts) and connects it to a psychological mindset (moral relativism) that ultimately affects unethical behavior. Our findings show that the benefits of social capital also carry a moral cost.

OB: Do for My Job! A Moderated Mediation Model of Responsible Leadership and Unethical Pro-job Behavior

Author: **HUA HU**, *School of Economics and Management Tsinghua U.*
Author: **Robin Mengxi Yang**, *School of Economics and Management, U. of Chinese Academy of Sciences*
Author: **Yang Ouyang**, *The School of Economics and Management, Tsinghua U.*
Author: **Yan Li**, *School of Government, Beijing Normal U.*

Unethical pro-job behavior, as a form of self-externalization, has been intriguing increasingly scholars' interest. Employees tend to engage in unethical pro-job behaviors that strengthen their bonds with jobs. This study examined the antecedent of unethical pro-job behaviors from the perspective of leadership. 252 supervisor-subordinate dyads data conducted in four foreign-owned enterprises in the east of China showed that responsible leadership negatively affects the employee's unethical pro-job behavior through the mediation effect of moral disengagement; leader identification positively moderates the negative relationship between responsible leadership and moral disengagement; furthermore, the indirect effect of responsible leadership on unethical pro-job behavior through moral disengagement was positively moderated by leader identification. This study discusses theoretical and practical implications.

Participant: **Ezra Zuckerman**, *Massachusetts Institute of Technology*
Participant: **Brad Peterson**, *Mayer Brown LLP*

Cooperation within and across organizations is key to organizational and managerial performance. Starting with Granovetter (1985) scholars in management, sociology and economics have shown that social networks can be used as a governance mechanism to facilitate cooperation. These scholars attributed the network effect on cooperation to social networks' ability to facilitate trust, monitoring and the distribution of reputation-relevant information about past performance. More recent work on cooperation has emphasized two core considerations: First, the importance of shared norms and culture for successful cooperation, and second the underappreciated role formal rules play in scaffolding cooperation and leveraging these forces. These advances together with network scholars' long-standing insight that network structure can both shape actors' culture and norms, and be shaped by them, suggest many new avenues for research into network governance of cooperation. To further advance our understanding of network governance, this symposium brings together scholars of networks, contracts, norms, and culture to explore the ways that rules, norms, and culture can support network governed cooperation, and help managers facilitate cooperation within and across organizations.

Panelist: **Tanusree Jain**, *Trinity College School of Business*
Panelist: **Bryant A. Hudson**, *IÉSEG School of Management*
Panelist: **Giuseppe Delmestri**, *WU Vienna U. of Economics and Business*

The climate emergency – “a situation in which urgent action is required to reduce or halt climate change and avoid entirely irreversible environmental damage resulting from it” (Oxford University Press, 2019) – has been described by many, including scientists, politicians, and increasingly also business leaders, as of one the biggest threats facing humanity today (Ripple et al., 2019). Radical actions to counter this emergency are required on all fronts. Yet, such organizational and institutional efforts have been slow to emerge, often given a fear of negative social evaluations of such actions from salient stakeholder groups (Slawinski, et al., 2017). As such, we contend that scholars of social evaluations (Bitektine et al., 2020; Haack & Sieweke, 2020; Roulet, 2020) focusing on topics around legitimacy, reputation, or stigma (Devers et al., 2009), are well positioned to question, examine, and provide potential solutions for some of the challenges organizational and institutional actors will face when engaging to battle the climate emergency. To reflect on and discuss how scholars of social evaluations can contribute to the study of tackling the climate emergency, we have organized a panel symposium featuring leading organizational theorists interested in both social evaluations and climate-related issues. Next to a lively debate, it is our ambition to identify promising avenues for future research in this space as well as ask how we can bring both theory and practice closer together to generate impact.

Moderator: **Joep Cornelissen**, *Erasmus U. Rotterdam*

Finalist for the OMT Division Best Symposium Award

The panel symposium seeks to foster dialogues on the tensions that emerge in academic-practitioner relationships, as well as the practices through which organization and management scholars can respond to them. It does so by bringing together an esteemed panel of expert scholars who have provided major contributions to our understanding of academic-practitioner relationships, tensions, and responses to them. The aim of facilitating interactions between these panelists is to create awareness of the types of tensions that emerge in academic-practitioner relationships, and deepen understanding of the types of practices through which organization and management scholars can respond to these tensions.

Panelist: **Sandra A. Waddock**, *Boston College*
Panelist: **Dara Kelly**, *Simon Fraser U.*
Facilitator: **Kenneth Jørgensen**, *Malmö U.*

This PDW aims to understand the planetary crisis not just as environmental problems like deforestation, carbon emissions, global heating or melting glaciers, but as the fundamental nature of our relationship with the planet that sustains us and the way we theorize these relations in our field. In the era of the Anthropocene, where human activity is changing the functioning of the earth system (Crutzen, 2006; Steffen, Crutzen, & McNeill, 2007), it becomes imperative to interrogate the epistemological and ontological basis of the knowledge that is deployed to understand both the problems of the planetary crisis and their proposed solutions. The Gaia hypothesis proposes that all organisms on Earth are interconnected and part of a single and self-regulating complex system that sustains the conditions for life on the planet (Lovelock, 1972; Lovelock & Margulis, 1974). While it might seem a radical and novel concept in Western philosophy, the notion of Earth as a living being, inseparable from human and nonhuman life, is central to Indigenous philosophies and cosmologies that predate Greek mythology by many thousands of years (Te Ahukaramu, 2005). The PDW will discuss these profoundly different worldviews and knowledge systems and explore possibilities of developing a more Earth-centric perspective in our research through collective reflection on the modalities through which Indigenous worldviews could inform our theories and methods. Such a decolonial imagination can generate new insights into understanding the ecological crisis while challenging the anthropomorphic biases and the economism that dominates our field, through a respectful engagement with Indigenous worldviews.

Perspectives on Corporate Social Responsibility

Digital Session Chair: **Ei Sandi Nwe**, *Purdue U., West Lafayette*

STR: CSR-enhancing Acquisitions: Investigating the Role of CSR in Corporate Strategy

Author: **Ei Sandi Nwe**, *Purdue U., West Lafayette*

Author: **Umit Ozmel**, *Purdue U., West Lafayette*

In this paper, we explore and investigate whether and to what extent CSR-enhancing acquisitions, defined as acquisitions where targets have a better corporate social responsibility (CSR) record than the acquirers, create value for acquirers' shareholders. Drawing on the social capital perspective on CSR and stakeholder theory, CSR-enhancing acquisitions can be seen as a strategy pursued by firms to accumulate social capital and improve their CSR performance. Using a sample of acquisitions involving publicly traded firms the period of 1991-2013, our study shows that the announcements of the CSR-enhancing acquisitions yield higher cumulative abnormal returns (CAR) for acquiring firms' shareholders, compared to those of non CSR-enhancing acquisitions. On one hand, the positive effect of CSR-enhancing acquisition on the abnormal returns becomes more salient (i) during economic downturns and (ii) in the presence of low information asymmetry. On the other hand, because of expectancy violation and inconsistency, the effect of CSR-enhancing acquisitions on the announcement returns is attenuated when acquirers have a recent involvement in controversial issues.

STR: Family Firms and Compliance with Mandatory CSR: Evidence from a Natural Experiment

Author: **Nupur Pavan Bang**, *Indian School of Business*

Author: **Yashodhara Basuthakur**, *Texas A&M U., Mays Business School*

Author: **Raveendra Chittoor**, *U. of Victoria*

Author: **Ramachandran Kavil**, *Indian School of Business*

Our study leverages a natural experiment setting based on the mandatory corporate social responsibility (CSR) regulation in India to address whether and how CSR spending is influenced by ownership by a family and the heterogeneity in family ownership. Using a longitudinal panel dataset of 1,102 listed firms in India, our study finds that, driven by the motivation to pursue legitimacy-seeking activities and build family legacy, family firms comply better with the CSR regulation. The compliance is further improved for firms belonging to family business groups. We further test our theoretical mechanism by examining the modes of CSR implementation and find that family business group firms and legacy firms tend to use substantive (direct or in-house) modes of implementation. Given the nature of our research setting where the CSR regulation as well as what qualifies for CSR is clearly defined and externally imposed, our study is able to overcome some of the limitations of prior research viz., endogeneity concerns, and inconsistencies in the operationalization of CSR.

STR: Temporal flexibility in the workplace and women's career progression

Author: **Luisa Gagliardi**, *Department of Management and Technology, Bocconi U.*

Author: **Myriam Mariani**, *Bocconi U.*

Author: **Stefano Breschi**, *U. Bocconi Milano*

Author: **Dirk Hovy**, *Bocconi U.*

This study analyzes whether the value placed by employers on temporal flexibility explains the gender gap in career progression. We use data for firms acquired by multinational companies, match them with employees' records from LinkedIn and distinguish between same- and different-time-zone acquisitions. Differences in time zone between acquirer and target firms increase the demand for and value of employees' temporal flexibility, which puts women at a disadvantage. We find that women are 1.7% less likely than men to be promoted in cross time zone acquisitions. The career progression gap rises up to 7.3% for meaningful time zones.

Paper is NOT Available. Please contact the author(s).

STR: The influence of target CSR performance on acquirer acquisition announcement returns

Author: **Julian Gabler**, *HSG U. of St. Gallen*

With this study, we examine the influence of a target's CSR performance on acquirer announcement returns. We posit that when targeting a company with superior CSR status, acquirers face lower information asymmetries and less opportunistic behavior during the acquisition process as well as post-acquisition access to valuable resources, resulting in a more positive investor reaction and thus higher acquirer announcement returns. We furthermore argue for the acquirer's own CSR performance being a contingency factor moderating the target CSR-acquirer performance relationship. We find empirical support for our hypotheses in a sample of 232 acquisitions announced between 2003 and 2013. Our work adds to research on acquisition performance, specifically how target characteristics influence acquisition outcomes.

STR: Employee Dilemmas From Competing Organizational Goals: Insights from Emergency Medical Services   

Author: **Timothy Gubler**, *Brigham Young U.*
Author: **Haibo Liu**, *U. of California, Riverside*
Author: **Alexandru Roman**, *CSUSB*

The literature on multiple-goal organizations highlights the unique challenge of simultaneously meeting potentially conflicting profit and prosocial objectives. We study individual level performance effects on the delivery of a prosocial service in the presence of strong organization-level financial incentives. We examine these effects within the context of Emergency Medical Service (EMS) crews responding to 9-1-1 calls. Using data from 31 states reported to the US National Emergency Medical Services Information System, we find that even in the absence of direct individual benefits, EMS crews are responsive to the financial sustainability objective of their agencies by providing higher levels of service to patients with higher ability to pay. Specifically, we find that both private insurance and Medicare patients receive more procedures (4.6% and 1.5%) and have longer transport times (5.1% and 3.9%) than Medicaid patients controlling for time, call, patient, and condition characteristics. These differences reduce with call urgency and for agencies with a higher proportion of high ability to pay patients in the recent past but increase on busy days. The robustness of our findings derives from the quasi-random assignment of insurance across EMS units' runs and the fixed effects specification in our models and is supported by several robustness checks including instrumental variable analyses.

STR: How Organizational-Relationship-Based Political Connection Influences Debt Financing

Author: **Nan Zhang**, *School of Management, Xi'an Jiaotong U.*
Author: **Qiao-zhuan Liang**, *School of Management, Xi'an Jiaotong U.*
Author: **Huiying Li**, *School of management, Northwestern Polytechnical U.*
Author: **Xiao Wang**, *Xi'an Jiaotong-Liverpool U.*

In emerging economies, political connections may play an important role in acquisition of financial resources, which have become a focus of academic research. However, the existing literatures of political connection's effect on debt financing mainly focus on the interpersonal-relationship-based political connection—relatively less legitimate and thus fragile especially under the circumstance of anti-corruption campaigns in China, neglecting the organizational-relationship-based political connection (established by corporate party organization) that comparatively have more legitimacy and stability. This study is among the early efforts on investigating how organizational-relationship-based political connection influence private firms' debt financing in China. With 11061 firm-year observations of China's A-shared listed private firms between 2010 and 2017, we found that organizational-relationship-based political connection has a significantly positive effect on private firms' debt financing. Moreover, this effect is weakened in regions with better developed institutional environments, whereas strengthened when the firms are supported by the industrial policy. This study advances our understanding of the connotation of political connections and provides a new perspective for investigating determinants of private firms' debt financing in the context of an emerging economy.

STR: ESG Performance and Labor Productivity: Exploring whether and when ESG affects firm performance 

Author: **Nathan Barrymore**, *U. of Maryland R.H. Smith School of Business*
Author: **Rachelle Sampson**, *U. of Maryland*

We explore whether positive ESG (environment, social, and governance) performance causes changes in labor productivity. We use a random coefficient model to estimate the distribution of the ESG-labor productivity relationship across a large sample of US and European firms. The mean effect of ESG performance on labor productivity is statistically significant and positive in some sectors and significant and negative in others, while the variance of the relationship is always larger than the mean effect and statistically and economically significant. We find this variance is greater within than across sectors, suggesting significant firm-level variation in the returns to ESG. To examine the causal effect of revealing ESG performance, we examine the 2013 UK regulation mandating standardized greenhouse gas emissions reporting. We find that treated firms with better-than-expected ESG performance experienced an increase in labor productivity post-regulation, while treated firms with worse than expected ESG performance saw decreased labor productivity, relative to both pre-treatment trends and a control group. The combination of the correlational and regulatory studies suggests that positive ESG performance positively impacts labor productivity when institutional structures reveal ESG information to stakeholders but has both positive and negative correlations with labor productivity in a population of large firms.

STR: Is Labor Productivity More Sensitive to Firm Philanthropy towards Welfare Shocks or Chronic Needs? 

Author: **Luis Ballesteros**, *George Washington U.*
Author: **Vontrese Deeds Pamphile**, *George Washington U.*

Do increases in labor productivity that follow from corporate philanthropy depend on the societal causes to which firms donate? Integrating insights from psychological research showing that individuals respond more charitably towards beneficiaries who experience a welfare loss (e.g., those afflicted by disasters) than beneficiaries in a chronic state of low welfare (e.g., those living in poverty), we develop and test the argument that employees exert more effort at work when their firm's philanthropy targets welfare shocks than when philanthropy targets chronic conditions. Using longitudinal data on corporate philanthropy from large U.S. companies, we present identification strategies that consistently support our argument. Our estimates suggest that, on average, a 6.63 percent greater increase in marginal labor productivity occurs when companies donate towards welfare loss after sudden shocks—such as epidemics, natural disasters, and terrorist attacks—vis-à-vis donations to chronic conditions like poverty and homelessness. This correlation survives accounting for a vector of joint fixed effects and time-varying controls as well as a battery of robustness checks. The findings suggest that the targets of philanthropic donations are important for the ways in which corporate giving acts as a non-pecuniary incentive.

The Hidden Agency Costs

Digital Session Chair: **Jiyeon Kang**, *Pennsylvania State U.*

STR: Sinners or Saints? The Career Prospects Awaiting Directors Who Are Sponsored by Activist Hedge Funds 

Author: **Jiyeon Kang**, *Pennsylvania State U.*
Author: **Mark R. DesJardine**, *Penn State Smeal College of Business*
Author: **Donald C. Hambrick**, *Pennsylvania State U.*

We examine the career outcomes awaiting individuals who are sponsored as corporate directors by activist hedge funds (AHFs), a growing population in American business. According to the behavioral theory of corporate governance, which emphasizes the importance of social cohesion and rapport among business elites, AHF-sponsored directors will be penalized for violating these norms. According to agency theory, however, which emphasizes shareholder primacy, AHF-sponsored directors will be rewarded for their visible commitment to shareholder wealth-maximization. We test these competing theories on a sample of AHF-sponsored directors and a matched sample (generated by coarsened exact matching) of conventionally nominated and elected directors. We find partial support for both theories: AHF-sponsored directors (relative to conventional directors) subsequently attain more new directorships, as agency theory predicts, but in much smaller companies, as behavioral theory predicts. We discuss the practical and theoretical implications, as well as future research opportunities.

STR: The High Cost of Cheap Talk: How Disingenuous Ethical Language Can Reflect Agency Costs. 

Author: **Didier Cossin**, *International Institute for Management Development - IMD*
Author: **Stephen Smulowitz**, *International Institute for Management Development - IMD*
Author: **Abraham Lu**, *International Institute for Management Development - IMD*

Does the ethical language that managers use matter? In contrast to previous research arguing that “talk is cheap,” we predict that managers could be opportunistically lying to stakeholders about their ethical intentions, in order to reduce pressure for corporate social responsibility (CSR). That is, disingenuous ethical communication from managers can be indicative of agency costs. We test this prediction by inductively creating a dictionary of cheap talk words using a matched sample of Code of Ethics from S&P 1500 firms committing a large restatement and non-restating firms. We show that firms increasing use of cheap talk words in their annual reports (10-Ks) is associated with decreasing CSR, but that classic agency theory prescriptions (i.e., monitoring and incentives) can reduce this effect. That is, the negative relation between cheap talk and CSR is reduced by internal monitoring (i.e., board independence), external monitoring (i.e., analyst coverage) and incentives (i.e., unexercisable option pay). We also show that exercisable option pay can actually make agency problems worse, by strengthening the negative relation between cheap talk and CSR. We contribute to the literature on the importance of managerial communication by predicting and showing the high cost of disingenuous ethical language.

STR: Omitted Agency costs in Preemptive Voluntary CEO Departures

Author: **Shuo Yang**, *Kent State U.*
Author: **Asli Musaoglu Arikan**, *Kent State U.*
Author: **Ilgaz Tahir Arikan**, *Kent State U.*

Much like the Newton’s first law of physics, the first law of the agency theory is to assume that CEOs are likely to entrench themselves unless a force acts to remove or recruit them. Given that the principal-agent relationship generates conflicts of interest between the CEOs and the shareholders, corporate governance focuses on balancing retention and termination and the boards of directors (BODs) time their actions and inactions. This paper theorizes that the CEOs are not necessarily waiting for the BODs to make a move. Increased likelihood of preemptive voluntary departures is a potentially value-destroying implication of BODs with a history of CEO dismissals. Furthermore, we argue that CEOs actively manage their careers and time their exits from their current firms based on their own relative (compared to other CEOs) past performance, firm’s relative current performance, their expectations about the BODs likelihood of terminating their employment, CEO-labor market conditions, the riskiness of the stability in firm and industry performances. To this end, we empirically predict the likelihood of CEO preemptive voluntary departure and its value-destroying implications for firms. Main findings suggest that the BODs with a history of executive dismissals increase the likelihood of preemptive voluntary CEO departures. These departures decrease firm value due to unrealized CEO career performance.

STR: Control and Trust as Facilitators of Performance and Satisfaction in Managing Virtual Team Members

Author: **Valentin Pfeffer**, *EBS U. für Wirtschaft und Recht*

In this article, we examined how control and trust used by virtual team managers to steer the members of virtual teams affect the individual performance and job satisfaction of the virtual team members. We distinguished between formal control and informal control as well as between cognition-based trust and affect-based trust. Answering this research question is important because research has not yet explained how managers of virtual teams can use formal and informal control as well as cognition- and affect-based trust to steer virtual teams. We collected survey data from 308 members of virtual teams in for-profit companies, which had not been done with this set of variables before. We used PLS-SEM to test our hypotheses. We found slight support for a positive effect of formal control on performance. Additionally, cognition-based trust was positively associated with performance while affect-based trust was positively associated with satisfaction. Our findings contribute to the research on virtual teams by providing a more differentiated view on control and trust in this setting. Furthermore, this study contributes to our understanding of the control-trust relationship on the interpersonal level and supports the notion that control can be beneficial for developing trust which was suggested in previous research.

Time Horizons and Risk-taking

Digital Session Chair: **Liang Wen**, *U. Of Sydney*

STR: **Media influence and time horizons of strategic change**

Author: **Liang Wen**, *U. Of Sydney*
Author: **Jingyu Yang**, *U. Of Sydney*

This study draws on the behavioral theory of the firm (BTOF) to understand why and how different media coverage, conceptualized as the “soft” performance feedback, can drive firms’ search behaviors differently, leading them to make strategic changes in different domains. By decomposing multifaceted strategic changes into short versus long-term domain, we posit that negative media coverage fosters firms to conduct a problemistic search, which increases both the short- and long-term strategic changes in the firms, though at a different degree; while positive media coverage encourages firms to pursue a slack-driven search, which increases the firms’ long-term strategic changes aiming for future gains but decreases their short-term strategic changes. We find support for the hypotheses by analyzing a sample of 8,499 firm-year observations covering 2,452 listed companies in China from 2012 to 2017. Both theoretical and practical implications are discussed.

Paper is Available to Meeting Registrants Only.

STR: **The influence of time, contracts, and audience on investment decisions in Major League Baseball**

Author: **Jay (Jinwon) Park**, *U. of California, Irvine*
Author: **Philip Bromiley**, *U. of California, Irvine*
Author: **Kyungmook Lee**, *Seoul National U.*

Attainment discrepancy (AD) studies emphasize situations where management believes options exist to raise performance over aspirations, or where low performance makes survival the relevant aspiration level. Sometimes organizations face performance sufficiently below aspirations that achieving aspirations in the time available becomes unreasonable, even though survival is not at risk. We develop hypotheses regarding the influence of negative AD on investment decisions in such situations, and how time pressures and alternative forms of performance pressure may moderate the influence of negative AD on investment. Using Major League Baseball game data from 2007 to 2016 and measuring investment by use of rookies yields the following results. First, negative AD increases investment. Second, the effect of negative AD on investment increases as time remaining to raise performance above aspirations declines. Third, the final year of a manager’s contract (a second indicator of time remaining to improve performance) and home game attendance (an alternative indicator of performance pressure) diminish the influence of negative discrepancy on investment.

Paper is Available to Meeting Registrants Only.

STR: **License to Fire? Unemployment Insurance and the Moral Cost of Layoffs**

Author: **Dongil Daniel Keum**, *Columbia Business School*
Author: **Stephan Meier**, *Columbia Business School*

Using staggered expansions of unemployment insurance (UI) benefits, this study examines moral costs as a constraint on managers’ layoff decisions and more generally, firm resource adjustment. UI not only reduces the burden for the unemployed but also the moral cost of layoffs to their managers. We show that expanding UI leads to larger layoffs in firms experiencing negative economic shocks. The licensing effects are stronger for weakly governed or financially unconstrained firms, whose managers have greater discretion to avoid moral cost and keep marginal workers on their payroll, and for non-Republican or internally promoted CEOs, who show stronger prosocial concerns and lay off fewer workers despite low performance. This study presents moral cost as a novel microeconomic channel through which UI affects layoff decisions, which can compromise its effectiveness as a social insurance program and an automatic stabilizer.

Paper is Available to Meeting Registrants Only.

STR: **The Non-Linear Effect of Strategic Dissent on Firm Performance**

Author: **Sicheng Luo**, *Business School, Sun Yat-Sen U.*
Author: **Hai-Trung Nguyen**, *Institute of International Business, National Cheng Kung U.*
Author: **Hao-Chieh Lin**, *National Sun Yat-Sen U.*

Previous research has found a mixed and ambiguous relationship between top management team (TMT) and firm performance if strategic dissent occurs within the team. This study examines how such differences in managerial cognitions both boost and constrain organizational success by using an integrated theoretical lens – the information-social categorization perspective. Moreover, a possible breakthrough resides in the reality that the impact of TMT strategic dissent varies with conditions under which TMTs operate their business. Thus, we provide a more nuanced understanding of contextual factors by identifying environmental dynamism and munificence. Our findings based on multisource data of 147 Taiwanese show that TMT strategic dissent exhibits a U-shaped effect on firm performance. We also reveal that firms more benefit from TMT strategic dissent when their TMTs confront with low level of dynamic environment and high level of munificent environment, respectively. The results contribute to upper echelons literature by exploring how a strategically diverse TMT affects firm performance based on different environments.

This symposium is designed to advance research on cultural clash, the dissonant interactions of members from separate cultures, within and beyond organizations. The literature has long established that culture clash degrades organizational performance. The papers in this symposium prod this assumption, examining its mechanisms and scope conditions, establishing when and how culture clash occurs. The first presentation examines how status disagreement emerges from diversity in collectivist orientation, undermining group productivity. The second presentation studies group assimilation and power asymmetries in a post-merger organization using computational linguistic analysis of email communication. The third presentation looks at culture clash among founding teams in start-ups, finding that founding teams with high interpersonal cultural diversity adopt industry-typical cultural scripts while founding teams with high intrapersonal cultural diversity cultivate distinctive cultures. Finally, the fourth presentation theorizes how extreme groups build strong cultural beliefs and attract new members by studying the proliferation of Covid-19 conspiracy theories on Twitter. Taken together, the papers in this symposium revisit old assumptions and theories of culture clash, updating them with innovative experiments, modern computational linguistic techniques, and novel data sets.

Organizer: **Norris F. Krueger**, *Entrepreneurship Northwest*
Participant: **Russ McBride**, *U. of California, Merced*

Calling all scholars of risky decision-making! It has been 100 years since Knight wrote his seminal book “Risk, Uncertainty, and Profit” and concluded that profit comes from “true” uncertainty, or unmeasurable and unquantifiable risk. Join us in recognizing our application of the Knightian model of uncertainty in management research.

The academic world has long welcomed Knight’s (1921) theory about how the entrepreneur, broadly defined, can make profit by their willingness to bear “true” uncertainty over time. Knight describes how this profit can take various forms, including economic and/or social impact. Exactly 100 years later, where do we stand in accounting for “unmeasurable and unquantifiable risk” in our research? The goal of this caucus is to take stock of Knight’s model of uncertainty in management research. The desired outcome of the caucus is to share knowledge about the application of Knight’s model, and to identify and address research questions arising from its application. This caucus relates to various ongoing Academy of Management topics of interest, specifically the nature of Knightian uncertainty, risky decision-making, and experimental research. The caucus ties to AoM’s 2021 Annual conference theme, “Bringing the Manager Back in Management” because Knightian uncertainty is experienced by the entrepreneur, a manager within an entrepreneurial context. Note that “unmeasurable and unquantifiable risk” is not limited to entrepreneurship—it is also present outside of entrepreneurship; therefore, the caucus is anticipated to appeal to a broad audience of management researchers within AoM’s membership.

Succession and Retention in Public Service Organizations

Digital Session Chair: **Breck Wightman**, *Indiana U., Bloomington*

PNP: **Outsiders in Executive Succession: Institutional, Industrial, or Sectoral?**

Author: **Breck Wightman**, *Indiana U., Bloomington*

An important consideration in the executive succession process is the successor's origin. Traditionally, this has been defined as the difference between being promoted from within the organization—an insider—versus being externally recruited and hired—an outsider. More recently, this approach has been challenged by scholars who instead point to industry experience as the identifying characteristic of an insider. Specific to public organizations, scholars have theorized that the fit between the publicness of the organization and the prior public sector work experience of the new manager is a key distinguishing factor of the insider/outsider distinction. Among these differing conceptualizations of outsiders, which matter most for organizational performance? Using the presidential hires of public, doctoral-granting institutions of higher education in the U.S. from 2010-2018, this paper tests three measures of outsiders—institutional, industrial, and sectoral—in the executive succession process and their effects on organizational performance. Findings provide some evidence that only sectoral outsiders have any meaningful (positive and significant) influence on performance. However, being an outsider by all three definitions is associated with a large drop in performance two years after hire.

PNP: **Succession Planning in Brazilian Public Organizations**

Author: **Nathalie Perret Gentil Dit Maillard**, *Faculty of Economics, Administration and Accounting - U. of São Paulo*
Author: **Joel Souza Dutra**, *U. of São Paulo (FEA/USP)*

To understand the advances in Succession Planning and its conditions in public administration, we established as the main purpose of this study analyze and to connect the stage of succession planning development within the HR Model adopted (operational or strategic). It is considered the assumption that there is a direct association between the development of HR model with the succession planning stage in organizations, in other words, the more strategic the HR practices, criteria, instruments and policies are the more advanced is the succession planning. It was decided to study the organizations of the Brazilian Development Association that gather the Development Finance Institutions in all country that follow as its guideline a Resolution for organizations to structure their succession planning. The research is a qualitative approach and two sequential studies were carried out to achieve the research objectives. As one of the results, the structured the HR practices are the more advanced is the succession planning and the more structured are the criteria used for the selection. It was also found that advances in this process, for example, although they do not adopt a fullness succession process, they have developed selection mechanisms that seek to minimize the risk of wrong choices and reserve a percentage of management positions to be filled by professionals from their internal staff.

PNP: **Talent Retention: An Empirical Examination of a 21st Century United States Department of Agriculture**

Author: **James Ellis Jordan**, *UMSL School of Business*
Author: **Ekin K. Pellegrini**, *U. of Missouri, St. Louis*

Federal organizations are experiencing challenges retaining talented employees. Thirty-one percent of government employees will be eligible to retire by 2022, and as a result, government organizations need to timely examine employee expectations related to talent retention. Semi-structured interviews were conducted with twenty-five Generation X and millennial federal government employees to gain an in-depth understanding of their perceptions on talent retention in the federal government context. Supplemental quantitative data were collected on leader-member exchange (LMX). Federal government employees identified seven categories pertinent to talent retention: career growth, communication, job resources, leadership, learning and development, organizational pride, workplace culture. Some of these drivers of talent retention have been studied in previous research, however this is the first study that empirically identify these variables in the government context. Findings also identify two novel drivers of talent retention; organizational pride and 360 communication. Results extend prior research by providing new information on how to improve the effectiveness of government organizations, specifically related to retention. Based on the study's findings, we offer seven novel practical implications for government organizations attempting to improve talent retention.

The objective of this Panel Symposium is to explore the challenges of engaging in consulting and research, with a goal of publishing in highly regarded academic journals. Part of the mission of the Academy of Management (AOM) is to ensure that our science-based knowledge is relevant and responsible, providing insights that make a valuable contribution to our society and its institutions. A core goal is to produce knowledge that is truly actionable—transcending purely scientific concerns and enabling organizations and their members to draw on these insights to make informed choices about practical problems and opportunities and to effectively implement solutions to these challenges. Consulting within organizations helps to uncover values for both research and practice – in essence, the foundation of the challenge of “bringing the manager back in management.” The panel will address a number of the challenges and opportunities in undertaking this dual effort of combining practice and scholarly research, including: • coping with the time pressures associated with consulting versus time of academic publication; • the challenge of capturing and disseminating data extracted from the field to both academics and practitioners; • the rigor-relevance debate in linking consulting and research; • our ongoing quest for actionable knowledge; • addressing critics from more traditional academic research methods; and • realizing the value of practitioner-scholar collaboration in our research.

Developmental relationships (e.g., mentorship and sponsorship) in the workplace are associated with a variety of positive outcomes, including better job performance and higher job satisfaction (Allen et al. 2004; Ghosh & Reio, 2013; Underhill, 2005). However, more research is necessary to identify how to best optimize these relationships (e.g., Bozer & Jones, 2018; Kammeyer-Mueller & Judge, 2008). The five papers in this symposium each take a different approach to studying developmental relationships with the ultimate goal of contributing to a greater understanding of 1) the challenges that seekers and providers face in these relationships and 2) how to best initiate and foster developmental relationships in the workplace. These papers address the exchange of various forms of critical workplace support including advocacy, access to networks, and developmental feedback, and discuss how both the seekers and providers in development relationships can influence the extent to which these relationships produce beneficial outcomes.

Because social network is seen as a form of capital, social network, and social capital research is often closely related. As a result, social network research has largely focused on the instrumental aspect of social networks, such as how it is related to access to information, promotion, and innovation. The purpose of this symposium is to go beyond this instrumental view and show-case four papers that investigate the non-instrumental implication of social networks. Specifically, the symposium discusses how network composition influences unethical behavior, how the nature of ties impacts cognitive capability (e.g. face memory), how psychological experiences of power and status lead to different brokerage strategies, and how homophily has different reputation implications for men and women. In addition, the symposium integrates both the intrapersonal (e.g., norm perception, face memory, the psychological experiences of power and status) and interpersonal processes (e.g., reputation) associated with social networks, whereas the previous literature has largely focused on the interpersonal processes (e.g., access to information and resources, trust, interpersonal perception).

Presenter: **Zhi Liu**, *Guanghua School of Management, Peking U.*

In modern organizations, work and workers are being monitored, tracked, and publicly scrutinized in new and diverse ways. Under the auspices of meritocracy, workers are increasingly ranked and compared—both with one another and against often unattainable performance standards. These conditions provide fertile ground for perfectionism among workers and leaders alike, which organizational scholars are increasingly recognizing as a critical part of many workers' experience. In this symposium we present four papers that explore the effects of perfectionism on workers' performance and wellbeing. Following the presentation, Brian Swider will lead a discussion on the challenge of perfectionism in the modern workplace and the opportunities for the future of scholarship on the topic. A particular feature of this symposium is its international composition, including researchers from Australia, China, England, and the United States.

MSR: **The Role of Consciousness in the Evolution of Business as an Agent of World Benefit**  

Author: **Chris Laszlo**, *Weatherhead School of Management, Case Western Reserve U.*
Author: **Ignacio Pavez**, *U. del Desarrollo*

The call of our times is no longer for businesses that produce goods (the “widgets” of neo-classical economics) to satisfy material consumption, irrespective of the harm done to society. It is for an entirely new form of economic organizing, whose purpose of existence is to create positive-impact value, defined as “increasing economic prosperity while contributing to a healthy regenerative environment and improving human wellbeing”. It is a call for business as an agent of world benefit. The proposed research explores the factors for bringing back into management a manager who is more self-aware and conscious of how his or her actions impact the world around them. In line with MSR’s mission, we are searching for drivers of pro-social and pro-environmental behavior in organizations along with individual behavior that is more empathetic, caring, and in service of creating a better world.

MSR: **The Wounded Healer: Feminist Leadership Nurtured by American Zen Buddhism**   

Author: **Tianyuan Yu**, *Mount Saint Vincent U.*

Within the field of gender and leadership studies there is a call for alternative theoretical and methodological innovations that would “enter uncharted territory” (Martin and Collinson, 2002: 255) and “navigate roads not yet taken” (Kark, 2004: 173). This study takes up the call by exploring gender and leadership in American Zen communities with a researcher-centered approach. I developed a Zen-informed feminist research methodology in the process of doing a field study at four major American Zen centers, three of which had been directly impacted by sex scandals of founding abbots. Based on research findings I propose a Zen-informed feminist leadership model in relation to my own emotional and spiritual transformation as a result of the research. The paper illustrates how a Zen-informed feminist research as well as Zen-informed feminist leadership can be healing, empowering and transformational.

MSR: **Sustainable HRM and Spiritual Leadership: conceptual analysis and research agenda**

Author: **Adriana Cristina Ferreira Caldana**, *U. of Sao Paulo (FEA-RP/USP)*
Author: **Nayele Macini**, *FEARP- FEARP - Faculdade de Economia, Administração e Contabilidade de Ribeirão*

The objective of this study was to verify the relationship between the dimensions of Spiritual Leadership, the functional and competitive dimensions of Human Resources and Organizational Sustainability. The Systematic Review method was used to systematize the available knowledge, performing the theoretical alignment between the topics and evaluating the types of research integrating these themes. It started from the proposition that there is a theoretical alignment between the dimensions of Spiritual Leadership and the competencies necessary for the management of sustainability. After preliminary analyses, 49 articles resulted, which were used in the content analysis. The literature was classified according to the codes determined in advance, where it was possible to verify the most recurrent dimensions of each thematic axis. A research agenda was presented. Finally, it was possible to verify that there is a lot of space for the development of more in-depth studies, which focus specifically on the relationship of these thematic axes.

MSR: **Meaningful moves: A meaning-based view of turnover intentions**  

Author: **Anirban Kar**, *Beedie School of Business Simon Fraser U.*
Author: **A R. Elangovan**, *U. of Victoria*
Author: **Sanaz Matinkoosha**, *Gustavson School of Business, U. of Victoria*
Author: **Richard Cotton**, *U. of Victoria*

Turnover is a major global concern with significant service and cost implications. Although inquiries have been made into the antecedents, dynamics, and consequences of turnover, there is a lack of fine-grained understanding of the psychological states that reflect the cumulative impact of different antecedents and immediately precede turnover intention. In our paper, we provide a brief overview of the turnover literature, probe the critical missing pieces, and develop a meaning-based view of turnover intention. We draw from the literature on meaning in the context of work, distinguish between meaning in work and meaning at work, and hypothesize about the relationships between high/low meaning in and at work on the type of turnover intention (quitting the organization and/or profession). We tested our hypotheses with data gathered from employees in the Adult Custody Division (ACD) of a provincial correctional system in Canada. Our analyses of the data (N=854) indicates support for the meaning-based view of turnover intentions, with meaning at work exhibiting strong predictive powers. This meaning-based view of turnover intention provides a richer and more nuanced understanding of turnover and offers employees, managers and leaders more tailored remedies.

Mistreatment and Spillover at Work

Digital Session Chair: **James J Lavelle**, *U. of Texas At Arlington*

OB: Customer Injustice and Service Employees' Responses: A Social Exchange Perspective

Author: **James J Lavelle**, *U. of Texas At Arlington*
Author: **Deborah Elizabeth Rupp**, *George Mason U.*
Author: **David Herda**, *Louisiana Tech U.*
Author: **Joohan Lee**, *U. of Texas At Arlington*
Author: **John Lauck**, *Louisiana Tech U.*

Recent research has uncovered the debilitating effect that customers' unfair treatment of service workers has for both employees and their employers. These studies have largely explained the effects of customer mistreatment through a conservation of resources (COR) theory lens, arguing that customer injustice depletes the regulatory resources of service employees, thereby impairing their well-being and ability to perform their job effectively. In our paper, we posit that the psychological process is more complex than this explication. That is, we argue that aspects of the employee-customer social exchange relationship must also be considered, and that such relational processes are critical above and beyond COR effects. After formulating our theoretical model, we offer time-lagged data from two studies of service workers supporting our hypotheses that customer injustice predicts employee turnover intentions (Study 1, N = 182) and citizenship behavior directed toward customers (Study 2, N = 337), and that these effects are mediated by perceived customer support and customer commitment, respectively, while controlling for COR effects. Incorporating insights from the customer service literature, we further demonstrate the role of display rule perceptions as a moderator of these sequential indirect effects.

OB: Understanding Deviance Spillover in Organizations

Author: **Caodie Peng**, *South China Normal U.*
Author: **Min-Hsuan Tu**, *U. at Buffalo, The State U. of New York*
Author: **Lin Wang**, *Sun Yat-Sen U.*

Drawing on moral disengagement theory, we developed and tested a dual-stage moderated mediation model to explore the spillover effect of workplace deviance as well as the boundary conditions of the spillover. A two-wave survey was conducted on 231 supervisor-subordinate dyads. Results showed that (a) employee deviance increased abusive supervision, which triggered supervisor-directed aggression; (b) supervisor's organizational embodiment strengthened the positive relationship between employee deviance and abusive supervision; (c) subordinate's perspective taking weakened the positive relationship between abusive supervision and supervisor-directed aggression; (d) the indirect effect of employee deviance on supervisor-directed aggression through abusive supervision is most pronounced when supervisor's organizational embodiment is high and subordinate's perspective taking is low. The findings suggest how organizational embodiment and perspective taking may influence the spillover effect among different forms of workplace deviance. Implications for how to handle the spillover effect of workplace deviance are also discussed. Key words: employee deviance; abusive supervision; organizational embodiment; perspective taking; spillover effect

OB: Perpetrated Incivility: Individual vs Contextual Antecedents – A Reflective Viewpoint

Author: **Yariv Itzkovich**, *Kinneret Academic College*
Author: **Ana Aleksic**, *Faculty of Economics & Business, U. of Zagreb*

The goals of the current study are twofold. Its first goal was to provide further insight into the primary antecedents of instigated workplace incivility. The current study shows whether context or personality explains better perpetration incivility. Its second goal was to construct and validate a new reflective measurement scale for measuring incivility based on the target's emotional experience rather than on the uncivil act's frequency. Data were analyzed using Partial Least Squares Structural Equation Modeling, which distinguishes between formative and reflective measurement scales and evaluates those, relying on robust measurement theory. Results indicated that both moral disengagement and the contextual variables could predict incivility perpetration. Yet it was found that contextual antecedents predicted instigated incivility better. Additionally, a new reflective scale – the Reflective Workplace Incivility Scale (RWIS) for measuring perceived incivility, was constructed and validated. The first contribution of the current article is integrating contextual and individual drivers into one model, contributing to understanding the precursors of instigated incivility. Such an integrative viewpoint in incivility research is overlooked, although its importance to a comprehensive understanding of incivility. The second contribution is related to the measurement of experienced workplace incivility. Studies thus far, have relied mostly on formative measures to capture the different aspects of incivility. Although these measures facilitated empirical research on workplace incivility, they were centred on the frequency of the uncivil incidents and less on the individual experience, which is the essence of the construct. All in all, incivility research from different viewpoints allows us to mitigate workplace exclusion and enhance inclusion in workplaces.

Paper is Available to Meeting Registrants Only.

OB: Interpersonal Mistreatments at Workplace: The Buffering Role of Psychological Capital

Author: **Inamul Haq**, *Monash U., Malaysia*
Author: **Usman Raja**, *Brock U.*
Author: **Muhammad Umer Azeem**, *U. of Management and Technology, Lahore, Pakistan*
Author: **Asma Shakil**, *Riphah International U.*

We explore how negative interpersonal behaviors such as workplace incivility and ostracism impact employee performance. We suggest that although these behaviors are considered indirect and less explicit as compared to bullying and harassment, they can have a highly damaging impact on employee performance. Incivility and ostracism can cause anxiety or emotional distress among the victims, which in turn may lead to reduced performance. In addition, we suggest that Psychological Capital (PsyCap) as a personal resource can help mitigate the negative impact of incivility and ostracism. Based on the Conservation of Resource (COR) theory, we conducted two studies using a multi-source, time-lagged design to test our hypotheses. The results of both studies supported our contention that incivility and ostracism lead to reduced performance. While anxiety mediated the relationship between incivility and performance, emotional exhaustion mediated the relationship between ostracism and performance. PsyCap moderated the mediated links in both studies

Entry, Product Development, and Performance

Digital Session Chair: **Xuege (Cathy) Lu**, *Cornell U.*

STR: Should Firms Accelerate Product Development During Market Emergence? (WITHDRAWN)

Author: **Xuege (Cathy) Lu**, *Cornell U.*

This study challenges the notion that speeding products to market is beneficial by examining conditions under which accelerating product development as a strategy can be suboptimal. I argue that the extent to which acceleration enhances market evaluation is contingent upon (a) whether the product aligns with or deviates from market convention, and (b) the average market intensity on product development; both contingencies should be especially salient for new entrants during market emergence. Using a uniquely detailed dataset on the EnergyStar program of LED lightbulbs from 2010 to 2017, I find that although incumbent firms benefit from frequent product adaptation, new entrants may suffer from adopting such a strategy. To avoid being discounted by market audience, new entrants should (a) decelerate when introducing unconventional products, and (b) resist the temptation to rush when peer pressure for speed is strong. By presenting an alternative view on the implication of product development frequency, this study enriches understanding on winning strategies for firms competing in nascent market.

STR: Schumpeterian Fade: Has It Become Harder For Newer Firms To Join The Elite?

Author: **Andrew D Henderson**, *U. of Texas at Austin*

Author: **Temitope Oladimeji**, *U. of Texas at Austin*

Author: **Melissa Graebner**, *U. of Illinois at Urbana-Champaign*

A Schumpeterian perspective on sustained superior firm performance contrasts two classes of contestants. Entrepreneurs in newer firms take risks and pursue fresh discoveries in the hope of developing sustainable advantages. Meanwhile, the established elite work to renew their superiority and prevent Schumpeterian overthrow, sometimes by exercising dynamic capabilities. Analyses of US Compustat firms from 1967-2018 reveal temporal shifts in this battle. Newer entrants have become less likely to achieve sustained superiority and the ages at which firms first accomplish this have risen dramatically. In contrast, while the rate at which established firms renewed sustained superiority fell through the 1980s, it rose sharply thereafter. As the path to initial greatness has become rockier, the rich have increasingly stayed rich, evidence of Schumpeterian fade.

STR: Small Business Strategies during the different stages of unexpected events

Author: **GIANLUCA PUSCEDDU**, *U. degli Studi di Cagliari*

Author: **Ludovica Moi**, *U. of Cagliari*

Author: **Francesca Cabiddu**, *U. of Cagliari*

Although research on crisis management is long-established, scholarly attention in the context of small and medium-sized enterprises (SMEs) is still in its infancy. The purpose of this conceptual paper is to propose a first event sequence-based framework elucidating what kind of strategies are implemented by SMEs across the phases of crisis prevention, response, and recovery. Our study contributes to crisis management literature by investigating business strategies in SMEs in crisis times throughout the different stages, pointing out the prevention, response, and recovery phases' circularity. This research helps to understand what strategies could be more suitable according to specific moments during distress. From a managerial perspective, this research presents the significant results of a systematic literature review (SRL) in SMEs' strategies in crisis time. Keywords: Crisis management; disaster; recovery; resilience; Covid-19; Coronavirus; SMEs; business strategies.

Problem Solving

Digital Session Chair: **Daniel Ehls**, *Helmut Schmidt U.*

TIM: A Field Experiment on the Role of Constraints in Creative Problem-Solving  

Author: **Daniel Ehls**, *Helmut Schmidt U.*
Author: **Karim R. Lakhani**, *Harvard U.*
Author: **Jacqueline Lane**, *Harvard U.*

The role of constraints in the problem solving process has been a central line of inquiry in the creativity and innovation literature with ongoing debates of whether constraints imposed on creative problem solvers diminish or enhance their efforts and outputs. We investigate this question by designing and executing a field experiment in collaboration with a world leading company in consumer electronics seeking creative solutions through a community crowdsourcing program to improve the wearing comfort of their popular headphones. We mobilized 1,833 problem solvers, 331 ideas and 435 community evaluators to rate the quality of the solutions, for a total of 2,473 evaluator-solution pairs. To make experimental comparisons, we exogenously varied the number of constraints faced by the community problem solvers to determine how exposures to constraints affected the number and quality of solutions. We find causal evidence that moderate levels of constraints increase both solution quantity and quality. Compared to problems framed with no constraints, having some constraints causally increases a solvers' likelihood of proposing a solution by 6% or 1.5 times. Turning to solution quality, we find that while constraints decrease the average novelty of solutions, they have no effect on the most novel and useful solutions. Lastly, we observe an inverse curvilinear relationship between the number of constraints and the most creative solutions, where problems with some constraints increase the likelihood of coming up with one of the most creative solutions by 3-4% compared to problems with no constraints. We discuss the implications of our findings to the creativity and problem-solving literatures.

TIM: Intra-organizational Competition as a Source of New-To-The-World Innovations

Author: **Johann Peter Murmann**, *U. of St. Gallen*
Author: **Zhijing Zhu**, *U. of Nottingham, China*

Chinese firms have been widely seen as imitative. This historical case study explores what organizational mechanisms allowed Tencent, a Chinese firm in the fast-changing instant messaging (IM) service sector, to achieve a new-to-the-world innovation with its WeChat smartphone app. Tracing the competitive dynamics in the Chinese IM sector from its inception, we found that Tencent was able to create the innovative WeChat product through a crisis-induced intra-firm competition dynamic that was embedded in variation-selection-retention evolutionary processes spanning the market, the firm and the business unit levels. Building on the intra-firm competition and evolutionary literatures, the paper shows that three business units simultaneously competed and cooperated in developing alternative IM products while allowing the market to select the winner. The competition dynamic took place in three key areas — technology, product promotion, and complementary assets of suppliers. The relative balance between competition and cooperation changed over time, and top management guidance and firm-level routines were essential in managing the challenges of competition within the firm.

TIM: How Does Education Influence Individual Innovation Behavior? A Mediation Model

Author: **Jonathan Liebenau**, *London School of Economics and Political Science*
Author: **Biao Huang**, *LSE*

Although individual innovation and education economics are analyzed in many publications separately, the mechanism of how education influences individual innovation is missing. We analyze individual innovation for 2,078 employees in 3,976 value engineering projects (VEPs) over 6.5 years and build multilevel models to explain how education measured by earned degrees of employees improves innovation performance. Activeness, creativity and teamwork act as mediators and then contribute to enhance individual innovation performance, measured by three indicators: 1) the total number of VEPs which the employee proposed as an applicant, 2) the total numbers of VEPs which the employee joined as either an applicant or a follower, 3) the total number of patent applications from the VEPs which the employee joined. This mediation effect is statistically significant in two models whose dependent variables (DVs) are the first and second indicator respectively and there is direct association in the third model whose DV is the third indicator. This triangulation shows how education has a positive relationship with individual innovation performance with reliability and validity. We show that employees in science or engineering are more innovative, which contributes to explain the “engineer dividend” in China and how managers can improve innovative practices.

TIM: Price elasticity of demand for consumer innovation

Author: **Tobias Ebbing**, *Hamburg U. of Technology*
Author: **Christian Luethje**, *Technical U. of Hamburg*

Consumer innovators increasingly engage in commercial distribution of their products. This work investigates how labelling the source of innovation as consumer made affects the price elasticity of demand. Our core results draw from a large-scale matched sample of 2754 pairs of consumer innovation branded and regular product sales data from a video game marketplace. The underlying processes are examined in a factorial survey with quantitative and qualitative parts. In low price areas, customers can relate to the unique motivational set of consumer innovators, who do not primarily innovate out of commercial interest. Knowing about their ulterior motives, customers do infer less non-monetary innovation effort reductions when prices are low. Negative low-price effects on demand are dampened. At high prices, customers are more trusting towards consumer innovators that their prices are justified by higher development effort rather than profit interest. This fosters price acceptance and reduces the perceived sacrifice of high consumer innovation prices compared to regular supply. Customers further notice superior creativity of consumer innovators and the hardships of individual product development. Consequently, compared to regular supply, the demand for consumer innovation labelled products is less sensitive to low or high prices. We render conclusions for consumer innovators' pricing, marketplaces and policy makers. Attesting customers' awareness of consumer entrepreneurial backgrounds and that it moderates marketing measures, we suggest further research in the area of consumer innovation marketing.

New Pathways to Understanding and Promoting Gender Equality

New Pathways to Promoting Gender Equality

Presenter: **Ashley E. Martin**, *Stanford Graduate School of Business*
Chair: **Eileen Y. Suh**, *Boston U. Questrom School of Business*
Presenter: **Eileen Y. Suh**, *Boston U. Questrom School of Business*

Participant: **Ike Silver**, *The Wharton School, U. of Pennsylvania*
Participant: **Edward Chang**, *Harvard Business School*

Despite making important strides, gender inequality remains a significant problem. Men still enjoy higher status than women and the belief that society values masculinity more than femininity prevails. Occupational segregation by gender also continues to persist and diversity efforts to promote gender equality are found to be largely ineffective in attracting and retaining women in organizational settings. It also remains unclear how the new perspective of gender as a continuum influences the broader notion of gender equality. This symposium includes four empirical papers that seek to address some of these limitations. Specifically, drawing on the empirical findings of the four included studies, this symposium proposes new pathways to understanding gender amidst a “gender revolution” (Brooks, 2019) and promoting gender equality in contemporary organizations and society. These studies have theoretical implications for advancing our understanding of gender equality in management research, as well as, practical implications for organizations striving to mitigate biased judgment and improve their diversity levels.

Between Me and You: Exploring External Contextual Factors in Employee Interactions

Contextual Factors in Employee Interactions

Discussant: **Suzanne S. Masterson**, *U. of Cincinnati*
Presenter: **Kathleen Keeler**, *Ohio State U.*
Presenter: **Harshad Girish Puranik**, *U. of Illinois at Chicago*
Presenter: **Daniel M. Peat**, *U. of Cincinnati*
Presenter: **Jaelyn Perrmann**, *Northern Kentucky U.*
Presenter: **Marcia Lensges**, *Xavier U.*
Presenter: **Nathan Tong**, *U. of Hartford*
Presenter: **Joshua Knapp**, *U. of Wisconsin, Whitewater*

One of the crucial actions that makes organizations successfully function is the interaction of their employees. Often, workers must interact with one another frequently in order to achieve organizational objectives and goals. However, numerous external contextual factors can influence the nature and quality of these workplace interactions. In turn, these interpersonal interactions have consequences for organizational productivity, collaboration, OCB, and other goals and outcomes. In this symposium, three presentations will explore several of these contextual factors. The first presentation examines the positive and negative consequences of background music in the workplace. The second presentation investigates how military veteran status in the workplace can have both positive and negative implications among workers. In the third presentation, the role of pet peeves is studied to better understand how they can influence how employees interact with one another and what work-related outcomes can result. This symposium will conclude with a discussant sharing her thoughts on the preliminary findings from the three presentations and implications for research and practice.

**Trust the Feeling or Feeling the Trust: Understanding the Relationship
Between Trust and Emotions**
Trust the Feeling or Feeling the Trust

Chair: **Jonathan Lee**, *U. of New Hampshire*
Discussant: **Roy James Lewicki**, *Ohio State U.*

Trust and emotion are understood to be salient in organizations, and impactful in their functioning and life. Although it is understood and accepted that decisions to trust can be driven by emotions, and emotions can result when trust is honored and violated, the relationship between the two constructs has been surprisingly understudied. Our symposium aims to showcase cutting-edge research that will encourage further development and understanding of this relationship. The papers included incorporate the role of both experienced and expressed emotions. They consider how emotions contribute to the trajectory of trust from it being established, violated, and repaired through approaches that account for the ongoing, dynamic nature of the relationship. With the present collection of research, our symposium aims to better understand two topics critical to the management field and inspire more research in the field.

Governance Effectiveness in International Markets

Digital Session Chair: **Yusen Dong**, *China Europe International Business School (CEIBS)*

STR: Co-evolution of ownership reform and corporate governance effectiveness in Chinese listed firms

Author: **Yusen Dong**, *China Europe International Business School (CEIBS)*
Author: **Han Ming Daniel Chng**, *China Europe International Business School (CEIBS)*
Author: **Wei Yang**, *U. of Glasgow*
Author: **Qing Ye**, *Zalando SE*
Author: **Jingyuan Li**, *Hong Kong U. of Science and Technology*

Corporate governance is one of the most widely studied topics in management and business ethics. However, the effectiveness of firms' corporate governance mechanisms has often been questioned. We adopt an institutional perspective to understand how firms' corporate governance mechanisms will only be effective when the prevailing institutional context adequately addresses the rights and incentives of controlling shareholders. Taking China's split-share structure reform in 2005 as a natural experiment, we examine whether shareholder monitoring, board monitoring, executive turnover, and executive compensation can mitigate the risk of organizational distress before and after the reform. Using matched samples of distressed and non-distressed Chinese public-listed firms, we observe that controlling and institutional ownership, executive turnover, and executive compensation reduce the likelihood of organizational distress only after the reform while board monitoring remains ineffective. Our theory and results offer important insights into how the effectiveness of firms' corporate governance mechanisms co-evolves with prevailing institutional contexts in an emerging economy and how the principal-agent and principal-principal problems are integrally linked.

STR: UK Pension Fund Investment Myopia: Trustees' Temporal Narratives and Uses of the Past (WITHDRAWN)

Author: **Anna Tilba**, *Durham U. Business School*
Author: **John Wilson**, *Newcastle Business School, Northumbria U.*

In this exploratory study we utilise theorization about time through 'rhetorical history' narratives to examine organisational uses of the past and how pension fund trustees manage the tension between short- and long-term investment strategies. We identify and elaborate on distinctive temporal narratives of systemic, organizational and trusteeship role legacies that appear to contribute to organizational inertia and myopic investment, which seems to exacerbate investment short-termism even further. Theoretically, our study offers an alternative perspective to the established view of 'rhetorical history' as a positive force on strategic decision-making. We argue that there is a need to understand better how uses of the past affect strategic management within organizations, focusing on the negative as well as the positive. Practically, although rhetorical history is seen as a tool that managers can use to mobilize the resources necessary to motivate change, we demonstrate how this tool can also provide a comfort to those who resist change, reinforcing entrenched behaviour and acting as a constraint on progress. In the context of the ongoing policy attempts to change and improve the culture and conduct within financial services in the UK and globally, policy makers need to instil in trustees and in the wider investment community the desire to change dominant narratives as a means of fashioning a more sustainable future.

STR: Organizational Stigma: Literature Review, Synthesis and Research Propositions

Author: **Lu Ye**, *U. of Melbourne*
Author: **Helen Wei Hu**, *U. of Melbourne*

Organizational stigma has drawn increasing attention from management scholars in recent years, while the theoretical clarity is lagging behind and potential insights remain trapped within different research domains. Here, we review the literature on organizational stigma, provide a synthesis of organizational stigma's foundational concepts, its key constructs, and propose potentially promising ideas to moving the research forward. Specifically, focusing on the audience and organization perspectives, we develop a comprehensive framework to capture antecedents and consequences of organizational stigma. Further, we propose boundary conditions to understand the dynamics of the framework. By conducting this review, our framework provides conceptual clarity of organizational stigma and offers avenues for future research.

STR: Rare and Valuable: Female Board Directorship in the Middle East and North Africa

Author: **Julia Barbar**, *U. of St. Gallen*
Author: **Canan Mutlu**, *Kennesaw State U.*
Author: **Marc Van Essen**, *U. of South Carolina*

Amassing unique hand-collected data for 1197 publicly-listed MENA firms from 2016, we explore the predictors of female board assignments at the firm, industry, and country level and also examine the impact of female directors on firm performance. We rely on the institutional logic and legitimacy concerns to explain the predictors of female board directorship and find that foreign ownership, firms in industries with larger female employment bases, and gender parity promote female board directorship. We find, though, partial empirical support that smaller firms as well as family- and state-owned firms assign more board seats to female directors. Supporting the upper echelons view of board gender diversity, we find that female directors have a positive impact on firm accounting performance. However, reflecting a market bias against female representation in corporate hierarchy, we find a negative impact on firm performance in terms of market measures.

The Big Scam? What's Wrong with Business Schools, Business School Faculty, and the Study of Management *The Big Scam?*

Distinguished Speaker: **Sydney Finkelstein**, *Dartmouth College*
Program Chair: **Amy Hillman**, *Arizona State U.*

Industry after industry has seen disruption and transformation, yet business schools and business school faculty continue as they have for decades. The unfortunate result is our business model is dangerously out of tune with the expectations and demands of key stakeholders. The research we do seldom connects to the real challenges that managers encounter in their work, but even if it did these managers would barely know what the business school research enterprise is up to. The teaching we do continues to be seen by too many academics as a necessary evil, characterized by “commodity” teaching and a fundamental inattention to communicating and disseminating our ideas to wider audiences. And our employers – business schools – have enabled all of this via outmoded incentives systems and cultural norms while simultaneously ignoring warning signs of how our competitive advantage is eroding. The result: we are happily ensconced in our protective bubble while our schools, our jobs, and our research enterprise are in crisis.

Leadership   

Digital Session Chair: **Yueyue Liu**, *Nanjing U.*

ENT: CEO Relationship-focused Leadership, Organizational Identification and Corporate Entrepreneurship 

Author: **Yueyue Liu**, *Nanjing U.*
Author: **Meng Xi**, *Nanjing U.*
Author: **FeiFei Li**, *Nanjing U. of Posts and Telecommunications*
Author: **Xiulin Geng**, *Nanjing U.*

Drawing on social information processing theory and uncertainty-identity theory, the paper builds a multilevel and integrated framework to simultaneously test the influences of CEO relationship-focused leadership behaviors and middle management team's organizational identification on corporate entrepreneurship. Paired data with vice presidents and middle managers from 192 companies in China was used to test our theoretical model. The results show that CEO relationship-focused leadership behaviors positively predict middle management team's organizational identification and corporate entrepreneurship, and middle management team's organizational identification mediates the positive relationship between CEO relationship-focused leadership behaviors and corporate entrepreneurship. In addition, external environmental uncertainty not only moderates the positive relationship between CEO relationship-focused leadership behaviors and middle management team's organizational identification, but also moderates the indirect effect of CEO relationship-focused leadership behaviors on corporate entrepreneurship through middle management team's organizational identification. This study enriches our understanding of process model and contextualization of CEO leadership behaviors influencing on corporate entrepreneurship.

ENT: Founder-CEOs' Transformational Leader Behaviors and Well-Being 

Author: **Feng Xu**, *South China Agricultural U.*
Author: **Linlin Jin**, *Guangdong U. of Technology*

Entrepreneurship literature postulates that entrepreneurs' transformational leader behaviors exert positive influences on followers and ventures. However, little is known about how leader behaviors may be conducive to entrepreneurs and what factors might impact the enactment of leader behaviors. Integrating transactional stress theory and the self-concordance model, this study found that transformational leader behaviors positively impacted entrepreneur well-being, while daily stress processes have negative, indirect effects on well-being by impairing leader behaviors. Further, there are individual differences regarding how experienced and novice entrepreneurs react to stressors, affecting leader behaviors and well-being. We discussed the theoretical and practical implications of these findings.

ENT: Microfoundations of Entrepreneurial Leadership: The Case of Elite Women Entrepreneurs

Author: **Shezeen Hemani**, *PhD researcher, U. of Glasgow*
Author: **Dominic Michael Chalmers**, *U. of Glasgow*

We examine the microfoundations of entrepreneurial leadership to theorize how women entrepreneurs in socio-economically challenged contexts grow new ventures to scale. Using inductive multiple case study, we identify three individual attributes: psychological orientation, knowledge accumulation, and social identity; and four adaption responses: challenging stereotypes, engaging family men as stakeholders, activating elite networks, and showcasing opportunity potential to demonstrate how elite women entrepreneurs navigate enabling and constraining environments that shape entrepreneurial outcomes. We contribute to entrepreneurial leadership literature by expanding on a microfoundational perspective and provide a dynamic, processual and contextualized explanation for successful leadership.

ENT: Strategic Leadership in SMEs: The Mediating Role of Dynamic Capabilities  

Author: **Emmanuel Quansah**, *U. of Houston, Victoria*
Author: **Kaveh Moghaddam**, *U. of Houston, Victoria*
Author: **Stephanie Thomas Solansky**, *Texas State U.*
Author: **Yuan Wang**, *U. of Houston, Victoria*

Small and medium-sized enterprises (SMEs) play a vital role in the United States and throughout the global economy, spurring innovation and job creation. This study investigates the effect of strategic leadership practices on SME performance. We conducted a quantitative survey among leaders of 290 SMEs to examine their strategic leadership and how it affects SME performance. The mediating role of employee empowerment dynamic capability (EEDC) and resilient dynamic capability (RDC) are explored. The results suggest that strategic leadership effect on firm performance is fully mediated by employee empowerment dynamic capability as well as resilient dynamic capability. The contingency role of firm life cycle stages are also examined and empirical results support the notion that the mediating role of dynamic capabilities become more pronounced as SMEs transition from the early stages to later stages of their life cycle.

Organizational Success Avenues of Digitalization

Digital Session Chair: **Nicolai Etienne Fabian**, *U. of Groningen*

OCIS: Fake It till You Make It: The Value of Symbolic and Substantive Digital Actions

Author: **Nicolai Etienne Fabian**, *U. of Groningen*
Author: **John Dong**, *Trinity College Dublin*
Author: **Abhi Bhattacharya**, *U. of Alabama, Tuscaloosa*
Author: **Peter C. Verhoef**, *Groningen U. (RuG)*

Becoming digital is widely considered imperative for firms to stay relevant in the digital age and there is an increasing market pressure on firms to offer digital products and services themselves. However, becoming digital cannot easily be achieved as digital actions are costly and time-consuming. We suggest that firms need to reach a point of optimal distinctiveness that reconciles stakeholder's perceptions about their digital position in the market. Moreover, under high institutional pressure, some firms opt for symbolic rather than substantive compliance while others do the other way around or both. By combining the optimal distinctiveness literature and impression management theory, we shed light on how firms may decouple symbolic actions (what they say about what they do for digital transformation) from substantive digital actions (i.e., what they actually do for digital transformation). We posit that different configurations of symbolic and substantive actions might have different impacts on firm value in the financial market. We test our propositions based on a panel dataset from 145 firms between 2010 and 2019 and find that only the combination of both symbolic and substantive digital actions leads to greater firm value. Our findings suggest that for digital transformation the value creation of digital transformation is embedded in a broader institutional environment and both substantive changes and communication of those efforts are needed to improve market valuation.

OCIS: Role of Digital Technology in Product Meaning Innovation: A Design Perspective

Author: **Haoyue Gu**, *Ivey Business School*
Author: **Yasser Rahrovani**, *U. of Western Ontario*
Author: **Robert Austin**, *Ivey Business School*

Digital technology is an important source for digital product's design and innovation. Many IS researchers have studied the role of digital technology in innovating product's functions and aesthetics. Yet fewer have studied the role of digital technology in innovating in a third design element—meaning—in product design and innovation. “Meaning” refers to a product's symbolic, psychological, and cultural associations that were proposed by designers, which together significantly alter users' perceived experience of the product. Innovation with digital technology in product meaning, a source of new values for using a product, is different from innovation in functions and aesthetics. This fact has practical, as well as scholarly implications: without a robust vocabulary to discussing meaning innovation, the literature implicitly assumes innovation with digital technology happens in only functions and aesthetics despite the importance of innovation in meaning. Further, designers and companies may miss a valuable opportunity to earn higher returns. Thus, taking a design perspective, we leverage design and management theories to study how designers use digital technology to innovate in product meaning. We plan to use multiple case studies, expert panels, and semi-structured interviews. Initial findings based on twenty-hour pilot interviews and potential contributions are discussed.

OCIS: Necessary-but-not-sufficient service provider capabilities in digital transformational outsourcing

Author: **SUDIPTO MAZUMDER**, *Indian Institute of Management, Indore*
Author: **Swapnil Garg**, *Indian Institute of Management, Indore*

Evolution of business process outsourcing (BPO) and its significant transformation due to digital disruption has led to the emergence of Digital Transformational Outsourcing (DTO). Simultaneously, growth in BPO has led to a larger quantum of value creation activities shifting from the client to the outsourcing services providers (OSP). While together they make BPO performance contingent on OSP's dynamic capabilities, we have little understanding of what the capabilities are. On the one hand, BPO literature has studied capabilities in traditional contexts, and on the other hand, digital literature is yet to build an outsourcing focus. To address this gap in the literature, we employ a mixed-method approach to conduct an early investigation to identify OSP capabilities in DTO and study how these identified capabilities constrain OSP performance. Qualitative analysis of 21 expert interviews and cross-case comparisons of ten use cases of DTO, enabled the identification of six generic OSP capabilities i.e., consultative, orchestration, generation and sharing of insights, network building and management, knowledge access, and standardization that embraced nuances specific to DTO. We follow this up with a necessary-but-not-sufficient analysis using Necessary Condition Analysis (NCA) to understand how the individual capabilities constrain performance. Capabilities in insights generation and knowledge access were found to be necessary conditions for almost all levels of OSP performance while varying levels of the other capabilities emerged as bottlenecks for high to top performance.

Participant: **Peter Belmi**, *U. of Virginia*

Impression management is the process by which individuals attempt to influence the perceptions others have of them. These tactics are common in everyday social interactions, but can be particularly useful in professional spheres to influence others' perceptions of employees' competence and likeability, and therefore their chances of being hired, favorably evaluated, or earning higher salaries. Despite the usefulness of such tactics in gaining opportunity in organizations, strategic self-presentation techniques to manage the impressions others have of oneself can often have negative consequences. The current symposium seeks to advance the study of impression management in the organization by examining in a more nuanced fashion the perceptual consequences of impression management strategies. The proposed symposium consists of four empirical papers addressing when impression management goes awry. These papers examine questions related to the tactics individuals use to gain status in groups (presentation 1), the disclosure of failures as a strategic self-presentation technique (presentation 2), the use of detailed professional introductions to create opportunities for social connection (presentation 3), and the misperceptions between majority and minority groups about each other's emotional reactions to equity-based issues (presentation 4). Together, via experimental studies using diverse samples, these papers address questions pertaining to when common impression management strategies are advantageous, and when they can be detrimental to individuals.

New Perspectives on Industry Evolution: Bridging Socio-cognitive View and Demand-side Factors

Demand-side perspectives on industry evolution

Organizer: **Mara Guerra**, *ETH Zürich*
Organizer: **Amy Zhao-Ding**, *Technical U. of Munich*
Participant: **Vibha Gaba**, *INSEAD*
Presenter: **Andrew Boysen**, *Kenan-Flagler Business School, U. of North Carolina at Chapel Hill*
Presenter: **Callen Anthony**, *New York U.*
Participant: **Andrew Nelson**, *U. of Oregon*
Discussant: **Mary Tripsas**, *U. of California, Santa Barbara*

Existing work on industry evolution has largely taken a linear and monolithic view. Based on empirical observations that industries and technologies evolve following more complex patterns, this view has begun to be called into question. Recent studies have proposed more nuanced views on industry evolution, and demand-side factors are becoming increasingly relevant in explaining these dynamics. In this symposium, we extend the demand-side perspective by bringing in a socio-cognitive element, in which customers view technologies as tools to achieve their goals, envision different functional uses, and apply heterogeneous criteria to evaluate products. The papers included in this symposium showcase that customer perception over product features and usage scenarios, their co-usage and sense-making of old and new technologies provide explanations for firm behaviors and technology trajectories. Taken together, the four papers underscore the role of customers perceptions in explaining industry evolution in diverse empirical contexts. Our goal is to encourage future research to join us in further exploring these relationships and strengthening the theoretical underpinnings of complex evolutionary patterns.

Issues of Effective and Ethical Leadership in Public Service Organizations

Digital Session Chair: **Stephen Teo**, *Edith Cowan U.*

PNP: **Ethical Leadership and Employees' Willingness to Report Unethical Behavior**      

Author: **Swee-Hoon Chuah**, *U. of Tasmania*
Author: **Diep Nguyen**, *Edith Cowan U.*
Author: **Stephen Teo**, *Edith Cowan U.*
Author: **Christine Soo**, *U. of Western Australia*

We provide empirical and theoretical insights to explain the mechanisms which enhance or suppress the impact of ethical leadership on employees' willingness to report unethical behavior. The present study extends the social information processing perspective by including individual and organizational influences (such as employee perceptions of unethical behavior, ethical climate, and the enforcement of a code of conduct) to examine how these factors influence how ethical leadership influence employees' willingness to report unethical behavior. Utilizing the two scenario-based experiments, we found that employees' perceptions of unethical behavior influence their willingness to report wrongdoings irrespective of their supervisor's ethical leadership behavior. Also, employees' willingness to report unethical behavior when organizations promote ethical leadership and enforce a code of conduct within a principled climate. We elaborate on the implications of these results to illuminate how organizations could encourage reporting behavior among employees.

PNP: **High-Performance Work Systems and Ethical Leadership: A Case Study in a Pakistani Public Hospital**

Author: **Muhammad Faisal**, *School of Management, College of Business, RMIT U.*
Author: **Pauline Stanton**, *RMIT U.*
Author: **Michael Muchiri**, *RMIT U.*

This paper explores the relationships between contemporary human resource management (HRM) practices, ethical leadership, and employee attitudes and behaviours based on a case study research in a large tertiary care public hospital in Lahore, Pakistan. The study examined the extent to which high-performance work systems (HPWS) influenced employees organisational citizenship behaviour (OCB) through affective commitment (AC). Further, we examined how ethical leadership moderated the mediating relationship between HPWS and affective commitment to influence OCB. Survey data were gathered from 548 front-line doctors and nurses. Our findings suggest that first, AC positively mediated the relationship between HPWS and OCB in that when employees perceive and experience some level of HPWS they are more likely to experience affective commitment and in turn more likely to exhibit organisational citizenship behaviours. Second, AC positively mediated the relationship between EL and OCB. Similarly, those employees who experience ethical leadership are more likely to feel committed to the organisation and practice OCB. Third, we did not find the support for ethical leadership as a moderated mediation between HPWS and affective commitment to influence OCB. Finally, we discuss these findings and draw conclusions which highlight theoretical, managerial and practical implications for the public healthcare sector. Keywords: High-performance work systems, ethical leadership, affective commitment, organisational citizenship behaviour, public healthcare, Pakistan.

PNP: **How do supervisors foster job satisfaction among public sector employees?**

Author: **Nhung Nguyen**, *Virginia Tech*
Author: **Tuan Trong Luu**, *Swinburne Business School, Swinburne U. of Technology*

Though the role of supervisors in leveraging public sector employees' job satisfaction has been empirically established, the mechanisms underlying this relationship have not been fully understood. Drawing upon conservation of resources theory, we theorize co-worker support and perceived reasonable workload as a two-phase mediation mechanism to link supervisor support to job satisfaction. Furthermore, based on complementary resources perspective, we propose that tangible job resources enhance the effects of supervisor support and co-worker support on reasonable workload perceived by employees. Results from structural equation modelling analysis with data from the 2019 U.S. Federal Employee Viewpoint Survey support our hypotheses.

RM: **Curbing Claims Of Causal Direction Stemming From A Technique With Panel Data (WITHDRAWN)**

Author: **Christopher Dishop**, *Michigan State U.*
Author: **Rick DeShon**, *Michigan State U.*

A growing number of researchers in organizational science have begun using a statistical routine to support inferences of causal direction. The technique involves partialling a prior observation of the outcome variable, and doing so it thought to mitigate concerns of reverse causality. We review the technique and then evaluate its ability to discriminate directional effects using Monte Carlo simulations. Our results demonstrate that directional inferences cannot be established using this statistical approach and therefore suggest caution when directional inferences are based on statistical modeling only. We recommend that researchers emphasize assumptions and their justifications when making inferences rather than statistics alone.

RM: **The Application of the Difference-in-Differences Model in Strategic Management Research**

Author: **Chi Hon Li**, *Texas A&MU*.
Author: **S. Trevis Certo**, *Arizona State U.*

Sage Publications/RM Division Best Student Paper Award

Difference-in-differences (DD) models allow researchers to estimate changes between treatment and control groups after exogenous interventions or shocks. We reviewed research in strategic management and found that the use of DD models increased from 1 study in 2006 to 27 studies in 2020. Our review also found, however, that strategy researchers often overlook the two most important assumptions of DD models: as-if random assignment (i.e., endogeneity) and parallel trends (i.e., differences between two groups over time without the intervention). Specifically, we found that only 41% and 51% of the articles assess the validity of these two assumptions respectively. Such findings explain in part why strategy scholars have often inappropriately used DD models to examine endogenous treatment variables, such as corporate governance practices, international strategies, and corporate-level strategies. We develop simulations and find that violations of the model's assumptions bias parameter estimates. Our primary finding is that DD models do not resolve endogeneity concerns and are biased if the treatment is endogenous. We use our simulation results to provide straightforward recommendations to strategy scholars employing DD models.

RM: **Advancing Causal Inference: Differences-in-Differences vs. Bayesian Structural Time Series Models**

Author: **Jin-Su Kang**, *National Chiao Tung U.*
Author: **Stephen Thomas Downing**, *U. of Missouri*
Author: **Nabangshu Sinha**, *National Chiao Tung U.*
Author: **Yi-Chieh Chen**, *National Yang Ming Chiao Tung U.*

As competition becomes fierce and competitive environments change more dynamically than ever, understanding the implications of any strategic decision has become important for firms to maximize the effect of their resource allocation. Thus, evaluating the causal inference of strategy implementation is critical for strategists, yet few studies address practitioners' needs in this manner. While a few studies have prioritized the need for causal inference by employing the differences-in-differences (DD) method in management research, the inherent limitations of this method pose problems for the suitability and reliability of its results. Thus, this study aims to introduce a new approach for causal inference in management research, the Bayesian structural time series (BSTS) model. The BSTS analysis enables us to investigate causal inference from existing whether or not to when and how long. Using customer data from a Korean e-commerce platform, we show why BSTS can be superior to DD thereby providing a basis for subsequent use of causal inference studies delivering practical management implications.

Complexity of Interpersonal Relationships at Work

Digital Session Chair: **Sven Horak**, *St. John's U.*

HR: Collegiality and Co-Worker Relationship Quality at the Workplace

Author: **Sven Horak**, *St. John's U.*
Author: **Andreas Klein**, *Niederrhein U. OAS*
Author: **Henning Ahlf**, *WESTPHALIAN U. OF APPLIED SCIENCES*
Author: **Bindu Arya**, *U. of Missouri, St. Louis*
Author: **Shiming Xia**, *Doshisha Business School*

Regarding collegiality as a central element in today's globalized work environment, we provide insight into its influence in enhancing co-worker relationship quality. Utilizing social exchange theory to examine how interpersonal factors influence co-worker relationship quality among a group of 346 white-collar employees, we find that although co-worker commitment positively influences co-worker relationship quality, there is no indication that coworker-trustworthiness has a direct effect on co-worker relationship quality. Our findings suggest that the importance of trustworthiness in the workplace may have been overestimated. Our work therefore suggests that co-worker commitment appears to be the central construct contributing to better co-worker relationships.

HR: Reactions to Impression Management Behavior: Effects of Situational Strength and Attributions

Author: **Lynn A. McFarland**, *Darla Moore School of Business, U. of South Carolina*
Author: **William Benjamin Ward**, *U. of South Carolina*
Author: **Silvia Clark**, *Darla Moore School of Business, U. of South Carolina*

Although impression management research has yielded great insights, there are a number of discrepancies in prior research. It is likely that these discrepancies are due, in part, to a lack of an explicit consideration of the context in which impression management behavior occurs. This study seeks to advance impression management theory and research by examining the effects of context on the consequences of impression management behavior. Specifically, based on an integration of attribution theory and research on situational strength, we propose that the context in which impression management occurs has implications for how others perceive an individual's impression management use; thereby affecting important outcomes (e.g., evaluations of the individual). As predicted, we find that strong situations (characterized by high evaluative potential) are more likely to prompt external attributions for ingratiation behaviors. Further, the attributions observers make for workplace behavior relate to evaluations of the ingratiation. Altogether, this research helps reconcile discrepancies in past research and offers a more nuanced understanding of the consequences of impression management behaviors in the workplace.

HR: How Organizational Politics and Subjective Social Status Moderates Job Insecurity-Silence Relations

Author: **SuJin Son**, *Chosun U.*
Author: **Tae Seok Yang**, *Associate Professor of Management (OB/HR), Western Illinois U.*
Author: **JUNSUPARK**, *Sungkyunkwan U.*

Drawing from the conservation of resource theory, this study examines the relationships between job insecurity and two types of employee silence (i.e., acquiescent silence [AS] and defensive silence [DS]) and the potential role of perceived organizational politics in this relationship. It predicts that the subjective social status of employees moderates the two-way interaction effect of job insecurity and perceived organizational politics on these two types of silence. Using data of 350 employees in South Korea, we found that the relationship between job insecurity and employees' AS is stronger for individuals who perceive their organizations to be highly political. The study's results also indicated a three-way interaction between job insecurity, perceived organizational politics, and employees' subjective social status on employees' AS, such that in a highly political work environment the relationship between job insecurity and employees' AS is stronger, especially for employees with low social status. Theoretical and practical implications are discussed.

HR: The Initiative Paradox: Relational Crafting, Social Undermining and Workplace Loneliness

Author: **Yu Kang**, *U. of Electronic Science and Technology of China*
Author: **Lu Chen**, *U. of Electronic Science and Technology of China*
Author: **Kaixuan Tang**, *U. of Electronic Science and Technology of China*
Author: **Yilin Xiang**, *U. of Electronic Science and Technology of China*

Drawing upon the transactional theory of stress, we investigated the influencing mechanism between relational job crafting and workplace loneliness and its boundary condition from a social interaction perspective. A multiple-source, multi-wave field study was conducted with data collected from 267 employee-peer dyads in three Chinese firms. The results showed that there is an inverted U-shaped relationship between promotion-oriented relational crafting and loneliness via peer social undermining. Meanwhile, prevention-oriented relational crafting is positively related to loneliness through the mediating of peer social undermining. Moreover, impression management motive moderates the inverted U-shaped relationship between promotion-oriented relational crafting and peer social undermining. Implications of these findings for reducing workplace loneliness are discussed.

Author: **Ekta Johar**, *Indian Institute of Management, Ahmedabad*

Author: **Manjari Singh**, *Indian Institute of Management, Ahmedabad*

Our study attempts to bridge the gap in the management literature with respect to the impact of social networks on HRM systems in the Asian context. We specifically examine the formation and the influence of social ties in the Indian scenario. Based on a comprehensive review of the literature, we have developed a conceptual framework which contextualises the fictive kinship ties from the sociocultural as well as the professional perspectives. The sociocultural perspective incorporates intrinsic features such as caste, regionalism, etc. and their extrinsic manifestations through cultural artefacts. The fictive kinship ties from professional perspective include educational and corporate alumni networks. The framework further illustrates the influence of these fictive kinship ties on various HRM processes and decision making within the organisation. The theoretical and practical implications of the framework have been discussed.

SIM: Black Companies Love You, the Challenge-seekers: A Symbolic Disguising of Black Companies in Japan

Author: **Jungwon Min**, *Sophia U.*

Symbols can be used to mask or embellish firms' unfair or exploitative labor practices. This study defines this abuse of symbolic management of exploitative firms as symbolic disguising and examines it in the context of black companies in Japan. Black companies refer to firms that coerce employees into overly harsh or hostile working conditions in Japan. This study argues that to avoid being categorized as a black company, exploitative firms, defined as those imposing long overtime hours and low wages, engage in symbolic disguising in recruitments: they frame their ideal candidate profile (ICP) statement with a symbolic word that can sugarcoat their demanding working conditions. To test this argument, this study analyzed ICP statements of 1 238 Japanese firms between 2006 and 2017 based on topic modeling. The results show that exploitative firms tend to frame their ICP statement describing challenging work. This tendency is particularly evident for those with few employees or a high ratio of female employees. The results provide new insights into the literature on symbolic management: the dark side of symbolic management.

SIM: Historical hangover as a driver of power differential: A case study of the Niger Delta.

Author: **Alim Abubakre**, *Coventry U., School of Strategy and Leadership*
Author: **Ismail Adelopo**, *U. of the West of England*
Author: **Denise Baden**, *Southampton Business School, U. of Southampton*

This study seeks to understand the drivers and implications of power differentials between Multinational Corporations (MNCs) and their stakeholders. While some studies have explored the dynamics of the relationship between powerful MNCs and weak stakeholders, very few studies have considered the role of history as a driver of the power imbalance to explain MNC behaviours in developing countries. This study explores history as a driver of power imbalance in favour of the Multinational oil companies (MNOs) when compared to a weak stakeholder that is the local community in Nigeria's upstream sector of its oil and gas industry. The key theme emerging from 75 interviews with managers of MNOs and stakeholders is 'historical hangover'. Historical hangover articulates how past legacies of MNOs' home countries strengthen the influence of MNOs in Nigeria, leading to a power imbalance in favour of MNOs over stakeholders such as the local communities. The consequence of the historical hangover leading to power imbalance are critical ethical challenges for society and leads to corporate social irresponsibility with impunity.

SIM: Beautifying Struggle: Food Workers, Dehumanization, and Hope

Author: **Michael B. Elmes**, *Worcester Polytechnic Institute*

This paper considers the dehumanization of workers in the industrial food system and how their struggles could, from an ethical and aesthetic perspective, be made more beautiful. It begins with an overview of the literature on the nature of dehumanization, the nature of struggle in organizations, and aesthetic knowledge as ethics. It then considers the plight of one category of dehumanized food workers, meatpacking workers, and how they have suffered, particularly during the COVID-19 pandemic of 2020. It presents a farmworker organization, the Coalition of Immokalee Workers, that has succeeded in re-humanizing their struggle with growers and food retailers, improving pay and working conditions, and establishing a Fair Food certification process in the Southeastern U.S. The implications for how struggles in other dehumanizing contexts such as meatpacking might be beautified are explored as are the implications for future research.

SIM: Back to the Roots: Indigenous Resurgence and Decolonization

Author: **Ana Maria Peredo**, *U. of Victoria*

In recent decades, we have witnessed increasing global Indigenous mobilization against extractivism. At the same time, we have witnessed efforts of Indigenous peoples aimed at cultural resurgence. In this paper, using a post-colonial lens, we analyze a case of resurgence in Canada. Colonization in Canada, as elsewhere, deprived Indigenous Peoples of their access to traditional land and resources, attempted to incorporate them into the capitalist economy, and in the process established their dependent relationship in a welfare state. We argue that resurgence efforts of T'Sou-ke First Nation to build a program aimed at recovering independence and based in renewable energy, domestic food production and cultural revitalization are the basis for decolonization. The resurgence initiatives in this Indigenous nation enlarges our understanding of the dynamics of colonialism in a settler society.

CAR: Do behavioral intentions matter? A diary study on work-related ICT-use after work hours 

Author: **Niels Gadeyne**, *U. of Leuven (KU Leuven), Belgium*
Author: **Marijke Verbruggen**, *KU Leuven*

This paper draws upon the theory of planned behavior (TPB) to study daily work-related ICT-use after work hours. The focus of this paper is threefold. First, little is known about what drives daily fluctuations in employees' work-related ICT-use after work hours. Building on TPB, we study daily behavioral intentions to engage in work-related ICT-use as an antecedent of such ICT-use. Second, in line with TPB, we propose that behavioral intentions serve as a mediator in – and thus helps explain – the relations between previously found antecedents (i.e. norms and preferences) and daily work-related ICT-use after hours. Third, we extend earlier research on moderating factors on the effects of such ICT-use by exploring whether daily behavioral intentions buffer adverse effects of daily work-related ICT-use after hours. We tested our hypotheses using a daily diary study with two measurement points a day during 5 days. In total, 186 employees filled out the diary study during, on average, 4.21 work days. Results of this study indicate that daily intentions to engage in work-related ICT-use after hours predict such ICT-use later, and moreover, that behavioral intentions mediates the relation between both integration preferences and norms and actual work-related ICT-use after hours. Jointly, this findings suggest that the theory of planned behaviors serves as a valid perspective to study daily work-related ICT-use after hours. Moreover, contrary to expectations, on days employee's have higher behavioral intentions, the adverse effects of work-related ICT-use after work hours on both work-to-home conflict and psychological detachment are amplified rather than buffered.

 **CAR: Keep Calm and Work from Home: Strategies Used by Dual-Earner Households with School-Age Children**  

Author: **Mina Beigi**, *Southampton Business School, U. of Southampton*
Author: **Melika Shirmohammadi**, *U. of Houston*
Author: **Wee Chan Au**, *Monash U., Malaysia*
Author: **Chira Tochia**, -
Author: **Azadeh Hashemian**, -

Carolyn Dexter Award Nominee

We examine how dual-earner couples with school-age children who worked from home during the COVID-19 lockdown adjusted to the changes it brought to their lives. To do so, we conducted a qualitative study of 28 dual-earner households who had at least one school-age child, resided in China, Iran, Malaysia, the United Kingdom, or the United States, and worked from home during the lockdown. In each household, we interviewed the parents (56 in total), and we asked at least one child to draw their work-from-home experience and narrate the drawing. Informed by resource-based work-home interface and family stress models, we outline the resources and demands generated by working at home as a family, as well as the strategies families employed to manage their collective work-from-home. Families adopted collaborative, attentive, and relational strategies to fit their demands and their resources, while using delegative and negligent strategies to manage their unmet demands. We extend the work-from-home scholarship to a collective level, and wed it with the family stress model to explain the dynamics of collective work-from-home. At a practical level, the strategies presented in our work can inform employers of dual-earner couples and families experiencing similar dynamics.

Paper is Available to Meeting Registrants Only.

CAR: What do we want now or later? Work-family decisions in a dual-earner context. 

Author: **Elisabeth Abraham**, *KU Leuven*

Dual-earner couples regularly make work-family decisions; i.e., decisions to deal with conflicts between work and family. Such decisions occur on a daily basis (e.g. when a family event interferes with a work deadline), but they can also relate to more long-term – or anchoring – choices about how to combine career and family plans (e.g. whether to work part-time, move elsewhere, ...). Existing work-family research has mainly explored decision-making as a rather coherent and logical process. However, human choices are also characterized by automatic thinking processes, which are inherently prone to cognitive errors and can lead to suboptimal outcomes. In this theoretical paper, we argue that work-family conflict and dual-earner decision-making elicit specific conditions of uncertainty and complexity, making automatic thinking more likely. By drawing on behavioral decision-making literature, we develop several research propositions on how cognitive biases can impact short- and long-term decisions in a dual-earner context. We theorize that in the short run, individual partners tend to focus on avoiding immediate costs, choosing options that are not necessarily in line with couple commitments. For long-term decisions, partners may disproportionately focus on potential losses or coping challenges, thereby missing out on desirable work-family choices for the couple as a whole. Our propositions may guide work-family researchers to think about and include cognitive biases in their future studies.

CAR: Do I Have a Better Family Life When Working With a Humorous Leader? A Dual Pathway Investigation 

Author: **Angela Jie Xu**, *Jinan U.*
Author: **Lei Wang**, *Dongbei U. of Finance and Economics*
Author: **Fufu Sun**, *Shanghai U. of Finance and Economics*

Managing positive employee work-family interface has been an essential responsibility for today's leaders. Meanwhile, humor emerges as a popular and cost-effective leadership practice. Nevertheless, the impact of leader humor on employees' family domain is largely unknown. Drawing upon work-family resources model, we propose that leader humor leads to information inadequacy, which is harmful to employee work-to-family enrichment on the one hand. On the other hand, it arouses employees' positive affect, which is beneficial for their family pursuits. We further contend that quality information and affect resources exchanged with teammates (indicated by team-member exchange, TMX) would weaken the dual impact of leader humor on employee work-to-family enrichment. A three-wave data from 285 full-time working employees evidenced the information loss and positive affect gain pathways linking leader humor to employee work-to-family enrichment. TMX was found to buffer leader humor's detrimental effect on information adequacy but not sway its beneficial effect on positive affect, which in turn facilitates employee work-to-family enrichment. Important theoretical and practical implications are provided regarding how organizations can capitalize on leader humor and encourage positive employee work-family interface.

Innovation, Entrepreneurship, and The Supply of Scientific and Inventor Human Capital

Innovation and Entrepreneurship

Panelist: **Lee Fleming**, *U. of California, Berkeley*
Panelist: **Matt Marx**, *Cornell U.*
Panelist: **Benjamin Balsmeier**, *U. of Luxembourg*
Panelist: **Seungryul Ryan Shin**, *Seoul National U.*

This panel symposium assembles four papers and researchers at the intersection of research on innovation, entrepreneurship and scientific human capital. We first discuss the localization of knowledge and how physical presence and proximity of inventors influence knowledge flows within and across technology classes. Then, the value of scientific human capital, specifically inventors and scientists, is discussed in the aspects of innovation and entrepreneurship. We extend the discussion to where the supply of scientific human capital comes from. Each panelist introduces relevant findings that are based when possible on strong identification, including exploitation of inventor death events, a shift-share instrument based on historic census data for regional mobility of human capital, and field experiment on STEM students. Avenues for future research will be discussed.

Understanding Workspace Aesthetics: A PDW Proposal

Workspace Atmospherics

Participant: **Tom Stafford**, *Louisiana Tech U.*
Participant: **Neal M. Ashkanasy**, *U. of Queensland*
Participant: **David Boggs**, *Eastern Illinois U.*
Participant: **Oluremi B. Ayoko**, *U. of Queensland*
Participant: **Joe Story**, -

Sustainable competitive advantage depends on the human capital of an organization, and firms make significant capital investments in aesthetically appealing workplaces as much to motivate existing workers of the firm as to serve as a visible workplace benefit to attract recruits. In the literature and in managerial practice, there are periodic considerations of the influence of workspace aesthetics have on worker motivations, but there is little yet that is programmatic on the topic in the field of management, since the investigation of workspace aesthetics spans several functional and theoretical disciplines including psychology, sociology and management theory. This PDW proposes to bring together several of these disciplines in a panel which will lead to a discussion of the increasingly important role of workspace design and aesthetic qualities in the increasingly “open” offices inhabited by the modern workforce. Factors of critical consideration include the need to retain personal identity in the increasingly open office plans of the modern workforce, and sometimes the industrial psychology sensibilities of organizational behavior are the appropriate lens through which to observe emerging trends and practices. In other cases, sociological theory and research methods bring value. In yet others, social cognition perspectives on judgment and motivation is also cogent. This PDW proposes to bring leading thinkers in several of these areas together to inform attendees on new trends in workspace design, as well as stimulate debate on the emergent field of workspace aesthetics as a field of study within the larger perspective of organizational behavior research.

Gossip, Envy & Bragging

Digital Session Chair: **Trevor Spoelma**, *U. of New Mexico*

OB: Cross-Domain Effects of Negative Workplace Gossip on Employee Life Satisfaction

Author: **Jun Xie**, *Guangdong U. of Foreign Studies*
Author: **Hanjing Chen**, *Guangdong U. of Foreign Studies*
Author: **Qihai Huang**, *Huddersfield Business School, U. of Huddersfield, UK*
Author: **Jessica (Yongyi) Liang**, *school of management, Jinan U.*

Drawing upon psychological detachment theory, the present study investigates the cross-domain effects of negative workplace gossip on life satisfaction by examining the mediating role of psychological detachment difficulty and the moderating role of family-supportive supervisor behaviours (FSSB). The results from a three-wave field survey of 329 employees in China indicate that perceived negative workplace gossip is positively related to the target employees' detachment difficulty and that detachment difficulty mediates the relationship between perceived negative workplace gossip and life satisfaction. Moreover, FSSB negatively moderates the relationship between perceived negative workplace gossip and detachment difficulty, such that the relationship is weaker when FSSB is higher. Furthermore, FSSB also negatively moderates the mediating effect of detachment difficulty between perceived negative workplace gossip and life satisfaction, such that the indirect effects are weaker when FSSB is higher. The theoretical and managerial implications of these findings are discussed.

OB: More than idle talk: Examining the effects of positive and negative team gossip

Author: **Trevor Spoelma**, *U. of New Mexico*
Author: **Andrea L. Hetrick**, *U. of New Mexico*

Supported by meta-analytic evidence, the general consensus in the teams literature is that the more a team communicates, the better. However, one type of communication that appears at odds with this view is gossip—a behavior traditionally viewed as harmful in organizations. We propose that one way to uncover potential benefits of gossip in teams is to focus on the valence (positive or negative nature) of the gossip. Drawing on expectancy theory, we propose team gossip indirectly influences team performance through social loafing because it plays a key role in shaping beliefs about effort in team contexts; effects determined by team gossip valence. We hypothesize that positive team gossip decreases social loafing, whereas negative team gossip increases it. In turn, we expect that through social loafing, positive team gossip has a positive indirect effect on team performance, whereas negative team gossip has a negative indirect effect. We test these predictions in a sample of 63 self-managing teams. We find support for our predictions regarding positive team gossip but not regarding negative team gossip. Our findings point to the potential benefits of gossip and highlight why efforts to abolish gossip in organizations may impair team effort and performance.

OB: Do not ask, but you shall receive: Newcomer reactions to receiving negative gossip about supervisors

Author: **Daroon Jalil**, *PhD student at Old Dominion U.*
Author: **Xiaohong Xu**, *Old Dominion U.*
Author: **Lixin Jiang**, *U. of Auckland*

As research regarding the targets and initiators of workplace gossip is gaining traction, one perspective that remains overlooked is the gossip receiver. Organizational newcomers, who use social information to navigate an unfamiliar organizational terrain, are a particularly relevant population to study the impact of receiving negative gossip. We propose a parallel moderated mediation model in which receiving negative gossip about supervisors has contradicting effects on newcomer job anxiety through perceived social inclusion and negative rumination, and agreeableness as a boundary condition of the effects of receiving negative gossip about supervisors. We collected data from 202 newcomers using a four-wave time-lagged design and found that receiving negative gossip about supervisors increased newcomer job anxiety via negative rumination but did not decrease job anxiety via perceived social inclusion. Further, agreeableness moderated the effect of receiving negative gossip about supervisors on negative rumination (but not perceived social inclusion) such that the effect of receiving negative gossip about supervisors on negative rumination was stronger for less agreeable newcomers. Lastly, the indirect effect of receiving negative gossip about supervisors on job anxiety via negative rumination was stronger for less agreeable newcomers. Theoretical and practical implications specific to gossip and newcomers are discussed.

OB: Approach or Avoidance: Contrasting Effects of Envy-Related Coping Strategies

Author: **Timea David**, *Institute of International Business, National Cheng Kung U.*
Author: **Hsi-An Shih**, *National Cheng Kung U.*

High performing employees are often expected to take initiative and engage in extra-role activities. But the harmful consequences of coworker envy stemming from outperformance might discourage employees to take initiative—a disrupting factor that management scholars yet to fully understand. With the present research, we hope to address this deficiency and provide a deeper analysis of the envy-proactivity link. We draw upon regulatory theories and examine how approach and avoidance motivations of envied employees drive distinct patterns of their envy appraisal and subsequent coping strategies. Our findings suggest that the extent to which individuals focus on the potential negative impact of envy on themselves, drives the selection of avoidant coping strategies, which hinders proactivity. However, concern towards the envier stimulate approach motivated coping strategy, which in turn can enhance proactive behaviors. Our pilot study conducted among international working professionals provided initial evidence that self-oriented concern in the face of envy stimulate distancing behaviors (avoidance motivation), whereas other-oriented concern prompts envied individuals to engage in courtesy (approach motivation). Study 2 demonstrated that these two mechanisms have contrastive effect on proactivity: the serial mediation was negative through self-oriented concern and distancing, but positive through other-oriented concern and courtesy. An experimental design in Study 3 further strengthen the robustness of these findings.

The field of organizational psychology is currently in what some scholars have referred to as an affective era (Judge et al., 2017) and have called for examinations of discrete emotions at work. In response to these calls, the subject of gratitude has recently received attention in management research. Though knowledge has accumulated regarding the moral and well-being functions of gratitude, much less is known of the relational functions of gratitude in organizations. Therefore, the purpose of this symposium is to explore the relational nature of gratitude through examinations of expressed, felt, and normative gratitude within-persons, dyads, and groups. Specifically, this symposium demonstrates the many ways gratitude can enhance relationships at work and foster positive employee behaviors. This symposium consists of four papers. The first paper investigates employee outcomes of receiving gratitude from supervisors. The second paper examines the emergence and impact of gratitude norms in teams. The third study examines leader and follower self-transcendent emotions in the COVID-19 pandemic. Finally, the last paper explores how mindfulness can influence greater helping behavior at work by stimulating state gratitude. Together, these papers advance understanding of the positive impact of gratitude on employee relationships and positive behaviors. We believe that this symposium showcases the importance of gratitude in organizations and will motivate future research in this area.

This session will be live and an open meeting-style session. Please note that the session will also be recorded.

Participant: **Ana Maria Peredo**, *U. of Victoria*

In the past few decades, we have seen the gradual emergence of organization and management research that addresses what firms can do to mitigate climate change and other environmental dangers. As others have noted, much of our field's research has focused on the firm level, aiming to explore how firm-level choices can help or harm the environment. Rich as this research has been, however, the broader system—the rules of the game—limit what firms can do in the face of the climate crisis. So management scholarship must move beyond its current focus on firm-level and individual-level behavior, to focus more attention on the broader system that sets the rules of the game. The environmental crisis is, in this sense, similar to other 'grand challenges' whose scale and urgency have pushed numerous thought-leaders in our field to urge us to broaden our focus. To understand and respond to the climate emergency, we need to focus on the political-economic-cultural systems within which firms and individuals operate and on what plausible, different systems could better support local efforts to respond to environmental challenge. The overall goal of this PDW is to help our field develop the conceptual tools we need to understand our challenges at the system level and to contribute to the policy debates at that level. To accomplish this, the PDW will feature speakers offering a range of views. It will also create space for dialogue among them and with other participants.

What Is Trustworthy MTurk-Based Research? Recommendations for Authors and Reviewers

Recommendations for Trustworthy MTurk Research

Participant: **Isabel Villamor**, *George Washington U.*

Participant: **Ravi Ramani**, *Morgan State U.*

Participant: **Herman Aguinis**, *George Washington U.*

Amazon's Mechanical Turk (MTurk) is the most pervasively-used online marketplace for conducting research in management and related fields. However, there are significant concerns that call into question the validity of research conclusions based on MTurk data (e.g., Barends & de Vries, 2019; Hydock, 2018; Zack, Kennedy, & Long, 2019). Accordingly, the goal of our professional development workshop (PDW) is to offer best-practice recommendations regarding how to design, implement, and report MTurk studies. Our recommendations are aimed at researchers planning on using MTurk as well as those who evaluate manuscripts describing MTurk-based research (i.e., journal reviewers and editors). Based on a review of 146 sources, our PDW will provide a summary of MTurk's practical and logistical benefits and a detailed analysis of 10 particularly salient features of MTurk research and their concomitant threats to internal, external, construct, and statistical conclusion validity (e.g., participant inattention and misrepresentation, vulnerability to web robots, MTurker non-naïveté, perceived researcher unfairness). We will then offer 10 best-practice recommendations to address those threats during research planning, research implementation, and reporting of results (e.g., decide qualifications used to screen MTurkers, formulate compensation rules, approve or deny compensation). Also, our session will offer participants opportunities to discuss specific questions or concerns they have about conducting research on MTurk. Finally, we will provide a hands-on demonstration of how to implement each of these recommendations and conduct an MTurk study that minimizes the validity threats of associated with this data collection method.

Nonmarket Strategy in the Global Context

Digital Session Chair: **Wen Helena Li**, *U. of Technology, Sydney*

STR: Firm–Government Geographic Distance and Firm Philanthropy in China

Author: **Wei Liu**, *The U. of Sydney*

Author: **Wen Helena Li**, *U. of Technology, Sydney*

This study examines the impact of a firm's geographic distance to its local government on the firm's philanthropic giving in an emerging economy. Drawing on the geography strategy literature and the literature conceptualizing corporate social responsibility (CSR) initiatives as signals to relevant stakeholders, we posit that a firm located distantly from its local government tends to make more philanthropic donation to signal its goodwill, with the hope to overcome the geographic distance-induced information asymmetry, so that it can retain reciprocity in its social exchange with the government. More important, this positive relationship between firm-government geographic distance and government-oriented philanthropic donation becomes weaker when the firm has political connections or the local media in the region is well developed, both of which can attenuate the information asymmetry tied to geographic distance. We find support for our hypotheses by analyzing two complementary samples: the cross-sectional sample of 1,088 privately owned firms from the Chinese Private Enterprise Survey in 2000 and the panel data of 6,247 firm-year observations from Chinese publicly listed private firms between 2010 and 2015. Both the theoretical and policy implications of our findings are discussed.

STR: The Insurance Mechanism of CSR: Evidence from the Anti-Corruption Code of Conduct in Russia (WITHDRAWN)

Author: **Yulia Muratova**, *Aarhus BSS, Aarhus U.*

CSR initiatives help firms to establish goodwill with stakeholders and yield insurance-like benefits in the case of a negative event. However, the exact mechanism shaping this process is unclear. This study aims to contribute to the exploration of the mechanism linking CSR initiatives with corporate outcomes, by empirically focusing on a relationship between the adoption of an anti-corruption code of conduct and lawsuits against signatory firms in Russia. By deploying a difference-in-difference methodology, this study finds that a firm's anti-corruption efforts increase the number of lawsuits against the firm. Empirical evidence suggests that this is due to two mechanisms: transparency and non-conformity with stakeholder expectations. The findings have implications for the CSR literature and anti-corruption policies in emerging markets.

STR: Corporate Political Influence around the World

Author: **Daniel Blake**, *IE Business School*

Author: **Srividya Jandhyala**, *ESSEC Business School*

The extent of corporate political influence – the ability of firms to obtain favorable policies from politicians – varies significantly across countries. Drawing on selectorate theory, a perspective developed in political science, we argue that political leaders' proclivity to alter public policies in response to firms' demands reflects the size of the winning coalition whose support they need to remain in power. In countries with small winning coalitions, political leaders trade preferential policies for a share of the rents, which allows them to stay in power by buying the support of a small coalition. Because this is inefficient in countries with large winning coalitions, leaders prioritize the provision of public benefits and are less likely to concede to firms' preferential policy demands. We hypothesize that the negative relationship between the size of a country's winning coalition and corporate influence is observed for firms that offer goods of political value, particularly, large, foreign, and politically connected firms. Analysis of survey data of up to 9918 firms across 37 developing and emerging market countries provides support for our arguments. Our study advances extant research by providing a theoretical framework for comparing corporate influence and the supply side of political markets across countries.

STR: Resource dependence roles of business and political directors: China's anti-corruption campaigns

Author: **Yue Wang**, *Jones Graduate School of Business, Rice U.*

Author: **Hong Zhang**, *Wuhan U.*

How firms change board composition to manage multiple resource dependence relations with external forces? Standing from the viewpoint of resource dependence theory, we argue for two types of directors, political directors and business directors, and how they link firms with two external environments, the market environment and the political environment. In the context of Chinese anticorruption campaigns, using a difference-in-difference (DID) approach, we find that firms affected by the anticorruption campaigns are more likely to increase the number of business directors and decrease the number of political directors on board after the movement. We also find a moderation effect that the positive influence of the campaigns on business directors are stronger for state-owned companies, while the negative effect on political directors are weaker for firms in a region with a high degree of marketization. The moderation reveals the interactive relations between firms' dependence on the market and its dependence on the government. These findings contribute to the literature on firms' board composition, resource dependence theory and non-market strategies.

Risk, Crises, and Turnaround

Digital Session Chair: **Wein-Hong Chen**, *National Dong Hwa U.*

STR: Sources of Enterprise Resilience in Times of Global Crisis: A Fuzzy Set Analysis  

Author: **Wein-Hong Chen**, *National Dong Hwa U.*

Global crises have become more evident in the twenty-first century and witnessed success and failure of enterprises. Along with the rising occurrence of global crises, enterprise resilience becomes a hot topic among business scholars, consultants, and policy makers. This study adopts the set-theoretic methodology and explores configurations of resource slack, executive compensation, and CEO duality that contribute to or hamper enterprise resilience. The results reveal certain resource slack bundles combined with absence of CEO duality as sources of enterprise resilience. This study makes unique contributions by exploring sources of enterprise resilience, an under-explored but a rising area of interest in the field of business management.

STR: Organizing for Value Creation and Managing Risk: Study of Indian Pharmaceutical Ecosystem 

Author: **Mayank Aggarwal**, *Indian Institute of Management, Ahmedabad*

Researchers and managers are increasingly looking at ecosystems as the locus of value creation for firms. But even with full information and rational expectations, inherent randomness and probabilistic nature of the value creation process create complexities for the firm. Firms maximize their value while minimizing the risk due to chance events. But how firms manage this risk? Why firms prefer a relationship with one firm and not another? We answer these questions by presenting a formal model of the firm's complementary interactions. Drawing from the possibilities of ideas and technologies available to firms to manage complementarities and avoiding extreme events, firms maximize their output by establishing and managing a complementary relationship. We empirically test the findings of the model in the context of the Indian pharmaceutical ecosystem. We find that firms minimize their risk by establishing relationships with multiple firms. The interactions with firms with high resource asymmetry and competitive relationships give rise to the highest complementarity. Our findings contribute to the literature on ecosystems and randomness and guide managers to create value in an increasingly interconnected industry ecosystem.

STR: Financial Restatements in a Time of Turbulence, Leverage, and Rational Expectations  

Author: **Grigorios Livanis**, *Ohio U.*
Author: **J Michael Geringer**, *Ohio U.*
Author: **Aaron Wilson**, *Ohio U.*

Using agency theory and transaction cost economics as a conceptual foundation, this study uses backward- and forward-looking measures, sales instability and market leverage, to examine likelihood of financial restatement. We test hypotheses using a sample of 43,876 firm-year observations from 2005-2018, involving 5,397 firms and 3,991 restatements. As hypothesized, higher levels of sales turbulence as well as higher levels of market leverage increase likelihood of restatement. Although firms evidencing sales increases over prior years have lower likelihood of restatement, examination of interaction reveals this effect is reduced when such increases occur in the context of increased sales turbulence or increased levels of leverage.

STR: Effective Turnaround for SMEs: Interaction between Insolvency Proceedings and Retrenchment Strategies

Author: **Rachid Achbah**, *COACTIS - U. Lyon-Univ Jean Monnet - IAE Saint-Etienne*
Author: **Marc Frechet**, *Jean Monnet U.*

Extant research on turnaround acknowledges that when a firm begins to experience financial difficulties, retrenchment is the most frequent response. Should this strategy be unsuccessful, the firm proceeds to legal treatment through insolvency proceedings. However, little is known about the fact how firms' can consider simultaneously or successively the use of out-of-court and in-court restructuring strategies. The goal of this study is to investigate the impact of the interplay between insolvency proceedings and retrenchment strategies on firm survival. We use a Cox proportional hazards model to predict survival probability on a sample of French SMEs. Our main findings are that the opening of insolvency proceedings has a significant and negative impact on firms' life expectancy. The influence of retrenchment differs whether it concerns employees or assets. Retrenchment in employees has a general and negative influence on firm's survival, but we find that this influence is even more pronounced in the presence of insolvency proceedings. In contrast, assets retrenchment increases firms' life expectancy. In this case, we observe that the insolvency proceedings increase this positive impact on survival likelihood. This research is likely to help researchers, legislators, and managers to better understand the effective use of retrenchment strategies within insolvency proceedings.

Firm Innovative Performance

Digital Session Chair: **Tianjiao Xia**, *U. of East Anglia*

TIM: How Does Cross-national Knowledge Distance Influence Host Innovation?    

Author: **Tianjiao Xia**, *U. of East Anglia*
Author: **Xiaohui Liu**, *Loughborough U.*

How do advanced economy multinational enterprises (AEMNEs) leverage cross-national knowledge distance for their emerging market innovation? Drawing on an embeddedness perspective, we examine and extend the 'learning-by-hiring' and 'learning-by-exporting' logics for a better understanding of AEMNEs' innovation activities in a dissimilar knowledge context where strong cross-national differences persist. We predict that the recruitment of local talents and third-country exporting as two mediators that shape and filter AEMNEs' access and integration of geographically distant knowledge for their emerging market innovation. We further predict an inverted U-shaped effect of third-country exporting on AEMNEs' innovativeness and a crowding-out effect of the recruitment of local talents on third-country exporting as an innovation mechanism. Our analysis of 534 AEMNEs operating in China offers support for our conjectures. Our study offers important implications on how to manage multiple embeddedness across AEMNEs' global networks for their innovation to flourish in emerging economies.

TIM: Strategic Roles and the Evolution of Innovation Units: A Process Model 

Author: **Lisa Canova**, *U. of Geneva*
Author: **Katherine Tatarinov**, *GSEM - U. of Geneva*
Author: **Tina C. Ambos**, *U. of Geneva*

Innovation units in large, dispersed organizations are often mandated to follow different rules and dynamics than the rest of the organization. But our understanding about how such units evolve over time and integrate with the organization is scarce. Taking an activity-based view, this paper addresses the question of: How do the strategic roles of innovation units within an organization evolve over time? Through a qualitative longitudinal single case study of an innovation unit in a globally dispersed organization, the study finds that the unit evolves and changes its strategic roles. We derive a process-based framework defining three drivers of evolution at the micro, meso and macro level, which result in different strategic roles (culture building, network building and platform building) across three phases. A key feature of these strategic roles is the inherent misalignment with the organization. This study contributes to our understanding of the evolution of strategic roles of innovation units in large global organizations. We provide a refined theoretical perspective on misalignment as a key feature of the innovation unit's strategic role which shapes its relationship with the organization.

Paper is Available to Meeting Registrants Only.

TIM: Am I Better Off Alone? Firms' Innovation Performance and Knowledge Alliances  

Author: **Youstina Masoud**, *UMass Amherst*

In this paper, we introduce firms' innovation comparison as a major antecedent to the intensity of firms' alliance formation. We define innovation comparison as the difference between firms' innovation performance and their aspiration levels. We build on the behavioral theory of the firm to explain the implications of negative innovation comparisons on firms' tendencies to engage in alliances. We argue that when firms perform less than their innovation inspirations, they engage in more alliances to compensate for their lack of knowledge, experience, and resources. Additionally, we examine the moderating role of TMT characteristics on this relationship. We focus on TMT's age, tenure, and functional diversity due to their effects on informational processing and environmental interpretations. A panel of knowledge intensive firms shows partial support to the proposed model. The proposed framework contributes to alliance literature by integrating the behavior theory of the firm to explain firms' behavior towards alliance formation. Additionally, we extend TMT literature by examining age, tenure, and functional diversity as boundary conditions to firms' ability to perform corrective actions in case of unfavorable performance.

Paper is Available to Meeting Registrants Only.

TIM: Multiple Strategies of Appropriating Value from Innovation: Ownership and Temporal Perspectives 

Author: **Pia Hurmelinna-Laukkanen**, *U. of Oulu*
Author: **Paavo Ritala**, *LUT School of Business and Management*
Author: **Jialei Yang**, *U. of Oulu*

The discussion on appropriability as a major determinant of firm competitiveness is relatively established in the fields of strategy and innovation management. The classic perspective of appropriability suggests that innovating firms seek individual value capture from activities that are specific to their organizations—excluding others, or at least keeping some control over their innovations. These widely held assumptions have led the appropriability discussion to fall short in explaining the latest developments in the changing business reality, such as the emergence of open forms of innovation and business models that abandon or are indifferent to control and ownership of resources. By theorizing appropriability along two axes, ownership and time, we recognize and articulate multiple strategies available for appropriating value from innovation. In particular, we identify four categories of innovation appropriability: primary, derivative, generative, and prospective, and identify their central features. This categorization contributes by enhancing a dynamic view on appropriability.

HR: Enhancing Leader Inclusion While Preventing Social Exclusion in the Work Group

Author: **Lynn Shore**, *Colorado State U.*
Author: **Beth G. Chung**, *San Diego State U.*

In the last ten years research on inclusion has been increasing at a rapid pace. However, behaviors of the leader that increase employee experiences of inclusion or exclusion is not yet well understood. In this paper we present a model of leader inclusion and exclusion, and the roles the leader can play that increase or decrease these employee experiences. The roles we discuss are leader exclusion, leader inclusion, bystander, ally, role model, and advocate.

HR: When does group efficacy deteriorate group performance? Implications of group competency

Author: **Hae Sang Park**, *Roosevelt U.*
Author: **Soo Young Shin**, *Yeungnam U.*

While social cognitive theory suggests that a group's efficacy belief enhances its performance, emerging theory and evidence have found that this relationship is more complex than it appears to be. We propose that the relationship varies according to the level of group competency. Using data from 389 employees in 41 work groups of a manufacturing company in South Korea, we examined the moderating effects of group average competency and group minimum competency on the relationship between group efficacy and performance. Supporting the social cognitive theory, group efficacy is positively related to group performance that was rated by group members. The results also show that both moderating effects are significant. Specifically, the relationship between group efficacy and performance is stronger when members are generally incompetent. This result shows an evidence of Dunning-Kruger effect, which refers to an illusory tendency that people with low ability tends to overestimate their performance. However, when the group minimum competency, which could be interpreted as a potential bottleneck of the group, is low, the relationship become negative. In other words, when the potential bottleneck is incompetent to the point that he or she significantly hampers the group processes, group efficacy lowers group performance.

Paper is Available to Meeting Registrants Only.

HR: Team cognitive diversity and creativity: The role of team intellectual capital and inclusive climate

Author: **Jiaojiao Qu**, *Taiyuan U. Of Technology*
Author: **Mingwei Liu**, *Rutgers U.*
Author: **Xia Cao**, *Shanxi U. of Finance and Economics*

Although the influence of diversity for organizations has attracted growing interests in recent years, it is still controversial. To mitigate the inconsistencies, this study focuses on cognitive diversity to unravel how and when it affects creativity. Drawing on the information/decision-making perspective, the resource-based view and the inclusion literature, we theorize and test a multi-level moderated mediation model of the relationship between team cognitive diversity and individual creativity. With a paired and time-lagged sample of 348 members and their 46 leaders from Chinese high-tech organizations, we find that team cognitive diversity is positively related to individual creativity; this positive relationship is mediated by team intellectual capital; and team inclusive climate moderates the indirect effect, such that the positive linkage between team cognitive diversity and individual creativity via team intellectual capital only occurs when team inclusive climate is high. These results deepen our understanding of the role of cognitive diversity, and shed light on the process through which, and the condition under which, cognitive diversity translates into creativity. We conclude by discussing the theoretical and managerial implications of our research.

Paper is Available to Meeting Registrants Only.

HR: Procedural Justice and Team Learning: Integrated Understanding Based on Social Exchange Theory

Author: **Sicheng Luo**, *Business School, Sun Yat-Sen U.*

The learning that occurs in teams is seen as crucial for organizations to survive and thrive in dynamic environment. Although team procedural justice has been found to impact team learning behavior, it is not clear how and when it is able to do so. Intra-team trust and team leadership have been considered to be important antecedents likewise. However, these factors are examined independently of each other, causing the lack of coherent knowledge on existing work of team learning. In this study, we use social exchange theory to integrate insights across studies on procedural justice, intra-team trust, and leader-member exchange (LMX) differentiation. The time-lagged, survey-based findings reveal that the positive relationship between procedural justice and team learning is mediated by intra-team trust. Yet, this is only true when LMD differentiation is weak, not when it is strong. We therefore provide initial patterns of interaction and discrimination among key factors that are related to team learning in ways that contribute to both theory and practice.

Paper is NOT Available. Please contact the author(s).

HR: Nonlinear effects of team abusive supervision on team members' knowledge hiding

Author: **Meiqin Jiang**, *College of Economic and Management, Huazhong Agricultural U*
Author: **Pengcheng Zhang**, *School of Management, Huazhong U. of Science and Technology*

Despite the necessity of knowledge exchange, the individual employees tend to hide their knowledge based on different, mixed or no motives. Drawing on the integration of balance theory and displaced aggression theory, we explained the role of leadership in influencing employee knowledge hiding. Specifically, we proposed a U-shaped relationship between team abusive supervision and member knowledge hiding in teams. Moreover, we proposed that economic and social leader-member exchange moderate the relationship between team abusive supervision and employee knowledge hiding. Our analysis based on 260 employees nested in 63 groups revealed that team abusive supervision and employee knowledge hiding indeed have a U-shaped relationship such that the moderate level of team abusive supervision triggers the minimum level of employee knowledge hiding. Economic LMX moderates the team abusive supervision-knowledge hiding relationship such that team abusive supervision will associate with less employee knowledge hiding when team has high level rather than low level of economic LMX. Moreover, social LMX moderates the team abusive supervisor-knowledge hiding relationship such that team abusive supervision will relate to more employee knowledge hiding when team has high level rather than low level of social LMX. The implications for theory and practice are discussed.

Strategizing with Business Analytics

Digital Session Chair: **Sergey Stroppiana Tabankov**, *Warwick Business School*

OCIS: **Tensions Interrelation Across the Implementation Stages of Business Analytics**

Author: **Sergey Stroppiana Tabankov**, *Warwick Business School*
Author: **Mareike Mohlmann**, *Bentley U.*

Organizations face a series of tensions related to the implementation process of business analytics. It is therefore essential for organizations to be prepared for the rise of these tensions in order to manage them efficiently and to implement an effective plan of action. We divide the business analytics implementation process in three stages to render the entire process accessible to various stakeholders: (1) data collection and input data, (2) data analysis and computation, and (3) organizational output and data-driven learning. We map the chosen literature to each of the stages, identifying benefits and challenges, and the tensions derived from their coexistence. Instead of discussing the tensions in isolation per current literature, we examine how they interrelate and influence one another, advancing the existing knowledge on business analytics, thus providing a solid base for future empirical research.

Paper is Available to Meeting Registrants Only.

OCIS: **Cognitive Complexity, Digitized Analytics Capability, CEO Incentives and Competitive Aggressiveness**

Author: **T Ravichandran**, *Rensselaer Polytechnic Institute*
Author: **Liang Zhao**, *Lally School of Management, Rensselaer Polytechnic Institute*

The competitive dynamics research has shown that firms with more aggressive competitive behaviors exhibit better performance. However, limited studies have explored the antecedents of a firm's competitive behavior. In this study, we analyze the competitive behavior of firms through a cognition perspective and focus on two dimensions of cognitive complexity: (1) differentiation and (2) connectedness. Differentiation refers to the breadth or variety of environmental, strategic, and organizational concepts embedded in the cognitive framework, and connectedness refers to the development of connections and sophistication among the various concepts. We argue that the biases embedded in complex cognitive structures would influence a firm's competitive behavior, and digitized analytics capability and CEO incentives could modulate these biases. We test our hypotheses using data for 334 U.S. firms from 2008 to 2015. We find that highly differentiated cognitive structures will enable firms to increase competitive aggressiveness while highly connected ones will inhibit firms from taking competitive actions aggressively. Furthermore, we find that firms with higher digitized analytics capability would be capable of competing more aggressively when their cognitive framework is complex. Finally, we find that risk incentives could reduce shirking, and hence, positively moderate the relationship between differentiation and competitive aggressiveness but negatively moderate the relationship between connectedness and competitive aggressiveness. We discuss the theoretical and practical implications of our findings and draw guidelines for future research.

Paper is Available to Meeting Registrants Only.

OCIS: **Knowledge- and Resource-based Views Driving the Development of the Analytics Maturity Framework**

Author: **Olga Menukhin**, *The U. of Manchester*
Author: **Catherine Mandungu**, *The U. of Manchester*
Author: **Azar Shahgholian**, *senior lecturer*
Author: **Nikolay Dimitrov Mehandjiev**, *Alliance Manchester Business School, U. of Manchester*

Resource-based and Knowledge-based Views (RBV and KBV) have been used to underpin models predicting analytics' contribution to competitive advantage, growth and company performance. However, so far neither RBV nor KBV have been used to derive benchmark-oriented and holistic models of growth based on the capability maturity model (CMM). Here we address this gap and demonstrate how KBV and RBV can serve as a theoretical basis for our Analytics Maturity Framework (AMF). It is differentiated from existing analytics maturity models by using a firm theoretical foundation and providing guidance for future growth instead of simply diagnosing the existing maturity level. Indeed, AMF distinguishes two aspects of maturity: "state", assessing the present situation, and "management", analysing existing processes to establish the next stage of growth. AMF has been implemented as a web-based diagnostic tool and feedback from practitioners has indicated a strongly positive validation of its usefulness and applicability across sectors.

Subordinates' Responses to Dysfunctional Leadership

Digital Session Chair: **Yang Ouyang**, *The School of Economics and Management, Tsinghua U.*

OB: Servant Leadership and the Impact of Supervisor Affiliation on Pro-Group Unethical Behavior

Author: **Yang Ouyang**, *The School of Economics and Management, Tsinghua U.*

Author: **HUA HU**, *School of Economics and Management Tsinghua U.*

Author: **Robin Mengxi Yang**, *School of Economics and Management, U. of Chinese Academy of Sciences*

Based on social identity theory, this research aims to develop and test a model contending that the supervisor affiliation perceived by employees mediates the influence of servant leadership on employees' pro-group unethical behavior. Among a sample of 239 supervisor-employee matching data of four foreign-owned engineering enterprises, we found that supervisor affiliation mediated the positive effect of supervisors' servant leadership on employees' pro-group unethical behavior. The results also revealed that employees' moral attentiveness weakened the positive impact of supervisor affiliation on pro-group unethical behavior. The current study continues the momentum on business ethics research by advancing our understanding of antecedents of pro-group unethical behavior as well as how positive servant leadership affects such negative unethical behavioral outcome. This effort also extends research that shows mediating and moderating roles played by interpersonal contextual influence and individual difference. Implications of these results for theory, practice and directions for future research are discussed.

OB: Justifying the Abuse: How Abusive Supervision Can Increase Supervisor-Directed Obligation

Author: **Andreas Wihler**, *U. of Exeter Business School*

Author: **Kai Christian Bormann**, *Bielefeld U.*

Author: **Dominic Gansen-Ammann**, -

Abusive supervision, which covers the sustained display of hostile leadership behaviors, is gaining increased academic attention in recent years. In the present study, we suggest that the persistence of abusive supervision may stem from short-lived positive outcomes of experiencing abusive supervision. Drawing from cognitive dissonance theory, we argue that targets of abusive supervision reduce the dissonance caused from experienced hostility by processing it as justified. Justified abuse then ignites pro-organizational reactions by increasing subordinates' supervisor-directed obligation. We also expect the positive indirect effect of abusive supervision on supervisor-directed obligation to be weaker in conditions of subordinate wrongdoing (low dissonance) and stronger in conditions of no wrongdoing (high dissonance). We test our assumptions across three studies in an applied setting via experience sampling and two experimental vignette studies. Consistent with our theorizing, we find that justified abuse mediates the effect of abusive supervision on supervisor-directed obligation. In addition, in line with cognitive dissonance theory, that the positive indirect effect is weaker when subordinates had committed a work-related mistake (low dissonance) and stronger when they had done nothing wrong (high dissonance). These results indicate that the consequences of abusive supervision are more nuanced than previously assumed.

OB: Can Abusive Supervision Create Positive Work Engagement?

Author: **Eunji Huh**, *Korea Advanced Institute of Science and Technology (KAIST)*

Author: **Eun-Suk Lee**, *Chung-Ang U.*

Departing from previous research which shows that abusive supervision, as a salient job demand, induces detrimental employee outcomes, this study examines how to create constructive consequences of abusive supervision. To do so, we identify the boundary conditions to change the negative effect of supervisory abuse on employees' work engagement in a positive direction. We examine the interactive moderating effect of a personal resource (i.e., the positive causal attribution of abusive supervision) and a job resource (i.e., workplace friendship) on the relationship between abusive supervision and work engagement. Our findings indicate that abusive supervision increases employees' work engagement when they make a positive causal attribution of abusive supervision (i.e., interpreting their abusive supervisor's motives as promoting their job performance, rather than as intentionally harming them) and have favorable workplace friends. By revealing that supervisory abuse can enhance employees' work engagement when it is coupled with proper personal and job resources, this study offers a novel picture of abusive supervision. In addition, our study highlights that in order to identify constructive effects of abusive supervision, it is critical to delve into the interaction between resources from these two domains to deal with abusive supervision.

OB: Dysfunctional Leadership, A Systematic Literature Review and Research Agenda

Author: **Robert Matthias Modliba**, *Private U. Seeburg Castle*

Author: **Theresa Treffers**, *TUM School of Management, Technische U. München*

Over the last 20 years, there has been growing interest in the "dark" side of leadership. This pa-per systematically reviews the literature on dysfunctional leadership and synthesizes the diverse definitions, constructs, and measures. We identified 21 different constructs of undesirable su-pervisory behavior, including abusive supervision, destructive leadership, paternalistic leader-ship, and workplace bullying; disentangled their similar and different underlying dimensions, such as power asymmetry, the tendency to belittle others, and supervisor self-orientation; and analyzed 42 different construct operationalizations. We consolidated our findings in a compre-hensive dysfunctional leadership framework that includes the causes and consequences of dys-functional leadership on multiple levels and contextual and demographic factors as contingency factors. Based on this framework, we develop a research agenda that recommends dyad-related approaches to better understand the mutual causes of dysfunctional leadership and multilevel approaches to better understand the work- and person-related consequences of dysfunctional leadership.

Alliances: Behavioral, Relational, and Institutional Foundations

Digital Session Chair: **Theresa Bockelmann**, *Westfälische Wilhelms-U. Münster*

STR: CEO Career Variety As Behavioral Antecedent Of Organizations' Strategic Alliance Portfolios

Author: **Theresa Bockelmann**, *Westfälische Wilhelms-U. Münster*

Author: **David Bendig**, *Westfälische Wilhelms-U. Münster*

This study takes a behavioral perspective on the antecedents of strategic alliances. Considering the impact of CEOs on their organization's strategic choices and behaviors, career variety and its motives pose a particularly influential and interesting executive characteristic. By analyzing a multiyear sample of the S&P 500 companies, this study offers two main contributions to management research: 1. The study connects TMT research with strategic management research to reveal a TMT-based antecedent of a firm's composition of strategic alliance portfolios. 2. We introduce a novel concept to analyze and understand the influence of career variety as an observable characteristic. Results propose that while the alliance portfolio size increases with an increasing level of career variety of a CEO, mid-ranked executives are most capable of creating a balanced and ambidextrous strategic alliance portfolio as well as a healthy mix of competitive and non-competitive partnerships. These results contradict current market mechanisms revealed by previous studies, which point to an increasing market value of CEOs with greater career diversity.

STR: Trust Dynamics during Early Alliance Operation: The Role of Partner Engagement

Author: **Florian Kapmeier**, *ESB Business School, Reutlingen U.*

Author: **Jeroen Struben**, *EMLYON Business School*

Cooperative endeavors offer valuable strategic options for firms. Yet, many of them are failure-prone as partners must balance collective and private interest. While interpartner trust is considered central for alliance success, paradoxically, the role and dynamics of trust is still not understood. We synthesize a computational model, capturing relational dynamics of an alliance, encompassing coevolution of trust, partner contributions, and (relative) alliance interactions. Analyzing alliance dynamics using simulation we find and explore a tipping boundary, separating a regime of alliance failure and success. We identify implications for collaborative (aspirations) and private strategies (openness). Our analyses reveal that strategies informed by a static mental model of partner trust, contributions, and openness tend to yield subpar alliance results and hidden failure-risk. We discuss implications for management theory.

STR: Alliance choices: A Behavioral Theory of Problemistic and Slack Searches under CEO Overconfidence

Author: **Fen Zhang**, *Xi'an Jiaotong U.*

Author: **Changhong Yuan**, *Xi'an Jiaotong U.*

Author: **Weiguo Fan**, *Tippie College of Business, U. of Iowa*

Author: **Yongchuan Bao**, *U. of Alabama in Huntsville*

How do firms configure exploration versus exploitation in alliance portfolios when facing behavioral heuristics? Based on the behavioral perspective, this study uses problemistic and slack searches as the behavioral explanation for exploration versus exploitation configurations in alliance portfolios. Simultaneously, it takes into account the moderating role of CEO overconfidence by considering the influence of decision makers' subjective interpretations on performance feedback and slack, during the decision-making process. It employed a feasible generalized least squares approach to regression to empirically test the model using data of 224 publicly traded firms in the United States (U.S.) comprising high-tech industries. The findings show that both, below-aspiration performance and absorbed slack, play positive roles in focusing attention on exploration rather than exploitation alliances. The results also show that CEO overconfidence intensifies the positive roles of below-aspiration performance and absorbed slack in the exploration alliance choice. This study contributes to extant literature by extending the behavioral theory to the choices of exploration versus exploitation in alliance portfolio configurations, and filling the limited attention on managers' subjective interpretation of behavioral drivers as boundary conditions in behavioral research.

STR: Invoking the Past: The Dynamics of Framing Organizational History during Transformation at Ericsson

Author: **Zahra Kashanizadeh**, *Lecturer and senior researcher- PhD*

Author: **Henk W. Volberda**, *Amsterdam Business School, U. of Amsterdam*

Referring to the past, particularly to organizational history, is an important aspect of managerial sense-giving, yet prior research provides inconsistent conclusions regarding how references to the past are related to strategic transformation initiatives. In our longitudinal study of Ericsson, we explore various ways through which incumbent firms can leverage the organization's past to facilitate the strategic transformation and legitimize the nascent strategies. Our framework illustrates how managers make sense of the change based on the interaction between endogenous and exogenous forces, and how they can accordingly give sense to the audience by framing organizational history. Our findings reveal how temporally shifting frames in distinct circumstances can shape the interpretation of stakeholders about the change and inspire the vision of transformation.

TIM: How Do Whales Become Sharks? A Process Model To Develop Corporate Entrepreneurial Capabilities   

Author: **Markus Perkmann**, *Imperial College London*
Author: **Cristobal Garcia Herrera**, *Imperial College London*

The question of how firms continuously acquire, develop, and renew their capabilities is at the core of strategic management. Given the current pace of technological disruption, this question is even more compelling in both theory and practice. Based on an inductive longitudinal study of multiple cases, this paper develops a process model to theorize about corporate entrepreneurial capability building in established firms through engagement with industry-led consortium accelerators. The process model comprises four capability-building phases: i) attracting, ii) strategic fit sensing, iii) shaping streams, and iv) internalizing. In so doing, we advance a novel mechanism-based explanation of how corporate R&D/innovation units of established firms develop entrepreneurial and experimentation capabilities through a four-phases process engagement with industry-led accelerators and new ventures. This process model is inductively generated through four, theoretically sampled cases of established firms - in the maritime, logistics, dredging and energy sectors-, which have co-sustained an industry-led accelerator in leading European Port maritime complex. This paper contributes to the corporate entrepreneurship and venturing, organizational learning and dynamic capabilities streams by solving the puzzle of how new corporate lean entrepreneurial capabilities are acquired and initiated through the symbiotic interaction between corporations and new ventures in industry-led consortium accelerators.

TIM: Board Members who hold Technology-related Positions and their Impact on Firms' Innovative Activities

Author: **Linh Phan**, *Heinrich-Heine U. of Dusseldorf*

Firms have recognized the importance of innovative activities to maintaining their competitive advantage and increasing their profitability, but the driving forces of firms' innovative activities are less well understood. This paper investigates whether board members who hold technology-related positions in the firm or in other firms increase firms' innovative activities. Drawing on upper echelons theory, we develop a research model that hypothesizes a positive relationship between board members who hold technology-related positions in the firm or in other firms and firms' innovative activities. Moreover, given that governance and management structures are interconnected, we investigate the interactions of the Chief Executive Officer and the Chief Technology (CTO) when they are on the board and the top management team (TMT), respectively. The research model is empirically validated using a secondary panel dataset comprising 10,903 executives from 912 Standard & Poor's 1500 firms from 2000 to 2011. We find that technology positions on the board have a positive effect on firms' innovative activities. In addition, by investigating the interaction effects between the board and the TMT, we demonstrate that, contrary to common belief, a representative of the R&D function on both the board and the TMT can be detrimental to firms' innovative activities.

TIM: Technology Acquisitions and Out-Licensing: Exploring Alternative Technology Commercialization Paths 

Author: **Thomas M. Klueter**, *IESE Business School*
Author: **Solon Moreira**, *Fox School of Business, Temple U.*
Author: **Clinton Ofoedu**, *IESE Business School*

Following technology acquisitions firms typically engage in intense reorganization of R&D activities triggered by the redundancies and inefficiencies in assets when combining the acquirer and the target R&D. Prior studies have considered the discontinuation and divestiture of technological assets as mechanisms deployed by firms to manage these redundancies. We complement this view by highlighting that technology out-licensing is an important alternative to adjust R&D activities following acquisitions. Technology out-licensing has unique properties as it allows firms to recover R&D investments in the short term, while retaining ownership of valuable technologies in the long term, which is highly useful during the post-acquisition process. We go beyond examining the direct link between acquisitions and out-licensing by considering that technologies residing in the target firm's portfolio may have different levels of uncertainty and that such uncertainty is an important contingency in the acquisition out-licensing relationship. We test our theoretical framework by examining the acquisition and out-licensing activities of 374 bio-pharmaceutical firms between the years 1985 and 2014. The paper contributes to the literature on the management of both in- and outgoing open innovation initiatives by systematically demonstrating how technology acquisitions as well as the acquired knowledge base are important antecedents for out-licensing decisions.

TIM: Disproportional Ownership Structures and R & D Investment: an Investor Protection Perspective

Author: **Hongzhang Zhu**, *Renmin U. of China*
Author: **XINYU HU**, *Renmin U. of China*
Author: **Xiaoxi Chang**, *China U. of Political Science and Law*

As two main types of disproportional ownership, dual-class equity structures and stock pyramids are widely adopted in practice to endow shareholders with extra voting rights. However, comparative research based on these two forms of ownership structures is rare. Using panel data consist of dual-class firms and pyramidal firms during 2010-2018, this paper examines the effect of disproportional ownership structures on firm's R & D investment. We find that compared with stock pyramids, dual-class structures are more conducive to the corporate R & D investment; however, large ownership-control rights divergence of the dual-class equity structures has a negative moderating effect on the relationship between dual-class equity structures and R & D investment of the firm. As an essential component of investor protection, equity balance exerts a three-way interaction effect to further weaken the moderating effect of ownership-control rights divergence in dual-class equity structures. This paper not only confirmed the positive influence of dual-class equity structures on the firm's R & D investment, but also provided evidence for the mechanism of the combined "contact perspective" and "legal perspective" in investor protection literature.

Shareholder and Investor Issues

Digital Session Chair: **Santiago Mejia**, *Fordham U.*

SIM: On the Promise and Limits of Prosocial Neoclassical Economic Approaches to Shareholder Primacy

Author: **Santiago Mejia**, *Fordham U.*

Oliver Hart and Luigi Zingales (Hart 2020; Hart and Zingales 2017a,b,c; Zingales 2017, 2018a,b, 2019a,b, 2020) have proposed to amend the influential view about the nature and function of the firm typically associated with Milton Friedman (1962, 1970). The core of their proposal is that ethical and social values should be given a more central role in an account of the objective function of the firm. The caliber of the authors and the growing concern with the ethical flaws in the traditional model of shareholder primacy, helps to explain why their recent contributions have received much attention. The paper utilizes Hart and Zingales' account to examine whether neo-classical economics can offer an account of the objective function of the firm that is ethically sound. To assess this, we formulate two set of principles. The first highlights that the investigation into the objective function of the firm is normative. It requires thinking in normative terms of both managers and shareholders. Moral norms filter the desires that managers should promote on shareholders' behalf. The second set of principles highlights the conceptual diversity of our normative language; any appropriate account of the objective function of the firm needs to have a rich normative conceptual vocabulary to reflect such diversity. The paper shows that while neoclassical economics may often meet the first set of principles, it lacks the resources to meet the second. It also shows that any account of the nature firm that is descriptively and prescriptively adequate needs economics to work hand in hand with legal scholarship and moral philosophy.

SIM: CSR as a benefit or a burden: Diversified Time-oriented Investors' Reaction on IPO Market

Author: **Hexi Sun**, *Northwestern Polytechnical U.*

Author: **Jia Ming**, *Northwestern Polytechnical U.*

This paper investigates the underlying mechanism which determines the insurance or backfire role of CSR in the case of audiences' reaction to corporate misbehaviors. We specify corporate philanthropy for CSR and employee underpayment for corporate misbehavior. By categorizing investors on IPO market in terms of their time orientation, we propose that short-term oriented investors (VCs) react negatively to corporate philanthropy in the case of employee underpayment while the long-term oriented investors (institutional investors) hold the positive reaction. To be more general, CSR can provide insurance for the firm in the case of corporate misconduct if the audiences are long-term oriented but can contrarily bring about burden if the audiences are short-term oriented. Analyzing a 5-year (2016-2020) panel of IPO firms in China comprising 1214 observations, we find general support for our ideas. Our findings bridge the two viewpoints of the current literature (insurance-like effect and backfire effect) and identifies a crucial boundary condition that the time orientation of audiences matter to determine whether corporate philanthropy is a benefits or burden.

Reporting and Communication

Digital Session Chair: **Christian Hauser**, *Swiss Institute for Entrepreneurship*

SIM: **The role of web-based reporting systems in safeguarding whistleblowers' anonymity**

Author: **Christian Hauser**, *Swiss Institute for Entrepreneurship*

The widespread nature of corruption worldwide and its potentially serious consequences for multinational corporations (MNCs) have led to an increase in research on organizational controls designed to prevent, detect or respond to corrupt behavior. One such organizational control discussed in the literature is whistleblowing, which is often described as an effective measure to combat serious corporate misconduct. The extant whistleblowing literature focuses mainly on the individual informant, while less attention has been paid to the formal structures – i.e., whistleblowing channels – set up by organizations to facilitate whistleblowing. Drawing on expectancy theory, this study examines the ability of different types of reporting channels to safeguard the anonymity of whistleblowers. Based on a survey covering 178 organizations from France, Germany, the United Kingdom and Switzerland, this study shows that a web-based reporting system is more effective in protecting whistleblowers' identities than conventional reporting channels. It thus demonstrates that ICT-based tools can play an important role in the fight against corrupt behavior against or on behalf of MNCs.

SIM: **Explorations in Corporate Hypocrisy and Proposing a Direction for a Sustainable Future**

Author: **Gerard F. Farias**, *Fairleigh Dickinson U.*
Author: **Christine Farias**, *Borough of Manhattan Community College*
Author: **Isabella M. Krysa**, *Fairleigh Dickinson U.*

Despite dire warnings that the potential for environmental catastrophe is growing, most corporate sustainability efforts today, driven by the business case are limited to only those situations where financial outcomes are not in jeopardy. We argue that many of these efforts are in fact a co-opting of the sustainability agenda while creating the illusion of change. In effect, these efforts are hypocritical. We propose a categorization of these hypocrisies, which are manifested in various ways. Firms adopt sustainability to different degrees and we propose a continuum for Business-as-usual to Purposeful firms specifying qualifying criteria for each type. To make sustainability sustainable, we argue that the purpose of the firm must focus on the wellbeing of humanity and the planet. We propose the development of a Double Contribution Line to replace the ubiquitous Triple Bottom Line.

SIM: **Unethical Pro-Organizational Behavior in Sustainability Reporting of Institutions of Higher Education**

Author: **Ifeoluwa Tobi Popoola**, *McMurry U.*
Author: **Milorad Novicevic**, *U. of Mississippi*
Author: **Paul Johnson**, *U. of Mississippi*
Author: **Marvin Matthew**, *U. of Mississippi*

Identity theory (Ashford & Mael, 1989) is a common theoretical frame used in past studies on unethical pro-organizational behavior (UPB). Scholars assumed that organizational identification is a key factor driving permanent and temporary employees to engage in UPB. We extend this framework by integrating accountability theorization and identity theory to propose that individual perceived accountability (operationalized as personal obligation) may provide additional explanation of variance in UPB beyond organizational identification, especially for temporarily employees with a likely weak OI. We designed two studies - a 320-student-participant game theoretic experimental study and a 251-participant survey study - to test the influence of employment status (temporary vs. permanent), employee task role (preparer vs. reviewer), and interpersonal trust (chat vs. no chat) on employees' engagement in UPB. Findings support an interacting influence of employment status and interpersonal trust building situations on employees' UPB engagement. Interpersonal trust moderated the relationship between PO and UPB.

SIM: **"Materiality assessment is an art, not a science"**

Author: **Karen Maas**, *Impact Centre Erasmus, Erasmus U. Rotterdam*
Author: **Jilde Garst**, *Erasmus School of Economics, Rotterdam*
Author: **Jeroen Suijs**, *Erasmus School of Economics, Rotterdam*

Transparency is always seen as an important determinant for business success and avoid greenwashing. Responding to the call to be more transparent about sustainability activities, firms were seen to report on every aspect of their non-financial performance, leading to reports of over 500 pages. The reporting standards-setters thus started to place emphasis on concise and comprehensive information on the most relevant topics. The materiality assessment was introduced to support firms in selecting the sustainability topics that are material. However, a lack of consensus between standard setters on how to conduct this assessment has led to a diversity of methodologies, making the results hard to interpret and compare. Furthermore, the current standards provide little guidance in handling the inherent tensions of sustainability that surface during a materiality assessment. In our study, we investigated the methodologies behind materiality assessments by analyzing over 400 corporate reports between 2017-2019 and interviewing reporting managers in 20 large multinationals. In this article, we show how the methodologies of their materiality assessments reflect how firms handle the sustainability tensions. We end the article with a reflection on the role of standard-setters on the road to transparent reporting materiality decisions.

Author: **Jun Jin**, Zhejiang U.
Author: **Shijing LI**, Zhejiang U.

While research on corporate social responsibility (CSR) disclosure in developing countries recognizes the impact of external factors, less attention has been given to internal factors, especially entrepreneurs' personal traits. Noting that entrepreneurs' decisions are considerably influenced via the phenomenon of their expressions on social media, we build upon upper echelons theory to argue that entrepreneurs' self-expression is positively related to firms' CSR disclosure. Moreover, we contend that the effect of entrepreneurs' self-expression on firms' CSR disclosure is positively moderated by entrepreneur perceived economic status and by firms' political involvement. Our hypotheses are mostly supported through an empirical analysis of data for 2,210 firms captured by survey on Chinese enterprises collected by the Privately Owned Enterprises Research Project Team. Our study contributes to the theories and research on CSR management, especially those on CSR disclosure, by uncovering impacts of entrepreneurs' personal traits through the identification of two critical contingencies.

CAR: Job Losers' Wellbeing: Integrating Psychological Contract and Conservation of Resource Perspectives

Author: **Eric Adom Asante**, *Lingnan U.*
Author: **Frederick Oduro**, *Beijing Normal U.*
Author: **Barbara Danquah**, *U. of Macau*
Author: **Rebecca Dei Mensah**, *U. of Cape Coast*
Author: **Kwasi Dartey-Baah**, *U. of Ghana Business School*
Author: **Emmanuel Affum-Osei**, *Kwame Nkrumah U. of Science & Technology, Kumasi*

Although there is a consensus in the literature that layoff can be viewed as a form of psychological contract (PC) violation, research is yet to examine how such violation impacts layoff victims' wellbeing outcomes including life satisfaction, sleep quality and psychological distress. Integrating psychological contract theory and the conservation of resource theory, we hypothesized a dual-stage moderated mediation model in which PC violation resulting from layoff is associated with three dimensions of layoff victims' wellbeing via worry. This indirect effect is proposed to be conditional on the level of social support received. Based on a sample of 252 layoff victims, we found support for the dual-stage moderated mediation model in which the association between PC violation and the three dimensions of wellbeing via worry was weak for layoff victims reporting high levels of social support. Findings contribute to our understanding of how PC violation is associated with nonwork outcomes.

CAR: Hiring long-term unemployed individuals: The managers' perspective

Author: **Celine Flipo**, *IESEG School of Management*
Author: **Maria Castillo**, *IESEG School of Management*

The current sanitary crisis has seen unemployment rates rise around the world and will have an impact in long-term unemployment. This paper studies the reasons why managers are reluctant or willing to recruit long-term unemployed individuals, and how managers can foster their re-employment. The results of interviews carried out with 40 managers from different companies allow us to identify the hiring barriers that managers face at the company level, to identify and categorize manager's motives to hire long-term unemployed individuals, and to present a number of practices that have been deemed successful for hiring long-term unemployed individuals. It reveals that these barriers, motives, and best-practices revolve around three main categories: identity, work-related tasks, and relations.

CAR: Job Search of Older Unemployed Workers: Evidence from Longitudinal Data

Author: **Gokce Basbug**, *SKK Graduate School of Business*
Author: **Hye Jin Rho**, *MIT Sloan School of Management*
Author: **Abdullah Yalaman**, *Eskisehir Osmangazi U.*

Previous research has shown that older unemployed workers reduce their reservation wage at higher rates than their younger counterparts. However, we know little about why this is the case. In this paper, we focus on the psychological toll of joblessness for older workers as they experience long spells of unemployment. Using longitudinal data on unemployed workers in New Jersey, we first show that the negative emotions of older workers during unemployment intensify at a higher rate than younger workers as they remain unemployed. We then provide early evidence that older workers reduce their reservation wage at a higher rate, because remaining unemployed is psychologically more costly for older workers than their counterparts. We discuss the implications of our findings.

Entrepreneurship and Emotions 4

Digital Session Chair: **Robin Marco Gubela**, *Berlin School of Economics and Law*

ENT: How Owners' Emotions Shape Small Family Firms' Selling Price Perceptions

Author: **Robin Marco Gubela**, *Berlin School of Economics and Law*
Author: **Michael Graffius**, *Berlin School of Economics and Law*
Author: **Birgit Felden**, *Berlin School of Economics and Law*
Author: **Sven Wolff**, *U. of Siegen*

Planning for business succession is a challenging process. For non-family successors, small family firm owners typically demand a sale price, which they specify based on personal experiences with and feelings toward their firms. However, their price perceptions typically do not represent the firm's market value, which leads to failed transactions. Research studies selected emotions and lacks a measurement framework to quantify their impact on selling-price perceptions. Our study contributes to the literature by developing, validating, and preliminarily testing a new scale, which we denote the individual price indicator. To this end, we develop the proposed scale by analyzing 115 peer-reviewed papers in terms of emotional aspects and systematizing the corresponding results. We further validate the scale in two qualitative and two quantitative studies. Lastly, we provide a first test of the scale on owners' willingness to accept lower sales prices. Our results evidence the scale's usefulness to facilitate an owner's business valuation practices.

ENT: Entrepreneurs' Stressors, Discrete Emotions and Personality: A Daily Dairy Study

Author: **Li Wang**, *Guangdong U. of Technology*
Author: **Feng Xu**, *South China Agricultural U.*
Author: **Linlin Jin**, *Guangdong U. of Technology*

Emotional effects in entrepreneurial contexts have attracted broad scholarly interest. However, we still have limited knowledge concerning the antecedents to or the generation process of emotions. Drawing on affective events theory, this study focuses on the generation process of two entrepreneurial emotions (fear and pride) by linking entrepreneurial stressors (workload and financial) and personality traits (neuroticism and optimism) over a two-week period with 61 entrepreneurs. Multilevel analyses provided evidence on individual differences in entrepreneurs' emotional reactions to stressors at between- and within-person levels. Further, neuroticism and optimism can partially account for individual differences in examined relationships across levels of analysis. Theoretical and practical implications are discussed.

ENT: Compassion and the success of social ventures

Author: **Byungku Lee**, *U. of La Verne*

Based on the self-regulation theory, this study examines the self-control mechanism through which the other-oriented emotion of compassion of social entrepreneurs influences the performance of their social ventures. To this end, this study introduces grit, which is defined as an individual's passion and perseverance to achieve long-term goals, as a mediator of the relationship between social entrepreneurs' compassion and the performance of social ventures. This study operationalized a social venture's success as social and economic values created by the social venture. Data are presented from the survey of 254 social entrepreneurs in the United States. The results strongly support the predictions of this study. This study concludes by highlighting the implications of the findings that explain how social entrepreneurs' compassion for others improves the performance of their social ventures.

ENT: Exploring Investment Processes between Venture Capital Investors and Sustainable Start-ups

Author: **Julia Woehler**, *TU Dresden*
Author: **Enrico Seidel**, *TU Dresden*

Venture capital is an important funding source for sustainable entrepreneurship and, thus, drives sustainable development. However, sustainable startups have trouble acquiring venture capital. Hence, existing literature focuses on dedicated impact investors or aims to understand why more traditional investors avoid sustainable investment opportunities. In contrast, this study investigates investment processes from venture capitalists without a dedicated “green” focus on sustainable startups. We investigate 166 documents, containing business plans and decision documents of sustainable and non-sustainable new ventures. We explore whether sustainable entrepreneurs present their business plans in a different style than non-sustainable entrepreneurs and whether investors react differently to sustainable business models. Using NLP and topic modeling, we reveal that traditional venture capitalists do not justify an investment by writing about the topic sustainability. However, investigating writing styles based on sentiment and word usage shows that both, entrepreneurs and investors, argue more emotionally when writing about a sustainable business case.

ENT: Impact of Venture Capitalists' Experience on their Diversification Strategy in India 

Author: **Sukanya Roy**, *Indian Institute of Management, Bangalore*
Author: **Dalhia Mani**, *Indian Institute of Management, Bangalore*

Our study contributes to the venture capitalists' industrial and regional diversification strategies at the selection stage, specifically in an emerging entrepreneurial context with high uncertainty. Venture capital diversification literature has focused primarily on mature environments, and their outcomes may not be suited for emerging environments. We study the effect of venture capitalists' experience on their diversification strategy and the moderating effects of investment-stage and syndication using data on 289 venture capitalists who had invested in Indian start-ups from 1999-2018. Drawing from the resource-based view, we expect that with increasing experience, venture capitalists would make informed decisions about prospective deals and decrease their diversification. Contrary to our expectations, we find that the venture capitalists diversify more with increasing experience. Early-stage investments and syndication negatively moderated the effect of experience on diversification. We suggest that learning under uncertainty is a slow process, or venture capitalists diversify more to undertake riskier investments seeking higher returns. Foreign venture capitalists investing in India are less regionally diversified than their domestic counterparts; however, the effect was not significant for industrial diversification. We discuss the possible explanations for findings in the discussion section.

ENT: Building Distant Search Routines and Capabilities in Venture Capital-Invested Ventures 

Author: **Roberto Santos**, *U. of Massachusetts, Lowell*

This study examines how international venture capitalists (IVCs) alter the search routines of their portfolio firms, which allows them to build a new capability in knowledge generation. My theoretical framework suggests that portfolio firm knowledge generation is enhanced as a result of their association with IVCs and the resultant transition towards more global search routines. I construct a novel dataset comprised of 2,327 new ventures across five industries during the period 2004-2014 that were granted 20,985 patents and received 254,616 backward citations. Using a difference-in-differences (DID) approach, I find that following IVC investment, portfolio firms search more distant technological domains, broaden their search scope, and couple local search with distant search more frequently. These effects are moderated by the IVC's network.

ENT: (When) do later stage venture capitalists rely more on the crowd than their peers?

Author: **Maria Vasi**, *U. of Palermo*
Author: **Paolo Roma**, -
Author: **Christos Kolympiris**, *Warwick Business School*

Venture capitalists (VCs) make only a small number of investments and are more likely to invest in ventures where other VCs have invested previously. As such, valuable opportunities may be forgone if they are not funded by VCs in the first place. We demonstrate how crowdfunding (CF) can remedy this concern. Using a sample of new technology-based ventures, we reveal that ventures initially funded through reward-based CF can be even more likely than those initially backed by VCs in attracting follow-up funds from VCs. This happens when ventures originally funded via reward-based CF, complement the certification they derive from CF with patents and a founding team with a track record of success. In those cases, VCs rely on the crowd more than their peers. Overall, the results suggest that signal complementarity can at least equalize the effectiveness of an a priori inferior and an a priori superior signal.

ENT: Sit out or All in? Family Ownership and Turnaround Strategies in Severe Crisis

Author: **Thomas Wittig**, *U. of Witten/Herdecke*
Author: **Alexandra Bertschi-Michel**, *U. of Bern*
Author: **Philipp Sieger**, *U. of Bern*
Author: **Andreas Hack**, *U. of Bern*

To investigate how firms attempt to overcome a survival-threatening crisis and why they do so, we apply a classification scheme of turnaround strategies and take a SEW perspective. We theorize how the level of family ownership relates to the employment of different turnaround measures and, ultimately, to insolvency. Analyzing a unique sample with responses of 209 risk managers reveals that the higher family ownership, the more the endangered firms tend to “sit out” instead of going “all in”, and that higher family ownership indeed makes insolvency less likely. This contributes to the literature on turnaround, particularly in family-owned firms, SEW, and to practice.

 **ENT: The ability-willingness paradox of small family firms to collaborate for innovation** 

Author: **Maksim Belitski**, *U. of Reading*
Author: **Christina Guenther**, *WHU - Otto Beisheim School of Management*
Author: **Nada Khachlouf**, *ICD Business School*

Family firms' innovation collaboration activities are characterized by the so-called ability-willingness paradox, i.e. they are less willing to engage in collaborations, but more able to benefit from it. In this paper, we introduce collaboration partner type and geographic proximity as two important boundary conditions of this paradox. We examine the differences in knowledge collaboration for innovation across different geographical proximities and partner types for a small family and non-family firms. We use a large sample of 6,272 small firms in the United Kingdom (UK) during 2002-2016 to show that this paradox is indeed not a universal phenomenon. Small family firms overcome their lower willingness when collaborating with customers within regional proximity and are able to generate an innovation output premium as compared to small non-family firms.

ENT: A Glimpse into Black-Box: How Investors Make Sense on Family Firm Succession Via Media Coverage?

Author: **Yijie Min**, *Guanghua School of Management, Peking U.*

This study explores how investors use family logic to perceive and evaluate “family issues” after intergenerational leadership successions, and reflect it as family firm value. Using media reporting data covering family issues after leadership successions, we wonder whether investors value family information and how they process such information using family logic. Our findings suggest: (1) higher media volume on child-successor-centric family issues is associated with higher firm value, and this main effect is strengthened when media volume on parent-founder-centric and successor-sibling-centric family issues are high as well. These imply family information volume (media volume) plays its role via information asymmetry mechanism. (2) More positive media tone on child-successor-centric family issues is associated with higher firm value, and this main effect is strengthened when media tone on parent-founder-centric family issues is neutral and when media tone on successor-sibling-centric family issue is negative. We contribute to understand: (1) how investors integrate evaluation on individual level to collective level under family logic; (2) how family issues are integrated into investors' stereotypical cognitions on family firms; (3) how to manage family firms' external condition during intergenerational successions.

 **ENT: Intergenerational Imprinting and Identification in Family Businesses: A Narrative Analysis**

Author: **Julia Brinkmann**, *PHD Student at Bielefeld U.; Faculty for Business Administration*
Author: **Christina Hoon**, *Bielefeld U.*

In this exploratory study, we address the phenomenon of intergenerational imprinting, understood as the process through which employees in family firms use imprinted features to imprint the next generation of their own family members. Drawing upon a qualitative, inductive case study of an agricultural family firm, we use narrative analysis techniques to tell three composite narratives of how family members transmit a frame of reference across multiple generations. We demonstrate that generations of families collectively share and use the imprinting features that persist in the organization to imprint the attitudes, mental models, and rules and principles of their family members in the current context. By considering these three composite narratives, we identified that the imprinted frames of references differ in their temporal focus. Distinguishing between two scenarios of incremental and disruptive change settings, we offer a model that theorizes the retrospective, prospective or dual focus in frames of reference and examine why each might become adaptive, maladaptive or non-adaptive in changing settings. We explain how these differences in adaptability engender a member's sense of momentum that produces three different organizational identification trajectories (progressive, ambivalent or regressive). We contribute by moving beyond a focus on the owning family and the founder legacy in family firms and offering insights into imprints as antecedents of organizational identification trajectories that have to be viewed across multiple generations.

Entrepreneurial Orientation 1

Digital Session Chair: **Anders Fan**, *U. of North Texas*

ENT: Re-examining Antecedents of Entrepreneurial Orientation: A Multilevel Manifestation

Author: **Anders Fan**, *U. of North Texas*

Author: **Derrick ED'Souza**, *U. of North Texas*

Over the past four decades, two conceptualizations of the entrepreneurial orientations (EO) construct have been advanced - trait-based, and behavior-based. Scholars in each camp have developed independent scales to measure EO and have established complementary links between the EO construct, its antecedents, and organizational performance. This has resulted in varied and mixed results on the relationships between these phenomena of interest and it has stymied progress in the field. Recently, Wales, Covin, & Monsen (2020) attempted to untangle this debate by reconceptualizing EO as a construct that has unique manifestations at three organizational levels (management team, internal/organizational, and market). Our review paper is the first attempt to identify the antecedents based on Wales, et al., (2020) latest EO conceptualization. In addition to successfully identifying antecedents of EO at each of the three organizational levels, we also found antecedents that influenced EO at all three levels. We called them 'cross-level' antecedents. We discuss potential theoretical and practitioner implications of our findings and offer future research directions in areas such as data collection methods, context-specific studies, configuration approaches, and new antecedents garnered from complementary business disciplines.

ENT: A Signaling Perspective on Entrepreneurial Orientation: Too Much of a Good Thing?

Author: **Jeldrik Pulm**, *Chair of Innovation Management, TU Dortmund U.*

Author: **Bastian Kindermann**, *Chair for Technology & Management, TU Dortmund U.*

A high level of entrepreneurial orientation (EO) is ambivalent. While EO fosters firm performance, its consequences for firms' risk are twofold: it may strengthen firms' competitive position but likewise increase their risk of failure through explorative ventures. We take a novel signaling perspective on EO. In trading off risk and return, stock markets constantly evaluate signals. Signals enable firms to reduce the information asymmetry with markets while shaping markets' perception of the firm. While EO might entail the chance for high returns, it comes along with higher risks. Consequently, we aim to advance the theory on signaling effects of EO in markets' reactions to strategic announcements of newly public firms that are under increased scrutiny. We hypothesize that markets react most favorably at moderate levels of EO, constituting an inverse U-shaped relationship. We argue that firms' industry position and business diversification moderate the relationship. Based on a sample of 1,393 firm-year observations of firms going public between 2001 and 2014, we find support for our hypotheses. By taking a signaling perspective on EO, we advance the literature on strategic orientations towards a new direction. From a practitioner's perspective, firms and shareholders need to understand the signaling effects of EO.

ENT: Individual Entrepreneurial Orientation: A Configuration Approach

Author: **Anke Steinmeyer**, *Bond Business School, Bond U., Australia*

As EO was designed as a firm-level construct, there is a dearth of research that has applied the concept to an individual level of analysis. The purpose of this paper is to demonstrate how the revised global entrepreneurial orientation (GEO) concept (Lumpkin & Pidduck, 2021) provides the foundation for a robust individual level platform. This platform allows us the opportunity to demonstrate how a formative five-component (i.e., autonomy, proactiveness, innovativeness, competitiveness, and risk-taking) configuration approach can be applied conceptualizing a typology of individual EO profiles. We further establish how these EO profiles relate to the process of new value creation. Our model shows how entrepreneurial decision-making under uncertainty is influenced by cognitive processes, precisely, heuristics and biases, and how decision-making and value capture is affected by entrepreneurial action. Lastly, we will outline how we intend to operationalize our conceptual model.

ENT: Cognitive Biases and Strategic Decision-Making: A Self-Regulation Perspective

Author: **Alexander Paul Fust**, *U. of St. Gallen*

Author: **Tobias Jenert**, *U. of Paderborn*

Author: **Christoph Winkler**, *Iona College*

Author: **Julian Paul Kolbe**, *U. of St. Gallen*

Entrepreneurs are prone to various cognitive biases which distort their learning and information processing. These biases vary considerably among entrepreneurs and impact information processing during strategic decision-making. While research has examined the outcomes of cognitive biases, there is a lack of knowledge on how cognitive biases impact entrepreneurial decision-making processes. To address this gap, we analyze how cognitive biases impact information processing during decision-making processes. Furthermore, we discuss how entrepreneurs can self-regulate the effects of overconfidence and attribution bias in more detail. We discern functions of cognitive biases across different entrepreneurial situations and suggest that entrepreneurs with high self-regulation are able to adapt to specific situations by monitoring and controlling their cognition and affect.

SIM: Organizing for Positive Impact: Towards a theory of Triple Bottom Line Innovations

Author: **Udayan Dhar**, *Weatherhead School of Management, Case Western Reserve U.*
Author: **Ronald Fry**, *Case Western Reserve U.*

Organizations that seek to 'do well by doing good' depend on innovations that cater to the triple bottom line (TBL) - that is, innovations that simultaneously prioritize economic, social, and environmental objectives. This study investigates the organizational factors that are involved in affecting such innovations. We drew upon a database of case studies that were developed as part of a global Appreciative Inquiry (AI) initiative. Our analysis of TBL innovations in 36 medium-sized, for-profit companies in the United States showed that when leaders and organizations are socially and ecologically embedded, and take a long-term view of the business, it inspires innovations that prioritize positive impact. These innovative ideas are successfully implemented through incorporating elements of collaborative boundary spanning, awareness building, and circular value chains; and ultimately have the potential to be transformational in their TBL performance. We also find evidence that the institutional context affects the potential for such innovations. Our analysis points to the idea of reframing corporate responsibility and sustainability as 'flourishing' by placing social and ecological value creation at the core of the purpose of business.

SIM: Broadening the reach: How effectual entrepreneurs build impact ecosystems across geographical divide

Author: **Marleen Wierenga**, *Nijmegen School of Management*
Author: **Sara Lindeman**, *Aalto U. School of Business*
Author: **Jarkko Levänen**, *LUT U. School of Energy Systems*
Author: **Mokter Hossain**, *Qatar U.*
Author: **Paavo Ritala**, *LUT School of Business and Management*

Effectuation theory focuses on entrepreneurs using available means to create artefacts such as firms and markets. In this study, we explore three cases of entrepreneurial innovation processes initiated in developed countries but aimed at low-income markets of developing countries. In these entrepreneurial processes happening simultaneously in two geographical locations, firms often struggle to understand the local institutional and market conditions. We find that the studied entrepreneurs have been able to develop and disseminate solutions for addressing grand challenges in emerging markets by building an "impact ecosystem". This required the entrepreneurs to work with diverse stakeholders, pioneer, have an iterative learning approach and be deliberately inefficient in their operations. Our results contribute by linking effectuation theory with the literature on ecosystems and demonstrating how entrepreneurs can engage in effectuation processes in building impact ecosystems.

SIM: Sharing Economy in the Age of Access: challenges to the Sustainability

Author: **Daniela Viegas Da Costa Nascimento**, *Pontifical Catholic U. of Minas Gerais*
Author: **Armindo Dos Santos De Sousa Teodosio**, *Pontifical Catholic U. of Minas Gerais*
Author: **Marcelo De Rezende Pinto**, *Pontifical Catholic U. of Minas Gerais*

In the discussions involving the sharing economy, it is possible to see a tendency to highlight its positive aspects. However, the debates seem to neglect problematizations regarding the dilemmas and consequences of what sharing can mean for the social groups interested in embracing the sharing economy concept. In the age of access, the lack of ownership of goods may indicate a transformation concerning life in society. However, the essence of collaboration inherent in the sharing economy might be questioned, as the shared system would be just an attractive instrument with a friendly discourse mostly used to transfer the responsibility of the industry to the citizen, under the banner of mutual aid. Thus, our article seeks to investigate the different perspectives on sharing by analyzing its main dilemmas. Our study presents a critical view of the barriers, vulnerabilities, and illusions present in this specific issue, which most studies and approaches on the subject end up reproducing. As a theoretical contribution to literature, we point out that only those who have access to the sharing system are able to participate effectively, and their excesses reiterate the economic and utilitarian structure based on inequality.

SIM: Uber's Intermediation in Brazil: Collaborative and Sustainable Consumption Challenges

Author: **Verônica Macário De Oliveira**, *U. Federal de Campina Grande*
Author: **Daniela Viegas Da Costa Nascimento**, *Pontifical Catholic U. of Minas Gerais*
Author: **Armindo Dos Santos De Sousa Teodosio**, *Pontifical Catholic U. of Minas Gerais*
Author: **Suzanne Érica Nóbrega Correia**, *U. Federal de Campina Grande*

Consumer research deals with complex social problems and, in recent years, it has focused its discussion on the possibilities arising from collaborative consumption. Strategies are aimed at large areas of daily consumption such as transportation, food, housing, and consumer goods, questioning reflections, and impacts on sustainable consumption. These problems need to be analyzed using inter and transdisciplinary research designs, seeking close cooperation between science and practice that aims to create a shared understanding of the research problem. This article seeks to fill the gap in the literature on the potential impacts of the collaborative consumption model as an alternative proposal for sustainable consumption in the transport sector, using intermediaries. It focuses on the structuring of the real world within interdisciplinary and transdisciplinary cooperation that involves the theme, using Uber as a typical case. The question that guided the discussion was: what are the impacts on cities regarding consumption practices through transport platforms intermediated by large companies (notably UBER), considering the sustainability dimensions? Through the application of Constellation Analysis (CA), a visualization, and analysis tool that facilitates the dialogue between actors with scientific and practical perspectives, the intersection between the views of actors dealing with conflicting priorities resulting from socio-environmental responsibility took place.

Author: **Koushik Dutta**, *Louisiana Tech U.*

Understanding entrepreneurial actions that addresses pressing social and environmental challenges has become an emergent and important area of research interests. Blending of market-based logics and social welfare logics has created new opportunity spaces for prosocial ventures, albeit it comes with acute challenges of resource acquisition. This gap can be filled by social impact accelerators (SIA)s short-term, limited duration, cohort-based educational programs for nascent prosocial ventures, that apart from providing seed funding often utilize extensive consultation with mentors, program directors, customers, guest speakers, alumni, and peers, help solidify their value proposition. Hence it is crucial for prosocial ventures to get selected into the accelerator programs as that could later translate into venture success. Despite the recent proliferation of accelerator research, research on Social impact accelerators (SIA) has been limited. SIA is a new form of accelerator that selects prosocial ventures, those ventures that display potential to generate financial returns along with social impact into their cohort-based programs. Specifically, how SIAs process external information to make cohort admission decisions. This study uses signaling theory layered with pecking order and static trade-off theory to conceptually analyze how entrepreneurial behaviors about capital structure decisions impact selection decisions into SIA.

Machine Learning (ML) techniques that enable researchers to extract useful information from textual data have opened new avenues for research. In management research, with the prevalence and prominence of text documents, a recent stream has begun to examine new questions (and re-examine longstanding questions) that management scholars and practitioners face. With the goal of engaging the audience in a discussion about the use of text analysis methods in management research, this proposed symposium aims to present a variety of applications of working with textual data in strategy, innovation, and entrepreneurship research. We cover a diverse, broad range of applications, including measuring the radicalness of innovation, emergence of new categories, classifying the language of jobs, and tracking the direction of research through literature reviews. By introducing different areas of research where text analysis can offer distinctive value and discussing opportunities and challenges associated with using these methods, we anticipate to generate interest among a diverse set of audience.

Digital Transformations

Digital Session Chair: **Renate Kratochvil**, *BI Norwegian Business School*

TIM: Organizational context factors that stimulate digital mindsets to unfold in digital transformation

Author: **Renate Kratochvil**, *BI Norwegian Business School*
Author: **Mariya Khanamiryan**, *BI Norwegian Business School*
Author: **Ahmet Soylu**, *OsloMet - Oslo Metropolitan U.*
Author: **Ragnhild Kvalshaugen**, *BI Norwegian Business School*

The cultivation of digitally minded employees' knowledge and skills about digital technologies is necessary, but not sufficient, for companies to succeed in digital transformation initiatives. The creation of an organizational context that stimulates the unfolding of these employees' digital mindsets is equally important to allow for the continued deployment of these employees' beliefs, motivation, abilities and enthusiasm about digital technologies. We analyze unique qualitative data collected in a company that is working successfully on digital transformation initiatives and identify four organizational context factors—empowerment, a culture of learning and knowledge management, the digital ecosystem, and experimentation and play—that, in combination, stimulate the unfolding of employees' digital mindsets to integrate new digital technologies in organizations. Our findings contribute to organizational context factors, digital mindsets and the interdependencies between individuals and organizational digital transformation.

TIM: EXPLORING DIGITAL TRANSFORMATION: The Role of Business Model Innovation in Manufacturing Firms

Author: **Yannick Mies**, *U. of Osnabrueck*
Author: **Piet Hausberg**, *Osnabrück U.*

Recently, technological innovation has brought about new digital technologies that substantially challenge the rationale behind so far established economic fundamentals. Adopting digital technologies, firms can realize concrete business improvements that are not only limited to product and process innovation, but can also imply the reinvention of their entire business model. This digital transformation offers especially manufacturing firms with multiple options to create new business models. Nevertheless, the extant literature reveals little about the concrete appearances of these new business models. Thus, we develop a typology of business models for manufacturing firms that undergo digital transformation and investigate what drives digital transformation in particular. We build a conceptual framework that connects key drivers of digital transformation with the different appearances of business model archetypes. Our framework matches different combinations of four digital transformation drivers (namely ubiquitous connectivity, functional virtualization, relational decentralization, and flexible scalability) with four business model archetypes (lighthouse supplier, service enthusiast, data scientist, and platform owner). On that basis, combined with reported cases from the literature to illustrate its findings, this conceptual paper presents four propositions that depict the concrete relationships between different combinations of digital transformation drivers and the corresponding business model manifestations in manufacturing firms.

TIM: Organizational capabilities and process of business model innovation for digital offers

Author: **Azadeh Shomali**, *ESSCA School of Management*
Author: **Guy Parmentier**, *Grenoble Alpes U.*
Author: **Romain Gandia**, *U. Savoie Mont Blanc*

Recent digital technologies, IoT and cloud computing are pushing established manufacturing firms to develop digital services, which require them to go through a complete Business Model Innovation (BMI). Despite this growing trend, strategy literature still lacks a complete picture of how established firms develop new business models and which organisational capabilities would facilitate this process. This paper addresses these literature gaps through studying the process of developing digital services in two manufacturing firms. We identified four phases for the BMI process and nine organisational capabilities that facilitate this process. Our findings contribute to the literature on digital transformation, business model innovation and dynamic capabilities.

TIM: Sourcing external digital solutions: Digital technologies' architecture and knowledge exchange  

Author: **Lukas Falcke**, *U. of St. Gallen*
Author: **Stephen Comello**, *Stanford Graduate School of Business*
Author: **Ann-Kristin Zobel**, *U. of St. Gallen*

Sourcing of external digital solution has become an important strategy incumbent firms are using to accelerate their digital transformation. However, external knowledge and technology sourcing is a complex, multi-phase process that requires exchanging various kinds of knowledge across cognitive, technological and organizational boundaries. Using a longitudinal in-depth qualitative analysis of 15 early-stage pilot projects between startups offering digital solutions and electric utilities seeking to adopt them as empirical setting, we develop a framework of external digital technology sourcing. This framework explicates how and why knowledge exchange patterns differ given a derived set of digital technology integration processes - positioned along the digital technology stack. We show that service enablement at the data-application interface triggers a parallel knowledge iteration pattern, system harmonization at the data-network interface triggers a concurrent knowledge co-creation pattern and assuring hardware efficacy at the network-device interface triggers a sequential knowledge validation pattern. We discuss contributions to the literature on digital innovation and external knowledge sourcing.

Multi-Level Team Research

Digital Session Chair: **C. Ashley Fulmer**, *Georgia State U.*

OB: **Toward a Configurative Approach to Team Trust**

Author: **C. Ashley Fulmer**, *Georgia State U.*

Research on team trust continues to grow, supporting its critical role in team functioning. Yet, there remains a lack of clarity about how team trust forms in a team. In this paper, we adopt a configurative approach to understand how team trust arises from the trust relationships that team members have with one another and what form or configuration team trust can take over time. Drawing on theories and research on levels of analysis and relational balance, we develop a multilevel microdynamic model that conceptualizes team trust as a configurative emergent state of the dyadic trust relationships between members. At the dyadic level, the model describes the emergent dynamics through symmetric and asymmetric relationships between members. At the team level, the model identifies team trust configurations and their trajectories over time. At the interteam level, we further consider the top-down influences from salience of the interteam context on team trust emergence. By explicating the emergent dynamics of team trust, our model provides a nuanced and integrated understanding of trust in teams and offers a potentially powerful tool for leaders and teams to cultivate and manage team trust.

OB: **Focused Attention of Members in Multiple Team Membership: A Diary study**

Author: **Heejin Kim**, *U. of California, Irvine*

As organizational tasks are increasingly carried out through temporary projects, many knowledge workers are now asked to work in multiple concurrent teams and collaborations. Although focused attention is critical in performing complex tasks, individuals' attention is inevitably divided by having to work for multiple teams, and little is known about individuals' attention allocation processes in such a context. To fill this gap, I start by reviewing previous literature on attention and propose an empirical study that examines the antecedents and consequences of one's day-to-day focus on teams using a diary study. Based on the cognitive psychology literature, I explore a multilevel model consisting of bottom-up (salience of a team at the moment) and top-down (one's perceived importance of a team) factors that influence attention allocation to teams, and the consequences of attention allocation (job strain and work satisfaction). In so doing, I suggest a member-centered perspective of teams using attention as a mechanism, and I explain how individuals navigate through their work in multiple teams.

OB: **Mindfulness in context: Mindfulness, conflict, emotional exhaustion, and well-being in team context.**

Author: **Neetu Choudhary**, *U. of Melbourne*
Author: **Carol Gill**, *Melbourne Business School*

The effectiveness of mindfulness has been established, however, the conditions under which mindfulness is most effective have received limited attention. This has prompted an unresolved theoretical debate amongst scholars about whether mindfulness is a universal panacea or has a differentiated effect based on context. We investigate this issue in two ways. First, we systematically review empirical research on mindfulness since 2010 to gain insight into the role of context in mindfulness research. Second, we study whether mindfulness is influenced by context, specifically, mindfulness in self-managed teams, which are an increasingly common and complex way of organizing work. We develop and test a multilevel model on how team conflict influences the relationship between mindfulness, emotional exhaustion, and team member well-being. We test these relationships in a time-lagged, multi-source, survey study involving 274 team members in 54 project teams. Our results support the proposition that mindfulness increases affective well-being by reducing emotional exhaustion. However, this effect is most pronounced under conditions of high team conflict. High individual mindfulness is a universal panacea in that it results in less emotional exhaustion and greater affective wellbeing at all levels of team conflict, however, it also has a differentiated effect in that those with low individual mindfulness experience higher emotional exhaustion and lower affective wellbeing when team conflict is high. We conclude that mindfulness is most effective in contexts that elicit negative thoughts, feelings, and behaviors.

OB: **How and when do employees hide knowledge from co-workers? A multilevel moderated-mediation model**

Author: **Ghulam Ali Arain**,
Author: **Zeeshan Bhatti**, *Portsmouth Business School*
Author: **Abdul Karim Khan**, *United Arab Emirates U.*
Author: **Imran Hameed**, *Lahore School Of Economics*

Based on the social learning and cognitive theories, this study examines a multilevel moderated-mediation model that tests the direct relation between perceived organizational politics (POP: level-1) and employee knowledge hiding from coworkers (EKHC: level-1) is mediated by moral disengagement (MD: level-1). The mediation effect is then further moderated by supervisor knowledge hiding from employee (SKHE: level-2). We obtained multi-sourced, multi-timed, and multilevel data of 294 employees, nested within 80 supervisors. Data were analyzed by applying multilevel structural equation modeling (ML-SEM) using Mplus, which highlighted that POP first led to moral disengagement, which, in turn, led to EKHC. The mediation effect was then further positively moderated by SKHE. This is the first empirical study that examines both EKHC and SKHE together in a single research model and provides a thorough understanding of why, how, and when POP leads to EKHC.

Innovation in the time of Covid

Digital Session Chair: **Roberto Santos**, *U. of Massachusetts, Lowell*

TIM: Innovation under crisis: Is knowledge breadth a liability? Insight from the COVID pandemic 

Author: **Roberto Santos**, *U. of Massachusetts, Lowell*
Author: **Denise R. Dunlap**, *UMass Lowell*
Author: **Scott Latham**, *U. of Massachusetts, Lowell*

Innovation in response to crisis is an incredibly complex and risky undertaking, especially when it is critical that innovations succeed to alleviate the crisis. Given the backdrop of the coronavirus (COVID-19) pandemic, we develop a novel conceptual framework that advances our understanding of how the key knowledge attributes of breadth and depth impact the development of two types of innovations: new and repurposed innovations. We then employ the framework to examine 437 startup, midsize, and multinational firms involved in developing innovative treatments for the coronavirus. Our findings suggest that knowledge breadth may be a liability in the context of a crisis. However, when these firms face disruptions to their R&D pipeline due to the crisis, they are more likely to develop new innovations. Based on our findings, we offer implications for policy makers, business leaders, and entrepreneurs that will increase the probability of generating successful innovations in response to future crises.

TIM: Scientific publications and COVID-19 “research pivots” during the pandemic

Author: **Philip Shapira**, *Alliance Manchester Business School*

This paper examines scientific research publication trends during the global coronavirus (COVID-19) pandemic in 2020. After reviewing the timing of the emergence of the pandemic in 2020 and the growth of governmental responses, available secondary sources are used to highlight impacts of COVID-19 on scientific research. A bibliometric analysis is then undertaken to analyze developments in COVID-19 related scientific publications through to October of 2020 by broad trends, fields, countries, and organizations. The paper explores the extent to which researchers across all fields of science have pivoted their research outputs to focus on topics related to COVID-19. Significant variations are found by specific fields (identified by Web of Science Subject Categories). In a top quintile of fields, not only in medical specialties, biomedical sciences, and public health but also in subjects in social sciences and arts and humanities, there are relatively high to medium research pivots. In lower quintiles, including many domains of science as well as in social science, and arts and humanities, low to zero COVID-19 research pivoting is identified. Implications for research management and policy and for future research assessment are highlighted.

TIM: Strategic organization of scientific research teams in response to a crisis

Author: **John Bechara**, *Tilburg U.*
Author: **Ramin Vandaie**, *U. at Buffalo, The State U. of New York*

Strategy and organizational scholarship has long been interested in how scientific research is organized and managed to face strategic challenges. This issue has gained particular importance in light of the recent global Covid-19 pandemic. In this study, we examine how the collaborative structure of scientific research teams change over time at different stages of the pandemic. More specifically, we argue that during the early stages of the pandemic smaller research teams with fewer researchers spanning fewer organizations and countries respond more efficiently to the pandemic. However, at later stages of the pandemic the need for larger teams with more researchers spanning more organizations and countries respond more effectively to the pandemic. Using publication data culled from the *New England Journal of Medicine*, the world’s foremost authority on medical research, during the first half of 2020 (the period corresponding to the global emergence and first peak of the Covid-19 pandemic) our results reveal that relative to the research teams of non-Covid-19 related publications, the research teams of Covid-19 publications spanned fewer organizations and fewer countries but had a similar number of researchers. Additionally, our results showed that over time the research teams of Covid-19 publications relative to non-Covid-19 publications spanned more countries but continued to span fewer organizations and had a similar number of authors.

TIM: Re-designing knowledge production in the Post-Covid-19 era. A task-based approach 

Author: **Edoardo Ferrucci**, *Department of Business and Management, LUISS Guido Carli U.*
Author: **Francesco Rullani**, *U. Ca' Foscari of Venice; Dept. of Management & Bliss - Digital Impact Lab*

This paper seeks to single out what micro-level working activities may be more conducive of faster Covid-19 transmission. We do so from an innovation perspective, knowing that knowledge production has an important component rooted in tacit knowledge, whose sharing is heavily based on physical interaction. Specifically, we hypothesize that communication-intense working activities (including those needed to transfer tacit knowledge) may accelerate Covid-19 contagion, and must be re-designed with more urgency and attention than other working activities that apparently may look as dangerous, such as selling or training. We test this empirically employing data from 9 different sources relative to US Metropolitan Statistical Areas, and confirm our hypothesis, eventually elaborating policy and managerial implications for dealing with innovation (and beyond) during the pandemic

Author: **Joakim Hans Netz**, *Jönköping U.*

Author: **Mattias Axelson**, *Stockholm School of Economics*

The Covid-19 pandemic disrupted societies worldwide, and many firms answered the call for Covid-19-related innovations, with some quickly developing innovations to personal protection equipment, an area outside of their core businesses prior to the pandemic. How firms respond during crises to pressing societal needs by suspending a profit orientation to satisfy stakeholder needs is not understood well. We conducted inductive case studies of eight companies to address why such firms pivot from shareholder- to stakeholder-oriented new product development and how they satisfy new stakeholder needs during crises. Findings suggest that such companies model the process of internalizing and internal propagation of affectively charged signals that impress urgent humanitarian needs and alteration of how extant resources were recognized in relation to social norms and how capability assembly was initiated. These findings explain how for-profit product innovation prior to pandemic led to an additional mode of crisis-driven, new product innovation by suspending a profit orientation to respond quickly to calls for help. Implications to theory and practice are discussed.

Presenter: **Mai P. Trinh**, *Arizona State U.*

Extant literature on women's careers, work opportunities and experiences has examined diverse individual and contextual factors that enable or hinder their career progression and access to leadership positions. This presenter symposium will provide novel insights and theoretical approaches for understanding women's careers and leadership experiences in diverse organizational, professional, national and regional contexts. Drawing on five distinct international bodies of empirical data, it develops and extends contemporary theory to inform future social and organizational policy. In line with this year's AOM theme "bringing the manager back in management", the symposium will generate critical reflection for gender-inclusive careers, HRM and leadership scholarship, discourse, policy and practice. With a specific focus on incorporating diverse global perspectives and the temporal dimension of careers, the papers each provide insight into women's career trajectories in different cultural contexts. Moreover, the organizers and presenters come from diverse cultural backgrounds with different scholastic affiliations: Lebanon, France, Switzerland, India, Brussels, Australia, Austria, Greece, and the United States. The collective contribution from the papers is augmented, therefore, by the diversity and complementarity of theoretical lenses applied and their respective research ontologies and epistemologies as well as the institutional and cultural contexts of the presenters and organizers.

Digital Session Chair: **Sabrina Schell**, *U. of Bern*

ENT: The role of emotions in the selection of family external top management team members in family firms 

Author: **Sabrina Schell**, *U. of Bern*
Author: **Julia Katharina de Groot**, *WHU - Otto Beisheim School of Management*
Author: **Salome Richards**, *U. of Berne*
Author: **Andreas Hack**, *U. of Bern*

Family firms often face the challenge of staffing their top management team with people from outside the owner family. This decision-making process can evoke numerous emotions, involves different dynamics and is crucial for the long-term success of the organization. Using a qualitative research design involving 19 Swiss family businesses and interviews with executive search professionals, we investigate how family businesses select non-family top management team (TMT) members. The selection process is organized as a funnel and ends in selecting the candidate with the highest fit and highest level of trustworthiness. In the TMT member selection process, emotions become increasingly important over time. The owner family influences different points in the process, controls it and integrates a family effect, especially by integrating emotions.

ENT: Manage the unmanageable? The illusion of control of new venture teams coping with dynamic environments

Author: **Anian Gehring**, *Innovation and Entrepreneurship Group (WIN) – TIME Research Area, RWTH Aachen University*
Author: **Andrea Greven**, *RWTH Aachen U.*
Author: **Malte Brettel**, *RWTH Aachen U.*

Behavioral decision theory and the hubris theory of entrepreneurship suggest that entrepreneurs' uncertainty in dynamic environments leads to cognitive biases. Despite the elaborated theory, empirical evidence of the dynamism - bias relationship is scarce and has produced unexpected results. Further, the role that mechanisms applied to cope with environmental dynamism play in the emergence of cognitive biases, remains unclear. This study investigates how the interplay of environmental dynamism and environmental scanning relates to the illusion of control bias of new venture teams (NVTs). The NVT illusion of control describes an NVT's tendency to systematically overestimate the degree to which their skills and performance, instead of chance, will influence uncontrollable events. We test our hypotheses by applying structural equation modeling with a sample of 123 NVTs in Germany. Our findings reveal a lack of direct relationship between environmental dynamism and NVT illusion of control but discover an indirect relationship between the two mediated by environmental scanning. These findings suggest that NVTs regularly overestimate their ability to manage their largely unmanageable environment when applying the coping mechanism of environmental scanning.

ENT: It's Time for a Change: The Temporality of Team and Venture Opportunity for Startup Survival 

Author: **Katja Bringmann**, *U. Ghent*
Author: **Theresa Helena Veer**, *U. of Tuebingen*

Understanding what drives startup survival is of high interest for entrepreneurship research. We develop a dynamic entrepreneurial process model of early entrepreneurship that includes key input factors of nascent firms, namely the entrepreneurial founding team (EFT), entrepreneurial opportunity, external financing and traces changes in quarterly intervals. Based on a hand-collected sample of 2670 observations on 538 early stage ventures from both Europe (252) and Latin America (286), we jointly analyze the effect of EFT and entrepreneurial opportunity quality on startup survival. Further, we explore external financing by venture capitalists as a mediator mechanism through which EFT and entrepreneurial opportunity influence startup survival. Our paper contributes to the individual-opportunity nexus theory by disentangling the effect of both actor and non-actor input factors for entrepreneurial success and to the entrepreneurial process perspective by analyzing their influence over time. Our findings show that the relevance of EFT and entrepreneurial opportunity shift throughout the development of a startup: EFT becomes gradually less important and entrepreneurial opportunity becomes more important as the startup matures. Further, both effects are partially mediated by external financing.

ENT: It Is A "Game of Thrones": New Venture Team Power Hierarchy Skewness and New Venture R&D Intensity

Author: **Wen Feng**, *Zhejiang U.*
Author: **Qiongjing Hu**, *Zhejiang U.*
Author: **Xiaoyun Xie**, *Zhejiang U.*

This study examines how power configurations of new venture teams (NVTs) are associated with R&D intensity in new ventures. Drawing on the functional perspective of power hierarchy, we propose that the proportion of NVT members with high versus low power (i.e., power hierarchy skewness) has a positive effect on new venture R&D intensity. Moreover, this positive effect will be strengthened by hierarchy mutability and weakened by organizational slack. Based on a nine-year panel data of 363 new ventures with 1277 observations listed on the Growth Enterprises Market (GEM) in China, our hypotheses received general support. We discuss the theoretical and practical implications of our findings on new venture teams, power hierarchy and new venture innovation.

Exit

Digital Session Chair: **Yue Song**, *Auburn U.*

ENT: For love or money? The effects of psychological ownership on the timing of founder exits

Author: **Yue Song**, *Auburn U.*

Author: **Michelle Zorn**, *Auburn U.*

Author: **Marc Todd Junkunc**, *Washington and Lee U.*

Acquisition is a central way through which founders exit the ventures they created, especially for founders who choose to stay with their companies after their Initial Public Offerings (IPOs). However, founders are often psychologically attached to their firms and face a substantial dilemma over when to consider their economic interests and exit the firm. We explore the factors that drive the timing of founders' decisions with respect to choosing between exiting via acquisition or remaining in control of their firms. Drawing from the psychological ownership literature, we theorize that factors such as social identities, investment of technical specialized knowledge, serial entrepreneur status and having outside employment influence the length of time until acquisition. Further, we examine how acquisition premiums influence this timing. Our results have implications for the literature on the seller perspective in acquisition deals, psychological ownership, and the founder's dilemma.

ENT: Do Rational Entrepreneurs Exit Rationally?

Author: **Elahe Ghasrodashti**, *Macquarie Business School, Macquarie U.*

Author: **Nidhida Lin**, *Macquarie Business School, Macquarie U.*

Author: **Ralf Wilden**, *Macquarie Business School*

Author: **Francesco Chirico**, *Macquarie Business School, Macquarie U.*

Author: **Dawn DeTienne**, *Colorado State U.*

While theory suggests that highly rational entrepreneurs and with high need for cognitive closure (NFCC) are likely to put stronger emphasis on retrospective performance and personal factors when deciding whether to persist with an underperforming venture, our findings from a discrete choice experiment with 177 entrepreneurs show mixed evidence, thereby challenging existing research. Overall, we find that entrepreneurs who perceive themselves as rational do not always demonstrate rational behavior in persistence decisions and entrepreneurs with high NFCC pay significantly more attention to retrospective performance, but not to prospective performance and personal options.

Paper is NOT Available. Please contact the author(s).

ENT: An Institutional Perspective on Optimism and Entrepreneurial Exit

Author: **Zhu Zhu**, *Montclair State U.*

We explore the effect of entrepreneurs' optimism on entrepreneurial exit using survey results of 175 new ventures based in China. The findings of this study challenge the assumption that there is a linear relationship between entrepreneurial optimism and entrepreneurial exit, we demonstrate that there is a U-shaped relationship. We also incorporate institutional theory to address the importance of institutional context in the external environment on entrepreneurial exit. Our results suggest that institutional support moderates the U-shaped relationship between entrepreneurial optimism and entrepreneurial exit, in other words, when institutional support is high, the relationship is more positive for overly optimistic entrepreneurs, and the relationship is more negative for moderately optimistic entrepreneurs.

ENT: Entrepreneurs' Exit Strategy Intentions and Their Final Exit Path

Author: **Sascha Hohen**, *Goethe U.*

Author: **Lars Schweizer**, *Goethe U.*

This paper explores entrepreneurs' initially intended exit strategies and compares them to their final exit path. Our data shows that originally intended and final exit strategies differ among entrepreneurs. Two groups of entrepreneurs emerged from our data. The first group comprises entrepreneurs who financed their firms through equity investors. The second group is made up of entrepreneurs who financed their businesses solely with the owner's equity. Our data shows that the first group originally intended a financial harvest exit strategy and settled with this harvest exit strategy. The second group initially intended a stewardship exit strategy that failed to succeed.

The Present and Future of Social Media PlatformsDigital Session Chair: **Reza Alibakhshi, HEC Paris****OCIS: Is 'New' Always 'Nicer'? Examining the Influence of Innovation in Social Media**  Author: **Reza Alibakhshi, HEC Paris**Author: **Shirish Chandra Srivastava, HEC Paris**

With a view to enhance content creation and increase user engagement, social media platforms such as Facebook, Twitter, and Instagram have been experimenting with new innovative features. We investigate the effect of introducing one such innovative social media feature — the “story” on the communication between the profile owners and users through the primary social media channel – the “posts”. Grounding our arguments in the resource allocation and social penetration theories and employing a quasi-experimental difference-in-difference method, we examine how introduction of the innovative story feature on a popular social media platform influences (1) the frequency of profile owners’ information sharing through social media posts, and (2) the extent of follower engagement through feedback in terms of linking and commenting on the posts. Our results show that introduction of the story feature positively influences both. However, this influence is moderated by the cultural orientation of the situating social media community. We find that low-power-distance cultures, which value profile owners’ self-disclosure, exhibit a significant positive impact, whereas high-power-distance cultures exhibit no significant influence. We delineate the implications of our findings for both research and practice.

Rising depression and anxiety among the elderly during COVID-19 are troublesome both for the individuals and society. Using the emotional contagion theory, we examined the complex linkages between social media use and depression among the elderly during the pandemic. We found that active but not passive use of social media is associated with depression. Further, we investigated whether social media use (both active and passive) has a differential impact on depression for blacks and whites in America. We found that active social media is associated with depression for both blacks and whites, whereas passive SMU is associated with depression only among blacks. Further, we conducted multiperiod analyses by measuring depression scores at four different time periods. Based on the robust approach, we found support for the above linkages indicating the persistent adverse impact of social media usage. The present study provides insights into the cause of depression among the elderly during the pandemic. Our study has significant implications for academicians and practitioners.

Paper is Available to Meeting Registrants Only.**OCIS: Social Media Ostracism Influence on Lurking Intentions**  Author: **Ahsan Ali, School of Economics & Management, Tongji U.**Author: **Hongwei Wang, School of Economics & Management, Tongji U.**Author: **Mingchuan Gong, U. of Science and Technology of China, City U. of Hong Kong**

Based on conservation of resources theory an underlying mechanism is proposed linking social media ostracism with lurking intentions of social media users. The model proposes that emotional exhaustion mediates and psychological resilience moderates the relationship between social media ostracism and lurking intentions. Results support the conceptual model, revealing that social media ostracism positively predicts emotional exhaustion among social media users, which also links it with lurking intentions of social media users. Furthermore, psychological resilience was found to moderate the relationship between social media ostracism and emotional exhaustion which in turn, mediates the joint effect on lurking intentions.

Paper is Available to Meeting Registrants Only.**OCIS: Linking transparency and privacy to the impact of Enterprise Social Networks**Author: **Pedro Seguel, McGill U. - Desautels Faculty of Management**

Despite widespread diffusion of Enterprise Social Networks, research about such technologies’ impact on employee performance remains limited. While most of the research has focused on how ENS’s communication visibility increases knowledge about coworker’s knowledge leading to better performance, the research has highly overlooked the role of privacy at the workplace. Furthermore, most online privacy research has been performed in consumer settings. So, we don’t have a clear idea of how privacy will affect information sharing in the enterprise context. In this research, I answer how information privacy concerns from workers regarding ESN affect individual metaknowledge accumulation? I extend on Communication Visibility Theory by including elements of a behavioral theory of privacy and transparency. I explain how ESN’s implementation at the organization might lead to a higher awareness of being watched by others, triggering hidden behaviors based on privacy concerns. Consequently, I propose a multi-level explanation of how privacy affects the returns individuals can get for ESN usage. First, individual privacy concerns decrease ESN usage, decreasing their opportunities to take advantage of its potential. Second, as privacy concerns are serious and shared within a team, the accuracy of information provided on the ESN might decrease, decreasing individuals’ chances of getting accurate metaknowledge to improve their performance. This research expands current knowledge about the impact of ESN at the workplace, by bringing understanding to the role of privacy on the impact of Enterprise Social Networks. And it highlights the importance of clarifying how privacy and transparency jointly affect human behavior in the workplace.

OSCM: How do Supply Chain Managers Affect Supply Chain Resilience? An Advice-Seeking Perspective

Author: **Ethan Nikookar**, *Australian Institute of Business*
Author: **Yoshio Yanadori**, *Waseda U.*

Research on supply chain resilience has successfully established flexibility as a firm-level antecedent that contributes to supply chain resilience. However, little is known about the mechanisms that develop flexibility within a firm. Drawing on the social capital theory and social network theory, the authors claim that supply chain managers' advice-seeking plays a critical role in developing this antecedent. Specifically, the authors hypothesize that supply chain managers' structural and relational embeddedness in their reference network, comprised of individuals from whom they seek advice, are instrumental to developing supply chain flexibility, which subsequently enhances the firm's supply chain resilience. The authors use survey data collected from 385 manufacturing firms in Australia and employ Hayes and Preacher's (2014) mediator model to test the hypotheses empirically. Results provide overall support for our theoretical model.

OSCM: Setting the Stage: Initial Socio-Emotional Communication and Performance in Cross-Functional Teams

Author: **Vera M. Schweitzer**, *WHU – Otto Beisheim School of Management*
Author: **Fabiola Heike Gerpott**, *WHU – Otto Beisheim School of Management*
Author: **Nale Lehmann-Willenbrock**, *U. of Hamburg*
Author: **Sander De Leeuw**, *Wageningen U.*
Author: **Michaela Schippers**, *Erasmus U. Rotterdam*

Effective cross-functional integration is characterized by complex interactions during project work in supply chain management. We draw from a socio-emotional communication framework and team development models to carve out that socio-emotional communication constitutes a double-edged sword in setting the stage for team performance development. Specifically, in the light of unequivocal prior research findings regarding this topic, we pose the question of whether team members' reactions to socio-emotional statements may be the reason that some cross-functional teams succeed and others fail. We used sophisticated interaction coding to capture early communication patterns of 33 teams (N = 134) as well as their performance development over six meetings of a supply chain simulation. Using latent growth modeling, we found that the amount of socio-emotional communication in the first meeting negatively impacts overall team performance. However, running sequential analytical models revealed that unsuccessful teams reacted upon socio-emotional communication with dysfunctional remarks and task-oriented contributions, while successful teams only showed task-oriented reactions, and more profoundly increased team performance over different rounds. Operations managers should be sensitized about the possible detrimental effects of unthoughtful handling of socio-emotional chitchat in cross-functional teams.

OSCM: Supplier Dependence Asymmetry and Investment in Innovation: The Role of Psychological Uncertainty

Author: **Siqi Ma**, *U. of Akron*
Author: **Adriana Rossiter Hofer**, *U. of Arkansas*
Author: **John Aloysius**, *U. of Arkansas Sam M. Walton College of Business*

A key source of competitive advantage for large firms accrues from investments in innovative products and processes by their suppliers, incentivized by a positive relationship climate. A fundamental hindrance to such climate lies in a condition that commonly characterizes buyer-supplier relationships: asymmetric levels of dependence between business partners. Such asymmetry has been shown to be detrimental to the relationship, enhancing the likelihood of conflict, and negatively impacting the performance of the more dependent party. Considering that such dependence asymmetry is likely to persist, large buyers face the challenge of promoting a relationship environment that provides an incentive for suppliers to invest in innovation. In this study, we propose that large, dominant buyers can influence suppliers' intentions and behaviors through mitigating two psychological dimensions of uncertainty – perceived riskiness and perceived ambiguity – which emerge from a situation of dependence asymmetry. Specifically, using the lens of resource dependence theory we investigate the effects of these two dimensions of uncertainty on a supplier's trust, commitment, and willingness to invest in innovation, as well as the moderating effect of a buyer's information sharing in shaping a supplier's perceived uncertainty. Our findings indicate that a supplier's dependence on a large customer increases its perception of ambiguity and riskiness in the relationship, negatively impacting its trust, commitment, and willingness to invest in innovation. However, a buyer's initiative to share relevant and timely information with the supplier reduces its perceived uncertainty, enhancing its attitudes towards the buyer and encouraging innovation. As such, positive relational attitudes by suppliers can be achieved even under conditions of dependence asymmetry.

OSCM: The Microfoundations of Relational Governance Capability: A Social Capital Perspective

Author: **Tejasv Kalra**, *Newcastle U. Business School*
Author: **Paul Cousins**, *U. of Manchester*

Organizations adopt a variety of governance mechanisms to drive collaboration in organizational and inter-organizational relationships. Scholars have examined structural and processual dimensions of inter-organizational governance. Adopting a microfoundational approach, we explore how the interactions between individuals, processes, and structures influence the development of an organization's capability to govern its relationships through relational governance mechanisms. We conducted a longitudinal case study with a multinational bank to examine the development of inter-organizational governance capability through a social capital theoretic lens. We find that the capability is developed by reconciling individual-level factors through complex social processes, leading to the development of inter-organizational structures. These structures contribute to the development of structural, cognitive, and relational social capital. Finally, these processes differ depending on the complexity of the task. We present a framework to deepen our understanding of the development of relational governance capability.

Author: **Kamrul Ahsan**, *Associate Professor*

Agile project management has become increasingly popular as a management philosophy for project management. However, there are few examinations into agile project management's competency requirements, including how these competencies are signaled to the broader labor market. This study examines agile project management competencies and how these agile competencies are signaled in job advertisements. Utilizing a project management framework to understand agile project management competencies, we examine the requirements from both demand- and supply-side requirements and how these competencies are signaled to the labor market through job advertisements. We discuss the implications of these findings for the broader project management theoretical framework and community.

Strategy-Making as Collective Sense-Making

Strategy-Making as Collective Sense-Making

Digital Session Chair: **Leonhard Dobusch**, *U. of Innsbruck*

SAP: Sense and Action in the Covid-19 Crisis

Author: **Maria Elisa Brandão**, *FDC - Fundação Dom Cabral*
Author: **Rosileia Milagres**, *FDC - Fundacao Dom Cabral*

This study aims at investigating how organizations mobilize themselves to face rare events. Our intention is to contribute to this understanding based on two fields: sensemaking and routines. Although there is literature addressing both themes, we consider that little attention has been given to their integration, especially in crisis' context. We conducted a literature review in nine journals between 2000 and August 2020. We found only five papers linked to the theme, confirming that little is known about the process of building meaning and the consequent adjustment of routines in face of rare events. We observed that literature points out four possibilities of reaction: organizations can consciously choose to persist with the usual routines, can be paralyzed, can rely on heuristics, or based on its socio-cognitive resources, can improvise. For each of these possibilities, we can identify that there is a building of corresponding sensemaking that motivates it. We inferred that the capacity of organizations to respond to rare events starts with the sensemaking process, followed by the possibility of positioning themselves in one of the four alternatives mentioned above. We also asked ourselves what would determine this option and suggest the importance to analyze the organizational context.

Paper is Available to Meeting Registrants Only.

SAP: Collective Mindfulness and Strategy: Integrating the Core Theoretical Streams

Author: **Aniruddha Chatterjee**, *Macquarie U., Sydney & XLRI, Jamshedpur*
Author: **Kyle Bruce**, *Macquarie Graduate School of Management*

This paper elucidates the crucial role played by collective mindfulness in strategic decisions and strategizing activities. We unveil some of the micro-processes that take place in the 'black box' of strategy making and outline the need to simultaneously address questions such as- who makes strategies (person), what do they do (practices), and how do the person and practices interact with the dynamic environment. Further, we bring forth the complementarities between three emerging and seemingly disparate streams of strategy research, namely- behavioral strategy, strategy-as-practice and the dynamic capabilities perspective and explain how the concept of collective mindfulness may provide a mechanism to integrate them. By highlighting how collective mindfulness can explain finer details of strategy and may act as a central construct to integrate strategy research streams, we seek to stimulate newer lines of inquiry for progressing strategy research. Keywords: collective mindfulness, strategy, behavioral strategy, strategy-as-practice, dynamic capabilities

Paper is Available to Meeting Registrants Only.

SAP: Balancing the Personal and the Organizational: Shifting Focus of Frontline Sense-Making

Author: **Jane Seppälä**, *Aalto U., Department of Industrial Engineering and Management*
Author: **Timo Olavi Vuori**, *Aalto U.*

We still lack a proper understanding of how mergers politicize. To answer this, we conducted a longitudinal study at a large medical technology hardware and software provider MedTech. Our findings show how frontline management sensemaking plays a crucial role in merger politicization: their perceptions of top management legitimacy influence whether their sensemaking and actions primarily concern organizational or personal welfare. When frontline managers' perception of top management decision-making shifts towards more political, the focus of their sensemaking shifts from organization-focused to self-focused. This shift then leads to employees finding new and creative ways to save themselves, i.e., various increasingly political actions. While initial political actions against top management decisions aim to benefit the organization (e.g., to reverse an erroneous decision), the self-focused political actions are indifferent towards their organizational consequences. Hence, while organization-focused political actions can benefit merger success, self-focused political actions contribute to merger failure. Our findings contribute to the research on mergers and postmerger integration by proposing how frontline sensemaking influences merger politicization and to research on organizational politics by showing how perceptions of political decisions lead to the escalation of political behaviors.

Sustainability Transitions

Digital Session Chair: **Frederik Dahlmann**, *U. of Warwick*

SIM: The Role of Purpose in Supporting Sustainability Transitions

Author: **Frederik Dahlmann**, *U. of Warwick*
Author: **Wendy Stubbs**, *Monash U.*

There is growing recognition that today's grand challenges and wicked problems require significant transformative shifts in business practices and governance. The purpose ecosystem is an emerging phenomenon of new private sector actors seeking to promote wider systems change by driving and supporting the creation of purpose-driven businesses. In this paper, we conduct interviews with members of the purpose ecosystem to theorise how the general notion of purpose is used as an informal means to govern and transform business-society relations in the 21st century. We find that purpose ecosystem actors employ "double framing" in their explanations and justifications of focusing on purpose. By invoking both notions of "systemic subservience" and "humanistic goal-alignment", we propose that the simultaneous use of two contrasting, but complementary frames allows actors to appeal to and potentially unite a variety of diverse audiences. Double framing therefore emerges as an innovative rhetorical device used to mobilise and steer private sector actors. Our research contributes to literatures on how purpose is used as a lever to drive sustainability transformations as well as the significance of framing within values-based governance.

SIM: Stakeholder engagement accelerating transition towards a sustainable circular economy

Author: **Annika Blomberg**, *Tampere U.*
Author: **Johanna Kujala**, *Tampere U.*
Author: **Anna Heikkinen**, *Tampere U.*

In this article, we ask in what ways stakeholder engagement can accelerate the transitions towards a circular economy (CE). The empirical material consists of 35 semi-structured interviews of CE stakeholders at local, regional and national levels in Finland. The CE stakeholders include private, public and third sector organizations fostering the circular economy in Finland. A fine-grained, inductive analysis of stakeholder relationships in the context of a circular economy was conducted. Our analysis identifies four types of engagement relations that prevail among the CE stakeholders: (1) hierarchical relations, (2) collaborative relations (3) adversarial relations and (4) advocate relations. Each of the relations actualizes and is maintained through a set of more specific activities. Hierarchical relations include enabling and bureaucratic activities; collaborative relations include facilitating, learning and communicating, and partnering activities; adversarial relations include competing and moderating activities; and advocate relations include influencing and informing activities. The analysis indicates that each type of relation with its specific activities of stakeholder engagement is valuable for accelerating the transitions toward a sustainable CE. Hierarchical relations lay the foundation for the circular economy, while the collaborative relations based on trust and openness are in the core of advancing the circular economy. In collaborative relations organizations network, learn from each other and share knowledge and partner to collaborate and to co-create, and the traditional roles and boundaries of organizations blur. Despite the prevailing emphasis on collaborative approach, the adversarial relations and the related activities are relevant for the transition to a sustainable circular economy, too, as they force to consider issues and their implications thoroughly and from many viewpoints. Advocate relations illustrate how the CE stakeholders attempt to engage wider audiences in the advancement of the circular economy by informing and driving changes in the attitudes.

SIM: Intimate Co-creation of Value for Sustainability: The Nature, Measurement and Nomological Network

Author: **Sushil S. Chaurasia**, *U. of New Brunswick*
Author: **Dhirendra Shukla**, *U. of New Brunswick*
Author: **Manoj Motiani**, *Indian Institute of Management, Indore*
Author: **Kapil Khandeparkar**, *Goa Institute of Management*

Intimacy (deep cooperation) is mutually beneficial to both, the SME organization and its partners/stakeholders involved, but the literature does not offer a blueprint for what intimacy in co-creating value for sustainability (ICCVS) means or what factors differentiate value co-creation from intimate co-creation of value? Through a planned mixed-method investigation, leveraging upon focus groups, in-depth interviews, essays and structured surveys, the current investigation conceptualized, developed and validated a measure of ICCVS that distinguish 'intimate co-creation of value' from co-creation of value. Our findings suggest that intimate co-creation of value for sustainability is generally perceived to occur due to corporate credibility, economic incentive, sustainability recognition, sustainability philosophy, sustainability impact, commitment, trust, unfiltered information exchange, and shared interpersonal boundary.

SIM: Understanding the Motivation Complexity of Grassroots Ecopreneurs at the Base of the Pyramid (BoP)

Author: **Norma Achieng Juma**, *Washburn U.*
Author: **Joy Olabisi**, *Rochester Institute of Technology*
Author: **Eliada Griffin-EI**, *Robert Morris U.*

This qualitative study focuses on the factors that motivate grassroots ecopreneurship at the base of the pyramid. Extant research suggests that GEs at the base of the pyramid (BoP) primarily engage in necessity-driven ventures. However, this study demonstrates that GEs' motives to launch new ventures appear to be multifaceted. Moreover, the GEs' motivation does not appear to be linear or sequential but rather simultaneous. We also observed an interlinkage of environmental and economic motives. These interlinkages were observed in GEs who diversified their investments into related and unrelated areas. Socio-ethical motives, the GEs' concerns toward other members of the community, and a desire to create social value beyond private value are also additional unique observations. Our findings also indicate that GEs at the BoP were strategically aligned with highly supportive, collaborative networks of private and public institutions, which contributed to them establishing and sustaining viable businesses.

This professional development workshop aims to support the development of critical and practical activism by building on the conversations around ‘critical praxis’ and ‘activist turn’ in the CMS. Grounded, in part, in the debate around ‘critical performativity’ and set against the urgent need for critical academics to act practically and critically to address core social and organizational issues (e.g. intensifying class, racial and gender inequalities, environmental destruction and political alienation) this proposed workshop involves a set of presentations and activities that encourage the development of the activist CMS scholar. The PDW is organized into three parts. The first part will include four thematic presentations about different academic-activist interventions, among others, (i.e. socio-economic inequality, decolonizing the university, diversity and inclusion, and intellectual activism), the theories and methodologies used to engage with the cause of the activism, challenges and outcomes. In the second part, the participants will be divided into sub-groups and go to virtual breakout rooms (as they interact via padlet), where they will collectively seek answers to three questions (1) What are the methodological and practical tools to engage with relevant social and organizational issue?, (2) How can theory be utilized for praxis?, (3) How can CMS build a collective activist agenda concerning the relevant social and organizational issue? In the third and final part, there will be a debriefing session in plenary to share the main points of the discussions in the breakout groups. The workshop aims to help develop a form of activist CMS scholarship performed through multiple formats and engagements.

STR: Prior Investments in Human Capital Reduce Layoffs Associated with COVID-19 Financial Pressures

Author: **Frederick Scott Bentley**, *Binghamton U.-State U. of New York*

Author: **Rebecca Rheinhardt Kehoe**, *Cornell U.*

Author: **Hyesook Chung**, *Cornell U.*

This study examines how a firm's pre-pandemic investments in human capital and physical capital influence its likelihood of engaging in layoffs in response to financial pressures in the early periods of the COVID-19 pandemic. Building on insights from the resource orchestration literature, we contend that layoff decisions must be examined in the context of firms' path-dependent resource orchestration activities and in light of relevant environmental pressures. We specifically argue that firms with higher levels of pre-pandemic investment in employees' human capital will be less likely to engage in layoffs in response to pandemic financial pressures based on the increased value embedded in their employees' knowledge, skills and abilities (KSAs) and motivation. We further argue that firms' pre-pandemic investments in physical capital will strengthen the mitigating effect of human capital investments on the likelihood of layoffs due to the complementarities that are likely to develop in the course of a firm's concurrent investments in these two types of resources. We demonstrate support for our hypotheses in a sample of 709 U.S. banks using data from quarterly Federal Deposit Insurance Corporation (FDIC) reports, news articles, and Worker Adjustment and Retraining Notifications (WARN) Act filings through the second quarter of 2020. We discuss implications for our understanding of the impact of the COVID-19 pandemic on organizations and employees, for research examining how organizational factors shape the likelihood of layoffs in a crisis environment, and for research on resource orchestration and human capital.

STR: Can Sponsorship Address Women's Underrepresentation in Senior Management?

Author: **Benjamin King**, *U. of Maryland*

Author: **Cristian L. Dezso**, *U. of Maryland*

Author: **Nathan Barrymore**, *U. of Maryland R.H. Smith School of Business*

Research suggests that women are underrepresented in senior management because they are less likely than men to compete for promotions and high-promotability assignments. Ascending the corporate ladder, however, also involves sponsors – managers that compete on behalf of protégés for promotions and assignments. Can sponsorship reduce women's underrepresentation in senior management? To address this question, we use a controlled experiment and investigate how gender impacts managers' willingness to sponsor their protégés. We find that when earnings accrue to protégés, the gender gap in competitiveness is eliminated, suggesting that female managers are effective sponsors. However, male managers compete significantly more for male, rather than female, protégés. This gap disappears when male managers receive information about protégés' risk preferences, suggesting an important managerial intervention to increase sponsorship effectiveness.

STR: Standardized Tools, Generalizability of Human Capital, and Employee Mobility

Author: **Milan Miric**, *U. of Southern California -Marshall School of Business*

Author: **Hakan Ozalp**, *Vrije U. Amsterdam*

The mobility of highly skilled knowledge and creative workers is an important determinant of innovation. Existing studies have not considered how the use and diffusion of standardized technologies and tools influence the mobility of individual knowledge workers. We theorize that the diffusion of standardized tools increases the generalizability of human capital and, in turn, increases the ability of individuals to move between companies. Using data on the use of middleware in the console games industry, we find that this diffusion of standardized middleware tools lead to an increase in labor mobility on average, but was associated with higher mobility for individuals with skills that complemented those tools, in comparison to those that were substituted by these tools. Worker experience with standardized tools amplified these effects, as individuals who were experienced in using these tools saw the largest shift in the likelihood of mobility. We do not find that this diffusion led to individuals leaving the industry, but we do find evidence that the diffusion of a common set of tools within an industry was associated with workers being less likely to leave that industry. These results highlight the potential unintended effects of technological standardization and the broad diffusion of standardized tools, which may enable workers to more easily shift between competitors.

STR: Bundling Postemployment Restrictive Covenants: New Evidence from Firm and Worker Surveys

Author: **Natarajan Balasubramanian**, *Syracuse U.*

Author: **Evan Penniman Starr**, *U. of Maryland, College Park*

Author: **Shotaro Yamaguchi**, -

We examine the joint adoption of four postemployment restrictive covenants—non-disclosure agreements (NDAs), non-solicitation agreements (NSAs), non-recruitment agreements (NRAs), and non-compete agreements (NCAs)—and their implications for workers and firms. We find that firms tend to adopt these provisions together, with only 3 bundles (No provisions, Just an NDA, All four) covering more than 82% of workers and 70% of firms. Among the individual provisions, we find that NDAs to be the most common, covering 57% of workers in the US and deployed by more than 75% of firms, while NCAs are the least common, covering 22% of workers. We find that firms are more likely to use all four provisions with workers who have greater access to valuable information or clients or a top management job. We also find that while firms still use NCAs at the same level in states where NCAs are unenforceable, firms shift the bundle towards the other provisions, especially NDAs. Finally, we show that using all four provisions is associated with reduced turnover and lower wages relative to firms that use just an NDA, suggesting that firms are able to use this bundle of restrictions to capture more value from human capital.
