

BRINGING *THE MANAGER* BACK IN *MANAGEMENT*

81st Annual Meeting of the Academy of Management
29 July – 4 August 2021 | A Virtual Experience

Program / Schedule / Agenda

NOTE: This document was created on 23 July 2021 and reflects scheduling and program changes up until that point. Any changes after that date will not be reflected within this PDF and you should refer to the online version of the searchable program: <https://2021.aom.org>

What's New for AOM 2021 - An Improved Virtual Experience

In 2020, the Academy of Management pushed the boundaries of what the Annual Meeting could achieve by gathering virtually to network and share research in new and exciting ways. The unique circumstances of AOM 2020 inspired attendees to engage with research – and with one another – in a novel setting, prompting an unparalleled level of interaction and accessibility.

As we look ahead to AOM 2021, we are excited to share some innovations based on your feedback and suggestions that will make this year's virtual Annual Meeting an even better experience for connecting, engaging, and learning:

- A **Preview Day** on Thursday, 29 July will offer an opportunity for attendees to get oriented to the virtual platform and receive training to help you get the most out of your experience.
- A new **Consortium Day** is being developed to allow for broader audience participation – you will no longer need to choose between your favorite PDW and DIG consortium!
- **75% of sessions will be live (synchronous)**, giving you the opportunity engage in real-time, while still giving you the option to watch session recordings at your convenience after the session has taken place.
- With **sessions of all types being scheduled during each of the meeting's five days**, arranging your own conference schedule will be easier and more flexible than ever.
- **Tiered registration rates**, including an additional early registration option.
- Opportunities to **engage socially** with other attendees.

We look forward to having you join us for the 81st Annual Meeting of the Academy of Management!

Studying Lived Experiences: Phenomenological Methodologies for Institutional Inquiry

Phenomenological methodologies

Organizer: **Emamdeen Fohim**, *U. of Bern*
Organizer: **Michael John Gill**, *U. of Oxford*
Presenter: **Melodie Cartel**, *UNSW Business School, Australia*
Presenter: **Renate Elisabeth Meyer**, *WU Vienna & Copenhagen Business School*
Presenter: **Mia Raynard**, *WU Vienna U. of Economics and Business*
Presenter: **Juliane Reinecke**, *King's College London*
Presenter: **Christopher W. J. Steele**, *U. of Alberta*
Presenter: **Madeline Toubiana**, *U. of Alberta*

Institutional theory is shaped by the philosophy of phenomenology. Nevertheless, these phenomenological roots are often forgotten by organizational scholars. Not surprisingly, phenomenology as a research methodology is seldom applied in institutional studies. Phenomenological methodologies seek to study individuals' lived experiences. The aim of this PDW is to return to the phenomenological roots of institutional theory and to discuss the different types and opportunities for phenomenological methodologies. After introducing phenomenology and phenomenological methodologies, prominent scholars will discuss a range of concepts of particular relevance for institutional theory including institutional complexity, place and space, time and temporality, emotions, and taken-for-grantedness. Drawing on these concepts, breakout room sessions will allow participants to develop potential research projects that aim to advance research on of the discussed concepts by applying a phenomenological methodology. The overall goal of the PDW is to open up new approaches for the development of institutional theory. We thus believe that this PDW is of particular interest for scholars of the OMT community as well as the OB community. But we expect that also RM scholars will be curious to learn about a still quite unknown research methodology. And we believe that scholars of the MH community will be curious to return to the historical analysis of one of organization studies most dominant theory – namely, institutional theory.

This workshop introduces participants to phenomenology and relevant institutionalist concepts (institutional complexity, place and space, time and temporality, emotions, taken-for-grantedness). During breakout sessions, participants share research ideas related to these concepts, using a phenomenological methodology. No pre-registration. First come, first served. Referred discussion topics for breakout rooms can be entered here: <https://emamdeen85.wufoo.com/forms/z1te73cm0zlpj0p/> For enquiries: please contact emamdeen.fohim@kpm.unibe.ch and michael.gill@sbs.ox.ac.uk

Digital Session Chair: **Romain Gandia**, *U. Savoie Mont Blanc*

TIM: How do Airbnb support business model replication through a multi-sided platform?

Author: **Romain Gandia**, *U. Savoie Mont Blanc*
Author: **Corine Genet**, *Grenoble Ecole de Management*
Author: **Sylvain Colombero**, *Grenoble Ecole de Management*

This study analyzes how Airbnb implement their business model replication process to create competitive advantage in the tourism and hospitality industry. Specifically, we address an issue ignored by the literature: the role of multi-sided platforms in the business model replication process. Using an exploratory qualitative approach, we show how the multi-sided platform supports the exploration and exploitation phases in the Airbnb business model replication process. We also underline the instrumental role of the platform in technically standardizing the orchestration between the franchisees and the franchisor and between the local and the global level. This notion of standardization is instructive for managers in charge of a replication process in the tourism and hospitality industry. Our study contributes to a better understanding of business model replication in a digital environment and clarifies the distinction between the concept of multi-sided platform and digital business model while underlining their complementarity

Paper is Available to Meeting Registrants Only.

TIM: Digital platforms and infrastructure: How platform providers form interconnections across standards (WITHDRAWN)

Author: **Sven Niederhöfer**, *U. of Hamburg*
Author: **Sebastian Spaeth**, *U. of Hamburg*

Platform literature often considers platforms in isolation conceptualized as two-sided markets, developer communities, modular products connected to sets of complementary products, or socio-technical organizations, while omitting their connection to the overall infrastructure. Yet, the underlying infrastructure provides technological generativity for platform innovation and is relevant for platform competition in that open standards may decrease platform differentiation as they make complementary products compatible across a range of competing platforms. Against this backdrop we address three questions: RQ1: How do platform providers manage generativity across the layered modular architecture? RQ2: How do platform providers populate their ecosystem to balance generativity and control? RQ3: Which other platforms do platform providers form connections with? To address these questions we construct a unique data set covering 80 platforms in the smart home market and make three contributions to literature. First, we take a broader lens, considering platforms as layered modular architectures forming links to the surrounding infrastructure at different layers. We thereby derive four generative architectures with different degrees in openness. Second, we report four different approaches taken by platform providers to populate their ecosystems. Thereby, we consider the combinations with the architectural configuration that platform providers take and especially highlight the integration of large established platforms on the service layer (cloud-to-cloud). Third, we account for standards and promoted compatibility between platform ecosystems, while we estimate the relative importance of different factors.

TIM: Towards born sharing: the sharing economy evolution enabled by the digital ecosystems

Author: **Ke Rong**, *Tsinghua U.*
Author: **Yining Luo**, *U. of Cambridge*

Recent years have seen the prosperity of the sharing economy. With innovative sharing business models keeping emerging, there is some controversy around the definition of the sharing economy. This paper argues that the sharing economy is evolving with digitalisation, the locus of sharing economy is access economy rather than Customer-to-Customer (C2C) platform economy. Our study aims to examine how the sharing economy emerges and evolves with digitalisation and the how digital ecosystem enables the evolution. This paper identifies the two digital-enabled evolutionary trends of sharing economy business models, from adapted sharing to born sharing, and from downstream to upstream sharing. In terms of the Born Sharing model, companies sell access services instead of selling products. The mechanism of this evolving economic model is to match the supply and demand by drastically reducing the transaction cost, information asymmetry and market uncertainty with the help of enabling digital technologies and infrastructure. Our research suggests that the emergence and evolution of sharing economy is enabled by the digital ecosystem around, which is composed of two pools: digitally infrastructural pool and digitally enabled pool. This study contributes to sharing economy studies and ecosystem research by conceptualising "born sharing" and providing a dynamic digital ecosystem framework to understand the evolution of the sharing economy.

Paper is Available to Meeting Registrants Only.

TIM: What's New (for Scholars) about Transaction Platforms? A Systematic Literature Review

Author: **Anne Sophie Barbe**, *Aalto U., Department of Management Studies*

This paper systematically reviews the literature on transaction platforms by examining what makes transaction platforms novel for organization and management (O&M) scholars. To do so, it tracks the theoretical constructs that these scholars use to conceptualize transaction platforms, as well as the transaction platform's attributes that they portray as new, by contrast with these theoretical constructs. The systematic analysis of 113 scholarly articles, published in top-tier management journals between 1997 and 2019, reveals that O&M scholars tend to conceptualize transaction platforms as cases of markets, institutions or as cases of organizations. Then, it shows that O&M scholars introduce transaction platforms as novel by stressing three main characteristics: (1) the characteristics of information available to transactions participants (2) the spatio-temporal location of transactions participants and (3) the tasks managed by the owners and/or managers of the transaction infrastructures. Building on these findings, we propose to discuss the definition of transaction platforms and outline directions for future research by suggesting original theoretical constructs for problematizing transaction platforms.

This professional development workshop (PDW) is designed to introduce research opportunities by connecting management scholars with unique access to Japanese firms and those with some interest in Japanese firms and its management. The Japanese economy and firms still have played an important role in the global business; for example, its GDP is the third largest in the world in 2020. Nevertheless, the presence of Japanese companies in the management research is not so high. The main reason for this low presence of Japanese firms could be attributed to Japanese scholars' small number of publications. Only a few Japanese scholars can regularly publish papers in decent journal in the management field. Although abundant detailed data on business and economic activities are available in Japan and many Japanese management scholars have access to such data, its potential has not been exploited yet. In this PDW, we will invite non-Japanese scholars who have interest in Japanese firms and its management but does not have data, or non-Japanese scholars who want to utilize Japanese firms to test their research ideas. By providing some preliminary analysis from two large scale survey projects in Japan (Covid-19 Research Project and Organizational Survey 2020 Project) conducted by the members of The Academic Association of Organizational Science (AAOS), we want to revive the interest of management scholars in Japanese firms.

Non-Traditional Work Arrangements

Digital Session Chair: **Kapil Verma**, *Indian Institute of Management, Kozhikode*

OB: Adapting to Work-From-Home: Examining the Benefits and Costs of Psychological Detachment from Home

Author: **Kapil Verma**, *Indian Institute of Management, Kozhikode*
Author: **Marilyn Ang Uy**, *Nanyang Technological U.*

The COVID-19 pandemic forced organizations to shift to remote working to mitigate the spread of the disease. From the employees' perspective, working from home comes with its own set of challenges. Because the boundary between work and home gets even more blurred as employees work from home, staying focused on their job while being at home takes a great amount of effort and results in higher levels of anxiety and fatigue. Can psychological detachment from home help employees in adapting to work-from-home arrangements? Focusing on this question, we integrate boundary theory and self-regulation theory to examine how and when psychological detachment from home influences daily work engagement and enacted incivility. We conducted an experience sampling study across two work weeks with employees working from home in India during the reopening phase after the nationwide lockdown. Our findings indicate that detachment from home is negatively related with next-morning work-related anxiety, which further impacts state work engagement and enacted incivility. Results also show that detachment from home is positively related with next-morning exhaustion, which in turn predicts state engagement and enacted incivility. Further, the indirect effects of detachment from home on daily engagement and enacted incivility via exhaustion were significant only for employees with low trait self-control. Overall, our study yields theoretical and practical implications for work-from-home practices even after the COVID-19 crisis ends.

OB: Essential but Undervalued: Essentials Are Less Engaged, Prosocial, Supportive, and More Exhausted

Author: **Arianna M. Beetz**, *The Wharton School, U. of Pennsylvania*
Author: **Hakan Ozcelik**, *California State U. Sacramento*

This study aims to explore whether and how the organizational mandates imposed on employees during a large-scale disruptive event, i.e., COVID-19 regarding their work modality: on-site (essentials), from home (virtually), or combination of both (hybrids), impact employees' attitudes, motivation, and wellbeing. We drew on organizational-based self-esteem research and the research on crisis management to develop a model predicting that essential employees perceive these organizational mandates as a cue to how much they are valued by their organization, as reflected by their organization-based self-esteem, which in turn should be related to their work engagement, prosocial behavior, willingness to support the organization, and emotional exhaustion. We also considered an employee's supervisor's expression of companionate love and level of enjoying working on-site as factors moderating these relationships. We have conducted a field study in a metropolitan municipality to test our model. The sample consisted of 792 employees from a wide range of occupations. Results provided strong support for our model to show that essential employees who were mandated to work onsite experienced lower levels of OBSE as compared to other employees, which in turn was related to negative work outcomes. Limitations, implications and future research direction were discussed.

Paper is Available to Meeting Registrants Only.

OB: Worker Affectivity and Work Attitudes: A Meta-Analysis of Mechanical Turk Samples

Author: **Jestine Philip**, *U. of New Haven*
Author: **Vasiliki Kosmidou**, *U. of New Haven*

The purpose of this paper is to meta-analyze the relationship between (positive and negative) affect and work attitudes (job satisfaction, organizational commitment, and turnover intentions) for Mechanical Turk data samples. MTurk has become a popular convenience sample choice for OB/HR scholars. MTurk workers are also part of the evolving digital gig economy, for whom the attitudinal and behavioral outcomes may differ from traditional employees due to the former's varying employment relationships. We analyzed a total of 50 papers and 55 unique samples consisting of 23,427 MTurkers for PA studies and 14,798 MTurkers for NA studies. Consistent with conventionally sourced samples, PA was positively related to job satisfaction and organizational commitment and NA was negatively related to turnover intentions. The effect size magnitude for MTurker job satisfaction was statistically different and higher than conventional samples. Implications and the need to conduct such meta-analytic reviews for other attitudinal and behavioral outcome variables for MTurkers are discussed.

Paper is Available to Meeting Registrants Only.

OB: The Balancing Act between Privacy & Communication in Activity-based Workspaces: a Longitudinal Study

Author: **Marc Rucker**, *Friedrich-Alexander U. of Erlangen-Nürnberg*
Author: **Tobias Eismann**, *Eureka Innovation*
Author: **Martin Meinel**, *Eureka Innovation*
Author: **Kai-Ingo Voigt**, *Friedrich-Alexander U. of Erlangen-Nürnberg*

For many decades, companies have been trying to increase the performance of their employees using suitable office concepts. However, all conventional offices, such as private or open-plan offices, offer employees either a high degree of privacy or communication. But both of these dimensions are important when employees have to perform different tasks and are the prerequisite for employee performance. The literature defines this as the privacy-communication trade-off. So-called activity-based workspaces (ABWs), with their mixture of open and closed spaces, offer promising conditions for eliminating this trade-off. However, there is still no scientific evidence whether ABWs can actually solve the privacy-communication trade-off. Therefore, we accompanied a company for one year during their move from a conventional office to an ABW and surveyed the employees once before and twice after the move (n=86). In this longitudinal study, we were able to measure both a significant increase in perceived privacy and communication in the new work environment. Previously, these two dimensions were considered incompatible in only one work environment. Our study is therefore the first to show that ABWs are the ideal office concept to provide an appropriate level of privacy and communication and thus offer the best conditions for increasing employee performance.

Empowering Leadership and Positive Employee Behavior

Digital Session Chair: **Trevor Foulk**, *U. of Maryland*

OB: Giving Power to the People: Empowering Leadership's Impact on Leaders' Prosocial Use of Power    

Author: **Trevor Foulk**, *U. of Maryland*
Author: **Nicolais Chighizola**, *U. of Maryland*
Author: **Oguz Gencay**, *Robert H. Smith School of Business, U. of Maryland*
Author: **Gilad Chen**, *U. of Maryland*

Leaders are given power with the hope that they will use that power to benefit their followers and the organization. However, research has documented that the psychological tendencies associated with power often motivate self-interest and the pursuit of one's own goals. It is therefore critical to understand how to make leaders feel powerful in ways that will cause them to engage in prosocial behaviors towards others. The social distance theory of power suggests that feeling powerful increases social distance with others in a way that causes these selfish and antisocial behaviors. Integrating this perspective with the literature on empowering leadership, we posit that when leaders come to feel powerful via empowering leadership, their sense of power will make them feel more social closeness, rather than social distance, with followers which will subsequently promote prosocial behaviors directed towards them. We test our theoretical model in two experiments and a multi-source field study. Across three studies we find converging support for our theoretical expectations, and demonstrate that when leaders come to feel powerful via empowering leadership some of the negative and antisocial patterns associated with power do not emerge, but rather a more prosocial type of power is exhibited.

Paper is NOT Available. Please contact the author(s).

OB: Empowering leadership and employee creativity: The role of motivation and resource crafting   

Author: **Yuan Cheng**, *School of Business, Renmin U. of China*
Author: **Guangjian Liu**, *School of Business, Renmin U. of China*
Author: **Zhipeng Zhang**, *China U. of Labor Relations*

Drawing from the componential model of the creativity process, this study investigated the mediating effect of employees' intrinsic motivation, felt obligation and resource crafting behavior in the relationship between empowering leadership and employee creativity as well as the moderating role played by employees' power distance orientation. Multisource data were collected from 235 members and their direct leaders in China, using a two-wave and time-lagged research design. Our results show that empowering leadership is positively related to employee creativity, employees' motivation (including intrinsic motivation and felt obligation) and resource crafting behavior sequentially mediated this relationship. Besides, power distance orientation strengthens the relationship between empowering leadership and employees' felt obligation. The contribution of this study lies in explaining how employee creativity is triggered by empowering leadership as well as its boundary conditions.

Paper is NOT Available. Please contact the author(s).

OB: The Relationship between Empowering Leadership and Task Performance: A Conditional Indirect Model 

Author: **Dongseop Lee**, *Korea U. Business School*
Author: **Eunjeong Kwon**, *Arizona State U.*
Author: **Yongduk Choi**, *Chonnam National U.*

Despite the mounting interest in empowering leadership, empirical evidence for its relationship with employee task performance has been limited and inconclusive. Using an interactionist perspective, we investigated the relationship between empowering leadership and task performance by integrating the roles of employees' taking charge as a behavioral mediator and their trust in leader as an interpersonal moderator. The results, based on two-wave data from 196 Korean white-collar employees and their direct supervisors, showed that empowering leadership was positively related to taking charge, only when the employees' trust in leader was high. Moreover, the indirect relationship of empowering leadership with task performance through taking charge was also conditional on the level of trust in leader. Theoretical and practical implications are discussed.

Paper is Available to Meeting Registrants Only.

OB: The Role of Employees' Regulatory Focus in Shaping the Effect of Empowering Leadership 

Author: **Liyuan Li**, *School of Economics and Management Tsinghua U.*
Author: **Zhang Ying**, *Tsinghua U.*

Building on regulatory focus theory (Higgins, 1997) and self-determination theory (SDT; Deci & Ryan, 1985; Ryan & Deci, 2000, 2002), the current research hypothesize that empowering leadership may trigger different motivational processes (i.e., intrinsic motivation and extrinsic motivation) for employees with different regulatory focus, and thus result in different perceived stressors for them. Expanding the literature of empowering leadership, the current research incorporates the largely neglected regulatory focus perspective. Using a two-wave survey, the hypotheses were tested in a sample of 294 employees. Results show both significant mediation effect of intrinsic motivation and extrinsic motivation between empowering leadership and employee perceived stressors. And employee promotion focus would strengthen the relationship between empowering leadership and intrinsic motivation, while prevention focus would strengthen the relationship between empowering leadership and extrinsic motivation. The results make contributions to empowering leadership literature by identifying how employees with different regulatory focus react to empowering leadership, and exploring the both positive and negative motivational process of empowering leadership on employee perceived stressors.

Participant: **Jonathan Davis**, *U. of Oregon*
Participant: **Pablo Montagnes**, *Emory U.*
Presenter: **Patryk Perkowski**, *Columbia Business School*

This Symposium includes five studies on the drivers and consequences of employee mobility within organizations. The studies in this symposium adopt a multi-level perspective, by examining how the interaction of individual and organizational factors determine internal moves as well as the individual- and firm-level outcomes of those moves. After the presentations, Professor Russell (Russ) Coff will lead the paper discussion. The goal of the Symposium is to foster a research conversation among researchers interested in internal mobility across disciplinary fields, including careers, human resource management, and strategy, to identify overlaps, potential for collaboration, and avenues for future research.

While it is easy to come up with a rough or vague idea about a research topic, it is not easy to refine, implement, and publish the idea. Every one of us needs help from others, particularly those who have successful publishing experience. However, many of us lack access to colleagues with relevant expertise or hesitate to ask for feedback from experts in relevant domains. Sometimes we are not even sure what kinds of expertise we would need to move the idea forward. In the OB Research Incubator, participants are paired with renowned scholars who have successful publishing experience and can help participants move their ideas forward. Participants also have an opportunity to connect with other OB scholars who share similar research interests. This PDW is open for any member of the OB Division who would like to seek and exchange advice or feedback on research projects in any stage prior to publishing. Prior to participation in this PDW, participants must submit a brief summary of their research idea by June 15, 2021 (5-6 pages, double spaced). These briefs will be reviewed by the session organizers. Those whose briefs receive favorable evaluation will receive a registration code for the session. Complete details regarding the research brief were made available via an announcement on the OB Division and other division listservs starting April 1, 2021.

TIM: Learning from Failure, Collective Efficacy and New Product Performance   

Author: **Xiangming Tao**, *U. of Shanghai for Science and Technology*
Author: **Catherine L. Wang**, *Brunel U. London*
Author: **Paul John Alexander Robson**, *Royal Holloway, U. of London*
Author: **Mathew Hughes**, *Loughborough U.*

Although the virtues of the learning from failure in breeding innovation have been widely promoted, teams are still an under-researched objective when it comes to learning from failure. Moreover, much less is known about how team learning from failure affects innovation performance especially under the influence of collective cognition. Incorporating social learning theory and social cognitive theory, our study examines how experiential learning from failure (ELFF) and vicarious learning from failure (VLFF) affect new product performance (NPP) in new product development (NPD) teams. We further explore the moderating role of collective efficacy. Survey data from 152 paired NPD project teams in high-tech firms illustrates that both ELFF and VLFF facilitate NPP in terms of NPD speed to market and new product creativity. Further, a high level of collective efficacy intensifies the positive relationship between ELFF and NPD speed to market, but attenuates the positive relationship between VLFF and new product creativity. Our results illustrate that both ELFF and VLFF should be encouraged to promote innovation performance in the NPD team. However, the NPD team should hold a fine-grained view regarding the double-edged sword effect of collective efficacy on the relationship between learning from failure and NPP at the team level.

TIM: The antecedents of green technologies: ethnic inventors and recombinant capabilities

Author: **Alba Marino**, *U. of Messina*
Author: **Francesco Quatraro**, *U. of Turin*

We draw upon the micro-foundation of recombinant knowledge in GTs, the international business literature on the firms' strategies for external knowledge sourcing and the most recent strain of migration studies in the innovation field to explore the role of ethnic migrants in leveraging recombinant creation dynamics and increasing the probability of successful green innovations. Our main argument is that the involvement of ethnic inventors increases the likelihood to successfully generate green inventions, due to their inherent experiences and distinct knowledge bases and experiences might enhance creativity (Parrotta et al., 2014) and complex problem solving (Cooke and Kemény, 2017). We rely on data drawn from the ethnic patenting database, which covers harmonized USPTO patent records granted to US-based MNEs over the period 1975-2009 as designed by Kerr (2008), merged with information on the career of each inventor in the sample derived from the Harvard Patent Dataverse database (Lai et al., 2011). We find that teams composed of inventors with wider recombinant capabilities also tend to have a higher propensity of developing new green technologies. Also, a higher level of ethnic diversity among the US-based inventors correlates with a higher probability of patenting GTs, but the relationship follows a non-linear pattern along ethnic diversity. Finally, we find that patents developed by R&D teams involving a higher degree of ethnic diversity among their domestic inventors are more likely to combine technological knowledge in a novel way to develop GTs. Our results bring implications for the strategic management of inventors' teams by multinationals willing to run the green patent race and for policy-makers facing the climate change challenges.

TIM: The Role of Female versus Male Stars in Team Knowledge Recombination  

Author: **Mona Reber**, *U. of Mannheim*
Author: **Leo Schmallenbach**, *U. of Mannheim*
Author: **Himani Singh**, *U. of Mannheim*

This paper focuses on female stars, an underrepresented and largely unexplored group of star knowledge workers, and their role in team knowledge recombination. We argue that gender differences between male and female stars can produce differential implications for the availability and integration of knowledge in teams and hypothesize that the presence of a female star fosters the breadth of knowledge recombination in teams. Empirically, we rely on a sample of star inventors, representing knowledge workers, and their patents filed at the US patent office in the period of 1990-2010. We match teams with a female star to similar teams with a male star and compare how broadly the teams recombine knowledge across technological boundaries in their patented inventions. We find that teams with a female star combine knowledge more broadly. Our findings emphasize the special role of female stars in teams and may thus help leverage the untapped potential of women in many knowledge-based and creative industries.

TIM: The Colour of Hierarchy: A field experiment on hierarchical endorsements and idea selection

Author: **Mathias J. M. Boënne**, *Erasmus U. Rotterdam*
Author: **Bart Leten**, *KU Leuven*
Author: **Ammon Salter**, *U. of Bath*

In the early stages of the idea creation process, individuals often turn to other members within the organization to help them select which ideas merit further development. Critical to this decision is receiving endorsement on the value of ideas from relevant others. We suggest the hierarchical position of these endorsements shapes idea selection, as these endorsements are interpreted by the idea creators as a signal of competence and of future support. We test this conjecture using a field experiment at a major European University organization, where information about the hierarchical endorsement on ideas is exposed and withheld to a randomly assigned treatment and control group involved in an ideation process. We find that hierarchical endorsement has a positive effect on idea selection for those high in the hierarchy of the organization, but little or no effect on those individuals in more low-level positions. Furthermore, we find that hierarchical endorsements mainly reinforce initial quality perceptions of idea creators, rather than that they shift selection towards other ideas. We explore these findings for our understanding of the role of hierarchy in the idea creation processes.

Engaging and Supporting International PhD Students and Early Career Faculty in the HR Division
Engaging International Members of the HR Division

Chair: **Vanessa Shum**, *Simon Fraser U.*
Chair: **Karina Van De Voorde**, *Tilburg U.*
Panelist: **Jaime Andrés Bayona**, *Pontificia U. Javeriana*
Panelist: **Ilona Buciuniene**, *ISM U. of Management and Economics*
Panelist: **Sewon Kim**, *State U. of New York Empire State College*
Panelist: **Scott L. Martin**, *Zayed U.*
Panelist: **Margarita Nyfoudi**, *U. of Birmingham*
Panelist: **Hilla Peretz**, *ORT Braude College*
Panelist: **Madina Rival**, *LIRSA-Cnam Paris*
Panelist: **Shay Tzafir**, *U. of Haifa*

International members (outside of North America) represent a large portion of the HR Division at the Academy of Management— in terms of their membership share at the HR Division membership and participation in AOM/HR Division conferences. It is essential to engage international members, in particular international PhD students and early career faculty, for improving the global inclusivity of the division. This PDW aims to create a plan to provide support and address the needs and challenges faced specifically by international PhD students and early career faculty. Attendees can expect to raise and discuss experiences and challenges related to being international members in a scholarly association that is gradually becoming international (also compared to others, including local associations), learn about opportunities for international members to become more involved in the HR Division and the AOM, and discuss "what's in it for early career scholars" to be members of the HR Division and the AOM (in terms of available activities and resources). This PDW is structured in 4-parts: (1) sharing the vision and goals of the HR Division International Committee, (2) discussing the challenges specific to international PhD students and early career faculty and possible avenues to address these challenges, (3) learning from a panel of international guest speakers who will share their advice and experiences, (4) introducing the Junior Ambassadors group – the new delegates within the Ambassadors program. In sum, the objective of the PDW is to support international PhD students and early career faculty to develop meaningful experiences and lasting relationships with the HR Division.

How do I register? There is no charge to attend, but pre-registration and conference registration are required. To pre-register, please email your name, school, and a brief CV to Vanessa Shum (vanessa_shum@sfu.ca) by July 10.

MSR Morning Meditation *MSR Morning Meditation*

Chair: **Richard Peregoy**, *U. of Dallas, Satish & Yasmin Gupta College of Business*
Chair: **Gerald Biberman**, *U. of Scranton*

The practice of meditation (either individual or collective) has the common objective to still/silence the mind and allow the unconscious reality to emerge, open and unfold. Many variations of meditation exist. In this conference five different forms will be introduced—a different form will be introduced each day during the conference. The idea is for those new to meditation to sample, and for those who find a familiar meditation to expand their experience. These five meditations can be accomplished in a few minutes or longer as you wish.

Facilitator: **Barbara C. Nussbaum**, -

Neuroscientists, psychologists, educators, and management scholars propose that the current emphasis on the intellect and reason in education and business over values such as love, connectedness, and compassion are at the root of many business ethical failures and societal problems. They argue not that reason should be abandoned in education and business management, but rather that it needs to be balanced with values such as love because these attributes are innately human, and this will enable wise decision making. This is a difficult task in the context of the current ethos of intellect and reason that dominates education and management. To correct the imbalance, we need to explore ways of preparing managers of the future to accept the relevance and importance of learning how to develop and embody love. This PDW aims to provide an experience of community love by inviting the participants to listen and speak in a respectful and reverential way to create a caring, receptive container. Participants will engage in the practice of Collaborative Autoethnography, which will integrate the Nguni South African concept of Ubuntu, to explore, research, and demonstrate the experience of love in a community setting. To support this practice we will discuss: contexts from which love is considered such as Christianity and indigenous cultures, why and how love might be implemented in education and management, and how Collaborative Autoethnography can be applied in a process of connecting with others to research and learn from the experience of love and connectedness.

Feedback and Knowledge Sharing

Digital Session Chair: **Xiaode Ji**, *Guanghua School of Management, Peking U.*

OB: **How Information Advantage Influences Employee Voice Behavior**

Author: **Xiaode Ji**, *Guanghua School of Management, Peking U.*
Author: **Jiang XU**, *Ph.D Candidate in Organizational Behavior*

Although information is the premise of voice, the role of information plays in voice literature is less understood. In this study, we introduce the concept of voicer information advantage over peers to explore how information functions in the context of voice. Specifically, by incorporating the perspectives of self-interest behavior and voice as a planned behavior theory, we propose that employees possessing voice-related information advantage over their peers are motivated to voice by expected benefits brought to themselves. Moreover, this effect is particularly likely to exist in a cooperative rather than competitive team. An experiment employing a scenario task was designed to test our hypotheses. Data from 135 participants supported our hypotheses. Implications for theory and practice are discussed.

OB: **The relationship between psychological ownership and knowledge sharing**

Author: **Daeho Kim**, *Sungkyunkwan U.*
Author: **Jiseon Shin**, *Sungkyunkwan U.*

Despite great attention to the effectiveness of psychological ownership in organizations, its relationship with knowledge sharing has been barely understood with theoretical and empirical evidence. There are inconsistent theoretical predictions and empirical results on the relationship between psychological ownership and knowledge sharing. To clarify the relationship, we apply social identity theory to theorize that psychological ownership experiences a significant psychological mechanism. We posit that organization based psychological ownership (OBPO) and job based psychological ownership (JBPO) can influence knowledge sharing differently through identification with coworkers. Additionally, we propose that diversity climate can amplify or suppress the effects of psychological ownership on knowledge sharing. Using a two-wave study design, we examined the distinctive roles of diversity climate in the relationship between psychological ownership and knowledge sharing. With this study, we highlight that the relationship between psychological ownership and knowledge sharing is dependent on employees' social identity surrounding ownership targets and diversity climate.

OB: **The Expert Paradox: How Team Member Expertise Impacts Leaders' Information Integration**

Author: **Stephen Sauer**, *Cornell SC Johnson College of Business*
Author: **Matthew Rodgers**, *Hope College*
Author: **Melissa C. Thomas-Hunt**, *Vanderbilt U.*

Today's organizations have come to view and to use workplace teams as information processors, making the ability to manage knowledge and expertise an essential pre-requisite for effective group decisions. Consequently, an important mandate for leaders of information processing groups is to determine an approach that most benefits the group. This paper addresses this critical area by focusing on the structural and social factors affecting leaders' behavior when guiding group decisions. Specifically, the research considers the effects of power distribution (i.e., location of expertise) on leaders' choice to contribute their own unique knowledge or to integrate others' information. The paper proposes that leaders do not always serve as information integrators, but may instead compete with their team members by focusing on their own position rather than promoting consideration of others' knowledge. In addition, leaders' perceptions of threat may mediate this result. Data from two experimental studies support these hypotheses.

OB: **How Team-Level Performance Feedback Influences Peer-Evaluations: A Social Comparison Perspective**

Author: **Gerhard Speckbacher**, *WU Vienna U. of Economics and Business*
Author: **Martin Wiernsperger**, *WU Vienna U. of Economics and Business*

Teamwork promises important benefits, especially when it comes to complex problem solving. However, the lack of reliable performance measures at the individual team member level makes the management of team performance challenging. While information from peer monitoring during task completion is a valuable source of knowledge on individual contributions, such information tends to be biased. This paper analyzes how positive or negative feedback on overall team outcomes influences team members' perceptions of their own and other team members' relative contribution to overall team performance. Building on social comparison theory, we propose that individuals tend to use same gender peers as social reference points and positive versus negative team-level feedback has an impact on individuals' (unconscious) strategies for enhancing self-esteem. Overall, we hypothesize that positive (negative) team-level performance feedback leads to a shift of relative contribution ratings towards lower (higher) evaluations of peers that share the evaluator's gender. We test our hypotheses in an experiment with 247 student participants and find evidence to support our hypotheses.

TIM: Transport connectivity and innovation diffusion: Evidence from high-speed railways expansion

Author: **Daxin Sun**, *Shanghai Jiao Tong U.*
Author: **Saixing Zeng**, *Shanghai Jiao Tong U.*

How does infrastructure within national innovation systems spur innovation diffusion? Using the expansion of high-speed railways (HSR) in China as a quasi-experimental design, we theorize that connection to the HSR networks will facilitate the engagement in technology licensing, one typical example of innovation diffusion, by decreasing information asymmetry and accessing to a large market with complementary technologies. We further clarify potential mechanisms beyond of focal relationship by introducing three boundary conditions. We use 251 city samples in China between 2005 and 2015 to test our theory. We find evidence that cities' technical licenses have been increased after the connection to the HSR. We also find that such a positive relationship is stronger when a local city has more human capital and greater foreign competition. Our finding contributes to economic geography literature and research on transport infrastructure by shedding new insights on the interplay between HSR and regional knowledge diffusion.

 **TIM: The organization of corporate science and technology: out of sight, out of mind?**

Author: **Marcelina Grabowska**, *KU Leuven*

In spite of the great importance of science in generating valuable innovations the exploitation of scientific discoveries, even within a firm, is a complex process and only a small fraction of a firm's scientific discoveries is further taken-up in technology development. This study provides evidence that even though firms are active producers of valuable scientific discoveries, the exploitation of internal science in a firm's technology development is not straightforward. I investigate the role of the geographical distribution of a firm's science and technology activities. The results show that firms are better able to exploit internal scientific research in technology domains where science and technology activities are geographically co-located.

TIM: Network Structure And Regional Innovation: A Multi-Level Framework 

Author: **Elisa Operti**, *ESSEC Business School*
Author: **Amit Kumar**, *Warwick Business School*

We develop a typology of regional innovation networks based on the extent to which the inventors in a given location span structural holes within the internal collaboration network or connect local inventors with inventors outside their region. We identify four types of network configurations characterized by different levels of internal brokerage and external boundary-spanning (fortresses, multi-level brokers, playing fields and absorbers). Using data on co-inventing networks within and between United States Metropolitan Statistical Areas between 2000 and 2014, we show that configurations balancing internal brokerage (closure) and low (high) external boundary-spanning lead to higher innovation performance than isomorphic configurations. In a nutshell, our findings convey a more nuanced, multi-level understanding of the trade-offs between different brokerage roles in regional innovation dynamics.

Paper is Available to Meeting Registrants Only.

TIM: complementarities in the sourcing, use and exploitation of managerial and technological innovations

Author: **Giuliana Battisti**, *Warwick Business School*
Author: **Paul Stoneman**, *Warwick Business School*

This paper explores patterns of both managerial and technological innovations, how they interact, and their relationship with firm performance. Parallels between managerial innovations and investments in intangibles are highlighted. Using a data set relating to 1497 UK enterprises in 2009 with a special emphasis upon non-manufacturing, it is shown that firms both source and use technological and managerial innovations and different types thereof simultaneously, suggesting widespread complementarities across innovations. Factor analysis is used to generate combined indicators of firms' overall efforts in both sourcing and using different innovations and enables their allocation to clusters. The most active sourcing and using clusters are the smallest, whilst the least active sourcing and using clusters are the largest. Firm characteristics differ across both sourcing and using clusters in expected ways. Further, (i) there is a positive relationship between corporate performance and the intensity of both sourcing and using innovations, and (ii) firms undertaking technological (managerial) innovation experience greater improvement in sales growth if they also undertake managerial (technological) innovation. The findings indicate that reliance upon either technological or managerial indicators of innovation alone could be misleading in terms of both the extent of innovation and the impacts of different types of innovation upon firm performance. policy implications are drawn.

Participant: **Amanuel G. Tekleab**, *Wayne State U.*
Participant: **Hermann Ndofor**, *Indiana U., Indianapolis*
Participant: **Michael Frese**, *Asia School of Business*

We propose the fourth PDW on Successful Publishing for Early Career Scholars of Management in Africa. Scholars from underdeveloped countries have often not had the opportunity to receive the training that leads to publishing in high-quality management journals. Thus, they need mentorship to help them to understand the requirements of high-quality research journals and developmental feedback to help them improve their scholarship. This workshop will provide one-to-one developmental feedback to assist early career African and African diaspora scholars to publish early research that has high impact. We received very positive feedback from the participants who attended the previous three years' workshops.

Enhance Your Toolkit for Teaching Careers  
Enhance Your Toolkit for Teaching Careers

Coordinator: **Peter Heslin**, *UNSW Sydney*
Facilitator: **Michael B. Arthur**, *Suffolk U.*
Facilitator: **Jon P. Briscoe**, *Northern Illinois U.*
Facilitator: **Suzanne Chan-Serafin**, *UNSW Sydney*
Facilitator: **Shoshana Dobrow**, *London School of Economics*
Facilitator: **Stefanie Gustafsson**, *U. of Bath*
Facilitator: **Scott Seibert**, *Rutgers U., School of Management and Labor Relations*

This PDW will enable you to learn from a range of high caliber academics from around the world about how to teach careers, either as a whole subject or as a topic in a course such as Leadership, Human Resource Management, or Organizational Behavior. If you want to be exposed to some well-established career concepts and tools, as well as learn to facilitate some proven experiential career activities, this workshop is for you! The six topics covered will be teaching (a) the “intelligent career” framework, (b) career narratives and development planning, (c) diversity and inclusion, (d) callings, (e) career tensions, and (f) network analysis and building. After a brief overview of the session by the session Coordinator, participants will hear a brief introduction by each facilitator of the topic and process they will lead at their roundtable. Participants will then have the opportunity to spend 20min at each of their preferred three roundtables. The plenary discussion will focus on clarifying any issues raised during the roundtable discussions, unearthing participants’ most valuable insights, as well as hearing other career teaching tips and tools that participants would like to share with the whole group. This workshop will be highly interactive, useful, and fun!

Building on the insights from four previous AOM-caucuses and a 2020-symposium, which explored the strategy-change interface, this caucus examines if and when strategy-implementation should involve consideration of the risk-benefit trade-offs. When transitioning organizations, it may be more useful to think of risk and benefit as converging notions, not as dichotomy. In short, because the risk-benefit dichotomy could be limiting scholarship, management decision-making and serious transition risks abound, such as climate change and pandemics, the purpose of this caucus is to explore the usefulness and relevance of the risk-benefit dichotomy. It also explores whether risk and benefit could be considered to be potentially converging notions, including as antecedents to the identification of new manageable upside and/or downside value-creating risks or constructive cognitions. This work has the potential to inform the work of strategic management, strategy-as-practice, organizational behavior, organizational change, human resource and project scholars. Previous caucuses have already led to special issue and a book initiative involving 18 scholars from around the world. Over 25 scholars attended an online symposium on the subject hosted by the Australian National University in August 2020. We believe this caucus would be of great interest to practitioners. Importantly, critical insights could be gained into how organizations manage transition risks while transitioning their organizations for a better world.

All welcome.

Many organizations have made public pledges in support of diversity, equity, and inclusion (DEI) in light of the disproportionate effects of COVID-19 and ongoing violence affecting communities of color in the United States. Yet, these pledges may not reflect existing internal practices of the organizations. As such, management scholars and practitioners are paying greater attention to strategies that organizations can use to bridge the gap between their espoused commitment to DEI and actual practices. This proposed PDW explores how a strengths-based and positive organizational scholarship (POS) approach—a focus on leveraging dynamics that contribute to human strength, resilience, and flourishing—can help to advance managerial practices in support of DEI in organizations. This PDW builds on the success of our 2020 PDW, an initial foray into the value for organizational research of a positive organizational inclusion scholarship for equity and diversity or POISED approach. Our workshop will include facilitated conversations across three panels among scholars whose research on management operations, tasks, and practices exemplifies a POISED approach. We will encourage widespread participation from attendees, who will engage in reflection and small group discussions following each panel on how a POISED approach could enhance their own research and potential impact on management practices. We will also engage attendees in real time, inviting them to share their insights and learning during the panel sessions through virtual tools. Finally, we will moderate a small plenary with expert scholars, who will discuss current and future work on DEI and POS. We hope that by fostering rich conversations at the nexus of these two streams of research, this PDW will seed new ideas and expand our contributions to management practice and scholarship.

Presenter: **Jun Lin**, *New York U.*

In this symposium, we highlight the double-edged nature of successes of those from underrepresented backgrounds. We suggest that it is crucial to examine the macro-level ramifications of more micro-level strategies. Without this understanding, it is possible that the promotion of strategies for individual successes can have broader negative consequences for race and gender inequality. In our first two presentations, we highlight how this relates to gender inequality, and in the second two, shift to examine how it relates to race, demonstrating the generalizability of this phenomenon to various forms of inequality. We thus emphasize that the path to a more equitable society will take more than attention to individual-level phenomena; managers and scholars alike must also be attuned to institutional-level consequences.

Managing Pandemic-Induced Research Disruptions: A How-To Guide

Managing Pandemic Research Disruptions

Organizer: **Timothy Hoff**, *Northeastern U.*
Panelist: **Timothy Hoff**, *Northeastern U.*
Panelist: **Amber Stephenson**, *The David D. Reh School of Business, Clarkson U.*
Panelist: **Gary J Young**, *Northeastern U.*
Panelist: **Larry R. Hearld**, *U. of Alabama, Birmingham*

The Covid-19 Pandemic has produced important research-related disruptions for management scholars. Those of us who study health care face several unique problems in relation to finding appropriate funding for our research, gaining access to both primary and secondary data sources that we need to conduct our research, and publishing our research in a timely manner. This PDW presents best practices and strategies for dealing with all these things.

Contextual Issues in International Management

Digital Session Chair: **Pankaj Kumar**, *Virginia Tech*

This session addresses topics associated with contextual issues in international management. It includes two papers addressing time issues: one examining three temporal lenses on international business research and one examining time as a potential liability for international permanence. The session also includes papers on the use of tax havens by MNEs in business clusters and unpacking institutional embeddedness in emerging markets.

IM: Time: Three Temporal Lenses on International Business Research

Author: **Michael J. Mol**, *Copenhagen Business School*
Author: **Madeleine Stefanie Rauch**, *Copenhagen Business School*

In this paper, we address the importance of giving a more explicit focus to time in studying international business (IB) phenomena. We develop three distinct time lenses: Time-as-measure, time-as-evolution and time-as-emergence, which differ not only ontologically, but also in terms of the features of IB and multinationals that they shed light on. We apply these lenses to two substantive IB phenomena, subsidiary initiative taking and global value chains. We finally discuss how the three lenses best can advance the incorporation of time into future IB research, and provide implications for IB theories, methods, and research questions.

Paper is Available to Meeting Registrants Only.

IM: Is Time a Liability for International Permanence? An analysis of Uncertain Times

Author: **Dinorá Eliete Floriani**, *U. do Vale do Itajaí (UNIVALI)*
Author: **Beatrice Mayer**, *U. do Vale do Itajaí (UNIVALI)*
Author: **Gabrielle Damo Rossato**, *U. do Vale do Itajaí (UNIVALI)*
Author: **Giovanna Magnani**, *U. of Pavia*

Considering the worldwide COVID-19 pandemic it is timely to emphasize time pressure debates in times of high uncertainty. Through an empirical research developed based on four Brazilian high-tech firms we collected the data in real time simultaneously with the evolution of pandemic. Our paper leads to the start of debates about the role of time pressure in the internationalization of firms in uncertainty times. Presents also the relationship between liability of timing and the need to seek a manageable internationalization processes over time through international permanence.

Paper is Available to Meeting Registrants Only.

IM: The use of tax havens by MNEs in business clusters: A cross-country and firm-level analysis

Author: **HA PHUONG LUONG**, *Aston U.*
Author: **Chris Michael Jones**, *Aston U.*
Author: **Yama Temouri**, *Khalifa U., Abu Dhabi, UAE*

This paper examines the use of tax havens by MNEs located in business clusters versus their non-cluster counterparts. We extend knowledge-based theory to construct a number of empirical hypotheses that are tested using dichotomous choice models. The firm-level dataset covers 21,389 MNEs from 5 OECD countries during the years 2009-2017. We find evidence that MNEs who are part of a business cluster have 14.9 percent to 23.7 percent higher likelihood of engaging in tax haven activity compared to MNEs who are not part of a business cluster. This association continues to hold whilst controlling for other important factors that drive tax haven FDI. Additional insights suggest that technological sophistication and firm size can impact the magnitude of the correlation between MNEs in business clusters and their tax haven activity. The findings of this paper shed more light on the use of tax havens among MNEs, and hold theoretical and managerial relevance.

Paper is Available to Meeting Registrants Only.

IM: Unpacking institutional embeddedness in emerging markets

Author: **Christiaan Roell**, *U. of Roehampton Business School*
Author: **Felix Arndt**, *U. of Guelph*

This article examines institutional embeddedness strategies of multinational enterprises (MNE) operating in an emerging market, drawing attention to how foreign subsidiaries proactively negotiate their involvement with nonmarket actors. Using an inductive, interpretive study of four long-established Dutch MNE subsidiaries in Indonesia, we identify three dimensions of institutional embeddedness that MNE's subsidiaries actively manage. Political, cultural, and cognitive embeddedness were three pillars that guided the successful operation in these countries. Each of these pillars is supported by mechanisms that guide the successful longevity of the subsidiaries. We offer novel insights into how embeddedness strategies are executed at multiple organisational levels, including headquarters, subsidiary, and the individual.

**Is Government Interventionism More Beneficial to Multinationals
than the Free-market System?**
Markets versus Governments

Organizer: **Cheng Li**, *Ivey Business School*
Panelist: **Alvaro Cuervo-Cazurra**, *Northeastern U.*
Panelist: **Jing Li**, *Simon Fraser U.*
Panelist: **Nan Zhou**, *Tongji U.*
Panelist: **Anna Grosman**, *Loughborough U.*
Panelist: **Aldo Musacchio**, *Brandeis U.*
Panelist: **Saul Estrin**, *LSE*

For most of the 20th century, the free market system prevailed, unleashing entrepreneurial spirits globally and creating prosperity. However, the rise of emerging economies and their governments' role in the global system has revived the old debate over the merits of government interventions versus free markets, which led to a new wave of academic discussions of governments' role in the global system. The number of journal articles regarding the relationship between state ownership and globalization has more than doubled since 2014. But views on this issue are divided. On the one hand, supporters of government intervention claim that businesses can benefit from institutional support, enabling them to compete as national champions on a global scale, especially in countries with the institutional void. On the other hand, supporters of the free market, however, hold a different view. They argue that the free market is the optimal system for business success since it promotes competition and guides business decisions. So, in this panel, we ask: Is the pendulum swinging for government intervention? Or does the free market remain the engine driving economic prosperity and business success?

Moderator: **Margaret D. Gorman**, *Denison Consulting*

The consulting industry continues to evolve in the age of digital transformation, and the expanding role of the management consultant remains critical as managers seek to navigate uncertainty. When and how professionals choose to engage in a consulting practice is a career consideration for many career pivoters, doctoral students, and academics seeking to be more connected to the practice of management. This symposium reports on the amazing career stories of ten experienced consultants who each have cultivated sustainable consulting practices. Often the choice to launch a consulting practice occurs after many have established themselves as scholars in a particular management knowledge area and become interested in putting their scholarly knowledge to work. Universities are not in the business of developing their professors and students as consultants. Thus, there is a need to address this desire among many members of the Academy of Management. The purpose of this symposium is to provide participants with a venue for sharing and exploring how to develop a management consulting practice. Members of the Academy of Management (both scholars and practitioners) who have thriving consulting practices and/or firms will share their stories and interact with participants interested in either developing or enhancing their consulting practices. The session brings together established practitioners, scholars, and students, creating a forum through which ideas can be shared about how to make the shift from scholar to consultant.

Distinguished Speaker: **Jessica Beth Rodell**, *U. of Georgia*

A major challenge facing junior faculty is learning how to be productive (i.e., gaining traction on their research while also being excellent instructors and well-reputed academic citizens—all while maintain their wellbeing). This implies that productivity is a process that can be improved through learning. Similar to the sessions of this Professional Development Workshop (PDW) from prior years, our main goal is to help develop an awareness of the processes used by prolific junior faculty. Although most PDWs use esteemed senior scholars as panelists, we propose a model that uses peer junior faculty members who have established track records of productivity as scholars (i.e., excellent in research, service, and teaching). A unique feature of this PDW is the focus on productivity as a process of continuous development—rooted in this assumption is that, as scholars, we can build thought-patterns, practices, and habits that foster both our work and wellbeing. Our goal is to dissuade you from comparing your productivity to others' but rather, focus on the merits of continuous self-development. Our presenters will discuss the best practices and evolution of their work habits, including how they have considered, revised, and gone about their work (e.g., time allocation, co-authorships, writing blocks, and strategies) and how they protect and invest in their wellbeing to maintain their productivity (e.g., exercise, work/family balance). This session uses a number of formats including individual presentations, small group roundtables where participants are able to have conversations with each of the panelists, and a keynote address. This PDW is one of the flagship events put together by Making Connections Committee members at the request of the OB Division Executive Committee.

Bringing the Just Manager back in Management

Digital Session Chair: **Marjo-Riitta Diehl**, *Aalto U. School of Business*

OB: **The Role of Procedural Justice in Managers' Experiences in Layoffs**

Author: **Marjo-Riitta Diehl**, *Aalto U. School of Business*
Author: **David Leonard Patient**, *Vlerick Business School*
Author: **Abiola Sarnecki**, *EBS Business School*

Drawing on the organizational justice literature and the construct of necessary evil, this paper examines the experience of layoffs from an under-researched perspective - managers. The managers often play conflicting roles in an organizational necessary evil; they are both witnesses to and survivors of the harm caused to employees by layoffs. Applying insights from cognitive appraisal theory, we propose a serial mediation model whereby the effect of procedural justice in a layoff context on managerial exit intentions is serially mediated by managerial feelings of control and well-being. We test and confirm our hypotheses using survey data from 144 managers in a large European telecommunications company that had conducted layoffs. In line with cognitive appraisal theory, our work extends current research on the importance of organizational justice as a resource for managers in the context of necessary evils. We also extend understanding of necessary evils and how their burden can be made less severe to managers – both for those tasked with them and observing them - and confirm the positive effects of procedural justice for managers' health and exit intentions.

Paper is Available to Meeting Registrants Only.

OB: **"Who" Matters, but How? Agent Bias in Justice Reasoning**

Author: **Irina Cojuharenco**, *Surrey Business School*
Author: **Tatiana Marques**, *Instituto U. de Lisboa (ISCTE-IUL), Business Research Unit (BRU-IUL)*
Author: **Joao Barreiros**, *Instituto U. de Lisboa (ISCTE-IUL) Business Research Unit (BRU-IUL)*

We empirically investigate when and how the justice agent can impact employee perceptions of event justice. By regarding the "agent bias" as "the direct effect of agent characteristics on overall justice judgments regarding an event, over and above other possible effects on evaluations of distributive, procedural, informational, or interpersonal justice" (Cojuharenco, Marques, & Patient, 2017: 631), we formulate hypotheses regarding the role of agent characteristics for ambiguous justice events, as well as events that are unambiguously fair versus unfair. The empirical test of the hypotheses by means of experimental vignettes with actual supervisors from past work experiences of respondents has provided no evidence in support of the "agent bias". Justice judgments concerning events, as well as downstream attitudes and behavioural intentions, resulted from the nature of the agent's actions and outcomes irrespective of who acted. This work contributes to the literature on organizational justice by testing a specific bias, relating to agent characteristics, and by further informing frameworks that highlight the role of context in justice reasoning. For practitioners, it suggests that no matter who is appointed to a position of authority, upholding established (non-agent) criteria of organizational justice (distributive, procedural, informational, and interpersonal) can be all that matters for the perceived fairness of organizational events.

Paper is NOT Available. Please contact the author(s).

OB: **Corporate Samaritans: The Role of Situation Strength & Moral Maturation in Deontic Justice Enactment**

Author: **Julia Zwank**, *EBS U. of Business and Law*
Author: **Mario Gollwitzer**, *Department of Psychology, Ludwig Maximilians U. Munich*

The burgeoning yet fragmented literature on organizational justice enactment has so far paid limited attention to the deontic justice motive, even though research assumes the existence of innate morality in humans and moral virtues provide a critical account of why people care about fairness. Nevertheless, behavior is influenced by strong organizational norms and managers – albeit motivated – not always able to act upon their motive. While a plethora of research investigates those who lack or are able to appease their moral concerns, often called Corporate Psychopaths, only few studies have examined individuals who are able to break through the blinders imposed on them and enact justice for deontic reasons – even in the face of adversity. To shed light on the etiology of those who we name Corporate Samaritans, we draw on two important yet to date overlooked concepts in the justice enactment literature: situation strength and moral maturation – and their interaction. We argue that moral maturation predicts deontic justice enactment even in strong situations. We also further extend the term deontic justice enactment as mere compliance, "requirement-based moral rule-following" by two distinct behavioral categories that go beyond the call of duty: humanistic and supererogatory behaviors.

Paper is NOT Available. Please contact the author(s).

OB: **"When Good Intentions Meet Tough Decisions..." – How Managers Grapple with Justice Conundrums**

Author: **Julia Zwank**, *EBS U. of Business and Law*
Author: **Marjo-Riitta Diehl**, *Aalto U. School of Business*
Author: **Marion Fortin**, *U. of Toulouse I, Capitole*

Managers tasked with change must typically make and implement tough decisions whereby each choice implies undeserved negative outcomes for at least one of those affected and is likely to be perceived as unfair – a conundrum for justice enactment. Drawing on longitudinal interviews, we noted that although managers uniformly stressed the importance of justice in change management, their patterns of grappling with justice conundrums differed. A first group of managers struggled with the moral implications and their inability to act upon their intentions and left the organization. A second group of managers wrestled with their attempts to execute changes perceived as unfair and sought to meet various stakeholder expectations, leading them to change their roles. A third group focused on the business strategy and appeased their moral concerns by conceptualizing fairness from the company perspective and by morally disengaging. These managers remained in their roles. Our findings culminate in an integrative model that extends the current literature by illustrating 1) the dynamics of how managers grapple with the conundrums involved in justice enactment; 2) the role played by cognitive mechanisms in such dynamics; and 3) the intertwined influence of moral emotions and the circle of moral regard on justice enactment

Facilitator: **Trish Ruebottom**, *Degroote School of Business, McMaster U.*

This is Professional Development Workshop (PDW) is a continuation of the successful PDWs on organizational stigma organized and facilitated by the growing stigma research community for five consecutive years (2016-2020) at the Academy of Management annual meeting. Over the last few years, there has been an upswing in research on stigma, stigmatization, and stigmatized contexts. Building on previous PDWs, we aim to encourage theoretically and methodologically consistent and rigorous research on stigma as well as identify opportunities for future research. At the same time, we hope to contribute to enhancing our understanding of stigma's role in influencing identities, organizations, professions, categories, industries, and fields. Overall, this PDW will consist of three components: (1) an overview of the topic and recent work; (2) a panel discussion on the practical and theoretical considerations of demonstrating stigma in research, involving four prominent stigma scholars – Christian Hampel, Wesley Helms, Kisha Lashley, Alessandro Piazza, and Madeline Toubiana – as panelists and distinguished discussant – Yuri Mishina – whose work presented the predominant definition of stigma in organizational studies; and (3) thematic roundtables (virtual breakout sessions) involving by well-known stigma scholars that will facilitate discussions on participants' projects and on challenges that researchers are experiencing in positioning, conceptualizing, and publishing their work. Roundtables will have a maximum of 3 participants per table to encourage focused and productive discussions and feedback sessions. Participants will need to pre-register and submit a 1-2-page document with an abstract of a project and an outline of challenge statement to aomstigma@gmail.com

The panel portion is open to all attendees, but roundtables will have a maximum of 3 participants per table. Roundtable participants will need to pre-register and submit a 1-2-page document with an abstract of a project and an outline of a challenge statement to aomstigma@gmail.com by July 1st, 2021.

Participant: **Hila Lifshitz-Assaf**, *New York U.*

Research interests in categories and categorization has grown significantly in recent years, but only in recent years have researchers begun to pay closer attention to social context and social process, and particularly to the social practices through which categories, in particular categories of innovative products, or new phenomena are enacted and made concrete. The current symposium takes on this challenge by addressing several questions at the frontier of categories research: (1) how do categories interact with core organizational processes and how does the meaning of categories interact with other organization constructs such as routines, identity, and structure through organizational practices, (2) how are categories anchored in market, professional practices or embodied in cultural and material practices, (3) how are categories instantiated in communicative practices and discourse, (4) how are organizational actors and their actions constraint by categories and how may these actors escape or decouple from the reach of categories and categorization.

Getting Emotional: So What? Using Emotions to Explain Institutional Processes

Getting Emotional

Organizer: **Maxim Voronov**, *Schulich School of Business*
Organizer: **Tammar B. Zilber**, *Hebrew U. of Jerusalem*
Facilitator: **Michael John Gill**, *U. of Oxford*
Facilitator: **Janina Klein**, *Vrije U. Amsterdam, School of Business and Economics*
Facilitator: **Thomas J. Roulet**, *U. of Cambridge*
Facilitator: **Madeline Toubiana**, *U. of Alberta*

This PDW is a continuation of PDWs we organized at AoM 2017 in Atlanta, 2018 in Chicago and 2019 in Boston that attracted much interest and large audiences from across the academy. It aims to encourage empirical research at the intersection of emotions and institutions by creating an opportunity to discuss the possibilities and trouble-shoot the challenges of conducting such research. Studying emotions from an institutional perspective requires a more socially embedded conceptualization and a more contextualized approach than survey scales of affect can reveal. Researchers working in this domain face empirical challenges in collecting, analyzing, conceptualizing and displaying emotions as data. While emotions have been studied extensively by researchers from psychology, sociology, anthropology, philosophy and neurobiology, the appropriate lenses and methods by which to tackle emotions and their role in institutional dynamics is less understood. By bringing together renowned scholars, versed in distinct approaches and qualitative methodologies, we seek to develop expertise across the community of interested scholars to enable the continued growth of this important research stream within organizational theory. Senior and junior scholars who have successfully studied and published emotions and institutions will walk attendees through their specific approaches for theorizing from their data on emotions. By creating a forum to share best practices and common pitfalls, the proposed PDW will help build and enhance the skills of researchers interested in conducting empirical research on emotions and institutions.

Using Sport Data to Advance Management Theory

Sport Data

Organizer: **Paolo Aversa**, *City U. London*
Organizer: **Dmitry Sharapov**, *Imperial College Business School*
Presenter: **Lindred L. Greer**, *U. of Michigan, Ross School of Business*
Presenter: **Fernando Suarez**, *Northeastern U.*
Presenter: **Emily Grijalva**, *U. at Buffalo*
Presenter: **Tim D. Maynes**, *U. at Buffalo, The State U. of New York*
Presenter: **Hemant Kakkar**, *Fuqua School of Business, Duke U.*

Publishing rigorous and relevant research in top management journals often requires rich and suitable data that allow challenging and compelling research questions to be investigated. The surge of accessible sport data in recent years has increased the number of studies that make use of such data to advance management theory. Beyond the fact that professional sport comprises multi-billion dollar industries worthy of attention per se, sport also provides settings in which fundamental themes of competition and cooperation are at play, making it attractive for scholars seeking to advance management theories. However, sport settings combine research opportunities with non-trivial challenges and dichotomies that require further reflection: First, sports greatly differ in their nature, and it is not always easy to choose the most suitable sport contexts to respond to particular research questions. Second, in sport settings, generalizability of results is less evident than in traditional industries, and readers and reviewers often display skepticism about external validity and generalizability of findings to business contexts. Building on successful editions of this workshop at AOM in the previous five years, this two-part PDW will (1) bring together a panel of scholars to share experience in publishing management research with sport data and (2) provide developmental support in the second part of the workshop for scholars that are in the process of using sport data in their projects or who plan to use sport as a setting to study their research questions.

OSCM Joint Doctoral Student & Junior Faculty Consortium (part 1)
OSCM Doct. Student & Junior Faculty Consortium (1)

Coordinator: **Desiree Van Dun**, *U. of Twente*
Coordinator: **John Aloysius**, *U. of Arkansas Sam M. Walton College of Business*

The Operations and Supply Chain Management Division is pleased to announce a joint Junior Faculty and Doctoral Consortium at the virtual annual meeting of the Academy of Management (AoM). This event will consist of two parts: the first one held on Friday morning, July 30, 2021 and the second part on Saturday morning, July 31, 2021. The primary focus of the joint consortium involves an intensive research incubator session for doctoral students and junior faculty. Doctoral students are asked to give a short (15 minute) presentation about their research proposal to a panel of senior and junior faculty who then provide feedback and guidance on each proposal. Subsequently, the junior faculty will have an opportunity to present their research programs describing how they are extending their dissertation research and/or starting new research streams. The doctoral students are able to ask questions and learn about building a research identity. In addition to the research incubator session and online social networking, several panel sessions will further elaborate on publishing, the job market, dealing with ethical dilemmas, and the development of research streams. Experts in the field are invited to provide their input and engage participants in Q&A sessions.

The consortium is a pre-registration event. If you are interested in attending the Junior Faculty and Doctoral Consortium, please send your application by e-mail to the relevant coordinator by May 17th, 2021. For junior faculty: Desiree van Dun (d.h.vandun@utwente.nl); For doctoral students: John Aloysius (aloysius@uark.edu). Applications will be acknowledged via email by the end of May. Applications should include: (i) a cover letter including full contact information, your advisor's contact information (doctoral students only), and a one-sentence statement on your stage in the doctoral program (doctoral students only), (ii) a current vita, and (iii) a one-page summary of your dissertation research (doctoral students only) / research prospectus highlighting one main research proposal (junior faculty only). More information can be found on our OSCM division website: <https://oscm.aom.org/events/consortium>. We look forward to hearing from you!

Contesting Social Responsibilities: The Manager versus ‘the Rest of the World’?

Contesting Social Responsibilities

Organizer: **Laura J. Spence**, *Royal Holloway, U. of London*
Organizer: **Itziar Castelló**, *Surrey Business School*
Organizer: **Arno Eerikki Kourula**, *U. of Amsterdam*
Speaker: **Mark Anner**, *Pennsylvania State U.*
Speaker: **Jana Costas**, *European Uni Viadrina, Frankfurt (Oder)*
Speaker: **Cedric Dawkins**, *Loyola U. Chicago*
Speaker: **Premilla D'Cruz**, *Indian Institute of Management, Ahmedabad*
Speaker: **Nolywé Delannon**, *U. Laval*
Speaker: **Chikako Oka**, *London School of Economics*
Speaker: **Robert A. Phillips**, *Schulich School of Business*

In this research PDW we consider the manager in the context of organising social responsibilities. By counterpointing diverse debates on identity and control, deliberation and dissensus, and representation and collective action, we draw in the perspectives of the marginalized and often excluded voices from within and outside the firm. Through a structured conversation invited speakers on our cross-cutting themes - who are purposefully chosen to ensure a very diverse range of geographies and voices - will position organizing social responsibilities in relation to the role of the manager. An established management and CSR scholar will offer a counterpoint to these discussions. The last word will go to the audience who will be actively brought into the conversation in order to fully review the manager in relation to the many others involved in organising social responsibilities.

This event is open to everyone. Contact the organizers for more information.

Panelist: **Ioannis Ioannou**, *London Business School*
Panelist: **Akbar Zaheer**, *U. of Minnesota*

This Professional Development Workshop (PDW) will engage a conversation between more junior and established scholars who study organizational governance in both the private and the public interest (Luo & Kaul, 2018; Mahoney, McGahan, & Pitelis, 2009; Olson, 2002). We aim to construct a dialogue around a collective research agenda examining the role the private sector can play (and its limitations) in solving problems related to the tragedy of the commons (Hardin, 1968; Marciano, Frischmann, & Ramello, 2019; Ostrom, 2000). In particular, this class of problems is usually related to social and environmental dimensions, in which the internalization of externalities is complex (Coase, 1960), and the governance of common-pool resources is intricate (Ostrom, 1990, 2000). Therefore, it is critical that we gain a better understanding of the range of strategic options available to firm managers, how they make these choices and their implications for both social and private value creation. The workshop thus aims to coalesce a diverse group of scholars studying related phenomena, around a common agenda of addressing some of the most pressing problems for firms and society around the world. This agenda corresponds closely to the all-Academy theme of bringing the manager back in as we consider their role in managing uncertainty and contributing to solving Grand Challenges around the world.

Do you have a burning question about teaching strategy but no answer yet? This hands-on, walk-in Teaching Clinic PDW will feature fifteen expert mentors who are ready to answer your individual questions pertaining to some of the most pressing teaching-related issues you may be facing. Topics include: (1) Online teaching, (2) MBA teaching, syllabus development, grading, and other teaching issues, (3) using interactive exercises, social media, and videos, (4) discussion leadership and teaching with cases, including live cases, (5) transitioning to executive education, (6) and teaching with simulations. Pre-registration is highly encouraged so that we may have enough mentors ready for you.

Doing Critical Management Education and Research
Doing Critical Management Education and Research

Digital Session Chair: **David Knights**, *Oxford Brookes U.*

CMS: **A Pedagogy for Critical Management Studies**  

Author: **David Knights**, *Oxford Brookes U.*

Author: **Guy Huber**, *Oxford Brookes U.*

Author: **Richard Longman**, *U. of the West of England*

In this essay, we explore the underlying processes of identity work in teaching from a critical management studies (CMS) and critical management education (CME) perspective. Identity is a concern for both teachers and students and especially where it is routinely challenged as in a CME and CMS learning environment. In bucking the trend of offering a staple diet of managerial solutions to organizational problems, our pedagogy is inherently troubling. We reveal this through auto-ethnographic accounts of our experience of teaching critically and seeking to engage ourselves and our students in self reflexively problematising identity and the world which it reflects and reproduces. A distinctive part of our contribution is to consider the way that identity is so often taken for granted as a laudatory accomplishment and, as a consequence, CMS and CME often fail to recognise how our attachment to it can be an obstacle for management learning. To conclude, we speculate on the implications of our pedagogy for inculcating more critical forms of identity work, through which we might free ourselves to think differently.

CMS: **Moments of Discomfort: Poststructuralist Reflexivity and Researcher Subjectivity**

Author: **Melissa Louise Carr**, *Bournemouth U.*

William H. Newman Award Nominee

This article presents poststructural reflexivity as a way to both deconstruct the performativity of one's own research practice and consider how researcher subjectivity is constituted within the research process. I present two vignettes as moments of discomfort conducting research 'in the field' which we argue create a sense of unease when shifting subjectivities and regimes of power become more visible. I draw upon Foucauldian Discourse Analysis as a tool of poststructural reflexivity to illustrate discursive regimes through which we become gendered subjects. The article illustrates the usefulness of poststructural reflexivity as a way to consider the performative effect of research and regimes of power which impact our ways of seeing and being in the world.

CMS: **Entrepreneurship curricula through teachers' practice in Madagascar**     

Author: **Joseph Tixier**, *EMLYON Business School*

Best Critical Management Learning and Education Paper is sponsored by the journal Management Learning

In this paper, I propose to peek inside a classroom by studying how teachers in a third world country practice entrepreneurship education, when they are given a curriculum designed by an international organization based in Europe. As part of a one year long ethnographic study, I specifically examine how this curriculum is used by teachers in three vocational higher secondary schools in Madagascar. My findings suggest that teachers will anchor their decisions to adapt the curriculum according to three constraints: their own experience and, learners' characteristics such as their level and the social contexts they are embedded into, and the schools situation, organization and logistical constraints. I use the didactic transposition as a theoretical lens to understand how teachers strategically select and adapt the teaching material they are provided with. I expand it to include elements on which teachers can perform this transposition independently, grouped into content, method, and timing.

Paper is Available to Meeting Registrants Only.

Gandhi's Experiments with Truth – as guidance for managers
Gandhi's Experiments with Truth

Chair: **Anil K. Maheshwari**, *Maharishi U. of Management*
Chair: **R Ray Gehani**, *U. of Akron*
Panelist: **Tanuja Sharma**, *MSR*
Panelist: **Sharda Nandram**, *Nyenrode Business U.*
Panelist: **Nisha Pandey**, *Vivekanand Education Society's Institute of Management, Mumbai, India*
Panelist: **Vikram Gulati**, *Maharishi International U.*

Mahatma Gandhi highlighted and underscored the many experiments he conducted and integrated over multiple decades in his Autobiography. Through dialog and exercises, this workshop expects to create a rich, coherent, and practical perspective on the Gandhian process of values-based experimentation for guiding managers in a rapidly changing world. Gandhi grew and developed his leadership as an experimenter of key beliefs and principles he valued in different stages of his life. These experiments included his well-known experiments with truth, non-violent non-cooperation, vegetarianism, celibacy, empowerment of untouchables and women, and more. His experiments in the political field related to successful peaceful protests became well-known throughout the civilized world, and as a result acclaimed Gandhi as the Mahatma. He was more interested in sharing his experiments in the spiritual (and moral) field that were known only to him, and from which he derived the power to work in the political field. Gandhi's moral values such as non-violence and truth, inspired other leaders such as Dr. Martin Luther King and Nelson Mandela to great success. Can Gandhi's process of values-based experimentation inspire the managers of tomorrow? What was the essence of his process of experimentation and how can it guide business managers today? This workshop brings together a panel of management researchers with rich perspectives on Gandhian experiments.

Everyone is welcome

Organizer: **Victor Chen**, *U. of North Texas*
Organizer: **Julie Irene Hancock**, *U. of North Texas*
Organizer: **Danielle Cooper**, *U. of North Texas*

Workplace incivility permeates across individuals and spills over into domains of home and marriage. Simply witnessing rude behaviors at work perpetuates its spread through emulation. Breaking the retaliatory nature of incivility, embedded in a spiral of negative emotions, remains as uncharted terrain that needs to be further explored. By discussing how targets and victims make sense of and respond to incivility differently, we hope to broaden options for those who feel trapped in incivility spirals. All too often victims and targets remain silent. Based on the social interactionist perspective (the web of social relationships and organizational structures affected by uncivil encounters), a panel of content experts will discuss HR Practices, self-directed approaches, lessons learned from workplace bullying, and behavioral incivility itself as a righteous response.

**Bringing the Strategist Back to Practice: Communication
Perspectives on Actorhood in Strategizing**
Communication Perspectives on Strategic Actorhood

Organizer: **Birte Asmuß**, Aarhus U.
Organizer: **Milena Leybold**, U. of Innsbruck
Organizer: **Elen Nathues**, U. of Twente
Organizer: **Virpi Sorsa**, Hanken School of Economics
Panelist: **Nicolas Bencherki**, U. du Québec, TÉLUQ
Panelist: **Viviane Sergi**, UQAM U. of Quebec in Montreal, Canada
Panelist: **Violetta Splitter**, U. of Zurich
Panelist: **Matthias Wenzel**, Leuphana U. Lüneburg
Facilitator: **Matthew Koschmann**, U. of Colorado, Boulder
Facilitator: **Julia Hautz**, U. of Innsbruck
Facilitator: **Madalina Stoicovici Pop**, Aarhus BSS, Aarhus U.
Facilitator: **Dennis Schoeneborn**, Copenhagen Business School

This Professional Development Workshop (PDW) aims to illuminate how communication perspectives can help better understanding actorhood in strategizing. In line with the AoM 2021 theme of Bringing the Manager Back in Management, we seek to channel attention to strategic actorhood, the strategist's role and body, and non-human instantiations of strategic agency: What makes up a strategist? When does actorhood become strategic? Can an individual embody a strategy and if so, how? To broaden, challenge, and unite existing discourses, the PDW brings together two communities in the field of organization and management studies; Strategizing Activities and Practice (SAP) and Communicative Constitution of Organizations (CCO). Scholars who successfully advanced SAP or/and CCO research will provide PDW participants with new insights, inspiration, and advice to further develop their work-in-progress on the nexus of strategizing, actorhood, and communication. Further, we seek to continue the vivid exchange between the two communities SAP and CCO, also preventing possible blind spots in each. Our PDW is two-part: First, four scholars who have recently published SAP or/and CCO research in top-tier journals, Violetta Splitter and Matthias Wenzel (SAP) and Nicolas Bencherki and Viviane Sergi (CCO), will present and discuss their theoretically and empirically driven perspectives on strategizing, actorhood, and the role of communication. The presentations will be followed by a Q&A session. Second, up to four PDW attendees will each meet with one of eight roundtable facilitators to discuss their work-in-progress research. The PDW requires a pre-registration to productively use the time of this second part.

The PDW is two-part. Part 1 (60 min) includes panel presentations, a discussion among panelists, and a brief Q&A session. Part 2 (45 min) consists of roundtable sessions for individual advice and more interactive discussions. The PDW closes with a 15-minute wrap-up. Registration requirements differ with regards to participants' preferences to attend Part 1 and 2 or Part 1 only. Joining Part 1 of the PDW (the panel) is open for everyone attending AOM 2021 and with an interest in the outlined topic. Thus, there is no limit of attendees during Part 1 and no registration required. Scholars interested in attending Part 2 (roundtable discussions) were asked to pre-register. The registration period for Part 2 already ended in June 2021. Participants only taking part in Part 1 are asked to leave the session after the first hour.

The Anchor Institution Task Force defines “anchor institutions” as, “enduring organizations that are rooted in their localities” (MARGA, 2021) often by mission, invested capital, and relationships to employees, customers, and vendors. Anchor institutions, including colleges, universities, hospitals, community foundations, libraries, and arts institutions, are invested in their local communities’ success and economic development. Traditionally, anchor institutions are nonprofit organizations, but little research to date has examined whether or how for-profit businesses support the health and economic development of their communities. This panel symposium will feature three grantees of the Robert Wood Johnson Foundation, the nation’s largest philanthropy focused solely on health, who are seeking to better understand whether for-profit business serve as “anchors” in their communities.

When is the Right Time to Grow My Family? The Hidden Challenges of Family Planning in Academia
When is the Right Time to Grow My Family?

Organizer: **Serena Sohrab**, *Ontario Tech U.*
Organizer: **Golshan Javadian**, *Morgan State U.*
Organizer: **Shora Moteabbed**, *George Mason U.*
Panelist: **Nada Basir**, *U. of Waterloo*
Panelist: **Rachel McCullagh Balven**, *Arizona State U.*
Panelist: **Catherine Shea**, *Carnegie Mellon U. - Tepper School of Business*

In this workshop, we will explore the timing of family planning in academia with a focus on less-discussed challenges such as infertility, miscarriage, and other pregnancy complications. We will explore family planning at different stages of the academic career to better understand the costs and rewards associated with each stage. The panelists are chosen to represent various family planning trajectories. These scholars will share their family planning journey with the audience and provide guidance on strategies to effectively navigate family planning in academia.

IM Division GWU-CIBER Best Paper on Emerging Markets Award

Digital Session Chair: **Anupama Phene**, *George Washington U.*

The session features the finalist papers for the GWU-CIBER Best Paper on Emerging Markets Award, which is presented to the best scholarly paper of the IM Division focusing on Emerging Markets at the Academy of Management annual meeting. This award is sponsored by the George Washington University Center for International Business Education and Research (GW-CIBER). All papers with a research focus on Emerging Markets accepted by the IM Division for presentation at the Academy of Management annual meeting are eligible for the award.

IM: The Asymmetric Interactions among DMNEs, EMNEs and Local Firms in the Global Mobile Money Industry

Author: **Nan Zhou**, *Tongji U.*

Incorporating the concept of status into the study of legitimacy spillover and competition, this study examines the asymmetric interactions among developed country multinationals (DMNEs), emerging market multinationals (EMNEs), and local firms in the global mobile money sector. These interactions have led different types of firms to demonstrate different patterns, with regard to how established firms impact new entries. Our empirical investigation of market entry strategies, from 2001 to 2015, among DMNEs, EMNEs, and local firms in the global mobile money industry shows that: (1) there is legitimacy spillover from DMNEs to EMNEs, but not vice versa; (2) there is legitimacy spillover and competition between EMNEs and local firms; and (3) DMNEs and local firms represent competition to EMNEs, but not vice versa.

IM: Forged by Fire: Home Country IPR Reforms And Emerging Economy Firm Innovativeness Abroad

Author: **Pankaj Kumar**, *Virginia Tech*

Author: **Xiaojin Liu**, *Virginia Commonwealth U.*

Author: **Akbar Zaheer**, *U. of Minnesota*

We investigate whether and under what conditions IPR reforms matter for domestic firms' outcomes. Given that prior research has mostly adopted an inward focus on firm behavior in reforming countries, typically studying the activities of foreign firms, we explore how IPR reforms modify the outward behavior of domestic firms from these countries. Theorizing that institutional reform can have generative effects on firm capability rather than only exert protection effects, we start by proposing that major IPR reforms boost home country firms' innovative capabilities, as manifested in their patenting abroad, specifically the U.S. Taking a contingent approach, we postulate that if the IPR reforms are a significant source of capability enhancement, their effect should be attenuated to the degree that firms have access to alternate sources of capability enhancement. We propose that initial R&D capability and prior IPR reform experience in other countries weaken the relationship between IPR reforms and innovation abroad. Using a longitudinal dataset of 1,382,649 firm years from 64 reforming countries over the period 1977-2013 and employing multi-level estimators, we find support for our hypotheses. Our research highlights a less-studied outcome of reforms and suggests that firms from emerging market countries may become more internationally competitive post-reform.

IM: Sustainable agricultural global value chains: Sustainability strategies of Latin American SMEs

Author: **Tommaso Ferretti**, *McGill U. - Desautels Faculty of Management*

Author: **Paola Perez-Aleman**, *McGill U. - Desautels Faculty of Management*

Sustainability initiatives centered on standards adoption and lead firms' programs produced social and environmental progress in agricultural global value chains (GVCs). However, small and medium enterprises (SMEs) operating as suppliers still face many challenges in the transition to sustainable production and markets, which remains poorly understood. We study the commercial strategies of 63 SMEs from five Latin American countries operating as suppliers in coffee GVCs. We find that the SME's diversification and value-adding strategies are intertwined with efforts to improve social and environmental sustainability. Moreover, financial resources from impact investments are essential to facilitate firm-level strategies to enable the creation of organizational capabilities to move to more socially and environmentally sustainable production.

IM: Closing the institutional gap: Protecting Technology in Foreign Direct Investment

Author: **Siyao Li**, *U. of Pennsylvania*

What is the relationship of foreign direct investment with a state's investment protection regime? It has commonly been viewed that foreign investors can seek outside institutional guarantees when investing in countries with relatively weak institutions for property protection, but for technological components of foreign direct investment, this option is in fact quite limited. How then do multinational corporations protect their property in host countries, especially in terms of technological assets? I argue that foreign direct investment can affect how domestic institutions for property protection develop in its countries of destination, thereby contributing to better rule of law in such countries. Instead of avoiding host country institutions, MNCs employ strategies to engage with both the host and home governments, and achieve better property protection through domestic institutions. Using a combination of cross-country data on technological investment activity, interviews of business executives, and host country case studies, I show that FDI leads to improvements in intellectual property institutions in host countries, and demonstrate the mechanisms through which MNCs influence the legal environment in host countries.

Blended Learning: Implementation and Outcomes

Digital Session Chair: **Arpita Agnihotri**, *Penn State Harrisburg*

MED: Differences in Learning Effectiveness across Learning Environments: A Cognitive Load Perspective   

Author: **Fabian Alexander Müller**, *Philipps-U. Marburg*

Author: **Torsten Wulf**, *Philipps-U. Marburg*

MED Best Paper in Graduate Management Education. Sponsored by the Graduate Management Admission Council (GMAC) for the most significant contribution to graduate management education.

Empirical evidence in the extant literature indicates that blended learning environments lead to better learning outcomes in management education than traditional lectures. However, the working memory of the cognitive system, which processes all incoming information, is highly limited and can be assumed to be working at capacity in traditional lectures. As blended learning environments cannot expand this capacity, they can only improve learning effectiveness if they are able to influence the underlying mechanics of the working memory. To examine such potential influences, we draw on cognitive load theory from educational psychology research. We posit that effective blended learning environments reduce a learner's extraneous cognitive load, which refers to the working memory capacity related to understanding the instructional design, and increase their germane cognitive load, which is related to learning outcomes. An experiment involving 115 graduate management students provides empirical evidence for our hypotheses. We contribute to management education research on blended learning environments by explicitly considering the mechanics of the human cognitive system. Our results suggest that blended environments can improve learning effectiveness if their designs enable more efficient use of the working memory. This can be facilitated through the application of learning technologies in research and practice.

MED: Resistance to Blended Learning in Business and Public Administration Higher Education

Author: **Ettore Oriol**, *EAESP - FGV / SP*

Author: **Marcus Brauer**, *Estácio de Sá/UERJ/UNIRIO*

Author: **Amanda Arias Matheus**, *UNIRIO*

Author: **Julio Cesar Silva Macedo**, *UNIRIO*

Although resistance to technology is frequent in teaching, when it comes to resistance to Blended Learning (BL) in higher education, research is scarce and rare in literature, especially in the national. Currently, resistance to BL is a significant problem, although such technology has high rates of growth in several countries. The general objective of this research was to identify and analyze the main dimensions of resistance to BL in higher education in Business and Public Administration in Rio de Janeiro/Brazil, in São Paulo/Brazil, in Malaga/Spain and in the city of Porto/Portugal. After the bibliographic review of themes such as BL, Resistance to Technologies and Unified Theory of Acceptance and Use of Technologies (UTAUT), a theoretical structure tested explains the resistance to the BL method. Seven dimensions were used: Self-efficiency, IT Skills, Performance Expectancy, Effort Expectancy, Social Influence, Interactivity and Internal Communication, all directly influencing the Resistance construct. The results indicate that the proposed model had a good fit and that the Self-efficiency and IT Skills constructs had a negative influence on Resistance. The Expectancy dimension had a positive and extremely significant impact on the mitigation of resistance to BL adoption. The other dimensions do not form statistically significant, not conforming their influence on the mitigation of resistance to BL. In the comparison between the four universities researched, EAESP-FGV was the one that showed less resistance to BL adoption and Malaga/Spain was the one that showed more resistance to BL adoption.

Paper is Available to Meeting Registrants Only.

MED: Delivery Modes: Learning Effectiveness and Student Satisfaction   

Author: **Mourad Dakhli**, *Georgia State U.*

Author: **Marta Szabo White**, *Georgia State U.*

We use objective and subjective measures of learning outcomes to compare learning effectiveness and student perceptions across three different delivery modes, traditional (face-to-face), hybrid, and online. For the objective measures, we use scores on rote, critical thinking and engagement assessment tools in the introductory international business course. For the subjective measures, we compare student perceptions by analyzing scores from the Student Evaluation of Instructors (SEIs) surveys that are administered at the completion of each course section. We find differences in the critical-thinking and engagement components whereby students in the hybrid delivery group performed better than their counterparts in the traditional and online groups. Online students had in general lower scores across the board, especially on the engagement dimension. In their totality, the objective data results support the value of the in-person factor for learning effectiveness. On the student perceptions side, results show similar assessment of learning experiences in the traditional and hybrid modes across most dimensions. Students were more critical in assessing instructors and learning experiences in online course sections.

Paper is Available to Meeting Registrants Only.

MED: Effects of flipped classes on student learning: The role of perceived instructor attitude

Author: **Sabrina Wittmann**, *Philipps-U. Marburg*

Author: **Torsten Wulf**, *Philipps-U. Marburg*

Despite the increased importance of constructivist learning environments, in particular flipped learning, in management education, there is mixed evidence on the results. Even though many studies find positive effects of flipped learning formats on student learning outcomes, others report no or even negative effects. As the mechanics accounting for these effects remain mostly unknown, we draw on flipped learning and educational psychology research and look beyond the direct effects of the learning format to explain the inconsistent results. We integrate research on the instructor's perceived attitude, consisting of enthusiasm, presentation style, friendliness, genuine interest, and welcoming conduct, and flipped learning research, proposing that the instructor's perceived attitude mediates the positive effects of flipped learning formats on student learning outcomes. The results of an experiment with 147 undergraduate management students support our hypotheses. We contribute to management education research on flipped learning formats by hinting at the importance of active learning and the perceived attitude of the instructor. Thus, management education scholars should take indirect effects from other disciplines into account when investigating constructivist learning environments. In addition, instructors should ensure that their attitude is positively perceived by students to facilitate improved student learning outcomes.

Preparing the Manager for Climate Change: From Awareness to Action

Preparing the Manager for Climate Change

Organizer: **Jennifer Leigh**, *Nazareth College*
Presenter: **Petra Molthan-Hill**, *Nottingham Business School, Nottingham Trent U.*
Presenter: **Rae Andre**, *Northeastern U.*
Presenter: **Florian Kapmeier**, *ESB Business School, Reutlingen U.*
Facilitator: **Laura Albareda**, *LUT U., School of Business and Management*

The United States' predicted reentry to the UN Climate Change Paris Agreement and continuing adverse climate-related events have kept climate at the forefront of the news even with the ongoing global COVID-19 pandemic. Many have argued that COVID creates the opportunity to "build back better" by integrating a green agenda that can restore the economy, remediate ecological challenges, and address social inequities. If this mandate moves into law and policy, the urgency to train the next generation of managers to negotiate the complexity and chaos of continuous climate change is more important than ever! This PDW will provide AOM members three climate change education approaches focused on active learning. The session will include innovations from Europe and North America: the Team Humanity best green education practices from Dr. Rae Andre's recently released book *Lead for the Planet: Five Practices for Confronting Climate Change* (U. Toronto Press), the Carbon Literacy Training for Business Schools initiative pioneered by Dr. Petra Molthan-Hill and colleagues from NBS, and the interactive En-Roads climate-energy simulation model for decision-makers developed by Climate Interactive and the MIT Sloan Sustainability Initiative, facilitated by Dr. Florian Kapmeier, partner of Climate Interactive. After an initial icebreaker, participants will select a breakout room with the climate learning innovation of their choice. In these sessions participants will discuss how to achieve climate change education in business schools and experience active learning activities on their selected topic. The groups will return for a final facilitated session where participants can share insights and resources.

This interactive and lively session offers participants several cutting-edge resources related to carbon literacy and sustainability leadership education for novices and experts alike. To maximize learning, we recommend attending on a computer rather than a phone if possible. Please reach out to Jennifer Leigh jeigh4@naz.edu with any questions.

How to Bring Racial Harmony in Organizations: Some Knowledge from the Ancient Indian Writings

How to Bring Racial Harmony in Organizations

Organizer: **A.D. Amar**, *Seton Hall U.*
Organizer: **Satinder Dhiman**, *Woodbury U.*
Presenter: **Jon Radwan**, *Seton Hall U.*
Presenter: **Mahadevan B**, *Indian Institute of Management, Bangalore*
Presenter: **Sharda Nandram**, *Nyenrode Business U.*

This symposium provides the foundation for equal treatment of all humans, in fact all living entities, as advanced in the ancient Hindu writings—going back to the second millennium BCE, when they were compiled and put in writing, such as the Vedas, Upanishads, and the Bhagavad Gita—by taking the doctrine of Advaita Vedanta or nonduality that portrays all humans as Atman—an element of Brahman, the supreme creator. We draw several postulates from these writings that can be used to implement the major principles of Advaita in organizations for addressing the issues of diversity, equity, and inclusion goals which a very large number of American organizations are struggling to operationalize for the last couple years or so. Among several ancient Indian philosophical traditions that logically and theologically advance the equality of all living entities is the doctrine of the Advaita Vedanta which provides an excellent framework to understand unity in diversity through the lens of Oneness—that is, One Divine Spirit dwelling in everyone and everything, and every living entity having abode in Brahman—the Divine Spirit. It invites us to treat human with love and respect—sacredly—because human is Divine in essence. We believe that understanding the underlying unity in diversity is one of the best approaches to foster racial harmony in organizations, root branch and all, which may furnish the best antidote to racial disharmony and social unrest that plague the present-day world. Taking the concepts discussed in this symposium, our presentations provide how organizations, and the larger societies can apply and implement these concepts in improving the racial harmony at their workplaces and social interactions.

The Organizational Behavior Doctoral Consortium is held annually and designed for doctoral students who are in the final stages of their programs. The consortium includes a mix of presentations, discussions, and interactive sessions designed to help doctoral students navigate the job market and launch them into their academic careers. The program includes faculty presentations and roundtable sessions on topics such as crafting the right academic job, succeeding at research and publishing, and preparing for effective teaching, as well as how to successfully organize and deliver a job talk that best communicates their research and teaching identity.

Discourse, Dialogue, and Communication in Change

Digital Session Chair: **Donna Ogle, Rockford U.**

ODC: **What's in a Name / Hashtag? Implications for the Field of Organization Development**

Author: **Donna Ogle, Rockford U.**

Author: **Ram Tenkasi, Benedictine U.**

Author: **William Brock, Colorado Christian U.**

ODC Division Rupert F. Chisholm Best Theory-to-Practice Paper Finalist

As demonstrated by Ogle, Tenkasi, & Brock (2020), organization development, as a field, is not significantly represented in social media when measured by social media's quintessential mark – the hashtag. Concepts drawn from the field are clearly evidenced within the social media universe as demonstrated through tweet hashtags; however, its concepts have been somewhat usurped by the field's progenies in management and organization studies (MOS). A call rang for organization development scholars and practitioners to become more cognizant of and capable in social media usage in order to retain, and potentially regain, relevance for the field. This paper considers a key element in "how" organization development scholars and practitioners may practically answer this call by pursuing cognizance and capability in the discerning use of Twitter hashtags. It demonstrates a particular issue in employing the oft used #OD since this hashtag has become primarily associated with negative images of drug use, depression, suicide, and self-mutilation. This situation is predominantly evident in Japanese tweets examined in this paper. After this caution and evidence, the call is reiterated for organization development scholars and practitioners to become more active in the venue of social media, and alternative hashtags are considered to help in this endeavor. Keywords: Organization Development, Social Media, Twitter, Hashtags, Social Network Analysis

ODC: **'Are we a Fertility or an Infertility Company?' A Learning Expedition Inviting Dialogic Reframing**

Author: **Thomas Schumacher, U. of St. Gallen**

In this article, I present, illustrate and analyze a learning expedition (LX) of pharmaceutical company managers, uncovering processes fostering generative dialogue to develop new collective understanding. Applying a dialogic lens to a sequence of exchanges with partner organizations and internal dialogic circle settings, managers' unquestioned assumptions in describing their own business become clear and can then evolve. Enabled by different facilitation elements, the LX suspends organizational routines and triggers generative dialogues that encourage organizational change. The study contributes by showing: first, how context and practices used in establishing the LX aid in suspending organizational routines and second, how the context of multiple interorganizational events and exchanges (understood as a cycling between different dialogues) enables dialogue and reflexivity fostering organizational development (OD) and third, how the LX enables double loop learning that invites reflexivity, altering managers' assumptions.

Paper is NOT Available. Please contact the author(s).

ODC: **Mutual Sense-Censoring, Generative Exploration, and Collaborative Change**

Author: **Makoto Nagaishi, Chukyo U.**

Although several extant studies have focused on the discourse-based organizational change, the full potential of the change practices in global meaning-making systems has remained unexplored in the field of organization development and change (ODC) research. Hence, the major objective of this article is to develop systematic explanations on the power mechanisms in multinational corporations (MNCs) by proposing a model that implies the evolutionary co-existence of various meaning-making patterns in the headquarter-subsidary relationship. Furthermore, this paper attempts to explore the implications of some questions, such as what kind of leadership is more conducive for the constructive dialogic setting in the context of the headquarters-subsidary relationship and how practitioners can facilitate a smooth transition from the mutual sense-censoring phase to the collaborative action phase in multi-cultural settings. The author uses a Japanese manufacturing MNC as a case in point and shows that the change practitioners are in charge of the crucial position to keep a good balance to create psychological safety in a dialogic space and to lead members to move ahead with the sense of crisis. Furthermore, from the viewpoint of leadership, the change leaders' authentic self-descriptiveness can provoke organizational members to imagine and develop new ways of looking at the complex organizational realities.

Paper is Available to Meeting Registrants Only.

ODC: **Managing Secrecy-Transparency Tensions: The Communicative Role of HR Managers During M&As**

Author: **Kenneth Lim, U. of Edinburgh**

During change communication, HR Managers constantly balance the competing requirements of organizational secrecy vis-à-vis employee needs for transparent communication to help to deliver the desired outcomes of M&As. Yet, relatively little attention has been paid to these tensions faced by HR Managers during M&As. Hence, drawing on twenty semi-structured interviews with international HR Managers who have considerable experience in integrating companies and M&As, this study qualitatively examines the experiences of HR Managers on the contradictory demands of change communication during M&As. The findings first reveal the pressures for organizational secrecy and its workforce implications during M&As. The findings then highlight the communicative role of HR Managers to provide transparency, amidst the secrecy, and its contributions to organizational change during M&As. This study then discusses the important theoretical and practical implications of recognizing this communicative role performed by HR Managers to contribute to the literature of change, human resource management, and the human side of M&As literature.

Sustainable and Liveable Cities

Digital Session Chair: **Jonas Friedrich**, *Research Institute for Organizational Psychology*

ONE: Does Smart equal Sustainable? Coupling, Decoupling, and the Sustainability Performance in Cities

Author: **Jonas Friedrich**, *Research Institute for Organizational Psychology*
Author: **Maximilian Palmié**, *U. of St. Gallen*
Author: **Oliver Gassmann**, *HSG U. of St. Gallen*

Smart city initiatives have been criticized for not meeting demands of urban sustainable development. This study investigates the coupling and decoupling dynamics of 251 smart city projects in Switzerland following neo-institutional theory. Decoupling theory investigates gaps between societal demands, in our case from sustainability, and actual organizational practice. This study understands smart city initiatives as hybrid organizations which by definition have to handle conflicting societal demands. Thereby, we investigate the concept of the Trojan Horse by Pache and Sanch's (2013), which theorizes the influence of welfare as opposed to market logics in hybrid organizations. Thereby, organizations which are more deeply embedded in market logics tend to couple rather than to decouple to sustainability in order to gain legitimacy. We scrutinize this concept by creating a unique dataset with six researchers applying content analysis and a subsequent sustainability scoring. We find private smart city projects which are embedded in market logics perform best on triple-layered sustainability scores and thus couple to sustainability. A more finely grained investigation shows that while market embedded smart city initiatives perform well on environmental and economic sustainability, they do less so on social sustainability measures. Smart city initiatives which provide public goods and are thus linked to welfare logics generally perform less well on averaged sustainability scores while leading social sustainability scores. This study extends the literature of decoupling theory by introducing specific coupling and decoupling dynamics for the realm of sustainability in hybrid organizations and contribute to the debate of sustainable urban development in general.

ONE: Could Cities Become More Sustainable And Livable Thanks to Entrepreneurship? A Review

Author: **María Del Mar Martínez-Bravo**, *U. of Almería*
Author: **Raquel Antolin-Lopez**, *U. of Almería*
Author: **Javier Martínez-del-Río**, *U. of Almería*

Urban sustainability and livability research has been gaining increasing attention since numerous challenges such as the alarming population growth and the overconsumption of natural resources threaten the ability of cities to become viable pillars of sustainable development. Even if cities sustainability has been analyzed from different perspectives, this literature remains disconnected from entrepreneurship literature while entrepreneurs have been raised as a potential conduit in the transition of societies towards sustainable development. Hence, this article aims to extend the existing literature on urban sustainability by performing a systematic literature review on whether and how entrepreneurship can help cities to become more sustainable and livable. First, we take stock on the mechanisms through which entrepreneurs can impact urban sustainability and livability and which urban dimensions entrepreneurs can contribute to enhance. Second, we develop a research agenda that identifies critical research avenues for scholars and practitioners based on a critical assessment of existing research and the gaps in the literature that were found.

ONE: Institutional Features Fostering Sustainability and Livability in European Cities

Author: **María Del Mar Martínez-Bravo**, *U. of Almería*
Author: **Raquel Antolin-Lopez**, *U. of Almería*
Author: **Javier Martínez-del-Río**, *U. of Almería*

This study analyzes the longitudinal relationships between the three dimensions of urban sustainability and city livability, while exploring the moderating effect of the institutional framework on those relationships. Specifically, we propose that regulatory institutions and citizens' pressures moderate the relationships between economic, social, and environmental urban sustainability on city livability in the long term. We test those relationships in a sample composed of data from 20 European cities from 2011 to 2016. Overall, our findings validate the causal positive effect of the three urban sustainability dimensions on city livability. In addition, our results confirm the moderating effect of regulatory institutions on the relationships between social urban sustainability and city livability, and the moderating effects of citizens' pressures on the relationships between environmental and social urban sustainability and city livability. Therefore, these results help to extend current knowledge on the interconnections between urban sustainability, city livability and their institutional background.

ONE: Electric bike-sharing services mode substitution for driving, public transit, and cycling.

Author: **Tomasz Bielinski**, *U. of Gdansk*
Author: **Agnieszka Kwapisz**, *Montana State U.*
Author: **Agnieszka Wazna**, *U. of Gdansk*

In hopes of reducing traffic congestion, air and noise pollution, and energy consumption, bike sharing is becoming increasingly popular around the world. Underlying many of the benefits attributed to bike sharing is an assumption that bike share journeys replace a significant proportion of trips previously made by car. This paper examines factors correlated with the use of an electric bike-sharing system in Tricity, Poland. We use the double hurdle estimation approach on data from two matched surveys: before and after the implementation of the system. Our analyses indicate that electric bike rides did not act as a substitute for car trips. Shared e-bikes were used by residents as a substitute for public transportation or as a last/first mile of transport to/from public transportation stops. We examined the use of e-bikes for various types of trips and identified factors encouraging and discouraging people from usage of bike-sharing and cycling in general.

Sustainability paradoxes

Digital Session Chair: **Simone Carmine**, *Department of Economics and Management, U. of Padova*

ONE: THE IMPORTANCE OF BEING PARADOXICAL. A Paradox Approach to Foster Sustainability

Author: **Simone Carmine**, *Department of Economics and Management, U. of Padova*
Author: **Valentina De Marchi**, *Department of Economics and Management, U. of Padova*

In addressing sustainability issues, companies face many conflicts between the three dimensions of sustainability (e.g., environmental and social economic goals and demands versus economic ones). Tensions in sustainability can generate complex challenges for organizations, due to the many different aspects involved—characterized by different perspectives, logics, resources, regulations, etc.—and therefore weaken their sustainability efforts. The current study aiming at empirically investigating whether the mere experience of sustainability tensions can undermine companies' sustainability performance, and if an organizational paradox approach can support companies in mitigating their possible negative impact. A quantitative analysis has been performed on original survey data about tensions, paradox approach and performance in sustainability. The analysis reveals that experiencing corporate sustainability tensions negatively affects sustainability performance of companies, and a paradox approach helps to moderate this negative impact, even if it is not able to reverse it completely.

ONE: What Would Jesus Do: How Long-term Orientation Influences Dealing with Paradox

Author: **Taeun Kwon**, *U. of Zurich*
Author: **Timo Busch**, *U. of Hamburg*

In an increasingly complex society, the ability to dealing with paradoxes has become a critical managerial issue. Recent studies suggest a relationship between temporal orientation and the dealing with paradox, but we have limited understanding of the interaction between the two. In this paper, we explore how a long-term orientation influences the dealing with competing demands through an inductive case study of a faith-based pension fund, which demonstrates an extremely long-term view due to its faith, while dealing with the competing demands of faith and finance. We find that long-term orientation contributes to a consistent vision and flexible orientation that allows for managing the paradox, and identify two key mechanisms – reminding of the vision and deliberating over the vision – that create the connection between the vision and operation. By empirically demonstrating the relationship between long-term orientation and the dealing with paradox and the mechanisms it entails, we also leave practitioners with more concrete learnings.

Paper is Available to Meeting Registrants Only.

ONE: The curvilinear relationship between digitalization and firm's environmental performance

Author: **Gozal Ahmadova**, *U. of Granada*
Author: **Blanca Delgado-Marquez**, *U. of Granada*
Author: **Luis Enrique Pedraza**, *U. of León*

This study explores the relationship between home country digitalization and firms' environmental performance. We use panel data with 16,926 observations of 5026 firms from 47 countries in 10 sectors, collected from Thomson Reuters Eikon between 2014 and 2019. In this study, we capture three dimensions of home-country digitalization: knowledge, technology and future readiness. Our results reveal the existence of an inverse U-shaped relationship between each dimension of home-country digitalization and firms' environmental performance. Our analysis showed that at first stage, home country digitalization has a positive indirect impacts on environmental performance, e.g. enhanced energy efficiency and resource management, but later, an excess of digitalization causes “rebound effect” with negative consequences on environment, e.g. high electricity consumption, radioactivity, or e-waste.

AMR: Writing Theoretical Papers - A Workshop with the Editors
AMR: Writing Theoretical Papers

Organizer: **Sherry M. B. Thatcher**, *U. of South Carolina*

This interactive workshop will help participants write clear theoretical articles that make a contribution to the literature. The session consists of two parts. First, we offer participants insights on how to structure a manuscript to showcase its theoretical contribution, we also discuss some of the major challenges in writing theoretical articles and potential avenues for address these challenges. Second, participants will have the opportunity to engage in small group discussions on these topics with current and past AMR Editors, Associate Editors, and Editorial Review Board members.

What Is ‘Systematic’ About Systematic Literature Reviews? *Systematic Literature Reviews*

Organizer: **Olga Petricevic**, *U. of Calgary*
Organizer: **Denise M. Rousseau**, *Carnegie Mellon U.*
Panelist: **Sharon Alvarez**, *U. of Pittsburgh*
Panelist: **Joseph T. Mahoney**, *U. of Illinois at Urbana-Champaign*
Facilitator: **Zahra Premji**, *U. of Calgary*
Facilitator: **Ryan Splenda**, *Carnegie Mellon U.*

In this interactive PDW, we will offer (1) an opportunity to discuss the best approaches and best practices for systematic synthesis of management literature, and (2) a hands-on training session on how to design systematic literature reviews, describing methodological innovations for conducting them and more rigorous standards for reporting them. First, we will discuss the purpose of systematic literature reviews (compared to other types of literature reviews) and their relevance for advancing management scholarly efforts with leading scholars and journal editors. Second, we will illuminate why most literature reviews often fall short of their potential, and how unrecognized variance in methodological rigor undermines the usefulness of different types of reviews for evidence-based management. Third, we will present state of the art techniques and approaches for conducting systematic literature reviews; in doing so we show how adoption of advanced systematic review practices facilitate an accumulated body of knowledge to guide in management scholarship and practice. There will be opportunities to both interact with journal editors and participate in interactive activities designed to advance skills for planning, selecting, formulating, conducting, reporting and publishing systematic literature reviews.

Knowledge Context of Entrepreneurship, Pre-entry Capabilities, and New Ventures' outcome

Knowledge Context of Entrepreneurship

Organizer: **Aliasghar Bahoo Torodi**, *Bocconi U.*
Organizer: **Roberto Fontana**, *U. of Pavia & Bocconi U.*
Panelist: **Bart Clarysse**, *ETH Zürich*
Panelist: **Martin Ganco**, *Wisconsin School of Business*
Panelist: **Sonali Shah**, *U. of Illinois at Urbana-Champaign*
Panelist: **April Franco**, *U. of Toronto*

How founders' pre-entry affiliation and industry experience affect new ventures' outcome? In many industries, especially high-tech and knowledge-intensive ones, successful and innovative ventures commercialize knowledge conceived by founders while employed in the focal, upstream, or downstream industry. While independent scholarly attention has been devoted on understanding formation and performance of academic, corporate, employee, and user spinoffs, still we know little about how different knowledge context contributes to the development of specific type of capabilities, and in turn how pre-entry capabilities can explain performance heterogeneity among the new entrants. The objective of this PDW is to engage scholars in each of these streams of the literature to advance a holistic conceptualization of the role of knowledge context in shaping new entrants' capabilities and their performance outcome.

Panelist: **Charles Williams**, *Bocconi U.*

The world has been affected by an unprecedented shock during this past year. Beyond affecting the health of people, the global emergence of the COVID-19 pandemic has threatened firms in developed and developing countries. While the strategic management literature has studied adaptation to technological change, natural disasters, and other unexpected events, this environmental shock was qualitatively different. In the context of this turbulence, entrepreneurial firms are likely to be an especially vulnerable category. The purpose of this PDW is to reflect on what we know and what we have yet to learn about how nascent firms can adapt to a global shock of this magnitude. We designed a multidisciplinary event, combining speakers with expertise in strategic management and related areas of management research, to explore the several facets of this complex phenomenon. The PDW is designed to generate interaction, debate, and brainstorming. To do so, the program includes four phases: 1) a series of scholarly presentations by the speakers, 2) a Q&A session moderated by the organizers, 3) a series of breakout-room conversations led by the speakers to brainstorm research questions within their areas, and 4) a concluding discussion where each breakout-room shares their insights with the broader audience.

Ecosystem Governance

Digital Session Chair: **Yimei Hu**, *AAUBS, Aalborg U.*

TIM: Coordination, Complementarity, and Innovativeness in Innovation Ecosystems 

Author: **Yimei Hu**, *AAUBS, Aalborg U.*
Author: **Huanren Zhang**, *U. of Southern Denmark, Odense, Denmark*
Author: **Yuchen Gao**, *School of Public Policy and Management, Tsinghua U.*

Interdependence and complementarities are two fundamental premises for the existence of innovation ecosystems. Using a computational experiment, we compare the performance of four coordination structures (centralized governance, sequential structure, pooled structure, and coordination by customer choice) in innovation ecosystems under different types of complementarities. Our results show that ecosystems coordinated by downstream customers outperform the ones coordinated by centralized governance and the ones coordinated by either sequential or pooled structures. Moreover, the presence of complementarity between the focal firm's and the complementor's offerings in the ecosystem significantly improve the innovativeness of the complementor, and the pooled structure benefits more in comparison to the sequential structure. These results are shown to be robust to turbulence and the degree of technological interdependencies in the ecosystem. The study extends our knowledge on ecosystem coordination from the structural perspective and highlights the indispensable role played by complementors in innovation ecosystems.

TIM: Orchestration coordination in innovation ecosystems: mechanisms and enabling factors

Author: **Juliana Bonomi Santos**, *FGV EAESP*
Author: **Laís Moltene**, *Fundação Getulio Vargas - EAESP*
Author: **Vittoria Loviscek**, *Fundação Getulio Vargas - EAESP*
Author: **Ely Laureano Paiva**, *UNISINOS U.*
Author: **Susana Carla Farias Pereira**, *Fundação Getulio Vargas - EAESP*
Author: **Luiz Carlos Di Serio**, *Fundação Getulio Vargas - EAESP*

This paper explores how network orchestrators coordinate efforts across innovation ecosystems to promote benefits to their network members. Using a case study of the Brazilian leading AgriTech innovation ecosystem, we studied the multiple relationships between the main orchestrators. Based on the in-depth analysis of interviews with orchestrators and secondary data, we uncovered that orchestrators use different coordination mechanisms depending on their objectives and closeness. We also identified the hindering and enabling factors associated with using these mechanisms and the inexistence of a coordination mechanism to align the interests of all main orchestrators. We contribute to the network orchestration literature by showing the importance of considering ties across orchestrators, exploring mechanism inter-network coordination, and uncovering factors that contribute to the network structure. In doing so, we provide insights for practitioners on relevant issues related to the coordination effort across orchestrators that may be relevant to foment innovation ecosystems.

TIM: Ecosystem governance: How focal firms manage complementors?   

Author: **Yujiang Chen**, *Cambridge U.*
Author: **Xingkun Liang**, *Peking U.*
Author: **Xianwei Shi**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Research on business ecosystems highlights the strategic importance of complementors in determining focal firms' successes in various aspects. There are scarce systematic studies on ecosystem governance, especially, how focal firms can manage complementors to develop competitive advantages. We develop a formal model to explore this topic by examining the focal firm's strategic decisions on choosing complements (extensive margins) and depth of using the complements (intensive margins). We analyzed how various factors affect extensive margins and intensive margins and how ecosystem governance can have impacts on the whole ecosystem as well as the relative value appropriation power between focal firms and complementors.

Paper is Available to Meeting Registrants Only.

TIM: Ecosystem Benefits: An Integrative Framework 

Author: **Zhe Cao**, *Imperial College Business School*
Author: **Llewellyn D W Thomas**, *IESE Business School*

Ecosystems are distinguished by non-hierarchical coordination and collective generation of a coherent ecosystem-level offering targeted at a defined audience. This creates a momentum-building challenge, as participation is voluntary and rewards and delivery obligations typically not contractually defined. We submit that ecosystem benefits—participant-level pecuniary and non-pecuniary benefits that ecosystem participants can expect to realise through their participation in the ecosystem—provide a powerful inducement for potential stakeholders to join and contribute to the ecosystem. However, although widely discussed, different types of ecosystem benefits have not been coherently conceptualised in the literature. Through a thematic review, we organised ecosystem benefits into five key themes. Integrating our analysis of how ecosystem benefits are expressed in consumption and provision sides of the ecosystem, we propose an integrative framework. We suggest that ecosystem research needs to move beyond current dominant focus on consumption-side compatible offerings to also include provision-side operational coordination. We conclude with a research agenda.

Open innovation (OI) is a management concept that describes the purposive management of knowledge flows across organizational boundaries. It has attracted significant attention from management researchers and has been studied using a variety of theoretical and methodological perspectives. At the same time, researchers in a growing number of disciplines and divisions are attracted to this domain. While our understanding of OI is increasing, many challenges in researching OI remain and new ones emerge. Being the sixth consecutive PDW on this topic, this PDW gathers a number of active scholars conducting research related to OI. These scholars will share and build on their experiences in researching OI to identify some key challenges—and associated opportunities—to help advance research in this domain. By building on recently identified OI research categories, the facilitators will introduce and discuss these challenges, which cover a broad range of levels of analysis, various theoretical perspectives, and methodological approaches. Following this, they will moderate a roundtable discussion with interested participants. Pre-registration (by submitting a short text with research interests) is recommended for the roundtables, which have pre-defined topics, but attendance is open as long as space permits.

Pre-registration (by submitting a short text with research interests) is recommended for the breakout room allocation.

The academic-practitioner gap is a well-recognized and continually growing issue for management scholars. This gap is especially prominent in healthcare contexts, where hospitals, systems, and entire jurisdictions are often subject to wide-spread organizational (and system-level) interventions and restructurings. Given the fundamentally applied nature of healthcare management research, scholars in the field must find assurance that their work is equal parts theoretically insightful and practically relevant. The aim of this session is to engage in a conversation about creating research partnerships with practitioners by providing examples and strategies “from the field.” We will hear from both emerging and experienced scholars who have intentionally crafted, or are in the process of crafting, research collaborations with practitioners and health care organizations. (All are welcome to this year’s Emerging Scholars sessions! Pre-registration is not required, but is encouraged. Email cheryl.rathert@slu.edu to register or for more information.)

Meaning of Work and Employee Social Responsibility

Digital Session Chair: **Felix George Jr.**, *Texas A&M U.*

OB: Patterns of Corporate Social Responsibility Perceptions Across Five Stakeholder Dimensions

Author: **Felix George Jr.**, *Texas A&M U.*

Author: **Alejandra Manzanares**, *Texas A&M U., College Station*

Author: **Siyue Qiu**, *Texas A&M U., College Station*

Prior research examining the influence of corporate social responsibility (CSR) on organizational citizenship behaviors (OCBs) and counterproductive work behaviors (CWBs) has typically conceptualized CSR to be unidimensional or analyzed the CSR dimensions in isolation. Such an approach has obscured critical details regarding the CSR-OCB and CSR-CWB relationship. Thus, we use a person-oriented approach, suggesting that employees holistically evaluate CSR activities in various stakeholder dimensions. Relatedly, we advance the notion that specified patterns of CSR will be differentially associated with employee outcomes. Incorporating concepts from signaling theory and theorizing on optimal distinctiveness, we posited that employee OCBs would be highest and CWBs lowest when there is divergence between scores in five CSR dimensions. In a sample of 583 employees, results from a latent profile analysis indicated that employees engaged in more OCBs and fewer CWBs when: (a) there were inequalities in the amount of CSR directed toward various stakeholders and (b) CSR to employees was comparatively high. The pattern effect of the CSR dimensions accounted for 9.53% of the variance in OCBs and 19.46% in CWBs. These findings provide evidence of what we label an optimal divergence effect, challenging the notion that interdimensional CSR consistency leads to positive employee outcomes.

OB: Employee-Level Contributing to Society: Integrative Literature Review

Author: **Rowdy Bryant**, *Vrije U. Amsterdam*

Author: **Egenia Lysova**, *Vrije U. Amsterdam*

Author: **Svetlana Khapova**, *Vrije U. Amsterdam*

Organizations are addressing societal challenges by implementing Corporate Social Responsibility (CSR) and while we understand more on how employees perceive these practices (captured by micro-CSR), we still lack understanding on how contributing to society occurs on an employee level. Several research streams addressed employee-level contribution to society: the meaning of work (i.e., calling and meaningful work), job design (i.e., prosocial motivation and task significance) and public policy (i.e., public service motivation and perceived societal impact). Unfortunately, the discussion is scattered, lacking integration and a definition that captures what contributing is, who society is, and how it occurs. The goal of this integrative review is to bring construct clarity. We achieve this by comparing the literature on theory-based attributes and by drawing from outside theory (multi-stakeholder and legitimacy). We find that scholars have failed to elaborate that employee-level contributing to society is a belief. We argue that the contribution occurs when employees believe that (1) they serve stakeholders through their work, and (2) the stakeholder(s) would agree on being served. After presenting our definition we will develop an integrative research agenda to enhance construct clarity in the streams of literature and present future research directions.

OB: Responsibility-taking Behavior: Validation of a Measure

Author: **William A. Pasmore**, *Columbia U.*

Author: **Gian Zlupko**, *Columbia U. Teacher's College*

Author: **Nilima Ajaikumar**, *Columbia U.*

Author: **Mariana Garcia**, *Teachers College, Columbia U.*

Author: **Stuti Sinha-Chowdhury**, *Columbia U. Teacher's College*

This research validates a scale to measure responsibility-taking behaviors in organizations. Responsibility-taking is defined as the willingness of an individual to accept ownership for the outcomes of a task that they have agreed to perform. Responsibility taking is a highly-desired quality of employees and thus it is contemplated that the current measure will be of interest in both hiring and performance management situations. In this research, we conduct a confirmatory factor analysis into the hypothesized dimensions of responsibility-taking as well as convergent and divergent validation using well-established measures. Results offer strong validation for the responsibility-taking measure.

This paper is based on findings of a qualitative study of 27 project team members functioning as multiteam systems in financial services firms. The findings included developing a process model of communication that was evident in successful project teams, but absent in unsuccessful ones. The distinctive features of the communication practices displayed by successful project teams is that they recognized the need for and constructed a shared understanding of the organizational, technological, and economic reality they were confronting. This agreed upon sense of the key elements of the project's socio-technical context, is neither a "shared meaning" (Donnellon, Gray, & Bougon, 1986) nor a "mental model" held in common (Cannon-Bowers & Salas, 2001). Instead, it is a socially constructed knowledge that extends across the functional divides of team members, and results from a mindful inquiry into what the project team does not know about each other that is necessary for them to know in order to effectively complete their team project. Through careful identification of and inquiry into what the team members do not know about the context that they are dealing with, they socially construct a shared sense of reality that enables an alignment of "shared understanding" (Churchman & Schainblatt, 1965) between the diverse functional groups within their team, and also between members of their team and other functional teams within the organization. We have termed this dual alignment across functional boundaries within and between project teams as interpretive symmetry. Our process model builds on past research on boundary spanning, as well as boundary objects (Gal, Yoo, & Boland Jr, 2005; Star & Griesemer, 1989) and perspective making/taking (Boland Jr & Tenkasi, 1995). We identify boundary space as the place and the opportunity for this cross-boundary inquiry and communication to occur. We also identify receptivity among the project team as the member's awareness and acceptance that they do not know which opens them up to conduct inquiry and construct new knowledge. This model of communication represents this paper's main contribution which integrates theory on shared reality with multiteam systems. This paper also contributes to our understanding of the role of boundary spaces and mindfully receptive states in promoting cross-boundary communication.

The Organizational Behavior (OB) Mid-Career Faculty Workshop is designed for faculty members who have recently made tenure (within 3 years) or are 9-10 years post-Ph.D. The goal of the workshop is to provide a forum for mid-career faculty members to connect with senior Faculty Fellows to receive advice and ask questions related to navigating the challenges and opportunities of this career stage. The discussion topics for the workshop will be finalized based on input solicited from mid-career faculty who register for the workshop, but potentially include: examining mid-career options (e.g., moving into administration); career enablers (e.g., joint appointments, sabbaticals, changing institutions); maximizing and enabling research (e.g., developing new research ideas, finding new collaborators, securing grants, expanding publication portfolio to writing and editing books); service and engagement (e.g., department chair, center director, professional service, engagement with outside boards and institutions); and planning for promotion. The Faculty Fellows include a mix of senior faculty from different countries and with varied career experiences. The format of the workshop is highly interactive with a combination of panel and small group discussion. Participation is limited; pre-registration through the PDW registration system is required.

Participation is limited; pre-registration is required. The registration deadline is Tuesday, June 29. To check availability and register, go to https://uic.ca1.qualtrics.com/jfe/form/SV_0uHe98fcY5rQTUG. For questions, contact the planning committee at hxu62@uic.edu.

Panelist: **Jane E. Dutton**, *U. of Michigan*
Panelist: **Kristin D. Neff**, *U. of Texas at Austin*
Panelist: **Christopher Germer**, *Harvard Medical School*
Panelist: **Yu Tse Heng**, *U. of Washington, Seattle*

This panel symposium brings leading self-compassion and organizational compassion scholars and practitioners into a conversation to explore how self-compassion could uniquely improve organizational functioning amidst current world challenges. Self-compassion – broadly defined as the compassion extended to oneself in instances of perceived inadequacy, failure, or suffering – has been proposed as an adaptive strategy for promoting well-being and positive psychological functioning, particularly in difficult times. Although prior work on self-compassion offers an essential first step toward understanding the potential benefits of self-compassion in the workplace, many organizational research opportunities have yet to be capitalized. The symposium will comprise a brief introduction to self-compassion and research related to key organizational constructs, a moderated discussion, and a question and answer session to facilitate connections and insights.

The Innovations in Teaching (Virtual) Teamwork PDW is a practical, highly interactive workshop designed for faculty and students who are interested in learning more about cutting edge tools and techniques for teaching others how to effectively lead teams. Given that many individuals spent the last year working, teaming, and teaching in virtual settings, the third iteration of this workshop will focus on teaching teaming in the virtual context. By virtual context we mean both: (1) creating learning experiences to accomplish teamwork-focused learning objectives when students are remote and interacting virtually, and (2) integrating learning objectives about remote collaboration into team and leadership courses. We have assembled a range of experts who will share how they adapted existing team lessons, activities, and resources into ones that can effectively be administered remotely as well novel ways they teach about the distinct features and implications of virtual teamwork. This workshop will remain faithful to its intent of helping translate the science of teams into actionable lessons that can be utilized by the AoM community and lending insights relevant to the unique circumstances in which much of teaming occurred in 2020. And, even once the recent global pandemic passes, the topics of this workshop will be beneficial to those, who by choice or by the nature of their position, will continue to work or teach remotely.

Categories and Valuation  
Categories and Valuation

Digital Session Chair: **Simon Friis**, *MIT Sloan School of Management*

OMT: **Strategy or Confusion? A Theory-of-Value Approach to Understanding Viable Combinations of Categories** 

Author: **Simon Friis**, *MIT Sloan School of Management*

How do categories constrain strategic choice and valuation? Early studies by economic sociologists and organizational theorists documented the tendency for audiences to penalize offerings that span multiple categories. Seeking to explain this seeming regularity, prototype theory cast the penalty as an invariant behavioral tendency. This explanation is problematic, however, because it is fundamentally unable to account for more recent findings that document premiums for category spanning. Nevertheless, prototype theory has persisted as a prominent theoretical foundation in the categories literature. In this paper, I develop and test the theory of value approach to categorization to understand why some combinations of categories are more valuable than others. I put forth a notion of categorical coherence that, unlike prior studies, focuses on conceptual coherence rather than how typical combinations are. I also devise a novel way of measuring conceptual coherence using word embedding models. I test my predictions using data from Twitch.tv, a leading video live streaming platform focused on video games. Preliminary results suggest that conceptual coherence is a key factor in understanding when category spanning will be valued or penalized.

Paper is NOT Available. Please contact the author(s).

OMT: **Audience Expertise and Category Distances: A Study in the Venture Capital Industry (2000-2017)** 

Author: **Arnaud Cudennec**, *Hong Kong Polytechnic U.*

In research on social evaluations and market categories, the extent to which audience members' expertise dimensions – breadth and depth – influence firm valuation has been largely ignored. Furthermore, category research has overlooked the consequences of the nested disposition of categories. Using a dataset of around 29,000 venture capital deals worldwide between 2000 and 2017, we address these gaps by examining the effect of investees' intra-category distance, beyond inter-category distance, as well as investors' expertise breadth and depth. Our findings provide evidence that both inter- and intra- category distances positively impact valuation as that those effects are contingent on investors' expertise breadth and depth. Our findings contribute to research on social evaluations and market categories.

Paper is NOT Available. Please contact the author(s).

OMT: **Two Similarities, One Firm Value: A Natural Language Processing Study of IPOs' First-Day Returns**

Author: **Paul Gouvard**, *USI (Lugano)*

Conflicting results tie audiences' valuations to firms' similarity to category prototypes or to outliers. Explanations of these results generally assume that prototypes and outliers have a strong weight in audiences' valuations although audiences may use them differently in different contexts. We challenge this assumption and propose that the weight of prototype similarity and outlier similarity in audiences' valuations is contingent on prototypes' and outliers' prominence in audiences' eyes in a given context. Prototype similarity plays a lesser role in audiences' valuation when specific knowledge rather than general knowledge is needed to value an entity. Outlier similarity plays a heavier role in audiences' valuations when recent trends in the market recall outliers' features to audiences. We measure prototype and outlier similarity by applying a natural language processing technique to 160,000 financial documents and test our hypotheses based on the first-day returns of 2,488 U.S. IPOs from 1996 to 2015. We find that firms with prototype similarity are less underpriced in low-tech industries, but that this effect disappears in high tech industries, where more specific knowledge is required to value any particular firm. Firms with outlier similarity are more underpriced, particularly during periods of hot IPO market, during which highly underpriced IPOs are recalled to investors. Our findings extend understandings of optimal distinctiveness, valuation, market categories, and computational approaches to strategy.

Paper is Available to Meeting Registrants Only.

OMT: **Being True and Good: Categorical Ambiguity and Experts as Authenticators** 

Author: **Arnaud Cudennec**, *Hong Kong Polytechnic U.*

This study aims at joining the literatures on categories and on social evaluations to study the consequences of ambiguity in both meaning ("what one is") and valence ("what one is worth") on market audiences' valuations. It offers a conceptual framework in which authenticity mediates the effects of meaning and valence ambiguities on valuation. Importantly, the paper argues that the demand for authenticity – and thus the sanction of meaning and valence ambiguities – varies with audience members' expertise. We then explore the cognitive and social determinants of the experts' judgments of ambiguity and authenticity. In doing so, this study offers contributions by combining the literatures of categorical ambiguity, authenticity and expertise.

Dark Sides: Deception and Lying

Deception and Lying

Digital Session Chair: **Lee Charles Jarvis**, *U. of Queensland*

OMT: **On bullshit: Lying as institutional work** 

Author: **Lee Charles Jarvis**, *U. of Queensland*
Author: **Elizabeth Goodrick**, *Florida Atlantic U.*
Author: **Bryant A. Hudson**, *IESEG School of Management*

With only a few exceptions, the institutional literature has yet to reckon with the ways in which deceptive statements can be leveraged to affect the higher order institutional dynamics. Responding to this gap, we theorize lying as a form of discursive institutional work strategically leveraged to variously maintain or disrupt institutional fields. To that end, we suggest that four distinct forms of lying (i.e., maintenance lies, defensive lies, noble lies, and demagogic lies) will be differentially likely to succeed in advancing the liar's preferred form of institutional work based on salient characteristics of the field the liar is embedded in. That is, we suggest that fields are characterized by differing degrees of truth regime fragmentation, or the fragmentation of various communities' more-or-less discrepant sets of normative rules for discerning what statements constitute lies and what consequences should apply to liars. Various degrees of truth regime fragmentation are said to differentially facilitate the success of maintenance, defensive, noble, and demagogic lies. In theorizing lying as a form of discursive institutional work, we contribute to both the institutional and social psychology literatures, most notably through attempting to explain one source of a salient contemporary "grand challenge," that being the degradation of political discourse in Western politics via the resort to deceit as a means of advancing political ideologies.

OMT: **Boeing's Jedi Mind Tricks: Discursive Framing and the Dark Side of Institutional Entrepreneurship**

Author: **Thomas John Fewer**, *PhD Candidate, Drexel U.*
Author: **Dali Ma**, *Drexel U.*

Winner of the Responsible Research Award

Although organizational studies have hinted at a dark side of institutional entrepreneurship, little is known about how actors creatively deceive regulative agencies in the pursuit of private interests. To unearth such deceptive strategies, we conduct a framing analysis of the discourses with respect to training certification of the Boeing 737 MAX aircraft. Our analysis reveals strategies used by Boeing employees to deceive the FAA and international aviation regulative bodies into accepting major flight software changes as only minor additions to the prior-generation aircraft. We also identify the microscopic strategies in preventing and suppressing resistance from within Boeing. The dark side of institutional entrepreneurship employed by Boeing employees ultimately contributed to technological catastrophes (i.e., Boeing 737 MAX crashes).

OMT: **Deceptive Recruitment: Fraud, Coalitions, and the Dark Side of Routines**  

Author: **Bryan Spencer**, *Frankfurt School of Finance & Management*
Author: **Claus Rerup**, *Frankfurt School of Finance & Management*

Investment fraud as a specific form of organizational misconduct has received significant attention from scholars over the years, yet little work has been done to unpack where these practices originate or how new participants are recruited. To address this, we develop an year-long case study of a distributed financial organization, "CTG," which conducted investment-related activities involving cryptocurrencies between August 2017 and August 2018. Applying a routine dynamics perspective, we explore how a secretive coalition uses deception and roleplay to recruit new members. In tracing the emergence of routines related to financial fraud, our analysis revealed actors whose roles shifted to enact the routines that had entrapped them, thus shifting from victims of investment fraud to transgressors.

OMT: **Rationalizing Torture through Professionalization and Scientization: CIA 'Enhanced' Interrogations** 

Author: **Moritz Gruban**, *U. of Lausanne, HEC Lausanne*
Author: **Patrick Haack**, *U. of Lausanne, HEC Lausanne*
Author: **Roy R. Suddaby**, *U. of Victoria*

In a seminal work Meyer and Rowan (1977) demonstrate how much of what appears to be efficient is merely the reproduction of widely held cultural expectations of efficiency. By couching behaviors in the dispassionate rhetoric of science and professionalism, practices drawn from long-standing traditions, myths and superstitions are made to appear rational, logical and progressive. We extend this reasoning with the observation that the language and practices of rationality can also be used to make immoral behaviors appear legitimate. We do so in a longitudinal analysis of the of torture in the Central Intelligence Agency after the terrorist attacks on the US on September 11. Drawing on rich archival data we show how practices of torture that violated long-standing international norms and firmly held moral standards of the US government were rationalized. We identify two clusters of practices by which this occurred; the professionalization of torture and the scientization of torture. In contrast to most studies of legitimacy, in which social practices are legitimated to external audiences, we focus on reflexive legitimacy, or the process by which social practices are legitimated internally.

Managing Through Algorithms and Metrics *Algorithms and Metrics*

Digital Session Chair: **Lindsey Cameron**, *The Wharton School, U. of Pennsylvania*

OMT: (Relative) Freedom in Algorithms: How Digital Platforms Repurpose Workplace Consent

Author: **Lindsey Cameron**, *The Wharton School, U. of Pennsylvania*

Finalist for the Louis R. Pondy Best Paper Based on a Dissertation Award

This research explores how the shift from human to algorithms as managers affects the nature of worker experience and autonomy, namely a new form of social relations of production. Drawing on a four-year qualitative study of the ride-hailing industry, I describe the experience of being managed by algorithms, conceptualizing the phenomenon of algorithmic work: a set of job-related activities that is constituted, to some extent, by a set of instructions programmed by a computer. I begin with describing how algorithm structure the work through managing the work process at multiple sites of human-algorithm interactions. While some research suggests that this introduction of algorithms creates a control system that snuffs out autonomy; I find the reconfiguration of the work process actually allows for more instances of worker autonomy. In algorithmic autonomy, workers have the ability to express autonomy at every interaction with the algorithm, ultimately producing consent to the work arrangement. However, in contrast to existing research on consent, I find that consent in the algorithmic workplace is more fragile in that consent must be constantly requested and obtained at each stage of the work process at every algorithmic interaction.

OMT: “Till Numbers Tear Us Apart” Measuring Practice and Common Grounds in Extreme Situations

Author: **Anouck Adrot**, *U. Paris-Dauphine, PSL Research U., DRM*

Author: **Isabelle Bouty**, *U. Paris-Dauphine, PSL Research U., DRM*

Author: **Alexis Tsoukias**, *U. Paris-Dauphine, PSL Research U., DRM*

There is a lack of knowledge on whether measuring can help multiple organizations build common grounds in extreme situations. This mixed-method research addresses this gap by approaching measuring as an organizational practice and focusing on measure interpretation and communication. It examines the evolution of measuring practice across 3 interrelated organizational systems during the first Covid wave in France. From press data and formal statements, we qualitatively coded 308 verbatims expressing measures related to masks management in the 27 first weeks of 2020. Thanks to data quantification and visualization, we identified four measuring practices: clarifying, putting on guard, enthusiastic tracking and accounting. Overall, the measuring practices diverged across the systems. Some systems, though, tended to partially converge at some periods. At others they tended to frame divergent if not dissonant representations of reality. These findings highlight measuring as a diversified and evolutive organizational practice in extreme situations. They contribute to the literature on extreme situation by nuancing commonly held conceptions of measuring and common grounds.

OMT: Smoothing the Demand for Water: How Scarcity Is Managed Through the Persuasive Use of Numbers

Author: **Virginia Leavell**, *UC Santa Barbara*

Organizations must manage the flow of resources in and out of the boundaries in order to survive. When resources become scarce, organizations can face operational problems. The problem of resource scarcity has produced a rich body of scholarship on what Thompson (1967) called ‘input transaction’ strategies. For some classes of organizations, however, input transaction strategies are not practicable because new resource inputs either do not exist or are prohibitively expensive or difficult to secure. Organizations that manage nature resources are one example of this kind of organization. By studying how a water utility manages scarcity by “smoothing” the demand for water, this paper contributes to the undertheorized “output transaction” side of Thompson’s original formulation of the scarcity problem. To reduce demand for what it produces, the organization in this study persuades customers to use less by quantitatively refracting water into different kinds of numbers: volume, money, and time. This paper additionally contributes to the sociology of quantification by studying the process of producing many numbers to describe a single phenomenon or object. By highlighting how quantitative refraction enables the collaborative management of a complex resource like water, this paper advances our understanding of scarcity, persuasion, and quantification in organizations.

OMT: Shifting Focus: Social Impact as Capitals Formation

Author: **Gorgi Krlev**, *U. of Heidelberg*

The emergent impact measurement literature grapples with the complexities of social impact. It was recently suggested that management research should turn to welfare economics for guidance. However, prominent conceptual approaches from welfare economics also face three fundamental problems: (1) measurement, (2) attribution, and (3) aggregation. I address these problems by combining the economics literature on productivity and the sociological literature on capitals to develop a capitals approach to social impact. The approach helps shift research to actual measurement of effects on target groups, and provides a framework for analyzing the reverse of positive impact, namely social problems such as inequality.

Teaching CSR, Ethics, and Sustainability Using Computer-based Business Simulations

SIM Computer-based Business Simulations

Organizer: **Jae Hwan Lee**, *Hamline U.*

Presenter: **Benjamin Nathan Alexander**, *California Polytechnic State U.*

The Social Issues in Management (SIM) Curriculum Development Committee (CDC) proposes a pedagogical Professional Development Workshop (PDW) that will introduce a variety of computer-based business simulations that management instructors can use to teach corporate social responsibility (CSR), ethics, and sustainability. In this PDW presenters will first share their favorite simulations and teaching tips, after which attendees will participate in breakout room discussions. At the end of the PDW, attendees will receive a teaching resource packet detailing each simulation's content and learning outcomes. The PDW does not require pre-registration and is open to all AOM members.

Around the world, researchers are engaged in exciting and innovative research projects on business strategy and policy. Unfortunately, many such researchers face various obstacles that prevent them from publishing in leading journals. This PDW has been designed to aid those researchers. A panel of editors from leading journals will provide insights into the requirements and submission processes of their journals, framing of research papers, demarcating contributions in the literature, and so on. Another panel comprising of scholars from various parts of the world will share their own successes and challenges, publishing strategies, and provide their own (un) successful experiences on journal publication. Finally, registered participants who submitted a working paper in advance will receive one-on-one feedback from facilitators on their manuscripts.

Leadership and Management in Public Service Organizations

Digital Session Chair: **Amy Fahy**, *Trinity Business School, Trinity College Dublin*

PNP: **Transformational Leadership and Work Alienation: Evidence from School Leaders**     

Author: **Amy Fahy**, *Trinity Business School, Trinity College Dublin*
Author: **Steven McCartney**, *Trinity College Dublin*

This study builds on and contributes to work in developing effective leadership in times of crisis. Although studies in leadership have examined organizational leadership during crises, few have explored how transformational leadership is effective for organizational changes and crisis-management. To address this issue, we propose two relational resources, namely employee trust and relational coordination, as mediators between transformational leadership and positive outcomes during a crisis. Using data from a unique sample of 634 leaders from Irish primary schools as they navigated through the COVID-19 crisis, this study analyses school principals' leadership on organizational performance and their work alienation via the relational resources. Structural equation modelling is employed to test hypotheses developed in this study. Mixed findings emerged concerning the mediating process of relational resources for the impact of transformational leadership on organizational performance and leaders' work-alienation. Implications are discussed.

PNP: **Supportive Leadership and Job Satisfaction at the European Court of Auditors**  

Author: **Timur Uman**, *Jönköping International Business School*
Author: **Daniela Argento**, *Kristianstad U. College*
Author: **Giuseppe Grossi**, *Kristianstad U. College*
Author: **Giorgia Mattei**, *U. Roma3*

This paper explores how supportive leadership influences communicative, collaborative and performance management practices and how these three practices, in turn, relate to the job satisfaction of public servants within the European Court of Auditors (ECA) context. Drawing on the person-organization fit and leadership behavior theories the study empirically tests a theoretically derived model of the direct and indirect effects of supportive leadership on employees' job satisfaction by considering the responses to a survey administered to the ECA staff. The findings of our study show that communicative and collaborative practices mediate the relationship between supportive leadership the job satisfaction of the ECA employees. In the case of performance management practices, instead, we find that, while supportive leadership has a positive relation with performance management practices, these practices have no significant relationship with job satisfaction. This study not only addresses the theoretical void in the field, but also provides an empirical contribution by describing how a professional public European audit institution is managing its human resources, and also highlights the means of doing it.

PNP: **Top Managers in Public Organizations: A Systematic Literature Review and Future Research Directions**  

Author: **Ting Huang**, *Aarhus U.*
Author: **Anders Ryom Villadsen**, *Aarhus U.*

This article synthesizes empirical research on top managers in public organizations. We present a systematic literature review of 138 studies focused on public sector top managers between 2005 and 2020. The paper provides descriptive results suggesting that the empirical focus on top managers in the public sector is increasing, though still limited compared to research on upper-echelons in private firms. We develop an empirically-based framework to guide the analysis by identifying essential elements of existing top management studies and linking them into relationships. Based on the findings of the analysis, we outline an agenda for future research on top management studies in the public sector that we call for more studies focusing on top management teams, psychological aspects of top managers, developing strong and unifying theories, and employing comparative research as well as diverse methodology.

PNP: **Hybrid Managers in Higher Education: Power, Identity and Challenges**

Author: **Alexandra Budjanovcanin**, *King's College London*
Author: **Fiona Denney**, *Brunel Business School*

In higher education institutions, like in other professional bureaucracies and public organisations, the hybrid-manager role is the link between professionals and management and is responsible for helping deliver organisational strategy. Hybrid-managers are characterised by their straddling of the managerial and professional roles – deemed to face particular challenges associated with identity conflict. However, a more nuanced examination of their role and its enactment, that goes beyond identity conflict, has been called for – especially outside of the healthcare context. This paper reports the emerging findings of a pilot study on Heads of Department – a classic hybrid-manager role in UK universities. Drawing on in-depth interviews, the emerging findings highlight the different ways in which academic hybrid-managers navigate their two worlds – shunning or integrating them to varying extents - and the reasons for this. The findings also start to uncover the ways in which power is perceived in the role, with a view to better understanding how different types of academic hybrid-manager employ power for different ends – contributing to our understanding of the effectiveness of academic hybrid-managers and more widely, for improving the effectiveness of public organisations.

Presenter: **Daniel Ames**, *Columbia Business School*

Negotiation is a fundamental interpersonal tool and managerial skill, through which individuals and groups obtain some of their most consequential outcomes. Developing a deeper understanding of negotiation behavior involves understanding both the mechanics of negotiation – which strategies are effective and what negotiators expect – and the broader context in which the negotiation occurs. The papers in this symposium investigate individual differences and group-level differences in negotiators' expectations, the negotiation process, and negotiators' subsequent outcomes. We present novel research studies with field and experimental data and qualitative investigations that describe how negotiators' individual characteristics (e.g., personality, gender, and minority status) and the negotiation context (e.g., importance of issues or relationships, stereotype congruence) impacts negotiators' expectations, behavior, and outcomes. This set of research papers provides a broad perspective on how factors outside the negotiation table shape negotiators' expectations, the negotiation process itself, and the consequences for negotiators' expectations and their long-term, post-negotiation outcomes.

Diversity, Equity, and Inclusion (DEI) affect outcomes at the individual, team, and organizational levels. In this symposium, we highlight an emerging area of diversity research on within-group differences, bringing together a set of five (student-led) within-social-group differences papers, including empirical studies (lab and field) as well as theoretical development (including propositions). Following the presentations, Dr. Tracy Dumas, a leading scholar in the study of DEI will facilitate a group discussion about these papers and future research on DEI in organizations.

Discrimination and Bias Practices at Work

Digital Session Chair: **Elisabeth K. Kelan**, *U. of Essex, Essex Business School*

GDO: **Algorithmic inclusion: Shaping artificial intelligence in hiring**   

Author: **Elisabeth K. Kelan**, *U. of Essex, Essex Business School*

Carolyn Dexter Award Nominee

It is often claimed that increased use of artificial intelligence (AI) in the hiring process reduces the human bias that has long plagued recruitment; nevertheless, the datasets used for machine learning may replicate and amplify such bias. This article goes beyond claims that AI enables human bias-free hiring and that datasets are the only source of bias, to show that the entire machine-learning process may be subject to bias, creating new forms of exclusion. It reveals how inclusion can be created by design. The article is conceptual, in that it reviews how exclusion and inclusion are created in hiring, before proposing new avenues for HR research. It develops the concept of algorithmic inclusion, and thus contributes to understanding how AI in hiring is both shaped by and shapes society. It suggests that HR researchers and practitioners must be involved in AI design and implementation processes.

Paper is NOT Available. Please contact the author(s).

GDO: **Diversity for Tokenism? Moderating Effect of Fairness on Token-Gender and Workplace Discrimination** 

Author: **Eun-Ji Oh**, *Sungkyunkwan U.*

Based on tokenism theory, this study investigates how employees' experience of workplace discrimination differs in settings of employee gender status in specific gender dominated or gender diversified jobs. We also examine whether the effect of the employee gender status such as minority or diversity status (e.g., minority status: female employee in male-dominated jobs) on workplace discrimination is influenced by organizational fairness. Using a dataset of 23,474 employees, we find that female employees who work in a male-dominated (minority status) and gender-diversified (neutral status) jobs have greater experiences for workplace discrimination, while male employees who work in the female-dominated jobs tend to have less workplace discrimination. In addition, our findings show that female employees who work in male-dominated jobs have lower workplace discrimination when they work in organizations with greater fairness. Our study contributes to literature on gender diversity and gender minority by demonstrating tokenism of gender diversity and the role of organizational fairness.

GDO: **An Experience-Sampling Investigation of Attributions and Outcomes of Workplace Discrimination**  

Author: **Samantha Dodson**, *U. of Utah, David Eccles School of Business*
Author: **Rachael Goodwin**, *Syracuse U. Whitman School of Management*
Author: **Wilhelm Hofmann**, *Ruhr U. Bochum*
Author: **Jesse Graham**, *U. of Utah, David Eccles School of Business*

Modern workplace discrimination – low-level, subtle behaviors that isolate or handicap others – is on the rise, bearing negative consequences for employees' well-being. Despite a large literature focused on identifying subtle discriminatory behaviors and the associated outcomes, theory and empirical tests involving dynamic, within-person processes associated with these negative behaviors is limited. Drawing from attribution theory, we test how experiencing modern workplace discrimination differentially affects negative outcomes via attributed locus of causality. Using an experience sampling design across a five-day period, we found that individuals who experienced modern workplace discrimination behaviors at work were more likely to make external, rather than internal, blame attributions. Further, internal attributions were associated with decreased state self-esteem, whereas external attributions were associated with decreased state job satisfaction. Moreover, women in our sample reported a greater number of discriminatory experiences and were more likely than men to attribute those experiences to the prejudice of others. Combined, our results yield multiple theoretical, empirical, and practical implications for the study of modern workplace discrimination.

Paper is Available to Meeting Registrants Only.

 GDO: **What Counts as Discrimination? How Principles of Merit Shape Fairness of Demographic Decisions**  

Author: **Teodora Tomova**, *NYU Stern*
Author: **L Taylor Phillips**, *NYU Stern*

Demographic attributes (age, disability) frequently affect people's selection decisions. We provide a novel perspective as to why such discrimination persists: meritocratic principles lead people to perceive some demographic attributes as fair to use, rather than as discriminatory. Specifically, we theorize that meritocracy requires that relevant and controllable inputs determine outcomes. We therefore suggest that perceived relevance and controllability affect the degree to which demographic attributes are perceived as fair to use. Moreover, we suggest perceived relevance outweighs controllability, such that even uncontrollable attributes can be perceived as fair criteria if perceived to be outcome relevant. In two qualitative studies, we probed how people think about demographic attributes used in selection (Studies 1a-b). We find that people largely associate irrelevant, uncontrollable attributes with discrimination (race, gender), neglecting attributes they perceive as controllable and/or relevant (age, disability, caregiving-status). Further, people refer to control and relevance dimensions to justify their perceptions. Next, a quantitative approach (pre-registered Study 2) supports our theorizing that perceived relevance impacts fairness perceptions more strongly than perceived controllability. In a pre-registered experiment (Study 3), we again find that perceived relevance has a stronger effect than controllability on perceived fairness, which in turn affects selection behaviors, including seeking information regarding demographic attributes during hiring. Finally, Study 4 shows that perceptions of relevance, controllability, and employer's use of demographic attributes in selection together impact employee's psychological safety and job satisfaction. Overall, principles of merit lead people to believe that even some legally protected demographic attributes are fair to use, allowing discrimination to persist.

Author: **Xabier Barriola**, *IESE Business School*

While there is research on the effect of ideology on organizational hiring, much of that research treats this interaction as a uniform response at the broad organizational level stemming from ideological actions. By treating ideology as a construct that is equally salient across all situations, rather than examining in which situations it is most salient, management scholars miss important organization insights. One such example of ideological salience is the hiring and retention of a marginal employee in an organization, in which performance criteria are less important than supervisor discretion. This paper demonstrates that teams owned by Republican NBA owners will hire marginal white players over and beyond what performance differences would suggest. This has important implications for organizational scholars, since these hiring differences cannot be resolved through market forces if it is owners themselves that have such an outsized effect.

As in organizational life, there are numerous barriers that detriment female scholars in academia generally and in the field of organizational sciences, specifically. Indeed, akin to the 'glass ceiling' phenomenon within organizations, women in academia suffer from similar gender inequities (e.g., field-level structural barriers, lack of organizational support, social support concerns, and limited allyship). As such, the aim of the proposed professional development workshop (PDW) is to apply findings from organizational scholarship to the field of academia, shedding light on the challenges that female scholars face in our field and generating ideas for structural changes that can help women overcome some of these barriers. This session invites leading female and male scholars to apply insights from their own, and others', research on gender and organizational bias to the field of management. The panelist presentations will be followed by breakout sessions where participants are able to have open conversations with the panelists and engage in a discussion of possible solutions to the barriers women face. Combined, this PDW seeks to broaden our understanding of women's experiences in the Academy, and find solutions to better meet the needs of female scholars and facilitate their success in the field.

The Iberoamerican Academy of Management (IAM) and Management Research: The Official Journal of IAM (MRJIAM) invited Iberoamerican scholars and students interested in conducting research in the 17 Sustainable Development Goals (SDGs) enacted by the United Nations in 2015. We hope to gather at the next Academy of Management conference to discuss how Iberoamerican scholars may contribute solutions to achieving these goals. Scholars around the world have joined this effort by calling for research and for providing evidence-based management studies and guidance to leaders on how to tackle the 17 SDGs. IAM and MRJIAM would like to join this remarkable effort and turn our work into actionable and responsible research insights with a view to tackling some of the biggest challenges of our lifetime.

For more information about this session contact Fernanda Wagstaff at fwagstaff@utep.edu.

Migrants and Geopolitics

Digital Session Chair: **Kira Haensel**, *Florida Int'l U.*

This session features three papers addressing various aspects of global migration, along with a fourth examining geopolitical issues related to economic sanctions during the COVID-19 pandemic.

IM: HRM practices that boost successful integration of migrants

Author: **Nicole Richter**, *U. of Southern Denmark*
Author: **Sven Hauff**, *Helmut Schmidt U.*

Building on strategic HRM literature and the concept of well-being-oriented HRM, we analyze how firms can contribute to the successful integration of international migrants into the workplace. We identify HRM practices and sets of HRM practices that collectively form what we call a migrant-supporting HRM system. Based on data from self-initiated international migrants in Germany, we analyze the associations between this HRM system and cross-cultural adjustment, affective commitment and job performance. Our findings confirm the predictive validity and relevance of our migrant-supporting HRM system. Moreover, our results point to three salient sets of HRM practices, namely the provision of engaging work, organizational support and a positive organizational environment. Within these sets, we identify best practices that contribute most to the successful integration of international migrants.

IM: Addressing the Elephant in the Room: Migration and its Implications for Business School Teaching

Author: **Aida Hajro**, *WU Vienna U. of Economics and Business*
Author: **Milda Zilinskaite**, *WU Vienna U. of Economics and Business*
Author: **Paul Baldassari**, *WU Vienna U. of Economics and Business*

Migration is a pressing global phenomenon, interconnected with human rights, sustainability, economic development, and geopolitics. It has important implications for the activities, strategies, structures, and decision-making processes of firms. Yet despite its undeniable impact on management, migration has been all-but ignored in business school teaching curricula. In this essay, we seek to make two contributions. First, we clarify the grounds for integrating migration issues into management education. Second, we delineate how to achieve this. Specifically, we suggest that teaching migration as a threshold concept can provide a way to reshape students' ways of thinking about the complex and often paradoxical relationships between corporations, nation states, intergovernmental organizations, civil society, and industry. We highlight the core characteristics of this approach and provide insights into the less discussed pedagogical potential of unbounded threshold concepts.

Paper is Available to Meeting Registrants Only.

IM: Global Migration: Implications for International Business Scholarship

Author: **Aida Hajro**, *WU Vienna U. of Economics and Business*
Author: **Chris Brewster**, *Henley Business School, U. of Reading*
Author: **Washika Haak-Saheem**, *Henley Business School, U. of Reading*
Author: **Michael J. Morley**, *U. of Limerick*

Migration is increasingly viewed as a high-priority policy issue among politicians, intergovernmental organizations, NGOs and civil society throughout the world. Its implications for the private sector, for economic prosperity and for the cross-border activities of firms are undeniable and will remain a top priority for the foreseeable future. Yet despite its relevance to International Business (IB), migration has been subject to only limited discussion in the mainstream IB literature. In this contribution, we examine key aspects of migration germane to IB. In particular, we suggest that recent migratory shifts are transforming important elements of the context within which multinational enterprises (MNEs) operate with significant implications for the international human resource management practices of MNEs, for the way cross-border activities of firms are managed, and for the manner in which international strategies are formulated and implemented. We offer a research agenda to motivate IB scholars to study global migration in more depth and reevaluate the generalizability of aspects of their theories in light of developments in global migration.

IM: Internalizing External Conflicts: Thick Skin in the Face of Economic Sanctions and a Pandemic

Author: **Monica Sharif**, *California State U., Los Angeles*
Author: **Farshad Ghodoosi**, *California State U. Northridge*

Economic sanctions regimes have played and continue to play a significant role in the geopolitics of recent years. Sanctions are designed to punish by isolation, economic pressure, and severe trade and service restrictions. This research presents a case for the importance of examining the role of economic sanctions for organizations, particularly employee behavior. Borrowing from the literature in international relations, international law, and political science, the paper provides background regarding how economic sanctions actually work in international relations. It analyzes the micro impact of economic sanctions as it creates ontological insecurity for the target population. The paper utilizes novel data from sanctioned and non-sanctioned countries during the Covid-19 pandemic. The results indicate significant differences in performance, work engagement, ethical behavior, affect, and work climate. Specifically, individuals from the sanctioned country, compared to individuals from non-sanctioned countries, demonstrated more resiliency during distress. Despite a harsher work environment, they demonstrated less negative emotions, more ethical behavior, better work engagement, and consistent performance. The paper concludes by furnishing a new theory—ontological resiliency—and proposing new solutions to the underlying problem of lack of resiliency.

Political Institutions and International Management

Digital Session Chair: **Elise Goiseau**, *Excelia Business School, CERIM & CeReGe*

This session addresses the importance of political institutions in international management. Papers examine external institutional dynamics during the Arab Spring, pro-market reforms, national culture, and internationalization, using a dynamic factor analysis methodology to model a country's political environment, and how theoretical mechanisms across country-, firm-, and executive-levels of analysis affect firms' disclosures of political orientations.

IM: External dynamics during the Arab Spring: Institutional duality in dynamic external environments

Author: **Evelyn Reithofer**, *WirtschaftsU. Wien*
Author: **Vera Kunczer**, *WU Vienna*
Author: **Jonas F. Puck**, *WU Vienna*
Author: **Jakob Lengauer**, *WirtschaftsU. Wien*

External dynamics have the potential of unforeseeably and drastically changing market conditions and bear great risks and uncertainty. In this case study on the Arab Spring, we explore the effects of external dynamics on institutional duality, i.e., institutional pressures that foreign subsidiaries are confronted with through headquarters (internal) and host country environments (external). Based on an analysis of a European water boiler manufacturer with a production site in Egypt, we analyze institutional pressures before and during the Arab Spring as well as foreign subsidiary and MNE HQ reactions to changed external pressures. We find that external pressures and uncertainty increase in a situation of external dynamics, leading to higher internal pressures. However, MNE HQs decrease internal pressures exerted on subsidiaries if HQs trust subsidiary control mechanisms. Moreover, subsidiaries can influence internal pressures by constructing their internal legitimacy. Our observation of a direct relationship between external and internal pressures and of subsidiary and HQ responses to institutional duality in a dynamic environment represent important contributions to institutional duality literature.

IM: Pro-market reforms, national culture, and internationalization: A cross-country analysis of EEFs

Author: **Rajnish Rai**, *Indian Institute of Management, Ahmedabad*
Author: **Mitul Surana**, *Indian Institute of Management, Indore*

This study contributes to the institution-based view of the firm by examining how informal institutions influence the relationship between pro-market reforms and the degree of internationalization of emerging economy firms. We posit that firms' response to pro-market reforms depends upon the national culture they are embedded in. Specifically, we conjecture that the two dimensions of national culture — uncertainty avoidance and individualism — shape firms' perceptions of pro-market reforms, thus impacting the relationship between pro-market reforms and firm internationalization. Using a sample of 44,119 firm-year observations for 6,449 unique firms across 30 emerging economies between 1996 and 2018, our findings show that pro-market reforms have a positive effect on firm internationalization, but this effect is weaker in more uncertainty avoiding cultures and stronger in more individualistic cultures. Our study provides valuable insight into how national culture can shape the internationalization of firms and has useful theoretical and policy implications.

IM: Who wants to talk politics? How multi-mechanisms affect firms' disclosure of political orientation

Author: **Jing Li**, *Simon Fraser U.*
Author: **Jun Xia**, *U. of Texas at Dallas*
Author: **Edward J. Zajac**, *Northwestern U.*
Author: **Zhouyu Lin**, *Jinan U.*

This study analyzes how the interplay of economic and political interests across countries, firms, and senior executives affects the propensity of firms' disclosing a political orientation. Specifically, we develop and test an integrative theoretical framework that considers how three complementary theoretical mechanisms across country-, firm-, and executive-levels of analysis simultaneously predict which firms are more likely to talk politics versus remain silent. We find support for our framework using Chinese publicly listed firms' response to a home government policy. We conclude with a discussion of how our multi-level and multi-mechanism approach and our supportive findings could inform future research on corporate political behavior.

Paper is Available to Meeting Registrants Only.

IM: Modeling A Country's Political Environment: An Application Of Dynamic Factor Analysis Methodology

Author: **Tatiana Vashchilko (Lukoianova)**, *Haskayne School of Business, U. of Calgary*
Author: **James Agarwal**, *Haskayne School of Business, U. of Calgary*
Author: **Oleksiy Osiyevskyy**, *U. of Calgary*

Political uncertainty generates non-trivial costs for business, resulting in suboptimal decision-making and suppression of economic activity. Decreasing political uncertainty and attaining greater accuracy in risk analysis of a country's political environment remain a challenge. Our research attempts to fill this gap by: (1) redirecting scholarly attention from the questions of what and why to how political uncertainty and risks can be identified and assessed by (1) offering a process-based theoretical framework of a country's political environment; and (2) proposing a new methodological framework based on Dynamic Factor Analysis (DFA) to estimate the dynamic structure of a country's political environment. To demonstrate the application of this methodology, we analyze Brazil's political environment for the period 1984-2018 using monthly political risk time-series data. Specifically, we demonstrate how the results of the DFA methodology allow us in evaluating the characteristics of the country's political environment, in terms of: (1) complexity of the political environment, (2) potency (or importance) of the drivers and dimensions of political environment; (3) stability of political environment, and (4) nomological validity of the model. The paper ends by mapping Brazil's historical political environment with our empirical results and focusing on the methodological challenges and opportunities of using DFA.

The world has never been in a greater state of flux. The prevailing perspective of the past three decades—globalization—is undergoing a tectonic shift, notably exemplified with the retreat of multinational corporations and shrinking international interactions. We have embarked on a new dawn of global sluggishness, or “slowbalization,” which is influencing every aspect of IB with increasing geographical fragmentation and deeper links within regional blocs. In essence, IB is dominating the conversation around the world. In this PDW, we bring together the best and brightest young minds—those whom our domain proudly calls our emerging scholars—to discuss the changing dynamics of IB and converse on some of the most relevant topics of the day. This workshop provides an opportunity to convene all seven recipients of the FIU Emerging Scholar Award, together with the field’s most distinguished IB scholar, Journal of International Business Studies Editor-in-Chief Alain Verbeke, to share their takes on current issues in an IB-dominated time and their experiences in navigating an impactful research career. This workshop is of great interest to every scholar, especially junior scholars and doctoral students. Our panelists will provide state-of-the-world insights and commentaries on the most important IB issues that will provide participants with real-time insights on how to traverse a clear path of understanding on complex phenomenon and how to successfully build an impactful research career.

There is a need for improving scientific observation in the field of Management Consulting. Like in medical research, rigorous scientific research methods are required to carry out experiments and develop impactful treatments to heal from dysfunctions and foster sustainable company performances. The objective of this PDW is two-fold: - Mapping out various approaches to the field of scientific Management Consulting, including ethnostatistics, , - Illustrating the qualimetric intervention-research as a research method applied to Management Consulting.

**Creativity in Online Teaching Re-designing Strategies to
Enhance Students' Engagement & Performance**
More Creativity in Online Teaching for Students

Host: **Andrea Honal**, *Duale Hochschule Baden-Württemberg, Mannheim*
Presenter: **Kumaran Rajaram**, *Nanyang Technological U.*
Presenter: **Volker M. Rundshagen**, *U. of Applied Sciences Stralsund*

Education is evolving at a faster pace than in the last decades. It's very important to understand how and where it's changing so that educators and higher education institutions can support students in preparing for new challenges. Technology rapidly changes the workplace and the demanded skill-sets for employees within a short period. Normally, education systems are very slow in adapting to these new circumstances. Traditionally, students are expected to learn what is taught, and what is taught is expected to increase students' skills and abilities proficiently and sufficiently for them to contribute meaningfully in their future work. But during the COVID-19 crisis, the whole higher education system has changed. Educators and students have transitioned to online instruction with varying levels of success. Learners discovered that it was more difficult to learn virtually when normal classroom interaction is not available. Moreover, it was hard for educators to observe students who may be struggling with mental health issues in an online learning environment and they could not provide real-time assistance. Thus, a lot of universities have to re-think their online teaching approaches to guarantee that students have a positive online learning experience. Digital technologies and innovative approaches provide new changes to train the required skills interactively, and across international boundaries, not only during the COVID-19. Therefore, new ideas and a broader view on education are needed to implement more creativity into online-courses – not only during the COVID-19 pandemic – but also beyond. Thus, the goal of this online PDW is to showcase different approaches to teach online in a more creative way to increase the students' engagement and outcomes.

Presenter: **Tim Hargrave**, *Central Washington U.*
Presenter: **Raghu Garud**, *Pennsylvania State U.*

This Professional Development Workshop (PDW) on New Perspectives of Organization Change Processes gives scholars and practitioners an opportunity to learn about and engage with the latest research on organization change processes. More specifically, this PDW focusses on processes of change, or the sequence of events in which organizational characteristics and activities change and develop over time, and the factors that influence these processes. The PDW is organized around themes from the 2nd edition of the Oxford Handbook of Organization Change and Innovation (forthcoming 2021). The PDW aims to expand participants' perspectives and develop new ways to think about organization change processes based on teleology models of change, life cycle and discontinuous models of change, evolutionary models of change, dialectical models of change, and hybrid models of change. The format of the PDW consists of impulse presentations by authors of selected chapters of the Oxford Handbook, small group breakouts which are facilitated by the presenters, and a plenary panel session of questions and issues raised in group breakouts.

Panelist: **Amit Nigam**, *City U. London*

Given the increasing prevalence of expert occupational and professional groups working inside organizations, this workshop seeks to explore new directions in research at the intersection of occupations and professions in organizations. To accomplish this, we will bring together leading scholars with participants in an interactive format to advance perspectives on this growing area of management research. The goals of this professional development workshop are three-fold: (1) provide contemporary perspectives on occupations and professions in organizations; (2) develop new research at the cutting-edge of this occupational turn in organizational and management scholarship; and (3) build a community of scholars who are engaged in theoretical and empirical research on occupations and professions. Through presentations from senior scholars, interactive panel discussions, and roundtable virtual breakouts where faculty and PhD students can receive feedback on ongoing research projects on occupations and professions, we seek to advance scholarship in this important area while simultaneously building community.

Organizational Stigmatization   
Organizational Stigmatization

Digital Session Chair: **Rongrong Zhang**, *U. of Alberta*

OMT: **How Do Moral Emotions Affect an Industrial Stigma Spillover?**  

Author: **Rongrong Zhang**, *U. of Alberta*
Author: **David Deephouse**, *U. of Alberta*

Scholars using a cognitive view to study industrial stigma spillover posit that as long as an innocent firm is similar to a perpetrator firm for a negative event, stigma spillover will happen. This view ignores the role of moral emotions. We address this limitation by conducting a mixed-methods study. We used an exploratory qualitative study of the Chinese infant formula industry to identify important moral emotions in an industrial stigma spillover. Building on insights from the qualitative study, we designed an experimental study of a 5G data security scandal. We found that positive moral emotions expressed by the perpetrator firm before a negative event shield innocent firms from stigma spillover, even when they are similar to the perpetrator.

 OMT: **Shelter or Ghetto? Stigmatization and the Narrative Around the Creation of a LGBT Retirement Home**

Author: **Romain Vacquier**, *PSL, U. of Paris, Dauphine, DRM, Management & Organisation*
Author: **Bryant A. Hudson**, *IÉSEG School of Management*

Organizations can emerge to help the stigmatized manage the negative consequences of the label they experience. We, however, know very little about how they can achieve such work. We argue those organizations have to navigate between addressing their members' needs while at the same time managing the expectations of their external audiences. External audiences may reject those organizations for affiliating themselves with the stigmatized. The stigmatized internal audiences can disagree with the way the organization portrays them. We took a narrative approach to understand how those organizations manage this tension in the wake of their emergence. To empirically explore this question, we conducted a longitudinal qualitative study of a project of retirement home dedicated to LGBT elders in France. We describe how this organization built an organizational narrative to balance the tension between its internal and external audiences. Our study makes three contributions. First, it reveals the cultural-political embeddedness of stigma when the stigmatized try to manage its consequences through mediating organizations. We also show this attempt may constitute a reflexive experience for the stigmatized. We finally show that organizational narratives constitute a critical transactional instrument to negotiate meaning between divergent expectations of audiences.

Paper is Available to Meeting Registrants Only.

OMT: **Scandal, Ideology, and Stigma**

Author: **Yasir Dewan**, *HEC Paris*
Author: **Tal Simons**, *Erasmus U. Rotterdam*

This study focuses on event-based organizational stigma during scandals through an inductive, multiple-case research design. Focusing empirically on the stigmatization by newspapers during scandals that occurred in the US, we theorize that event-based organizational stigma is an outcome of a competition between the newspapers to stigmatize or destigmatize an organization. Stigmatization of organizations does not take place primarily because of their culpability but rather due to their ideological characterization. Specifically, organizations are more likely to be stigmatized when they have a negative characterization based on the focal newspapers' ideology. Conversely, organizations are more likely to be destigmatized when they have a positive or neutral characterization based on the newspapers' ideology. By highlighting the role of ideology in determining organizational stigma during scandals, we advance the understanding of the sources of organizational stigma as well as demonstrate the role of audience heterogeneity in organizational social evaluations.

Paper is Available to Meeting Registrants Only.

OMT: **The Positive Effect of Stigmatization in the TV Show Industry** 

Author: **Blanca Moriyon**, *Department of Business Administration. U. Carlos III de Madrid*

Existing academic literature on product stigma is primarily concerned with proving all the negative effects stigmatization can bring to the products it impacts given the feelings of fear and embarrassment it enhances in social spheres. Previous literature also provides insights to how stigma can be transferred: from organizations to individuals and amongst individuals themselves. This paper brings light to the possibility that stigma also has the ability to transfer from individuals to products to which they are closely related and that it can also affect product performance in a positive way. Using a dataset of TV shows aired in the US for fourteen years (1953 to 1966), we prove that, when we eliminate the fear of association to the stigmatized product, by looking at a product consumed in private, the impact of stigma may affect positively the performance of the product. Using regression analysis, the results obtained prove that when stigma transfers to a TV show, there is a positive impact in the likeability of the show leading to an increase in the ratings given by the audience to it. Important implications for research on stigma and social evaluation are drawn.

Circular economy: Choices, decisions and trade-offs

Digital Session Chair: **Fatima Khitous**, *U. of Oulu Business School*

ONE: A Choice-Based Conjoint Analysis on Customer Engagement During the Transition to Circular Economy

Author: **Fatima Khitous**, *U. of Oulu Business School*
Author: **Annabelle Depuydt**, *Ghent U.*
Author: **Andrea Urbinati**, *LIUC U. Cattaneo, Castellanza (VA), Italy*
Author: **Katrien Verleye**, *Ghent U.*

The fashion industry, amid its highest growth and prosperity, stands amongst the most polluting and socially abusive industries. To curtail these trends, the research stream of circular business models (CBMs) recently emerged as a new one to focus on the preservation of resources and/ or promoting societal wellbeing through slowing and closing material loops. As the success of CBMs also relies on customer engagement, which still remains an under-researched area, this paper aims to unearth the relative importance of circularity and customers' willingness-to-pay for each selected attribute. Based upon a choice-based conjoint analysis (n=365), this paper shows that circularity is an important attribute for engaging customers, followed by price, quality, and brand. Interestingly, higher levels of circularity go along with a lower customer engagement and a lower willingness-to-pay, if customers are neither incentivized (e.g., through discount initiatives) nor educated (through awareness raising activities) towards the purchase of circular products.

Paper is Available to Meeting Registrants Only.

Author: **Justina Banioniene**, *Lecturer*

The circular economy prevails with the belief that being environmentally sustainable leads to better financial results and may reinforce the tension between business demands and social expectations. The paper seeks to get a deeper understanding about manufacturing companies' motivations and decision-making logics for the transition to the circular economy. The research is exploratory by obtaining an inductive approach and interpretive perspective and by using interview method including different types of organizations such as manufacturing companies, international environmental associations, and public organizations. We identified the most important motivating and non-motivating drivers for shifting to the circular economy. What is more, the results showed how these drivers are connected and lead to the decision making to shift to the circular economy by determining three types of decision-making logics, such as institutional, instrumental, and integrative. Integrating the circular economy principles within the business performance is a challenge, and we also identified paradoxical tensions, namely leadership versus copying, long versus short run, integrated versus isolated activities, product versus waste management.

ONE: Understanding Circular Economy Trade-offs

Author: **Enes Ünal**, *Cranfield U.*
Author: **Vikash Kumar Sinha**, *Aalto U. School of Business*

With the increasing number of firms transitioning towards a circular economy, the theoretical and practical understanding of sustainability has been changing in depth and scope. This transition has fundamentally changed the way firms make sustainability trade-offs. The extant literature on trade-offs tends to focus on established incumbent firms that predominantly indulge in market-oriented decisions where economic priorities drive the deployment of scarce resources to "other" sustainability dimensions. In contrast to a market-oriented understanding, emerging studies on highly committed firms have demonstrated the importance of nonmarket-based factors that bolster the social, environmental, and political standings of firms. Such studies have cast doubts on our current understanding of the trade-off between different dimensions of sustainability. Aiming to inform the sustainability trade-off literature, we carried out a mixed-method study to explicate the rationale and dynamics of sustainability trade-offs.

Sustainable Business Models

Digital Session Chair: **Cristina Neesham**, *Newcastle U.*

ONE: Defining Value in Sustainable Business Models

Author: **Cristina Neesham**, *Newcastle U.*
Author: **Krzysztof Dembek**, *U. of Melbourne*
Author: **Julia Benkert**, *Swinburne Business School, Swinburne U. of Technology*

The aim to deliver multiple forms of value to a variety of stakeholders distinguishes sustainable business models (SBMs) from other types of business models. However, despite being central to defining SBMs, value itself is seldom defined. We argue that explicit definitions of value are necessary in each SBM research context, to advance theorizing and methodological rigour. Our findings from a four-stage study offer guidance for developing good definitions of value in SBMs. Firstly, our systematic literature review reveals that value is used in many different contexts with different implicit meanings, in a black-box approach that defines SBMs without defining value. Secondly, drawing on philosophical methodology literature, we identify criteria for valid and operational definitions. Thirdly, we apply these criteria to identify prevalent issues within existing attempts at defining value in SBM – including circularity, ambiguity, and vagueness. Based on our conclusion that the value concept may be a ‘real vague’ which can never be precisely or completely defined, we emphasize the need for SBM researchers to explicitly define value in each research context. Finally, we provide an analytical framework to guide the development of good definitions of value in SBMs, and suggestions for further research into SBM theorizing methodology.

ONE: The Effect of Firm Expansion in Sustainable Business on Incumbent Product Evaluation

Author: **Xuege (Cathy) Lu**, *Cornell U.*

Despite a rising number of firms expanding into market categories with sustainable benefits, we know little about how it affects incumbent market audience. In this study, I explore the extent to which firm expansion in sustainable business may improve consumer evaluation on incumbent products. In particular, I highlight the enhancement effect of prosocial signaling through which firms emphasize their prosocial intention during such expansion. I argue that prosocial signaling has a stronger effect on well-known firms compared to their less-known counterparts, especially when quality perception on incumbent products is low. Using empirical context of the US lightbulb market, I find strong support that salient prosocial signals improve rating on traditional lightbulbs when firms expand their business into energy-saving lightbulbs; this is especially true for brick-or-mortar retailers and when prior product ratings are poor. This study provides one of the first evidence that indicates the benefits of sustainable market expansion on incumbent products. I contribute to research in corporate prosocial engagement, as well as nascent scholarship on the value-laden nature of market category.

ONE: Broadening our Understanding of ASMSustainability Complexity: A Systems Thinking Lense

Author: **Gift Garikai Dembetembe**, *PhD Candidate, U. of St. Gallen*

Artisanal and Small-Scale Mining (ASM) is apparently an important, growing component of the global economy. This industry creates livelihoods for people with limited alternative income generating opportunities and has the potential to retain a large share of generated wealth in the national economies where it exists. However, ASM has potential negative social and environmental impacts that are quite significant. This combination of characteristics makes ASM a complex system whose efficient regulation requires more than event-oriented policy interventions, but regulatory moves informed by holistic and systemic views. Regulatory history in ASM has shown that each time politicians and regulators attempt to proffer well intentioned interventions, unintended consequences are often the result. This study attempts to amplify the relevance of applying systems thinking tools in improving our understanding of ASM sustainability. The enhanced understanding brought about by a model-based-systems thinking approach applied in this study, will hopefully, aid policy makers, regulators, civil society groups and other stakeholders to adopt a holistic approach in fostering sustainable development in ASM.

I-deals & Career Management: Conceptual Issues and Applications

I-deals and Career Management

Organizer: **Maria Simosi**, *Royal Holloway, U. of London*
Organizer: **Denise M. Rousseau**, *Carnegie Mellon U.*
Panelist: **Maryam Aldossari**, *U. of Edinburgh*
Panelist: **Matthijs Bal**, *U. of Bath*

Panelist: **Smriti Anand**, *Illinois Institute of Technology Stuart School of Business*
Panelist: **Maria Tomprou**, *Carnegie Mellon U.*

I-deals refer to customized employment conditions negotiated between an employee and the employer, ranging from small adjustments to completely individualized arrangements. Employees often use i-deals in their attempt to improve the intrinsic work-related motivation, create their work-life balance and promote professional advancement. Scholars have noted positive effects and possible perils of customized arrangements for a worker careers, particularly effects of individual non-compliance with normative standards for work hours and contributions. Extant research largely adopts the i-dealer's perspective, paying limited attention to the perspectives of the manager, colleagues and HR practitioners—all of whom can influence the career consequences i-dealers experience. This PDW seeks to remedy this omission and advance more contextualized and theory-driven research by broadening researcher insights regarding i-deals as a career management strategy and HR practice, and igniting fruitful dialogue. The workshop is designed for 1.5 hours and consists of three parts. Part one is a panel discussion: Leading scholars/panelists will present their views on the current state of the literature on i-deals as a career management tool. Part two engages attendees in 'roundtables' to discuss dynamics affecting a) the manager's; b) coworkers' and c) HR perspectives relevant to the i-dealer's career and organizational consequences. In the zoom context of this year's AOM meetings, we will use an advance survey of attendees to guide the assignment of breakout rooms during our session. Part three at the end of our PDW will summarize the product of the roundtable discussions to help attendees identify opportunities for empirical research that advances new perspectives on i-deals.

The caterpillar is an interesting case: it carries imaginal cells which he doesn't fully recognize as his own. Those cells are so different that the organism attempts to attack them as invaders. However the imaginal cells continue to multiply, eventually taking over and emerging in a new and different being: the butterfly. We think this is a wonderful analogy of something that happens to us, humans. We act without noticing the paradigm governing our life and we react in thoughtless, automatic ways without pausing to check if our deeper values are actually reflected in our behaviors. If something suggests we should review our way of life, we may react like the caterpillar to the invading imaginal cells, pushing those thoughts aside. We strive to maintain the status quo, not realizing that this prevents us from growing the wings that could make us thrive. What role do we, educators of the next generation of managers, play? Do we ignore the imaginal cells that disrupt the status quo? Or do we encourage and promote attention to what could shape a new way of being, of relating to self, others and the natural world? In this PDW educators from Sri Lanka, Philippines, Russia, France, Peru, China, Ghana, Indonesia, Brazil, Argentina and US will share how they are intentionally developing those 'imaginal cells' that create a profound transformation of the mindset. They are prompting students to shape a new worldview, one of a world that works for all, in sync with their highest self.

OB: Projecting Family-Work Conflict and Enrichment onto Others when Assessing Burnout and Promotability

Author: **Nina Junker**, *Goethe U.*
Author: **Sharon Toker**, *Coller School of Management, Tel Aviv U.*

Carolyn Dexter Award Nominee

Unless living under the same roof, people find it challenging to accurately perceive how others' family demands affect their work outcomes. Nonetheless, with little information to rely on, employees often make such judgments about coworkers or subordinates, creating a risk of bias with concerning managerial implications. This study elucidates how these judgments are formed. We develop and experimentally test a theoretical model of family-to-work perceptions, focusing on social projection as a mechanism driving perceptual bias. In a randomized experiment, comprising 676 working parents from three countries (Germany, Israel, US), we find that when asked to recall conflicting rather than enriching family-to-work experiences, employees are more likely to assume similar conflicts in others. Consequently, they judge these others as more burnt-out and, in some cases, as less fit for promotion. This effect holds for both male and female targets, across three cultures, regardless of perceivers' managerial position, mood, or personality traits. We observe similar projection of family-to-work enrichment onto others, yet results vary across countries. Our study contributes to work-life research by offering a mechanism that links between employees' family-to-work experiences and their perceptions of others' experiences. We discuss the relevance of our findings to challenges imposed by the COVID-19 pandemic.

OB: Is This the Burnout We're Looking For? Testing the Affective and Cognitive States of Employee Burnout

Author: **John Jamison**, *Hong Kong U. of Science and Technology*

The three-dimensional construct of burnout conceptualized by Maslach and her fellow researchers has become dominant in both research and practice. Yet the psychological characteristics of employees identified as burned out by the associated Maslach Burnout Inventory do not seem to match the psychological characteristics of the burnout phenomenon (emotionally and cognitively disengaged, unmotivated). This study uses the theory developed around the three-dimensional construct of burnout to articulate testable hypotheses about the emotional, cognitive, and motivational states of employees experiencing burnout. We test these hypotheses on a factored sample of over 600 employees using matched MBI survey measures and modern quantitative analysis of qualitative writing samples. We find that contrary to the conceptualization suggested by the three-dimensional construct, the psychological profile of a worker measuring high on the MBI is actually emotionally activated and cognitively involved. These findings draw into question just what psychological state the three-dimensional construct is actually measuring.

OB: Antecedents of Subjective Well-Being at Work: The Case of Japanese Regular Employees

Author: **Remy Magnier-Watanabe**, *U. of Tsukuba*
Author: **Caroline Benton**, *U. of Tsukuba*
Author: **Philippe Orsini**, *Nihon U.*
Author: **Toru Uchida**, *torulyon*
Author: **Kimihiko Nagata**, *Nagata Global Partners*

This study empirically explores the antecedents of subjective well-being at work for Japanese regular employees beyond those already identified in Europe and US-centric research. We applied a 2-stage design, whereby we first conducted in-depth interviews whose findings were then statistically assessed using a questionnaire survey. We identified eight original factors affecting subjective well-being at work for Japanese regular employees: meaningful work, relationships, culture, workspace, evaluation, time off, financial benefits, and diversity at work. Consequently, regression analyses pinpointed the predictors of subjective well-being at work; for positive feelings at work, work relationships, evaluation, and diversity; for negative feelings at work, workspace and diversity; and for satisfaction with one's work, meaningful work only. In the face of chronic labor shortage and an ageing population, these findings will help Japanese companies create a work environment that can maximize regular employees' well-being, job performance, and retention.

OB: A meta-analysis on the relation between information overload, behavior, and experience.

Author: **Benedikt Graf**, *Trier U.*
Author: **Conny Herbert Antoni**, *Trier U.*

This quantitative meta-analysis provides insights into the relation between information overload (IO) and peoples' behavior and experience, such as information avoidance, lowered performance, negative impacts on well-being and physical health. We analyzed the data of 94,073 employees, managers, students, and mixed samples within 81 studies and overall, 251 effect sizes. We performed multi-level as well as robust variance estimation analyses and found positive correlations between IO and information avoidance ($z = .29$ [CI .21, .36]), burnout and fatigue ($z = .48$ [CI .39, .57]), and negative correlations between IO and performance ($z = -.20$ [CI -.26, -.14]) and satisfaction ($z = -.26$ [CI -.36, -.17]), as well as on other outcomes. Explorative moderator analyses revealed different moderating effects based on sample nationality or vocational setting. Overall, the results of this meta-analysis indicate a negative relationship between IO and peoples' behavior and experience, which call for an evaluation of the exchange and handling of information. Across a wide range of studies and contexts, this meta-analysis reveals that IO provokes the information fatigue syndrome that has been poorly considered to date, leading to severe consequences in both work and home contexts.

A Primer on Endogeneity and Instrumental Variable Regression
Endogeneity and Instrumental Variable Regression

Participant: **Xiaosong Peng**, *Lehigh U.*

This workshop introduces the concept of endogeneity and outline its causes, and provides an overview on how researchers may address endogeneity in both the research design phase and the data analysis phase. It also provides suggestions for reviewers when evaluating the edogeneity problems in submitted manuscripts. Lastly, the workshop provides a walkthrough of instrumental variable regression, the most widely used analysis technique to address endogeneity in empirical research in the field of operations and supply chain management. A publicly available dataset is used to demonstrate the instrumental variable regression technique step-by-step.

Participant: **Vontrese Deeds Pamphile**, *George Washington U.*

This workshop aims to explore research frontiers in the increasingly active area of nonmarket strategy. Through a combination of panel presentations by distinguished scholars and interactive roundtable discussions with workshop participants – with an emphasis on the interactive roundtables – we seek to identify how to advance research and how to address some shortcomings in existing approaches – both empirical and theoretical - in nonmarket strategy research. The proposed workshop is likely to be of interest to researchers working on topics such as corporate social responsibility, political strategy, (social) innovation, stakeholder governance, and sustainability, providing an informed perspective on cutting-edge research on these topics. This is a continuation of the AOM 2016, AOM 2017 and AOM 2019 PDWs under the same name, sponsored by STR, IM, ONE, PNP, and SIM divisions. The PDW was sponsored to go ahead in 2020 but was cancelled due to the conference moving online.

Acquisitions and Innovation

Digital Session Chair: **Michael Vetter**, *Technical U. of Munich*

TIM: **The Effect of Acquisitions on Open Source Software Development**

Author: **Michael Vetter**, *Technical U. of Munich*
Author: **Joachim Henkel**, *Technical U. of Munich*
Author: **Henning Piezunka**, *INSEAD*

The development of Open Source Software (OSS) often depends on sponsoring firms. Despite their important role, the effect of changes of control rights in these firms has yet to be explored. We study the effect of acquisitions on contributions to OSS using a matched-sample analysis of 347 OSS projects affected by an acquisition. We examine contributions by employees of the sponsoring firm and other contributors, finding acquisitions to have a negative effect. Our data reveals an enormous variation across acquisitions that can be traced back to differences in acquirers' ability and tendency to extract resources. Our qualitative data provides further insights into the underlying mechanisms. We discuss implications for practice and for research on OSS.

Paper is Available to Meeting Registrants Only.

TIM: **Building Platforms Through Acquisitions**

Author: **Kimmo Karhu**, *Aalto U.*
Author: **Robin Gustafsson**, *Aalto U.*
Author: **Antti Luitro**, *Aalto U. School of Science*

The rise of the platform economy and digitalization has completely changed the dynamics of how firms grow in the market. Platform firms, such as Google, Amazon, and Facebook, tap to the growth through network effects leading to winner-takes-all dynamics with few firms dominating the market. In a highly dynamic and turbulent market, acquisitions are a strategic tool for firms to respond to market changes. In this study, we set out to study platform strategies by analyzing 641 acquisitions of leading six platform firms between 2000 and 2020. We utilized a supervised machine learning approach to classify firms' acquisitions into layers of a digital stack and then analyzed the results against the firms' 26 platforms positioned in the same stack. Our results confirm a strategy with platform firms increasingly acquiring assets in the same layer and the layer below of their platforms. Strongest temporal finding is that the middleware layer has become strategically important for platform firms during the last 10 years. Overall, our study highlights the promise and importance of stack-based layered analysis for understanding digital businesses.

TIM: **How can Digital Technology-Related Acquisitions Affect a Firm's Innovation Performance?**

Author: **Chenrui Liu**, *Beijing Normal U.*
Author: **Ning Gu**, *Beijing Normal U.*
Author: **Yifan Liu**, *School of Economics and Management, Tsinghua U.*

This paper studies how acquiring digital firms affects the post-acquisition innovation performance of traditional firms. Based on the longitudinal dataset of Chinese listed firms from 2007 to 2017, our findings show that digital technology-related acquisitions have a positive effect on a firm's innovation performance. Furthermore, we propose a contingency model to investigate the moderating effect of unabsorbed slack and internal digital investment. The results indicate that the acquirer's unabsorbed slack has a partially positive moderating effect on the relationship between digital technology-related acquisitions and innovation performance. Meanwhile, the acquirer's internal digital investment negatively moderates this relationship, but its negative moderating effect would be weakened by the unabsorbed slack. Our paper expands the contingency perspective within a traditional firm's digital transformation and has implications for future research and management practices.

Paper is Available to Meeting Registrants Only.

TIM: **Business Group Affiliation and the Risk of PAE Litigation**

Author: **Miryam Martin**, *U. of the Balearic Islands*
Author: **Abel Lucena**, *U. of the Balearic Islands*

Using novel data on US public firms, this paper investigates the preferences of patent assertion entities (PAEs) to choose target companies. Drawing upon signaling theory, we argue that business group affiliation can be interpreted by PAEs as an informative attribute about the superior value creation capabilities of affiliated firms (compared to standalones). PAEs, as rent-seekers, could leverage this information to identify opportunities to extract rents. Consistent with our argument, we find that PAEs tend to sue more to companies having business affiliations than companies without such affiliations. However, business groups differ from one another in a range of observable attributes, generating differing opportunities from rent extractions. We also examine the role of three business group characteristics in conveying information to PAEs. The results show that the bigger the business group, the more attractive to PAEs. Likewise, the higher the technological overlap, the greater the probability of being sued. Our results also reveal that the organizational distance is not a key driver.

**Talking About Someone Like Me: Implementing Diversity,
Equity and Inclusion in Cases and Classes**
Implementing Case Diversity, Equity and Inclusion

Presenter: **Richard McCracken**, *The Case Centre*
Presenter: **Genevieve Macfarlane Smith**, *Haas School of Business, UC Berkeley*
Organizer: **Vicky Anne Lester**, *The Case Centre*
Presenter: **Kellie McElhaney**, *Haas School of Business, UC Berkeley*
Facilitator: **Hazel Walker**, *The Case Centre*

The case method is a key pedagogical tool for business schools. Yet there is an increasing perception that cases feature a predominance of white male protagonists and neglect to address topics relating to diversity, equity and inclusion (DEI) critical for new generations of businesses leaders to navigate. The comparative lack of diverse protagonists perpetuates established leadership archetypes and deprives students of alternative role models. Even cases with diverse protagonists can perpetuate harmful stereotypes and norms around gender, race, national origin, age etc. – such as women being depicted as more emotional, less visionary, and less agentic than men. This PDW is for faculty interested in developing competencies in writing and/or delivering DEI cases in their teaching, as well as those interested in building an integrated approach to incorporating DEI-related cases in course materials in the wider curriculum. The session will include presentations and participative exercises. Participants will develop greater knowledge, skills and confidence in incorporating DEI into their case writing and teaching without technical or pedagogical difficulties. The workshop will be delivered by a team of presenters drawn from the Center for Equity, Gender, and Leadership at UC Berkeley-Haas School of Business, and The Case Centre.

If you joined the Organizational Behavior (OB) division within the last three years and want to learn more about the OB division and starting out in the field of OB, then this forum is for you! This PDW was created to answer your questions about the “essentials” of the virtual AOM conference, the OB division, and the field of OB. The session is organized around a panel discussion between established members of the OB division and new members like yourself. We designed the forum so that you can meet and interact with a diverse group of leading scholars in the OB division and connect with other new members of the division. The PDW will include a welcome and overview of the OB division, a networking ice breaker, and a panel discussion prompted by questions from participants. As a participant in the forum, you can ask questions of your choice.

What Are We Talking About? Natural Language Processing in Organizations

Natural Language Processing in Organizations

Chair: **Michael Yeomans**, *Imperial College Business School*
Speaker: **Ariella Kristal**, *Harvard Business School*
Participant: **Sudeep Bhatia**, *U. of Pennsylvania*
Participant: **Amir Goldberg**, *Stanford U.*
Speaker: **Grant Packard**, *York U., Toronto*
Speaker: **Ada Aka**, *The Wharton School, U. of Pennsylvania*
Speaker: **Lara Yang**, -
Participant: **Jonah Berger**, *The Wharton School, U. of Pennsylvania*
Participant: **Yang Li**, *Cheung Kong Graduate School of Business*

This symposium is designed to advance research on organizational communication by bringing together leading scholars examining state-of-the-art applications of natural language processing. Language is endemic to almost every aspect of an organization - we talk and write to each other all the time. However, the dominant paradigms for studying social interactions involves indirect measures of communication (surveys, network analyses, etc.). The presentations in this symposium demonstrate how that communication can be measured directly. Each presenter considers natural language data from common and difficult conversations throughout an organization. And in each case, natural language processing is used to show that the content of the communication has direct consequences for organizational outcomes. Across different field settings, we show how our analyses can also provide evidence for biases and information gaps that can inform behavioral models of decision-making in an organization.

Defining and Implementing Innovative and Entrepreneurial Strategies

Digital Session Chair: **Dieter Gutschi**, *WU Vienna*

ODC: CEO Curiosity and Strategic Change

Author: **Dieter Gutschi**, *WU Vienna*

Author: **Patricia Klärner**, *WU Vienna U. of Economics and Business*

In a rapidly changing business environment, curiosity, defined as the urge to search for new information and experiences, can be highly beneficial for CEOs and their strategic decision-making. Despite increasing research on the role of executive personality in strategic decisions, we lack deeper insights into the role of CEO curiosity. Our study fills this void by studying the role of CEO curiosity in strategic change. We suggest that CEO curiosity is positively associated with strategic change. We also introduce environmental dynamism and CEO power as important moderators. Our study contributes to upper echelons research by unveiling the so far understudied but important role of CEO curiosity in strategic change. It also contributes to strategic change research by providing insights into how CEO personality and dynamic contextual factors influence strategic change.

ODC: Leveraging Strategy for Better Implementation : The (Hidden) Role of Employees in Microfirms

Author: **Carole Bousquet**, *IDRAC Business School*

Author: **Miguel Delattre**, *IAE - U. of Lyon 3*

Author: **Jessica Lichy**, *IDRAC Business School*

This paper focuses on how to improve strategic implementation in microfirms – i.e., companies with fewer than ten employees. They are often overlooked in research owing to lack of access to the field, and because managers of microfirms express relatively less interest in mobilizing external support, compared to SMEs and large companies. However, these structures are all equally subject to the difficulties and turbulence of their environments, even more so in this period of global pandemic and perturbations. By means of five intervention-research carried out within professional structures, this research highlights the problems linked to the lack of formalization and strategic implementation in these companies and proposes actions for improvement experimented during the support. We also seek to show that, in very small structures, the formalization of strategy and the multiplication of its implementation among employees makes it possible to increase the strategic implementation and performance of microfirms.

ODC: Entrepreneurial Orientation in Coworking Spaces for Corporate Entrepreneurship and Venturing

Author: **Lars Goermar**, *U. of Bayreuth*

Author: **Till Marius Gantert**, *U. of Bayreuth*

Author: **Yixin Qiu**, *U. of Bayreuth*

Firms search for new ways of improving their innovativeness and internal entrepreneurship. Entrepreneurial orientation has been shown to be a powerful facilitator for these tasks. Previous research has shown that entrepreneurial orientation increases by empowerment and proper leadership, yet we know little about the spaces in which it proliferates. We argue that social interaction and autonomy, as prevalent in coworking-spaces, strengthens and complements entrepreneurial orientation. Following the literature on entrepreneurial orientation, as well as coworking-spaces, we pursue a multiple case study analysis. We find that the elements of entrepreneurial orientation as outset by previous studies does not fully describe the entrepreneurial orientation in corporate coworking-spaces. Our findings stress that corporate entrepreneurship research and practice needs to pay more attention to the spatial and interior settings for improving innovativeness and internal entrepreneurship.

ODC: The Role of a Corporate University in a Technology-Based Company to Boost Ambidexterity ➔

Author: **Raphael Lissillour**, *IPAG Business School*

Author: **Javier Alfonso Rodríguez-Escobar**, *UEMC*

Based on the concept of organizational ambidexterity, this study presents evidence on the role of Corporate Universities (CU) in the deployment and configuration of capabilities to operationalize corporate strategy. Through a longitudinal case study of ZTE University in China, this paper has been able to verify different theoretical positions about the development of capabilities in a framework of simultaneous exploratory and exploitative innovation strategies and to clearly witness how the CU are dynamically linked with those development. The findings highlight the most relevant capabilities that drive the strategic orientation of the company and distinguishes those that are more likely to be exploited by the company through its CU.

OMT: How Funny Was That? Discoveries From Measuring Leader Humor

Author: **Benno Stöcklein, U. of Passau**
Author: **Dominik Bong, U. of Passau**

We introduce a multimodal approach to conducting nuanced, unobtrusive measurements of leader humor expressions, and we exploratively test it using a sample of press conferences held by professional soccer coaches in the German Bundesliga. First, we discover that although most of the humor recognized across leaders was affiliative humor, individual leaders still exhibited unique patterns in their use of humor. For instance, some coaches almost exclusively employed others-directed humor, and we found differences in the total amount of humor expressed per press conference and the number of humorous instances per press conference. Second, we uncover general patterns in the timing of both humor overall and individual humor styles. For example, most humor occurred towards the end of press conferences. Third, we propose a novel framework, that enables us to identify differences in the audience's recognition of leader humor and their perceptions of humor clarity, and find that some leaders communicate their humor more clearly to an audience than others. Our exploratory approach provides a solid foundation for additional empirical research on executive communication, especially leader humor. Ultimately, our findings reconfirm the need for a nuanced perspective on leader humor and contribute to extant research on leader rhetoric and executive communication.

OMT: Authority Acceptance and Team Performance: Insights from the English Premier League

Author: **Alexandru Roman, CSUSB**
Author: **Jerayr M. Halebian, U. of California, Riverside**
Author: **Marlo Raveendran, U. of California, Riverside**

Classical management theory identifies authority acceptance as fundamental to organizational success. Based on this perspective, the higher the degree to which employees find managerial orders to be acceptable – the greater organizational adaptation capacity and consequently performance. Despite being central to classical theories of organization, authority acceptance has been understudied by current management perspectives. In this study, we examine conditions under which higher degrees of authority acceptance may improve organizational performance. Drawing on insights from authority acceptance theory and the information processing view, we posit that under high task and agent interdependence and high architectural knowledge, i.e. when success is a function of effectively coordinating coproduction - groups with higher authority acceptance will perform better due to their increased coordination capacity. We expect this relationship to be stronger under conditions in which groups are more likely to perceive authority as legitimate and to identify with the organization. We examine our hypotheses using data from the English Premier League – one of the world's most popular, competitive, highest stakes and culturally diverse soccer competitions. Our empirical results are consistent with our theoretical expectations and indicate that higher levels of team authority acceptance are associated with better results controlling for manager and team characteristics. The robustness of our findings derives from the fixed effects specification in our models and is supported by several robustness checks including instrumental variable analyses.

Paper is NOT Available. Please contact the author(s).

OMT: Safety in Numbers? How Reputation and Salience of Misconduct Change Group Size Effect on Punishment

Author: **Yinmiao Yu, Imperial College Business School**
Author: **Cleo Silvestri, Imperial College London**
Author: **Lin Dong, U. of Birmingham**
Author: **Yuri Mishina, Imperial College London**

The present study sheds light on the role of social-control agents in punishing misconduct. We posit that social-control agents give each violator a lighter sanction when a great number of people are involved in a misconduct case. However, this relationship is attenuated by violators' reputation and by the salience of the misconduct to stakeholders before the current case. We test our hypotheses using suspension decisions in 458 doping cases in the context of professional road cycling between 1999 and 2019. Our results indicate that, in general, social-control agents' punishments depend on internal resource constraints, but when pressure from stakeholders is high, the concern to protect the integrity of the field and their own authority prevails and leads to greater sanctions.

OMT: The Effect of Own and Vicarious Learning in the Adoption and Abandonment of Innovative Practices

Author: **Emanuel Ubert, U. della Svizzera Italiana**
Author: **Nikolaus Beck, U. of Lugano/U. Della Svizzera Italiana**

When a new and innovative practice can be easily adopted or abandoned and its performance effects can be easily observed, the wider diffusion of that practice forces managers to decide whether and when to (re-)adopt or abandon it. Contrary to practices which cannot be repeatedly adopted or abandoned, such practices lend themselves to organizational experimentation. The traditional diffusion literature has largely overlooked such practices and the relevance of learning with respect to performance experiences from such experimentation. This paper theorizes and empirically tests when in such innovative practice's wider diffusion process an organization relies on its own previous as opposed to its rivals' performance experiences to decide whether to (re-)adopt or abandon that practice. We argue that organizations typically rely on their rivals' practices early and their own experiences later in the diffusion process. We use the diffusion of an innovative defensive football (soccer) system, the chain-defense, in the German Bundesliga to test this argument. The results demonstrate that rivals' positive experiences with the practice reduce the likelihood of its abandonment by a typical team early in its wider diffusion process. A team's own positive experience with the practice additionally discourages its abandonment later on. Rivals' positive experiences also increase typical teams' adoption risk early in the process. Their own direct experiences with it never do. These findings contribute to the literature on innovative practice diffusion.

OMT: Environmental Jolts and Temporal Adaptation in a Local Solar Energy Movement

Author: **Heli Tuulia Nissilä**, *Aalto U. School of Business*

Finalist for OMT Division Best Paper on Environmental and Social Practices Award

Environmental jolts are unexpected external shocks of the institutional environment that disrupt actors and movement processes and trigger adaptive responses in them. A jolt represents a discontinuity to the world, as people know it, and introduces novel temporal structures to institutionalized settings, like new timelines for action. Drawing on a qualitative study of a solar energy movement in a Northern country, in a time where the global industry went through a rapid hype disappointment cycle (2007-2016), this study explores how movement members experience and enact time in the face of jolts. My findings depict the role of temporal adaptation – understood as an ongoing and collective process by which movements enact appropriate timing norms as a response to jolts – in creating alignment between movement goals, activities and purpose and broader change processes. In so doing, temporal adaptation sustains movement legitimacy and the continued attraction of resources. This is further enlightened through a model for temporal adaptation by movements in the face of jolts, explicating a process that progresses through alternating phases of a search for local potential and timing norms, visible right after a shock, and intentionally constructing specific timing norms as responses to benchmark developments, visible later when stability increases.

OMT: The Pandemic Work: Developing a Computational Grounded Theory of Exogenous Category Shocks

Author: **Sima Sajjadiani**, *Sauder School of Business, U. of British Columbia*

Author: **Amirpouyan Shiva**, *U. of British Columbia*

Author: **Marc-David Seidel**, *U. of British Columbia*

The exogenous shock of the COVID-19 pandemic has changed familiar work-related categories organizing work and life in ways current theories of categories cannot fully explain. To understand these changes, we analyzed online conversations about COVID and work using a computational grounded theory approach to develop a theory of worker response to exogenous category shock. We explain the process through which workers perceive, evaluate, and respond to work-related category changes due to exogenous category shocks. Our research contributes to the category dynamics literature by going beyond gradual, planned, or intentional changes in categories to examine the effects of abrupt exogenous shocks that suddenly change categories. We theorize how the exceptionality, temporality, and contested nature of these changes in work-related categories influence workers' evaluations and responses. Methodologically, we contribute to the growing field of interpretive data science in management research by using machine learning techniques to understand a complex and multi-dimensional textual corpus. Practically, our findings offer important insights for policy makers and organizations on consequences of a wide range of societal exogenous shocks such as pandemics, disasters, political upheaval, and war that disturb established categories.

Paper is Available to Meeting Registrants Only.

OMT: Degrees of Flexibility: Predicting Market Category Change and Stability

Author: **Benjamin Innis**, *Boston College*

We further develop scholarly understandings of market category dynamics by offering a theoretical framework describing the conditions under which any given category is likely to change over time. We argue that a category's propensity to change is driven by the category's evaluative flexibility and practice flexibility—the degree to which evaluators will willingly reimagine category boundaries and the degree to which category members will readily deviate from normative practices, respectively. Our theory highlights the interrelationship between category membership, category boundaries, and category meanings, offering an integrated path forward for empirically examining a variety of market category dynamics.

OMT: Four Decades of Population Ecology - Historical Review and Future Research Agenda

Author: **Kata Isenring-Szabó**, *U. of St. Gallen*

Based on our review of the past 40 years of population ecology and 15 years of categories research, we find that the population ecology perspective has been updated with new angles and components stemming from categories research. Our chronological process tracing of proliferating category-related themes in population ecology publications reveals that such successful update would not have been possible, had categories research not built on the theoretical foundations of population ecology in the first place. However, despite this shared intellectual ancestry, there is little reflection in current categories research on these roots in general, or the theory fragments and concepts of population ecology in particular. Currently, the “categorical imperative” literature is in a fragmented state, scattered with inconsistent findings and overly diversified theorizing language. We call for closer attention to classical population ecology in current industry-level categories research, as we believe that the challenges categories research faces today have already been partially addressed in population ecology. Specifically, we put forward a number of recommendations which would enable theorists to address the current challenges in the categorical imperative tradition, and thus bringing us closer to a future integrative framework.

Research on professionals and their workplaces is becoming increasingly popular, reflecting the growing importance of experts and other knowledge workers in contemporary society (Empson, et al., 2015). Following successful PDWs over the last seven years on various topics within professional organization research, this year we turn our attention to the impact of contemporary information technology, artificial intelligence and digitalization on professionals and their work. This is a challenging set of issues for researchers and practitioners in these traditionally stable and institutionalized contexts. The PDW will begin with five brief presentations by our panelists, each outlining a research project that includes professionals facing the opportunities and/or threats of the digital era (details on topics and presenters below). Thereafter we will divide into a series of round tables, each around one of the panelists. The PDW will thus also afford opportunity for small group interactions with our expert panelists and organizers.

Fake News: Implications for Management, Organization, and Society

Fake News, Management and Society

Participant: **Philemon Bantimaroudis**, *U. of Cyprus*
Participant: **Michael L. Barnett**, *Rutgers U.*
Participant: **Elanor Colleoni**, *U. of Milan*
Moderator: **Naomi A. Gardberg**, *City U. of New York, Baruch College*
Participant: **Laura Illia**, *U. de Fribourg / U. of Freiburg*
Participant: **Stelios C. Zyglidopoulos**, *Kedge Business School*

This symposium on fake news seeks to encourage research about a burgeoning phenomenon that poses significant implications for the management domain. Fake news has been defined as “fabricated information that mimics news media content in form but not in organizational process or intent”. It “overlaps with other information disorders, such as misinformation (false or misleading information) and disinformation (false information that is purposely spread to deceive people)” (Lazer et al., 2018: 1094). Although fake news has received attention due to its effect on politics and particularly the 2016 US Presidential election, its potential effects on business have only recently received attention from scholars in communications, information systems, and marketing. Therefore, this panel symposium’s purpose of is to engage a group of scholars in an informal, moderated, interactive discussion to (1) encourage research on the fake news phenomenon, (2) explore the potential effects of fake news on corporate reputations, businesses, and competition, (3) share methods (experiments, GPT-3 use) and findings (agendamelding, conspiracism) from the communications and journalism fields, and (4) discuss how we establish the impact of fake news on business through academic research.

Climate Change and Emissions

Digital Session Chair: **Patrick J. Callery**, *Sprott School of Business, Carleton U.*

ONE: Induced Innovation in the Public Sector: Evidence from Landfill Methane Emissions Regulation

Author: **Patrick J. Callery**, *Sprott School of Business, Carleton U.*

The concept of induced innovation suggests the ability for policy makers to design and implement economically efficient regulation, both limiting negative environmental impacts from corporate activity and providing firms opportunities to improve performance through innovation in regulatory response. While extant research has substantially addressed aspects of both induced innovation among regulated private sector firms and managerial innovation among public sector organizations, we know relatively little about the nature of innovation taken by public sector entities in response to environmental regulation. An improved understanding of induced innovation in the public sector is important because public organizations are increasingly subject to regulation, with implications for regulatory efficiency and local government viability. We address the problem by analyzing prevalence and determinants of induced innovation among both publicly and privately owned entities subject to regulation in a unique context: methane emissions from municipal solid waste landfills in the United States. We find that induced innovation is more prevalent among public than private organizations, whereas private organizations are more effective at implementing induced innovation projects. We also find unexpected effects of various institutional factors on innovation uptake. The study contributes to literatures on induced innovation and public sector innovation, provides insights to guide future research, and offers guidance for efficient regulatory design.

Paper is Available to Meeting Registrants Only.

ONE: Moving Targets: Aggressiveness, Attainment, and Temporal Dynamics in Corporate Carbon Targets

Author: **Patrick J. Callery**, *Sprott School of Business, Carleton U.*
Author: **Eun-Hee Kim**, *Fordham U.*

Carbon emissions reduction targets are becoming a de rigueur component of corporate sustainability disclosures. We explore what carbon targets entail and whether they drive firms toward meaningful reductions of carbon emissions by analyzing target data disclosed by firms to CDP at multiple levels. We start by displaying first-order parameters that are directly disclosed by firms and then illustrate implicit, second-order factors derived from the first-order parameters, which provide a fuller picture of carbon targets and the aggressiveness of emissions reductions embodied therein. Further, we examine temporal dynamics by developing a target matching algorithm that enables us to more directly track targets across years since firms often report multiple targets in a given year and change target parameters over time, blurring comparisons and analyses at the firm-year-target level. We demonstrate that firms' self-reported claims of target attainment frequently contradict our calculations of actual target attainment based on disclosed carbon emissions and firms regularly alter target parameters from year to year with the adjusted targets becoming less aggressive over time.

Paper is Available to Meeting Registrants Only.

ONE: Moral hazard and the market-based method: Does using REAs affect corporate emissions performance?

Author: **Francisco Ascui**, *U. of Edinburgh*
Author: **Matthew Brander**, *U. of Edinburgh*
Author: **Theodor Cojoianu**, *Queen's School of Management, Queen's U. Belfast*
Author: **Qian Li**, *Cardiff Business School, Cardiff U.*

An increasingly widespread accounting practice for electricity (scope 2) emissions, known as the 'market-based method', is problematic as it allows companies to use purchased renewable energy attributes (REAs) to report lower emissions, which therefore no longer reflect the actual location-based electricity generation emissions resulting from the company's electricity consumption. Using REAs therefore may create a moral hazard, as companies using these arrangements are insulated from the consequences of their actions and may thus have less incentive to genuinely reduce their emissions. We construct a year-on-year matched sample of firms using/not using REAs (2,716 firms with 12,700 firm-year observations from 2006 to 2018) and apply a two-way fixed effects difference-in-difference (DiD) method to investigate the effects of REA use on emissions performance. We find that firms using REAs increase their absolute energy consumption and absolute emissions (scope 1 and 2) relative to companies that do not use REAs, while simultaneously reducing their relative emissions intensities per unit revenue, and that all effects are more significant after three or more years of REA use. The observed intensity reductions do not indicate genuine improved emissions performance, however, as firms using REAs do not improve their energy efficiency, but instead have higher revenue and tend to be located in countries with lower location-based grid emission factors. We conclude that companies, investors, and customers should beware the potential for moral hazard arising from the use of the market-based method, and should ensure that renewable energy purchasing drives additional renewable supply and does not distract firms from taking genuine mitigation actions.

“Navigating Qualitative Dissertations: Advice from the Experts” is a Professional Development Workshop aimed at providing doctoral candidates performing dissertations that incorporate inductive methods (i.e., mixed-method or purely qualitative dissertations) with focused and personalized feedback from experienced qualitative researchers.

The synchronous portion of the session, which does not require an application, will consist of a panel discussion featuring Jennifer Howard-Grenville, Mike Pratt, and Kevin Rockmann, and be moderated by John Paul Stephens. The discussion will address topics of interest to burgeoning qualitative scholars such as crafting an identity as a qualitative researcher, the benefits and challenges of inductive research, publishing qualitative work, and approaching the job market with a qualitative dissertation. Additionally, there will be smaller virtual breakout rooms, giving participants the opportunity to converse directly with faculty facilitators in a smaller setting.

Participation in the asynchronous portion of this session, which requires an application submitted on or before June 14, 2021, will include a focused, personalized discussion with a faculty facilitator tailored to each participant’s dissertation. Please email aomnqd21@gmail.com with any questions.

International Early Academic Careers: How to Stand out in the Virtual Job Market?

International Early Academic Careers: Job market

Organizer: **Fannie Couture**, *U. of Sydney Business School*
Organizer: **Seray Ergene**, *U. of Rhode Island*
Organizer: **Rangapriya Kannan-Narasimhan**, *SAP*
Moderator: **Madalina Stoicovici Pop**, *Aarhus BSS, Aarhus U.*
Moderator: **Renate Kratochvil**, *BI Norwegian Business School*
Speaker: **Eero Vaara**, *U. of Oxford*
Speaker: **Charlotte Cloutier**, *HEC Montreal*
Speaker: **Karla Sayegh**, *U. of Cambridge*
Speaker: **Shenghui Ma**, *Fudan U.*

This Professional Development Workshop (PDW) will focus on the strategies for standing out in the virtual job market for early career academics working in an international context. It is tailored to PhD students and early career scholars in the Strategizing Activities and Practices (SAP) Interest Group and is designed to be part of the SAP Doctoral & Early Career Program 2020. The first part of the PDW is a facilitated panel discussion between six scholars with a range of experience, including early to mid-career academics and leading researchers from the SAP and qualitative research community. The use of virtual recruitment by Universities to counter COVID-19 makes it imperative for candidates to stand out in the virtual job market. The focus of the panel discussion is to share advice and experiences around how-to stand out in the job market. Panelists will answer a broad range of questions on the virtual job market focusing on key aspects of the job search process such as networking, job interviewing, and others. Then, each panelist will answer one question for which they had time to prepare before the PDW. In part two (restricted to invited attendees), participants will attend a pre-arranged roundtable which will provide an opportunity to delve more deeply into specific questions and for participants to share their own experiences. Participants will be asked in advance about their specific areas of interest and level of experience and we will use this to allocate attendees to roundtables. We will end the workshop with feedback from the roundtable discussions.

The PDW will include an expert panel discussion to share advice and experiences. In order to tailor this discussion to your needs, please briefly outline 1) where you are in your academic career, e.g., year 1 of PhD, 2) where you are currently studying or employed, and 3) one or two questions that you hope the session will address. Please send your comments to priya@sandiego.edu

Meaningful work in organizations    
Meaningful work in organizations

Organizer: **Sarah Kimakwa**, *U. of Texas Rio Grande Valley*
Participant: **Jorge A. Gonzalez**, *U. of Texas Rio Grande Valley*
Participant: **Hale Kaynak**, *U. of Texas Rio Grande Valley*
Participant: **Vincent O. Ogutu**, *Strathmore U.*
Participant: **José Pagán**, *New York U.*

This PDW brings together scholars, practitioners, and doctoral students from different management fields to discuss how workers derive meaning and purpose from their work. We bring together social entrepreneurship, international management, healthcare management scholars and academics to discuss this important issue. There is growing interest in meaningful work both from scholars and practitioners. People no longer consider monetary pay as the sole purpose of work, but also seek to find meaning in what they do. Moreover, there is a paradigm shift in businesses as organizations not only pursue economic value creation, but also seek to improve society. Employees are important in enhanced organizational performance; thus, it is paramount that organizations find ways in which they can increase employee job engagement and productivity. Meaningful work has been shown to be one way organizations can motivate and engage employees. Organizers will present an overview of meaningful work in their respective disciplines to generate discussion. Following their presentations, participants will breakout into groups based on topics of interest to discuss and suggest future research directions. Since participants will be drawn from scholars, practitioners and doctoral students, suggested research questions will be timely, appropriate, and relevant to scholarship and practice.

Job Redesign

Digital Session Chair: **Paola Adinolfi**, *U. of Salerno*

OB: **Quality Research in the School Sector: A Job(Re)Design Perspective for Total Quality Management**

Author: **Paola Adinolfi**, *U. of Salerno*
Author: **Gabriella Piscopo**, *U. of Salerno*
Author: **Davide De Gennaro**, *U. of Salerno*
Author: **Valerio Giampaola**, *U. of Salerno*

The objective of this exploratory study is to address whether and how Total Quality Management (TQM) is influenced by top down, such as job design, or bottom up, such as job crafting, organizational practices, by examining the issue from two viewpoints: that of managers and that of employees. In particular, the leader-follower dichotomy is analyzed in the school sector, where school managers on the one hand, and teachers and secretarial employees on the other, aim at achieving quality in the educational service offered through a focus on excellence in teaching and learning, application of latest technology, and strong and purposeful leadership. An exploratory in-depth semi-structured interview-based approach in 14 secondary schools of Southern Italy has been employed to understand a rapidly evolving phenomenon as the current education organizational context. The results suggest that the organization of work, whether top down or bottom up, assumes critical importance in pursuing total quality. Behaviors such as job design by managers or job crafting by employees modify the behavioral approach and determine an orientation towards TQM by different types of workers.

OB: **The dark side of autonomy: The role of autonomy facets and work intensification**

Author: **Tanja Bipp**, *Heidelberg U.*
Author: **Maren OBERLÄNDER**, *U. of Heidelberg*
Author: **Marvin Walczok**, *U. of Heidelberg*

Job autonomy is seen as a central work characteristic with positive effects on motivation and work outcomes. However, in today's world of work, excessive levels of job autonomy might also form a demand associated with negative consequences. In two studies, we investigated the detrimental effects of two autonomy facets with regard to work motivation. First, in a cross-sectional study with 501 employees, we found evidence that work methods and work scheduling autonomy might form demands at work. For both facets, we found support for a "too-much-of-a-good-thing" effect, as we identified non-linear relationships with work intensification. In a second, experimental study based on vignettes (N = 228 employees), we manipulated the autonomy facets by descriptions of a hypothetical work situation applying a 2x2 between-subject design (high vs. low work methods vs. work scheduling autonomy). We found evidence for contradicting effects, as the autonomy facets had positive and negative motivational effects. In particular, work scheduling autonomy led to higher levels of work intensification, at the same time hindering and stimulating work engagement. Although our findings did not fully replicate in our second study, nevertheless they provide much needed empirical evidence and an explanation approach for detrimental motivational effects of autonomy at work.

OB: **The Tasks at Hand: An Integrative Conceptual Review and Dimensional Scaling Framework**

Author: **Christopher Winchester**, *U. of Minnesota Carlson School of Management*
Author: **Elizabeth Margaret Campbell**, *U. of Minnesota*

Tasks are formative to what every working individual does, yet there is increasing ambiguity amid the disjointed state of the task literature which demands a much-needed state of clarification and way to categorize all types of tasks (Grant, 2007; Hackman, 1969; Hackman & Oldham, 1976; Wood, 1986). To rectify this issue, we conduct an integrated conceptual review of the differing task typologies and dimensions that have been explored. In doing so, we first provide a consensus on the definition of tasks and how it should be used in our field. Second, we develop an integrated dimensional scaling framework in which tasks can be categorized based on the three dimensions of task complexity, task significance, and task scope. Finally, we demonstrate how this framework can be applied and expanded upon in research and practice moving forward. Collectively, we hope this elicits debate and continued advancement in our field as we move forward in furthering our understanding of tasks.

Impacting Real Managers: How to Publish in HBR, SMR, CMR, & PSJ

How to Publish in HBR, SMR, CMR, & PSJ

Organizer: **Brad Winn**, *Utah State U.*
Organizer: **Margaret M. Luciano**, *Penn State U.*
Panelist: **Ania Wieckowski**, *Executive Editor at Harvard Business Review*
Panelist: **David Vogel**, *U. of California, Berkeley*
Panelist: **David Reimer**, *HR People + Strategy*
Panelist: **Allyson MacDonald**, -

Many research studies have commenced with the hope they will have significant theoretical and practical implications. Most researchers want to make a difference within their scholarly communities and within organizations for practicing managers. Yet, too often important research findings and insights are not read by “real world” managers, leaders and professionals. In our quest to be more inclusive in sharing our research, it is increasingly important to consider new ways of providing managers greater access to our research findings. The aim of this PDW is to discuss how researchers can have a greater impact on practice by publishing in journals that are circulated beyond the Academy. In this PDW, editors share tips on how to publish in journals that are read by both academics and practicing managers. The PDW is presented in two components including an asynchronous component and a synchronous component. In the asynchronous component, senior editors representing “bridging” journals (Harvard Business Review, MIT Sloan Management Review, People + Strategy Journal, California Management Review) will share insights on how to publish in venues that impact both academics and practitioners. In the synchronous component, these editors will lead a highly interactive and participative session that will also include smaller breakout room discussions.

Combating Stigma after Incarceration: Employment Reentry *Stigma after Incarceration*

Digital Session Chair: **Kylie Jiwon Hwang**, *Columbia Business School*

 **OMT: Entrepreneurship as a Bridge to Employment? Evidence from Formerly Incarcerated Individuals** 

Author: **Kylie Jiwon Hwang**, *Columbia Business School*

Winner of the OMT Louis R. Pondy Best Paper Based on a Dissertation Award

William H. Newman Award Nominee

While entrepreneurship is increasingly seen as a career choice to move ahead, many entrepreneurs eventually transition back to wage-employment. This leads to an important question of whether entrepreneurship is, in fact, a desirable labor market choice in the long term, considering the impact it has on subsequent wage-employment outcomes. This paper explores this question by focusing on a population that is frequently pushed into entrepreneurship due to pervasive labor market discrimination in the United States: formerly incarcerated individuals. I argue that entrepreneurship will benefit, rather than harm, formerly incarcerated entrepreneurs in subsequent wage-employment outcomes, because the severe discrimination they face in the traditional wage-employment market mitigates concerns for fit and commitment to wage-employment and, instead, amplifies the positive signal from entrepreneurial experience. Results from the National Longitudinal Study of Youth 97 data suggest that, compared to formerly incarcerated individuals without any entrepreneurial experience, those with entrepreneurial experience have an increased likelihood of securing wage-employment, regardless of actual entrepreneurial success. Interestingly, this is particularly true when they are high school dropouts or racial minorities (Black and Hispanic Americans), suggesting that entrepreneurship provides long-term benefits to those who are especially lacking in other positive credentials and, thus, are the most stigmatized by employers. I provide mechanism checks that take advantage of an exogenous policy shock and conduct in-depth interviews with employers and formerly incarcerated individuals.

 **OMT: Protective Halos, Experts' Justification for Failure and the "Job Readiness" of Returning Citizens**

Author: **Audrey Holm**, *Boston U.*

Finalist for the Louis R. Pondy Best Paper Based on a Dissertation Award

In this paper, I examine how and when experts draw upon the meanings present in their proximate environments to uphold their beliefs about the value of practices they associate with their expertise. The experts in this study are employment specialists tasked with helping formerly incarcerated jobseekers become "ready" for employment. I draw inductively from interviews, observations and archives associated with these specialists in two distinct institutional contexts: specialists who mostly work with correctional services and focus exclusively on reentry services for formerly incarcerated people, and specialists who work more broadly as social services to help vulnerable jobseekers. I identify how interdependencies with social actors within each context influence specialists as they develop interpretations of why clients risk failing to become "ready." I develop the notion of "protective halos" whereby experts draw meanings from their proximate environments to justify that they may fail to reach the results they aim for, thus protecting their own sense of expertise. My findings extend our understanding of how experts' proximate environments can protect – rather than threaten or alter – the beliefs and practices they associate with their expertise. I also discuss possible contributions to the study of labor market inequality and employment reentry.

OMT: "Finding Employment Saved my Life": On the Stigma Navigation Work of Reentry Organizations. (WITHDRAWN)  

Author: **Jan Stephen Lodge**, *Cambridge Judge Business School*

One of the 'grand challenges' of our time, confronting societies around the world, is the sustained integration of stigmatized individuals into formal employment in organizations. Working in the context of people with criminal convictions, we explore how 'reentry organizations' – social enterprises working to support individuals' transitions back into society – function as central social-symbolic actors that engage to convince and convert employers to give individuals leaving prison a chance and prepare people with convictions for the job search process. Our study highlights the multidirectional role of stigma-reduction work by such 'ally' organizations and shows how they contribute to the stigma reduction for the stigmatized. Overall, we thus present a case of how social-symbolic work can promote the inclusion of stigmatized groups into society and reduce inequality.

Influence of Emotions *Influence of Emotions*

Digital Session Chair: **Kevin Woojin Lee**, *New York U.*

OMT: Anachronization: Loss as Lived Experience of the Changing Nature of Work

Author: **Kevin Woojin Lee**, *New York U.*

Author: **Beth Bechky**, *New York U.*

Commercialization has spread across nonmarket spheres of social life, altering the modus operandi of their members, organizations, and institutions. Scholarship has mainly emphasized people's cognition: how people living through commercialization have been thinking through this experience and its consequences. However, an emerging set of studies has uncovered deeply emotional instances of resistance to commercialization, suggesting a need to go beyond this cognitive institutional perspective. In this study, we examine an opera company which commercialized. Mirroring their field's emerging concerns about opera's ability to survive, the company's administrators made organizational changes that attempted to cut costs. However, these organizational and institutional changes compromised aspects of the company's work, which had been supported by its older institutional context. And in delving into company members' lived experience of these changes, we discovered their profound sense of loss, embodied in their intense feelings of frustration and sorrow. Looking closely at an organization's commercialization thereby allowed us analytical purchase on what we refer to as its members' "anachronization": they were left behind by the changing character of the times, were increasingly out of step with how their world – that is, their work and organization – was being structured, and were haunted by what had vanished. And in studying this experience, we found that value tethers people to institutions: its destruction evoked members' passionate refusal to let go, and their ardent repudiation of how the nature of their work was changing. We therein breathe meaning and feeling into our depictions of how people experience change by drawing attention to noncognitive aspects of life within organizations and institutions.

OMT: Navigating the Moral Maze of an Escape Room: Bridging Cultural Spheres in a Political Art Project

Author: **Gloria Kutscher**, *Aalto U., Department of Management Studies*

Author: **Farah Kodeih**, *IIESEG School of Management*

Author: **Henri Schildt**, *Aalto U. School of Business*

Author: **Mia Raynard**, *WU Vienna U. of Economics and Business*

Organizations often combine cultural spheres to pursue goals which can elicit moral concerns and opposition in different actors. In this study we investigate challenges and moral transgressions that arise from blending distinct cultural spheres. We have conducted a longitudinal inductive study of an Escape Room art project that combined a humanitarian sphere with gaming and art. We found three categories of moral concerns, relating to the boundaries of cultural spheres, the integrity of each cultural sphere, and the integration of "voices" from each sphere. By distinguishing the operation of moral codes through moral intuitions through situated emotions, our study further clarifies the structural sources of moral transgressions.

OMT: Navigating Institutional Complexity and Collaboration Through Emotion Work

Author: **Anna-Lisa Schneider**, *U. Bundeswehr, Munich*

Author: **Verena Bader**, *Bundeswehr U. Munich*

Author: **Georg Loscher**, *Bundeswehr U. Munich*

Based on an ethnographic study, we explain how actors from disparate home logics fake, make and disrupt collaboration. We find that actors employ emotion work depending on their perceived level of institutional complexity. When they perceive the requirements of various emotional registers as strongly differing, actors fake collaboration by employing emotional contagion and suppression. When they perceive the requirements as similar, actors' emotional expressions are increasingly authentic and rich. When they are united under a common purpose, actors express emotional simplification and emotional dogmatism. They develop emotional power leaving no space for different logics of new participants and disrupting collaboration. Our findings contribute to the literature on institutions and emotions by analyzing how emotion work enables the cooperation of representatives from different logics, identifying dynamics that influence actors' displayed emotions and offering insights on the agentic consequences of employing emotion work for collaboration.

Paper is Available to Meeting Registrants Only.

OMT: The Importance of Being Earnest: The Role of Character, Competence, and Emotion in Reputation Change

Author: **Timothy David Hubbard**, *U. of Notre Dame*

Author: **Kevin Curran**, *U. of Amsterdam*

Good reputations are deemed vitally important to organizations. Utilizing an experimental approach, we examine how the characteristics (competence versus character violation) of adverse events affect reputation judgements by the general public towards high reputation organizations and how emotions play a role in this process. Results of an online experimental study (Study 1) using specially created TV news reports found character to be a critical factor in understanding changes in organizational reputation judgements. In Study 2, we used a biometric laboratory study to understand the emotive versus cognitive drivers of these negative judgements and studied participants physiological responses to the same TV reports. By combining electrodermal activity and facial expression analysis, we were able to show that when combined with a competence violation, negative character increases expressed negative emotions and levels of arousal. In Study 3, we re-test mediation using a larger sample of car owners in the United States using remote facial expression data collection. We find that negative emotions mediate the relationship between character and competence violations and changes in organizational reputation judgements. We contribute to research on reputation decline by providing a clearer understanding of the micro-level processes of reputational change and stakeholder's reactions to adverse organizational events.

Leadership in Public and Nonprofit Organizations

Digital Session Chair: **Fnu Pallavi Awasthi**, *Nova Southeastern U.*

PNP: **Giving Sense about Paradoxes: Paradoxical Leadership in the Public Sector (WITHDRAWN)**   

Author: **Leonie Backhaus**, *U. of Hamburg*
Author: **Artur Reuber**, *U. of Hamburg*
Author: **Dominik Vogel**, *U. of Hamburg*
Author: **Rick Vogel**, *U. of Hamburg*

Although paradoxes are inherent to the public sector, few attempts have been made to better understand how to manage such competing yet interrelated demands effectively. This study examines how paradoxical leadership (i.e., leaders' sense-giving about organizational paradoxes) affects follower outcomes. Based on two-wave survey data from German district offices, structural equation modelling reveals that paradoxical leadership positively influences followers' job satisfaction and work engagement. Role ambiguity fully mediates the relationship between paradoxical leadership and perceived performance. Our study expands on the nomological network of public leadership and advances the notion that paradoxes bear potentials for leadership in ambiguous public settings.

Paper is NOT Available. Please contact the author(s).

PNP: **A Paradigm Shift: Investigating the Predictors of Servant Leadership in Public Service Organizations** 

Author: **Fnu Pallavi Awasthi**, *Nova Southeastern U.*
Author: **Fred Ochieng Walumbwa**, *Florida International U.*

This study examines servant identity and moral potency as predictors of servant leadership behavior among local government managers, using a mixed-method approach in two studies. Study 1 comprised an online survey of 228 employees and 99 managers serving in local government agencies in a large State in the United States. The Hierarchical Linear Modelling (HLM) results of the survey data revealed that both servant identity and moral potency positively and significantly relate to servant leadership behavior manifestation among local government managers. In Study 2, three qualitative case studies of the local government leaders who obtained high servant leadership scores in the online survey were conducted. Findings from case studies revealed that the leader's life experiences, beliefs, and values determine his or her servant identity to manifest servant leadership behavior. Overall, the results suggest that servant identity and moral potency are important individual leader attributes that predict the manifestation and development of servant leadership in public service organizations.

Paper is Available to Meeting Registrants Only.

PNP: **Implicit Public Leadership Theories as a Determinant of Followers' LMX and Work Engagement (WITHDRAWN)** 

Author: **Laura Werkmeister**, *U. of Hamburg*

William H. Newman Award Nominee

Organizational members' perceptions and meaning making play a crucial role in the emergence and outcomes of public leadership. Building on a socio-cognitive approach to public leadership, this study tests whether followers' prior expectations of ideal leaders, their implicit public leadership theories (IPLTs) operate as cognitive benchmarks against which followers evaluate their leaders. The study further investigates whether the outcome of this evaluation affects followers' perceptions of the leadership relationship quality and their work engagement. A sample of N=102 public employees took part in an experiment in which their IPLTs were assessed with the semantic misattribution procedure and employees' ratings of their actual leaders' characteristics. Structural equation modeling revealed that a match between participants' IPLTs and their real leaders' traits significantly increased the follower-rated quality of the leader-member-exchange relationship (LMX). While IPLT match did not have a direct effect on work engagement, LMX mediated the indirect effect of IPLT match on work engagement, thus pointing to the significance of a relational approach to public leadership. The implications of these findings for the conceptualization and outcomes of public leadership are discussed.

PNP: **An Inductively-Derived Process Model of Nonprofit Leadership Behaviors and Mechanisms**

Author: **Bekah Zorgdrager**, *U. of Colorado, Boulder*
Author: **David R. Hekman**, *U. of Colorado, Boulder*

Because nonprofit organizations solve many social problems yet are discouraged by funders from engaging in critical fundraising and marketing activities, we sought to generate a model of successful nonprofit organizational leadership. Drawing from 32 in-depth interviews with high-ranking nonprofit leaders, we developed a model of nonprofit leadership. Our inductive process revealed three key nonprofit leader behaviors linked together by three collective emergent states. Specifically, and contrary to existing for-profit leadership models, interviewee accounts revealed that successful nonprofit leaders actually began their leadership process by engaging in inclusive conduct, which was reported as increasing member psychological freedom which, in turn enabled leaders to interrogate organizational reality. When leaders interrogated reality, they challenged the status quo which led members to have a favorable outlook toward risk, which, in turn, enabled the leader to focus the mission outward, boost collective efficacy and ultimately organizational performance. Our model primarily contributes to nonprofit leadership research by uncovering the specific behaviors and emergent states involved in the nonprofit leadership process, however, our model also contributes to research on leadership more generally.

Managing Misinformation: Belief and Beyond

Managing Misinformation: Belief and Beyond

Presenter: **Gordon Pennycook**, *Hill Levene School of Business*
Presenter: **Zhiying Ren**, *The Wharton School, U. of Pennsylvania*
Presenter: **Julia A. Langdon**, *London Business School*
Presenter: **Ezra Zuckerman**, *Massachusetts Institute of Technology*

Misinformation is driving important outcomes for organizations and individuals. In this symposium, four teams of scholars present research on misinformation explaining the psychological processes behind its proliferation and providing insight into what can be done to manage it. Gordon Pennycook begins the symposium with evidence for the role of lazy thinking as an alternative explanation for why people believe misinformation. He demonstrates that peoples' thinking styles dictate their susceptibility to believing false information. Next, Bella Ren takes us beyond belief, showing how social feedback plays an important role in whether people share conspiracy theories even when they acknowledge their inaccuracy. Subsequently, Julia Langdon explores how people judge the unethicity of spreading information that is explicitly demarcated as false. Her findings show that people condemn false information less when they have been exposed to similar, accurate information. Finally, Ezra Zuckerman Sivan submits research revealing how knowingly false statements can be interpreted as symbolic protests against the "establishment" enhancing their appeal. He shows how this phenomenon is partisan-motivated. His findings suggest that the role of belief in spreading misinformation might be more limited than we previously thought. Together these talks provide insights into the underlying psychological mechanisms driving the proliferation and influence of misinformation and what interventions can be used to manage it.

Religious Expressions and Threat at Work

Digital Session Chair: **Tamer Koburtay**, *Assistant professor U. of Petra*

GDO: Islam and Female Leadership: Insights from Women Leaders and Muslim Scholars  

Author: **Tamer Koburtay**, *Assistant professor U. of Petra*
Author: **Tala Abuhussein**, *Assistant Professor - U. of Petra*

This paper seeks to study female leaders' beliefs and experiences and also Muslim scholars' views on how Islam and its interpretations impact women leaders. Drawing on in-depth semi-structured interviews with 11 female leaders and 6 Muslim scholars in Jordan, both groups indicate that Islamic guidelines support gender equality and reforming all types of gender discrimination. The findings also show that the hindering point to female leadership is the misinterpretation and false assumptions of Islamic principles and guidelines. To our knowledge, this is the first attempt that incorporates Muslim scholars' and female leaders' views in gender research that is specifically designed to research the Jordanian context. The salient novelty and significance of this study were achieved through challenging the existing conception of Islam as a source that holds women leaders back and therefore, it highlights the contextual applicability and extension of the Islamic feminist theory.

GDO: When Women Can't Be Who They Are at Work: Religious-Based Identity Threat  

Author: **Bahareh Javadizadeh**, *Indiana State U.*
Author: **Carol Flinchbaugh**, *New Mexico State U.*
Author: **Yashar Salamzadeh**, *U. Sains Malaysia, Graduate School of Business*

Employees can be authentic at work only if they work within an organization, where they can freely behave in line with their core values. Over the last four decades, adherence to Islamic rules became a necessity in Iran's organizational environment. As a result, Iranian employees, especially women, continuously fail to enact their non-religious identity at work. Drawing on identity theory and social identity theory, this study examines the religious-based identity threat experienced by Iranian women and its effect on women's authenticity at work. We surveyed 177 Iranian women and examined a moderated mediation model. We predicted that accepting external influence as an individual trait moderates the mediating effect of authenticity at work on the association between religious-based identity threat and two organizational outcomes: turnover intentions and job satisfaction. Our findings show that female employees' perception of religious-based identity threat driven by their organization's religious rules, policies, and norms prevents them from expressing their authentic core values, resulting in increased turnover intention and decreased job satisfaction. We discuss managerial implications, limitations, and opportunities for future research.

GDO: How French Muslim hijabis deal with the internal identity asymmetry and religious expression at work

Author: **Sarra CHENIGLE**, *U. Paris Est Créteil, LIPHA, France*; *U. Gustave Eiffel, LIPHA*
Author: **François Grima**, *UPEC*
Author: **Lionel PRUDHOMME**, *IGS*

Muslim women who wear the hijab (hijabis) frequently find the expression of their religious identity to be the subject of heated debate. In the workplace, that expression can lead to negative outcomes (Gebert et al., 2014). The literature shows that individuals have a need to be recognised for who they really are and to validate their need for authenticity (Swann, Johnson, & Bosson, 2009; Ménard and Brunet, 2012). Our research is based on qualitative interviews carried out with 35 hijabis. The object of our study is three-fold. First of all, we explore the causes of internal identity asymmetry experienced by hijabis. Next, we carry out a multi-level analysis of the moderators acting on the sense of misidentification (intra-personal level, inter-personal level and professional level). Lastly, we show how, despite the stereotypes depicting them as lacking in agency, hijabis navigate asymmetry at work through the deployment of response strategies. Our study shows that the moderators identified have a significant impact on the sense of misidentification: some reduce it while others increase it. Finally, our research provides a better understanding of the dynamics of identity negotiation at work.

State Capitalism, Crises, and Firms: Past, Present, and Future
State Capitalism, Crises, and Firms

Organizer: **Ilya Okhmatovskiy**, *Nova SBE, U. Nova de Lisboa*
Panelist: **Alvaro Cuervo-Cazurra**, *Northeastern U.*
Panelist: **Anna Grosman**, *Loughborough U.*
Panelist: **Aldo Musacchio**, *Brandeis U.*
Panelist: **Gerhard Schnyder**, *Loughborough U.*
Panelist: **Pei Sun**, *Alliance Manchester Business School, U. of Manchester*
Panelist: **Geoffrey T. Wood**, *U. of Western Ontario*

Crisis situations, which may range from natural disasters to military conflicts, from stock market crashes to life-threatening diseases, frequently trigger state interventions that can be described as using tools of state capitalism. State control over firms in crisis situations deserves a separate analysis because what has been written about the costs and benefits of state control under “normal” conditions does not necessarily apply when we consider state control over firms in crisis situations. In particular, it is important to explore to what extent the existing theories about the implications of state control are applicable in crisis situations. Recent studies have explored how state ownership of firms is associated with their corporate governance, social responsibility, internationalization, non-market strategies, etc. In this symposium, we will discuss how governance, strategies, and stakeholder relationships of state-controlled firms have been affected by crisis situations in the past and what lessons can be derived from these experiences for the future.

Institutions and International Management

Digital Session Chair: **Cinara Gambirage**, *FGV EBAPE*

This session examines various issues related to institutions and international management. It contains papers related to rapid institutional changes and subsidiary performance, integrating Western and Eastern perspectives on development, global offshoring uncertain environments, and how territorial identity and social globalization impact cultural values.

IM: Rapid institutional changes and subsidiary performance: the impact of home and host country learning

Author: **Lucio Fuentelsaz**, *U. of Zaragoza*
Author: **Elisabet Garrido Martínez**, *U. of Zaragoza*
Author: **Minerva González**, *U. of Zaragoza*

This research focuses on the role played by home and host country learning in the relationship between the speed of institutional change and subsidiary performance. We posit a negative relationship between the speed of pro-market institutional change in the host country and subsidiary performance. We also argue that this relationship is contingent to the institutional learning that parent multinationals (MNEs) have previously obtained in other countries. By integrating the dynamic institution-based view and the organizational learning literatures, our analysis highlights the key role that the abilities and skills developed by MNEs to face rapid institutional changes has on the host countries where they operate. We test our theoretical model using a sample of 348 subsidiaries from 70 MNEs that operate both in emerging and developed economies for the period 2001-2017.

IM: Capabilities and options in uncertain environments: A study of global offshoring

Author: **Tung-Min Hung**, *National Taiwan U. of Science and Technology*
Author: **Yi-Ju Lo**, *Yuan Ze U.*

While the impact of environmental uncertainty on the relationship between firm capabilities and firm performance is still unclear, we adopt the integrated perspective of dynamic capabilities and real options to explore this issue under the context of global offshoring. We propose that an offshoring firm could benefit from its offshoring capabilities to configure globally dispersed activities as options in uncertain environments. In addition, the managerial attention and discretion guided by a corporate strategy to implement offshoring, an execution of options, could help explain the variance of firm performance. As firms own equivalently offshoring capabilities and face the same level of environmental uncertainty, we further argue that the implementation of a corporate-wide offshoring strategy would result in better performance by capturing the value of options. Using the firm data from the Corporate Client Survey of Offshoring Research Network and the uncertainty measurement from the International Country Risk Guide, we find the empirical support for our premises.

IM: Globalization & Values: How Territorial Identity and Social Globalization Impact Cultural Values

Author: **Maria Luiza C.A. Pinho**, *Georgia State U., J. Mack Robinson College of Business*
Author: **Celso Pinho**, *Georgia State U.*

This paper investigates how territorial identity affects the survival/self-expression values, and if the presence of social globalization acts as a moderator of their relationship. Using the World Value Survey database at the individual level and the KOF Globalization database at the national level, we ran a multilevel analysis to test seven hypotheses developed with the support of the identity theory. The tests show that six out of seven hypotheses are statistically significant, shedding lights on how cultural shifts of survival and self-expression can be explained through territorial identity and social globalization.

IM: Integrating Western and Eastern Perspectives on Development: Implications for US-China Trade War

Author: **Hwy-Chang Moon**, *Seoul National U.*
Author: **Wenyan Yin**, *Seoul School of Integrated Sciences and Technologies*

The US-China trade war shows that economic issues are often intertwined with political, thereby exacerbating the situation and increasing uncertainty about future intentions. The conflicts have caused significant economic losses to not only the parties involved but also to other countries. The sustainability should be built on inter-civilizational dialogue and mutual learning. To this end, this paper introduces an approach of integrating Western and Eastern perspectives on economic development for mutual benefit. The Western approach, demonstrated by economic and business scholars such as Paul Krugman and Michael Porter, emphasizes the importance of uniqueness that is difficult for rivals to imitate. In contrast, the Eastern approach or the Chinese traditional wisdom such as Confucius and Sun Tzu, stresses the importance of learning. Despite the differences between the Western and Eastern perspectives, they can be effectively integrated by exploiting both of their advantages. In providing useful implications for the US-China trade war, we introduce Porter's business model from the West and Sun Tzu's military strategy from the East. Based on this integrated approach, this paper argues that instead of pursuing trade retaliation, China should adopt a strategic approach of "winning without fighting" by making alliances with multinational corporations from a sustainable perspective.

Writing Better Theory 
Writing Better Theory

Panelist: **Tailan Chi**, *U. of Wisconsin, Milwaukee*
Panelist: **Klaus Meyer**, *Ivey Business School*
Panelist: **Anupama Phene**, *George Washington U.*
Panelist: **Jeffrey J. Reuer**, *U. of Colorado, Boulder*
Panelist: **Laszlo Tihanyi**, *Rice U.*
Chair: **Juan Bu**, *Indiana U.*
Chair: **Stephanie L. Wang**, *Indiana U., Bloomington*

Writing good theory is the key to career success in our profession. However, less agreement exists about definitions of “theory”, and even less agreement exists regarding the meaning of a “theoretical contribution”. The purpose of this annual PDW since 2014 is to present the audience with the successful experiences and valuable insights on writing good theory by prominent scholars and editors. The panelists of this year include Professors Tailan Chi, Klaus Meyer, Anupama Phene, Jeffrey J. Reuer, and Laszlo Tihanyi. This PDW will be interactive and welcome questions from participants to stimulate relevant and meaningful discussion.

This professional development workshop is designed to assist authors in preparing their management education and learning manuscripts for publication. The submitted manuscript can be in any stage of completion, but must have sufficient content for review and comment. A management education and learning manuscript that was submitted, but not accepted in the 2021 Academy of Management Education and Development Division conference program, may be submitted since the manuscript title will not appear in the program. Manuscripts will be grouped with similar management education and learning manuscripts with each author expected to review each manuscript, provide feedback to participants and journal editors and/or experienced reviewers will facilitate a discussion of all participants' manuscripts at their assigned table. This workshop is co-sponsored by the Organization Management Journal, Management Learning, the Journal of Management Education, the Case Centre, and the Academy of Management Learning and Education journal. Pre-registration for this workshop is required. Please e-mail a PDF copy of the most recent version of your management education and learning manuscript to mngntedlearnwritersworkshop@gmail.com by June 30, 2021 for inclusion in this important workshop. History Is a Feminist Issue! Crises, Intersectional Injustice and Useable History for Social Change *Crises, Intersectionality and 'Useable Histories'*

Participant: **Lilia Giugni**, *U. of Cambridge*
Participant: **Neil Stott**, *U. of Cambridge*
Participant: **Simone Trixie Allison Phipps**, *Middle Georgia State U.*
Participant: **Laura Claus**, *U. College London*
Participant: **Laure Lelasseux**, *HEC Paris*
Participant: **Lucy Delap**, *U. of Cambridge*

Power relations shape the social construction of crises, and historically oppressed groups such as women and non-white people are often denied the opportunity to share their own experiences of critical events. Similarly, deep-seated manifestations of social injustice which could well be conceptualized as 'crises' (for example, gender-based violence and racialized police abuse) are not always identified as such. With this in mind, we propose a PDW that critically explores the notion of crisis and its implications towards gender, racial and social justice, using a 'useable history' perspective. Our proposed six speakers - a diverse group of scholars united by their interest in organizational history, social innovation and organizational activism - will reflect on histories of 'crises' as experienced by women, people of colour, and other historically marginalized groups. Panellists will then shed light on useable history (Bennett, 2006) as a tool for progressive social and organizational transformation, and discuss the impact of this approach on their work as researchers, teachers and change agents.

Presenting in the Rough: The Art of the Academic Job Talk
Presenting in the Rough

Organizer: **Bess Rouse**, *Boston College*
Panelist: **Rachel Arnett**, *The Wharton School, U. of Pennsylvania*
Panelist: **Anthony Klotz**, *Texas A&M U.*
Panelist: **Siobhan O'Mahony**, *Boston U.*
Panelist: **Ryan L. Raffaelli**, *Harvard U.*

Presentation skills play a central role in the dissemination of knowledge. Are you a doctoral student or faculty member who studies cognition or related topics in organizations and are looking for ways to dynamically present your research? The purpose of this PDW is to bring together a group of scholars who are interested in finding new, innovative, and compelling ways to craft and deliver presentations. The theme for this year's PDW is "The Art of the Academic Job Talk." Panelists will present on specific topics such as how to architect a compelling slide deck, hone in on what to present, prepare and rehearse, engage a multi-disciplinary audience, and navigate a virtual job talk. The PDW will be conducted in three parts—a series of presentations, a moderated discussion, and breakout discussions during which participants will have the opportunity to engage with panelists. At the end of the workshop, we hope participants leave with a set of strategies to improve their presenting. Although the focus of this session is on job talks, many of the strategies can be applied more broadly. We plan for this to be an enriching PDW with a lively, interactive, and relaxed atmosphere.

This is a two-part PDW. Part 1 provides an introduction to content and text analysis as a research methodology. Presenters will discuss appropriate applications, reliability and validity concerns, data curation, programming, and different computer-aided content analysis tools. Experts will also walk through examples of content analysis techniques from published research and offer publishing tips. Part 1 is open to all AOM attendees and does not require pre-registration. Part 2 of the PDW models MOC's successful "Cognition in the Rough" PDW. Experts and authors will interact in small groups to discuss the content, structure, techniques, and potential journal outlets of submitted proposals. Part 2 requires pre-registration and a submission of a 2-3 page proposal to contentanalysis1@gmail.com. The deadline for proposal submissions is July 16. Details are available via AOM listservs or by contacting the organizers at contentanalysis1@gmail.com.

Experiments in Institutional Theory and Strategy Research

Experiments

Organizer: **Oliver S. Schilke**, *U. of Arizona*
Organizer: **Alex B. Bitektine**, *JMSB, Concordia U.*
Facilitator: **Brandy Aven**, *Carnegie Mellon U.*
Facilitator: **Denis A. Gregoire**, *HEC Montreal*
Facilitator: **Derek Harmon**, *U. of Michigan*
Facilitator: **Aleksandra Joanna Kacperczyk**, -
Facilitator: **Hazhir Rahmandad**, *MIT Sloan School of Management*
Facilitator: **Tyler Wry**, *The Wharton School, U. of Pennsylvania*

This workshop provides the opportunity for researchers with interest in experimental research on institutional theory and strategy to engage in dialogue, discuss research agendas and methods, and receive feedback on their ongoing work. The workshop begins with a panel discussion addressing the potential of experimental paradigms and measures to facilitate novel research on institutions and organizations and providing an overview of recent contributions of experimental methods to the advancement of our knowledge on institutions and organizational strategy. The workshop will also comprise a showcase presentation of an experimental research project as well as a paper development workshop, where participants will have the opportunity to get an in-depth feedback and mentoring on experimental research projects in progress from experienced facilitators.

If you are interested in receiving feedback on your work in progress and participating in the second segment (paper development), please submit your manuscript by email to both workshop organizers, Oliver Schilke (oschilke@arizona.edu) and Alex Bitektine (alex.bitektine@concordia.ca), no later than July 15, 2021.

CEOs, leadership and sustainability

Digital Session Chair: **Ajith Venugopal**, *Texas A&M International U.*

ONE: CEO Personality and Organizational Decoupling in the Context of Corporate Sustainability

Author: **Ajith Venugopal**, *Texas A&M International U.*
Author: **Sridhar Nerur**, *U. of Texas At Arlington*
Author: **Yasar Mahmut**, *U. of Texas At Arlington*
Author: **Wendy J. Casper**, *U. of Texas At Arlington*
Author: **Snehal Awate**, *Indian School of Business*

The gap between what firms say and what they do is referred to as organizational decoupling. Despite the fact that decoupling is a widespread phenomenon, there is a paucity of empirical studies that have examined individual level predictors of organizational decoupling, especially in the context of corporate sustainability. This paper examines the relationship between CEO personality and organizational decoupling in the context of corporate sustainability. Using the U.S. manufacturing firms in the S&P 1500 for a period of 10 years starting from 2009 to 2018, we find the support that the CEO personality traits of extraversion and neuroticism increase organizational decoupling. We explored the moderating role of board power on the above relationship but did not find any supporting evidence. This paper contributes to both the literatures on organizational decoupling and upper echelons theory. Examining CEOs' psychological characteristics as antecedents advances TMT research by moving beyond the reliance on demographic proxies that characterize most prior research.

ONE: For Individuals or For Groups? The Influence of CEO Moral Foundations on Firms' ESG Performance

Author: **Eunice Ng**, *St.Gallen Institute of Management in Asia*
Author: **Riyang Phang**, *American U. of Central Asia*
Author: **Soon Lee Eugene Kang**, *Nanyang Technological U.*

ABSTRACT This study examines how chief executive officers' (CEOs') moral foundations (MF) – source of intuitions about what is right and wrong – influence their firms' environmental, social, and governance (ESG) performance. While some CEOs may view harm and injustice caused by their firms' activities as moral violations against unrelated others (i.e. individualizing MF), other CEOs may perceive adhering to their firm-identified primary stakeholder groups' expectations as their guiding moral principle instead (i.e. binding MF). Using a linguistic technique to assess MF from unscripted text spoken by 1,860 CEOs of S&P 1500 firms over five years, we show that CEOs with higher individualizing MF drive greater corporate ESG performance, while CEOs with higher binding MF negatively affect their firms' ESG performance. Moreover, we find that pressures from consumer and employee stakeholder groups negatively moderate the relationship between individualizing MF and firms' ESG performance. Our findings suggest that stronger stakeholder pressures can have unfavourable consequences, such as diminishing the expression of CEOs' personal values around firms' ESG outcomes. As a whole, our study highlights the significance of CEOs' morality in understanding corporate ESG performance and adds nuance to existing research around the value of stakeholder pressures in driving greater ESG performance.

Paper is NOT Available. Please contact the author(s).

ONE: Despotic Leadership, Negative Emotions and Project Success; the role of Mindfulness

Author: **Jabran Khan**, *U. Sains Malaysia*
Author: **Namra Mubarak**, *U. Sains Malaysia*
Author: **Mastura Jaafar**, *U. Sains Malaysia*

Project success is a real challenge for the project-based organizations. Employee's negative emotions disturb their normal activities in an organization, by creating obstacles in the normal operations of the project-based organization. Therefore, the organization should make efforts to decrease negative emotions of the employees in the organization. For this purpose, the present study tested the mediating role of negative emotions (NE) by linking despotic leadership (DL) with project success (PS) and testing the moderating role of employee mindfulness (EM). Data were collected in time lags from the information technology sector of Pakistan. Results were consistent with our hypothesized framework as despotic leadership increases the negative emotions of the employees that lead to a negative effect on project success. Moreover, mindfulness plays the buffering role in mitigating the damaging impact of despotic leadership on negative emotions. The findings of this study provide evidence that project-based organizations need to develop strategies to decrease employee's negative emotions.

This PDW builds on similarly named PDWs in 2019 and 2020 in a continued effort to improve social impact research and build a community of social impact researchers. The PDW aims to further the sophistication of how social impact (broadly construed) is conceptualized and measured across many different research streams. Prior to the synchronous portion of the session, academic and practitioner participants (almost all new participants in this year's PDW) will record brief videos detailing their current and in-process research projects or real-world practice that involve conceptualizing and/or measuring social impact. Then, in the synchronous portion of the PDW an invited practitioner will reflect on some of the key issues facing social impact measurement practice. Then practitioners and researchers participate in a discussion panel, each responding to each others' previously recorded videos. Finally, panelists will respond to questions from the audience. To promote clarity, academic presentations will pay special attention to the definition of social impact used, theoretical foundations, type of data used (primary/secondary), and measurement type (single/multiple dimensions) measured. The results of an online survey of social-impact-related research by attendees will be shared following the PDW to help grow the community of social impact researchers.

Please listen to posted videos before (if available) entering synchronous session so that you have a baseline understanding of the speakers' background and perspectives.

TIM: A Tale of Two Origins: Tracing the Diffusion of University versus Firm Inventions

Author: **Paige Clayton**, *Georgia Institute of Technology*
Author: **Lauren Lanahan**, *U. of Oregon*
Author: **Andrew Nelson**, *U. of Oregon*

Knowledge diffusion drives both technical progress and economic growth. Underlying much diffusion scholarship is an assumption that organizational origin – that is, whether knowledge stems from a university or commercial firm – plays an important role. Universities are motivated to share and may thus catalyze diffusion, while profit-driven firms seek to protect private gains from new knowledge and thus may limit diffusion. However, very little work has directly compared diffusion patterns between these two origins. We present a unique comparative case study design that examines the diffusion of two comparable, foundational biotechnology inventions – recombinant DNA (rDNA) and polymerase chain reaction (PCR) – that originated in university and firm settings. Using a variety of metrics, we find robust evidence contrary to existing assumptions; the diffusion of PCR significantly outperforms rDNA along a range of metrics. Examining the historical record, we consider how early social networks and complementary assets may play an outsized role in shaping knowledge diffusion – and one that overwhelms the role of organization origin. We show that reliance on the university-firm dichotomy is insufficient in explaining knowledge diffusion; we argue for the exploration of underlying mechanisms in diffusion studies; and we highlight the utility of employing multiple complementary measures in diffusion research.

TIM: A critical look at breakthrough innovation: Literature Review and Proposed Framework

Author: **Avimanyu Datta**, *Illinois State U.*

A surfeit of definitions for innovation types has resulted in the equivocal way breakthrough innovation is defined and used in the academic literature. The term breakthrough is often synonymously used with radical, disruptive, discontinuous, or stated to be results of radical innovations built to destroy past competencies. Such misperception may lead to several problems. First, it confuses breakthrough with competence destroying innovations, radical innovations, and product innovations. Second, if a breakthrough is equated with radical or competence destroying innovations, or new product launch, we assume that firms risk disbanding their existing technologies. Such activities without a clear path have shortcomings such as integration costs and information overload, leading to inconclusive results and the high complication of combining dissimilar innovation. Last, without proper definitions, we cannot have explicit cut assumptions and boundary conditions. This will cripple future research. To resolve this, I am proposing creating a nomenclature of innovations by breaking them into three categories: Innovation Configuration, which will comprise of architecture versus component innovations, and radical versus incremental; Innovation Application, which will look at product versus process innovations, and competence enhancing versus competence destroying innovations; and lastly Innovation Performance that looks if the innovation created a breakthrough in its performance. This model will reduce confusion between breakthrough, disruptive, and radical innovations and help future research understand breakthroughs from performance standpoints.

TIM: The impact of breakthrough innovation on firm performance: evidence from China

Author: **Xuecheng Yang**, *U. of Electronic Science and Technology of China*
Author: **Yunfei Shao**, *U. of Electronic Science and Technology*
Author: **Bo Fan**, *U. of Electronic Science and Technology of China*

As breakthrough innovation as well as its successful commercialization is a critical driving force for competitive advantage and firm performance, we try to examine the factors and mechanism of breakthrough innovation from the perspective of profiting from innovation. To capture the underlying mechanism of asset-performance relationship, we explore how complementary assets affect firm performance. By testing the data collected from 230 firms in China, we find that (marketing and manufacturing) complementary assets both positively affect breakthrough innovation and firm performance, while the mediating role of breakthrough innovation between the two types of complementary assets and firm performance is different. To be specific, breakthrough innovation plays a full mediating role in the relationship between marketing complementary assets and firm performance while plays a partial mediating role between manufacturing complementary assets and firm performance. In doing this, we may make contributions to the intersectional research on complementary assets and breakthrough innovation, as well as extensive theoretical explanations of profiting from innovation theory. Besides, we also offer some theoretical guidance for firms to promote breakthrough innovation with nurturing complementary assets to achieve the success of its commercialization and improve firm performance.

TIM: The Evolutionary Nature of Breakthrough Innovation: Re-Evaluating the Exploration vs. Exploitation

Author: **Dominika Kinga Sarnecka**, *Harvard Business School*
Author: **Gary Pisano**, -

Over the past few decades, a consensus has emerged that breakthrough innovations emerge from exploration of novel terrain while more routine innovations are the product of exploitation. In this paper, we revisit this explore versus exploit dichotomy with an analysis of three decades of innovation histories of over two and a half thousand firms. Longitudinal firm-level data and a novel measure of search (Technological Focal Proximity) enable us to characterize corporate activity at a detailed level and examine both search strategies that lead to breakthroughs and those that do not. Contrary to the existing literature, we find that breakthrough innovations develop from a search process that evolves in phases and involves both exploration (initially) and exploitation (subsequently). In the early phases, firms explore unfamiliar terrain. However, as the process unfolds, firms shift their search strategies to focus on exploiting cumulative knowledge. Our findings call into question the strong dichotomy between exploration versus exploitation that has played such a prominent role in theories about the origins of breakthrough innovation, and have potential implications for strategy, organizational design, management practice, and corporate culture.

The main objective of this PDW is to officially plan the publication and “meet” the authors of the Third Edition of the Global Human Resource Management Casebook, whose First Edition, which was published in 2011, was the first project of the HR Division's Ambassadors Program. Since its establishment in 2008, the Ambassadors Program has been making an impact, not only in the HR Division, but also at the Academy of Management, as several other divisions have created their own ambassadors programs. The Second Edition of the Global HRM Casebook was published in 2018. In addition to the cases and case questions, which featured in the First Edition in 2011, teaching notes for educators are featured in the Second Edition. We plan to launch the Third Edition at the 2022 Annual Meeting, when we, hopefully, can hold a physical conference again. The First and Second Editions have been warmly received, they have sold well internationally, and Routledge has confirmed that they will support and publish the Third Edition. The HR Division remains as the sole benefactor of the Casebook's royalties.

**Bringing Leadership Back to Managers: How Leadership Theories
can Better Respond to Managers' Issues**
Bringing Leadership Back to Managers

Panelist: **Zahira Jaser**, *U. of Sussex Business School*
Panelist: **Melissa Carsten**, *Winthrop U.*
Panelist: **Michelle Bligh**, *Claremont Graduate U.*
Panelist: **Olga Epitropaki**, *Durham U.*
Panelist: **Hannes Leroy**, *Erasmus Research Institute of Management*

A long lineage of research marks a clear separation between the concept of “leader” and “manager”. This literature frames managers as strategic administrators, and leaders as inspirational influencers. It informs how leadership and management are taught in business schools, at MBAs and at executive development programs through practitioner and academic publications exploring “How managers become leaders” or “When managers become leaders”. Yet, managers are key tassels in the unfolding processes of leadership in organizations, they face complex leadership and followership challenges on a daily basis. In modern organizations, where complexity is so high, change a constant, and relationships so central, we ask ourselves: how can a manager be effective at influencing, implementing, persuading, without also being a good leader? Unsurprisingly, some scholars are starting to call out this division as obsolete, and even “questionable”. Instead, they call for leadership theories that can better respond to the challenges managers face in their complex day-to-day activities, bridging and buffering different, even contradictory, demands from their upper and lower partners in organizations (e.g. their own bosses, and their direct reports). This panel will explore leadership by considering managers as “connecting leaders” linking together different units, departments, relationships, asking novel questions: how can a manager concurrently co-enact the identity of leader towards their reports, and follower towards their boss? Why middle managers do not make better use of charisma? Why do we still use obsolete terminology as ‘subordinates’, instead than using more dynamic terms as ‘followers’? Why are we enamored with the concept of leader and not with that of manager? The panelists will unpack and debate these issues.

This symposium seeks to highlight recent trends away from stylistic approaches to more concrete behavioral approaches of leadership (van Knippenberg & Sitkin, 2013). Papers in this symposium advance knowledge in this area through a methodologically inclusive lens by synthesizing major streams of research on how leaders' blaming behavior affects followers, examining how leader awareness can affect organizational commitment, tackling the paradox of leader humility, expanding our understanding of how leaders can care for the well-being of others during times of suffering, and establishing ways leaders can increase their wise reasoning. The purpose of this symposium is to highlight emerging leadership research that utilizes behavioral approaches, with the aim of facilitating greater consideration of the possibilities and consequences around leadership behaviors and their implications for leadership development.

The question of how and why social actors adhere to and violate societal norms has long fascinated management scholars and practitioners. Hardly a day goes by without newspapers, NGOs, or regulators calling out an organization or its members for behavior that breaks the law or violates ethical standards. In this symposium, we will explore how such instances of organizational deviance are socially constructed. Conceptualizing organizational deviance as socially constructed means that deviance is seen as behavior in or by an organization that actors outside the organization – such as government agencies, social movements, or media outlets – label as violating norms. The notion of organizational deviance as being socially constructed in this manner is well-established in neighboring disciplines such as sociology, but its implications have been neglected by management scholars. The projects in this symposium explore these implications to shed light on the social construction of deviance from different angles and in different contexts. Taken together, the work in this symposium pushes forward a multi-actor view on the social construction of organizational deviance, highlighting how deviance is created from the actions and interactions of multiple actors with distinct roles, and how this creation in turn influences these actors' behavior. In making these contributions, the papers in this symposium draw on novel contexts, such as the US Prescription Drug Epidemic and the #MeToo movement, and present a balance of empirical and theoretical analysis.

Wagner**, *Swiss Federal Institute of Technology Zurich, ETH*

The COVID-19 pandemic poses new challenges for firms worldwide on an unprecedented scale. This setting is structurally different from previously studied supply chain disruptions and corresponding mitigation strategies. In this study, we aim to empirically substantiate the ongoing and interdisciplinary debate on the COVID-19 pandemic. Based on a sample of 4,032 publicly listed U.S. and Chinese firms across six industries, we show that the magnitude of the shareholder value decline associated with the COVID-19 pandemic is -2.27% in the first month and -16.67% over a three months period. We show that there are substantial differences in the effect size of the shareholder value impact between U.S. and Chinese firms, and across industries. We further identify the firm factors that mitigate this negative impact, such as firm size, firm tangibility, trade cycle, vertical integration, and the digitization of work processes. These findings provide important guidance for managers with regard to the recovery of the COVID-19 pandemic and the implementation of mitigation measures for future large-scale disruptions.

While digital platforms have become mainstream, there still remain some unanswered questions pertaining to managing platform ecosystems. One such unexplored question pertains to the effect of marquee sellers on the platform— marquee sellers arguably attract other sellers and buyers to the platform, thereby enhancing the platform's value. In this paper, we study how adding a marquee seller to a B2B secondary market platform for IT products affects other sellers, in terms of the prices they obtain for comparable products. Using proprietary data on B2B secondary market auctions obtained from a platform provider, we show that the entry of a marquee seller has a positive effect on the prices obtained by other sellers on the platform, reflecting a reference price effect. We further show that this positive effect on final prices is moderated by the extent to which bidders are active on multiple seller sites on the same platform, and the extent to which bidders participate in the marquee seller site. We explain these effects using theory in multi-homing and involvement, in terms of how reference prices are set. Our work extends the platforms literature by considering the specific influence of a marquee seller on other sellers, thereby informing platform owners on the implications of the advice to add more marquee sellers to platforms. We also contribute to the literature on secondary markets for durable, used IT products, which are instrumental in reducing e-waste and mitigating the environmental damage done by electronic products in landfills.

Paper is Available to Meeting Registrants Only.**OSCM: Supply-Network Effects on Supplier Environmental Disclosure**Author: **William Diebel**, *Ivey Business School*Author: **Jury Gualandris**, *Ivey Business School*Author: **Robert D Klassen**, *U. of Western Ontario*

We use unique, longitudinal supply-network data to identify how environmental disclosure norms spread from manufacturing firms to tier-1 Focal Suppliers. Our data suggest that the environmental disclosure practices of Focal Suppliers are only influenced by a small subset of direct buying firms, those that exhibit best-in-class environmental disclosure and profitability, while powerful buyers and average buyers are not likely to exert any influence. We also find that central suppliers, key supply-network brokers and critical stakeholders in further propagating environmental disclosure norms, are more sensitive to being influenced. Our findings inform climate change management and policy decisions.

Paper is NOT Available. Please contact the author(s).**OSCM: Developing and Implementing Business Ecosystem Strategies - A Performance Measurement Perspective**Author: **Gurpreet Muctor**, *Warwick Business School*Author: **Pietro G. Micheli**, *U. of Warwick***Carolyn Dexter Award Nominee**

An increasing number of firms are investing in the creation of business ecosystems to acquire novel capabilities to innovate increasingly complex products and services, and to achieve competitive advantage. Research highlights the importance for companies to develop and implement ecosystem strategies; however, it also notes that such strategies must be characterized by emergence, dynamism and network orientation, and be aimed at influencing, rather than controlling, ecosystem partners. We provide an in-depth analysis of ecosystem strategy development and implementation through a qualitative, longitudinal study carried out at a multinational technology corporation headquartered in Japan. We also identify several aspects related to governance and control— specifically performance measurement and management practices— that acted initially as barriers to ecosystem development and then as enablers. Our findings portray the process of creating the ecosystem strategy as contentious and iterative, and as eventually requiring the company to challenge some of its deeply held assumptions and approaches in order for the new strategy to be implemented. Moreover, even though the case company did not act as an “orchestrator,” it actively contributed to the development of a value proposition that was highly customer centric and dynamic, and that was not enforced by any other firm. In relation to performance measurement and management, we find that top-down, financially oriented approaches are likely to limit the growth of a business ecosystem and identify performance targets and indicators not just as tools used to gather data, but as key mechanisms to embody and express competing logics.

Participant: **Oyinkasola Sodiya**, *U. of Texas At Arlington*

The solidarity economy refers to a diverse set of cooperative and community-based economic practices ranging from cooperatives and credit unions to community gardens. It also refers to an anti-capitalist transnational social movement that aims to promote such practices as a way to transform the larger economy to make it better sustain vibrant communities and the environment. This symposium contributes to the current debate on diversity through alternative modes of organizing the economy for social justice. First, it explores how the governance of organizations in alternative economies creates novel opportunities for historically subordinated and marginalized groups in the capitalist economy. The inadequacy of capitalist institutions has become particularly visible in the wake of the economic crisis of 2008 and, more recently, in the light of the harsh consequences of the COVID-19 pandemic, boosting wealth inequality, globally. These disparities have most strongly affected low wage workers, often women and racial and ethnic minorities, long marginalized in organizations. Second, we consider successes and known problems with alternative economies organizations. We also explore their homogeneity, how problematic such homogeneity is, what can be done to address these and other issues that may hinder the goals toward equity, and the reduction of poverty of the Solidarity Economy. We bring together a diverse group of scholars from diverse disciplines based in Austria, Belgium, South Africa, and the United States.

Remote Work and Women's Career Equality: How to Move Forward Without Falling Behind?
Remote Work and Women's Career Equality

Organizer: **Ellen Ernst Kossek**, *Purdue U.*
Organizer: **N. Sharon Hill**, *George Washington U.*
Chair: **Isabel Villamor**, *George Washington U.*
Moderator: **Tracy Dumas**, *Ohio State U.*
Panelist: **N. Sharon Hill**, *George Washington U.*
Panelist: **Frances J. Milliken**, *New York U.*
Panelist: **Matthew B. Perrigino**, *Iona College*
Panelist: **Ellen Ernst Kossek**, *Purdue U.*
Panelist: **Joyce Bono**, *U. of Florida*

The consequences of COVID-19 (including working remotely) on women's career equality have received significant media and scholarly attention. While some experts claim that remote work hurts women's career equality, others argue it may decrease the discrimination that women often face in the workplace. Pre-pandemic studies suggest that the growth in remote work might be a double-edged sword for women with mixed career benefits and detriments. As organizations increasingly implement remote work, it is critical to understand the implications for women's career equality—including and beyond the pandemic. We have convened a panel of dynamic scholars who study varied aspects of remote work and its impact on women's career equality. In the proposed panel symposium, our panelists will address the following questions: (1) How has the growth in remote work affected women's career equality, and what impacts are overarching vs. unique across contexts (e.g., academia, business)? (2) What theories and perspectives are relevant to understanding the short- and long-term effects of this growth in virtual work on women's career equality? (3) What factors has research shown can mitigate the negative effects? (4) What are important future research directions, and what future managerial, organizational, and policy interventions are needed to enhance the benefits and mitigate the negative effects of remote work on women's career equality? Our moderator will facilitate discussion with the panelists and audience to uncover the career challenges and opportunities that women face in remote work to advance future research and practice..

**Wisdom of The Bhagavad Gita Inspiring Frontline
Managers and Workers In Post Pandemic Workplace**
Gita's Guidance Inspiring Managers and Workplace

Chair: **R Ray Gehani**, *U. of Akron*
Organizer: **Satinder Dhiman**, *Woodbury U.*
Participant: **Nathalie Shapiro**, *Vedanta Institute Los Angeles*
Participant: **Sylvia Burgess**, *One Step at a Time Consulting*
Participant: **Vikram Gulati**, *Maharishi International U.*

In the current Corona pandemic crisis, millions of frontline managers, care-givers, and service-providers (including faculty like us) are plagued and paralyzed by catastrophic stress and concerns about our own and others' survival and well-being. We are unable to act effectively as the conventional management theories and practices have ceased to provide us much guidance. The Bhagavad Gī'tā can serve as a healing balm and a powerful tool for our full engagement in transformational change management. This innovative and interactive PDW will help AOM participants and fellow service providers experientially discover holistic and integral solutions. All the presenters, with shared interest in the wisdom of the Gī'tā, and caring for alleviating the frontline managers' and their clients' burnout, will present from their diverse disciplines and deep experiential backgrounds. In the Gī'tā, the frontline warrior leader Arjuna too was distressed in the middle of an existential battlefield. We would re-examine with our participants how frontline managers can be inspired like Arjuna was, and be resilient to do their dutiful actions without attachment to their actions and outcomes. With two small-group activities and a large-group briefing, the participants will be guided to explore and practically apply the key principles of Gī'tā to illuminate how frontline managers and service providers can engage their inner spirit fearlessly, with single-pointed determination against unsurmountable odds. The AOM participants will also practice the principles and philosophies of the Gī'tā that frontline manager Mahatma Gandhi used to lead millions towards their liberation and freedom.

MSR: **The Metascience of the Academy of Management: Supporting the Global Manager**      

Author: **Charles Thomas Tackney**, *Copenhagen Business School*

This is a theory and evidence-based exploration of the emerging Academy of Management metascience as an historical, international organization and social institution. Informed by industrial relations method for inquiry into the “web of rules” governing organizations and insight-based critical realism, I describe two parameters for situating research within the 26 divisions and interest groups (DIGs). First, there developed a horizontal research parameter between organizations and markets. The second vertical parameter ranges between individual and societal level analytics, such as between individual educational predictors for academic success to macro level societal studies. This parameter enables a criterion-predictor empirical modelling approach that appears to be a newly emergent feature of the Academy’s metascience. My exploration first clarifies these parameters. The Academy founding principles are then reviewed, along with a content analysis of Academy journal editor retrospectives. These trace a decades long privileging of quantitative, quasi-experimental design policy favoring statistical modelling. A convenience sample of business statistics texts indicates that the quasi-experimental design vocabulary of dependent – independent style psychological modelling is the dominant methods language available in current training texts. The criterion-predictor alternative for qualitative or quantitative inquiry described is wholly overlooked, although it offers an engaged epistemology for strategizing value-informed outcomes. From predictors of student academic success, to spirituality or religious assessments of workplace authenticity, to goals associated with diversity and change management and sustainability criteria like the triple-bottom line (TBL), this exploratory study captures key methods elements about the Academy’s dynamic, emerging metascience, enabling further dialogue to advance its historical, global mission.

MSR: **Imitating institutional leadership—How values work of leaders bring past and future together**

Author: **Gry Espedal**, *VID Specialized U.*

This study conceptualizes the phenomenon of imitating institutional leadership. The study suggests that a relationship is to be found in the imitating work of leaders mirroring each other’s ideals and practices. The study is a unique study bringing the manager back in management by analyzing two leaders from two different centuries’ contribution to the development of imitating institutional leadership. Time plays a role in bringing forward the agency of history to establish continuity and meaning to the present members of the organization. The mechanisms of the temporal work are building on discursive, relational, and material elements. The mimetic imitation of the leaders organizing the value of compassion is brought further by reintroducing the grand narrative of the founder and performing values work of taking care of the marginalized throughout history.

MSR: **The Purpose of Business from a Catholic Social Teaching Perspective**

Author: **Domenec Mele**, *Mele*

Different proposals on the purpose of the firm include maximizing shareholder value, creating value for all stakeholders, creating shared value, and optimizing collective value. In contrast, Catholic social teaching suggests that the purpose of a business firm is being a community of persons who in various ways are endeavoring to satisfy their basic needs, and who form a particular group at the service of the whole of society. Profits are important but they are only instrumental for higher ends. This paper discusses the CST view on the purpose of the firm, and how it differs from the other approaches mentioned.

Paper is Available to Meeting Registrants Only.

MSR: **From Classical Oikonomia to Christian Oikonomia: The Revolution of the Common Good** 

Author: **Sara Mandray**, *ESCP Business School*

In this developmental paper we propose to investigate the notion of the common good. This notion of growing interest in management sciences is intrinsically problematic, and many tensions underly its definition. In this article, we propose to distinguish the common good from other similar concepts, in particular from general interest. The study will consider large historical horizons, from Ancient Greek Aristotle to twentieth-century ideologies (Marxism, Totalitarianism). Finally, we may draw two trends, based on two different visions of economy: the Classical oikonomia and the Christian oikonomia. Following those two trends, we try to analyse the emergence of the concept of the common good and its confrontation to three major revolutions: the advent of the Christian age, the discovery of the New World, and the industrial revolution.

Getting Your Writing Done: Crafting a Generative Writing Practice *Getting Your Writing Done*

Presenter: **Rena Seltzer**, *Leader Academic*
Panelist: **Modupe Akinola**, *Columbia U.*
Panelist: **Niro Sivanathan**, *London Business School*
Panelist: **Sekou Bermis**, *Kenan-Flagler Business School, U. of North Carolina at Chapel Hill*
Panelist: **Elizabeth Margaret Campbell**, *U. of Minnesota*

Whether you are an assistant professor looking to publish your way to tenure or a seasoned faculty member who wants to re-invigorate your writing process, this interactive PDW will support you in crafting a more productive writing practice. The workshop will be facilitated by a coach who supports professors at major research universities to accelerate their rate of writing and publishing, along with a panel of successful professors who will share concrete examples of how they craft their writing habits to get more done. Participants will also work cooperatively to plan specific strategies they will use following the conference to become more prolific writers. The program draws on research about the patterns of the most generative academic writers, ideas from positive organizational scholarship, and the experiences of scores of professors who have overcome challenges and achieved their writing goals. The format includes individual presentations, small group discussions, and large group dialogue.

If you are new to the Organization and Management Theory (OMT) division, are interested in joining OMT, or are an established member who has been away for a while, then this forum is for you! This forum was created especially to help members to feel “at home” in the OMT division. We have designed the forum so that you can meet leading scholars in the OMT division, meet other new members of the division, and discuss research with other scholars who share similar interests. The forum will include a welcome and overview of the OMT Division and research discussions moderated by renowned scholars who actively conduct research in a particular area of interest. As a participant in the forum, you can self-select into several research themes of your choice. Research themes will be organized by theory, context and methodology.

What Were You Thinking?: Developing Cognitive Sensibilities for Inductive Coding

What Were You Thinking?: Inductive Coding

Organizer: **Jessi Hinz**, *Case Western Reserve U.*
Organizer: **Silja Hartmann**, *Freie U. Berlin*
Facilitator: **Arne Carlsen**, *BI Norwegian Business School*
Facilitator: **Martha S. Feldman**, *U. of California, Irvine*
Facilitator: **Claus Rerup**, *Frankfurt School of Finance & Management*
Facilitator: **Matthias Wenzel**, *Leuphana U. Lüneburg*
Facilitator: **Kristina Marie Workman**, *Cornell U.*
Facilitator: **Heather Ciara Vough**, *George Mason U.*

The act of inductively coding qualitative data can be daunting for early stage researchers. While some students gain tacit knowledge about coding through training with a qualitatively-oriented mentor, many more students struggle to code their data without mentorship or adequate training. The few prescriptive resources that are available introduce general strategies for coding, but do not explain the cognitive processes that are involved in executing these techniques. To address this lack of coding resources, we propose a virtual PDW in which experienced, as well as more early-career, qualitative scholars will introduce their methods for analyzing qualitative data. Importantly, they will not only discuss how they code data, but will also explain their thought processes, so participants can begin to develop the cognitive sensibilities necessary to examine data in their own projects. To facilitate the development of these cognitive skills, the proposed virtual PDW will involve an interactive component in which participants code text provided by one of the facilitating scholars, discuss their specific experiences coding, and receive feedback from the scholars about how to improve their coding skills in future work.

Thank you for your interest in this two part PDW. The first half of the PDW will be a panel discussion and is open to anyone to attend. The second part of the PDW requires prior registration and is an experiential learning session which requires participants to complete a brief coding exercise ahead of time. You will then have the opportunity to work in a small group with your facilitator of choice where you can ask more specific questions about the scholar's coding process, discuss your coding experience, and learn from others' coding experiences. To reserve your place in a breakout room with a qualitative scholar, please complete the following steps: 1. Fill out this brief application with your research interests and facilitator preferences at <https://forms.gle/h5PpH9zyYfuB42DA> by 11:59pm on Sunday, June 20th. 2. Complete and submit a brief coding exercise (facilitator assignments and pre-work instructions will be sent to you in late June) by 11:59pm on Monday, July 19. *Please note that the second half of this workshop is limited to 36 participants. Acceptance notices will be sent on a rolling basis. We will do our best to match participants to roundtables based on their expressed preferences and research interests. We look forward to receiving your application!

A Best-Practice Guide for Publishing Registered Reports in Management Research

Publishing Registered Reports: Best-Practice Guide

Organizer: **Roman Briker**, *Maastricht U.*
Presenter: **Jon Michael Jachimowicz**, *Harvard Business School*
Presenter: **Fabiola Heike Gerpott**, *WHU - Otto Beisheim School of Management*
Presenter: **Charles A. Dorison**, *Northwestern Kellogg School of Management*
Presenter: **John Antonakis**, *Faculty of Business and Economics (HEC Lausanne), U. of Lausanne*
Presenter: **Joyce He**, *U. of California, Los Angeles*

Management research aims to produce trustworthy and replicable scientific output. A promising approach to better achieve this goal and counteract questionable practices in the field is the publication model of Registered Reports, i.e., the submission and peer review of a manuscript containing hypotheses, planned methods, and analysis plan before collecting data. This publication model offers exciting opportunities to tackle replication problems and ensure methodological rigor, gain a job market advantage, produce more relevant insights for practice, and adhere to new funding requirements for open science. Indeed, an increasing number of top-tier journals such as *Nature Human Behavior*, *Journal of Experimental Social Psychology*, and *The Leadership Quarterly* now offer Registered Reports. Building on developments in other fields, this PDW seeks to focus on how to plan, (where to) submit, and successfully publish a Registered Report. As such, this PDW has three main goals: First, we will provide a hands-on introduction to registered reports. Particularly, we will explain (a) what Registered Reports are, (b) why and how Registered Reports can complement existing management research, and (c) which management journals (and journals in related fields) offer Registered Reports. Second, experienced authors and an editor who handles Registered Reports (John Antonakis, *The Leadership Quarterly*) will present best-practice guides and share (successful) publication stories of Registered Reports, do's and don'ts, as well as common pitfalls. Third, participants will have the opportunity to share their ideas for Registered Reports, discuss possible concerns about this publication model, and contribute to a panel discussion on the future of Registered Reports in management research. Overall, participants will learn how to better approach Registered Reports, find out if this publication model might suit their research questions, and learn where and how to publish them.

Virtual Work: Broadening the Research Agenda  
Virtual Work Research

Organizer: **Sumita Raghuram**, *San Jose State U.*
Organizer: **N. Sharon Hill**, *George Washington U.*

Virtual work research has developed in siloes (e.g. telework, virtual teams, computer-mediated work). Consequently, there are missed opportunities for leveraging cross-disciplinary developments. This caucus aims to identify opportunities to bridge research across different virtual work domains by bringing together scholars who focus on different aspects of virtual work.

Volunteering and Philanthropy

Digital Session Chair: **Marlene Walk, IUPUI**

PNP: Volunteers as Shapers of their Work: Job Crafting in Satisfaction and Organizational Identification

Author: **Marlene Walk, IUPUI**
Author: **Emily Peterson, IUPUI**

Volunteer satisfaction is a significant concern because volunteers tend to “vote with their feet” and leave nonprofit organizations when they are dissatisfied. Volunteer management predominantly focuses on the implementation of management practices aiming to improve volunteer outcomes. This study alters the perspective and focuses on volunteers as active participants in their volunteer experience. We propose that volunteer proactivity is an important, yet overlooked, factor in volunteer outcomes such as satisfaction and organizational identification. Further, we posit that those volunteers who perceive their volunteer work as meaningful are more likely to engage in proactive behavior. We test and (partially) confirm our hypotheses using a sample of 678 volunteers in one youth-serving nonprofit organization in the Midwest region of the United States.

PNP: Unemployment rates and nonprofits' volunteer use: A study of U.S. charitable organizations (WITHDRAWN)

Author: **Jeongyoon Lee, U. of Kentucky**
Author: **Young Joo Park, U. of New Mexico**
Author: **Sungeun Kim, Oakland U.**

As a community's unemployment rate increases, financial supports for nonprofits drop, service demands for nonprofits increase, and potential volunteers' supply increases. Nonprofits find volunteers to be a vital asset and collaborative partners. Guided by resource dependence and transaction costs theory and resource-based view, this study examines how a community's unemployment rates influence nonprofits' volunteer use and how some nonprofits use more volunteers as critical resources than others in times of a community's financial hardship. Using IRS 990 and U.S. Census data (2010-2012), our longitudinal analysis finds that 1) nonprofits situated in communities with higher unemployment rates use fewer volunteers; 2) nonprofits having higher resource management competencies use more volunteers; 3) nonprofits having higher financial resource management competencies use more volunteers in communities with higher unemployment rates. These findings will help pinpoint how volunteers can best be deployed as a substitute for financial resources, production cost-saving human resources, and social resources in times of economic challenges.

PNP: The Effect of Corporate-Nonprofit Partnerships on Intention to Donate and Volunteer

Author: **Rong Wang, U. of Kentucky**
Author: **Michelle D. Shumate, Northwestern U.**

Increasingly, nonprofits and corporations publicly communicate about their partnerships. Guided by information integration theory, this paper examines how information about a nonprofit's partnership with a corporation influences individuals' intention to donate and volunteer. This research used a two-study experimental design. Study 1 (N = 966) examined how explanations for the partnership and partnership evaluation influenced the two outcomes. Study 2 (N = 970) further examined whether specific information about partnerships, including type, duration, and communication source, was integrated with existing knowledge to influence the outcomes. Partnership evaluation consistently impacted stakeholder's intention to support nonprofits, and it mediated the effect of partnership explanations on the intention to volunteer. Furthermore, partnership type significantly influences the two outcomes while duration and source of communication had no impact. (124 words)

PNP: Drawn In or Crowded Out? Do Funding Signals Have the Same Effect in Nonprofit Contexts?

Author: **Cavin Joseph Williamson, U. of Tennessee, Knoxville**
Author: **David Gras, U. of Tennessee**

In for-profit organizing, financial support from third parties signals capability to other prospective financial backers, leading to further resource acquisition. In nonprofit organizing, however, signals of financial support potentially have a more complex relationship with future funding, as the financial support of one party has been shown to crowd out support from other parties in nonprofit giving. In this study, therefore, we pose competing hypotheses on the effect of financial support signals in nonprofit contexts, summarizing evidence in support of the crowding out and capability signaling perspectives. Using tax filing data from a population of Canadian nonprofits, we examine the effect of signals of financial support on subsequent donations from other sources. Findings suggest that signals of financial support positively predict future funding from other sources in general, but that this effect is contingent on organization size. Large and small organizations' financial support tends to positively predict future support, while midsize organizations' financial support is far more of a ‘mixed bag’, including several negative and significant effects in predicting future support. Our findings deepen understanding of signaling dynamics in nonprofit contexts, and provide guidance for nonprofit fundraisers.

Facilitator: **Holly Slay Ferraro**, *Seattle U.*

This PDW focuses on showing academics how they can advance their career through the Scholarship of Teaching and Learning (SoTL) by writing and publishing cases studies on the career field. The session is designed for those who are interested in the Teaching Careers field and want to use teaching strategies that engage students, promote critical thinking, clarify careers theories, assist professors to reach the class learning outcomes and high student's score evaluations. In addition, the session is addressed to those academics that are concerned in how they can advance their career, by publishing in reputable journals building their case for tenure and promotion. The workshop is organized in a way to actively involve participants in writing Teaching Cases, exploring fundamental issues on case writing, covering main aspects of this pedagogical technique, and ultimately, its publication. It's organized and facilitated by experienced and award-winning case scholars, from different countries and universities, members of associations and groups focused on new approaches on Teaching Careers. Also, this PDW brings back an important initiative of the Career Studies Teaching Community.

HCM Division Senior Scholars Coffee Chat

Representative-at-Large: **Nicholas Edwardson**, *U. of New Mexico*
Representative-at-Large: **J'Aime Jennings**, *U. of Louisville*

The leadership of the HCM division has created a Senior Scholars Mentoring Coffee Chat. In this virtual environment, it has made it particularly difficult for doctoral student early in their academic career to interact with colleagues in the field in usual ways, building up connections and exchanging ideas and research. The goal of this program is for HCM doctoral students, post-docs, and junior faculty to have the opportunity to communicate and exchange thoughts with peers from other schools and countries with the guidance of a senior health care management.

**Preparing healthcare leaders to become good ancestors:
Implications for teaching**
Healthcare leaders as good ancestors

Chair: **Andrew N. Garman**, *Rush U.*
Facilitator: **Ryan Armbruster**, *U. of Minnesota*
Facilitator: **Katherine A. Meese**, *U. of Alabama, Birmingham*
Facilitator: **Paula Song**, *Virginia Commonwealth U.*

In 2008, Donald Berwick and colleagues published a seminal paper outlining what came to be known as the “Triple Aim” (Berwick, Nolan, & Whittington, 2008). The article articulated the critical interplay between care quality, access and cost, and how the U.S. health system could not make progress unless it pursued all three aims simultaneously. Since that time, health systems have been trending toward a greater focus on the health of the communities they serve, expanding the complexity of healthcare leaders’ roles to include a focus not just on community welfare, but also on advocacy. In the decade to come, this focus is predicted to expand further, to include what might be characterized as an “employer triple aim,” involving the intersection of well-being, socio-economic justice, and climate change. The proposed workshop features experienced academics working in each of these three areas, who will discuss their work preparing students for the next-generation challenges they may face in each of these three areas. The second half of the workshop will involve break-out sessions, in which participants can pursue a deeper dive into two of the three topics of their choosing, exploring strategies for bringing these critical topics into the classroom.

MED Best Symposium in Management Education and Development Award sponsored by McGraw Hill/Irwin for the symposium that offers the most significant contribution to advance management education and development.

This panel symposium explores the use of gaming in management research, education, and practice. Bringing together management researchers with experience of the gaming industry, and industry professionals who are active in supporting gaming in learning and education, we generate an interactive discussion of the implications of using games within research and management education. We specifically discuss the use of games within educational settings, highlighting how we have used a variety of games in several different management courses including Leadership, Organizational Behavior, Human Resource Management, Entrepreneurship and Strategic Management as experiential learning activities. In doing so, we discuss how commercially available game scan be modified and adapted for management education and how games and game design can be implemented to illustrate management course material. This symposium session will also involve hands on experience for attendees to use different games in a virtual format, highlighting how such use can creatively enforce terms and concepts.

Words Matter: The Role of Rhetoric in Organization Behavior

Digital Session Chair: **Kristina Wald**, *U. of Chicago Booth School of business*

OB: Making a Boast Believable: Disclaimers Increase the Effectiveness of Seemingly Untrue Brags

Author: **Kristina Wald**, *U. of Chicago Booth School of business*
Author: **Shereen J. Chaudhry**, *U. of Chicago Booth School of business*
Author: **Jane Risen**, *U. of Chicago Booth School of business*

Communicating about one's accomplishments and abilities to others is an important part of navigating the social world, yet people are not always believed when making self-promotional claims. In this research, we investigate how people can brag about themselves more effectively when their audience is not likely to find their claim very credible. In particular, we examine, and find support for, the efficacy of disclaimers—phrases that attempt to prevent negative judgments from the speaker's forthcoming statement (e.g. "This may sound strange to you, but..." or "I'm not that smart, but...")—as an effective tool that can address a brag's lack of believability and thereby improve perceptions of the brag. However, we also find evidence that such disclaimers are ineffective, and sometimes even harmful, when the speaker is already perceived as credible in their claim. Finally, we find that other types of disclaimers (that address other negative aspects of the statement besides the lack of believability) are ineffective regardless of speaker credibility. Results are discussed in terms of the disclaimer's effect on perceived speaker self-awareness and sincerity.

OB: Watch your language! What CEO tweets tell about firm performance and how they change due to COVID-19

Author: **Sabine Bergner**, *U. of Graz*
Author: **Karl Kreiner**, *AIT Austrian Institute of Technology*

Language is the primary tool for business communication and exerts its influence during both times of crisis and stability. This study examines the power of CEO language and investigates its link to firm performance, firm reputation and crisis management. Therefore, the language style of 144 CEOs was analyzed using their messages on Twitter before and during the COVID-19 crisis. In essence, CEOs who tweet more often about their achievements and motivational drive and who use more assertive and community-related language manage financially more successful firms. Notably, CEO language directly relates to various financial indices of firm performance including assets, profit or revenue. The findings reveal that the power of CEO language partly lies in its effect on firm reputation. When CEOs send tweets rich in achievement-oriented, assertive, driven and community-orientation expressions they nourish the firms' reputation, which then feeds the firms' financial performance. Notably, CEOs adapt their language on Twitter in critical times, such as during the COVID-19 crisis, and use more personal and socio-relational expressions with an emphasis on affiliation and community but also on negative emotions like anger during the crisis. Concluding, this study demonstrates the power of CEO language on social media and provides insights on how it changes in times of crisis. Its implications are discussed in light of the upper echelons theory and impression management theory.

Paper is Available to Meeting Registrants Only.

OB: Linking Daily Intercultural Communication to Creative Behavior: A Job Demands-Resources Perspective

Author: **Cheng-Huan Liu**, *Rutgers U., School of Management and Labor Relations*
Author: **Maria Kraimer**, *Rutgers U., School of Management and Labor Relations*
Author: **David T. Wagner**, *U. of Oregon*

Although multicultural interactions are purported to offer creative potential, this creativity often goes unrealized. Our research takes a within-person approach to unravel the conundrum of creativity in cultural diversity. To do so, we focus on intercultural communication quality and examine how it facilitates day-to-day creativity in a multicultural workplace. Drawing on the motivational process of Job-Demands-Resources and conservation of resources theories, we propose that daily quality of intercultural communication indirectly enhances an individual's creative behavior the following day through work-related rumination and work engagement. Results from an experience sampling study of 136 employees who work outside their home country generally supported our model. Specifically, employees experiencing daily high-quality intercultural communications reduced affective rumination in the evening and enhanced their next-day work engagement and creative behavior. Overall, this study enriches our understanding of multicultural interactions and creativity by adopting an intra-individual approach.

Paper is Available to Meeting Registrants Only.

OB: Happy Talk: Is Common Diversity Rhetoric Effective Diversity Rhetoric?

Author: **Lisa Michelle Leslie**, *New York U.*
Author: **Elinor Flynn**, *New York U.*
Author: **Olivia Foster-Gimbel**, *New York U.*
Author: **Colleen Flaherty Manchester**, -

Despite increased emphasis on diversity, diversity initiatives often evoke negative employee reactions, which undermine their effectiveness. We investigate leaders' diversity rhetoric—defined as how leaders talk about diversity—as a tool for increasing employees' diversity support. We identify three diversity rhetoric types: value-in-diversity (diversity creates value), challenge-in-diversity (diversity creates challenges), and contingent diversity (diversity creates value if the challenges are overcome). Drawing from theory on communication norms, we predict value rhetoric is most common. Drawing from theory on persuasion and goal setting, we predict contingent rhetoric is most effective. An archival study of company websites reveals value rhetoric is most common, but contingent rhetoric has the strongest positive effect on diversity rankings (Study 1). A survey of employees of an agriculture company reveals leaders use value rhetoric most often, but contingent rhetoric has the strongest positive effect on employees' behavioral diversity support (Study 2). Finally, an experiment reveals diversity rhetoric has causal effects and perceived goal difficulty explains why contingent rhetoric is most effective (Study 3). Collectively, these studies uncover a descriptive-prescriptive paradox—the most common diversity rhetoric is not the most effective—and suggest leaders can increase diversity support by changing the way they talk about diversity.

As the workforce becomes increasingly racially diverse, creating spaces to discuss and address issues surrounding racial diversity has become an important aspect of modern organizational life. However, organizations have to consider how to create these spaces in ways that do not promote backlash. Extant work has demonstrated that, in many ways, this can be challenging as discussing race and racism can garner feelings of resistance among discussants, reducing their desire to improve diversity. Thus, to better prepare organizations and leaders to address diversity, this symposium presents research that develops insights into how diversity concerns are addressed, and the ramifications for different approaches to addressing them. This symposium will begin by exploring how organizational leaders' engagement with race and racism shapes if, and how, they address it in their organizations. A common way for organizational leaders to address racism is by implementing a diversity initiative; consequently, this symposium will also seek to understand the elements of diversity initiatives that influence how employees respond to these initiatives. After the presentations, there will be a group discussion, facilitated by PhD candidate Merrick Osborne, that will develop concrete recommendations for managers and organizations moving forward.

Super-wicked problems of our time (Levin et al., 2012) have caught the attention of the organization and management scholarly community (Howard-Grenville et al., 2019). As we turn the corner into the '20s, many recognize the necessity for transformative leadership and organizing. In this PDW we explore humanistic approaches that encourage and empower managers and their organizations to focus on addressing the major challenges of our era by considering human and societal needs and propagating remedies rooted in principles of dignity and well-being. Drawing on humanistic perspectives of management that prioritize the protection of human dignity and promotion of well-being (e.g., Pirson, 2017), this PDW constructs a high engagement space to seed interdisciplinary dialog across social, environmental, political, and economic dimensions. The PDW features opening keynote remarks by management thought leader Anita McGahan, past president of the Academy of Management (AOM), who calls for innovative managerial approaches and enlightened organizational action on issues including social justice and immigration (McGahan, 2020). In addition, editors from top management journals will share insights and discuss publication strategies in support of scholarly efforts that prioritize and amplify the best of humanity in managing and organizing. The session concludes with facilitated breakout conversations for developing and implementing humanistic resources that inspire novel thinking and energize solution-generation among managers, and that advance research and impact across management scholars.

Managers & Decisions for Innovation

Digital Session Chair: **Nadine Hietschold**, *Bern U. of Applied Sciences*

TIM: Why do innovation managers put a premium on premium?

Author: **Mario Schaarschmidt**, *Paderborn U.*
Author: **Gianfranco Walsh**, *Friedrich Schiller U. Jena*
Author: **Ariane Segelitz-Karsten**, *Friedrich Schiller U. Jena*
Author: **Nadine Hietschold**, *Bern U. of Applied Sciences*
Author: **Sebastian Gurtner**, *Bern U. of Applied Sciences*
Author: **Ronny Reinhardt**, *Friedrich Schiller U. Jena*

Researchers and practitioners call for innovation that is affordable to consumers with a low willingness or ability to pay. However, many affordable innovation ideas may never come to fruition because they do not get past important innovation gatekeepers; managers and decision-makers' individual-level preferences and attitudes may hinder the development of affordable innovation. This research identifies affordable innovation rejection attitudes among decision managers as a major obstacle in developing affordable innovation and proposes a scale to measure them. Across a series of qualitative and quantitative studies, this research develops and validates a parsimonious psychometric scale to measure decision-makers' affordable innovation rejection (AIR) attitudes. The resulting six-item scale is based on a tripartite conceptualization of AIR and proves to be valid in terms of convergent, experimental, nomological, and test-retest reliability. We discuss possible applications of the scale in light of a short future research agenda.

TIM: The role of group composition for cognitive collaborative foresight processes

Author: **Melanie Wiener**, *WU Vienna U. of Economics and Business*
Author: **Regina Gattringer**, *Johannes Kepler U. Linz*

Corporate foresight is said to be a promising approach to reduce or handle uncertainty arising from fast changing, complex environments. The added-values mentioned in literature are among others, that it prepares for the future by challenging dominant mental models that decision-makers have adopted from the past and helping them to overcome the inertia inherent in their beliefs. The literature review shows that collective cognition – and in this regard group composition – plays an important role in how far proposed qualities of cognitive foresight can be met and cognitive biases (e.g. group polarization phenomenon, confirmation bias) can be overcome. This research investigates how group composition (in terms of homogeneity versus heterogeneity) affect cognitive foresight processes and how cognitive pitfalls are likely to be overcome. Based on an integrated literature review, we propose a conceptual framework of a collaborative foresight that benefits from inter-organizational diversity and offer suggestions to guide future empirical and theoretical research.

TIM: Competing Logics of Structure and Stakeholders for New Product Development in a Corporate Makerspace

Author: **Cole Crider**, *Florida Gulf Coast U.*
Author: **Russell E. Browder**, *U. of Oklahoma Price College of Business*
Author: **Robert P. Garrett**, *U. of Louisville*

The purpose of this study is to understand the competing logics at work in an internal corporate venture (ICV) structure focused on the new product development process (NPD). Through an ethnographic approach, we explore how one large corporation launched an ICV with a unique structure and innovation processes in the form of a corporate makerspace. We analyze the competing logics of ICV and parent company through four iterations of the NPD process, explaining how each product cycle surfaced conflict between logics and led to structural changes for different sets of stakeholders.

Paper is Available to Meeting Registrants Only.

TIM: The Impact of a Central Functional Department for Innovation Management on Firms' NPD Performance

Author: **Fabian Reck**, *U. of Bamberg*
Author: **Philipp Caspar Wiesenfeldt**, *U. of Bamberg*

In this paper, we examine if and by which mechanisms the presence of a functional department for innovation management at the corporate level (IMD) impacts firms' NPD performance. Drawing on the RBV and the notion of organizational structure as a venue for capability development, we propose that the presence of a central IMD helps the firm cultivate valuable capabilities that facilitate new product development. Distinguishing between execution-oriented and entrepreneurial roles of corporate functions, we extend this baseline argument and specify five capabilities that we expect to be influenced by IMD presence: three of them corresponding to the execution-oriented role of the IMD (project selection and evaluation, project implementation, project coordination), and two corresponding to the entrepreneurial role (innovation orientation, openness to external knowledge). We test the resulting mediation model based on survey data from a sample of 124 manufacturing and service firms using PLS-SEM. Our results demonstrate that IMD presence positively affects the firm's capabilities for selecting, implementing, and coordinating NPD projects, but has no significant effect on innovation orientation and openness to external knowledge. By this, IMD presence benefits the firm's NPD efficiency. Regarding NPD effectiveness, however, our results indicate that IMD presence might be a double-edged sword.

Sequence Analysis in Career & HRM Research: Techniques and Practical Applications

Sequence Analysis

Organizer: **Katja Dlouhy**, *U. of Mannheim*
Organizer: **Torsten Biemann**, *U. of Mannheim*

This is an introductory workshop on sequence analysis, specifically on optimal matching analysis. Optimal matching analysis can be used to assess similarity of sequence data, and to find patterns in longitudinal nominal data. The workshop is targeted at researchers and doctoral students who want to get started with this method. The objective of the workshop is to encourage and enable participants to apply sequence analysis in their own research. After introducing fundamentals of the method, we will provide examples of its use in empirical career studies. Attendees will then develop practical, hands-on skills for using optimal matching analysis by analyzing a sample data set with career sequences. We will discuss important practical issues and introduce some advanced applications, giving enough room for discussion and questions. After registration, participants will be provided with a download link to the free software R, sample data, and some syntax for R that can serve as a blueprint for their own future analyses.

Employee voice is critical to organizational functioning. A recent line of inquiry has begun to explore how context -- situational factors external to the voicer -- influence when and whether employees speak up. Predominantly, this research has focused on the role of the leader in eliciting or discouraging voice. This symposium explores research on voice and context beyond the influence of leadership to other critical aspects in the context. This symposium expands theory and research on the unexplored ways context influences when, how and whether members voice, along with the downstream consequences of voice.

Incivility and Microaggressions at Work

Digital Session Chair: **Elizabeth R. Tenney**, *U. of Utah, David Eccles School of Business*

GDO: Silenced by Incivility: People, Especially Women, Voice Less in Uncivil Groups  

Author: **Elizabeth R. Tenney**, *U. of Utah, David Eccles School of Business*
Author: **Kathryn A. Coll**, *U. of Utah*
Author: **Kristin Bain**, *Rochester Institute of Technology*
Author: **Tamar Admati Kreps**, *U. of Hawaii*

Researchers have discovered inconsistent relationships between voice and gender. Drawing on the theoretical perspectives of voice climate and backlash anticipation, we propose that uncivil social interactions between workgroup members can affect decisions to voice, and that they do so differently for men and women. In two immersive online experiments with over 2,000 participants, we find that those assigned to participate in uncivil versus civil groups were less willing to voice, and that the silencing effect was stronger for women than men. We also find evidence that two aspects of group voice climate—psychological safety and impact—were parallel mediators explaining the effect of incivility on voice. Further, we show that these effects can be mitigated if group members support each other, even when they are otherwise uncivil. This work adds to the field's understanding of voice by demonstrating how decisions to engage in extra-role behavior can depend on peer interactions in small workgroups, and that these interactions can affect some people more than others.

GDO: Disrupting the effects of gender microaggressions: Allies as triggers of redemptive sense-making  

Author: **Jennifer Kim**, *Tufts U.*
Author: **Alyson Meister**, *IMD Business School*

Women continue to remain underrepresented in Science, Technology, Engineering, and Math (STEM), and this gender disparity is particularly pronounced in leadership positions. Through in-depth, qualitative interviews of 39 professional women in STEM careers, we explore how experiencing gender microaggressions in the workplace can shape the experiences and leadership outcomes for women leaders in STEM. Our findings highlight the various types of gender microaggressions women most often confront, and how and when these microaggressions are likely to occur. We discover the negative impact that experiencing microaggressions can have on women's work identities, and in particular how it can trigger a cycle of rumination and self-doubt. Importantly, we surface the interventional and empowering role that allies play in triggering a redemptive sense-making process that can ultimately support women to build resilience and counter the negative effects of this experience.

Paper is Available to Meeting Registrants Only.

GDO: Coping Strategies and Sensemaking for Microaggressions  

Author: **Nisha Nair**, *U. of Pittsburgh*
Author: **Deborah Good**, *U. of Pittsburgh*

Microaggressions can have damaging health impacts on minorities experiencing exclusion through such forms of discrimination and bias (Nadal, Griffin, Wong, Davidoff, & Davis, 2017; Sue, Capodilupo, & Holder, 2008). Using focus groups of different marginalized groups and through in-depth interviewing, we analyze the ways in which marginalized identities respond to and deal with microaggressions. Through a qualitative analysis of microaggression experiences along race, gender, sexual orientation and religion, we explore the sensemaking process and coping mechanisms employed by recipients of the microaggressions. Our results indicate some underlying patterns of sensemaking, categorized as coping by a) resisting or reclaiming voice, (b) retreating, reframing or withdrawing, (c) rejecting or stonewalling, (d) restraining and internalizing, (e) receiving support and reconnecting (with safe spaces), and (f) redoubling (effort).

Paper is NOT Available. Please contact the author(s).

GDO: The Impact of Subordinate Incivility on Male and Female Leaders' Well-Being: An Experimental Study

Author: **Rhea Paskel Stronach**, *Saint Mary's U., Canada*
Author: **Camilla M. Holmval**, *Saint Mary's U.*

Utilizing a between-subjects (N = 125) laboratory experiment, we investigated whether subordinate incivility impacts leader well-being (operationalized as state affect), whether this relationship is mediated by relatedness and competence needs frustration (Baard, Deci, & Ryan, 2004), and whether these mediation effects are stronger for females than for males. Results demonstrated that: (1) subordinate incivility caused lower positive affect for both genders and higher negative affect for male leaders only; (2) subordinate incivility impacted leader affect via relatedness need frustration for both genders; and (3) subordinate incivility impacted leader affect via competence need frustration for male leaders only. Existing research exploring subordinate incivility is primarily correlational; we provide causal evidence of the impacts of disrespectful subordinate behaviour on leader well-being and find evidence for the mediating role of needs frustration variables, and the moderating role of gender, in understanding leader reactions to mistreatment from their employees.

Are We Even On the Same Side?: Pitfalls to Allyship
Are We Even On the Same Side: Pitfalls to Allyship

Organizer: **Michael Rosenblum**, *NYU Stern School of Business*
Participant: **Jaelyn Lisnek**, *U. of Virginia*
Participant: **Michelle Lee**, *New York U.*
Participant: **Olivia Foster-Gimbel**, *New York U.*

In pursuing societal change, members of dominant groups are often called to act as allies to disadvantaged groups. Four talks highlight how and why such alliances are often fraught: prejudices leak from the allies' words, groups differ in perceived harm, and coalition members' motives are questioned. The first talk shows that Black Americans infer the underlying prejudices of Whites who declare themselves to be nonprejudiced and egalitarian, and that their interpersonal evaluations and behavioral trust are shaped by Whites' underlying prejudice. The next talk examines a tendency of conservatives to see men as the true victims of the #MeToo movement, thereby inhibiting allyship. The third talk discusses how White coalition members (relative to racial minorities) may be perceived to have ulterior motives for allyship in interracial political coalitions, which influences observers' intentions to join such coalitions. The last talk investigates how organizational actors understand their own allyship efforts and how this affects the development of employee allyship programs in organizations. These talks highlight the complexity of cultivating and signaling allyship, noting potential pitfalls.

If our symposia is not asynchronous, our time preference is for "16:00 – 20:00 UTC-5/GMT-5" Thank you!

Supporting Self-Regulated Learning: Increasing Student Feedback Through Comparison Activities

Supporting Self-Regulated Learning

Presenter: **Martin R. Fellenz**, *Trinity College Dublin*

Presenter: **Michelle MacMahon**, *Trinity Business School, Trinity College Dublin - U. of Dublin*

Comparison activities, such as comparing a code against peers' code, rubric, exemplar or other are found to be an effective teaching strategy for building programming skills. Comparison activities support self-regulated learning through a process of abstraction. That is, students are facilitated to engage in a conversation with their work and produce inner feedback that becomes the raw material for their learning and development (Nicol, 2020). This workshop is designed to support educators in their designing and implementing effective comparison activities and administering the process to facilitate student self-regulation. This highly interactive and collaborative workshop will provide participants with materials and ideas that are immediately useable and applicable to a wide variety of teaching practices. We guide participants in their developing insights about comparison activities for students self-regulated learning; we describe and discuss ubiquitous, implicit comparison opportunities, and facilitate participants identifying concrete opportunities for explicitly implementing comparison activities within their teaching practice; we introduce participants to a framework that guides their decisions on design and implementation; and provide case examples. These segments will be interspersed with reflective and experiential exercises to highlight the benefits and processes of comparison-based internal feedback. Comparison activities can be deployed across all learning settings including in classroom settings, individual and group assignments, and online tasks and interactions.

Facilitator: **Kristie Rogers**, *Marquette U.*
Facilitator: **Shalini Khazanchi**, *Rochester Institute of Technology*
Facilitator: **Violet Ho**, *U. of Richmond*

Reviewing is a critical “professional responsibility” and an integral part of participating in the academic community (Trevino, 2008). Yet Tsang and Frey (2007: 129) noted that “there is no formal training for referees who usually pick up their review skills through learning by doing.” This raises a perplexing question for doctoral students and junior faculty: how to develop critical reviewing skills with so few opportunities to practice the art of reviewing? This PDW provides participants with a rare opportunity to learn and practice the art of reviewing. Prior to the conference, participants will be asked to prepare a practice review of the manuscript by Oc, Bashshur, and Moore (2019) titled, “Head Above the Parapet: How Minority Subordinates Influence Group Outcomes and the Consequences They Face for Doing So” published in the *Journal of Applied Psychology*. The actual workshop will consist of two parts: (1) presentation on the reviewing process from editor’s, reviewer’s, and author’s perspectives, as well as (2) interactive breakout rooms. The panel will provide participants an opportunity to gain key insights about the review process and quality reviewing from scholars who have served as Associate Editors and Editorial Board Members at leading journals in our field. In the interactive breakout rooms, Oc (representing the author team) will provide background information about the original submission of their manuscript. Participants will then break into small groups, each facilitated by an experienced faculty member, to discuss and receive feedback on their formal reviews. The PDW will conclude with Oc sharing actual reviews the author team received and how they helped shape the final manuscript.

To reserve your spot for Part 2 of the PDW, please complete the following steps: 1. Send an e-mail to mocreview@gmail.com to request a copy of the manuscript. 2. Complete a formal review of this manuscript (i.e., approximately two single-spaced pages). 3. E-mail your completed review to mocreview@gmail.com. 4. If review is accepted, we will send you a confirmation email. Please note that spots in Part 2 of the workshop will be allotted to the first 27 doctoral students and junior faculty members who submit completed reviews before June 30th. Please reach out early as spots tend to fill up quickly!

innovative Methodologies for Studying Careers and Work Arrangements

Digital Session Chair: **Soorjith Illickal Karthikeyan**, *Indian Institute of Management, Udaipur*

OB: 'Tis Neither Here nor There! A Process Model of Liminal Experience in the Context of 'Bench' Employee

Author: **Soorjith Illickal Karthikeyan**, *Indian Institute of Management, Udaipur*
Author: **Srinivasan Tatachari**, *T A Pai Management Institute*
Author: **Divya Pant**, *Indian Institute of Management, Udaipur*

This paper develops a process model of employee liminal experience inside organizations. We focus on the employees in an Information Technology Company who were on 'bench', i.e., the downtime between projects, for different durations to study the unfolding of their liminal experience. The process model presented in this paper tracks the evolution of employee liminal experience through the stages of opportunity, drift, and crisis, and their constituent contributing factors. A process perspective is applied in the analysis of narrative data collected from the employees on bench.

Paper is Available to Meeting Registrants Only.

OB: The Future of Work: Mental Representations of a Changing World of Work 

Author: **Lauren Christine Howe**, *U. of Zurich*
Author: **Leonie Jolanthe Hentrup**, *U. of Zurich*
Author: **Jochen I. Menges**, *U. of Zurich*

The future of work is central to discussions in society, but surprisingly absent as a theme in management scholarship. Although there is scattered research on topics related to the future of work, conceptually there is a lack of clarity about what "the future of work" means and entails, and empirically, its temporal positioning in the future has made it challenging to gather data in the present. We resolve these issues by drawing on literature on prospective cognition to offer a novel conceptualization of the future of work as an individual's mental representation of how work will change; these representations can be assessed in the present. Here we build theory about and study empirically whether people systematically differ in how they feel about, prepare for and thus ultimately shape the future of work. Across a series of archival, survey, and experimental studies focused specifically on skills needed in the future of work, we find general support for our theoretical framework that people overrepresent technical (as opposed to socioemotional) aspects, that this systematic distortion has adverse emotional effects on women (but not men), and that shifts in mental representations can change how people feel about and prepare for the future of work.

OB: The Pain and Possibility of Departure: Meaningful Work Shapes Leader Exit From Organizations

Author: **Elizabeth Trinh**, *U. of Michigan, Ross School of Business*
Author: **Krystal Laryea**, *Stanford*

Organizational exits are an inevitable part of work life, yet leaving is not an easy process for people who have achieved a deep and meaningful connection with their work. Departures can be especially challenging for leaders, as exits have implications not only for the leaders themselves but also their organizations. We draw on the meaning of work literature in order to uncover why some leaders leave well while others overstay to the organization's detriment. In an inductive, qualitative study of 43 executive directors in the nonprofit sector, we identify three sources of meaning that influence leadership orientation and find that organizational leaders' experiences meaningful work ultimately affects how they navigate leaving their organizations. We propose three distinctive departure processes and develop a model that ties meaning-making to the processes of departure. In doing so, we contribute to the literatures on meaningful work and leader departure.

OB: The Impact of Digital Technologies on Employee Performance and Strain: An Experience Sampling Study

Author: **Christina Desernot**, *Ruhr-U. Bochum*
Author: **Sascha Alavi**, -
Author: **Matthias Weiss**, *Ruhr-U. Bochum*

New digital technologies, originally introduced to enhance productivity, not always live up to expectations when being introduced in organizations. To gain a better understanding of the contingencies determining the performance-related consequences of employees' use of digital technologies, we draw on organizational information processing theory and literature on technostress. We examine task type and technology induced competitive climate as moderators of the digital technology use – employee performance relationship. We test our conceptualization using an experience-sampling study with 709 daily observations nested in 104 employees and perform various robustness checks to control for methodological issues such as endogeneity or autocorrelation. The results advise managers that a technology-induced competitive climate is conducive to effective technology deployment in creative tasks, but detrimental in analytical tasks.

Presenter: **Remy E. Jennings**, *U. of Florida*
Participant: **Klodiana Lanaj**, *U. of Florida*

In the past year, the devastating COVID-19 crisis has rapidly aggravated the dire problem of leadership burnout and propelled it to the forefront of organizational concerns. On a regular basis but particularly during times of uncertainty and hardship, the myriad daily demands and responsibilities involving high stakes decisions can easily deplete and distress managers, as they are expected to tackle strategic decisions while also caring for the well-being of their followers and guiding work teams. Unfortunately, experiencing low (emotional) well-being—depleted energy and the lack of positive emotional experiences—has been linked to lower performance and effectiveness. Thus, it is crucial and timely to better understand how leaders can effectively regulate themselves to recover their own sense of well-being—whether this recovery takes place at or outside of work (i.e., at home)—especially during challenging times when leaders' well-being is most likely to be precarious. Traditionally, researchers have focused largely on a “follower-centric” perspective and focused less on a “leader-centric” perspective. While the former emphasizes the interpersonal consequences of leader behaviors on their followers, a small but emerging literature takes the latter approach, seeking to understand the intrapersonal consequences of leaders' behaviors—that is, how the behaviors that leaders engage in affect their own emotions, attitudes, and/or leadership behaviors (e.g., Foulk, Lanaj, Tu, Erez, & Archanbeau, 2018; Lanaj, Johnson, & Lee, 2016; Lin, Scott, & Matta, 2019). Given the tenor of our time and in line with the 2021 AoM theme, “Bringing the Manager Back in Management,” our symposium takes a leader-centric perspective and explores how leaders' behaviors at and outside of work are associated with their experience of well-being. Going further, we also investigate (a) boundary conditions (i.e., moderators) and (b) how, in turn, leaders' experience of well-being affects their leadership attitudes (e.g., leader identity) and/or behaviors (e.g., procedural justice, transformational leadership behavior, effort-based performance). To provide a comprehensive examination of the phenomenon of leader well-being, our symposium addresses three complementary questions guided by our leader-centric approach: (1) How does a leader experiencing low well-being (i.e., depletion) affect the leader's (subsequent) leadership behaviors? (Young, Lee, & Johnson) (2) How do leader behaviors at work, especially during times of hardship, affect the leader's experience of well-being? (Bae & Mayer; Lee & Kim) (3) How do leader behaviors outside of work (i.e., at home after work) affect the leader's (next day) experience of well-being at work? (Lanaj & Jennings). By answering these questions, our symposium sheds light on the intrapersonal consequences of leader behavior. In doing so, we uncover what kinds of leader behaviors, both at work and at home, help to sustain leaders' (emotional) well-being.

Organization Development Education Association (ODEA):
Educating Integrated Scholar Practitioners
ODEA: Educating Scholar Practitioner Change Agents

Organizer: **Deborah A. O'Neil**, *Bowling Green State U.*
Organizer: **Corrie Voss**, *Bowling Green State U.*
Distinguished Speaker: **David Jamieson**, *Jamieson Consulting Group*
Organizer: **Jackie Milbrandt**, *U. of St. Thomas*
Distinguished Speaker: **Claudy Jules**, *Google Inc*

For the 81st Annual Meeting of the Academy of Management, we are asked to consider how management studies might bring more scholarly attention to the manager in organizations. Hillman (2020) suggests that one opportunity may lie in management education and how we better prepare our graduates to collaborate with managers in times of increased ambiguity, complexity, and uncertainty in service of creating healthier human systems. In the field of Organization Development (OD), we are uniquely positioned to contribute to this opportunity because our field spans the boundaries between the worlds of theory and practice. While certain foundational ideals of the field, i.e., our dedication to humanistic values and our belief in the potential of the human system (Jamieson & Worley, 2008) support continued collaboration with managers, it may be time to challenge other enduring assumptions. One of these assumptions is how we continue to frame the division between scholarship and practice. Collaborating in uncertain times will require the strategic integration of our professional identities, along with the intentional integration of evidence-based knowledge from scholarship and practical insights from organizational experience and application. As representatives of the ODEA, a consortium of OD faculty educating scholar-practitioners, we propose to convene a workshop to explore the further development and education of integrated scholar-practitioner leaders and change agents. We believe that by exploring these integrative practices in the OD field we can help support and develop change agents who rely on both scholarship and practice to thrive in a complex and competitive environment.

This PDW will help researchers develop and expand their qualitative data analysis skills, specifically in relation to coding data in meaningful ways. This session focuses specifically on different ways of coding data and the implications of this for the analytic process. This virtual session will involve an asynchronous participant-led coding session, followed by a detailed debrief by experienced qualitative scholars representing various coding traditions and practices. In the debrief, the panel members will work through and reflect upon their practice of coding, draw comparison between the various different approaches to coding and the outcomes they produce, and respond to specific audience questions. The session is thus divided into two parts. Part I comprises an asynchronous coding exercise for participants, guided by expert (video) instructions. Part II comprises a synchronous coding debrief and expert discussion, guided in part by participant questions. While the two parts are clearly linked, it is possible for participants to partake in any part separately. For instance, one may simply attend Part II of the session, observing the experts taking turns to move through various 'bits' of data to illustrate the diverse coding techniques available to participants. The purpose of this session is to demystify the process of coding and helping participants understand the various conditions of coding and their value. This PDW is thus specifically designed to help researchers identify practical ways to improve their analytical strategies when working with qualitative interpretive data.

PART I: CODING EXERCISE [OFFLINE] Coding instructions Video All 15 minutes Coding exercise Offline activity Participant-led 75 minutes PART II: CODING DEBRIEF [ONLINE: Start at 2 pm] Introduction Livestream Koehler 10 minutes Individual debrief Livestream Fairhurst, Koehler, Lê, Smith 60 minutes Audience Q&A Livestream Q&A 45 minutes Total Time 205 minutes (90 offline, 115 online)

Deciphering Managerial Cognition: New Methods & Opportunities for Studying Strategic Decision Making *Deciphering Managerial Cognition*

Organizer: **Mana Heshmati**, *U. of Michigan*
Organizer: **Carolyn Fu**, *MIT*
Speaker: **Felipe Csaszar**, *U. of Michigan*
Speaker: **Jerker C. Denrell**, *U. of Warwick*
Speaker: **J.P. Eggers**, *New York U.*
Speaker: **Elizabeth Pontikes**, *UC Davis*
Speaker: **Mary Tripsas**, *U. of California, Santa Barbara*
Speaker: **Dennis A. Yao**, *Harvard U.*

Despite the recognition of the critical role that cognition plays in managers' strategic decision making, little research has systematically assessed the role of managerial cognition in firm outcomes. This PDW recognizes that a key reason for this gap is the methodological challenge of understanding and analyzing cognition. Thus, this workshop brings together a group of scholars from diverse theoretical and methodological backgrounds to share their expertise on managerial cognition and strategic decision making, generate discussion on how advanced tools can be used to overcome the aforementioned methodological challenges, and provide a forum to facilitate future research on this important topic. The PDW will follow a two-part format. In the first part, six leading scholars will share insights on some of the key current topics and methodologies for studying strategic decision making followed by a brief Q&A with the audience. The second part will consist of two rounds of break-out room discussions with the panelists from Part I. In order to ensure an interactive discussion and a good fit between break-out room participants in the second part, we ask that interested individuals please complete the following brief google form: <https://forms.gle/Vi9kgbWDQ6njkvY1A>. The deadline for pre-registration applications is Friday, July 9, 2021 and acceptance notifications will be sent by Friday, July 16, 2021. Please contact Mana Heshmati (heshmati@umich.edu) or Carolyn Fu (cjfu@mit.edu) with any questions about the PDW or application process.

Despite growing workforce diversity, organizational attention, and social pressure (e.g., #MeToo), inequalities along axes of race, gender, class, sexual orientation, and ability remain a persistent challenge for most modern workplaces. Recent research has suggested that one key way these inequalities are perpetuated is through misperception, in which individuals fail to see, choose to ignore, misconstrue, or build narratives around them. However, though this work documents the importance of individuals' subjective understandings of inequality, how those understandings are formed—and thus how they might be altered—remains largely unclear. In the proposed symposium, we address this open question: We present a collection of novel empirical papers examining how the way people perceive aspects of organizational life (specifically, opportunity for upward mobility, meritocratic processes, relationships with other groups, and conflict) directly shapes their tolerance for and perpetuation of various types of inequality. Drawing from both experimental and field data and focusing on a range of different types of inequality (e.g., socioeconomic, racial) at work, these studies highlight that individuals' perceptions about inequality are (1) potentially malleable, (2) critical vehicles through which today's nuanced, relationally-enforced inequality is sustained, and (3) must be taken as seriously as the outcomes they foster.

Mister Rogers: A Spiritual Management Sage for Managers
Mister Rogers: A Spiritual Management Sage

Participant: **Judith A. Neal**, *Edgewalkers International*
Participant: **Ian Mitroff**, *U. of California, Berkeley*
Participant: **Donna Mitroff**, *The Kidvocate Group, LLC*

Mister Rogers (Fred) was a spiritual sage for all times. He was an ordained Presbyterian minister and children’s television was his ministry. He helped us when we were children, and he can help us when we are adults. Indeed, he’s needed more than ever for the troubled times in which we live. The kids who watched him are now today’s managers. Therefore, he serves as a wonderful exemplar and our students and clients can find him very relatable and inspirational. Participants in this PDW will: a) Learn the seven key spiritual principles of Mister Rogers that are useful to managers, b) Experience two approaches to applying these principles (video analysis and storytelling), c) Participate in active dialogue about spiritual managerial principles in research and teaching, and d) Develop professional relationships and connections with fellow workshop participants through the experience of multiple intelligences.

Anger at Work

Digital Session Chair: **Lauren Kaufmann**, *The Wharton School, U. of Pennsylvania*

OB: Why Punishing Bystanders is Psychologically Different than Punishing Transgressors

Author: **Lauren Kaufmann**, *The Wharton School, U. of Pennsylvania*

Anecdotal evidence suggests that people have a desire not only to punish transgressors but also some of their bystanders. Remaining unknown are how the demand for punishing bystanders relates to existing theories of altruistic punishment against transgressors, and what psychological rationale might account for any differences observed. We show (Study 1) that people exhibit consistently lower demand for punishing bystanders than transgressors. We argue that the psychological mechanism underlying this pattern could also help explain why some bystanders are seen as more blameworthy than others. We develop and test the theory that differences in expectations influence intent-related cognition, and this accounts for differences in punishment across targets. In Study 1, we gather process evidence that participants judging bystanders, who are less likely to be seen as having violated expectations, have longer reaction times, perceive lower clarity in judging intent, and more easily generate exonerating thoughts. In Study 2, we show that participants are also less likely to spontaneously generate thoughts about the intent of the bystander, but increasing the accessibility of thoughts about negative (positive) intent leads to increased (decreased) punishment for the bystander. Manipulating the accessibility of intent-related thoughts can reduce differences in punishment between bystanders and transgressors. Additionally, we show that this psychological mechanism explains variation in different people's responses to the same bystander. This research provides insight into why people condemn some bystanders while accepting the silence of others and expands the scope of the current discussion on altruistic punishment.

Paper is NOT Available. Please contact the author(s).

OB: I Lost My Temper! An Intrapersonal Perspective on the Consequences of Leader Anger Expression

Author: **Xuting Jiang**, *Nanjing U.*

Author: **Wei He**, *Nanjing U.*

Author: **Kong Zhou**, *School of Management, Huazhong U. of Science and Technology*

Although prior research has examined the social influences of leader anger expression on employees' psychological and behavioral outcomes, little attention has been given to understanding leaders' own responses to their anger expression. Integrating implicit leadership theory with identity threat theory, we develop an intra-personal model that considers anger expression as a trigger of the leader's perceived threat to the leader role identity. We further theorize that angry leaders tend to downplay leadership behaviors (i.e., initiating structure and consideration) and escalate anger expression to cope with the threatened leader role identity. A three-wave experience sampling method (ESM) study with data collected from 107 leaders provided support to the detrimental intra-personal consequences of leader anger expression. Moreover, consistent with the life span arguments, older leaders were found to exhibit stronger perceptions of leader role identity threat associated with anger expression than younger leaders. Theoretical and empirical implications of these findings were discussed.

Paper is Available to Meeting Registrants Only.

OB: The Social Consequences of Anger Expression: An Interpersonal Perception Perspective

Author: **Xuting Jiang**, *Nanjing U.*

Author: **Wei He**, *Nanjing U.*

Author: **Xueling Fan**, *School of Business, Nanjing U.*

Previous research has paid much attention to whether leader anger expression is effective in enhancing leadership effectiveness, but the social consequences of anger expression for ordinary employees have seldom been examined in organizational context. Integrating emotion-as-social information (EASI) theory with social perception theory, we propose two conflicting mechanisms contributing to the ambivalent influences of anger expression on expressers' leader emergence. Specifically, we theorize that anger expression has a positive (and a negative) indirect effect on leader emergence by increasing coworkers' perceptions of expressers' competence (and warmth). Furthermore, apology after anger expression (anger apology) benefits leader emergence via warmth as perceived by others. The results from two vignette experiments provided convergent support for the role of warmth in mediating the negative effect of anger expression and the positive effect of anger apology on leader emergence. Contrary to our prediction, anger expression had a negative (Study 1) and a nonsignificant (Study 2) effect on observers' perceived competence and leader emergence when the appropriateness of anger expression was low (Study 1) and high (Study 2). These findings were replicated in Study 3 with the critical incident technique. The theoretical and practical implications are discussed in relation to the organizational context of Chinese firms.

Paper is Available to Meeting Registrants Only.

OB: How does Leader Anger Expression towards Unethical Behavior Impact Team OCB?

Author: **Shimin Zhang**, *Hong Kong Polytechnic U.*

Author: **Shenjiang Mo**, *Zhejiang U.*

Based on fairness heuristic theory, this study examines how and when leader anger expression towards unethical behavior influences team OCB. Team-level data are collected at three time points from 453 employees in 93 work teams. Results show that distributive justice climate mediates the positive relationship between leader anger expression towards unethical behavior and team OCB. Moreover, leader moral decoupling weakens the positive impact of leader anger expression towards unethical behavior on team OCB via distributive justice climate. The findings suggest the importance of adopting a fairness perspective to understand the collective level consequences of leader anger expression.

Paper is Available to Meeting Registrants Only.

Facilitator: **Tina R. Opie**, *Babson College*
Facilitator: **Ina Sebastian**, *Massachusetts Institute of Technology*
Facilitator: **Jay Shaw**, *U. of Toronto*
Facilitator: **Timothy J. Vogus**, *Vanderbilt U.*

This consortium includes two popular topics: “Online Teaching” from 2:45 – 4:15 EDT, and “Hot Topics in HCM Research” from 4:45 – 5:45 EDT. A 30 minute break between the sessions will allow for “hallway time” in which attendees can network and chat informally. Session 1 is “Online and Disconnected: The Importance of Social Presence in Online Teaching Connections.” The purpose of this session is to discuss facilitation methods for creating faculty-student and student-student connections when teaching in an online environment. The Covid-19 pandemic led many higher education institutions to quickly pivot from an in-person format to a virtual format, resulting in many students feeling isolated. Given that many institutions may choose to continue virtual classes past the period of the pandemic, the concept of “connectedness” is important. This panel will share research on how best to facilitate “connectedness,” share success stories, and discuss new ideas to try as we move forward. Session 2 (4:45 - 5:45 EDT) is the always popular “Hot Topics in Health Care Management: Research Roundtables.” As the health care industry undergoes dramatic shifts in response to changes in population needs, policy reform, fiscal constraints and technological developments, the need for more research on key topics has become apparent. This session invites participants to engage in discussion of four of the “hot topics” in health care management research and practice: 1) the changing nature of work; 2) crisis resiliency and recovery; 3) equity and disparity; and 4) telemedicine, health care technology/digitalization. Participants will gather at virtual “research roundtables” where they will meet other researchers who share similar interests and discuss with them the state of research on their shared topic, challenges in conducting research on this topic, and future research. Participants will self-select into breakout rooms where discussion will be facilitated by three accomplished scholars with active research on the hot topic. This session will offer participants the opportunity to engage in rich research discussions, share new ideas, and make meaningful connections with potential collaborators. (All are welcome to this year’s Emerging Scholars sessions!)

Pre-registration is not required, but is encouraged. Email cheryl.rathert@slu.edu to register or for more information.)

Stakeholders in Innovation

Digital Session Chair: **Chenxiao Wang**, *Harbin Institute of Technology*

TIM: How does Corporate Social Responsibility Influence Disruptive Innovation? A Stakeholder Theory View  

Author: **Chenxiao Wang**, *Harbin Institute of Technology*

Author: **Israr Qureshi**, *Australian National U.*

Author: **Feng Guo**, *Tianjin U.*

Author: **Qingpu Zhang**, *Harbin Institute of Technology*

How does corporate social responsibility affect disruptive innovation? Leveraging stakeholder theory, we expect that corporate social responsibility (CSR, including internal CSR and external CSR) facilitates disruptive innovation and the effects are contingent on environmental turbulence (market turbulence and technology turbulence). Based on a sample of 226 firms, our empirical results indicate that internal CSR and external CSR are positively related to disruptive innovation. Meanwhile, technology turbulence positively moderates the relationship between internal CSR, external CSR and disruptive innovation. In addition, market turbulence negatively moderates the relationship between external CSR and disruptive innovation. The theoretical contributions, practical implications, limitations and future research are also discussed.

TIM: Blockchain Meta-Organizations: A New Context For Stakeholder Management

Author: **Barry Varys-Scudder-Davis**, *Bentley U.*

Author: **Jill Ann Brown**, *Bentley U. - College of Business - Management Department*

Blockchain technology has the potential to enable new forms of economic and social organization that create a new context for stakeholder management. Rules and laws set in code, alongside automated smart contracts, allow for networks of organizations to communicate, coordinate, and collaborate, without the need for trust between entities. This can allow diverse networks of stakeholders to organize using blockchain technology, forming a blockchain meta-organization comprised of multiple legally autonomous participants and other social and economic entities. While there are many benefits to blockchain, this new organizational form creates opportunities and challenges for traditional stakeholder management. We propose a different stakeholder approach, launching off of an issue-based conceptualization of stakeholder management, to show how blockchain meta-organizations can bring multiple stakeholders together for value creation, as well as to address industry-level and societal level wicked problems, including sustainability issues.

Paper is Available to Meeting Registrants Only.

TIM: A Blockchain-based inter-organisational relationships: Social and innovation implications

Author: **Maksym Koghut**, *Kent Business School, U. of Kent*

Author: **Omar Al-Tabbaa**, *U. of Kent, Canterbury*

Author: **Soo Hee Lee**, *U. of Kent, Canterbury*

Author: **Martin Meyer**, *Kent Business School, U. of Kent*

Contemporary businesses increasingly adopt algorithmic technologies to facilitate inter-organisational coordination. One example of this trend is a blockchain-based smart contracting, also known as smart contracting, which autonomously executes actions when encoded conditions are satisfied. While an emerging body of literature provides some evidence of positive associations between smart contracting and operational performance reflected in the reduction of transaction costs and improvement of transaction efficiency, research has yet to explore how these novel, technology-based governance mechanisms can affect relational resources, mainly social capital, often required to produce innovation performance. Therefore, by adopting the social capital lens, this study investigated the social and performance implications of smart contracting. Adopting a mixed-methods strategy, data collection included collecting insights from field experts, using the Delphi method, followed by semi-structured interviews with executives of firms that either use this technology or facilitate its implementation. The findings revealed that smart contracting directly affects the formation and structure of inter-organisational social capital, which can subsequently contribute to innovation performance. We also developed an evidence-based model that critically integrates factors influencing the relationship between social capital and innovation performance. Interestingly, system trust, as trust in technology, is found to be the key contextual factor, driving most aspects of inter-organisational collaborations. The study advances our understanding of how inter-organisational relationships can evolve in the smart contracting settings.

TIM: Platform Governance in the Sharing Economy  

Author: **Christina Kyprianou**, *IE Business School*

Author: **Chad Navis**, *Clemson U.*

Dominant theories of platform governance—focused on innovation platforms and the technical compatibility of platform producers as a value creation imperative—overlook the importance of fostering the relational compatibility of both platform producers and consumers in sharing economy platforms. To address this oversight, we develop a theoretical framework of platform governance that accounts for the unique features and challenges of platform-based value creation in the sharing economy. Our framework is grounded in two essential governance levers shown to have general relevance to platforms: the selection of platform participants and the structuring of platform participant interactions. We build on these foundational levers to develop new theory, and provide examples of the distinct governance practices that sharing economy platforms utilize to ‘pull’ these two levers to opposing levels of intensity to create value. To further demonstrate the usefulness and novelty of our framework, we develop propositions linking attributes of transactions common in the sharing economy to the platform governance approach most suitable for fostering relational compatibility. Our work offers a conceptual foundation for future research interested in developing new knowledge on the heterogeneous governance practices of platforms.

“Hello? Is Anyone Out There?” Lessons Learned from Teaching Online and Blended Courses

Lessons Learned from Teaching Online and Blended

Chair: **Karen Landay**, *U. of Missouri - Kansas City*
Panelist: **Frederick Scott Bentley**, *Binghamton U.-State U. of New York*
Panelist: **Michal Biron**, *U. of Haifa*
Panelist: **Steven Charlier**, *Georgia Southern U.*
Panelist: **John Francis McMackin**, *Dublin City U. Business School*
Panelist: **Cody Jackson Reeves**, *Brigham Young U.*
Panelist: **Amanda Shantz**, *Trinity College Dublin*

The COVID-19 pandemic is arguably the biggest shock to the institution of higher education in decades. A significant challenge facing faculty in all disciplines is how to successfully transition coursework to a bewildering variety of online and blended formats while simultaneously supporting students. However, faculty must also leverage these experiences in order to prepare for what is potentially a long-lasting or even permanent shift away from a reliance on traditional, face-to-face approaches for instruction. Furthermore, beyond immediate challenges, these experiences also provide a valuable opportunity for faculty to reflect on their teaching practices and how the needs of increasingly digitally savvy students can be met in new and innovative ways. Thus, the purpose of this professional development workshop (PDW) is to offer AOM members the opportunity to share lessons learned from experiences teaching in non-traditional formats during the pandemic that may be applied both now and in the (hopefully more “normal”) future. This interactive session will be comprised of two parts. First, a diverse panel of six HR faculty will participate in a moderated discussion. The panelists represent both US and non-US countries, have taught at the undergraduate and graduate levels, and have experienced a variety of blended and fully online formats. Second, attendees will participate in two breakout room sessions, each led by a member of the panel. This will allow for more nuanced discussion and exchange of ideas among panelists and attendees.

As work becomes more subjective and colleague evaluations play an increasing role in one's opportunities for advancement, maintaining positive relationships with one's colleagues has never been more critical for success. Yet building and maintaining positive workplace relationships can be challenging in the face of difficult interpersonal communications employees regularly face. Employees are called on to deliver critical feedback that will help others develop, speak up when they have an idea that can improve the status quo, and prioritize targeted work goals above secondary activities like investing time in a colleague's help request, with benefits flowing to organizations when they engage in these challenging interactions. In this symposium, we take an interaction-based view of workplace relationships to illuminate how employees can navigate the necessary, but challenging, interactions that present themselves as employees go about their daily work.

GDO: Unemployment Flips Effects of Parenthood on Life Satisfaction, Benefitting Women More Than Men

Author: **Sara Hendrick**, *Emory U.*
Author: **Melissa J. Williams**, *Emory U.*
Author: **Emily Bianchi**, *Emory U.*

Past research suggests that parenthood has more positive effects on life satisfaction for men than for women. We propose that during periods of unemployment this pattern will reverse. Drawing on gender theory, we suggest that during unemployment, the parental role will act as a psychological buffer for women, but will challenge men's identities as breadwinners, thus improving life satisfaction for mothers, but worsening it for fathers. Using data from the Survey of Unemployed Workers in New Jersey (N = 2,848), which followed Americans collecting unemployment insurance benefits over 12 weeks, we find that being a parent predicted greater life satisfaction for women, but less life satisfaction for men. We highlight important implications for scholarship on parenthood, gender, and unemployment and lend fresh insight into how, during unemployment, women and men continue to construe their parenthood identities through the lens of restrictive gender roles.

GDO: (Don't) Mind the Gap: Reframing Re'sume's Facilitates Mothers' Work Re-entry

Author: **Ariella Kristal**, *Harvard Business School*
Author: **Leonie Nicks**, *Behavioural Insights Team*
Author: **Jamie L. Gloor**, *U. of St. Gallen*
Author: **Oliver Hauser**, *U. of Exeter Business School*

Becoming a mother and taking care-related leaves from work contribute to economic gender inequality: Employers' gender role stereotypes ascribe mothers less qualification and ambition (i.e., agency), which are reinforced by employment gaps in their re'sume's. We integrate the judgment and decision-making literature to redesign mothers' re'sume's in a way that reduces mothers' barriers to work re-entry. More specifically, integrating signal detection theory, we theorize that by replacing employment dates with the number of years the applicant worked in each job, applicants can better convey their relevant professional abilities and ambition to employers (i.e., signals) without disclosing these distracting employment gaps (i.e., noise). In a large-scale randomized field experiment (N = 9,022), results showed that mothers with this redesigned re'sume' received more callbacks than those whose re'sume's showed employment dates. In an online experiment (N = 667), we replicated and extended these findings to show explicit evidence of our theorized mechanism: applicant agency. By integrating these literatures, we proposed and tested a cost-free, low-effort intervention to reduce inequality by reducing mothers' re'sume' gap-related agency penalties and facilitating their return to work.

GDO: Gender Equality in Organizations: The Dynamics of Space

Author: **Carol T. Kulik**, *U. of South Australia*
Author: **Sukhbir Kaur Sandhu**, *U. of South Australia*
Author: **Sanjeewa Samanmali Perera**, *U. of South Australia*
Author: **Sarah Alison Jarvis**, *U. of South Australia*

Gender equality goals have proven to be difficult for organizations to achieve. Management scholars attribute gender equality's intractability to decoupling: Organizations adopt structures, policies and programs that fail to deliver their intended outcomes. We present a conceptual framework that draws on recent developments in spatial configurations and institutional logics. The framework portrays organizational activities as operating across three distinct spaces (physical, mental, and social), but the management literature has historically emphasized activities originating in the physical space. We use case examples to illustrate how organizations might avoid decoupling by simultaneously attending to all three spaces. The framework identifies opportunities for organizations to harness cross-space dynamics, embrace divergent institutional logics, and enable progress toward gender equality.

GDO: Gender equality in the workspace: A literature review and a research agenda

Author: **Alessandra Migliore**, *Politecnico di Milano*
Author: **Chiara Tagliaro**, *Politecnico di Milano*
Author: **Cristina Rossi Lamastra**, *Politecnico di Milano School of Management*
Author: **Gianandrea Ciaramella**, *Politecnico di Milano*

This paper proposes a comprehensive literature review, exploring how workplace strategy influences female workers and, more generally, impact on gender equality. This promising strand of the literature is acquiring more and more attention among scholars, but it is still nascent. The literature shows a general conviction that the workspace affect women and men to different extents and that the issue is emerging across different fields, but a transversal and inter-disciplinary stance would be desirable to identify a broader spectrum of gender-related issues in the workspace. We performed a systematic review of 86 papers published in the last ten years (2010 – 2019). We built a conceptual framework of analysis in order to categorize emerging issues and subjects that differently affect women, including both workspace design and workspace organization of the workplace. Our research will benefit scholars, executives and designers that deal with workplace management and are keen on finding tools and policies for improving gender equality in the workplace.

In this year's AOM call for submissions on "Bringing the Manager Back in Management," Vice President and Program Chair Amy Hillman asks: "In an increasingly distanced world, how does one create relationships, cultures of care, and concern while holding employees, peers, and supervisors to a higher standard of accountability?" The present PDW is designed to address this important and timely question, as a central component of a sense of community is responsibility (i.e., a commitment to the well-being of the group and its individual members). Given that the fragmentation, disconnection, and loneliness that typically exist in society have been amplified due to the COVID-19 pandemic, now, more than ever, we have the opportunity to help navigate cultivating a sense of community in our virtual worlds. This PDW invites participants to seize the opportunity to adopt the role of community builder in their organizations, classrooms, and neighborhoods. To this end, in this PDW we bring together leading practitioners from industry and top educators to share their insights on building community in their respective virtual contexts. Following a panel discussion, participants will have an opportunity to attend a breakout room discussion with one of the expert panel members on building community in remote teams, digital communities, and in the classroom. The PDW will end with a large group discussion on where we go from here in bringing community to our online communities. Participants will leave this PDW having identified concrete tools that will assist them in connecting in our distanced world.

One of the "grand challenges" of our time confronting societies around the world is the transition and integration of stigmatized individuals into formal employment in organizations. While studies have started to show that engaging in employment can have many different positive implications for stigmatized individuals, these benefits may depend in significant ways on how these individuals transition and integrate into organizations. In this symposium, we draw attention to the processes, experiences, and outcomes surrounding this often challenging endeavor.

Distinguished Speaker: **Diane-Laure Arjalies**, *Ivey Business School*

How we define sustainability affects how scholars and managers understand, study, and practice sustainable organization. A dominant definition views sustainability as a journey of continuous improvement toward better environmental practices. However, the journey definition obscures the limits organizations face on their use of economic, social, and environmental systems before those systems transform or collapse. For such systems, sustainability is a destination or, in other words, a dichotomous property of the system: a fishery is either sustainable or unsustainable. There is a clash between the journey and destination definitions that threatens to limit theories of sustainable organization. This PDW explores that clash by supporting research on the meaning of sustainability. We focus on three definitions: sustainability is (1) a journey, (2) a destination, and (3) both a journey and destination. We convene a panel discussion and roundtable feedback sessions for scholars working on the effect of sustainability assumptions on our understanding and practice of sustainable organizing.

Step ONE is a moderated PDW to support early-stage sustainability PhD students to begin and bolster their journey with the Organizations and the Natural Environment Division. It is a precursor to the ONE Doctoral Consortium, which is targeted at later-stage doctoral researchers. In times of virtual meetings, it is especially challenging for these early-stage PhD students to not only get involved with academic communities but also to stay committed. As a group of five late-stage doctoral researchers and early-career scholars, we wish to create a safe and inclusive space for early-stage PhD students and first-time AOM ONE participants. With this PDW we aim to (1) cultivate a passion and purpose for sustainability research, particularly through encouraging participation in a welcoming research community; (2) guide PhD students in navigating, participating in, and thriving at AOM, and as part of ONE; and (3) develop students' interests in ONE-related topics, by helping them articulate their research purpose in sustainability, as well as to identify potential theoretical lenses, collaborators, and pathways that will help to engender and amplify that purpose. With Jeffrey York and Grace Augustine as invited keynote speakers to help contextualize the relevance of our program, we offer opportunities for participants to listen, engage, and become part of an inclusive global academic community.

Participation will be based on pre-registration. We will pre-register participants on a first-come, first-served basis.

TIM: Anticipated Knowledge Worker Mobility And R&D Dynamism: Evidence From A Natural Experiment

Author: **Aman Asija**, *U. Ramon Llull, ESADE Business School*
Author: **Dimo P. Ringov**, *ESADE Business School*

This study examines how the threat of knowledge worker mobility affects the dynamics of firm R&D. We argue that the appropriability challenges posed by the threat of knowledge worker mobility give rise to a “caution effect” on firm R&D strategy. In particular, we posit that the threat of losing knowledge workers dampens R&D dynamism, i.e., reduces the volatility of firm R&D expenditure. Yet, the dampening of R&D dynamism is less pronounced for firms that have alternate mechanisms for mitigating the threat of knowledge worker mobility, such as firms that have established a reputation for litigiousness. Using a natural experiment and a difference-in-differences methodology in the context of the US manufacturing industry over the period 1991-2018, we empirically test and find evidence supporting our hypotheses.

Paper is Available to Meeting Registrants Only.

TIM: Technology diffusion and changing skill demands

Author: **Sirui Wang**, *The Wharton School, U. of Pennsylvania*
Author: **Prasanna Tambe**, *The Wharton School, U. of Pennsylvania*

Using an expansive data set on job listings and skill requirements, we document the entry of the Swift programming language for developing mobile applications into the labor market and how employers choose to hire workers for this emerging technology. We find that the first employers of Swift tend to be firms that are characterized by having general and diverse skill demands while firms that hire on less common skills or on specific bundles of skills have a lower tendency to engage with Swift until much later. This heterogeneity among firms in when they invest in human capital associated with emerging technologies results in a shift in the types of Swift jobs that are demanded in the market over time. We are able to attribute this shift to the decisions of employers rather than the skill since we do not observe comparable trends in a functionally equivalent but more mature mobile application programming language, Objective-C. Our findings are consistent with how organizational inertia can inhibit prompt adoption of new technologies. Implications for technology adoption, hiring, and labor shortages are discussed.

TIM: Examining the Knowledge Leadership, Knowledge Sharing and Work-Related Curiosity on Project success

Author: **Namra Mubarak**, *U. Sains Malaysia*
Author: **Jabran Khan**, *U. Sains Malaysia*
Author: **Mastura Jaafar**, *U. Sains Malaysia*

Project success (PS) appears to be one of the most studied variables in the project management literature, but project performance is, unfortunately, unsatisfactory in the Pakistani Project-Based Organisations (PBOs). Although the technical and behavioural aspects of PS have been given due attention by previous scholars, the behavioural aspect demands more attention since the project manager and its employees play a crucial role in determining the success of a project and its organisation. Therefore, this study tested the relationship between knowledge leadership (KL) and PS, along with the mediating role of knowledge sharing (KS) and the moderating role of employees' work-related curiosity (WRC) on the KS-PS correlation. Data were collected in three-time lags from 258 employees from information technology (IT) organisations across Pakistan. The results support the proposed model. It was found that KL facilitated subordinates and created a KS environment that enabled the co-workers to share their expertise to accomplish tasks. Implications for researchers and practitioners are discussed at the end of this paper. There is no previous study identifying the relationship between knowledge leadership and project success. However, Innovativeness requires refined mechanisms of knowledge sharing for continuous improvement and corrections.

TIM: Building capabilities for external knowledge sourcing: Training and Innovation in Small firms

Author: **Licia Cerini**, *Department of Management and Technology, Bocconi U.*
Author: **Nilanjana Dutt**, *Bocconi U.*
Author: **Charles Williams**, *Bocconi U.*

We study how an increase in a firm's internal human capital can support new product development. By adopting training practices, we expect firms to increase the benefits of external knowledge. These benefits may differ between market- and institution-based knowledge sources because each provides distinct expertise to the firm. The study relies on the Community Innovation Survey that tracks firms from twelve European countries in multiple industries in 2006-2014. We find that small firms - those with fewer than 50 employees - attain higher returns to external knowledge when they invest in human capital through training. However, these results only hold for external knowledge that is market-based. Our study links the innovation and strategic human capital literature by illustrating how training helps firms extract the value of external knowledge for new product development.

Professional Development Workshop Chair: **Rebecca Rheinhardt Kehoe**, *Cornell U.*
Division Chair-Elect: **David Collings**, *Dublin City U.*

For new and prospective HR Division members, as well as less experienced conference attendees —particularly doctoral students and international members—AOM can be a confusing and overwhelming event. Additionally, virtual conferences often lack the opportunities for networking and socializing that are a staple of face-to-face conferences. The goal of this social is to offer a friendly introduction to AOM and the HR Division, providing the opportunity for attendees to learn more about the HR division and welcoming them to the division as their “home” at AOM. This social will open with a brief introduction to the HR Division, highlighting PDWs and the HR Division’s conference program offerings. Participants will be encouraged to join break-out rooms and interact with members of the HR Division Executive Committee, as well as meet new friends and interact with familiar faces. This is a social hour! If you are inclined, please feel free to have your favorite beverage ready for this exciting networking and social session.

MC: **Entrepreneurial Coaching: A Systematic Literature Review**   

Author: **Isabell Diermann**, *U. of Kassel*

Author: **Silja Christina Kotte**, *HMKWU. of Applied Sciences Frankfurt*

Carolyn Dexter Award Nominee

Despite the importance and increasing popularity of coaching as a means for supporting entrepreneurs throughout the entrepreneurial process, research on entrepreneurial coaching is only emerging and a holistic overview is missing. We conducted a systematic literature review, and, based on 31 empirical studies from across the world, identified outcomes, input, process, and contextual factors of entrepreneurial coaching. The quality assessment indicated that the quality of empirical studies on entrepreneurial coaching is highly heterogeneous. The pattern of outcomes reflects the particularities of coaching entrepreneurs, namely entrepreneurship-specific and venture-related outcomes. Regarding input and process factors, entrepreneurs' coachability plays an important role for coaching success. Among process factors, coach roles are particularly prominent and remarkably multifaceted. Research on contextual factors (in particular the institutional embeddedness of coaching engagements and multiple stakeholders) lags far behind their apparent importance. We derive suggestions for theory development and practical implications for coaches, incubator managers and entrepreneurs.

MC: **The development and application of HRM in SMEs in Emerging Economies**

Author: **Alexandros Psychogios**, *Birmingham City U. Business School*

Author: **Rea Prouska**, *London South Bank U.*

Research has so far explored a range of factors, such as institutional, cultural, industry, and internal HRM structures/practices, which can explain how the HRM function has developed in some emerging market economies (EMEs). With the increasing importance of EMEs to the world economy, the study of HRM in these economies and in a range of organisations becomes even more critical, especially for practitioners and consultants in the HRM field. Of particular importance is the study of HRM in small and medium enterprises (SMEs) in EMEs because they constitute the backbone of such economies. However, the development of the HRM function in SMEs operating in EMEs has, so far, not been of special research and practice interest. We address this gap by exploring this development of HRM in SMEs operating in a range of countries in Asia, Africa and Latin America, with the aim of uncovering key influences that can be utilised from both practitioners and consultants when targeting at helping SMEs in these contexts to apply HR practices. We also contribute to theory and practice by developing a conceptual framework of two institutional elements to demonstrate how they influence the development of the HRM function in SMEs in EMEs. Within this framework we propose a four-fold typology of the HRM function in SMEs in these economies that facilitate (or inhibit) successful HRM implementation.

MC: **Scientific consulting enables compatibility between AI & human potential: How a Bank fights ML & CFT**

Author: **Jocelyne Boulos Eid**, *ISEOR, Magellan, IAE Lyon, U. Jean Moulin*

Author: **Marc Bonnet**, *ISEOR, Magellan, IAE Lyon, U. Jean Moulin*

Author: **Jeremy Salmeron**, *ISEOR*

Winner of the Information Age Publishing Outstanding Doctoral Student Paper Award

Money laundering (ML) has been affecting the global economy for many years and treating its security. ML encompasses illegal activities that are used to make illegally acquired funds appear legitimate. Banks are in the front line of the fight against ML and Counter Finance Terrorism (CFT). They should acquire monitoring software, manage controls and experts practices. This paper aims to share the mechanism put in place to ensure the implementation of a monitoring system that incorporate Artificial Intelligence (AI) to detect suspicious transactions. The choice for the case study is a Private Bank in the Middle East. The intervention research project comprises of valuing the impact of implementing a socio-economic management consultancy method to synchronize the internal control departments human potential to sustain FATF recommendations for monitoring software (FATF, 2012). This anticipated improvement in performance would increase the AI solution return on investment thus ensuring compliance and sustainability of the Bank.

MC: **Digital Transformation Consulting: Toward a Human-Technology Performance Model Digital Transformat**  

Author: **Emmanuel Monod**, *Shanghai SUIBE U.*

Author: **Antonia Koester**, *U. of Potsdam*

Author: **Elisabeth Joyce**, *Edinboro U.*

Author: **Sabine Khalil**, *ICD international business school*

Author: **Nataliia Korotkova**, *Norwegian U. of Science and Technology*

As the focus on digital transformation and its unexplored opportunities is prospering, consulting firms have also turned their attention to it. Despite this increased attention, digital transformation project failure rate remains high, thereby reaffirming the "IT productivity paradox" or "AI productivity paradox. The purpose of this paper is to holistically scrutinize the current approach of digital transformation consulting. A deductive qualitative study draws upon the Human Technology Performance model to elucidate papers on digital transformation published by four major management consulting firms in 2014-2019. Whereas the focus on customer-centricity and some measures of corporate performance is prominent in the consulting approaches, the study results have revealed several "blind spots" that are still either neglected or poorly covered. Three main blind spots are particularly prominent from the analysis. First of all, consulting firms often apply a "one size fits all" approach, thereby neglecting contextual factors, such as age, size, or industry. Secondly, they neglect process level in the return on investment of IT. Thirdly, the suitability of IS development methods remains poorly considered. Hence, the paper argues that, while consulting firms purport to support digital transformation exigences and efforts, they, in fact, adhere to traditional approaches to business consulting.

Proactive and Prosocial Personality Traits

Digital Session Chair: **Sunjin Pak**, *Slippery Rock U. of Pennsylvania*

OB: **Work To Win or Work Not to Lose? Promotion and Prevention Focus in Workaholism**

Author: **Sunjin Pak**, *Slippery Rock U. of Pennsylvania*
Author: **Sang-Hoon Lee**, *U. of Illinois at Urbana-Champaign*
Author: **Amit Kramer**, *U. of Illinois at Urbana-Champaign*

We conceptualize, develop, and validate a multidimensional measure that can explain the underlying motivations of workaholism. Based on regulatory focus theory (Higgins, 1997), we established the Promotion- and Prevention-oriented Workaholism Scale (PPWS), which consists of three dimensions (i.e., cognitive, emotional, and behavioral dimensions) for each form of workaholism, with five items for each dimension. We tested the psychometric properties and nomological networks of the PPWS in a three-phase study using data from 1,086 participants. First, the multidimensional and hierarchical model of the PPWS shows a better fit to the data than alternative models. The PPWS shows high internal reliability and content validity across samples. Second, our findings support that the PPWS is distinct from conceptually related covariates, such as job involvement, work engagement, burnout, and perfectionism. Finally, the PPWS shows incremental validity as it predicts job involvement, work engagement, and burnout above and beyond the previous workaholism scales (i.e., MWS, WART, DUWAS, WorkBat, and BWAS). We also discuss the implications and limitations of our research, along with future research on the PPWS.

OB: **Leadership Signatures and Leadership Emergence**

Author: **Robert Wood**, *U. of Technology Sydney*
Author: **Bichen Guan**, *U. of Technology Sydney*

This study introduces the construct of leadership signatures as an individual leadership difference, based on the “If this, then that” contingency relationships from the CAPS framework (Mischel & Shoda, 1995). It tests a leadership signature in which variability in leader identity across situations is modeled as a function of leadership self-evaluations in the form of “if this (self-evaluation), then that (leader identity)”. Data were collected every second week for 36 weeks from 227 participants, assigned to initially leaderless dormitory groups (n = 37). Leadership signatures were relatively stable over time, were stronger for those with past leadership experience, and differed significantly between individuals. The strength of leadership signatures for individuals positively predicted their emergence as leaders, based on peer ratings. The results point to the potential of leadership signatures as an explanatory mechanism for leader behavior and resulting outcomes. Implications for contingency models of leadership are discussed.

OB: **Stay Hungry: Development and Validation of a Measure of Dissatisfaction with the Status Quo**

Author: **Bichen Guan**, *U. of Technology Sydney*
Author: **Robert Wood**, *U. of Technology Sydney*
Author: **William Beckwith**, *U. of Technology Sydney*
Author: **Luke Borgnolo**, *U. of Technology Sydney*
Author: **James Mayers**, *U. of Technology Sydney*

Employee dissatisfaction with the status quo (DWSQ) has been recently identified as a motivator to minimize discrepancies between current performance and aspirational standards and to enhance innovative behaviors. A key challenge in applying this construct is a lack of a consistent definition and validated measure. To address this issue, we develop and validate a 16-item DWSQ scale through six steps, across two samples from the IT sector and one sample from the finance and banking sector. The final version of the DWSQ scale has four factors: Internal Questioning, Improvement Focus, Expressing Concern, and Nonconformist. Factor analyses and regression analyses results provide strong evidence of the convergent, discriminant, criterion-related, and incremental validity, along with the internal consistency and test-retest reliability of the scale. DWSQ explains the variances of innovative behavior and adaptive performance over cognitive ability and big five personality traits, supporting the motivating role of DWSQ in the workplace. The comprehensive conceptualization of the construct and the validated measure of DWSQ will enable researchers to expand theories including DWSQ and organizations to select and develop innovative employees and strengthen organizational innovative capability.

OB: **How Dose Prosocial Motivation Congruence Frontline Followers' Service Quality: A P-E Fit Perspective**

Author: **Pengcheng Zhang**, *Huazhong U. of Science and Technology*
Author: **Mingwei Liu**, *School of Management, Huazhong U. of Science and Technology*
Author: **Chenglin Gui**, -
Author: **Meiqin Jiang**, *College of Economic and Management, Huazhong Agricultural U*

Based on P-E fit theory and research on goal congruence, the current research analyzed the relationship of leader-follower congruence in prosocial motivation and follower's service quality in hospitality organizations. It further explored how leader-follower congruence in prosocial motivation influenced follower's service quality. We conducted a field study to get a sample of 176 leader-follower dyads from a large-sized hotel in China. All the theoretical hypothesis was tested with polynomial regression and response surface analysis. The results indicated that leaders and followers in the congruent dyads with high prosocial motivation lead to higher levels of service quality than those in the congruent dyads with low or moderate prosocial motivation. Interestingly, we also found that service quality is higher when followers' prosocial motivation is lower than leaders' rather than when leaders' prosocial motivation is lower than followers. Additionally, leader-follower congruence in prosocial motivation had an indirect effect on service quality through followers' task proactivity. Our research sample is a mature team data collected in China with a high collectivist culture, which may affect the stability and universality of the results. Future studies can also examine the influence of the congruence of prosocial motivation on service quality according to the different dimensions of prosocial motivation in different cultural contexts. Hospitality organizations should pay more attention to the importance of leader-follower congruence in prosocial motivation. Leaders should strengthen communication and feedback with followers to enhance mutual understanding, and prosocial motivation can be an important reference indicator for recruitment, promotion and corporate training. These findings highlight the pivotal role played by leaders in promoting followers' service quality, and provide deeper comprehension into the role of prosocial motivation congruence between leaders and followers in influencing followers' service quality.

Panelist: **Marco Testoni**, *Tilburg U.*

The recent advances in machine learning (henceforth, ML) and big data methods are not only shaping the way organizations operate and compete, but are also increasingly impacting academic research through enabling scholars to access ever larger datasets and deploy novel analytical techniques. Building skillsets around cutting-edge methods to gather and analyze such data and produce meaningful insights for research and practice has therefore become a necessity for management scholars. This PDW will provide AoM participants with the opportunity to learn about some of the most popular new computational approaches and tools, as well as data sources to advance the study of organizations and their members, their interactions in the labor market, and the new challenges they confront due to the advent of ever more sophisticated ML techniques. The first part of the PDW will focus on presentations by the invited panelists, covering machine learning applications for natural language processing to study innovation processes and organizational culture using large corpora of text, as well as methodological advances in the study of biased algorithms in evaluating human capital, occupational exposure to artificial intelligence, and social interactions using smartphone geolocal data. The presentations by the panelists will be followed by a Q&A session with the audience and further by a series of roundtables where participants can interact among each other and with the panelists and discuss their ongoing research projects.

This workshop will include a panel discussion open to all conference registrants, followed by a shorter paper feedback session in breakout rooms that will be by invitation only. To apply to the paper feedback session, please submit a paper abstract (up to 350 words) to amarchetti@london.edu and victoria.sevcenko@insead.edu by 1st July 2021 with the subject "AOM PDW on New Data and Methods in Strategic Management Research – Paper Session Application". Selected participants will be notified two weeks prior to the scheduled workshop.

Panelist: **Klaus Meyer**, *Ivey Business School*
Moderator: **Mike W. Peng**, *U. of Texas at Dallas*
Panelist: **David J. Teece**, *U. of California, Berkeley*

Consistent with the conference theme, the goal of this proposed panel symposium is to share the views of some of the most cited and thus most influential management scholars on how they bring managers back in management in their own scholarship. For the purpose of our session, we define “managers” broadly to not only include managers, but also executives, leaders, entrepreneurs, government officials, and policy makers. As the starting point for the session, the panelists will address the following questions: (1) How do they treat the role of managers in their research? (2) Does their emphasis on managers help them produce influential research? (3) How do they bring the manager back in management not only in their research, but also in other activities including teaching, service, and consulting? (4) How can more members of the Academy “bring the manager back in management”? Then, the session will be interactive and include a Q&A format. Representing 13 AOM divisions, our session purposely includes a highly diverse set of panelists whose research addresses micro and macro domains and who typically use qualitative and quantitative methods. Also, each has held or holds editorial appointments as well as professional association positions in the Academy of Management as well as other academic organizations. We have done so intentionally so our session will be of interest to many AOM colleagues regardless of domain and/or methodological interests and orientations.

What Silence Can Teach Us About Race and Leadership

Silence, Race, and Leadership

Facilitator: **Kathryn Goldman Schuyler**, *Alliant Intl U. / Coherent Change*
Facilitator: **Michelle Marie Evans**, *U. of Melbourne*
Facilitator: **Lemuel Watson**, *Kinsey Institute, Indiana U.*
Facilitator: **Chellie Margaret Spiller**, *Waikato Management School*

Collectively unpacking and experiencing how silence acts when we seek to address race is critical to supporting conscious, transformative leadership. Fear-based silence disconnects people from themselves, each other, and the planet. It allows people to run away from discomfort, giving tacit approval to racism and preserving status, privilege, and power. Leadership that tolerates or feeds fear-based silence allows racism to fester—feeding ignorance, prejudice, and deep divides. Sacred silence by contrast heals and raises consciousness. A practice of sacred silence helps one push for change and disruption to racism. Sacred silence nourishes the courage to look fearlessly within personal shadows, seeking to see what is required to make the world a safe, secure, and just place for all. This PDW will create an online collective space for participants to reflexively engage. After a brief invocation and presentation about these contrasting types of silence, participants will be invited to reflect in small groups on how silence can be stifling or nourishing. Back in the main zoomroom, groups will have the opportunity to share key insights before the diverse, international presenters invoke sacred silence and share their varied perspectives about it with regard to leadership. Hearing and building upon one another's words, we will facilitate a circle that allows space for silence, images, and sound. Our intention is for the workshop to be thought-provoking and inspiring, so that we build community across the members of the various sponsor groups, yielding new friendships and collaborations for writing and research. **KEY WORDS:** Indigenous Leadership, Black Leadership, Race and Leadership, Mindfulness, Racism, Silence, Wisdom

To read the paper that served as the ground for this workshop, see Spiller, C., Evans, M., Goldman Schuyler, K., & Watson, L.M. (2021). What silence can teach us about race and leadership. *Leadership*, 17(1), 81–98. <https://doi.org/10.1177/1742715020976003>

Patents Examined & Enforced

Digital Session Chair: **John Howells**, *Aarhus U., Department of Management*

TIM: Do Patents Alleged to be “Overly-broad” and of “Dubious Validity” Retard Innovation?

Author: **John Howells**, *Aarhus U., Department of Management*
Author: **Ron D Katznelson**, *Bi-Level Technologies, Encinitas, California, USA*

A current refrain in patent policy discourse is that “overly-broad” patents of “dubious validity” retard innovation. We briefly review expressions of the thesis to show that they reduce to the allegation that disagreements over enforceable patent scope and/or validity harm innovation. The Selden automobile patent is alleged to have been such a patent. We review the evidence of commercial development during the Selden patent term and show that although there was disagreement as to the scope and validity of Selden’s patent claims, there is no evidence that innovation was retarded. We show that Henry Ford and others relied on “freedom to operate” analyses of the Selden patent claims that unambiguously demonstrated their narrow scope. We reexamine archival evidence and cite new primary sources, in particular the legal Opinion given to Ford on the Selden patent to provide a more accurate account than hitherto published of how Ford made his analysis. It was this analysis embodied in the legal Opinion that gave the Ford Motor Company the confidence to publicly indemnify all its customers from infringement liability. Suit for infringement of the Selden patent was brought against the Company, and Ford ultimately prevailed. The Selden patent was licensed, not to create a patent pool, cross-licensing agreement or cartel, but a “patent enforcement collective”; the Selden case should be known as the exemplary instance of how freedom-to-operate analysis can provide the confidence to invest and develop business.

TIM: Start-ups’ Technological Invention and the Role of Enforcement Environment

Author: **Aqi Liu**, *Tsinghua Shenzhen International Graduate School*
Author: **Siva Ramakrishna Devarakonda**, *Tilburg U.*

The patent institution offers incentives for start-ups to engage in inventive activities. Yet, patents are only probabilistic rights, raising the risk of litigation for start-ups. In high-tech industries, competitors often employ patent litigation to assert their intellectual property and challenge start-ups’ novel inventions. In this study, we focus on the institutional environment for patent enforcement and examine how the prevalence of patent adjudication influences start-ups’ technological inventions. We theorize that start-ups are likely to reduce their efforts in inventive activities in an environment with a high adjudication rate to avoid ruinous litigation costs and the risk of patent invalidation. We further posit that the negative impact of adjudication can be made more or less pronounced by other institutional features that affect start-ups’ perceived litigation risks and costs for their inventions. Using a sample of Chinese biopharmaceutical start-ups founded between 2008-2017, we find empirical support for our hypotheses.

Paper is Available to Meeting Registrants Only.

TIM: Patent Validity and Follow-on Patenting: Evidence From Ex Parte Reexamination at the USPTO

Author: **Charles DeGrazia**, *EMLV*

The paper analyzes the effects of ex post declarations of patent validity, a component of patent quality, on follow-on patenting decisions by both assignees and rivals to a given patent. Using a DiD-matching estimator, this chapter estimates the effects of validation, or an increase in the probability of validity through ex parte reexamination on follow-on patenting. I find that validation increases for overall and external follow-on patenting but the results are mixed for internal follow-on patenting. The increase in follow-on patenting by rivals can be attributed to an increase in defensive patenting based on the positioning of follow-on patents in technology space after validation. The positioning of external follow-on patenting is unaffected by validation. Finally, I find that the validation effect is more prominent in complex relative to discrete technologies.

Paper is Available to Meeting Registrants Only.

TIM: The influence of Patent Assertion Entities on Inventor Behavior

Author: **Mukund Chari**, *U. of Colorado, Boulder*
Author: **H Kevin Steensma**, *U. of Washington*
Author: **Charles Connaughton**, *U. of Washington*
Author: **Ralph A. Heidl**, *U. of Oregon*

Patent assertion entities (PAEs) are intermediaries that acquire patents from inventors and license them to firms that are using the intellectual property in products that they have already commercialized. We consider how PAE intermediation influences the behavior of inventors by reducing the costs to monetize their inventions. Using a proprietary dataset that tracks PAE lawsuits, we find that, as PAE intermediation for a given class of technologies increases, larger numbers of focused inventors (i.e., small firms, universities, and labs) that typically lack commercializing capabilities begin producing inventions in this class. Further, we find that, as compared to their larger counterparts, focused inventors are particularly responsive to increasing PAE intermediation by producing greater numbers of inventions, albeit inventions that are increasingly likely to be incremental advances.

Individual and Collective Turnover

Digital Session Chair: **Silvia Clark**, *Darla Moore School of Business, U. of South Carolina*

HR: All hands on deck? Comobility and career outcomes after organizational failure

Author: **Agnieszka Nowinska**, *Aalborg U., Department of Business and Management*
Author: **Valentina Tartari**, *Copenhagen Business School*
Author: **Ram Mudambi**, *Temple U.*

The observation of joint transfers of workers, termed collective turnover or comobility is a phenomenon that tends to be inherently contaminated by concerns of selection. We study the phenomenon in a unique quasi-experimental context of organizational failure wherein no employees had the choice of staying on. Studying the phenomenon in this “cleaner” context, we find that overall, comobility is associated with the likelihood of a downward career move. This association is even stronger for junior employees, relative to moving alone. Contrary to our expectations, for senior employees comobility is associated with an increased likelihood of demotion, relative to a solo move. We use of proprietary hand-collected data on 185 traders and trading managers securing jobs in various countries and industries after an exogenous organizational failure in the bunker trading industry supplemented with unique qualitative insights.

Paper is Available to Meeting Registrants Only.

HR: Exploring the benefits of turnover: Quits vs. Discharges, Job Levels and unit performance

Author: **Cristina Simon**, *IE U.*
Author: **Emmanouil Avgerinos**, *IE U. - IE Business School Madrid, Spain*
Author: **Elena Revilla**, *IE Business School*

Research so far supports a general negative effect of turnover on unit performance, and attempts to explore its potential benefits are scarce. One potential source of positive effects is related to the reasons for turnover, specifically whether it takes the form of quits or discharges. Results from the few empirical comparisons of these two types of turnover render inconclusive results, calling for the exploration of boundary conditions that may moderate their relationship with performance. The present study investigates to what extent the turnover-performance link is jointly affected by the reasons for departure and the position held by the leavers. Building on human capital and social capital arguments, we compare the impact of quits and discharges across managerial and staff levels over unit performance. We test our hypotheses using longitudinal monthly data from 5,202 stores of a large fashion multinational retailer in 39 countries. Our results show a curvilinear, inverted-U relationship between staff quits and unit performance, and discharges are proven linearly beneficial both for managerial and staff positions, although at different degrees. Our results demonstrate that differentiating between quits and discharges matters, and that the relative value conveyed by the job level of the departing employees is a relevant contingency in this distinct effect over performance.

HR: The Relationship Between Faultlines and Collective Voluntary Turnover

Author: **Silvia Clark**, *Darla Moore School of Business, U. of South Carolina*
Author: **Robert E Ployhart**, *U. of South Carolina*
Author: **Jonathan Hendricks**, *U. of Nebraska, Lincoln*

This study examines the link between demographic faultlines and collective voluntary turnover to provide contributions to both literatures. Based on social identity theory and job embeddedness, we further propose that business unit tenure moderates the faultline-collective voluntary turnover relationship. We test the hypotheses using data drawn from a sample of government employees nested within 356 business units over the course of two years. The results suggest that demographic faultlines (age, gender, ethnicity) are associated with an increase in collective turnover. These effects hold, even after controlling for the independent dimensions of diversity, which suggests that the faultline construct captures variance distinct from the individual elements. Furthermore, the results suggest this relationship is moderated by the average organizational tenure of the business unit. Overall, we contribute to the literature on collective turnover and faultlines and demonstrate that the effects of demographic faultlines on collective voluntary turnover are conditional on contextual factors.

HR: Will they Stay or will they Go: Collective Engagement and Turnover Volatility during the Pandemic

Author: **Patrick Flynn**, *North Carolina State U.*
Author: **Anthony J. Nyberg**, *U. of South Carolina*

Using a large, geographically dispersed organization designated as “essential” and required to stay open during the COVID-19 crisis, we examine the relative influence of store-level versus macro-level differences in collective turnover over time. Capitalizing on the unique situation in which employees were at minimal risk of being unemployed, but who likely perceived high levels of uncertainty surrounding health risks, we responded to calls to disentangle the influence of store and macro factors of collective turnover. The findings illustrate that store-level differences explain most changes in collective turnover, and that high collective engagement appears to limit increases in collective turnover as crises unfold. The findings result from examining monthly collective voluntary turnover between January and June of 2020 in 4,528 stores in the United States from a large, North American organization coupled with a detailed examination of collective engagement in a random subsample of 472 stores. In combination, the results inform theory regarding collective turnover and collective responses to crises while also providing practitioners suggestions for how to minimize negative employee responses to unexpected events through employee engagement. The lessons learned are applicable to crisis situations but also have important implications for practitioners and researchers in non-crisis situations.

**Toward a Restorative Justice Approach for “Bringing
the Manager Back in Management”**
Toward a Restorative Justice Approach

Organizer: **Michael Gross**, *Colorado State U.*
Organizer: **Jennifer Parlamis**, -
Organizer: **Laura L. Rees**, *Queen's U.*
Organizer: **Ming-Hong Tsai**, *Singapore Management U.*
Panelist: **Meena Andiappan**, *U. of Toronto*
Panelist: **Estelle Archibold**, *Case Western Reserve U.*
Panelist: **Deborah Kidder**, *U. of Hartford*
Panelist: **Tyler Gene Okimoto**, *U. of Queensland*
Panelist: **Gregory Paul**, *Kansas State U.*

This year's academy theme “Bringing the Manager Back in Management” focuses on what managers do on a day-to-day basis. This panel symposium is designed to engage a group of scholars and practitioners to examine how research and practice on Restorative Justice addresses issues confronting managers in a formal, moderated, interactive discussion. We aim to bring to light theoretical and practical opportunities for organizations. Panelists will draw on a wide range of relevant scholarship in the field of RJ applied to a variety of contexts, including artificial intelligence, social and economic disparities in the workplace, how we teach RJ in our business schools, how we can provoke a new wave of research on restorative justice as a managerial practice, and the factors that may influence organizational ripeness for restorative justice.

“A labyrinth conveys the complexity and variety of challenges that can appear along the way [to a distinguished career]. Passage through a labyrinth requires persistence, awareness of one’s progress, and a careful analysis of the puzzles that lie ahead. Routes to the center exist but are full of twists and turns, both expected and unexpected.” ~ Alice Eagly & Linda Carli In 2007, Eagly and Carli published “Through the Labyrinth: The truth about how women become leaders,” discussing the challenges to women in leadership. In this highly impactful work, they proposed a labyrinth as an apt metaphor for the complexities women women’s face in navigating a pathway to leadership. Beyond recognizing the existence of a glass ceiling, they described the myriad challenges experienced by women seeking and occupying leadership roles. Though this work was published nearly two decades ago, we continue to see relatively little progress in terms of women occupying top positions in corporate America. In May 2020, just 37 (7.4%) of Fortune 500 CEOs were women (Hinchliffe, 2020), and as of September 2020, only 32 (6.4%) of S&P 500 CEOs were women (Catalyst, 2020). On corporate boards, women comprise 22.5% of Fortune 500 corporate board directors (Alliance for Board Diversity & Deloitte, 2018), and although this figure is higher than the percentages of female CEOs, it still shows that women constitute a clear minority of female leaders. Whilst these statistics point to the labyrinth of challenges that women experience in navigating paths to top leadership roles, all working women experience complex and nuanced stereotypes, preferences, expectations, and treatment that also take on labyrinth-like qualities. With this in mind, we align with the labyrinth metaphor of Eagly and Carli (2007) to present a set of studies that extends beyond a labyrinth of leadership, to the labyrinth of women’s work more broadly defined. In this symposium, we elaborate upon additional twists and turns in the labyrinth of working women’s experiences. Collectively, the research presented explores individual, relational, and organizational factors influencing the experience of working women. In particular, the collection of studies provide novel insights including: (1) negative evaluations of organizations have a greater effect than positive evaluations in increasing the gender diversity of boards; (2) although women are perceived to be less powerful than men, those who balance agentic and communal behaviors are perceived as more effective leaders, not higher in status; (3) although diversity and inclusion are often used synonymously, organizations need to do both to decrease isolation among minority groups; (4) women value and seek meaningful work more than men which may affect job choices; and (5) though women experience more mistreatment in the workplace than men, the attributions for, and identity implications of, mistreatment may differ depending on the gender composition of the organizational context and the gender of the perpetrator. Taken together, these studies shed light on how women experience and navigate careers, others’ perceptions of their qualities, work environments, work values, and interpersonal relationships with others at work.

International Management in Asia

Digital Session Chair: **Dongdong Huang**, *Business School, Nankai U.*

This session examines international management issues in the context of Asia. It includes three papers based on Chinese contexts that examine intergroup bias and social distance between group members in China, the double-edged sword of global demand heterogeneity on the performance of service multinationals, and international penetration of emerging market platforms. The final paper examines factors related to strategic asset seeking during a cross-border acquisition wave using a sample of Indian firms.

IM: Are Chinese really “a tray of loose sand”? Intergroup bias and social distance between group members

Author: **Zhibiao Zhang**, *SHIDLER COLLEGE OF BUSINESS*

Although social distance plays a significant role in human group dynamics, how social distance within a group influences intergroup bias remains underdiscussed. By exploring whether Chinese are “a tray of loose sand” when they pursue high harmony as an end, this study examines how social distance between group members influences their intergroup bias, i.e., ingroup harmony and outgroup hostility in Chinese society. The survey results support the hypotheses that within-group social distance negatively influences ingroup harmony and outgroup hostility, with its effects on outgroup hostility fully mediated by ingroup harmony. Results also support that education has negative effects on ingroup harmony, but do not support negative impacts of education on outgroup hostility. In addition, it is found that age has positive influences on ingroup harmony and negative effects on outgroup hostility. The paper concludes with implications of the results, limitations, and suggestions for future research in this area.

IM: International Penetration of Emerging Market Platforms

Author: **YANG LI**, *Nanyang Business School*

Author: **Seung Ho Park**, *Nanyang Technological U.*

The rise of digital platforms has changed the firms' internationalization process. This study posits that platform-specific advantages, such as network size and platform innovation, contribute to platforms' international penetration. We focus on incumbents' market dominance in the host countries and the type of platform updates to assess the boundary conditions of the relationship between platform-specific advantages and the success of the platforms' international penetration. The empirical testing utilizes the archival data of Chinese social media platforms for 2016-2020. The results show that network size positively influences platforms' international penetration, and market dominance weakens such influence. The results also show that the portion of explorative innovations conditions the impact of platform innovation. The study provides valuable insights for theory and practice in the internationalization of digital platforms.

IM: Strategic Asset-Seeking During in a Cross Border Acquisition Wave

Author: **Faisal Mohammad Ahsan**, *Indian Institute of Management, Ranchi*

Author: **Mohammad Fuad**, *Indian Institute of Management, Ahmedabad*

Author: **Ashutosh Kumar Sinha**, *Indian Institute of Management, Lucknow*

Cross border acquisition (CBA) waves are periods of concentrated acquisition activity characterized by a cyclical pattern. These waves are triggered by exogenous shocks and provide a time bound window for firms to respond either by seeking newer markets or by upgrading themselves by acquiring strategic assets. We draw on the extant literature that emphasizes the challenges faced by emerging markets firms in pursuing cross border acquisitions. Our findings suggest a U-shaped relationship between entry timing within a wave and strategic asset-seeking acquisitions, which is driven by a trade-off between acquisition of high quality assets and reduction in uncertainty surrounding the acquisition deal. Further, acquirer's ownership structure conditions the relationship between entry timing and acquisition motives. Specifically, business group affiliation and foreign institutional ownership strengthen the relationship between timing within a CBA wave and strategic asset-seeking motive. Our findings, based on a sample of Indian acquirers provide robust support to our theoretical arguments.

IM: Double-edged Sword of Global Demand Heterogeneity on the Performance of Service Multinationals

Author: **Di Zhu**, *Nanjing U.*

Author: **Cheng Li**, *Shenzhen Reform and Opening up Executive leadership academy*

Author: **Xiao Zhang**, *Nanjing U.*

Author: **Yue Wang**, *Macquarie Business School, Macquarie U.*

Drawing upon knowledge-based view and transaction-costs perspective, the study identifies customer relationship orientation and structural flexibility as the two key mechanisms that service multinationals can use to capture the benefits and mitigate the costs of global demand heterogeneity. Using a sample of Chinese service multinational firms, we show that one the one hand, customer relationship orientation amplifies the benefits of customer knowledge in the interaction between customer relationship orientation and global demand heterogeneity, resulting in a positive impact on internationalization performance. On the other hand, structural flexibility mitigates the costs of knowledge processing and routine adaptation in the interaction between structural flexibility and global demand heterogeneity, also contributing to the improved internationalization performance. Besides, production and consumption simultaneity strengthens the positive moderating effect of customer relationship orientation in the global demand heterogeneity-internationalization performance relationship. This study contributes theoretically and practically to our knowledge of how demand-side factors can shape firms' internationalization performance.

Authenticity, Trust, and Servant Leadership: Impact on Follower CWB

Digital Session Chair: **Saima Ahmad**, *College of Business and Law, RMIT U.*

OB: How Servant Leadership Averts Workplace Bullying: A Moderated-Mediation Examination →

Author: **Saima Ahmad**, *College of Business and Law, RMIT U.*
Author: **Talat Islam**, *Institute of Business Administration, U. of the Punjab, Lahore, Pakistan*
Author: **Premilla D'Cruz**, *Indian Institute of Management, Ahmedabad*
Author: **Ernesto Noronha**, *Indian Institute of Management, Ahmedabad*

The purpose of this paper is to examine the relationships between servant leadership, workplace bullying and employee compassion. Furthermore, this study explores the moderating role of social cynicism in their relationships. This is an empirical research based on the analysis of the data collected through a survey administered to a sample of 380 employees working in various healthcare organisations in Pakistan. Structural equation modelling was used to test the research model. This study found that perceived servant leadership helps in lessening employee exposure to workplace bullying. Perceived servant leadership also predicts employee compassion which further mediates servant leadership's relations with workplace bullying. However, social cynicism beliefs moderate the mediating mechanism. The findings suggest that servant leadership plays a positive role in averting workplace bullying, directly as well as indirectly, by building employees' compassion. The study has implications in developing models of leadership to build employees' empathetic resources as well as to combat workplace bullying.

OB: Being Real: How and When Authenticity at Work Effects Interpersonal Deviance

Author: **Mamoona Arshad**, *Lahore U. of Management Sciences*
Author: **M Abdur Rahman Malik**, *Lahore U. of Management Sciences*

While research on 'authenticity at work' is gaining scholarly attention, the understanding on how authenticity at work shapes dark interpersonal outcomes such as interpersonal deviance still is at nascent stage. Building on self-determination theory, we posit that the relationship between authenticity at work and interpersonal deviance is mediated through dual pathways of work passion. Moreover, we identify network support and promotion focus as a boundary condition to the effects of both forms of work passion on interpersonal deviance. Two wave data collected from employees and their supervisors supports the mediation effects for the dual pathways of work passion including harmonious work passion and obsessive work passion. High network support and low level of promotion focus exacerbates the negative effects of harmonious work passion while the effects of obsessive work passion remained unmoderated. Overall, we broaden the impact of authenticity at work on dark interpersonal behaviors.

OB: How and When Feeling Trusted Leads to Unethical Behavior: An Information Processing Perspective

Author: **Abudoukadierjiang Rouzi**, *Sun Yat-Sen U. Business School*

Although research has begun to examine the influence of feeling trusted on employee behavior, most studies focus on its positive effects, neglecting its potential negative impacts on employees. Grounded in social information processing theory, this study explores the influence of perceived trust on employees' unethical behavior. A dyadic leader-subordinate sample collected from 264 service employees and their immediate supervisors in northwest China at three time points shows that perceived trust has a significant positive impact on employees' unethical behavior. Psychological entitlement mediates the relationship between perceived trust and unethical behavior, and employees' risk-taking propensity moderates the indirect influence of feeling trusted on unethical behavior through the mediating effect of psychological entitlement. This study reveals the mechanism and boundary condition of the impact of feeling trusted on employees' unethical behavior and provides an important reference for future research concerning perceived trust, unethical behavior and hospitality management practices.

OB: The Roles of Compassion and Resilience on Employee Thriving, Well-being, and Interpersonal Deviance 📄

Author: **Sang-Hoon Lee**, *U. of Illinois at Urbana-Champaign*
Author: **Chen Tang**, *U. of Illinois at Urbana-Champaign*
Author: **Wu Wei**, *Wuhan U.*
Author: **Ying Chen**, *U. of Rhode Island*

In this study, we examine how and when employees can continue to thrive at work despite the influence of adverse situations. We expand the social embeddedness model of thriving and integrate it with the literature on compassion to propose a hypothetical model in which compassion indirectly affects employees' thriving through negative and challenge appraisals of adversity. We further hypothesize that resilience moderates these indirect effects. Finally, we propose that employees' thriving negatively relates to negative affect and interpersonal deviance in the workplace. We tested this model in a time-lagged, three-wave sample—where employees and supervisors are experiencing adversity (i.e., COVID-19 pandemic outbreak)—at a financial service firm in Wuhan, China. Our results showed that experiencing compassion had an indirect effect on thriving through an increase in the challenge appraisals of adversity. Also, compassion had a positive indirect effect on thriving via decreased negative appraisals when employee resilience was low. We also found the positive functioning of employee thriving, such that it is negatively related to negative affect (i.e., improved individual well-being) and interpersonal deviance. These findings highlight the compensatory effect of compassion and resilience, especially considering that compassion is critical for those employees with lower levels of resilience during the COVID-19 pandemic, and the positive functioning of employee thriving on their end outcomes. The theoretical and practical implications are also discussed.

Shaping Innovation

Digital Session Chair: **Jiang Xiaoxian**, *Xi'an Jiaotong U.*

TIM: Are Heterogeneous Customers Really Good for Iterative Innovation?

Author: **Jiang Xiaoxian**, *Xi'an Jiaotong U.*
Author: **Ruijie Jin**, *Xi'an Jiaotong U.*
Author: **Gong Min**, *Xi'an Jiaotong U.*
Author: **Li Mingzhu**, *Xi'an Jiaotong U.*

Are heterogeneous customers really good for iterative innovation? To address this question, building on the knowledge-based view and cognitive load theory, we investigate the impact of customer heterogeneity on iterative innovation and how such relationship changes with firms' absorptive capability. Using a sample of publicly listed firms in China from 2007 to 2019, the findings support our prediction that iterative innovation follows an inverted U-shape as customer heterogeneity increases, which indicates that a high level of customer heterogeneity impedes iterative innovation. Absorptive capability strengthens the positive effect of customer heterogeneity on iterative innovation, such that firms with greater absorptive capacity are able to overcome the cognitive load caused by customer heterogeneity and enjoy more benefits from it. We discuss the implications of these findings for research on customer heterogeneity and iterative innovation.

Paper is Available to Meeting Registrants Only.

TIM: How institutional complexity shapes firms' tradeoff between quantity and novelty of innovation

Author: **Huiying Li**, *School of management, Northwestern Polytechnical U.*
Author: **Yu Chang**, *Northwestern Polytechnical U.*
Author: **Xinchun Wang**, *West Virginia U.*
Author: **Wei Huang**, *School of management, Northwestern Polytechnical U.*
Author: **Nan Zhang**, *School of Management, Xi'an Jiaotong U.*

Government, an important institutional force in emerging economies, has been recognized as a key factor influencing firm innovation. However, this influence is mainly treated as monolithic. Less is known about the independent and joint influences of institutional pressures from different level of governments on firm innovation outcomes, especially distinguishing the quantity and novelty of innovation. This paper focused on the potential inconsistent demands from central government and local governments in developing innovation and examined how the institutional complexity affect inefficient deployment of resources among quantity and novelty of innovation. Using the data of Chinese listed state-owned enterprises (SOEs) and difference-in-difference estimates, we found that the institutional linkage to central government exhibited a positive differential effect on the quantity of innovation. In provinces where provided more support for innovation, SOEs produced a larger post-policy increase in the quantity of innovation, while a smaller post-policy increase in the proportion of novel innovation. Moreover, we found the combined effect of central and local government on the quantity and novelty of innovation were both positive, that is, the agency risk that pursuing quantity at expense of novelty were intensified when the demands for innovation from central and local government were more consistent. This study contributes to the research on firm innovation by unpacking the influence of different level of governments, and enriches the literatures on institutional complexity by identifying the response in the tradeoff between quantity and novelty of innovation.

Paper is NOT Available. Please contact the author(s).

TIM: Research performance in Business and Management: The impact of team size and diversity

Author: **Sorin Krammer**, *U. of Exeter Business School*

Despite inherent differences across disciplines, collaboration in general and larger teams of co-authors in particular, are prevalent strategies to increase research performance via academic publications. We take a more fine-grained view of this relationship by distinguishing between two dimensions of research performance, namely impact (i.e., subsequent citations of a paper) and prestige (i.e., the ranking of publication journal). Different from prior literature, we argue that there are both benefits and pitfalls in having larger teams, and these trade-offs will affect differently the impact and prestige of academic research. Specifically, we propose that while team size will enhance linearly the impact of a paper, it will contribute in a non-linear fashion to its prestige. Furthermore, these relationships will be moderated by the knowledge and international diversity of the team. We test these hypotheses using bibliometric data on more than 40,000 publications between 1994 and 2013 papers across 21 sub-fields within the realm of Business and Management. Our results broadly support our theoretical assertions. We discuss some practical implications for assessing and stimulating the research performance of academics in business schools.

TIM: Attention and Intention: Role of Attention Focus on Intention to Build Big Data Analytics Capability

Author: **Ao Zan**, *UNSW Sydney*
Author: **Salih Zeki Ozdemir**, *U. of New South Wales*

Big data analytics capability (BDAC) has emerged as a new driving force of innovation, productivity, and competitive advantage. While research has investigated the benefits it may generate for the adapting firms, what is not yet clear is how and why firms decide to develop BDAC in the first place. In this paper, we aim to examine how firm's intention to develop BDAC is formed and we emphasize the role top management team (TMT) in this process. For this purpose, we focus on the cognitive processes of the TMT and their attention focus during the strategy development particularly. We construct an integrative theoretical framework through combining Technology Acceptance Model, Attention Based View, and Upper Echelon Theory and develop hypotheses on the potential impact of customer and competitor attention focus and market turbulence on the firm's intention to develop BDAC. We collect data on U.S. S&P MidCap 400 firms for 2010-2020 using a novel text-analysis methodology as well as existing secondary datasets. We find that TMT customer attention focus increases firm's intention to develop BDAC, while competitor attention focus decreases it. Moreover, our results show that market turbulence is positively associated with firm's intention to develop BDAC.

Author: **Benlu Hai**, *Henan Normal U.*

Author: **Junxiao Yang**, *Henan Normal U.*

Author: **Pengyu Chang**, *Henan Normal U.*

As an important factor that affects the capital market's efficiency, stock liquidity has an important impact on firm innovation activities. However, there is still considerable controversy in academia as to whether stock liquidity can improve the level of firm innovation. This paper takes the 2007-2019 Chinese Shanghai and Shenzhen A-share listed firms as a research sample, introduces the important variable of executive share incentives, and deeply studies the impact of stock liquidity on firm innovation. The research results show that there is a significant inverted U-shaped relationship between stock liquidity and firm innovation. The increase in stock liquidity can reduce firms' actual financing costs and facilitate the entry of major shareholders and increase the number of executives to conduct innovative research and development. The desire for long-term investment, however, excessive liquidity will drive institutional investors to short-term arbitrage, increase the pressure of firms to be acquired, aggravate the short-sighted behavior of executives, and inhibit firm innovation. Further research shows that executive share incentives significantly regulate the relationship between stock liquidity and firm innovation. Executive share incentives can ease principal-agent conflicts, drive executives to review the situation, cater to shareholders' interests, improve innovative decision-making, optimize investment structure, and enhance the firm Innovation level. This study enriches the relevant theoretical research on firm innovation from the cross-over perspective of firm external capital markets and internal executive incentives. Meanwhile, it provides management enlightenment for firms in the new era to better carry out innovation activities and enhance technological innovation capabilities.

HR Practices, Intentions and Turnover

Digital Session Chair: **Min Jong Jun**, *Binghamton U.-State U. of New York*

HR: **Training and Turnover: Job demands and Employee Benefits as Moderators**

Author: **Min Jong Jun**, *Binghamton U.-State U. of New York*

Although many researchers have suggested that training helps to reduce turnover, there remains a need for empirical evidence to examine these claims. Based on human capital theory and person-job (PJ) fit, I hypothesize that the effects of training on turnover may differ depending on the relative level of job demands and the level of employee benefits. To examine this, I conducted two studies by using two different South Korean panel data: the unbalanced panel data from the Korean Labor & Income Panel Study (KLIPS) and the balanced panel data from the Human Capital Corporate Panel (HCCP) survey. The first panel data analyses based on 6,199 individuals from the KLIPS from 2001 to 2018 supported the hypotheses regarding job demands and employee benefits as moderators. The second panel data analyses based on 313 companies from the HCCP from 2009 to 2017 identified the opposite results regarding the relative level of job demands. I discuss the implications of the synergistic effects of training and the relative level of job demands or the level of employee benefits on turnover.

Paper is Available to Meeting Registrants Only.

HR: **A Coping Perspective on Supervisor Firing Intentions: Openness to Experience and Impostorism**

Author: **Sal Mistry**, *U. of Delaware*

Author: **Julie Irene Hancock**, *U. of North Texas*

Author: **Michele N. Medina-Craven**, *Mississippi State U.*

The turnover literature has not adequately examined supervisor characteristics that may lead to employees' involuntary turnover, which is surprising considering the central involvement that direct supervisors hold in the termination decision process for employees. Drawing on coping theory and related personality research, we argue that supervisor openness to experience is related to supervisor intentions to fire and that supervisor impostorism is the underlying psychological mechanism. In a field study (Study 1), we collected temporally lagged data from undergraduate students working on a business simulation, finding that supervisor openness to experience is negatively related to intention to fire. In another field study (Study 2), we obtained data at a single point in time from working supervisors; we replicated the findings of Study 1 and found that supervisor impostorism served as an explanatory mechanism. Finally, in another field study on working supervisors (Study 3), we demonstrated that leader impostorism mediated the relationship between supervisor openness to experience and supervisor intention to fire, supporting the avoidant coping explanation for the transference of supervisor openness to experience to supervisor intention to fire. Together, the converging results of these studies indicate that supervisor openness to experience and impostorism give rise to intentions to fire.

HR: **A Machine Learning Examination of Turnover: Hidden Patterns and New Insights**

Author: **Hila Chalutz Ben-Gal**, *Afeke Tel Aviv College of Engineering*

Author: **Dan Avrahami**, *Tel Aviv U.*

Author: **Dana Pessach**, *Tel Aviv U.*

Author: **Gonen Singer**, *Afeke Tel Aviv College of Engineering*

Purpose. What do antecedents of turnover tell us when examined using human resources (HR) analytics and machine-learning tools, and what are the respective theoretical and practical implications? Although the turnover literature is expansive, empirical evidence on turnover antecedents studied using data science tools remains limited. Methodology. To help reinvigorate research in this field, we propose a novel examination of turnover antecedents—competencies, commitment, trust and values—using big data tools to develop a granular, case-dependent measure of turnover. Findings. Using archival data from 700,000 employees of a large organization collected over a period of ten years, we find that turnover is generally associated with varying levels of these antecedents. However, in more fine-grained analysis, their effect on turnover is contingent upon role, person and cultural background. Value. We discuss the implications on turnover and HR research and the potential of machine-learning methods in the design and implementation of managerial and HR planning initiatives.

Paper is Available to Meeting Registrants Only.

HR: **The link between turnover intention and actual turnover behavior: Stronger than it was found!**

Author: **Kin Fai Ellick Wong**, *Hong Kong U. of Science and Technology*

Author: **Roslina Yong**, *Hong Kong U. of Science and Technology*

Author: **Jessica Yuk Yee Kwong**, *Chinese U. of Hong Kong*

Organizational researchers has long used point-biserial correlation to examine the strength of relationship between a continuous variable and a binary variable. Although there have been many concerns that this correlation underestimates the strength of the relationship, Williams and Peters (1998) offered excellent argument that these concerns were not justified. On top of this debate, we introduced three new elements that were not discussed in the literature to revisit this issue. Specifically, we propose that due to the new concepts of expected distribution similarity, continuous-binary conversion principles, and the number of point in Likert scale, the point biserial correlations underestimate the strength of the relationship. We illustrated these elements in four computer simulations and in one re-analysis of the most recent meta-analysis (Wong & Cheng, 2020). We proposed a preliminary way to adjust this. Finally, we discuss future directions to address the limitations of this research.

Interacting with the Local Environment

Digital Session Chair: **Jesper Edman**, *Waseda U.*

This session addresses topics related to interacting with the local environment. It includes papers examining aligning integration with responsiveness through value management, whether and how multinational firms synchronize adaptation or standardization approaches for the design and content of their website and social media channels when operating in different countries, liabilities and advantages of foreignness in a digital world through the lens of foreign and local apps, and whether foreign multinational companies enjoy an advantage when recruiting in local labor markets that show discriminatory practices towards one group of job seekers.

IM: TAME IT OR LOSE IT: PROCESS AND OUTCOME OF MANAGING RECIPIENT REINTERPRETATION OF MNCs' HEADQUARTER VALUES

Author: **Meng Zhao**, *Nanyang Business School*
Author: **Seung Ho Park**, *Nanyang Technological U.*
Author: **Marie K Harder**, *School of Computing, Engineering and Mathematics, U. of Brighton*

Knowledge transfer across borders is a transformational process since local recipients reinterpret the meaning of the transferred knowledge. Recipient reinterpretation may cause local behavior to deviate from the transferred knowledge, raising managerial concerns to multinational corporations (MNCs). The knowledge transfer literature on how and why recipients reinterpret knowledge is extensive. However, there are few insights about the managerial implications of recipient reinterpretation. This paper finds that recipient reinterpretation can be destructive or productive, depending on the managerial response of knowledge senders. We conducted a multiple-case study of seven MNCs' transfer of organizational values to their Chinese subsidiaries. We found that inattention to recipient reinterpretation undermines the HQ-subsidiary relationship, distorts the HQ's information about local value compliance, and encourages parochial intra-subsidiary behaviour. By contrast, managing recipient reinterpretation through a sequence of wedging, anchoring, and accommodating processes generates favourable relational, informational, and behavioural value transfer outcomes. These processes enable HQ values to guide and adapt to local reinterpretation simultaneously. This paper extends our understanding of recipient reinterpretation in knowledge transfer and informs strategies for addressing the conflicting demands of HQs and subsidiaries in global integration. The study also casts light on the undervalued role of local managers as knowledge creators.

IM: Liability and advantage of foreignness in a digital world: The performance of foreign and local apps

Author: **Nan Zhou**, *Tongji U.*

This study compares the performance of foreign and local mobile apps along different dimensions. We argue that foreign mobile apps have fewer active users than local mobile apps due to their low perceived value and high perceived costs, thereby reflecting the liability of foreignness in a digital world. However, foreignness also brings certain benefits, such as the capability to satisfy long-tail users' specific needs. Thus, foreign mobile apps also enjoy higher daily usage time than local apps. Next, we consider two moderators. A high level of physical presence increases a foreign mobile app's ability to understand local users' needs and also enhances the legitimacy of the foreign app, thus reducing the liability of foreignness in a digital world. A high level of diversity of experience increases a mobile app's ability to understand and satisfy long-tail users' specific needs, thus enhancing the advantage of foreignness in a digital world. We test these ideas using daily usage data of 32 travel mobile applications installed on a major mobile phone brand in China in a period of 251 days and find support for our arguments.

IM: Liability of foreignness or outsider's advantage? MNCs, diversity signals, and local human capital

Author: **Nils Kruse**, *Martin-Luther-U. Halle-Wittenberg*

This research uses signaling theory as an overarching framework to contribute to the question of whether foreign multinational companies (MNCs) enjoy an advantage when pursuing recruiting in local labor markets that show discriminatory practices towards one group of job seekers. While recent research in the field of international management found that foreign MNCs often leverage their otherness by attracting disadvantaged labor market populations, the details of the underlying mechanisms remain unclear. My research addresses this gap by distinguishing between the effect of signals about a company's foreignness and signals about its support for diversity and inclusion of women on corporate attractiveness. The experimental data for this research was collected by means of manipulated job advertisement vignettes that were distributed to 1,000 university students in South Korea. The results suggest that foreign companies are generally perceived as more attractive than local companies. However, local companies can offset their initial disadvantage vis-à-vis foreign firms if they invest in measures of diversity and inclusion – at least among the female population. The findings call for a more nuanced view of the debate about the liabilities of foreignness and the role of gender. At the same time it alerts to the competitive possibilities for managers of local and foreign companies who are looking to assemble a high quality workforce.

IM: Standardize or adapt? A fine-grained model for cross-border communication through digital channels

Author: **Yanina Rashkova**, *U. degli Studi di Cagliari*
Author: **Ludovica Moi**, *U. of Cagliari*
Author: **Elona Marku**, *U. of Cagliari*
Author: **Francesca Cabiddu**, *U. of Cagliari*

This study investigates whether and how multinational firms synchronize adaptation or standardization approaches for the design and content of their website and social media channels when operating in different countries. We perform a content analysis of multinational firms' website and Instagram page to analyze their design and content deployed in two markets: Russia and Italy. This study reveals that firms exhibit different degrees of standardization versus adaptation of the website and social media's design and content based on the country and industry context. Firms that sharply differ in the design and content between website and social media are usually used to standardize the cross-border communication through websites and adapt it through social media. Furthermore, firms that converge reaching a high similarity or closeness in terms of design and content's adaptation and standardization in both channels are positioned in a balanced degree of standardization versus adaptation, especially in some industries. Our study contributes to the international marketing literature by providing a fine-grained framework to analyze the design and content communication convergence or divergence between websites and social media in terms of standardization and adaptation. In closing, we provide some managerial implications, and recommendations for further research on this topic.

Participant: **Howard Hao-Chun Chuang**, *National Chengchi U.*
Presenter: **Scott DuHadway**, *Portland State U.*
Discussant: **Jeffrey R. Edwards**, *U. of North Carolina*
Discussant: **Mark Pagell**, *U. College Dublin*

We propose a PDW that continues one organized in 2020 by the Empirical Research Method Department at the Journal of Operations Management. In Part I, the department editors will discuss the role of the methods department and current initiatives. We will review our Develop-Review-Import classification scheme for method papers that we use to help prospective authors assess fit of their potential method paper ideas. We will also summarize the method-paper proposals that we would like to encourage. The department is seeking to expand its reviewer base, and we will share what is expected of a methods reviewer. In Part II, the department editors will summarize this year's commonly encountered methodological issues. We will also share our methods-check routine for manuscripts that have been submitted to JOM. In Part III, we will summarize key methodological developments that are important for JOM authors to be aware of, and also offer pointers for successful implementation of that material. Our main target audiences are 1) researchers who want to publish papers about methods in JOM and 2) researchers who want to publish empirical research in JOM and more broadly in other management areas, but need guidance on the implementation of methods.

If you joined the Organizational Behavior (OB) division within the last three years and want to learn more about the OB division and starting out in the field of OB, then this forum is for you! This PDW was created to answer your questions about the “essentials” of the virtual AOM conference, the OB division, and the field of OB. The session is organized around a panel discussion between established members of the OB division and new members like yourself. We designed the forum so that you can meet and interact with a diverse group of leading scholars in the OB division and connect with other new members of the division. The PDW will include a welcome and overview of the OB division, a networking ice breaker, and a panel discussion prompted by questions from participants. As a participant in the forum, you can ask questions of your choice.

TIM: Disruptions in the C-Suite: Status Characteristics as Determinants for CTO Turnover  

Author: **Tobias Baehr**, *Chair of Innovation Management, TU Dortmund U.*
Author: **Bastian Kindermann**, *Chair for Technology & Management, TU Dortmund U.*

Leading the technology and innovation function, chief technology officers (CTOs) are the functional top managers responsible to drive firm innovation, which can be disrupted when a CTO exits a firm. Research, however, has mainly focused on the turnover of chief executive officers, boards, or lower-level employees, while knowledge about the turnover of individual functional top managers, such as the CTO, remains scarce. This study theoretically and empirically examines the determinants of CTO turnover and utilizes a unique dataset on large U.S. firms from 2006 to 2018. By conducting a multi-level study on status characteristics theory, we reveal that status on the team, firm, and market-level influence CTO turnover decisions, yet in different directions and extents. We develop theory on the reasons for functional top manager turnover and we advance literature on CTO antecedents. Beyond theoretical contributions, our results provide advice to the managerial practice.

Paper is Available to Meeting Registrants Only.

TIM: Impact Of Digital Leadership On Open Innovation: A Moderating Serial Mediation Model 

Author: **Tasneem Fatima**, *International Islamic U., Islamabad, Pakistan*
Author: **Afshan Masood**, *International Islamic U., Islamabad, Pakistan*
Author: **Mehwish Majeed**, *International Islamic U., Islamabad, Pakistan*
Author: **Muhammad Usman Ali**, *Technical Education and Vocational Training Authority Punjab*

The study examines the intervening role of knowledge sharing and innovation capability between digital leadership and open innovation. We hypothesized that top management knowledge value can strengthen the relationship between digital leadership and knowledge sharing. In line with the resource-based view and knowledge-based view, the serial mediation model explains how organizations can achieve open innovation through knowledge sharing and innovation capability development under digital leadership. Data is collected using a time-lagged design from 250 employees working in telecom and IT services companies. Results showed good support for the serial mediation model. Top management knowledge value was found a significant factor to improve knowledge sharing among employees. Future research directions have been discussed along with theoretical and practical implications.

TIM: The impact of IT capabilities on organizational performance: A Mediated Moderation Approach

Author: **Khalid Mehmood**, *School of Economics & Management, Tongji U.*
Author: **Haseena Bader Alkathery**, *Abu Dhabi U.*
Author: **Fauzia Jabeen**, *Abu Dhabi U.*
Author: **Yaser Iftikhar**, *Armed Forces Post Graduate Medical Institute, National U. of Medical Sciences*

This paper's aim is to investigate IT capabilities' influence on organizational performance within the hospitality industry. Specifically, it analyzes the indirect effects of sustainability practices and service quality on the relationship between IT capabilities and organizational performance. Top management support's moderating effect is also examined. Using a three-wave, time-lagged methodology, 507 managers of hotels took part in the study. IT capabilities directly and indirectly influence organizational performance. Specifically, the study found that sustainability practices and service quality indirectly effect the IT-capabilities-organizational-performance relationship. Further, top management support moderates the influence of IT capabilities on organizational performance. By testing the indirect effect of sustainability practices and service quality on the IT-capabilities-organizational-performance relationship, this paper contributes to hospitality by revealing the association between IT capabilities, sustainability practices, service quality, top management support and organizational performance.

TIM: Impact of Female Presence in a Top Management Team on Innovation    

Author: **Jangwook Lee**, *Korea Development Institute*
Author: **Jiyeon Chung**, *Soongsil U.*

Despite a large body of research on the relationship between top management team (TMT) diversity and firm performance, the impact of TMT diversity on innovation has received relatively little scrutiny. This paper examines how gender diversity of TMTs, or female presence in TMTs, impacts firm innovation by exploiting U.S. state-level variation in support for job protection of female workers. We analyze a panel of U.S. firms over the period 2005-2018 and find that greater TMT gender diversity increases innovations but decreases the impact of innovations on future ones. Furthermore, greater TMT gender diversity narrows down innovative search. These findings can be explained by female executives' collaborative leadership styles and risk aversion. Both managerial and research implications are discussed.

There has been tremendous change for faculty in the past year with classes suddenly moving online due to the pandemic. This required faculty to immediately adjust the way they manage their classes and interact with students without adequate time to find or develop new approaches to managing their classes. Few would say this adjustment has been easy or quick whether they are new to teaching or a seasoned instructor. This 3rd Annual Teaching Bootcamp at AOM addresses these pandemic-driven changes and provides the opportunity to obtain tips, techniques, and resources covering a variety of topics to help you manage your classes in this new and challenging environment. This lively, interactive session features a variety of topics related to teaching across all management disciplines with various delivery formats presented by experienced instructors in an interactive synchronous format. In alignment with the conference theme of “Bringing the Manager Back in Management, faculty responsibilities are framed as managerial tasks. This PDW will provide teaching resources to help faculty effectively manage their classes in today’s environment supporting the AOM vision to “inspire and enable a better world through our scholarship and teaching...” We anticipate an interactive and informative session, so come join the fun as we explore the basics from syllabus construction to building community in an online/hybrid classroom and motivating students.

The COVID-19 pandemic has surfaced the fragility arising from often overlooked risks across a breadth of contexts, including the lack of coordination among public health institutions, disruption in supply-chains, the spread of misinformation, uncertainty in decision making, and the absence of real-time monitoring systems. For these reasons, many organizations and societies turn to digital tools to reduce the magnitude of disruption. The surge in the use of digital technologies in the face of the COVID-19 pandemic may emerge new opportunities and problems. Some view the current pandemic as an opportunity for organizations to thrive by accelerating digital transformation. Others voiced that the reckless use of technologies may make the situation even worse, generating unexpected challenges. The empirical insights from presenters will advance our understanding of whether and how the digital tools can address the challenges in the face of the COVID-19 crisis at various levels of analysis - individual, organizational and societal levels.

Disruptive Innovation and Digitization

Digital Session Chair: **Giang Truong Hoang**, *Victoria U. Australia*

ODC: **Entrepreneurial Leadership and Product Innovation in Construction SMEs** 

Author: **Giang Truong Hoang**, *Victoria U. Australia*
Author: **Tuan Trong Luu**, *Swinburne Business School, Swinburne U. of Technology*
Author: **Thuy Thu Nguyen**, *Vietnam Ministry of Education and Training; Foreign Trade U.*
Author: **Lan Phuong Le**, *Foreign Trade U.*
Author: **Nhat Tan Pham**, *International U. - Vietnam National U. HCMC*

Product innovation is an important driver of the success and sustainable development of firms. Drawing on the resource-based view and the resource dependence theory, our research examines how entrepreneurial leadership influences product innovation in construction small and medium-sized enterprises (SMEs). We develop a research model in which knowledge acquisition and market-sensing capability mediate the effect of entrepreneurial leadership on product innovation, and competitive intensity moderates the relationships between the two mediators and product innovation. The data for our research model were collected from 402 employees working in 254 construction SMEs in Vietnam. Our findings reveal a positive link between entrepreneurial leadership and product innovation, which is mediated by knowledge acquisition and market-sensing capability. Additionally, competitive intensity is found to moderate the associations between knowledge acquisition and market-sensing capability and product innovation. Other than the theoretical contributions, our study provides important practical implications on how SMEs can foster product innovation by utilizing both internal and external resources.

ODC: **Organizational Structures Leveraging Disruptive Innovations: A Conceptual Framework**

Author: **Kristina Stoiber**, *U. of Innsbruck School of Management*

Companies are facing challenges to survive due to substantial transformations induced by digital technologies. Thus, companies need to be innovative to sustain competitive advantages. Recent literature recognizes the potential of disruptive innovations as a key factor for a company's competitiveness. However, disruptive innovations often challenge established companies due to the conflict between their existing business model and the newly emerging, disruptive business model. This study investigates how established companies can overcome such challenges and successfully develop and implement disruptive business models. In particular, we analyze different organizational structures proposed in the literature that promote disruptive business model innovations in established companies. On the basis of a systematic literature review, we conceptualize a framework linking the different organizational structures to the challenges arising from conflicting business models. The developed framework identifies which structures leverage the capability of established companies to implement a disruptive business model and thus strengthen its competitiveness.

ODC: **Overcoming Path Dependence in an Established Firm: The Role of Senior Leadership**   

Author: **Catherine Archambault**, *IESEG School of Management*
Author: **Xavier Lecocq**, -

Strategy literature has extensively highlighted the benefits and the constraining effects of self-reinforcing mechanisms leading firms onto path dependence. Surprisingly, literature has been scarce in unveiling how established firms deploy path breaking interventions in practice, and especially how a basic constituent of formal organizations – hierarchical power – can be an important antecedent to path breaking. In this paper, we investigate how senior leaders shape path breaking processes over time in an established firm. We investigate the case of Kiabi, a multinational whose leaders decided to proactively overcome path dependence by inviting the firm's total workforce to shape a series of path breaking interventions. We discover how senior leaders rely on (1) ad hoc problem solving, (2) new strategic intentions and (3) new capabilities to break from path dependence over time. Our contributions with this paper are fourfold. First, we show the relevance of hierarchical power to study path breaking dynamics. We provide an agentic view of path breaking and show how senior leader create intentional processes to maintain the firm's path breaking capacities over time. Second, we make a methodological contribution and show how ad hoc problem solving, strategic intentions and dynamic capabilities enable path breaking in practice. Third, we bring an endogenous view of path breaking by showing how senior leaders shape from within the conditions to overcome the threat of emerging self-reinforcing mechanisms. We demonstrate how endogenous path breaking processes – less studied in current path dependence literature – cohabitate with exogenous path breaking processes. Fourth, we discuss the temporal dynamics of breaking paths from a theoretical and practical perspective.

Knowledge Spillovers

Digital Session Chair: **Rui Guo**, *Queen Mary U. of London*

TIM: Research Subsidy Spillovers, Two Ways 

Author: **Kyle Roy Myers**, *Harvard Business School*
Author: **Lauren Lanahan**, *U. of Oregon*

We study how the outputs of research spill over technological and geographic space in the context of the U.S. Small Business Innovation Research program. We infer input-output links using text analyses and identify the marginal costs of producing patents using noncompetitive grant matching policies. Due to technological spillovers, the costs of spurring specific types of patents are substantially larger than the costs of spurring any patent. Due to geographic spillovers, roughly 80% of the patents generated by the program are from inventors who never participate in the program. The cost effectiveness of research subsidies crucially depends on which outputs count.

Paper is Available to Meeting Registrants Only.

TIM: FDI Knowledge Spillovers and Chinese Local Firms Technological Upgrading: The Role of Returnees

Author: **Rui Guo**, *Queen Mary U. of London*
Author: **Shijun Mu**, *Queen Mary U. of London*
Author: **Lutao Ning**, *Queen Mary U. of London*

This paper investigates how returnees' repatriation speed and irregularity affect FDI knowledge spillovers and local firms' technological upgrading. Using a unique dataset of high-tech Chinese firms located in Zhongguancun Science Park in Beijing from 2007 to 2013, our empirical result shows that returnees are vital in upgrading local firms' technological capability and disseminating FDI spillovers. Returnees' high repatriation speed positively contributes to local technological upgrading and FDI knowledge absorption, whereas irregularity dampens them. This research contends that the time-based attributes of returnees' repatriation in facilitating local firms' absorption of FDI knowledge provides a more integrated viewpoint on the relationship between returnees and FDI spillovers. Our findings have important implications for policymakers and practitioners.

Paper is Available to Meeting Registrants Only.

 **TIM: Knowledge spillovers in Schumpeterian environments: Asymmetries between new entrants and incumbents**

Author: **Francisco Polidoro**, *U. of Texas at Austin*
Author: **Charlotte Jacobs**, *Fox School of Business, Temple U.*

Existing literature recognizes knowledge spillovers as an underpinning of the dynamic interplay between new entrants and incumbents but stops short of investigating systematic differences in the extent to which they generate knowledge spillovers. This study reveals asymmetries between new entrants and incumbents that result in an innovation created by a new entrant spurring more innovations by other firms than a similar innovation building on the same technology but created by an incumbent. In contrast with existing literature highlighting the differential role that new entrants and incumbents play in technological evolution by creating different types of innovations, this study demonstrates that even when both firms build on the same technology, they still have an asymmetric impact on the subsequent trajectory of that technology.

Paper is NOT Available. Please contact the author(s).

TIM: R&D Tax Incentives: Examining Sources of Heterogeneity in Input and Output Additionality in China

Author: **Xiaoyong Dai**, *Xi'an Jiaotong U.*
Author: **Gary Chapman**, *De Montfort U.*

We use a longitudinal dataset of listed Chinese firms to evaluate the effects of participation in a high- and new-technology enterprise tax incentive programme on firm innovation. We advance understanding by first providing strong evidence of an economically significant average role of tax incentives in inducing input and output additionality. Second, we reveal vast heterogeneities in the input and output additionality effects across recipients, and that firm programme experience, innovation experience, certification likelihood and incentive size are important sources of these heterogeneities. Finally, we advance understanding of the dynamic effects of tax incentives by showing how the input and output additionality effects vary over time.

Fit, Flow, and Attachment

Digital Session Chair: **Johanna Anzengruber**, *Upper Austria U. of A.S*

OB: Flow Experiences During Online and Face-to-Face Meetings: A Two-Wave Study

Author: **Johanna Anzengruber**, *Upper Austria U. of A.S*

This paper aims to explain the effects of flow on organizational commitment in hybrid (online and face-to-face) job application settings. In detail, it investigates flow experiences of job applicants during the different phases of the application process. In addition, it explores whether situational factors like the attractiveness of a job application process per se and personal factors like a person's occupational self-efficacy affect a person's commitment towards the employer. Drawing on data of 166 job applicants over a period of up to six months, we find that job candidates who experience flow during the application process are more likely to be committed to their future employer. Furthermore, the study reveals that occupational self-efficacy and attractiveness of the application have a positive indirect effect on organizational commitment via flow. Combined, our study provides insights on how to facilitate organizational commitment right from the very first moment of a person's contact with the organization.

OB: On the Generality of Other-ratings

Author: **Kristina Tirol-Carmody**, *U. of Kansas*

Author: **Jill Ellingson**, *U. of Kansas*

Author: **Brittany Solomon**, *U. of Notre Dame*

Self-report questionnaires are frequently used in organizational research to assess psychological processes, attributes, and states. Yet, there are a number of well-documented shortcomings associated with the method, including the introduction of self-serving biases and common method variance when used exclusively. We propose that other-ratings—ratings of a target individual that are provided by an observer, such as a coworker or team member—can be used in place of self-ratings to accurately assess commonly measured work-related psychological constructs in organizational research. To investigate the validity of other-ratings as substitutes for self-ratings, we conducted a meta-analysis and two field studies. First, we meta-analytically assessed whether other-ratings predict self-ratings of work-related psychological constructs and investigated the extent to which observer-target familiarity (i.e., the degree to which an observer is acquainted with a given target) moderates self-other agreement. Next, we empirically examined these relationships using two commonly studied work-related psychological constructs (satisfaction and engagement). We also explored the validity of other-ratings as predictors of employee turnover intentions, a behavioral outcome associated with each of the two measured constructs. Overall, our results indicate that other-ratings predict self-ratings of work-related psychological constructs, self-other agreement can improve with increased observer-target familiarity, and other-ratings predict target criterion-related behavioral intentions. Keywords: Other-ratings; self-other agreement; measurement

OB: Too Much Fit with a Group? Person-Group Fit as a Moderator of the Effect of Charismatic Leadership

Author: **Inju Yang**, *RMIT U.*

Author: **Jee Young Seong**, *Jeonbuk National U.*

Author: **Sanghun Sung**, *U. of Iowa*

Author: **Doo-Seung Hong**, *Seoul National U.*

Drawing on theories of substitutes and contingencies for leadership, we explore how person-group (PG) fit moderates the relationship between charismatic leadership (CL) and task performance via followers' organizational citizenship behavior (OCB). Using data collected from 139 employees and their direct supervisors working at a public sector firm in Korea, we found that employees' task performance via OCB was positively influenced by CL when the employees had high person-group demands-abilities (PGDA) fit. However, CL did not affect task performance via OCB when the employees had high PG value fit. By introducing contingencies and specifying their underlying logic, this study broadens the current theoretical spectrum for both substitutes for leadership and CL contexts.

Paper is Available to Meeting Registrants Only.

OB: The Incongruity of Misfit: A Systematic Literature Review and Research Agenda

Author: **Benedikt Englert**, *U. of Mannheim*

Author: **Martin Sievert**, *U. of Mannheim*

Author: **Bernd Helmig**, *U. of Mannheim*

Author: **Karen Jansen**, *Henley Business School, U. of Reading*

For decades, person-environment fit research has been a prevalent and complex topic of research, as evidenced by multiple reviews. Inherent in person-environment fit theorizing is the notion that its absence, i.e. misfit, is accompanied by negative consequences. Until recently, this simplistic view of fit and misfit predominated, resulting in a shallow understanding of the meaning and experience of misfit. It was just over 10 years ago that researchers began to recognize misfit as a distinct construct worthy of closer attention. Still, this research is diverse, fragmented, and partly inconsistent. Thus, we offer a systematic review of existing misfit literature. We review and systematically analyze 94 scholarly articles published between 1981 and 2020. We synthesize the prevalent knowledge on misfit and outline promising research avenues following a multi-level approach. The results provide valuable insights for future research on misfit and offer three main contributions. First, we offer conceptual clarity for a fuzzy and eclectic phenomenon. Second, we provide a deeper understanding of the underlying mechanisms and dynamics of individual misfit episodes. Third, we contribute to an understanding of the diverse consequences of individual misfit. Based upon our results we provide an extensive research agenda.

OB: Engagement and Anxiety during Covid-19: The Role of Servant Leadership and PsyCap through Telework

Author: **Waleska Yone Yone Yamakawa Zavatti Campos**, *Pontifical Catholic U. of Rio de Janeiro (PUC-Rio)*

Author: **Flavia Cavazotte**, *Pontifical U. Catolica de Rio de Janeiro*

Author: **Valter Moreno**, *Rio de Janeiro State U. (UERJ)*

Author: **Marcelo Jucá Quintão**, *Pontifical Catholic U. of Rio de Janeiro*

This study adopts the servant leadership framework to investigate the importance of leadership in managing engagement and anxiety in the context of telework induced by the COVID-19 pandemic. The study examines the impact of servant leaders on work engagement and anxiety, the mediating role of psychological capital, and telework's moderating role on these relationships. The hypotheses were tested through structural equation modeling, based on a survey with 327 professionals. The results show that servant leadership has a direct, positive association with work engagement and a direct, negative association with work anxiety. These effects are partially mediated through psychological capital. The analysis also shows the moderating effects of teleworking on the relationship between servant leadership and psychological capital, and servant leadership and engagement.

OB: Towards Humanizing Organizations-Employing State-like Employee Strengths for Triggering Voice

Author: **Vikas Rai Bhatnagar**, *Management Development Institute*

The stagnating levels of employee engagement, worsened by the distressing and uncertain times due to the global pandemic of COVID-19, makes the requirement for humanizing organizations compelling. The current study examines the newly developed state-like construct of employee strengths at work (ESAW) that engages four attributes out of the five that humanize organizations, unlike the extant trait-like conceptualization of employee strengths that engages only one attribute. Bridging a gap in the literature by linking leadership and strengths theory, the current study empirically examines the mediating effects of the new variable ESAW on the association of empowering leadership and voice by analyzing data from 259 leader-subordinate dyads in manufacturing companies in India. As the study examines a new variable, a multiple-rater and cross-sectional research design are appropriate for providing causal evidence, more so when time lag in the design of the questionnaire provides temporal precedence to the predictor variable. Results reveal that ESAW fully mediates the relationship between empowering leadership and voice behavior, thereby unraveling the causal mechanism by which empowering leadership triggers voice behavior. The significance of the study lies in contributing to humanizing organizations and providing insights for trigger voice behavior from subordinates, having implications for improving organizational effectiveness.

OB: Working in the Eye of the Pandemic: Local COVID-19 Infections and Daily Employee Engagement

Author: **Max Reinwald**, *LMU Munich*

Author: **Sophia Zimmermann**, *U. of Konstanz*

Author: **Florian Kunze**, *U. of Konstanz*

The COVID-19 pandemic has drastically changed many aspects of our society and work life. In this study, we assess how daily variations in employees' work engagement are affected by daily variations in infection rates in employees' communities. Applying the conceptual framework of event system theory, we argue that surging COVID-19 cases have an impact on employee engagement, depending on the individual sensemaking processes of the pandemic. We assume that employee age and received leader support are key context factors for these sensemaking processes and that particularly older employees and employees who receive little leader consideration react with lower work engagement levels toward rising local COVID-19 infections in their proximity. We find support for most of our proposed relationships in an eight-day diary study with largely a representative data set of the German workforce, which we integrate with official COVID-19 case statistics on the county level. We discuss the implications of these results for the literature on extreme events and individual workplace behavior. Furthermore, these findings also have important implications for companies and executives who are confronted with local COVID-19 outbreaks or further pandemic waves.

OB: The Covid 19 Pandemic And Psychological Contract Breach: The Disruption of A Work From Home Schedule

Author: **Baiyun Gong**, *Nova Southeastern U.*

Author: **Randi L. Sims**, *Nova Southeastern U.*

The COVID 19 Pandemic created a chain reaction that fundamentally altered many employees' day-to-day lives. In this study, we observe the impact of this shock on the breach of the employees' psychological contract. Through the lens of affective event theory, we test the research model using survey data from 239 employees who worked from home during the pandemic. Findings suggest that moving to a work from home schedule undermines the trust between the employees and employers, which, in turn, leads to an increase of work-life conflict for those working from home and promotes recognition of a breach of psychological contract.

Innovating Women

Digital Session Chair: **Denis Trapido**, *U. of Washington, Bothell*

TIM: The Female Penalty for Novelty and the Offsetting Effect of Alternate Status Characteristics

Author: **Denis Trapido**, *U. of Washington, Bothell*

Research has shown that audiences penalize novelty in women's work but also that such penalty may vary. This study builds on theories of uncertainty and status signaling to identify contingencies that may account for the variation in the female penalty for novelty in science and technology. Drawing on theories of expectation states and gender status beliefs, I posit that peer audiences have a baseline bias against novelty in women's work and penalize novelty in female authors' contributions to knowledge. However, when authors possess status characteristics that are more relevant to the task of producing knowledge than gender, this penalty erodes. I identify two academic status characteristics, prestigious graduate degrees and prestigious mentors, which offset the female penalty for novelty. Longitudinal multi-source data on productivity of academic engineers show that female engineers who have these characteristics face no significant citation penalty for the novelty of their work. Implications of these findings for gender inequality in science and technology and for policies that aim to reduce it are discussed.

TIM: Beyond Immediate Relations: Understanding Women Collaborative Networks

Author: **Jieun Lee**, *U. of Missouri, Columbia*
Author: **Michael Deane Howard**, *Texas A&M U., College Station*
Author: **Hannah Grubbs**, *Texas A&M U., College Station*

This study examines collaborative networks focusing on how women's need to utilize indirect relationships influences network tie formations. Research has identified women tend to have ineffective network positions and what are negative outcomes, yet there is limited attention to how they reinforce collaboration chances at work. Pointing out their struggle to establish new direct network ties in a male-dominated environment, we suggest women likely form transitive network ties by closing indirect ties, unless they have more available resources for new opportunities. Using a sample of 64 firm-level inventor patenting collaborations from 2000 to 2012, the network meta-analysis reveals that although female inventors less likely develop direct ties for patenting collaborations, they build transitive ties utilizing previous indirect ties through male peers. Further, whereas slack resources in a firm weaken the negative tendency of female inventors' direct tie formations, greater R&D expenses and environment munificence allow them to less depend on indirect ties reducing transitive tie developments. Our findings offer an important implication that women's network tie formations result not only from challenges of gender stereotyping but also from the need for indirect network ties.

TIM: Female Mentors in Science

Author: **Marc Lerchenmueller**, *U. of Mannheim*
Author: **Leo Schmallenbach**, *U. of Mannheim*
Author: **Karin Hoisl**, *U. of Mannheim*

Research councils and funding bodies urge inclusive and effective mentorship, particularly calling for more female mentors who presumably bestow distinct benefits on mentees. Benefits notwithstanding, senior women, who are predestined to becoming academic mentors, still face substantial barriers in comparison to senior men across academic disciplines. The question arises whether these barriers also transfer to their protégés and whether female vs. male mentorship affects protégé outcomes differently. Combining arguments from the literature on gender differences in professional labor markets from both the demand- and supply-side, we expect that female vs. male mentorship likely depresses the evaluation of protégés' work. Identifying mentors of a highly competitive cohort of 4,556 life scientists with early career sponsorship from the National Institutes of Health (NIH), we first document a citation discount of 10% on the average paper published by a female- relative to a male-mentored protégé. Once we account for observational mentor characteristics, features of the grant, and research content, this discount disappears. Yet, when looking at the most impactful publications, an average citation discount for female-mentored protégés of 11% persists, even after controlling for all of the above. In an extension to the analysis we find suggestive evidence that this discount arises due to male authors disproportionately citing male vs. female-mentored work. We interpret these findings as an indication for a demand-side bias against female mentored protégés.

TIM: Determinants of inventorship: family environment and parental forces

Author: **Myriam Mariani**, *Bocconi U.*
Author: **Karin Hoisl**, *U. of Mannheim*
Author: **Hans Christian Kongsted**, *Copenhagen Business School*

With registry data on 1.4 million individuals in Denmark born 1966-1985, we document large differences between genders in their propensities to become inventors. We also show that parental resources and background predict children's choices of high school track and field of tertiary education, and through them they affect the probability to become an inventor. These factors benefit boys disproportionately more than girls, causing at least part of the gender gap in science and innovation. Parental inventorship matters for children to transition into the inventive job, over and above their educational trajectories, but only for boys. By focusing on a sample of first-born girls and exploiting the randomness of the gender of their second-born sibling, we investigate the mechanisms that likely drive these asymmetric effects. While role models and parental specialization seem to drive the educational choices of children, the effect of parental inventorship that benefits mostly boys is likely because parents anticipate girls to be confronted with a "men's job". Thus, to raise the share of women inventors, in addition to further women's enrolment into STEM, we need to change the threat of this profession being a male kingdom.

Empowering, Authentic, and Ethical Leadership

Digital Session Chair: **Wei Hua**, *Texas Tech U.*

OB: “Authenticity” as a Moral Virtue: A Conceptual Framework for Perceived Leader Authenticity

Author: **Wei Hua**, *Texas Tech U.*

As a reflection of the on-going controversies related to whether an internalized moral perspective should be included in theories of authentic leadership, this paper introduces virtue ethics to the scholarly conversation. It argues that authenticity is inherently a moral virtue that resides in the leader’s character. As such, external perceptions of leader authenticity are essentially about moral judgment. Based on recent empirical evidence in moral psychology, this paper further illustrates why character judgment is more relevant than the judgment of actions in the overall moral judgment of leader authenticity. More specifically, it matters more for leaders to be perceived as possessing the moral virtue of authenticity rather than simply displaying authentic actions, such as being consistent. Thus, recognizing different types of signaling behaviors related to leader authenticity is extremely important, since behaviors that signal the moral virtue of authenticity are more relevant than behaviors that signal authentic actions. Theoretical, empirical, and practical implications of this framework are also discussed.

OB: Authentic leadership and employee health: A conditional process model (WITHDRAWN)

Author: **Kristin Hildenbrand**, *U. of Sheffield*
Author: **Pascale Daher**, *U. of Liverpool*
Author: **Godbless Akaighe**, *Sheffield U. Management School*

The purpose of this paper is to examine the effect of authentic leadership on employees’ health via employees’ perception of climate of authenticity across two studies. In Study 2, we additionally explore the moderating role of employees’ neuroticism. The hypotheses were tested across two studies using two-wave survey data. In Study 1 (n = 104), the mediation hypothesis was tested. Study 2 (n = 146) extended Study 1 and examined the moderated mediation model. Across both studies, authentic leadership is positively related to employee health, and employees’ perceived climate of authenticity mediates this relationship. Study 2 additionally shows that employees’ neuroticism moderates this indirect effect such that perceived climate of authenticity instigated by authentic leadership is particularly conducive for employees high in neuroticism as opposed to those low in neuroticism. Findings emphasize the health-promoting effect of authentic leadership. It is recommended that organizations cascade, through their leaders, emotional display rules that encourage genuine emotional expression. This paper addresses gaps in the leadership literature through investigating perceived climate of authenticity, a mediating variable that lies at the heart of authentic leadership and integrating the role of employees’ personality in the leadership process.

OB: Leader Financial Insecurity and Ethical Leadership

Author: **Yuanmei Qu**, *Rowan U.*
Author: **Mayowa Babalola**, *Graduate School of Business, Nazarbayev U.*
Author: **Lu Chen**, *U. of Electronic Science and Technology of China*
Author: **Shuang Ren**, *Deakin U.*

While previous research has explored dispositional and managerial antecedents of ethical leadership in order to promote this positive style of leader behaviors, our knowledge regarding whether broader and extra-organizational context within which supervisors operate may affect the emergence of their ethical leadership remains underspecified. In this research, we draw on uncertainty management theory (UMT) to examine how and when supervisor financial insecurity influences ethical leadership behavior at work. Specifically, we suggest that supervisor financial insecurity triggers supervisor anxiety, which in turn inhibits the demonstration of ethical leadership. We also examine organizational pay fairness as a moderator in this mediation process, such that supervisors who perceive their pay as fair are less susceptible to the anxiety resulting from financial insecurity than those who perceive their pay as unfair. Results from a three wave, multisource field study involving 305 supervisor-subordinate dyads provided support for our hypothesized model. Theoretical and practical implications of our findings are discussed.

OB: Empowering Leadership and Elder Teachers’ Knowledge Sharing Behavior: A Moderated Mediation Model

Author: **Zhenyuan Wang**, *East China Normal U.*
Author: **Liming Zhao**, *Faculty of Economics and Management, East China Normal U.*
Author: **Haojie Song**, *Zhengzhou U.*
Author: **Jianghong Du**, *East China Normal U.*

This study develops and examines a moderated mediation model that explores the link between empowering leadership and elder teachers’ knowledge sharing behavior by focusing on the mediating role of organization-based self-esteem and the moderating role of organizational status. Based on a two-wave survey from a sample of 204 elder teachers in primary and secondary schools in the People’s Republic of China, the results indicate that empowering leadership is positively related to elder teachers’ knowledge sharing behavior, and this relationship is mediated by organization-based self-esteem. Moreover, organizational status moderates the mediating role of organization-based self-esteem in transmitting the effect of empowering leadership to knowledge sharing behavior. Implications and directions for future research are discussed.

Issues of Identity

Digital Session Chair: **Johanna Jarvela**, *Bayes Business School (formerly Cass)*

SIM: The Mine or the Mire? - Mobilizing Place and Identity in Resource Struggles

Author: **Johanna Jarvela**, *Bayes Business School (formerly Cass)*

In mining, the ideas of consultation and participation together with the frames of corporate responsibility and sustainable development have become the lingua franca of mining conflict resolution. This paper takes post-Gramscian approach to explore how different forms of power and dissent are performed in dialogue processes; and draws from political ecology literature to examine how place and place-based identities are mobilized in the conflicts. The findings show how place is actively utilized as a power resource by both the company, and those who resist it, and that place-basedness becomes a frame for contestation. The local values, meanings and knowledge are connected to the persuasion and control through dialogue. While the place contexts can offer strategic leverage for fringe stakeholders to oppose mining - instead of being disempowered by the hegemonic CSR practices - the power struggles and local dynamics can also silence some of the resistance. The empirical context of the paper is a project by mining multinational in Finnish Lapland. The paper contributes to the theorization on the often veiled power struggles in corporate-community relations, and the limits of conciliatory mechanism; and to the research on identities in organisation studies by theorising on the significance of place as source of identity and how that influences the corporate-community relations.

SIM: Punishment, Forgiveness and Moral Identity: A Valuable Relationships Perspective

Author: **Gijs Van Houwelingen**, *Amsterdam Business School, U. of Amsterdam*

Author: **Marius Van Dijke**, *Erasmus U. Rotterdam*

Author: **Niek Hoogervorst**, *Erasmus U. Rotterdam*

Author: **Lucas C.P.M. Meijs**, *Erasmus U. Rotterdam*

Author: **David De Cremer**, *NUS Business School*

When and why do organizational actors, typically leaders, to opt to either punish or forgive a norm transgressor? Some scholars have suggested organization members either use punishment and forgiveness as management tools, that is, to ensure optimal organizational performance. Others have suggested that punitive and forgiving responses are mostly driven by moral concerns. In this paper, we integrate both perspectives by combining social cognitive theory of moral identity with the valuable relationship hypothesis. We argue that moral identity centrality predicts punitive and forgiving behavior that is optimal to ensure cooperation on the collective level. More specifically, over a series of three studies (two experimental studies and a field study), we show that moral identity centrality (vs. peripherality) is related to a higher sensitivity to relationship value. As such, we are the first to suggest and test a comprehensive framework that explains why responsible actors in organizations may choose to punish a transgression they may just as well have forgiven, or vice versa.

Paper is Available to Meeting Registrants Only.

SIM: Gender and Mission Drift: Evidence from a Natural Experiment of Social Bricoleurs

Author: **Aindrila Chatterjee**, *Doctoral Scholar*

Author: **Amit Jain Chauradia**, *Indian School of Business*

We study a social enterprise that recruits and trains social bricoleurs, defined as an entrepreneur who promotes the enterprise's mission and has financial independence. Agency problems emerge as social bricoleurs deviate from the mission and focus more on their own entrepreneurial activities. We observe a natural experiment in a social enterprise that sought to achieve gender balance by exclusively recruiting female social bricoleurs in about of half its district locations in rural India. Compared to male bricoleurs, we find that female bricoleurs were more likely to focus on the social performance of the enterprise than their own financial returns. Therefore, hiring female social bricoleurs to maintain gender balance not only reduces gender bias in the workforce, but also reduces mission drift of the social enterprise.

SIM: Diversity, Equity, and Inclusion for Data Workers: A Stakeholder Approach

Author: **Bill Herman**, *Metropolitan State U. of Denver*

The social, political, and economic power of technology firms is hard to overstate, not least because they collect and control so much data about people from around the world. The positive and negative effects of this traffic in data are not distributed equitably. This paper argues that these firms have an ethical obligation to recruit, retain, and promote a diverse workforce, grounded in two separate but related reasons. First, the firms owe this to employees because their jobs are a desirable, scarce resource. Second, and more specific to technology firms, is that they will not be able to make more ethical decisions about how to handle this data and the consequent effects on broader society.

Decolonizing Management and Organizations
Decolonizing Management and Organizations

Digital Session Chair: **Nitesh Bhat**, *Indian Institute of Management, Bangalore*

CMS: **Intellectual Freedom: A Decolonisation Perspective Inspired by Gandhian Ideals**      

Author: **Nitesh Bhat**, *Indian Institute of Management, Bangalore*
Author: **Abhoy Kumar Ojha**, *Indian Institute of Management, Bangalore*

The intellectual freedom of the colonised populace in erstwhile European colonial territories continues to be influenced by colonial ideals even today despite decades of political and economic freedom. Using the ideals of Mohandas Karamchand Gandhi as outlined in his work *Hind Swaraj* as the backbone of our arguments, we seek to contribute to conversations on decolonisation of the mind and suggest how the formerly colonised may attain intellectual freedom, with a specific focus on education and research in India. The views of other prolific thinkers, both Gandhi's contemporaries and modern scholars, help us understand the nuanced meaning of some of the issues examined by Gandhi. The way to the future is suggested to be a blend of knowledge grounded in indigenous traditions and liberal borrowing from other traditions, including the West tradition which Gandhi criticised. Specifically, we suggest how education in India could be moulded to achieve purna swaraj, or complete independence as envisioned by Gandhi. Our study has multiple implications for businesses, governments, and the society because it questions the basis of decisions and choices people make, and also urges them to deeply introspect on their priorities, goals and the means to achieve them.

Paper is Available to Meeting Registrants Only.

CMS: **Transmodernizing Imperial Business History**

Author: **Alexandre Faria**, *EBAPE/FGV*
Author: **JAEDER FERNANDES CUNHA**, *U. of Sao Paulo (FEA/USP)*

The rise of the radical right within the context of neoimperial neoliberal capitalism has been triggered by ultra-conservative revisionisms in both South and North which radicalize pasts of coloniality against the majority within and outside organizations and houses of knowledge. In this context we investigate the denial of Latin America by Unilever historiography (UH), an imperial Anglo-Dutch multinational corporation that operates in the region since 1926. We put forward a transmodern decolonial approach to foster a critical dialogue between the Euro-British and decolonial historical turns in Organizational Studies. Analysis shows that UH embodies an ambivalent pattern in Business History (BH) that has been rather ignored by both historic turns. Through this innovative/regenerative approach engaged with a majority excluded by history, we argue that the institutionalization of BH by the Anglo-American world as a post-imperial historical turn is informed by under-researched colonizing-decolonizing dynamics. With implications for research and teaching, we conclude that dynamics of appropriation-containment of "historical others" by the field of History informs the denial of Latin America by HU and global radicalization of modernity/coloniality that might be opposed by a history otherwise engaged with a growing population of Southern 'peoples without history' in both North and South which fosters reappropriations of the liberating side of pasts.

CMS: **Bringing Decolonizing Critical Discourse Studies into Organization Studies** 

Author: **Caroline Rodrigues Silva**, *Fundação Getúlio Vargas/EAESP*
Author: **Vinicius Galante**, *Fundação Getúlio Vargas - EAESP*

This work aims to investigate and problematize how the Brazilian hegemonic media discourses operate in the construction of the Brazilian imaginary about Black lives, racism, blackness, and whiteness in the context of the riots and demands of the social-activist movement Black Lives Matter (BLM), or "Vidas Negras Importam", in Brazilian Portuguese. To this end, we use a decolonial critique perspective, convening knowledge and productions of subordinated intellectuals by hegemonic science, particularly authors from the Global South, and we also dialogue with "classic" critical authors of discourse analysis, in examining a body of news of a representative newspaper of the Brazilian hegemonic media. In addition, we aim to demonstrate which subjects can speak and be heard, and which subjects are silenced by the silencing mask in the discourses about black lives, racism, whiteness, and blackness communicated by the Brazilian hegemonic media, commenting on discursive, political, and social implications of the processes of colonialism and subordination. Considering this, we contribute to the field of Critical Analysis of Decolonial Discourse (CADD) in Organizational Studies (OS) by demonstrating how discursive strategies of the Brazilian hegemonic media (controlled and populated by White subjects), corroborates the denial of racism and the selectivity in the ethical treatment regarding humanitarian values in consideration of the race of the subjects. Moreover, we contribute by demonstrating how decolonial authors advocate, update and contextualize debates in racial issues from a critical

JAM Trinity - Strategies for Designing and Building Scalable Social Platforms

JAM Trinity - Building Scalable Social Platforms

Chair: **Himanshu Warudkar**, *Indian School of Business*
Presenter: **Arvind Gupta**, *Indian School of Business*
Presenter: **Shrikant Ekbote**, *Indian Institute of Technology - Guwahati*

Few countries can boast of having strategised, designed and built socially scalable platforms that cater to 1.3 billion citizens. India's JAM Trinity is one of the few examples which have embodied key principles of platform strategy, design and the power of networks. India's digital infrastructure comprises of three key pillars - a bio-metrically verifiable identity which is the base of India's 'Aadhaar Stack' or 'India Stack', mobile phones on back of a telecom revolution, lowest cost of data in the world leading to 600+ million unique smartphone users and a unique interlinkage of India's universal digital identity with Jan-Dhan bank accounts. Together - "Jan-Dhan, Aadhar and Mobile" are the famed "JAM Trinity". This is a textbook case of strategising, designing, developing platforms and truly leveraging the "power of networks". In this PDW, we cover examples of platform strategy, design, scalability, adoption building for scalable social platforms in the context of "JAM Trinity". We bring together an interesting perspective of using "service design" techniques in the creation and usage of these platforms. The richness of this session arises from three different perspectives that we are able to bring towards these platforms i.e., strategy, design, technology. This is an interactive session wherein post the initial remarks, participants will be put in 3 breakout rooms and be able to have in-depth discussions on the 3 topics for furthering their own research. We will end the PDW via a real-time gamified quiz based on the session contents topping it all with suggested research agendas. We are co-opting additional speakers from academic institutions and will add confirmations in due course.

Work Passion and Intrinsic Motivation

Digital Session Chair: **Mijeong Kwon**, *U. of Michigan, Ann Arbor*

OB: Work Passion and Employee Behavior: In Search of the Intrinsic Motivational Processes

Author: **Wan-Jing April Chang**, *National Tsing Hua U.*
Author: **Ya Jen Joe Cheng**, *National Yang Ming Chiao Tung U.*

Past organization and management studies have emphasized individual and organizational performance. However, research on employee growth and development is relatively limited, even though findings drawn from positive psychology show that promoting and preserving employee mental health can improve employee performance. The present research follows the argument of positive organizational behavior (POB) to suggest that employee behaviors are determined by underlying intrinsic motivational processes linking employees' work passion, flow experience, well-being, and positive behavior. The present study has two major goals: first, to examine the dualistic effects of passion on creative workers' intrinsic motivation processes and behavioral consequences; second, to confirm the mediating role of flow experience and well-being in, as well as their causal relationships with, work passion, flow experience, well-being, and positive behavior (innovative behavior and job performance). The present overarching study consists of two specific studies. Study 1 involves (1) data from 363 creative professionals and (2) a cross-sectional design for testing the proposed model. Study 2 involves (1) two-wave data concerning creative professionals and (2) three cross-lagged tests for examining the causal relationships among variables. Structural equation modeling is employed for testing the hypotheses. The results of the two studies demonstrate that the effects of two kinds of passion differ from each other in relation to differences in time frame. Moreover, the results show that the greater the work passion is in creative workers, the more likely they will be to experience flow, well-being, strong job performance, and innovative behavior. The results also confirm their causal relationships with one another. Lastly, we discuss our findings' theoretical and practical implications, the study's limitations, and suggestions for future research.

OB: Intrinsic Motivation Display as an Impression Management Tactic

Author: **Mijeong Kwon**, *U. of Michigan, Ann Arbor*

Previous research assumes that employees' true levels of intrinsic motivation and the levels of intrinsic motivation they show to others are the same and does not distinguish between the two. This paper challenges the assumption and builds a theory about how employees can display their intrinsic motivation to others in a way that it deviates from their true intrinsic motivation. Drawing on theories of impression management, we argue that employees are more likely to exaggerate their intrinsic motivation to interaction partners with greater power. We further propose that morality concerns are central in employees' intrinsic motivation display, where employees' desires to moral mediate the relationship between interaction partners' power and employees' intrinsic motivation displayed to the partners. We report results of two experiments and one field survey that support our hypotheses.

OB: Good to Be Passionate? The Conflicting Effects of Leader Passion on Follower Creativity

Author: **Lei Liu**, *UCL School of Management*
Author: **Colin Muneo Fisher**, *UCL School of Management*
Author: **Hannah Lettmann**, *UCL School of Management*

Do passionate leaders inspire follower creativity? We hypothesize that leaders' displaying passion has two contradictory effects on followers' and their creativity. In five experimental studies (total $n = 1872$), we show that leaders' displays of passion stimulate follower creativity because followers identify more with passionate leaders, increasing followers' intrinsic motivation. However, this potential benefit to creativity was offset by an unintended effect of passion: Increased identification with the leader also led followers to follow more passively, thereby stifling follower creativity. Although we originally predicted that followers' personal identification with passionate leaders would lead followers to anchor more heavily on examples that leaders gave, our results did not support this assertion. We conclude that personal identification constrains individuals' cognitive activities generally (i.e., makes them follow more passively), instead of fixating individuals' attention on the examples given by leaders. These findings provide insights into the dark side of leader passion in work requiring creativity, which has been frequently overlooked by prior literature on leader behaviors and follower performance.

OB: Can't Catch a Break: Working During Time Off Undermines Intrinsic Motivation

Author: **Laura Maria Gurge**, *London Business School*
Author: **Kaitlin Woolley**, *Cornell SC Johnson College of Business*

Intrinsic motivation refers to what people do—whether they pursue activities that enable autonomy, competence, and relatedness. However, six studies offer a new perspective on intrinsic motivation, demonstrating that it is also determined by when people pursue activities. Working during time perceived as non-standard work time (i.e., weekends/holidays vs. Monday-Friday) decreased intrinsic motivation for professional and academic goals (Studies 1-2). This effect occurs because working during perceived non-standard work time triggers counterfactual thoughts that one's time could have been better spent (Study 3). An intervention that held non-standard work-time constant, but manipulated norms about time-use by emphasizing that others work (vs. relax) during this time, helped restore intrinsic motivation in one's own work (Studies 4a-4c), with consequences for persistence. This research contributes to literature on time and intrinsic motivation, and addresses a real challenge many people face: How changing norms about work time affect interest in, and enjoyment of, work.

MSR Morning Meditation *MSR Morning Meditation*

Chair: **Richard Peregoy**, *U. of Dallas, Satish & Yasmin Gupta College of Business*
Chair: **Gerald Biberman**, *U. of Scranton*

The practice of meditation (either individual or collective) has the common objective to still/silence the mind and allow the unconscious reality to emerge, open and unfold. Many variations of meditation exist. In this conference five different forms will be introduced—a different form will be introduced each day during the conference. The idea is for those new to meditation to sample, and for those who find a familiar meditation to expand their experience. These five meditations can be accomplished in a few minutes or longer as you wish.

TIM: Quantity, Variety, or both? “R&D Worker Flows, Diversity, and effects on Technological Performance”   

Author: **Fakher Omezzine**, *Grenoble Ecole de Management*
Author: **Isabel-Maria Bodas-Freitas**, *Grenoble Ecole de Management*

R&D employees are the source of firms' inventive capabilities. The voluntary movement of R&D employees into and out of jobs creates a flow of workers that allow organizations to match the skills they need and those that employees provide, as well as to regenerate ideas and knowledge within the organization. Thus, this R&D workers' flow, in terms of levels and variety, enable a dynamic rejuvenation of knowledge and social capital, which play an important role in driving innovation. This study conceptualizes the effect of R&D worker flows on the inventive output of firms, as resulting from the levels of these flows, as well as from their degrees of diversity. Using biannual data on French firms involved in R&D activities between 2007 and 2015, we suggest that the levels of R&D worker flows (both incoming and outgoing) have an inverted u-shaped effect on the inventive output of the firm. Our findings also suggest that the diversity of these flows (in terms of distinct knowledge backgrounds) moderates this effect, such as at low levels of worker flows a diverse composition of these flows improves team's creativity and hence firm's patenting output, while at high levels of workers flows it accentuates the complexity and management costs of the reorganization of working teams and thus, deteriorates the firm's patenting output. We discuss the implications of these results for theory and policy.

TIM: Opposing effects of enterprise social media use on job performance

Author: **Yan Pan**, *School of Management, Xi'an Jiaotong U.*
Author: **Yufan Shang**, *Xi'an Jiaotong U.*

The purpose of this study is to explore the mechanism and boundary condition of the relationship between enterprise social media use and job performance. This study used a two-wave design, with a final sample of 481 employees from an automobile company. The results indicate that enterprise social media use is positively related to both work overload and informational support. Work overload and informational support predicts job performance negatively and positively, respectively. Furthermore, work overload and informational support mediates the relationship between enterprise social media use and job performance. Job autonomy moderates the relationship between enterprise social media use and work overload and informational support. Therefore, this study provides a more balanced view of how enterprise social media use influences job performance by demonstrating the opposing mediating roles of work overload and informational support. Furthermore, this study fills the gap by taking job characteristics into more consideration when examining the boundary condition of enterprise social media use. Last, this study validates the generalization of job demands-resources model in social media research.

TIM: Effect of AI Chatbots' Gender in the Business Context: Empirical Evidence from Debt Collection  

Author: **Yiting Guo**, *School of Economics and Management Tsinghua U.*
Author: **Ximing Yin**, *School of Management and Economics, Beijing Institute of Technology*
Author: **De Liu**, *U. of Minnesota*
Author: **Sean Xin Xu**, *School of Economics and Management Tsinghua U.*

Chatbots have been empowered by Artificial Intelligence (AI) and rapidly applied to many industries. There is a call for more understanding of the effect of chatbots' social cues on business outcomes. This paper investigates how does the choice of chatbots' voice gender impact customer's intention to repay overdue debt. Prior studies on gender differences have conflicting implications. Employing unique real business dataset, we find that for male customers, they are more willing to repay when served by female chatbots. However, female customers have no preference for the gender of chatbots. We explain the mechanism of gender effect by finding that female customers lead to more engagement of male customers, hence induce higher repayment intention. We also find that the advantage of female chatbots are more prominent when the calls happen in the evening (when people have more emotional needs) and when the customers are less likely to repay initially. The main effect is validated by several robustness checks. Especially, this paper finds that the gender-stereotypical attributes (e.g., forceful and assertive of masculinity, gentle and warm of femininity) have the same effects as chatbot gender. We further discuss the theoretical contributions and managerial implications.

TIM: The impact of business model innovation on person-organization fit

Author: **Matthias Menter**, *Friedrich Schiller U. Jena*
Author: **Lutz Göcke**, *FH Nordhausen*
Author: **Christopher Zeeb**, *Friedrich Schiller U. Jena*

Academia has widely reasoned about the impact of business model innovation on firm performance. However, when it comes to understanding or predicting outcomes of business model innovation beyond financial performance indicators, literature has a blind spot. Research lacks empirical findings from the internal organizational dynamics after the inherent transformation process induced by business model innovation. Rooting our analysis in configuration theory, the purpose of this paper is to shed light upon the organizational impact of business model innovation. As the individuals' perceived fit with their employing organization drives corporate outcomes, we employ the person-organization fit concept and assess (unintentional) changes in the fit relation subsequent to business model innovation. Our findings suggest that incremental business model innovation enhances fit, whereas radical business model innovation decreases fit. Absence of business model innovation likewise impairs fit. The theoretical and practical implications of our study are discussed.

**Coaching across Organizational Levels in a Pandemic:
Advancing Positive Change in the Public Sector**
Coaching across Organizational Levels

Moderator: **Tojo Thatchenkery**, *George Mason U.*
Panelist: **Jessica Srikantia**, *George Mason U.*
Panelist: **Eric J. Weis**, *Objective Area Solutions*
Panelist: **BJ Johnston**, *Objective Area Solutions*
Panelist: **Russ Miller**, *Objective Area Solutions*

Managers and leaders in public organizations have increasingly been realizing the value of individual coaching for improving employee effectiveness, satisfaction, teaming, and a host of other valued outcomes. Simultaneously, coaching has been moving beyond the individual into coaching larger systems (teams, organizations, etc.). The four panelists engaged in diverse interventions concurrently within the same large (~35,000) public sector organization that has a continuous nationwide, highly technical and safety-related mission. They plan to share insights not only from each intervention independently but also from their synergies. Each of the panelists will explore how selected pre-pandemic techniques have evolved into a new repertoire of coaching processes, that we believe will result in a hybrid of best practices once the organization is post-pandemic. The interventions touch on: 1) developing human potential in the context of a technical organization shifting to online work post-COVID; 2) approaches to career and personal development; 3) using team coaching to create organizational alignment; and 4) using peer coaching to support collaboration, problem solving and systems thinking.

Panelist: **Chia-Huei Wu**, *U. of Leeds*

Academic performance is judged in part on one's level of linguistic competence in English. As a consequence, scholars who wish to succeed on the academic market must be able to write in English not only fluently but also eloquently. This places non-native English speakers in a disadvantageous position. The goal of this PDW is therefore to have a discussion regarding the various types of challenges that non-native English speakers face when writing and publishing in English and share concrete tips on how to improve academic writing in English. We bring together a panel of experienced and well published organizational behavior scholars who approach the theme from different perspectives. In the first part of the PDW, our five panelists share their experiences and insights on the art of writing, publishing and working together with non-native English scholars either synchronously or via pre-recorded video messages. In the second part of the PDW, we continue with a short hands-on short writing exercise and practice-oriented discussion in breakout rooms. We will conclude with a Q&A session and a summary of lessons learned.

Supervisors and Feedback

Digital Session Chair: **Gyula J. Nagy**, *SKEMA Business School*

HR: **Managerial Blurring of Employee Goals**

Author: **Gyula J. Nagy**, *SKEMA Business School*

Author: **Isabelle Walsh**, *SKEMA Business School, U. Côte d'Azur, GREDEG*

Using a classic grounded theory approach, this study identifies a counterintuitive managerial behavior that results in blurred employee goals being set during annual reviews. The findings reveal that the main reasons managers choose to purposefully blur employee goals is to maintain evaluation flexibility of their subordinates. This behavior is seen to occur despite managers' awareness of the benefits of setting specific goals, which are supported by extensive research and management practice. Less specific employee goals lead to significant detrimental consequences on the effectiveness of the Performance Management System. Through studying managerial blurring of employee goals, this study identifies some new antecedents of goal specificity in managerial goal setting.

HR: **Does distorted negative feedback from supervisor help employees to enhance?**

Author: **Xiaotao Zheng**, *Shanghai Normal U.*

Author: **Bingqing Wu**, *U. of Wisconsin Parkside*

Author: **Rui Sun**, *Chinese Academy of Personnel Science*

Author: **Mingchuan Yu**, *Shanghai Normal U.*

Supervisors are likely to distort feedback to employees, especially if the feedback that should be given is negative. However, few studies address the content distortion effect on poor performer. Building on the theory of performance feedback, this study indicated that distorted negative feedback has negative effect on poor performers' improvement intention via employee's perception of feedback utility. Considerate feedback style moderates the indirect effect. Specifically, the indirect effect will be stronger when considerate feedback style is lower. Implications for theory and practice, limitations of the research, and future directions are also discussed.

Paper is Available to Meeting Registrants Only.

HR: **Evidence based recommendations on feedback practice: A systematic literature review**

Author: **Silvia Dello Russo**, *TBS Business School*

Author: **Atieh S. Mirfakhhar**, *Instituto U. de Lisboa (ISCTE-IUL), Business Research Unit (BRU-IUL)*

Author: **Mariella Miraglia**, *U. of Liverpool*

Literature on feedback, and particularly feedback quality, has burgeoned over the past quarter century. This is especially relevant for practitioners who are turning to feedback as a remedy and solution to improve performance management. Within this scope, we aimed to uncover how research can best assist practice on feedback and contribute to rigorous, evidence-based management. To this aim we conducted a systematic literature review of the practical implications contained in feedback studies. Our pool of retained articles (N=120) allowed us to shed light on several aspects, namely why recommendations are offered, what recommendations are endorsed, when and where the recommendations are most applicable, to whom those are addressed, and how they are framed by researchers. Based on our findings, we summarize the main practical implications on feedback that scientific research has to offer to practitioners; highlight areas where research is still needed and derive an agenda for future feedback studies; offer recommendations to researchers on how to pay attention, craft and enrich their practical implications sections.

Paper is Available to Meeting Registrants Only.

HR: **Effects of Supervisor Negative Feedback on Employees' Feedback Management Behaviours**

Author: **Lu Xing**, *Renmin U. of China*

Author: **Jianmin Sun**, *School of Labor and Human Resources, Renmin U. of China*

Author: **Denise Mary Jepsen**, *Macquarie Business School*

Studies on feedback management behaviours such as feedback-seeking behaviour (FSB) and feedback-avoiding behaviour (FAB) have developed relatively independently from the broader feedback literature. Little is known about how the feedback that individuals receive affects their subsequent feedback management behaviours. We propose an overarching framework that integrates conservation of resources theory with the cognitive-affective processing system framework to determine why and when supervisor negative feedback affects employees' FSB and FAB. Data was collected at two points in time from 220 employees of a manufacturing enterprise in China. As anticipated, employee organisation-based self-esteem mediated the negative effects of supervisor negative feedback on employees' FSB, while frustration mediated its positive effect on FAB. Leader-member exchange serves as a double-edged sword for employees, as it weakens the negative effects of supervisor negative feedback on employees' organisation-based self-esteem, while strengthening the positive relationship between supervisor negative feedback and frustration. The theoretical and practical implications of the findings are discussed.

A Practicum with the AOM Ombuds: Bystander Interventions

Bystander Interventions

Organizer: **Gregory K. Stephens**, *Texas Christian U.*
Organizer: **Mary Sue Love**, *Southern Illinois U., Edwardsville*
Organizer: **Jennifer Lynn Schultz**, *Saint Mary's U. of Minnesota*

The three members of the Academy of Management Ethics Ombuds Committee will present this interactive session designed to help faculty intervene effectively when they witness conflicts or other violations of AOM values. We introduce a classic model of bystander intervention, adapted for our purposes from Latané and Darley's (1970) bystander intervention model. Bystander intervention is seen as a series of five steps that inevitably precede effective bystander action. First, the bystander must notice the event. Second, the bystander must see the event as worthy of intervention. Third, the bystander must hold himself or herself accountable for intervening. Fourth, the bystander must understand how to intervene in a way that will provide needed assistance. Fifth, the bystander must actually take action, often despite competing thoughts or circumstances that argue against taking action. Based on this model, during the PDW we will first assist participants in identifying intervention-worthy events such as professional bullying, abuse of low power individuals, sexual harassment or even assault. As AOM Ombuds, we have, unfortunately, been called upon to assist individuals subjected to these and other situations, many of which have been witnessed and could have been stopped with appropriate intervention from bystanders. Therefore, a second objective of the PDW will be to offer practices that will enable willing bystanders to intervene, and via case role plays, give them a chance to practice the bystander intervention skills.

Panelist: **Adia Harvey Wingfield**, *Washington U. in St. Louis*

Moderator: **Samantha E. Erskine**, *Weatherhead School of Management, Case Western Reserve U.*

How can intersectionality improve antiracist management practices and scholarship? This PDW is designed to help participants understand how identities, interactions, and institutions are both embodied and embedded within multiple systems of oppression and privilege. A diverse panel of intersectionality experts will help PDW participants learn how to center intersectionality as a methodological tool within antiracist management research. Through a panel discussion, breakout groups, and interactive presentations, participants will gain an understanding of how to utilize intersectionality to rigorously study and engage in antiracist managerial practices. Aligned with the 2021 AoM theme of "Bringing the Manager Back in Management," this PDW aims to help participants understand how they can become more reflexive about the impact of their emotions, ideologies, practices, and organizing structures on their management practices and scholarship.

To help us make this PDW a meaningful experience for you, and to keep the conversation going beyond this virtual conference space, we would encourage (but we do NOT require) you to fill out the form here: <http://bit.ly/aom2021>. All of the questions are optional. Your answers will be shared with our panelists.

Participant: **Sara Singer**, *Stanford U.*
Participant: **Devin Johnson Rapp**, *U. of Utah, David Eccles School of Business*

The Coronavirus (COVID-19) pandemic precipitated upheaval across the globe in the public health, government, and economic arenas as well as broader society. Across the board, leaders' responses to addressing these challenges many times were not adequate to addressing the crises and only served to cause more pain and suffering. The tragic events of 2020 and 2021 highlight the necessity of an in-depth understanding of crisis leadership. There is an urgent need to develop a research agenda around crisis leadership, an emerging field, in order to support leaders in providing more effective leadership during crises such as pandemics. This professional development workshop (PDW) offers the opportunity to discuss and collaborate on how to build a research agenda in the area of crisis leadership. This PDW will begin with a brief overview of a scoping literature review of research on crisis leadership. A three-part panel of international and interdisciplinary scholars and practitioners will use their research lens perspective to identify new perspectives in researching crisis leadership. After a Q & A session with the panelists, participants will then move to breakout sessions where they can explore a research agenda in crisis leadership in more depth. Overall, participants in this PDW will benefit from the wide variety of international and interdisciplinary perspectives to stimulate creative approaches to a research agenda on crisis leadership.

Indigenous Ceremony and Ways of Knowing for Transformative MSR Research MSR Plenary

Organizer: **Julia Storberg-Walker**, *George Washington U.*

The MSR plenary is a space for exploring the relationship between Indigenous ceremonial practice and research; a space for Indigenous ways of knowing, and a space for decolonizing higher education. After an opening by Scholar/Activist Lyla June Johnston, noted scholars (Gregory Cajete, Carma Claw, Kiri Dell, Ella Henry, Joseph Gladstone, Bobby Banerjee, and Grace Ann Rosile) will share their ideas about the connections between Indigenous research and ceremony. The intention is to catalyze a deeper reverence for/legitimization of Indigenous research that sees the world as sacred. Further, the session will explore how research as ceremony might contribute towards more equitable and impactful research in MSR and the wider AOM community. A discussion of how Indigenous research itself is an act of decolonizing higher education will follow, and the session will conclude with an interactive discussion about the ethical dimension of this form of research.

Gregory Cajete, Ph.D. (Santa Clara Pueblo), Native American educator whose work is dedicated to honoring the foundations of Indigenous knowledge in education. Dr. Cajete is a Tewa Indian from Santa Clara Pueblo, New Mexico. He has served as a New Mexico Humanities scholar in ethno botany of Northern New Mexico and as a member of the New Mexico Arts Commission. In addition, he has lectured at colleges and universities in the U.S., Canada, Mexico, New Zealand, England, Italy, Japan, and Russia. Dr. Cajete has authored ten books: "Look to the Mountain: An Ecology of Indigenous Education," (Kivaki Press, 1994); "Ignite the Sparkle: An Indigenous Science Education Curriculum Model", (Kivaki Press, 1999); "Spirit of the Game: Indigenous Wellsprings (2004)," "A People's Ecology: Explorations in Sustainable Living," and "Native Science: Natural Laws of Interdependence" (Clear Light Publishers, 1999 and 2000). "Critical Neurophilosophy and Indigenous Wisdom", Don Jacobs (Four Arrows), Gregory Cajete and Jongmin Lee (Sense Publishers, 2010). "Indigenous Community: Teachings of the Seventh Fire," (Living Justice Press, 2015); "Walking with Indigenous Philosophy: Justice and Addiction Recovery, 3rd edition. Cajete, G.A., J.G. Hansen, J.H.C. Vest and J.E. Charlton" (J. Charlton Publishing, 2019); "G.A. Cajete, Editor. Native Minds Rising: Exploring Transformative Indigenous Education and Sacred Journeys: Personal Visions of Indigenous Education" (J. Charlton Publications, 2020). Dr. Cajete also has prefaces and chapters in 35 other books along with numerous journal articles and over 350 national and international keynote and workshop presentations. Dr. Cajete retired from the University of New Mexico in June 2020 and is currently working as an independent scholar, consultant and writer.

Carma Claw is an Assistant Professor of Management in the School of Business Administration at Fort Lewis College. Dr. Claw is a citizen of the Diné (Navajo) Nation, and is Bitah'nii and Kinlichii'nii from Aneth, Utah. Her research interest areas include strategic resources, ethics, leadership, indigenous business management, and sovereignty as a resource for organizations. Her research has appeared in *Leadership* and the *Vanderbilt Journal of Entertainment & Technology Law*. Dr. Claw has presented at the Academy of Management, Southern Academy of Management, Western Academy of Management, Quantum Storytelling, and Tribal Wisdom for Business Ethics conferences. Additionally, she is an author in the first ever tribal business textbook—*American Indian Business Principles and Practices*, in the *Indigenous Aspirations and Rights*, and *Tribal Wisdom for Business Ethics* books. Before earning a doctoral degree, she worked over seventeen years in industry with a majority of those years at two top-flight defense electronics companies.

Kiri Dell is a lecturer in the Faculty of Business and Economics at the University of Auckland. Dr. Dell's teaching focuses on Maori land issues and Maori economies. Kiri's research and areas of expertise focuses on land development, utilisation and protection. She is Chair of the Indigenous Caucus for the Academy of Management and Director of Nuka Institute, a land development agency.

Ella Henry is an Indigenous Maori woman from New Zealand. Dr. Henry traces her ancestry to three tribes of the Far North of New Zealand (Ngatikahu ki Whangaroa, Te Rarawa, Ngati Kuri). Ella is an Associate Professor of Entrepreneurship, in the Business School at Auckland University of Technology. Ella's PhD focused on Maori entrepreneurship in screen production, and her Master's thesis on Maori women and leadership. Her current research explores Maori and Indigenous leadership, careers, networking, and financial investments. Ella is also Director of Maori Advancement in the Business School, with a key role to enhance Maori student success, and opportunities for the Maori faculty in the Business School to develop their confidence and competence, professionally and culturally, as well as being a conduit between non-Maori and the Maori world and traditional knowledge.

Joseph Scott Gladstone is an Assistant Professor at the University of New Haven. Dr. Gladstone's international work explores transplanar wisdom, a foundational Native American and Indigenous philosophy, and its influences on organization management, efficiency, and ethics. His work is published in *Leadership*, *The Journal of Management Education*, *American Indian Quarterly* and *American Indian Culture and Research Journal*, as well as other journals and numerous book chapters. He is a co-editor of *American Indian Business: Principles and Practice* (University of Washington Press), the first and only general management text of its kind serving the U.S. market. He is an enrolled member of the Blackfeet Tribe of Montana, and recognized Nez Perce (Idaho) descendant. He is originally from the Pacific Northwest region of the U.S.A. and now lives in southern New Mexico.

Lyla June is an Indigenous musician, scholar and community organizer of Diné (Navajo), Tsétséhéstàhese (Cheyenne) and European lineages. Her dynamic, multi-genre presentation style has engaged audiences across the globe towards personal, collective and ecological healing. She blends studies in Human Ecology at Stanford, graduate work in Indigenous Pedagogy, and the traditional worldview she grew up with to inform her music, perspectives and solutions. She is currently pursuing her doctoral degree, focusing on Indigenous food systems revitalization.

Bobby Banerjee is Professor of Management and Associate Dean of Research & Enterprise at The Business School, City University of London. He researches and teaches on corporate social irresponsibility, unsustainability, climate change, and decolonial resistance movements.

Grace Ann Rosile (PhD, University of Pittsburgh) is Professor Emeritus of Management at New Mexico State University. She studies organizational storytelling, Ensemble organizing processes, indigenous ethics, and pedagogy. She has been studying and applying the SEAM method for over 20 years. She is author of numerous academic articles and book chapters, most recently focused on Ensemble Leadership through Ensemble Storytelling. She is co-founder (2010, with David Boje) of the New Mexico Quantum Storytelling Conference, co-founder (2020) of the True Storytelling Institute, and founder of HorseSense At Work, offering management development and teamwork training. She also developed 7 educational films and edited a book (2016) on "Tribal Wisdom for Business Ethics." She is co-author (with Boje) of "How to do Conversational Storytelling Interviews" (Elgar Publishing, 2020).

Adapting to COVID-19 and Workplace Change

Digital Session Chair: **Mouna El Mansouri**, *ESSEC Business School*

OB: **How Employees Adapt to Change Prompted by COVID-19: Importance of Discrete Emotions and Proactivity**

Author: **Mouna El Mansouri**, *ESSEC Business School*
Author: **Laurie Barclay**, *U. of Guelph*
Author: **Tina Kiefer**, *Warwick Business School*

The COVID-19 pandemic has initiated unprecedented organizational change. Whereas the organizational change literature has focused on how employees reactively respond to planned strategic change efforts, the COVID-19 pandemic has thrust employees into an active role in which they must adapt to the rapidly evolving demands of their environment. Drawing on appraisal theories, we argue that employees can appraise how the changes prompted by COVID-19 have impacted the meaningfulness of their work and their work effectiveness. In turn, these appraisals can elicit positive and negative discrete emotions, which can provide employees with guidance on how to navigate the opportunities and challenges in their work environment. We test our predictions using a three-wave survey design (N = 402) during the COVID-19 pandemic. Results indicate that COVID-19 related changes that increased the meaningfulness of work elicited pride whereas changes that reduced work effectiveness elicited frustration and anxiety. In turn, these discrete emotions differentially prompted promotion-oriented and prevention-oriented proactive behaviors. Importantly, both promotion-oriented and prevention-oriented proactive behaviors enhanced employees' subsequent adaptivity to change. Our findings provide insight into how employees can actively respond to change related to the COVID-19 pandemic, including how they can self-initiate changes to their jobs in response to rapid change in their environment, how discrete emotions (i.e., pride, anxiety, and frustration) can differentially propel proactive behaviors, how negative emotions may prompt behaviors that can enhance adaptivity (rather than being dysfunctional for change), and how both promotion and prevention-oriented proactive behaviors can enhance employees' adaptivity to change.

OB: **The Benefits of Time Budgeting While Working From Home During COVID-19**

Author: **Laura Maria Giurge**, *London Business School*
Author: **Stephanie Chan-Ahuja**, *London Business School*
Author: **Eliot Sherman**, *London Business School*
Author: **Gillian Ku**, *London Business School*

COVID-19 has created one of the most challenging working-from-home experiments in history. Overnight, most tactics that employees use to manage work-nonwork boundaries have been removed. Drawing on boundary theory, we introduce a new boundary management tactic—time budgeting—that involves creating temporal separation between work and nonwork domains as well as within work and nonwork activities. Survey data from 568 employed adults working from home as a result of COVID-19 provided support for our prediction that time budgeting was associated with better work-from-home experiences in terms of well-being and task performance. However, contrary to prior work and our prediction, the benefits of time budgeting were not moderated by employees' preference for work-home segmentation (vs. integration). Follow-up interviews with 16 survey respondents provided additional insights about time budgeting, including the role of sense of control as a potential mediator. Overall, our paper broadens theory by introducing time budgeting as a new boundary management tactic that can help employees cope with blurred boundaries.

OB: **COVID-19 Fear, Compliance, and Counterproductive Behavior: A Curvilinear Relationship**

Author: **Neha Tripathi**, *Assistant Professor Indian Institute of Management Ahmedabad*

Drawing from the emergent literature on functional view of fear, we develop a research model explaining a U-shaped curvilinear relationship of fear of contracting COVID-19 on employees' workplace compliance, in turn influencing their counterproductive work behavior (CWB). We theorize for the moderating role of consistency in COVID-19 fear over time on the effect of virus-contraction fear on compliance. A diary study of 181 full-time working professionals (total daily matched morning-evening observations = 1,340) during the initial stage of COVID-19 spread in February 2020 was conducted in a metropolitan city-state when it transitioned to a proactive stance to contain the virus spread. The results provided evidence of impact of COVID-19 fear on compliance in a U-shaped curvilinear pattern affecting employees' CWB. The effect of COVID-19 fear on compliance was contingent on consistency in COVID-19 fear over time such that COVID-19 fear reduced compliance when such fear is experienced sporadically. Our findings illuminate duality embedded in (dis) functional responses to fear in a crisis. We provide timely recommendations to managers and organizations to harness the benefits of negative emotions such as fear in a crisis in curtailing deviant behaviors at work.

OB: **Managing the Crisis: How COVID-19 Demands and Agile Project Management Predict Employee Exhaustion**

Author: **Jan Koch**, *SRH Berlin U. of Applied Sciences*
Author: **Carsten C. Schermuly**, *SRH Berlin U. of Applied Sciences*

As a global pandemic, COVID-19 impacts work-related processes, placing strain upon many employees. Identifying process variables and potential organizational resources can play an important role in addressing employee mental health, both for the current pandemic and future crises. Based on an extension of the job demands-resources model, this paper introduces COVID-19 demands as distal job demands, examining their influence on emotional exhaustion through proximal unfinished tasks. Furthermore, we suggest that agile project management acts as a buffering job resource in this relationship. In two studies, we drew samples from Germany (N = 168) and the US (N = 292). Across studies, COVID-19 demands had an indirect effect on emotional exhaustion, mediated by the number of unfinished tasks. Furthermore, agile project management acts as a buffering job resource for employees in Germany, attenuating the relationship between COVID-19 demands, unfinished tasks, and subsequent feelings of emotional exhaustion. In contrast, findings from Study 2 revealed that COVID-19 demands were stronger related to unfinished tasks and subsequent feelings of emotional exhaustion in the US when employees reported higher levels of agile project management. Taken together, our results indicate that work under COVID-19 fosters feelings of emotional exhaustion through the accumulation of unfinished tasks.

Digital Session Chair: **Eugene Tee**, *HELP U., MALAYSIA*

OB: A broaden and build framework of self-transcendent emotions for organizational effectiveness

Author: **Eugene Tee**, *HELP U., MALAYSIA*

Author: **Intan Arifah Raja Reza Shah**, *HELP U., MALAYSIA*

The organizational behavior literature establishes that positive emotions are essential in contributing to desired workplace outcomes. Limited work, however, focuses on self-transcendent emotions – emotions arising from attending to the needs of others that motivate prosocial behaviors. Further, existing theoretical work is limited in explaining the underlying mechanisms by which this category of emotions benefits individuals and organizations. The current work addresses this theoretical lacuna. We distinguish between four self-transcendent emotions – compassion, gratitude, inspiration, and awe, and detail the underlying processes that link them with enhanced organizational functioning. We build our propositions guided by an overarching theory – the broaden-and-build theory of positive emotions and detail the specific mechanisms by which each self-transcendent emotion broadens cognitive processes and builds the necessary resources for individual and organizational effectiveness. We conclude our review with four key themes – (i) the importance of delineating levels of analysis in research on self-transcendent emotions, (ii) acknowledging contextual and cross-cultural differences shaping the experience of self-transcendent emotions, (iii) addressing measurement concerns and (iv) examination of other self-transcendent emotions. In effect, we synthesize the positive psychology and organizational behavior literature to generate a framework illustrating how self-transcendent emotions contribute to organizational effectiveness.

OB: The Janus Face of Grandiose Narcissism in the Service Industry: Self-Enhancement and Self-Protection

Author: **Fan Yang**, *Guanghua School of Management, Peking U.*

Author: **Ran Li**, *Hitotsubashi U.*

Author: **Xiji Zhu**, *Central U. of Finance and Economics*

Two separate dimensions (admiration and rivalry) that correspond with self-enhancement and self-protection regulatory processes are recognized in grandiose narcissism. Based on this dimensional framework of grandiose narcissism, we investigated distinct influencing mechanisms and outcomes of the two dimensions in an organizational context using multi-level structural equation modeling. From a sample of 649 frontline employees in a Chinese call center, we found that contrary to individual narcissistic admiration, which was positively associated with organizational citizenship behavior toward customers (OCB-C) mediated by self-perceived status, narcissistic rivalry was positively associated with employee counterproductive work behavior (CWB) (customer-directed sabotage) mediated by emotional exhaustion. In addition, as common emotion regulation strategies, surface acting buffered the relationship between narcissistic admiration and OCB-C, while deep acting enhanced the relationship between narcissistic rivalry and CWB (customer-directed sabotage). Discussion on the theoretical and practical implications of these findings reveals that grandiose narcissism might have a Janus face—that is, both a bright side with prosocial behaviors and a dark side with unethical behaviors.

OB: Achievers, Not Winners: On the Negative Role of Guilt Proneness in Competitive Settings

Author: **Uriel J. Haran**, *Ben-Gurion U.*

Author: **Dina Van Dijk**, *Ben Gurion U. of the Negev*

Author: **Michal Barina**, *Ben-Gurion U.*

Author: **Mor Krief**, *Ben-Gurion U.*

Author: **Stav Rosenzweig**, *Ben-Gurion U.*

Guilt proneness is associated with high work intensity and job performance, by enhancing personal and interpersonal motives. However, at many work settings, competitive goals place personal achievement and interpersonal motives at odds. We propose that guilt proneness hampers, rather than bolsters, goal pursuit in competitive settings. We tested our prediction in one lab experiment and two field studies. In the lab, guilt proneness increased participants' preference to play a game individually over competing with other participants (Study 1). In the field, we found that high guilt proneness of physicians predicted higher achievement motivation but lower competitive motivation, which resulted in a lower preference for specializing in medical fields characterized by competitive values (Study 2). Similarly, amateur catchball players with high guilt proneness displayed lower competitive motivation, and preferred an equal distribution of playing time over a scheme focused on winning (Study 3). These results demonstrate that the same individual attribute generally responsible for high motivation and performance also predicts lower motivation to compete and a lower desire to win.

OB: Prison, Orchestra, Juggler, Mouse: The Organizational Metaphor Scale

Author: **Ramon J. Aldag**, *U. of Wisconsin, Madison*

Author: **Mary E Zellmer-Bruhn**, *U. of Minnesota*

Despite growing recognition of the power of metaphors and of their central roles in seminal organizational theories, there has been no attempt to directly assess the degree to which particular sets of metaphors are seen as typical of one's organization. This paper presents the organizational metaphor scale (OMS) and provides related data from more than 800 subjects in 20 diverse organizations. The OMS can be used to gauge perceptions of organizational cultures, to assess their "fit" to particular organizational policies and practices, and to examine their causes and consequences. Scale psychometric properties are examined and strong links of OMS subscales to organizational descriptions and rewards, organizational culture strength, and leader use of cultural forms are demonstrated. Implications are offered.

Antecedents of OCB

Digital Session Chair: **Daniel Gullifor**, *U. of Wisconsin, Eau Claire*

OB: Core self-evaluations and organizational citizenship behaviors: situational appraisals and actions

Author: **Daniel Gullifor**, *U. of Wisconsin, Eau Claire*
Author: **Farzaneh Noghani**, *Texas Tech U.*
Author: **Elizabeth P. Karam**, *Texas Tech U.*
Author: **Claudia Cogliser**, *Texas Tech U.*
Author: **Scott W Lester**, *U. of Wisconsin, Eau Claire*

Since its introduction over two decades ago, core self-evaluations (CSEs) have received extensive consideration from management scholars. While CSEs have been directly linked to workplace outcomes, less is understood regarding the mediating mechanisms through which CSEs are related to workplace outcomes. In this study, we examine the process through which CSEs promote favorable outcomes by examining the mediating role of both leader-member exchange (LMX) quality and work engagement in the CSE—organizational citizenship behaviors (OCBs) relationship. We hypothesize that the relationship between CSEs and OCBs are mediated by the quality of the individual's relationship with their leader (i.e., LMX quality) and their level of work engagement. Our results provide broad support for the hypothesized mediation relationships whereby CSEs are indirectly related to OCBs through both LMX quality and work engagement. A discussion of these findings and their implications for both theory and practice is provided.

OB: Why and When Leader Entity Morality Beliefs Promotes Employee Unethical Pro-Organizational Behavior

Author: **ZHUOYUE PANG**, *Ph.D Candidate in Organizational Behavior, Department of Management, HKUST*
Author: **Hongwei He**, *Alliance Manchester Business School, U. of Manchester*
Author: **Weiyue Wang**, *Lecturer in Marketing*

Research on unethical employee pro-organizational behavior has gained increasing attention and explored obvious antecedents like leadership and leader's unethical behavior. However, no known study has examined leader entity morality beliefs, although it is apparent that leader entity morality beliefs would shape the organizational environment in which the employees are in. Combining the implicit person theory and stressor-coping-outcome model, our research aims at investigating the indirect effect of leader entity morality beliefs on employee unethical pro-organizational behavior through employee job stress and moral disengagement. Results found that employees who had stronger organizational identification were more likely to be influenced by leader entity morality beliefs, resulting in high unethical pro-organizational behavior through their job stress and moral disengagement. Our findings have pertinent practical implications in managing employee job stress and unethical pro-organizational behavior.

OB: Enhancing Organizational Citizenship Behavior for the Environment: A Social Identity Perspective

Author: **Xiao Xiaohong**, *Guizhou U. of Finance and Economics*
Author: **Zheng Zhou**, *Guizhou U. of Finance and Economics*
Author: **Fu Yang**, *Guizhou U. of Finance and Economics*

Although the value of subordinates' organizational citizenship behavior for the environment (OCBE) has received more attention, the understanding of what contributes to subordinates' OCBE has been notably neglected. According to social identity theory, we propose a theoretical model that responsible leadership promotes subordinates' OCBE by examining subordinates' moral identity as a mediator and individualism as a boundary condition. Using a sample of 273 collected in China, results indicated that responsible leadership was positively related to subordinates' moral identity, which in turn was positively related to subordinates' OCBE. Subordinates' moral identity partially mediated the relationship between responsible leadership and their OCBE. In addition, both the relationship between responsible leadership and subordinates' moral identity and the indirect relationship between responsible leadership and subordinates' OCBE were stronger when individualism was lower. These findings provide novel insights into how to help subordinates improve OCBE and highlight the important role of responsible leadership in organizations.

Presenter: **Margaret M. Luciano**, *Penn State U.*

A wonderful aspect of the Academy of Management (AoM) Annual Meeting is the developmental opportunities it provides for doctoral students. For example, the New Doctoral Student Consortium helps new doctoral students begin to feel more comfortable in our field. In addition, the Organizational Behavior (OB) division sponsors a Senior Student Doctoral Consortium to help prepare more advanced doctoral students for the job market. The purpose of the “Halfway There” PDW is to bridge the gap between these consortia by providing information and advice relevant to doctoral students starting the 3rd or 4th year of their programs. “Halfway There” is designed to help these students begin establishing themselves as independent scholars. We have conducted this PDW at AOM each year since 2009 and it has been very favorably received on each occasion. Despite increasing the attendance cap to 120, we have still had several potential attendees waitlisted each year. Due to positive feedback from prior attendees, we have decided to conduct the PDW again in 2021 with minor, but important, modifications to the format we have used in prior years; these modifications focus on providing a more holistic experience for the participants, as well as showcasing a more inclusive conceptualization of the various avenues towards career success. A number of prominent OB division members have agreed to participate in the 2021 PDW and provide students with their insights on topics such as (1) launching one’s dissertation (2) crafting a research project, (3) understanding the “job market” process, and (4) accomplishing your career goals.

Pre-registration is required; the link to preregister will be shared on the HR/OB listservs.

Participant: **Sigal Barsade**, *The Wharton School, U. of Pennsylvania*

Verbal communication about emotions, such as talking about one's own emotional experiences or inquiring about the emotions of others, is often seen as a taboo topic in the workplace. However, emerging work suggests that verbalization of the emotions of oneself and others can affect important outcomes at the individual, dyadic, team, and organizational levels, such as social learning, engagement, and cooperation. In this symposium, we highlight different perspectives on why, how, and when to verbally communicate about the emotions of yourself or others in organizational contexts. The five papers presented cover a broad range of inter-related topics (e.g., verbal emotional acknowledgment, explicit collective emotion regulation, and verbal emotional expression) and represent different theoretical and empirical perspectives (e.g., including both laboratory and field work). Our discussant, Hillary Anger Efenbein, a leading scholar in the study of emotions, will close our session by offering a synthesis of the papers and discussing with the audience future directions for the study of verbal communication about emotions at work. Through this symposium, we aim to generate new insights about how we can study verbal communication about emotions at work.

Presenter: **Sheri Sheppard**, *Stanford School of Engineering*

Although there has been progress in understanding some aspects of gender inequality, the hiring process and its contributions to gender inequality in labor markets and organizations remains unclear, leaving knowledge of the potential solutions for gender inequality incomplete (Petersen and Saporta, 2004). This symposium brings together four papers that deepen our understanding of inequality by focusing on changes in labor markets and organizations. A paper by Burbano, Padilla, and Meier examines an important but overlooked job characteristic—gendered differences in preferences for meaning at work—that may in part explain occupational segregation by gender—and are more pronounced in national contexts with greater levels of education and economic development. In another paper, Sterling, Gilmartin, and Sheppard suggest that informing employer’s beliefs about men’s and women’s abilities—instead of improving women’s self-beliefs about abilities—could be the pathway by which the gender pay gap lessens. Wang examines how laws in the U.S. (i.e. salary history bans) that address a specific juncture in the wage-setting process—initial salary offers prior to the negotiation stage—can reduce historic inequalities by disrupting path dependencies in wages. And finally, a paper by Zhang investigates how technological change such as e-commerce adoption by retail companies, may improve racial and gender equality in hiring and promotions.

Publishing Multimodal Research / Publishing Research Multimodally
Publishing Multimodal Research

Organizer: **Dennis Clemens Jancsary**, *WU Vienna*
Organizer: **Miikka J. Lehtonen**, *Rikkyo U.*
Organizer: **Maria Laura Toraldo**, *U. of Milan*
Panelist: **Markus A. Höllerer**, *UNSW Sydney & WU Vienna*
Panelist: **Gazi Islam Islam**, *Grenoble Ecole de Management*
Panelist: **Lianne Lefsrud**, *U. of Alberta*
Panelist: **Silviya Svejnova**, *Copenhagen Business School*
Panelist: **Tammar B. Zilber**, *Hebrew U. of Jerusalem*
Panelist: **Michael Zundel**, *U. of Liverpool Management School*

Organization and management scholarship is increasingly considering the importance of intricate orchestrations of verbal, visual, and other semiotic resources in the construction, maintenance, and change of organizational realities (e.g., Bell, Warren, & Schroeder, 2014; Boxenbaum, Jones, Meyer, & Svejnova, 2018; Höllerer et al., 2019; Toraldo, Islam, & Mangia, 2016). However, genuinely multimodal research is impeded by the limitations of our predominantly verbal publication formats. Cultural, technical, and/or legal restrictions prompt researchers to “translate” multimodal insights into linear written text, which requires substantial skill and may counteract the contributions of a multimodal perspective. Successfully publishing genuinely multimodal organization research (e.g., Lefsrud, Graves, & Phillips, 2018; Zilber, 2018) without losing valuable contributions in translation requires novel strategies for fitting multimodal insights into existing publication formats and/or the creation of publication formats that are more conducive to multimodal forms of knowledge dissemination. In this PDW, preeminent scholars in organization and management theory who have successfully published multimodal research will discuss their experiences and practices-in-use with participants with the aim of collectively developing promising avenues for strengthening multimodal publication strategies and thinking about opportunities for innovative and more genuinely multimodal forms of publication. We ask participants to share experiences with ongoing research projects, introduce emerging research ideas, or prepare pressing questions as a basis for in-depth discussions at different roundtables.

This session is open to all participants registered for the conference. However, to create an interactive and engaging atmosphere, we kindly ask you to come with emerging research ideas, experiences with ongoing research projects, and/or pressing questions to facilitate lively discussions at the different roundtables. Please contact Dennis Jancsary if you have any questions.

Social movements, responsible leadership and sustainability

Digital Session Chair: **Xueting Jiang**, *New York Institute of Technology*

ONE: Leveraging A Lenient Category in Practicing Responsible Leadership: A Case Study

Author: **Xueting Jiang**, *New York Institute of Technology*
Author: **Bogdan Prokopovych**, *U. of Massachusetts, Amherst*
Author: **Garett DiStefano**, -

In this extended case study, we examine how business leaders translate responsible leadership mindset into practice and engage with various stakeholder groups. By looking at the efforts of a leadership team of a large US college dining provider, we found that organization executives leverage a lenient market category of local food to successfully connect with and satisfy interests of different stakeholder groups. We believe that lenient categories, those with unclear boundaries and ambiguity, could be used as strategic devices to integrate less similar needs of stakeholders and foster positive stakeholder relationships. Based on our findings, we develop a theoretical model to illustrate how responsible leaders take advantage of meaning structures of the market category they have adopted and achieve both financial and social benefits for a broad range of stakeholders.

Paper is NOT Available. Please contact the author(s).

ONE: Understanding the Dynamics of CSR Deep Meaningfulness in Grassroots Community Enterprise.

Author: **Charline Collard**, *U. of Toulouse I, Capitole*

This study is a four years ethnography that focuses on the experience of work meaningfulness crafting in a context of grassroots CSR: What paths to meaningfulness do community entrepreneurs follow? What are the dynamics of meaningfulness over time? What challenges do these actors experience, and how do they navigate them? I answer these questions using Rosso et al.'s (2010) four paths to meaningfulness theoretical framework. I find that the four paths are followed simultaneously, showing the creative and responsible dynamics of satisfied and frustrated mechanisms of meaningfulness over time. However, I find that the need for self-concordance remains frustrated, revealing the challenges of pursuing a double calling when searching for deep meaningfulness. My findings contribute to the emerging literatures on the tensional processes inherent in the double-edge sword phenomenon of meaningfulness, and to CSR additions.

Paper is Available to Meeting Registrants Only.

ONE: Social Media for Future: The Use of Collective Emotions in Online Social Movement Campaigns

Author: **Janet Su**, *U. of Lausanne*

Social media is a powerful tool to spread news and influence others. In fact, 71% of Americans use the Twitter platform to get their news (Shearer and Matsa, 2018). This study uses the context of Greta Thunberg and the global FridaysForFuture climate strike movement to understand which types of communication are most likely to be engaged with by users. Through this paper, we aim to contribute to the social movements literature by introducing sentiment and collective emotions. We find that longer tweets containing images and video content tend to be more liked and retweeted. We also found that negative tweets tend to be more effective. In terms of collective emotions, tweets evoking disgust and sadness are the most effective. Contrasting prior studies, positive emotions, anger, and fear are not significantly effective in gaining awareness online.

Paper is NOT Available. Please contact the author(s).

ONE: Transforming Sustainable Value in the Construction Industry - The role of Social Movements

Author: **Guilherme Duch Crosta**, *U. College London*
Author: **Armando Castro**, *UCL*

Projects pursuing the balance of economic, ecological, and social aspects are being increasingly implemented by the construction industry. This shift represents a paradigm change and evidences new values being acknowledged within the sector. Concurrently, construction scholars tend to emphasize the creation, retention and addition of value, focusing mostly on costs and client deliverables. However, less attention is paid to the process of value change, specifically one that focuses on alternative stakeholders, such as Social Movements. We employ Social Movement theory to comprehend how these organizations affect the notion of value and value change in this industry. Their role is accentuated as a source for a value paradigm change in the form of institutional pressures that shape the values of other stakeholders of the construction industry. These pressures elicit a response in the form of a broader incorporation of sustainable practices amongst construction projects, which effectively alters the industry's notion of value. Additionally, we showcase a theoretical model that describes the pressure channels originated by Social Movements and their process mechanism affecting the construction industry.

OSCM Joint Doctoral Student & Junior Faculty Consortium (part 2)
OSCM Doct. Student & Junior Faculty Consortium (2)

Coordinator: **Desiree Van Dun**, *U. of Twente*
Coordinator: **John Aloysius**, *U. of Arkansas Sam M. Walton College of Business*

The Operations and Supply Chain Management Division is pleased to announce a joint Junior Faculty and Doctoral Consortium at the virtual annual meeting of the Academy of Management (AoM). This event will consist of two parts: the first one held on Friday morning, July 30, 2021 and the second part on Saturday morning, July 31, 2021. The primary focus of the joint consortium involves an intensive research incubator session for doctoral students and junior faculty. Doctoral students are asked to give a short (15 minute) presentation about their research proposal to a panel of senior and junior faculty who then provide feedback and guidance on each proposal. Subsequently, the junior faculty will have an opportunity to present their research programs describing how they are extending their dissertation research and/or starting new research streams. The doctoral students are able to ask questions and learn about building a research identity. In addition to the research incubator session and online social networking, several panel sessions will further elaborate on publishing, the job market, dealing with ethical dilemmas, and the development of research streams. Experts in the field are invited to provide their input and engage participants in Q&A sessions.

The consortium is a pre-registration event. If you are interested in attending the Junior Faculty and Doctoral Consortium, please send your application by e-mail to the relevant coordinator by May 17th, 2021. For junior faculty: Desiree van Dun (d.h.vandun@utwente.nl); For doctoral students: John Aloysius (aloysius@uark.edu). Applications will be acknowledged via email by the end of May. Applications should include: (i) a cover letter including full contact information, your advisor's contact information (doctoral students only), and a one-sentence statement on your stage in the doctoral program (doctoral students only), (ii) a current vita, and (iii) a one-page summary of your dissertation research (doctoral students only) / research prospectus highlighting one main research proposal (junior faculty only). More information can be found on our OSCM division website: <https://oscm.aom.org/events/consortium>. We look forward to hearing from you!

The Collection, Analysis, Theorization and Representation of Visual Data in Qualitative Scholarship

Visual Data

Organizer: **Siyin Chen**, *U. of Toronto, Rotman School of Management*
Organizer: **Hila Lifshitz-Assaf**, *New York U.*
Organizer: **Stine Grodal**, *Northeastern U.*
Panelist: **Candace Jones**, *U. of Edinburgh*
Panelist: **Mary Ann Glynn**, *Independent Scholar / Researcher*
Panelist: **Mark de Rond**, *U. of Cambridge*
Panelist: **Silviya Svejenova**, *Copenhagen Business School*
Panelist: **Curtis LeBaron**, *Brigham Young U.*
Facilitator: **Hila Lifshitz-Assaf**, *New York U.*
Facilitator: **Stine Grodal**, *Northeastern U.*

Our world is becoming increasingly visual. Organizations and individuals alike increasingly communicate through visual means by posting images, photos and memes on social media, websites, and embedding them in emails. Organizational scholars are therefore faced with a new challenge: How do we make sense of visual data? In particular, how do we collect, analyze, theorize and represent visual data? All of the methods that organizational scholars have at their disposal to engage in qualitative analysis takes for granted that data are textual in nature. However, a large literature in the social sciences suggests that visuals process very differently than text. The goal of this PDW is to provide some needed assistance and sharing of best practices for qualitative scholars who would like to use visual data to generate theory about organizational phenomena.

Thank you for your interest in our PDW! All are welcome to attend within maximum capacity (no pre-registration required and no preparation needed). Please contact Siyin Chen at siyin.chen@rotman.utoronto.ca for any additional questions. We look forward to seeing you at AOM.

Does It Make a Difference? Practices, Directions, and Challenges of Impactful Scholarship

Practices and Challenges of Impactful Scholarship

Organizer: **Lorenzo Skade**, *European Uni Viadrina, Frankfurt (Oder)*
Organizer: **Yanis Hamdali**, *European Uni Viadrina, Frankfurt (Oder)*
Speaker: **Jennifer Howard-Grenville**, *Cambridge Judge Business School*
Speaker: **David Nils Seidl**, *U. of Zurich*
Speaker: **Eero Vaara**, *U. of Oxford*
Speaker: **Angelique Slade Shantz**, *U. of Alberta School of Management*

How can scholars create societal impact with their research while succeeding in building careers and delivering on expected results in the competitive academic world? This question has spurred the ongoing commitment of scholars to rethink the impact of their research, leading to a growing body of thought-provoking works, embedded in a variety of discourses. Yet, especially early- and mid-career scholars often struggle to understand the process of creating and enunciating this impact in their careers-to-come. Therefore, this Professional Development Workshop (PDW) brings together distinguished senior scholars with dedicated participants across different AOM DIGs to collectively reflect on the role and relevance of management and organization research in addressing societal, economic, and environmental issues through rigorous and relevant research. The workshop will be split into two parts: Part one will be open for all interested participants and feature short presentations and a panel discussion to showcase different aspects of scholarly impact. Part two will provide 30 pre-selected early- and mid-career scholars with the opportunity to reflect upon the impact of their work during roundtable sessions, hosted by the distinguished senior scholars. The goal of this workshop is to discuss (1) what “impact” is and why it matters, (2) the practices of creating impactful scholarship, and (3) ways of impactful engagement in the academic and the public discourse. Doing so, this PDW brings together participants with distinguished senior researchers to reflect upon these issues in both a broader context as well as in the context of their own research.

For the first part of this PDW, no application is required. For the second part of this PDW, participants have to register by sending an application to the organizers. This application should consist of (1) a 500-words abstract of the participants’ current research project(s), (2) two questions for the panelists, and (3) three roundtable preferences. Please send your application as one single PDF file to skade@europa-uni.de until July 15, 2021. Please contact skade@europa-uni.de or hamdali@europa-uni.de if you should have any further questions.

SIM: Modern Mad Men: Marketing Ethics and the Neuroscience of Consumer Autonomy  

Author: **Rob Barlow**, *Hult International Business School*
Author: **Matt Johnson**, *Hult International Business School*

Modern powers to influence consumer behavior have thrust questions of marketing ethics into the public spotlight and led to the need for an ethical frame through which to view marketing activities. In this paper, we draw on the modern science of consumer influence to develop such a framework and use it to propose ethical diagnostic criteria for marketing professionals. We start by making the case that consumer autonomy is among the most important values deserving of ethical consideration in this discussion. Then, drawing on decades of neuroscience, psychology, and behavioral economics research, we develop a theoretical understanding of how it is often undermined via the strategies available to modern marketing professionals, and of how such violations may be classified and diagnosed. Finally, we consider the implications of our theory and analysis from a regulatory perspective, with respect to some of the worst threats posed to consumer autonomy by new and emerging technologies.

Paper is Available to Meeting Registrants Only.

SIM: Stretching issue selling beyond organizational boundaries: The influence of external issue selling

Author: **Michiel De Roo**, *Vrije U. Amsterdam*
Author: **Christopher Wickert**, *Vrije U. Amsterdam*

We discuss an under-theorized theme in the issue-selling literature by analyzing how external issue selling influences internal issue selling. Our study is based on corporate social responsibility (CSR) managers that act as “issue sellers” vis-à-vis other internal actors they approach as “issue buyers”. While prior research has mainly conceptualized issue selling as an internal organizational endeavor, our study finds that an important activity of issue sellers is to establish relationships with external stakeholders. We find that sellers engage with external stakeholders to influence them to create a beneficial institutional climate to adopt the issue. Sellers also create external legitimacy about how the organization addresses the issue, which can create both positive and negative repercussions on internal buyers: it enhances internal acceptance for the issue at stake, but can also be considered as a distraction among internal buyers. Furthermore, sellers leverage external stakeholders to create external demand and pressure to adopt the issue. Our study advances the issue-selling literature by expanding the issue-selling process beyond organizational boundaries and showing how various externally-oriented issue-selling moves influence the internal issue-selling process.

SIM: A micro-level account of organizational responses to the challenges of its audiences

Author: **Gonzalo Conti**, *Chair of Business Ethics and Management Accounting, Martin-Luther-U.*

Institutional theorists have argued that organizations must respond to the challenges of their social contexts if they want to remain legitimate. This study investigates how managers individually interpret the challenges posed by their stakeholders and the role of their evaluations as an antecedent of how organizations choose to respond. Using an in-depth case study of a for-profit school education provider in a developing country, I explored how managers’ evaluations shaped the emergence of responses to two events wherein audiences challenged the organization’s ability to provide quality education and abiding by ethical values while operating on a for-profit basis. The qualitative evidence of the study shows that managers actively make sense of their stakeholders’ demands. Furthermore, their evaluations constitute the bases or filters whereby they dismiss or acknowledge their audiences’ claims. Although addressing audiences’ challenges constitute a managerial responsibility, the multiplicity of social demands and managers’ cognitive and emotional processes constrain their ability to do so. The study can help managers in their effort to maintain legitimacy amid the challenges that emerge from their social contexts.

SIM: When Corporate Ethical Responses after Transgressions Fail to Alleviate Consumers’ Anger

Author: **Claudia Rossetti**, *U. of Mannheim*
Author: **Jenni Sipilä**, *LUT U., School of Business and Management*
Author: **Laura Marie Edinger-Schons**, *U. of Mannheim*

After corporate transgressions, crisis management research suggests that firms should use ethical (i.e., highly accommodative) crisis responses, including elements of accepting responsibility for the crisis, apologizing, and offering compensation, to induce consumer forgiveness. Drawing from research on consumer-brand relationships and consumer forgiveness, the authors take a contingency perspective and propose important boundary conditions for the effectiveness of corporate ethical responses after transgressions. Using longitudinal survey data regarding real consumers’ perceptions of the Volkswagen emissions scandal, the authors analyze the time-lagged relationship between consumers’ perceptions of the firm’s response as ethical and consumers’ anger reduction toward the firm for the transgression. Consumers who perceive the corporate response as more ethical are more likely to let go of their anger over time. Yet, this mitigating effect disappears when consumers highly distrust business in general and the industry of the transgressing firm, when they judge the transgressing firm as having a stable disposition for unethical behavior, or when they perceive the culture of the transgressing firm to be highly authoritarian. The results of this study contribute to crisis management research and practice by revealing the contingent nature of the effectiveness of corporate ethical responses after transgressions.

Participant: **Karim Harji**, -

Although the phenomenon of social entrepreneurship, social franchising, and social innovation continues to expand in the academy, the social impact of entrepreneurship and innovation does not yet match the scale of current needs in contexts of poverty nor future threats facing humanity (Seelos and Mair, 2017; Kistruck and Schulist, 2020). Scaling social impact is a process that is dependent on organizational resources, management capabilities, and ecosystem conditions. Given their hybrid logics and the institutional contexts of low-income markets, social enterprises require a distinctive approach to scaling (Mair et al., 2012; McKague et al., 2015), which presents a significant opportunity for management scholars to explore well-established theoretical in new contexts. Despite pioneering work on innovation and scale (Seelos and Mair, 2017) and social franchising (Tracy and Jarvis, 2007; Christensen et al., 2010; Kistruck et. al., 2011; Alon, 2014; Giudici et al., 2018), the existing literature is comprised of a multitude of concepts and frameworks with different antecedents, components, pathways, and stages (Blundel and Lyon, 2014; Weber et al., 2015; London, 2016) including different definitions of scale (Kickul and Gundry, 2015) and different emphases on how much social enterprises should pursue scaling strategies similar to traditional for-profit firms (Austin, Stevenson and Wei-Skilleen, 2006). Overall management insight on scaling social impact remains nascent, with theoretical work only beginning to consolidate findings. The purpose of this PDW is to address this gap by building the field of scholarship on scaling social impact in contexts of poverty.

Teaching Business Model Innovation: Tips, Techniques And Tools

Teaching Business Model Innovation

Chair: **Yuliya Snihur**, *Toulouse Business School*

Chair: **Christoph Zott**, *IESE Business School*

Panelist: **Raphael H. Amit**, *U. of Pennsylvania*

Panelist: **Constantinos Markides**, *London Business School*

Panelist: **Kathleen Eisenhardt**, *Stanford U.*

The business model of firms refers to a strategic, system-level, holistic construct which depicts the ways in which firms do business. Business model innovation refers to the commercial introduction of a business model that is new to the product market(s) space(s) in which the focal firm competes. The number of courses on business model innovation offered in strategy and entrepreneurship programs at universities has been significantly increasing in recent years. The purpose of the proposed hands-on, highly interactive PDW is to offer tips, techniques and tools, and share experiences on best practices and rigorous analytical methods for teaching business model innovation. Scholars already teaching business model-related topics or wishing to develop such courses are encouraged to participate to receive focused feedback from senior faculty experienced in researching and teaching business model innovation. The PDW will provide a coherent perspective on the business model innovation teaching (and research) and offer new insights to guide future course development and academic inquiry. PDW participants will get hands-on expert feedback on concrete questions and teaching-related issues.

The Role of Multinationals in Tackling Global Sustainability Challenges

MNCs and Global Sustainability Challenges

Chair: **Stephanie L. Wang**, *Indiana U., Bloomington*
Distinguished Speaker: **Ans Kolk**, *U. of Amsterdam*
Distinguished Speaker: **Heli Wang**, *Singapore Management U.*
Distinguished Speaker: **Shaker A. Zahra**, *U. of Minnesota*
Distinguished Speaker: **William Newburry**, *Florida International U.*
Chair: **Vladislav Maksimov**, *U. of North Carolina, Greensboro*

It is increasingly urgent to address pressing global sustainability challenges. How multinationals, who serve as influential actors in multiple countries' economic, environmental, and social development, affect global sustainability challenges is under heated debates. The purpose of this PDW is to share insights on ongoing and emerging MNC-sustainability research from prominent scholars in this area and suggest directions to guide and focus future research efforts. The distinguished panelists include Professors Ans Kolk, Gurneeta Vasudeva, Heli Wang, and Shaker Zahra. This PDW will be interactive and welcome questions from participants to stimulate relevant and meaningful discussion.

Discussant: **Clifford Oswick**, *City U. London*

A diverse range of organizations, encompassing for-profit organizations, social enterprises, non-profit and public organizations, are driven by a strong social mission to resolve societal challenges and drive social change. Such organizing necessarily involves navigating complexity in the form of potentially competing values (e.g., Gehman, Trevino & Garud, 2012), institutional logics, organizational forms and identities (Smith & Besharov, 2019). Often, in order to balance the competing needs for innovation and stability, organizations are forced to “deviate from socially legitimate templates for organizing and thus experience unique organizing challenges” (Battilana & Lee, 2014, p. 397). Research has shown that many organizations which navigate complexity and combine opposing elements struggle to maintain a balance between their various aims (Smith, Gonin, & Besharov, 2013) and experience mission drift (Besharov & Smith, 2014; Ramus & Vaccaro, 2017), often resulting in the abandonment of social aims in favour of commercial goals (Mair, Battilana & Cardenas, 2012). Scholars have recognized that most organizations cope with a multiplicity of opposing demands – mostly social and commercial – to some degree (Shepherd, Williams & Zhao, 2019), for example with for-profit organizations increasingly engaging in the generation of social value and not-for profit organizing engaging in commercial activities to substitute their traditional sources of income. Yet our understanding of how organizations can resolve challenges and instead leverage the unique opportunities they face remains vague. Building on existing research, the aim of this symposium is to explore the challenges and opportunities of organizing from various angles. The presenters will explore key questions that individually and collectively enhance our understanding of how organizing efforts can drive social change. To accomplish this, each paper draws on different theoretical lenses and empirical contexts.

Contextual Considerations in Managing Organizations *Organizational Context*

Digital Session Chair: **Yoonjin Choi**, *London Business School*

OMT: **Corporate Purpose and its Impact on an Organization's Ability to Attract and Retain Talent**

Author: **Yoonjin Choi**, *London Business School*
Author: **Chang Wa Huynh**, *HEC Paris*

In this paper, we explore an important, yet less explored, characteristic of a socially responsible organization—an emphasis on corporate purpose beyond profit maximization. Drawing insights from literature on organizations' involvement in corporate social initiatives (CSI), we argue that an organization's commitment to its corporate purpose beyond profit maximization will positively impact its ability to attract and retain talent. More specifically, we argue that potential applicants would find a purpose-led employer more attractive than an employer without a purpose, because they expect greater utility in working for a purpose-led employer. However, after having worked for their employer, we argue that employees' preference towards a purpose-led employer would not be universal but rather dependent on employees' social value orientation. In particular, employees with high prosocial orientation would continue to show preference towards the purpose-led employer, while employees with low prosocial orientation would not. That is, while non-prosocial individuals expect to experience greater pride working for a purpose-led employer, they would in fact find it difficult to identify with the organization post-employment. We conduct three studies involving more than 1,500 participants and find evidence supporting our theory.

Paper is Available to Meeting Registrants Only.

OMT: **Culture, Psychology and Organization Studies: Four Alternative Packaged Approaches**

Author: **Shirah Eden Foy**, *Ecole Polytechnique Fédérale de Lausanne*

In response to significant interest in considering cultural and psychological phenomena in organization studies, and the relatively high entry barriers related to familiarizing oneself with the relevant literature scattered across multiple fields, the present study summarizes four “packaged” approaches that management scholars can adopt in their studies of organizations within and across cultural contexts. These packages, differentiated by their positions on the nature of culture (its definition, locus) and the comparability of cultures, can be employed to generate particular types of knowledge about organizations and their members. The merits and limitations of each are reviewed, and examples from the management literature are provided. Numerous opportunities remain to extend organization theory by working toward culture-inclusive models.

Paper is NOT Available. Please contact the author(s).

OMT: **Deliberation for Legitimation: Evidence from Experiments on Corporate Tax Avoidance**

Author: **Robin Schnider**, *U. of Zurich*
Author: **Andreas Georg Scherer**, *U. of Zurich*

The multi-level theory of legitimacy differentiates between propriety—that is, an individual evaluator's assessment of the extent to which a legitimacy object is appropriate for its social context—and validity—that is, the construal of appropriateness among different collectives. While the legitimacy literature has clarified that validity may enter individuals' cognition in the form of “validity cues” which individual evaluators use to form their propriety judgments, it yet has to explore the conditions under which a given validity cue gains predominance in the formation of evaluators' propriety judgments and overrides the influence of cues stemming from other sources. This question is particularly relevant in public deliberations about the legitimacy of organizations and practices in the context of complex societal problems, where it is not clear a priori whether and how the engagement with different validity cues affects propriety judgment formation. We address this research gap by analyzing the impact of several validity cues (stemming from peers, experts, and social media commentators) on propriety judgments about global tax avoidance. Results of two experiments featuring direct deliberations with representatives of a Big Four tax advisory firm and its critics and indirect deliberations via videos on social media (YouTube) confirm that deliberation affects propriety and offer important insights on how validity cues stemming from different sources affect the (de-)legitimation process. Surprisingly, validity cues stemming from social media commentators are shown to overrule validity cues stemming from either experts or peers, pointing towards serious challenges for deliberate opinion formation in the age of digitalization.

Paper is Available to Meeting Registrants Only.

OMT: **The Case for Cycles, Rhythms, and Seasons in Organizational Studies**

Author: **Michael Matthews**, *U. of Oklahoma*
Author: **Samuel Matthews**, *U. of Northern Iowa*
Author: **Thomas Kelemen**, *Kansas State U.*

Cycles, rhythms, and seasons (CRS) affect individuals and organizations. However, although much research has been done on individual CRS (e.g., how circadian rhythms affect swing shift workers, how month-end targets affect sales associates), there is still a lack of acknowledgment about how impactful CRS can be to organizational outcomes. Thus, we seek to bring more attention to this important area of research. First, we elaborate on three types of CRS that are salient for organizational studies (i.e., biological CRS, environmental CRS, and societal CRS). We also demonstrate how these three types of CRS impact organizations similarly, as well as how they impact organizations differently. Second, we outline four key attributes of cycles: predictability, proximity, strength, and duration. Third, we illustrate how organizations can maximize the benefits and minimize the downsides of these CRS. We hope these three contributions will help spark additional research in this field of study.

Presenter: **Andrew Spicer**, *U. of South Carolina*

Organizational wrongdoing continues to be one of the biggest challenges posed by firms, considering its impact on our economy, society, organizations, and individuals. Despite a rich literature in existence, we believe that our field will benefit from a renewed scholarly attention to wrongdoing. Our symposium aims to advance the discussion on antecedents, evaluations, and processes (e.g., resolution) of organizational wrongdoing. Our symposium papers provide interesting insights regarding the following broad questions: (1) Which novel factors shape organizational wrongdoing? (2) How do insiders, social-control agents, and other key audiences evaluate wrongdoing? (3) How do their evaluations and reactions influence the process and consequence of wrongdoing? (4) What are the consequences of organizational wrongdoing in broader society and economies? Additionally, each paper employs a variety of methods, including case studies, quantitative analysis, and historical analysis.

Participant: **Tommy Pan Fang**, *Harvard U.*
Discussant: **Francisco Polidoro**, *U. of Texas at Austin*

The symposium features four papers that examine how institutions shape the nature of economic exchange for technologies, firms, industries, and nations. The four papers use diverse theoretical frameworks, methodologies, levels of analysis spanning the empirical contexts of post-WWII U.S. innovation ecosystem, graphene, U.S. data centers, and global mobile money. Together, they address an interesting set of questions and advance our knowledge about how variation in the presence, attributes, and nature of various institutions shape incentives associated with innovation and market emergence, and consequently yield insights for better understanding industrial innovation trajectories, firm performance, and market entry patterns. The symposium will be of interest to scholars of technology and innovation management (TIM) and strategic management (STR).

Facilitator: **Orestis Terzidis**, *Karlsruhe Institute of Technology*
Facilitator: **Madis Talmar**, *Eindhoven U. of Technology*

Scholars interested in topics of entrepreneurship and innovation are increasingly embracing the design science research (DSR) approach. DSR is rooted in Herbert Simon's *The Sciences of the Artificial* (1996) and aims at developing instrumental knowledge, that is scientific knowledge guiding action. While entrepreneurship and innovation scholars across various divisions increasingly develop ideas on how to design, conduct, and communicate DSR, this knowledge is still much dispersed. It is the aim of this PDW to share ideas on DSR, to develop novel DSR research ideas, and to build connections within the growing entrepreneurship and innovation DSR community. This PDW will be an interactive and engaging online format with two parts. Part 1 will be an interactive discussion panel with outstanding DSR scholars from the fields of entrepreneurship, technology and innovation, and information systems. Part 2 will be a research incubation session in which novel DSR research opportunities will be developed and pitched. Overall, this innovative PDW aims at getting inspired, learning from others, and building community.

IM Division National U. of Singapore CGIO Best Paper in International Corporate Governance

Digital Session Chair: **Luiz Ricardo Kabbach De Castro**, *U. de Navarra*

This session includes the finalists* for the IM Division CGIO Best Paper in International Corporate Governance Award, which is presented to the best scholarly paper of the IM Division focusing on international corporate governance issues at the Academy of Management annual meeting. This award is sponsored by the National U. of Singapore's Center for Governance, Institutions & Organizations (CGIO). All papers with a research focus on corporate governance accepted by the IM Division for presentation at the Academy of Management annual meeting are eligible for the award. * Session excludes two papers that are also finalists for the CEIBS Best Paper Award

IM: Where Have You Been? Realizing Absorptive Capacity to Leverage Director International Experience

Author: **Andre Havrylyshyn**, *Darla Moore School of Business, U. of South Carolina*
Author: **Melanie Ward**, *U. of South Carolina, Darla Moore School of Business*

Our paper expands upon extant corporate governance literature to explore the relationship between directors with professional international experience and firm performance. We draw on theory regarding directors learning from their experiences in different national contexts, which indicates that directors are a resource that contributes to at least temporary competitive advantage (valuable, rare, difficult to imitate). We also leverage work on absorptive capacity to discuss how organizations can support this resource through network density of board committees. We test our hypotheses on a sample of 461 firm-year observations of 105 S&P large-cap U.S. manufacturing firms between 2010-2014. We find that professional international experience directors positively affect firm performance when the network density on committees allows for more dissemination of the insights held by these types of directors.

IM: The role of anti-foreigner sentiments for IJV performance

Author: **Vera Kunczer**, *WU Vienna*
Author: **Rian HJ Drogendijk**, *U. of Groningen*
Author: **Jonas F. Puck**, *WU Vienna*

In recent years, sentiments have been shifting towards nationalist attitudes and increasing anti-foreigner sentiments. Such sentiments can spill over to MNCs given MNCs' embeddedness in their home-country environment, and can hence be reflected in the behaviors of organizational members. We argue that especially in IJVs where partner firms come from foreign countries, conflicts due to anti-foreigner sentiments can be apparent. Building on social identity theory, we theorize that negative sentiments against foreigners lead to pronounced in-group favoritism and stereotyping, make the relationships between IJV partners more difficult, and directly influence the success of the operation. What is more, we hypothesize that contact and interaction between IJV partner firms decrease the negative relationship between anti-foreigner sentiments and IJV performance. Using hierarchical linear modeling on a sample of 9,000 observations from 1993 to 2017, we find a negative effect on the success of IJVs but that long collaboration with the IJV partner and a more equally shared organization mitigate the negative influence.

IM: Parent-subsidiary temporal closeness and expatriate staffing: the communication synchronicity effect

Author: **Jingyu Yang**, *U. Of Sydney*
Author: **Liang Wen**, *U. Of Sydney*
Author: **Stefan Volk**, *U. Of Sydney*
Author: **Jane Lu**, *City U. of Hong Kong*

This study draws insights from media synchronicity theory (MST) to understand why and how temporal closeness between multinational enterprise (MNE) parent and subsidiary locations may affect MNEs' employment of expatriates in their foreign subsidiaries. Parent-subsidiary temporal closeness, indicated by the working time overlap between the parent and subsidiary location, determines the extent to which synchronicity can be achieved in day-to-day communication directly at a distance. Such communication synchronicity enables MNE parents to exercise control and maintain effective knowledge exchange with subsidiaries without having to rely on costly expatriates. As such, we posit a negative relationship between parent-subsidiary temporal closeness and the deployment of expatriates in a subsidiary, such that the expatriate ratio decreases with an increase of overlapping working time between the parent and subsidiary location. Furthermore, we posit that the negative relationship can be further moderated by factors enabling or constraining parent-subsidiary synchronous communication such as digital accessibility and linguistic distance. Empirical analyses of a sample of 3,500 subsidiaries of 1,801 Japanese MNEs between 1990 and 2009 support our theorizing. Theoretical and practical implications for MNEs' global operations are discussed.

CSR and Corruption in International Management

Digital Session Chair: **Yannick Wiessner**, *Erasmus U. Rotterdam*

This session addresses issues related to corporate social responsibility and corruption in international management. It includes papers related to how foreign firms use strategic agility to deal with corruption, environmentally-sustainable strategies and export performance, firm-level CSR and the perception of government effectiveness in Latin America, and the interaction of cognitive factors in influencing employee time theft behaviors.

IM: When Corruption Corrupts: How Foreign Firms Use Strategic Agility to Deal with Corruption

Author: **Natalia A. Vershinina**, *Audencia*
Author: **Gideon D. Markman**, *Colorado State U.*
Author: **Peter Rodgers**, *Southampton Business School*
Author: **Peter Stokes**, *DeMont Fort U.*

Corruption has detrimental effects on individuals, organizations, societies, and nations; it therefore comes as no surprise that the extant research in this area is focused on government corruption and on bureaucrats who coerce firms to pay bribes. Although the coercive nature of institutional pressure cannot be overstated, we question the view that, when faced with corruption, firms are merely powerless victims; in fact, we theorize that firms often play an active role and that their actions can and do perpetuate corporate corruption. Our longitudinal, qualitative study of 55 foreign firms operating in Russia and Ukraine and of eight local chambers of commerce reveals that, to deal with corruption, firms use strategic agility—often in nonmarket settings—to avoid, comply with, and even instigate and entrench corruption. Unpacking the corruption-agility link is no trivial matter, especially because strategic agility is framed as an adaptive modality; it was therefore surprising to learn about its maladaptive side and how it causes negative externalities such as heightened corruption. Managers rarely divulge their corrupt activities; so, corroborating research on this topic, including on the role played by strategic agility and nonmarket settings, is urgently needed.

IM: Environmentally-sustainable strategies and export performance

Author: **Camila Costa**, *Pontifical Catholic U. of Rio de Janeiro (PUC-Rio)*
Author: **T. Diana Macedo-Soares**, -
Author: **Jorge M. T. Carneiro**, *FGV EAESP Sao Paulo School of Business Administration*
Author: **Filip De Beule**, *KU Leuven*
Author: **Rafael Burstein Goldszmidt**, *Fundacao Getulio Vargas*

Research is still scant about the impact of environmentally-sustainable strategies in export markets. Given that engaging in environmentally-friendly actions might increase some costs (e.g., control and monitoring) while reducing others (e.g., pollution remediation, energy use, waste), the impact on organizational performance is not clear-cut. However, environmentally-sustainable strategies are expected to attract more customers and increase their willingness to pay, thereby positively affecting sales. This study examines two thus far under-researched issues: the mediating impact of environmental certifications over the effect of environmentally-sustainable strategies on export market performance, and the moderating impact of the level of environmental consciousness of customers in the destination country. Empirical evidence from a sample of 142 Brazilian agribusiness firms corroborates the expected positive association between environmentally-sustainable strategies and export market performance, for exports to both lower and higher environmentally-conscious markets, but no evidence was found about the effect being higher in the latter markets. Interestingly, the mediation of certifications was not statistically significant, which suggests that clients use other ways to assess the environment-friendly efforts carried out by firms.

Paper is Available to Meeting Registrants Only.

IM: Firm level CSR and the perception of government effectiveness in Latin America

Author: **Larissa Marchiori Pacheco**, *Northeastern U.*
Author: **Elizabeth Marie Moore**, *Northeastern U.*
Author: **Kristin Brandl**, -
Author: **Luis Alfonso Dau**, *Northeastern U.*

Recent evidence suggests firms use CSR strategically to respond to formal institutions and governmental policies—but they also respond to the absence or underdevelopment of these institutions and policies. Firms engage with local institutions in order to create or change them in the presence of institutional voids. Consequently, it can be expected that as firms continue to engage with local institutions and enhance their CSR programs, governments, and the way individuals perceive the role of governments will be impacted. Thus, we examine the impact of firms' CSR on the perception of government effectiveness in emerging markets where institutional voids are prevalent. Using a sample of 820 firm-year observations of 145 firms from 30 Latin American countries, over the period of 2005-2018, we find robust support for our hypotheses. Results suggest that firms' CSR have a significant, but negative impact on the perception of government effectiveness. This effect is increased when firms are more profitable, and thus have more leverage. Further, the effect is increased in countries that receive higher amounts of foreign direct investment, but reduced when countries are able to pay off larger portions of their international debt. Our findings provide important insights for the CSR literature, but also critical implications for policymakers in emerging market contexts.

Paper is Available to Meeting Registrants Only.

IM: **The complex interaction of cognitive factors in influencing time theft behaviors** 

Author: **Chandrashekhar Lakshman**, *Florida Atlantic U.*

Author: **Kubilay Gok**, *Winona State U.*

Author: **Linh Chi Vo**, *ESDES, U. Catholique de Lyon*

Author: **John J. Sumanth**, *Wake Forest U.*

Time theft is a costly yet poorly understood phenomenon in business organizations. Although research has addressed workplace deviance on the part of employees, much of this work has focused on severe forms of deviance. The relative attention given to nonaggressive, production-oriented and organizationally targeted deviant behavior such as time theft is much less, despite its serious consequences. We contribute to this literature by examining the effect of abusive supervision on time theft in the context of Vietnam. We utilize a sociocognitive theory-based reasoning to propose a model. We found that time theft is the outcome of a simultaneous interaction between abusive supervision, moral disengagement, and equity sensitivity. Our model and empirical results suggest that a complex process of social information processing, with several countervailing factors balancing each other, influences time theft. We provide a discussion of these results, directions for future research, and the limitations of our study.

Speaker: **Stuart Winby**, *SPRING Network - Silicon Valley Design Firm*
Speaker: **Steven Dhondt**, -
Speaker: **Peter Jay Sorenson**, -
Speaker: **Peter Aughton**, -

While there is a broad consensus that new technology will have transformative effects on the future of work and organization, the nature of its specific effects remains part of an ongoing discussion in which academics, practitioners, management consultants and popular media are involved. These discussions indicate that the process of shaping the future of work and organization needs to be managed and managing this process requires viable applied perspectives. The sociotechnical approach offers such an applied perspective on the design and development of job, organizations and ecosystems. Although it was developed in the era of mechanization, the sociotechnical perspective is continuing to develop in the context of new technology. In this PDW, an international forum of practitioners and academics report on different cases in which a sociotechnical perspective is used to deal with the potential transformative effects of new technology. The video clips of these presentations form the input for an online discussion on managing the future of work and organization and the future development of applied sociotechnical theory.

Discussant: **Martin R. Fellenz**, *Trinity College Dublin*

MED Global Forum Best Symposium Award for the symposium that best creates the opportunity to address global issues of significance to management education and/or development.

To remain relevant, management education (ME) must reflect and address the realities that influence its subject matter, management. In the context of immense turbulence that has characterized 2020, an assessment of where ME stands and where it is going is timely, because even without the global pandemic ME stands at the crossroads of significant changes that require innovative solutions. The drivers of change are multifaceted, and include changing business dynamics; increasingly diverse and complex social and cultural contexts; shifting societal expectations; speed, complexity, and variety of technological developments; evolving and new roles for ME stakeholders; expanding policy, regulatory and accreditation influences; and issues related to environmental and sustainability concerns. While these factors have recently been overshadowed by the global Covid pandemic and its direct impact on the provision of ME worldwide, with rolling lockdowns and travel restrictions and the increased reliance on remote and digitalized teaching and learning, ME and business schools as the most visible actors in the ME space face questions about their future. The five papers in this symposium collectively question to what degree current models of ME practice may be sustainable and where they are not, and critically explore what may take their place.

The Organizational Behavior Doctoral Consortium is held annually and designed for doctoral students who are in the final stages of their programs. The consortium includes a mix of presentations, discussions, and interactive sessions designed to help doctoral students navigate the job market and launch them into their academic careers. The program includes faculty presentations and roundtable sessions on topics such as crafting the right academic job, succeeding at research and publishing, and preparing for effective teaching, as well as how to successfully organize and deliver a job talk that best communicates their research and teaching identity. More than 40 faculty members have volunteered to present or serve as roundtable hosts for this session, which takes place over two days.

Organizer: **Barbara Mittleman**, *Stakeholder Alignment Analytics*

Individuals, groups, functions, organizations, and stakeholders increasingly connect laterally in order to coordinate and deliver results. In recent years, two methods for fostering horizontal connections provide an essential contrast – relational coordination (RC) centers on process - communicating and relating for the purpose of task integration and action, while stakeholder alignment (SA) centers on substance – issues or interests that are “at stake” for the purpose of alignment and action. This professional development workshop involves parallel table-top exercises in which the two methods are introduced and applied in role-play simulations of a complex multi-stakeholder challenge involving community behavioral health. This synchronous, interactive workshop will bring together researchers and practitioners from different fields to explore the complex relational and stakeholder dynamics of multi-party systems change. At the same time we will be taking into account embedded levels of change from the microdynamics of intra and interpersonal change, the meso-dynamics of inter-group and organizational change, and the macrodynamics of inter-organizational, community and institutional change. Workshop participants will break into working groups to apply RC and SA methods to a community behavioral health challenge, then meet across RC and SA groups to articulate how different methods can complement each other with their distinct results and implications for theory and practice. We will develop theoretical and practical insights into the relational dynamics operating at multiple levels among multiple stakeholders with differential power, and how these create possibilities and challenges for positive change.

Publishing Inductive Qualitative Research in Prominent Academic Journals
Publishing Inductive Qualitative Research

Host: **Quy Nguyen Huy**, *INSEAD*
Distinguished Speaker: **Melissa Graebner**, *U. of Illinois at Urbana-Champaign*
Distinguished Speaker: **Davide Ravasi**, *UCL School of Management*

This PDW workshop is aimed at fostering information exchange among practitioner scholars interested in publishing inductive qualitative research in prominent academic journals. Practitioner scholars are individuals who pursue rigor in their research process and output as well as produce knowledge that is useful for improved managerial practice. This PDW has been offered for several years now and keep attracting hundreds of scholars. The content offered is not predetermined and varies every year depending on the audience's questions and evolving norms in the field. The workshop will feature scholars with a track record of publishing qualitative research in premier journals. The goal will be to build help practitioner scholars to disseminate their ideas through prominent journals, while still encouraging these scholars' focus on managerial relevance. The conference presenters will lead exchanges around topics such as understanding the expectations of premier journals; conducting a literature review; designing data collection and analysis processes; selecting and working with co-authors; writing a first research draft; refining a manuscript before journal submission; and dealing with the editor and reviewers during the review process.

Environmental strategies

Digital Session Chair: **Gregorio Martín De Castro**, *U. Complutense de Madrid*

ONE: Environmental Strategies in the New Era of Corporate Environmentalism: From Reactor to Upcyclers

Author: **Gregorio Martín De Castro**, *U. Complutense de Madrid*
Author: **Javier Amores Salvadó**, *U. Complutense de Madrid*

Since the nineteenth century, there is a growing concern of nations, citizens and businesses on the preservation of the natural environment. In that sense, during the last three decades, several proposals have explored the environmental stance of the firms showing different typologies of environmental strategies. Nevertheless, current climate emergency and the approach to several interconnected tipping points call for an enriched understanding of firm's environmental positioning as well as new business model solutions and more advanced environmental strategies able to reverse the situation. In this sense, our research refines and develops the existing theory in two distinct ways. Firstly, through deconstructing existing environmental strategies into their key dimensions based on Strategy and Innovation and Learning traditions, we offer an enriched understanding and refinement about their nature and implications, traditionally focused on the reduction of negative environmental externalities. Secondly, we develop theory by fleshing out a new environmental strategy, called upcycling, that conveniently addresses the big challenge of climate emergency by showing a new firm's environmental positioning where companies not only reduce their negative environmental externalities but also remove and reverse current environmental degradation and create by the first time, by means of a 'new sustainable capitalism', positive environmental externalities in their daily business activities.

ONE: Firms and the Growth-Sustainability Nexus: A Review and Research Agenda

Author: **Swantje Freund**, *U. of Oldenburg*
Author: **Josua Oll**, *U. of Oldenburg*
Author: **Joern Hoppmann**, *U. of Oldenburg*

Scholars of corporate sustainability and corporate social responsibility have long pointed to the detrimental consequences of economic growth for ecological and social systems. However, thus far, the debate on the growth-sustainability nexus has primarily taken place at the macro-economic level. As a result, although firm growth forms a central underlying driver of economic growth, it remains unclear which role firms (can) play in fostering or hindering a post-growth world and how they can design strategies that more explicitly take into account the negative consequences of growth. To address this shortcoming, we analyze the management literature on growth to gain firm-level insights on the outcomes, measures, strategies, and drivers of growth, and to derive implications for the field of corporate sustainability and corporate social responsibility. Our review shows that firm growth represents an important, prominent, and heterogeneous topic in management scholarship. Yet, sustainability considerations or critical reflections on firm growth have not made their way into the leading general management and sustainability management journals. Reflecting on our findings from a sustainability perspective, we develop a robust research agenda to stimulate future micro-level research on the growth-sustainability nexus.

ONE: Natural resource dependence: understanding why companies (do not) disclose on biodiversity

Author: **Fiona Vanessa Stappmanns**, *HSG U. of St. Gallen*
Author: **Leo Vogel**, *U. of St. Gallen*
Author: **Judith Louise Walls**, *HSG U. of St. Gallen*

Biodiversity is the foundation of all life on earth and plays a critical role in solving grand challenges like climate change. Yet, corporate disclosure on biodiversity remains scarce. We develop a theoretical model to explain why companies (fail to) disclose on biodiversity, by applying and extending natural resource dependence theory. Our model shows that companies may omit to disclose on biodiversity when they perceive an operational or regulatory risk associated with dependence on biodiversity. By contrast, when companies view biodiversity as material or a reputational threat, they are more likely to engage in disclosure. In addition, materiality positively moderates the relationship between biodiversity risk and disclosure. We discuss ways in which the topic of biodiversity, in spite of its complexity, can be brought to the forefront of manager's minds in order to place greater emphasis on biodiversity in corporate sustainability management.

Publishing in AMD including the Future World of Work Special Issue 
Publishing in AMD

Organizer: **Kevin W. Rockmann**, *George Mason U.*

Have interesting findings you can't explain? Curious about exploring new or unexplained phenomena? Have a desire to be more creative and transparent in presenting your research? Come learn about publishing in Academy of Management Discoveries (AMD). In this session you will hear a presentation about AMD from the current editor-in-chief followed by an opportunity to ask questions related to publishing in the journal. You will also have an opportunity to hear about the special issue on the Future World of Work from that editorial team and to ask them specific questions regarding the special issue. We hope to "see" you there!

Ethical Leadership

Digital Session Chair: **Muhammad Waheed Akhtar**, *COMSATS U. Islamabad, Sahiwal Campus*

SIM: Leaders Moral Muteness and Followers Derogation: The Jeopardies of Despotic Leadership

Author: **Muhammad Waheed Akhtar**, *COMSATS U. Islamabad, Sahiwal Campus*
Author: **Fauzia Syed**, *Assistant Professor (FMS)*
Author: **Muzhar Javed**, *COMSATS U. Islamabad, Sahiwal Campus*

Based on the assumptions of moral disengagement theory, we hypothesized that under despotic leadership employees tend to engage in moral disengagement in turn fosters employee outcomes (unethical work behaviour, negative workplace gossip and retaliation). Moreover, we hypothesized that moral identity affects the despotic leadership and moral disengagement relationship; we also hypothesized that moral identity moderates the mediated relationship. Employing a multi-wave and two-source sample, data was collected from employees and their peers (n=255) in the services sector of Pakistan. We validated the proposed framework using the moderated-mediation technique. Results supported the mediating effect between despotic leadership and employee outcomes using moral disengagement. The results revealed that the impact of despotic leadership on moral disengagement was weaker under high moral identity and vice versa. Furthermore, it was revealed that moral identity moderates the mediated relationship. The study concludes with implications, limitations and directions for future research.

SIM: What's Charisma Got to Do with It? Two Faces of Charismatic Leadership and CSR Engagement

Author: **Tanurima Dutta**, *U. of Nevada, Reno*
Author: **Rafik Beekun**, *U. of Nevada, Reno*
Author: **Jinyu Hu**, *U. of Nevada, Reno*

In this article, we examine the importance of leadership styles in corporate social responsibility (CSR). Drawing from charismatic leadership theory, we argue that the two distinct styles of charismatic leadership, personalized charismatic leadership (PCL) and socialized charismatic leadership (SCL) influence firm's CSR engagement through different underlying mechanisms. Integrating with existing CSR typologies (internal-external CSR, institutional-technical CSR, reputation-enhancement and stakeholder-reciprocation strategic CSR and substantive-symbolic CSR), we propose that socialized charismatic leaders favor CSR initiatives that benefit a wide array of stakeholders while personalized charismatic leaders have the propensity to selectively engage in CSRs that address the needs of a particular group of stakeholders (external CSR, technical CSR, reputation enhancement strategic CSR and symbolic CSR). In doing so, our study advances knowledge about the micro-foundations of CSR and the unique pathways between leadership styles and CSR types.

SIM: Responsible Leadership: a double ethical alignment between values and CSR commitment

Author: **Catherine Pourquier**, *CEREN, EA 7477, Burgundy School of Business - U. Bourgogne Franche-Comté*
Author: **Jacques Igalens**, *U. of Toulouse I, Capitole*

For more than fifteen years, the literature on Responsible Leadership (RL) has been trying to outline the contours of this concept, which is still under construction at several levels, micro, meso and macro. Our objective is to focus on the link between the leader's posture and that of his or her organization in terms of CSR commitment from an ethical perspective. To do this, we put forward the concept of alignment. In our view, this alignment is a "marker" for the embodiment of RL's ethical posture. We propose a new way of reading RL based on a double ethical alignment, alignment of the CSR values of the organization and the leader on the one hand, and alignment of the CSR commitments of the organization and the leader on the other hand. From an academic point of view, the concept of alignment makes it possible to embody the ethical commitment of responsible leaders and their organizations. From a managerial point of view, alignment makes it possible to measure the level of responsible and ethical commitment of the leader and the company. We illustrate this concept of alignment through two case studies of world leaders in their fields of expertise, Essilor and Danone, who are also considered CSR "champions". Through these two examples, as well as an interview with the former chairman of Grameen Danone Bank, Nobel Peace Prize winner Muhammad Yunus, we will show how alignment is both a generic concept that measures the strength of investing in an ethical commitment to CSR and also a contingent concept that takes into account the cultural specificities of the organization. We propose a theoretical and a managerial model of alignment to shed light on the concept of RL. Keywords: Responsible Leadership, Ethics, CSR, Alignment, Values, Commitment

SIM: How stakeholders' CSR attribution is formed: The role of leader humility

Author: **NAIDAN ZHANG**, *U. of Nottingham Ningbo China*
Author: **Alim J. Beveridge**, *U. of Nottingham, China*

Corporate social responsibility (CSR) research at the micro-level is receiving increased interest and attention in academic and managerial circles. However, much of the existing literature ignores an important factor in micro-CSR research—CSR attribution. In addition, compared with analyzing the influence of CSR attribution on stakeholders' attitudes and behavior, understanding how stakeholders form different attributional explanations is not yet well understood. Against this backdrop, this study aims to investigate the formation of stakeholders' CSR attributions. Drawing upon social information processing theory and the literature on leader humility, this article aims to analyze how leader humility and stakeholders' received CSR cues interactively influence the formation of stakeholders' CSR attribution. Specifically, we propose that leader humility and stakeholders' received CSR cues interactively influence their CSR attribution through underlying mechanism of perception of selflessness. This article extends existing research on literatures of CSR, CSR attribution and leader humility, and can help companies to manage stakeholders' scepticism more effectively.

Thus far, the empirical evidence about the role of employees in the relationship between human resource management (HRM) and employee and organizational outcomes, shows that it is the perceived human resource (HR) practices by employees rather than the implemented HR practices as rated by managers that have a more direct influence on employees' behavior and outcomes. Despite the importance given to employees as key recipients of HRM, we still have a limited understanding of what factors explain and influence employee perceptions of HRM and how they impact employee well-being and performance. Accordingly, the papers in this symposium aim to shed light on (a) the role of employees in influencing their own perceptions of HRM, (b) other factors that influence employee perceptions of HRM, and (c) the processes through which employee perceptions of HRM impact employee well-being (trade-offs) and team effectiveness.

The COVID-19 pandemic has been generating profound impacts on the higher education sector. In many countries, one of the major negative consequences of this pandemic is the fall of the revenue of universities, due to the factors such as the drop of enrolment of international students. The budget cut of universities has further resulted in salary reduction, hiring freeze, or layoff. In contrast, in China, job opportunities are steadfastly growing, and open to the international job market. However, China job market for management scholars is so far not well understood to the international scholars, even ambiguous for many Chinese scholars, as this market is characterized as complex, dynamic, multi-level, and of highly internal variety. In this PDW, scholars from several representative Chinese universities (both senior and junior faculty members, and from multiple geographical regions) share their experiences, observations, and insights regarding the job opportunities in China for candidates in the management field. Topics to be covered include (but not limited to) recent developments and trends in the application procedures, selection criteria, promotion, compensation and benefit, teaching load, and research funding, as well as those policies particularly for foreign employees.

**Promoting Equity in Learning: Inclusion in the Classrooms across
Healthcare Management Programs**
Promoting Equity in Learning

Participant: **Michele Heath**, *Cleveland State U.*
Participant: **Lihua Dishman**, *A. T. Still U.*
Participant: **Deborah M. Mullen**, *U. of Tennessee, Chattanooga*

This Professional Development Workshop (PDW) will discuss how to create equity in the classroom. Equity requires putting systems in place to ensure that every student has an equal chance for success despite race, gender, ethnicity, language, disability, family background or income. Professors need to understand the unique challenges and barriers faced by students in order to provide support to help students overcome those barriers. As higher education becomes more diverse, our image of a “typical” college student needs to evolve. Students have unique backgrounds, identities, and experiences that they bring to classroom. Equity can only be created once professors recognize these learner differences and build environments that honor those perspectives. An equitable education system understands who each person is, makes learning relevant, and helps all students develop the knowledge and skills they need. It is important to give all students an equitable start, which leads to better outcomes for individuals. This PDW seeks to address common inequities and best practices on how to create equity and inclusion in the classroom. The PDW will start with a short reflection about what equity is and the challenges (academic and outside) most minorities face while attempting to obtain a degree. Next, we will conduct breakout sessions to discuss prepared questions to prompt discussion on promote social justice and equity in learning as well as inclusion in the classroom. Lastly, we will have a large group discussion that includes report out, brief discussion, and Q&A.

Panelist: **Riki Takeuchi**, *U. of Texas at Dallas*
Panelist: **Michele Williams**, *U. of Iowa*
Coordinator: **Cheng-Huan Liu**, *Rutgers U., School of Management and Labor Relations*

The Organizational Behavior (OB) Junior Faculty Workshop is designed for faculty members who consider themselves junior (e.g., are untenured or within the first 4-5 years of an academic position). The goal is to provide a developmental forum for participants to learn from Faculty Fellows about how to navigate career challenges related to research, teaching, and service. There are ten Faculty Fellows, which includes a mix of senior faculty from different countries and with varied career experiences. The Fellows will offer their perspectives regarding (1) tips, best practices, and/or lessons learned about navigating our field; and (2) questions from participants. The format of the workshop is highly interactive and will include a combination of panel and small group discussions. Participation is limited and pre-registration is required.

Participation is limited; pre-registration is required. Please check for availability and register at https://unlv.co1.qualtrics.com/jfe/form/SV_6Xxxu8yOTpE6D66.

Fear of COVID, Emotional Exhaustion, and Employee Outcomes

Digital Session Chair: **Muhammad Mohtsham Saeed**, *U. of South Australia*

OB: Fear of Pandemic (COVID-19) & Employees' Engagement - The Moderating Role of Perceived Support

Author: **Muhammad Mohtsham Saeed**, *U. of South Australia*
Author: **Tafara Chipamaunga**, *Australian Institute of Business*

COVID-19 has impacted nearly all walks of life – life at work is no exception. In 2020, nearly all the working professionals had to make some sort of adjustments in their routine work life to address the monumental challenges posed by the pandemic. Employees in most organisations are reported to have experienced distress, fear and anxiety while working in a highly unpredictable environment created by COVID19 across the globe. As a result, managers are struggling to find ways to maintain /enhance the level of employees' engagement and continue to realize their true potential while at work. This study aims to advance knowledge in the Fear of Pandemic area in particular. While driving its theoretical foundations from cognitive activation theory of stress, "Four Horsemen of Fear" and Organisational Support theory, we have tried to develop a comprehensive theoretical framework to enhance our understanding of the pandemic and the vital role it plays in lowering the levels of employees' engagement / performance while at work. It also emphasises the need to have effective Organisational/Supervisory / Peer support mechanisms in place to assist the managers in their fight against monumental workplace challenges posed by the Pandemic. In the prevailing context of COVID 19, study offers quite useful and timely insights both for the researchers as well as practitioners; it draws their attention to the escalating fear created by this dreadful disease on one hand and facilitates their efforts to devise a successful strategy to deal with it on the other. The study will help the managers to revisit/ further refine their existing HR policies & procedures particularly the policies around employees engagement/retention, rewards/ incentives /compensations and future development/recognition etc and ensure they are well-equipped to deal with any such challenges in the future.

Paper is Available to Meeting Registrants Only.

OB: Transformational leadership: Building Follower Resources to Reduce Emotional Exhaustion during Covid

Author: **Dustin Bluhm**, *U. of Colorado, Colorado Springs*
Author: **Paul B. Lester**, *Comprehensive Soldier Fitness Office*
Author: **Bruce Avolio**, *U. of Washington*
Author: **Sean Hannah**, *Wake Forest U.*

The COVID-19 pandemic has resulted in unprecedented uncertainty and rapid change within organizations, leaving employees more susceptible to burnout and productivity loss. Using Conservation of Resources theory, we explore how transformational leadership can bolster followers' psychological and skill-based resources to reduce emotional exhaustion and productivity loss in the pandemic crisis context. Based on the adaptive performance framework and Event System Theory, we also examine leader crisis response competence and perceived coronavirus disruption as boundary conditions. Using multi-wave field study data collected as the pandemic unfolded (n = 453), our moderated serial-mediation model demonstrates that during extreme events, transformational leadership positively influences follower resources of psychological capital and coping with uncertainty, with a dominant effect of psychological capital in mediating the effects of transformational leadership on follower emotional exhaustion and productivity loss. Further, the serial mediation effect was strengthened when perceptions of leader crisis response competence was high, and no longer significant when response competence was low, suggesting that transformational leadership behaviors must be paired with an effective crisis response by the leader in order to reduce follower emotional exhaustion and productivity loss. This research offers contextualized theoretical contributions to multiple literatures in addition to important practical implications for leaders during the pandemic and other extreme events.

OB: Perceived Threat of Covid-19, Collectivism and Employee Creativity

Author: **Fangzhou Liu**, *Shanghai Jiao Tong U.*
Author: **Anyi Ma**, *Tulane U.*
Author: **Krishna Savani**, *Nanyang Technological U.*

The present study investigated the joint effects of cultural collectivism and perceived threat of Covid-19 pandemic on employee anxiety and creativity. Consistent with threat rigidity perspectives on creativity, two studies, including an online experiment (Study 1, N = 183) and a field study (Study 2, N = 293), found that greater perceived threat of Covid-19 was associated with greater self-reported anxiety, which in turn was associated with lower employee creativity. More importantly, we found that cultural collectivism weakened the association between perceived threat of Covid-19 and anxiety. Further, greater perceived threat of Covid-19 was associated with heightened anxiety as well as lower creativity only when cultural collectivism was low; when cultural collectivism was high, perceived threat of Covid-19 was unrelated to anxiety, and ultimately, to creativity. The present findings suggest that cultural collectivism help employees cope with psychological threats. By buffering the anxiety induced by perceived threat of a pandemic, cultural collectivism can help mitigate the negative influence of threat on employee creativity in the midst of crises.

Author: **Vanessa Shum**, *Simon Fraser U.*

Author: **Christopher D. Zatzick**, *Simon Fraser U.*

Author: **Sandra Robinson**, *U. of British Columbia*

Employees have to face the heightened awareness of human mortality and vulnerability amid the pandemic. Extant research focuses on two distinct forms of death awareness: Death anxiety and death reflection. To date, researchers have overwhelmingly taken a variable-focused approach by examining these forms of death awareness as separate variables across individuals. Yet, this approach overlooks the possibility that different subpopulations of employees might experience distinct combinations of death anxiety and reflection. To address this limitation, we adopted a personal-centered approach to consider death anxiety and reflection conjointly within individuals in the context of the COVID-19 pandemic. Across two studies, we identified three distinct death awareness profiles—the disengaged, calm reflectors, and anxious reflectors—and found that these profiles were distinguished by both personal and contextual health risks. In addition, we found that these profiles differentially predicted not only traditional, context-general death awareness outcomes—well-being and prosocial behavior at work—but also context-specific outcomes in light of the unfolding public health and social justice crises amid the pandemic—COVID-19 prevention behavior and pro-diversity behavior. We concluded with a general discussion on our research’s implication.

Socialization of Organizational Newcomers

Digital Session Chair: **Han Cheng Chang**, *Guangdong U. of Finance and Economics*

OB: A Theoretical Model of Social Support on Newcomer OCB: The Mediation of Team Cohesiveness

Author: **Han Cheng Chang**, *Guangdong U. of Finance and Economics*
Author: **Jin Feng Uen**, *National Yang Ming Chiao Tung U.*
Author: **Su Cheng Chang**, *Yuanta Securities Co., Ltd*

This study investigated the relationship between social support, team cohesiveness, and newcomer organizational citizenship behavior (OCB) using the flying-geese phenomenon and social learning theory. The authors of this study used a cross-level questionnaire survey to analyze 103 samples from 32 organizations and found social support and team cohesiveness had positive effects on newcomer OCB. Furthermore, team cohesiveness played a mediating role in the relationship between social support and newcomer OCB. This showed that team cohesiveness is a critical mechanism influencing newcomers' behavior in the process of organizational socialization. When employees receive social support, they would show OCB and blend into their organization, which would increase the organization's effectiveness. This study compensated for cross-level verifications of social learning theory and recommended that businesses value their newcomers' OCB to strengthen the effect of team cohesiveness on the socialization process.

Paper is Available to Meeting Registrants Only.

OB: Welcome to Our (Divided) Team: Perceived Subgroups and LMX During Newcomer Socialization

Author: **Laura Elisabeth Creon**, *SRH Berlin U. of Applied Sciences*
Author: **Carsten C. Schermuly**, *SRH Berlin U. of Applied Sciences*

Organizational newcomers' early team and leadership experiences can determine socialization success. Team colleagues and leaders form the first points of contact for newcomers, but research on their role in socialization remains scarce. Based on the social identity approach and signaling theory, we expect perceived subgroups in the team and LMX to predict socialization outcomes (social integration, organizational attractiveness, intentions to remain) and psychological safety to mediate these processes. We conducted a two-wave field study and an experimental vignette study. Results confirmed most hypotheses, indicating that low perceived subgroups and high LMX function as precursors to successful socialization via psychological safety.

Paper is NOT Available. Please contact the author(s).

OB: How Voice and Silence Develop in Newcomers: A Four-Wave Organizational Socialization Perspective

Author: **Tim Alexander Reissner**, *Maastricht U., School of Business & Economics*
Author: **Hannes Guenter**, *Maastricht U.*
Author: **Simon Barend De Jong**, *Maastricht U., School of Business & Economics*

We develop and test a dynamic perspective into the ways in which voice behavior and employee silence develop in organizational newcomers. Unlike prior cross-sectional research, we focus on the differences in changes of voice behavior—distinguishing between promotive and prohibitive voice behavior—and employee silence. We suggest that these changes in employee voice and silence depend on the degree to which organizational newcomers understand and adjust to organizational norms, goals, and values (i.e., organizational socialization). We draw from multiple goal pursuit theory to substantiate our hypotheses which we test on 198 organizational newcomers across four waves of data. Using random coefficient growth models, we find employee voice and silence to develop along relatively independent trajectories and provide partial evidence for the influence of organizational socialization on these changes in newcomer behavior. Implications for theory and practice are discussed.

Paper is Available to Meeting Registrants Only.

OB: Should I Show My Competence? The Influence of Newcomers' Self-promotion on Coworkers after Entering

Author: **Pang Xingyu**, *School of Economics & Management, Tongji U.*
Author: **Mingyun Huai**, *Tongji U.*

When entering a new organization, newcomers need to make good impressions to gain coworkers' support and acceptance. Whether self-promotion, as a widely used impression management strategy, is effective for newcomers when they interacting with coworkers is still unknown. Drawing on social interdependence theory and social influence theory, in this study we examine how newcomers' self-promotion behavior can lead to different reactions (positive or negative) from coworkers when considering the complex interdependent relationships (cooperative and competition) with coworkers. Furthermore, we propose task interdependence to moderate the relationships between newcomers' self-promotion and coworkers' reactions by determining the salience of different types of interdependence between newcomers and coworkers. Results from data of 414 newcomers show that newcomers' self-promotion is positively related to coworkers' admiration and then lead to coworkers' social support. Besides, newcomers' self-promotion is also positively related to coworkers' envy and then lead to social undermining. The positive relationship between self-promotion and coworkers' admiration is stronger when task interdependence is high and the positive relationship between self-promotion and coworkers' envy is stronger when task interdependence is low. These findings illustrate that in different conditions, the effectiveness of newcomer's self-promotion is different, which extends the literature on both organizational socialization and impression management.

Russian and CIS Management Research Caucus

Presenter: **Carl Fey**, *Aalto U. School of Business*
Participant: **Tatiana Andreeva**, *Maynooth U.*

This event is an opportunity for Russian/CIS management research scholars to meet and discuss important Russian/CIS research topics, challenges, opportunities and how Russian management scholars can broaden our sight and deal with dichotomies. This year we will also discuss “Knowledge Management Practices in Russian Companies,” led by Tatiana Andreeva from Maynooth University.

 **CM: About 70% of Participants Know That The Canonical Deception Paradigms Measure Dishonesty** 

Author: **Samuel Skowronek**, *The Wharton School, U. of Pennsylvania*

Four paradigms dominate the study of behavioral ethics: the coin task, the die task, the matrix task, and the sender task. Over 60,000 people have participated in experiments with these paradigms, and results from these studies inform theory and practice. In this article, I challenge the construct validity of these tasks. In Study 1, I show that most participants know that these tasks are designed to measure their ethical decision making. This awareness leads most participants to believe that the experimenter expects and wants them to lie and leads many participants to conceptualize lying in these experiments as an amoral activity. In Studies 2 and 3, I show that participant sophistication significantly correlates with participants' overreporting. In Study 4, I conduct three construct validation tests by running participants through three foundational experiments. I show that sophisticated and unsophisticated participants behave differently in these experiments. Rather than deception, the results from these studies instead measure how participants perceive their relationship with the experimenter.

 **CM: Becoming a Pirate: Leaving the Gig Economy** 

Author: **Michael Maffie**, *Pennsylvania State U.*

How and why do platform workers "quit"? Using data from more than 330 ride-hail drivers, I find that platform companies downplay the costs of working a 'gig', such as asset depreciation and vehicle maintenance, resulting in workers underestimating the true cost of working a "gig." Once workers realize these costs, some exit, yet others have come to rely on gig income to meet their economic needs. In response, I find these workers begin their own "pirate" (illegal) taxi operations to decrease their reliance on platform companies. This article develops both a new category of conflict and response for marketized employment relationships.

 **CM: People Use Prosocial Behavior as a Cue for Intelligence**  

Author: **Polly Kang**, *NUS Business School*

Author: **David P. Daniels**, *NUS Business School*

People often need to judge others' motivation ("Are they prosocial, or selfish?") and ability ("Are they intelligent, or foolish?") under uncertainty. Current theories across the behavioral sciences suggest that actors who cooperate in one-shot interactions will be viewed as less intelligent, and vice-versa. However, we theoretically show that if people think about cooperative interactions using simple mental models – specifically, as one-shot Prisoner's Dilemmas played by actors with prosocial motivations – then the situation can transform into a Stag Hunt coordination game in which cooperation is a sign of intelligence. Thus, our key prediction is that prosocial behavior is a cue for intelligence: actors who cooperate in one-shot interactions will be viewed as more intelligent, and vice-versa. We test our theory across six studies. Consistent with our theory, in surveys of managers and U.S. adults we find that actors who are viewed as more prosocial are actually viewed as more intelligent, and vice-versa (Studies 1–3, 6). Furthermore, in experiments we find that managers are more likely to hire workers for intelligence-based tasks if workers previously cooperated in one-shot interactions (Studies 4–5); this hiring effect vanishes among the relatively small minority of managers who do not believe that cooperation in a one-shot interaction is a sign of intelligence (Study 5). On the other hand, we do not find evidence that people who only engage in other types of prosocial behavior (e.g., altruistic behavior in Dictator Games; cooperation in repeated Prisoner's Dilemmas) are viewed as more intelligent, consistent with our theory's focus on one-shot cooperation, but ruling out a simple "halo effect" account (Studies 5–6). Interestingly, we find that people who previously cooperated in one-shot interactions are not significantly more intelligent in reality (Studies 4–5), suggesting that observers' actions are driven by misperceptions and ruling out rival accounts such as costly signaling theories.

Despite increasing attention to corporate social responsibility (CSR) issues in global value chains (Gond & Moon, 2011), the complicity of multinational corporations in perpetuating global inequities is still on the sidelines in mainstream scholarship and practice (Banerjee, 2014). More recently, gendered inequities across global value chains have begun to be recognised in the CSR literature (e.g. Grosser, 2009; Karam & Jamali, 2013; McCarthy, 2017). However, intersectional voices continue to remain veiled or missing in this discourse (Ozkazanc-Pan, 2018). An intersectional approach to CSR acknowledges that the dominant hegemony erases the experiences of other less-privileged group members (Crenshaw, 1989; Liu, 2017). It enables us to understand GVCs and CSR in a different way, and that the inequalities therein are 'the outcome of intersections of different social locations, power relations and experiences' (Hankivsky, 2014: 1). Further, explorations of CSR in GVC contexts need to investigate not just women and children as oppressed, and men as oppressors, but to explicate the 'multiple sources' of actors' privilege as well as their experiences of discrimination (Crenshaw, 1989; McCarthy, Soundararajan & Taylor, 2019). Privilege and discrimination; and agency and oppression are nested in power structures and present in complex multidimensional experiences (Crenshaw, 1989; Mohanty, 2003).

Digital technologies and online platforms continue to transform the environment within which companies and industries operate. These technologies are reshaping the ground for competition and thereby are impacting the context within which new firms, existing organizations, and the infrastructure for entrepreneurship. On one hand, they offer new opportunities for innovation. However, on the other hand, these technologies increase uncertainty and create new risks. The remarkable scale of the digital transformation is attracting increasing interest in the entrepreneurship research community. More recently, it is being recognized that the digital platform firms, such as, Amazon, Apple, Facebook, Google, and many smaller platforms are integrating entrepreneurs into their ecosystems. In fact, some are arguing that the context for entrepreneurship itself is changing from the traditional one described by Schumpeter to one where the context for entrepreneurship is facilitated, but dependent upon a platform. Today, it is difficult to imagine establishing a new firm without ensuring that its website is found on Google or without advertising on Instagram or some other platform. It is vital that we understand the implications of these changes in context and how a firm expresses its existence for entrepreneurship, business models, and entrepreneurial ecosystem Dynamics. This PDW assembles leading thinkers on these issues and aims to promote an interdisciplinary dialog aimed at highlighting new research directions, exploring effective research designs and methods to better integrate these issues into the ENT, TIM and STR agenda.

Working with COVID-19: How the Pandemic Impacted our Lives

Digital Session Chair: **Ronit Waismel-Manor**, *The Open U. of Israel*

GDO: No Room of Her Own: Gendered-Spatial Analysis of Work-Family Conflict during COVID-19

Author: **Ronit Waismel-Manor**, *The Open U. of Israel*

Author: **Varda Wasserman**, *The Open U. of Israel*

Author: **Orit Shamir Balderman**, *The Max Stern Yezreel Valley College, Israel*

The present study proposes a gendered spatial theoretical perspective for studying the work-family interface of employees working from home during the COVID-19 crisis. Based on interviews with fifteen professional heterosexual couples, working in fulltime jobs, with children under 18 in Israel, we present three gendered spatial strategies employed by the couples in order to meet the challenges of home-working during the first quarantine, when both parents were forced to work from home while simultaneously taking care of their children. First, a gendered division of the space: the domestic space was unequally divided, with men occupying the private, distant, and comfortable parts of the house, while women worked near the children, often in the kitchen or living room, where they had no privacy or quiet. Second, controlling work time: time was unequally divided, with men working during standard work hours with few disruptions from the children, whereas women more often worked afternoons and/or nights, with fewer options to display their visibility and accessibility to work. Third, bodily gendered practices to mark work-family boundaries: the penetration of work into the domestic space has generated a new gendered form of bodily regulation that forced many women (and not men) to use their bodily appearance as an aesthetic disciplining dictate, as means to separate the private from the public sphere, and as a way to defy the organizational invasion to the private home. The findings show that these gendered strategies are reproducing the gendered division of labor and inequality between partners.

GDO: Employee resource groups: Examining a viable and valuable crisis response structure

Author: **Theresa M. Welbourne**, *U. of Alabama*

Author: **Seth Butler**, *The U. of Alabama*

Author: **Ashton Royal**, *The U. of Alabama*

Although employee resource groups (ERGs) have existed since the early 1960s, little empirical research has been conducted on them. Most of the knowledge comes from case studies that focus on individual ERGs with less work conducted on the reasons ERGs come into existence, optimal ERG structures, how they develop as teams, the growth paths of ERGs, leadership roles and how they adapt to help members and stakeholders, including during crisis situations. In this paper we explore the potential of the grass-roots programs known as ERGs to respond to crisis. Given that the pre-cursor to today's ERGs was the first black caucus in Rochester, NY, that was born out of a crisis (the first race riot in the USA), it should not be surprising that their evolutionary form of today, ERGs, have been actively responding to COVID-19s. In order to understand why ERGs may be particularly suited to respond to crisis situations, we explore the topic of ERG structure and conduct two different studies gathering data on ways ERGs are responding to COVID-19. This work suggests that evolving ERG structures that fit the description of parallel organizations, have high potential to take on big challenges and crisis situations, particularly when taking on an intersectional perspective.

GDO: Words as a conveyor of internal strife: Tales from working mothers during COVID-19

Author: **Christina Hymer**, *Darla Moore School of Business, U. of South Carolina*

Author: **Caitlin Ray**, *Darla Moore School of Business, U. of South Carolina*

Author: **Sherry M. B. Thatcher**, *U. of South Carolina*

This study acknowledges the tremendous demands that the COVID-19 pandemic has placed on working mothers and its impact on their careers. In Study 1, we examine the phenomenon of cross-domain identity threat, which occurs when an identity-relevant event (here, COVID-19) simultaneously threatens the cross-domain identities of working mothers (worker identity, mother identity). We anticipate that working mothers experiencing cross-domain identity threat report higher levels of emotional exhaustion and lower levels of career optimism. We test these hypotheses with a sample of working mothers obtained from the social media site, Reddit. In Study 2, we examine the relationship between the negativity of working mothers' identity narratives expressed over the course of COVID-19 on Reddit and a planned job behavior – intent to leave the workforce. We find support for our hypotheses. Our study contributes to the identity literature by conceptually and empirically extending research on identity threat and identity narratives.

GDO: Mom Guilt, Work family Conflict, and cognitive dissonance during the COVID-19 pandemic

Author: **Matthew Aplin-Houtz**, *U. of Missouri -St. Louis*

Author: **Bahareh Javadizadeh**, *Indiana State U.*

Author: **Audrey Churchill**, *Indiana State U.*

In this study, we explored how the Covid-19 pandemic affected women via changes in organizational justice perspectives, amplification of work-family conflict (WFC) from additional responsibilities such as managing remote learning, and conflicts of identity for the traditional roles of working mothers. Our data revealed the lack of structure traditionally found in the physical office setting twinned with increased family-work conflict (FWC) dramatically changed our participants' view of home and work. Additionally, our data revealed that our participants' identities for their mother and worker roles also shifted due to the Covid-19 pandemic. Our findings show the necessary implications of boundaries for working mothers and how those boundaries establish fairness for both home and work settings and impact the identity of working mothers.

Diversity Management and Outcomes

Digital Session Chair: **Sanjana Singh**, *Utrecht U.*

GDO: Are Organizational Gender Diversity Management Practices Effective?

Author: **Sanjana Singh**, *Utrecht U.*
Author: **Eva Jaspers**, *Utrecht U.*
Author: **Tanja Van Der Lippe**, *Utrecht U.*

While organizations use gender diversity management (GDM) to promote women's participation, it can have negative unintended consequences for their integration. However, integration is seldom accounted in GDM evaluations as it traditionally focused just on women's representation. We develop a novel network-based measure of gender diversity which accounts for both representation and integration in a team. Specifically, we evaluate the relative effectiveness of different approaches to GDM using both, the traditional and the new gender diversity measures. This is analyzed using Bayesian Informative hypothesis evaluation of network information from 401 teams across nine countries and six sectors. We find GDM practices to largely be ineffective. This could follow from current efforts being misguided by traditional measures to focus on representation at the cost of integration. In fact we found the traditional measure to inflate the effectiveness of practices, as compared to the new measure. Our findings suggest that policymakers must consider integration along with the representation of women to understand the net effectiveness of GDM.

Paper is Available to Meeting Registrants Only.

GDO: Detrimental Effects of the "Business Case for Diversity" for Underrepresented Groups' Belonging

Author: **Oriane Georgeac**, *Yale School of Management*

Many organizations provide explanations for why diversity matters. How do these affect underrepresented groups? I investigated the content, prevalence, and consequences of two organizational justifications: the "business case" (BC), which claims diversity is valuable for its performance benefits, and the "fairness case" (FC), which justifies diversity based on morality. Using an algorithmic classification, Study 1 (N=410) found the BC is more prevalent (80%) than the FC (1%) among the Fortune 500. Extending social identity threat theories, I theorized that the BC undermines underrepresented groups' anticipated belonging to, and thus interest in joining, organizations – an effect driven by threat. Study 2 (N=151) found that LGBTQ+ professionals randomly assigned to read an organization's BC (vs. FC) anticipated lower belonging, and in turn, less attraction to it. Study 3 (N=371) showed that the same effects emerge among women (but not men) STEM job seekers. Study 4 (N=509) documented the process of social identity threat (over and above alternative mechanisms) among STEM women. Study 5 (N=480) found that the BC (vs. FC and control) thwarts African Americans' anticipated belonging through similar processes. These findings suggest that the most prevalent organizational justification for diversity functions as a threatening cue that paradoxically hinders organizations' diversity goals.

Paper is Available to Meeting Registrants Only.

GDO: How Incentive Compensation can Persuade Managers to Foster Gender Diversity in their Organization?

Author: **Denis Monneuse**, *UQAM U. of Quebec in Montreal, Canada*

The diversity management literature underscores the critical role played by managers. However, the determinants of their commitment to diversity management have been overlooked so far. This paper aims to contribute to closing this gap. It reports a 4-year ethnography in "BeBank" the main subsidiary (6,000 employees) of a European retail bank which implemented a new reward system: 10% of senior managers' incentive compensation depended on their actions in favor or gender diversity. BeBank succeeded in dramatically advancing women's careers after the implementation of this incentive plan. This paper focuses on the mechanisms explaining how incentive compensation can persuade managers to foster gender diversity. This paper contributes to closing the research-practice gap by providing insight into how to persuade managers to reduce gender inequality. It also extends the theory of inequality remediation in the workplace and contributes to integrating change management and the attention-based view of the firm in the diversity management literature.

GDO: Can Training Help Break the Silence? Understanding Target Reporting of Workplace Sexual Misconduct

Author: **Chelsie Josephine Smith**, *Sprott School of Business, Carleton U.*
Author: **Kathryne Dupre**, *Carleton U.*

Encouraging employees to report workplace sexual misconduct is becoming more prevalent, yet the success of these efforts remains poorly understood. In the current study, we examined the predictors of sexual misconduct reporting within an organization that is actively providing training on sexual misconduct policies and resources and encouraging employees to report sexual misconduct experiences they endure. Within a sample of 3,230 gender harassment, 890 sexual advance harassment, and 570 sexual assault incidents, we examined the extent to which factors related to this organizational intervention (i.e., knowledge of sexual misconduct policies and resources, satisfaction with training, and perceptions of organizational intolerance of sexual misconduct) predicted targets' reporting of sexual misconduct over and above demographic factors (e.g., sex, race, tenure) and incident details (e.g., relative perpetrator power). We found that predictors of target reporting varied based on the type of sexual misconduct incident and that training most strongly benefitted target reporting in cases of gender harassment incidents. Though the directionality of certain demographic and incident characteristic predictors (e.g., target sex, perpetrator power) aligned with our hypotheses, others including target race and perceptions of organizational intolerance for sexual misconduct, did not. These unexpected findings incite a nuanced discussion of implications pertaining to target voice subsequent to sexual misconduct that is relevant to researchers and practitioners alike.

The proposed Professional Development Workshop (PDW) seeks to illuminate how scholars and managers can propel organizations toward an antiracist climate by amplifying the research and voices of scholars of color. Antiracism has been recently defined as “a continuous, reflexive practice of proactively interrogating Whiteness from an intersectionality framework, leveraging one’s position of power and privilege, and courageously interrupting the status quo” (Erskine & Bilimoria, 2019: 1). Specifically, this PDW will challenge the way scholars and managers think about, discuss, and address antiracist allyship in the workplace and how they can personally leverage privilege to disrupt the systems of inequality in their own scholarship. Considering our sponsorship by The PhD Project’s Management Doctoral Student Association, we propose that we are the organization and PDW proposal best equipped to facilitate this timely and impactful conversation on antiracist allyship.

To help us make this PDW a meaningful experience for you, and to keep the conversation going beyond this virtual conference space, we would encourage (but we do NOT require) you to fill out the form here: https://bit.ly/aom2021_antiracist_allyship. All of the questions are optional. Your answers will be shared with our panelists.

Corporate Social Responsibility

Digital Session Chair: **Shubham Singh**, *ESSEC Business School*

The papers in this session examine various aspects of Corporate Social Responsibility as they related to international management. The first paper examines the impact of business group affiliation on CSR. The second paper looks a cross-sector partnerships and their impact on perceived social risks. The third paper examines how emerging market MNEs manipulate their CSR practices as a response to institutional complexity when undertaking cross-border acquisitions. The final paper then offers an institutional complexity framework which it uses to better understand the mechanisms that disincentivize MNE irresponsibility.

IM: In the Same Boat Towards Social Impact: Business Group Affiliates' CSR

Author: **Yannick Wiessner**, *Erasmus U. Rotterdam*
Author: **Brian Pinkham**, *Erasmus U. Rotterdam*

Business groups (BGs) are fundamental drivers of economic activity and growth in many countries. However, research on the financial performance of groups and affiliates dominates the field. The socio-environmental impact of BGs, beyond externalities of their financial performance and economic impact, has widely been overlooked. This paper contributes by considering the impact of BG affiliation on one form of affiliates' non-financial performance; specifically on corporate social responsibility (CSR). We argue that a firm's BG affiliation increases member firms' engagement in behaviors and strategies that potentially lead to improved socio-environmental impact through a social embeddedness mechanism. Central to this mechanism are the links between the collective, i.e. group-level of a BG, and the individual affiliates' goals and behavior. Individual firms within a BG may have their behaviors shaped by different pressures and incentives – leading to variation in compliance and shirking depending on the level of affiliation. This effect is expected to fade the more peripheral the focal organization is within the BG in a structural sense. However, once the BG network transcends national borders, the effect of being too decoupled from the BG network might again incentivize more CSR from a focal affiliate. We test our hypotheses drawing on a unique dataset of approximately 7,000 firms across 46 countries over 10 years. Owing to the comprehensive nature of our dataset, we also control for country-level institutions beyond company-level financial aspects.

IM: Window dressing or enduring commitment: CSR as a strategic tool in cross-border acquisitions

Author: **Xiaoying Li**, *Keele U.*
Author: **Qihai Huang**, *Huddersfield Business School, U. of Huddersfield, UK*
Author: **Guowei Cai**, *Sun Yat-Sen U. Business School*

Emerging market multinational enterprises (EM-MNEs) face the challenge of liability of foreignness and legitimacy in their internationalisation. This article examines how EM-MNEs manipulate their corporate social responsibility (CSR) practices as a response to institutional complexity when undertaking cross-border acquisitions. Drawing on institutional theory and strategic view of CSR, we propose a dynamic relationship between different stages of acquisition development and CSR performance. Such a relationship is contingent on different ownership and institutional conditions. Using data collected from different sources on Chinese firms listed on Shanghai or Shenzhen Stock Exchange from 2008 to 2017, we test our hypotheses and made several important theoretical contributions and managerial implications.

Paper is NOT Available. Please contact the author(s).

IM: Cross-sector partnerships and perceived social risks

Author: **Anthony Goerzen**, *Queen's U.*
Author: **Luke Fiske**, *Queen's School of Business, Canada*

The United Nations' Sustainable Development Goal (SDG) 17 encourages global partnerships for sustainable development, of which cross-sector partnerships (CSPs) are a particularly important mechanism. Yet, a good amount of evidence is emerging that CSPs fail to match their objectives and often fall into inactivity. In this paper, we argue for a new conceptualization of why partners form CSPs that illuminates these common failings and suggests ways to overcome them. We put the question of the partners' perceived social risks at the center of CSP formation and suggest CSPs emerge primarily as a social risk mitigation practice. Using semi-structured interviews to explore how partners understand social risk, we catalogue how multi-national corporations (MNCs), governments, non-governmental organizations (NGOs) and others perceive the likelihood and consequences of social risks. Our analysis, grounded in convention theory (CT), identifies six perceived social risks and three overarching mitigation practices. Our contribution is broadly to the CSP literature as well as to an emerging stream that focuses on social risk.

IM: MNE Irresponsibility and its Disincentives: An Institutional Complexity Approach

Author: **Irina Minodora Surdu**, *Warwick Business School*
Author: **Giulio Nardella**, *Loughborough U., School of Business and Economics*

Abstract Purpose – This paper puts forward a definition of corporate social irresponsibility (CSI) which is relevant to the study of the multinational enterprise (MNE). We then offer an institutional complexity framework through which to understand the mechanisms that disincentivize MNE irresponsibility.
Design/methodology/approach – In presenting the approaches taken by social regulation researchers as well as international business policy scholars to understand CSI, we propose a definition of CSI and explicate the various disincentives associated with MNE irresponsibility. Originality/value – We recognize that a primary hurdle to the advancement of international management research concerning MNE irresponsibility has been a lack of a precise definition of CSI. MNEs manage complex global operations and supply chains, situated within diverse institutional environments, with often competing stakeholder perceptions, pressures, and demands. Should MNEs be identified as having behaved irresponsibly, they may experience pressure by formal institutional mechanisms led by regulatory bodies and policymakers, as well as by informal social regulatory mechanisms, where deterioration in stakeholder perceptions may, among other performance deficits, lead to damages in MNE reputation. We offer a definition of CSI that is sufficiently nuanced to capture the complexity of the contemporary MNE context, as well as a framework that presents a clearer understanding of the institutional mechanisms that may disincentivize MNE irresponsibility. By examining the institutional complexity of MNE irresponsibility, our framework offers a bridge connecting the international business policy and social regulation research streams.

Signaling theorists have paid abundant attention to the signalers and the quality of signals. However, limited research has been dedicated to the signaling environment and the question of how receivers may interpret the same signal in different institutional environments. We examine the effect of cultural contexts, as part of an institutional environment, on corporate (unsystematic) risk resultant from firms' signals on Environmental, Social, and Governance (ESG) scope. We define ESG scope as the extent to which the focal firm performs evenly in all ESG dimensions (broad scope) or selectively focuses on a few (narrow scope). Drawing on signalling theory, we argue that the incongruence between ESG scope and stakeholders' cultural values can create signaling noise, which can lead to receivers having differing perceptions of ESG signals. We gauge how such noise affects corporate risk. Using a sample of 1,543 firms in 35 countries in a multilevel linear modeling design throughout 16 years (2002–2017) and drawing on GLOBE data, we find empirical support for our argument. Our study contributes to signalling theory by incorporating the cultural environment into the signaling framework.

IM: Relief of Disclosure in Soft Regulation: Selective Inaction as Risk Aversion in Multiplicity

Author: **Xie Nina**, *Chinese U. of Hong Kong*

This paper focuses on an organization's resistance behavior against conformity in two major contextual topics -- diffusion of global norms, and multiplicity of institutional complexity affecting cross-listing firms. We integrate institutional theory with research on the behavioral agency model to illustrate how firms' "selective inactions" effectuate resistance to the normative procedures. Where the firm is capable of but not willing to conform, we examine the substantive corporate governance quality as the basis of the firm's likelihood to conform. However, cross-listing firms may be substantially structured which following recommended corporate governance codes; the attention based selective inaction might be a result of comparison between environment. We test our argument with a sample of internal control includes 1,340 firms listed in China from 2007 to 2010. In addition by examining corporate capital structures, we found that the a higher ratio of shares trading in the foreign market, associates with managers' risk aversion behavior, further discouraging internal control reporting at firms' home exchange.

IM: All but impossible? Sustainability in extractive industry located in unstable institutional context  

Author: **Pablo Leao**, *FGV EAESP Sao Paulo School of Business Administration*

Author: **Larissa Marchiori Pacheco**, *Northeastern U.*

Author: **Maria Tereza Leme Fleury**, *Fundacao Getulio Vargas*

This article draws on stakeholder theory and neo-institutional theory to analyze how relevant stakeholders from different levels (local and global) pressure companies to adopt sustainable practices in an industry with significant environmental and social impacts. A multiple case study with four multinational companies (MNEs) in the pulp and paper sector in Brazil yields results that indicate that stakeholders reinforce each other demands. We found that government and industry associations take over the roles as moderators, while NGOs translate demands from global to local level. Additionally, we found that companies will also advocate in favor of sustainable practices in an institutional context where environmental policies are being dragged to a level below the one already adopted by them. Our contribution is twofold: we expand the knowledge regarding the role of stakeholders in pushing sustainability agendas, and we present empirical evidence on how firms from an institutional unstable context relate to demands from several stakeholders at the local and global levels.

IM: The Heterogeneous Impact of Gender Diversity on Technological Evolution  

Author: **ZEYNEP YAVIC**, *The Ohio State U. Fisher College of Business*

Author: **Rafael Corredoira**, *The Ohio State U. Fisher College of Business*

Author: **Mona V Makhija**, *Ohio State U.*

This study examines how gender diversity affects innovation outcomes and how countries' formal and informal institutional context impacts this relationship. We argue that societies' written and unwritten rules determine the extent of cognitive differences between men and women and lead to greater diversity in their perspectives and knowledge, particularly in societies where traditional gender role attitudes are dominant. Such increased disparity results in greater returns from gender diverse teams in countries where gender equality is relatively less emphasized by their institutions. Data from the United States Patent and Trademark Office (USPTO), World Bank's survey on Women, Business and the Law, and GLOBE cultural practice survey allow an inclusive and generalizable conceptualization of the impact of gender diversity on innovation. The findings indicate that increased gender diversity results in better innovation outcomes, and institutional context moderates this relationship. These findings suggest that it is necessary to consider institutional structures related to gender role attitudes in order to understand the impact of gender diversity on the technological influence of inventions.

MH: **Globalization from Below: Labor Inequality in the German Shipbuilding Industry, 1960-2000**   

Author: **Katharina Bothe**, *German Maritime Museum - Leibniz Institute for Maritime History*

Author: **Carolin Decker-Lange**, *The Open U. Business School*

Journal of Management History Award for Best International Paper

This study examines how globalization affected employment changes in the German shipbuilding industry in the second half of the 20th century. Over four decades, as a response to global competition originally large and labor-intensive shipyards in the northwest of Germany evolved into lean and nimble high-technology companies. Our findings based on 28 oral history interviews with former staff of two leading shipyards show that this large-scale industry transformation is a hitherto hidden history of labor mobility, migration and evolving dimensions of diversity in the workplace. Allowing for a look at globalization from below, the narrations reveal structural and subjective implications on workforce hierarchies and on different workers' roles and positions. We identify five patterns of social exclusion and inequality between and within groups of workers with and without migrant backgrounds that have not been documented before.

MH: **Integrating Historical Research into International Business: Towards an eventful temporality** 

Author: **Stephanie Decker**, *Department of Management, U. of Bristol, UK*

Historical research is inherently temporal, highly contextualised and offers important insights to IB scholars. These accounts demonstrate eventful temporality in that they are contingent, complex and causally heterogeneous. We outline a framework for historical research in IB that focuses on 1) embedding theory to make historical accounts more relevant to IB scholars, 2) configuring such narratives as sequential, multi-level and contextual, and 3) generalising insights as contributions to theory. We end by reflecting on the potential for theoretical contributions through the integration of more historical research on international phenomena.

Paper is Available to Meeting Registrants Only.

MH: **Institutional Legacy and Community Enterprise Development**

Author: **Helen Haugh**, *U. of Cambridge*

The history of land ownership in Scotland is one of political struggle between commercial landlordism and Dùthcas - the hereditary, indissoluble and inalienable right of people and communities to the land on which they live and work in common. This paper examines the cases of two community enterprises established to buy and commit land that was formerly privately-owned into community ownership, and then manage the estates for community benefit. The methodology employs archival, observation and interview data to consider how the institutional legacy of landlordism impacts community enterprise development. By situating community entrepreneurship in the Scottish historical context, the research demonstrates the influence of institutional legacies on community enterprise development and entrepreneurial plurality.

Presenter: **Kathy Lund Dean**, *Gustavus Adolphus College*

Cognition is a central concern in organizations, and courses in management (e.g., entrepreneurship, strategy, and organizational behavior) repeatedly deal with topics that involve understanding the cognition of individuals and groups. A challenge for instructors is to find exercises, activities, and methods for teaching in ways that students can better appreciate the challenges of cognition “in the rough” (i.e., situated, in real-time, influenced by organizational politics and time constraints, and emotions among other contextual influences). The purpose of this PDW is to bring together expert instructors to share classroom-tested experiential exercises, activities, and lesson plans for teaching about cognition in the rough. The PDW will proceed in a “round-robin” workshop format, whereby participants will have the opportunity to rotate to three different breakout rooms in which expert instructors provide interactive, 20-minute explanations/demonstrations of their exercise/activity/lesson. Thus, participants will have the opportunity to take home three unique activities or instructional ideas that they can use in their own classes.

What Makes Me Want to Quit?

Digital Session Chair: **Shinhee Jeong**, *Louisiana State U.*

OB: **Is Turnover Intention Static or Dynamic?**

Author: **Shinhee Jeong**, *Louisiana State U.*
Author: **Yunsoo Lee**, *Hanyang U.*

The purpose of the present study is to identify the growth trajectories of employees' turnover intention using growth mixture modeling. We utilized work, family, and health study (WFHS) data consisting of repeatedly measured data of employees from an extended-care company (n = 799). We identified three profiles (i.e., Low-flat profile, Steadily increasing profile, and High-flat profile) that exhibit distinct patterns of change. Using multinomial logistic analysis, this study also investigates the associations between the identified profiles and inter-role conflict (i.e., work-life conflict and life-work conflict), psychological workplace strain (i.e., perceived stress and emotional exhaustion), and socio-demographic characteristics (i.e., gender, age, tenure, and education). Finally, we also examined mean differences in those variables among the three profiles. Based on these results, we suggest theoretical and practical implications related to turnover intention.

Paper is Available to Meeting Registrants Only.

OB: **Taking a differentiated perspective of age in the workplace**

Author: **Sabine Katzdobler**, *Bundeswehr U. Munich*
Author: **Sonja Sackmann**, *U. Bundeswehr, Munich*

Ageism against older employees is prevalent in the IT-industry, increasing the risk of older IT-employees' turnover intention. To contribute to a more differentiated perspective of age, we provide the first empirical test of the recently developed GATE framework (North, 2019) that disentangles generation, age, tenure and work experience. This study uses longitudinal data from the Socioeconomic Panel. We test hypotheses about the effects of the GATE-variables on the probability of older IT-workers' intention to quit (ITQ) involving the within-between random effects approach. The results suggest that the GATE-framework partly provides added value. Whereas there is partial support that tenure is important for reducing ITQ, chronological variables (age and generational difference) were not found to be relevant. The respective influence of age and work experience on ITQ examined with cross-sectional data was not related in the within-person model. The theoretical and practical implications of the GATE-framework are discussed. This study makes three contributions: First, it provides some support for a more differentiated view of age in the workplace. Second, it informs the turnover research by addressing age-related predictors for reducing ITQ. Third, the benefits of long-tenured employees' human capital are highlighted by focusing on the tenure-ITQ relationship in the IT-sector.

OB: **The Dark and Bright Side of News Consumption for Employees: A Conservation of Resources Perspective**

Author: **Teng Iat Loi**, *Washington State U.*
Author: **Leah Sheppard**, *Washington State U.*
Author: **Kristine Kuhn**, *Washington State U.*

Although news consumption is a daily habit for many, little is known about its effects on employee outcomes. We draw from conservation of resources theory to develop an integrative model that simultaneously examines the beneficial and detrimental consequences of news consumption for employees. We conducted a 15-day experience sampling study to test our model. Results show that although news consumption is positively associated with news-to-work interference, it can also increase news-to-work enrichment. News-to-work interference and enrichment, in turn, exert different effects on employee withdrawal behavior and work goal progress. Moreover, employees' trait construal level buffers the relationship between news consumption and news-to-work interference, and job relevance strengthens the relationship between news consumption and news-to-work enrichment. Taken together, our research enhances our theoretical understanding of news consumption, highlighting that daily news consumption can yield both positive and negative outcomes for employees.

OB: **The Effect of Gender and Racial Diversity on Collective Turnover**

Author: **Gary Chapman**, *De Montfort U.*
Author: **Shukhrat Nasirov**, *De Montfort U.*

We draw on insights from the social identity theory to answer two important questions: does gender and racial diversity influence collective employee turnover in organizations? If so, can an organization's experience with a pro-diversity climate attenuate these relationships? Drawing on the U.K. higher education sector as the empirical context, we demonstrate that greater gender and racial diversity has a positive association with collective turnover. At the same time, more experience with pro-gender diversity practices moderates this association so that this experience reduces collective turnover due to gender diversity in more gender-diverse organizations, while its effect is found to be opposite in less gender-diverse organizations. We detect no similar effect for an organization's experience with pro-racial diversity practices.

Presenter: **Arik Cheshin**, *U. of Haifa*
Presenter: **Florencio F. Portocarrero**, *U. of California, Irvine*

In this symposium, we present five studies that examine the ways in which emotions simultaneously influence and are influenced by interactions at work. Our presenters use content-coding, experience-sampling, field and online experimental research methods, and rely on various organizational and emotion theories, to examine the joint influence of emotions and interactions on each other and on outcomes. Specifically, our presenters highlight how: (1) emotions influence employees' interactions with others and (2) others' interactions with the employee; (3) how interactions influence employees' emotions, which (4) can be regulated in ways that influence subsequent interactions; and (5) how emotions shape employees' interactions with their organizations and communities. In addition to the contributions to theory development, our presenters offer practical implications for managers to better understand the relationship between workplace interactions and emotions. Dr. Shane Connelly will discuss and integrate the findings presented and offer additional insight into the understanding of the relationship between emotions and interactions at work and beyond.

Algorithms: Who's in control?

Digital Session Chair: **Lydia Qianqian Li**, *Shanghai U.*

OCIS: (Not) Seeing Like an Algorithm: Managerial Control and Worker Resistance in the Platform Economy

Author: **Lindsey Cameron**, *The Wharton School, U. of Pennsylvania*
Author: **Hatim A. Rahman**, *Northwestern Kellogg School of Management*

How has the relationship between control and resistance changed as organizations increasingly use algorithms to manage workers? Drawing on workers' experiences from a comparative ethnography of two of the largest platform organizations, we found that platforms' use of algorithms to control workers made worker outcomes more visible, but worker activities leading to those outcomes were difficult for the algorithm to observe. Specifically, we found workers devised covert resistance tactics to manipulate the platforms' algorithmic rating systems in order to maintain high ratings and receive access to future work opportunities. We also found that, compared to customers, workers had greater knowledge of how the platforms' algorithms worked, and used this expertise to manipulate customers when employing covert resistance tactics. More broadly, our findings reveal that visibility asymmetry - a form of information asymmetry that highlights how organizations and workers have differing observations into the labor process - provides an important lens through which to examine the relationship between control and resistance. We further discuss how visibility asymmetries are based on an organization's control system and the way work is configured. Taken together, our findings extend prior theories of control and resistance by characterizing the role of visibility asymmetry and demonstrating how these asymmetries transform visibility into a strategic engine of workers' resistance.

OCIS: How information asymmetry influences platform-complementor relationship continuance

Author: **Chenchen Weng**, *U. of Nottingham, China*
Author: **Martin J Liu**, *U. of Nottingham, China*
Author: **Jun Luo**, *U. of Nottingham, China*

Platform owners adopt preferential treatment strategy to garner heterogeneous values. Complementors who do not receive preferential treatment get the short end of the stick. An interesting phenomenon is although certain complementors receive unfavorable treatments, they still choose to stay on the platform. To sustain disadvantaged complementors and maximize the overall ecosystem value, platform owner leverages information asymmetry in the preferential treatment governance. However, we have limited understandings regarding how information asymmetry influences platform-complementor relationship continuance. Drawing on the interviews with platform and complementors, our study identifies a process model that explains how information asymmetry influences disadvantaged complementor's relationship continuance. This study highlights the role of algorithm in producing information asymmetry and identifies two levels of information asymmetry: the governance level between platform and complementor and the relational level between different complementors. We also find that information asymmetry produces two distinct sensemaking routes—a passive attitude via sensemaking route and a meaning-restructuring route via sensebreaking, that enables complementors to maintain relationships.

OCIS: Developing Human Trust in Automated Systems: The Central Role of Personal Control

Author: **Chris Long**, *St. John's U., New York*
Author: **Elizabeth Niedbala**, *United States Army Aeromedical Research Laboratory*
Author: **Amanda Kelley**, *United States Army Aeromedical Research Laboratory*

In this article, we build from previous research on the antecedents of trust in human and non-human relationships to identify and classify four primary components of autonomous system trustworthiness (superior capability, reliable credibility, accessible customization, communicated consideration). Using these components, we develop a theory outlining the psychological processes that lead individuals to trust autonomous systems. A primary contribution of our theory is that we demonstrate how an individual's perceptions of personal control influences the development of human trust in an autonomous system. We argue that the extent to which a technology increases an individual's sense of personal control on key dimensions (i.e., control over one's task environment and control over a given technology) determines the extent to which an individual will trust a given autonomous system. The paper concludes with a discussion of how the theory we outline here advances research on human-machine interaction and trust in autonomous systems.

OMT: **Producing Masks Amid COVID-19? How A Pandemic Imprint Affects Firm's New Medical Production**  

Author: **Yang Liu**, *Cornell SC Johnson College of Business*
Author: **Christopher Marquis**, *Cornell U.*

Finalist for OMT Division Best Paper on Environmental and Social Practices Award

We examine how corporate leaders' prior pandemic experience influences their response to a later and similar pandemic. Drawing on imprinting theory, we argue that corporate leaders that experienced Severe Acute Respiratory Syndrome (SARS) are more likely to be aware of the severity of a new and similar infectious disease (i.e., COVID-19) and so are quicker to respond to COVID-19 by producing personal protective equipment (PPE). We theorize that this imprinting effect can vary in intensity and so the effect of the pandemic imprint is stronger if the corporate leader experienced the SARS during a more susceptible life stage (i.e., early adulthood). Furthermore, a series of environment-triggered processes will also shape the imprinting intensity. Specifically, population mobility from the epicenter and local COVID-19 spread tend to strengthen the effect of a SARS imprint, whereas local quarantine rate and the abundance of local medical resources likely weaken the effect of a SARS imprint. Using a large sample of publicly traded firms in China, we find evidence that mostly supports our theory. Our study contributes to imprinting theory by highlighting how imprinting intensity can vary depending on individual-level susceptibility and environment-level triggered processes. We also contribute to literature on organizational responses to public crises and provide fresh insights on corporate diversification decisions.

Paper is NOT Available. Please contact the author(s).

OMT: **Imprinting, Organizational Incentives, and Politician Behaviors Towards FDI in China** 

Author: **Tao Wu**, *National U. of Singapore*
Author: **Yanbo Wang**, *National U. of Singapore*
Author: **Andrew Delios**, *National U. of Singapore*

By embedding individuals in incentive frames of organizations, we theorize how organizational incentives serve as an "iron cage" to weaken the momentum of imprints in sustaining specific behavioral patterns. We test our theory in the context of the city-level bureaucratic system in China using a longitudinal dataset of city-official pairs from 1994 to 2009. We investigate how the extent of manifestation of imprints – the impact of exposure to the history of the Second Sino-Japanese War on actions against FDI entries by Japanese firms – varies between the party secretary and the mayor of a city. Leveraging the asymmetry of incentive schemes in economic domain between these top two officials, we found that party secretaries – whose hometown was a major battlefield (strongly imprinted) – are more likely to block entries by Japanese firms compared to those whose hometown was not a major battlefield (weakly imprinted). However, this blocking effect is not significant for mayors although both can substantially affect the decisions as to FDI introduction under a dual leadership system in China. Our study extends current literature on imprinting and provides an incentive perspective to explaining the variation in manifestation of imprints.

Paper is Available to Meeting Registrants Only.

OMT: **Making Sense of Organizational Imprints** 

Author: **Matthew CB Lyle**, *U. of Colorado, Colorado Springs*
Author: **Ian Walsh**, *Bentley U.*
Author: **Bogdan Prokopovych**, *U. of Massachusetts, Amherst*

Scholars have explained the maintenance of organizational imprints largely in terms of institutional forces, with little attention given to the potentially formative influence of the individuals who enact imprints in a context. Drawing on a field study of a home healthcare agency, we develop theory that explains how organization members reinterpret and sustain organizational imprints over time. We demonstrate how newcomers' encounters with imprints during socialization experiences spur sensemaking processes through which they express, revise and endorse the shared meanings of imprints. We close with a discussion of the implications of our work for scholars investigating imprinting, sensemaking, and other social processes in organizational contexts.

Paper is Available to Meeting Registrants Only.

OMT: **Organizational Memory Refinement and Framework**

Author: **Heloisa Aragao**, *U. of Texas At Arlington*
Author: **Liliana Pérez-Nordtvedt**, *U. of Texas At Arlington*

In this study, after a bibliometric analysis and an in-depth review of the literature, we propose a refined and more precise conceptualization of organizational memory (OM) and a framework to guide its research. Specifically, we argue that OM consists of the pool of past organizational experiences - transformed collectively over time through three interrelated processes - retention, distribution, and retrieval – that is brought to bear in present situations. In addition, we suggest that OM's main functions are the interpretation of new experiences, and the present guidance of organizational member's behavior and organizational action. Further, we discuss how the origins of OM are grounded on imprinting processes at founding, and how its continuous development is the result of experiential learning. Importantly, given the apparent overlap between OM and absorptive capacity (AC), two important constructs for organizational learning, we distinguish between them and suggest how these two constructs fit in the nomological network. Our study provides a better understanding of the OM construct, setting OM's boundaries and allowing for research in this area to advance further.

Discussant: **Nelson J. Phillips**, *UC Santa Barbara*
Discussant: **Trish Reay**, *U. of Alberta*
Discussant: **Marc-David Seidel**, *U. of British Columbia*

Like every year, the OMT Dissertation Proposal Workshop is a chance for students at the pre-proposal stage to draw on the wisdom and expertise of a group of established OMT scholars to develop a defensible dissertation proposal. Classes and preliminary exams usually have clear structures and guidelines, but we often get little sense of how to turn our vague good ideas into dissertation proposals that will intrigue potential committee members, pass a defense, and grow into a high-quality dissertation. This workshop aims to address this gap by improving the focus and framing of research questions, identifying and addressing methodological issues, and/or constructively critiquing conceptual foundations. As well as these important content issues, discussions may also address process issues like managing your dissertation committee, and completing the dissertation. Also in the virtual format, the workshop will start with a short panel and continue with roundtable discussions between faculty mentors and doctoral students working on dissertation proposals in the panelist's area of expertise.

This session is Invite Only. For all questions, please contact renate.meyer@wu.ac.at

Presenter: **Ana M. Aranda**, *Catolica Lisbon School of Business and Economics*
Discussant: **Joseph Porac**, *New York U.*

In organization theory and strategy, the study of culture, institutions, and cognition has been an active research space (Kaplan, 2011). Work in the area has attempted to capture collective representations and shared (institutional) meanings in the content of texts. Notably, scholars have approached this challenge from multiple perspectives, attempting to map patterns of words in groups, populations, and fields (Carley, 2002; Huff, 1990; Kennedy, 2008; Porac et al., 1995). The extent to which meanings have been effectively captured has been a deep perennial issue. With the increased availability of digital text data and adoption of methods from computational linguistics, techniques for measuring meanings have begun to infiltrate strategy and organizational research on a larger scale, once again intensifying the concerns capturing meaning (Hannigan et al., 2019; Evans & Aceves, 2016). In this symposium, we examine two leading approaches that are seemingly bifurcating: word embedding methods and topic modeling rendering methods. We invite a group of scholars in management with expertise doing cutting edge work across both approaches do engage in discussion. Our primary goal is to use these two approaches to explore whether this increased sophistication adds value to organization and strategy research above and beyond the existing methods in the field?

We will try to run an open forum type symposium, using panels, discussion and question periods. We may take advantage of breakout rooms, depending on the timing. We ask that participants without much background in computational text analysis approaches to examine some of the posts for the session at <https://www.interpretedatascience.com/>. Once on that page, you will be steered to specific materials and useful links for the session, including the IDEaS GitHub. Best, Dev Jennings & Tim Hannigan /Symposium Co-Organizers

Decolonizing and Rethorizing Sustainability

Digital Session Chair: **Bobby Banerjee**, *Bayes Business School (formerly Cass)*

ONE: Decolonizing Organization Theory in the Age of the Anthropocene and Gaia

Author: **Bobby Banerjee**, *Bayes Business School (formerly Cass)*
Author: **Diane-Laure Arjalies**, *Ivey Business School*

Our aim in this article is to change the terms of the conversation about the ecological crisis. We argue that the nature-culture dualism, a product of Enlightenment thought, and which is largely responsible for the ecological crisis, cannot be the basis for any meaningful solutions. We show how more recent Western imaginaries like the Anthropocene and Gaia that are proposed to overcome the separation of nature from culture, are also based on exclusions that reflect Enlightenment rationality and legacies of colonialism. In sharp contrast, we show that Indigenous philosophies that preceded the Enlightenment by thousands of years have developed systems of knowledge based on a relational ontology that reflects profound connections between humans and nature. We demonstrate that such forms of knowledge have been systematically subjugated by Western scholarship based on Enlightenment based ideals of arguments of rationality and empiricism. We propose that a decolonial imagination can generate new insights into understanding the ecological crisis and call for management scholars to challenge the anthropomorphic biases and the economism that dominates our field, through a respectful engagement with Indigenous worldviews.

Paper is Available to Meeting Registrants Only.

ONE: Envisioning indigenous territorial autonomy

Author: **Rajiv Maher**, *EGADE Business School, Tecnologico de Monterrey*

I analyze the case of an indigenous autonomy movement, the Autonomous Territorial Government of the Wampis Nation (GTANW in Spanish) located in the Amazon forest in Peru. The Wampis people have lived in their territory for 7000 years and have a rich culture, traditions, spirituality, economy and knowledge that facilitates self-sufficiency or tarimat pujut. The problem lies in the fact that tarimat pujut requires a well conserved forest and since colonization by the Spanish and later Peru this self-sufficiency is under threat. The article details the process of autonomy struggles led by the Wampis people ranging from institutionalization to state-like structures to de-institutionalizing to engage in violent conflict with state forces to formally declaring autonomy from Peru in 2015. The article reveals the hybrid practices of organizing and leadership undertaken by the GTANW in pursuit of tarimat pujut. I identify the use of pragmatism, ancestral knowledge of organizing and leading for war; and a flexible relational approach taken by the GTANW to achieve their main aim of tarimat pujut as key hybrid practices for achieving de-colonial autonomy.

Paper is Available to Meeting Registrants Only.

ONE: Tackling Grand Challenges Requires Tackling Grand Conspiracies

Author: **Janet Su**, *U. of Lausanne*

Climate change denialists have been particularly successful in using narratives to spread doubt around the existence of a climate change crisis. Our paper uses a mixed-method narrative analysis approach to study how climate change denialists communicate, particularly through documentaries. Documentaries are an effective medium not only to entertain audiences, but to simultaneously educate and/or mobilize audiences for collective action. In this study, we demonstrate how denialists use emotions to gain legitimacy while delegitimizing critics. A process of amplifying negative emotions and juxtaposing negative and positive emotions has been used. We contribute to the deinstitutionalization literature by identifying the role that emotions play in the communication of firms under threat. We also find evidence of how positive and negative emotions can work together to create new forms of emotional energy.

ONE: Organisational struggles over the natural environment: a co-evolutionary analysis (WITHDRAWN)

Author: **Kirti Mishra**, *Indian Institute of Management, Udaipur*

Due to its multidimensional nature and impacts, climate change requires a systemic, multilevel response approach incorporating organisational, small-scale, regional and national institutions, as well as global governance mechanisms, which together form the climate change response regime. We argue that, since organizations are embedded in this response regime, they have to both develop their own direct climate change response actions and, at the same time, respond to the tensions and struggles manifested within the response regime. The organisational interactions that occur within the response regime, in relation to the management of struggles over the natural environment are also under-theorised. Therefore, this research paper investigates how organizations manage these struggles through intra and inter organisational interactions within the response regime. More specifically the research questions guiding our study are: how do organisations manage struggles over the natural environment? and, what inter and intra organisational interactions drive these responses? For This paper adopted a co-evolutionary theoretical perspective, which provides us with a framework for understanding change in complex socio-ecological systems (Abatecola, 2012; Breslin, 2014; Child & Rodrigues, 2011) for investigating interactions between organizational and environmental systems. Our findings reveal that organisational and regime climate change responses were interdependent, as a result of symbiotic or mutualistic co-evolution (Jones, Ferrière, & Bronstein, 2009; McKelvey, 2002) This paper makes a number of contributions to the discipline of management and organisation studies, as well as to literature on policy interventions, by identifying inter and intra-organisational co-evolutionary interactions that drive organisational responses to tensions and struggles over the natural environment. More specifically, we identify those interactions whereby an organisation manages the challenges of response regime struggles and, at the same time, develops its own climate change responses. Co-evolutionary interaction is illustrated by the specific ways in which the firm's responses are influenced by and influence developments within the response regime.

The Craft of Conducting Research: Literature Reviews and Hypotheses

Digital Session Chair: **Amanda Hinojosa**, *Howard U.*

RM: **Storytelling in Review Articles: Exemplars and Guidelines**

Author: **Amanda Hinojosa**, *Howard U.*
Author: **George Banks**, *UNC Charlotte*
Author: **William L. Gardner**, *Texas Tech U.*

Review papers are some of the most challenging, but also some of the most impactful and highly cited types of papers published in academic and practitioner-oriented outlets. Despite the popularity of such papers, guidance on how to execute an impactful, rigorous review is scattered across different outlets due to the variety of review types that can be conducted. We sought to provide a methodological process (i.e., a six-step flowchart) for writing reviews that have a critical impact on the advancement of the field. First, we highlight the need to align the choice of review type and the review's purpose to maximize the theoretical, practical, or methodological contribution of the work. We discuss how a good review is very much like a good story and thus should employ the same elements to present a compelling review story (narrative conflict, characters, setting, plot, sequence, and narrative arc). Second, we identify several important methodological issues that authors must take into consideration when executing their review. Together, these contributions provide a methodological process for the development of rigorous and impactful reviews.

RM: **Heuristics and Comparison Standards: Developing Hypotheses Via Thought Experiments**

Author: **Lisa Schurer Lambert**, *Oklahoma State U.*
Author: **Truit Gray**, *Oklahoma State U.*

Organizational research seeks to advance theory through the testing of hypotheses derived from theory. While the task of hypothesis development is widely acknowledged to require imaginative and disciplined thinking, unfortunately, the practice of hypothesis development remains ambiguous and defies efforts to distill it into a replicable process or even into a set of best practices. The present paper is oriented to novices and seeks to provide three strategies that may be used in order to spur the development of well thought out and precise hypotheses. First, we demonstrate that comparisons are at the heart of all knowledge acquisition within organizational research and subsequently incorporate comparison standards into the hypothesis development process. By deliberately invoking comparison standards as a tool for theoretical thinking, researchers may expand and clarify their thinking and increase the precision of their hypotheses. Second, we demonstrate how three less commonly discussed tricks or heuristics for hypothesis development may stimulate thinking to result in stronger hypotheses. Lastly, we show how thought experiments, "hypothetical cases intended to function as experiments" (Häggqvist, 2009, p. 57), for generating hypotheses may be enhanced by combining comparison standards and our three heuristics. By offering practical guidelines for hypothesis development we hope to provide junior scholars with tools that may be used to fully articulate their hypotheses.

RM: **In Search for the Context: Using Machine Learning for Creating Custom Bibliographic Databases**

Author: **Oskar Kosch**, *Cracow U. of Economics*
Author: **Marek Szarucki**, *Cracow U. of Economics*

The adoption of machine-learning is apparent throughout science, technology and business, as we learn how to maximise its usefulness. There has been a similarly broad range of effects across empirical sciences, from biology to cosmology to social science, as machine-learning methods have been developed to analyse high throughput experimental data in novel ways. For example, in learning to detect articles related to the methodology of management sciences (MMS), the task is to assign a label of "MMS" or "not MMS" to any given publications identified in relevant bibliographical repositories (e.g., Scopus or Web of Sciences databases). This task seems to be even more complicated when one is searching for MMS publications written in non-English language. Our paper deals with methodological issues related to this undiscovered to date problem on the example of polish methodology of management sciences. To even approach the issue, first, the custom database needs to be created, as the coverage of the existing database is selective, and inherits characteristics of the core-periphery model of scientific production. We propose a procedure to do so, as well as employ machine learning, and explore its accuracy in analogue documents inclusion into custom bibliographic databases for the case of polish management methodology. Our results are highly suggestive and reveal the applicability of the proposed procedure, and consequently, allow for more context-aware literature reviews and bibliometrics. This may lead to bringing back the manager to the management.

Artificial Intelligence in the Processes and Practices of Digital Strategizing

Artificial Intelligence and Digital Strategizing

Facilitator: **Luciana D'Adderio**, *U. of Edinburgh*
Facilitator: **Samer Faraj**, *McGill U.*
Facilitator: **Mikkel Flyverbom**, *Copenhagen Business School*
Facilitator: **Stefan Haefliger**, *Cass Business School, City U. London*
Facilitator: **Marleen Huysman**, *Vrije U. Amsterdam*
Facilitator: **Neil Pollock**, *U. of Edinburgh business school*
Facilitator: **Joe Nandhakumar**, *U. of Warwick*
Facilitator: **Henri Schildt**, *Aalto U. School of Business*
Organizer: **Jochem T. Hummel**, *Warwick Business School*
Organizer: **Georg Reischauer**, *WU Vienna & JKU Linz*

While scholarship on digital strategies such as platform strategies is progressing, less attention has been paid to the role of digital technologies in the processes and practices of strategy-making. To address this gap, this PDW focuses on the role of Artificial Intelligence (AI) such as machine and deep learning technologies. Specifically, by bringing together distinguished strategy and information systems scholars, this PDW aims to 1) give an overview of recent advancements on the role of AI in the processes and practices of crafting, refining, and implementing (digital) strategies; 2) discuss how different theoretical perspectives and methods can advance future research; 3) summarize and distribute results from these discussions to inspire future research. The PDW builds on a panel symposium on digital strategizing at the AOM 2019 and a correspondent PDW at the AOM 2020.

The Pandemic and COVID-19

Digital Session Chair: **Isabelle Le Breton-Miller**, *HEC Montreal*

SIM: Do Socially Responsible Firms Foster Socially Responsible Citizens? Social Distancing under Covid-19

Author: **Danny Miller**, *HEC Montreal*
Author: **Zhenyang Tang**, *Clark U.*
Author: **Xiaowei Xu**, *U. of Rhode Island*
Author: **Isabelle Le Breton-Miller**, *HEC Montreal*

The literature on the interplay between geographic communities and organizations has largely ignored the role of individual residents. In adopting a meso-perspective, we examine a potentially vital relationship between corporate conduct and pro-social behavior demanding sacrifice from individuals. Drawing on Weber (1922), we theorize that organizations in a community legitimize personal social conduct in three ways – by serving as role models, imparting norms and values, and routinizing forms of interaction. We study the relationship between corporate social responsibility (CSR) behavior by local firms and the social distancing (SD) of citizens in US counties during the Covid-19 pandemic, a core ethical outcome. We argue and find that the residents of communities in which firms exhibit higher levels of CSR engaged in more SD during the Covid-19 pandemic. This was true when firms were a) long-established, b) isomorphic in their CSR, and c) major employers and vendors. Moreover, CSR relating to the treatment of employees and positive and negative extremes in CSR had an especially strong effect on SD. Implications are drawn for the study of business ethics, as modeled by CSR, as a force for ethical personal behavior and public health in communities.

SIM: The role of the stakeholders' perception on the company's performance during the pandemic

Author: **Ivo Hristov**, *U. of Rome Tor Vergata*

The pandemic has brought a complete change to the way organizations operate, people live, and governments administer. Many business enterprises were either completely shut down or operating at a substantially reduced scale. The stakeholders' perception represents one of the most relevant dimensions that impacts on the companies' performance, and consequently, potentially plays an important role for better crisis management. To this end, the aim of this paper is twofold: 1) to identify the main strategic dimensions that affect stakeholders' perception, and 2) to analyze the relation exists between stakeholders' perception and company's performance during the pandemic. Based on a survey among 221 managers of Italian companies, the information provided by a semi-structured interview with 45 of them, and a total of 995 of their stakeholders (divided by suppliers, clients, banks and employees), we identified four relevant dimensions (sustainable development, organizational drivers, digital transformation and cultural change), which, if implemented in a company, impact on the decision-making process of the stakeholders. In addition, we explored the relationship between the overall companies' performance during an early stage of the pandemic (May-December 2020), in terms of job orders, credit line granted, deferred payments, and employee absenteeism, and the perception score of their stakeholders. Results suggest that companies with a high-level score, in terms of stakeholders' perception, have a greater chance of surviving during the pandemic, leading an organization to be better positioned in terms of reducing financial risk, improving its image and reputation, complexity reduction and risks-into-opportunities transformation.

SIM: COVID-19 Will Bring Us Together: The Dynamics of Place and the Structure of Cross-Sector Partnership

Author: **Mohamed Hassan Awad**, *California State U., Los Angeles*

Local places, such as communities, cities, and towns, host many cross-sector partnerships primarily towards alleviating social and environmental issues on the local level. Yet, existing literature has focused on large-scale systemic impact and global challenges such as climate change, paying scant attention to the role of these local dynamics in shaping cross-sector partnerships. In this article, I advance the concept of place, a geographic location imbued with specific meaning systems and material resources, to unpack how local embeddedness shapes the structure of cross-sector partnerships. I focus on elements of formalized structure, specifically the scope of operations, partners' roles, and shared resources. I employ a longitudinal approach focusing on two place-based dynamics: the changes in the wicked problem, and the subsequent shifts in the tensions between the moral and material considerations of the partners. I investigate these shifts using a three-year field study of Occupy Medical, a local partnership between the civic society and the local government in Eugene, Oregon, tackling the wicked problem of providing healthcare to marginalized and disenfranchised communities, mainly the homeless. The analysis covers a nine-year period of 2011 – 2020 and various restructurings of the organization, the latest prompted by the onset of the COVID-19 pandemic. I unpack a dynamic relationship between the two partners in response to place-based dynamics captured in shifts in the organizational structure. I theorize two forms of structural arrangements between the partners, loosely and tightly-coupled, and further elaborate on the role of cross-sector partnerships in crisis response on the local level.

SIM: Employee Deviance: Retaliation after Employer's Response to COVID-19

Author: **Jean Phillips**, *Penn State U.*
Author: **Dorothea Roumpi**, *Pennsylvania State U.*
Author: **Solon Magrizos**, *U. of Birmingham*
Author: **Caroline Moraes**, *U. of Birmingham*

Research has advanced our understanding of the causes of employee deviance, including employee retaliation intentions and behaviors. We know less about how employer decisions that put employees' safety at risk, for example relaxing COVID-19 restrictions once allowed by state governors to do so, might influence employees' deviance intentions. In this study, we examine whether retaliation intentions are particularly high among employees perceiving lower organizational support, having higher turnover intentions, and with a greater ease of leaving the employer. We utilize the negative norm of reciprocity and equity as enabling theories to build a model that we test with a survey of 327 working adults in the United States. We analyze the moderated-moderated-mediation model with a path analytic and bootstrapping procedure that tests the model's indirect effects. We find support for the proposed model, with the exception of the proposed interaction between perceived organizational support and ease of leaving. This work makes several theoretical contributions in the areas of business ethics, and employee deviance and by identifying boundary conditions for the relationship between employee perceptions of low organizational support and retaliation intentions. Specifically, we highlight the originality of the moderating effects of preexisting turnover intentions and the perceived ease of leaving the employer on deviance intentions. Practical implications include the importance of increasing employees' perceptions of organizational support when difficult organizational decisions and policies might put employee safety at increased risk, which is particularly likely to reduce retaliation intentions among people intending to stay with the organization.

Author: **Hai Guo**, *Renmin U. of China*

Author: **Yang Li**, *Renmin U. of China*

Author: **Rui Shen**, *School of management, Zhejiang U.*

The relationship between corporate social responsibility (CSR) and firm performance has received much research attention, yet hasn't achieved a consensus. By introducing optimal distinctiveness theory to CSR literature, we argue that CSR deviation, the extent to which a firm differs from its peers in the same category in terms of CSR activities, may have a significant effect on firm performance. Specifically, we examine the effect of CSR deviation on firms' post-disaster recovery in the context of COVID-19, where both the institutional and competitive pressures are exacerbated. Drawing on the survey data of 939 firms in China, we find supports for an inverted-U shaped relationship between CSR deviation and firms' post-disaster recovery, as well as the moderating roles of regional disaster severity and government support. The study enriches the CSR literature by reconciling the inconsistent findings on CSR-performance relationship and offers contextual insights to the optimal distinctiveness theory.

Creating and Curating Your Own Teaching Content Efficiently

Creating Your Own Teaching Content Efficiently

Organizer: **Johann Peter Murmann**, *U. of St. Gallen*
Organizer: **Vijaya Narapareddy**, *U. of Denver*
Distinguished Speaker: **Ron Adner**, *Dartmouth College*
Distinguished Speaker: **Melissa Graebner**, *U. of Illinois at Urbana-Champaign*
Distinguished Speaker: **Mukti Khaire**, *Harvard U.*
Distinguished Speaker: **David Kryscynski**, *Brigham Young U.*
Distinguished Speaker: **Ithai Stern**, *INSEAD*

This professional development workshop (PDW) features innovative approaches to creating and curating your own teaching content efficiently. While there is ample teaching material available from textbook publishers and case clearing houses such as Harvard Business School or The Case Center, instructors often find that the material may not fit their teaching purposes perfectly due to the analytical lens or setting (e.g. country, industry) of the material. Furthermore, creating one's own teaching material can help students learn better as the instructor will better identify with the material and be more enthusiastic about teaching it. In this PDW, we seek to provide participants with an overview of the basic principles and challenges in teaching strategy using one's own research findings and other (online, popular) sources. The primary objectives of this PDW are twofold. First, it will introduce and provide short demonstrations of award-winning professors teaching content that they have personally created, emphasizing their approach and challenges they have encountered. Second, it will provide participants with the opportunity to engage with our highly-experienced presenters during an interactive Q&A to learn how to do this themselves. Some of the key questions we aim to answer are as follows: • When is it effective to create your own teaching materials? • What are the to-do's and not-to-do's in the process? • How can one pull together materials from the Internet quickly?

TIM: Robin Hood Pricing? Bottom of the Pyramid, Product Variety, and Performance     

Author: **Arzi Adbi**, *NUS Business School*

Author: **Ajay Bhaskarabhatla**, *Erasmus U. Rotterdam*

Small packs are ubiquitous in resource-constrained, bottom-of-the-pyramid (BOP) markets. Firms can sell small packs at a discount, premium, or uniform price relative to large packs, and each pricing strategy entails important tradeoffs. How firms balance these tradeoffs and set prices for BOP products remains an understudied empirical question. Using granular data from Nielsen on prices and sales of all shampoo products in India, we find evidence of price discounts for smaller packs. Firms offering greater product variety outside BOP offer larger discounts on BOP products. Furthermore, we find that operating in BOP markets is associated with better performance outside BOP markets. Evidence highlights the use of redistributive pricing strategy and suggests that some firms do well outside BOP markets by doing good in BOP markets.

TIM: Commons and Tokens — How Governance Modes in Decentralized Autonomous Organizations (DAOs)

Author: **Xule Lin**, *Imperial College Business School*

This study discovers the new, poorly understood phenomena of "Decentralized autonomous organizations" or DAOs. Posited by blockchain technology, DAOs provide an alternative solution to the collection action problem, enabling non-hierarchical communities of stakeholders to coordinate without a central authority and to achieve common goals. Examining DAOs built on Ethereum blockchain with abductive reasoning, this exploratory study investigates how governance modes emerge to address the paradox of centralized adoption of decentralized blockchain technology. A conceptual framework is proposed to provide a plausible explanation of the focal phenomena. Building on extant studies on blockchain governance, the proposed framework specifies the "layers" in the blockchain technology stack and explains how governance challenges manifest in the tensions between "commons logic" and "token logic" along with several domains.

Paper is Available to Meeting Registrants Only.

TIM: Supply chain management ambidexterity and incumbent-startup collaborations

Author: **Julius-Ferdinand Kolb**, *RWTH Aachen U.*

Today's digital age has created the need for the transformation of incumbent firms. It requires them to explore novel opportunities, while continuing to exploit their existing ones. One way is to open the innovation path to outside firms. The automotive industry is already well known for its use of suppliers as a source of innovation. But, while maintaining their traditional partnerships with tier-1 suppliers, many automotive firms have implemented startup programs to gain access to and collaborate with small and innovative firms. As part of a 30-month participant-observation study in an incumbent automotive company we conducted a multiple case study research of 5 startup cooperations of the incumbent. In this study, we observed the use of different forms of ambidexterity within the incumbent and across its divisions in an attempt to balance their exploration and exploitation activities. The organizational structure suggests that the research and development (R&D) division uses structural ambidexterity to leverage the innovations coming from their startup collaborations. The purchasing and supply chain management (PSM) division on the other hand, as an important facilitator for all R&D cooperations, is characterized by contextual ambidexterity. Our case studies however show, that each startup project is characterized by a different combination of ambidexterity approaches by the R&D and PSM Division. We extend the ambidexterity literature by showing the different effects and challenges of combining structural and contextual ambidexterity have on startup-incumbent collaborations.

TIM: Temporal balancing: The timing of network mobilization across the idea journey

Author: **Anne L.J. Ter Wal**, *Imperial College Business School*

Author: **Paola Criscuolo**, *Imperial College London*

Author: **Ammon Salter**, *U. of Bath*

This paper explores how technologists differ in their timing of mobilizing support and feedback from their network during the idea journey, and how such timing differences affect their innovation performance. We argue that individuals with greater temporal balancing in network mobilization – i.e. who involve different contacts from their network at different stages – will perform better than individuals who reach out to all their contacts at the same stage of idea maturity. Such temporal balancing enables individuals to benefit from early-stage feedback and support from close confidants whilst shielding embryonic ideas from pragmatic skeptics until these ideas are more clearly developed and can better withstand criticism. We further argue that hierarchical peers and strong ties are close confidants who tend to be mobilized early, whereas managers are more likely to be pragmatic skeptics who tend to be involved at later stages of the idea journey. We test our predictions based on survey data and archival innovation performance records on 303 technologists in the R&D function of a large multinational firm. We find support for our predictions.

Panelist: **Vijay Edward Pereira**, *Khalifa U., Abu Dhabi, UAE*
Chair: **Glenn Muschert**, *Khalifa U., Abu Dhabi, UAE*

Indian higher education sector has undergone several changes in the last few years. In July 2020, a new national policy on education was laid down in the country. It is expected that that in line with previous policy changes new policy will also bring out further reforms in the sector and make education more relevant for industry where most of the graduates are ultimately employed. and experience Private sector is likely to play a pivot role in this respect. In this backdrop, this PDW will discuss the impact of various changes in the institutional environment on the Indian higher education institutions (HEI). It will highlight that while institutional changes have presented various opportunities for growth to HEIs in India, ambiguity in these changes have put sever constraints too. Taking a few case studies this PDW investigates the pros and cons of institutional changes and recommends ways for dealing with them.

Leader Identity

Digital Session Chair: **Matthew Rodgers**, *Hope College*

OB: Effects of Leader Group Prototypicality on Effectiveness & Performance via Leader Identity Threat

Author: **Matthew Rodgers**, *Hope College*
Author: **Tingting Chen**, *Lingnan U.*
Author: **Emily David**, *China Europe International Business School*

Low follower perceptions of their leader's group prototypicality can pose a threat to the leader's identity. In this study, we theorized and tested how both follower-assessed leader group prototypicality and follower-leader congruence on this factor relate to perceived leader identity threat. We also proposed that perceived leader identity threat negatively affects both leadership effectiveness and team performance, and perceived organizational support mitigates the negative relationship between perceived leader identity threat and leadership outcomes. Using a multi-source and time-lagged survey design to collect data from 402 employees and their 90 leaders, the results generally support our research hypotheses. For example, both follower-assessed leader group prototypicality and follower-leader congruence on leader group prototypicality negatively relate to perceived leader identity threat. In addition, the effects of perceived leader identity threat on leadership effectiveness and team performance were weaker when perceived organizational support was high rather than low.

OB: Developing a Leader Identity: The Effect of Motivational Traits on Engagement in Identity Work

Author: **Sarah Greeley**, *U. College Cork*
Author: **Ronan Carbery**, *Cork U. Business School*
Author: **Anthony McDonnell**, *U. College Cork*
Author: **Gillian Barrett**, *U. College Cork*

Existing conceptualizations of the process of leader identity development remain abstract, hampering advancement in understanding specific characteristics that motivate individuals to engage in identity work, or the active engagement in developing a leader identity. Motivation to engage in identity work has been broadly theorized as pivotal to leader identity development, however its specific role is lacking critical analysis. This means that while motivation could be invaluable in leader development efforts, there is currently too little explicit knowledge to fully harness its potential. This paper seeks to redress this by elucidating the role of motivation in individual-level leader identity development through the creation of an expectancy process model. In so doing, the integral role of self-efficacy and goal orientation on individual motivation are emphasized by predisposing individuals to having differential levels of valence to engage in identity work. Additionally, we unpack how one's fit within organizationally defined norms influences overall motivation to engage in identity work. Through the concept of perceived prototypicality, we propose that when individuals experience little motivation to engage in identity work, high levels of perceived prototypicality may act as a buffer, stimulating increased identity work.

OB: Individual identity and organizational control systems: A review and a new research agenda

Author: **Daniel Afonso**, *PhD Student*
Author: **Monica Franco-Santos**, *Cranfield School of Management*
Author: **Valentina Battista**, *Cranfield School of Management*

The identity literature studying the relationship between individual identity and organisational controls has mostly understood controls as a coercive force. This literature seems to mainly investigate controls as mechanisms that ensure individuals evaluate and correct their behaviours and sense of self to align with what organizations believe will help deliver their materialistic or financial objectives. From a control literature perspective, this understanding of organisational controls could be considered partial. The control literature reveals a richer and more nuanced understanding of the types of controls organizations adopt, some of which can be coercive, while others can be enabling. There seems to be a dearth of research in the identity literature that accommodates or contrasts these different types of controls. We do not know, however, what explains the lack of focus on enabling controls and whether incorporating these types of controls will add value to identity research. To address these issues, we set out to more closely review the literature examining the relationship between individual identity and organisational controls as informed by both the identity and the control literatures with the aim to advance the knowledge of this relationship and to open the door for new lines of research.

OB: What does the word 'Leader' 'Do'?

Author: **Mark Learmonth**, *Durham U.*
Author: **Kevin Morrell**, *Durham U. Business School*

Increasingly, the word 'leader' is being used to refer to those in formal positions of authority at work. Talking and writing about 'leaders' is becoming (if it has not already become) a normal, and normalized way to refer to anyone in a top job. The practice is becoming so commonplace, that it goes virtually unnoticed in many sorts of discourse: whether in corporate reports, job adverts and mundane day-to-day conversations at work; or outside formal organizations in the news and social media. It is because so many of us are now using 'leaders' commonly and routinely to talk about executives and other top people that the focus of our paper is on the effects this apparently mundane practice is having. Our primary focus is not on questions about what leadership is; our objective is rather to draw attention to what using the term 'leader' does. We show how the routine use of 'leader' for organizational elites (especially when compared to many of the alternatives) has a capacity to do things which, while often unnoticed, both reflect and reinforce wider societal trends and processes of great potential significance to us all.

Cross-sectoral partnerships have been highlighted as a key mechanism to deliver the promise of the United Nations 2030 Agenda for Sustainable Development and are acknowledged to play a crucial role in addressing complex and grand societal challenges. Realising and sustaining effective cross-sectoral partnerships is often necessary, but also challenging. This Symposium contributes to the growing knowledge of cross-sectoral partnerships by focusing on the role of synergistic interactions in and around a focal cross-sectoral partnership. As most research on cross-sectoral partnerships has focused on a focal partnership, less attention has been devoted to the role of synergistic interactions - defined as the interactions with additional actors (partner or broker) that produce a combined effect greater than the sum of their separate effects, in and around a focal cross-sectoral partnership. Understanding the role of synergies in realizing, sustaining and even scaling cross-sectoral partnerships, going beyond a focal partnership, is important from both theoretical and practical standpoints. This Symposium fosters research and debate around these issues, showcasing pioneering empirical studies that shed light on how these synergies help realize, sustain and even scale cross-sectoral partnerships (CSPs) for social impact.

Organizational Virtue: Conceptualization and Measures *Organizational Virtue*

Organizer: **Miguel Angel Alzola**, *Fordham U.*
Participant: **Rosa Chun**, *IMD*
Participant: **Matthew Kraatz**, *U. of Illinois*
Participant: **Geoff Moore**, *Durham U.*
Participant: **Jared Peifer**, *City U. of New York, Baruch College*

The purpose of this panel is to entertain the question of whether corporations are the kind of entities that can possess virtue (and vice) and whether and how corporate virtue can be measured. We will consider several measures of virtues and vices and the assumptions that underlie the conceptualization and operationalization of virtue notions. The ultimate goal is not only to assess the existing empirical research claiming to measure the presence or absence of corporate virtue and vice but also to critically examine the very idea of measuring virtue and the possibility for collective entities to be virtuous in a robust sense.

Panelist: **Giuseppe Delmestri**, *WU Vienna U. of Economics and Business*
Panelist: **Joel Gehman**, *U. of Alberta*
Panelist: **Sandra A. Waddock**, *Boston College*

The Covid-19 pandemic warrants increased scholarly attention to grand challenges, such as inequality, poverty, climate change, ecological imbalances, socioeconomic and political crises along with their extended impacts (Davis, 2020; Ferraro, Etzio, & Gehman, 2015; George et al., 2016; Munir, 2020; Pio & Waddock, 2020). Whereas mainstream organizational theorizing brings those challenges in as part of our empirical contexts, or in our managerial implications, this symposium will discuss how we can address head-on the importance of grand challenges, make them a core aspect of our research, and accordingly develop theoretical and empirical approaches that may be seen as a ‘grand challenges turn’ in our field. Some recent examples include work on the patriarchy of microfinance (Zhao & Wry, 2016) and providing toilets in Indian villages (Mair, Wolf, & Seelos, 2016). Nevertheless, even scholars working on grand challenges tend to focus on a particular problem and may lose sight of the broader systemic challenges of these issues (Munir, 2019).

Environmental performance

Digital Session Chair: **Jun Jin, Zhejiang U.**

ONE: How ICT capability affect Environmental Performance of Manufacturing Firms?

Author: **Jun Jin, Zhejiang U.**
Author: **Zan Chen, Zhejiang U.**
Author: **Shijing LI, Zhejiang U.**

Information and Communication Technology (ICT) has great potential for improving the environment. However, significant ambiguity remains in the study of how ICT capability affect the environmental performance at firm level. To address this gap, from the perspective of capability hierarchy, we have explored the internal mechanism and the moderators in the relationship between ICT capability manufacturing firms' environmental performance. The data of the World Bank Enterprise Survey in China from 2011-2013 is used to test the hypotheses. Results reveal that ICT capability significantly improves firms environmental performance, and the positive relationship is mediated by ambidextrous innovation. Moreover, the research indicates that the main market and industry attribute can moderate the relationship between ICT capability and environmental performance, while the moderating effect of competitive environment is not significant. These results not only promote the dialogue between environmental management theory and ICT management theory, but also provide important management implications for implementing ICT and innovation to foster the firms environmental performance.

Paper is NOT Available. Please contact the author(s).

ONE: Testing non-linear relationships between environmental innovation and firm performance.

Author: **Dante Ignacio Leyva-de La Hiz, Montpellier Business School**
Author: **Maria Teresa Bolivar-Ramos, Autonomous U. of Barcelona**

Despite the growing interest in environmental innovations, there is still no consensus about their effect on firm performance. On the one hand, advocates of environmental innovations state that such innovations exert a positive influence on firm performance, as they can reduce production costs, open new markets and improve a firm's corporate image, among other benefits. On the other hand, environmental innovations represent relevant drawbacks such as high development costs and uncertainty, which drives some authors to establish a negative link. We try to shed light on this debate by stating that this relation is more complex than a simple linear association; hence, we propose a U-inverted relationship between environmental innovations and firm performance. In addition, we claim that firm age plays a key role in that relationship, as more mature firms find it more difficult than younger firms to capitalize on environmental innovations to improve firm performance. Our longitudinal analysis of 4,634 environmental patents from 75 companies belonging to the electrical components and equipment industry worldwide confirms our hypotheses.

ONE: Varieties of Capitalism, Environmental Risk and Readiness, and MNCs' Environmental Performance

Author: **Stephen Brammer, U. of Bath**
Author: **Layla Jayne Branicki, The Open U. Business School**
Author: **Stephen Pavelin, U. of Bath**
Author: **Lynda Porter, U. of Bath**

The environmental impacts of large multinational companies (MNCs) are attracting increasing scrutiny as the climate crisis intensifies. In this study, we extend prior research that has examined the role of country-level institutions on MNCs' corporate environmental performance (CEP) by exploring interdependencies between home- and host-country conditions and between institutional and ecological country characteristics. Specifically, we theorize that multinational companies' home-country Variety of Capitalism (VoC) affects their CEP by shaping firms' comparative advantages in environmental performance, and by acting as an interpretive schema by which host-country conditions are evaluated and responded to. We test our theoretical propositions using a large sample of 3,994 MNCs headquartered in 72 countries over the time period 2009 to 2018. Findings show that MNCs' environmental performance is shaped significantly by host-country characteristics, and that MNCs' home-country VoC also significantly moderates the impacts of host-country influences on MNCs' CEP. We find that firms' home country variety of capitalism asymmetrically affects how home- and host-country institutional conditions influence CEP: for CME MNCs, home country institutional readiness complements firm CEP, but host-country institutional readiness substitutes for firm CEP, with the opposite being true for LME MNCs. Thus, add to debates regarding how varieties of capitalism influence forms of pro-social firm behavior by highlighting their asymmetric importance for home and host-country conditions.

ONE: Organizational Sustainability Cognition and Its Relationship with Sustainability Performance

Author: **Waqas Nawaz, Smith School of Business, Queen's U.**

Three decades after the Brundtland Commission's report, evidence suggests that the organizations are still unclear about what sustainable development means. Most previous research on organizational sustainability cognition is conceptual and it treats sustainability as ideal-types (business-case frame or paradoxical frame). The very few empirical studies are either restricted by a cross-sectional design or their focus is organizational motivation to pursue sustainability. I analyzed 99 organizational reports of 11 firms in the Textile and Apparel Industry between 2010 and 2019 to find what sustainability means to the firms. For this purpose, I focus on 'why firms do what they do' (implicit cognition) instead of 'what they do' (explicit behavior). The implicit frames uncover the full breadth of sustainability understanding of firms, which I have thematically organized over the collective action frames (motivational, diagnostic, and prognostic frames). I then empirically argue that existing corporate sustainability benchmarks do not consider the qualitative aspects of sustainability embedded in firms' cognitive perspective. Ignoring these qualitative elements may put the cognitively advance firms at a disadvantage and discourage them from being creative in addressing sustainability challenges. I have identified opportunities for future research at the end of this paper.

PNP Division Faculty Development Consortium

Facilitator: **Adam Eckerd**, *Indiana U. / Purdue U., Indianapolis*

This consortium provides concurrent discussions explicitly designed to customize the workshop experience for the needs of public and nonprofit faculty at various stages of professional development. The workshop will run two-tracks for participants: A pre-tenure and a post-tenure track. Pre-tenure topics include assembling research networks, work-life balance, pursuing teaching excellence, and the review and promotion process. Post-tenure topics include promotion to full professor, assuming an administrative position in your department, work-life balance, and becoming a journal editor. Additional topics will be solicited in the registration process. Participants will pre-register in advance and indicate a desired track by contacting Dr. Eckerd at aeckerd@iu.edu.

Teaching Employee Share Ownership and Equity Compensation in the Contemporary Business School

Teaching Employee Share Ownership

Chair: **Joseph Blasi**, *Institute for the Study of Employee Ownership and Profit Sharing at Rutgers SMLR*
Moderator: **Adria Scharf**, *Rutgers U., School of Management and Labor Relations*
Presenter: **Trevor Daniel Young-Hyman**, *U. of Pittsburgh*
Presenter: **Saehee Kang**, *Florida State U.*
Presenter: **Daphne Berry**, *U. of Hartford*
Presenter: **Edward Carberry**, *U. of Massachusetts, Boston*
Presenter: **Jegoo Lee**, *U. of Rhode Island*

Employee share ownership and related types of employee financial participation are widespread compensation practices today. According to the 2018 General Social Survey, 19.8% of U.S. employees have equity ownership in the companies where they work, 8.7% hold stock options, 38.1% are eligible for profit sharing, and 30.1% are eligible for gain sharing. Nationally, 46.8% of employees are eligible for one or more of these forms of financial sharing (Kruse and Blasi 2019). Ownership sharing takes a variety of forms, from stock options and stock bonuses for skilled employees in tech and professional settings, to broad-based employee share ownership approaches found in Employee Stock Ownership Plan companies and worker cooperatives. Despite the ubiquity of employee share ownership and despite research showing its positive effects on employee and firm-level performance outcomes, the topic is largely overlooked in business school classrooms. Few business schools educate students about this widespread organizational tool—despite its direct relevance to many commonly taught business school courses. In this PDW, presenters will describe their own strategies for teaching about employee share ownership in a variety of business school and management classes, highlighting strong case studies, readings and films designed for classroom use. Participants will then meet in pairs before breaking into facilitated discussion groups and closing with a large group discussion. Participants will gain knowledge about employee share ownership, familiarity with new teaching tools, and ideas for how to integrate discussion of employee share ownership into courses that they themselves teach.

Public vs. Private Lives - Lights! Web-Cam! Action! *Ethics Forum*

Organizer: **Lucy Leety-Wheeler**, *Academy of Management*
Panelist: **Deborah M. Mullen**, *U. of Tennessee, Chattanooga*
Panelist: **Rachel McCullagh Balven**, *Arizona State U.*
Panelist: **Jessica Peck**, *Cleveland State U.*
Panelist: **Jacob Park**, *Castleton U.*
Panelist: **Kristin MacDonald**, *Virginia Commonwealth U.*

This session looks at the ever-increasing juncture between public and personal (private) lives. For students, issues include online exam proctoring, online synchronous classes, taped presentations, and virtual meetings with faculty. The requirement to turn on the camera exposes them away from school lives. There are cases of the lectures taped and shown on social media and the exposure of their home and family (a realm previously not shared) to peers, students, and academic leaders for faculty. As we navigate a broader online/virtual life - what are the ethical rules?

Participant: **James Calvin**, *Johns Hopkins U.*
Participant: **dt ogilvie**, *Rochester Institute of Technology*
Participant: **Mzamo P. Mangaliso**, *U. of Massachusetts, Amherst*

For the last two years, the Africa Academy of Management has been organizing a PDW on Entrepreneurship Education in sub-Saharan Africa. In 2019, the PDW focused on Enhancing Entrepreneurship Education in sub-Saharan Africa: The Role of the Diaspora. In 2020, the second PDW explored the establishment of new institutions to foster entrepreneurship education in sub-Saharan Africa. The present PDW draws from the experience of five scholars to discuss the content and context of entrepreneurship programs in universities in sub-Saharan Africa. The purpose of this PDW is to provide solutions to the development of entrepreneurship programs that turn students into problem solvers and job creators.

Doctoral students are often faced with multiple unfamiliar challenges. The PhD process can be demanding and overwhelming and very often students are expected to navigate these challenging issues themselves. Building a support network and effective strategies to manage this process can be critical to these students' future academic and career success. This year's "CAR Doctoral Consortium" will provide a forum for early to mid-stage doctoral students to meet, connect, and learn from each other informally, from guest speakers, and from a panel of distinguished career scholars on several useful and relevant topics. Our aim is to bring together scholars from a broad range of cultures and institutions that mirror the diversity of the CAR membership. Our speakers are a group of distinguished senior as well as junior international faculty. They will share insights on the following seven topics: (1) Finding your First Academic Job; (2) Surviving: Accessing and leveraging formal and informal resources during your doctoral program; (3) Thriving: Recruiting mentors and collaborators for your network; (4) Make it happen: Effectively navigating the dissertation process; (5) Head of the class: Preparing for your first course assignment and teaching role; (6) Balancing act: How to juggle demands of academic life during your doctoral program and beyond; (7) Need Field Data: Find Out How To Get It. Moreover, the PDW will conclude with a 1-hour panel discussion with highly published career scholars along this year's AOM theme of "Bringing the Manager Back in Management".

The Careers Division Doctoral Consortium provides a forum for doctoral students to meet, connect, and learn from each other, guest speakers, and a panel of distinguished career scholars. Please note that this session is by invitation only. Doctoral students wishing to attend should confirm their interest by email to Ricardo Rodrigues (ricardo.rodrigues@kcl.ac.uk) and indicate their preferences using this link <https://forms.gle/DxnLinsBqwPYYgJa8>

What we have learned from 2020 for 2030 and beyond - A
Dialogue with Senior Global Executives
Beyond 2020. A Dialogue with Sr. Global Executives

Organizer: **Gerhard Apfelthaler**, *California Lutheran U.*
Panelist: **Stéphane J.G. Girod**, *IMD*
Moderator: **Gerhard Apfelthaler**, *California Lutheran U.*
Organizer: **Stéphane J.G. Girod**, *IMD*

In the 10-year period between 2008 and 2018, both world trade and world gross domestic product (GDP) have increased by about 26% (WTO, 2019). Worldwide exports of goods and services as a percentage of global GDP had reached more than 35% by the end of 2019 (World Bank, 2021). Despite frictions such as the U.S. administration's trade war against China, globalization seemed unstoppable. The experience of recent years, especially the pandemic of 2020 and early 2021, however, has forced governments and companies globally to rethink existing practices and policies. In this Professional Development Workshop (PDW), International Business (IB) scholars will discuss recent changes and future adaptations with a live panel of senior business executives from globally active companies. Moderated by an IB scholar, we will also address how instructors can prepare their students better with regards to dynamic shifts in the world economy as well as ways in which practitioners' experience can be integrated into the classroom. During the PDW, participants will have an opportunity to interact with the panelists in the form of a Question-and-Answer session, and a recording will be made available after the PDW.

Corruption and Political Issues in International Management

Digital Session Chair: **Luke Fiske**, *Queen's School of Business, Canada*

This session addresses cultural and political issues in international management. It includes papers examining a dynamic gravity approach to corruption and outward FDI, the institutionalization of corruption in multinational corporations, the consequences of political violence for foreign direct investment, and non-market strategies in response to political disruption of international business ties.

IM: **Bribe and Co. - The Institutionalization of Corruption in a Multinational**

Author: **Armando Castro**, *UCL*
Author: **Suzana Braga Rodrigues**, *Rotterdam School of Management, Erasmus U.*
Author: **Nelson Phillips**, *UC Santa Barbara*

The engagement of multinational corporations from different nationalities in corrupt operations in every corner of the world has more recently driven an extensive scholarly interest for the antecedents and outcomes of corruption. Indeed, exploring corruption around and between organizations, has significantly advanced the field of international business, but yet, there are still important issues underdeveloped. How multinational corporations engage in corruption, how this is internally developed, sustained and then spread across its various units at home and even abroad is still an uncharted research field. Our paper addresses this gap drawing upon a case study of the EMNE Odebrecht – one of the largest construction companies in Latin America. We bring together conventional theories of international business, and the institutionalization perspective to understand what enabled the company to institutionalize and reproduce corrupt practices not only with the country of origin but also around subsidiaries around the world.

Paper is Available to Meeting Registrants Only.

IM: **Is violence bad for business? The consequences of political violence for foreign direct investment**

Author: **Anne Jamison**, *Princeton U.*

William H. Newman Award Nominee

What are the consequences of political violence for foreign direct investment (FDI)? The conventional wisdom suggests that political violence, a type of political risk, inhibits foreign investment in the developing world. I argue that this explanation is incomplete: the effect of political violence on investment varies with market structure. While current knowledge holds for investment in competitive markets—these firms are indeed deterred by violence—conflict has the opposite effect on investment in prospective monopolies (such as utilities, telecommunications, and logistics). Specifically, violence creates opportunities for firms to profit as these are markets with inelastic demand regardless of conflict. I test the theory using novel sector-level FDI data and a conservative estimation strategy. Building on work in business, political science and economics, this project forces us to rethink the relationship between conflict and capital. This has important consequences for the determinants of FDI and post-conflict reconstruction literatures.

Paper is Available to Meeting Registrants Only.

IM: **Non-market Strategies in Response to Political Disruption of International Business Ties**

Author: **Alexander Settles**, *U. of Florida*
Author: **Juha Väätäinen**, *LUT U., School of Business and Management*
Author: **Roman Teplov**, *Lappeenranta-Lahti U. of Technology LUT*

This study contributes to research on international targeted sanctions and their measurable effects. We investigate how targeted sanctions affect Russian companies and individuals. Our study methods are combination of quantitative analysis on measurable sanctions effects on turnover, assets, liquidity, and employment. What we find is short-term indeterminate negative financial effects on targeted sanctioned firms that dissipate over time. To further explore how sanctioned companies are shielded and use adaptation strategies to overcome sanction we examine case studies of sanctioned firms. Our analysis indicates that sanctioned firms adapt to sanction regimes and undermine the economic impact of these targeted sanctions. The implications of this research are that while target sanctions create symbolic meaning in foreign relations and create financial friction for targeted firms and individual there exist adaptation strategies that negate the economic impact of these sanctions. Sanctioned Russian individuals and firms seem to have restructured their international holdings subject to sanctions to avoid the negative impacts of these sanctions.

Paper is Available to Meeting Registrants Only.

IM: **Corruption and Outward FDI: A Dynamic Gravity Approach**

Author: **Mahdi Forghani Bajestani**, *Old Dominion U.*
Author: **Shaomin Li**, *Old Dominion U.*

We study how the perception of bribery level in target markets by foreign investors shapes their investment behavior. The literature is dominated by two views arguing that inward FDI is deterred by (1) corruption in the host country, and (2) corruption differences between home and host markets. We shift the focus from recipient countries to investors' perspective and develop a framework with distinctions between low and highly corrupt countries to evaluate their firms' responses to clean and corrupt environments abroad reflected in their outward foreign investments. Applying a dynamic gravity model to a panel data on bilateral FDI among 36 OECD countries, we find that first, low-corruption sources of investment are deterred by widespread bribery in foreign markets and tend to commit more resources to clean environments. Second, and more interestingly, highly corrupt countries invest more in high-corruption target markets, supporting the corruption distance perspective.

Status, Exclusion, Inclusion and Gatekeeping

Digital Session Chair: **Caterina Maria Orlandi**, *U. of East Anglia*

ODC: ‘Aided Visibility Work’ and Social Exclusion in Housing Association Organizations

Author: **Caterina Maria Orlandi**, *U. of East Anglia*
Author: **Zografia Bika**, *U. of East Anglia (UEA)*

This study examines how Housing Association (HA) organizations and their micro enterprise and employment support partners carry out institutional work aimed at disrupting social exclusion processes in the global North. Through a qualitative case study comparison, we uncover how Anglo-French HA organizations navigate the visibility of their social tenants/clients in order to help, especially those who are “invisible” or “negatively hypervisible”, come back to the labour market, start a business or volunteer and thus enable them to be seen anew in a more positive light within their ‘small worlds’. Three interrelated mechanisms underpin their strategic intervention through what we call here aided visibility work: (1) handholding/accompagnement, (2) outreach/aller vers, and (3) stigma mitigation activities. Our findings have implications both theoretically in terms of bridging the institutional work, organizational stigma management and (in)visibility literatures, and also practically in terms of unveiling the role that HAs have as applied institutional workers.

Paper is Available to Meeting Registrants Only.

ODC: Organization’s Status in Flux – Analyzing Employees’ Status Work and Micro-Narratives During Change

Author: **Olli-Jaakko Kupiainen**, *Aalto U. School of Science*
Author: **Outi Vanharanta**, *Aalto U. School of Science*
Author: **Matti A. Vartiainen**, *Aalto U.*

The organization’s status is important both for the organizations and employees. However, research analyzing status has often used different public rankings, and employees’ perceptions of their organization’s status have been neglected. By taking insiders’ perspectives into account, we offer a dynamic view of status. Our case organization - a large technology organization, went through substantial changes over a year. We analyze organizational members’ micronarratives on enterprise social media and their interpretations of changes. Our research questions explored what justifications organizational members use to form evaluations of their organization’s status and social standing in its operational environment during the large-scale change processes and how are the organization’s status upward mobility potentials narrated in organizational members’ change talk. Our findings illustrate that employees use different markers to justify their organization’s status, and they use status aspiration and status seeking when they narrate their organization’s potentials to the upward mobility of status. We suggest that the organization’s status is plural and several interpretations of status co-exist. The nascent finding suggests that by giving up control, the organization can improve its status. Our research shows that employees are active in defining, explaining, defending, and augmenting their organization’s status and social standing through status work.

ODC: Staying in a Dying Organisation: Stigmatisation and Organisational Identificatification

Author: **Sandra Krisberga-Sinigoj**, *Cranfield School of Management*
Author: **Patrick Reinmoeller**, *IMD*
Author: **David Denyer**, *Cranfield U.*
Author: **Jutta Tobias**, *City U. London*

ODC Division Best Doctoral Student Paper Finalist

The literature suggests that employees tend to leave stigmatised organisations whose operations are then threatened by the challenge of hiring and retaining employees (Pozner, 2008). This qualitative case study seeks to answer the question: What keeps employees in a dying organisation? Dying organisations are stigmatised organisations facing the acute challenge of retaining employees so they can reach the very final stage of completing the closure process. This empirical study analyses changes in dying organisations over three years using the lens of organisational identification and organisational commitment. It is based on a dataset of retrospective, semi-structured interviews with 44 former employees across a European financial services firm, thus providing a unique opportunity to capture insights across all levels of the organisational hierarchy. The findings challenge previous findings suggesting that stigmatisation may facilitate employee retention and the biggest risk to retention is the loss of organisational identification due to the changed identity of the dying organisation. This study contributes to deepening current understanding of organisational identification, its relationship to stigmatisation and its conceptual distinction from organisational commitment.

ODC: The Paradox of the “Enlightened” Capitalist: Role of ‘Freedoms’ and ‘Unfreedoms’ in Market Economies

Author: **Saheli Nath**, *U. of Central Oklahoma*

ODC Division Best Paper Finalist

William H. Newman Award Nominee

In this paper, we examine the role of Sen’s “development as freedom” paradigm in management studies by theorizing how understandings of freedom and unfreedoms affect the adoption and institutionalization of extra-institutional social movement tactics as mainstream business practices in market-based economic systems. Rather than a capabilities approach that narrowly focuses on fulfilling elementary needs like health, education and sanitation, this study argues that freedom can be more broadly construed in terms of the ways in which people perceive their choice to allocate resources to influence the world around them. We propose a framework for understanding how values and ideologies on what constitutes as freedom affect the choices of individual and institutional investors in a market-based economy to invest selectively by ostracizing certain businesses and privileging others. We illustrate the process of accessing such freedom using the example of the rise of the logic of social protection and environmental justice from the divestment movement of the 1960s, and the resultant growth in the business practice of socially responsible investing in financial markets. We conclude by discussing how understandings of freedoms and unfreedoms shape the emergence of alternative logics in capital markets and the development of subsequent organizational forms and practices.

With a growing number of platforms translating management research for practitioner guidance, research impact on practice has become an increasingly prominent and popular topic. However, almost no attention has been paid to the very important roles of gatekeepers in this process, those who choose research to be translated. In this paper, we investigate how knowledge translators select peer-reviewed scholarly research papers for translation for practitioners. Based on Gatekeeping theory, we collected and analyzed multiple types of data from a magazine that publishes translations of scholarly research for practitioners in order to delineate the criteria the magazine's knowledge translators used in selecting research papers to translate. We studied the magazine's website, interviewed its knowledge translators, and used a matched sample of unselected research papers to empirically assess empirically the actual criteria used. We found that knowledge translators are more likely to choose papers that have explicit sets of implications for practice, are more recently published, are written by high status authors in high status journals, and are seen by knowledge translators as "interesting", "counterintuitive", as well as "trustworthy". We discuss the implications for these findings for the gatekeeping literature, for research on knowledge translation processes, and for academics' research and publication.

Presenter: **Weiyi Ng**, *National U. of Singapore*
Participant: **Eliot Sherman**, *London Business School*

The papers in this symposium collectively work at extending and developing the intersections of two current, and burgeoning, streams of contemporary labor market research. First is the move towards a better understanding of the mechanisms of hiring bias. While past research has focused on demonstrating the existence of hiring bias, recent research has endeavored to develop a much richer understanding of how and why it may develop, whether it changes over time, and how it could be mitigated. A second stream of work has tackled the question as to how technological advances will impact the labor market, such as how companies are exploiting the continued externalization of gig-economy labor force hiring and whether and how machine learning matching technologies will benefit or harm employees of employers. In our first presentation, Mahabadi and Cohen ask: How and where do people learn to hire and how does that shape labor markets? The authors explore this question in the context of startups and investigate how founders and hiring managers there turn to outsiders for help with the critical tasks of hiring. They analyzed over 200 interviews with hiring managers, startup employees, potential job applicants and subject matter experts across over 50 startups; non-participant observation; and document review. They show that founders and hiring managers from many startups described learning from various parties in their ecosystem about several aspects of hiring, including: learning from investors, job candidates, mentors, consultants, recruiters, other entrepreneurs, and people in established organizations; learning through deliberate networking and advice seeking; and learning through less formal and less hiring-focused interactions at events such as startup fairs, conferences and social events. Based on these analyses, they categorized entrepreneurial learning into three broad categories: the very mechanical and transactional aspects of hiring; the aspects of structures closely related to hiring; the more elaborated learning of what they might do to convince people to work for them. The paper then explores the implications of these learnings for labor markets and organizations. In our second presentation, Rissing asks is hiring bias shaped through personal experience or the result of exposure to negative events? The author examines this in the context of H1B visa examiners. He engages two burgeoning, yet largely separate, literatures examining dynamic personal and contextual factors that may shape decision maker bias over time. First, experience-based theories argue that through repeated assessments of individuals belonging to different groups, decision makers may update their attitudes regarding said groups. Second, event-based theories have argued that decision maker bias may be shaped by local shocks, such as crimes or attacks associated with members of a select group that may then be perceived as a threat. There have been few opportunities for scholars to examine how these two key forms of learning might contribute to the updating of decision makers' attitudes regarding particular groups of workers in an organizational setting. In our third presentation, Daviss and Leung ask whether or not employers change their hiring preferences, and by implication, their biases, over time. Specifically, they explore how employers' preferences for women or men job candidates vary across multiple hiring decisions. They propose three potential patterns: stability, in which an employers' bias and by extension their preferences remain consistent across multiple hiring decisions; reduction, in which the strength of an employers' gender bias is reduced through direct experiences with workers; and reversion, in which an employers' preference for women or men reverses directions due to the accumulation of moral credentials. To test these patterns, they draw on a unique longitudinal dataset from an online labor marketplace, comprising 4 million bids submitted for more than 450,000 jobs, posted by more than 128,000 employers in 2012. Using logit regression with applicant- and job-level controls, they test whether a bid's likelihood of being selected is correlated with the gender of the worker, as well as the gender of the employer's most recent hire and the quality of the employer's experience with their most recent hire. They find strong evidence suggesting that employers' preferences for women versus men are largely stable, and weak evidence that employer's gender preferences are shaped in part by their direct experiences with workers. They do not find, however, that employers' preferences reverse with the accumulation of moral credentials, even when employers' moral credentials would presumably be strong. In our fourth presentation, Yang, Bao, and Leung ask whether and how racial hiring bias can be mitigated. Specifically, they examine whether and how employer perceptions of how responsible a job applicant looks may mitigate the hiring bias African Americans face. While employers are known to be biased against hiring black job applicants, when as compared to White applicants, what is less well-understood is whether and how this bias may be mitigated. The authors examine a mobile technology mediated labor market that matches employers looking to hire temporary labor with the gig-economy labor force job seekers. They ask whether or not employer perceptions of responsibility will mitigate the hiring bias black job seekers face. The particularly novel aspect of their paper is the use of a machine learned algorithm to code job applicant photos for how "responsible" they look – thereby introducing us to a computational method to measure human perception in hiring. Finally, Ng and Sherman ask whether the trend by firms who increasingly externalized labor markets to hire is justifiable. Much of the accumulated evidence suggests that it is not. For example, firms tend to pay a significant wage premium for external hires versus comparable candidates promoted from within. Furthermore, research documents declines in the performance of securities analysts, insurance agents, and bankers who switch organizations. Given these results, as well as the financial costs incurred when hiring via third-party recruiters, the rationale for sustaining external hiring at its current levels is not immediately apparent. How do firms capture value from external labor market hiring? Social capital theory suggests that external hires should produce work that is more creative than their otherwise equivalent internal counterparts. Ng and Sherman test this perspective via machine learning methods using a repository of resumes from the website LinkedIn. By relying on a matching estimator the authors find, in a sample of product managers working in large technology firms, that external hires are indeed more creative than observably equivalent internal hires. However, the authors also find that external hires have a higher turnover rate, an effect that is amplified for particularly creative external hires. This suggests that relying on external hires to catalyze creativity may be a difficult strategy to sustain in the long term. Taken together, this research offers some evidence as to why external hiring continues unabated in spite of its demonstrable detriments.

Changing the Energy Mix

Digital Session Chair: **Hyun-Soo Kim**, *KAIST*

ONE: Motivation for firm ECSR: Firm's CO2 emissions and Search for Renewable Energy Technology

Author: **Hyun-Soo Kim**, *KAIST*

Author: **Hyun Ju Jung**, *KAIST*

Author: **Chul Ho Lee**, *Korea Advanced Institute of Science and Technology (KAIST), College of Business*

Research in environmental corporate social responsibility has mainly focused on external pressures as determinants of firms to engage in eco-friendly behaviors. However, firms are heterogeneous in executing environmental behaviors, which cannot be explained solely by external factors. What motivates firms to engage in proactive environmental behavior, in particular, searching for environmental technology? This study tries to answer this question using the difference between the firm's CO2 emissions and their aspiration levels, and examines how this gap affects a firm's renewable energy technology search behavior. By testing our hypotheses within renewable energy technology search behavior of U.S. Fortune 500 information, communication, and technology firms from 2010 to 2018, we find that firms are more likely to search for renewable energy technology as the gap between firms' CO2 emissions and aspiration levels widens. When a firm's CO2 emissions is greater than aspirations, the impact of social gap on searching behavior is greater than the impact of historical gap. On the contrary, when a firm's CO2 emissions is less than aspirations, the impact of historical gap on searching behavior is greater than the impact of social gap.

ONE: The Influence of FDI on Renewable Energy and Environmental Performance

Author: **Christian Amponsah**, *Yorkville U.*

Author: **Samuel Adams**, *GIMPA*

This paper assesses the influence of FDI on renewable energy and environmental performance. Drawing on panel co-integration techniques the study investigates the effect of renewable energy on environmental quality of 28 Sub-Saharan African countries spanning the period 1980-2014. The findings based on the Fully Modified OLS and GMM estimation technique show that both renewable and nonrenewable energy contribute to carbon dioxide emissions in the countries studied in the long run, but only nonrenewable energy has a significant positive effect on carbon dioxide emissions in the short run. The results show that a percentage increase in nonrenewable energy consumption leads to an increase of 1.07% and 1.9% in CO2 emissions in the short and long run respectively. Additionally, economic growth contributes to environmental degradation while urbanization has a negative effect on carbon dioxide emissions. A percentage increase in GDP leads to 1.3% and 1.82% increase in emissions in the short and long run respectively. The results also show that less democratic states are more likely to pollute the environment than more democratic states. Further, there is no statistically significant effect of non-renewable energy in the short-run for high democratic nations. The study focuses on a panel of 28 SSA countries and does not identify country – specific conditions and therefore future studies should be directed at both firm and country levels to provide more information on the energy consumption - environmental degradation nexus.

ONE: A Voice for Change? A Network Analysis of Equity Ownership in Canada's Fossil Fuel Industry

Author: **Truzaar Dordi**, *U. of Waterloo*

Author: **Olaf Weber**, *U. of Waterloo*

Financial actors may exert considerable influence over the governance of fossil fuel corporations, which bolster or impede steps towards climate action. However, the influence of financial actors on climate instability remains to be examined. This network analysis of equity ownership uncovers the structure of control of financiers in Canada's fossil fuel industry and examines how sensitive the industry is to major stockholders. The results infer that ownership and influence are concentrated among a small subset of predominantly foreign and corporate equity owners. Moreover, the collective influence of just 14 major stockholders is significant. Finally, high debt loads of fixed assets make fossil fuel companies particularly sensitive to their shareholders. The results infer that these major stockholders will be unlikely to use their voice to curtail carbon emissions. Thus, this study not only allows us to identify key financial actors but map their influence over the economic activities directly associated with climate stability. The paper contributes to theory and practice, bridging the literature on corporate governance, equity ownership, and climate stability.

Developing and Publishing Research in Management Learning and Education

Publishing Research in Management Learning

Organizer: **Paul Hibbert**, *U. of St Andrews*
Organizer: **Jennifer Leigh**, *Nazareth College*
Organizer: **Marissa Edwards**, *U. of Queensland*
Organizer: **Martyna Sliwa**, *U. of Essex*
Organizer: **Todd Bridgman**, *Victoria U. of Wellington*

Research in Management Learning and Education has gained increased prominence within the Academy as external stakeholders demand evidence of student learning, accreditors require institutions to show evidence of impact and recent crises have set numerous practical challenges and theoretical puzzles. In this session, a panel Editors and Associate Editors from the three major Management Learning and Education publications (i.e., *Academy of Management Learning and Education*, *Journal of Management Education*, and *Management Learning*) will discuss and provide advice on how to design and conduct novel, impactful, and meaningful research in management learning and education. The goals are to obtain a better understanding of core characteristics and quality criteria of good research in our field and knowledge of opportunities for developing publications. More specifically, we want to provide current and prospective authors with a supportive, encouraging and interactive platform where they might share their ideas for designing and conducting management learning and education research projects and gain initial feedback and direction from experienced editors. All are welcome to attend.

This PDW has a long-standing tradition as a crowd favorite, and is a great opportunity to ask experts in qualitative research any questions you might have in areas such as ethnography, grounded theory, discourse analysis, interpretative phenomenological analysis and user questions related to participant observations, case studies, interviews, focus groups, conversation analysis, narrative inquiries, coding, content analysis, and computer-assisted qualitative data analysis. No preregistration is required, and the format is very laid back; attendees are encouraged to come and go as they please to have their questions answered by prodigious methodologists in the field.

Impression Management

Digital Session Chair: **Jan Christian Bauer**, *U. of Goettingen*

SIM: Too Good to Be True: Impression Management and Integrity's Self-Governing Mechanism in M&As

Author: **Jan Christian Bauer**, *U. of Goettingen*

Author: **Jan Christoph Hennig**, *U. of Goettingen*

In this paper, we study the influence of corporate culture (i.e., integrity) on impression management around M&As. Building on prior M&A literature, we argue that M&As provide a setting in which managers are prone to follow managerial self-interests and make use of impression management. Using a sample of 2,269 M&A transactions from S&P 500 firms between 2003 and 2018, we provide evidence that higher levels of integrity limit managerial use of impression management (i.e., manipulative disclosure behavior) during M&A announcements. We find an even stronger relationship in contextual situations that increase the risk of managerial self-interests in M&As. Our evidence suggests that integrity limits the risk of managerial self-interests in situations with high managerial discretion. We conclude that integrity acts as a self-governing function in situations that are hard to monitor by traditional governance mechanisms. Our study enriches prior research on impression management and voluntary information disclosure around M&A announcements with a perspective on the cultural value of integrity.

SIM: Maintaining a Good Image with Abusive Supervision: The Role of Self Enhancement Motives and FOC

Author: **Muhammad Waheed Akhtar**, *Liaoning U.*

Author: **Chunhui Huo**, *Liaoning U. Asia-Australia Business College*

Author: **Kashif Aslam**, *COMSATS Institute of Information Technology*

Author: **Muhammad Asrar-ul-Haq**, *COMSATS U. Islamabad, Sahiwal Campus*

Author: **Muhammad Safdar**, *Liaoning U. Business School*

The purpose of the research is to examine the mediating role of facades of conformity in the relationship between abusive supervision and emotional exhaustion. Further, we analyze the moderating role of the self-enhancement motives in the relationship between abusive supervision and facades of conformity. Furthermore, self-enhancement motives moderates the mediated relationship. Time lagged data across three intervals of four weeks (Time 1, Time 2, and Time 3) were collected from 321 employees working in the service sector of Pakistan. The key findings are that 1) abusive supervision predicts emotional exhaustion; 2) façade of conformity mediates this direct relationship; 3) self-enhancement motives moderate the relationship between abusive supervision and facades of conformity; and 4) self-enhancement motives moderate the mediated relationship. Managers need to promote a culture that accommodates diverse of opinion at the, so that everyone is able to express and share views openly. Organizations should encourage supervisors to participate in leadership development programs aimed at eliminating abusive supervision.

If sustainability transitions are to succeed, the role of actors, i.e. agency, is critical. While different forms of sustainability-related agency are studied, this research tends to operate in actor- and discipline-based silos. This symposium reviews prior academic research on sustainability agency. In view of integration, the symposium structures sustainability agency via relational agency, activist agency, and individual level agency. The seven symposium presentations draw from management and neighboring disciplines, offering reviews and conceptualizations of sustainability agency at individual and/or organizational levels of analysis. The symposium seeks to spark discussion on the need for theoretical and conceptual integration in the study of sustainability agency, within and across disciplines.

In the decade since ‘The Lean Startup’ was published, the method outlined in this book has been widely adopted by entrepreneurs and the principles it embodies have guided many new venture launches and product innovations. Established corporations have attempted to adopt these practices for their in-house innovation efforts with varying levels of success. This has prompted a surge in academic interest in the Lean Startup and associated methodology. While some underlying principles of the Lean Startup method are present in established streams of literature, a flourishing body of research has emerged to address remaining gaps between theory and the practices inspired by the Lean Startup method. Thus, we ask: What new research questions does the Lean Startup movement open up? In the sixth iteration of this highly popular workshop, we continue our discussion of these issues by assembling a panel of leading scholars who will share their current work and their perspectives on interesting directions for future research.

Whilst we are aware of many strategies with the potential to bring about lasting change in women's representation in decision-making, progress remains slow and gains often transient. This caucus aims to broaden our sight by exploring the need for new questions and research directions aimed at systemic change in organisations. This caucus aims to bring gender scholars together to explore the need for new questions and research directions aimed at systemic change in organisations. The presenters from the US and Australia will provide a brief overview of key dilemmas and challenges their research to date has identified. This will be followed by a facilitated discussion to identify possible new research questions and approaches.

Writing Difference ✈️ 💻 🖐️
Writing Difference

Digital Session Chair: **Iga Maria Lehman**, *U. of Social Sciences*

CMS: **Writing for a difference: Why writing on management needs to address the concept of writer identity** 🗂️ 💻

Author: **Iga Maria Lehman**, *U. of Social Sciences*

Since acceptance and visibility in discourse communities depends on readers' recognition of the veracity of writers' argumentation, my purpose in this paper is to conceptualize the identity academic authors assume to communicate disciplinary knowledge and beliefs to their readers. The theoretical perspectives involved in this analysis include Hyland's (2008) interactive model of voice and selected aspects of Harré and van Langenhove's (1999) positioning theory, which I synthesized into a multi-aspectual model of writer identity. Based on this conceptual framework, the discourse analytic tool was designed to measure rhetorical features which signal writer stance and reader engagement, and correspond to four types of intentional positioning of writer identity (linguistically encoded in the voices). From this analysis, specific advice is provided as to how academics can create a reader-inclusive and therefore more effective authorial identity in their texts. In this way, I present a transformative vision of management writing, which has been criticised as being no longer effective in communicating today's changing socio-cultural, disciplinary and practical contexts. In so doing, I support the recent efforts in CMS to 'write differently' in order to address the aesthetic, moral and political concerns of writing in the field.

CMS: **Return to Tamara-Land: Metaphors of Marquis de Sade and Mary Parker Follett on the Yellow Brick Road** 🗂️

Author: **R. Duncan M. Pelly**, *McMurry U.*

Author: **David M. Boje**, *Emeritus*

Stories have a remarkable way of illustrating theories. This article will use Frank Baum's *The Wonderful Wizard of Oz* to illustrate the tension between Mary Parker Follett's power with systems and the Marquis de Sade's power over systems. Through resurrecting the Tamara-land metaphor, we have used intertextuality and literary critique to explore the power dynamics of Dorothy, the Strawman, the Tin Woodman, and the Lion vis a vis the more powerful characters in *Oz: The Wizard of Oz*, and the Witches of the North, East, and West. This work is of interest to academics and practitioners who wish to explore complex power dynamics in a simple and elegant fashion.

CMS: **Voicing and Noising - The Other in Organization and Management Theory**

Author: **Philipp Arnold**, *European Uni Viadrina, Frankfurt (Oder)*

Author: **Jana Costas**, *European Uni Viadrina, Frankfurt (Oder)*

This conceptual paper takes inspiration from Jacques Rancière's theorizing on politics to refine our understanding of otherness in management and organization theory. Departing from the notion of noise, we argue that those othered in management and organization are precluded from the realm of sensible speech and can thus not be grasped through widely used conceptual lenses such as voice or discourse. We introduce the concepts of voicing and noising to provide a novel perspective on the politics of otherness understood as "the Dispute over the Existence of the Dispute" (Rancière, 1998: 55) and argue for a renewed theoretical and empirical engagement with it.

🗂️ CMS: **Can the Female Black Scholar Speak Out in a Noncooperative Space?** 🗂️ 🗂️ ✈️ 💻 🖐️

Author: **Penelope Muzanhamo**, *U. College Dublin, Smurfit*

Author: **Rashedur Chowdhury**, *U. of Southampton*

Best Critical Paper on Gender sponsored by the Journal of Gender, Work & Organization

We explore how black female intellectual activists cope in a 'noncooperative space' while seeking racial equality. Our analysis adopts and extends the concept of 'noncooperative space' as an organizational and social environment portrayed by powerful white agents as victim-friendly and protective, yet, in reality, one that is perilous for individuals who challenge racism. Our analysis suggests that courage helps black female intellectual activists to cope with and navigate these noncooperative spaces. However, courage, a traditionally manly attribute, is fragile and never omnipresent. Courage fades and regenerates, resulting in temporary loss and (re)gaining of voice. We reach our conclusion by grounding our analysis in intersectionality and drawing on an inductive theory analysis of an in-depth interview with a black African female scholar, and subsequently, her autoethnographic account of a racially motivated domestic violence experience. To overcome noncooperative spaces and advance racial equality, we suggest 'courageous collective action' and cooperation among black, brown and white scholars (allies). Our conceptualization contributes to debates on intellectual activism and racial equality within the broader area of diversity and inclusion.

Work-Life Integration, Family Harmony, and Gender Dynamics

Digital Session Chair: **Jing-hao Zhang**, *Peking U., School of Psychological and Cognitive Science*

OB: **Cultural differences in work-life integration and segmentation**

Author: **Jing-hao Zhang**, *Peking U., School of Psychological and Cognitive Science*

Despite abundant research on work-life integration and segmentation, few attempts explore the role of culture in them. Based on individualism-collectivism literature, we theoretically integrate cultural values into work-life integration-segmentation, and propose that people in individualistic cultures are more likely to attain work-life segmentation, whereas people in collectivistic cultures are more likely to attain work-life integration. To provide the mechanism about how work-life integration-segmentation continuums are formed variously between individualism and collectivism, we also posit that role identity pattern shapes the cultural distinction of work-life integration and segmentation, which implies the difference of work-life boundary management in distinct cultures. Our research advances understanding of the interrelationship between work and life domains and unpacks the psychological mechanism of boundary management distinction by expanding theory regarding the importance of roles of cultural values in boundary management strategy.

OB: **The Effects of CEO Original Family Harmony on Firm Product Innovation Performance**

Author: **Xiulian Ouyang**, *School of Economics & Management, Tongji U.*

Author: **Ying Wang**, *School of Management and Economics, Beijing Institute of Technology*

Author: **Xiangfan Wu**, *Xinjiang U. of Finance and Economics*

Author: **Ho Kwong Kwan**, *China Europe International Business School (CEIBS)*

In this study, we integrate work-family enrichment theory and upper echelons theory to examine how and when chief executive officers' (CEOs') original family has impacts on their firm performance. We argue that CEO original family harmony has an indirect effect on firm product innovation performance through CEO family supportive supervisor behaviors (FSSB) and top management team (TMT) behavioral integration, which operate in sequence. Additionally, we propose that CEO founder status strengthens the effects of CEO original family harmony. Results of data from 125 CEOs and 568 TMT members in various high-technology industries in China indicated that the positive relationship between CEO original family harmony and firm product innovation performance is serially mediated by CEO FSSB and TMT behavioral integration. Moreover, CEO founder status exacerbates the direct effect of CEO original family harmony on CEO FSSB and its indirect effect on firm product innovation performance. The findings provide insightful theoretical contributions, practical implications, and new research directions for understanding CEO family-work spillover and CEO-TMT interface.

OB: **Gender Matters: The Effects of Gender and Segmentation Preferences on Work-to-Family Conflict**

Author: **Viva Nsair**, *Wayne State U.*

Author: **Matthew Piszczek**, *Wayne State U.*

Many employees work under a family sacrifice climate, facing employer pressure to put the demands of work before the demands of family and leading to increased work-to-family conflict. This climate enforces consistent behavioral expectations across all employees. However, employees likely experience family sacrifice climates differently. Drawing on social role theory and boundary theory, we investigate how individual differences in gender and boundary management preferences interact to shape the relationship between workplace family sacrifice climate and work-to-family conflict in a two-wave sample of 157 professional employees. Results show women experience more work-to-family conflict from family sacrifice climates than men. We find that segmentation preferences further shape this relationship, but in opposite ways for men and women. Results indicate higher segmentation preferences are associated with a stronger relationship between family sacrifice climate and work-to-family conflict for women, but a weaker relationship for men. We discuss implications of these findings for understanding the role of organizational climate in creating gendered work-family experiences.

OB: **Psst! Did You Hear? A Gender Perspective on Reactions to Receiving Gossip at Work**

Author: **Maria Kakarika**, *EM Normandie Business School*

Author: **Shiva Taghavi**, *NEOMA Business School*

Author: **Helena Gonzalez**, *NEOMA Business School*

We examined workplace gossip recipients' perceptions of the gossiper and behavioral reactions, using three studies with mixed methods. In Study 1, we explored the nature of workplace gossip and how recipients perceive the gossiper with qualitative data. Studies 2 and 3 were experimental, and further examined behavioral responses toward the gossiper, as well as the moderating effect of the recipient's gender. Results showed that gossip recipients perceived the gossiper more negatively in terms of morality and trustworthiness. We also found that negative perceptions of the gossiper were stronger for female than male recipients. In turn, these perceptions translate into behavioral reactions toward the gossiper in the form of career and network-related penalties. Results are discussed in terms of their implications for practice and research on workplace gossip and understanding gender differences in responses of gossip recipients.

Panelist: **Leon Prieto**, *Clayton State U.*
Panelist: **Sabrina DeeAnn Volpone**, *U. of Colorado, Boulder*

The #BlackLivesMatter movement has burgeoned over the past several years, but it reached unprecedented levels of support in 2020. As topics of systemic racism, oppression, and racial inequality receive renewed attention, universities, and business schools particularly, have faced increasing pressure to integrate anti-racism education into the curriculum. Thus, the purpose of this PDW is to create a community of scholars and educators interested in exchanging and developing ideas to bring anti-racism lessons and materials into the classroom. The proposed format for this workshop is a 2-hour event consisting of a panel discussion and a break-out development activity. The structure of this workshop includes sharing of advice from expert educators on anti-racism teaching techniques and activities, exchanging of experiences between participants, and creating a space that fosters the generation of new ideas for bringing current events into the classroom.

As digital traces and computational capacity has grown exponentially, researchers in the IS field, as well as adjacent fields, have increasingly utilized computational methods of various kinds. Recently, computational methods have also been used in an inductive mode, geared towards developing, rather than testing, theory. In this PDW we seek to examine the emerging role of computational methods in theory development, associated potentialities as well as obstacles to overcome. We do so through a number of presentations of empirical work currently underway, group discussions, as well as a panel of senior scholars. This workshop is intended to contribute to the increasing sophistication, prevalence, and legitimacy of computational methods in developing new exciting theories of information systems and organizing.

Qualitative Research With Archival Data

Qualitative Archival Research

Organizer: **Anders Dahl Krabbe**, *Stanford U.*
Organizer: **Stine Grodal**, *Northeastern U.*
Panelist: **Mary Tripsas**, *U. of California, Santa Barbara*
Panelist: **Chris B. Bingham**, *U. of North Carolina, Chapel Hill*
Panelist: **Charlene E. Zietsma**, *Penn State U.*

The digitalization of textual data has spurred a dramatic growth in the availability of archival data. This new data captures both our ongoing digital life and stretches back in time as historical archives are digitalized and made available to the public. The availability of archival data raises new methodological opportunities and challenges for qualitative researchers who aim to generate organizational theory. Drawing on archival materials allows researchers to study the actual textual actions that actors—e.g. people, organizations or markets—make and to track them over time. This allows for textual ethnography where we (unlike in interviews but similar to traditional ethnography) are able to examine the interaction between actors in real time. Unlike both ethnography and interviews the use of archival data allows us to cross both time and space to study the unfolding of organizational phenomena not only across long time periods and in years passed but also across different spatial locations. Finally, archival data allows us to trace phenomena only manifest in aggregated patterns that is not readily observed with an ethnographic gaze. Yet, with these new empirical opportunities also come new challenges which arise both from the heterogeneity and extensiveness of the data. To rise to this challenge, this symposium brings together a set of scholars familiar with using archival data for qualitative analysis to discuss various methodological approaches for collecting and analyzing archival data and the consequences these methodological choices have for theory development.

OSCM: Understanding the Effects of Gray Swans on Employee Productivity

Author: **Tony N.K. Lynch**, *Auburn U.*
Author: **William Luse**, *U. of La Verne*
Author: **Bukola Bakare**, -

Companies' business practices and processes can have a negative effect the physical and mental well-being of their employees. This negative effect often results in loss productivity. Employee productivity can be affected by various internal and external factors either at the focal firm or at some node in the supply network (Hochwarter et al., 2008, Rao & Goldsby, 2009). In this paper, we present a conceptual model that examines how Gray Swans, which are low probability-high negative events, impact employee productivity. We propose that job engagement and job satisfaction mediates the effects of a Gray Swan on employee productivity. We also posit that organization identification moderates the effect on job satisfaction and job engagement in relation to employee productivity. We employ a social exchange-contingency theory perspective to examine how Gray Swans impact employee productivity. This conceptual work presents a formal definition of the Gray Swan construct. This paper, to the best of our knowledge, presents one of the first examinations of the effects of Gray Swans on employee job attitudes.

OSCM: Sustaining continuous improvement upon temporary workers' shoulders: a tale of survival & tribalism (WITHDRAWN)

Author: **Lucas Lopez-Manuel**, *U. of Vigo*
Author: **António Sartal**, *U. of Vigo*
Author: **Xosé H. Vázquez**, *U. of Vigo*

Long-term committed workers are expected to play a key role in the continuous improvement of operating routines, a fundamental activity preceding the creation of competitive advantages at the operations level. However, global uncertainty and market instabilities are increasingly pushing firms to increase the use of temporary labor to bypass current operational challenges related to production costs and flexibility. Although this strategy could have benefits at first sight, conventional wisdom in operations suggests it might be also hindering the successful deployment of continuous improvement practices. We therefore explore whether firms can sustain continuous improvement processes while relying on temporary labor by using an Insider Econometric approach on daily panel data (1793 observations across 9 lines gathered over two years). The results are mixed. We find temporary workers can positively contribute to continuous improvement activities especially when they are trained. However, this positive contribution turns negative as the number of temporary workers increases. We resort to evolutionary psychology to argue how continuous improvement outcomes are shaped by differences in hierarchical groups and tribal-like behaviors that aim to protect individuals' own interests. Overall, our findings questions established theory by offering a nuanced perspective of temporary workers in continuous improvement.

OSCM: Paradoxes of Process Digitalization and Worker Behavior

Author: **Daniel Kwasnitschka**, *Swiss Federal Institute of Technology Zurich, ETH*
Author: **Henrik Franke**, *Swiss Federal Institute of Technology Zurich, ETH*
Author: **Torbjørn H. Netland**, *Swiss Federal Institute of Technology Zurich, ETH*

What happens to front-line worker behavior when manufactures replace analog work methods with digitalized tools? Considering the current extent and speed of manufacturing and shop-floor digitalization, this important question remains under-represented. In this paper, we study the implementation of so-called "digital Shop Floor Management" (dSFM) systems in five advanced European manufacturing plants. Shop floor management refers to a collection of practices and routines implemented to monitor, steer, and improve production processes at the factory floor. Traditional shop floor management relies largely on lean principles that favor analog and on-site pen-and-paper methods. Seeking to make these processes more efficient, many manufactures are replacing analog methods with new digital dSFM technologies, such as digital dashboards, smart watches, and decision support systems using artificial intelligence. However, our observations give reason to believe that this transition is riddled with paradoxes that stem partly from incompatibilities between the intention of shop floor management and the capabilities of digital technologies. For example, we find evidence that digital technology – a measure that increases the autonomy of production workers – also paradoxically favors stricter control by management. We uncovered these trends in interviews among 30 managers and shop-floor workers of manufacturing companies located in central Europe and discuss our observations in light of paradox theory. Our main contribution is a behavioral paradox perspective on process improvement and digitalization of manufacturing processes.

OSCM: Influencing Supplier Representatives by Involving a Third Person: An Exploratory Study

Author: **Martin Norlyk Jørgensen**, *Aarhus U.*

As they sit at the nexus of where internal and external organizational interests meet and must be reconciled, purchasing and supply chain managers assume a key boundary mediation role. In this respect, their ability to influence supplier representatives is a sine qua non of successful supply chain management. This article investigates influence tactics of a subtle character, specifically, how managers from a buying organization (influence agents) manipulate supplier representatives' (influence targets) behaviors by involving a third person. So far, this phenomenon has received only scarce attention as existing literature on social influence in buyer-supplier relationships tends to (i) adopt an organizational-level unit of analysis, and (ii) if examining the individual-level seldom extend beyond a dyadic perspective. Drawing on Social Control Theory and employing an exploratory case study with data collected over a two-year period, the author identifies seven distinct influence tactics involving a third person and develops an overview of antecedents motivating their use. With these findings, this article makes a novel theoretical contribution by developing a deeper understanding of underexposed social influence dynamics in individual-level triads in buyer-supplier relationships.

Author: **Antoaneta Momcheva**, IE U. - IE Business School Madrid, Spain

Author: **Fabrizio Salvador**, IE U.

Author: **Rocio Bonet**, IE Business School

Facing irregular demand patterns, many service firms contract workers for specific hours when they are needed to meet peaks in demand. We conceptualize different metrics for schedule undesirability and investigate their impact on workers' likelihood of being absent as well as of performing poorly. Using a proprietary dataset of close to a million home visits performed by caregivers over a 5-year period, we find that the number of idle hours in the workday as well as the level of unpredictability of the schedule are significantly associated to higher likelihood of absenteeism as well as client dissatisfaction. Moreover, we find that fostering employee familiarity with the patients can mitigate this negative consequence of schedule undesirability.

The 3D printing revolution is here? The impact of 3D printing on managers and the innovation process *The 3D printing revolution is here?*

Organizer: **Maria Anna Halbinger**, *City U. of New York, Baruch College*
Organizer: **Hila Lifshitz-Assaf**, *New York U.*
Organizer: **Ning Su**, *Ivey Business School*

Three-dimensional printing is widely used across industries and has led to substantial technological, organizational, institutional and societal changes worldwide. Because 3D printing is fundamentally reshaping the ways in which innovation-related knowledge is combined, shared, designed and implemented, this digital technology is challenging existing organizational logics, occupations as well as innovation and entrepreneurial processes. Our interdisciplinary symposium, organized by three scholars from New York University, Ivey Business School and the Lawrence N. Field Center for Entrepreneurship, Baruch College, aims to shed light on the impact of 3D printing for theory and practice. We include four scholars to share their insights from their research that investigates 3D printing as a research context within and outside organizations and discuss the implications of their studies for the field of innovation, management, information systems, strategy, and entrepreneurship.

Author: **Lucia B. Oliveira**, *FGV-EBAPE*

Author: **Bianca Sá**, *FGV/EBAPE*

Author: **Ana Christina Celano**, *IBMEC, Rio de Janeiro*

Dark Side Case Award is sponsored by Sobey School of business

This teaching case portrays a dilemma faced by Daniel, a young Brazilian black journalist who works for Globo Group, the country's largest and dominant media conglomerate. He has been able to build a successful career start at GloboNews channel, which he – and his family – considered to be a dream job. It is a regular working day in early November 2019. Daniel looks at his appointments on the computer calendar and notices that the Brazilian national black awareness day – celebrated on November 20th – is approaching. This event has been a great advance in the Brazilian social agenda. At a glance, Daniel remembers that the country has the world's largest population of black people outside Africa, and that blacks represent the majority of the Brazilian population. It is the result of a grievous time of more than 300 years of slavery, and almost 5 million people forcibly brought to the country. For an idea of the magnitude of this number, around 380 thousand enslaved people were taken to the USA during its slavery period, ten times less than the number received by Brazil. In this reflective moment, he finally realizes that the organization he proudly chose to work for, and that portrays “diversity” as a core value, has so few black workers, and almost none in leadership positions. Moreover, no one seemed to care much about it. What should Daniel do?

CMS: **A Convenient Indian: The Resignation of Canada's First Indigenous Dean of a Law School**  

Author: **Jim Grant**, *Acadia U.*

I sought to expose and challenge neocolonial values and practices in a Western institution through an Indigenous woman's nuanced and detailed experience of paternalism, racism, and exploitation. The study was informed by a postcolonial perspective and draws on employment relations practices in the case of a woman, Canada's first Indigenous dean of a law school, who quit only two years into her tenure and claimed systemic discrimination leading to constructive dismissal. I sought to disrupt prevalent management and organizational practice by revealing how they serve to propagate neocolonial attitudes and reproduce barriers to the meaningful participation of Indigenous workers. I demonstrated how a neocolonial discourse was constructed and maintained in a Western institution, a legal system that has been hostile to First Nations' rights, and a profession that has been hostile to women. In addition, I demonstrated how a Western perspective was privileged or taken for granted and the Indigenous perspective was marginalized or dismissed. Key Words: employment relations, the West, paternalism, shaming, subordination, racial discrimination, hostile workplace, constructive dismissal, Indigenous, First Nations, postcolonialism, neocolonialism, exploitation, and contesting active legacies.

CMS: **Dark Side Case: Layers of Corruption in the Car Wash Scheme**  

Author: **Renato Chaves**, *HEC Montreal*

Author: **Emmanuel Raufflet**, *HEC Montreal*

Petrobras is an oil and gas giant publicly traded in Brazil and in international stock markets such as the New York Stock Exchange. The company's main shareholder is Brazil's federal government. Political influence is at the center of Petrobras' implication in a massive corruption scheme revealed in 2014. Brazilian Federal Police's Operation Car Wash disclosed a wide corruption scheme involving Petrobras, members of the Brazilian public administration, and some of the top construction firms in the country. The case focuses on describing how corruption practices spread at Petrobras as well as on the company's responses to the crisis initiated in March 2014. In the months that followed the scandal, former Petrobras executives involved in the scheme agreed to plea bargains and thus helped reveal an intricate network of corruption practices, including complex forms of bid rigging and bribery. Meanwhile, Petrobras announced the intention to create a Governance, Risk, and Compliance unit that would be in charge of various compliance initiatives. On the other hand, the company expressly denied liability and portrayed itself as a victim of the scheme. Based on rich information from the Car Wash scandal, the case addresses the following questions: what is organizational corruption and what are the main assumptions underlying the design and implementation of anti-corruption strategies?

CMS: **Dark Side Case: Tyson Foods during COVID-19 Pandemic**  

Author: **Debapratim Purkayastha**, *JCFBI Business School, IFHE, Hyderabad*

Author: **Hadiya Faheem**, *Freelancer, Hyderabad*

The case discusses Arkansas-based meat processing company Tyson Foods Inc.'s alleged negligent practices with regard to the safety of its workers during the COVID-19 pandemic. Critics contended that workers at Tyson's meat processing facility at Waterloo, Iowa, worked in closed production lines with no masks or personal protective equipment, and social distancing norms were violated, exposing them to the virus. They also alleged that even workers who felt ill were instructed by plant managers to ignore the COVID-19 symptoms and continue working. Consequently, the families of three workers who died due to COVID-19 at its Waterloo plant filed a lawsuit against Tyson Foods claiming that the managers had lied to the workers about the spread of COVID-19, that the company had failed to implement adequate workplace safety measures, and that supervisors had encouraged sick workers showing COVID-19 symptoms to continue working. In December 2020, Tyson Foods faced more scrutiny from regulators regarding its business practices during the pandemic. Critics felt that the situation at Tyson Foods and several other meat packing facilities in the US had only gone to show the kind of disregard in which such companies held their workers and portrayed contemporary capitalism at its worst. They opined that corporate greed and the singular focus on making profits had put workers' lives at risk since the workers had to report to work despite having COVID-19 symptoms. Going forward, what should Tyson Foods do to provide a safe working environment to its workers? What role can regulators and employers such as Tyson play in improving the working conditions for employees at the workplace? Amidst the pandemic, how do the management of companies such as Tyson Foods balance the need for providing essentials to customers with the need to keep their workers and customers safe?

CMS: Can Philip Morris Sustain the Big Shift in Global Smoking Landscape?

Author: **Kumar KB S**, ICFAI Business School, Hyderabad

André Calantzopoulos, CEO of the world's largest publicly traded tobacco company Philip Morris International (PMI) was all set to launch the company's breakthrough Heated Tobacco Product (HTP) iQOS (I quit ordinary smoking), in the US market. PMI had introduced iQOS as an alternative to traditional smoking products, given the growing risk and health hazards associated with them. HTPs were PMI's future business products, and the company worked on these products for several years before launching iQOS in Japan in 2014, where the product was highly successful. In the next five years the product was sold in 38 countries around the world. But the US market was a different ball game altogether, as federal agency related to health and human services Food and Drug Administration (FDA) had to approve the product before the launch. iQOS got approval from FDA after several laboratory tests, after it was proved that it reduced harm and the risk of tobacco-related disease among individual tobacco users and had low impact on passive smokers. But observers pointed out that only selective toxins were subjected to lab testing and several substances which were potentially more harmful than the constituents of combustible cigarettes were ignored. These claims could make it difficult for PMI to market its products in the USA. For the company, success of these products was highly important. For several years, it had been advocating people to quit smoking, and discouraged the use of traditional cigarettes. But in the process PMI cannibalized its own traditional combustible cigarettes. But the decline in demand for traditional cigarettes was not set off by the rise in the alternatives, which had hit the company's profitability. André Calantzopoulos had a huge challenge ahead of him. He not only has to come out with a plan to introduce a new technology into the market, but has to also address the growing concerns about the harmful side effects of the ingredients. Competitors were not far behind many of them have their own HTPs in the making, and were just waiting for the right time to enter the US market. At this juncture, André Calantzopoulos needed to steer the company in the right direction, while the future of its future product was itself ambiguous.

An emerging stream of research examines the impact of exogenous shocks on entrepreneurial startup success, including understanding entrepreneurial action as an equilibrium mechanism (Shepherd & Williams, forthcoming), and if the entrepreneurial response to such crises can be considered either rational, or instead impulsive and therefore less rational (Giones, et al., JBV forthcoming). To this emerging stream of research, we add a gender lens, exploring whether exogenous shocks, such as the COVID-19 pandemic, disproportionately impacts women entrepreneurs in comparison to male founders. With the onset of COVID-19, early Diana International Research Institute (DIRI) survey results suggest that two-thirds of women entrepreneurs report a revenue drop due to the pandemic (Manolova, Brush, Edelman and Elam, 2020). We argue that women's entrepreneurial success (or failure) during an exogenous shock are related positively (or negatively) to their human and social capital, as well as access (or constraints) on other resources such family care or financial resources. Another critical influence on startup success is the public policy measures which impact economic activity. While women entrepreneurs may be disproportionately challenged by the pandemic and subsequent economic effects, there is also evidence that they have been extremely resilient and innovative in overcoming these challenges. Previous research indicates that founders' human capital and networks are critical endowments that shift strategic direction (Greene, Brush, & Brown, 1997) and impact startup firm performance. These changes have not only allowed them to develop new business competencies, but also build new networks such as new channels for delivery (Manolova, et al, 2020; <https://www.bain.com/insights/can-covid-19-be-the-turning-point-for-women-entrepreneurs-in-india/>).

Knighthian uncertainty refers to where neither the possible outcomes nor the probability of those outcomes is known or knowable when a decision is being made. Management researchers have not ignored fundamental, or “Knighthian,” uncertainty over the years, but systematic theorizing has been sparse and fragmented. This paper development workshop devotes itself to deepening the conversation about fundamental uncertainty and how to make it operationalizable and actionable. This workshop emphasizes repurposing uncertainty from being a background assumption to a foreground focal construct that enables better understanding of but not limited to opportunity creation and discovery, imagination, curiosity, and creativity.

We adopt a multi-method approach to examine women's path to leadership from before their careers have even begun, to their leadership at the CEO level. Across four talks employing field studies, lab experiments, and natural language processing, we study how a follow-your-passions ideology causes women to opt out of male-dominated careers, how women's desires for power or status intersect to impact their likelihood of incurring backlash, how women's social power impacts their behavior, and how hiring a female CEO changes firms' official use of language around gender and agency such that the semantic meaning of the two concepts becomes more similar. The papers in this symposium broaden our understanding of how gender stereotypes present obstacles in women's career paths, while also identifying potential solutions to backlash triggered as a means of enforcing traditional gender roles.

Disability: Narratives and Experiences

Digital Session Chair: **Mukta Kulkarni**, *Indian Institute of Management, Bangalore*

GDO: **Organizational Narratives and the Construction of a Prototypical Disabled Employee**   

Author: **Mukta Kulkarni**, *Indian Institute of Management, Bangalore*

Conceptualizing organizational narratives as a means of employee identity regulation, I examine how an organization narratively constructs its prototypical disabled employee over time and why stable identity narratives allow for reading change. The study's data comprise public narratives (e.g., news releases) of the Government of India, the country's largest employer of persons with disabilities. Narratives during 2008–2016 were considered as this timespan witnessed the design of inclusive legislation that emphasized defining persons with a disability and their entitlements. Findings indicate that the label of "disadvantage" was consistently used to portray the target employee. Alongside other narrative material suggesting, for example, that the target employee was someone who required employment assistance, this label was supplied to external audiences to convert them into potential partners. This supply of narrative material further reinforced the portrayal of the target employee. Consistent use of this expansive label subsumed changing definitions of who is a person with a disability, allowed for aggregations with diverse disadvantaged collectives, and accommodated changes in employment entitlements and ecosystem partners, thereby allowing the reading of change in stable identity narratives. These findings, which are pertinent to identity regulation of employees with a disability, can also be extended to studying other categories of constructed social difference in the broader field of management and organization studies.

GDO: **How epistemic injustice maintains norms of the disembodied ideal worker in UK Universities**  

Author: **Jen Remnant**, *Edinburgh Business School - School of Social Sciences*

Author: **Kate Sang**, *Edinburgh Business School, Heriot Watt U.*

Author: **Katriona Myhill**, *Edinburgh Business School, Heriot Watt U.*

Author: **Thomas Stephen Calvard**, *U. of Edinburgh*

Author: **James Richards**, *Heriot-Watt U.*

This paper extends debates usually reserved for philosophy, health and justice systems to a new domain by applying Fricker's concept of epistemic injustice to the workplace to understand the experiences of academics living with disability and chronic health conditions. It focuses on the experiences of disabled UK higher education institution (HEI) employees, including women with long-term gynaecological health conditions. The paper brings together four studies conducted between 2017 and 2020 specifically: of interviews with disabled academics (n=75), interviews with key stakeholders in universities (n=35) (including university executives, line managers and human resources staff) alongside an analysis of the human resource management (HRM) policies (n=84) used by university managers to manage disabled employees and those with long-term health conditions, a survey of experiences of managing gynaecological health conditions while working in universities (n=627) and : university staff with gynaecological health conditions (n=23) and We utilise the concept of epistemic injustice to explain the complicated spoken and unspoken, written and unwritten ways in which HRM policy and practice in UK HEIs reinforces sexist and ableist barriers, limiting meaningful inclusion of disabled employees and women employees with gynaecological health conditions. The paper reveals the invisibility of embodied experiences in HE HRM policy and subsequent practice, the implicit operationalisation of stigma to maintain silence and the burden of "proof" required from individuals experiencing health conditions or disability that originates from an assumption of disingenuity. The stigmatised nature of many health conditions, particularly those relating to women's reproductive systems, restricts open discussions of health and the materiality of bodies in the workplace, so limiting the provision of workplace accommodations. HRM policy and practice in UK HEIs requires disclosure and evidence from employees seeking support – obliging them to speak up in a context of institutional silence with no guarantees that they will be believed.

GDO: **Disability, professional isolation and career attitudes**

Author: **Camellia Bryan**, *Schulich School of Business*

Author: **David Baldrige**, *Oregon State U.*

Author: **Liu-Qin Yang**, *Portland State U.*

Employees with disability-related communication impairments can experience isolation from professional connections which can negatively affect their careers. Management research suggests that having lower quality leader relationships can be an obstacle to employees with disabilities development of professional connections. However, in this paper we suggest that lower quality LMX relationships may not be uniform hurdles for the professional isolation of employees with disability-related communication impairments. In contrast to previous research, we suggest that poorer quality LMX relationships are more detrimental for the professional isolation of employees with less severe, rather than more severe, communication impairment. We expect this to be the case because employees with more severe communication impairments are more likely to disidentify from and have lower expectations for professional connections as self-protective coping strategies. With a sample of 181 deaf and hard of hearing employees, we find that employees with less severe communication impairments report feeling more isolated than employees with more severe communication impairments, and in turn report lower career commitment and career satisfaction. Moreover, the effects of communication impairment severity on professional isolation only hold in lower quality LMX relationships. In a second study of 81 persons with various common disabilities, we find that one possible explanation underlying this resiliency effect of communication impairment severity is that communication impairment is associated with disidentification with professional connections. Overall, our findings suggest that more severe communication impairment may produce resilience against isolation from professional connections.

Author: **Anna Krzeminska**, *Macquarie Business School, Macquarie U.*

Businesses and governments worldwide are pushing for and employing people with autism in the absence of a rigorous academic foundation to guide them. Understanding how to build the capacity of employers to effectively utilize this highly un(der)-employed group and leverage their unique talents is critical to achieving a successful and sustainable outcome. This systematic literature review maps the state of knowledge on this topic by examining evidence from both qualitative and quantitative research relating to the barriers and enablers for autistic people in gaining and maintaining skilled employment. The common thread across the material reviewed is that inclusive organizational cultures as well as the positive and inclusive attitudes of managers and co-workers are core to the participation of autistic people in employment. Yet, the constituent management philosophies and attitudes that support inclusion of autistic employees are not well understood, and advancing knowledge in this area is currently undermined by limited evidence that is predominately based on small scale qualitative studies, underutilization of theory, and overuse of autism symptomatology as a lens of analysis. It is our hope that the research questions and guiding theoretical perspectives we offer herein will inspire and build scholarship in this important emerging area.

Author: **Yang Yang**, *Rowan U.*

Author: **David Baldrige**, *Oregon State U.*

Entrepreneurial pursuit is thought to be an important career option for persons with disabilities (PWD) to achieve financial self-sufficiency and earnings equality. Yet little is known about how the earnings of entrepreneurs with a disability compare with those of their organizationally employed counterparts. We draw on theories and research on disability-related organizational employment discrimination as well as entrepreneurship motivation to propose and test a model of factors impacting the extent to which PWD earn more (less) from entrepreneurial pursuit relative to organizational employment. We drew a matched sample of roughly 810 PWD from the Canadian Survey on Disability, half of whom engaged in entrepreneurship and half of whom were organizationally employed. We find that entrepreneurial pursuit has a stronger negative association with earnings of PWD who have experienced an earlier disability onset age, who report more unmet accommodation needs, and those who are female. These findings allow us to contribute to the disability entrepreneurship literature by challenging assumptions about the extent to which entrepreneurial pursuit is beneficial for all PWD. Indeed, the same groups of PWD who are more disadvantaged in organizational employment may also earn less from entrepreneurial pursuits, thus limiting entrepreneurship as a path toward earnings equality.

GDO: Inclusive Leadership, Policy-Practice Decoupling, and the Anomaly of Climate for Inclusion

Author: **Michàlle Mor Barak**, *U. of Southern California*
Author: **Gil Luria**, *U. of Haifa*
Author: **Kim Brimhall**, *Binghamton U.-State U. of New York*

Inclusion is increasingly recognized as a critical leadership issue, yet research points to effectiveness variability among diversity and inclusion initiatives, indicative of potential policy-practice decoupling. Drawing on climate theory, we develop a moderated mediation model focusing on policy-practice decoupling as a mediator between supervisors' inclusive leadership and climate for inclusion, and introducing CEO's inclusive leadership and group diversity as moderators. To gain a deep understanding of decoupling, we use a multilevel approach and include in our model both top level leadership (CEOs), where espoused policies are determined, and group level leadership (supervisor), where enacted behaviors are experienced. We offer a novel perspective on climate of inclusion, which we have identified as 'the anomaly of climate of inclusion'. Unlike other organizational climate facets, inclusion climate is shaped not only by the shared experiences of group members, but also by their identities. Individuals from minority or underrepresented groups might experience decoupling in ways that are similar to other members from the same identity group even if they belong to different work groups. Our model, therefore, explains the process in which leaders create inclusive climate and point to boundary conditions in the process. We focus on two climate indicators: climate level and climate strength, and indicate that both are essential for understanding inclusion climate. Our conceptual model suggests that truly inclusive leaders would succeed at minimizing policy-practice coupling as perceived by all group members, not just historically dominant or high-status members. Implications for practice and future research are discussed.

GDO: 'Somewhere I Belong': Alienation and Belonging Among Homosexual Corporate Employees in India

Author: **Anupama Kondayya**, *Indian Institute of Management, Bangalore*
Author: **Shubhda Arora**, *Indian Institute of Management, Lucknow*
Author: **Pearl Malhotra**, *Indian Institute of Management, Bangalore*

Does diversity imply inclusion? And does inclusion necessarily create a sense of belonging? While organizations are trying to improve the diversity of their workforce, they are not necessarily succeeding in fostering a sense of inclusion and belonging among employees from underrepresented groups. We ask the question what leads employees to experience belonging or a sense of community and draw on the literature on community to examine the same. We use the sensitizing concepts from two streams of literature on community – the structural approach to community and the substantive approach to community – to analyze the experiences of 7 Indian working professionals who identify as homosexual. We find that the structural approach may lead to alienation of employees from underrepresented groups while the substantive approach leads to experience of community through shared values and solidarity. However, our findings reveal that the two experiences occur in isolation and there is a need to infuse values in structures in order that employees may experience belonging in the formal structures that they are part of.

GDO: Inclusive Leadership: A Multilevel Integrative Model

Author: **Wei Zheng**, *Stevens Institute of Technology*
Author: **Ann Mooney Murphy**, *Stevens Institute of Technology*

Amongst the growing outcry for denouncing discrimination and embracing inclusion of diverse members in organizational life, the idea of cultivating inclusive leadership has come to the fore. The nascent literature on inclusive leadership has documented divergent conceptualizations and faces limitations in its targeted level of influence and theoretical bases. In this paper, integrating the diversity and inclusion literature with the leadership literature, we expand our conceptualization of inclusive leadership as multilevel and model its within-level and cross-level influences on individual experience of inclusion, as well as on group and organizational climate for inclusion. We also propose that inclusive leadership can be exercised by formal and informal leaders, and that it is influenced by personal antecedents (diversity beliefs, inequality perceptions, and egalitarian goals) and contextual antecedents (learning orientation, slack resources, and stakeholder pressures). Based on our model, we offer insights and a research agenda focused on three fundamental questions: what constitutes inclusive leadership, who exercises it, and when it grows. Practical implications are suggested as well.

GDO: Masculinity Contest Cultures and Inclusive Cultures: Insights From an Agent-Based Model

Author: **John Meluso**, *U. of Vermont*
Author: **Laurent Hébert-Dufresne**, *U. of Vermont*
Author: **James Bagrow**, *U. of Vermont*
Author: **Rob Razzante**, -

Recent scholarship by Berdahl et al. (2018) finds that "work" becomes a masculinity contest when organizations valorize acts of dominance, acts which likely perpetuate barriers to the advancement of marginalized groups in organizations (as with the "glass ceiling"). But how such Masculinity Contest Cultures (MCCs) develop and sustain themselves remain open questions. This study juxtaposes MCCs with Inclusive Cultures to examine how each culture spreads in organizations. Drawing upon systems theory, we simulated the processes of socialization and promotion in organizations via an agent-based computational model. Varying the hiring pools for different organizations from inclusive to contest-oriented revealed that inclusiveness emerged as self-reinforcing in all but organizations with the most contest-oriented hiring pools. In contrast, hiring pools socialized into hegemonic masculinity made organizations more likely to resist Inclusive Cultures and showed potential to evolve into MCCs in productivity-oriented, hierarchical organizations. Furthermore, organizations tended to see greater cultural change in higher ranks of the organizational hierarchy than in lower ranks, regardless of the more-prevalent culture. Such cultural stratification demonstrates the challenge in transforming the culture of every organizational level toward inclusiveness without further study of socialization processes.

International Corporate Governance

Digital Session Chair: **Raquel García-García**, *U. of Oviedo*

This session examines issues related to international corporate governance. It contains papers examining the impact of ownership concentration on financial performance across Asian emerging economies, the changing nature of global product integration, managerial attention and subsidiary initiative in the offshore oil industry, and how different entry modes lead to different governance mechanisms of subsidiaries, resulting in variation in subsidiary structure and work contexts.

IM: Managerial Attention and MNE Subsidiary Initiative in the Offshore Oil Industry

Author: **Michael Murphree**, *U. of South Carolina*
Author: **Bui K. Petersen**, *Memorial U. of Newfoundland*
Author: **Ningzi Li**, *U. Of Chicago*

The roots of subsidiary initiative – entrepreneurial actions taken by subsidiaries that can change their role within the broader corporation or even overall corporate strategy – has been broadly studied at the organizational and external environmental level. Following calls to consider the role of individual managers in the undertaking of subsidiary initiative, this paper adopts the Attention Based View to consider the mediating role of managerial attention in the subsidiary initiative process. Using interview data from MNE subsidiaries in the offshore oil industry in Newfoundland, Canada, we find that individual characteristics – most notably entrepreneurial background, local identity and degree of local embeddedness help direct the attention of local managers to the external environment. This increases the propensity for subsidiary initiative. When promoting initiatives, it is necessary to gain the attention and help reorient an ally with the headquarters top management team to facilitate approval. This paper helps expand understanding of subsidiary initiative in international business and the as yet understudied role of middle managers' attention in determining the incidence and approval of initiatives.

IM: How does Concentrated Ownership impact on Financial Performance? Asian Emerging Economy Evidences

Author: **Abdulla Al Mamun**, *U. of Wollongong*
Author: **Qaiser Rafique Yasser**, *Preston U., Pakistan*

We aim to clarify the relationship between ownership concentration and firm performance using both accounting measures and value based measures based on Asian emerging economies. It proposes the theoretical assumptions and empirical evidences on how concentrated ownership can influence firm performance among selected Asian emerging economies given their differential characteristics. We have adopted dynamic panel data estimation, Generalized Methods of Moments (GMM), apart from regression analysis in the estimation of the panel data regressions of firm performance in order to take into account the problem of endogeneity caused by the potential effect of ownership on firm performance. The paper offers econometric insights about how concentrated ownership has impact on firm performance. It suggests that a positive association is found between the dispersed ownership of largest shareholders and firm profitability, while highly concentrated ownership negatively influence firm performance across Asian emerging economies. This paper satisfies the specified need to study how concentrated ownership can have influence on firm performance given the scholarly and regulatory importance of the area.

IM: Organization of Hybrid Governance

Author: **Xiaoli Tang**, *Washington U. in St. Louis, Olin Business School*

A key theme for multi-business firms and multinational firms is managing heterogeneous business units or international subsidiaries. Where does the heterogeneity come from? How do firms redeploy resources across differing units to maximize value? In this paper, we identify a particular source of subsidiary variation—entry mode into foreign markets. Firms choose either greenfield investment or M&A when entering a new market. We propose that different entry modes lead to different governance mechanisms by the headquarters towards the subsidiaries, resulting in variation in structure and work contexts of the subsidiaries. This variation then leads to differences in headquarters-subsidiary relationship, and knowledge creation and transfer at the subsidiary level. We test our hypothesis with a field study at a multinational company and find that the firm exerts more dynamic control towards M&A subsidiaries by redeploying more headquarters employees to these subsidiaries than to greenfield subsidiaries, and knowledge created at M&A subsidiaries are less location specific as employees from these subsidiaries tend to be redeployed to more unrelated locations.

IM: The Changing Nature of Global Product Integration

Author: **Heather Berry**, *George Washington U.*
Author: **Aseem Kaul**, *U. of Minnesota*

We revisit the topic of global integration and its determinants by replicating Kobrin's (1991) seminal study. We gathered the same cross-sectional data used by Kobrin, which we then extended across time and disaggregated into three subcomponent parts. Similar to Kobrin, we find that parent firm technology intensity drives global integration, but our subcomponent analysis reveals that technology intensity drives parent to affiliate integration, while other factors (including increasing foreign country knowledge stocks and less parent offshore outsourcing activities) are more important in driving affiliate-led integration with other affiliate and parent operations. Finally, we make available our industry level data on global product integration, which we call the Global Product Integration Index (GPII).

Advice on writing an award-winning dissertation from dissertation award finalists
Tips for Great Dissertations

Chair: **Davina E. Vora**, *State U. of New York at New Paltz*
Panelist: **Chang Liu**, *Rutgers Business School*
Panelist: **Ivar Padrón-Hernández**, *Hitotsubashi U.*
Panelist: **Iris Saittakari**, *Aalto U. School of Business*
Panelist: **Noman Ahmed Shaheer Siddiqui**, *U. of Sydney Business School*

Deciding on a dissertation topic and completing a dissertation, let alone an award-winning one, can be a daunting task. Are you a Ph.D. student who could use some advice about the process? Do you have questions for others who have not only completed their dissertations, but also whose dissertations were recognized as being among the best in their field? If so, this session is for you! Recent finalists and winners of dissertation awards in international management talk about their experiences and share advice with you. Their points cover the entire scope of the dissertation process as well as both professional and personal issues. Even if you are not striving to have the best dissertation in the world, their tips and suggestions may be valuable to you. Regardless of your stage in the dissertation process, we encourage you to attend.

MC: **"How do We Achieve it?" A Relational View of Service Quality Enhancement in High-involvement Service**

Author: **Rajashik Roy Choudhury**, *Indian Institute of Management, Bangalore*

William H. Newman Award Nominee

Although the discourses on the consequences of attaining service quality are extensive, scholars did not seem to expend adequate effort in understanding the underlying mechanisms through which a service organization could enhance perceived quality. This apparent gap in the services marketing literature calls for a detailed process study to enable researchers and practitioners comprehend how relational approach could help service organizations to persuade the consumers over a period of time. Drawing on social influence theory (SIT), this paper shows how service quality is enhanced in high-involvement service contexts. Building on ethnographic memoir of a large-scale management consulting assignment, I show that consultants utilize Kelman's (1958) social influence techniques of compliance, identification, and internalization to gradually increase the extent of cooperation from clients thereby improving their perceptions of service delivery. This study also reveals why a continuous, process-oriented, relational perspective is superior to examine the dynamic nature of consumers' expectations and their perception of performance compared to discrete evaluations of service quality at different encounters. Through this paper I contribute to the service quality literature as well as to the SIT-related conversations.

MC: **An Organizational Wake-up Call: Five Lessons the COVID19 Pandemic Strikes Us with...**

Author: **Laura Khachan**, *U. Jean Moulin Lyon III*

Author: **Laurent Cappelletti**, *LIRSA-Cnam Paris*

Pandemics and outbreaks of contagious infections have been recurring throughout history. These outbreaks have molded the path of several fields, especially when it comes to biology and chemistry where the scientific community has been highly mobilized in a race for a safe and effective treatment or vaccine. The development of new molecular entities in these fields and the release of new treatments and antibiotics have helped populations to overcome the subsequent threats. Nevertheless, the socio-economic impact has been great and has caused the suffering of populations who struggled for years to recover. Today, we live in the COVID19 global pandemic era, and we explore in this text its impact on the management of organizations. From our standing point as internal intervener in a pharmaceutical wholesaler company located in Lebanon., we share our organizational reaction to the national strategies and we question future management strategies to sustain a high level of agility in times of uncertainties through the implementation of the socio-economic intervention research. We communicate the creation of value in the purpose of making the capitalism responsible on the social and sanitary levels.

MC: **How to Accompany the Evolution of the Management of Administrative Staff in a Hospital Environment**

Author: **Sophie Claire Le Lédan**, *ISEOR, Magellan, IAE Lyon, U. Jean Moulin*

Author: **Carole Bousquet**, *IDRAC Business School*

Winner of the Thomson South-Western Outstanding Research-Based Paper on Management Consulting

The objective of this communication is to show how an intervention carried out with the administrative department of a French hospital has enabled the identification of margins for improvement in overall performance. Management support is provided during a research-intervention. The doctoral research began with a socio-economic diagnosis and continues with a project including several major areas for improvement. The results show chronic under-productivity and numerous non-quality in administrative processes. Change management is based on the data collected and on their effect of raising awareness of the room for manoeuvre that can be activated for the survival of the establishment. The study of skills showed the vulnerabilities to be corrected by integrated training and reorganization. The health crisis and the context of the hospital establishment show that adaptations of the intervention process are useful and produce specific results. The partial results of an ongoing intervention and the context do not allow any generalization. The observation of the actions actually implemented and the evaluation of their effectiveness should provide an interesting complement to this longitudinal research over the next two years.

Decolonizing the Management Curriculum: Black Minds Matter Too

Decolonizing the Management Curriculum

Organizer: **Leon Prieto**, *Clayton State U.*
Presenter: **Kalu Osiri**, *U. of Nebraska, Lincoln*
Presenter: **Milorad Novicevic**, *U. of Mississippi*
Presenter: **David Boughey**, *U. of Exeter Business School*
Presenter: **Keith Hollingsworth**, *Morehouse College*
Presenter: **Shennette Garrett-Scott**, *U. of Mississippi*

Amid the growing calls for the decolonization of the management curriculum, scholars are urged to address the issue of the underrepresentation of the Black experience in Entrepreneurship and Management. Black agency is often missing from the pages of the largely whitewashed Management and Business History. Too many times we see people of African descent depicted as passive actors, almost an afterthought, and not the originators and innovators who founded their own communities, businesses, social enterprises. This workshop aims to address how a diverse group of Management educators approach decolonizing work in the classroom and/or with their scholarship.

Are you a junior faculty member or a senior student looking to craft your research identity, portfolio, network, and/or home within the Academy? Are you interested in organizations and cognition, from a micro, meso, or macro perspective? If so, the MOC division has a consortium with you in mind! Now in its 9th year, Diamonds in the Rough (DIR) offers early-stage professional guidance for “diamonds in the rough” i.e. emerging scholars across a wide variety of theoretical perspectives and methodologies. DIR strives to meet the demand for professional development in a warm, welcoming, and inclusive environment. This year’s virtual format will include a synchronous one-hour panel on challenges and opportunities in academia with a special focus on career lessons in the time of COVID-19. In addition, you will be paired with one or more other participants and an influential scholar who will provide you with personalized feedback and guidance on your own portfolio. Come to be treated to stories about how prominent scholars forged their paths, advice on how to best navigate your own, and the opportunity to connect with colleagues who share similar research interests. MOC prides itself in being a ‘bridging division’ and DIR is a ‘bridging PDW’ that strives to function as an intra- and inter-divisional mentoring network. Pre-registration is required. To register, please (1) complete our registration survey here and submit (2) your CV and (3) a one page overview of your research identity for feedback.

Looking Back to Spiritual Traditions of Diversity, Equity and Inclusion

Spiritual Traditions of DEI

Panelist: **Joan F. Marques**, *Woodbury U.*
Panelist: **Tom Elwood Culham**, *Beedie School of Business Simon Fraser U.*
Panelist: **Payal Kumar**, *Indian school of hospitality*
Panelist: **Benito Teehankee**, *De La Salle U., Manila, Philippines*
Panelist: **Stacie Chappell**, *Vancouver Island U.*
Participant: **Neha Shivhare**, *Simon Fraser U.*
Moderator: **Ayesha Sengupta**, *Ph.D. Candidate at Maharishi International U.*

The proposers of this symposium aim to share a scope of managerial practices that could contribute to lasting improvement. Focusing on the manager's role, we would like to combine our common advocacy for Diversity, Equity, and Inclusion (DEI) with our broad range of performance and research angles toward the spiritual approach. As a panel, this team of scholars and practitioners plans to explore multiple behavioral models for managers toward a more rewarding and durable implementation of DEI. More specifically, this panel symposium will explore moral and spiritual based practices for managers with a specific focus on Buddhist psychology, Daoist philosophy, Hinduism, Catholic Social Teachings, and Ego-development and identity elements of embracing DEI.

Today's changing world of work increasingly requires identity flexibility from those making their careers inside or outside of organizations (Ashford, Caza, & Reid, 2018; Caza, Moss, & Vough, 2018). With this symposium, we aim to explore some of the identity implications of our current business reality in a number of employment contexts. In particular, the papers presented will first look at work identity in a rather traditional organizational within-role setting, before moving to the implications of work identity for extra-role behaviors, identity during career inaction and, finally, identity outside of organizational boundaries. In presenting four empirical papers of both quantitative and qualitative nature, this symposium will cover the topic of identity within a range of professional groups: managers, employees and gig workers. In addition, it will feature remarks from our session discussant Jennifer Petriglieri, with the aim of stimulating dialogue on the impact of identity in the modern-day work context.

Exploring the impact of low leader identity on managerial stress and subordinate perceptions

Participant: **Jeffrey Sanchez-Burks**, *U. of Michigan*
Discussant: **Sigal Barsade**, *The Wharton School, U. of Pennsylvania*

Emotions are pervasive in organizations. A recent line of inquiry notes that emotions rarely occur independent of a social context. Indeed, social forces profoundly influence how we feel, the emotions we display and the feelings we know are appropriate to express in a given context. Altogether, research indicates that shared affect influences critical outcomes for employees and clients within and beyond the workplace. This symposium seeks to expand scholarship on the myriad ways that collective emotion influences employee behavior in the workplace. In particular, the papers in this symposium address an understudied aspect of collective emotion: how contextual factors influence the development of collective emotion and its subsequent behavioral effects.

Presenter: **Maria Jose Tonelli**, *Fundacao Getulio Vargas*
Presenter: **Martha S. Feldman**, *U. of California, Irvine*

This PDW explores the foundational work of female scholars for the field of organization and management theory. It represents the third edition of a standing series showcasing the enduring relevance of earlier organizational research. We believe that continually re- visiting the 'classics' may complement the strong emphasis (at AOM and beyond) on new/fashionable ideas, enable cumulative insights, and promote the value of research committed to theorizing core organizational dynamics. This edition not only focuses on paying attention to — but also expanding — our canon by shedding light on female scholars whose work is often overlooked. The event is structured through a mix of expository and interactive moments. The first part features an introduction by the organizers, a panel discussion among speakers, and presentations by Marta Calás on Edith Penrose; Lisa Cohen on Rosabeth Moss Kanter; Martha Feldman on Susan Leigh Star; Maja Korica on Rosemary Stewart; Maria José Tonelli on Isabel Menzies Lyth; and Emmanuelle Vaast on Jean Lave. The second part (requiring registration) will include roundtables mediated by the speakers and a plenary discussion led by the organizers. All presentations will be recorded and made available via the Talking About Organizations Podcast.

The first part (presentations) is open for all AOM participants. The second part (roundtables) requires registration. Please register for the roundtables via the following link: <https://forms.gle/7rJFTsLQa62rMajZ7>

Science Denial: Causes, Courses, and Remedies. A Route Map for Organizational Scholars

Science Denial: Causes, Courses, and Remedies

Organizer: **Elena Bruni**, *WU Vienna*

Organizer: **Lianne Lefsrud**, *U. of Alberta*

Panelist: **Renate Elisabeth Meyer**, *WU Vienna & Copenhagen Business School*

Panelist: **Thomas J. Roulet**, *U. of Cambridge*

Panelist: **Derek Harmon**, *U. of Michigan*

Panelist: **Shahzad Ansari**, *Cambridge U.*

Panelist: **Andrew J. Hoffman**, *U. of Michigan*

Finalist for the OMT Division Best Symposium Award

This symposium explores the resurging phenomenon of science denial, which hampers the effectiveness of organizations, institutions, and individuals to respond to global challenges such as climate change, public health, and pandemics. To this end, we bring together leading scholars who are reflecting on science denial from different theoretical perspectives (social movement theory and framing, environmental and social justice, institutional theory and social evaluations) and explore its implications and ameliorations. Beginning with an introduction to science denial and its main characteristics, we will draw insights from panelists, discussant comments, and a Q&A session. With this, our Symposium will provide participants with an understanding of the phenomenon of science denial, different theoretical approaches to examine it, and novel research approaches and engaged methods to address it.

With the increasing availability of text data and advances in methods that allow researchers to capture meaning in and around organizations using language, we seek to better understand the various ways in which we can capture meaning using language. This Professional Development Workshop (PDW) aims to explore the different levels at which meaning resides, recognize various different approaches for analyzing this meaning, and develop an integrative perspective on multi-level theorizing and analysis. We build upon and extend a successful PDW on language held virtually during AOM 2020 and prior sessions in the LMO (Language, Meaning and Organizing) series to provide a forum for bringing together a variety of theoretical and empirical approaches to language. We thus seek to broaden the scope of this growing community by inviting the participation of scholars who have used language directly or indirectly in their research and would like to contribute to this area of work in the future. The PDW will feature two scholars presenting a seminal paper that uses multi-level analysis of language, followed by panel and roundtable discussions with leading scholars and researchers in the field.

2021 Doctoral Student Professional Development Consortium *PNP Doctoral Consortium*

Chair: **Erynn Elizabeth Beaton**, *Ohio State U.*
Chair: **Alexander Kroll**, *Florida International U.*

Abstract: The Public and Nonprofit Division Doctoral Student Professional Development Consortium is an intensive workshop that seeks to provide doctoral students in public and nonprofit administration with guidance on the job market, the publication process, presentation skills, and dissertation research. Doctoral students at any stage are welcome to apply to the consortium, and the consortium is especially beneficial for students who are in the dissertation proposal development stage or later. The Consortium will give participants the opportunity to a) get tips on finding an academic job, b) present their research or a proposal to get feedback from accomplished scholars, and c) network among peers, future colleagues, and potential employers. Participants must apply to participate in this PDW. Please direct questions to the PNP Doctoral Consortium Co-Chairs, Erynn Beaton (beaton.13@osu.edu) or Alexander Kroll (akroll@fiu.edu).

An invitation is required for this session. Applications are being accepted through Friday, April 30, 2021 at this link: https://fiu.qualtrics.com/jfe/form/SV_b3K6a0K99ctjrJY Please direct questions to the PNP Doctoral Consortium Co-Chairs, Alexander Kroll (akroll@fiu.edu) or Erynn Beaton (beaton.13@osu.edu).

Broadening Our Vision: Video Ethnography in Organizational Studies *Video Ethnography in Organizational Studies.*

Organizer: **Michael Jarrett**, *INSEAD*
Organizer: **Curtis LeBaron**, *Brigham Young U.*
Organizer: **Marlys K. Christianson**, *U. of Toronto*
Moderator: **Philip Gylfe**, *Aalto U. School of Business*
Moderator: **Feng Liu**, *Saint Mary's U., Canada*
Moderator: **Sotirios Paroutis**, *Warwick Business School*
Participant: **Mary J. Waller**, *Colorado State U.*

Management scholars have increased their use of video as a research tool in organizational studies. It helps them to see, understand, codify, and make sense of the strategizing process. These methods uncover the micro-interactions of organizational actors. It allows insights into their implicit practices that emerge in their moment-to-moment exchanges. Consistent with the interests of SAP, video makes explicit the links between micro-dynamics and broader organizational outcomes. This PDW is timely, as it provides an opportunity to revisit the recent progress of video-based research. What changes do we observe over recent times? The newly online world of social distancing in the pandemic has switched many in-person interactions to video-based ones, thus increasing the need for and opportunity to study video. Thus, we will examine the progress, benefits and challenges of video ethnographic methods. While the PDW will provide an update of the field, it will emphasize “hands on” experience of video analysis taking different approaches. Finally, the PDW aims to encourage newcomers. It will help them understand and use this method in their research, spark debate, and generate further innovation. We aspire to co-create good practices and build a community of engaged scholars.

Video recordings of human interaction are often made possible by confidentiality agreements between researchers and participating subjects. In organising this PDW, we seek to maintain all ethical and contractual commitments. Thus, in signing up for this PDW, you also agree to the confidentiality agreement that you will not record any of the presentations, including presentations and analyses of video data. The PDW is very participative and thus limited to 50 spots. Please pre-register using the following link to secure a place: http://insead.eu.qualtrics.com/jfe/form/SV_efiajUYRgi6MLKC

Panelist: **Tricia Olsen**, *U. of Denver*
Panelist: **Louise Jayne Obara**, *De Montfort U.*
Panelist: **Laura J. Spence**, *Royal Holloway, U. of London*

The past two decades have heralded a business and human rights perspective (BHR) on corporate responsibility. Discussions of BHR are often grounded with theories of corporate social responsibility (CSR). While it may seem that CSR and BHR are similar in terms of the issues they address at the surface, they differ substantially in terms of origins, underlying basic assumptions, and the implications they yield. CSR and BHR present fundamentally different understandings of the role and place of corporations in society. The goal of this workshop is to bring a diverse set of CSR and BHR scholars together to engage in an Oxford-style debate. The debate will focus on questions about whether BHR is a critique, a subset, or an extension of CSR. In answering these questions, the PDW will establish the relevance of BHR for multiple divisions and outline new research agendas. The workshop includes panelists and facilitators with diverse and innovative perspectives to prompt conceptual, empirical, pedagogical, and pragmatic discussions to advance work on both CSR and BHR. The debate between CSR and BHR scholars about the relationship between the two research domains provides any scholar interested in business and social issues with a forum to think about the broader question of how their respective sub-fields connect to each other and ultimately help move forward scholarship in the broad domain of business and society relationships.

This workshop offers practical advice to doctoral students on completing their dissertations and transitioning to their first academic positions. The workshop is open to all doctoral students. Pre-registration will be required. The workshop will be conducted in an informal setting where students will be able to interact with faculty and other students in small groups. The finalists for last year's STR Outstanding Dissertation Award share the coordination of the workshop. The format of the PDW will include presentations and perspectives from last year's finalists and a panel of senior faculty. Attendees will break out into groups to interact with faculty and Q&A will be held after all sessions.

Pre-registration is required. If you have questions, feel free to contact Marco Testoni (mtestoni@tilburguniversity.edu).

Using Employer-Employee Panel Matched Datasets to Advance Management Research

Employer-Employee Data in Management Research

Organizer: **Thomaz Teodorovicz**, *Harvard U.*
Organizer: **Carlos Inoue**, *U. of Illinois at Urbana-Champaign*
Panelist: **Seth Carnahan**, *Washington U. in St. Louis, Olin Business School*
Panelist: **Vera Rocha**, *Copenhagen Business School*
Panelist: **Ines Black**, -
Panelist: **J. Daniel Kim**, *The Wharton School, U. of Pennsylvania*
Panelist: **Aleksandra Joanna Kacperczyk**, -

The use of employer-employee matched datasets is growing rapidly in management research. Scholars have used such datasets to inform questions in topics such as human resources and organizational performance, worker mobility, wage inequality, and entrepreneurship. This type of dataset offers many benefits such as the possibility of isolating the influence of certain workers on organizational performance and identifying the role of work experience on the creation and performance of new ventures. It also imposes some challenges such as getting access to and manipulating sensitive data. This PDW seeks to recognize and take stock of the use of such data in management research, share knowledge and experience about working with such data, discuss and stimulate research in management, and develop a scholarly community of researchers studying the interaction of workers and firms. This PDW will consist of short presentations of researchers with experience with such datasets, followed by group activities, and round-table discussions among panelists and the audience. The main insights and takeaways will be summarized in a document and distributed to the Academy of Management scholarly community.

Understanding Organizational Governance in Digitally Transformed World

Organizational Governance in Digital Businesses

Organizer: **Richard Makadok**, *Purdue U., West Lafayette*
Speaker: **Kevin Boudreau**, *Northeastern & NBER*
Speaker: **Gary Dushnitsky**, *London Business School*
Speaker: **Anparas an Mahalingam**, *Purdue U.*
Speaker: **Frank Nagle**, *Harvard Business School*
Panelist: **Hanna Halaburda**, *New York U.*
Panelist: **Tobias Kretschmer**, *LMU Munich*
Panelist: **Geoffrey Parker**, *Dartmouth College*
Panelist: **Brian Silverman**, *U. of Toronto*

In order to help to build a community of scholars interested in studying platform-based and digitally-enabled business models by using classic core strategy questions, a popular PDW at last year's AOM 2020 online conference (with over 200 live participants and nearly 1000 YouTube views, the STR division's second most popular YouTube video) explored how conventional corporate-level strategy theory could inform our understanding of this phenomenon. This year, as an extension of that initial effort, we propose to take a similar approach to the platform phenomenon, but using a different set of questions as our theoretical lens. Specifically, this proposed PDW examines how platform-based and digitally-enabled business models can be understood in terms of organizational governance. As a step toward understanding organizational governance in a digitally transformed world, this PDW plans to provide a stimulating environment to discuss the implications of digitization for governance, and vice versa. We will focus on how digitization broadens the application of theories of organizational governance to these new organizational forms, and how they bring the need to expand existing theories through a sharp focus on the organizational and governance features that are unique to these novel organizations.

We encourage participants to register in advance for the workshop by sending an email to StrategicManagementWorkshop@gmail.com with their name, title, institutional affiliation, telephone, and email. As an optional addition, participants who wish to join the final part of the workshop -- i.e., the paper-development breakout discussion -- should also attach to their email a one-paragraph document (with name and affiliation) that articulates an idea for a research project on the topic of the workshop. The purpose of these breakout group discussions will be to brainstorm and refine ideas for future research projects at the intersection of organizational governance and digital business models. Each breakout group will have several audience members, along with 1 or 2 of the panelists or speakers, who will facilitate the breakout group's discussion.

Participant: **Isabel Fernandez-Mateo**, *London Business School*
Participant: **Hans Frankort**, *City, U. of London*
Participant: **Jacob W. Roberson**, *USC Marshall School of Business*

There has been a greater effort, internationally, to include more women in the workforce. One of the ways this effort has manifested is through gender diversity initiatives, which are aimed at reducing gender disparities and creating a more welcoming workplace for women. However, within the workforce, there are two barriers that can diminish the initiative's efficacy: resistance to implementing these initiatives, or unexpected consequences associated with the initiatives (particularly for the women that they are supposed to benefit). In four presentations, this symposium explores how these barriers manifest, and how to address them, by focusing on: people's perceptions that inhibit equitable gender representation, elements that influence women's ability to attain valued positions, and the unintended consequences for women who do attain these positions. All four papers develop novel insights into factors to consider when an organization is seeking to improve gender representation, as well as pitfalls to avoid when doing so. After the presentations, Dr. Lisa Leslie, a renowned expert in diversity initiatives, will facilitate a discussion bridging the presentations to develop future insights in gender diversity research. Thus, this symposium will shed light on important considerations that can help organizations to effectively address gender disparities.

HCM Division Senior Scholars Coffee Chat

Representative-at-Large: **Nicholas Edwardson**, *U. of New Mexico*
Representative-at-Large: **J'Aime Jennings**, *U. of Louisville*

The leadership of the HCM division has created a Senior Scholars Mentoring Coffee Chat. In this virtual environment, it has made it particularly difficult for doctoral student early in their academic career to interact with colleagues in the field in usual ways, building up connections and exchanging ideas and research. The goal of this program is for HCM doctoral students, post-docs, and junior faculty to have the opportunity to communicate and exchange thoughts with peers from other schools and countries with the guidance of a senior health care management.

The goal of this professional development workshop is to provide a session in which attendees receive constructive feedback and advice on health care management related research projects that are in progress, but not ready for journal submission. Projects may range from early conceptual stages to later stages (i.e. writing a manuscript). Participants will receive feedback, in a collegial setting, from health care management researchers in the field on key issues attendees are facing in their projects. Participants will be matched with two research mentors based on the nature of their research project and the expertise of our esteemed panel. Each participant will discuss their research projects with each of their assigned mentors, rotating in timed increments.

To participate in this PDW, you must have submitted an application or signed up previously to be a mentor.

Precarious Employment and Reproduction of Inequality
Precarious Employment

Digital Session Chair: **Letian Zhang**, *Harvard Business School*

OMT: Shaking Things Up: Disruptive Events and Inequality  

Author: **Letian Zhang**, *Harvard Business School*

This paper develops a theory of how disruptive events could reduce racial and gender inequality in organizations. Despite efforts from regulators and advocates, racial and gender inequality in the workplace remains high. I theorize that because the persistence of such inequality is often reinforced by organizational inertia, disruptive changes that shake up old hierarchies, break down routines, and shift culture could offer an opportunity for racial minority and women workers to advance. To examine this theory, I explore a critical but seldom analyzed organizational event in the inequality literature – mergers and acquisitions. Using a difference-in-differences design on a nationally representative sample covering 37,343 acquisitions from 1971 to 2015, I find that although acquisitions lead to occupational reconfigurations that favor higher-skilled workers, they also reduce racial and gender inequality. In particular, I find improved managerial representation of racial minorities and women and reduced racial and gender segregation in the acquired workplace. This post-acquisition effect is stronger when (a) the acquiring firm had greater racial and gender equality and (b) the acquired workplace lower racial and gender equality pre-acquisition. These findings suggest that certain types of radical organizational change could significantly advance racial and gender equality.

OMT: Turning the Wheel? Interns and the Reproduction of Precariousness 

Author: **Alessandro Niccolo' Tirapani**, *Montpellier Business School*

One of the latest developments in Western job markets is the increasing rate of uncertain, unstable, and insecure work arrangements, a phenomenon labelled as precariousness. Here, the extraordinary number of interns working in and around European institutions in Brussels (Belgium) is used as an empirical case study for exploring and theorising how such precariousness is reproduced. I argue that it is possible to identify three dimensions that can help to explain this: the regime of practices and discourses, contextualised self-interpretations, and the conditions of possibility for emancipation. I show how these work together to reproduce precarious employment and precarious life conditions, focusing on the role played by the depoliticisation of social relations. In doing so, this work expands our understanding of precariousness in organisation studies by moving beyond two streams of literature: structuralism, which attributes the main cause to institutions, legislation, and power dynamics; and individual analyses of precariousness, which only look at how individuals experience it. In contrast, I build on these assumptions to focus more on the ambiguous role that lived experiences play in reproducing the regime of precariousness. I reveal how these factors work together, nurturing each other in a cycle, but I also show that there is a point of exit that could change the course of events. To 'turn the wheel' it is therefore necessary to re-politicise social relations and to devise better ways of organising.

Paper is Available to Meeting Registrants Only.

OMT: Why Does Inequality Increase with Flexible Employment? 

Author: **Ankur Chavda**, *HEC Paris*

Author: **Minjae Kim**, *Rice U.*

We develop and test a theory on why the inequality between novice and veteran workers may exacerbate with “flexible” employment practices—that allow employers to hire and fire workers more freely. Literature suggests that novice workers cannot rely on flexible employers to give them opportunities for building a career or accumulating skills, thus suffering from an exacerbated inequality. But employers using flexible employment practices may initially hire those whose skills have not been demonstrated but seem promising, compared to “committed” employers that hire workers for the long term, because flexibility allows employers to experiment instead of having to commit for a long term. Thus, the inequality of opportunities may decrease with flexible employment. Nevertheless, flexible employers may be less likely to continue hiring novice workers for the long term than veteran workers, insofar as novice workers on average are revealed during the experimentation stage to have lower skills than veteran workers. Consequently, more experimentation in the industry may imply a competition lopsided in favor of veteran workers and eventually reduce the share of novice workers hired long-term, exacerbating the arguably more consequential inequality—inequality of long-term employment. We test and confirm this idea in the TV programming industry where being either the committed, or “straight-to-series,” program—that commits to producing an entire season and hiring actors for the entire season—or the flexible, or “pilot,” program—that evaluates the first episode before committing to producing an entire season and hiring the cast for that full duration—is deemed viable.

Paper is NOT Available. Please contact the author(s).

OMT: Temporary Employment, Precarity Trap in Low-paying Jobs, and Wage Inequality  

Author: **Halil Sabanci**, *IESE Business School*

Author: **Marta Melvira**, *IESE Business School*

This study examines the association between temporary employment incidence and wage inequality by focusing on the asymmetric distribution of temporary employment across different wage layers, specifically its high concentration in lower-level deciles. We argue that a high share of low-wage jobs in total temporary employment leads to rent destruction in low-paying jobs, shifting rent allocation vertically from low to high earners, thus increasing wage inequality. We also hypothesize that the rent-shifting process is subject to some moderating factors. Specifically, we expect the effect to be amplified in industries with greater human-capital intensity and a smaller probability of temporary workers' transition to permanent jobs, while being less pronounced in industries with greater concentration of large firms. We test our predictions with data on wages of a representative sample of the Spanish labor force, extracted from administrative linked employer-employee datasets, which include 784,206 individuals from 2006 to 2018 (total N=4,967,236 person-year observations). Employing heteroscedastic models that simultaneously examine the effects of both micro and macro-level covariates on within-industry wage variance, we find the expected positive association between the ratio of total temporary employment that is occupied by low-paying jobs and wage inequality at the industry-region-year level. The results also support our moderation hypotheses. Building on and advancing market-based and rent-destruction accounts of evolving employment practices, we introduce the ratio of temporary employment occupied by low-wage jobs as a structural source of wage inequality and discuss its theoretical and practical implications.

There is a pressing need for employees to speak up in the face of wrongdoing, interpersonal mistreatment, or questionable work experiences. At the same time, there are substantial risks and consequences for employees who raise moral concerns ineffectively, such as retaliation, dismissal, and firing. In this symposium, we provide a sharp focus on the risks and consequences of speaking up in the workplace, extending beyond what has been considered by extant research. Drawing on multiple theoretical perspectives, our papers investigate influential factors and underlying mechanisms that predict voice-related behaviors and shape observer reactions. More broadly, our papers offer collective insights into the overall process of speaking up and integrate the respective literatures within this research domain (e.g., voice, whistleblowing, moral courage), which have largely evolved independently of each other.

Panelist: **Maria Aluchna**, *Warsaw School of Economics*
Panelist: **Akanksha Bedi**, *Western Washington U.*
Panelist: **Benson Honig**, *McMaster U.*

This session will explore scholarly access barriers to publication in top journals. While peer review is frequently asserted to be 'blind' and 'a level playing field,' some indications suggest biases occur and may, at times, reflect systemic institutional norms. In this session, the Ethics committee will discuss some of these barriers that scholars face, including coercive citation, gratuitous reference padding, special editors that may skirt conventions, and other similar biases that impact a meritocratic academy. Our goal will be to identify possible recommendations to enhance opportunity and access to all scholars reflecting the diversity of our communities.

Once a research project has been completed, one of the most prestigious forms of publication is a journal paper. There is not only increasing pressure to publish but to publish in 'top tier' journals. There is vast and comprehensive information about the range and scope of refereed research journals in every field. Through this Professional Development Workshop, the HR Division intends to provide insight to – and engage with – non-US scholars who plan to publish in top tier US journals in the HR field. Authors, who are interested to have a one-on-one session with a reviewer, should email their HR paper to Liza Castro Christiansen at liza.castro-christiansen@henley.reading.ac.uk before 30 June 2021. Papers will be accepted on a first-come, first-served basis.

Exploring Effective Leadership Practices through Popular Culture

Leadership Practices through Popular Culture

Organizer: **Michael Joseph Urick**, *St. Vincent College*
Presenter: **Therese Sprinkle**, *Quinnipiac U.*
Presenter: **Nathan Tong**, *U. of Hartford*
Presenter: **Jeremy Woods**, *California State U., Bakersfield*

The purpose of this PDW is to demonstrate how to leverage popular culture (such as movies, television shows, music, books, video games, comics, and podcasts, etc.) in leadership development initiatives. Our goal is to make validated theories more accessible to participants. We investigate the use of leadership theories in popular culture as a starting point for more nuanced leadership exploration. To do this, we have designed an interactive session, focused on popular culture themes, which will encourage participants to fully explore leadership theory. With our hands-on approach, participants will identify theories and popular culture themes which will help to influence their own management and leadership activities. This PDW would be beneficial for academics and leadership development consultants alike.

Business Education Transformed  
Business Education Transformed

Participant: **James A F Stoner**, *MSR*
Participant: **James Weichert**, -
Participant: **Morgane M.C. Fritz**, *Excelia Business School, CERIM & CeReGe*
Participant: **Kenneth Sagendorf**, *Regis U.*

The members of the business schools in this session will report how their schools are transforming business education to meet “the greatest challenge our species has ever faced” – global unsustainability’s existential threat to all species. Business education must be transformed because, with some important and valuable exceptions, business schools throughout the world are currently teaching present and future managers the “business-as-usual” practices that are destroying the planet’s capacity to support our own and other species. As members of globalmovement.net, the presenting schools are working to transform business practice by collaborating with businesses in transforming the schools’ entire business curriculum and some research to be fully aligned with the need for a sustainable/flourishing/regenerating world – and to do so within 3 years. The workshop audience will see how their schools can start transforming business teaching and practice by learning how the presenting schools are already doing so. In breakout sessions audience members will learn what the presenting schools are doing, the results they are getting, and what they plan to do next. Audience members will be encouraged to offer suggestions about what the presenting schools should do and perhaps even to offer to help the presenting schools. Audience members will be invited to join an application to a 2022 MacArthur Foundation 100 million-dollar competition. That application will scale the achievements of the first globalmovement.net schools up to 400 schools and beyond.

Bots, Fraud, and Careless Responding: Challenges of Bad-faith Responses in Survey Research

Challenges of Bad-faith Responses in Surveys

Organizer: **Erin E. Makarius**, *U. of Akron*
Organizer: **Barbara Zepp Larson**, *Northeastern U.*
Moderator: **James M. Diefendorff**, *U. of Akron*
Panelist: **Daniel Judson Beal**, *Virginia Tech*
Panelist: **Jason Huang**, *Michigan State U.*
Panelist: **Melissa G. Keith**, *Bowling Green State U.*
Panelist: **Leib Litman**, *CloudResearch*
Panelist: **Ekaterina (Katia) Damer**, *Prolific*

This symposium is aimed at bringing together a panel of scholars to discuss the prevalence and challenges associated with bad faith responses as well as opportunities to improve the quality of responses in survey research. Bad faith responding is defined as a) intentionally careless responses (e.g., participants responding without reading items or randomly), b) fraudulent participants (e.g., individuals lying about who they are or completing multiple surveys), and c) bots (computer programs) completing one or more surveys and producing fake data. The panel discussion will focus on the trends of bad faith responding in organizational research, the challenges associated with gathering survey data, and the opportunities for preventing, detecting, and mitigating bad faith responses. The primary goals of this panel symposium are to build awareness of bad faith responding, the costs of convenience sampling, and to inform researchers of ways to resolve issues that can arise. By bringing together researchers who have examined these issues with practitioners working for platforms that help manage the survey research process (e.g. – Qualtrics, MTurk), we provide a unique perspective on the prevalence and impact of bad faith survey responding in management research.

Facilitator: **Masoomeh Kalantari**, *McGill U. - Desautels Faculty of Management*

Our proposed PDW provides a space for discussion and connection around the ‘non-traditional’ academic careers paths of scholars whose research draws on managerial backgrounds. Careers that span occupations and industries is a well researched topic in management and includes boundaryless and protean careers. Little is known about the make-up of AoM Divisions in terms of the dimension of prior managerial experience, and the first-hand experience of ‘non-traditional’ career paths is not fully leveraged in the academy. While multiple possible career paths exist in teaching (e.g., Professor of Practice), deviance from the modal research academic career path (with no substantive non-academic professional experience) often brings stigma and penalties. These, coupled with concerns about age and commitment to an academic career constrain non-traditional candidates’ entry into doctoral programs. This PDW will bring senior, junior and prospective scholars together on the topic of non-traditional academic career paths that include professional experience to provide support, promote the value of such paths, and to seed community.

Researchers typically investigate intragroup conflict at the team level. But emerging research suggests that intragroup conflict is not uniform, shared, or static. This PDW explores ways in which we can look at intragroup conflict differently. The PDW's goal is to connect and mobilize a community of researchers interested in the microfoundations of team conflict to generate collaborative work in this area. Emerging research, which adopts a social network perspective, suggests that dyadic relationships provide the foundation for conflict in teams. Novel conflict asymmetry and conflict expression research suggest conflict is not experienced uniformly in teams and may not be shared. And scholars have long advocated a dynamic view of conflict. This PDW will (1) generate an awareness of the microdynamics of conflict, (2) share recent advances in the field, and (3) create an opportunity for researchers working in this area to collaborate. The format will include short presentations, Q&A, and breakout groups with researchers sharing similar interests.

Despite decades of scholarship, major investments, policy changes, and the tireless efforts of practitioners, achieving greater gender diversity is still on the to-do list of many organizations. Although the causes of gender inequality have been understood for some time (e.g., gender stereotypes and prejudice, masculine work norms; Eagly & Karau, 2002; Ibarra, Ely, & Kolb, 2013; Kanter, 1977), many current practices used by organizations (e.g., bias trainings, grievance procedures) have proven insufficient to produce meaningful change. As a result, women are still excluded from many professions and high-status roles within them. This symposium offers four new perspectives on improving gender diversity, introducing new theory and challenging our assumptions about: (1) how wise interventions can offset gender disparities; (2) the consequences of experiencing chronic concerns about confirming negative gender stereotypes on women's collective action efforts; (3) which formal mentorship programs are most effective at increasing diversity; and (4) the role of chauvinistic supervisors in perpetuating sexist thinking. Together these talks provide managers with new tools to address gender inequality and encourage them to more wisely use the ones they already have.

The purpose of this PDW is to provide a forum and foster a community in which health care management scholars can discuss pertinent issues about teaching, from common questions and challenges that educators confront to helpful practices, tips, and ideas to becoming more effective instructors. The PDW will be conducted as a series of online breakout room discussions, with participants receiving advice and helpful guidance on challenges and issues confronted in a range of educational settings. Each breakout room will focus on a specific theme and include assigned "teaching mentors" who can provide expert guidance and feedback on topics relating to a variety of themes.

While there has been a steady transition to greater use of online learning, the COVID-19 pandemic accelerated the use of technology, including the expanded use of online learning and video conferencing platforms, remote learning, smartphones, virtual environments, and electronic resources. In parallel, many managers made the transition during this period to working and managing remotely. This has shifted the goal posts for teaching management students further and faster with emphasis on “managing”. In this PDW (now in its 23rd year at AOM since 1998), we will present new technologies and relevant teaching techniques for using technology to support management education. This longstanding professional development workshop focuses upon the practical use of technology in teaching and learning through demonstration and sharing presenters’ hands-on teaching experience in an interactive presentation format. The workshops this year will include seven different presentations on various topics with experienced management educators sharing their latest learning, approaches, and experience. The Teaching with Technology PDW has historically attracted novices and experienced educators, as well as those who love and loathe technology in teaching and learning.

Winner of the OMT Division Best Symposium Proposal Award

Academics are extremely fortunate. Our job is to (1) think of questions other people haven't thought of and identify questions that haven't been answered, (2) figure out how to answer them, (3) do it, and then (4) tell the story. The bulk of the training we receive in doctoral programs focuses on parts two and three (i.e., research design and analytical techniques), with a reasonable amount of attention given to part one in theory and content seminars; however almost no attention is given to part four—storytelling. Our symposium will address the under-discussed “art” of storytelling that helps make some articles so much more influential than others. In particular we will focus on the structure of storytelling, storytelling techniques, language use, and the writing process. Our panelists are OB, Strategy and Organization theory scholars who are well known for their storytelling styles, and will create a unique and meaningful session on the art of storytelling.

Recent research in management emphasizes the need to engage with grand challenges of our time, such as climate change, inequality, poverty, ecological imbalances, conflict, socioeconomic and political crises, etc. in which organizations, their managers, and other stakeholders are implicated and by which they are also impacted in various ways. We take this conversation further and in a new direction through a panel of academics who have gone 'beyond academia'. In addition to publishing research related to such challenges, these academics have also engaged in significant efforts 'on the ground' to address such challenges through policy work, social activism, leadership roles outside of typical academic settings, roles in social movements, becoming part of solution implementation in communities, and so on. Our symposium discusses how the exploration of such roles by management academics can open up our field to make an impact towards addressing grand challenges in direct ways and also feed back into theory, methodology, and pedagogy in unexpected and fortuitous ways.

Environmental Crime, Greenwashing and Employee Perspectives on Sustainability

Digital Session Chair: **Abhirup Chakrabarti**, *Smith School of Business, Queen's U.*

ONE: Deterring environmental crime: Learning from how firms respond to regulatory discretion

Author: **Abhirup Chakrabarti**, *Smith School of Business, Queen's U.*

The effort to deter environmental crime has increased over the past decade. So has environmental crime, despite strict standards and severe penalties. A puzzle is that regulatory discretion – for instance, a regulator’s choice of which specific firms to inspect at any time – is important but seemingly ineffective in improving environmental outcomes. To explore, I examine how a firm’s tendency to violate an environmental law is influenced by when and where a regulator has recently conducted inspections. I engaged with an environmental regulator to digitize data on a decade of inspections (2008-2018) of toxic waste-producing firms in six geographically contiguous jurisdictions in India. The results show that firms were more likely to violate an environmental law after other firms in their jurisdiction recently violated environmental laws, but not when geographically proximate firms were recently inspected. Firms were less likely to violate an environmental law if geographically proximate firms were recently caught violating environmental laws. The temporary compliance inducing effect of geographically clustered inspections was further pronounced among firms that were more frequently inspected in the past or were previously penalized for violations. These insights complement studies of corporate environmentalism by showing how firms engage with regulatory discretion. In addition, the results suggest that environmental outcomes depend on whether the goal is to induce compliance among firms proximate to the inspected firm, for which a routine of spatially compact inspections works well, or to detect and penalize violations, for which a routine of randomly choosing firms to inspect works well.

ONE: Employees’ Response to Corporate Greenwashing

Author: **Jenifer Lynn Robertson**, *U. of Western Ontario*
Author: **A. Wren Montgomery**, *Ivey Business School*

Although research has begun to investigate greenwashing, the effect of this phenomenon on employees has not yet been considered. Accordingly, we investigate greenwashing from an organizational psychology lens, exploring the impact it can have on employees, and whether these effects differ for different types of employees (i.e., those who have an educational background in environmental science and/or sustainability and those who do not). Using data collected at three separate time points from two distinct employee groups, our results show that greenwashing was negatively related to employees’ other-serving/genuine CSR attributions, pro-environmental work climate perceptions as well as their organizational trust and identification, but only for employees educated in environmental science and/or sustainability. Surprisingly, we found that greenwashing was positively related to self-serving CSR perceptions for both employee groups. These findings generate insights into the extent to which corporate environmental communications can backfire, by uncovering the deleterious effects greenwashing can have for certain employees.

Paper is NOT Available. Please contact the author(s).

ONE: An Employee Perspective on Costs and Benefits of Environmentally Focused Sustainability Initiatives

Author: **Stuart A. Allen**, *Robert Morris U.*

Employees’ participation in their organizations’ environmental sustainability initiatives is often critical to the initiatives’ success. Attitudes to participating in pro-environmental behaviors are addressed at the global level in the literature without identifying the antecedents to those attitudes in the form of specific costs and benefits that contribute to attitude formation. Goal frames can be applied in identifying costs and benefits on a personal level but also costs and benefits to important groups that employees are members of, such as their organization and broader society. The present study addresses the gap in understanding of antecedents to employees’ attitudes to initiative participation by examining their perceptions of the costs and benefits of participating in initiatives to them personally, to their organization, and to society. One hundred and twenty survey participants described 150 environmental sustainability initiatives and identified costs and benefits in the personal, organizational, and societal goal frames. Analysis of the results produced cost and benefit codes and categories of codes within each frame, as well as themes across the three frames. The findings are explored in the context of supporting further research on employees’ attitudes to participating in environmental sustainability initiatives and how the reported costs and benefits can be used by employees, managers, and organizations to predict and encourage participation in key initiatives.

Research on boards of directors has largely taken a macro view in examining phenomena such as board interlocks, board composition and board diversity. Research involving the top management team (TMT), on the other hand, has taken a more micro approach, examining firm strategy as a reflection of the values and cognition of individual executive leaders. Such research often studies how executive attributes, such as personality or experience, affect firm strategies and performance. Despite the fact that board decisions have the potential to influence a firm's top management team (Haynes & Hillman, 2010; Conyon & Peck, 1998; Boyd, 1994), there is scant research on how behavioral or cognitive attributes of board members (Veltrop, Bezemer, Nicholson & Pugliese, 2017; Daniel & Milliken, 1999; Johnson, Hoskisson, & Hitt, 1993) actually influence TMT decision making. In addition to these top-down effects, there may be reciprocal influence from the TMT on factors such as board composition. This Professional Development Workshop (PDW) aims to bridge research involving boards and TMTs by facilitating a conversation between these complementary fields. The session provides a forum where scholars will interact and share ideas that may serve the development of research that connects the board and TMT. In doing so, the session aims to integrate academic scholarship on boards and TMT in a way that will also benefit practicing managers and boards.

Scaling Up Accelerator Research

Scaling Up Accelerator Research

Chair: **Gary Dushnitsky**, *London Business School*
Participant: **Shaker A. Zahra**, *U. of Minnesota*
Participant: **Violetta Gerasymenko**, *Oregon State U.*
Participant: **Sandy Yu**, *U. of Minnesota*
Participant: **Susan L. Cohen**, *U. of Georgia*
Participant: **Benjamin L. Hallen**, *U. of Washington, Seattle*

Over the past decade, accelerators have become an important feature of the global entrepreneurial landscape (Wright & Drori, 2018). This has led to a growing body of research that examines the types and organization of these accelerators and their contributions to the growth and scaling activities of start-ups. Researchers have examined how accelerators provide a forum for knowledge creation, technology development, commercialization, and new business model development. This research underscores the importance of accelerators for new ventures' strategic decisions such as funding, timing of exits, scaling up strategies and technology commercialization. Moreover, it highlights the opportunity to leverage the accelerator setting to study canonical questions in entrepreneurship (Clough, Fang, Vissa and Wu, 2019). Focusing on accelerators as an important entrepreneurial setting, we will illustrate and discuss the opportunities to broaden this stream of research: (1) bringing a dynamic view of founders' experience while undergoing an accelerator program, (2) considering their relative positioning within a cohort of other accelerator-sponsored start-ups, as well as the persistent longer-term impact (3) of accelerator affiliation and (4) short-yet-adverse events on start-ups' prospects and (4) founders' future entrepreneurial pursuits beyond the specific accelerator-sponsored start-up. The focus on the founders, their agency – and the limits thereof – are a key theme throughout the discussion. It falls squarely in line with the 2021 AOM theme "Bringing Back the Manager in Management."

If you have any questions about this PDW, please contact Violetta Gerasymenko at: violetta.gerasymenko@oregonstate.edu

GDO: An Intersectional Approach to Studying Burnout in Local Government

Author: **Cynthia Wilkes**, *U. of Southern California*

Author: **Thai Le**, *U. of Southern California*

Author: **William Resh**, *U. of Southern California*

This paper empirically examines the simultaneous influence of multiple dimensions of individual identity on employee burnout. We advance a better understanding of disparities in individual well-being outcomes for public servants. Using conservation of resource (COR) theory and applied intersectionality, we deconstruct burnout to look at differential vulnerability to emotional exhaustion, depersonalization, and loss of personal accomplishment for individuals at the intersection of gender, racial, and generational identities. Using survey data from a sample of over 6,000 local government employees across two neighboring large cities in California, we estimate the impact of intersectional identities on different dimensions of burnout. Our results show that younger generations of women of color are particularly vulnerable to burnout, but the experience of burnout is not uniform across groups, with each dimension of burnout revealing different vulnerable groups. These findings highlight the importance of deconstructing burnout into its discrete dimensions to better understand the experience of different socio-demographic groups of employees and develop culturally competent strategies to better support an increasingly diverse public workforce.

Paper is Available to Meeting Registrants Only.

GDO: Dynamic structures of inequalities: Intersectionality in higher education

Author: **Inge Bleijenbergh**, *Radboud U. Nijmegen*

Author: **Marloes Van Engen**, *Human Resource Studies, Tilburg U.*

Author: **Monic Lansu**, *Radboud U., Netherlands*

Author: **Pleun Van Arensbergen**, *VHL U. of Applied Sciences, the Netherlands*

Intersectional inequality in organizations is usually conceptualized in an idiosyncratic way, focusing on specific inequalities experienced by specific groups of employees. Such an idiosyncratic focus hinders understanding the generic mechanisms underneath organizational inequalities. This paper contributes to organization studies and diversity management literature by conceptualizing intersectionality as a dynamic structure of inequality, where mechanisms of inequality at the level of organizational structure and organizational culture, social interactions and identities may interact and affect different groups in different ways. To be able to grasp the complexity of such dynamic structures we propose the use of qualitative systems dynamics modeling. During participatory action research in a Dutch University, we involved 47 managers and employees in building a qualitative system dynamics model of the intersection between gender, nationality and ethnicity. In visualizing the dynamic structures of intersectional inequalities, we showed not only how intersectional inequalities added to each other, but also how they intersect and interact in time. Variables such as the diversity of selection committees and the perceived deviation of candidates from the norm visualize the intersection between gender, national and ethnic inequality. Gender and nationality intersect in the feeling of belonging of faculty, while the informal networks of international students connects nationality and ethnicity. Dynamic structures of inequality allow both dynamic equilibrium and dynamic change in an organization, explaining why change is difficult, but also showing how change could come about.

Paper is Available to Meeting Registrants Only.

GDO: A feedback perspective on intersecting inequalities in organizations

Author: **Inge Bleijenbergh**, *Radboud U. Nijmegen*

Author: **Mathijs Ambaum**, *Radboud U., Netherlands*

Organizations show persistent gender-, class- and ethnicity-based inequalities between employees in terms of well-being, remuneration and representation. Despite decades of diversity scholarship, anti-discrimination legislation and diversity management, gender and ethnic pay gaps and harassment persist, and white male higher-class leaders are overrepresented in the top of organizations. Such inequalities increasingly meet societal resistance. Scholars mainly explain inequalities based on the demographic characteristics of hiring panels, workforce and management, assuming linear causality between these characteristics and the observed unequal outcomes. However, inequalities are more complex. This paper develops an innovative feedback perspective, conceptualizing the feedback of intersecting inequalities in organizations to further the theoretical understanding of inequalities. A feedback perspective reveals how elements of inequalities interact in such a way that they reinforce or balance each other. Such a perspective helps us to understand why inequalities co-occur rather than appear in isolation, why addressing a single demographic cause is often not effective, and how to predict the potential effects of interventions that address multiple inequalities simultaneously. We conceptualize the feedback of intersecting gender, ethnicity and class inequalities in a causal loop diagram of the pay gap, inequality in leadership positions and harassment.

Recent events in the United States have sparked a renewed interest in inequality, discrimination, and social injustice. Yet engaging in behaviors that enact social change is often a complex decision, for both members of marginalized and majority groups. Given the complex challenges people from different groups face when working toward greater social equity, it is imperative to understand the specific behaviors people engage in to enact social change, the decision-making process underlying these behaviors, and their downstream consequences. To this end, the proposed symposium considers how and why employees tackle concerns with inequality and push for social change within and beyond their organization, with a focus on the ways in which individuals leverage their unique social identities and/or account for the unique benefits and constraints associated with their identities. The papers in this symposium draw on both qualitative and quantitative research across organizational contexts (e.g., in Congress, among boards of directors) and multiple theoretical foundations (e.g., boundary and identity management, intersectionality, social role theories) to contribute to important ongoing conversations about diversity, inequality, identities, and social change.

Elaborating on past MC Division consortia, the objectives for this year's consortium provides an opportunity for doctoral students in the midst of their doctoral research, to share their research processes and progress and receive support and feedback from peers and faculty. Concurrently, the participants will explore the value of management, but especially management-consulting elements, and how these can generally be mapped to a doctoral student's dissertation research and connect with possible post-doctoral futures. With this in mind, we draw upon the commonalities between management consulting and research, where both seek to address problems. The phases utilized in both often include problem identification, clarification of the purpose of the endeavor, data collection, diagnosis, actions, conclusions, and recommendations. As consultants, scholars and practitioners search for theory-into-practice perspectives that aid both student researchers and practicing consultants. By drawing on this connection, we intend to highlight the options MC division doctoral students have as they recognize the value of management consulting elements that contribute to the body of knowledge and can be used to translate theory into practical application. Thus, this PDW will incorporate methods of enhancing doctoral student participants' grasp of research side-by-side with highlighting management consulting theory-into-practice considerations utilizing an interactive approach that gives voice to the student researcher while inviting and utilizing the wisdom of colleagues.

The Sustainability Mindset Indicator   
The Sustainability Mindset Indicator

Presenter: **Isabel Rimanoczy**, *PRME Working Group on the Sustainability Mindset*
Presenter: **Beate Klingenberg**, *Marist College*

Why is there a workshop on sustainability in MED, even at the AOM? What is the role of management educators in preparing students and leaders for the social and environmental challenges? Do students care for sustainability more than their professors? What tacit values are educators supporting, what paradigm? A paradigm of unsustainability or one of transformation? What is a sustainability mindset, and can it be developed? If so, how? What is the Sustainability Mindset Indicator? What does it assess? What research is it based on? These are some of the questions that will be addressed in this session. Expect an unusual design, intriguing and experiential, based on a 1981 American film. And expect multilevel learning: about yourself, others, groundbreaking research, an innovative pedagogical process to facilitate learning, and a new assessment instrument. By the way, the workshop already started with this abstract.

Entrepreneurial Cognition 
Entrepreneurial Cognition

Organizer: **Matthew Grimes**, *Cambridge Judge Business School*
Panelist: **Jean Siobhan Clarke**, *EMLYON Business School*
Panelist: **Denis A. Gregoire**, *HEC Montreal*
Panelist: **Tyler Wry**, *The Wharton School, U. of Pennsylvania*

The cognitive process that leads to the development of new ventures has been a central topic of ongoing concern to scholars of entrepreneurship. Are you a doctoral student or faculty member who studies cognition within the context of entrepreneurship and are looking for ways to connect with other similar researchers? The purpose of this PDW is consistent with this year's AOM theme, "Bringing the Manager Back in Management" by highlighting the importance of individual and collective cognition in the context of entrepreneurship and innovation. The structure of the PDW is two-fold: 1) to bring together a group of senior scholars who each examine the importance of entrepreneurial cognition yet from different vantages in order to spark reflection on the future state of research in this area and 2) to facilitate a series of virtual breakout room conversations on different aspects of entrepreneurial cognition to allow individuals who do research in this area to form meaningful connections.

Participant: **Benito Teehankee**, *De La Salle U., Manila, Philippines*

Shaken to the core by lingering social injustice that continues to permeate into all social structures of society in a vastly interconnected world, this PDW aims to initiate a dialogue amongst management scholars and practitioners who hold a deep and sincere interest to help kindle a sense of mutual acceptance and respect in and outside of workplaces. The fact that social injustice remains such a major impediment in human interactions is a concerning trend, that should instigate profound self-investigation and spiritual exploration, resulting in enhanced consciousness that may lead to more effective results than the thus far widely implemented, yet consistently ineffective diversity training in workplaces. Some hard questions we will deliberate on are, A) What practices could we, as managers, or educators of managers apply in order to end the negative cycle? B) How can we best reach inside ourselves to conjure greater desire to do the right thing, and assist others in awakening to the awareness of interbeing? C) What should we discontinue, either in ourselves or in our behavior or practices, by way of reducing or eliminating divisiveness, suppression, or othering?

Can We Do It, Yes We Can: Strategies for Non-US Scholars to Succeed in the US Jobs Market
Can We Do It, Yes We Can

Organizer: **Katja Wehrle**, *Justus-Liebig U. Giessen*
Organizer: **Alexander Newman**, *Deakin U.*
Organizer: **Ulrich Leicht-Deobald**, *U. of St. Gallen*
Panelist: **Ariane Froidevaux**, *U. of Texas At Arlington*
Panelist: **Lindred L. Greer**, *U. of Michigan, Ross School of Business*
Panelist: **Maartje E. Schouten**, *Iowa State U.*
Panelist: **Ante Glavas**, *U. of Vermont*

Many management scholars from outside of the US are interested in working in American business schools. Despite this interest, many non-US candidates in the job market lack information on how to best navigate this competitive jobs market and obtain commensurate employment. This PDW is designed for both young and mid-career OB scholars who would like more information on seeking and obtaining employment at US business schools. It will bring together panelists currently working at schools in the US, who were trained overseas, and faculty who have been involved in recruiting scholars from outside the US. By hearing from each side, participants will be able to hear different perspectives from those both seeking employment in the US as well as from those on the hiring side for US institutions. The panel will highlight strategies for applying for and obtaining employment in the US, identify the key challenges faced by non-US scholars in the job search, application and interview process, and reflect on the tacit knowledge gained from their own experience. Topics for discussion include: What does the job search, application and selection process look like? What types of business schools are there in the US and how do different schools evaluate non-US candidates on the jobs market? What are key challenges faced by candidates in adapting to the national culture and university system? The PDW includes individual presentations by panelists, roundtable discussions focusing on strategies for job candidates at different stages in their careers, and a closing Q&A.

Empirical Investigations Of Followership Theory: How Followers Impact Leaders And Leadership *Empirical Findings on Followership*

Organizer: **Melissa Carsten**, *Winthrop U.*
Discussant: **Mary Uhl-Bien**, *Texas Christian U.*

As work has gone remote and managers and subordinates are being forced to engage more at a distance, demands are being placed on leaders and followers to work together in different ways to get things done. Much of this calls for broader views of leadership that are flatter, less hierarchical and involve more follower autonomy. These new realities align well with emerging research on followership theory. According to followership theory, followers are not passive recipients of a leader's influence but instead active and engaged partners in the co-production of leadership and achievement of work unit outcomes. In this symposium we present much-needed empirical findings on the study of followership theory. The findings have critically important implications for integrating followership in leadership theory, as well as the ways we conceptualize, study, teach, and develop leadership and followership in organizations.

Panelist: **Marie Dasborough**, *U. of Miami*
Panelist: **Virginie Lopez Kidwell**, *U. of North Texas*
Panelist: **Ashlea Troth**, *Griffith U.*

This panel symposium brings together well-established scholars from around the globe who have published articles relevant to group affect, emotional culture, and emotional climate in management's top journals. This symposium takes stock of what has been done in these important research areas, details the many relevant individual and organizational outcomes influenced by affect and affective culture, and discusses future research directions in group affect. By tying together prominent research streams in group affect, this panel offers a guided and interactive discussion with expert panelists on the future directions of affect research while offering consideration to the crucial role that managers and organizational leaders hold in recognizing and shaping positive emotional cultures.

Questions can be submitted during the panelist discussion via chat (or voice). If you would like to submit a question in advance, contact Brandon Antwiler @ Brandon.Antwiler.edu

Behavioral ethics research, aimed at understanding the causes and consequences of (un-) ethical behavior in organizations, is thriving. However, many studies rely on research approaches that emphasize internal validity over external validity and generalizability. While informative, ethics researchers are calling for the field to better take into account the contextual complexity of organizational life. Theoretical advances are needed on ethics phenomena that occur “inside organizations” or the field risks losing its credibility. For this reason, our behavioral ethics PDW seeks to offer insight on how to enhance researchers’ methodological toolkit, and to help develop future research ideas that better incorporate different (field) research designs into behavioral ethics research. To address this critical need, this PDW provides a forum for advancing discussions on how to approach ethics research in the field and to continue building a research community for stimulating scholarly discussions on behavioral ethics. This is the fifth rendition of this PDW, which is set up in two parts. The first part of the PDW consists of eight future-oriented Pecha Kucha presentations by experts in the field (timed 5-minute presentations by prominent scholars offering ideas on how to expand the literature). The second part is a breakout room networking session where attendees can engage in conversations, foster connections, and build research relationships. To facilitate this networking, attendees will be asked to select which two breakout rooms they want to attend and to submit two-three (research) questions per breakout room before the Academy.

Registration for this session is required through the below survey link. Registration will occur on a first come, first served basis. The session will be capped at 100 attendees, and we will close the survey once we hit that cap. So please only register if you are truly committed to attending our session. The deadline to register is June 30. Please click on (or copy-paste into an internet browser) this link to fill out our registration survey:

Artificial intelligence and decision-making processes

Digital Session Chair: **Leid Zejnilovic**, *NOVA School of Business and Economics*

OCIS: **Learning Best Practices: Can Machine Learning Improve Human Decision-Making?**

Author: **Hamsa Bastani**, *The Wharton School, U. of Pennsylvania*
Author: **Osbert Bastani**, *U. of Pennsylvania*
Author: **Park Sinchaisri**, *Haas School of Business, UC Berkeley*

Workers spend a significant amount of time learning how to make good decisions. Evaluating the efficacy of a given decision, however, is quite complicated. For one, decision outcomes are often long-term and relate to the original decision in complex ways. The goal of our paper is to study whether machine learning can be used to infer tips that can help workers learn to make better decisions. Such an algorithm must identify strategies that not only improve worker performance, but that are also interpretable to the human workers so that they can easily understand and follow the tips. We propose a novel machine learning algorithm for inferring interpretable tips that can help users improve their performance in sequential decision-making tasks. We perform a behavioral study to validate our approach. To this end, we designed a virtual kitchen-management game that requires the participant to make a series of decisions to minimize overall service time. Then, we compare the performance of participants shown a tip inferred using our algorithm compared to a control group that is not shown the tip, as well as groups shown either a tip proposed by experienced human workers or a tip inferred by a baseline algorithm. Our experiments show that (i) the tips generated by our algorithm are effective at improving performance, (ii) they significantly outperform the two baseline tips, and (iii) they successfully help participants build on their own experience to discover additional strategies and overcome their resistance to exploring counterintuitive strategies.

Paper is NOT Available. Please contact the author(s).

OCIS: **Explainable AI for non-experts: Is this a chimera?**

Author: **Cheryll-Ann Wilson Drakes**, *Bentley U.*

Artificial intelligence (AI) offers transformative benefits in many areas of economic activity, through the innovative use of profuse, multifaceted streams of data. This power comes at a cost: the systems evolve so organically that the rationale behind its decisions can be a mystery even to its developers. The AI-based system thus becomes a “black box” that is, one that is not transparent, making it difficult to trust the system’s decisions, assess model fairness, detect bias, and meet regulatory demands. These concerns have led to the consideration of explainable AI (XAI) as a cognitive bridge between the two worlds. However, the majority of deployments are for machine learning engineers. Thus there is a need for human-understandable AI systems that can tailor explanations relative to the needs, knowledge, and goals of non-experts. This essay explores some of the literature over the past half century pertaining to the explainability needs of different stakeholders, including efforts made to address such needs as well as lessons learned.

OCIS Best Paper Award Finalist

There is a renewed and growing demand for interpretable and explainable machine learning (ML) systems, propelled by the increased use of these systems for making high-stakes decisions affecting individuals. Despite having set theoretical ground for explainable intelligent systems a few decades ago, the information system scholars have given little attention to new developments, and especially to the use of ML trained models in decision-making with humans-in-the-loop in real-world problems. In this paper, we take the sociotechnical system lenses and employ quantitative and qualitative analysis of a field intervention in a public employment service setting to study the machine learning informed decision-making with interpreted models’ outputs. Contrary to theory, our results suggest a small positive effect of explanations on confidence in the final decision, and a negligible effect on the decisions’ quality. We uncover complex dynamic interactions between humans and algorithms, and the interplay of algorithmic aversion, trust, experts’ heuristic, and changing uncertainty-resolving conditions. We discuss theoretical and practical implications of our findings.

Paper is Available to Meeting Registrants Only.

OCIS: **Who Should Grasp Decision-making Authority, Human Or Intelligent System?**

Author: **Xiacong Cui**, *Georgia State U.*
Author: **Mark Keil**, *Georgia State U.*
Author: **Liwei Chen**, *U. of Cincinnati*
Author: **JJ Po-An Hsieh**, *Georgia State U.*

Effective task allocation between humans and automation has attracted much attention since the introduction of automation technologies that assist humans in task performance. Yet, the rise of intelligent systems (IntelSys) capable of making task-allocation judgment raises an urgent question: who (human or IntelSys) should have the authority to make the decision to allocate tasks between humans and automation? Drawing on the perspective of team-based decision-making, this study proposes four hypotheses that compare the impacts of three decision-making approaches (DMAs) on human-automation team performance. To test the hypotheses, we conducted a large-scale experiment with 662 participants playing on a gaming platform. The results suggest that the effectiveness of DMAs is contingent on task uncertainty and human expertise. Our findings provide critical insights on whether humans or IntelSys should assume the role of decision-maker in human-automation teams under different scenarios.

Participant: **William A. Kahn**, *Boston U.*

This symposium aims to deepen and expand our understanding of the relationship between the way organizations and managers understand and provide narratives related to inequality and their subsequent diversity practices. The four papers presented in this symposium offer new theoretical insights and mechanisms for the conditions under which organizations are more (less) apt to redress inequality. This symposium brings together strategic management scholars, economic sociologists, and organizational behavior scholars investigating, with a wide range of methods (qualitative, observational, and experimental), inequality in the workplace. We believe this symposium will generate an insightful discussion and fuel further inquiry into the role organizational narratives play in perpetuating inequality.

Management scholars have been increasingly interested in how history and historical processes affect current organizational behaviors and have called for a fuller integration of history to understand management phenomena. This symposium brings together a unique set of papers that explore different ways through which history may help us understand current management phenomena and provide implications for future research and practice. Specifically, the first paper investigates how Gandhi's idea of business leadership as a societal trustee—i.e., preserving communities, environments, and relationships while building value through profit—persistently shapes strategies of subsequent generations of business leaders in India. The second paper describes the organization of innovation in the United States over the past fifty years as a result of the three factors: (1) the nature of technical advance and associated commercial opportunities, (2) the organization of financing innovation, and (3) markets for technology as well as other institutional and governmental processes. The third paper develops an imprinting perspective to understand the enduring influence of the initial spatial separation and community distinctiveness of minority business communities on their future development and how their integration with White residential areas and businesses weakens this influence. The last study also advances an imprinting perspective, suggesting that variations of early residents' religious make-up shaped institutional differences across different U.S. States, which then affects organizational leadership structures. As a set, the papers offer new insights into how historical factors, processes, contexts, and events can inform organization and management theories and strategic management research from the perspectives of imprinting and institutions and shed new light on management history studies.

Presenter: **Caroline Flammer**, *Boston U.*

This PDW aims to bring together scholars from the fields of strategy and organization theory to deepen our understanding of corporate governance and sustainability with the aim of identifying and exploring emerging avenues for research. Environmental crises such as global warming and climate change are becoming disruptive enough that even hedge funds, traditionally focused on financial returns, are insisting on governance reforms to focus attention also on environmental, social and related governance issues. This pattern is in tandem with stakeholder pressures that are compelling companies to look beyond just their financial profits. Against this backdrop, it is quite important that the board of directors and leadership of businesses are aware that their boards and organizations must be vehicles for multiple goals across different domains. The idea that organizations engage with multiple goals is as old as the study of organizations, but there remains so much to understand about how businesses use different modes of governance and implementation to differentiate and integrate across their various goals, especially across financial imperatives along with the broader environmental and societal domains. Through this PDW, we intend to highlight new research and an unfolding agenda for understanding how companies' top managers and board of directors identify, evaluate, implement and communicate policies across these different fields of the firm, recognizing that these goals may be complementary, other times mostly separable, and even sometimes in conflict. Leading researchers with expertise in corporate governance and sustainability will share their approaches and insights into this pressing topic.

Attendees are required to pre-register for this event. You can do so by filling out the form at the following link: <https://forms.gle/F1w74nSE4hBuD4st8>. In case of any questions, please contact Navya Pandit at navya.pandit@unibocconi.it.

Leveraging Text Data To Answer Old and New Questions in Innovation Research

Text Data in Innovation Research

Organizer: **Andrea Contigiani**, *The Ohio State U. Fisher College of Business*
Organizer: **Do Yoon Kim**, *Boston College*
Organizer: **Mike Horia Teodorescu**, *Boston College*
Presenter: **Natalie Carlson**, *Columbia Business School*
Presenter: **Jorge Guzman**, *Columbia Business School*
Presenter: **Timothy Hannigan**, *Alberta School of Business*
Presenter: **Jeffrey M. Kuhn**, *U. of North Carolina, Chapel Hill*
Presenter: **Arianna Marchetti**, *London Business School*
Presenter: **Astrid Marinoni**, *Georgia Tech Scheller College of Business*

The literature in management and other social sciences has increasingly been leveraging text analysis techniques to revisit old research questions and explore novel ones. The emergence of these techniques has allowed researchers to exploit a variety of vast data sources, such as firms' filings, product descriptions, customer reviews, news, patent text, social media, and more. This paradigm change may be particularly impactful in the context of research in innovation, where data availability is traditionally scarce. The purpose of this PDW is to discuss the main text analysis techniques and illustrate some of their most promising applications in the context of innovation research. We are joined by a group of scholars who are pioneering these techniques, in order to explore the various facets of this emerging class of methodologies in the context of innovation research. The PDW is designed to be developmental and interactive, and thus includes four parts: 1) a list of short presentations by the speakers, 2) a Q&A session moderated by the organizers, 3) a series of breakout-room conversations where each speaker discusses the technical aspects of their core technique and explores new potential applications with interested participants, and 4) a wrap-up discussion where groups share the main insights from their conversations and collectively brainstorm future research directions.

Approaches to Inclusion in the Workplace: A Dialogue Across Theoretical Strands

Approaches to Inclusion in the Workplace

Coordinator: **Kelly Gabriel**, *George Washington U.*

Moderator: **Judith A Clair**, *Boston College*

Panelist: **Bernardo M. Ferdman**, *Ferdman Consulting*

Panelist: **Michàlle Mor Barak**, *U. of Southern California*

Panelist: **Amy Randel**, *San Diego State U.*

Panelist: **Katina Sawyer**, *George Washington U.*

Over the past two decades, organizational diversity and inclusion literature has demonstrated that inclusion, along with diversity, is key to creating equitable workplaces. However, research focused on inclusion is currently rooted in a variety of foundational approaches, which has resulted in a lack of conceptual cohesion over time. While there are certainly areas of overlap across these unique approaches, there is also room to create greater clarity regarding what inclusion is and how it operates in organizations. Therefore, this panel symposium seeks to put into conversation these different approaches, focusing on benefits and drawbacks of each approach, with the goal to better imagine, understand, and ultimately realize inclusive organizations. This panel will engage a group of experts in a formal, moderated, interactive discussion of the panelists' approaches towards inclusion, the benefits and drawbacks of the various approaches, ways to reconcile seemingly incompatible aspects of approaches, and implications for inclusion research and practice. The symposium will include ample opportunity for audience involvement and dialogue.

Professional Identity

Digital Session Chair: **Rajesh Chandwani**, *Indian Institute of Management, Ahmedabad*

OB: Role of Emotions in Curating Professional Identity: An interplay of Identity Work and Identity Play  

Author: **Rajesh Chandwani**, *Indian Institute of Management, Ahmedabad*
Author: **Upam Pushpak Makhecha**, *Indian Institute of Management, Tiruchirappalli*
Author: **Farheen Fathima Shaik B**, *Indian Institute of Management, Tiruchirappalli*

In this study we study the identity formation and sustenance in case of nascent jobs where existing frames, expectations and ideal identities are absent. We conduct a narrative inquiry of thirty three Organ Transplant Coordinators (OTCs) in India. We propose a three staged model of Identity Progression consisting of Identity Probing, Identity Steadying and Identity Advocacy stages as the OTCs enter and sustain in their careers. The stages illustrate the interplay between identity play and identity work, emotional and cognitive salience and sensemaking and sense giving. Our paper contributes to research on the role of emotions in identity work and identity play in several ways. First, we propose that in nascent professions with underdeveloped or equivocal identity, identity play and identity work might not be mutually exclusive. In such situations, we posit that identity play and identity work proceed in a reflective and iterative process thereby creating a unique individual professional identity. Further, we examine the role of emotions in identity play and identity work by exploring the ways in which emotions not only affect identity work but also become an integral part of creating a new identity. Finally, we establish the critical role of context in identity work and identity play. We discuss practical implications for facilitating identity formation and sustenance processes in nascent professions.

Paper is Available to Meeting Registrants Only.

OB: The fragility of experts: A moderated-mediation model of expertise, identity threat, & overprecision 

Author: **Sang Hoon Kang**, *Rutgers Business School*

Experts play a crucial role in modern organizations, but evidence regarding the soundness and reliability of their decision-making is mixed and often contradictory. Drawing on theories of identity threat, I argue that experts are more susceptible to bias following disconfirming feedback from others. A series of lab experiments show that (a) experts are more likely than novices to double-down and produce overly precise predictions following disconfirming feedback; (b) this feedback-induced overprecision by experts is mediated by perceived level of expert identity threat; and (c) self-affirmation attenuates identity threat and reduces overprecision. I supplement these experimental findings by investigating experts' response to disconfirming feedback in a real-world settings - Major League Baseball umpiring. Ultimately, I propose a moderated-mediation model of expert decision-making to understand "when" and "why" experts offer overly precise judgments that is unavoidable and prevalent in organizational settings.

Paper is Available to Meeting Registrants Only.

OB: Cold (and hot) passion: A dual path model of job passion in professional work 

Author: **Siyin Chen**, *U. of Toronto, Rotman School of Management*

It is widely believed that job passion leads to positive work outcomes because it fuels people with personal significance and emotional drive. However, we proposed that this theorization of job passion can be problematic in professional work as professionals are required to detach from their personal values and emotions, and adhere to professional values and standards. Based on in-depth interviews with professional journalists, we hypothesized that job passion in professional work has two distinctive paths, one leads to personal significance ("hot path") and one leads to professional detachment ("cold path"). We further hypothesized that these two paths are associated with different workplace outcomes. On the one hand, job passion connects to higher work meaningfulness and perceived prosocial impact through personal significance. On the other hand, job passion relates to less tension and lower intention to leave through professional detachment. Results from a field survey with a larger sample of journalists support our dual path model of job passion in professional work. Overall, our research demonstrates the importance of job passion for professionals as well as the dual path of its positive influence on professional work.

OB: Who I'm Going to Become Is Not Clear! COVID-19's Impact on Future Professional Identity Clarity

Author: **Christina Hymer**, *Darla Moore School of Business, U. of South Carolina*
Author: **Xing Liu**, *Wayne State U.*
Author: **Jeff Savage**, *Darla Moore School of Business, U. of South Carolina*

In this study, we investigate the impact of the COVID-19 pandemic, as a natural, strong, and external identity-threatening event, on workers' future professional identity clarity trajectories. We examine the influence of workers' current professional identity beliefs (self-efficacy, imposterism) on their pre-COVID-19 and post-COVID-19 future professional identity clarity trajectories. Using a repeated measures design, we test our model with 223 observations collected from a unique sample of early career STEM academics participating in a nine-month collaboration with start-ups. As expected, we find that the COVID-19 pandemic hindered future professional identity clarity growth. Further, we find that both self-efficacy and imposterism encourage future professional identity clarity growth, and that self-efficacy provides a protective benefit for workers' future professional identity clarity trajectories in the wake of the COVID-19 pandemic. Our study has implications for research on identity, self-efficacy, and imposterism. We provide practical implications of this research.

Paper is Available to Meeting Registrants Only.

Panelist: **Karen Jehn**, *Melbourne Business School*
Panelist: **Semin Park**, *U. of Iowa*
Panelist: **Esther Sackett**, *Santa Clara U.*

This Conflict Management Division doctoral consortium is designed for students interested in developing an academic identity, thinking more strategically about the research process, planning for the job market, and transitioning to becoming a faculty member. Specifically, we will focus on four main topics important for successfully completing a program and launching an academic career: 1) becoming a conflict management and negotiations scholar, 2) managing the dissertation process, 3) preparing for the job market, and 4) transitioning to faculty. The PDW will be led by a mix of early, mid-career, and senior scholars, each offering their unique perspective. The format will include short presentations, Q&A, and small group discussions.

Strengths from Disadvantage: Toward a Broader Understanding of the Consequences of Social Inequality

Strengths from Disadvantage

Organizer: **Gabrielle Rose Lopiano**, *Emory U.*
Discussant: **Sandra Cha**, *Brandeis U.*
Presenter: **Andrea Dittmann**, *Emory U., Goizueta Business School*
Presenter: **James T. Carter**, *Columbia Business School*
Presenter: **Karren Kimberly Knowlton**, *Tuck School of Business at Dartmouth*
Presenter: **Gabrielle Rose Lopiano**, *Emory U.*

Scholarship aimed at understanding the experiences and outcomes of members of historically disadvantaged, underrepresented, and marginalized social groups has largely focused on and documented the hardships and inequalities they suffer. However, our current understanding of may not capture the full range of consequences arising from social disadvantage. The goal of this symposium is to demonstrate the merit of a more balanced approach to studying the experiences of marginalized groups by considering the unique resources that they may acquire as a result – in contrast to a dominant focus on the detriments. The four papers in this symposium provide theoretical and empirical support for certain strengths that members of disadvantaged groups develop in response to enduring systematically more difficult life experiences, and how they enact such resources at work. These studies demonstrate this phenomenon across four different disadvantaged social groups, including the working class, racial minorities, women, and the LGBTQ community. Using both qualitative and quantitative methods, this research advances diversity scholarship by shedding light on under-explored outcomes associated with social disadvantage group membership.

Mindful Managing; How Managers in the Moment Enhance Wellbeing and Organizational Performance
Mindful Managing and Organizational Performance

Facilitator: **Elizabeth Wheeler Guyton**, *George Mason U.*
Facilitator: **Dorsey Standish**, *U. of Texas at Dallas*

This highly experiential workshop offers both personal and professional development through the exploration of mindfulness practices and their benefits at the individual and collective level. Although mindfulness is not a novel topic, the pandemic and its consequential challenges for the manager, employee, and organization, heighten the relevance of mindfulness as a managerial practice. Now more than ever, present moment awareness brings value to management by enabling managers to enhance their wellbeing and the wellbeing of those whom they manage. In addition to promoting individual wellbeing, mindful management can contribute to organizational performance through enhanced engagement, innovation, decision making, teamwork, agility, customer service, safety, and quality. This session builds on a review of the neuroscience of mindfulness and existing knowledge to introduce an innovative continuum of mindfulness application and novel uses of mindfulness in the organizational setting. Presenters demonstrate a mindful meditation designed to create shared mental models in order to advance key strategic initiatives such as diversity, equity, and inclusion. During this interactive workshop participants will enjoy mindful meditations, collaborate to define the mindful manager, and engage in lively discussion examining strategies for developing mindful management within organizations and for fostering a mindful organizational culture and climate. Participants will gain an understanding of how mindfulness works from a neuroscience perspective, practical knowledge of how to meditate, a clear definition of mindful management, and an understanding of at least one novel application of mindfulness in the organizational setting. Keywords: mindfulness, wellbeing, organizational performance, neuroscience, mindful management

Education: Disciplinary and Cultural Differences**
PDW on online technology use in business education

Participant: **Ruslan Ramanau**, *The Open U.*
Participant: **Giacomo Carli**, *The Open U.*
Participant: **Dan Bumblauskas**, *U. of Northern Iowa*
Participant: **Herbert Nold**, *Polk State College*

By the third decade of the 21st century online education has come of age and has become mainstream in a wide range of disciplinary contexts, including business and management education (BME). This workshop aims to bring together educators from a range of disciplinary contexts in BME with experience and/ or interest in blended or online teaching and learning and willingness to contribute to formulating research agenda on use of digital technologies. The key outcome of the workshop will be establishing closer links teaching and learning practice and research and providing networking opportunities for the diverse audience of workshop participants. This session will be a mix of presentations and work in small groups.

The Female Leadership Advantage in a Crisis 
Female Leadership Advantage

Panelist: **Kayla Stajkovic**, *Edgewood College*
Moderator: **Lillian Eby**, *U. of Georgia*
Panelist: **Jenny M. Hoobler**, *U. of Pretoria*
Panelist: **Corinne A. Post**, *Villanova U.*
Panelist: **Alexander Stajkovic**, *U. of Wisconsin, Madison*

Perceptions of who makes an effective leader are altered in crises. One perspective from which leadership effectiveness can be evaluated is gender differences. In this panel symposium, we will discuss research on gender and leadership effectiveness and focus on why women might be more effective leaders than men in a crisis. Panelists will point to misalignments among mechanisms discussed in extant research and identify synergies to elucidate why women might be more effective leaders than men in a crisis. The session will include discussion of the gender and leadership literature, conversation about the need for intersectional research, such as examining joint identities of gender and race, and suggestions for future research.

What Has Happened to Organizational Discourse Analysis? Assessing Trajectory and Renewal

Renewal of Discourse Analysis

Moderator: **Yuan Li**, *Saint Mary's College of California*
Panelist: **Loizos Th. Heracleous**, *Warwick Business School*
Panelist: **Gerlinde Mautner**, *WU Vienna U. of Economics and Business*
Panelist: **Clifford Oswick**, *City U. London*
Panelist: **Linda L. Putnam**, *U. of California, Santa Barbara*

This symposium will assess whether the popularity of organizational discourse analysis is in decline, what problem this decline might raise, and what can be done to address it. Panelists will offer insights into how discourse analysis can address concerns about parochialism and how it can engage materiality and socio-materiality to address social constructivist and critical realist concerns simultaneously. It will also explore multi-modal and mixed method approaches and show how these methods could contribute to organizational discourse analysis. In addition, panelists will explore validity criteria for evaluating discourse work and ways to integrate distinct theoretical perspectives.

**Business With Purpose and the Purpose of Business Schools
in a Post Pandemic World**
Purpose of Business and Business Schools

Organizer: **Hector Osvaldo Rocha**, *IAE Business School*
Organizer: **Roy R. Suddaby**, *U. of Victoria*
Organizer: **Michael Andreas Pirson**, *Fordham U.*
Discussant: **Elaine Cahalan Hollensbe**, *U. of Cincinnati*
Panelist: **Jay Gilbert**, *B Lab / B Corps / Imperative21*
Panelist: **Rajendra Sisodia**, *Conscious Capitalism Inc*
Panelist: **Gerard George**, *Georgetown U., McDonough School of Business*
Panelist: **Charles Wookey**, *Blueprint for Better Business*

Both the Covid-19 crisis and the emergence of innovative business models like B-Corps, Conscious Capitalism, and Blueprint for Better Business offer a powerful signal that the foundational assumptions of competitive capitalism are increasingly in doubt. Business schools, however, appear to be followers rather than leaders in this historical moment of social change. While consumers and businesses are experimenting with new models of capitalism premised on balancing profits with social purpose, business schools have been slow to change and appear to be struggling with their identity and purpose. But, what might be the purpose of business in a post-pandemic scenario? What would a post-pandemic business school look like? What might be the foundational values of a post-pandemic market system? The aim of this symposium is to explore these questions in conversation with four thought leaders and prominent innovators of management education and business practice.

The Symposium will consist of an introduction followed by an interactive, collaborative dialogue between the convenors, the leaders, and the audience around the three proposed questions.

- Introduction - Hector Rocha, Michael Pirson, and Roy Suddaby will outline the goals and introduce the structure of the Symposium
- Question 1 - What might be the foundational values of a post-pandemic market system? Michael Pirson will moderate this panel
- Question 2 - What might be the purpose of business in a post-pandemic scenario? Hector Rocha will moderate this panel
- Question 3 - What would a post-pandemic business school look like? Roy Suddaby will moderate this panel
- Closing remarks Elaine Hollensbe will identify themes and ideas that emerged from the panel discussions and provide closing remarks.

Publishing in Academy of Management Collections
Publishing in Academy of Management Collections

Organizer: **Benjamin Martell Galvin**, *Brigham Young U.*
Organizer: **Elizabeth L. Rose**, *U. of Leeds*

Academy of Management Collections (AMC) is a new and exciting publication that will make an important contribution to the AOM's portfolio of publications. AMC has a unique format, in that each issue consists of a selection of articles from AOM publications, tied together by an original paper that serves to curate the collection. In this session, the AMC editors will introduce you to the publication, share its mission, and talk about how AMC will benefit both scholars and practitioners. They will also provide an overview of what a collection – including the curating essay – will look like, how a successful proposal can be developed and submitted, and how the review process works. There will also be time to ask questions and obtain insights directly from the AMC editors.

**Advancing Aspirations Research: Exploring New Avenues in Performance
Feedback Theory**
Advancing Aspirations Research

Coordinator: **Marino Van Zelst**, *Tilburg U.*
Coordinator: **Gerardus JM Lucas**, *Nottingham U. Business School*
Coordinator: **Hugo Verwer**, *Maastricht U., School of Business & Economics*
Panelist: **Daniela Blettner**, *Simon Fraser U.*
Panelist: **Philip Bromiley**, *U. of California, Irvine*
Panelist: **Elizabeth Lim**, *Georgia State U.*
Panelist: **Ohad Ref**, *Ono Academic College*

Research on Performance Feedback Theory continues to have a significant influence on the development of much work in strategic management. Performance Feedback Theory scholars recognize the need for exploring new avenues, such as the influence of corporate governance, stakeholders, and cognitive aspects on the link between performance feedback and subsequent strategic actions or aspiration adaptation. During the proposed PDW, participants will reflect on how to embed these promising new avenues in their own research. To set the stage, a Q&A panel composed of leading experts will outline their novel ideas, which they consider important to advance theory, and then address questions and suggestions from the audience. Then, participants discuss the research outline they submitted in a breakout room discussion with peers working on the same topic. Developmental feedback will be provided by peers, as well as the panelists, who will facilitate the discussions. The ultimate goal of this PDW is to advance Performance Feedback Theory and strengthen the behavioral strategy community within the Academy of Management.

This is the fourth session in "Global Work Design Project" PDW series (follow-up of the 2016, 2018, and 2019 sessions). The Global Work Design Project was launched as an Ambassadors Program research initiative in 2015, with the goal to study the meaning of "good work" around the world. Data were finalized from the research teams in 30 countries. Initial data analyses have begun, to be completed by March 2021. In this PDW we will discuss the findings with a focus on developing the first paper of the project and to plan the second paper. Specifically, using presentations and roundtable discussions, we aim to achieve two objectives: (a) to describe the data, discuss specific challenges, and provide an overview of the impact of national context on work design as the basis of the first paper; and (b) to stimulate ideas for the second paper drawing from the expertise of researchers from multiple perspectives (e.g., HRM, OB, IM). The workshop supports the HR Division's desire to focus on more cross-cultural topics, as well as networking members internationally.

Integrating Induction and Abduction for Theory Development in Big Data Research

Integrating Induction and Abduction

Participant: **Prasanna Karhade**, *U. of Hawaii at Manoa*
Participant: **Abhishek Kathuria**, *Indian School of Business*
Participant: **Elizabeth Davidson**, *U. of Hawaii at Manoa*
Participant: **Benn Konsynski**, *Emory U., Goizueta Business School*
Participant: **Brian T. Pentland**, *Michigan State U.*
Participant: **Andrew Burton-Jones**, *U. of Queensland*

The age of big data has brought the “problem of plenty” whereby researchers have to grapple with an abundance of observations to consider in theory development. Advancements in artificial intelligence (AI) and machine learning (ML) are enabling the inductive discovery of patterns and trends in the big data. Yet, developing generalizable theory from the abundance of observations and patterns seems elusive. In the third decade of the 21st century, it is ever important to develop theory that is sensitive to the diversity – in contexts and geographies. Responding to the Bringing the Manager back in Management Theme, we invite scholars to integrate perspectives of induction and abduction for developing theory that is actionable for managers in the 21st century. Deduction, induction and abduction denote three distinct approaches of knowledge creation. Patterns discovered in big data via induction can serve as inputs for abduction which is inference to the best explanation. This PDW addresses theory development challenges of transparency and explainability, ethics and inclusivity, and cognitive reapportionment across system and human cognitors while integrating induction and abduction. Research on digital innovation, platforms and health care, and socio-technology design contexts provide exemplars of this approach, including demonstrations of induction via ML techniques and induction/abduction in qualitative and ethnographic studies. Our interactive workshop format is designed to engage academics and data scientists in addressing techniques, trade-offs and ethical issues for theory development in big data research.

Panelist: **Marla Baskerville Watkins**, *Northeastern U.*

Women faculty of color endure gendered racial (intersectional) trauma in the workplace that often results in posttraumatic stress symptoms (e.g., cognitive intrusions and avoidance) and poor work outcomes. However, organizational interventions often place the onus on the worker to alleviate such deleterious stressors rather than eradicating its discriminatory practices on a systemic level. Oppressive and psychological injurious practices toward women of color in academe include isolation from academic networks, epistemological exclusion, and invisible labor. Facing both sexism and racism, women faculty of color are also uniquely ascribed stereotyped gendered racial roles (e.g., Strong Black Woman and lotus blossom) and are more sexually harassed and objectified than White women and men of all races and ethnicities. Such harmful encounters elicit trauma-induced safety checking coping behaviors that prioritizes the needs of the dominant group over that of their own. A multilevel trauma-informed approach, however, could attenuate the psychological demands of the worker and generate accountability at organizational and management levels. As such, this symposium will highlight the use of intersectionality theory and the public health intervention model (primary, secondary, and tertiary interventions) as an integrated framework to cultivate trauma informed organizations, thereby mitigating re-traumatization and promoting the well-being and career advancement of women faculty of color.

OB: Sense of an ending- Health & manager support influence on the passage of time & intention to retire

Author: **Christina Cregan**, *U. of Melbourne*
Author: **Carol T. Kulik**, *U. of South Australia*
Author: **Sanjeeva Samanmali Perera**, *U. of South Australia*
Author: **Shruti Sardeshmukh**, *U. of South Australia*

We investigate older workers' intention to retire as a temporal process. We use Carstensen's socio-emotional selectivity theory to investigate the influence of the passage of time on employees' choice between work and retirement, and the moderating influence of health and manager support. We examine longitudinal data consisting of survey responses of 495 older workers, each of whom remained in one workplace, collected in three waves (2011, 2012 and 2013). Growth curve analysis shows that, over two years, poor health with any level of support is consistently associated with a high intention to retire while good health with high support is consistently associated with a low intention. In contrast to these stable patterns, the results also show that good health in a context of low manager support is associated with increasing intention to retire over the period. We conclude that older workers in stable poor health prioritize present-oriented relationships with family and close friends while those with stable good health and high support acquire future-oriented work-related relationships. However, as time goes by, there is an increasing intention to retire among those with stable good health and low manager support so they can enjoy a "third age" of active retirement.

Paper is Available to Meeting Registrants Only.

OB: The Importance of Project Status for Career Success

Author: **Shihan Li**, *Heinz College - Carnegie Mellon U.*
Author: **Nynke Niezink**, *Carnegie Mellon U. - Dietrich College of Humanities and Social Sciences*

In a project-based organization, working on "hotshot" projects is often thought to contribute to employees' career success. In this study, we investigate the effect the imputed status of the projects that employees are assigned to has on their career success. We develop a network-based model and deduce hypotheses about how highly central (high-status) projects will positively contribute to employees' career success. We test these hypotheses on a population of 1000 IT specialists in a large international consulting firm over a five-year period. Our findings indicate that employees who are assigned, on average, to higher-status projects are within six months rewarded with higher billing rates, a major indicator of career success. We further confirm that this career advantage is moderated by two critical contextual variables: the extent of "cue consistency" of projects' statuses and employees' formal level. As predicted, the relationship between project status and career success is strongest if the statuses of the set of projects an employee is assigned to are consistent. Also, senior-level employees, due to their higher visibility in the organization, benefit more from higher-status assignments than do junior-level employees. Finally, we develop a novel theory that addresses how all of these factors might combine to give junior-level employees a differential advantage in their career development. Consistent with our proposed theory, we find for senior-level employees, cue consistency does very little to enhance the effect of average project status on career success. Conversely, junior-level employees heavily depend on cue consistency to benefit from averagely high-status assignments.

OB: Values and Share of Household Income

Author: **Laurens Bujold Steed**, *Miami U.*
Author: **Joseph Charles Rode**, *Miami U. Ohio*
Author: **Scott Dust**, *Miami U.*
Author: **Marne Lynn Arthaud-Day**, *Kansas State U.*

Research outside of organizational literature has established the importance of an individual's earnings relative to their partner (i.e., their share of household income) in predicting individual and household well-being. However, despite the importance of the workplace as the source of this income, this important variable has been largely overlooked among management scholars. To address this oversight, the current study explores antecedents and outcomes of an individual's share of household income in a longitudinal study of 227 individuals spanning a thirteen year period. We apply a values-based perspective to understand why employees might develop differing configurations of earnings within their partnerships. We also explore how these earning configurations predict subjective work experiences when considered in conjunction with an employee's values for work. Results from analyses of longitudinal data suggest that benevolence and stimulation (but not power) values predict higher shares of household income. Higher shares of household income and work centrality interact to predict work engagement and career satisfaction. Theoretical and practical implications of these findings are discussed.

Paper is Available to Meeting Registrants Only.

OB: The Effects of Promotion on Tie Formation and Decay across Team and Rank Boundaries

Author: **Jaeyun Jeong**, *Hanyang U.*
Author: **Kyoung Won Park**, *Hanyang U.*

This study investigates how promotion affects tie formation and decay across team and rank boundaries in an organization. It also investigates the moderating roles of Machiavellian personality in the relationship between promotion and inter-team tie formation and decay. Online survey data were collected in two time points from 566 employees of a Korean chemical company. The results from negative binomial regressions generally confirm our hypotheses that promotion would be significantly related to inter-team tie formation and decay of newly promoted employees with both higher- and lower-rank employees, but not to intra-team social network changes. The results also confirm the positive and significant moderating effect of Machiavellian personality on the relationship between promotion and inter-team tie formation with higher-rank employees. These results are robust to different specification tests. Overall, this study suggests that newly promoted employees tend to conserve the total amount of social networks, by forming new social ties and decaying existing ties at the same time, and they do so partly with instrumental motivations.

Trust is a fundamental characteristic of organizational relationships and one of the most frequently studied concepts in management research today. This annual PDW is aimed at advancing research on trust by serving as a platform for scholars to discuss critical issues, engage in dialogue, and help further research-in-progress. The workshop consists of three segments: (1) The first segment starts off with a panel discussion, in which leading scholars share their thought-provoking ideas on this year's focal topic of "trust in the digital age"; (2) For the second segment, attendees break into roundtables to discuss various relevant issues in current trust research. Each table will start out with a particular topic but may move on to other issues as the discussion unfolds. Topics may include (but are not limited to): trust asymmetries, trust violation and recovery, trust in teams, trust in interorganizational relationships, trust across levels of analysis, trust in networks, trust dynamics, and trust and contracts; (3) The third segment consists of a paper development workshop, in which the facilitators provide in-depth feedback on work-in-progress trust research previously submitted by workshop participants. These papers should be in an advanced developmental stage, targeted at a scholarly management journal, and no more than 40 double-spaced pages in length.

If you are interested in receiving feedback on your work in progress and participating in the paper-development segment of the workshop, please submit your manuscript by email to both workshop organizers, Bart de Jong (Bart.deJong@acu.edu.au) and Oliver Schilke (oschilke@arizona.edu), no later than July 15, 2021.

The increasing urgency of tackling grand challenges, like climate change, has fostered a lively discussion among organizational and management scholars about producing work that is both rigorous and relevant for practice. Few practitioners appear to find scholarly research useful, leaving organizational and management scholars excluded from public discussions and forums. Many scholars appear comfortable with this and tend to evaluate work with citation counts that do not matter to non-academics. Yet many scholars are beginning to question this approach and want to produce meaningful research that practitioners use. Doing so is difficult for early-career scholars who face promotion and tenure requirements based on academic-focused publication and citation counts. To address this dilemma, this PDW from the Impact Scholar Community supports early-career scholars interested in increasing the impact of their work. The PDW equips them with tools and approaches to positively impact diverse stakeholders, inform practice, and generate knowledge relevant to solving grand challenges.

Business Agility – Where Have We Gone and Where Do We Go from Here?

Business Agility: Opening New Perspectives

Organizer: **Stéphane J.G. Girod**, *IMD*

Organizer: **Christiane I. Prange**, *School of Economics & Management, Tongji U.*

Panelist: **Julian M Birkinshaw**, *11393*

Panelist: **Michele Zanini**, *Management Lab*

Panelist: **Wendy K. Smith**, *U. of Delaware*

This workshop's purpose is to advance Academy members' understanding of business agility in faster changing, more uncertain environments, so that the research and teaching field can progress and reflect the latest evolutions in the business world and the research informs better practices. For practitioners, business agility is viewed as a way of coping with the high pace of change and uncertainty in the business environment by being more flexible and entrepreneurial and by changing faster. But the scientific field is lagging and does not reflect well the evolutions that have taken place with digital transformation, (de)globalization and now even COVID. As business schools and MBA programs become increasingly scrutinized for their relevance, we need to bring rigorously built insights that capture how companies become more adaptive and more continually renew their competitive advantage through business agility. In this workshop we close this gap in three ways. First, we review the concept in its current academic fields, in strategy and beyond, and we present several critical challenges (for example, the applicability of business agility in different contexts, the use of a paradoxical approach in implementing agility). Second, a panel of experts provide new, cutting-edge, research-based insights into how the concept is evolving in the field of practice. Third, we organize three parallel group discussions where we invite participants to discuss three main topics: (1) theory-development workshop to co-create an exciting research agenda; (2) development of constructs and measures to support rigorous empirical research; (3) agile strategizing and its impact on theory, research and teaching. A specific application of agility in corporate strategy sharing insights on how selected companies have started to change towards an agile strategy process. Participants report their conclusions in a final plenary discussion that the panelists moderate.

Managing Grand Challenges   
Managing Grand Challenges

Digital Session Chair: **Seray Ergene**, *U. of Rhode Island*

OMT: **A Process Study of Addressing Grand Challenges**  

Author: **Seray Ergene**, *U. of Rhode Island*

Climate change, income inequality, and land degradation are some of the large-scale concerns that humanity is facing today. While a growing body of work looks at the relationship of organizations with the natural environment and society, most research takes the business case view, which prevents exploring the systemic roots of grand challenges and how organizations tackle them. To capture the processes and practices where the business case approach falls short, this paper develops a new analytic perspective, sustainability as relational practice, drawing from a practice theory approach informed by actor-network theory. Based on an in-depth longitudinal study of a large fashion company, this paper identifies four key interrelated processes in confronting large-scale concerns: visualizing grand challenges, creating allies through translations, transforming organization by performing sustainability, and becoming sustainable by re-visioning focus on grand challenges. The findings suggest that tackling grand challenges unfold through an overarching assembling process of social and material elements, making visible subtle but important nuances that produce larger organizational efforts beyond the business case. In illustrating how grand challenges are visualized, translated, performed, and re-visioned through various practices, this relational sustainability frame allows observing successful organizational means as well as limitations encountered when confronting systemic large-scale issues.

OMT: **Firms and Grand Challenges: Toward a Polycentric Governance Strategy**  

Author: **Ryan Federo**, *U. de les Illes Balears*

Firms have now become important actors in efforts to address grand challenges. The growing academic interest in understanding why and how firms help in such efforts offers conflicting insights that are diverging into two siloed research streams—whether firms become involved in resolving grand challenges to gain public legitimacy as responsible members of society or to enhance firm reputation and brand value in order to differentiate themselves from competitors. Inspired by polycentric governance and an actor-centered approach, we focus on the interactive elements and underlying motives of nonmarket and market actors that shape firm strategy in the global governance landscape. We theorize that a polycentric governance strategy constitutes an integrated strategy that enables firms to effectively manage the interests of multiple stakeholders to succeed in addressing grand challenges while remaining competitive in the market. We discuss the implications of these insights for theory development on grand challenges and stakeholder governance.

OMT: **A New Framework That Integrates Inclusivity and Quality Improvement Science for Healthcare Managers**

Author: **Ansie Prinsloo**, *The Da Vinci Institute: School of Business Leadership*
Author: **Rica Viljoen**, *Da Vinci Institute for Business Leadership*

This study proposes that healthcare delivery can be enhanced by integrating inclusivity and quality improvement (QI) into the inclusivity quality improvement (IQI) framework. This conceptual framework draws on astute theory, including the model for improvement (MFI), the system of profound knowledge (SOPK), the integral inclusivity framework, spiral dynamics, and business theory. Based on the IQI framework, two QI programmes were developed and implemented in the South African healthcare industry to validate, refine, and empirically inform the framework. Case study data were gathered from multiple sources, and content analysis was used to compare the theoretical themes informing the IQI framework. The findings provide insights concerning the theoretical contributions, practical application, prerequisites and barriers to successful QI work in healthcare, and the benefits derived from applying the IQI framework. The findings emphasize that the theories used to inform the framework resulted in improvement, and the applications offered practical insights into QI programme application of value to management. I address the readers directly in the first person, which is increasingly popular using a personal, auto-ethnographic and narrative report style through which I share my thinking and voice with the reader (Berger, 2015; Humphreys, 2005; Hyland, 2002; Onwuegbuzie & Johnson, 2006; Webb, 1992). Keywords: Improvement, Inclusivity, Management, Quality, Case study

OMT: **Change Agents' Crossing of Organizational Boundaries for Digital Transformation**   

Author: **Steffi Menten**, *Radboud U. Nijmegen*
Author: **Armand Smits**, *Radboud U. Nijmegen*
Author: **Robert A.W. Kok**, *Radboud U. Nijmegen*
Author: **Kristina Lauche**, *Radboud U. Nijmegen*
Author: **Maarten Van Gils**, *Hogeschool van Arnhem en Nijmegen*

In this study we address the practices of change agents in the digital transformation (DT) process, and, more specifically, how change agents cross organizational boundaries to support this process. We apply an organizational change lens, focused on change agents, and enrich this with a more open perspective to get a better understanding of the DT process. Applying a multiple case study design, we find that DT can be unpacked into two change processes: DT of the product and of the production process. Change agents in our cases emphasized either a product or process response. In addition, these two change processes are very different in nature, which influences both the role of the change agents and how and why they cross organizational boundaries. The crossing of organizational boundaries, at least in medium-sized firms, does not reflect the typical external collaboration that would be expected in the context of DT. By applying a broader scope to crossing organizational boundaries – by including ‘accessing external resources’ next to ‘external collaboration’ –, we are able to show that medium-sized firms do cross organizational boundaries, albeit in a different way than expected: with a stronger focus on accessing external resources.

This symposium will explore the practical/societal impact opportunity and potential of academic conferences in theory and practice. The symposium offers insights on this topic based on empirical research on the practical impact of bringing managers and professionals into the "machine room" of the academy exemplified by practitioner study trips to the Academy of Management Annual Meeting. Researchers and management/HR practitioners will discuss research end-user participation in academic conferences as a pathway of practical/societal impact of research, the nature of practical/societal impact from practitioner participation in research conferences as well as the circumstances under which knowledge uptake can take place.

HR: A Study of Talent Management and Employee Job-related Outcomes in the Indian Manufacturing Industry ✈️

Author: **Renu Dalal**, *Purdue U.*

Author: **Mesut Akdere**, *Purdue U., West Lafayette*

This study examined the relationship between talent management and employee job-related outcomes in the Indian manufacturing setting. Talent management practices included talent acquisition, talent development, talent engagement, and talent retention. Employee job-related outcomes of this study included intent to stay, job engagement, affective commitment, job satisfaction, and employee competency. This study used the social exchange theory and a resource-based view as the theoretical underpinning for the proposed TM model. The role of organizational culture as a moderator was also examined in the study. The sample of the study consisted of 992 full-time employees working in one of the largest textiles and paper manufacturing organizations of India with facilities located in two Indian states. Data was collected online through a questionnaire composed of several existing survey instruments. The response rate for the survey was high (62.98 percent). The primary method of data analysis was structural equation modeling. The overall relationship between talent management and employee job-related outcome was found significant and positive. The findings showed that organizational culture is significantly related to talent management and employee job-related outcomes. However, the organizational culture does moderate the relationship between talent management and employee job-related outcomes.

HR: Shaping absorptive capacity by talent management in the host country: The study of Chinese diaspora

Author: **Marina Latukha**, *Graduate School of Management, St. Petersburg State U.*

Author: **Andrei Panibratov**, *Graduate School of Management, St. Petersburg State U.*

Author: **Yugui Zhang**, *Shanghai International Studies U.*

The paper explores the role of talent management (TM) practices in shaping firm's absorptive capacity in the host country. Based on the data from representatives of Chinese diaspora employed in Russia, we discuss the role of TM practices in developing firm's absorptive capacity through learning from diaspora. We find that retention and development practices significantly influence firm's absorptive capacity, which promotes attractiveness of Russia as of destination country for Chinese employees, and of particular company with the corresponding TM system.

HR: Good 'and' Bad? : Institutional dynamic to adopt Talent Management in South Korea (WITHDRAWN) ✈️

Author: **Hyun Mi Park**, *Coventry U., UK*

Institutional theory has been used extensively to explain talent management (TM) adoption, but few studies examine the institutional dynamic to adopt Western-based TM practices within the Far East context. This paper builds context-driven theory and contributes to an understanding of the non-linear nature of institutional change, highlighting the limitations of the current institutionalization framework. Through 22 qualitative, semi-structured employee interviews across multiple sectors, the findings suggest that older, more mature and embedded local South Korean firms responded to external diktat through their USA-imitated TM and ultimately failed, whereas younger, newer firms learned from experience and were more likely to adapt. Venture firms' founders run the firms in a way that granted employees more autonomy and that was more egalitarian in its culture, such as decentralised authority structures and unconventional corporate culture. Subsequent deinstitutionalization occurs as a result of innovative, hybrid forms of TM implemented by younger, smaller and dynamic firms.

Participant: **Sharon Sheridan**, *College of Business, Clemson U.*
Participant: **Dejun Kong**, *U. of South Florida*

Workplace humor is a powerful communication tool that is known to facilitate positive outcomes for employees, teams, and interpersonal relationships. However, in recent years, scholars have questioned the positive nature of humor and have encouraged the study of multiple types of humor, including those that can generate negative outcomes for both users and recipients. Additionally, there have been calls to understand the reasons behind the use of humor in the workplace and to consider how the contexts in which humor is used may influence outcomes. These queries suggest that the literature on workplace humor is still in its infancy, leaving us with a limited understanding of this common phenomenon. This symposium addresses this research agenda by investigating: (1) multiple types of humor (e.g., offensive humor, aggressive humor, leader self-deprecating humor, sarcastic humor), (2) unique effects of different types of humor (e.g., perceived norm violations, perspective taking, outright exclusion), (3) mechanisms that can influence the use of humor (e.g., risk of exclusion, need satisfaction, relative power, anxiety), (4) outcomes from reacting to other's humor (e.g., joke listener's morality evaluation), and (5) influence of social contexts within which humor is used (e.g., conflict-ridden vs. conflict-free). Overall, our symposium aims to promote the investigation of humor to newer grounds and perspectives.

How power influences the use of humor

Government Incentives & Subsidies

Digital Session Chair: **Jennifer Kuan**, *California State U., Monterey Bay*

TIM: Interfaces, Modularity and Ecosystem Emergence: How DARPA Modularized the Semiconductor Ecosystem 

Author: **Jennifer Kuan**, *California State U., Monterey Bay*
Author: **Joel West**, *Keck Graduate Institute*

Scholars have identified the pivotal role that modularity plays in creating innovation ecosystems—complex arrangements of buyers, suppliers, and complementors. In large part, this is due to modularity's effect on industry structure, breaking up the value chain along interfaces, thus allowing specialized firms to enter, compete, and innovate. Less well-understood is where modularity comes from. While modularity theory is heavily influenced by the information technology sector, other industries (such as automobiles) suggest a potential conflict between firm incentives and the creation of modular interfaces. We demonstrate the role for government funding in generating modularity using an historical case study of the semiconductor industry and shifts in industry structure enabled by public R&D funding in the 1970s. We argue that this funding was mission-oriented with an interest in changing the semiconductor industry structure from a vertically-integrated oligopoly to a competitive, de-integrated industry. A subsequent shift, to an ecosystem encompassing an ever-expanding variety of customer industries, further increases the long-term economic value of modularity-as-policy.

TIM: Internal power dynamics: impact of government innovation policies on firm commercialization 

Author: **Tianyu Gong**, *School of Economics & Management, Tongji U.*
Author: **Bilian Ni Sullivan**, *Hong Kong U. of Science and Technology*
Author: **Yijia Tang**, *Jones Graduate School of Business, Rice U.*

This study develops a theory of interactive power dynamics to examine the effect of government innovation policies on firms' new product commercialization. Our interactive power dynamics model suggests that such policies can disrupt the power relations between interdependent subgroups within a firm (in this context, research and development (R&D) and marketing teams). In the context of China's Medium- and Long-Term Plan for Science and Technology Development (2006-2020) (MLP 2006), we argue that the growth in power of a firm's R&D group arising from a need to meet the government's expectations could reduce cooperation between R&D and marketing, with a consequent negative effect on new product commercialization. We further argue that if the R&D group is already more powerful, this exacerbates the negative impact, but a more powerful marketing group can mitigate it. We took a quasi-experimental approach to test our hypotheses using a large dataset from China and obtained support for our theoretical model. Ultimately, our study offers a number of policy and managerial implications.

TIM: Policy mix comprehensiveness, resource availability and green innovation of firms

Author: **Zhou Rong**, *School of Public Policy and management Tsinghua U.*
Author: **Chen Luyi**, *School of Public Policy and management Tsinghua U.*
Author: **Yuan Zhou**, *Tsinghua U.*
Author: **Qintian Zhang**, *School of Public Policy and management Tsinghua U.*

The functionalist view of policy mix comprehensiveness always regarded it as the extensive use of policy instruments and strategies to solve the multiple failures in sustainability transitions, but ignored the politic and power relations embodied in. To fill this gap, this study extended the concept of policy mix comprehensiveness from the perspective of political sociology, and proposed that the policy mix comprehensiveness represented the complex and tangled relations between governments and the governed, which might increase risks and administration burdens, thus impaired the green innovations of firms. This study further proposed that the resource availability of firms could moderate the relations between policy mix comprehensiveness and green innovation of firms. 22989 firm level data from Chinese textile industry were collected to verify the hypothesis. Our research found that policy mix comprehensiveness has positive correlations with green management innovation of firms, while has negative correlations with green technology innovation of firms, thus impaired the overall green innovation of firms. The financial resources, political resources and knowledge resources could moderate the relationship between policy mix comprehensiveness and green innovations. In doing so, our study provided a foundation for future research to explore the interactions between government and the governed and the organization behaviors in policy mix research.

TIM: A political perspective of Chinese small-and-medium-sized firm's foreign patent application 

Author: **Tianyu Gong**, *School of Economics & Management, Tongji U.*
Author: **Yijia Tang**, *Jones Graduate School of Business, Rice U.*

Current patent literature focused mainly on the market value of firms' patents but paid less attention to the patent's role in firms' non-market strategy. Invoking the political perspective, we argue when the government raises the patenting into the national strategy in a transitioning economy, the following implementation policy can promote firms to file more patent applications to gain political legitimacy from the government. Such effect becomes more salient when firms lack political legitimacy. Further, political legitimacy embedded in firms' patent applications can help firms access the bank loan. Such outcome becomes stronger in the regions where the government has more control over the local bank system. We find empirical support for these arguments by examining the effect of a policy to implement a national strategy of intellectual property right on the Chinese firm's foreign patent applications. Our results provide insights into the patent literature.

Agribusiness, Canning, and Carbon: Management History in Industry

Digital Session Chair: **Richard C. Hoffman**, *Salisbury U.*

MH: Entrepreneurial Processes and Industry Growth: The Case of the Early Canning Industry

Author: **Richard C. Hoffman**, *Salisbury U.*

Entrepreneurship is at the heart of new developments that often lead to the creation of new industries. This study examines the origins of the canning industry via the experiences of three of its earliest entrepreneurs: Edward Wright, William Nunsen, and Thomas Kensett II. The narrative examines key aspects of the industry's context including the growth in demand for preserved foods, the resources of the Chesapeake, and the development of food preservation technology. The importance of entrepreneurs in the development of economic growth are then discussed as well as five characteristics of entrepreneurial processes that are used to examine Baltimore's early canning entrepreneurs. Each one exhibited the entrepreneurial characteristics in different ways. One failed in his efforts; the other two succeeded in developing businesses that endured into the next century. The study reveals that using entrepreneurial processes does not guarantee success, and that there are various paths to success. An entrepreneurial multiplier effect was also evident in the growth of firms producing supplies and equipment for canners. An entrepreneurial lens offers a closer insight into the development of firms and their industries. Some remaining unanswered questions as well as avenues for future studies are discussed.

MH: Women at the margins: Tales of agribusiness in Nova Scotia, 1905-2013.

Author: **Clara Bullock**, *Dalhousie U.*

Author: **Tasha Richard**, *Tasha*

Author: **Nicholous Mark Deal**, *Saint Mary's U., Canada*

This paper traces the margins of history that minimized the contributions of women in agribusiness. Over the last few decades, narratives of social progress and women-in-business have increasingly gained notoriety within business writ large. This has notably spilled over into non-traditional professions like agriculture. We disturb this tale of change by engaging with how much (or little) has materialized in the way agribusiness is embodied through an archival study of the Nova Scotia Agricultural College. In the process, we surface and problematize the ways in which women have been portrayed in historical narratives stretching over nearly a century. Three narratives are untangled from the archive: (1) the good wife, (2) women as unsung heroes, and (3) silly little college girls. One of the lasting tales from our research is noting that the presence of the historical woman in agribusiness' past does not necessarily translate her story as narrative.

MH: Industrial Transitions in the Black: US Innovation and Scale-up of Carbon Production, 1864 to 1975

Author: **David Foord**, *U. of New Brunswick*

This article examines the US carbon black industry from 1864 to 1975, with a focus on innovation and scale-up during World War II. The purpose of the study is to understand the forces behind transitions in the industry's technologies and business models. The primary research question is what drove the transition to dramatically increased production efficiency and output in the 1940s. I conclude that long-term, firm-based R&D and government sponsored standard-setting provided the scientific and technological foundations for the transition. Through the federal government's procurement and sponsored construction contracts, the carbon black industry was able to apply its industrial research discoveries to transform its business model to high efficiency production in the context of economic growth and expansion of natural gas pipelines for home heating and cooking in the 1940s.

The Role of Gender in the Workplace

Digital Session Chair: **Julia D. Hur**, *New York U.*

OB: Losing Competition for Talent: Gender Bias in Advisor Selection  

Author: **Julia D. Hur**, *New York U.*

The current research examines the intersection between gender bias and mentorship formation. From the mentor's perspective, producing a successful protégé is a two-step process – recruiting protégés with the most potential and then helping them realize that potential. While previous work on gender bias mainly focused on the latter step, the present research suggests that female mentors might be disadvantaged at the early stage of protégé recruitment and lose the competition for top talent to their male counterparts. The author examined the actual, high-stakes decisions of protégés selecting their mentors on the reality singing competition, The Voice. Comparing to Monte Carlo simulation results, female mentors were significantly less successful in recruiting top talent protégés than would be expected by chance. The results also indicate a disadvantage of being a token female; female mentors were especially less likely to recruit top talent protégés when they were numerically underrepresented.

OB: Sexism and Well-Being of Women: A Moderated Mediation Model of Job Crafting and P-O Misfit 

Author: **Ayesha Tabassum**, *York U., Toronto*

Research has found workplace sexism cause twofold damages. Such experience of patriarchy and prejudice at workplace not only affects female employees psychologically and physically but also impedes organizational sustainability through turnover of high performers, promotion of discriminatory climate, and denting the interpersonal relationships. The present paper aims to develop a conceptual model to elucidate the moderating role of job crafting in determining the relationship between workplace sexism and well-being of women. The paper also illuminates the workplace sexism-well-being relation by theorizing mediation of person-organization (P-O) misfit. Specifically, the paper introduces job crafting as a coping strategy for workplace sexism through the Job Demand and Resources (JD-R) model and job crafting typology. Drawing on the P-O fit theory, P-O misfit is established as a mediator to interpret the relation between sexism at workplace and well-being of women. In summary, the paper develops a moderated mediation model of job crafting and P-O misfit to investigate the relation between workplace sexism and women well-being. Based on the theoretical model, a number of propositions are offered to guide future empirical research. Theoretical and practical implications along with the avenues for future research are discussed as well.

OB: Exploring When and Why Gender and Structural Power Influence Retaliation Against Moral Objectors 

Author: **Timothy Kundro**, *U. of Notre Dame*

Author: **Nancy Rothbard**, *U. of Pennsylvania*

Although research suggests that moral objection plays a critical role in reducing unethical behavior within organizations, moral objectors often face retaliation, in part because they are viewed as lacking self-control (i.e. overly emotional, unprofessional, low in other-focus, lacking task focus). Since structural power may provide individuals the legitimacy needed to mitigate these negative perceptions, researchers have called upon those with high structural power to serve as moral objectors. However, research on role and expectancy violation theories questions this perspective, suggesting that women may not benefit from structural power in the same way as men. In this paper, we present a contingency model to understand when and why moral objectors face retaliation. Specifically, we theorize that men, but not women, who engage in moral objection face less retaliation as they attain higher structural power. Given the ineffectiveness of structural power for women, however, we investigate an alternative solution to mitigate retaliation. Specifically, we argue that using an organizational frame to morally object effectively reduces retaliation – regardless of one's gender or structural power. We test and find support for our theory in two archival survey datasets (total N = 63,166), a critical incident technique experiment, and two online experiments.

OB: Bring Back Mothers in Management: First-time Mothers' Identity Integration and Managerial Career 

Author: **Yun-Kyoung Kim**, *Salisbury U.*

Author: **Amit Kramer**, *U. of Illinois at Urbana-Champaign*

Author: **Teresa Cardador**, *U. of Illinois at Urbana-Champaign*

The influx of women into professional careers in the last four decades represents a move toward a more egalitarian society. However, the underrepresentation of women at senior management levels indicates the next frontier in achieving a more egalitarian workplace. Although previous research has suggested that women's dual-identity concerns as mothers and professionals may contribute to them 'opting out' of management roles, it offers little explanation for how the relationship between these two identities influences women's career advancement in management. In this paper, we provide an identity perspective on how first-time mothers' identity integration following motherhood influences their continuous pursuit of managerial career and their leader emergence in top management positions. Our conceptual development is grounded on assorted research and theoretical descriptions to ultimately illustrate how first-time mothers' maternal-professional identity integration affects their career attitudes and promotion via their self-perceptual and interactional identity enhancement and identity conflict. Whereas existing research focuses on work-family interference and gendered career preference, we describe how women's intrapersonal identity integration leads their opting out decision and promotion to the top management positions.

Facilitator: **Truit Gray**, *Oklahoma State U.*
Facilitator: **Anna Maria Zabinski**, *Oklahoma State U.*

In this PDW, we critically examine the correspondence between theory and methods. Engaging esteemed quantitative and qualitative scholars and research methodologists who have published extensively on the interrelatedness of theory and method, we first discuss as a panel some of the trends that have led to a growing apart of how methods are applied and how they support (or maybe no longer support) the larger process of theorizing. In particular, as editors and editorial board members, we have observed a trend such that investigators are more concerned about following generic, expedient, precedent-driven designs and analyses than identifying and pursuing designs that fit well with their theories and analyses that fit well with their designs. We will also discuss strategies for curbing this trend and fostering a happy union of theory and method. We then distribute our facilitators across several breakout groups that represent quantitative and qualitative research traditions, as well as different disciplinary subgroups within the Academy, to discuss implications for future scholarly work with PDW participants.

**A Women's Wisdom Circle to Share Stories of
Managing as Feminine**
Managing with Women's Feminine Wisdom

Distinguished Speaker: **Nancy J. Adler**, *McGill U.*
Distinguished Speaker: **Jyoti Bachani**, *Saint Mary's College of California*
Distinguished Speaker: **Kathryn Goldman Schuyler**, *Alliant Intl U. / Coherent Change*
Distinguished Speaker: **Judith A. Neal**, *Edgewalkers International*
Distinguished Speaker: **Vasanthi Srinivasan**, *Indian Institute of Management, Bangalore*
Distinguished Speaker: **Sandra A. Waddock**, *Boston College*

Six globally-respected scholars and professors, from three countries, who have taught management to thousands of students and executives over their careers, and built and led organizations and communities of practice to effect systemic change, will present their personal experiences as women in academia. For far too long the feminine qualities of collaboration, care, compassion and creativity have not been permitted to thrive in spaces where masculine qualities of competition, hierarchy, power, and consumption dominate. As in traditional wisdom circles, sharing personal experience stories will be a way to transfer knowledge, commiserate, cross-pollinate ideas, and get insights that can address many of the problems the world is currently facing by bringing a distinctly feminine perspective.

Employee Voice and Involvement

Digital Session Chair: **Kabiru Oyetunde**, *London South Bank U.*

HR: Non-traditional workers' voice research: A systematic review

Author: **Kabiru Oyetunde**, *London South Bank U.*

Author: **Rea Prouska**, *London South Bank U.*

Author: **Aidan McKearney**, *London South Bank U.*

The traditional employment relationship (TER) is eroding rapidly due to economic instabilities and crises occasioned by past and recent events (e.g. COVID-19). In response is a growing proliferation of non-traditional employment relationships (NTERs). Expectedly, traditional workers' voice research has been widely documented. However, non-traditional workers' voice research is in its infancy leaving the literature fragmented. This necessitates understanding the body of literature and conceptualizing voice in NTERs. Reviewing present empirical studies on non-traditional workers' voice, we conceptually map the current forms of voice available to these workers, the issues they voice and their influence on management actions and decisions. Then we identify the determinants and outcomes of non-traditional workers' voice, and offering future research insights in to studying voice of these workers.

Paper is NOT Available. Please contact the author(s).

HR: Triangular Worker Voice Antecedents: Towards a Conceptual Model and Research Propositions

Author: **Kabiru Oyetunde**, *London South Bank U.*

Author: **Rea Prouska**, *London South Bank U.*

Author: **Aidan McKearney**, *London South Bank U.*

The proliferation of employment agencies and digital platforms occasioned by outsourcing, information technology, and work patterns disruption, has led to an increasing rate of triangular work. Yet, limited research has examined the voice experiences of triangular workers and its determining factors. This is a significant neglect as voice opportunity for triangular workers offers a double benefit of protection from precariousness, and opportunity to creatively contribute to organisational improvement. This paper offers a conceptual model to illustrate the determining factors shaping triangular workers' voice. In so doing, we explore contextual conditions of temporary agency and gig work at the external and internal firm levels. Our integrative model offers propositions that can inspire future empirical research and contributes theoretically to the study of voice among workers in non-traditional employment relationships.

HR: Distinguishing Two Types of Employee Voice Experiences

Author: **Qing Lu**, *Zhongnan U. of Economics and Law*

Author: **Liping JIN**, *Zhongnan U. of Economics and Law*

Author: **Edward Tang**, *Zhongnan U. of Economics and Law*

Author: **Fangjun LI**, *school of management, Jinan U.*

Author: **Su Cui**, *Zhongnan U. of Economics and Law*

This study investigates whether employees' "speaking up" and silence behaviors depend on their voice experiences with their leaders—that is, whether employees' suggestions or ideas have been attitudinally respected or behaviorally implemented from the above. Integrating a sense-making perspective with the behavioral modification framework, we propose that employees with voice adoption experiences tend to perceive themselves as more "capable" (i.e., role-breadth self-efficacy), which then increases their voice behaviors while decreasing silence behaviors; Contrastingly, employees with voice responsiveness experiences are likely to feel more "energized" (i.e., positive affect) and voice more. A sample of 163 employees and their 38 direct supervisors from the fashion industry have supported all our hypotheses. Theoretical and practical implications and future research directions are discussed.

HR: Social Exchange and dynamic effects of voluntary employee representation

Author: **Kornelius Kraft**, *TU Dortmund*

Author: **Alexander Lammers**, *TU Dortmund*

In this paper we address the question how non-monetary incentives contribute to organizational performance. We consider involvement practices, provided by the management, such as round table conferences or employee spokespersons as a non-monetary incentives for the alignment of interest between management and workers. Drawing on the social exchange theory, we study the effects of implementing voluntary employee representation as a non-monetary measure on labor productivity in German establishments. A simple model is derived which relates the concept of reciprocity to workers' utility and effort. We provide empirical evidence by using representative German establishment level data in which the panel structure allows us to follow establishments over time. Using a dynamic conditional difference-in-differences approach, we estimate introduction as well as dynamic post introduction effects. To mitigate selectivity issues we apply an inverse-probability weighting approach. We provide evidence of a significant and time persistent impact of voluntary provided employee voice on establishment productivity. In particular our results show, that the association between productivity and voluntary involvement does not arise in the introduction period but rather in the long run after two to five years.

Paper is Available to Meeting Registrants Only.

Author: **Chunling Zhu**, *Renmin U. of China*

Author: **Fangliang Zhang**, *Renmin U. of China*

Author: **Yanfang Xu**, *Renmin U. of China*

Although researchers have argued that supervisors are voice managers, the role of supervisors' favorable feedback in employee voice behavior has received little attention. The current research addresses this issue from social exchange perspective by investigating the reciprocal relationship between supervisors' downward favorable feedback and employee upward voice. We hypothesize a first-stage moderated mediation framework with supervisor identification as a mediator and relational energy as a moderator. By collecting data from 503 employees and their 205 immediate supervisors from a retailer company with a three-wave and multi-source research design, we find that supervisor favorable feedback is positively related to employee voice both directly and through the mediation of employees' identification with their supervisors. In addition, this positive effect can be strengthened when employees perceive high relational energy from their supervisors. This research advances our understanding of the role of supervisor feedback skills in influencing employees' extra-role behaviors. The findings also help business practitioners maximize the positive outcomes of supervisor favorable feedback effectively.

Change and Crisis Management

Digital Session Chair: **Tae Jin Hwang**, *Washington U. in St. Louis*

OB: Effects of Flux in Coordination Caused by Membership Change on Team Performance 

Author: **Tae Jin Hwang**, *Washington U. in St. Louis*

Although researchers have examined what happens in a team after membership change, we know little about what happens in a team before the change happens but after members are informed about upcoming change. Drawing on social identity theory and studies on individuals' response to change, I theorize that the way team members coordinate their work will start to shift during the pre-change period. I predict that change of in members' coordination system would undermine a team's short-term performance. I reconcile two opposing views regarding the effect of flux in coordination on a team's long-term performance by predicting an inverted U-shaped relationship. I test my hypotheses with the data collected from an online study. While working on a video-recording task in a virtual meeting room, three-person teams were informed that one of them will leave and a new member will join after 10 minutes. After 10 minutes from the announcement, membership change was implemented. I found that after learning about impending change, teams shifted the way they coordinate work and less engaged in activities that facilitate coordination. Flux in coordination during the pre-change period was positively related with a team's short-term performance and did not have a curvilinear relationship with a team's long-term performance. I contribute to the literature on membership change by investigating the pre-change period and elaborating a path-dependent view of the effects of membership change on team performance.

OB: Leading Remotely in a Time of Crises: Relationships with Emotional Intelligence

Author: **Jenell Lynn-Senter Wittmer**, *U. of Toledo*
Author: **Margaret M. Hopkins**, *U. of Toledo*

Leaders around the world have been thrust into leading remotely, using virtual platforms and other various technologies to communicate and stay engaged with their employees and teams during this current extraordinary global crisis. Previous research supports that leaders share concerns around trust, communication, engagement, and support when leading remotely. Prior research also identifies "people skills" as essential in overcoming these concerns. We propose that emotional intelligence is essential in leading remotely during crisis situations. Thus, the current study explores the relationships between emotional intelligence and the emotional intelligence composites of self-perception, self-expression, interpersonal relationships, decision-making, and stress management with leader concerns when leading remotely during a time of crisis.

OB: Two sides of the same coin? An analysis of the authentic and charismatic leadership during crisis 

Author: **Laura Cortellazzo**, *U. Ca' Foscari of Venice*
Author: **Elena Bruni**, *WU Vienna*

Crises are crucial events in which a leader's efficacy is challenged and tested. Both authentic and charismatic leadership theories have examined the leadership tenure in such troubling circumstances. However, findings are still equivocal, especially regarding the features of both leadership styles in coping with crisis management. To address this void, we use the case of Jacinta Ardern, Prime Minister of New Zealand, who was celebrated by media as an effective leader during two important crises, namely a terrorist attack and the Covid-19 pandemic. To do so, we employed a large dataset of newspaper articles that framed her endeavour over the last three years. We show how Ms Ardern leveraged on some features of both leadership styles, and yet she successfully managed the two different crises. Hence, our study makes a contribution to the literature on leadership in crisis situations, providing a critical examination of the two constructs, showing how they can be interrelated.

OB: The Meaning of Change: How Leaders Can Give Sense and Make Meaning Following Anomalous Events 

Author: **Jacob Andrew Klopp**, *Penn State Smeal College of Business*

Research on leader sensegiving has explained how leaders can help workers make sense of the events that unfold at work. This area of research has illuminated key mechanisms by which shared understandings of organizational life are constructed. Yet leader sensegiving research has failed to distinguish between sense and meaning. As a consequence, leader sensegiving research has assumed that understanding work life and finding work life to be meaningful are conceptually indistinct. In this article, I use narrative and storytelling theory to develop a theoretical process model that distinguishes between sensemaking and meaning making following anomalous events at work, and I highlight the moments at which leaders can give sense and make meaning for workers. The proposed model suggests that distinguishing between sensemaking and meaning making is crucial for explaining work-related outcomes that are driven by factors that go beyond the cognitive considerations presently studied in leader sensegiving research.

Identity and Authenticity

Digital Session Chair: **Xiaofeng Xu, Tongji U.**

OB: The Antecedents of Moral Identity: A Meta-Analytic Review

Author: **Xiaofeng Xu, Tongji U.**
Author: **Miaomiao Li, Tongji U.**
Author: **Ho Kwong Kwan, China Europe International Business School (CEIBS)**

Moral identity is an important self-concept. Taking a social cognitive perspective, we propose an integrative framework to examine the relationships between moral identity and its antecedents including personality traits and organizational context. An analysis of effect sizes drawn from 110 studies involving 44,441 participants shows that gender has positive relationship with moral identity, personality traits are strongly related to moral identity and that organizational context (specifically, leadership style and ethical climate) is also strongly associated with moral identity. The scale used to measure moral identity, cultural tendencies toward individualism or collectivism, and demographic characteristics moderate the relationships between moral identity and its antecedents. The significance and implications of the different factors that influence moral identity are discussed.

OB: How and when occupational identity threat leads to job crafting and positive outcomes

Author: **Yangxin Wang, Chinese U. of Hong Kong**
Author: **Dora C. LAU, Chinese U. of Hong Kong**
Author: **Youngsang Kim, Sungkyunkwan U.**

Drawing on the relevant identity literature, job crafting research, and work on sensemaking, this research investigates how occupational identity threat is positively related to individual job crafting (i.e., approach crafting and avoidance crafting) and how approach crafting transforms occupational identity threat to higher job engagement and improved job performance. We suggest that because occupational identity and work role are two sides of the same coin, crafting one's work boundaries could function to reconstruct an occupational identity and therefore react to occupational identity threat. Specifically, approach crafting and avoidance crafting represent the sensemaking and sensebreaking process in the identity reconstruction, using which individuals could add valuable components while reduce undesirable components to their occupational identity. We also propose that individuals' regulatory focus would moderate these relationships. Based on a multi-wave, multi-source survey study, our analytical results supported the positive effect of occupational identity threat on approach and avoidance crafting, while providing further support for the moderating effect of prevention focus and the mediating effect of approach crafting in transferring the effect of occupational identity threat in a positive manner (i.e., higher job engagement and performance). We discussed the theoretical and practical implications of our findings.

OB: Navigating Expected Selves: The Roles of Cognitive Styles, Identity Motives, and Regulatory Focuses

Author: **Xing Liu, Wayne State U.**
Author: **Elizabeth C Ravlin, U. of South Carolina**
Author: **David C. Thomas, U. of Victoria**

We develop theory to enhance our understanding of how individual differences in cognition (cognitive styles), self-regulatory orientation (promotion and prevention focus), and salient identity motives (authenticity, belonging, and self-expansion) influence employee engagement in differing types of identity work and play. These identity management approaches are triggered in response to everyday identity tensions and conflicts that occur between preferred selves and organizationally-expected selves at work. We conceptualize two major categories of identity work and play: conformity-oriented and resistance-oriented types. Conformity-oriented forms include aligning of preferred and organizationally-expected selves, and distancing, in which an individual superficially conforms to the organizationally-expected identity at work. Resistance-oriented forms are represented by integrating and defending, which ensure that at least some part of the preferred identity is maintained in the work context. Based on social cognitive conceptualizations of the self, we theorize that an analytic cognitive style activates the need for authenticity, whereas holistic cognition is more likely to activate belonging and self-expansion motives. These salient motives, in combination with promotion or prevention regulatory focus, lead individuals to engage in different forms of identity work and play as primary approaches to identity management at work. We discuss implications of our model and directions for future research.

OB: Me, Me, and Me: The Process of Felt (In)Authenticity at Work through Multiple Referent Selves

Author: **Laura L. Rees, Queen's U.**
Author: **David Lehman, U. of Virginia**
Author: **Rangaraj Ramanujam, Vanderbilt U.**

Authenticity is often positioned as the straightforward alignment between one's inner self and outward behaviors. However, this traditional conceptualization fails to account for the possibility that individuals balance being authentic to multiple coexisting selves. We build on existing work in authenticity, self and identity, and communications to propose an alternative perspective: that individuals simultaneously have an unfiltered self (based on a lack of restraints), a normative self (based on sensible categories), and an aspirational self (based on ideals) that serve to meet competing intrapersonal needs for self-verification, self-regulation, and self-enhancement, respectively. We posit that individuals rely on different logics to communicate with others about these referent selves in order to enact authenticity. In turn, behavioral (mis)alignment with one's intended message about the self shapes felt (in)authenticity, which informs self-conscious emotions (pride, shame, guilt) reflecting individuals' self-evaluations that, over time, influence individuals' identification with the organization. Overall, our theoretical framework offers an alternative conceptualization of the dynamic process of authenticity. Specifically, it suggests that the particular path by which individuals feel (in)authentic in given episodes—rather than simply whether they feel authentic—may be more critical for both individual well-being and organizational relationships than currently believed.

ENT Division Mid Career Consortium  
ENT Division Mid Career Consortium

Host: **Jon C. Carr**, *North Carolina State U.*

This consortium is specifically designed to meet the needs of those scholars who are midway through their academic careers. This consortia activity adopts a highly interactive online format (small group discussions, personalized Q&A, etc.). Leading entrepreneurship scholars will provide practical advice and mentorship to help ENT mid career scholars understand the research process, build their network, and manage the steps for their on-going career.

By invitation only.

Diversity and Aging

Digital Session Chair: **Matthew Piszczek**, *Wayne State U.*

HR: **Age-specific Effects of Shift Work and Age Structure Analysis on Psychological Well-being**  

Author: **Matthew Piszczek**, *Wayne State U.*
Author: **Joseph Yestrepky**, *Wayne State U.*
Author: **Greg Thrasher**, *Oakland U.*

As the global workforce ages, it has become more important to understand how the effects of seemingly age-neutral practices change across working lives. Shift work has been shown to have stronger negative effects on the physical health of older workers, however the age-specific effects of shift work on psychological well-being is poorly understood despite the changes to cognitive, social, and emotional resources associated with age. Moreover, the role of the organization in setting human resource practices and policies may also in part determine the strength of the age-specific effects of shift work on psychological well-being. Using mixed effects and marginal effects analyses in a large linked dataset of German employees and employers, the present study draws on selection, optimization, and compensation theory to examine the relationship between shift work and psychological well-being at each year of age between 18 and 67 in establishments that do and do not conduct an age structure analysis of their employees. Results show that in establishments that do not conduct an age structure analysis, shift work is associated with increasingly lower psychological well-being with age. In establishments that do conduct such an analysis, effects of shift work on psychological well-being are more consistent across age.

HR: **The Influences of High-Involvement Work Practices on Older Workers' Retirement Intention**  

Author: **Kaifeng Jiang**, *Ohio State U.*
Author: **Zhen Zhang**, *Southern Methodist U.*
Author: **Jia Hu**, *Ohio State U.*
Author: **Guangjian Liu**, *School of Business, Renmin U. of China*

Research on retirement decisions has invited studies to examine how personal, work-related, and environmental factors interplay to affect older workers' retirement decisions. Drawing upon the person-environment fit framework, we proposed a negative relationship between high-involvement work practices (HIWPs) and older workers' retirement intention. We further developed hypotheses regarding the moderating effects of gender, age, educational level, managerial status, and external economic environment on the relationship between HIWPs and retirement intention. We tested the hypotheses using a sample of 754,856 employees age 50 and over from 360 U.S. government agencies participating in the Federal Employee Viewpoint Survey from 2006 to 2015. The results, based on mixed effect logit regressions and cross-classified modeling, indicated that older workers' experience of HIWPs had a negative relationship with their retirement intention, and the negative relationship was stronger for older men workers, workers aged 50-59 years, older workers without a bachelor's degree, and non-managerial older workers than for older women workers, those aged 60 years or over, those with a bachelor's degree, and those with managerial responsibilities, respectively. Moreover, the results showed that the negative HIWPs-retirement intention relationship has become stronger since the Great Recession of 2008. We discussed the theoretical and practical implications of older workers' retirement decisions by considering the interactions between human resource management practices and personal and environmental factors.

HR: **Managing Older Workers through Relationships at Work: Social Support, Feedback, and Performance**

Author: **Tatiana Marques**, *Instituto U. de Lisboa (ISCTE-IUL), Business Research Unit (BRU-IUL)*
Author: **Sara Ramos**, *Instituto U. de Lisboa (ISCTE-IUL)*
Author: **Ramona Bobocel**, *U. of Waterloo*

With the aging of the global workforce, it is crucial to deepen our understanding of how to keep older workers healthy, motivated, and productive. In this research, we integrate job design with socioemotional selectivity theory, to propose that social job characteristics affect employee performance differently for older and younger workers. Specifically, in a three-wave survey (N=454), we tested employee age as a moderator of the relationships between receiving social support and feedback at work, and in-role and extra-role performance, as well as giving social support and feedback at work, and in-role and extra-role performance. The results showed that, in general, both receiving and giving social support and feedback are associated more strongly with the performance of older than younger workers. The findings provide important theoretical implications for the study of aging and work and offer practical applications for organizations and managers on creating workplaces in which older workers can reap the benefits of social relationships to remain productive.

HR: **Age Differences in Physical Abilities: Implications for Research, Practice, and Policy**  

Author: **Cody Jackson Reeves**, *Brigham Young U.*
Author: **Brian W. McCormick**, *Northern Illinois U.*
Author: **Bennett E. Postlethwaite**, *Pepperdine U.*

Despite the high number of aging workers in physically demanding occupations and sweeping age-related policies that govern entry into and exit out of some occupations, there is currently not a defining quantitative study that offers a comprehensive picture of how age impacts physical abilities. To fill this critical gap, we present the results of a meta-analysis and a primary study of more than 45,000 police and corrections officers that, taken together, provide evidence-based insight into how workers' physical abilities tend to change with age, and how age-related differences interact with sex differences in impacting physical abilities. Our findings reveal varying strengths of negative relationships between age and the physical ability dimensions of muscular power, muscular endurance, cardiovascular endurance, and movement quality. For the muscular tension dimension, we find the relationship between physical ability and age to be curvilinear such that workers' muscular tension is expected to improve until workers reach their 30s and then decline with declines becoming more pronounced with increasing age. Our investigation of the interaction of age and sex reveals that the magnitude of physical ability sex differences remains largely consistent with age. We discuss the practical and policy-related implications of these findings as well as implications for future research.

Qualitative Studies of Identity Work and Leadership Experiences

Digital Session Chair: **Yangerjungla Pongener**, *Indian Institute of Management, Bangalore*

OB: Identity work of individuals in disparate professions

Author: **Yangerjungla Pongener**, *Indian Institute of Management, Bangalore*

I examined the identity work of 31 individuals who are simultaneously working in disparate professions (e.g., a church worker and an engineer). I found that such individuals typically experienced both identity conflicts and identity synergies. I also found that the identity work of such individuals involved synthesizing this dialectic between identity conflicts and identity synergies. My findings offer two theoretical insights. First, by showing the coexistence of identity conflicts and identity synergies, my study is different from previous studies that have predominantly examined the relationship between identities as a binary, i.e., as either conflicting or synergizing. Second and consequently, I offer a dialectical perspective to identity work as opposed to prior studies that have taken a linear perspective to identity work.

OB: No Mud, No Lotus Flower: the Process of Posttraumatic Growth

Author: **Dae-hyeon Kim**, *Washington U. in St. Louis, Olin Business School*
Author: **Roni Jo Draper**, *Brigham Young U.*

Although past posttraumatic growth has made significant strides in improving our understanding of the factors associated with posttraumatic growth in the past two decades, less effort has been made to understand the process of posttraumatic growth. Specifically, how the process of posttraumatic growth unfolds overtime and what facilitates and inhibits this process remain a puzzle. To address this oversight in the literature, we investigated the process in which religious mothers (the Church of Jesus Christ Latter Days Saints—LDS) reach the state of posttraumatic growth from the onset of trauma—discovering that their child is an LGBTQ individual, which means a potential eternal separation with their own child according to their religion's teachings. Narrative interviews of 45 mothers with strong LDS backgrounds were collected following the tenets of narrative inquiry. The analysis of these narratives provides a process theory of posttraumatic growth, which highlights what facilitated or inhibited the process of posttraumatic growth for these mothers. By providing a process theory of posttraumatic growth strongly rooted in empirical data as well as the rich descriptions of this understudied phenomenon, our study expands the current scope of posttraumatic growth literature.

OB: Shadows of the Past: How Prior Experiences Shape Employees' Reactions to Current Leadership

Author: **Svenja Schlachter**, *Justus-Liebig U. Giessen*
Author: **Frank H. Walter**, *Justus-Liebig U. Giessen*
Author: **Johanna Dietl**, *Jacobs U. Bremen*

Although it is typical that employees encounter multiple supervisors during their careers, little is known about how employees' experiences with prior supervisors shape their reactions to their current supervisor's leadership. The present study examines how (in)congruences between current and prior supervisors' task-oriented leadership as well as laissez-faire leadership relate to an employee's trust in the current supervisor. Using polynomial regression and response surface analyses in a time-lagged sample of 159 employees, we find that incongruence between current and prior supervisors' laissez-faire leadership reduces an employee's trust in the current supervisor. This incongruence effect is particularly pronounced if the current supervisor exhibits laissez-faire leadership to a greater extent than the prior supervisor did, but it also holds if the current supervisor shows less laissez-faire leadership than the prior supervisor. For task-oriented leadership, by contrast, we do not find a similar pattern of incongruence effects; a current supervisor's task-oriented leadership is positively associated with employees' trust, regardless of the prior supervisor's respective behavior. In sum, these findings provide new insights into how "shadows of the past" may shape an ongoing supervisor-employee relation.

OB: "They're Conspiring Against Us": Follower Evaluations of Leaders Who Use Conspiratorial Rhetoric

Author: **Benjamin Dow**, *Washington U. in St. Louis, Olin Business School*
Author: **Jennifer Ann Whitson**, *U. of California, Los Angeles*

The apparent rise of high profile leaders who openly endorse conspiracy theories has been an increasing topic of concern among many commentators. A focus on conspiratorial explanations for events can be especially problematic during times of crisis, such as the ongoing covid-19 pandemic, when follower's look to leaders for guidance. However, rather than reassuring followers and offering evidence-based advice, some leaders turn their attention to unsubstantiated claims that powerful actors are working against them. In an effort to explain the persistence of this seemingly counter-productive strategy, we examine follower's evaluations of leaders who engage in such conspiratorial rhetoric. Drawing on compensatory control theory, we posit that when followers lack a sense of control they evaluate leaders who espouse conspiratorial beliefs more positively. Across two studies, we find that conspiratorial leaders are evaluated more negatively than non-conspiratorial leaders, but that this gap shrinks when followers' sense of control is lowered. We discuss the implications of these findings both for the current crisis and for high-profile leaders more generally. We raise the possibility that efforts to increase follower's sense of control may, in the long-term, help stem the tide of conspiratorial rhetoric among high profile leaders.

The Dark Triad and Leader Behaviors

Digital Session Chair: **Nilupulee Liyanagamage**, *U. of Wollongong*

OB: Borderline Machiavellianism: A Call for Reclassification of High and Low Machiavellianism

Author: **Nilupulee Liyanagamage**, *U. of Wollongong*
Author: **Mario Fernando**, *U. of Wollongong*
Author: **Belinda Gibbons**, *U. of Wollongong*

The MACH IV scale is the primary tool used in Machiavellian studies for identifying high and low Machiavellians. While this classification has been useful, the arbitrary nature of classifying low and high Machiavellians on the cut-off point of 60 is leading to confusion and ambiguity. Our study calls for academic discourse to investigate and debate on those managers who are projecting the characteristics of both low and high Machiavellian attributes. To provide greater clarity for identifying and refining those characteristics of low vs high Machiavellians, this study attempts to understand those managers bordering on high Machiavellianism in the MACH IV score. We use in-depth interviews to triangulate the MACH IV survey responses. The study was conducted in the construction industry in Sri Lanka where Machiavellian leaders are popular and sought after. Study findings reveal that borderline high Machs express both high and low Mach characteristics and their behavior may be influenced by cultural and religious values.

OB: Enough is enough! The impact of core self-evaluation on the despotism-outcome relationship

Author: **Jongwook Pak**, *Trinity College Dublin*
Author: **Xuan Kou**, *Trinity College Dublin*
Author: **Teng Liu**, *Trinity Business School, Trinity College Dublin*
Author: **Seung Yeon Son**, *Korea National Defense U.*

Recently, there has been a surge of studies on the dark side of leader behaviors. The current research builds around newly emerging leadership in this line of inquiry – despotism. Indeed, the detrimental impact of despotic leadership on employee attitudes and behaviors is congenital. However, there is yet limited understanding of the conditions under which the magnitude of such negative influence systematically changes. To extend, we investigate how employees' core self-evaluation (CSE) engenders differing reactions to despotic leadership. In doing so, we draw on self-verification theory to predict that the negative impact of despotic leadership on subordinate outcomes becomes deteriorating further under the presence of high CSE. Our empirical analyses of 226 supervisor-subordinate dyadic data demonstrated that despotic leadership is negatively associated with subordinates' task performance and knowledge sharing behaviors, and the relationships are channeled through degrading quality of leader-member exchange (LMX). Most conspicuously, the self-verification view of CSE regarding the despotism-outcome link indeed received strong support. By identifying the deadly combination, we uniquely add to the current discourse. We discuss the theoretical and practical implications of our research.

OB: Superheroes vs. Saints: The A&C Model of Narcissism, Needs, and Leadership Behaviors

Author: **Michaela Scanlon**, *Smith School of Business, Queen's U.*
Author: **Matthias Spitzmuller**, *Queen's U.*

Approaching the narcissism-leadership relationship from a multi-faceted perspective has been suggested as a next step in understanding this fascinating relationship. To date, leadership research has primarily focused on agentic narcissism. However, studying leadership and narcissism from an agency-communion perspective allows for a deeper understanding of their relationship and more nuanced inferences surrounding leadership behaviors. To illustrate, agentic narcissism is centered around inflated self-views in agentic domains (e.g., intelligence, competence, and achievement; Gebauer et al. 2012), which mirrors an egoistic bias (Paulhus & John, 1998). On the other hand, communal narcissism centers around inflated self-views in communal domains (e.g., trustworthiness, warmth, benevolence), mirroring a moralistic bias. Where egoistic bias has been associated with power needs (e.g., the need for control and authority over others), moralistic bias has been linked to social desirability needs (e.g., the need for affiliation and social acceptance). Through a dynamic self-regulation process that interacts with one's social environment (Morf & Rhodewalt, 2001), we predict different leadership behavior outcomes for agentic (i.e., destructive leadership behaviors) and communal (i.e., unauthentic leadership behaviors) narcissism based on regulation of these differing needs. The present paper delineates these predictions, and discusses theoretical and practical implications, as well as limitations and future research.

OB: Altruistic or Egoistic? Competing Explanations of Employees' Motivation to Help Abused Coworkers

Author: **Zhiyu Feng**, *School of Business, Renmin U. of China*
Author: **Krishna Savani**, *Nanyang Technological U.*

The present research tests two competing mechanisms for employees' motivation to help abused coworkers. According to the altruistically motivated view of helping, employees help others because they empathize with others' negative situation. Thus, compared to employees who have themselves not been abused by a supervisor, employees who have themselves been abused would be better able to empathize with their coworkers who are being abused, and thus, help these coworkers more. By contrast, according to the egoistically motivated view of helping, employees help others because they want to feel good about themselves. Thus, compared to employees who have themselves been abused by a supervisor, employees who have not been abused would feel more guilt and shame upon seeing coworkers being abused, and thus help abused coworkers more to relieve their negative emotions (guilt and shame). Two experiments and a multi-wave, multi-source field study support the altruistically motivated view of helping.

The COVID-19 pandemic has fostered uncertainty and several unforeseen consequences. It has revealed many tensions at individual, organizational, and societal levels, such as in work-life balance, organizational innovation for today and tomorrow, and addressing public health while sustaining economic activity. As paradox scholars, we not only lived these tensions in our daily lives, but we were also inspired to engage the paradox research community in better understanding these tensions. This PDW is to showcase our efforts over the last several months, which resulted in a collection of four papers in the *Journal of Management Inquiry*, scheduled to be in print in April 2021. Over 40 scholars contributed to short essays organized across the four papers, which included papers on societal tensions, organizational tensions, tensions for individuals within organizations, and a commentary on our overall process. We use this collective achievement as a springboard for further efforts in developing paradox theory and theories on crises more broadly.

One of the key challenges facing the research in behavioral and management sciences is bridging the divide between research and practice and between researchers and managers, policy-makers and practitioners. As the theme *Bringing the Manager Back in Management* of the 2021 AOM meeting states: “it’s not always clear how our research addresses issues confronting practicing managers”. Therefore, the purpose of this All Academy Theme Professional Development Workshop is to explore how we can integrate rigor and relevance to ensure knowledge from management research is useful for policies and management practice toward a better world. The AAT PDW will involve two panels with brief synchronous presentations, followed by Q&As and synchronous discussions of each panel led by the panelists in breakout rooms. The first panel will focus on ensuring that rigorous research is relevant for practice. The second panel will focus on ensuring that practice in organizations can be improved through rigorous research.

Time allocation (2.5 hours, 150 minutes total) 35 min Synchronous introduction and Panel A: From Rigorous Research to Practice, 5 panelists brief presentations (5 minutes each), followed by Q&A (questions on chat) (10 minutes), followed by all participants’ discussions breakout rooms with panelists in each room (20 minutes). 5 minute break. Panel B: From Practice to Rigorous Research, 6 panelists brief presentations (5 minutes each), followed by Q&A (questions on chat) (10 minutes), followed by 20 minutes all participants’ discussions in breakout rooms with panelists in each room, followed by closing remarks.

Innovations in Finance

Digital Session Chair: **Laura Stiller**, *U. of Regensburg*

TIM: Platforms as driver for Coopetition – A social network analysis in the financial market

Author: **Laura Stiller**, *U. of Regensburg*

Author: **Stefanie Steinhauser**, *U. of Regensburg*

Research on platforms and competition in digital markets has grown considerably in the last decade. Studies show that the influence of individual platforms often results from a platform ecosystem that is joined by different companies, sometimes even direct competitors. However, there is a limited understanding of how networks are created around platforms and why direct competitors join forces and start cooperating with each other. In this paper, we investigate the influence of platforms and other important factors on cooperation activities between competitors in the German financial market in order to draw a more refined and comprehensive picture of coopetition networks. We investigate various drivers of coopetition—external drivers (i.e., platforms, AI, blockchain technology, and banking license), relation-specific drivers (i.e., type of company and position in the network), form of coopetition, and endogenous network effects and ask the question: how do platforms influence coopetition in the financial market and which factors influence network development in financial markets? We employ a social network analysis approach, namely, an exponential random graph model (ERGM), to analyze 371 companies in the German financial sector. Our results show that platforms have a significant positive impact on coopetition. Further, our study demonstrates the influence of regulatory requirements as well as relationship and partner characteristics on coopetition and network development.

TIM: Virtual teams, Leadership, Social Exchange and Performance: Evidence from Public Sector Banks

Author: **Rekha A G**, *State Bank of India*

Author: **Resmi A G**, *TKM Institute of Management*

Virtual teams are becoming ubiquitous, and they place new demands on leadership practices. Despite the relevance, very little is known about the influence on leader-member social exchange relationships, and follower performance in virtual contexts. Drawing on the theories of transformational leadership (TFL) and leader-member exchange (LMX), this study aims to investigate the impact of the degree of virtuality in teams that collaborate through digital technologies. A multi-group and structural path analysis on the data gathered from over 400 senior managers working in the public sector banks operating in India indicated that the influence of virtuality is more complex than expected. This study highlights that virtuality acts as a positive moderator on the LMX-performance relationship, whereas it negatively moderates the TFL-LMX relationship. Implications and future research directions is also presented.

TIM: Helping or Hindering? How Clients' Experiences Relate to Their Robo Advisory Use

Author: **Anke Schulz**, *Ludwig Maximilian U. of Munich (LMU)*

Author: **Anja Christine Tuschke**, *LMU Munich*

Author: **Alexander Ilgen**, *Deutsche Bank*

Firms are increasingly evaluating whether or not to introduce new business models based on digital technologies, also in knowledge-intensive, risky contexts long immune to them. In the financial industry, the algorithm-based service robo advisory in banking, which supports and executes clients' investment decisions, is one strategic option of interest. Based on our access to a large and recent data set of an important provider, we have a unique opportunity to analyze the foundations of the diffusion of this recent technology. Building on yet also departing from extant literature, we offer a client perspective on this topic. Our results suggest that in contexts where uncertainty and risk are particularly pronounced, clients' experiences – resulting in technology-aligned or -misaligned knowledge and routines – link closely to their robo advisory use. Clients' experiences can both, help and hinder new technology adoption.

TIM: Paradoxical Framing: How Executives Publicly Frame Competing Technologies in Times of Ambidexterity

Author: **Joern Hoppmann**, *U. of Oldenburg*

Author: **David Lechner**, *ETH Zürich*

Author: **Sarah Fiedler**, *U. of Oldenburg*

The literature shows that organizational executives engage in strategic technology framing that favors their own technologies to acquire resources from external stakeholders. Yet technological discontinuities may require organizations to become ambidextrous and invest in new, disruptive technologies. This raises the question of how executives deal with the paradoxical situation of having to simultaneously promote competing technologies in times of organizational ambidexterity. To investigate question, we draw on an in-depth case study of four largest electric utilities in Germany during energy transition between 1998 and 2016. We show that even as organizations entered new technologies, strategic technology framing by CEOs and leaders of old business units continued to primarily favor old technologies. At the same time, however, the executives leading the new business units engaged in strategic framing that favored the new technologies, resulting in leaders within the same organization promoting competing technologies. To resolve the resulting tensions, executives used four frames that portrayed technologies as complementary rather than competing: (1) bridging, (2) ramping, (3) hedging, and (4) balancing frames. Overall, our study contributes to the literature on strategic framing by providing a more nuanced understanding of how strategic technology framing differs across individuals within the same organization. Moreover, we advance the literature on ambidexterity by showing how the investment in competing technologies affects firms' public portrayal of technologies with potentially important implications for strategic change.

Leader Competence, Humility and Pride

Digital Session Chair: **Hongguo Wei**, *U. of Central Oklahoma*

OB: Careful What You Ask For: Competence and Efficacy in The Leader-Follower Relationship

Author: **Hongguo Wei**, *U. of Central Oklahoma*
Author: **Jeremy D. Meuser**, *U. of Mississippi*
Author: **Angela Passarelli**, *College of Charleston*
Author: **Karlygash Assylkhan**, *Case Western Reserve U.*

We introduce the follower' perspective to understand whether and how leader influence affects follower performance outcomes. Drawing on implicit leadership theories and implicit followership theories, we develop a theoretical model involving the mediated moderation of leader-member exchange (LMX) and follower self-efficacy on the relationship between follower's sense of leader influence and performance outcomes (task performance, OCBI, and voice). Employing a multi-source multi-wave design, we collected a sample involving 184 leader-follower pairs from 83 groups. The results show support for the hypothesized model. Specifically, we found that leader-reported LMX mediated the relationship between follower's sense of leader influence and performance outcomes. The impacts of follower's sense of leader influence on performance outcomes were stronger at low than high of follower self-efficacy.

OB: The "Evil Genius": Examining the Relationship Between Perceived Competence and Unethical Behavior

Author: **Daphna Motro**, *Hofstra U.*
Author: **Daniel Sullivan**, *U. of Arizona*

Given the importance that perceptions of competence play in the workplace, a field of research has emerged identifying predictors of competence. One variable that has been identified is unethicality, with greater unethical behavior indicating lower competence. However, across three experiments (N = 602), we challenge this potentially misleading notion and present evidence that this relationship only holds when the unethical behavior is simple (e.g., stealing items from a storage closet), but not complex (e.g., computer hacking). Drawing on the stereotype content model, we explore the "evil genius" archetype in more detail. We find that the interaction between unethicality and complexity on perceptions of creativity and leadership is mediated by perceptions of competence. However, when the perpetrator is caught for complex unethical behavior, it acts as a leveling agent, thereby removing any heightened perceptions of competence. While expected, we did not find evidence that getting caught influences perceptions of the perpetrator's social intelligence. We believe these findings offer a significantly more accurate picture of the connection among unethical behavior in the workplace, competence, and being caught for one's immoral actions.

OB: Humble Leadership and Team Innovation: a moderated mediation

Author: **Wei Liu**, *School of Economics & Management, Tongji U.*
Author: **Lei Xinghui**, -
Author: **Taoyong Su**, *School of Economics & Management, Tongji U.*
Author: **Zhiwen Shan**, -

Although there is growing scholarly attention towards the positive effects of leader humility on team outcomes, extant research has failed to consider whether and how humble leadership influences team innovation. In this research, we propose a moderated mediation model to explain the relationship between humble leadership and team innovation. Integrating social learning theory and leader humility literature, we hypothesize that when a humble leader leads a team, the team followers are more likely to reconsider their strategies, review past events with self-awareness, share diverse information and adapt to new ideas, which in turn promotes team innovative activities. Moreover, consistent with research emphasizing the inclusion of team culture in exploring leader-innovation relationships, we investigate the moderating role of expertise diversity in the above positive indirect effect. We test the model by using both survey and archival data that was collected from 135 teams of 25 medium-to-large-sized firms in the internet technology industry in China. Findings largely support our theoretical assertions, suggesting that humble leadership has important implications for team process and innovation.

OB: The Influence of Responsible Leadership on SRHRM, Organizational Pride, and Innovative Behavior

Author: **Zhong Lifeng**, -
Author: **Wenli Dong**, *School of Business, Renmin U. of China*

Responsible leadership has recently gained growing attention in both academic and practical fields. Drawing on social identity theory, this study investigates whether and how responsible leadership influences innovative behavior through socially responsible HRM and organizational pride. Based on a sample of 280 employees from the manufacturing industry, our results indicated that responsible leadership was directly related to innovative behavior and indirectly related to it through socially responsible HRM and organizational pride. Specifically, socially responsible HRM and organizational pride sequentially mediated the positive relationship between responsible leadership and innovative behavior. Overall, by considering responsible leadership and socially responsible HRM simultaneously, we shed new light on the processes through which innovative behavior is enhanced owing to responsible management practices.

Affect at Work: Loneliness, Envy, Passion, and Emotionality

Digital Session Chair: **Robert Wood**, *U. of Technology Sydney*

OB: Negative but Productive: Trait Neuroticism, Situation Contingent Emotionality and Performance

Author: **Robert Wood**, *U. of Technology Sydney*
Author: **Shuang Ren**, *Deakin U.*
Author: **Bichen Guan**, *U. of Technology Sydney*
Author: **Nadin Beckmann**, *Durham U.*

Trait neuroticism has been associated with a variety of negative outcomes, including mental and physical illnesses, job dissatisfaction, low self-esteem and poor job performance, when tested at the between-person level of analysis. Impressions to the contrary, the observed effects of trait neuroticism and the associated negative emotionality are not uniformly negative. Trait neuroticism and negative emotionality are related to a range of psychological mechanisms, including goal prioritization, effort intensity, planning and detailed information processing, which enhance performance at the within-person level. We tested the effects for an integrated model including trait neuroticism and situation contingent negative emotionality on performance in an analytical engineering course with 84 first year students at a Chinese university. Situation contingent negative emotionality data were collected by ESM over a 3-week period. The criterion task was the final exam, completed 11 weeks later. Situation contingent negative emotionality positively predicted performance and this effect was moderated by trait neuroticism. Students with higher trait neuroticism were better able to channel their feelings of anger, frustration, tension and sadness in response to daily task challenges into more productive problem solving and learning on the course than their less neurotic colleagues. The paradox of the differential results for trait neuroticism at the within- and between-person levels of analyses and implications for research that integrates the two levels are discussed.

OB: You are not feeling alone, but with peers

Author: **SungHyoun Hong**, *Hanyang U.*
Author: **Min-Soo Kim**, *Hanyang U.*
Author: **Da Eun Hong**, *Hanyang U.*

Previous work engagement studies have focused primarily on one individual, with little attention given to colleagues present around the individual when working. This daily research conceptualized affective dissimilarity and validated its operation based on the social comparison theory. Affective dissimilarity indicates the differences in affect state between team members and a particular individual. We hypothesized the moderating effect of positive and negative affective dissimilarity on the relationship between daily positive and negative affect and daily work engagement particularly. We applied the experience sampling methodology and tested our hypotheses using 10 consecutive working days of 221 employees (total=1,114 days) using hierarchical linear modeling. The results showed that positive affective dissimilarity does not moderate the effect of daily positive affect on daily work engagement, but negative affective dissimilarity moderates the effect of daily negative affect on daily work engagement. These findings suggest that the presence of others in a team is an important consideration in an individual's daily work engagement experience, and, especially in terms of negative affect, individuals significantly compare their negative affect with their peers' at their workplace.

OB: Being envied is not enviable! A study of the daily experience of being envied in the workplace

Author: **Harshad Girish Puranik**, *U. of Illinois at Chicago*
Author: **Kathleen Keeler**, *Ohio State U.*
Author: **Haoying Xu**, *U. of Illinois at Chicago*

Recent research on workplace envy has suggested that perceiving oneself as the target of coworker envy is a common and ambivalent experience. We integrate theory on sensitivity about being the target of threatening upward comparisons (STTUC) with that on emotion regulation to theorize that envied employees may need to manage these ambivalent states to avoid negative coworker reactions. Specifically, we posit that on a daily-basis envied employees will engage in surface acting to manage the ambivalent emotional states associated with being envied. However, this can take a toll on their self-regulatory resources, leaving them depleted. Self-regulatory resource depletion, in turn, will result in low job satisfaction and job performance. We further suggest that these day-level relationships will be stronger for people who are low as opposed to high in the tendency of viewing themselves as being envied as the experience of being envied will be a novel and uncommon one for these individuals. Results of a 3 week experience sampling study supported our hypotheses and showed that being envied in the workplace is a complex social experience that can influence employee's job performance and satisfaction.

OB: Role of perceived passion in temporary creativity

Author: **Anna-maija Nisula**, *Associate Professor*
Author: **Mika Vanhala**, *Associate Professor*
Author: **Kirsimarja Blomqvist**, *LUT U.*

In temporary creativity the interpersonal affective aspects are important sources of social information and determinants of the creative process. To shed light on the affective aspects of temporary creativity, this study investigated dyadic passion, consisting of cognitive and affective passion, as a driver of temporary creativity in a dyad as well as the relationship between temporary creativity and creative performance in a dyad. The proposed research model was tested using a dataset of 126 dyads collected from 13 creative events using partial least squares structural equation modelling (PLS-SEM). The empirical results showed that both dyadic cognitive and affective passion are positively related to creativity in a dyad. The results also showed that creativity and creative performance in a dyad are positively and significantly linked. Thereby, this study sheds light on the role of dyadic passion in temporary creativity and suggests theoretical and practical implications for research on passion and creativity.

Scheduled: **Sunday, Aug 1 2021 7:00AM- 9:00AMET (UTC-4)**

**GDO's Global Ambassadors: Broadening the AOM Experience
for Emerging International Members**
Global Connections

Organizer: **Anna Katherine Ward**, *Virginia Tech*
Organizer: **Eden King**, *Rice U.*
Panelist: **Devi Vijay**, *Indian Institute of Management, Calcutta*
Panelist: **Lavanya Vijayasingham**, *United Nations U.*
Panelist: **Jenny M. Hoobler**, *U. of Pretoria*
Panelist: **Fida Afiouni**, *American U. of Beirut*

Our broad goal is to connect and integrate emerging international members from emerging economies (e.g., South Africa, India) and other geographies where our GDO membership is under-represented (e.g., Latin America, Eastern Europe, Middle East, Oceania). The GDO's Global Ambassadors will partner with AOM sister organizations to identify and recruit Management scholars around the world to take part in our PDW. Participants will be matched with mentors who will help them feel more integrated at future AOM conferences and more confident in their future AOM paper development efforts. Four panelists with connections to/in underrepresented/emerging economies will present ideas, and Global Ambassadors will facilitate roundtable discussion on overcoming outsider status at AOM and developing high-quality conference submissions. In alignment with AOM's four driving goals, our PDW aims to (1) connect and integrate members of the global management/organization community who might otherwise be overlooked at AOM, (2) enhance the diversity of the membership to which AOM provides indispensable value, (3) advance knowledge relevant to an even more diverse set of stakeholders/institutions around the world, and (4) enhance AOM's standing as a globally-led association. Key take-aways to participants of the PDW include stronger (1) connection to and integration within the GDO community, and (2) honing of paper development skills, making future AOM attendance more likely.

Recruitment and Fit

Digital Session Chair: **Vesa Peltokorpi**, *Hiroshima U.*

HR: **Here today, gone tomorrow: A mixed-method study on headhunter-intermediated recruitment practices**  

Author: **Vesa Peltokorpi**, *Hiroshima U.*

While unsolicited job offers are the strongest pull factor driving turnover, little is known about headhunters' candidate contacts and outcomes. Drawing on the unfolding model of voluntary turnover (Lee & Mitchell, 1994) and research on headhunters, this study examines what kind of employees are contacted by headhunters and why some of them leave. Using the case of Japan, where subsidiaries of foreign multinational corporations use extensively headhunters to recruit host country national employees (HCNs), we first conducted interviews with 131 expatriate managers (clients), contingency-based headhunters, and HCN employees (candidates). The findings suggest that headhunters' contacts were guided by HCNs' English proficiency, tenure, and previous placement by headhunters. The findings also suggest that headhunters' contacts can drive up turnover. To further examine the antecedents and outcomes of headhunter contacts, we collected time-lagged survey data from 456 HCN employees in foreign subsidiaries. In addition to confirming our interview findings, the survey findings also suggest that headhunters' contacts have a positive relationship with HCN employees' voluntary turnover.

Paper is NOT Available. Please contact the author(s).

HR: **Tit for tat? Opportunistic behaviors in client-headhunter relationships**  

Author: **Vesa Peltokorpi**, *Hiroshima U.*

While headhunters act as agents hired by clients (principals) in the intermediated labor market, research has focused primarily on the benefits that headhunters gain from their broker position between clients and candidates. Shifting the focus of attention, we interviewed 51 contingency headhunters specialized in foreign subsidiaries in Japan to examine the opportunistic behaviors of corporate clients and how headhunters responded to these behaviors. The findings show that clients were using several headhunters in search assignments, negotiating and refraining to pay placement fees, contacting introduced candidates directly, changing search criteria and stopping the search, and using headhunters to poach employees. The findings also show how headhunters used social interaction and contract-based approaches to respond to opportunistic behaviors. This study contributes to research on HRM by focusing on the overlooked client opportunistic behaviors in client-headhunter relations.

HR: **When does organizational attractiveness pay off? The role of knowledge and capital intensity** 

Author: **Sanne Ghielen**, *KU Leuven*

Author: **Kim De Meulenaere**, *U. of Antwerp/ Antwerp Management School*

Author: **Rein De Cooman**, *KU Leuven*

Author: **Luc Sels**, *KU Leuven*

Because of growing quantitative and qualitative labor shortages in industrialized societies, the attraction and retention of human capital are key challenges for contemporary firms. To conquer the 'war for talent' and gain competitive advantage, organizational attractiveness is considered a key organizational asset. Yet, prior research did neither thoroughly theorize nor empirically investigate whether and when organizational attractiveness pays off. Building on the resource-based view and contingency theory, we posit that not all firms equally benefit from organizational attractiveness, depending on the quality and quantity of human resources needed in a firm. We put forward a three-way interaction suggesting that the impact of organizational attractiveness on labor productivity is most pronounced for highly knowledge-intensive firms (i.e., in need of high quality human capital) that also have low levels of capital intensity (i.e., in need of relatively high amounts of human capital). Based on a multi-source longitudinal dataset of 211 Belgian organizations, we find empirical support that only highly knowledge-intensive firms with low capital intensity benefit from organizational attractiveness. Firms with low levels of knowledge intensity or high levels of capital intensity encounter no effects at all. By examining whether and under what organizational context factors organizational attractiveness benefits firm performance, this study contributes to multiple streams of research – e.g., employer branding, recruitment and retention, marketing, strategic HRM – that have used organizational attractiveness as outcome variable presuming that it is unambiguously beneficial.

HR: **Challenging Work and Psychological Contracts at Pre-Organizational Entry**

Author: **Yinyin Cao**, *U. of Michigan, Dearborn*

Author: **Jung Hyun Lee**, *U. of Michigan, Dearborn*

Author: **Marie Waung**, *U. of Michigan, Dearborn*

This study examines the effect of challenging work-related psychological contracts (PCs) on subsequent employee outcomes in the unique context of internships prior to formal organizational entry. We administered online surveys to 196 college students participating in summer internships, with data collected both pre and post internship completion. Our results show that employer fulfillment of challenging work was positively associated with organizational attractiveness, as mediated by intern skill development. In taking into account the potential moderating role of person-organization (P-O) fit, we further found differential effects for those with high and low P-O fit, such that high-challenge work environments ameliorated the effect of low P-O fit on organizational attraction. These results highlight the instrumental benefits of PC fulfillment in driving potential employees' attraction towards the organization.

Paper is Available to Meeting Registrants Only.

HR: **CSR fit and organizational attractiveness for job applicants** 

Author: **Arpita Agnihotri**, *Penn State Harrisburg*

Author: **Saurabh Bhattacharya**, *Newcastle U. Business School*

The paper's objective is to explore a conceptual model on the influence of CSR "fit" on organizational attractiveness among job applicants under the boundary conditions of CEO activism and CSR credibility. The study is based on archival research, largely reviewing extant literature in CSR and drawing propositions based on existing theory. Paper draws propositions based on the literature on CSR fit, credibility, and CEO activism. Our paper asserts influence of CSR fit on organizational attractiveness among job applicants. It further explains moderated mediating mechanism through which CSR fit influences organizational attractiveness among job applicants. Recruitment literature has primarily explored the role of CSR in attracting potential job candidates. In this paper, we present the role of CSR "fit," an aspect not explored before in recruitment literature. We also introduce the role of CEO activism in recruitment literature.

Rhetoric as a consulting tool: SEAM applications in various contexts

Digital Session Chair: **Pierre El Haddad**, *USJ Lebanon/ISEOR IAELyon*

MC: Storytelling for non-profits: How do socio-economic interventions recount the organization?

Author: **Pierre El Haddad**, *USJ Lebanon/ISEOR IAELyon*

Author: **Dolly Bassil**, *Independent Consultant*

Author: **Veronique Zardet**, *U. of Lyon, IAE Lyon, MAGELLAN, ISEOR, FRANCE*

Author: **Renaud Petit**, *U. of Franche Comté/ Iseor research center*

Winner of the University-Enterprise Cooperation Award (UEC)

Purpose. The narrative of non-profits is dominated by social values. The scarcity of resources and incommensurable needs of society are forcing them to acknowledge their challenges and to adapt to morphing environments. The underlying story pertains to economic challenges and organizational survival. The paper investigates the ability of the socio-economic approach to management re-story nonprofit organizations. Design/methodology/approach. The paper first compares the tenets of storytelling with those of the socio-economic approach to management, and then compares the outcomes of interventions in five intrinsically different nonprofits operating in Europe and the Middle-East. Findings. The results point to an effective change in the nonprofit narrative to protrude the economic dimension and resource efficiency to maintain their social services. The paper also demonstrates symbiosis between storytelling and the socio-economic approach to management. Originality/value. The main contribution of the paper is in the inductive contribution of non-profit actors to recount their organizations along social and economic dimensions.

Paper is Available to Meeting Registrants Only.

MC: Storytelling-Based Socio-Economic Interventions for Theaters 🗨️

Author: **Lara Khabbaz**, *Notre Dame U.-Louaize*

Author: **Franz Datry**, *ISEOR*

Going back to its *raison d'être*, Theater was meant to bring about intellectual challenges for its audience through live performance and direct interaction. As a means of communication, all the theater's artistic elements are conceived and dedicated to convey a certain message. Theater is the aggregation of different forms of arts such as script writing, movement design, costumes, music, dancing, lighting, sound, colors, paintings, decoration, among other arts. All deployed in the service of telling a STORY. In this paper, the authors explain how Storytelling as a management tool brings value to the SEAM intervention in theaters and performing arts businesses. This is done through highlighting storytelling incidents and impacts on the actors, methods, tools, performance, and the business in all its aspects. The authors will identify different elements of storytelling in the SEAM interventions and the resulting transformational change and pinpoint generic characteristics in an uncommon research field. Their observations, gleaned from 16 years of experience at every level of the live performance business, sharing insights, experiences, stories and results of the Socio-Economic interventions in a sector full of particularities. Professor Henri Savall depicted the similarities between business and theater; he even called the business community "actors" among five common natural characteristics to all: intelligent, amnesic, disobedient, and strategist. In addition to many other metaphors used in the Socio-Economic approach to make ideas easier to understand by everybody. Storytelling is the ideal method for ultimate Buy-in because it touches the hearts, makes immediate influence, and initiates engagement and advocacy. Edu-taining is the objective of Theaters throughout the years. They are meant to educate people while entertaining them. The same applies to Storytelling in SEAM. In brief, this paper is about telling a story of a story told to storytellers.

Paper is Available to Meeting Registrants Only.

MC: Storytelling the Imaginary to Make It Real Through Strategic Implementation ✈️

Author: **María Angeles Rastrollo-Horrillo**, *U. of Malaga*

Author: **Jeremy Salmeron**, *ISEOR*

Author: **Françoise Goter-Grivot**, *ISEOR, Magellan, IAE Lyon, U. Jean Moulin*

There has been increasing interest in the narrative aspects of strategy over the last two decades. In all forms, communication is integral to strategy (Balogun et al, 2014). It is broadly accepted in the "communication and strategy" literature that storytelling infuses the strategic planning work with meaning, facilitating the top-down communication of the strategy. People need to feel like they are part of something with meaning, people value being valued, and telling stories is more inspiring than communicating the strategy through tables and charts explaining the problems and the opportunities the company is facing or communicating the strategic vision with over-used (and banalized) words like "optimize, competitiveness, innovation", etc.

Paper is NOT Available. Please contact the author(s).

MC: Metaphors in SEAM: Techniques for Effective Management Consulting

Author: **Omayya Kuran**, *U. of Balamand*

Author: **Henri Savall**, *ISEOR, U. of Lyon*

Practitioners and consultants work together in the field. Management consultants cooperate with practitioners to diagnose and solve problems, maximize growth and improve organization performance. Consultants deal with the challenge of making the message appealing to practitioners. It is therefore necessary for a consultant to build trust and demonstrate empathy to encourage practitioners to take some action. Moreover, a consultant must find creative and emotive ways of inspiring practitioners through effective communications. This challenge can be met through the use of stories and metaphors. It is proven that better story-tellers make better managers (Boje, 1991a). The use of metaphors and storytelling in business make people listen and engage. Stories and metaphors have been used for centuries by politicians, philosophers, artists, authors, and many others, to educate, convey complex ideas, engage and to elicit emotive feelings and actions. Management consultants have to revisit the power and effectiveness of these tools in the world of business. The Knowledge of utilizing stories and metaphors is an essential part of effective communications, and a skill that consultants must cultivate. This paper provides first a short review of the research on the use of metaphors and storytelling in management. It aims to utilize storytelling and metaphors to improve the communication between management consultants and clients in order to ultimately increase organizational productivity. It mainly portrays the impact of using metaphors into the socio-economic approach to management (SEAM) to stimulate richer and more productive interactions between practitioners and consultants.

MSR Morning Meditation *MSR Morning Meditation*

Chair: **Richard Peregoy**, *U. of Dallas, Satish & Yasmin Gupta College of Business*
Chair: **Gerald Biberman**, *U. of Scranton*

The practice of meditation (either individual or collective) has the common objective to still/silence the mind and allow the unconscious reality to emerge, open and unfold. Many variations of meditation exist. In this conference five different forms will be introduced—a different form will be introduced each day during the conference. The idea is for those new to meditation to sample, and for those who find a familiar meditation to expand their experience. These five meditations can be accomplished in a few minutes or longer as you wish.

Conceptual Studies of Cognition and Affect

Digital Session Chair: **David Joseph Keating**, *U. of Mississippi*

OB: **Supervisors' Emotional Responses to High-Maintenance Employees: A Research Proposal**

Author: **David Joseph Keating**, *U. of Mississippi*
Author: **Jeremy D. Meuser**, *U. of Mississippi*

On one hand, high-maintenance employees have been described as workplace irritants and toxic energy drainers (Burke & Witt, 2004; Conner, 2013). On the other hand, they have also been deemed charismatic, task-oriented, breakthrough thinkers (Leviss, 2005). The current lack of consensus of what exactly a high-maintenance employee is, shows a clear lack of understanding of this prevalent employee type. This developmental paper seeks to provide clarity on high-maintenance employees and their effect on others in the workplace. Toward this pursuit, the manuscript seeks to contribute towards creating a consensus on the definition of high-maintenance employees. In this research proposal, we hope to leverage discussion in the developmental paper sessions traditionally offered by AOM to improve our theory and research design prior to the execution of the study.

Paper is Available to Meeting Registrants Only.

OB: **Worry at work: How organizational culture influences anxiety**

Author: **Jeremy Yip**, *McDonough School of Business Georgetown U.*

Organizational culture profoundly influences how employees think and behave. Established research suggests that the content, intensity, consensus, and fit of cultural norms act as a social control system for attitudes and behavior. We adopt the norms model of organizational culture to elucidate whether organizational culture can influence how employees experience emotions. We focus on a pervasive emotion, anxiety. We propose four important pathways that link organizational culture with anxiety. First, we propose that when norm content is result-oriented, employees must strive for challenging goals with specific targets under time pressure, and are more likely to experience anxiety. Second, when norm intensity is weak, employees do not internalize norms and they engage in deviant behaviors that increase uncertainty and promote anxiety. Third, a lack of consensus about norms commonly creates conflict between factions within an organization and increases anxiety. Fourth, when there is a mismatch between employees' values and organizational norms and values, the misfit engenders anxiety. Taken together, different features of organizational cultural norms can independently and multiplicatively influence the magnitude of anxiety, which has constructive or destructive effects on performance.

OB: **Effects of Clothing Characteristics in the Workplace: A Conceptual Framework**

Author: **Yingyi Chang**, *Virginia Commonwealth U.*
Author: **Jose M. Cortina**, *Virginia Commonwealth U.*

Perceptions of clothes can be distinctive, varying across individuals, situations, cultures, and time. Evidence from daily life and from existing literature across disciplines, although disparate, all point to the importance of clothing in the workplace. With a systematic inductive approach, we identify three universal and distinctive clothing characteristics at work - formality, provocativeness, and fashionability - as well two other categories - uniforms and religiosity of clothing - which are tied to particular social groups. Drawing on attribution theory and the stereotype content model, we provide a cohesive conceptual framework in which clothing characteristics influence observers' perceptions of wearer's competence and warmth through observers' dispositional attribution process. These perceptions, in turn, influence performance appraisals and supportiveness directed at wearers. We conclude by offering suggestions for future research and implications for employees and employers with regard to managing clothing practices and avoiding potential biases.

OB: **How and When employee volunteering probes unethical pro organizational behaviour?**

Author: **Suman Choudhary**, *Indian Institute of Management, Udaipur*
Author: **Kirti Mishra**, *Indian Institute of Management, Udaipur*
Author: **Niharika Garud**, *U. of Melbourne*

Extant corporate social responsibility (CSR) literature has examined the positive impact of various CSR practices on organizational and employee level outcomes. More recently, critical CSR scholars have called for research investigating the detrimental impacts of specific CSR practices on their effects and the wider societal consequences they have due to the huge criticism of business case for CSR. In the present study, we explore the negative impact of one of the most widely adopted CSR practices of employee volunteering (EV) on external stakeholders. Specifically, we demonstrate the link between EV and unethical pro organizational behaviour (UPB). Our theoretical model based on moral licensing theory highlights the processes and conditions through which EV may lead to UPB and includes 11 propositions. Further, we explain the implications of the theoretical model for management research and practice. Lastly, we discuss future research directions and limitations of this research.

Strategizing Tensions - Tools and Practices to Manage Paradoxes

Strategizing Tensions

Digital Session Chair: **Birgit Elisabeth Renzl**, *U. of Stuttgart*

SAP: **Open Strategizing Activities & Practices: the Openness and Closure Paradox Control by Digital Tools**

Author: **Cassia Goulart Heinzen**, *Federal U. of Santa Catarina*
Author: **Rosalia Aldraci B. Lavarda**, *Federal U. of Santa Catarina*

This study aims to understand how open strategizing activities and practices occurs considering the openness and closure paradox being controlled by digital tools. We followed the social practice theory perspective and a qualitative approach. The research method was a case study and data collection techniques comprised: semi-structured interviews; document collection; direct observation. Using pattern matching as qualitative data analysis, with data triangulation, we found that: the openness and closure paradox is constant in open strategizing; the formalization and procedures approach can contribute to a minimum control of the practice of open strategizing and its paradoxes, in order to avoid information overload, risks and deviations objectives; digital tools support open strategizing but must be managed based on the desired opening levels for each organizational and stakeholder section. This study fills a theoretical and empirical gap related to open strategizing paradox and ways of managing them aiming to achieve an effective open strategizing controlling using digital tools. The social and practical implications explain the inevitable openness and closure paradox in the strategy practices of a Startup and addresses the benefits of using minimal control through digital tools to manage this paradox - despite its complexity of operationalization.

Paper is Available to Meeting Registrants Only.

SAP: **Managing in a Material World: How Middle Managers Orchestrate Frontline Responses to Paradoxes**

Author: **Jarryd Daymond**, *U. Of Sydney*
Author: **Eric Knight**, *Macquarie Business School, Macquarie U.*
Author: **Stefan Meisiek**, *U. of Sydney Business School*

Middle manager interactions with frontline employees are a key nexus in strategizing and prone to paradoxical tensions that need to be managed. Based on a 34-month video ethnography, we show the material and discursive interplay involved in responding to paradoxes in-the-moment, with middle managers using material practices to elicit different types of proactive and defensive responses to paradoxical tensions. We contribute to the middle management literature by reconceptualizing their role as “material managers,” shaping how frontline employees, in particular, co-construct their response to tensions. We conclude that the use of materials gives middle managers a distinct managerial toolkit compared to top managers, which is crucial to paradox management.

SAP: **Paradox of Time in Strategy-Making: Decision and Emergence in a Small Firm's Trajectory**

Author: **Sari Laari-Salmela**, *U. of Oulu Business School*
Author: **Tuija Mainela**, *U. of Oulu Business School*
Author: **Vesa Johannes Puhakka**, *OBS - Oulu Business School Finland*

The challenge time poses to organizations' strategy making relates to the paradoxical way organizations observe and operate on time. In this paper, we adopt a systems theoretical view on temporal work taking place in organizations and examine the effect of the time paradox on strategy making. Based on a longitudinal study of a small software subcontracting firm and functional analysis of its evolution, we show how the firm's strategy making unfolds through the operations of decision-making and deparadoxization, resulting in constantly changing view of the future but at structural level establishing a pattern that maintains its trajectory. Instead of genuinely novel choices, strategy making produces ‘novel stability’, capturing actors in a time loop.

Turning Post-COVID-19 Institutions into Enduring Organizations: How Managers Build Agility & Growth
How Managers Build Agility & Growth Post-Covid-19

Organizer: **Satinder Dhiman**, *Woodbury U.*

This symposium presents pathways by which effective managers and leaders turn post-Covid-19 institutions into enduring organizations through agility and growth mind-set. A recent Gallup study notes that the quality of managers and team leaders is the single biggest factor for an organization's long-term success (Clifton & Harter, 2019). We cannot have a culture of agility until we equip our managers with the right development, clear expectations, ongoing coaching and accountability. If we give every team member in an organization a great manager – a great coach – one who cares about their development and growth, we have successfully engineered an organization with unlimited potential. We have helped build a more enduring organization. We need to bring the manager back into management! We do not need to view leadership and management as dichotomous functions, for great leaders can also be effective managers. Peter Drucker once said that successful organizations need both good managers and leaders, like the two hands needed to play violin. The current context has increased the need for a new management and leadership perspective that embraces a more fluid, less encumbered and more participative kind of management practice. Perhaps it is too early to arrive at post-pandemic management and leadership theory and practice. Nevertheless, during this moment of crisis, we must build on the lessons we have learned so far, help managers and leaders to embrace universal, holistic leadership principles: be authentic, have integrity, serve selflessly and create communities of care, together. When managers and leaders understand the context and embody these guiding principles as they engage with the emerging new normal, they will be ready to lead authentically and navigate the present volatile and precarious world with increased awareness and confidence. This symposium is our humble offering in this direction.

What Makes the Jobs of Tomorrow? The “What” and “Why” of Labor Outcomes from Technological Change

What Makes the Jobs of Tomorrow?

Organizer: **Christophe Combemale**, *Engineering & Public Policy (EPP), Carnegie Mellon U.*
Presenter: **Anna Waldman-Brown**, *Massachusetts Institute of Technology*
Presenter: **Sebastian Steffen**, *MIT Sloan School of Management*
Presenter: **Jenna E. Myers**, *U. Of Toronto-Ind Rel Lbr*
Participant: **Laurence Ales**, *Carnegie Mellon U. - Tepper School of Business*
Participant: **Kate S. Whitefoot**, *Engineering & Public Policy (EPP), Carnegie Mellon U.*
Participant: **Erica R.H. Fuchs**, *Carnegie Mellon U.*
Participant: **Erik Brynjolfsson**, *Stanford U.*

The theme of this symposium is the labor outcomes of technological change, and the mechanisms by which these outcomes are generated. The four papers presented address questions of skill and occupational demand effects of technological change, as well as changes in worker experience and participation. The papers cover different forms of technological change representing a diversity of possible impacts, from automation in manufacturing and elsewhere, to digital technology to changes in product design. Each paper uses different scopes and methods of analysis, from the firm level to economy-wide, to identify key phenomena of labor outcomes and uncover their origins. Together, these papers present a holistic view of technological change affecting labor outcomes through 1) firm institutions and choices of institutional development, 2) inclusion of workers as stakeholders in technology development and implementation, 3) the dissemination and adoption of technologies over time, and 4) altering the decision space and process organization incentives of firms. In keeping with the theme of “what” and “why” this symposium both presents valuable findings about ongoing changes in labor demand and worker experience and offers insights into why these effects may occur, providing tools for the development of organizational responses and policy targeted at technological change. The work presented by Combemale draws on insights from operations research, engineering, and psychology to construct and test a formal model of how firm choices around the division of labor generate skill demand, developing a taxonomy of how technological change in turn affects skill demand by altering the problem of the firms. Emphasizing occupational changes including reskilling or possible displacement, the work presented by Steffen uses a near-universe of US online job postings at different points in time to trace of aggregate outcomes for occupational skill content, wages and demand and a linkage of these outcomes to areas of technological exposure. Myers presents work with a focus on the participation of workers in innovation and mechanisms for the inclusion of workers’ interests in technological development through value-selling by developments in four long term projects. Focusing on the role of workers in innovation, productivity gains from technological change and the influence of firm-level and regional contexts, the work presented by Waldman-Brown approaches labor outcomes of technological change from an institutional perspective, using a comparative analysis of highly similar manufacturing plants in different countries as they implement a suite of automation technologies.

COVID and Careers

Digital Session Chair: **William E. Donald**, *Southampton Business School, U. of Southampton*

CAR: The university-to-work transition: Responses of universities and organizations to COVID-19 pandemic

Author: **William E. Donald**, *Southampton Business School, U. of Southampton*

Author: **Melanie Ashleigh**, *U. of Southampton*

Author: **Yehuda Baruch**, *Southampton Business School, U. of Southampton*

Our purpose is to understand how universities and organizations have responded to the the impact of the Covid-19 pandemic (COVID) in terms of preparing university students and recent graduates for entry into the global labor market, using the accounting, banking, and finance sector as a case study. The three research questions are: (1) What characteristics (technical and personal skills) do university careers services and organizations consider as desirable in early careers talent following the the COVID-19 pandemic? (2) How can university careers services and organizations work individually and collaboratively to best develop early careers talent following the the COVID-19 pandemic? (3) What are the challenges that university career services and organizations face when working individually or collaboratively to develop early careers talent following the the COVID-19 pandemic? The data for thematic analysis comes from 36 semi-structured interviews with Careers Advisors (n=19) and Graduate Recruiters (n=17). Theoretically, our contribution comes from applying a framework of career construction theory within the context of a career ecosystem to understand the views of the intermediary, meso-level actors, which, to-date, have lacked representation within career literature. This study, therefore, offers some of the the first findings on the impact of the COVID-19 pandemic, helping to ensure that organizational behavior and career theory literature reflect the dramatically changing landscape in the university-to-work transition. Practically, we provide an insightful bridge between universities and organizations, offering opportunities for greater collaboration, and enhanced outcomes for all stakeholders.

CAR: Differential Impacts on Diverse Groups during COVID-19 in Canada

Author: **Guang Ying Mo**, *Ted Rogers School of Management, Ryerson U.*

Author: **Wendy Cukier**, *Ryerson U.*

Author: **Akalya Atputharajah**, *U. of Ottawa*

Author: **Miki Itano Boase**, *Ted Rogers School of Management, Ryerson U.*

Author: **Henrique Hon**, *Ted Rogers School of Management, Ryerson U.*

The COVID-19 pandemic is affecting all segments of the society. This study investigates the pandemic's social and economic impacts on women and diverse groups in Canada, including women, immigrants, Indigenous peoples, people with disabilities, and visible minorities. Using data from Statistics Canada, we conduct quantitative analyses to identify the differences in the challenges and concerns between women and men, immigrants and Canadian-born citizens, intersectional groups, as well as the precautions taken by these groups. Our findings confirm that immigrant women are more negatively affected by COVID-19 in terms of financial challenges and social concerns. In addition, the findings confirmed that women are facing a lower mental health status while taking more responsibilities for care works for household members and non-household members.

CAR: The roles of negative career shocks and work-life balance in depression during pandemic

Author: **Hassan Imam**, *Riphah International U.*

Author: **Gul Afshan**, *Sukkur IBA U.*

Author: **Farah Samreen**, -

During this pandemic, workers across the globe — either temporary or permanent — remained the most vulnerable segment. Drawing upon affective event theory, this study discusses how COVID-19 impacted the individual's career, work and family roles, as well as their psychological wellbeing. Data from 324 employees were collected from the service organizations in which layoff plans were implemented, and was then analyzed after achieving the model fit. The results highlighted a positive association between negative career shocks and depression. Similarly, the imbalance between work and home life positively mediated between negative career shocks and depression. In addition, a multi-group analysis between permanent vs. temporary employees revealed that employees with permanent contracts are more vulnerable during this pandemic, as compared to temporary workers. This study draws the attention of human resource managers and policymakers to devise remedial strategies for prevailing in the post-pandemic period to reduce the employees' career- and health-related concerns.

Paper is Available to Meeting Registrants Only.

CAR: How to minimize job insecurity during the COVID-19 pandemic

Author: **Judith Langerak**, *U. of Amsterdam*

Author: **Jessie Koen**, *U. of Amsterdam*

Author: **Edwin A.J. Van Hooft**, *U. of Amsterdam*

Job insecurity has become a major theme for most workers in our new, COVID-19-induced, world of work. While prior research indicates how workers can cope with the experience of job insecurity in order to mitigate its negative consequences (i.e., reactive coping), little research offers insights into preventive measures workers can use to minimize the further development of job insecurity. Therefore, this study investigates whether proactive coping (i.e., future-oriented coping that tries to detect and proactively manage stressors before they can fully develop) can help workers manage their future job insecurity experience. Additionally, to clarify the difference between proactive and reactive coping, this study explores whether theoretically proactive coping behaviors can also function reactively to buffer the negative consequences of job insecurity. Multilevel path modelling results based on weekly data of 266 workers over a 5-week period indicate that proactive coping is generally related to an increase of job insecurity, instead of the expected decrease. Regarding the reactive functioning of proactive coping behaviors, the results indicate no buffering effect in the relationship between job insecurity and its consequences. The discussion elaborates on possible explanations for these results and the (in)difference between proactive and reactive coping.

Beyond the Dyad: The Impact of Context on Trusting Relationships in Organizations

Beyond the Dyad: The Impact of Context on Trust

Chair: **Jonathan Lee**, *U. of New Hampshire*
Discussant: **Kurt T Dirks**, *Washington U. in St. Louis*

While much progress has been made in understanding the role of the trustor and trustee within the dyad, factors in the surrounding context can also impact their trusting relationship. Importantly, these contextual factors can have implications for how the two parties in the initial trustor-trustee dyad engage one another in building and rebuilding trust. Our symposium explores these possibilities by showcasing four papers that challenge existing assumptions and provide new insights. They do so by integrating a variety of research designs (surveys, experiments, case studies), analytical techniques employed (mixed model analysis, qualitative data analysis, structural equation modeling), levels of analyzes (individual, organizational), contexts (crises, public health systems), and topics that further enrich this research dialogue (time, emotions, culture). This symposium aims to extend the existing literature on the role of the surrounding context for trusting relationships, and identify future research areas.

Decision-making for a Degrowth World: Organising Interdependencies beyond the Local to the Global *Decision-making for a Degrowth World*

Organizer: **André Reichel**, *ISM International School of Management*
Speaker: **John M. Jermier**, *U. of South Florida*
Speaker: **Fergus Lyon**, *Middlesex U.*
Speaker: **Lena Olaison**, *Copenhagen Business School*
Speaker: **Birke Dorothea Otto**, *Free U. Berlin*
Speaker: **Robert Perey**, *U. of Technology, Sydney*

The assumption that economic growth is an absolute requirement of the global political economic system is so entrenched it is rarely questioned by mainstream economists (Daly, 2013) and is perhaps even more deeply embedded in the field of organizational and management studies. This growth-centred vision of how economies work and how businesses operate is increasingly unsustainable, and despite growing evidence of the ecological and social harm of maintaining this worldview (starting with Meadows et al., 1972), it is the current global health pandemic that has reignited calls to governments and businesses to urgently undertake structural institutional change to address these problems, including calls for a radical break from traditional growth-based models. A strong theme in these degrowth discourses is the focus on self-organising at the local level, which has implications for the future roles of managers, decision making and cooperation to maintain beyond growth systems. During past AoM meetings we have explored issues raised by the scholarly discourse on degrowth and the wider notions entailed by a postgrowth perspective. In the previous PDW we applied the concept of degrowth (Latouche, 2004; 2010) on how to organize new collectives of transformative practice through connecting business with civil society and local governance institutions (Shrivastava & Kennelly, 2013). In this PDW we will build on those discussions to explore how new forms of organising may unfold at the micro/meso scale, and how these interrelate to the macroeconomic scale of decision-making and design.

Putting the entrepreneur back into entrepreneurship development. This Professional Development Workshop will focus on ecosystem metrics and policy initiatives to foster the development of healthy entrepreneurial ecosystems. As the entrepreneurial ecosystem construct has emerged, policy makers have been requesting metrics to understand and measure this complex phenomenon. During this PDW, ecosystem experts will share the state-of-art of entrepreneurial ecosystem building, its multidimensional nature and highlight future research avenues. Attendees get the opportunity to discuss with ecosystem experts, facilitators and policymakers on research ideas and current developments or contexts (including Covid-19's impacts). We offer a chance for in-depth conversation where attendees can share ideas with our best research minds on ecosystems, people deeply engaged in entrepreneurship policy, and leading experts on growing entrepreneurial communities. We have recruited a diverse array of experts including experience at connecting and facilitating ecosystem discussions. Most important, we are welcoming practitioners and champions, including members from Kauffman's ESHIP initiative. The entrepreneurial world (and the data) believes healthy economic communities grow by activities driven by the entrepreneurs. Top-down, institution-focused approaches are misleading at best, rather than a bottom-up, networks-focused approach. As policymakers hear that message, they need and want to better understand these processes. Yet, most of our research seems top-down and institutions-centric. Meanwhile, the needs of the entrepreneurs and the desires of the policymakers have not gone unnoticed by our colleagues. But how do we get started at studying entrepreneurial ecosystems in directions that serve policy and practice? Why not get together and learn from each other?

Hoodology: An Interactive Cultural Experience

Hoodology

Presenter: **Queen Jaks**, *Journal of Hoodology*
Participant: **Kahlil King**, *Northern Kentucky U.*

The purpose of this PDW is to introduce Hoodology, via Hood culture, to management and organizations. Hoodology is the scientific study of hoods in America (Jaks, 2020). The term 'hood' was introduced by the Blackstone Rangers in the 1960's and popularized in the 1980's by West Coast gangster rappers (Grabar, 2012). Neighborhoods where 40% of the inhabitants are poor and typically in areas of extreme inner-city poverty, are where hoods develop (Wilson (1991). The hood mostly refers to urban neighborhoods with high rates of crime, violence, poverty (Massey, 1995), and drug related activities (Gaston, 2019). Individuals from Hood culture are often thought of as unemployable (Wilson, 1991). However, Hood culture is not a counterculture, but rather an untapped, contributing population, particularly in organizations. Hood culture produces empathetic, adaptable, relatable, resilient, compassionate, self-confident and street-smart individuals (Jaks, 2020). To correct for these misjudgments, we will share an accurate depiction of Hood culture to decrease biases among management, researchers, educators, and practitioners. This allows Hood culture to become acceptable in the workplace. Management views poverty through the lens of social class; the hood exists within the lower social class. This interactive PDW will expose participants to Hood culture by comparing and contrasting it with more familiar cultural backgrounds. Participants will find that although Hood culture has unique qualities, it is likely quite similar to their own culture. Dispelling myths, misconception and beliefs about the Hood provide an opportunity to form deeper connections with people they may never have connected otherwise.

Cultural and HR Issues in International Management

Digital Session Chair: **Michal Szymanski**, *Moscow School of Management Skolkovo*

This session examines various cultural and HR issues in international management. It contains papers on social networks and professional success based on experience from the PGA tour, cultural minority global professionals' career satisfaction, the impact of social cohorts on expatriate leadership development, and the interplay between identity and bridging skills of the first and second generations of highly qualified migrants.

IM: Strangers in the Foreign Land: Exploring Cultural Minority Global Professionals' Career Satisfaction

Author: **Yu-Ping Chen**, *John Molson School of Business, Concordia U.*
Author: **Yu-Shan Hsu**, *John Molson School of Business, Concordia U.*

Integrating trait activation theory and job embeddedness theory, we examined the influences of cultural intelligence, organizational and community embeddedness, and host country community diversity climate on cultural minority professionals (CMGPs) career satisfaction. Based on two distinct samples of CMGPs (169 Asian American Professionals in Study 1; 147 self-initiated expatriate academics in Study 2), we found that CMGPs' cultural intelligence enhances CMGPs' organizational and community embeddedness, which in turn increase CMGPs' career satisfaction. We further found that low host country community diversity climate facilitates the importance of CQ as a predictor of CMGPs' organizational and community embeddedness. Implications for theory and future research are discussed.

IM: Impact of Cultural Identity Negotiation on Bridging Activities of Highly Qualified Migrants

Author: **Cristina Popescu**, *U. of Tuebingen*
Author: **Markus Pudelko**, *U. of Tuebingen*

Based on 130 semi structured interviews, we looked at the interplay between identity and bridging skills of the first and second generation highly qualified migrants. Expanding current conceptualizations, we have illustrated that first generation migrants also develop a plural identity with the increase of stay in their receiving cultures, and second generation migrants can assess themselves as complete cultural members of their mainstream societies along with the gain of a higher socio-economic status and in order to increase their self-esteem. First generation migrants with both ethnic and plural identities, and second generation migrants with a mainstream identity have either deficient mainstream language knowledge or insufficient ethnic cultural internalization, which impede their bridging activities. Second generation migrants with a plural identity seem to be the ideal culture and language bridging agents due to their balanced embeddedness in their ethnic and mainstream backgrounds. Our study confirms the need to make a generational distinction upon looking into the identities and bridging skills of migrants. We have thus provided a more nuanced understanding of migrant identity processes and skill use, therefore positioning ourselves at the crossroad between international migration and international business research.

IM: Social Networks and Professional Success: Evidence from Foreign Newcomers on the PGA Tour

Author: **David Pastoriza**, *HEC Montreal*
Author: **Jean-François Plante**, *HEC Montreal*
Author: **Raja Kali**, *U. of Arkansas*
Author: **Ekaterina Turkina**, *HEC Montreal*

How do social networks matter for professional success? Are they a source of information and support, both of which could be beneficial? We provide an answer using a unique data set of foreign athletes migrating to the PGA Tour. We construct a nationality-based network of newcomers when they first begin to play in the PGA TOUR, and examine the impact of this initial social network on the newcomers probability of surviving (i.e., keeping their license) at the end of their first PGA TOUR season. We find that social cohesion within a nationality cluster has a sizable positive effect on newcomers' probability of surviving, but no evidence that the centrality of a nationality cluster in the overall PGA TOUR network has an impact on survival. If we consider social cohesion as indicative of the support an individual receives from the network and centrality in the network as a measure of information transmission, then this suggests that support has a more robust impact on performance than information.

Paper is Available to Meeting Registrants Only.

IM: Expatriate Leadership Behavior Development: A Social Cohort Perspective

Author: **Di Fan**, *Swinburne Business School, Swinburne U. of Technology*
Author: **Liqun Wei**, *Hong Kong Baptist U.*
Author: **Kun Qiao**, *Dalian U. of Technology*

Drawing on the social cohort perspective, this study explores the relationships between the age of expatriate leaders, culture flexibility and their leadership behavior consequence. The data were collected from 63 foreign expatriate leaders and 343 of their direct reported Chinese subordinates via the social media platform for professionals—LinkedIn. The study finds that, while an expatriate leader's age is not directly related to subordinates' perception of leadership behavior gaps, the expatriate leader's age is positively related to culture flexibility, and culture flexibility is negatively associated with subordinate's perception of leadership behavior gaps. Further, our findings also suggest that the negative relationship between culture flexibility and subordinate's perception of leadership behavior gaps is weakened in a younger cohort than in an older cohort of expatriate leaders. Insights derived from the age-based cohort role in developing effective expatriate leaders are further discussed.

Facilitators of Performance

Digital Session Chair: **Lewend Mayiwar**, *BI Norwegian Business School*

OB: Arousal and risk taking: the moderating role of reappraisal

Author: **Lewend Mayiwar**, *BI Norwegian Business School*
Author: **Thorvald Haerem**, *BI Norwegian Business School*

Researchers have provided important insight into the cognitive and emotional aspects of risk taking. In the present study we investigated the role of incidental physiological arousal - an affective component that has received relatively little attention and cognitive processing. Moreover, to gain further insight into the relation between arousal and risk taking, we examined the moderating role of habitual cognitive reappraisal. We found that incidental physiological arousal and intuitive processing predicted a higher likelihood of risk taking, whereas analytical processing predicted a lower likelihood of risk taking. Furthermore, we found that the relationship between physiological arousal and risk taking was stronger among individuals low on habitual cognitive reappraisal. Overall, the present study contributes to dual process theories of decision making as well the growing line of research on emotion regulation and risk taking. Implications and directions for future research are discussed.

OB: Perceived Service-Oriented High-Performance Work Systems and Global Service Performance

Author: **Hyun Young Jo**, *Leeds U. Business School*
Author: **Samuel Aryee**, *U. of Surrey*
Author: **Hsin-Hua Hsiung**, *National Taiwan U.*
Author: **David E. Guest**, *King's College London*

Despite its role in building an internal capability to implement a service excellence strategy, research has yet to examine whether perceptions of a strategically-focused human resource (HR) system instills customer orientation in frontline employees and ultimately, enhance their service role performance. Drawing on an integrated extended self and psychology of ownership framework, this study examines processes linking perceived service-oriented high-performance work systems (HPWS) and global service role performance. Multi-wave data obtained from 530 employees and 53 supervisors in the hospitality industry were used to test our hypotheses. Multilevel structural equation modeling (MSEM) results revealed that higher levels of supervisor customer orientation strengthened the perceived service-oriented HPWS-employee customer orientation relationship leading to job-based psychological ownership. In turn, job-based psychological ownership related to global service performance and together with employee customer orientation, sequentially mediated the influence of perceived service-oriented HPWS on a broader conceptualization of service role performance.

OB: You Cause my Humility: The Dyadic Effect of Co-Worker Humility on Performance

Author: **Michal Lehmann**, *Hebrew U. of Jerusalem*
Author: **Sarit Pery**, *Hebrew U. of Jerusalem*
Author: **Avraham N. Kluger**, *Hebrew U. of Jerusalem*
Author: **David R. Hekman**, *U. of Colorado, Boulder*

Humble leaders have subordinates with improved organizational outcomes such as job satisfaction, creativity, and performance. In this line of research, humility is typically construed as a leader trait and set of behaviors that affects subordinates. Little is known about the effect of humility among same-level co-workers. We address this gap by uncovering the effect of humility on performance within dyads of co-workers in teams. We hypothesize that humility is dyadic and its expression depends on the co-worker one interacts with. Also, we propose that performance (measured as creativity and contribution to the team) and psychological safety are also dyadic, meaning individuals perceive higher levels of psychological safety, perform better and are more creative in some dyadic relationships more than others. Finally, we suggest that dyadic humility leads to dyadic psychological safety and ultimately dyadic performance. We studied dyadic humility in unacquainted (Study 1), moderately-acquainted (Study 2), and well-acquainted teams (Study 3) and found support for our hypotheses. We discuss how our findings are counterintuitive in the sense that they indicate expressed humility and its resulting effects are a product of each employee's unique interaction with another specific person and not just an individual-difference construct that is consistent across all relationships.

OB: The Essential Impact of Stress Appraisals on Job Performance and Work Engagement

Author: **Raghd Al Hajj**, *Concordia U.*
Author: **John G. Vongas**, *Ithaca College*

This paper investigates the effects of stressors on in-role performance and work engagement. First, it explores whether stressors traditionally categorized as either challenging or hindering can be appraised simultaneously as both. Second, it explains the contradictory findings surrounding the relationships between stress and performance and engagement by including stress appraisals as a mechanism driving these relationships. In doing so, it also looks at whether stress mindset could explain not only how stressors are appraised, but also how appraisals influence performance and engagement. Over five work days, 487 Canadian and American full-time employees were asked to indicate their stress mindset and appraise an array of challenging and hindering stressors, after which they evaluated their performance and engagement. Results showed that employees rarely appraised stress as uniquely challenging or hindering. In addition, when employees harbored positive views about stress, stressors overall were evaluated as less hindering and hindrance stressors in particular were more challenging. Stress mindset was thus shown to be critical in modulating the genesis of stress appraisals. In turn, appraisals were able to explain the stressors' relationships to performance and engagement, with challenge and hindrance stressors boosting and hampering these outcomes, respectively. Finally, positive stress mindset buffered the negative influence of hindrance appraisals on engagement. Our findings clarify misconceptions about how workplace stressors are evaluated and offer novel evidence that stress mindset is a key variable in the study of stress at work.

Loneliness at Work

Digital Session Chair: **Zhang Ying**, *Tsinghua U.*

OB: **A Daily Investigation of The Relationship between Coworker Trust and Workplace Loneliness**

Author: **Yuan Jie**, *School of Economics and Management Tsinghua U.*
Author: **Zhang Ying**, *Tsinghua U.*

Bounded by the innate, primary drive to belong, employees suffer from loneliness when they perceive deficiency in the quality or quantity of their social relationship. We draw from social exchange theory (Blau, 1964) to examine how dynamic trust in coworker predicts workplace loneliness. Using a twice-daily diary design over 5 consecutive days, results from multilevel regression analysis revealed that trust in coworker helped to attenuate workplace loneliness via helping behavior among a sample of 126 employees at a medium-sized company. Furthermore, we found that coworker support and trust in coworker interacted to affect helping behavior, in such a way that trust in coworkers was more positively related to helping behavior when coworker support was high. Overall, the study demonstrates the agentic ingredient that helps to break the regulatory loop of loneliness.

Paper is Available to Meeting Registrants Only.

OB: **Antecedent & outcomes of workplace loneliness: Role of perceived organizational support**

Author: **Mantasha Firoz**, *Indian Institute of Technology Patna*
Author: **Richa Chaudhary**, *Indian Institute of Technology Patna*

Research to date has largely been unclear about the causes and consequences of workplace loneliness. Drawing from the conservation of resources theory (Hobfoll, 1989), we test a model that examines meaningfulness and psychological capital as the antecedents and creativity as an outcome of workplace loneliness in Indian business organizations. Additionally, we examine the moderating role of perceived organizational support on the relationship between workplace loneliness and creativity. Results from two different studies (Study 1 = Banking industry, n = 204; Study 2 = Public Sector Undertakings n = 375) provided support for our hypotheses. Meaningfulness related significantly with workplace loneliness in study 1 but the linkage was insignificant in study 2. Psychological capital significantly predicted workplace loneliness in both studies. Consistent with the expectations, the effect of workplace loneliness on employee creativity was negative and the relationship was significantly moderated by perceived organizational support. Implications for theory and practice are discussed. Keywords: Workplace loneliness, meaningfulness, psychological capital, perceived organizational support, creativity.

OB: **When Do Lonely People Help or Become Helpless? A Dual Model of Relatedness Needs Thwarting**

Author: **Xue Zheng**, *China Europe International Business School (CEIBS)*
Author: **Flora Chiang**, *China Europe International Business School*
Author: **Thomas A. Birtch**, *U. of Exeter*

Although organizational research has begun to examine the effects of loneliness, extant studies have mainly focused on its maladaptive consequences. We collected data from 542 employees across three different countries (the UK, USA, and China) during the COVID-19 outbreak to examine the effects of loneliness due to social distancing or lockdown measures. Building on basic psychological needs theory and integrating both regulatory loop and evolutionary models of loneliness, we found that loneliness leads to relatedness needs thwarting, which in turn leads to fatigue as a maladaptive response and help-giving as an adaptive response. Furthermore, the indirect relationship between loneliness and fatigue was found stronger when individuals have high individualistic orientation while the indirect relationship between loneliness and help-giving was stronger when individuals have low individualistic orientation. Contributions to theory, practical implications and future research directions are discussed.

Paper is NOT Available. Please contact the author(s).

OB: **Lonely@Work@Home? The impact of work and home demands and support on workplace loneliness**

Author: **Timo Walz**, -
Author: **Julia Kensbock**, *Maastricht U., School of Business & Economics*
Author: **Simon Barend De Jong**, *Maastricht U., School of Business & Economics*

Workplace loneliness, and its negative effects such as stress and reduced job performance, seem especially relevant in the fast-growing e-working environment and even more so recently with strict social distancing and home-working measures taken due to the COVID-19 pandemic. During e-working, employees are not only subject to different demands and support structures at work, but also at home, yet these two sides have so far not been investigated in the workplace loneliness literature. Drawing on job demands-resource (JD-R) theory and the workplace loneliness literature, we suggest job and home demands as antecedents to workplace loneliness, work-home interference and home-work interference as mediators, and job and home support as moderators. We conducted a two wave study of at remote-working, white-collar employees in Germany during the COVID-19 pandemic. We found that job demands increased workplace loneliness through heightened work-home interference and this relationship was buffered by job support. Home demands increased workplace loneliness through heightened home-work interference, but this relationship was not buffered by home support. We contribute to the workplace loneliness literature by identifying important antecedents of and possible remedies for workplace loneliness.

Collective Leadership

Digital Session Chair: **Ameek Kaur**, *National U. of Singapore*

OB: Understanding Shared Leadership for Team Creative Output: A Qualitative Study using WhatsApp

Author: **Ameek Kaur**, *National U. of Singapore*
Author: **Michael Frese**, *Asia School of Business*

This research adds to our understanding of the concept of shared leadership in the context of team creativity, by looking into the details like - which leadership roles should be shared, and how these roles should be shared in terms of role multiplexity and dynamism. Taking the ambidexterity perspective at the team level, we propose that the task focussed leadership roles of Organizer (convergent in nature) and Challenger (divergent in nature) should be present in a team working on creative tasks. To support this research, we conducted a qualitative study through Whatsapp (a smart phone chatting application) with teams of working professionals in Singapore. We focussed on team processes in order to understand how the different leadership roles should be shared. The findings suggest that in terms of role multiplexity, the Challenger role should be exercised by all the members of a team and the Organizer role can be exercised by one member. In terms of role dynamism, our findings suggest that the Challenger role should be shared at the same time by all the members during the divergence processes. For the Organizer role, it is important that this role is exercised effectively by one member at a time through the convergence and the progression to completion processes.

OB: Collective Social Identity and Shared Leadership: Effects of Gender Diversity, Salience and Beliefs

Author: **Andrea Farro**, *Rowan U.*
Author: **Michael Kukenberger**, *U. of New Hampshire*
Author: **Lauren D'Innocenzo**, *Drexel U.*
Author: **Jennifer Griffith**, *U. of New Hampshire*

Social identity theory suggests that individuals construct their identity not only around personal attributes but based on group membership. Leadership scholars have leveraged this approach by suggesting that when formal leaders are perceived to be similar to their teams, they are more successful. We apply these theoretical perspectives to shared leadership and suggest that collective social identity (the extent to which members view each other as representative of the team) will be an antecedent to the collective granting and claiming of leadership. In addition, we suggest that gender diversity will impact shared leadership via collective social identity. However, we believe that the effect of gender diversity is contingent on both gender salience and gender diversity beliefs. We test our model in a sample of 195 individuals embedded in 55 teams. We largely find empirical support for our hypotheses.

OB: A Text Mining-Based Review of Literature on Collective Forms of Leadership

Author: **Jong Gyu Park**, *Pennsylvania State U., Altoona*
Author: **Bora Kwon**, *Sacred Heart U.*
Author: **Kijung Park**, *Incheon National U.*
Author: **Gayeon Kim**, *Incheon National U.*

Collectivistic leadership approaches have become important to derive a new leadership approach by involving multiple individuals in the leadership process. This paper uses an advanced text mining technique to conduct a comprehensive analysis of 1,353 articles published in various academic disciplines on the diverse subject of collectivistic approaches to leadership. In Study 1, we analyzed seven most frequently used labels of collectivistic leadership (i.e., team leadership, shared leadership, distributed leadership, collaborative leadership, collective leadership, complexity leadership, relational leadership) by extracting frequently occurring terms and their correlation through text mining. The results show that the different leadership labels in the extant literature share similar keywords. In Study 2, we identified latent topics on the collectivistic leadership literature by conducting correlated topic modeling. As a result, we found the most prominent topics discussed on the subject, such as "Network and relations", "Education and school", "Team and performance", "Non-quantitative design and setting", "Collaboration in healthcare", "Innovation and complexity" and "Organizational learning".

OB: Female Leader Emergence in Shared Leadership: A Social Network Perspective

Author: **Selina Irma Graulich**, *U. of Konstanz*
Author: **Sebastian Tillmann**, *U. of Konstanz*
Author: **Sabine Boerner**, *U. of Konstanz*

This study examines female leader emergence in teams practicing shared leadership. More precisely, we investigate how and when female team members, who are usually underrepresented in formal leadership positions, emerge as informal leaders in shared leadership. Building on the extant literature on female leadership, leader emergence, and shared leadership, we expect women to be more relied on as leaders in shared leadership than their male peers. Beside direct effects, we specify formal vertical leadership as a moderator of the relation between gender and leader emergence. Thereby, we take a social network perspective on the conditions under which women emerge (i.e., receive leadership ties) as leaders in a settings of plural informal leadership such as shared leadership. Survey data from teams in the German public service and industrial sector is analyzed using temporal exponential random graph models (ERGMs). Contrary to our expectations, women have less incoming leadership ties than their male peers, mirroring findings in initially leaderless teams. However, in line with our hypotheses, the formal team leader may either encourage or deject female leader emergence. While empowering leadership increases the propensity for incoming leadership ties for women, directive leadership has the opposite effect. Implications for the study of female leadership, leader emergence, and shared leadership are presented, accompanied by practical implications for creating a gender inclusive shared leadership environment.

OCIS: **Recognition Incentives for Internal Crowdsourcing: A Field Experiment at NASA**

Author: **Jana Gallus**, *UCLA Anderson School of Management*
Author: **Olivia Jung**, *Emory U.*
Author: **Karim R. Lakhani**, *Harvard U.*

How can organizations motivate employees to engage in crowdsourcing? Should they use incentives that are congruent with their established hierarchical structures, or incentives that are aligned with the aspirational, peer-based approach to innovation that crowdsourcing represents? We partnered with NASA for a qualitative study and a field experiment (N=7,455) to understand employees' motivations to engage in crowdsourcing, and to study the effectiveness of different recognition incentives. First, we find that the perceived incongruence between crowdsourcing and organizational hierarchy disincentivizes employees by creating concerns about the legitimacy of peer-based innovation. Second, we find that managerial recognition, the incentive that is congruent with the established hierarchy, significantly increases engagement. We do not find support for the overall effectiveness of peer recognition, the incentive that is congruent with the peer-based approach to innovation. But this result masks an interesting heterogeneity by job function: Workers in support functions, who are otherwise less visible, report being highly motivated by it. Our study contributes to the literatures on crowdsourcing and incentives, and it yields direct implications for organizations seeking to adopt peer-based innovation.

OCIS: **Crowd-based Coordination in the Digital Age: A Convention Lens**

Author: **Emmanouil Gkeredakis**, *IESE Business School*
Author: **Panos Constantinides**, *Alliance Manchester Business School, U. of Manchester*

Emerging crowd-based phenomena epitomize new modes of coordination made possible by digital technologies. Extant literature provides rich insights into the ways digital technologies may create and transform the conditions underlying the coordination of complex work. Yet, crowd-based interactions do not rely on interpersonal familiarity, which previous studies highlight as crucial to achieve coordination, and are episodic, interaction-based, rather than focused on managing complex task interdependencies over time. Important questions are thus raised about how crowd-based coordination is accomplished and how digital technologies are implicated in the creation of conditions for coordination. In this paper, we argue that conventions are the main mechanisms of crowd-based coordination. In particular, conventions help frame interactional interdependencies, create a stable structure for expectations to converge, and instill a shared obligation to read, organize and respond in certain ways in particular episodes of interactions. Moreover, the enactment of conventions is dynamically shaped by crowd generativity and deliberately designed algorithmic processes. By developing a theoretical account of conventions in the digital age, our study contributes to the literature on technology-enabled coordination and advances understanding of the workings of digital platforms.

OCIS: **The Power of Crowds: Can Minority Shareholder Activism Promote Management Forecast Accuracy**

Author: **Yinju Nie**, *Northwestern Polytechnical U.*
Author: **Ming Jia**, *Northwestern Polytechnical U.*

In a setting where minority shareholder becomes into a higher stakeholder class with much salience, we study whether their voices promote management forecast accuracy. We test our framework by observing the publicly listed firms in Chinese Shenzhen Stock Exchange between 2010 and 2018, and find that small investors, when empowered with the availability to interact with firm management directly on the online social media platform, could improve management forecast accuracy by requesting information from firms. Furthermore, the positive impact of minority shareholder activism on forecast accuracy is stronger when focal firm is involved with more negative media coverage and when managers attach more importance to minority shareholder activism. This study not only contributes to the literature on shareholder activism, stakeholder salience and management earnings forecast, but also have valuable implications for protecting minority shareholders via the powerful voice of ordinary individuals in the information era.

Organizational life has always been rife with tensions. In 2020, the COVID-19 pandemic accentuated the experience of tensions in a wide array of domains for employees and their managers across the globe (Pradies, et al., 2021). How can employees and managers cope with such tensions of enabling productivity while maintaining well-being? The growing literature on the micro-foundation of paradox offers a useful framework for understanding how organizations navigate complex situations and their associated tensions (Waldman et al., 2019). In the past few decades, scholars provided important insights on how individual and teams navigate paradoxes in complex situations across a variety of domains, including leadership (Zhang et al., 2015), creativity (Miron-Spektor et al., 2011), identity (Kreiner et al., 2015), teams (Gebert et al., 2010), and corporate sustainability (Hahn et al., 2014). In this symposium, we will discuss new research on the micro-foundations of paradox, which is particularly relevant to the challenges managers currently face. The five papers comprising the symposium expand our understanding of the ways that individuals and managers engage competing demands in three specific areas: 1) emotional and cognitive aspects of coping with tensions and the extent to which they vary across contexts and cultures; 2) the effect of paradoxical leadership and framing on the ability of teams to manage interpersonal tensions to enhance creativity and performance, and 3) the interrelatedness of different tensions and how coping mechanisms for one tension can have unintended outcomes for related tensions.

This workshop aims to provide participants (in particular junior faculty and PhD students) with an understanding of how to publish organizational network studies in management journals. The study of networks within and between organizations is a growing field of research with its own unique opportunities and challenges. It is unusual in that it has theoretical relevance at the individual, team, organizational, and industry level; and can be integrated with a broad range of management theories. Therefore, it has broad applicability across the members of many of the academies divisions and interest groups. The opportunity to apply an organizational network framework across a broad range of topics also provides challenges. For example, understanding what research questions are relevant for a broad management audience is not always obvious. Network analysis has seen new statistical methods that provide opportunities and challenges, such as how to convey these new models to a wider management audience. This workshop sees the unique opportunity to bring together 15 leading academics from the LINKS Center for Social Network Analysis of the University of Kentucky, and the University of Exeter Centre for Social Networks; who have published in a wide range of top management journals. The format of the workshop includes a panel session and small roundtable discussions where individual papers from participants (submitted prior to the workshop) will be discussed.

Participants are required to register and to submit a draft paper/proposal (maximum 3,000 words) to the PDW organizers via email two weeks prior to the PDW. For further information and draft paper submissions please email Andrew Parker (a.parker3@exeter.ac.uk).

Knowledge Management

Digital Session Chair: **Marta Riquelme-Medina**, *Department of Management, School of Business, U. of Granada*

OSCM: Business Ecosystem Embeddedness and Supply Chain Competence: The key role of Knowledge Capacities

Author: **Marta Riquelme-Medina**, *Department of Management, School of Business, U. of Granada*
Author: **Mark Stevenson**, *Lancaster U. Management School*
Author: **Vanesa Barrales-Molina**, *Department of Management, School of Business, U. of Granada*
Author: **Francisco Javier Llorens-Montes**, *U. of Granada*

Business ecosystems have gained an increasing interest over the last decade. This article focuses on its operational benefits by investigating how embeddedness in business ecosystems influences supply chain competence. Specifically, it considers the mediating effect of external knowledge capacities: absorptive, desorptive and connective capacity. Primary data from 271 European firms participating in business ecosystems were collected to test three hypotheses using regression analysis with bootstrapping. Results indicate that business ecosystems embeddedness does not in itself improve supply chain competence. Rather, the relationship is explained through (i) absorptive and desorptive capacity directly mediating the relationship; and (ii) connective capacity, which increases supply chain competence indirectly by enhancing absorptive and desorptive capacity. These findings suggest external knowledge capacities could be components of dynamic capabilities. To the best of our knowledge, this is the first paper to demonstrate benefits of being embedded in business ecosystems other than in terms of innovation. It is shown that connective capacity boosts absorptive and desorptive capacity by enhancing the linkages upon which they are built, leading to superior supply chain competence. Finally, the paper provides newly validated scales for business ecosystem embeddedness and connective capacity.

OSCM: Knowledge Sharing in Project-based Supply Networks: The Role of Incentives and Network Governance

Author: **Mehrnoush Sarafan**, *U. of Bath and Cambridge U.*
Author: **Benn Lawson**, *U. of Cambridge*
Author: **Jens Roehrich**, *U. of Bath*
Author: **Brian Squire**, *U. of Bath*

Project-based supply networks are an emerging form of organising used to meet a buyer firm's operational and innovation goals. Knowledge sharing among suppliers in the network plays a key role in successful project delivery but is challenging to achieve in practice. Our study draws on self-determination theory to examine how buyers can leverage incentive provisions (penalties and bonuses) to motivate discretionary knowledge sharing within project-based supply networks. In addition, we investigate the contingent effect of network governance (lead and shared). We use a scenario-based behavioural experiment of 217 professionals within the UK using the online platform, Prolific. Our findings highlight how the effectiveness of incentive provisions is dependent on network governance. Where suppliers have shared responsibility for management of the network (shared governance), bonuses are significantly more effective than penalties in motivating knowledge sharing through support of key boundary-spanners' autonomy needs. However, where a network is managed by an external lead organization (lead governance), there is no significant difference between the effectiveness of penalty and bonus provisions in knowledge sharing motivation.

OSCM: Knowledge Asset Outsourcing Decision

Author: **Piyush Shah**, *Florida Gulf Coast U.*
Author: **Thomas Kull**, *Arizona State U.*
Author: **Craig R. Carter**, *W. P. Carey School of Business, Arizona State U.*
Author: **Bhavin Shah**, *IIM Indore*

When making decisions on whether to outsource managers are expected to consider theoretical variables like asset specificity from transaction cost economics (TCE) and core-competence from resource based theory (RBT). While these expectation have been found consistently valid for physical assets, they have been inconsistent for knowledge assets. We use a vignette based experiment to test if the lack of consistency is due to the limitation in the theoretical prescriptions or a result of peculiarities of knowledge assets. We use rigorous implementation of weighted least square estimator with mean and variance (WLSMV) based structural equation modeling to arrive at the results. We show that, for knowledge assets, while the TCE and RBT are valid, the operationalization of the idea of asset specificity and core-competence is heterogeneous. For RBT, the heterogeneity is caused by the involvement of decision maker with the knowledge asset. We resolve the lack of clarity of TCE and RBT in knowledge asset outsourcing decisions by showing that, possibly because of intangibility and peculiarities of knowledge assets, the operationalization of theoretical variables is systematically biased. Additionally, we show that decision makers can intentionally subvert knowledge asset outsourcing decisions towards self-interest. This finding questions the implicit assumption of TCE and RBT that decision makers are altruistic stewards and not self-interested agents. Our findings suggest a detailed analysis of individual decision making for knowledge asset outsourcing and more interestingly create an intrigue about how the biased and self-interested decision makers would interact to arrive at a firm level knowledge outsourcing decision.

OSCM: Globalization and Focus in Pinnacle OSCM Journals: 1952-2018

Author: **Jaydeep Balakrishnan**, *California State U. Sacramento*
Author: **Thomas P. Kenworthy**, *U. of Windsor*
Author: **Chun Hung Cheng**, *Logistics and Supply Chain Multitech R&D Centre*
Author: **Janice Eliasson**, *U. of Calgary*

The objective of this research is to enhance our understanding of the nature of Operations and Supply Chain Management (OSCM) scholarship. We focus on five pinnacle journals as sources of leading-edge research and trend setters in terms of globalization and relevance. The analysis enhances our understanding of the nature of OSCM authorship; scholarship globalization; international collaboration activity; research topics and trends; and research funding. We chose to focus our reporting predominantly on non-US-based research activity to showcase growing international publication successes. The findings indicate that multinational collaboration and research funding are trending upwards, providing important insights for various OSCM stakeholders.

Discourse and CSR Issues

Digital Session Chair: **Heidi Weigand**, *Dalhousie U.*

SIM: Does kindness matter? Intergenerational discourses on kindness and motivation in COVID-19

Author: **Heidi Weigand**, *Dalhousie U.*
Author: **Kristin Samantha Williams**, *UEF Business School, U. of Eastern Finland*
Author: **Sophia Okoroafor**, *Saint Mary's U., Canada*
Author: **Giuseppe Liuzzo**, *Munich Business School*
Author: **Erica Weigand**, *Marbella International U. Centre*

This study examines the intergenerational perceptions of kindness and the relationship between kindness and motivation as ethical and moral behaviour in the context of the COVID-19 global pandemic. The relationship between kindness and motivation is not well understood in management and organizational studies. Adopting a combination of methods with both theoretical and investigative benefits (intersectionality and critical discourse analysis), authors conducted 66 qualitative interviews with generation Z (born between 1997-2012/5) and generation Y (also referred to as Millennials, born between 1981 to 1994/6) across North American, Europe and Africa in the summer and fall of 2020. The two-part question guiding this study is: Does kindness matter and what can generational entrants and emerging leaders in the workplace tell us about the relationships between kindness and motivation in the context of COVID-19? The study sets out to make four contributions: (1) expand our understanding of the phenomenon of kindness, (2) explore the relationship between kindness and motivation, (3) examine intergenerational perceptions of kindness in the context of COVID, and (4) investigate how kindness might be leveraged as a model of moral and ethical behaviour valued by generational entrants and emerging leaders in organizations.

SIM: Rhetorical field settlement of the issue of modern slavery: Framing in the UK construction sector

Author: **Gabriela Gutierrez Huerter O**, *Assistant Professor, King's Business School*
Author: **Stefan Gold**, *U. of Kassel*
Author: **Alexander Trautrim**, *U. of Nottingham*

Despite increasing interest in modern slavery, the absence of frameworks of action to deal with this issue has received little scholarly attention. To address this gap, we draw insights from framing theory, adopt an issue-based approach to institutional fields, and trace longitudinally the framing work performed by actors in the UK construction sector. We reveal that field actors clustered their views on modern slavery around five constellations of frames that evolved over time: human rights crime, moral decision, economic issue, power imbalance, and holistic problem. We document three frame shifts—belief amplification, frame extension, and frame break—that enable us to reconstruct the processes through which a rhetorical field settlement emerged, thus contributing to literature on the dynamics of framing contentious issues.

SIM: Shareholder Activism and CEOs' Use of Language

Author: **Maria Cristina Zaccone**, *U. Cattolica del Sacro Cuore*
Author: **Taekjin Shin**, *San Diego State U.*
Author: **Lori Versteegen Ryan**, *San Diego State U.*

Drawing on signaling theory and the symbolic management perspective, we argue that a CEO's use of language that is congruent with the prevailing governance model of shareholder value maximization leads shareholders to evaluate the CEO more favorably and to reduce their activism toward the firm. We test this argument by examining CEOs' expression of the shareholder-value principle or a stakeholder orientation in the letters to shareholders from CEOs of 213 publicly traded U.S. firms. Our analysis shows that the use of shareholder-value language is favorably perceived by shareholders, thereby reducing the probability of the firm being targeted by activists. We find the opposite for the stakeholder orientation: stakeholder-orientation language is negatively perceived by shareholders, increasing the probability of being targeted by activists. We also test whether CEO celebrity moderates the strength of the relationship between CEOs' use of language and shareholder activism. Our analysis shows that CEO celebrity weakens the strength of the relationship between shareholder value language and the probability of attracting shareholder activists.

Now in its tenth year, the Junior Faculty Paper Development Workshop aims to provide junior scholars with the opportunity to receive developmental feedback on their current research projects. The workshop features a panel of distinguished scholars with expertise in a diverse range of topics and methods. It targets junior faculty who are struggling with one of their papers, as for instance the paper has been rejected or has received contradictory reviews. Each junior scholar will sit down with senior panellists to discuss his/her paper and get advice on how, and whether, to advance it. The workshop closes with a general Q&A on topics that are of interest to the participants, with a special emphasis on the common challenges faced by junior researchers.

Presenter: **Jan W. Rivkin**, *Harvard U.*
Presenter: **J. Myles Shaver**, *U. of Minnesota*
Presenter: **Anita McGahan**, *U. of Toronto*
Presenter: **Gautam Ahuja**, *Cornell U.*
Panelist: **Nicolaj Siggelkow**, *U. of Pennsylvania*

2020 STR Irwin Outstanding Educator Award for MBA and Executive Education - Jan W Rivkin; and Reflections on What COVID has Taught Us About Being Strategic Management Educators This session has two dimensions. First, it will honor Professor Jan W Rivkin as the recipient of the 2020 STR Irwin Outstanding Educator Award for MBA and Executive education in strategic management. Second, Jan and past Irwin winners (Myles Shaver, Anita McGahan, and Guatam Ahuja) will reflect on what COVID has taught us about being strategy educators. Given that the world has endured such turmoil, panelists will consider what we have learned about the substance of what we teach about strategy. Also, having been forced to teach in new formats with new technology, they will reflect on what have we learned about education.

**Possibly the Best Survey Methods PDW: Designing Surveys to
Collect Individual and Firm Level Data**
Possibly the Best Survey Methods PDW

Organizer: **Benjamin King**, *U. of Maryland*
Participant: **Alfonso Gambardella**, *Bocconi U.*
Participant: **Kristina Steffenson McElheran**, *U. of Toronto*
Participant: **Michael Roach**, *Duke U.*
Participant: **Daniela Scur**, *Massachusetts Institute of Technology*
Participant: **Evan Penniman Starr**, *U. of Maryland, College Park*

The purpose of this PDW is to enhance participant's understanding of how and when to use survey methods to answer important questions in the field of Strategic Management, or the related fields of entrepreneurship and technology management. The session aims to instill within participants the tools to know when survey methods should be used, and how to gather firm and individual level data in a manner that allows for statistical inference and hypothesis testing. The PDW advances the argument that survey methods can provide unique, primary datasets that offer several advantages over secondary datasets (i.e., government surveys, data scraped from the web). These include establishing novel facts and elucidating new mechanisms. Moreover, in-so-far-as these new facts and mechanisms are not explained by existing theories, survey methods also provide an important avenue for theory development and testing. Developing a careful and reliable survey is not easy, however, and so this PDW also highlights several of the potential pitfalls in survey work and how to avoid them. Finally, the PDW provides interactive elements to assist participants in uncovering the extent to which survey methods can be used to further their research stream, and provide answers to specific methodological questions

The first portion of this PDW (90 minutes) is open to all who would like to attend. For those that are interested in attending the last portion, a breakout session (30 minutes), you must pre-register. In this last portion the preregistered participants will be assigned to a small group of 4-5 other attendees and to one of the main presenters. They will be able to ask specific questions to the presenter about potential or current research that will involve survey methods. To be considered for this portion of the PDW, please submit a 2 paragraph statement or email to Ben King (bck8@umd.edu) that (1) Tells who you are, where you are at (PhD Student, Assistant Professor, etc.) and (2) summarizes the survey idea; and/or poses 1 or 2 specific questions you would like the presenter to answer. Space is limited to 25 participants.

OMT: From Shutdown to Shutdown: Mobilizing to Demarketize Water in the Face of Intersecting Crises

Author: **A. Wren Montgomery**, *Ivey Business School*
Author: **Jocelyn M. Leitzinger**, *U. of Illinois at Chicago*

As the COVID-19 pandemic spread around the world, it laid bare the long-standing intersecting and overlapping injustices of race and socioeconomic status. Our longitudinal qualitative study of the Detroit, Michigan, water shutoffs allows us to trace the changing perceptions of the role of the market in essential public services from prior to the humanitarian crisis of 2014 through the ravages of COVID-19 in 2020. This in-depth study reveals how vulnerable and marginalized communities were able to mobilize around these multiple crises and challenge the growing marketization of goods and services. We find that vulnerable populations, often excluded from research on movements and markets, face structural and social barriers to mobilizing tied to the marketized systems that repress them. Overcoming these barriers through community mobilization is a key component in building demarketization social movements. We theorize a novel multi-step process of demarketization that shifts commodified goods and services from market dominance, to adjustment and reforms and, ultimately, to outright challenge. Our insights provide a timely theoretical foundation that encompasses a variety of emerging movements and organizations challenging market ideologies and their impacts on healthcare, education, the climate crisis, the food system, and policing, among others.

OMT: Why Social Solidarity at Work Increased Following COVID Stay-at-Home*

Author: **Matt Cummins**, *Stanford Graduate School of Business*
Author: **William P. Barnett**, *Stanford U.*

Sociological theories argue that social solidarity can be based on complementary differences that lead to bonds through exchange, and on shared similarities that engender bonds from commonality. Studies of social solidarity in modern life, especially within formal organizations, typically emphasize the importance of the first of these: exchange-based solidarity. While solidarity from shared similarities is often discussed, it is less often identified empirically - especially within formal organizations. This study investigates commonality-based social solidarity at work, taking advantage of an exogenous shock: the 2020 Covid-19 Coronavirus outbreak and resulting stay-at-home order in California, which occurred unexpectedly during a study we were conducting on social solidarity at work. The data reveal increases in social solidarity at work following the stay-at-home order - especially among those with lower social solidarity at work to begin with. Diff-in-diff models show that nonwhites, those without families, and higher-ranking employees each saw larger increases in social solidarity at work in the wake of the shared experience. By contrast, those with more work-related ties enjoyed higher social solidarity at work prior to the shock, evidence of the importance of exchange-based solidarity among these workers. But after the stay-at-home order, churn in these ties decreased social solidarity at work for these workers. Our results imply a levelling effect when social solidarity is based on commonality, and that for this form of solidarity individuals need not actually be at work to enjoy social solidarity at work.

OMT: Lessons From A Pandemic: The Emergence of Community Organizing

Author: **Andreas Georgiou**, *U. Ramon Llull, ESADE Business School*
Author: **David Murillo**, *ESADE*

The COVID-19 pandemic temporarily exposed the inadequacy of established institutions and markets to handle a multidimensional crisis. What it also revealed is the spontaneous organizing capacity of local communities to mitigate some of the consequences of the pandemic. Building upon more than six hundred responses from an open-ended survey and follow-up qualitative interviews, we seek to understand the emergence of community organizing during the initial global lockdown to show how, contrary to previous interpretations, it does not require pre-existing shared values, goals and beliefs. Applying the sensemaking lens, we theorize the process that enabled community organizing to prevent the collapse of sensemaking, motivated neighbors to comply with the restrictions and inspired the sharing of resources, experiences, and a feeling of belonging. The implications of the proposed model for organization studies, community psychology, resilience, and sensemaking are discussed.

Paper is Available to Meeting Registrants Only.

OMT: Temporary and Permanent Organizing in Systemic Crises: A Study of Professional Responses to Covid-19

Author: **Amelia Compagni**, *Bocconi U.*
Author: **Giulia Cappellaro**, *Bocconi U.*

The Covid-19 pandemic is a systemic crisis able to dramatically affect, for a protracted period of time, numerous aspects of our individual, social and organizational lives. We study the case of C-Hospital in the city of Milan, Italy that, in response to the crisis, embraced temporary organizing by creating temporary Covid-19 units. Based on 73 semi-structured interviews and archival data, we elicit from medical doctors working in these units the perceptions of the crisis and their responses at an individual, information-processing and relational levels. We uncover how after its dismantling, temporary organizing left a legacy in terms of analytical clarity, individual empowerment and strong group bonding, and new expectations on how permanent organizing should be shaped and changed. With the study, we advance understanding of the internal dynamics of temporary organizing during crises and of the relationship between temporary and permanent organizing.

SAP: Standardizing Safety Practices on Oil Platforms: the Interplay of Sensemaking, Discourse and Action

Author: **Gabriela Maia**, *FDC - Fundação Dom Cabral*
Author: **Samir Lofti Vaz**, *FDC - Fundacao Dom Cabral*
Author: **Reed Nelson**, *U. of Louisiana Lafayette*

This research uses an in-depth case study to shed light on the interplay between sensemaking, discourse and action, as enacted by managers and employees in the course of standardizing safety practices on offshore oil platforms. We collected and analyzed data from multiple sources: PowerPoint presentations, interviews, participant observation, and informal conversations. Our findings suggest that managers and employees constantly (re) create different meanings about safety, both as “management” and as “value”. These meanings, in turn, interconnect with “instrumental” and “relational” managerial discourses, as well as with employees’ actions of “adapting to” and “resisting” change. We use our results to develop an empirical model that suggests the presence of vicious and virtuous cycles of enactment during the standardization of safety practices on high reliability organizations, which operate in extreme contexts and thus face risky activities in fragile environments on a daily basis.

SAP: How Employees’ Perceptions of CSR Attenuates Workplace Gossip: A Mediated- Moderation Approach

Author: **Khalid Mehmood**, *School of Economics & Management, Tongji U.*
Author: **Fauzia Jabeen**, *Abu Dhabi U.*
Author: **Yaser Iftikhar**, *Armed Forces Post Graduate Medical Institute, National U. of Medical Sciences*
Author: **Ángel Acevedo-Duque**, *U. Autónoma de Chile*

This study explores the relationship between employees’ perceptions of corporate social responsibility and workplace gossip by focusing on the mediating role of pride and the moderating role of traditionality. Drawing from appraisal theory of emotions, we hypothesized that employees’ perceptions of corporate social responsibility positively relate to pride, which in turn, negatively relates to workplace gossip. In addition, traditionality weakens the relationship between pride and workplace gossip and the indirect effect of corporate social responsibility on workplace gossip via pride. The time-lagged design was employed to collect data. Based on the field survey results from 342 frontline employees from the hotel industry in China, we provided evidence that the greater corporate social responsibility, as perceived by employees is associated with a lower likelihood of workplace gossip through the mediating effect of pride. Also, traditionality moderates the relationship between pride and workplace gossip, such that the relationship is stronger among high traditionalists than among low traditionalists.

Paper is Available to Meeting Registrants Only.

SAP: Formulating Strategy for Digital Transformation

Author: **Frederik Schroder Jeppesen**, *Aarhus BSS, Aarhus U.*

SAP Best Student Paper Award
William H. Newman Award Nominee

This paper aspires to contribute new insights to how strategists, assigned with writing strategy formulations in text, engage practices for concretizing abstract strategy discourse into fixated strategy formulations. In doing so, it reports the findings of an involved ethnography, following a project striving to formulate a grand strategy for digital transformation as they organize around the production of a strategy document. The paper thus explores how the strategizing process is influenced by an iterating artifact, as it becomes the locus of practitioners’ strategizing activity through steering committee meetings and subsequent writing team meetings. In total, this paper builds on the strategy work leading to the production of 14 iterations of a strategy formulation document. The paper finally theorizes six practices of accepting, ignoring/avoiding, rephrasing/adjusting, illustrating, condensing and hijacking, that the writers engage as they discuss how to write the forthcoming iteration. Additionally, it elucidates that these practices are also consequential for how the writers challenge strategy discourse already as it is conceived on steering committee meetings.

SAP: Inanimate Agency in Strategizing Discourse

Author: **Jenni Myllykoski**, *U. of Oulu Business School*
Author: **Anniina Rantakari**, *U. of Oulu*

The purpose of this article is to illuminate how inanimate becomes agentic in strategizing talk. Based on a longitudinal real-time study of a software company, our study conceptualizes two ways in which the company’s software product becomes agentic: indwelling agency and outdwelling agency. These findings extend discourse oriented strategy research by enriching current understanding of how inanimate agency manifests in the talk of the key strategists’ both in abstract and operational levels. Showing how strategizing can be discursively “locked” in the operational logic of the product can increase our understanding of the barriers for strategic renewal.

Product Development

Digital Session Chair: **Ireen Kulish**, *RWTH Aachen U.*

TIM: Untangling the analytics-innovation paradox in the context of new product development

Author: **Ireen Kulish**, *RWTH Aachen U.*
Author: **Andrea Greven**, *RWTH Aachen U.*

Why do companies fail to realize advantage from data? Our research gets to the bottom of it, investigating the value-add of data analytics competencies (DAC) in new product development (NPD). We surveyed NPD department heads in 209 German firms. Our empirical analysis suggests that DAC's positive impact on NPD performance is tunneled through innovative capabilities (IC) and depends on the degree of department centralization. Drawing from dynamic capabilities, organizational learning theories and complementary perspective, this study contributes to the digital innovation realm. First, it demonstrates a positive link of DAC on IC. Second, it reveals a mechanism of DAC on NPD performance through IC. Depending on the nature of IC (exploitative vs. explorative), some mechanisms add value in terms of NPD performance, while others destroy it. Third, department centralization favors building of IC. These findings add to the vivid scholarly debate concerning types of innovation fostered by DAC, their mechanisms to draw advantage from data and required organizational conditions. We do not only underline the importance of DAC in NPD but highlight the significance of process focus in light of strategic goals. We support managers allocating their budget towards right competencies and infrastructures to achieve repeatable NPD performance through data.

Paper is Available to Meeting Registrants Only.

TIM: Design as a Dynamic Capability : A Capability Building Framework

Author: **Sihem Ben Mahmoud-Jouini**, *HEC Paris*
Author: **Julie SAHAKIAN**, *Ecole Polytechnique*

This communication addresses the lack of empirical research on how firms build a new dynamic capability. Based on a longitudinal case study of Design integration as an innovation capability within an insurance company, we suggest a capability-building framework: a capability is built by acquiring resources, deploying them in activities such as projects, capitalizing on the learning from one project to another, and thus building progressively knowledge that is then shared and diffused among the resources resulting in the renewal of their competences. This framework highlights a reinforcement dimension and distinguishes operations (Designing, spreading Design and managing Design) from building on these operations (building the Design expertise and transforming the organization through Design) in order to contribute to the firm's resources renewal.

TIM: Fake it until you make it? Understanding “innovation theater” in organizations.

Author: **Cristian Granados**, *Tecnológico de Monterrey*
Author: **Yarid Ayala**, *EGADE Business School, Tecnológico de Monterrey*
Author: **Mónica Rámos-Mejía**, *Pontificia U. Javeriana Bogotá*

Research suggests that despite increased support from the top management, organizations are not becoming more innovative as a result of their investment in innovation activities (e.g. accelerators, hackathons, intrapreneurship programs). Existing literature points out that this is caused by the fact that sometimes these efforts are only symbolic actions rather than substantial ones. This is known as “innovation theater”. This phenomenon has been poorly understood in academic research, although previous studies have analyzed similar phenomena such as “symbolic actions” or “corporate hypocrisy”. It is not clear how this phenomenon emerges in organizations, what are its roots or what consequences it has for organizations. We conduct a deep qualitative study to analyze “how” and “why” this phenomenon occurs. We found different ways in how innovation theater is manifested (e.g. spaces to simulate, external alliances, internal structures) and we suggest this occur because of individual, unit, organizational and environmental drivers. We also identified negative and positive consequences of innovation theater at individual and organizational levels. Taking together these results and building on previous research, we propose a theoretical model which explains how and why innovation theater emerges in organizations through stages of maturity. This paper contributes in different ways to corporate innovation, innovation theater and symbolic actions literature. Mainly for being the first academic research that analyzes the phenomenon.

TIM: Use Your Broken Part into My Art? Industry Peers' Failures and Firm Innovation

Author: **Yiyang Zhu**, *Rice U.*
Author: **Alessandro Piazza**, *Rice U.*
Author: **Haiyang Li**, *Rice U.*

In competitive settings, the ability to attend to failures in the environment can help firms identify market opportunities or threats without the drawbacks of in-house experimentation, particularly under conditions of uncertainty. In this paper, we build theory about how firms make inferences based on their industry peers' failures and how such inferences may affect firms' innovative output. While existing studies primarily focus on failures as a foundation for experiential learning, especially as it pertains to strategic behavior such as mergers and acquisitions or R&D, how managers interpret failures happening outside the firm has received comparatively less attention. We contribute to this area of research by examining the effect on a firm's innovative output not only of failures by other firms, but also of their geographical location and underlying cause. In particular, we hypothesize that firms are more likely to pursue product innovations when others' failures are more geographically dispersed, yet refrain from doing so when they are causally complex. Firms' own production experience may also strengthen firms' perceived risk in innovation when failures in the environment are causally complex. Building on firm-level data on product recalls and new product introductions in the medical device industry from 2003 through 2017, we find support for our arguments.

Recruitment and Job Search

Digital Session Chair: **Serge P. Da Motta Veiga**, *EDHEC Business School*

HR: Social and Personal Resources During Job Search: How Can They Help?  

Author: **Serge P. Da Motta Veiga**, *EDHEC Business School*
Author: **Annika Wilhelmy**, *U. of Zurich*
Author: **Katrin Hasler**, *SkillsGarden AG*
Author: **Mirjam Ambuehl**, *SkillsGarden AG*
Author: **Martin Kleinmann**, *U. of Zurich*

Job seekers need to manage their efforts as they navigate the ebbs and flows of the job search process. While they engage in behaviors to find a job, they are likely to rely on resources that are available to them. In this paper, we build on conservation of resources theory (Hobfoll, 1989) to examine the role of such resources throughout the job search process. Specifically, we investigate whether and how both social and personal resources influence the job search process over time. In a multi-level study following 89 unemployed job seekers for 6 months, resulting in a total of 311 observations, we find that both social (i.e., social support and networking behaviors) and personal (i.e., job search self-efficacy) resources are positively related to job search intensity. In turn, we find that networking behaviors and job search self-efficacy are positively related to the number of job interviews obtained, albeit indirectly for networking behaviors. Finally, we find that networking behaviors and job search self-efficacy interact with each other, such that positive relationship of either resource with job search intensity and the number of job interviews becomes negative when unemployed job seekers are high in both resources.

HR: The Generative Mechanism of Boomerang Intention: From the Perspective of Legacy Identification

Author: **Tian Zehui**, *Business School of Nankai U.*
Author: **Qinghong Yuan**, *Business School at Nankai U.*
Author: **Shan Shan Qian**, *Business School at Nankai U.*
Author: **Yanyan Liu**, *Business School, Nankai U.*

In addition to internal and external hiring, re-hiring as a third way to obtain employees, has become increasingly important in the case of volatile career and fierce competition in the talent market. Current studies on boomerang employment are scarce and mainly focus on boomerang performance, with little emphasis on the generation of boomerang employment. Based on social identity theory, this paper explores the generation of boomerang employment from the perspective of legacy identification, holds that legacy identification affects boomerang intention, and that both corporate prestige and psychological contract violation affect legacy identification through legacy identification. The cooperative possibility between the current and former organization will moderate the positive effect of both corporate prestige and psychological contract violation and boomerang intentions through legacy identification, such that the mediated effect is stronger when the cooperative possibility is higher. We find support for our hypotheses in a sample of 393 ex-employees in the industries of internet communications, financial, and the professional services. Hopefully, this study can provide the basis for the continuous attention and management of former employees, thus enrich turnover research and expand the connotation and boundary of human resource management.

Paper is Available to Meeting Registrants Only.

HR: Inclusion in Digital Recruitment: Building both Internal and External Human Capital Resources  

Author: **Neil Lowndes**, *Trinity College Dublin*
Author: **Na Fu**, *Trinity Business School, Trinity College Dublin*

Drawing on strategic human capital theory, this study focused on the digital recruitment of human capital. It explored external human capital i.e., job applicant, experiences with digital recruitment tools and their perceived inclusion. Two studies were conducted. Study 1 adopted a qualitative method, interviewing 25 active job seekers. Findings highlighted the importance of digital recruitment tool ease-of-use and personalisation to suit job applicant needs. Study 2 adopted a quantitative method, surveying graduates in a top Irish business school. Using path analysis, a mediation model was tested for the ease-of-use and personalisation linked to job applicant satisfaction and positive experience with the employer via perceived inclusion. These results bolstered support for the importance of job applicants' perceived inclusion and the drivers enabling inclusion during digital recruitment. This study extends strategic human capital and human resource management research by adding digital and inclusive management elements. Implications for research and practice are discussed.

HR: Investigating Electronic Word-of-Mouth on Social Media: An Eye Tracking Approach  

Author: **Kang Yang Trevor Yu**, *Nanyang Technological U.*
Author: **Shota Kawasaki**, *Nanyang Business School*
Author: **Kim Huat Goh**, *Nanyang Technological U.*

We investigate how individuals process electronic word-of-mouth (eWOM) about jobs and employers on social media. Employing eye-tracking methodology, we examined 1) how positive and negative eWOM is processed differently, 2) what factors influence job seekers' cognitive processing of eWOM, and 3) factors that influence overall perceptions of credibility of eWOM as a source of employer information. Our results suggest the following: 1) job seekers devote more attention to negative compared to positive eWOM; 2) employer familiarity promotes effortful processing of eWOM; 3) employer reputation hinders processing of negative eWOM for active job seekers; and 4) employer reputation and job search efforts enhance one's perceptions of credibility of eWOM. Overall, this research provides valuable insight to the cognitive processing of online employer information and its implications for job search, recruitment, and employer branding.

Research on hierarchy has exploded in recent years. In this work, management scholars have largely focused on high- and low-rank roles within a hierarchy and how high and low rank can drive individual, group, and organizational processes and outcomes. However, recent work has begun to move beyond the study of traditional high- versus low-rank roles in hierarchies to instead consider other consequential hierarchical roles in groups and organizations. In this symposium we highlight this emerging area of research on alternative perspectives on hierarchical roles, bringing together a set of five cutting-edge papers. These papers all offer new perspectives on the roles of different hierarchical ranks, including developing theory on the role of various high-ranking members in alliances (first paper), unpacking the consequences of a common yet overlooked rank: the second-in-command rank (second paper), identifying how middle and low-ranking group members can emerge as informal leaders (third paper), challenging whether high ranks matter at all considering high rank does not automatically confer authority (fourth paper), and understanding the experience of rank 'losers' (fifth paper). The five papers across this symposium move beyond traditional studies of high-versus-low ranked roles in hierarchies and demonstrate that these other perspectives on hierarchical roles can also have profound influences on individual, group, and organizational processes and outcomes. Following the presentations, Dr. Drew Carton will facilitate a group discussion about these papers and future research on alternative views on hierarchical roles.

Distinguished Speaker: **Donald F. Kuratko**, *Indiana U.*
Distinguished Speaker: **Maureen A. Scully**, *U. of Massachusetts, Boston*
Facilitator: **Anne-Cathrin Ninette Darcis**, *Heinrich-Heine U. of Dusseldorf*

The idea that entrepreneurship has a strong role to play in tackling social problems has long attracted interest both within the ENT Division and many others across the Academy (e.g., ONE, SIM), but thus far little attention has been devoted to this idea in the context of established organizations, i.e. social intrapreneurship. In the spirit of the AOM 2021 theme, in this PDW we aim to unpack the challenges and opportunities that the context of established organizations poses for researchers and managers interested in pursuing social change from within, and to carve a future path for inquiry that addresses the issues confronting the managers supporting or practicing social intrapreneurship. With COVID-19 and climate change testing our economic systems and organizations, social intrapreneurs will be of paramount importance to rethinking the future of the corporation and 'building back better'. With the Aspen Institute as the convening partner, the session is structured into two parts. The first part includes networking opportunities among participants, followed by an overview of the extant literature by scholars in the field, and a 'fireside' chat with leading practitioners and academics. The second part of the session will use an interactive format based on the World Café (<http://www.theworldcafe.com>) that will then result in (a) putting forward key topics for future research and practice, and (b) individuals partnering around research projects (both practitioners and academics). In closing, the conveners will share their thoughts for future follow-up after the PDW.

Pre-registration is recommended but not required for the second part of the workshop. We will share recommended readings with pre-registered participants ahead of the meeting. Please note no preliminary preparation is required to attend the workshop. To pre-register, please email elisa.alt@kcl.ac.uk by July 25.

Panelist: **Matthew Steven Wood**, *Baylor U.*

Entrepreneurial action (EA) is a central construct in understanding entrepreneurship. As a result, scholars have conducted extensive research and shed important insight into the underlying factors contributing to entrepreneurial action (McMullen & Shepherd, 2006; Cardon & Kirk, 2015; Wiklund, Yu & Patzelt, 2018). Yet, our understanding of EA remains fragmented, and advancing research on context, process, and non-deliberative dynamics that shape these actions has never been more important, particularly in the event of COVID 19. In response to increasing interest, we build on a successful EA focused AOM 2020 PDW and identify challenges from four aspects: contextual, processual, non-deliberative, and conceptual dynamics facing EA research going forward. With this hybrid 2.5-hour PDW, part asynchronous and part synchronous, we endeavor to bring together a myriad of expert perspectives to highlight and integrate the diversity of contextual, processual, non-deliberative, and conceptual facets shaping entrepreneurial action (and inaction!) (EA/I).

International HR Issues

Digital Session Chair: **Helene Tenzer**, *U. of Tuebingen*

This session examines international HR issues. The papers in the session address the role of host country support and gratitude in individual thriving during the pandemic, the relationship between EMNE internationalization and innovation performance and the impact of two types of board-level diversity on this relationship, the impact of international new venture's internationalization approaches on potential jobseekers' perceived organizational attractiveness, and a review of research on repatriates' microsystems, or interpersonal networks.

IM: Home Is Wherever I'm With You – A Review of The Repatriate's Microsystem and Directions for Research

Author: **Sarah E. Henry**, *U. of Oklahoma*
Author: **Margaret A. Shaffer**, *U. of Oklahoma*

In recent years, the repatriation of employees on international assignments has captured the attention of researchers and practitioners alike. Although organizations invest considerable time, money, and attention towards sending these employees on international assignments, research indicates that employees experience difficulties during the repatriation stage, often resulting in turnover. In this paper, we review existing repatriation research with a specific focus on the individual's microsystem, or interpersonal network, in order to determine how the repatriate's relationships in the home and host countries influence key outcomes such as readjustment, knowledge transfer, and retention. These relationships are evaluated through the lenses of two different domains: personal and professional. We identify key relationships within each domain, review prior research, and offer suggestions for future research.

Paper is Available to Meeting Registrants Only.

IM: Beyond Mere Coping: The Role of Host Country Support and Gratitude in Thriving During the Pandemic

Author: **Jing Hua**, *Troy U.*
Author: **Lu Zheng**, *Huazhong U. of Science and Technology*
Author: **Alan G. Walker**, *Auburn U.*
Author: **Ian Stuart Mercer**, *Auburn U.*
Author: **Jiayi Liu**, *Auburn U.*
Author: **Jinyan Fan**, *Auburn U.*

While the ensuing COVID-19 pandemic has significantly altered individuals' lives worldwide, it has been perhaps especially disruptive to the lives of sojourners as many have been unable to return home and are absent from their families, a familiar culture, and normal social support systems. While it is important to ask how such individuals can successfully cope in such a crisis, we were interested in extending our knowledge and understanding by asking "how can such individuals move beyond mere coping to a state of thriving?" In answering this question, we utilized a positive psychology framework to develop a theoretical model wherein we expected higher/lower levels of perceived host country support to result in higher/lower levels of perceived gratitude, which would then result in higher/lower levels of thriving, and ethnocentrism moderated this indirect effect. To test our model, we utilized a sample of sojourners who responded to a pre-COVID-19 survey (February 2020) measuring ethnocentrism. We then administered daily surveys measuring perceived host country support, gratitude, and thriving over a nine-day period during the COVID-19 crisis (March 26–April 3, 2020). Results supported the indirect effect of host country support on thriving via gratitude. Further, we found that sojourners with lower levels of ethnocentrism exhibited stronger host country support-gratitude link, hence stronger indirect effect of host country support on thriving via gratitude. We close by offering implications for the existing literature, future research, and organizational practices.

Paper is Available to Meeting Registrants Only.

IM: Do international new ventures have attraction advantages?

Author: **Philipp Volkmer**, *U. of Bayreuth*
Author: **Matthias Baum**, *U. of Bayreuth*
Author: **Nicole Coviello**, *Wilfrid Laurier U.*

Attracting qualified employees stays one of the most critical challenges for new ventures – exceptionally for those who enter foreign markets close after inception: international new ventures (INVs). Based on signaling theory and person-environment (PE) fit-theory, this paper examines the impact of INVs approach of internationalization on potential jobseekers' perceived organizational attractiveness. We conducted two studies to elaborate our research questions - a qualitative pre-study where we interviewed c-level-staff (n=23) from 22 different new ventures and a subsequent metric conjoint experiment with jobseekers (n=222) to test our theoretically derived hypotheses. Results from a multilevel regression analyses show that INVs have attraction advantages based on their proactive internationalization approach and that particularly jobseekers with previous international experience feel attracted by INVs – providing ground for human-resource based competitive advantages when it comes to proactive internationalization. We derive implications for new venture recruitment theory and offer practical implications for startup staffing. Keywords: International new ventures (INVs); International Entrepreneurship; Recruitment; Metric conjoint experiment; Organizational attractiveness

IM: The effect of EMNE internationalization on innovation: the role of board diversity

Author: **Saneesh Edacherian**, *Indian Institute of Management, Ahmedabad*
Author: **Nikolaus T. Uhlenbruck**, *U. of Montana*
Author: **Sunil Sharma**, *Indian Institute of Management, Ahmedabad*

There is a consensus among researchers that the internationalization of emerging economy multinational enterprises (EMNEs) was motivated by their intention to acquire strategic assets such as innovative technologies, broaden their expertise, and enhance their skills. However, surprisingly, the amount of research on the outcomes of EMNE internationalization and the role of strategic leaders in capturing the advantages of internationalization is scarce. To address this gap, we study the relationship between EMNE internationalization and innovation performance and the impact of two types of board-level diversity on this relationship. We empirically test these relationships on a 21-year panel data of 244 firms comprising the Indian biopharmaceutical industry. We find that EMNE internationalization has an inverted U-shaped relationship with innovation performance, and this relationship is contingent on board functional and gender diversity. Our study contributes to EMNE internationalization and upper echelons literature in several ways.

**Global Mobility of People: Challenges and Opportunities for
International Business**
Global Mobility of People

Chair: **Alain C. Verbeke**, *U. of Calgary*
Panelist: **Dana B. Minbaeva**, *Copenhagen Business School*
Panelist: **Anupama Phene**, *George Washington U.*
Panelist: **Shea Xuejiao Fan**, *RMIT U.*

Despite the backlash over the last decade, the last 70 years have demonstrated a megatrend with a systematic rise in the cross-border mobility and migration of skilled and unskilled workers, both through the use of expatriation by multinational enterprises (MNEs), as well as through migration. The global mobility of people is fundamental to a variety of theoretical IB issues and particularly for the MNE's ability to efficiently organize human capital across its internal network conferring competitive advantage. Lately, the COVID pandemic not only reduced both the frequency and extent of global mobility, but fundamentally questioned its need. In this panel we consider the influence of the global mobility of people on the spread, activities and performance of the MNE. The panelists will explore and debate this influence from different disciplinary areas (general IB theory, global innovation, knowledge-based view, international human resource management, international and cross-cultural management) and different levels of analysis (micro, meso and macro). Further the panelists will examine how MNEs and other international organizations could retain the benefits of global mobility, either through its continued practice or by developing alternatives to address emerging restrictions in order to maintain advantage in the face of rising global competition.

Facilitator: **Ajay Narayanan**, -
Chair: **Param Srikantia**, *Baldwin Wallace U.*

The PDW explores almost a dozen tributaries of theory and practice that have culminated in what may be called the era of ‘consciousness based transformation’. It is based on the idea that raising people’s consciousness in organizations is among the most significant pathways of transformation and performance excellence. The workshop will feature five presenters who have spent decades exploring creative ways of translating “enlightened consciousness” into practical organizational systems, processes and interventions. With practical examples drawn from their careers and the use of interactive exercises, the presenters will discuss stories and interventions that exemplify the manager’s possibility as an enlightened presence. When we examine the history of managerial and organizational change theory and practice, we can discern five distinct phases in the evolution of the field. We are now witnessing the unfolding of the fifth era in which people are viewed as embodiments of consciousness, with a growing appreciation of the many ways in which the invisible domain of our inner consciousness shapes individual and organizational processes. This shift represents a powerful opportunity particularly for practitioners from Eastern cultures to extend the application of techniques drawn from eastern traditions in shaping the future of managerial and organizational transformation and leadership development.

This AAT PDW proposal is a response to the AOM 2021 CFP (theme: "Bringing the Manager back in Management"): "What makes for an effective manager in virtual/ hybrid workforces? How can organizations and managers deal simultaneously with increased global connectivity through social media? ... Will we need managers in the future or what views can help us redefine "management?" (Hillman 2020, p. 1). Whereas Artificial Intelligence (AI) has been identified as a way to create "an impact on a broader set of stakeholders than the research community" (Aguinis et al., 2019, p. 25), AMP is one of the only journals published by AOM where the "digital transformation" appear in an article title within the past three years. By contrast, most of the top ranked journals in the field of Information Systems (IS) issued calls-for-papers for special issues about AI, including MISQ, EJIS, ISR, and JAIS. MISQ executives just announced a special issue on digital transformation. Such concerns about this lack of research within management journals were echoed in an editorial in AMJ where the authors argued for the need for more research on the digital workforce and the workplace of the future and for greater understanding of societal grand challenges through management research. Digital transformation is now a practical problem, related both to job destruction and creation. During the COVID-19 crisis, digital transformation played a pivotal role in helping organizations to cope with the crisis and digital capabilities are becoming even more important to increase organizational resilience during the crisis. Therefore, this PDW aims to develop a greater understanding of digital transformation management value. In many divisions at AOM annual meetings, theories have been suggested for the evaluation of digital transformation management value such as the hidden work (Watson-Mannheim and Klein 2018) at OCIS division or the hidden cost (Savall Zardet Bonnet 2008) at MC division. This workshop will address these concerns with a further goal of promoting publishable research on them. Therefore, AI in management may be a way to respond to the all-academy theme question: "Bringing back the managers in management". The response to this question might be a "convergence across different domains to tackle common theoretical and practical problem" such as digital transformation.

A Focus on CEOs - How CEO Attributes Influence Firms

Digital Session Chair: **Elizabeth Lim**, *Georgia State U.*

MOC: Roles of CEO Pay Deviation and Firm Performance on the Expansion and Contraction of Firm Boundaries

Author: **Elizabeth Lim**, *Georgia State U.*

Building on theories of equity and social comparisons, we examine how CEOs paid below the going labor market rate influences new business entry and divestiture. Unlike prior studies which focused on boundary expansion strategies, we argue that underpaid CEOs seek to address pay equity concerns by engaging in both expansion and contraction of firm boundaries to increase shareholder value as a means to improve CEO total pay. Moreover, unlike prior research which focused on CEO relative total pay, we provide more nuances to our theoretical analysis by analyzing types of long-term incentive pay and short-term cash pay. We also predict firm performance negatively moderates the main relationships because stronger performance gives underpaid CEOs more legitimacy to influence the pay-setting process. Our hypotheses are largely supported.

Paper is NOT Available. Please contact the author(s).

MOC: CEO Self-Monitoring: An Old Construct in New Shoes

Author: **Cristina Oana Vlas**, *U. of Massachusetts, Amherst*

Author: **Mengjie Xu**, *U. of Massachusetts, Amherst*

Author: **Youstina Masoud**, *UMass Amherst*

Author: **Urmi Chaudhuri**, *U. of Massachusetts, Amherst*

This study proposes an unobtrusive measure of the self-monitoring of chief executive officers (CEOs). Using CEOs' appearance in the news, popularity, and compensation transparency, we examine the effect of CEO self-monitoring on firms' innovation strategy and innovation performance. A dataset of 105 CEOs in U.S.-based firms operating in an array of innovation-intensive industries between 1998 and 2018 inclusive show that self-monitoring in CEOs is positively related to innovation fluctuation as well as innovation mildness, and it stimulates efficacy and efficiency of innovation performance. The results suggest that high self-monitoring CEOs favor innovation decisions that drive social acceptance, resulting in high fluctuations in innovation strategies over time, but that overall tend to stay in line with other firms' innovation strategies. In these industries, their firms' innovation performance is generally better than that of firms with low self-monitoring CEOs.

MOC: Differential Effects of CEO Hubris and Overconfidence on Firm Performance: A Meta-Analysis

Author: **Temitope Oladimeji**, *U. of Texas at Austin*

Author: **David A. Harrison**, *U. of Texas at Austin*

We conduct a quantitative summary of empirical research on the performance consequences of CEO hubris and overconfidence, which we collectively refer to as self-exaggeration. To resolve outstanding theoretical, empirical, and substantive debates, we test predictions using meta-analytic techniques on a sample of 112 primary studies and 267 effect sizes, conducted in 25 different countries. We find that these two forms of self-exaggeration have opposing relationships with firm performance, fitting a differential referents paradigm regarding these executive attributes. CEO hubris has detrimental outcomes for accounting and capital market dimensions of firm performance. CEO overconfidence has beneficial outcomes for those same performance dimensions. We also find that CEO hubris is sensitive to national contextual factors that expand or constrict top managers' discretion, but CEO overconfidence is not. We discuss several insights and implications for these cumulative results and offer suggestions for new theoretical and empirical directions.

MOC: A Glimpse into the Boardroom Black Box: Attentional Bias, Power Dynamics and CEO Interconnectedness

Author: **Juan Romero-McCarthy**, *IPADE Business School*

Author: **German Cespedes**, *IPADE Business School*

Environmental scanning is a complex human process, and CEOs are limited in their attentional capabilities, making it necessary for them to selectively interpret objects and events. Boards contribute to filtering and processing vast amounts of data from both inside and outside the firm, but this filtering is affected by their attentional limitations and the social and cognitive relationships they establish with their CEOs. Using content analysis, we measure the impact of the board's imported attention on the CEO's attentional focus resulting from the directors' roles and experiences as board members at other tied-to firms. We theorize and find that the CEO's attention emphasis is affected by the board's imported attention emphasis and that the power dynamics inside the boardroom moderates this process.

MOC: The Role of CEOs' Cognitive Complexity and Cognitive Flexibility in Strategic Change

Author: **Philipp Benedikt Becker**, *WU Vienna U. of Economics and Business*

Author: **Patricia Klärner**, *WU Vienna U. of Economics and Business*

In this study, we examine the influence of two CEO cognitive map properties - CEO cognitive complexity and cognitive flexibility - on strategic change. Combining a topic model algorithm, trained on over 2 Million words, with network analysis, we measure the complexity of individual cognitive maps as well as their degree of adaption over time. Our panel data analysis of 156 firms in the S&P 500 between 2002-2019 shows that CEO cognitive complexity is negatively related to strategic change, while CEO cognitive flexibility is positively related to strategic change. However, the effect of cognitive complexity on strategic change is mediated through cognitive flexibility. Our study's findings contribute novel insights into the cognitive microfoundations of strategic change. We also provide empirical evidence of the detrimental effects of CEO cognitive complexity by revealing the mediating role of cognitive flexibility. Finally, we develop a new text-based approach to measure CEO cognitive map properties over time.

Modern Applications of Social Network Research

Digital Session Chair: **Karoline Strauss**, *ESSEC Business School*

MOC: **Synergy and Conflict in Visions of the Future: A Network-Based Approach to Future Work Selves**

Author: **Karoline Strauss**, *ESSEC Business School*
Author: **Julija Mell**, *Erasmus U. Rotterdam*
Author: **Frederik Anseel**, *UNSW Sydney Business School, Australia*
Author: **Annemijn Loermans**, *ESSEC Business School*

When thinking about their future career, not all individuals have a coherent vision of the desired future. Instead, some may imagine incompatible attributes for their future self and feel torn between them. We introduce the interconnectedness between future-oriented self-attributes as a previously overlooked quality of the way individuals think about their future by proposing a network-based approach to future work selves. We distinguish between future work self networks' positive density, the proportion of mutually facilitative ties between the attributes they contain, and their negative density, the proportion of ties that indicate conflict between attributes. We developed a methodology to capture future work self networks and across a series of studies showed that positive and negative density of future work self networks are distinct from related concepts such as career aspirations and vocational identity, as well as from the elaboration of future work self narratives. Positive density of future work self networks was related to career adaptability in a sample of 120 MBA students, and predicted career adaptability and proactive career behavior in a lagged study of 141 online panel respondents. In a lagged study of 517 employees from 11 companies, vitality mediated the relationship between positive density and proactive career behavior, suggesting that a more efficient use of resources may be one of the benefits of dense networks. An internal meta-analysis provided support for the positive relationship of positive density with career adaptability and proactive career behavior, and the negative relationship of negative density with proactive career behavior.

MOC: **Embedding Roles & Social Identities during Socialization: An Intrapersonal Network Perspective**

Author: **Peter Anzollitto**, *U. of North Texas*
Author: **Virginie Lopez Kidwell**, *U. of North Texas*

We propose theory to explain how newcomers' new organizational roles and social identities become embedded. Identity embeddedness is indicated by: degree centrality in the intrapersonal identity harmony network, perceived harmony with the network itself, and the perceived cost of lacking harmony with a focal identity. Newcomers are likely to be more satisfied and engaged with identities with greater embeddedness as well as find such identities to be more salient. The process of embedding identities is influenced by how an individual's preexisting identities interact with new organizational identities during socialization. To explain these interactions, we clarify the construct of identity harmony from a network perspective. Organizations can work to embed their employees' new identities through initiating identity work directed towards increasing harmony perceptions among the newcomers' new organizational identities and preexisting identities. Through helping individuals create harmony relationships among identities, organizations can improve socialization outcomes while actively participating in newcomers' self-narratives.

MOC: **With Age Comes Better Networks: How Age Shapes Networks That Foster Performance**

Author: **Jigyasu Shukla**, *U. of Central Florida*
Author: **Prasad Balkundi**, *U. at Buffalo, The State U. of New York*
Author: **Katie Badura**, *Georgia Institute of Technology*
Author: **Wonho Jeung**, *Korea National Defense U.*
Author: **Manish Singhal**, *XLRI-Xavier School of Management*
Author: **Peter Harms**, *U. of Alabama*
Author: **Sujitha Karnad**, *Xavier Labour Relations Institute*

Age has been linked to performance in multiple meta-analytical reviews. However, there is a lack of consensus in the extant literature about the exact nature of this relationship. Moreover, existing literature has not looked upon the above relationship through the process mechanism of workplace instrumental ties. We utilize social network analysis to investigate the instrumental network as a mechanism linking age and task performance plus age and interpersonal citizenship behaviors. More importantly, we study cognitive accuracy in social structure as the boundary condition influencing age-instrumental ties- performance relationships. In a rigorous methodology to investigate the above relationship, we collected multi-wave data from two organizational studies. In Study 1, we collected data from 179 employees at an Indian information technology services organization, and in Study 2, we collected data from 829 recruits in a South Korean army boot camp. Our moderated mediation model was supported by combining the two studies. Findings showed that instrumental network size mediated the relationship between age and job performance as well as between age and interpersonal citizenship behaviors. Cognitive accuracy of the social networks moderated the above relationships. Our research contributes to socioemotional selectivity theory and has important managerial implications.

MOC: **Occupying Brokerage Position that Endangers Performance? The Perspective of Interpretive Agency**

Author: **Qi Zhang**, *Erasmus U. Rotterdam*
Author: **Stefano Tasselli**, *Erasmus U. Rotterdam*

Organizational social network research in the past two decades is marked by an effort in integrating the psychological and network perspective. However, this trend over relies on a rational model of agency that sees people as purposive agents who actively seek for network-related advantage, restraining the conceptualization of "individuals" in network research. We theorize "interpretive agency" as the neglected side of agency and explore whether it addresses some long-standing puzzle in network literature: how people form brokerage that harms. Stressing that subjective experience and interpretation shape social action, interpretive agency can be captured in two information processing orientations that create stable and systematic variations in immediate intrapsychic experience and habitual interpretation of social relations: sensory processing sensitivity and relational schema. In two empirical studies, we first show that the supposedly advantageous brokerage can be experienced as detrimental to performance for highly sensitive individuals. Moreover, we demonstrate that the interpretation tuned by sensitivity and relational schema explains the formation of brokerage - regardless of the actual impact of brokerage. Not merely a means to structural advantage, brokerage can indeed be experienced and interpreted as an end that eventually generates undesirable or unintended outcome.

New Perspectives on Workplace Identity

Digital Session Chair: **Karolina Wenefrieda Nieberle**, *Durham U. Business School*

MOC: Modeling Identities in Context: A Dynamical Systems Approach to Leader-Follower Identities 

Author: **Karolina Wenefrieda Nieberle**, *Durham U. Business School*
Author: **Bryan Acton**, *Durham U. Business School*
Author: **Susanne Helena Braun**, *Durham U.*
Author: **Robert G. Lord**, *Durham U.*

Although leadership and followership processes are flexible and fluid, our theoretical and empirical knowledge of the short-term dynamics in individuals' leadership and followership identities are limited. Building on a Dynamical Systems Perspective we argue that leadership and followership identities are complex systems, that are composed of multiple interacting elements that exhibit emergent and nonlinear intra-personal identity dynamics. With the goal to explore these patterns of leader-follower identity variability across different contexts we address two questions: (1) How are individuals' leadership and followership identity dynamics characterized in different contexts associated with uncertainty? (2) How are these leadership and followership identity dynamics interrelated within different contexts? We collected daily data from a total of 69 Undergraduate students (1,159 data points) in the United Kingdom across seven-day periods in three different contexts during the academic year. Findings from dynamical systems modeling reveal the entangled nature of leadership and followership identities, different attractor states as well as consequences of COVID-19 on leadership and followership identity dynamics.

MOC: "We are going digital": Leveraging organizational identity pluralism for proactive adaptation

Author: **Mohammad Taghi Ramezan Zadeh**, *Amsterdam Business School, U. of Amsterdam*
Author: **Henk W. Volberda**, *Amsterdam Business School, U. of Amsterdam*

We investigate how incumbents adapt to a major technological change through an inductive study of three large and established firms. Our core contribution is a framework of how proactive incumbents turn their established identities into means of adapting to the technological change, here the digital revolution, through reflecting on and flexing, pluralizing, leveraging, and adapting organizational identity. We conceptualize meta-identity and sub-identity bricolage to explain organizational identity work while coping with the digital revolution proactively. We also distinguish between additive and transformative meta-identities, based on their effect on how adaptation projects are structured. Moreover, we find that managers across hierarchical levels complement each other's adaptation efforts; top managers promote meta-identity, and intrapreneurs construct sub-identity bricolage. Such identity works help managers avoid potential tensions between identity and innovation. We develop a multilevel identity-informed theoretical model of the firm's adaptation to major technological change. We discuss our findings and identify avenues for future research.

MOC: Working for the Same Purpose and Yet Against Each Other: The Process of Identity Network Enactment 

Author: **Virgil Fenters**, *UNLV*

Scholars have suggested that intrapersonal identity networks – the combination of identities and the relationships between them – influence enactment. However, very little is known about the process by which components of one's identity network interact to result in a single stream of enactment. Taking a grounded theory approach, I examined a cancer care surgical system and developed a process model of intrapersonal identity network enactment. My findings challenge the extant literature by suggesting that a common, highly central identity is not enough to align behavior in organizations. Individuals may enact a common "higher-order" identity in combination with the rest of their identity network in ways that actually work against each other, even as they genuinely work toward the same purpose. I also show how one's intrapersonal identity network influences how one interprets the enacted behavior of others. In doing so, I extend the identity literature by explaining how the same event can be experienced as an identity threat by some individuals and an identity opportunity by others, even when they share a common higher-order identity.

MOC: Members or mavericks? Organizational Identification Dynamics during Secret Innovation Projects  

Author: **Anika Stephan**, *HEG School of Management Fribourg / HES-SO // U. of Applied Sciences Wes*
Author: **Philipp Bubenzer**, *HES-SO / ETH Zurich*

Prior management research has provided extensive evidence that organizational members who identify with their organization tend to support its norms and objectives by displaying behaviors that are in-line with or beyond organizational expectations. We question whether this account of observable in-role or extra-role behaviors is complete and study organizational identification dynamics in a series of secret, unauthorized innovation projects (so-called "bootlegging" projects) within a technology-driven multinational firm. In contrast to prior research, our findings suggest that organizational identification may sometimes lead members to deliberately violate organizational norms in a struggle to support their organization. More specifically, we find that organizational identification turns out to simultaneously motivate both overt in-role and secret counter-role behaviors which, at first sight, appear to be conflicting as they both draw on the member's scarce resources. However, our results reveal that both behaviors really complement each other and thus create an interesting, hitherto unexplored organizational paradox. We then move on to also study how a member's organizational identification may change when performing the secret innovation project and uncover the critical role of managerial responses for successfully sustaining and strengthening organizational identification of members who are both, loyal members and loose mavericks at the same time.

Panelist: **Jeff Thompson**, *Brigham Young U.*
Panelist: **Sarah Ward**, *U. of Illinois at Urbana-Champaign*
Panelist: **Amy Wrzesniewski**, *Yale U.*

Scholars of work have discovered that individuals can derive a strong sense of meaning from work. Existing research has examined individuals' sense of meaning from different perspectives. Research has investigated how individuals experience their work as a calling, what it means when people feel intense passion for their work, or what happens when employees hold idealized views about what their work should be. Studies focusing on callings, passion, and idealism, however, have largely been evolving separately, making it hard to systematically discern their similarities and differences. Further, as scholarly and practical interests in meaningful work continue to grow, it is time to take stock and consider new questions regarding implications of callings, passion, or idealism. Especially in light of the various changes occurring in the new world of work, we need to move beyond implications of callings, passion and idealism for individual behaviors and towards understanding implications for individuals' relationships with others, as well as for organizational and professional outcomes. In this PDW, we bring together leading experts on callings, passion, idealism, and meaningful work in general. They will offer their unique perspectives to help interested researchers reflect on the similarities and distinctions between these constructs and envision new directions to deepen our understanding of individuals' experience of meaningful work beyond the individual level.

Thank you for your interest in our PDW! All are welcome to attend the main panel session without pre-registration within maximum capacity. Should you wish to participate in the PDW breakout rooms with our speakers, please fill out the following survey by June 20th, 2021: https://docs.google.com/forms/d/e/1FAIpQLSf1KeySFYruTXMfTylpS-J5L4E36E3MiLo1MixtH8HX65Z2Rw/viewform?usp=sf_link We will attribute breakout rooms on a first-come, first-served basis. Please contact Siyin Chen at siyin.chen@rotman.utoronto.ca for any additional questions. We look forward to seeing you at AOM.

Applications of Mindfulness in Post-pandemic Era

Mindfulness in the Post-pandemic Era

Presenter: **Frederick Chavalit Tsao**, *Chairman IMC Pan Asia Alliance*
Chair: **Tojo Thatchenkery**, *George Mason U.*
Presenter: **Jessica Srikantia**, *George Mason U.*
Chair: **Param Srikantia**, *Baldwin Wallace U.*
Facilitator: **Ajay Narayanan**, -
Presenter: **Ellen Keithline Byrne**, *Her New Standard: The Playbook for Women Leaders*
Presenter: **Ratanjit Sondhe**, *Discover Oneness Foundation*
Presenter: **Param Srikantia**, *Baldwin Wallace U.*
Presenter: **Tojo Thatchenkery**, *George Mason U.*

The PDW will explore creative applications of mindfulness practices in a variety of contexts in the amelioration of human alienation from the pandemic, in re-imagining management education post-COVID, in fostering creativity in a corporate context and as a tool of effective leadership in a global transnational organization. After discussing the application of mindfulness, the workshop will provide an experiential activity consisting of a series of ultra-brief interventions (UBIs) to experience simple techniques of mindfulness that can be easily applied in a variety of settings.

LMX Perspectives on Leadership

Digital Session Chair: **Fan Yang**, *Guanghua School of Management, Peking U.*

OB: Standing out or Singing alone: Examining Outcomes of “Solo Perfectionist” in a team, the Role of LMX 

Author: **Fan Yang**, *Guanghua School of Management, Peking U.*
Author: **Hui Wang**, *Peking U.*

Solo perfectionist refers to employees with the remarkably highest level in perfectionism comparing to other team members—the more “solo” they are, the larger the difference between their perfectionism and others’ (Li & Liao, 2014; Seo, Nahrgang, Carter, & Hom, 2018). Therefore, a high level of perfectionism “solo-ness” could be associated with both prominence and isolation. Drawing upon expectation status theory (EST) and leader-member exchange (LMX) theory, the current research examines the effects of perfectionism “solo-ness” on their status attainment, loneliness and distal workplace outcomes under different LMX quality. Results from a pilot study using scenario experiment show that the third party would attribute highest status, leader emergence and promotability to the highest perfectionist when both their “solo-ness” and LMX are high. Furthermore, results from main study using a time-lagged multi-source field survey show that when LMX is high, perfectionism “solo-ness” is positively related to status and further results in leader emergence and promotability. When LMX is low, such effects become weaker. In contrast, when LMX is low versus high, perfectionism “solo-ness” is positively related to loneliness and further results in burnout. Implications and future directions are discussed.

Paper is Available to Meeting Registrants Only.

OB: The Evolution of LMX Relationships and the Effect of Asymmetric Exchange: A 7-wave Study

Author: **Roeliene Van Es**, *Ghent U.*
Author: **Katia Levecque**, *Ghent U.*
Author: **Frederik Anseel**, *UNSW Sydney Business School, Australia*

This study provides new insights into the long-term dynamics of LMX relationships. In line with the core tenets of LMX theory, we posit that the evolution of LMX relationships follows a pattern characterized by an increase from its start and a decrease towards its end. However, we suggest that at any time this pattern may be disrupted and changed by asymmetric exchange, e.g. a one-sided investment in the relationship that is abruptly higher or lower than usual, and thus diverges from the previous exchange pattern. On the basis of a longitudinal sample of 789 members, covering seven datapoints over one year, and using discontinuous growth curve modeling, we found that LMX evolution during development was bell-shaped and decreased towards dissolution. Positive asymmetric exchange led to an instant rise of LMX quality and was followed by gradual improvement of LMX quality. Negative exchange had a detrimental effect on the relationship, without subsequent restoration to previous quality levels. Our findings stress the need for further longitudinal research on LMX and how and why it may change.

OB: LMX, RLMX and Job Involvement: Effects of Leader’s Power Distance Orientation and Promotion Criteria

Author: **Xiaoqing Pan**, *School of Management, Huazhong U. of Science and Technology*

A multi-level model based on social information processing theory is used to explain how and when the leader-employee social exchange relationship relates to employee’s job involvement simultaneously at the vertical dyad level (leader-member exchange; LMX) and through the horizontal group context (relative leader-member exchange; RLMX). Based on the data collected from 113 team leaders and their 452 corresponding employees, the results showed that both the LMX and RLMX positively related to employees’ job involvement via their perceived informal status. Moreover, moderated path analysis revealed the indirect relationship between LMX and job involvement was stronger when the leader had lower power distance orientation and absolute promotion criteria were used in the team. The indirect relationship between RLMX and job involvement was stronger when the leader had higher power distance orientation and adopted absolute promotion criteria.

OB: Replacing Leadership by Vision with the Leadership of Vision: the As-Yet-Impossible Prototype

Author: **Kris Mikel Hong**, *School of Economics and Management Tsinghua U.*

While much of the leadership literature describes how leaders use vision as a tool to influence people, what if it is actually the leaders who should be used to facilitate the leadership of vision? Paralleling the distinction between “rule by law” and “the rule of law,” I develop a theory of identity-based leadership that emphasizes how visions are superordinate to leaders and organizations. This paper discusses these processes by examining self-categorization theory in the context of the distant future. By being grounded in the distant future, a vision provides a discontinuity and contrast with current realities. This redefinition of vision allows for conceptual consistency of the envisioned group’s as-yet-impossible prototype despite changes in contexts, leaders and collectives. As members identify with the envisioned group, their actions reconfigure current reality to enable the vision’s alternative reality. This paper discusses how the reframing of vision addresses organizational phenomena at multiple levels of analysis and in contexts including vision communication, leader-follower relationships, leader succession, and organizational change. In concluding I also briefly explore how the leadership of vision highlights the imminent dangers of divisive yet inextinguishable visions.

Predicting Employee Perceptions and Judgments

Digital Session Chair: **Bret Sanner**, *Iona College - LaPenta School of Business*

ODC: **Desperate Times Call for Desperate Measures: The Effect of the COVID-19 Pandemic on Evaluations**

Author: **Bret Sanner**, *Iona College - LaPenta School of Business*

Author: **Karoline Evans**, *U. of Massachusetts, Lowell*

Author: **Delia Fernandez**, *Iona College - LaPenta School of Business*

The COVID-19 pandemic upended how people interact and work in ways that increased social isolation and, in turn, possibly changed how team members evaluate each other's contributions. We investigate this possibility by extending the reflective-impulsive model. More specifically, the reflective-impulsive model suggests that, because team members' resources have been depleted by the COVID-19 pandemic, individuals will use their reflective process less thereby creating less accurate impressions of their teammates' task abilities and reducing the weight they put on their perceptions of task abilities in evaluations. The reflective-impulsive model further suggests that, because restrictions related to the COVID-19 pandemic have made it difficult for many people to meet their need for relatedness, members will use their impulsive process to positively evaluate those who are higher on relatedness. Data from virtual and in-person teams from before and during the pandemic support our model. Supplemental analysis also suggests that, during the COVID-19 pandemic, members can increase their relatedness thereby improving their evaluations by being influential. Our findings provide insights into how individuals make evaluations during a crisis and suggest practical implications for how members can be more positively evaluated and more accurately evaluate others during the remainder of the COVID-19 pandemic.

ODC: **How and When Leaders' Perception of Organizational Change Influence Followers' Perception and Coping**

Author: **Xueqing Fan**, *Rutgers U.*

Author: **Xueling Fan**, *School of Business, Nanjing U.*

Author: **Wen Wu**, *Beijing Jiaotong U.*

Author: **Xiaoyun (Aarn) Cao**, *Lake Forest College*

Leaders take dual roles as both recipients and implementors during organizational change. Extant research, however, has primarily focused on only one of these dual roles with the other role ignored. Building on conservation of resource theory and attribution theory, this study integrates leaders' recipient and implementor roles in one model by examining how and when leaders' threat perception links to employees' threat perception and maladaptive coping behaviors. With three-wave data from 59 leaders and 436 employees, we found that leaders' threat perception was indirectly associated with employees' threat perception and maladaptive coping via change-related information hiding, and leader-member exchange mean strengthened the indirect effect that leaders have on employees. The implications of our findings for theory, practices, and future research are discussed.

Paper is Available to Meeting Registrants Only.

ODC: **Past, Present and No Future: Survivors' Perceptions of Organizational Decline**

Author: **Carl Richard Hossiep**, *U. of Muenster*

Author: **Ulrike Holder**, *WWU Münster*

Author: **Thomas Ehrmann**, *U. of Muenster*

Author: **Gerhard Schewe**, *U. of Muenster*

This article investigates the work attitudes of survivors during the ongoing decline of a firm with no prospect of recovery due to external causes. Data from a German firm is used as a case study. In particular, we explore whether transparency is a tool for keeping and regaining trust while decreasing stress and, hence, leads to high and stable employee satisfaction even during adverse times. Analyzing data from both an employee attitude survey and an executive attitude survey with over 25,000 and 1,700 initial responses, we run multiple mediation models and find that transparency is a tool for keeping and regaining trust while decreasing stress and, hence, is associated with increasing satisfaction during a decline. Thus, for both employees and their executives, high levels of transparency and trust seem to be effective in mitigating the negative effects of downsizing. We discuss the results with regard to potential declines in several key industries.

ODC: **Influence of Communication Satisfaction and CSR Association on Job Satisfaction & Work Alienation**

Author: **Shiva Kakkar**, *Indian Institute of Management Nagpur*

Author: **Samvet Kuril**, *Ahmedabad U.*

Author: **Swati Singh**, *PhD. Scholar, U. of Hyderabad*

Author: **Surajit Saha**, *ICFAI Business School, Hyderabad*

Author: **Anurag Dugar**, *Goa Institute of Management*

The Covid-19 pandemic has restricted mobility and made remote working a norm. Many scholars and practitioners have raised concerns that remote working can lead to feelings of isolation and alienation among employees. The study explores this issue by examining the influence of remote communication satisfaction and the organization's CSR association on employee alienation and job satisfaction. Sensemaking theory serves as the basis for hypotheses formulation in this study. Primary data has been collected from 418 employees working in various Indian organizations and analyzed through AMOS and Hayes' PROCESS macro for SPSS. Results indicate that remote communication satisfaction negatively influences work alienation, thereby improves employee satisfaction. Also, organizations that are perceived to have higher CSR association experience lesser work alienation than those who have a lower CSR association. This study extends the sensemaking theory by introducing new work-related (internal communication) and non-work-related (CSR associations) cues and explains how employees use them to 'make sense' of the organization's philosophy and continuity. Secondly, this study is a pioneer in exploring the relationship between communication satisfaction and work alienation. The results of this study translate into two significant recommendations for organizations. One, organizations should adopt a proactive communication strategy and provide work-related information to employees expeditiously. Two, since the organization's CSR involvement and its regular communication to employees bolsters their job satisfaction and reduces the development of negative attitudes (like alienation), organizations must enunciate their position on CSR issues on a regular basis.

Temporality and Materiality in Change Processes

Digital Session Chair: **Kaat De Pourcq**, *Ghent U.*

ODC: **Organizational Entrainment of Project Launch: Empirical Evidence from Chinese Real Estate Industry**

Author: **Shengqiang Cheng**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Author: **Runtian Jing**, *Shanghai Jiao Tong U.*

Author: **Xuan Sun**, *Shanghai Jiao Tong U.*

As entrainment theory often indicates, launching new projects at appropriate timing is critical for organizations to succeed in market competition. Despite this widely recognized concept by case studies in the organizational context, there lacks empirical evidence to support how this entrainment process is formulated by internal or external organizational activities. In the present study, we reveal the entrainment process that how organizational attributes and environmental favorableness influence projects' launch pace or timing decisions. We empirically examine such propositions through survival analysis with 90,755 observations of residential development projects of 149 real estate firms in China. Specifically, we find that organization inertia and resource munificence will decelerate and accelerate the timing of project launch, while external environmental favorableness can both directly accelerate the timing of project launch and strengthen the main effects of organization inertia and resource munificence on the timing of project launch.

ODC: **The Role of Written Texts in Collaborative Boundary Work: A Dynamic Sociomaterial Perspective**

Author: **Kaat De Pourcq**, *Ghent U.*

Author: **Katrien Verleye**, *Ghent U.*

Author: **Ann Langley**, *HEC Montreal*

Author: **Joris Voets**, *Ghent U.*

Taking a sociomaterial perspective, this article considers the dynamic role of written texts as boundary objects in practices of collaborative boundary work, in which boundary spanners mobilize these objects to assist in the achievement of collective goals. Using an autoethnographic approach, we ask two questions (1) How can boundary spanners leverage written texts throughout the process of collaborative boundary work? and (2) How do these written texts affect the trajectory of the collaboration? Data were gathered during a governmental reform which affected two inter-organizational collaborations in the mental healthcare sector. Our findings show how different types of "textual work" practices – relationship-based, evidence-based, power-based and content-based practices – have different substantive and relational implications for the trajectory of collaboration over time. By unraveling how these textual work practices are enacted sequentially over time, and generate their substantive and relational effects in two cases of collaboration, our study contributes to a sociomaterial perspective on the dynamics of collaborative boundary work.

ODC: **Continuous Cyclic Organizations – Coordination across Time Cycles**

Author: **Henrike Konzag**, *Aarhus U., Department of Management*

Author: **Borge Obel**, *Aarhus U., Department of Management*

Much of ordinary social life is organized in cycles: those of the day, the week, and the year. More and more organizations adapt to these cycles. As a result, an organization might frequently change its mode of operation resulting in time cycle for then coming back to where it started to begin a new time cycle. These organizations we call continuous cyclic organizations. Continuous cyclic organizations feature a temporal separation of tasks. While this temporal separation amplifies the challenges of coordination, we know little about the challenges organizations face in temporal coordinating continuous cyclic organizations. To investigate how task coordination unfolds in a continuous cyclic organization, we investigated day, evening, and night shifts in an emergency department in a regional hospital in Denmark. We collected data by interviewing and observing employees in their everyday work. Results show interesting differences in how coordination unfolds when an organization transitions from one stage to another in a cycle. We contribute with empirical insights into the concept of continuous cyclic organizations and extend the literature on coordination to understand the temporal dimension of coordination in continuous cyclic organizations.

ODC: **Considering the Corporeal to Facilitate Research to Practice Transitions**

Author: **Sonia M. Goltz**, *Michigan Technological U.*

Author: **Patty Sotirin**, *Michigan Technological U.*

The authors suggest that the research-to-practice gap, such as that found in evidence-based management, is due in part to a lack of attention to embodied knowledge. The recommendation is for change agents to bring attention to embodied knowing when implementing change based on research. Three approaches for introducing increased corporeal understanding are proposed. These include embracing the embodied body including attending to kinesthetic resistance, exploring what research means for intersectional bodies, and working with corporeal metaphors.

Author: **Dennis Schoeneborn**, *Copenhagen Business School*

Finalist for OMT Division Best Paper on Environmental and Social Practices Award

This paper examines how organizations can make long-term, distant future goals related to corporate sustainability actionable in the short-term, near future. Prior research suggests that this challenge is particularly pronounced in traditional organizations used to operate within a highly institutionalized temporal context dominated by economic short-termism. We add to this research by empirically investigating different forms of temporal work at a big German automotive firm that currently undergoes a major strategic reorientation toward sustainability. Drawing on interview, documentary, and press data, we discover and theorize the interplay of four intersecting forms of temporal work: explicit vs. implicit and aspirational vs. translational temporal work. Importantly, we find that explicit-translational temporal work—which focuses on breaking down sustainability goals into KPIs—in itself was not sufficient for deep-level strategic change. Only when it was coupled with more implicit and aspirational forms of temporal work, such change was made more likely. We deepen current research on organizational temporality by theorizing the interplay between the four modes of temporal work and their relation to changing highly institutionalized temporal structures. Our theorizing sheds new light on how actors and organizations can build new trajectories of change by engaging in temporal work and how such trajectories can support the transition toward sustainability.

OMT: **Transcending Time Horizons: How Actors Project Innovative Solutions Toward Distant Climate Goals**

Author: **Miriam Feuls**, *Copenhagen Business School*
Author: **Tor Hernes**, *Copenhagen Business School*
Author: **Majken Schultz**, *Copenhagen Business School*

How actors address climate change through ongoing practices is not adequately addressed in organizational research. In this paper, we extend organizational research through a study of how actors simultaneously project near and distant future solutions through their ongoing practices to work toward distant climate goals. From real-time observations of discussions about sustainable packaging solutions in an international dairy corporation we inductively identified three interconnected practices that actors used to envisage future solutions: bracketing, calculating, and narrating. We develop a grounded model that shows how these three practices became differently interrelated as actors addressed increasingly more distant future solutions. Our paper adds to the literature by establishing a model whereby actors move beyond the near future toward the distant future. This enables explanations of how actors may bridge seemingly irresolvable intertemporal tensions between the short and long terms.

OMT: **Maintenance of the Vulnerable Hybrid Identity: When Traditions and Modernity Meet in the Wilderness**

Author: **Soffiane Baba**, *U. of Sherbrooke*
Author: **Innan Sasaki**, *Warwick Business School*
Author: **Eero Vaara**, *U. of Oxford*

Finalist for the OMT Division Best International Paper Award

Our understanding of hybridity in organization theory stems mainly from observations of social enterprises. However, what is less studied is hybridity in community settings where it can be high-stake by putting community members' lives at stake, which is not necessarily the case in an organizational setting where the separation between professional and personal life is ordinary. Building on a rich qualitative study of a First Nation in Quebec, Canada, our analysis depicts the political dynamics of high-stake hybridity. We adopt an identity-as-narrative theoretical lens to explore how high-stake hybridity is dealt with through narratives at the community level, in a context where the weight of the controversial past is ubiquitous. In particular, our findings suggest that high-stake hybridity is strategically managed through three inter-related processes: historical isolation, historical combination, and enacting flexibility. Two main theoretical implications emerge from our study: not only is it essential to theorize hybridity as a political arena, but it is also more than ever relevant to bring history back in our understanding of identity-as-narrative.

OMT: **How Actors Effect Shifts in Strategic Trajectories: The Role of Temporal Nexus Events**

Author: **Tor Hernes**, *Copenhagen Business School*
Author: **Kätlin Pulk**, *Estonian Business School*

Abstract. We apply a temporal view to an event at the intersection of two activity streams in a naval design and construction company. This view shows how, at this event, actors revived a solution that had been proposed several years before within one stream by using it to address an imminent problem in a second stream, which eventually produced a shift in the company's strategic trajectory. The temporal orientation of the event's activity contrasted with the temporal orientations of the two intersecting activity streams. The temporal orientations of the two intersecting streams proved nevertheless vital for the event's generation of the strategy shift. We suggest the label "temporal nexus events" for these intersectional events. We propose a process model for how actors reach back in time along activity streams while drawing upon those streams to implement novel solutions that harbor the potential for a strategic shift.

In the past few years, there has been a renewed and reenergized interest in studying optimal distinctiveness (OD) among various communities of scholars within the Academy of Management (e.g., strategy, organization theory, and entrepreneurship). Reflecting and bolstering this interest, three professional development workshops (PDWs) were organized at the AOM annual conferences between 2017 and 2019, each of which attracted a large number of participants. Distinguished panelists and participants joined the conversations, aiming to systematically flesh out the various theoretical perspectives on OD, unpack the underlying mechanisms driving OD, and evaluate each perspective's strengths, weaknesses and connections. These efforts helped build a growing community of scholars studying this topic, contributing to an increasing number of articles on OD published in leading management journals. In response to this recent research, time is ripe for another PDW where scholars gather to critically reflect on the progress we have collectively made in advancing our understanding of OD, delineate the boundaries of this theory, and point to directions for future research.

Advances in Patent Research: New Data, Measures, and Methods
Advances in Patent Research

Chair: **Elie J. Sung**, *HEC Paris*
Chair: **Fabian Gaessler**, *Max Planck Institute for Innovation and Competition*
Presenter: **Dietmar Harhoff**, *Max Planck Institute for Innovation and Competition*
Presenter: **Bhaven Sampat**, -
Presenter: **Matt Marx**, *Cornell U.*
Presenter: **Sara Moreira**, *Northwestern Kellogg School of Management*
Discussant: **Annamaria Conti**, *U. of Lausanne*

This workshop focuses on the empirical analysis of patent data, emphasizing the use of patents both as a measure of knowledge and innovation, and as an institutional phenomenon worthy of research in its own right. The goals of the PDW are twofold. First, it will provide an introduction to patent data for management scholars new to the field, including a discussion of data sources, data limitations, and methods for effectively analyzing patent data. Second, it will provide examples of in-depth analyses using patent research. The panelists will engage in discussions with the audience to address the current state of patent research and future directions for research.

Employee Voice and Change

Digital Session Chair: **ChungJen Chien**, *College of Management, Yuan Ze U.*

OB: Why ethical leadership generate moral voice: A dual-route model

Author: **ChungJen Chien**, *College of Management, Yuan Ze U.*
Author: **Liew Yueah-Cin**, *College of Management, Yuan Ze U.*
Author: **Yu-Chi Lin**, *College of Management, Yuan Ze U.*

Ethical leadership has been recognized as a critical factor influencing employees' ethical behaviors. However, only a few research has empirically examined the effect of ethical leadership, not to mention its psychological process. To address this research gap, we adapt the cool/hot framework to explain the relationship between ethical leadership and moral voice. A total of 217 leader-follower dyad data were obtained from companies in Taiwan. The result reconfirmed the cognitive process (moral efficacy) and proposed another new affective process (affective attachment). Besides, it was also found that the effect of these two routes depends on the followers' moral identity. The moral efficacy route works only when the follower has a higher moral identity; however, the affective attachment route is more substantial when the follower has a lower moral identity. In conclusion, this research confirmed the dual paths of ethical leadership and elucidated its critical boundary condition. Through this dual-route model, we can integrate social learning theory and social exchange theory to depict a complete picture of ethical leadership. It is hope that the findings can inspire further studies to investigate the mechanisms and consequences of ethical leadership.

OB: Perceived Organizational History and its Influence on Employees' Daily Change Behaviors

Author: **Kai Christian Bormann**, *Bielefeld U.*
Author: **Fabian Bernhard**, *EDHEC Business School*

An increasing number of scholars have emphasized the implications of organizational history for understanding organizational behavior. Yet little is known how individuals' perceptions of the past can positively or negatively affect proactive change behaviors. In this study we first theoretically develop and empirically validate a measure for perceived organizational history. Three validation studies lend support for three distinctive constructs of perceived promotive, prohibitive and presence of history. We then use two diary studies to test the influence of perceived history on employees' daily change behaviors. Noting individuals' different time orientations, we also examine moderating effects of mindfulness and feelings of nostalgia. The findings add to current knowledge on how the appraisal of imprints of the past can make employees promote or decline change. Important implications for organizations are drawn.

Paper is Available to Meeting Registrants Only.

OB: Who steps up after a merger? The effects of boundary-spanning on post-merger taking charge behavior

Author: **Stefan Breet**, *Radboud U. Nijmegen*
Author: **Lotte Glaser**, *Erasmus U. Rotterdam*
Author: **Justin J.P. Jansen**, *Erasmus U. Rotterdam*

Although prior research on mergers and acquisitions (M&As) has suggested that cross-legacy boundary-spanners serve as organizational change agents, an emerging line of research highlights the costs of developing and maintaining boundary-spanning ties. Building on the social networks and organizational identification literatures, we develop a social network model and explore the influence of boundary-spanning on post-merger taking charge behavior. More specifically, we argue that employees without boundary-spanning ties are more likely to engage in taking charge behavior when they are closely connected to the boundary-spanners of their legacy organizations. Our analysis of the social network of a post-merger organization shows that cross-legacy boundary-spanning has a negative effect on taking charge behavior, while proximity to boundary-spanners has a positive effect. Our study also reveals that the positive effect of proximity on taking charge behavior is strongest for employees who weakly identify with the new organization.

OB: Why and How Manager Promotive and Preventive Psychological Ownership Influence Voice Endorsement

Author: **Jinyun Duan**, *East China Normal U.*
Author: **Wang Xiaotian**, *East China Normal U.*
Author: **Yue Xu**, *Xi'an Jiaotong-Liverpool U.*
Author: **Lixiaoyun Shi**, *East China Normal U.*

By considering the literature on psychological ownership and regulatory focus theory, this study explored why and how two distinct forms of managers' psychological ownership (i.e., promotive and preventive) influenced voice endorsement. Results from a time-lagged field study and an experimental scenario study revealed that managers' promotive psychological ownership was positively correlated, while preventive psychological ownership was negatively correlated with voice endorsement through openness to change. Moreover, the group promotive voice strengthened the positive indirect effect of managers' promotive psychological ownership on voice endorsement via openness to change, whereas its prohibitive voice strengthened the negative indirect effect of preventive psychological ownership on voice endorsement via openness to change. Finally, implications for manager-centered and team-level studies for voice endorsement, as well as practice, are discussed in the paper.

**Responding to Competing Demands: Exploring Relations of Both/And
and Either/Or Responses to Paradox**
Responses to Competing Demands

Organizer: **Harald Tuckermann**, *U. of St. Gallen*
Organizer: **Marc Krautzberger**, *U. of St. Gallen*
Host: **Wendy K. Smith**, *U. of Delaware*
Panelist: **Ann Langley**, *HEC Montreal*
Panelist: **Medhanie Gaim**, *Umea U.*
Panelist: **Marya Besharov**, *Oxford U., Saïd Business School*

This panel symposium hosts leading and emerging scholars to elaborate on the relationship between either/or and both/and responses to competing demands. Our aim is to transcend a dichotomous understanding of both/and and either/or approaches and view their relation in terms of a duality. Such a view poses questions about how either/or responses can be part of a both/and response, and conversely how both/and responses may also involve either/or thinking. Elaborating on such questions promises to provide insights into the dynamic relationship between responses and paradox across different levels of analysis and between different paradoxes to inform the management of organizational tensions. For managerial practice, the aim is to broaden the scope of possible responses to competing demands that pervade organizations. This is timely in today's complex world with its challenges like climate change, the current COVID-19 pandemic, social inequality, or technological breakthroughs.

Healthcare Management

Digital Session Chair: **Juri Matinheikki**, *Aalto U. School of Business*

OSCM: Value-based Procurement and Agency Problems in Triadic Healthcare Relationships

Author: **Juri Matinheikki**, *Aalto U. School of Business*
Author: **Katri Kauppi**, *Aalto U. School of Business*
Author: **Erik M. Van Raaij**, *Erasmus U. Rotterdam*
Author: **Alistair Brandon-Jones**, *School of Management, U. of Bath*

This paper adopts an agency theory perspective to analyze a medical devices procurement triad consisting of a centralized purchasing unit, a medical unit of a hospital and an external medical device supplier. Through an in-depth case study of this triad, we examine agency issues and how they hinder the governance of triad-level outcomes i.e., value-based procurement. Our findings contribute to agency theory by positing that each triad member may pursue individual goals creating goal incongruence not as a result of opportunism but rather caused by role-based norms and incentive structures. Furthermore, information asymmetry in triads should be approached as a multilateral phenomenon when all triad members are boundedly rational actors possessing limited information processing capacity and thus suffering from specialized information and hidden (bilateral) actions of the other triad members. Finally, we find social factors such as power asymmetry and institutionalized mindset of unit price myopia to moderate the effects of information asymmetry and goal incongruence on triad-level governance. These factors together appear to curtail moves towards more outcome-based contracts and hence value-based procurement.

OSCM: The Impact of Place on Health: Built Environment and Healthcare Process Outcomes

Author: **Eric Li Xu**, *U. of Minnesota*
Author: **Kevin Linderman**, *U. of Minnesota*

In recent years, healthcare reform has emphasized conformance quality improvements, notably in programs such as the Hospital Readmissions Reduction Program; however, programs meant to emphasize these improvements in health outcomes often disadvantage hospitals serving lower income communities. Contextual factors such as the neighborhoods that patients are drawn from can positively or adversely impact the outcome of treatment. This study seeks to understand the contextual factors surrounding patients to understand how the built environment factors surrounding patients impacts outcomes. We use the setting of the Hospital Readmissions Reduction Program to understand how built environment impacts conformance quality for relevant treatments. The findings indicate that built environment factors may impact a patient's likelihood of being readmitted. This provides a possible context to explain the discrepancy between process improvement and current health outcomes.

Paper is Available to Meeting Registrants Only.

OSCM: Improving Hospital Efficiency While Angering Patients?

Author: **Subhajit Chakraborty**, *Coastal Carolina U.*
Author: **Earnie M. Church**, *Coastal Carolina U.*

Many U.S. hospitals are struggling to improve their margins and some are forced to merge with bigger hospitals. To thrive in such a volatile environment, hospital leaders need to identify what is going wrong with their patients' experiences during medical treatments so that the service can be improved and the hospital can offer patient-centric care. In this study, we use mixed-methods at the patient-level to empirically demonstrate the dual but opposing role of mergers on hospital efficiency and patient satisfaction. Based on our findings, we emphasize that by periodically analyzing the sentiments associated with patient social media comments, hospital quality leaders in healthcare teams can quickly identify the gaps and plug them thereby achieving twin objectives of: (1) offering patient-centric care; and (2) developing a thriving online community for the hospital. Both of these should ultimately give hospitals a competitive advantage as they crowdsource these online communities to obtain current patient care quality defects and suggestions for improvement in the future. Implications of the study are discussed.

One of the principal ways in which companies can seek competitive advantage is through their access to the global labor market. Rising nationalism over the past years together with the current global pandemic, however, has deterred foreign talent from crossing the national borders. As management scholars and practitioners, it is important to understand the impact of immigration, immigration policy, and immigration integration on firm-level strategy because they can directly and indirectly affect firm capabilities and performance, influence culture, and reshape the competitive landscape in the local and global markets. This panel symposium intends to contribute to enhancing our understanding of the impact of immigration on firm-level strategy by discussing how local and global mobility (or immobility) of foreign talent creates (or destroys) value for companies and thereby the economy, exploring theoretically new and empirically innovative ways to study immigration and strategy in the national and global contexts, and the managerial and policy implications of the findings from cutting-edge studies of immigration and strategy.

IM Division Best Paper in OB / HRM / OT Award  

Digital Session Chair: **Davina E. Vora**, *State U. of New York at New Paltz*

This session features the finalist papers for the IM Division Best Paper in OB / HR / OT Award, which is presented to the best scholarly paper of the IM Division focusing on Organizational Behavior / Human Resource Management / Organization Theory at the Academy of Management annual meeting. All papers with a research focus on Organizational Behavior / Human Resource Management / Organization Theory accepted by the IM Division for presentation at the Academy of Management annual meeting are eligible for the award.

IM: How Language Barriers Impede the Formation of Mental Models in Multinational Teams   

Author: **Helene Tenzer**, *U. of Tuebingen*
Author: **Markus Pudelko**, *U. of Tuebingen*
Author: **Mary E Zellmer-Bruhn**, *U. of Minnesota*

Based on semi-structured interviews in 15 multinational teams (MNTs) from the automotive industry, this exploratory study investigates the relationship between language barriers and mental model formation in MNTs. Our examination reveals that in MNTs language barriers impede personal more than task-related communication and emotional more than neutral communication. We further demonstrate how these impediments in MNT communication hamper the formation of task-focused and team cohesion-focused mental models in MNTs. By highlighting linguistic hurdles in previously neglected areas, we expand international business researchers' understanding of the communicative bases of MNT functioning. Additionally, by elucidating the complex ways language barriers influence mental model formation, we contribute to a better understanding of the micro-foundations of team mental models in multilingual settings. Our findings carry important managerial implications for MNT leaders as emotion managers and communication facilitators.

This study uses social exchange theory to examine how and when reintegration in headquarters (HQ) enhances repatriate knowledge transfer. Specifically, we theorize how the preparatory stage for repatriation—when expatriates are still abroad—facilitates reintegration in HQ upon repatriation and, subsequently, repatriate knowledge transfer via both interpersonal and career-related pathways. For the former, we hypothesize that frequency of communication with HQ before re-entry facilitates repatriate knowledge transfer via reintegration. We also hypothesize that frequency of communication with HQ before re-entry improves trust in HQ colleagues, which in turn strengthens the positive effect of reintegration on repatriate knowledge transfer. For the second pathway, we hypothesize that career and repatriate support before re-entry increases repatriate knowledge transfer via reintegration. We also predict that career and repatriate support before re-entry improves career satisfaction upon return, which in turn strengthens the positive effect of reintegration on repatriate knowledge transfer. Time-lagged data from 129 assignees and their HQ supervisors support most of our hypotheses.

IM: Many Places to Call Home: Embedding Types and Relationships with Personal Initiative, Stay Intention 

Author: **Anh Ngoc Nguyen**, *U. of Bamberg*
Author: **Maike Andresen**, *U. of Bamberg*

Job embeddedness (JE) shows to significantly predict migrant employees' intent to stay. However, extant literature generally scrutinizes the role of JE level on migrants' intent to stay while overlooking the patterns of JE and the active role of migrant workers in constructing JE abroad. Based on a sample of 707 first-generation migrants, we employed Latent Class Analysis and a contextualized JE framework to reveal the 'hidden' JE patterns among the migrant worker population that form four embedding types: transnational embedders, going native by private life, going native by work life, and heart at home. The four embedding types were associated with employed migrants' intent to stay in the host country and host organization and varied in accordance with their personal initiative. We derive theoretical and practical implications and provide directions for future research. Keywords: Job embeddedness, intent to stay, personal initiative, latent class analysis

IM: General manager successors in local-market-seeking subsidiaries of MNEs: A multiple-case analysis   

Author: **Liang Li**, *Ivey Business School*
Author: **Paul Beamish**, *U. of Western Ontario*
Author: **Andreas P.J. Schotter**, *Ivey Business School*

How do decision makers of multinational enterprises (MNEs) appoint general manager (GM) successors in their local-market-seeking foreign subsidiaries? Extant literature suggests that to better address host country business practices and cultures that may contrast markedly with those of the home country, it is sensible to deploy a host-country national (HCN) subsidiary GM. Our field data, however, suggest that using HCN GM successors is not always the best strategy. For HCN GM successors promoted from within the subsidiary, expost opportunism is likely to arise, resulting in unsatisfactory subsidiary performance. Appointing HCN GMs from outside the subsidiary may limit expost opportunism, but it may entail divided engagement. Appointing parent-country national (PCN) subsidiary GMs, on the other hand, may beget over-reliance on existing practices. This qualitative inquiry corroborates the value of bounded reliability as a standard micro-foundation in international management research and reveals several managerial safeguards that can economize on bounded reliability.

Cultural Issues in International Management

Digital Session Chair: **Chandrashekhar Lakshman**, *Florida Atlantic U.*

This session examines cultural issues in international management. It includes papers examining national culture and leisure across the workweek, national tribalism in the context of venture capital funding in China and whether such tribalism can be diminished through conciliatory collaborative first moves, perceptions of religious accommodation in offshore service centers, and linguistic structures and cultural values.

IM: National Culture and Leisure Across the Workweek: A Mean Level and Trajectory Approach

Author: **Siwei Liu**, *School of Business, Sun Yat-sen U.*
Author: **Haiyang Liu**, *London School of Economics and Political Science*
Author: **Yueting Ji**, *Central U. of Finance and Economics*
Author: **Qian Yao Huang**, *Guanghua School of Management, Peking U.*
Author: **Shengming Liu**, *Fudan U.*

Based on a variety of literature from organizational studies, anthropology, and sociology, our research challenges the previous research assumption of entrainment trajectory as linear. The reason for such an assumption may be because previous research only conducted the convenient sampling method and collected data from one or several companies, which limits the power to detect real entrainment patterns. Utilizing Google Trends data on daily leisure engagement for twenty countries that cover over a half of world population, we unveil, at the population level, a nonlinear temporal trajectory of leisure over the workweek that first decreases from Monday to midweek, then stabilizes during the midweek, and later increases from midweek to Friday. Moreover, our findings also indicate that Hofstede's cultural work values exert significant influences on the entrainment trajectory of leisure across the workweek, such that population level of engagement in leisure across the workweek is lower for societies of higher power distance, higher individualism, higher masculinity, lower uncertainty avoidance, higher long-term orientation, or lower indulgence cultural work values. Finally, our findings also suggest that the societies that are culturally higher in power distance, higher in individualism, lower in masculinity, higher in uncertainty avoidance, higher in long-term orientation, or higher in indulgence follow a much more clear workweek rhythm of leisure and display a trajectory with sharper changes from Monday to Friday. Implications for entrainment research and cross-culture studies were further discussed.

IM: Reducing National Tribalism Through Conciliatory Collaborative First Moves

Author: **Wei Xia**, *U. of Washington*
Author: **H Kevin Steensma**, *U. of Washington*
Author: **Xiaoou Bai**, *U. of Texas at Dallas*

Despite opportunities to choose among prospective collaborators from across the globe, firms may remain partial to those who share their nationality. We explore the notion of national tribalism in the context of venture capital funding in China and whether such tribalism can be diminished through conciliatory collaborative first moves. Based on the composition of the investment syndicates that they assembled between 1998 and 2017, both Chinese and US venture capital firms favored partnering with fellow compatriot firms over comparable non-compatriots. We find, however, such tribalism to be particularly strong among Chinese firms. More critically, we find that, when a Chinese firm makes a conciliatory first move by initially including a US firm in an investment syndicate, not only is the focal US firm inclined to reciprocate the focal Chinese firm when it subsequently assembles investment syndicates, but also the US firm is no longer partial to partnering with comparably familiar US firms over the focal Chinese firm. In effect, conciliatory first moves made by Chinese firms reduced US tribalism. We fail to find, however, similar dynamics among Chinese venture capital firms. Chinese national tribalism was resilient to conciliatory collaborative first moves made by US firms.

IM: Configuring the Third Space: Perceptions of Religious Accommodation in Offshore Service Centers

Author: **Sara Nyobe**, *La Rochelle Business School - Excelia Group*
Author: **Eliada Griffin-EI**, *Robert Morris U.*
Author: **John Lawson**, *Robert Morris U.*

Every religion requires its participants to engage in certain patterns of behavior, and managers have to deal with religious employees' demands to accommodate these behaviors. This study focuses on the sensitive nexus where religion and demands of the global market intersect—and potentially challenge cross-national business practices—by examining strategies for accommodating religious requests in four Tunisian call centers that provide services to European clients. Our data and analysis, based on semi-structured interviews and non-participatory observation, focus on employees' perceptions of management policies and practices related to religion, policies that are often designed to mask employees' actual identities as non-European Muslims. Our analysis draws on Identity Regulation Theory (IRT), inasmuch as our data reveal that religious expression is a key element of many employees' indigenous identities, and on the postcolonial theory of the "third space" to capture the power dynamics at play in the interactions between employees embedded in a former colony and European clients embedded in societies that colonized Tunisia and much of Africa. Using a qualitative, comparative case-study approach, we describe and compare a variety of religion-related strategies used by managements of the four call centers and the kinds of resistance to those strategies that employees deploy in order to assert their religious identities.

IM: **Speaking of cultures: Linguistic structures and cultural values** ✈️ 🙌

Author: **Karoline Summerville**, *U. of North Carolina, Charlotte*

Author: **Victor Zitian Chen**, *U. of North Carolina, Charlotte*

Author: **Amir Shoham**, *Fox School of Business, Temple U.*

Languages require speakers to arrange words and symbolic sounds according to grammar structures that govern how speakers perceive the world around them. We use data collected from a large sample (N = 18,098) of students who formed global virtual teams across 159 countries to put forth an empirical relationship between language grammar structures and cultural value dimensions. A total of 79 languages were represented in our sample. We integrate linguistic and cultural transmission theories and research in the realms of psychology, economics, and management to test whether language grammar structures (e.g. gendered grammar structures pronoun drop, politeness distinctions and future time reference) are related to individual-level cultural values dimensions including masculinity, collectivism, power distance, and long-term orientations. Our results show that gendered grammar structures in languages are related to traditional masculine values. We also show that higher levels of collectivism are likely to be found among speakers of languages that permit personal pronouns to be dropped from sentences. Our results provide further support for linguistic relativity and cultural transmission. Keywords: Linguistic structures, Culture, Survey-based cultural dimensions, Values

Global Issues in Graduate Management Education

Digital Session Chair: **Amanda Shantz**, *Trinity College Dublin*

MED: In the eye of the storm: Turbulent times and the MBA

Author: **Amanda Shantz**, *Trinity College Dublin*
Author: **Melissa Jane Sayer**, -
Author: **Janice Byrne**, *Ivey Business School*
Author: **Kiera Dempsey-Brench**, *Trinity Business School, Trinity College Dublin - U. of Dublin*
Author: **Shirley Kavanagh**, *Trinity Business School, Trinity College Dublin - U. of Dublin*

MED Best Paper in Management Education Award sponsored by MOBTS and the Journal of Management Education for the paper that offers the most significant contribution to management education.

We investigate the extent to which MBA programs provide content, develop skills, and nurture mindsets to prepare students to tackle today's global challenges. In this paper, we describe the findings of two complementary studies. Study 1 reports a survey completed by 124 MBA program leaders in April 2020. Study 2 draws on a web-based search of curricula across the Financial Times's top 100 MBA programs. A core finding across both studies is that very little attention is paid to preparing students to lead through crises and address global challenges. However, there are important features of MBA programs that could be further mobilized to meet this end. Specifically, programs embed opportunities for interdisciplinary learning, yet they are siloed in stand-alone modules that emphasize financial gains where the firm is the epicentre in a network of stakeholders; students are encouraged to increase their self-awareness, yet the focus sits primarily within an organization's walls; some modules look to the future, yet they assume it can be predicted and controlled, particularly in business analytics, a new guise for rationality. These discoveries open a new theoretical space in the management education literature by addressing whether MBA programs adequately prepare students to lead in turbulent times.

MED: Once more on the rollercoaster: Loses and gains from the rapid shift to online delivery during Covid

Author: **Eimear Nolan**, *Trinity Business School, Trinity College Dublin - U. of Dublin*
Author: **Mairead Brady**, *Trinity Business School, Trinity College Dublin*
Author: **Bart Rienties**, *The Open U., United Kingdom*
Author: **YingFei Héliot**, *U. of Surrey*

A global rapid shift to online delivery in higher education due to the Covid19 pandemic resulted in students and teachers pivoting into a new learning environment, in many cases overnight. Our research nested within an Irish university explores how such a rapid educational delivery shift affected both students and teachers, offering a unique dual perspective and input into the changing roles of students and teachers due to Covid19. Our research design focused on open-ended surveys of 83 M.Sc. postgraduate students and their five teachers in five modules, followed by qualitative data collected through 34 in-depth interviews. The findings illustrate a complex narrative of self-regulation and challenge for both students and teachers both needing to adjust to a new educational experience. The main findings are that there is a core challenge in the repositioning of the student and teacher roles in a new educational ecosystem which needs to be both understood and managed to gain maximum benefit from this rapid and unprecedented change.

Paper is Available to Meeting Registrants Only.

MED: Short Term and Virtual International Immersions for Graduate Business Leadership Students

Author: **Jennie L. Walker**, *U. of Arizona Global Campus*
Author: **Yulia Tolstikov-Mast**, *Global Leadership Researcher and Practitioner*

The need to understand global contexts in business studies is driving more flexibility and creativity with international immersion curriculum. Traditional study abroad programs or international internships require commitments of several months or more and have conventional structure. They are also mostly designed for undergraduate or full time master's level students who can be abroad for entire terms. This is not possible for most working professional students, especially in graduate or doctoral distance education programs. The rise in flexible graduate degree programs has expanded opportunities for working professionals to pursue degrees concurrently with their careers. Those programs have students whose daily activities are connected to knowledge application and who require practice-driven education and experiences. This means that faculty must find creative solutions to effectively deliver global experience to students with limited discretionary time. This chapter discusses globalization in the business leadership curriculum, the need for shorter-term and virtual international immersions in graduate education, current approaches in the field, and challenges and potential solutions to improve the effectiveness of these experiences.

MED: Design Thinking in Executive Education: When the Parts are Greater than the Whole

Author: **Stefan Meisiek**, *U. of Sydney Business School*
Author: **Angèle Beausoleil**, *U. of Toronto, Rotman School of Management*
Author: **Daved Barry**, *Clarkson U.*
Author: **Anjana Dattani**, *U. of Toronto*

Research on design thinking education at business schools has mostly been concerned with practical issues of implementation, the efficacy of teaching design processes, and participant cognition. Rarely have studies looked at how design thinking techniques and skills gained might translate from the business classroom into the workplace. To close this gap, we turned to situated learning theory and studied how senior managers experience design thinking education and attempt to relate it to their communities of practice at work. We compared custom and open-enrollment executive education courses and found that any uptake depended more on the idiosyncratic workplace situation than on the willingness of senior managers to employ design thinking. As a consequence, few managers were able to employ the whole process, and most managers rather transferred parts and perspectives of what they had learned. Our research has relevance for the larger debate of the efficacy of design thinking for management and offers an explanation for the discrepancy between how design thinking is taught and how it is practiced.

**Shaping New Business People - A Role for Sustainability
Education & Mental Health in the Classroom**
Shaping New Business People:

Chair: **Andrea Honal**, *Duale Hochschule Baden-Württemberg, Mannheim*
Presenter: **Timothy Coville**, *St. John's U., New York*

Raising great business people who are mentally and technically fit is a core task of universities in this decade. Educators face big challenges in creating holistic curriculum concepts that also focus on CSR-related topics and health-related issues being essential for students in today's dynamic and complex business world. Many leaders like Elon Musk (Tesla, SpaceX) or Richard Brandson (Virgin Group) guide their firms towards long-term, sustainable, social and environmental success by redefining their business missions. Moreover, investors have increased how much they direct their capital towards firms that excel at environmental, social, and governance (ESG) dimensions of performance, like Tesla or SAP. Thus, professors should educate their students in another way – not only prepare them for the changing business landscape, but also for managing enterprises to succeed across ESG dimensions and regarding social or health issues. In 2020, COVID-19 has changed the whole education system. Due to closed universities during the lockdowns, new formats or tools are required and online-teaching is the only way to keep higher education alive. All universities are now online active in teaching, but only a few care about the psychological impact of the COVID-19-crisis on students and faculty staff. These few universities put mental health on their priority list by providing quick online support for their stakeholders. Thus, the purpose of this online workshop is to focus on two main topics: 1) CSR-related curriculum-design and 2) Dealing with mental health issues for students. Both aspects are essential to shaping students into great business people. The workshop will showcase practical-driven and interesting approaches / methods how to deal with these special two topics.

Job Crafting and Artificial Intelligence

Digital Session Chair: **Hao-Yun Zou**, *School of Management, Huazhong U. of Science and Technology*

OB: How do Proactive Leaders Facilitate Followers' Job Crafting? Testing a Dual-process Model

Author: **Hao-Yun Zou**, *School of Management, Huazhong U. of Science and Technology*
Author: **Yujie Che**, *Zhongnan U. of Economics and Law*
Author: **Haijiang Wang**, *School of Management, Huazhong U. of Science and Technology*

Despite substantial progress made in the job crafting literature, there is still limited knowledge about how leader personality traits influence employees' job crafting. In this study, we examined a dual-process model of leader proactive personality and follower job crafting. Specifically, we proposed that leader proactive personality is associated with follower job crafting via leader job crafting (a modeling process) and leader empowering behaviors (an empowering process). Moreover, drawing upon the similarity-attraction perspective, we further proposed that proactive leaders use more empowerment when followers are also proactive. To test the hypotheses, we collected daily diary data from 96 dyads of leaders and followers for 10 consecutive working days. Our findings suggest that proactive leaders engage in job crafting themselves and display empowering behaviors towards proactive followers; in turn, leader job crafting and empowering behaviors are both positively related to follower job crafting. Theoretical and practical implications of our findings are discussed.

OB: Employee Strengths Use and Turnover Intention: The Roles of Job Crafting and Self-Efficacy

Author: **Xixi Chu**, *Renmin U. of China*
Author: **Mengyi Li**, *Renmin U. of China*
Author: **Lihua Zhang**, *Renmin U. of China*

Based on the Theory of Planned Behavior, we explored the relationship of employee strengths use on turnover intention by proposing a moderated mediation model. Data were collected at two time points, spaced by a 2-week interval. 234 medical staff in Beijing volunteered to take part in survey. Results showed that strengths use had a significant negative effect on turnover intention, and job crafting completely mediated the relationship between strengths use and turnover intention. Furthermore, this study also found that self-efficacy positively moderated the direct relationship between strengths use and job crafting and the indirect relationship between strengths use and turnover intention via job crafting.

Paper is NOT Available. Please contact the author(s).

OB: How and When Does Job Crafting Enhance Job Performance?

Author: **Xue Zheng**, *China Europe International Business School (CEIBS)*
Author: **Tae-Yeol Kim**, *China Europe International Business School*
Author: **Yi Xiang**, *China Europe International Business School (CEIBS)*

Drawing on the ability–motivation–opportunity (AMO) model, we theorized and tested a moderated mediation model in which job crafting enhances role breadth self-efficacy (ability), intrinsic motivation (motivation), and experienced delegation (opportunity), all of which in turn affect work engagement and subsequent job performance. We also proposed that leader–member exchange (LMX) quality, as a social context, enhances the effects of job crafting on the AMO of employees. Results obtained using 759 employee–supervisor pairs from 79 sales groups indicated that job crafting leads to work engagement and job performance via role breadth self-efficacy and intrinsic motivation. In addition, LMX quality enhances the relationships between job crafting and role breadth self-efficacy, intrinsic motivation, and experienced delegation as well as the indirect effects that job crafting has on job performance via role breadth self-efficacy, intrinsic motivation, experienced delegation, and work engagement.

OB: The Implications of Diverse Human Moral Foundations for the Ethicality of Artificial Intelligence

Author: **Jake Telkamp**, *Iowa State U.*
Author: **Marc H. Anderson**, *Iowa State U.*

Organizations are making massive investments in artificial intelligence (AI), and recent demonstrations and achievements highlight the immense potential for AI to improve organizational and human welfare. But realizing the potential of AI necessitates a better understanding of the various ethical issues involved with deciding to use AI, developing and maintaining it, and allowing it to make decisions that have moral consequences. People want organizations using AI and the AI systems themselves to behave “ethically”. But “behaving ethically” means different things to different people. How should organizations using AI—and the AI itself—handle ethical dilemmas where humans cannot agree on the right course of action? Though a variety of ethical frameworks have been suggested, these approaches do not adequately answer how people make ethical evaluations of AI systems or how to incorporate the fundamental disagreements that people have regarding what is and is not ethical behavior. Drawing on moral foundations theory, we theorize that a person will perceive an organization's use of AI and AI decisions as ethical to the extent that those decisions resonate with the person's moral foundations. Since people hold diverse moral foundations, this highlights the crucial need to address individual moral differences in the development, application, and evaluation of AI systems. Our approach addresses several unresolved issues existing in the current state of the ethical AI literature. It suggests potential solutions to handling conflict in moral judgment and highlights future directions to augment ethical AI frameworks by incorporating individual differences in moral judgment.

Digital Information and Knowledge Sharing in Organizations and Society

Digital Session Chair: **Benjamin T. Mitchell**, *Texas Tech U.*

OCIS: **Big Data, Little Theory: Exploring The Structure Of Digital Content Use**

Author: **Benjamin T. Mitchell**, *Texas Tech U.*
Author: **Ronald K. Mitchell**, *Texas Tech U.*
Author: **Wei Hua**, *Texas Tech U.*

In response to the exponential growth in stored digital content, in this paper we present a theoretical framework to better explain possibilities for digital content use. This framework—set within the context of dynamic digital content and variability in user needs—is based upon better understanding three attributes that define the nature of digital content: symbols, meaning, and application, to identify: (1) eight basic “states” of digital content, and (2) eight “classes” of digital content use. We suggest how the theoretical framework we present accounts for current anomalies in IS research, and provides theory that is theoretically and operationally useful.

OCIS: **Together telling: reconciling information equivocality in crisis response**

Author: **Fahd Jamil**, *Warwick Business School*

Information is essential during crises. In a crisis response operation, information is usually shared among autonomous relief agencies to facilitate collective understanding and action. However, this may evoke the problem of equivocality, the presence of multiple competing or contradicting interpretations of the same information. The aim of this study is to offer pragmatic means of managing equivocality so collective understanding within and among groups can ensue in order to improve crisis response efforts. The primary theoretical constructs underlying this study are sensemaking, sensegiving, and storytelling. Sensemaking activities seek, process, create and use the information to come up with plausible understandings by assigning one meaning out of many plausible meanings in a situation, which is then communicated to others through the sensegiving efforts. Storytelling, as a communication tool, helps with the building of narratives in which open and negotiated conversations can lead to share understandings and coordinated actions. Built on the case of a garment factory fire incident in Pakistan that led to the death of 289 workers, the study adopted a Design Science Research approach by combining both existing theoretical understandings and relevant empirical data collected in two related settings. The data collection phase in Pakistan included analysis of investigation reports that examined the contributing factors and challenges faced by the first responders in handling the fire incident at the factory. Interviews with different actors of the factory fire incident, including survivors, victims’ family members, and emergency responders, were conducted. The second data source came from fieldwork conducted at Illinois Fire Service Institute (IFSI) in the United States. This was reinforced with reports retrieved from the National Institute for Occupational Safety and Health (NIOSH) database investigating the common causes of firefighter fatalities. The data were analyzed using content analysis and validated through the member-checking process. Based on the theoretical and empirical data, this study developed and introduced the concept of Together Telling (TT). By using storytelling exercises adopted from the theatre ensemble, TT addresses the information-sharing issue of equivocality by enhancing the dialogic competencies of the crisis handlers so they can collectively understand the situation and move towards action. This study has important theoretical and practical implications. Theoretically, it facilitates episodes of collective sensemaking by improving sharing of information among team members and the application of storytelling techniques in the context of crisis response as this has been largely used in pre-crisis and post-crisis settings. TT provides practical incremental steps towards achieving common understandings while managing misunderstandings and confusions among the crisis response teams which is crucial in moving forward jointly. It also allows new form of leadership to emerge where everyone contributes to developing the larger narrative of the ongoing situation.

OCIS: **Custodians of Rationality: Data Scientists’ Informing Practices and Organizational Decision-Making**

Author: **Mayur Prataprai Joshi**, *Alliance Manchester Business School, U. of Manchester*
Author: **Ning Su**, *Ivey Business School*

Over the last decade, data science has emerged as a new profession that has a promising proposition for the organizational decision-making. Building on existing research that has explored the impact of the use of data science in organizations, this study focuses on further unpacking the practices and implications of data scientists in organizational decision-making. Based on a qualitative field study utilizing on-site observations, interviews, and archival records from data science units in three large Indian banks, we identify inscribing expertise and prescribing insights as two dominant “informing practices” through which data science professionals shape rationality in organizations. As paradoxes emerge among these practices, in response, data scientists adopt a set of tactics to circumvent selected paradoxical forces. The study contributes to the emerging literature on the profession of data science and decision-making in organizations.

OCIS: **Do I know you? The effects of social capital on self-assembled groups**

Author: **Diego Gomez-Zara**, *Northwestern U.*
Author: **Leslie A. DeChurch**, *Northwestern U.*
Author: **Noshir Contractor**, *Northwestern U.*

This study investigates how individuals’ social capital affects group formation processes in online systems. I conducted a study with 854 participants who assembled groups using an online platform developed for this study and examined how they sent invitations to assemble groups with others, as well as their responses to others’ invitations. Through a family of statistical models for analyzing social network data, ERGMs, the result suggests that participants’ prior relationships have strong effects on the likelihood of being invited and accepted in a group. I found that individuals’ strength of relationships, their number of weak and strong ties, and their leadership experience influence their likelihood to be invited and accepted in a group assembled online. This study provides empirical support for social capital theories that explain how groups emerge online.

**Collaborating across Organizational Boundaries: Co-Creating a more
Just and Thriving Society**
Inter-Organizational Collaboration

Chair: **Ann E. Feyerherm**, *Pepperdine Graziadio Business School*
Discussant: **Ignacio Pavez**, *U. del Desarrollo*
Panelist: **Francisco Valenzuela**, *U. of Chile School of Business and Economics*
Moderator: **Danielle Zandee**, *Nyenrode Business U.*
Panelist: **Chris Worley**, *Pepperdine Graziadio Business School*
Panelist: **Barbara Gray**, *Pennsylvania State U.*
Panelist: **Ronald Fry**, *Case Western Reserve U.*
Panelist: **Matt Mayer**, *U. of Calgary*
Discussant: **Alison Stowell**, *Lancaster U.*

The aim of this panel symposium is to explore how organizations, collaborating across organizational boundaries, can create a more just, resilient, and thriving society. We believe that there are examples that have come from the responses to the COVID-19 pandemic and that management sciences can inform what role inter-organizational collaboration can play to help bring forth a more sustainable future. Five panelists consisting of Barbara Gray, Chris Worley, Ron Fry, Matt Mayer, and Francisco Valenzuela will address historical theories of collaboration, challenge organizational scholars to go beyond corporation-centric models to models of collaboration that join multiple corporations with other diverse societal actors to tackle complex problems, and provide a current example of social innovation labs that cross sectors to provide for “energy futures” in a Canadian province. We will also explore the concept of resilience in collaborating in a crisis. The COVID-19 pandemic has given us a unique opportunity to experience what Emery & Trist (1965) labeled a “turbulent field” and learn more about inter-organizational collaboration and how it can reshape organizing—as well as organizations themselves—to create a new and better normal. Where the “new normal” is in itself an empty concept, it can be filled by higher aspirations when socially constructed as an opportunity to create a more flourishing world (Cooperrider & Fry, 2020). How to do so collaboratively, is an important question that will be explored during the symposium. There will be time for participation and discussion from attendees

Places, as constitutive of institutional life, are important loci in the unfolding of institutional processes. This Symposium builds on the recent interest on the role of places and spaces and their interplay in institutional processes of maintenance and change. Adding to prior advances, it introduces and discusses the linkages between places, spaces, and communities and their role in reimagining institutions in crisis, disruption, and change. By bringing together conceptual and empirical research that usefully interlinks place, space, communities and institutional dynamics, this Symposium aims at discerning how their role and interplay can be theorized to understand institutional repair, renewal, and creation.

Reputation and Rankings in Sustainability

Digital Session Chair: **Nareuporn Piyasinchai**, *Cambridge Judge Business School*

ONE: How the Pursuit of Sustainability Poses Tradeoffs Between Legitimacy and Reputational Spillovers

Author: **Nareuporn Piyasinchai**, *Cambridge Judge Business School*

Author: **Matthew Grimes**, *Cambridge Judge Business School*

Author: **Christoph Loch**, *Cambridge Judge Business School*

Carolyn Dexter Award Nominee

Due to persistent dynamism regarding societal standards and expectations of sustainability, firms are increasingly expected to pursue sustainability by way of increased commitments to environmental, social, and governance (ESG) practices. Likewise, amidst such uncertainty and dynamism investors are likely to reward industry-specific conformity of ESG practices as a means of reducing risk. We argue, however, that such conformity regarding ESG practices increases the unanticipated risk of negative reputational spillovers in the event that the firms' peers and their ESG practices are publicly criticized. We test our hypotheses using a balanced panel dataset of 2,313 companies across 62 industries and 70 countries from 2013 to 2018. Our results suggest that although conformity indeed benefits a firm's financial performance on average, it also accentuates negative spillover effects—effects, which in the event that industry peers are highly criticized, can outweigh any legitimacy-related gains associated with conformity. Firms in industries with highly diverse sustainability practices alternatively benefit from positive spillovers when their industries' peers are severely criticized. Our findings contribute to longstanding research on categorization and optimal distinctiveness, while advancing the growing and important literature on spillover effects in the context of sustainability.

ONE: Reputational Imprints: How Public Criticism During Crises Affects Sustainability-Driven Innovation

Author: **Nareuporn Piyasinchai**, *Cambridge Judge Business School*

Author: **Matthew Grimes**, *Cambridge Judge Business School*

Public criticism of firms' environmental, social, and governance (ESG) practices offers an important source of environmental feedback that can prompt innovation. However, such criticism can also affect organizations' reputations in ways that constrain innovation, limiting both access to necessary resources for and the potential payoff from such innovation. In this study we examine this tension between public criticism as a source of organizational learning and reputational constraint in the context of global crises. Building on the organizational imprinting literature, we argue that global crises represent pronounced periods of upheaval for firms, during which firms are imprinted by public criticism in ways that over time channel firms' sustainability-related strategies. We test our hypotheses using a panel data set of 4,738 companies across a 12-year period beginning during the 2007–2009 global financial crisis. Our findings suggest that although the firms initially engaged in similar levels of sustainable practices, firms differed over time in their embrace of innovation in response to ESG incidents depending on how extensively they were criticized during the crisis. Moreover, competition is shown to amplify the resulting virtuous and vicious spirals. Our findings contribute to scholarship on imprinting, corporate reputation, and organizational sustainability.

ONE: Ratings and Reactivity: How Competing Logics Shape Organizational Responses to Being Rated

Author: **Ben William Lewis**, *Brigham Young U.*

Author: **W Chad Carlos**, *Brigham Young U.*

We examine why organizations may at times decrease their performance after receiving a positive rating. Incorporating insights from the literature on institutional complexity and competing institutional logics, we argue and demonstrate how the perceived incompatibility between a positive rating and a dominant logic may cause organizations to view the rating as unfavorable and thus strategically reduce their performance on the rated dimension. Utilizing a difference-in-differences design, we examine how companies responded to being rated and recognized as a charitable organization, an evaluation that we maintain was generally perceived as incompatible with the dominant institutional logic of shareholder maximization during the early 1990s. Our results suggest that companies were more likely to decrease philanthropic contributions after being rated as a generous firm. We also found this effect to be amplified and attenuated by factors that increased or decreased the saliency of the perceived incompatibility between the philanthropy rating and the dominant shareholder logic. These findings provide insights for scholarship on how organizations react to external evaluations and raise important questions for scholars and practitioners interested in the effectiveness of evaluation metrics in shaping organizational performance.

Research Methods Division/CARMA Social Hour
RMD/CARMA Social Hour

Organizer: **Kris Byron**, *Georgia State U.*

Join us for a virtual scavenger hunt of Philadelphia -- where the conference would have otherwise occurred. In teams, you'll answer unusual trivia questions that lead you to discover great websites of landmarks and museums and answer tricky questions about what you discover. You'll see quirky art, find surprising objects, peer inside majestic rooms, and virtually wander through sites that reveal Philadelphia's many treasures. You will visit Independence Hall and the Liberty Bell, the Philadelphia Museum of Art, Al Capone's cell at the Eastern State Penitentiary, and more. Participation in the social hour requires pre-registration by July 6, 2021. Pre-registrants will receive information by email about how to participate prior to the event. Please send questions to mdkbyron@gmail.com.

Strategizing in the Digital Age: From Big Data Analytics to Transforming Business Models

Strategizing in the Digital Age

Digital Session Chair: **Georg Reischauer**, *WU Vienna & JKU Linz*

SAP: **From Omnichannel to “Only” Channel: Mapping Users’ Dependency Path with Digital and Physical Service**  

Author: **Su Hua Ou**, *Soochow U.*

This research examined how user dependency enables channel integration, which creates value for enterprises. In a case study was conducted, we recorded observations, conducted interviews, and held internal meetings with key stakeholders of the famous chain retail store PX Mart in Taiwan. We analyzed how the managers fostered user dependency by investigating their customers’ pain points, connecting and locking them in with a set of strategic actions. We also analyzed how resources were recombined with particular organizing mechanisms, including bundling, packaging, and hybridizing, to create values for users and the enterprise. By building user dependency, the relationships between users and producers are also transformed from member keepers to bookkeepers, in-house servants, and financial managers. This paper contributes to the literature on omnichannel strategies and digital transformation by analytically linking the concepts of user dependency, resource recombination, and value creation in the context of a chain retail store. The paper also discusses its theoretical and practical implications.

SAP: **A Deconstructive Re-Reading of the “Big Data Analytics/Strategizing” Relationship**  

Author: **Yassine Talaoui**, *U. of Vaasa*

Author: **Marko Kohtamäki**, *U. of Vaasa*

Author: **Mikko Ranta**, *U. of Vaasa*

Author: **Sotirios Paroutis**, *Warwick Business School*

Author: **A. Paul Spee**, *U. of Queensland*

Big data analytics as a central concept in strategizing is gaining unequivocal consensus. However, the research interest in its mediative role and usage has overshadowed its ontology and its relationship with the social practice of strategizing. In this paper, we attempt a critical study of this relationship -drawing on Latent Dirichlet Allocation (LDA) and Derrida’s deconstruction- and seek to unveil that the taken-for-granted assumptions and the inherent contradictions of this binary relationship rooted in the ‘material/social’ distinction. We argue here that the ‘big data analytics-strategizing’ couplet is foregrounded in two facts accomplishing ‘instrumentality’ and ‘compliance’ that juggle the flow of causality and agency between the two sides of the dualistic liaison. The ‘big data analytics-strategizing’ relationship is not so much about ‘mediative resources’ or ‘artifacts-in-use’ as much as it is about the ‘ordering’ of social condition into shape or its ‘free will’ to resist big data analytics. When viewed thus, this relationship takes on a very different turn, which brings forth the relentless contestations between instrumentality and resistance, finality and enactment, change and inertia, linearity and emergence. Such ontological opposites are what nurtures and uphold our alternative re-reading of the premise of the ‘big data analytics-strategizing’ relationship.

SAP: **Business Model Innovators and the Formation of Reputation over Time**

Author: **Andrea Kim**, *John Molson School of Business, Concordia U.*

Author: **Michael Carney**, *Concordia U., Montreal*

Author: **Gwyneth Edwards**, *HEC Montreal*

Business model innovators (BMIs) combine existing technologies and organizational practices to provide new sources of value. While we expect innovative firms to conduct their business with integrity to compensate for the adverse effects of their cognitively unfamiliar business models, we argue that there is growing ambiguity about the expected conduct of BMIs. In our longitudinal case study, we demonstrate how a BMI (Uber) consistently breaches normative standards of business conduct without incurring the expected reputational penalties. We conclude that BMIs’ reputations are formed in an ideational grey zone that allows for greater latitude in standards of business conduct.

SAP: **Building Organizational Resilience: How Digital Transformation Creates Value in a Crisis**  

Author: **Sean Maddison Dwyer**, *Baylor U.*

Author: **Yasamin Hadavi**, *Baylor U.*

Author: **Hope Koch**, *Baylor U.*

Author: **Russell E. Browder**, *U. of Oklahoma Price College of Business*

How does digital transformation enable leaders’ resilience strategies in a crisis? To answer this question, we examine two organizations embedded in the grocery and foodservice distribution industries during the COVID-19 crisis. We study a grocery chain that faced customer demand that exceeded its logistical capacity and a grocery and foodservice distribution organization that experienced severe reductions in customer activity primarily related to government shut-downs of the restaurants it serviced. Our in-depth qualitative study highlights that when facing unexpected events and uncertain conditions, resilient organizations can create value for stakeholders that leads to improved outcomes for their organization, customers, and employees, shareholders, and the broader community. Organizational leaders can do so by enacting three types of resilience strategies: replication, repurposing, and reconfiguration. We find that the extent to which organizational leaders effectively integrate existing and new digital technologies with these mechanisms impacts the stakeholder value organizations create. This study offers implications to research at the intersection of organizational resilience and digital transformation.

SIM: The Role of Heterogeneous Contexts Shaping CSR Practices in Russia

Author: **Ekaterina A. Ivanova**, *HSE U.*
Author: **Liudmila Cheglakova**, *National Research U. Higher School of Economics*
Author: **Veronika Kabalina**, *National Research U. Higher School of Economics*

This paper investigates the diversity of Corporate Social Responsibility (CSR) practices in the Russian context. Our key aim in this paper is to study how a heterogeneous context, commonly found in developing countries, shapes the emerging CSR practices of Russian business organizations. An institutional perspective that draws on the contextual multilevel approach guides our study. In our theoretical framing we assume that organizational fields play a key role in shaping CSR practices. This is applied to empirical investigation of organizational CSR practices. To inform our analysis we used desk research and an empirical dataset that consists of 87 interviews with local business owners and managers representing a wide range of business organizations operating in Russia. Based on an exploratory qualitative inquiry, we distinguish between four types of organizational CSR practices co-existing in Russia: global, crossvergent, authentic and irresponsible. Our findings demonstrate that business organizations populating one organizational field share homogeneous characteristics of CSR practices. The distinctions among CSR practices of business organizations belonging to different organizational fields are explained by the markets where they operate, core stakeholders, response mechanisms to prevailing institutional pressures and the dominant legacy of CSR.

SIM: Different Strokes - Ownership Structures and the Choice of CSR Responses in Mandatory CSR Context

Author: **Syed Eraj Hassan**, *U. of Victoria (PhD Student)*

India became one of the first countries to implement the mandatory CSR law under the Companies Act of 2013 which stipulates that a broad category of firms make compulsory minimum CSR spends and share granular activity-level information publicly. Further, under the guidelines of the law, CSR is expected to be mere philanthropy than CSR that is construed as being of strategic importance to firms. With the board of directors responsible for enforcement of the law, I argue that this is a "soft hard law" that allows firms and their managers to exhibit systematic differences in their CSR approaches. Based on two categorizations of CSR levels from literature, I examine the propensity of firms in responding to their CSR obligations. At the first level, I classify and define CSR activities into four categories – philanthropic, strategic, political and process. Later, I categorize philanthropic CSR activities into symbolic and substantive giving. I look at the implication of firm-level differences on manager choices based on ownership structures and use extant literature to make predictions about their CSR implementation. These predictions can be tested by publicly available data in future research.

Paper is Available to Meeting Registrants Only.

SIM: Network Analysis of CSR Spending Practices of Indian Extractive Sector

Author: **Ajay K. Singal**, *Institute of Management Technology, Dubai*
Author: **Faisal Mohammad Ahsan**, *Indian Institute of Management, Ranchi*

We examine Corporate Social Responsibility (CSR) discourse to compare the change in themes across two time periods separated by policy intervention. The paper further explores internal governance and external implementation mechanism of affirmative CSR policy. We use Text Network Analysis of CSR related expenditure to evaluate the CSR discourse of a sample of metal and mining companies from Indian extractive sector. Results are presented in the form of network graphs. We conclude that CSR initiatives in the extractive sector are primarily devoted to local social development, with little emphasis on environmental sustainability. Further, companies have adopted two-tier governance structures for managing CSR. The top tier comprises board members who formulate CSR programs, and the second tier has executives responsible for the implementation. Another tier of governance involving local domain experts is emerging. The three-tier implementation mechanisms will give firms a tighter control on spending and enhance the effectiveness of initiatives.

SIM: The Impact of Absorbed Slack on Corporate Social Responsibility: Evidence from China

Author: **Lu Shang**, *Renmin U. of China*
Author: **XINYU HU**, *Renmin U. of China*

This study focuses on how and why absorbed slack resources influence corporate social responsibility. We use the data of 435 publicly listed Chinese firms between 2012 to 2016 as the research object, and relies on empirical analysis of corporate behavior theory to test the impact of absorbed slack on corporate social responsibility, as well as the moderating effect of political connection and ownership concentration. The empirical result shows that the impact of absorbed slack on corporate social responsibility is an inverted "U" shape, and a moderate level of absorbed slack helps maximize the level of corporate social responsibility. In addition, compared with companies with low political connection, the inverted "U" shape between the absorbed slack and corporate social responsibility in high political connected companies is more outstanding. Compared with companies with low equity concentration, the inverted "U" shape between absorbed slack and corporate social responsibility in high ownership concentration enterprises is more outstanding.

Paper is Available to Meeting Registrants Only.

Author: **Andreas Hoepner**, *U. College Dublin, Smurfit*

Author: **Qian Li**, *Cardiff Business School, Cardiff U.*

Author: **Penelope Muzanhenamo**, *U. College Dublin, Smurfit*

Within the context of Africa, the prevalence of poor institutional environments and its prioritisation of economic responsibilities create simultaneously the need for more socially responsible business practices, and the risk of more socially irresponsible episodes to be discovered. Despite there have been documentations of corporate social irresponsibility (CSI) (e.g. tax evasion, human rights abuse and bribery), there appears to be a lack of research quantitatively assessing the impact of CSI on shareholder value across the African continent. From the lens of stakeholder theory, expectancy violations and institutional voids, we argue that the interrelationship between stakeholder expectations, power and interests is of primacy to the firm and can exert influence on firms' economic role in creating shareholder value in the macro environment. Using a large sample of 865 African companies across the only emerging markets in Africa (Egypt and South Africa) and representative frontier markets (Kenya and Nigeria) during 2009-2016, we find that firms avoiding CSI earn higher returns and the penalty for CSI is higher in countries with stronger institutional environments. The findings imply for investors and managers that even in the context of weak institutions, adherence to basic moral principles (i.e. avoiding bad) appear to be good business practice.

Panelist: **Witold Jerzy Henisz**, *U. of Pennsylvania*

Moderator: **Ioannis Ioannou**, *London Business School*

In recent years, the literature and public discourse surrounding corporate sustainability and responsibility has emphasized the power of 'win-win' business strategies to motivate businesses to tackle societal challenges and thereby increase their financial profit. Recent discussions in online forums, triggered by an insightful article by King and Pucker (2020), have centered on the dark side of the widespread focus on win-win strategy. Specifically, because research has not established that win-win strategies are sufficient to actually solve enormous social challenges such as climate change or inequality, our collective attention to these strategies dilutes and discourages research, teaching, regulation, and corporate action focused on more effective (though less superficially attractive) approaches. The purpose of the proposed PDW is to engage the scholarly community in a critical analysis of the boundaries of the 'win-win strategy' as a tool to solve global challenges. In this session, we extend the ongoing conversation into a live forum. The PDW will begin with a debate between expert panelists as they react to a set of provocative statements drawn from the literature and from past online discussions. Following the debate, participants will split into themed "round table" style breakout rooms, where they will engage with one another to find ways to address the issues raised in the debates as they relate to specific topics of interest. Panelists will serve as moderators to guide the conversation towards specific actionable results. Each group will then present their findings to the group at large.

English Writing for German Native Speakers
English Writing for German Native Speakers

Organizer: **Markus Vodosek**, *Indiana U. - Kelley School of Business*
Presenter: **Mary Craig**, *English for Impact*

German is the second most widely spoken non-English native language of participants at the AOM Meeting. At the 2019 meeting, 806 or 8.1% of the 9,910 participants came from German-speaking countries. Many of the Academy's native German speakers write in English to submit manuscripts to international conferences and English language journals. Inevitably, non-native speakers of English face additional challenges in the writing and review process compared with native speakers of English. Such challenges include difficulties in adhering to the organizational, grammatical, semantic, and punctuation conventions of the English language and not being able to communicate complex thoughts clearly to reviewers and editors. In particular, German native speakers who write in English may mistakenly follow conventions of German writing that can adversely affect grammatical, semantic, stylistic, and punctuation aspects. This workshop is designed for German native speakers who want to improve their English writing skills through techniques they can later apply independently. In interactive exercises that take advantage of the chat, polling and breakout room functions of the online meeting platform Zoom and the collaboration capabilities of Google docs, participants will practice revision techniques that target German language patterns transferred into English. At the end of this workshop, participants will not only be able to preempt typical mistakes but also to write effective English sentences and, by extension, purposeful paragraphs and convincing manuscripts that meet the standards of AOM publications.

**Organizational Determinants of Health: Conceptualizing
Diversity & Inclusion in Healthcare Mgmt**
Org Determinants of Health: D&I in HCM

Coordinator: **Nicholas Edwards on**, *U. of New Mexico*
Panelist: **Geoffrey Silvera**, *U. of Alabama, Birmingham*
Facilitator: **J' Aime Jennings**, *U. of Louisville*
Panelist: **Tiffany Dawn Johnson**, *Georgia Institute of Technology*
Panelist: **Anthony C. Hood**, *U. of Alabama, Birmingham*
Panelist: **Kristine Ria Heard**, *U. of Alabama, Birmingham*

In response to the social justice uprising of 2020, organizations across industries have sought to initiate or improve their efforts towards diversity and inclusion (D&I). However, with regards to D&I, most firms' ability to address societal disparities and inequities is indirect and longer term—through equitable hiring practices, fairness in compensation and promotion, and public support of social justice and progress. Healthcare organizations, though, are uniquely positioned to directly and immediately impact existing disparities by improving the health of their communities. That is, healthcare organizations' product (i.e., patient care and outcomes) and the means by which the product is produced (i.e., culture, processes, staffing, governance, physical plant, etc.) are both channels for addressing current societal inequities and disparities. However, the mechanisms by which a healthcare organization's internal D&I decisions affect its immediate, patient-level outcomes and longer-term population-level outcomes are not well understood. Multilevel theories on diversity are relatively nascent compared to other fields of management theory. The academy has yet to settle on the very ontology of diversity within the firm, nor how a firm's diversity may impact its equally diverse products and customers (i.e., patients). At this historical juncture, the need for multilevel theorizing is critical for both the healthcare industry and the ascending fields of HCM and D&I theory. In this PDW, scholars from GDO and HCM will foster a collaborative conversation on what we term the organizational determinants of health—the multilevel context of healthcare organizations and patient care delivery that may reduce or promote health disparities.

Selection and Assessment

Digital Session Chair: **Joseph John McManus**, *Monmouth U.*

HR: Hiring Too Close to the Sun: Hubris & Managerial Hiring Decisions 

Author: **Joseph John McManus**, *Monmouth U.*

Talent acquisition is a critical source of competitive advantage for organizations. Even with substantial resources devoted to this process, hiring managers still make poor hiring decisions. The instant research proposes that hubris on the part of hiring managers is one factor that causes these individuals to make poor hiring choices. This theory is tested in an empirical study that draws on data from the NFL entry draft to see if observable factors that are expected to build hubris among managers are related to poor talent acquisition strategies among NFL talent evaluators. The findings are consistent with the model proposed and support a hubristic interpretation of the NFL personnel managers' behavior over the 2018-2019 period.

HR: Exploring the use of gamification in assessment: A signaling mechanism

Author: **Konstantina Georgiou**, *Athens U. of Economics and Business*

To expand our knowledge on gamification and the signals sent on the part of the organization when gamified assessments are used, the present study examines the mechanisms through which the use of gamification into an assessment method may increase the attractiveness of an organization as a prospective employer. Specifically, building on signaling theory, our study examines, following a longitudinal design, the signals that an organization sends to applicants about its symbolic traits (e.g., innovativeness), through the characteristics of a gamified assessment, in terms of enjoyment and flow, and their impact on organizational attractiveness. We believe that our findings contribute to gamification and signaling theory and have practical implications for organizations because they gain insights into the signals sent to applicants when different assessment formats are used.

HR: Post-Traumatic Stress Disorder and Hiring: Am I Traumatized and Stigmatized?

Author: **Wenxi Pu**, *U. of Manitoba*

Author: **Philip L. Roth**, *Clemson U.*

Author: **Jason Thatcher**, *Fox School of Business, Temple U.*

Author: **Christine Nittrouer**, *Texas Tech U.*

Author: **Michelle Hebl**, *Rice U.*

An increasing number of veterans in the United States and worldwide suffer from Post-Traumatic Stress Disorder (PTSD). Unfortunately, there is comparatively little research about how this disability influences hiring processes. We suggest that veterans with PTSD (compared to those who don't have PTSD) might be stigmatized during the hiring process such that their hiring ratings might suffer. At the same time, social media platforms have been increasingly used as popular sources of data collection among recruiters when making hiring decisions (i.e., social media [SM] assessment). Unfortunately, SM assessment may make PTSD more discoverable by making possible the introduction of extraneous information into the hiring process. We conducted a study of working professionals in which we manipulated the PTSD status of a veteran job applicant on two social media platforms (Facebook or LinkedIn). Results suggest that there is significant stigmatization of veterans with PTSD versus those without PTSD. Stigmatization was positively related to suspicion, which was negatively related to both expected task performance and expected organizational citizenship behavior (OCB) and positively related to expected counterproductive work behaviors. Thus, we document the negative effects of PTSD on veterans in the hiring process. Our results shed light on how SM posts can lead to stigmatization, suspicion, and lower hiring evaluations of veteran applicants suffering from PTSD. The manuscript also imports the construct of suspicion into the selection/staffing literature and shows how it affects veterans in the hiring process.

Paper is Available to Meeting Registrants Only.

HR: Occupational Characteristics Moderate Personality-Performance Relations in Major Occupational Groups 

Author: **Michael P. Wilmot**, *U. of Arkansas Sam M. Walton College of Business*

Author: **Deniz S Ones**, *U. of Minnesota*

Personality predicts occupational performance. However, previous cross-sectional meta-analyses overlook effects of occupational characteristics. Accordingly, we conduct second-order meta-analyses of the Big Five traits and performance in nine major occupational groups: Clerical, customer service, healthcare, law enforcement, management, military, professional, sales, and skilled/semiskilled ($k = 539$ studies, $N = 89,639$). For each occupational group, we integrate data from the Occupational Information Network (O*NET): Expert ratings of 1) traits' relevance to its occupational requirements and 2) its occupational complexity level. We report three major findings. First, trait relations differ considerably across major occupational groups. Second, expert ratings of traits' relevance largely converge with empirical relations; the top-two most highly rated traits mostly match the top-two most highly predictive traits. Third, complexity moderates performance relations. When occupational groups are ranked by complexity, multiple correlations generally follow an inverse-U shaped pattern, which suggests moderate complexity levels may be the "goldilocks range" for personality prediction.

GLOBE 2020: A Study of National Cultural Practices and Leadership Ideals in Over 100 Countries
GLOBE 2020: Cultural Practices and Leadership

Chair: **Mansour Javidan**, *Thunderbird School of Global Management at ASU*
Panelist: **Peter W. Dorfman**, *New Mexico State U.*
Panelist: **Richard Cotton**, *U. of Victoria*
Panelist: **Carolyn Egri**, *Simon Fraser U.*
Panelist: **Amanda Bullough**, *U. of Delaware*
Panelist: **Anirban Kar**, *Beedie School of Business Simon Fraser U.*

The proposed panel will provide a review of GLOBE 2020 study. We will explain our theoretical framework, our instrument design, and our sampling procedure. We will also share the first round of findings regarding cultural practices, as well as new culture dimensions and leadership ideals as we also share data depicting countries having a wide range of scores on these different dimensions. The following are the topics that will be covered: 1. Identifying and then solving critical methodological research challenges prior to conducting a large-scale cross-cultural survey (e.g., sampling issues). For GLOBE 2020, a focal point early on was to assess the construct validity of past cultural practice scales and modify the scales that merited further development. Several scales have been extensively revised (e.g., gender egalitarianism) and new scales proposed. 2. Presenting preliminary findings of cultural practices in GLOBE 2020 countries. Data will be presented regarding the range of country scores for each cultural dimension. 3. Discussing the process and results of re-conceptualizing the original GLOBE implicit leadership ideals. This involved examining contemporary implicit leadership theory and analysis of the cross-cultural data set to identify the best structure for the leadership ideals across cultures. We designed more parsimonious instruments to measure ideal leadership dimensions, added two new leadership dimensions, and expect to offer new configurations of ideal leadership profiles for different countries.

How to broaden our international sight on Management education at AOM? How to find original answers to the important challenges our universities and education institutions are currently facing? The main objective of this PDW is to share the way the Ambassadors Program at the MED Division has developed and collectively learn from other similar initiatives about best practices to adopt or even collectively develop innovative models for teaching and learning. The questions raised in this PDW include: What are the expected impacts of the MED Ambassadors on the MED Division? What are some of the outcomes the MED Ambassadors have managed to achieve already, and are planning to achieve? Several MED Ambassadors will introduce their projects (expectations of effectiveness) and key challenges they (may) face (difficulties encountered during project development and execution). Thus, interested divisions and interest groups (DIGs) will be able to think of new ways to increase inclusiveness, involvement and commitment of international members by means of the Ambassadors network.

Firm Strategy - Logics, Decision-making, Capabilities, & Adaptation

Digital Session Chair: **Maria Carmela Annosi**, *Wageningen U.*

MOC: Integrating intuition and rationality in the strategic decision-making process: Evidence from MNCs 

Author: **Maria Carmela Annosi**, *Wageningen U.*

Author: **Francesco Paolo Appio**, *SKEMA Business School, U. Côte d'Azur (GREDEG)*

Author: **Federica Brunetta**, *Department of Business and Management, LUISS Guido Carli U.*

The increasing complexity of business contexts, alongside the need for organizations to improve their capabilities and remain competitive on the market, make understanding strategic decision-making processes cornerstone for contemporary organizations. By gaining insights from top- and middle-level managers working in MNCs' subsidiaries operating in the food industry in the Netherlands, we frame an integrative view on intuition and rationality in the strategic decision-making process and disentangle its antecedents and consequences. The antecedents mainly pertain to those influencing conditions causing tensions when intuition and rationality need to be integrated, namely managers' personality characteristics, cognitive styles, experience, as well as the environmental forces, insufficient organizational resources, and the relevance of the strategic decision. The consequences assess the perceived effectiveness of the intuition-rationality integration and focus on time efficiency, creativity, and power of persuasion. Such results shed light on what is the role of intuition in the strategic decision-making process, suggesting that integrating it with rationality is in fact not straightforward and can only happen in a bi-directional sequential fashion through a certain degree of managerial decisional elasticity.

MOC: Two Sides of the Sensing Capability  

Author: **Herbert Endres**, *U. of Regensburg*

Author: **Gerrit H. Van Bruggen**, *Erasmus U. Rotterdam*

Many firms still fail to adapt to market changes because they are not very capable in sensing market opportunities and threats. Reasons for this include managers' limited understanding of the role of specific market knowledge sources in sensing threats compared to sensing opportunities. This article addresses how different types of market knowledge sourcings affect sensing of threats in comparison to the sensing of opportunities. We overcome limitations of prior research which gave only limited attention to these differences. Furthermore, we link these relationships with revenue growth. We use survey data from top managers at 483 industrial firms to test hypotheses and complement it with objective revenue growth data. We reveal that the type of knowledge sourcing influences the strategic interpretation of information about market changes. Further, our findings suggest that a growth strategy needs to pay particular attention to sensing threats and not only to sensing opportunities.

MOC: From Emotions to Actions: Chain Reactions in Strategic Adaptation  

Author: **Suvi-Tuuli Helin**, *Aalto U.*

We gather and analyze three years of ethnographic data from a management consultant organization to understand the emotional dynamics involved in continuous strategic adaptation to evolving client needs. We find that organizational practices that generate "chain reactions" of emotions and actions enable successful adaptation. In particular, practices that focus on information reinforcing optimistic perceptions about current capabilities generate confidence, which enables senior members of the organization to persuade clients to purchase services, leading to ambitious commitments and high expectations. In response, both senior and junior members of the organization are motivated to avoid shame that will occur if they fail to meet expectations. Thus they will strive to develop the needed capabilities rapidly. Our research contributes to strategic adaptation theory by integrating and elaborating previously disconnected insights regarding practices, emotions, and adaptation.

MOC: Beyond Local or Distant Search: Co-evolution of Cognition Representation and Behavioral Capabilities

Author: **Hui Sun**, *Northwestern Kellogg School of Management*

Author: **William Ocasio**, *U. of Illinois at Urbana-Champaign*

Organizational search is indispensable to organizational learning and adaptation. But organizations often search in the vicinity of their existing routines and capabilities due to bounded rationality. Hence, a plethora of prior studies has focused on how to facilitate distant search. However, a recent emphasis on cognition in strategy suggests that the dichotomy between local and distant search may be an oversimplification: search that is distant in capabilities may be local in cognition. Through an inductive, longitudinal study of the classical Chinese furniture industry, we traced the emergence, elaboration, entrenchment of cognitive representation, and associated strategic action. We found that elaborate cognitive representations are important for capability development, suggesting a beneficial coupling between cognitive local search and behavioral distant search. However, when cognitive representations are aligned with behavioral capabilities, cognitive entrenchment is likely to occur. Recontextualizing higher-level cognitive representations with different values may open up new opportunities for change.

Author: **Jenny Gibb**, *U. of Waikato*

Author: **Daniel Newark**, *HEC Paris*

Author: **Stephan Billinger**, *U. of Southern Denmark*

The logic of consequences and the logic of appropriateness have long been fundamental to understanding how choices in organizations are made. However, interaction between these logics within the firm has received minimal attention. In this paper, we advance theoretical understanding of how these two decision logics coexist and coevolve in organizations by reporting findings from a three-decade study of a small firm. In particular, through our analyses we identified three logic balances: predominantly logic of appropriateness, predominantly logic of consequences, and parity—a so-far largely overlooked dynamic in which both logics operate more or less coequally. We also identified four mechanisms through which our target firm shifted from one of these logic balances to another, as well as two mechanisms through which it sustained its ultimate state of parity until the end of our period of observation. Concerning parity, we found that its maintenance depended substantially on specialization by decision logic within the firm. As we note in our discussion section, this suggests intriguing potential implications for research on organizational design, as well as research on job satisfaction and meaning at work. In our discussion section we also propose directions for future decision research on the interaction between these two principal decision logics.

Workplace Deviance: Opportunism, Knowledge-Hiding, Hypocrisy, Pro-group Unethicality, Routinization

Digital Session Chair: **Roberta Fida**, *U. of East Anglia, Norwich Business School*

MOC: Opportunistic strategy under cooperation  

Author: **Chia Yi Liu**, *Tunghai U.*

Must a transaction be based on reciprocal commitments? Has opportunistic behavior inevitably caused the termination of a transaction? To elucidate the positive effect of opportunistic behavior on long-term transactions, this study regards opportunistic behavior as a strategy used to respond to the perception of partners' opportunistic behavior. Based on 113 transactions for contract farming in Taiwan's organic agriculture, this study employed the Heckman model to deal with the sample selection bias problem of opportunistic behavior under cooperation. This study found that in Chinese society, to maintain a transactional relationship, the opportunistic strategy is put to use based on the perception of partners' opportunistic behavior—our perception of the partners' obvious unethical behavior increases our hidden and obvious unethical behavior; the perception of partners' hidden unethical behaviors increases our hidden behavior, but does not affect our obvious unethical behavior.

MOC: Withstanding Moral Disengagement: Ethical Self-Efficacy as Moderator in Misbehavior Routinization  

Author: **Roberta Fida**, *U. of East Anglia, Norwich Business School*

Author: **Marinella Paciello**, *International Telematic U. Uninettuno*

Author: **Irene Skovgaard-Smith**, *Norwich Business School, U. of East Anglia*

Author: **Claudio Barbaranelli**, *Sapienza U. of Rome*

Author: **Gian Vittorio Caprara**, *Sapienza U. Di Roma Rome, Italy*

Moral disengagement (MD) is a social-cognitive process that increases the likelihood of engaging in counterproductive work behavior (CWB). Previous studies have also suggested its role in the routinization of misconduct. What remains unclear are the processes that could attenuate the disinhibitory power of MD in routinization of CWB. This is what we investigate in this manuscript. We propose that self-reflective and behavioral ethical self-efficacy beliefs can buffer the CWB-MD-CWB mediational path over time. We present two empirical studies conducted in two different contexts (i.e., the United Kingdom and Italy). Preliminary examination of the psychometric properties of the newly developed constructs attested the validity and reliability of the ethical SE measures (Study 1, N=308). The posited model has been investigated in an independent longitudinal study conducted on a larger sample of employees (Study 2, N=1308). Results from a structural equation model of moderated mediation confirmed that more efficacious individuals were less likely to routinize CWB over time through the mediation of MD. Results showed that the effect of self-reflective and behavioral ethical self-efficacies on the routinization process occurs at different stages. While self-reflective ethical self-efficacy buffers the CWB-MD relationship over time, behavioral ethical self-efficacy buffers the MD-CWB relationship over time. Theoretical and practical implications are discussed.

MOC: The Role of Moral Disengagement in the Contagion of Pro-group Unethical Behavior 

Author: **Julie N.Y. Zhu**, *U. of Macau*

Author: **Long Wai Lam**, *U. of Macau*

Author: **Yolanda N. Li**, *Lingnan U.*

Author: **Qi Shao**, *U. of Macau*

Pro-group unethical behavior is a kind of behavior that violates moral standards while benefitting the actor's team. In this study, we enrich the understanding of its causes by investigating whether being exposed to coworkers' pro-group unethical behavior induces employees to engage in the same unethical behavior. We theorize that employees' moral disengagement explains the link between coworkers' pro-group unethical behavior and employees' pro-group unethical behavior, and that the effect is contingent on the employees' level of team identification. We conducted three field studies to examine our research model. In Study 1, we obtained evidence supporting the indirect effect of coworkers' pro-group unethical behavior on employees' pro-group unethical behavior via moral disengagement. In Study 2, our results also showed the direct effect of coworkers' pro-group unethical behavior on employees' pro-group unethical behavior in addition to the indirect effect. In Study 3, our analyses suggested that the proposed indirect effect is contingent on team identification. Employees were more likely to learn pro-group unethical behavior from their coworkers through moral disengagement under high team identification rather than low team identification. These results were consistent with our expectation.

MOC: Do You Know What I Know: The Role of Context in Enabling, Reducing Knowledge Hiding in Workplace

Author: **Zeeshan Ali**, *national U. of computer & emerging sciences*

Author: **Richard J. Klimoski**, *George Mason U.*

This paper examines the circumstances under which an individual purposefully hides knowledge from his/her manager or supervisor. It goes on to explore the potential impact of context as this affects the probability and consequences of detection, factors thought to mitigate against its occurrence. Intentional withholding of relevant knowledge can be detrimental to any initiative in terms of such things as unintended costs, inferior quality of outputs or failing to meet deadlines. Accordingly, we review what we know about the concept of KH and briefly summarize what are thought to be its primary causes and some of its consequences. In doing so we emphasize the role of the anticipation of detection and its consequences as new and potentially important explanatory factors. We further propose that managing the expectations of detection and its consequences will contribute to the reduction of knowledge hiding and go on to recommend some tactics for doing so. We conclude by offering propositions that will allow researchers to evaluate the potential validity of our approach.

MOC: When hypocrisy is rewarded: The costs of moral flexibility outweigh the costs of hypocrisy

Author: **Elizabeth Huppert**, *U. Of Chicago*

Author: **Nicholas Herzog**, *U. of Chicago Booth School of business*

Author: **Justin Landy**, *Nova Southeastern U.*

Author: **Emma Levine**, *U. Of Chicago*

Why is hypocrisy so pervasive in our political, professional, and personal lives? Existing research on hypocrisy suggests that word-deed misalignment is penalized. Yet, hypocrisy continues to permeate our everyday lives. Across five studies (N = 3080), we identify circumstances in which hypocrisy is preferred to consistency. When required to take positions on moral issues, actors are rewarded more (in character judgments, interpersonal trust, and political support) for taking absolute positions (“It is never okay to lie”) that they fail to uphold than for taking more flexible positions (“It is sometimes okay to lie”) that are consistent with their behavior. We study this phenomenon in the moral domain of honesty. Although few people endorse absolute honesty themselves, they still reward others who proclaim that lying is never okay, even when such absolutism involves hypocritical deception. This research helps to explain the persistence of unrealistic moral absolutism in our social world.

One of the concerns in modern organizations is ethics, where few institutions are unaffected by scandals or abuse of power. Thus, we look for inspiration in difficult times to offer leaders and managers strategies to mitigate or prevent ethical challenges. This symposium brings together various values-driven leadership approaches to managing organizations and offers both historical and modern leadership lessons. All of the papers stem from organizations rooted in religious values that perform entrepreneurial actions to survive, yet the organizations exist in diverse contexts. Two of the papers investigate leadership and power in Benedictine organizations that have a long-standing history in values-driven leadership and offer ideas how to implement the elements of authentic, ethical, and servant leadership over time. The other two papers study the influence of religious values on entrepreneurial actions in general and in the family business context in particular. We weave the four papers together to better understand how leaders and entrepreneurs incorporate their (religious) values into their leadership styles and adapt their management approaches to engage their stakeholders. Finally, we discuss practical implications of our findings in this symposium.

OMT: Lukewarm or Hot? Comparing Investor Tie Formation of Entrepreneurs in Silicon Valley and Berlin

Author: **Katharina Scheidgen**, *Leuphana U. Lüneburg*
Author: **Anna Brattstrom**, *Lund U.*

Winner of the OMT Division Best International Paper Award

Carolyn Dexter Award Nominee

This study contributes a contextual perspective on tie-formation practices that is relevant to both entrepreneurship- and network research. Existing research has highlighted that forming personal ties to investors requires skillful networking from entrepreneurs. We shift attention to how such activities are shaped by local values, norms, and taken-for-granted assumptions about what is considered socially legitimate networking behavior in different institutional contexts. We present results from an embedded, multiple case study, in which we compared two types of entrepreneurs (start-up entrepreneurs and academic spin-off entrepreneurs) across two different institutional contexts that both provide a dynamic environment for entrepreneurial activities (Silicon Valley and Berlin). Our study offers theoretical insights into how institutional contexts shape tie-formation practices through tie-formation scripts. We identify practices and scripts that are distinct to the two different contexts. Moreover, we offer novel insights into how tie-formation scripts shape the quality of entrepreneurs' networks over time, as well as how they constrain (or enable) their ability to move from one institutional context to another. In particular, we introduce the novel concept of tie warmth to explain why strategies of network broadening may be appropriate in some contexts, network deepening is appropriate in others, and in some contexts, forming personal ties to investors may not be useful at all.

OMT: Accumulating Trust in Networks: The Interplay Between Social Structure and Networking Behavior

Author: **Giuseppe Soda**, *Bocconi U.*
Author: **Akbar Zaheer**, *U. of Minnesota*
Author: **Michael Park**, *U. of Minnesota*
Author: **Bill McEvily**, *U. of Toronto*
Author: **Mani R. Subramani**, *U. of Minnesota*

The predominant focus of the organizational literature on trust has been the direct interactions between ego and other actors, which has solidified our understanding of the dyadic foundations of trust. We have learned far less, however, about the formation of trust in the context of an extended network of actors whose interactions are more limited, diffuse, and distal. In this paper, we build on the emerging literature on network forms of trust to argue that actors accumulate trust by both leveraging their position in social structure and by engaging in networking behavior. We test our predictions using a sample of data from an online trading platform consisting of 28,000 traders across 48 weeks. Our data allows us to observe the accumulation of trust in the form of "copy trading" whereby traders risk their own financial capital by allocating a portion of their portfolio to be automatically based on the investments of other designated traders. We find that traders who occupy positions of higher status in the network and traders who signal positive sentiments in their communication behaviors accumulate higher levels of trust. Furthermore, the positive effect of networking behavior on accumulation of trust is amplified by network status. In sum, we contribute to the organizational literature on the formation of trust by demonstrating that network structure acts as a prism of social cues and as pipes of signaling behavior about trustworthiness that combine to explain the accumulation of trust.

OMT: Digging the Structural Hole: Brokering's Impact on Network Structure

Author: **Doron Shiffer-Sebba**, *Doctoral Candidate at U. of Pennsylvania*

Whereas the traditional view of brokerage implies solidified social ties activated by brokers, an alternative view acknowledges the potential for brokers to alter network structure. However, even researchers who hold this view analyze the role of brokers' properties, whereas how their behavior shapes network structure remains largely unexamined. Using ethnographic observations at a family office that brokers between wealthy clients and professionals, this study develops a grounded theory of how brokering behavior alters network structure. It finds that faced with uncertain brokerage opportunities and contingent social ties, brokers can make strong claims about the quality of their network ties even before they are established. Motivated by potential rewards, they first actively test opportunities for brokerage using tactics like invoking external threats. Then, in addition to activating existing network ties, they also change network structure to pursue discrete brokerage opportunities. Taken together, these findings bolster our understanding of how broker agency and network structure are mutually constitutive in practice. They show that in addition to who brokers are, what brokers do can also shape network structure.

OMT: Agency and the Micro-Foundation of Network Resilience: Insights From "Mafia Capitale" (2012-2015)

Author: **Francesca Capo**, *U. of Milano Bicocca*
Author: **Elisa Operti**, *ESSEC Business School*
Author: **Riccardo Maiolini**, *John Cabot U.*
Author: **Francesco Rullani**, *U. Ca' Foscari of Venice; Dept. of Management & Bliss - Digital Impact Lab*

The renewed interest in people as the actors of change within the network has sparked the emergence of a new "micro-foundations" movement in social network literature. Despite the increasing attention devoted to the role played by individuals in network change and transformation, we still lack an understanding of how individuals may be agentic in responding to network churn determined by external events. In this paper, we intend to address this challenge and shed light on the strategies implemented by key actors to make the network resilient in response to a sudden exogenous shock. We address this issue through a longitudinal case study of the evolution of a political, economic, and criminal network involved in a scandal known as "Mafia Capitale" and happened in Rome, Italy's capital, between 2012 and 2015. We identify four different strategies that actors can deploy to build network resilience in the face of shocks, thus contributing to research on network resilience and on the role of networks in institutional transitions.

Navigating Temporal Multiplicity   
Navigating Temporalities

Digital Session Chair: **Nawon Oh**, *Penn State Smeal College of Business*

OMT: Near-Miss Disaster Violations and Investor Reactions 

Author: **Nawon Oh**, *Penn State Smeal College of Business*
Author: **Srikanth Paruchuri**, *Texas A&M U.*

Investors penalize firms for their misconduct because it violates expectations that firms adhere to generally agreed upon norms and standards. In this paper, we present a new class of misconduct events, labeled “near-miss” events, which may bring to investor attention the potential disaster that was averted because of this violation revelation. Examples of such events include safety inspection violation reports identifying violations that may lead to imminent disasters. We develop a theoretical framework theorizing how investor reactions are shaped by a different mechanism in these contexts. We hypothesize that investor reactions will be affected by the saliency of past disasters in the industry, and how this relationship is moderated by the extent of a firm’s vulnerability to disaster. Our empirical investigation in the context of mining industry provides broad support for this novel mechanism and has implications for research on organizational misconduct and strategic research on investor reactions.

OMT: Living in the Future or Living in the Now? How Institutional Change Actors Engage Ambi-Temporality 

Author: **Moritz Jan Kleinaltenkamp**, *Hertie School of Governance*

Finalist for the OMT Division Best Paper Award

Actors seeking to change institutions from the inside out confront the challenge of living in two times at once, also referred to as “ambi-temporality”. They have to engage in the institutionalized practices of the present that they seek to overturn, while also enacting practices that correspond to their envisioned alternative future. Extant research on institutional change and collective action suggests that actors will ultimately focus either on the present or the future, often with detrimental consequences for their institutional change project. The paper at hand seeks to develop a more nuanced understanding of how actors seeking to change institutions engage with ambi-temporality. Drawing on an abductive ethnography of a blockchain start-up seeking to disrupt institutions of centralized organizing and corporate data monopolism, I investigate how individuals organized around a shared vision for the future differently perceive ambi-temporal tensions. I develop a typology of three archetypical orientations towards ambi-temporality which individuals may adopt. One of these orientations – “processuality” – presents a workable middle-ground between a focus on the present and a focus on the future that allows actors to harmoniously live in both times at once, and hence enact institutional change from the inside out. I discuss the implications each orientation has for organizational practice.

OMT: Granting Time: How Individuals Manage Temporal Multiplicity

Author: **Jane Bjørn Vedel**, *Copenhagen Business School*

While previous research has extensively examined the temporal structuring of organizations, little research has explored how individuals manage temporal multiplicity from operating through multiple temporal structures. Based on a study of college professors holding large, long-term grants, this paper suggests that professors manage their temporal multiplicity through the temporal strategies of transcending, reshaping, entraining, and bridging. Professors’ use of these strategies is conditioned on their positions in their organizations, grants, and careers. Changes in these positions, along with temporal reflexivity resulting from the insufficiency of using single strategies, trigger professors’ shifts among the strategies. Professors’ use of these strategies leads them to two overall patterns of managing temporal multiplicity: either developing asynchrony or synchrony with their organizations. The findings are theoretically important because they demonstrate the dynamics, conditions, and implications of individuals’ temporal strategies, which also explains why accepting the temporality that grants offer is complicated.

OMT: Experiencing Time like Groundhog Day? Uncovering the Morality of Temporal Orders in End-of-Life Care 

Author: **Patricia Helena Hein**, *EBS U. für Wirtschaft und Recht*

Morality is key to the origin of peoples’ temporal orientations, as moral values can be traced back to the origins of process (kairos) and linear (chronos) time. Yet, despite the call to explore the causes of temporal conflict in organizations, existing literature mainly focuses on temporal explanations of such conflicts – clock vs. process time. We draw on a qualitative case study of economized palliative care, and show how temporalities are morally charged. We find that staff confronted a moral dilemma in balancing an individual care ethic that required catering to patients’ subjective experiences of time when facing death, and a utilitarian ethic that required attending to clock-based timelines to ensure the efficient treatment of a greater number of patients. Consequently, staff engaged in temporal work as a means to redefine the morality patients attached to time. We show that by alleviating the underlying moral dilemma, individuals with authority may resolve temporal conflicts. Second, we conceptualize process time as an existential subjective coping mechanism that is strongly linked to actors’ moral values. Third, we highlight the productive nature of temporal conflict to stir debates about social problems in mainstream society, instead of patching them up through alleviating the underlying moral conflicts.

IM Division CEIBS Best Paper Award 

Digital Session Chair: **Katherine Xin**, *China Europe International Business School (CEIBS)*

This session features the finalists for the IM Division CEIBS Best Paper Award, which is presented to the best scholarly paper of the IM Division at the Academy of Management Annual Meeting. This award is sponsored by China European International Business School (CEIBS). All papers accepted by the IM Division for presentation at the Academy of Management annual meeting are eligible for the award. All papers that are finalists for other IM Division paper awards are also considered for the CEIBS Best Paper Award.

 **IM: A Temporal Agency Model of Investor Group Dynamics** 

Author: **Christina Maria Muehr**, *WU Vienna*
Author: **Igor Filatotchev**, *King's College London*
Author: **Thomas Lindner**, *U. of Innsbruck*
Author: **Jonas F. Puck**, *WU Vienna*

In this article, we contribute to, and extend, multiple agency theory through investigations beyond dichotomous agency relationships. As such, we examine temporal interests among principals, and propose faultlines as a novel approach to capture full agency dynamics, conflicts and costs. We test our model in the empirical setting of foreign and domestic firms undergoing an initial public offering (IPO) in the US, and explain incentives of public market investors to price investor faultlines in public equity markets. Within this framework, we distinguish dormant from active faultlines, and describe their activation course through the triggering event of IPO lockup expiration. We find evidence that faultlines negatively affect post-IPO stock market performance, with foreign firms driving this negative effect. We further investigate the contingency of firm foreignness, and uncover geographic dispersion among principals to heighten perceptions of faultlines. Moreover, we find firms operating in high technology markets to weaken, and increased ownership retention by directors and executives to strengthen, investor faultlines perceived by public market investors.

 **IM: Social Exchange and Reciprocal Integration between Migrants and Locals at Work**   

Author: **Minna Marinova Paunova**, *Copenhagen Business School*
Author: **Maribel Blasco**, *Copenhagen Business School*

The negative discourse surrounding migration today often stems from a perception that migrants are a 'burden' to local communities, 'getting' more than they 'give'. We propose a novel approach to theorizing migrant integration by developing a social exchange framework on the relation between migrants and locals in the workplace. The workplace is a critical space, because successful and meaningful employment is the single most important determinant of migrants' overall contributions to society, and positive informal relations among colleagues support workplace performance. Reciprocal integration is defined as the process through which everyday voluntary exchange interactions between migrants and locals, which are returned in kind or paid forward, accumulate. Examples would be the continual exchange of favors, information, birthday wishes, and invitations to dinner among colleagues in acts that are not mere professional obligations, but are voluntary as well as mutually rewarding and corresponding over time. These small interpersonal episodes between migrants and locals enhance social cohesion at the workplace. Considering the role of power, status, and culture in exchange, we develop a set of propositions that detail how the process of reciprocal integration might unfold.

 **IM: International experience as a microfoundation of foreign subsidiary performance: A multilevel model**   

Author: **Marketa Rickley**, *U. Of N. Carolina-Greensboro*
Author: **I-Heng Wu**, *U. of Iowa*
Author: **Ean Crawford**, *U. of Iowa*

In multinational companies, international experience by managers is considered a source of competitive advantage. Yet we know little about whether the positive consequences of personal international experience persist when aggregated in top management teams (TMTs). Are certain experiential, relational, or structural TMT configurations more effective at converting personal knowledge from international experience into organizational performance? Drawing on knowledge integration and small groups research, we develop a multilevel model of compositional emergence to define how personal international experiences aggregate from the individual to the collective. We then explore how TMT differences in experiential, relational, and structural configurations of international experience affect performance. We test our predictions using a cross-national and multilevel dataset on foreign-owned banks. The data include detailed information on top managers' demographic, educational, and professional backgrounds (N = 270 TMTs, nested within 60 foreign subsidiaries, and 28 multinational banks), ten years of financial performance data, and covariates from different levels (e.g., TMT, subsidiary, MNC, home country, host country). By theoretically and empirically linking individual differences in international experience to subsidiary performance through team-level knowledge integration mechanisms, we contribute to the search for microfoundations of competitive advantage using the knowledge- and resource-based views in an international context.

 **IM: The Role of Country Governance in Firm Responses to Economic Protectionism**    

Author: **Dennis Wajda**, *U. of Miami*
Author: **Ruth V. Aguilera**, *Northeastern U.*

Many countries have recently enacted investment-related national security screening laws and regulations ("national security screening laws" for short) that protect domestic firms from foreign ownership. Agency theory prescribes that these laws will dissuade managers from risky, long-term research and development (R&D) investments because these laws can dilute the disciplining role of the market for corporate control. Yet, agency theory's prescription undermines the importance of country governance that firms are also subject to. We propose that firms subject to different country governance exhibit differential responses to the enactment of national security laws because country governance can shape the type of governance issues faced by firms. In addition, the role of country governance in shaping firms' differential responses is stronger when managers have a lower level of decision discretion prior to the enactment of these laws. Using 40,843 firms from 61 countries, we find support for our arguments. Findings from this study advance comparative corporate governance research by highlighting that the influence of foreign acquisitions on R&D investment is contingent on country governance that firms are embedded in.

 **IM: EMNEs as Potential Employers in Developed Countries – The Role of CSR in Attracting Talents**

Author: **Bich Ngoc Le**, *U. of Fribourg*
Author: **Dirk Morschett**, *U. of Fribourg*

Attracting and acquiring skilled employees have become more challenging than ever in today "war for talents." This issue is particularly more relevant and challenging for emerging market multinational enterprises (EMNEs) due to their less favorable country-of-origin images as compared to those of their incumbent from developed markets (DMNEs). Integrating legitimacy, attribution, and signaling theories, we suggest that CSR engagement is a strategy worth considering for EMNEs. An experiment involving 490 potential applicants from Germany, Switzerland and Austria shows that good CSR helps EMNEs overcome country-of-origin constraints on attracting and hiring local talents in developed host countries. As an impediment, though, we find evidence of low applicant's willingness to search for CSR information, representing a serious challenge for firms' attempts to maximize benefits from CSR engagement.

Career Services Job Market Workshop *Career Services Job Market Workshop*

Coordinator: **Wendy A. Kramer**, *Academy of Management*
Speaker: **Olenda E. Johnson**, *North Carolina A&T State U.*

Join the Career Services Committee and our Special Guest Speaker for an interactive Job Market Workshop open to all members!
Topics will include:

- The Dos and Don'ts within the academic job search
- Statistics from the 2021 academic employment market
- Valuable insights for exploring non-traditional pathways for PhDs
- Closing Q&A

Workshop facilitators include the Career Services Committee leadership team members Dr. Matrecia James and Dr. Angela Miles.

Our Special Guest Speaker, Dr. Olenda E. Johnson will provide insights on exploring the many Non-traditional Pathways accessible to PhDs. Dr. Johnson is a Professor of Strategic Leadership and Leader Development at the U.S. Naval War College (USNWC) in the College of Leadership & Ethics (CLE). As a lead contributor in CLE, Dr. Johnson advises senior leaders, develops strategy, conducts flag officer research, and facilitates team efforts. In one of her key roles, she leads her team in developing and teaching leadership courses for Navy admirals and senior government service executives. Dr. Johnson currently holds an adjunct faculty appointment at Wellington School of Business & Government at Victoria University, Wellington, New Zealand.

You won't want to miss this session!
Add Career Services Job Market Workshop (session 553) to your schedule today.

Designing Effective Online Learning Modules Using Slide-Sharing, Video-Sharing, and Survey Software *Designing Effective Online Learning Modules*

Facilitator: **Thomas Cavanagh**, *Dominican U. of California*

This two-hour-and-fifteen-minute professional development workshop will use a format of mini-lectures, individual work time, and group discussion to guide attendees in creating effective and engaging online learning modules by applying empirically-supported principles derived from the Cognitive Theory of Multimedia Learning, specifically the use of advance graphic organizers, concise narrated animations, segmenting, interpolating questions, and learner control features. The workshop will include explanations of how these modules can be created using computer programs that most AOM attendees likely have access to and are familiar with, specifically slide-sharing programs (e.g., PowerPoint), video-sharing programs (e.g., YouTube), and survey software (e.g., Google Forms).

Power and Politics

Digital Session Chair: **Tyler Sabey**, *Texas A&M U.*

OB: A Tale of Two Quotes: When Power “Corrupts” and When It Triggers “Great Responsibility”

Author: **Tyler Sabey**, *Texas A&M U.*

Two seemingly contradictory quotes can be cited in the power literature. The first – and most traditionally held assumption by early power scholars – is attributed to the 19th century British politician Lord Acton: “Power tends to corrupt, and absolute power corrupts absolutely.” The other has more ambiguous roots (French Revolution, Voltaire, Churchill, Roosevelt, Uncle Ben Parker, etc.): “With great power comes great responsibility.” Though the notion that power corrupts seems to be the status quo, there are instances when individuals use their power for good. This begs the questions, why and when does power corrupt and why and when does it trigger great responsibility? To answer these questions, I draw from theorizing on cognitive morality (e.g., Kohlberg, 1976) and attribution theorizing (e.g., Heider, 1958) to argue that peoples’ reactions to having power – specifically self-/other-focused behaviors – depends on power attribution. Furthermore, I suggest that peoples’ reactions to power can be explained by where they direct their sense of responsibility – towards themselves (resulting in self-interested behaviors) or towards others (resulting in more other-interested behaviors). Moreover, behaviors directed towards others can be further understood by distinguishing the target (e.g., prosocial behaviors towards a specific individual or individuals vs. prosocial behavior towards the community or society at large). Using a multi-time period study design and structural equation modeling, I demonstrate that when powerholders attribute their power internally, they tend to participate in more self-interested work behaviors, but when they attribute their power externally, they tend to participate in more global prosocial behaviors.

OB: Let’s Get Political: An Expanded Self-Consistency Perspective on the Effects of Perceived Politics

Author: **Émilie Lapointe**, *BI Norwegian Business School*

Author: **Alexandre Morin**, *Concordia U.*

Author: **Christian Vandenberghe**, *HEC Montreal*

Author: **Gary Schwarz**, *Queen Mary U. of London*

How does the self shape perceived politics’ effects on employee turnover intention? We aim to answer this question by proposing an expanded self-consistency perspective on perceived politics in organizations. We first introduce the notion of perceived supervisor politics (PSP) and suggest that PSP differs from perceived organizational politics (POP). Building on cognitive dissonance theory and associated self-consistency assumptions and on self-verification theory, we then argue that POP threatens self-consistency among employees with high organization-based self-esteem (OBSE), making them less likely to think about quitting the organization. In contrast, PSP would represent an opportunity for self-verification among low-OBSE employees, making them more likely to remain in the organization. We further suggest that PSP may also threaten employees’ psychological consistency when the self-verification experience that is evoked as a function of OBSE levels is inconsistent with the overall experience of self-verification with the supervisor. In this case, employees would be less likely to think about leaving the organization. Two time-lagged studies, conducted in the United States and China, are reported to test these hypotheses. Results from latent moderated structural equations analyses supported our predictions. Theoretical implications and future research directions are discussed.

OB: Managing Power Dependence in Diversity Work at San Francisco Bay Area High-Growth Firms (2016-2020)

Author: **Vic Marsh**, *U. of Colorado, Boulder*

Author: **David R. Hekman**, *U. of Colorado, Boulder*

We examine how diversity-promoters manage their high dependence on their firms for employment while pushing effectively for innovative rather than template-driven diversity practices. Building theory inductively from multiple case studies, we tracked the evolution of diversity practices within six technology firms across four years in the San Francisco Bay Area. Through privileged access to line executives, Black and Hispanic/Latino employee activists, and several incumbents of the diversity program coordinator position within firms, we learned how diversity programs began and how they changed over time. Firms with very similar structures (diversity program managers and employee affinity groups) and similar diversity ideology had different experiences of one change outcome: whether their diversity practices remained stuck in their original templates or were customized to meet new needs. We contribute to studies of power dependence inside organizations by clarifying the tradeoff between insider knowledge and power dependence. Additionally, we add a strategizing perspective to power dependence, underscoring how diversity advocates use three behaviors to overcome resource blockages and effectively manage their power dependence. Finally, we contribute a novel perspective on the activist-employer relationship -- i.e., emphasizing internal coalitions (not just individual change agents) and activists as customizers of practices (not just diffusers of practice templates). We conclude with implications for power as a control that can be borrowed from a power-seekers perspective (not only delegated first by a power-holder), autonomy as a power distance issue achieved by neglect (not always ascribed or achieved status), and innovation as a customization process within institutional constraints.

OB: Organizational cover-up of extreme crime: The largest serial murder in German post-war history

Author: **Hendrike Werwigk**, *U. of Passau*

Author: **Marie Lucia Deutsch**, *U. of Passau*

We assessed the case of the 85-fold serial killer Niels Högel at Oldenburg and Delmenhorst Hospital between the years of 1999 and 2005 in a theory-informed, qualitative study with the objective of gaining a grounded understanding of why organizations cover up severe misconduct of single perpetrators. We screened all publications on the Niels Högel case, set up an elaborate timeline of the events, building an intelligent, taggable database, and conducted narrative interviews with former co-workers of the killer nurse. We identified that both, actual lack of awareness of the crimes due to characteristics of the crime scene and the perpetrator as well as a culture of handling problems internally made it possible for Niels Högel to concealment the killings. Our emerging understanding reveals a series of particularly important enablers of the cover-up: the role of fear of scandal, the intention to save the institution, and the highly embedded Esprit de Corps that demarcates a cohesive, narcissistic, and well-respected action team with a focus on financial goals and according pragmatism. Our findings contribute to the literature on organizational cover-ups by assessing established concepts of previous studies in a new light, raising attention to less explored phenomena relevant to the understanding of organizational cover-up, and expanding the spectrum of case studies analyzing organizational cover-up through a study setting in a regular institution.

Effects of Leaders on Followers

Digital Session Chair: **Lei Yao**, *Beijing Normal U.*

OB: Whether and how authoritarian leadership and benevolent leadership affect the family satisfaction

Author: **Lei Yao**, *Beijing Normal U.*

Author: **Minya Xu**, *Guanghua School of Management, Peking U.*

The extant studies on leadership are replete with employee performance outcomes. However, the literature remains quite silent on whether leadership effects transfer to employees' family members and influence their family satisfaction. In the present study, we explore the crossover effects of the most prevalent leadership styles in high power distance and collectivist cultures—namely, authoritarian leadership and benevolent leadership—on the employees' spouses family satisfaction. Based on conservation of resources theory, we suggest that employees' work-family conflict mediates the relationship between authoritarian leadership and family satisfaction of employees' spouses, whereas employees' work-family facilitation mediates the relationship between benevolent leadership and family satisfaction of employees' spouses. Additionally, we investigate spouses' need for control as a moderator of the indirect effect of authoritarian leadership, which moderates the relationship between employees' work-family conflict and spouses' family satisfaction. We test these hypotheses using multiphase, employee-spouse dyads from 207 Chinese couples. The findings contribute to work-family research by illustrating that leadership could affect employees' work-family interface and ultimately influence the family satisfaction of employee's spouse.

Paper is Available to Meeting Registrants Only.

OB: Leader's Ostracism Predicts Subordinates' Deviant Behaviors via Emotional Dissonance and Well-being

Author: **Mansik Yun**, *Central Michigan U.*

Author: **Nga Do**, *Central Michigan U.*

There is growing research interest in workplace ostracism, due to its detrimental effects. Ostracized employees may react to ostracism in a social exchange manner by enacting counterproductive work behaviors (CWB), adding to the detrimental impact of ostracism. We examine ostracism of employees instigated by the leader, which should be especially important because of the leader's formal power vis-à-vis the subordinates. Furthermore, in order to understand the processes through which leader ostracism may affect subordinates, we propose and test a moderated mediation model, based on a stressor-strain framework, illustrating how leader ostracism predicts emotional dissonance and employees' well-being (i.e., emotional exhaustion and work engagement) unfavorably, which in turn, resulting in CWB. We also examine if relational attributions buffer the ostracism-emotional dissonance linkage. We conducted three prospective studies with different research designs, especially regarding time lags. In Study 1, we collected data (N = 325) in a short-term three-wave prospective research design (i.e., a one-day time gap) from three construction companies. In Study 2, we collected data (N = 228) over 10 consecutive days from a construction company. In Study 3, we collected three-wave data (N = 268) over a six-month period from a hotel. Leader ostracism predicted emotional dissonance regardless of the time interval. The mediation and moderation, however, was more supported in the short than long-term designs. In sum, the current research provides a different process through which leader ostracism yields CWB via emotional dissonance and well-being, but also suggests the effects between variables may require different amounts of time.

OB: What Creates a "Good Soldier"? Leader Self-Sacrifice, Subordinate Negligent Behaviors under Ambiguity

Author: **Feifan Yang**, *Shanghai U. of Finance and Economics*

Author: **Zhijun Chen**, *Shanghai U. of Finance and Economics*

Extant research has uniformly tested that self-sacrificial leadership is beneficial for subordinates, teams, and organizations. Drawing on theories of situational strength, we challenge the current positive self-sacrificial leadership conclusion by emphasizing the detrimental role of ambiguity in the work context on expanding reciprocity pressure of subordinates. We propose that leader self-sacrifice can prompt subordinate negligent behaviors through subordinate increased citizenship pressure when they are under high ambiguity. Besides, under low ambiguity, leader self-sacrifice is positively associated with subordinate respect for the leader, which in turn decreases negligent behaviors. An experiment with 179 employees provided support for this contingency perspective. Our findings reveal the costs and benefits of leader self-sacrifice and the importance of work context in this unique leadership process.

Paper is Available to Meeting Registrants Only.

OB: The Impact of Transformational Leadership on Employees' Appraisals of Stressors

Author: **Nina Nesdoly**, *Telfer School of Management, U. of Ottawa*

Author: **Jane O'Reilly**, *Telfer School of Management, U. of Ottawa*

We develop and test a theoretical model to examine how and why transformational leadership affects employees' appraisals of challenge and hindrance stressors. We draw from foundational theories of stress to argue that transformational leaders motivate their employees to believe that they can successfully cope with workplace stressors, which in turn encourages them to appraise challenge stressors more positively and hindrance stressors as less threatening. Presenting a parallel mediation model, we test three mediators that operationalize our underlying theory: psychological empowerment, psychological safety, and stress mindsets. The results from a longitudinal online survey of 255 employed adults found that transformational leadership was positively associated with challenge appraisals in the context of challenge and hindrance stressors, and negatively associated with hindrance appraisals in the context of challenge and hindrance stressors. Psychological empowerment, but not psychological safety or stress mindset, was a significant mediator in all cases. We conclude that transformational leaders can help employees appraise stressors more optimistically by empowering them to view themselves as competent and in control in relation to their work. The applications of our research to theory and practice are discussed.

Crowdsourcing, Creativity, and Innovation

Digital Session Chair: **Olivia Jung**, *Emory U.*

OCIS: **Crowdsourcing Increases Employee Innovation: Field Experimental and Qualitative Evidence from CHCs (WITHDRAWN)**

Author: **Olivia Jung**, *Emory U.*

Are there long-term, spillover outcomes to crowdsourcing ideas from employees, beyond the innovations generated from it? This paper examines whether and how innovation contests, a crowdsourcing intervention that opens up a channel and opportunity to innovate, could increase employees' general engagement in innovation. In a multi-method study, I first conducted a field experiment with 53 community health centers (CHCs). Half of the randomly treated CHCs crowdsourced all employees for ideas to improve patient care. After the experiment, I interviewed 175 people spanning roles and levels from the same field sites to explore how and under what conditions this intervention works. My experimental findings evince that the intervention increased employees' engagement in innovation by more than 35 percent, two months following the intervention. My qualitative findings suggest that the intervention (1) exposed managers to the usefulness of soliciting employee ideas, prompting them to keep soliciting ideas and (2) spurred employees to prioritize innovating on top of their day-to-day work. The intervention was particularly effective in organizations where employee ideas were not proactively sought prior to the intervention. This study illustrates that a crowdsourcing intervention that introduces an open and structured approach to innovation can motivate manager-employee communication in new ways.

OCIS: **Crowdsourcing for Innovative Knowledge: Effects of Knowledge Integration and Social Network Position**

Author: **Yao Sun**, *U. of South Florida*

Author: **Ann Majchrzak**, *U. of Southern California*

Author: **Arvind Malhotra**, *U. of North Carolina, Chapel Hill*

As innovation is increasingly generated via crowdsourcing, factors that enable or impede collective innovation deserve a closer examination. This study advances the literature on crowdsourcing for innovation by examining the roles of knowledge integration and social network position in open innovation challenges. It tests the differential main effects and the interaction effect of knowledge integration and contributors' centralized network position on collective innovation by analyzing 3,200 posts generated from 21 organization-sponsored online crowd-based open innovation challenges. Findings showed that when knowledge contributors occupy a centralized position in the networked interaction, they are less likely to generate innovative knowledge, and the benefit obtained from integrated knowledge tends to be hampered by being centralized in online interaction. This study adds a new dimension to explaining crowdsourcing for innovation by incorporating a social network perspective into crowdsourcing and open innovation research. It also sheds light on the practice of crowdsourcing by highlighting the design of platforms that can promote the integration of crowd members' shared knowledge while encouraging diverse voices from non-centralized members of the crowd.

OCIS: **Crowds, Gigs and Platforms. An Integrative Review and Research Agenda on the Future of Online Work**

Author: **Francesca Bellesia**, *Dep. of Sciences and Methods for Engineering, U. of Modena and Reggio Emilia*

Author: **Elisa Mattarelli**, *San Jose State U.*

Author: **Fabiola Bertolotti**, *U. of Modena and Reggio Emilia*

Author: **Maurizio Sobrero**, *U. of Bologna*

As organizations outsource jobs traditionally performed by employees to the 'crowd' – i.e. to an external, undefined workforce with very different backgrounds, skills, expertise, and cultures – through online platforms, we still lack a detailed understanding of the experiences of workers on these platforms and how platforms change individual work. We conducted an integrative literature review on the changing nature of work on online platforms, based on 64 papers dated 2006-2020. We identified three main research areas, related to (I) work characteristics, i.e. motivation to engage in online work, workers' behaviors and performance, meaning of work; (II) the relation between workers and platforms, i.e. workers interactions with algorithms and control issues, such as algorithmic scores management; and (III) workers relations with peers, especially in online communities. For each of these areas we propose and detail future research directions.

Paper is Available to Meeting Registrants Only.

OCIS: **Thinking about the seeker: a method for ideas selection in crowdsourcing through clustering**

Author: **Gianluigi Viscusi**, *Imperial College Business School*

Author: **Riccardo Bonazzi**, *HES-SO Valais/Wallis, Sierre, Switzerland*

This article presents a method for new ideas selection, which uses clustering to filter ideas while considering the seeker's goals and the learning dynamics. Most of the previous research has considered the idea provider as the main subject of analysis. Instead, we focus on the bounded rationality of the solution seeker. Seekers often estimate that the main cost of an idea challenge comes from the reward itself; yet, making mistakes in the selection process and picking the wrong idea might result in the seeker wasting time and money. The study discussed in the paper is an early-stage application of the design science research (DSR); thus, we argue that the research contribution can be classified as "exaptation", a known solution to a new problem.

Paradox in Organizational Practice   
Paradox in Practice

Digital Session Chair: **Harald Tuckermann**, *U. of St. Gallen*

OMT: Continuously Responding to Paradox With Third Spaces: A Process Study on Change in a Nursing Unit

Author: **Harald Tuckermann**, *U. of St. Gallen*

This paper explores how organizations can continuously cope with paradox. A longitudinal case study on organizational change of a nursing department shows that establishing repeated social interactions supports organizational members in addressing emerging contradictory issues. These social interactions are third spaces, sites in which actors can enunciate, reflect and envision responses to contradictory issues. The explanation of how an organization can continuously cope with paradox rests on two pillars: first, the third spaces form an ecology of spaces so that organizational actors become involved in addressing their contradictory issues. Second, third spaces emerge and become maintained over time as they form a duality with contradictory issues. Furthermore, the paper contributes to explaining the shift from defensive to active responses, which are associated with vicious and virtuous cycles. Lastly, third spaces serve to relate cognitive approaches with social interaction, thus bringing together these two perspectives within the paradox lens.

Paper is Available to Meeting Registrants Only.

OMT: Clinical Response to Alarming Technology in High-Reliability Organizations

Author: **Carmen Diaz**, *Northwestern Kellogg School of Management*
Author: **Klaus Weber**, *Northwestern U.*

High-reliability organizations (HROs) increasingly use alarming technology to disrupt routines and draw attention to potential problems. However, HROs also require individuals and teams to reduce disruptions in order to maintain the organizational stability and mindfulness necessary in an HRO. This paper aims to explore the paradoxical relationship of disruptive alarming technology and organizational mindfulness by analyzing how an ICU nursing team processes and responds to alarms. Through a series of interviews and participant observations, I find that the nurses studied reduced the alarming stimuli to two types of alarms: ambiguous (alarms that did not have routinized responses and required sensemaking) and non-ambiguous (alarms that had routinized responses and required little to no sensemaking). In order to avoid having to process each alarm, nurses only focused their attention on ambiguous alarms. Nurses were able to filter the severity of ambiguous alarms through their expectations for how each patient would alarm that shift (what I define in the paper as “patient personas”). Patient personas were supplemented with information nurses gleaned from elements of embodied sensemaking – primarily in the form of physical positioning and sensory cues. Body language of other nurses, physical positioning of the nurse and their peers, time-chunking of their tasks, as well as visual information from the alarming technology all contributed to how nurses perceived and responded to the alarms for their patients, as well as for those in their vicinity.

OMT: Driving Internal Change by External Means: The Paradoxical Mission of Development NGOs  

Author: **Carolin Johanna Waldner**, *Heinrich-Heine U. of Dusseldorf*
Author: **Stephanie Schrage**, *Hamburg U. of Technology*
Author: **Andreas Rasche**, *Copenhagen Business School*

In this study, we analyze the dynamics of the paradoxical mission of development NGOs, who as external actors from Western welfare states aim to drive internal change in local communities in developing countries. This paradoxical mission is particularly interesting in order to contribute to paradox theory as it constitutes of two poles, where one is fixed and the other is dynamic. While NGOs can adjust their practices as external actors, they cannot influence the internal nature of their objective to drive change that comes from within local communities. Based on a 15-months ethnographic case study of the German development NGO Viva con Agua, which works with their paradoxical mission of implementing water, sanitation, and hygiene projects in rural Uganda, we find that the organization applied different strategies to cope with the paradoxical tensions of their mission and meet their desired end: (1) adjusting external means, (2) supporting internal means, and (3) working with universal means. This way, we contribute to the literature on organizational paradoxes by analyzing a paradox that unfolds between means and end of a process by introducing the paradox response of ‘working with universal means’.

OMT: Exploring the Inclusion and Exclusion Paradox Within the Performances of Organizational Rituals

Author: **Mustafa Kavas**, *Cass Business School, City U. London*
Author: **Amit Nigam**, *City U. London*
Author: **Paula Jarzabkowski**, *City U. London*

Family firms, by their nature, are imbued with paradoxes. In particular, the paradox of inclusion and exclusion among family and non-family members poses crucial challenges for family firms. Rituals that are powerful, yet seemingly unrelated to business provide a context within which the paradox of inclusion and exclusion becomes salient. We draw on a single and extreme case study in an Anatolian based family firm in which religious rituals are widely performed. We find that these rituals contain a duality between structure and anti-structure, which serves the emergence of inclusion and exclusion paradox. Our findings highlight that rituals form a basis for collective identity and shared understanding among multiple interest groups—particularly family members and non-family members. We also find that the same rituals provide a means to reinstate the existing hierarchy within the company. Hence, both sides of inclusion and exclusion paradox are maintained and managed through performances of rituals, which thus help define and sustain the boundaries of an organization.

International Perspectives on Sustainability: Framing and Sensemaking

Digital Session Chair: **Ziko Konwar**, *U. of Leeds*

ONE: The Two Faces of FDI in Environmental Performance: A Meta-analysis of Empirical Evidence in China

Author: **Yingqi Wei**, *U. of Leeds*
Author: **Sasa Ding**, *Southwest U. of Finance and Economics*
Author: **Ziko Konwar**, *U. of Leeds*

The extant literature has raised debates concerning the environmental performance of foreign direct investment (FDI) in China. We apply meta-analysis of 121 estimates reported in 40 studies to quantitatively synthesize our knowledge and understanding of the topic. Findings indicate that FDI lead to better environmental performance through reducing pollution, but not green total factor productivity. The meta-regression analysis reveals that the environmental pollution effects of FDI is moderated by FDI measurements, environmental regulations and the consideration of endogeneity in empirical estimations. The results are discussed with references to academic and practical implications.

ONE: The Environmental Innovation Capability of Emerging Market Firms: FDI and Institutional Logics

Author: **Weiqiang Tang**, *U. of South Australia*
Author: **Jingyu Yang**, *U. Of Sydney*

Despite the critical impacts of environmental innovation capabilities and foreign direct investment (FDI) on emerging market firms (EMFs), extant literature is largely silent on how EMFs enhance their environmental innovation capabilities via inward and outward FDI. In this study, we posit that EMFs develop their environmental innovation capabilities by learning from both inward and outward FDI diversity, and the learning-from-diversity effect varies among EMFs dominated by different institutional logics. These theoretical arguments are supported by data collected in 275 publicly listed Chinese firms between 2009 and 2018. This study, therefore, makes important contributions to organizational learning literature and environmental research in emerging markets.

ONE: The Framing of Sustainability by Societal Actors in India: Perspectives, Consequences, Implications

Author: **Lutz Preuss**, *Kedge Business School*
Author: **Bimal Arora**, *Aston Business School*
Author: **Isabel Fischer**, *Isabel.fischer@wbs.ac.uk*
Author: **Priyanka Chhaparia**, *Centre for Responsible Business (CRB)*

Addressing the grand challenge of sustainability requires collaboration between various societal actors. Given fast growing economies and geo-political ambitions, this applies in particular to emerging economies. Hence, we examine in this paper how different societal actors in India frame sustainability. Applying a multi-phase mixed methods research design, we find a clear separation of a framing of sustainability, as comprising environmental issues and being the responsibility of the private sector, from that of CSR, as comprising social issues and being the remit of government. Thus, our study uncovered a tension between domestic framings, which may better account for local conditions, and international framings, which societal actors cannot avoid given their ambitions to become international economic and political actors. Regarding theory development, frame separation emerges as a mechanism that is geared towards maintaining the tension between competing frames rather than resolving it, as is the aim of more commonly discussed frame-alignment mechanisms.

ONE: Penalty Zones in International Sustainability Standards: Where Sustainability Doesn't Pay

Author: **Nicole Darnall**, *Arizona State U.*
Author: **Konstantinos Iatridis**, *School of Management, U. of Bath*
Author: **Effie Kesidou**, *U. of Leeds*
Author: **Annie C. Snelson-Powell**, *U. of Bath*

International Sustainability Standards (ISSs) are sustainability governance tools that help firms improve their sustainability performance and act as credible market "signals" that help to legitimize firms' otherwise latent sustainability practices. Prior studies show a positive association between firms' ISS signaling, their improved market value, and their sustainability performance. However, we suggest that market signals behave differently when firms adopt multiple ISSs in that, beyond an optimum, additional ISS adoption diminishes a firm's market value and reduces its sustainability performance. Moreover, the number of ISSs that optimizes firms' market value is less than the number that optimizes sustainability performance. This difference is what we refer to as a performance "penalty zone," where firms continue to improve their sustainability performance by adopting additional ISSs. While these firms are signaling their stronger sustainability performance, the market fails to reward (and even penalizes) these signals and sustainability behaviors. Our findings offer a more nuanced view of signaling theory and typical suggestions that markets compensate firms' sustainability activities.

Organizer: **Rodney Lacey**, *Arizona State U.*
Organizer: **Vilmos F. Misangyi**, *Pennsylvania State U.*

During the past decade, interest in set-analytic methods such as Qualitative Comparative Analysis (QCA) and configurational thinking in management research has grown significantly. QCA's more widespread use has been driven by both growing scholarly interest in capturing complexity as well as improvements in its methodological application, measurement, and software. By now, QCA has become an established approach in management researchers' toolbox, and we attribute the growing presence of this approach in part to our offering over the past decade multiple editions of highly successful AOM PDWs; for example, last year's QCA PDW was among the 10 most attended asynchronous sessions Academy-wide. Given the feedback from last year's PDW and the outlook of a virtual AOM, we have re-designed this year's proposed PDW to serve the needs of three different audiences. Part 1 serves management researchers and practitioners with no or only little knowledge of, and experience with, QCA who want to learn the basic nuts and bolts of QCA and configurational logic. Part 2 serves more advanced management researchers and practitioners interested in current methodological issues around QCA. Part 3 serves participants who seek to discuss their ongoing QCA research with other participants and the experienced PDW organizers. Participation in this PDW is open to all conference attendees and requires no registration. Participants who wish to receive a list of recommended pre-readings may contact Johannes Meuer (jmeuer@ethz.ch) before the meeting.

Participation in this PDW is open to all conference attendees and requires no registration. Temporal Perspectives on Cognition and Affect

Digital Session Chair: **Danny Sandra**, *U. of Antwerp*

OB: **A Review of Entrainment in Organizations**

Author: **Danny Sandra**, *U. of Antwerp*
Author: **Jesse Segers**, *U. of Antwerp/ Antwerp Management School*
Author: **Robert A. Giacalone**, *John Carroll U.*

Despite the several calls and the empirical evidence that organizations benefit from entrainment, the number of publications in the entrainment field to date is still limited. This systematic literature review of entrainment in organizations aims to contribute to these debates by answering the following research questions: What is understood by entrainment in organizations? What vocabulary do organizational scholars and practitioners need to discuss about entrainment in organizations? To which fields did the concept of entrainment contribute to better understand organizations? After a rigorous search, selection, and elimination, 41 articles were included in this review, covering six major research themes: organizational outcomes, organizational theory, time, change, knowledge, and emotion. The review confirms that there is a common understanding as to what constitutes entrainment in organizations, but due to its complexity and vocabulary used, it is overwhelming. It also highlights the positive relationship between entrainment and organizational outcomes but warns for complacency in specific cases. In addition, the review highlights the use of the concept of entrainment to explain higher levels of theoretical complexities but helps likewise to argue the opportunity for organizations to sync their rhythms through strategic action while pacing their decision speed. As such, this review advances our understanding of entrainment in organizations and contributes to the general theoretical debates to bring more awareness to integrate time-related dimensions in future organizational studies.

OB: **Why Committed Employees May or May Not Engage in UPB: The Central Role of Future Time Perspective**

Author: **Xiaoyu Wang**, *School of Economics & Management, Tongji U.*
Author: **Chao Chen**, *Rutgers U.*
Author: **Mo Chen**, *U. of Science and Technology of China*

Taking the future time perspective, we proposed and tested a theoretical model of organizational commitment and unethical pro-organizational behavior (UPB) in which affective (organizational) commitment and continuance (organizational) commitment induces different considerations of future consequences, which in turn influence unethical pro-organizational behavior. Based on analyses of one time-lagged field study and one vignette-based experimental study, we found that affective commitment is positively related to consideration of long-term future consequences but continuance commitment is positively related to consideration of short-term immediate consequences. Furthermore, we found a negative indirect relationship between affective commitment and UPB via the mediation of consideration of long-term consequences but a positive indirect relationship between continuance commitment and UPB via the mediation of consideration of short-term consequences. The paper concludes with discussions of theoretical and practical implications.

OB: **Dynamic Value: Temporal Distance and Group Size of Information in Shaping Social Influence**

Author: **Jing Ping**, *Yale U.*

Individuals often pay attention to recency and source size of reference information when learning from it to aid own decisions. Despite research on the independent effects of temporal distance and group size on social influence of information, we have limited understanding about how recency and group size interact with each other to shape the influence of temporally dispersed information on individual decision making. Using 6.3 million single family listing records in California from 2009 to 2018, I find that in addition to their independent positive effects on social influence, temporal recency and group size are also contingent on each other. The discrepancy in the relative importance of recent information and distant information diminishes as the group size increases. Decision makers focus more on general patterns instead of individual recent information with the extension of time windows. Intercorrelation of information enhanced by temporal structure in large time windows also facilitates selection behaviors when incorporating information. Collectively, social influence forms a U-shape across time windows. These findings highlight the importance of accounting for the temporal structure of information for social influence research and provide new insights into the social dynamics of decision making process.

OB: **When Fast is Slow**

Author: **Zimin Liu**, *Peking U. Guanghua School of Management*

Empirical studies showed mixed results of the effect of need for cognitive closure (NFC) on employees' work performance. Some scholars propose that to detach the ability to achieve closure from the concept of NFC may be a better approach to clarify this relationship. Based on lay epistemic theory, we firstly distinguish between individuals' ability to achieve closure (AAC) and motivation for cognitive closure (MFC), and then propose work procrastination as a mechanism to explore NFC's impact on work performance. By using experience sampling method, study 1 collected data from 33 employees in 5 consecutive workdays in real organizational scenario. Results revealed that, AAC is a trait-like construct which is different from the state-like MFC. AAC is negatively related to MFC and has more predictive power in explaining individual behavior. In study 2, We proposed and tested a mediated moderation model in which the interactive effect of MFC and AAC on work performance is mediated by employees' work procrastination. Our results show how and why AAC and MFC interact to impact employees' work performance. Implications for theory and practice are discussed, including the paradoxical role of NFC for cognitive experience and working behavior in this information explosion era.

OMT: A Tale of Two Cities: How Firms' Reactions May Shape Societal Adaptation Following Climate Disasters  

Author: **Siri Nordland Boe-Lillegraven**, *Amsterdam Business School, U. of Amsterdam*
Author: **Panikos G. Georgallis**, *U. of Amsterdam*
Author: **Ans Kolk**, *U. of Amsterdam*

Finalist for the Responsible Research Award

Cities around the world are preparing for the effects of climate change, including sudden climate-induced disasters such as floods, hurricanes, and droughts. The science and policy literatures that inform cities' adaptation and disaster plans have focused on the probability and impact of climate disasters, but have not systematically considered how firms will react. We leverage management and organization research to build a framework of how firms make sense of such disasters, characterizing their responses as "fight", "flee", or "freeze". We extend our framework to the city level by using historical data and prospective sensemaking to develop a narrative scenario of a future flood in the Netherlands, where analysts already discuss how the next '100-year flood' may unfold. Our study reveals how heterogeneity in firms' sensemaking may come to dramatically affect which adaptation strategy is likely to prevail: city reconstruction or retreat. The paper bridges the climate science and policy literatures with organizational research, advances research on business sustainability and firms' responses to punctuations, and helps broaden the explanatory potential and methodological toolkit of organization theory. In so doing, the paper serves as a springboard for policy debates and future interdisciplinary research on societal adaptation following climate disasters.

OMT: Distributing Doubt: Sensemaking in High-Reliability Contexts  

Author: **Olivier Berthod**, *ICN Business School*
Author: **Michael Grothe-Hammer**, *NTNU*

High-reliability organizations (HRO), and reliability-seeking organizations (RSO) more generally, operate in environments that call for continuous adapting of situational interpretations and response actions. Extant research suggests that a capacity at inserting doubt in sensemaking offers important opportunities for risk mitigation in such settings. We do know that HROs embrace the ambivalence of doubt and belief with the help of processes that support the one or the other. What we know less about, however, is how doubt and belief are played out as sensemaking happens during particular incidents. To answer this question, we draw on qualitative fieldwork from a German fire and emergency department and unpack three central processes that account for the ambivalence of doubt and belief both in sequence and simultaneously.

Paper is Available to Meeting Registrants Only.

OMT: Ghosts of Crisis Past: Organizational Memory Longevity in Spanish Flu's Effect on COVID-19 Responses  

Author: **Peter Micah Madsen**, *Brigham Young U.*

Organizational learning research has found that organizations can learn from experience with negative events, like crises, to better prepare for and respond to similar events in the future. However, this prior work also suggests that organizational memory decays rapidly enough that experiences with long-past events should not have a significant impact on the response to a current organizational crisis. Moreover, extant organizational learning work views memories of past organizational experiences as being housed essentially entirely within the organization itself and has not explored the impacts of external memories of past organizational crises on current organizational actions. This paper reexamines the permanence of organizational memory of past crisis and the role of external memory repositories in crisis remembrance by integrating organizational learning theory with disaster memory theory. Based on this integration, we hypothesize that a past crisis can continue to impact current crisis mitigation efforts over very long periods of time—particularly when the past crisis was very acute—and that both internal and external collective memories of the crisis play a role in this impact. We test these hypotheses through an examination of the effect of U.S. states' experiences with the 1918-1919 Spanish flu pandemic on state governments' responses to the COVID-19 outbreak in 2020. We find strong support for our theory and hypotheses, suggesting that organizational and external disaster memories of long-past crises may play a significant, previously-untheorized role in organizational crisis mitigation efforts.

Paper is Available to Meeting Registrants Only.

OMT: Light in the Midst of Global Health Crises: Integrative Model of Crises Management

Author: **Prem Sagar Menghwar**, *Luiss Guido Carli U.*

Coronavirus crises have created multiple challenges for organizations and have brought health care institutions under severe crises. While extant literature on crises and crises management is fragmented, inconclusive, and mostly based on historical data and individual memories. We conducted a longitudinal case study in real time at a health institution to understand the process of crises management. Our findings show that distributed leadership is effective in managing crises and act as a determinant of dynamic capabilities. Further, contrary to extant literature not a single capability but a set of dynamic capabilities function together and organization work in collaboration with government, suppliers, and competitors to deal with the crises. We organize these findings in an integrative model that combines internal and external approach to explain crises management. We believe this study has theoretical implications and will act as a guide for practitioners, managers, leaders, and policy makers.

Actors in Institutional Processes  
Institutional Actors & Process

Digital Session Chair: **Eun Young Song**, *U. College London*

OMT: **How Confidence in Compliance With the Status Quo Creates Opportunities for Mobilization and Change**  

Author: **Eun Young Song**, *U. College London*

Existing literature on institutional change focuses on change as a result of conflicts between challengers and proponents of the dominant institutional logic. Although it helps us understand how challengers effectively weaken the existing logic and succeed in making change, the literature provides less insight into how opposition grows, especially when the survival chance of those who oppose the dominant logic is slim. In fact, we know little about how challengers develop under the radar although this process is fundamental to institutional change. In this paper, I explore this under-examined aspect of change by incorporating insights from studies on hidden transcripts and social categorization in the literature. Focusing on proponents of the dominant logic, I propose that their confidence in deferential communities makes it easier for them to miss potential challengers. Observing public and easy-to-recall signs of compliance, they lump potential challengers in with the community that apparently upholds the logic. I test my thesis by using a unique dataset of Korean neo-Confucian academies from 1327 to 1800 and conducting event history analysis of the grant of royal charters. Proponents of the dominant logic, such as authorities, tend to lump together academies from the same area and overlook anomalies within an overall deferential community. As the chartered academies thrive, potential challengers gain strength. On the whole, this study constructs a novel framework to better understand the readiness for institutional change.

OMT: **Policy Networks and Socio-Symbolic Work: The Failure of Public-Private Partnership (PPP) In Kuwait** 

Author: **Mhamed Biygautane**, *U. of Melbourne*
Author: **Evelyn Rita Micelotta**, *Telfer School of Management, U. of Ottawa*
Author: **Stewart R. Clegg**, *U. of Technology, Sydney*

Despite its popularity to explain policy failure, the policy network perspective focuses on the characteristics of policy networks but has not accounted for the agency and reflexivity of actors inhabiting these networks. This article complements this framework with the literature on socio-symbolic work to unpack how actors within policy networks engage in tactics to stall and purposefully lead to the failure of a potentially threatening new practice. Our case study of the failed implementation of Private-Public Partnerships (PPP) in Kuwait offers two contributions. First, we show that inapplicability and unreceptivity of the ideological underpinnings of PPPs can act as powerful driving forces behind the failure to institutionalize PPPs programs. Second, the article reveals three novel mechanisms of maintenance work - meaning stigmatization, regulatory and organizational paralysis and re-institutionalization - where the agency of actors is not intended to preserve and protect the institutionalized practice under threat, but to eradicate the rival alternative.

OMT: **From Victims to Institutional Entrepreneurs? A Process Study of Middle Manager's Reactions to Change**  

Author: **Marcel Maurer**, *Ilmenau U. of Technology*
Author: **Norbert Bach**, *Ilmenau U. of Technology*

The rise in popularity of post-bureaucratic organizational models challenges the role and relevance of middle management. Consequently, middle managers frequently find themselves in the paradoxical situation of being responsible for implementing structures and procedures that aim to make the institution of middle management redundant. We study middle managers' behavior in such a situation and ask why they choose particular reactions. Findings of a qualitative 32-month process study in a medium-sized family business show that middle managers react to change aiming to make them redundant with five distinct reactions. Inspired by theory on institutional entrepreneurship, we show that middle managers' intra-organizational social position determines their reactions over time, making them either victims or institutional entrepreneurs of the change process. Our findings contribute to a better understanding how new models of organization are implemented and legitimized as well as to research on the changing role and function of middle managers.

OMT: **Restoring Undermined Institutions: How Firms Target Regulatory and Normative Institutional Pillars** 

Author: **Aaron McDonald**, *California State U., San Marcos*

How do firms strengthen their institutional environment after the unplanned and radical weakening of a strong regulatory institution? For some industries, regulative institutions play a dominant role in defining the institutional environment by providing stability and certainty for firms. Yet, environmental jolts can radically weaken regulative institutions causing increased uncertainty and instability in the institutional environment. Driven by this uncertainty, firms may attempt to strengthen their weakened institutional environment. By exploring this question in the context of weakened copyright protection after the rise of digital piracy, I can make important contributions to the institutional change literature. Specifically, I build new theory on how firms coordinate actions targeting multiple institutional pillars (e.g. regulative and normative) to change their institutional environment and the institutional environment of different industries. I test these theories using a longitudinal dataset of the corporate political activity of copyright-reliant firms, and the copyright infringement takedown notices sent to Google. The findings show that digital copyright-reliant firms coordinate offensive regulative and normative change actions against their institutional rivals and the rival firms respond with defensive institutional change action.

CMS: **Reclaiming Sustainability through Organic Cotton Seeds**

Author: **Seray Ergene**, *U. of Rhode Island*
Author: **Marta B. Calas**, *U. of Massachusetts, Amherst*

Best Critical Ethics Paper sponsored by the Journal of Business Ethics

We are currently facing multiple ecological crises due to large-scale human impact on the planet. While a growing body of work studies the relationship of organizations with the natural environment, most research overlooks the fundamental premise that organizations, institutions, and societies are built on: anthropocentrism. To explore this assumption and to capture human-Earth power relations in everyday organizational practices, we develop a new theoretical lens, becoming naturecultural, by drawing from feminist new materialisms. Through a multi-sited ethnographic study at an organic cotton t-shirt supply chain, and by utilizing the methodological insights from actor-network theory, we narrate a human de-centered journey of organic cotton seeds from the fields until they become a sustainable t-shirt. Our case study illustrates the analytic work of becoming naturecultural and sheds light onto the emerging tensions as we experiment with non-anthropocentric writing. Our proposed relational lens facilitates moving beyond critique of anthropocentrism and making visible affirmative possibilities of more-than-human and more-than-capitalist practices.

CMS: **Recasting Sustainable Collaborations through Postcolonial Perspectives**

Author: **Michel George Majdalani**, *Lebanese American U.*
Author: **Michelle Mielly**, *Grenoble Ecole de Management*
Author: **Gazi Islam Islam**, *Grenoble Ecole de Management*

Best Doctoral Student Paper is sponsored by the journal Organization

This study examines from a postcolonial perspective the drivers of sustainability that underpin successful diaspora-induced organizational collaborations. Our qualitative comparative case study of three hospital/Medical school collaborations examines a population of diasporic Lebanese doctors, researchers and administrators working in US hospitals and brokering agreements with the American University of Beirut Medical Center. We observed the skillful cultivation of home-host mutual interests in the activities of 'dual diasporic agents', a subset of our sample who demonstrated strong interlocking loyalties to both home and host country organizations. Probing these collaborations at the micro level helped us identify the DDAs' internal motivations and external realizations to offer a postcolonial appraisal of how successful diasporic workers mobilize their work to counterbalance epistemic violence of the past and reconfigure center-periphery hierarchies. Their successful brokering of collaborative agreements between home and host country organizations enable them to address imbalances in epistemic power and promote sustainable and beneficial forms of organizing for home and host organizations. Since highly-skilled diasporic workers have often been described in terms of brain 'gain', 'drain', or 'circulation', a postcolonial examination of their motivations and practices can present a nuanced understanding of symbolic and real power-knowledge dynamics operate in inter-organizational collaborations.

CMS: **Sharing Economy as Capitalist Justification: State, Market and Society in the Commons Paradigm**

Author: **Daniela Viegas Da Costa Nascimento**, *Pontifical Catholic U. of Minas Gerais*
Author: **Armino Dos Santos De Sousa Teodosio**, *Pontifical Catholic U. of Minas Gerais*
Author: **Marcelo De Rezende Pinto**, *Pontifical Catholic U. of Minas Gerais*

The abandonment of the idea of ownership through the commons may indicate a transformation in the way of conceiving and thinking about life as a society. The tension in the political and economic conception of the advanced capitalist societies reveals a historical series of disorders within the socioeconomic order, making instability the principle that establishes the system. Some proposals emerge as a critique of the hegemony of capitalist development. This theoretical article discusses the system of capitalist justification, based mainly on Polanyi and Boltanski, trying to understand the relationship between State, markets, and society. The analysis indicates that there is a permanent reinforcement of justifications and devices to generate an update of the capitalist spirit, in a dynamic movement that does not expose the principle of accumulation and gains, offering satisfaction to criticism. In the re-emergence of the commons paradigm, the sharing economy presents itself as a capitalist restructuring path, under which its ethical dilemmas are critically discussed, in order to understand whether this new approach set within the perspective of the commons has the capacity for transformation of the current system.

CMS: **The lack of sufficiency among management researchers through the institutionalization of air travel**

Author: **Christian Manfred Huber**, *Chemnitz U. of Technology*
Author: **Hanna Sauer**, *Chemnitz U. of Technology*

Research on environmental sustainability within higher education institutions (HEIs) neglects mostly the behavior of the researchers themselves. Applying to this problem, it should not be overlooked that academics face competing logics within HEIs. While on the one hand sufficient behavior could reduce air travel, exactly those flights encourage careering in neoliberal academia. To analyze why there is still a lack of sufficiency among management researchers and how their established behavior can be sufficiently restructured, we build on Delbridge and Edwards's (2013) approach of "inhabiting institutions" and investigate how the (dominant) institutional logic of academic careering in the era of neoliberalism thwarts the (subordinated) logic of sufficiency. Forty-three interviews with pre-docs, postdocs, and professors disclose which barriers (e.g., personal benefits, structural barriers, and consequences of neoliberalism) and promoters (e.g., personal commitment, rule making, and system change) to sufficiency exist on micro, meso, and macrolevels. Our results show which interdependencies these levels are subject to and how actors are able to initiate a change toward sufficiency while inhabiting complex institutional settings.

In this Professional Development Workshop (PDW), we will explore the topic of entrepreneurship and small business in small towns and discuss what it is, what it does, where it comes from, who has it, plus how and why it does and does not work. Furthermore, we will also investigate how established methods of research can be augmented with emerging technologies, such as smart-phone-enabled experience sampling methods to facilitate a deeper examination of questions around small businesses and entrepreneurship in small towns. In this PDW, the goal is to collaboratively identify unanswered and hard to answer questions regarding small town entrepreneurial ecosystems and “main street” small businesses, which will have growing practical relevance in the post Covid-19 pandemic era. Thus, in a spirit of urgency and inclusiveness, we explicitly do not set an upper population limit for a “small town”, as this dynamic will also be discussed and debated. In this creative, collaborative, and interactive session, participants will identify areas of mutual interest in order to develop research initiatives and projects with both academic and practical implications.

Institutions and Culture in International Management

Digital Session Chair: **Maria Lapeira**, *Suffolk U.*

This session address issues related to institutions and culture in international management. It includes papers that examine the role of culture in impacting the multinationality-performance relationship, managing work identities across cultures, the measurement of long-term orientation, impacts of ambivalence towards foreigners in Sub-Saharan Africa, and the joint impact of the United Nations Global Compact and national institutions on firm CSR and CSI.

IM: Measurement of long-term orientation: Distinguishing between firm and country levels of analysis

Author: **David Souder**, *U. of Connecticut*
Author: **Dhvani Badwaik**, *U. of Connecticut - Storrs*
Author: **Philip Bromiley**, *U. of California, Irvine*
Author: **Scott Mitchell**, *U. of Kansas*

Long-term orientation represents one of six dimensions of national culture. In general, scholars find the highest levels of long-term orientation in Asian economies, while the U.S. holds a reputation for the most short-sighted culture. Yet, the emphasis on national differences can obscure significant variation in long-term orientation across industries and firms within countries. This paper shows how a measure of firm-level investment horizon developed in the strategic management literature (aggregated to the country level) can capture the construct underlying Hofstede's cultural score for long-term orientation in a more flexible way. We then use this measure to show that variation in investment horizon across firms exceeds the variation at the industry or country level of analysis. In addition, we demonstrate that the influence of relative performance on investment horizon, seen previously in U.S.-based studies, can be confirmed and extended in a study of over 2,700 manufacturing firms worldwide. We conclude by highlighting other research questions that can be explored in more detail by exploiting the flexibility offered by the investment horizon measure.

IM: Making room for sub-Saharan Africa: Forbivalence and the assets and liabilities of foreignness

Author: **Viva Nsair**, *Wayne State U.*
Author: **Scott D Julian**, *Wayne State U.*

Sub-Saharan African states have underdeveloped economic infrastructures and recognize their need for and thus welcome foreign expertise, investment, and resources. However, at the same time a history of colonization increases each state's national identity and gives them reason to be less welcoming to foreign status and direction. When considered in an organization context, this ambivalence towards foreignness – or what we term forbivalence – has implications for firm performance, and thus makes important the fundamental firm characteristics of foreignness and domesticity. Yet, scant studies address these factors in such a context, particularly how they interact with different levels of volatility, nationalism, and resource need, all contextually important moderating influences. Considering economical, historical and limited resource implications from a unique context, our study conceptualizes the relationship between firm foreignness and firm performance across sub-Saharan African nations. In addition, we extend understanding of the liabilities and assets of foreignness and emphasize the importance of understanding the context. The model provides new insights about the implications of forbivalence and firm foreignness within the sub-Saharan African context.

IM: Complement or Substitute? Effect of Public and Private Governance on Corporate Responsible Practices

Author: **Ye He**, *U. of Victoria*
Author: **Raveendra Chittoor**, *U. of Victoria*

Our study examines the joint impact of the United Nations Global Compact (UNGC) and national institutions on firm behavior with respect to corporate social responsibility (CSR) and corporate social irresponsibility (CSI). Conceptualizing the UNGC as a private governance and a normative institution, we develop a framework that highlights the optimal conditions for the UNGC to have a positive impact on firms' socially desirable practices. We build on the institutional configuration perspective and theorize that public governance (via the quality of national institutions) and private governance (via compliance with the UNGC) will have differential interactive effects on CSR and CSI. More specifically, we argue that the positive effect of the UNGC on CSR will be attenuated when national institutions are strong. However, the UNGC and national institutions are likely to complement each other and jointly lead to a lower CSI in the context of weak institutions. Empirical analyses using multi-industry panel data sample of 6832 listed firms from 73 countries during 2004-2018 support our predictions. Our results suggest that public and private governance can be both substitutes and complements in shaping corporate social practices.

IM: Revisiting the Multinationality – Firm Performance Relationship: The role of home-country culture

Author: **Rakesh B. Sambharya**, *Rutgers U., Camden*
Author: **Farok Contractor**, *Rutgers U.*

We test the contested multinationality-performance (M-P) relationship on a truly global sample of 335 multinational enterprises (MNEs) from 31 countries representing three regions of the world: Anglo-Saxon, Europe, Asian and emerging markets. We use two measures of multinationality: foreign sales dispersion by five regions and the ratio of foreign sales to total sales (FSTS) and two measures of firm performance: (return on sales and return of assets). We also introduce the never before used GLOBE cultural practices: performance-based cultures (PBC) and socially supportive cultures (SSC) as independent variables in M-P studies. Result indicate strong support the S-curve relationship controlling for cultural practices using both the foreign sales dispersion and foreign sales/total sales (FSTS) measures of multinationality for both measures of firm performance. Peak performance for MNEs from Asia and emerging markets is lower than those from the Anglo-Saxon and European regions. PBC and SSC were both negatively related to firm performance.

Paper is Available to Meeting Registrants Only.

Author: **Nana Yaa Antwi-Gyamfi**, *IESE Business School*

Author: **Yih-teen Lee**, *IESE Business School*

As work extends across multinational contexts, collaborating actors must continually manage self-presentations to cultural counterparts. The concept of identity work, and identity theory in general, hold great potential for deepening our understanding of dynamic, fluid and aspirational aspects of cultural identity; yet the linkages among these literatures remain underexplored. We therefore know little about how actors agentially enact specific cultural identities to achieve desired interactive outcomes. This paper explores the motivating question: in navigating multinational work contexts, how do embedded actors agentially enact cultural identities both native and foreign to them? We propose a theoretical framework that maps out linkages between identity work and identity theory, from which we derive the concept of cultural identity work. We furthermore propose a conceptual framework, the Cultural Identity Work Matrix (CIWM), which demonstrates how an actor's discretionary construals of cultural congruence and relative power during a culture-charged event, underlie the undertaking of a specific type of threat-reducing or opportunity-enhancing cultural identity work: enforcement, appeasement, reinforcement or ingratiation, manifesting through the enactment of regular or hybrid forms of native or foreign cultural identities.

Leaders, Managers and Professionals

Digital Session Chair: **Jan Schmitt**, *WU Vienna*

This session addresses issues related to leaders, managers and professionals in international management. It includes papers examining a cross-cultural view of destructive leadership and followers' task performance, whether vocal pitch of CEOs affects followers' perception of leader trustworthiness and whether foreign accentedness of CEOs and national origin of the followers moderate the relationship, a contextual analysis of the relationship between people management practices, and why IT professionals leave MNC subsidiaries without learning opportunities.

IM: A cross-cultural view of destructive leadership and followers' task performance

Author: **Katherine Crawford Alexander**, *Auburn U.*

Author: **Jeremy Mackey**, *Auburn U.*

Author: **Liam Patrick Maher**, *Boise State U.*

Author: **Charn Patrick McAllister**, *Northern Arizona U.*

Author: **B. Parker Ellen**, *Mississippi State U.*

Author: **Carley Robinson**, *Auburn U.*

Despite continued scholarly and practitioner interest in destructive leadership, we have an incomplete understanding of why, how, and the extent to which destructive leaders affect their followers' task performance differently across the various societal contexts in which this relationship is embedded. We remedy this problem by drawing from 69 independent samples of empirical data ($k = 69$, $N = 19,692$) to generate a meta-analytic data set that enables us to build and test implicit leadership theory predictions about why GLOBE's cultural value dimensions moderate the relationship between destructive leadership and followers' task performance across countries. We extend implicit leadership theory to explain why salient violations of followers' expectations for leadership behaviors exacerbate or attenuate the relationship between destructive leadership and followers' task performance. The results demonstrate that GLOBE's cultural value dimensions meaningfully predict the relationship between destructive leadership and followers' task performance, especially uncertainty avoidance, power distance, gender egalitarianism, human orientation, and performance orientation cultural value dimensions. Our examination of cross-national differences in violations of implicit leadership theory expectations generates theoretical, empirical, and practical contributions for research and practice.

IM: Voice Pitch and Leadership: Moderating Effects of CEO Accentedness and Follower Native Status

Author: **Midam Kim**, *U. of Kansas*

Author: **Minyoung Kim**, *U. of Kansas*

We investigate whether vocal pitch of CEOs affects followers' perception of leader trustworthiness and whether the foreign accentedness of the CEOs and the national origin of the followers moderate the relationship through an experimental study. While the negative relationship between vocal pitch and leadership qualities have been established in previous studies, most of the results were about native-born leaders and native-born followers. We explore whether what holds true for the traditionally typical native-born leadership and followership would also pattern with foreign-born leadership and followership. We conducted a forced-choice speech perception experiment with 12 native and foreign CEOs in US and native and foreign listeners in US. Importantly, the CEOs' speech samples were acoustically altered so that there were three vocal pitch levels, LOW, MID, and HIGH. Overall, participants selected speech samples with lower voice pitch as more trustworthy-sounding leaders, replicating the findings in the previous studies. However, this tendency was moderated by the foreign accentedness of CEOs and the native status of listeners. That is, the negative relationship between voice pitch and leader trustworthiness was 1) weaker when the CEO was foreign-accented and 2) stronger when the listener was foreign-born. These findings expand our understanding on voice pitch perception and leadership trustworthiness in the context of leader-follower communication in the globalization era.

IM: How universal is WMS? A contextual analysis of the relationship between people management practices

Author: **Eda Aral Kilic**, *Faculty of Economics and Business, U. of Groningen*

Author: **Harry Garretsen**, *U. of Groningen*

Author: **Janka Ireen Stoker**, *U. of Groningen, Faculty of Economics and Business*

The World Management Survey (WMS) initiative has collected firm-level data in more than 35 countries for the cross-country measurement of management quality. Abundant research shows that management quality is a good and universal predictor for productivity. However, firms' environments differ from each other substantially. The purpose of our study is to critically examine whether the people management dimension in WMS, as an important dimension of management quality, is equivalently associated with productivity across countries. We do so by investigating the association between people management and labour productivity in varying contexts of cultural values and labour markets in 14 countries. Our results confirm earlier findings that people management significantly relates to labour productivity. More importantly, we do not find any moderating contextual effects of culture or labour market characteristics on the relationship between people management and productivity, suggesting that the best practices of people management that WMS offers seem to be valid across countries with different cultural values and labour market characteristics. Therefore, we offer valuable insights into the debate of convergence versus divergence of management practices across the globe.

Author: **Wolfgang Sofka**, *Copenhagen Business School*

Author: **Christoph Grimpe**, *Copenhagen Business School*

Author: **Ulrich Kaiser**, *U. of Zurich*

IT professionals and their knowledge about the use of digital technologies are a cornerstone for the competitiveness of modern MNCs. However, demand for these digital talents is high on many host country labor markets and MNC subsidiaries have strong incentives to retain them. We theorize that the retention of digital talents in MNC subsidiaries emerges from the learning opportunities that they can provide, not just the salaries. We integrate mechanisms from research on MNC mandates into theory explaining voluntary mobility constraints of employees and hypothesize that the non-monetary benefits from acquiring new skills in subsidiaries with mandates for digitalization projects increase the probability to retain IT professionals. We use data for 566 IT professionals employed by 104 foreign MNC subsidiaries in Denmark between 2002 and 2012 for the empirical test of this hypothesis. The results show that digital mandates help retaining IT professionals. The effect is stronger for subsidiaries with additional R&D mandates. However, potentially higher salaries on local labor markets do not outweigh the retention effects of digital mandates. These results have important implications for theory and practice on the readiness of MNCs to exploit digitalization opportunities.

**Preparing Managers for Ambiguity through Simulations: Making an
Off-the-Shelf Simulation Your Own**
Making an Off-the-Shelf Simulation Your Own

Presenter: **Tawnya Means**, *U. of Nebraska, Lincoln*
Presenter: **Tammy Elizabeth Beck**, *U. of Nebraska, Lincoln*

By their very nature, simulations put learners in realistic situations in which they are dealing with uncertainty, ambiguity, and complexity. Simulations have long been used to provide students with a safe environment to apply theoretical and conceptual learning from the classroom. Simulations have many benefits, including opportunities for collaboration, teamwork, increasing student engagement, and learning by doing. The instructor's role in selecting and implementing a simulation is key to the impact that the simulation will have on student learning. When looking to add experiential learning components to teaching, many instructors look at the decision to use simulations as a buy or build decision. This session will broaden the sights of attendees by helping them overcome this dichotomy. Buying a simulation does not mean that you must use it as it is, there are a myriad of wonderful ways that you can take an off-the-shelf simulation and build learning activities to make it your own! In this session, the faculty presenters will describe how they have used multiple off-the-shelf simulations in teaching across a variety of levels (Executive Education, Graduate, Honors, Undergraduate), time frames (single class session, full-day, 8-week term, full semester) and modalities (in person, online, blended). Attendees will leave the session with a completed decision-making framework as a structured method of considering enhancements to standard simulation use.

Author: **Kirsi Liikamaa**, *U. of Turku, School of Economics*

John F. Mee Award for Paper with the Best Management History Division Contribution

Carolyn Dexter Award Nominee

In this paper, we extend the research on strategy-as-practice (SAP) by exploring the dynamics and historical embeddedness of practices related to strategic planning in a pluralistic environment. We use a longitudinal case study design combined with historical methods and focus on the evolution of strategic planning over nine years. We operationalize the framework of strategic planning as a social practice, presented by Langley and Lusiani (2015), and find the dynamics of strategy practices in a pluralistic environment to be incremental. We find six historically embedded practices related to strategic planning, including production practices (formalization, integration, coordination and participation), textual practices, (of evolving content) and consumption practices, that evolve over time. We extend the theoretical framework of Langley and Lusiani (2015) to include dimension of historical embeddedness. This extends SAP research by enlarging the understanding of contextually situated and historically embedded strategy practices. We operationalize historical embeddedness in context of SAP. Keywords: Dynamics, historical embeddedness, pluralism, strategy-as-practice, strategic planning

MH: Towards a more inclusive business history: The erasure of Madeleine Parent (1918-2012).

Author: **Kristin Samantha Williams**, *UEF Business School, U. of Eastern Finland*

This paper sets out to accomplish three things: introduce Madeleine Parent (1918-2012) as a key but neglected figure in the development of management thought and practice in Canada; offer a novel and highly digestible narrative which is persuasive and powerful and challenges conventional approaches to historical writing, and finally, to levy a critique on the field itself which saw fit to ignore a key player in management and organizational studies in Canada. This paper features a novel methodology called ficto-feminism, which combines aspects of collective biography, auto-ethnography and fictocriticism. Ficto-feminism is an onto-epistemological feminist approach to critical historiography which uses literary strategies and the political utility of polemics to create alternative historical account. This account challenges management history to be more inclusive of not only neglected figures, but also overlooked practices and novel approaches to research.

MH: Rhetoricians of the past: Rhetorical history and the crafting of organizational identity

Author: **Karin Knorr**, *Chair of Organizational Behavior, U. of Paderborn*
Author: **Franziska Hein-Pensel**, *Ilmenau U. of Technology*
Author: **Simon Oertel**, *TU Ilmenau*
Author: **Kirsten Thommes**, *Chair of Organizational Behavior, U. of Paderborn*

The past is a central element in crafting an organizational identity. However, the past is interpreted subjectively, resulting in ambiguity and multiplicity of interpretations. This study investigates the use of rhetorical history in crafting an organizational identity by analyzing differences between an organization as an actor and organizational members in applying rhetorical history. Our analysis is grounded on the self-representations of 28 watchmaking firms located in two watchmaking clusters in Germany based on their Web pages and interviews with 75 current and former members of watchmaking firms in these two clusters. Our results reveal that there are differences between the organization as an actor and its members not only regarding which claims of rhetorical history they emphasized but also with respect to the temporal and content-wise past to which they refer. While they share a pattern in terms of temporal structure, the organization as an actor emphasizes both near and distant history, creating a kind of "valley of oblivion," while the members of the organization show a stronger focus on near-history aspects. Our findings contribute to a more nuanced understanding of rhetorical history, showing that the use of rhetorical history is strongly influenced by rhetoricians of the past. With a focus on the importance of rhetorical history for crafting an organizational identity, our findings also allow us to draw conclusions about sources of multiple identities and how such identities can emerge—namely, through differentiated rhetorical interpretations of the past by groups of actors.

Workplace Relationships: Relational Cognition, Relationships, Social Capital & Influence

Digital Session Chair: **Mara Olekalns**, *U. of Melbourne*

MOC: **Stronger than me: Recrafting relationship narratives after relational turbulence** 

Author: **Mara Olekalns**, *U. of Melbourne*

Author: **Brianna Barker Caza**, *U. of North Carolina at Greensboro*

Organizations are built on a network of formal and informal relationships. They are critical for organizational performance and individuals' well-being, and provide an important resource for responding to the turbulence created by external crises. We develop a dyad-level construct, the relationship narrative ("who we are"), to explore the impact of external crises on workplace relationships. We theorize that the motivation and affective themes that define relationship narratives establish a narrative arc of either connection or disconnection. These narrative arcs underpin robust and fragile relationships, respectively, and shape how partners re-establish relationship narratives. External crises create relational turbulence and uncertainty by disrupting relational cohesion and affective climate, and trigger an attentional shift from the relationship to the individual. They create turning points within relationships, opening the possibility for partners to strengthen (reintegrate) their relationships but also creating the risk that relationships will worsen (fragment). How relational partners approach repairing disruptions to relational cohesion and regulating post-crisis affect determines which of four post-turbulence relationship narratives – resilient, habitual, fracture, disintegration – emerges from partners' relationship repair efforts. The path to each of these relationship narratives is contingent on the broad narrative arc that underpinned partners' pre-crisis relationship narrative.

A plenty of studies have demonstrated that political skill is beneficial to followers in interpersonal interactions. Based on social influence theory, our research challenges previous wisdom by identifying the potential dark side of follower political skill. We propose that leader-perceived follower political skill can lead to the conjecture of follower manipulation tendency, which further decreases the leader's motivation to build a relationship with such a follower. Furthermore, we suggest that follower political skill can be observed through by the leader only when the leader has high political skill. To test our hypotheses, we conducted an Implicit Association Test and a field study with a multiple-source, time-lagged design, in which the results supported our hypotheses. Taken together, our research reveals the perils of follower political skill and the importance of examining the characteristics of influence target in the social influence process.

MOC: **Mobilizing Social Capital**   

Author: **Emanuela Rondi**, *U. degli Studi di Bergamo*

Author: **Daniel Z. Levin**, *Rutgers U.*

Author: **Alfredo De Massis**, *Free U. of Bozen-Bolzano (Italy) and Lancaster U. (UK)*

Much of the research on mobilizing social capital focuses on the idea that potential resources accessible through existing relationships are converted into actual resources, such as a productive collaboration or useful advice. Less well understood is how this mobilization process occurs, in part because it is difficult to tease apart potential versus actual resources inherent in existing ties that are active and ongoing. To overcome this obstacle, we explore the mobilization process in the situation of dormant ties (i.e., people you used to know) that are reconnected, thereby allowing us to see more clearly how a tie's potential value can be mobilized and turned into actual value. To do so, we conducted research combining an inductive, qualitative field study of reconnections in the North Italian textile district (Study 1) and, to validate our findings, a vignette-based experiment with U.S. workers (Study 2). We find that the mobilization process can and does fail, sometimes dramatically, when people do not refresh the tie and thereby do not know where they stand with each other. More specifically, we find that three elements—remembering, catching up, and perceiving the tie similarly—are key in successfully mobilizing social capital.

MOC: **Predicting Leader-Member Exchange: Integrating Relational Cognition and Emotion** 

Author: **Courtney Williams**, *U. of Toledo*

Author: **Janaki Gooty**, *U. of North Carolina, Charlotte*

The role of the manager spans multiple levels of analysis as managers influence their individual subordinates, teams, and sometimes organizations as well as entire industries. When taking a dyadic perspective of management, the most prevalent theoretical framework is Leader-Member Exchange (LMX), which focuses on the quality of reciprocal exchanges within unique manager-subordinate relationships. High-quality LMX relationships are linked to beneficial outcomes for organizations; however, the LMX domain suffers from multiple theoretical and methodological issues, including a lack of dyadic research as well as a lack of focus on relational predictors that serve to develop and sustain high-quality LMX relationships. This work addresses this gap in the literature by drawing upon the multidisciplinary relationship sciences to examine relational cognition and emotion as predictive of both manager and subordinate LMX. We introduce the concept of communal relational motives to the LMX literature and examine its interplay with the emotional tone of the manager-subordinate relationship. We found that manager-subordinate agreement in the strength of their communal motive towards one another is predictive of manager LMX; while the manager-subordinate discrepancy in communal strength is more likely to influence subordinate LMX. However, the accumulated experience of positive emotions in the manager-subordinate relationship was the most important for predicting manager and subordinate LMX. Based on these findings, we discuss future avenues for research on manager-subordinate relationships.

MOC: Disentangling the Dynamic Nature of Work Passion: A Latent Growth Modeling Approach

Author: **Eko Yi Liao**, *Hang Seng U. of Hong Kong*
Author: **Yuen Shan Noel Wong**, *Hang Seng U. of Hong Kong*
Author: **Kaylee Kong**, *The Hang Seng U. of Hong Kong*

Abstract While employees' work passion is widely pursued by organizations and their citizens, the development of passion remains largely unstudied. This gap in extant literature has motivated the present study, as a part of which the dynamic nature of work passion is investigated—whether passion is context-dependent (i.e., the change of passion based on external circumstances). Our research framework was informed by the integrative framework of self-determination theory, which emphasizes individuals' internalization of activities while acknowledging the critical role of contextual influences. Specifically, unmet expectations was investigated as a critical contextual factor that represents the interplay of individual expectations and work realities. Using the data from a four-wave longitudinal survey involving 365 employees, a series of latent growth modeling tests were performed. Our findings show that unmet expectations influence the initial status and subsequences change in both forms of passion, albeit in opposite directions. The theoretical and practical implications were discussed accordingly.

MOC: Good or Bad for Ambivalent Emotion on Creativity? A Moderated Mediation Model

Author: **Yan Li**, *Beijing Institute of Technology*
Author: **Sizhi Chen**, *School of Management and Economics, Beijing Institute of Technology*
Author: **Abdul Gaffar Khan**, *School of Management and Economics, Beijing Institute of Technology*

Ambivalent situations trigger ambivalent emotions, such as the simultaneous experience of happiness and sadness, which is a pervasive phenomenon in organizations, such as a CEO feels optimistic for launching a new project but at same time feels worried because the new project needs invest too much money, which may hurt the old projects. Do ambivalent emotions facilitate or hinder creativity? Informational theories of emotion (Forgas, 2000) deems ambivalent emotions stimulate more information which facilitates creativity. Another perspective thinks ambivalence is a stressful situation that hinders creativity, which demands more psychological resources to identify and solve problems in a new way. By integrating conservation of resources theory (Hobfoll, 1989), theory about emotion regulation strategy (Koole, 2009) and bifurcation model of affect (Li, Ashkanasy, & Ahlstrom, 2010), we developed a moderated mediation model, where creative process engagement mediates the relationship between ambivalent emotions and creativity, where ambivalent emotion decreases the creative process engagement so that results in decreased creativity. And one dimension of a new construct of emotional stability (ES, emotional threshold) moderated the mediation effect of idea generation engagement such that the relationship is stronger when the emotional threshold is high. We also find that another dimension of the new ES (emotional recovery) is positively related to creativity. 316 employees from 50 work groups in China participated in the study.

MOC: How Observing Compassion in the COVID-19 Pandemic Benefits Employee Work and Personal Outcomes

Author: **Ussama Ahmad Khan**, *U. of Washington, Seattle*
Author: **Andrew Hafenbrack**, *U. of Washington*

Organizational scholars and practitioners have espoused compassion as a powerful antidote to alleviating another's suffering in the COVID-19 pandemic. Yet, past work has largely examined compassion as an in-person process. In a time where remote work and social distancing are necessary to prevent further spread of the virus, it is unclear if the influence of compassion would be diminished without face-to-face interaction. In this research, we unpack the question of how far-reaching the impact of compassion can be by examining whether compassion can spill over to third parties uninvolved in the compassion episode, and whether its impact can be transmitted virtually—the common mode of communication in this time. Drawing on social contagion theory and the theory of transactional stress and coping, we examine how observing compassion influences employees' interpersonal (organizational citizenship behavior) and intrapersonal (performance) work outcomes, and their personal well-being (negative mood), via employees' other-orientation. We also examine how employees' trait sense of control attenuates the compassion spillover effects. We test our proposed theoretical model via an experiential sampling intervention across two weeks in a sample of 91 K-12 teachers—essential workers whose work routines have been entirely disrupted and subjected to uncertainty (e.g., newly online courses). Each morning, we manipulated observed compassion (vs. control) via short stories involving other teachers. Overall, we found support for our propositions. We thus offer a simple remedy—that is, sharing short stories about compassion—that organizations and employees can use to alleviate some of the ongoing suffering during this difficult time.

MOC: Grateful or Slimy? How Power and Perspective Influence the Perception of Authentic Gratitude

Author: **Ayana N. Younge**, *U. of North Carolina, Chapel Hill*

While the understanding of gratitude within organizations has been conceptualized as having universal benefits, empirical work on this phenomenon is lacking. Indeed, innumerable findings have highlighted the unique affiliative outcomes of the positive emotion of gratitude in interpersonal relationships, but might the contextual features of organizations alter these affiliation intentions toward the expresser? In this paper, we explore how two embedded, and distinct, factors of organizations—power and perspective—create situations in which a gratitude expression may be perceived as inauthentic, subsequently impacting affiliation outcomes. Across five experimental studies, we demonstrate that in a context of social hierarchy, where low-power individuals may express upward gratitude and high-power individuals may express downward gratitude, one's perspective as a recipient or third-party witness of that behavior, creates different perceptions of how authentic that gratitude expression is. Specifically, we find that third-party witnesses of upward gratitude perceive those expressions as the least authentic, and this is due to the witness's tendency to make instrumental attributions for low-power individuals' gratitude expressions—viewing this expression as slimy. However, this mechanism is not consistently supported in the case of downward gratitude expressions. Results also show that perceivers, in general, indicate a lower interest in affiliating with those gratitude expressers they perceive as inauthentic. These findings extend research on gratitude in organizations and highlight how perceptions of emotional authenticity may be shaped by both social hierarchical relationships and one's perspective.
