

Creating A Better World Together

82nd Annual Meeting of the Academy of Management
5-9 August 2022 | Seattle, Washington, USA | A Hybrid Experience

The 82nd Annual Meeting of the Academy of Management: A Hybrid Experience

2022 Program / Schedule / Agenda

NOTE: The information in this document is as of 7 July 2022. Scheduling and other program changes after that date are not reflected in this document. Please refer to the online Annual Meeting program at <https://program.aom.org/> for the most up-to-date information.

Session Type: **Meeting**
Program Session: **1** | Submission: **18444** | Sponsor(s): **(CMS)**
Session Format: **Virtual-only: Zoom “meeting” style**
Scheduled: **Thursday, Aug 4 2022 8:00AM - 9:30AMPT (UTC-7)**

CMS Executive Committee Meeting *CMS Executive Committee Meeting*

Organizer: **Patrizia Zanoni**, *Hasselt U. & Utrecht U.*
Organizer: **Marcos Pereira Fernandes De Barros**, *Grenoble Ecole de Management*
Organizer: **Fernanda Filgueiras Sauerbronn**, *U. Federal do Rio de Janeiro - UFRJ*
Organizer: **Amon Barros**, *FGV EAESP Sao Paulo School of Business Administration*
Organizer: **Alison Pullen**, *Macquarie Business School, Macquarie U.*
Organizer: **Ozan Nadir Alakavuklar**, *Utrecht U., School of Governance*
Organizer: **Caroline Clarke**, *The Open U. Business School*
Organizer: **Richard Longman**, *U. of the West of England*
Organizer: **Ghazal Zulfiqar**, *Lahore U. of Management Sciences*
Organizer: **Alexandra Bristow**, *The Open U. Business School*
Organizer: **Paulina Segarra**, *U. Anáhuac México*
Organizer: **Liela A. Jamjoom**, *Dar Al-Hekma U.*
Organizer: **Kristin Samantha Williams**, *UEF Business School, U. of Eastern Finland*
Organizer: **Eina Riivari**, *U. of Jyväskylä*
Organizer: **Arturo E. Osorio**, *Rutgers U.*

Presenter: **Rebecca Baelen**, *U. of Illinois at Chicago*

The devastating COVID-19 global pandemic is a symptom of declining biodiversity in our planet. The drivers for this loss in biodiversity are related to business practices across industries (e.g., land use, intensive livestock production, wildlife trade, and climate change). Beyond COVID, this declining biodiversity is not only a business crisis but also a crisis for humanity and our planet. The leaders of the future must be conscious leaders, who can lead business organization in averting further future crises as well as revitalizing inclusive wellbeing, for human as well as the planet, through higher purpose, compassion, and integrity. This workshop introduces neuroscience research on consciousness, cognition, and compassion conducted by the Sadhguru Center for A Conscious Planet at a teaching hospital of Harvard Medical School. Drawing on classical yogi sciences, Sadhguru (2016) designed “Inner Engineering” programs as “technologies for wellbeing” and tools for expanding human consciousness. Participants will learn research findings on the effect of “Inner Engineering” on wellbeing, positive organizational behavior, and leadership as well as experientially learn these evidence-based yoga and meditation practices. We request participants attend the workshop in its entirety. The PDW will be conducted via a synchronous online format and pre-registration is required. Please register by visiting: https://rutgers.ca1.qualtrics.com/jfe/form/SV_6JWqVuaF0FktAAC

We request participants attend the workshop in its entirety. The PDW will be conducted via a synchronous online format. Pre-registration is required. We will send registered participants pre-workshop materials. A light stomach condition is recommended for participating in the experiential activities.

New Academic Job Opportunities in China   
Job Opportunities in China

Organizer: **Ben Nanfeng Luo**, *Renmin U. of China*
Participant: **Long Zhang**, *School of Business Administration, Hunan U.*
Participant: **Bin Hao**, *East China U. of Science and Technology*
Participant: **Ying Wang**, *School of Management and Economics, Beijing Institute of Technology*
Participant: **Rongrong Zhang**, *Chinese U. of Hong Kong*

As it continues and seems not going to fade away in a short term, the COVID-19 pandemic negatively disrupted the higher education sectors of many countries. On the contrary, universities in China are still offering management PhDs and scholars many job opportunities and will probably continue to be so in the next few years. As China job market for management scholars is characterized as complex, dynamic, and of highly internal variety, we delivered a PDW on the academic job opportunities in China in the 2021 AOM conference (which attracts about 50 participants). This year, in the current PDW, scholars from several representative Chinese universities will continue to share their experiences, observations, and insights regarding the job opportunities in China for candidates in the management field. It will cover topics including (but not limited to) the application procedures, selection criteria, compensation package, teaching load, promotion, and social service. Besides, this PDW will discuss the key to the career success as an academic scholar in China. The new developments and trends in China job market will be highlighted.

Participant: **Nidhi Srinivas**, *The New School*
Participant: **Sujatha Jesudason**, *The New School*

The goal of this PDW is to introduce a preliminary, integrative conceptual framework on the intersections between Management and Social Justice, spur management research and teaching that explicitly centers equity, inclusion, and social justice as the goals of organization and management, and provide an opportunity for chapter submitters of the book “Managing for Social Justice: Harnessing Management Theory and Practice for Collective Good (Poonamallee, Joy and Howard, (Ed.), 2022: Palgrave Macmillan) to share their work, receive feedback, and work together to strengthen the chapters for final inclusion in the book. The book and the proposed PDW builds on the Virtual Management and Social Justice Conversation Series created, curated, and hosted by Latha Poonamallee. An interdisciplinary and inter-sectoral project, it brings together scholars and practitioners who are obsessed with questions about how to challenge conventional understandings of organizations and management towards building a more just, equitable, and sustainable world. Submissions span topics such as Advancing Racial Equity in STEM work and education, Re-envisioning Philanthropy and CSR for social justice, pedagogical support and motivation for neurodiverse students, Inclusion of Transgender people in the workforce in India, Cooperatives as catalysts for refugee women’s identity work, Interrogating Whiteness in the field of OD and Organizational Change, Social Justice in Environmental Management and Sustainability, Courageous Conversations: Speaking Truth to Power, Social Justice and Policy Management, Tensions in the Circular Economy, Balancing Commerce and Conviction in Emerging Media among others. This topic is relevant to the 2022 AOM Meeting Theme of Creating a Better World Together.

Meaningful Work in Healthcare: A Tale of a Stressful Environment
Meaningful Work in Healthcare

Organizer: **Hale Kaynak**, *U. of Texas Rio Grande Valley*
Participant: **Hale Kaynak**, *U. of Texas Rio Grande Valley*
Participant: **Jorge A. Gonzalez**, *U. of Texas Rio Grande Valley*
Participant: **José Pagán**, *New York U.*
Participant: **Sarah Kimakwa**, *California State U., Chico*
Participant: **Vincent O. Ogutu**, *Strathmore U.*

This professional development workshop is intended to investigate the role of meaningful work in managing health care with the ultimate objective of improving patient care and hospital quality performance. To design it, we drew from the literature in health care, operations management, innovation and technology, human resource management and organizational behavior and theoretical underpinnings such as leadership, quality management, information processing. One primary driver for this PDW is that burnout among healthcare workers has increased with the recent COVID crisis, which has had major detrimental implications for healthcare management. Our PDW seeks to explore ways to respond. More specifically, we attempt to identify antecedents of meaningful work in healthcare as input, meaningful work as process, improved employee well-being as output and patient care and hospital quality performance as outcomes. For example, healthcare organizations can create an environment in which healthcare staff feel their jobs are meaningful to reduce occupational stress. Each member of our team will discuss the research variables related to his/her fields. The presentation portion of our workshop before the breakout sessions will end with a talk about healthcare delivery during the COVID-19 Pandemic at NYC Health + Hospitals.

Religion and Women Entrepreneurship Interaction COVID-19 Sub Saharan Africa Latin America South Pacific
Religion Women Entrepreneurship Africa

Participant: **Caren Brenda Scheepers**, *U. Pretoria Gordon Institute of Business Science*
Participant: **Anastacia Mamabolo**, *GIBS / U. of Pretoria*
Participant: **Ehne Swartz**, *Montclair State U.*
Participant: **Ofer Zwikael**, *Australian National U.*
Participant: **Nasima Mohamed Hoosen Carrim**, *GDO*
Participant: **Birgit Muskat**, *Australian National U.*
Participant: **Daniela Alejandra Gimenez Jimenez**, *TU Dortmund U.*

Our PDW focuses on the Interaction of Religion and Women Entrepreneurship during the time of an unprecedented global pandemic – Covid-19. We center our attention on three emerging market regions, namely Sub-Saharan Africa (SSA), Latin America and the Caribbean (LAC), and the South Pacific region. This PDW involves women entrepreneurship scholars from these three regions, four continents, and five countries. UN Women (2020) shows that the economic crisis due to the global Covid-19 lockdown regulations disproportionately affects women entrepreneurs, even though males were initially more severely affected by the health effects of Covid-19 (Manolova, Brush, Edelman, & Elam 2020). Our PDW endeavors to deeper understand this phenomenon, namely its severe impact on women entrepreneurship and, in particular, how religion and formal religious institutions interacted with women entrepreneurs' resilience and sustainability of women-owned entrepreneurial businesses in the three regions. We pay attention to the injustice of global inequalities of developed and developing countries' access to Covid-19 vaccines and resources, like Personal Protective Equipment (PPE) and government funding in buffering against the devastating financial impact of lockdown restrictions. We draw on the seminal work of Kloosterman et al. (1999), who introduced an interactionist perspective and applied the mixed embeddedness approach of perceiving women entrepreneurs as simultaneously being embedded in their social networks as well as the broader political, economic, social, cultural, and in particular - religious structures of their external context. Relating to Covid-19, we hone in on the role of religion as an informal institution (referring to North, 1990) in the form of global membership bodies with vast resources and their local socio-emotional and even financial support for women entrepreneurs in the three regions. We aim to show how the Catholic, Pentecostal Christian Church, Islamic, Jewish, and other denominations could collaborate with central and local government and civil society to offer integrated socio-emotional and financial support for women entrepreneurs in the three regions. A recent survey from the Diana International Research Institute (DIRI) of Babson College on women-owned businesses during Covid-19 found that contrary to assumptions predicting that women entrepreneurs will primarily adjust their business models to reduce risk, women entrepreneurs moved very quickly to capture new business opportunities resulting from the crisis and change in circumstance (Manolova et al. 2020). Building on New Institutional Theory (North, 1990; Scott, 2013), we highlight religion as an informal institution. Religion provides a sense of meaning by shaping women's entrepreneurial roles and choice of business (traditionally female activities such as retail and foodservice versus non-traditional activities such as engineering or manufacturing). In addition, the normative pillar of the religion, focusing on shared roles and expectations, emphasizes the role of social capital in conferring women's access to funding and available business networks. The three regions under discussion represent the world's major religions (Islam, Hinduism, Christianity, Pentecostal and Catholicism traditions, and traditional African and indigenous religions) and offer an opportunity for deeper exploration of the influence of these informal institutions on women's entrepreneurial leadership. Using Welter's (2011) contextual entrepreneurship framework, we consider the impact of socio-spatial geographical regions and postcolonial periods with the resultant patriarchal traditional religious norms on women entrepreneurship in the three regions. Our research question revolves around how religion interacted with women's entrepreneurship in these three regions during Covid-19. Aligned with the 82nd Annual AOM theme for 2022 on "creating a better world", our PDW endeavors to enhance the considered response of women entrepreneurs, pivot business models, and create new markets in response to the Covid-19 crisis. We endeavor to advise policymakers, government, global aid, and religious institutions on tailored recovery support for women entrepreneurship in developing countries. Our PDW offers an opportunity for AOM scholars to participate in building a vibrant entrepreneurial ecosystem for women entrepreneurs in these three regions to enhance recovery from the impact of Covid-19, advance gender equality, and create a better just world specifically for women in emerging markets.

Scaling Up Accelerator Research

Scaling Up Accelerator Research

Coordinator: **Violetta Gerasymenko**, *Oregon State U.*
Session Chair: **Gary Dushnitsky**, *London Business School*
Presenter: **Sandy Yu**, *U. of Minnesota*
Presenter: **Elena Kulchina**, *North Carolina State U.*
Presenter: **Ronit Yitshaki**, *Department of Economics and Business Administration, Ariel U.*
Presenter: **Matthias Wenzel**, *Leuphana U. Lüneburg*
Presenter: **Shelly Lev-Koren**, *Technion - Israel Institute of Technology*
Presenter: **Miriam Erez**, *Technion - Israel Institute of Technology*
Presenter: **Susan L. Cohen**, *U. of Georgia*

Over the past decade, accelerators have become an important feature of the global entrepreneurial landscape. This has led to a growing body of research that examines the types and organization of these accelerators and their contributions to the growth and scaling activities of start-ups. Researchers have examined how accelerators provide a forum for knowledge creation, technology development, commercialization, and new business model development. This research underscores the importance of accelerators for new ventures' strategic decisions such as funding, timing of exits, scaling up strategies and technology commercialization. Moreover, it highlights the opportunity to leverage the accelerator setting to study canonical questions in entrepreneurship. We will illustrate and discuss the opportunities to broaden this stream of research by: (1) discussing the effects of accelerators on the emergence of entrepreneurial identity around the world that is detached from socio-historical contexts, (2) considering different venture-specific factors that determine the extent to which ventures will benefit from participation in accelerators and namely (a) the breadth of their prior experience and (b) their relative positioning within a cohort of other accelerator-sponsored start-ups (3) re-examining the effects of different mechanisms of accelerators such as funding, networking, mentorship, and others on ventures' performance and (4) identifying lessons for generating novel theory from novel phenomena such as entrepreneurial accelerators. The focus on the founders, their agency, and the role of accelerators across and beyond different contexts are key themes throughout the discussion. It falls squarely in line with the 2022 AOM theme "Creating a better world together."

Discussant: **Jeff York**, *U. of Colorado, Boulder*

Over the last two decades, robust research has examined how entrepreneurs develop and launch startups by managing uncertainty and developing strategies through learning, doing, and thinking. In this PDW, we bring together the seminal and leading scholars of five theoretical models: Effectuation, Entrepreneurial Strategy, Lean Startup, Scientific Approach, Simple Rules. Through presentations and discussant-led breakout sessions, we will compare and contrast these models to a) identify their underpinning assumptions, key mechanisms, and contingencies, and b) develop a future research agenda that builds on such integration.

If you have any questions about this PDW, please reach out to Jacob Valentine at valentja@umd.edu.

Author: **Alaa Zalata**, *Lecturer in Accounting*

Prior research shows that information asymmetry and pressures to elude to stakeholders' expectations are central to strategic accounts of corporate social responsibility (CSR) decoupling—a practice that has severe socio-economic consequences for firms. Adopting a corporate governance perspective to CSR decoupling, this paper investigates how board gender diversity (BDG) can curb CSR decoupling. Using a battery of sophisticated analyses and robustness tests on 11,835 firm-year observations for the period of 2002-2017, our results confirm that broadly BGD is significantly and negatively associated with CSR decoupling. Adopting a nuanced view of BGD, we find that this effect is stronger for boards that are balanced, as opposed to skewed and titled boards and that independent women directors are more effective monitors of CSR decoupling, as opposed to executive women directors. Our study offers important theoretical and policy implications for the field of corporate governance and CSR.

GDO: Do Female CEOs Promote Behavioral Consistency in Firm's Nonmarket Strategy? 

Author: **Marwan Ahmad Alshammari**, *U. of Texas at Tyler*
Author: **Hazel Husne Dadanlar**, *Coastal Carolina U.*
Author: **Soumendra Banerjee**, *Misericordia U.*
Author: **D Harold Doty**, *U. of Texas at Tyler*

ABSTRACT In this study, we explore whether and under what conditions female CEOs engage in behavioral consistency in promoting CSR practices. Specifically, we draw on social role and behavioral consistency theories to argue that female CEO presence will be positively related to CSR consistency. We use two categories to capture the firm's consistency in CSR practices: inter-domain and temporal consistency. Temporal consistency refers to the consistency of a firm's behavior towards its stakeholders over time. Inter-domain consistency indicates reliability in a firm's conduct across its various stakeholder groups. We also argue that the relationship between female CEOs and CSR temporal and inter-domain consistency will be moderated by the board gender diversity. Data from 161 unique firms within the S&P 500 over the 2005-2013 sample period provide support for each of our hypotheses. Keywords: female CEOs, board gender diversity, nonmarket strategies, corporate social responsibility, behavioral consistency

GDO: A Sizable Advantage: Environmental and Social Sustainability Implications of Gender Diversity 

Author: **Philip Yang**, *U. of Tuebingen*
Author: **Sarah Diederich**, *U. of Tuebingen*
Author: **Jan Riepe**, *U. of Tuebingen*

We study the effect of board gender diversity on environmental and social performance of firms. Our model complements existing literature in the field of corporate governance and sustainability by hypothesizing a direct positive effect of board gender diversity on environmental and social performance. We further argue that this direct effect is moderated by firm size such that the effect of board gender diversity on environmental and social performance is larger for smaller firms. We find evidence for our hypotheses when using board gender quotas as the empirical setting for our identification strategy. Our results of a staggered difference-in-differences approach with 2,981 firm-year observations of 511 firms in eight European countries with mandatory board gender quotas provide tentative evidence of a direct effect of board gender diversity on environmental and social performance. Yet, the moderation effect is positive and highly significant, which suggest that particularly smaller firms are able to improve environmental and social performance through board gender diversity.

GDO: Gender Diversity, Institutional Context, and Environmental Innovation: A European Patent Analysis.

Author: **Marco Traversi**, *U. of Brescia*
Author: **Mariasole Bannò**, *U. of Brescia*
Author: **Graziano Coller**, *U. of Trento*
Author: **Emilia Filippi**, *U. of Trento*

This paper investigates the role of institutional context as a key driver of the relationship between women's presence on the board of directors (BoD) and environmental innovation. Moving from extant research on critical mass (i.e., at least three women appointed to the BoD), and considering the influence the institutional context exerts on women and their role as directors, we build and test some hypotheses on how a cultural context more/less inclined towards the female figure in a top echelon position can enhance/hinder the contribution made by women to environmental innovation. Specifically, we argue that women on BoD may have a positive impact on environmental innovation only when critical mass is reached and that a favorable institutional context (i.e., low-masculinity) positively contributes to the beneficial influence of female directors on the implementation of environmental innovation. We test and find support for our hypotheses on a sample of 3,316 European firms across three specific environmental innovation categories (i.e., Air, Water, and Waste).

Are Diversity and Inclusion Programs Working?

Session Moderator: **Yasir Mansoor Kundi**, *Institute of Business Administration, Karachi*

GDO: **Do Diversity-Related HR Practices Matter for Employee Performance? A Multilevel Investigation**

Author: **Yasir Mansoor Kundi**, *Institute of Business Administration, Karachi*
Author: **Mohammed Aboramadan**, *Doha institute for graduate studies*

In this study, we investigate whether diversity-focused HR practices exert an influence on employee performance through the intervening mechanisms of inclusion climate and relational attachment. The proposed links were hypothesized relying on the social processing information and social exchange theories. Multiphase and multisource data were collected from employees working in the hotel industry in Italy. In order to verify our hypotheses, we employed a multilevel statistical technique. The findings of this study indicate that diversity-focused HR practices can boost employee performance through inclusion climate and relational attachment. The results are novel as they address an empirically hot topic and identify outcomes of diversity-focused HR practices. Discussion, implications and limitations are presented.

GDO: **A Link between Gender Equality Initiatives and Women's Representation in the Industry Context.**

Author: **Marzena Baker**, *U. Of Sydney*
Author: **Muhammad Ali**, *Queensland U. of Technology*
Author: **Mirit K. Grabarski**, *Lakehead U.*
Author: **Alison M. Konrad**, *Western U.*

Little is known about the impact of workplace gender equality initiatives in improving women's representation at different organizational levels and in different industry contexts. We investigate how resource practices, pay equity, and work-life programs influence woman's representations and whether the gender composition of the industry moderates these relationships. Utilising a large archival panel dataset spanning 7-years from 2013 to 2020, we tested their effectiveness across three levels: top management (TMT), lower to middle management (LTMM), and non-management, including moderating effects of industry gender composition (female-tilted, balanced and male-tilted organizations). Drawing on theory of remediation of workplace inequality, our panel analyses show a positive relationship between resource practices and women in TMT and LTMM, pay equity and women in TMT and non-management, and work-life programs and women's representation in TMT and LTMM. Drawing on the signaling theory, we further found that work-life programs are most effective in enhancing women's representation in TMT in male-tilted organizations. The programs seem to be non-threatening to the organizational culture as they show effectiveness across all industries. However, the fact that resource practices in male-tilted industries showed marginally significant and weaker positive relationship with women's representation in TMT, suggests that there are barriers to those initiatives. Together, these findings suggest that well targeted programs designed to closely link to specific sources of inequality in given industry cultures can effectively deliver gender equality.

GDO: **Reducing Ambiguity Around Diversity in Organizations: A Review**

Author: **Sandra Portocarrero**, *PhD student at Columbia U. - Sociology*

In the United States, diversity is a popular yet ambiguous concept. To offer clarity, I review the literature on diversity in organizations that have shaped our conversations for the last 50 years. I first review the historically-informed approaches that shed light on the roots of the ambiguity around diversity management in organizations. I then review selected social psychological literature on diversity, particularly the works that inform diversity practices. Finally, I review the literature that explores the advantages of diversity in groups and the benefits of implemented diversity initiatives in organizations and the literature that examines the disadvantages of group diversity and when diversity initiatives fail in organizations. I integrate these three bodies of literature to offer a review of organizational diversity literature that will help readers and writers reduce ambiguity around the term diversity and better specify what they mean when referring to "diversity in organizations."

GDO: **Designing Prototypes for Inclusion**

Author: **Felix Danbold**, *UCL School of Management*
Author: **Batia Mishan Wiesenfeld**, *New York U.*

Nearly every organization is now striving for more diversity and inclusion for all. However, few achieve this. Current theorizing on these topics focuses on the psychological experience of inclusion and associated organizational practices. In contrast, we offer a theoretical perspective focused on understanding how and when organizations will possess the capacity for inclusion by looking at the cognitive foundations of people's ability to accept and embrace difference. This paper argues that one major barrier to inclusive diversity is a restrictively defined member prototype – the set of features that define what it means to be a member of the organization or relevant collective. Although organizations often want a well-defined prototype to set standards and norms for employees, this also leads to the exclusion or marginalization of all who do not readily fit this standard. We discuss how the configuration of prototypes determines inclusiveness – the capacity for inclusive diversity. In doing so, we offer scholars and organizations a new way to anticipate when diversity and inclusion initiatives may fail (i.e., when prototype inclusiveness is low, other well-intentioned efforts will fall short), and reveal novel strategies likely to increase inclusion. We identify four dimensions of prototype configuration and discuss their relationship for inclusiveness. We also offer a research agenda for testing the novel implications of our model and for exploring further considerations and consequences of prototypes in diversity and inclusion scholarship.

Author: **Denis Monneuse**, *UQAM U. of Quebec in Montreal, Canada*

The diversity management literature offers few accounts of organizations that manage to foster diversity, of how diversity policy and practices are enacted in practice, and of managers' motivations to do so. To close these gaps, this paper reports a 4-year ethnography in a European bank which succeeded in reducing the glass ceiling by inciting managers to appropriate its gender diversity policy and practices. I examine the multiple types of appropriation (e.g., selective appropriation, extension, diversion, misappropriation) as well as managers' underlying motivations for each of them. I then analyze the continuum of organizational responses to these appropriations, from undoing to appropriation of managers' appropriations. This paper contributes to a) providing a better conceptualization of appropriation by extending previous typologies and highlighting the organizational repertoire of action to react to managers' appropriations; b) shedding a new light on the so called 'resistance to change'; and c) providing insights into the advantages and drawbacks of appropriation as a new model of practice implementation. It thus contributes to advancing and renewing both the diversity and change management literatures.

Complementing recent theoretical developments in the realm of allyship, our symposium offers four presentations that provide empirical tests of the antecedents (Presentations 1 & 2) and consequences (Presentations 3 & 4) of allyship in organizations. Specifically, presenters will discuss the role of cognitive and affective motivators for allyship, and the impact of allies' involvement on people's perceptions of and attitudes toward allies. Furthermore, our symposium refines the scope and boundaries of allyship research through the incorporation of diverse research perspectives: examining allyship from those who also identify as disadvantaged (e.g., Asians for Black Lives Matter), exploring non-linear effects of motivators, studying liberal (e.g., gender equality) and conservative (e.g., anti-affirmative action) movements, and conducting experiments with social movement activists. In a world where both individuals and organizations strive to promote effective allyship, our hope is that this collective work will illuminate both the antecedents and consequences of allyship.

From Otherness to Togetherness: Inclusive Structural Responses to Inequality and Marginality
From Otherness to Togetherness

Presenter: **Sondos Gamal Abdelgawad**, *IE Business School*
Presenter: **Hossam Zeitoun**, *U. of Warwick*
Presenter: **Benson Honig**, *McMaster U.*
Presenter: **Isabel Fischer**, *Isabel.fischer@wbs.ac.uk*
Presenter: **Mark Clark**, *Sussex U.*
Presenter: **Vikki Abusidualghoul**, *U. of Warwick*
Presenter: **Jummy Okoya**, *U. of East London*

The purpose of this PDW is to create an inter-disciplinary forum for reflexivity that addresses the unflattering reality that despite the unprecedented growth in spending on diversity initiatives across institutions worldwide, delivering on diversity outcomes such as inclusion and equity is significantly lagging behind (PWC D&I survey, 2020; Berger, Essers, and Himi, 2017; Minefee, Rabelo, Stewart, and Young, 2018). Towards this end, the PDW aims at zooming in on the roll out of inclusive responses to marginalization and inequality dealing with a wide spectrum of diversity phenomena across multiple contexts within business schools' ecosystem. These responses span a wide range of human differences that give rise to inequality and marginality such as disability, ethnicity, race, and gender. During the first part of the workshop, organizers will introduce participants to contextual idiosyncrasies and challenges of implementing an inclusive response that they are currently undertaking. This introduction will be organized in the form of teaser presentations organized around the following themes 1) how responses capture the voice of underrepresented targets 2) the impact of responses in effecting bottom-up structural and system changes within a myriad of organizational and institutional settings 3) How underrepresented targets lived experiences give rise to inclusive responses. In the second part of the workshop, participants will self-select into breakout room based on the previously mentioned themes to engage in a deep reflection and debate. Finally, insights from each breakout room will be shared in plenary discussion.

Facilitator: **Juan I. Sanchez**, *Florida International U.*
Presenter: **Jacobo Ramirez**, *Copenhagen Business School*
Presenter: **Anabella Davila**, *Tecnologico de Monterrey*

Notwithstanding the many existing differences among Latin American countries, several institutional (e.g., shifts in public support for pro-market economic reform vs. statism, underdeveloped capital markets, pro-indigenous populism) and cultural (paternalism, power distance, spirituality, in group loyalty, machismo) features demand the contextualization of management theories, including the emerging talent management frameworks and theories (Tarique 2022, Trullen and Bonache, 2021; Tarique 2021; Collings et al., 2017). In addition, the Covid 19 pandemic has hit the region particularly hard, and according to some recent estimates, could impoverish 25 million people in Argentina, Brazil, Mexico, and Colombia alone. Many questions remain unexplored with respect to how local and foreign organizations can better attract, develop, and retain talent in such contexts. So far, our knowledge of talent management in the Latin American region is limited, and there is relatively little published work in scholarly international journals. In this context, this PDW will assemble scholars from different countries who have published on talent management in Latin America with the goal of discussing future research areas, and creating and expanding a network of interested researchers that can fill the research gap in the region.

Globalization has continued to improve the processes that allow the interaction and integration of people, businesses, institutions, governments, and their cultures and practices (Vuong, 2026). It has allowed nations with emerging economies to engage with global markets. Emerging market economies (EMEs) typically offer a greater return on investment and a greater exposure to risks (Gadanez et al., 2018). Consultancy has played a major role in helping actors understand the opportunities, volatility, and risks in emerging economies (Khuntia, et al., 2019); however, the role of consultancy is obscured in the process of emerging market transition. The purpose of this PDW is to gain insights from consultants whose services are engaged at both micro and macro levels within EMEs. Some of these consultants are embedded within the markets and some export their expertise to the markets. In the spirit of Creating a Better World Together, the workshop will bring together academics and practitioners who have had experience consulting for organizations in emerging economies.

MED: The Surprising Underperformance of East Asians in US Law and Business Schools: The Liability of Low Assertiveness and the Ameliorative Potential of Online Classrooms

Author: **Jackson Lu**, *MIT Sloan School of Management*

Author: **Richard Nisbett**, *U. of Michigan, Ann Arbor*

Author: **Michael W. Morris**, *Columbia U.*

MED Best Paper in Graduate Management Education. Sponsored by the Graduate Management Admission Council (GMAC) for the most significant contribution to graduate management education.
Carolyn Dexter Award Nominee

In the US, Asians are commonly assumed to excel across all educational stages. We challenge this assumption by revealing the underperformance of ethnic East Asians in US law schools and business schools, two prevalent professional schools that are consequential gateways to societal influence. Whereas most educational and governmental statistics lump all Asians together, we distinguish culturally between East Asians (e.g., ethnic Chinese) and South Asians (e.g., ethnic Indians), the two largest Asian groups in the US. We propose that East Asians—but not South Asians—underperform academically because their low verbal assertiveness is culturally incongruent with the assertive class participation prized by US law schools and business schools. Across six large studies (N = 19,194), East Asians had lower grades than South Asians and Whites despite performing well on admission tests (i.e., LSAT, GMAT, GRE). East Asians' underperformance was not explained by academic motivation, but by lower assertiveness (whether assessed by self-ratings, peer-ratings, or class participation scores)—after controlling for factors such as birth country and English proficiency. Consistent with the assertiveness mechanism, East Asians' underperformance was more pronounced in social courses emphasizing class participation (e.g., leadership, strategy) than in quantitative courses (e.g., accounting, finance). Notably, we found that East Asians' underperformance was mitigated in online classes conducted via Zoom, a communication medium characterized by lower social presence than in-person classes. By revealing a “Bamboo Ceiling” in the classroom, this research highlights the importance of fostering an inclusive classroom for students from diverse cultural backgrounds.

MED: Demystifying the Core Values of Top Global Business Schools

Author: **Kamran Ahmed Siddiqui**, *College of Business Administration, Imam AbdulRahman Bin Faisal U.*

Author: **Shabir Ahmad**, *College of Business Administration, Imam AbdulRahman Bin Faisal U.*

The purpose of this study is to examine the underpinning core values practiced at the top 100 business schools in the world. Financial Times ranking for Top 100 Business Schools for the year 2020 was selected for this study and the business schools' core values were collected from their official websites. Content analysis was used as the major data analysis technique. This research provides many significant findings. One-third of listed business schools do not have core values. Most of the top business schools have identified 5 to 6 core values on average. The top seven most frequently used core values include: Excellence, Integrity, Collaboration, Diversity, Innovation, Respect, and Inclusiveness. Three major clusters of core values of business schools were identified within the dataset. The 7 most frequent values are universal by nature and there seems no specific relationship with any country or ranking of business schools. Implication, limitations, and future and research directions are provided in the end.

MED: Why Management Schools May Never Change: Insights from the Early Years at Yale School of Management

Author: **Timothy O'Brien**, *Harvard Kennedy School*

For some time now, management education scholars have called for constructivist learning environments which position student experience as primary in order to help students learn how to learn from their experience. Such learning better prepares practitioners for the realities of practice than the comprehension of theory and conceptual frameworks might. However, the literature continuously calling on schools to integrate such courses into MBA, overlooks the fact that the Yale School of Management originally designed such a program but terminated it after 12 years. The course Individual and Group Behavior was central to SOM's early curriculum. It was celebrated by students, alumni and employers from 1976 to 1988, but was also a source of major contention among a divided faculty. Yale University chose to end disagreements about SOM's mission and purpose by terminating its Organizational Behavior department and eliminating coursework deemed too “soft” and “touchy-feely.” This essay exploring that case reveals a pattern of collective ambivalence for courses that prioritize learning from experience. Despite acclaim with students, alumni, and employers SOM's emphasis on practice created a contradiction for traditional faculty. This tension was resolved by firing instructors, eliminating courses, and prioritizing traditional methods. The paper concludes with implications for schools today.

MED: National Institutional Ranking Framework (NIRF): Analyzing Performance of Top 50 Management Schools

Author: **Pradeep Kumar Gupta**, *L M Thapar School of Management, Thapar Institute of Engg. and Technology, India*

Author: **Arunesh Garg**, *L M Thapar School of Management, Thapar Institute of Engg. and Technology, India*

The present study aims to examine the statistical differences in performance across different categories of management schools in India against the five major NIRF performance parameter heads viz, Teaching, Learning & Resources (TLR); Research and Professional Practices (RP); Graduation Outcomes (GO); Outreach and Inclusivity (OI); Peer Perception (PR); and Total Ranking Score (TRS). NIRF announced first ranking results in the year 2016 on the data of 2014-15. We have used the available NIRF ranking results of the top 50 ranked management schools for each of the six announcing years from 2016 to 2021. The study divided management schools into four categories as per their regulatory identity in India. Based on the relative performance and standing of four categories of management schools across five parameters of NIRF, the schools can strategize their efforts to retain and enhance their performance for achieving a higher NIRF ranking in the future. The findings are also pertinent to those management schools which are not ranked by NIRF for taking actionable decisions. This study claims its uniqueness as assessing the relative performance of institutions in the higher education sector in India. The theoretical underpinning of rankings can be a relevant addition to the existing literature of ranking systems for higher educational institutions.

MOC: The Emergence of Obsessive Entrepreneurial Passion and its Influence on the Mental Well-being     

Author: **Sanoon Fathima Fasana**, *Waikato Management School*
Author: **Jenny Gibb**, *U. of Waikato*
Author: **Antoine Gilbert-Saad**, -

Experiencing intense positive emotions towards engaging in business activities can bring undesirable consequences to entrepreneurs' lives. Despite potentially leading to unfavourable outcomes of this intense engagement, entrepreneurs often continue to be obsessively passionate about entrepreneurial activities. Yet, we still know little about what factors drive obsessive entrepreneurial passion and their individual-level implications. Recognising the importance of intrapersonal and interpersonal forces that fuel entrepreneurial passion, we employ two constructs, namely, affective entrepreneurial commitment and perceived competitive pressure as the potential antecedents of obsessive entrepreneurial passion. Empirical analyses of responses from 218 Sri Lankan entrepreneurs confirm that affective entrepreneurial commitment and perceived competitive pressure fuel obsessive entrepreneurial passion, which in turn negatively affect entrepreneurs' mental well-being. Importantly, we discover that obsessive passion has a mediating effect on the relationship between the driving forces of obsessive entrepreneurial passion and entrepreneurs' mental well-being. Our study provides new insights into the factors that impact entrepreneurial passion and shed light on the dark side of entrepreneurship by highlighting the negative implications of obsessive entrepreneurial passion to entrepreneurs' mental well-being.

MOC: Understanding the Linkage Between Workplace Humor and Loneliness Among Newcomers  

Author: **Sana Mumtaz**, *Umm Al Quwain U., UAE*

A vast body of literature emphasizes upon the essential role of workplace humor and links its different types with positive or negative impacts on employees' performance. However, there is a limited understanding regarding how newcomers respond to the workplace humor and experience individualized changes in them. Building on the social identity theory, this article develops a unique process model and develops a linkage between workplace humor and loneliness among newcomers. Further, it identifies the underlying mechanisms and conditions which impacts the social identity changes of newcomers during this process. Based on the proposed model, it is suggested that exposure to workplace humor is likely to lead to surface acting by newcomers during the initial days of their adjustment, particularly when the risk of social exclusion is high among them. On the one hand, consistent engagement in surface acting is likely to lead to positive emotions among those newcomers who will experience identity synergy. Thus, those individuals will embrace positive social identity changes over time. On the other hand, lack of alignment and the perceptions of identity conflict among some newcomers will trigger negative emotions in them, which will eventually lead to their rude behavior at the workplace; such individuals are likely to experience loneliness at the workplace. Overall, the proposed conceptual model presents a thorough relational process model of workplace humor, thus contributes a useful understanding of the deep and internalized change experiences of newcomers.

MOC: The Development of Overconfidence: The Effects of Shallow Learning on Overconfidence

Author: **Carmen Julia Sanchez**, *U. of Illinois at Urbana-Champaign*
Author: **David Dunning**, *U. of Michigan*

Across two studies we investigated the development of confidence and overconfidence in a debtor education course, a mandatory personal bankruptcy class. In study 1, using a nationally representative sample of Americans (n=25,281), those who had recently filed bankruptcy (n=818) performed worse on a financial literacy test yet possessed the highest levels of self-confidence in their financial expertise, compared to others (n=24,463). In study 2 we randomly assigned (n=400) participants to either complete a simulated debtor education course or not. We measured overconfidence in two ways, overestimation (excessive confidence in judgments), and overplacement (ranking oneself relative to others). Before the course participants overestimated and overplaced. Although they learned from the course, their confidence rose at faster rate than actual knowledge, resulting in exacerbated overestimation. The class, however, resulted in lower levels of overplacement. We ruled out that overplacement, but not overestimation, was driven by effects of merely repeating questions multiple times. The effect was especially pronounced in those that started off as top performers. In sum, people approach debtor education overestimating their judgments, and that debtor education results in a spike in overestimation.

MOC: Under the Spell of Charisma: Attributions of Charisma Leave People confident but Uncritical 

Author: **Florence Bernays**, *U. of Zurich*
Author: **Jochen I. Menges**, *U. of Zurich*

When people attribute charisma to a leader, they often choose to follow that leader. Surprisingly little is known, however, about how the charisma attribution process facilitates followership. Here, we draw on evidence from psychology and neurophysiology to suggest that when people attribute charisma to a leader, it has two effects. First, people tend to rely on automatic and intuitive cognitive processes, which are less accurate than deliberate and reflective cognitive processes. Second, people tend to experience more positive affect, which increases their confidence in the accuracy of their cognitive processes. Thus, when people attribute charisma to leaders, they suffer from less accurate cognition without noticing. Filled with positive emotion, people then choose to follow charismatic leaders, believing that they have accurately processed the leaders' message when in fact, they have not. Evidence from three experimental studies involving 648 participants provides general support for these propositions. By discovering how charismatic leadership deteriorates cognition, increases confidence, and ultimately, facilitates followership, we advance our understanding of how charismatic leadership works.

MOC: The Role of Intuition in Managerial Crisis Decision-Making  

Author: **Friederike Wetzel**, *U. of Innsbruck*
Author: **Katja Hutter**, *U. of Innsbruck*

The boundaries of rational decision-making in managerial conditions of uncertainty and time pressure lead to several studies investigating the importance of the complementary role of intuition in such events. While for example Coget and Keller (2010) or Okoli and Watt (2018) show that in crises intuition is applied to validate decisions and is strongly related to emotions and rational thinking, it is still uncertain how that applies to managers and fundamental crises conditions such as the Covid-19 pandemic. Therefore, we investigated through in-depth qualitative interviews with 17 long-term experienced high-level managers at the beginning of the pandemic how managers decide during the Covid-19 pandemic and what role intuition plays thereby. We found that intuition is applied specifically by providing direction, assessing the situation and information, reviewing and verifying decisions, as well as handling interpersonal topics, and creating possible solutions to problems. Moreover, we propose that managers profit from their gut feeling in crises, however, dependent on their preference and level of responsibility. We provide a specific analysis of the application of intuition in managerial crisis decision-making and thereby a more comprehensive view than the few existing works. Furthermore, we recommend how managers might apply this knowledge to their decision-making practice.

 **MOC: Work as Refuge: Job Crafting as Coping with Personal Grief-Inducing Events**   

Author: **Lidiia Pletneva**, *ESSEC Business School*

Finalist for MOC Division Best Student-Led Paper Award

William H. Newman Award Nominee

Building on an inductive, qualitative study of employees who experienced grief-inducing events such as bereavement, divorce, or breakup, this paper explores how and with what consequences work becomes a refuge from grief-inducing experiences in people's lives. Using the results of 61 in-depth interviews, I develop a process model of work-as-refuge. The process explicates how work becomes a refuge in its three different forms: cognition-based, time-based, and emotion-based. These forms are brought about by task, cognitive, and relational job crafting and provide a different mechanism to deal with grief, helping people cope with the event. I also show the short- and long-term consequences of using job crafting to make work a refuge. Those consequences occur in both work and life domains and tend to be positive, for instance, greater closeness with coworkers, enhanced career development, and expanded friendship networks. At the same time, those who work harder, adding stress to their lives and neglecting self-care, also experience negative consequences such as fatigue and compromised health. This paper advances theorizing on work-life interface and job crafting.

MOC: A Compassion-Centric Behavioral Agency Perspective for Organizations in Times of Crisis 

Author: **Wiljeana Jackson Glover**, *Babson College*

Author: **Zhike Lei**, *Pepperdine U.*

Author: **Eitan Naveh**, *Technion Israel Institute of Technology*

In times of crisis, organizations face a dilemma. How should they balance between minimizing losses and surviving financially, and acting for the benefit of all stakeholders and society-at-large? In theory, managers should balance between multiple demands, forgoing short term profits to address human needs when necessary. Yet, in practice, managers may face greater challenges in balancing demands during crisis. Combining the stakeholder-agency and compassion perspectives in the context of crisis management, we present the compassion-centric behavioral agency in crisis (CCBAC) framework to address this theory-practice gap. We suggest three levers for organizations and policy makers to encourage this behavior from organizations: developing and using technological and innovation capabilities, paradoxical leadership behaviors, and employee well-being and generosity programs. Organizations benefit from the CCBAC framework because they become better positioned to maintain their long-term competitive advantage and positive organizational identity while contributing to the needs of society. Policy makers benefit from incentivizing such organizations because they serve as an intermediary to achieve outcomes for society at large. Throughout, we use COVID-19 pandemic and other crises as examples to highlight the tension and opportunity within our “both-and” approach – organizations can be compassionate and pursue profit and efficiency in the long run.

MOC: Clarifying the Concept of Posttraumatic Growth for Management Research

Author: **Arseny Thumb Von Neuburg**, *U. of St. Gallen*

Posttraumatic growth (PTG) refers to positive psychological changes experienced as a result of the struggle with highly challenging life circumstances (Tedeschi & Calhoun, 2004). This notion has both intuitive appeal for practitioners and theoretical promise when applied to the context of “ordinary” work in an organizational context (Maitlis, 2020). However, in order to retain the explanatory power of the underlying theory, it is crucial to clarify the PTG concept for management research. This paper aims to do so by summarizing the different conceptualizations of PTG in the existing literature.

Panelist: **Jelena Zikic**, *York U.*

Academic performance is judged in part on one’s level of linguistic competence in English. As a consequence, scholars who wish to succeed on the academic market must be able to write in English not only fluently but also eloquently. This places non-native English speakers in a disadvantageous position. The goal of this virtual synchronous PDW is therefore to have a discussion regarding the various challenges that non-native English speakers face when writing and publishing in English and share concrete tips on how to improve academic writing in English. We bring together a panel of experienced and well-published organizational behavior scholars who approach the theme from diverse perspectives. In the first part of the PDW, our six panelists will share their experiences and insights into the art of writing, publishing, and working with non-native English scholars in these processes. In the second part of the PDW, we will continue with a practice-oriented roundtable discussion in breakout rooms. We will conclude the PDW with a session-wide Q&A and a summary of lessons learned.

Dispersion of Power through the Organization

Session Moderator: **SUZAN ECE ALPARSLAN**, *Kadir Has U.*

 **OB: How Machiavellian Middle Managers Gain Power**  

Author: **Fong T. Keng**, *Nanyang Technological U.*

Author: **Zhiyu Feng**, *School of Business, Renmin U. of China*

Author: **Xiao-Ping Chen**, *U. of Washington*

Author: **Hu Li**, *Nanjing U.*

Middle managers are important to organizations due to their unique position in the organization's power hierarchy, whereby they need to frequently switch between downward and upward social exchanges. However, there is limited research on how they use their unique positioning to navigate the political landscape. To examine how middle managers leverage different power relations in the organization's hierarchy to gain greater power, we focus on Machiavellian middle managers due to their tendency to be power-focused, flexible, and responsive to situational demands. Drawing from the Machiavellianism literature and power dependence theory, we theorize and test how and when Machiavellian middle managers "kick down" and "kiss up" to effectively gain power from below and above. Specifically, we theorize that Machiavellian middle managers exhibit abusive supervision towards their subordinates to gain coercive power, while building close guanxi (i.e., interpersonal connection) with their senior manager to obtain relational empowerment. Moreover, we theorize that these parallel positive indirect effects are strengthened when Machiavellian middle managers perceive high threat to hierarchy. Results from a lab experiment and a three-wave, three-source, three-level field study largely provide support for our theoretical model. Overall, our study demonstrates how Machiavellian middle managers are capable of effectively using different forms of social exchange to harness middle power.

OB: Doomed to Disengagement: The Fallacy and Futility of Expecting Employees to Act Like Owners

Author: **Randal S Franz**, *Seattle Pacific U.*

Employee disengagement is pervasive and persistent. According to the annual Gallop polls, the vast majority of employees report being disengaged from their jobs. Efforts to improve employee engagement (job-design, empowerment, participation, aligned compensation plans, etc.) do have somewhat of an effect; yet the disengagement numbers remain persistently high. Why has it been so hard to move the dial on employee engagement? In this paper, I reframe the issue to explain why these efforts are only partially effective. In short, such efforts only address part of the problem—i.e., the personal dimension. Employee disengagement is also a structural problem. The missing structural component entails understanding the corporate role into which employees have been cast. How a company acquires a resource from a stakeholder will determine the role they play in the company. Companies can either procure resources from suppliers, borrow them from lenders or obtain them from investors. Suppliers, lenders and investors play very different roles in a company and expecting them to behave the same is problematic. Together, the structural role a person plays, combined with their level of personal involvement, determines an employee's level of engagement. It requires both to transform employees from passive suppliers into engaged investors.

OB: Formal and Clan Control as Antecedents to Coopetition Under Different Levels of Uncertainty 

Author: **Christopher Höfer**, *Innovation and Entrepreneurship Group (WIN) – TIME Research Area, RWTH Aachen Un*

Author: **Andrea Greven**, *WHU Otto Beisheim School of Management*

Coopetition is a paradoxical phenomenon that requires conscious managerial intervention to control its inherent tensions. However, if done right it can yield considerable benefits to the firm as well as the involved teams. Building on agency theory, this study investigates to what extent behavior and outcome control as well as clan control are antecedents to coopetition between teams within a firm. Further, the boundary condition of task uncertainty as a moderator in this relationship is examined. Our findings from a cross-sectional sample of 97 work teams in a large industrial company support the notion that the right control strategy is an important antecedent at specific uncertainty levels. Specifically, we show that outcome and clan control have positive relationships with coopetition. We identify a curvilinear effect of task uncertainty on the outcome control – coopetition link indicating that this control strategy functions best under moderate levels of uncertainty. Further, we find a weakening effect on the clan control – coopetition link. With these findings, the study contributes theoretically to agency theory by examining coopetition and task uncertainty, two instances of complexity for the efficacy of control strategies. Additionally, we contribute to both the control as well as the coopetition literature by offering an explicit theoretical link and empirically supporting this relationship.

OB: A Cross-Lagged Study of Self-Leadership, Psychological Empowerment and Work Role Performance  

Author: **SUZAN ECEALPARSLAN**, *Kadir Has U.*

Author: **CEYDA MADEN EYIUSTA**, *Ozyegin U.*

Relying on Self-Determination Theory (SDT), we investigate the mediating role of psychological empowerment in the relationship between self-leadership and work role performance (task proficiency, task adaptivity, and task proactivity). We also explore whether and how supervisor close monitoring moderates the indirect relationship between self-leadership and work role performance. We tested our hypotheses in two studies conducted with white-collar employees from a broad range of jobs and companies (Study 1) and employee-supervisor dyads working in small and medium-sized firms (Study 2) in Turkey. In Study 1, we found that self-leadership had a positive indirect effect on employees' work role performance through psychological empowerment. In Study 2, the cross-lagged data confirmed this indirect relationship and revealed that supervisor close monitoring moderated the indirect impact of self-leadership on work role performance in different directions.

Leadership: Servant and Empowering

Session Moderator: **Mingyue Tang**, *Guanghua School of Management, Peking U.*

OB: How and When Servant Leadership Influences Employee Knowledge Sharing

Author: **Yue Hu**, *Vrije U. Amsterdam*
Author: **Oli Mihalache**, *Athabasca U.*

This research examines how and when servant leadership influences employee knowledge sharing. We develop a moderated mediation model and test it by conducting two studies, a survey with a sample of 187 non-Chinese employees working in European branches of Chinese multinational enterprises and a scenario experiment with 171 individuals working in the United Kingdom. The results suggest that (1) voice behavior mediates the positive relationship between servant leadership and individual knowledge sharing, (2) organizational justice positively moderates the relationship between servant leadership and voice behavior, (3) the indirect effect of servant leadership on knowledge sharing via voice behavior is stronger for employees with higher levels of individualism. In addition, we didn't find support for the role of individualism as a moderator for the influence of servant leadership on voice behavior and work engagement. The theoretical and practical implications, limitations, and directions for future research are discussed.

OB: Gimme What I Need! Examining Firefighters Response to Servant Leadership from a Dynamic Fit Lens

Author: **Anthony Perrier**, *U. of Toulouse I, Capitole*
Author: **Assâad El Akremi**, *U. of Toulouse I, Capitole*
Author: **Mathieu Molines**, *ESCE International Business School*

How servant leadership influences health and performance on a daily basis? We draw on the person-environment fit and the Job Demand-Resources (JD-R) perspectives to examine follower's health and performance variations related to the congruence between servant leadership needed and received. Based on a daily within-person examination, among firefighters, results indicated that emotional exhaustion is lower on days when received servant leadership fit followers' needs. We also found that emotional exhaustion mediated the within-person effects of servant leadership needed and received on followers' daily task performance. Implications to theory and practice are discussed.

OB: Servant Leadership and Team Performance: A Moderated Serial Mediation Model 

Author: **Qiwei Zhou**, *Beijing U. of Chemical Technology*
Author: **Keyu Chen**, *School of Economics and Management Tsinghua U.*

Draw on social learning theory and job crafting research, we examine how and when servant leadership can affect team performance. A two-wave and multi-source survey was conducted with 101 teams (comprised 486 employees and 101 team leaders) in a manufacturing company in China. The results showed that servant leadership was positively related to approach-oriented relational job crafting, and servant leadership was positively related to team performance via increased team approach-oriented relational job crafting and increased work engagement serially. Further, high team work intensification was shown to strengthen the positive effect of servant leadership and team relational job crafting. Theoretical and practical implications are also discussed.

OB: Empower to Inspire: A Multi-Level Review of Empowering Leadership, Creativity and Innovation  

Author: **Mingyue Tang**, *Guanghua School of Management, Peking U.*
Author: **Yuntao Dong**, *Peking U.*

Empowering leadership, among various types of leadership styles, is widely encouraged in organizational practices to unlock employees' creativity and innovation. Considerable attention has been paid to the relationship between empowering leadership and employees' creativity/innovation in more than one decade. In this paper, we aimed to comprehensively review this body of literature and present a full picture about the nature, mechanisms, and boundary conditions of this relationship across multiple levels of analysis. We also propose future research directions that can extend existing work at different levels and recommend potential avenues about research design.

- Presenter: **Szu-Han Lin**, *U. of Georgia*
- Presenter: **Abbie J. Shipp**, *Texas Christian U.*

A major challenge facing junior faculty is learning how to be productive. This implies that research productivity is a process that can be improved through learning. Similar to the sessions of this Professional Development Workshop (PDW) from prior years, our main goal is to help develop an awareness of the processes used by prolific faculty. Although most PDWs use esteemed senior scholars as panelists, we propose a model that uses peer junior faculty members who have established track records of productivity. A unique feature of this PDW is the focus on work and research productivity as a process. That is, presenters will discuss their work habits and how they go about their work (e.g., time allocation, co-authorships, writing blocks, and strategies) as well as other “life” factors that influence their productivity (e.g., exercise, work/family balance). This session uses a number of formats including individual presentations, small group roundtables where participants are able to have conversations with each of the panelists, and a keynote address. This PDW is organized by members of the OB Division’s Making Connections Committee (MCC).

Pre-registration is required; details will be shared on the AOM OB Listserv.

OB: [Nudging Attention to Inequality](#)

Author: **Hannah Benner Waldfogel**, *Northwestern Kellogg School of Management*
Author: **Nour Kteily**, *Northwestern Kellogg School of Management*

Inequality between groups in society is ubiquitous, yet there are stark ideological differences in who notices inequality and when. Relative to those keen on maintaining societal inequality (i.e., anti-egalitarians), social egalitarians are more attentive to and accurate at detecting inequality, but only when traditionally disadvantaged groups (i.e., women, poor people, racial minorities) are affected by it. The present research tests whether an informational intervention might effectively prompt attention to – and correct misperceptions of – inequality, depending on the status of the group affected. Prior to completing a pattern detection hiring task where either non-White or White job applicants were disproportionately less likely to be hired, participants (N = 2,869) were randomly assigned to an informational intervention condition where they read about racial wealth inequality in the United States or a control condition. For anti-egalitarians and egalitarians alike, the information treatment increases the tendency to report noticing bias against non-White students when such bias exists and has no impact on the tendency to mention noticing bias against White students when it exists. In addition, the information treatment has no effect on anti-egalitarian (mis)perceptions of inequality regardless of the status of the target facing bias. Moreover, we find evidence of a backfire effect on egalitarian perceptions of inequality after exposure to information about racial economic inequality; egalitarians exposed to the intervention are subsequently less accurate at detecting bias against White students when such bias is present. Our results reveal the nuances in how ideological beliefs affect interventions aimed at addressing attention to and perceptions of societal inequality.

Paper is Available to Meeting Registrants Only.

OB: [Practice the Purpose Preach: The Effect of Purpose on Workers’ Willingness to go the Extra Mile](#)

Author: **Nikolai Dominic Brosch**, *TUM School of Management, Technical U. of Munich*

Commercial organizations increasingly (re)define their corporate purpose beyond profit maximization to create value by contributing to the welfare of society and planet. In that context, this paper employs a two-phase natural field experiment to explore whether, when and how corporate purpose affects workers’ willingness to complete unrequired extra work. The main findings show that receiving information about an organization’s corporate purpose causes workers to complete more extra work. Workers whose personal preferences match with the organization’s purpose are most responsive. However, in case an organization does not authentically practice its purpose preach a backfiring effect can occur. Furthermore, the findings show that the underlying mechanism is driven primarily by a change in workers’ perceived meaning of work. In a broader context, the findings – that workers are willing to go the extra mile when working for an organization with purpose – provide some empirical indications in support of the theoretically proposed business case of purpose.

Paper is NOT Available. Please contact the author(s).

OB: [Sustaining Institutional Values in Social Enterprises through Mentoring Practice](#)

Author: **Aindrila Chatterjee**, *Indian School of Business*
Author: **Seung Hoon Lee**, *Indian School of Business*

Social enterprises attempt to solve important societal problems. To realize these purposes, they need to infuse institutional values and facilitate learning among members. One way to do so is through the practice of mentoring. The purpose of this study is twofold: to examine (1) the effects of mentoring on performance of mentors and (2) potential difference in such effects between face-to-face and e-mentoring. We develop theory that suggests mentoring can help mentors internalize the institutional values and facilitate their learning and social capital development. Our theory also suggests such beneficial effects can be weaker for e-mentoring due to lack of physical proximity to mentees and formal authority. We test our theory through a natural experiment that happened in a social enterprise in India, where senior entrepreneurs were asked to mentor newcomers in face-to-face manner in randomly sampled regions. The enterprise also created a distinct group of e-mentors. We hypothesize both face-to-face and e-mentoring have the effects of improving the mentors’ performance on a parameter monitored by the enterprise, but they differ in their effects on another performance parameter not monitored yet closer to its core institutional values. We test our hypotheses using difference-in-difference estimation, and our findings provide general support.

OB: [Exploring the Antecedents of Legal Compliance HR Attribution and the Consequences for Engagement](#)

Author: **Chunyu Xiu**, *HR attribution research*
Author: **Huadong Yang**, *U. of Liverpool*
Author: **Rory Donnelly**, *U. of Liverpool*

Employee HR attributions have received considerable attention in the field of HRM. However, external HR attributions have not been thoroughly studied, especially in a non-western context. This paper examines the antecedents (in terms of employee perceptions of organizational justice and the implementation of performance appraisals by team leaders) and consequence (in terms of employee engagement) of external HR attributions (in terms of legal compliance HR attributions) in firms in China. Our hypotheses were tested using survey of 354 team members and 61 matched team leaders in 18 Chinese companies. The results from multilevel analyses revealed a curvilinear relationship between employee perceptions of organizational justice and their HR attributions concerning legal compliance. The relationship was positive and weak when organizational justice was at low and medium levels but became substantially more positive and stronger when perceived organizational justice was at high levels. In addition, this nonlinear effect was more pronounced when the implementation of performance appraisal was strong rather than weak. Regarding the consequences, the results confirmed that HR attributions to legal compliance mediated the relationship between the two antecedents and employee engagement. We finally discuss the theoretical and managerial implications of our study.

Paper is Available to Meeting Registrants Only.

Author: **Irina Cojuharenco**, *Surrey Business School*

Author: **Sara M. Ahmed**, *U. of Surrey*

By comparing justice enactment to favour exchanges in organisations, we theorise about the reactions of givers and receivers over time. We use social exchange theories to hypothesize that albeit there are important similarities, the reciprocation of justice enactment is more likely than that of favours with greater temporal distance. We present a first laboratory test of this prediction and discuss theoretical and practical implications of our findings.

In recent years, research on meaningful work has expanded by scholars from diverse research fields, studying which factors contribute to employees experiencing their work as meaningful. While these research efforts are valuable, they tend to focus on the role of job design while paying less attention to the role of social context (e.g., relationships and connections inside and outside work) in fostering and maintaining meaningful work, resulting in this knowledge being limited. To address this shortcoming, this symposium brings together an internationally-diverse group of scholars to engage in conversation about the role of social context in fostering and maintaining experiences of meaningful work. This symposium includes five presentations followed by a discussion. Two of the papers deal with the role of social context in understanding how individuals justify or subjectively perceive why their work is meaningful. The other two papers examine how positive relationships at work and particularly in one's team can help to maintain experiences of meaningful work in meaningfulness-harming and challenging organizational situations. The last paper explores how workers in meaningful occupations relate to their clients depending on the different institutional roles that they adopt. With this symposium we aim to a) contribute to the understanding of social context as a source of perceiving and justifying one's work as meaningful, b) show the importance of social context for maintaining experiences of meaningful work in harmful and challenging organizational situations, c) broaden the understanding of the influence of social context on meaningful work from the predominantly studied colleagues and leaders to teams, clients, and significant others, and d) develop new avenues and possibilities for future research in this field.

Panelist: **Denise M. Rousseau**, *Carnegie Mellon U.*

Panelist: **Dean Shepherd**, *mendoza*

Policymakers are regularly named as one of the targeted audiences of management research. However, Aguinis, Jensen, and Kraus (in press) found that policy implications are underutilized and not part of organizational behavior and human resource management’s zeitgeist because only 1.5% of the articles (i.e., N = 61) from a sample of journals included such issues. Consistent with the conference theme, the goal of our panel symposium is to discuss how together we create a better world—specifically by using management research for policymaking. To achieve this goal, our symposium includes panelists who are purposefully diverse in terms of research interests, ontological perspectives, and geographic location (i.e., combined, they are members of more than 10 different AOM Divisions). As such, panelists will address issues of interest to both micro and macro management researchers, and those from a range of disciplinary backgrounds. Again, the symposium will have both a past and a future orientation. Regarding the past, panelists will address existing research and theories that can be used for policymaking to create a better world; what worked, what did not work, and the limits and possibilities for reviving and renovating past policy options. We can certainly learn from policy successes and failures in the past, at the same time as considering novel policy options at firm, social, economic and governmental level in the future. Regarding the future, panelists will also address what research should be conducted (i.e., which topics, theories, types of research designs) so that results are useful for firm and societal policymaking that will result in creating a better world. Overall, we hope our symposium will serve as a catalyst for a better understanding of what types of management research-informed policies are useful for creating a world in which we will all be better off together.

Compassion at Work: Looking at the Heart of Organizations *Compassion at Work*

Organizer: **Shanta Dey**, *U. Of Sydney*
Presenter: **Helena Nguyen**, *U. Of Sydney*
Presenter: **Hooria Jazaieri**, *Leavey School of Business, Santa Clara U.*
Presenter: **Hongguo Wei**, *Robert Morris U.*
Presenter: **Shanta Dey**, *U. Of Sydney*
Discussant: **Jason Kanov**, *Western Washington U.*

As the world moves from one crisis to another, compassion in response to human suffering is an essential, yet often overlooked, aspect of life. Suffering is also pervasive in organizational life as work is an essential part of life. Whether the suffering is stemming from an employee's life outside of work (e.g., financial problems), part of one's job role (e.g., taking care of sick patients), or organizationally induced (e.g., abusive leadership), organizations harbor the suffering of its employees and its clients or consumers. Yet there are significant gaps in understanding the antecedents, consequences, and boundary conditions of expressing compassion at work. The objective of this symposium is to offer new methodological and theoretical directions to highlight areas of inquiry focusing on the expression of compassion at work. All four papers in the session employ novel conceptualizations, designs, and analyses (e.g., in the moment, interactional dyadic design, team-level analyses with objective medical error data, and experimental designs) and make new theoretical connections (e.g., using attribution theory, cognitive appraisal theory, process model of emotion regulation) that serve as a catalyst for new scholarship on workplace compassion.

The Role of Appraisals and Values-Directed Action in the Compassion Responding Process

The OMT Junior Faculty Consortium provides a forum for junior scholars with interests in organization and management theory to get practical advice and build relationships that will help them prosper in their academic careers. It includes feedback sessions, panels, and facilitated discussions focused on three key topics: 1) developing research for publication with the help of seasoned scholars, 2) strategies for impact and growth as a researcher and teacher, and 3) navigating the early years of building a successful faculty career in diverse institutional settings.

Like every year, the OMT doctoral consortium aims at providing late-stage doctoral students with research interests in the areas of organization and management theory practical advice on finding jobs, managing their careers, doing and publishing research, and teaching. It will also provide an opportunity for students to form relationships with others at the same stage in their career and with more senior scholars who share their research interests. The event consists of a series panel presentations, round-table conversations, and mentoring sessions.

- Panelist: **Danielle Zandee**, *Nyenrode Business U.*

Organizational discourse analysis has been a theory and method characterized by a strong commitment to social constructivism. It has generated niche communities in many areas of organization and management research. However, it also faces methodological challenges such as the lack of templates for data analysis, the paucity of consensus on evaluating the quality of research, and the difficulty of demonstrating theoretical value-added to a knowledge base that is built predominantly on traditional qualitative research. This Professional Development Workshop (PDW) aims to advance discourse-based inquiry in organization studies by sharing insights and best practices in conducting discourse analysis. We bring scholars from management, communications, and linguistics together to bridge the disciplinary differences in conceptions about discourse and conventions for doing discourse-based research. We entertain novel approaches to combining discourse methods with quantitative language processing capabilities to generate new findings. The PDW will feature scholarly presentations based on exemplary empirical research, followed by an expert panel session and roundtable discussions with prominent scholars in the field.

Presenter: **Daniel Newark**, *HEC Paris*
Facilitator: **Sabine Pittnauer**, *Johannes Kepler U. Linz; Technion - Israel Institute of Technology*
Facilitator: **Daniel Waeger**, *Wilfrid Laurier U.*

This workshop provides the opportunity for institutional theory and strategy researchers with interest in experiments to engage in dialogue, discuss research agendas and methods, and receive feedback on their ongoing work. The workshop begins with a panel discussion addressing the potential of experimental methodology to facilitate novel research and providing an overview of recent contributions of experimental methods to the advancement of our knowledge on institutions and organizational strategy. The workshop will also comprise a showcase presentation of an experimental research project as well as a paper development workshop, where participants will have the opportunity to get an in-depth feedback and mentoring on experimental research projects in progress from experienced facilitators.

If you are interested in participating in the second segment (paper development), please submit your work by email to the workshop organizers, Alex Bitektine (alex.bitektine@concordia.ca) and Oliver Schilke (oschilke@arizona.edu), no later than July 24, 2022.

Using Sports Data To Advance Management Theory

Using Sports Data To Advance Management Theory

Organizer: **Paolo Aversa**, *City U. London*
Organizer: **Dmitry Sharapov**, *Imperial College Business School*
Panelist: **Andrew Carton**, *The Wharton School, U. of Pennsylvania*
Panelist: **Kenny Ching**, *Worcester Polytechnic Institute*
Panelist: **Enrico Forti**, *Manhattan College*
Panelist: **Sarah Doyle**, *U. of Arizona*
Panelist: **Mikhail Alexander Wolfson**, *U. of Kentucky*
Panelist: **John Mathieu**, *U. of Connecticut*

Publishing rigorous and relevant research in top management journals often requires rich and suitable data that allow challenging and compelling research questions to be investigated. The surge of accessible sport data in recent years has increased the number of studies that make use of such data to advance management theory. Beyond the fact that professional sport comprises multi-billion dollar industries worthy of attention per se, sport also provides settings in which fundamental themes of competition and cooperation are at play, making it attractive for scholars seeking to advance management theories. However, sport settings combine research opportunities with non-trivial challenges and dichotomies that require further reflection: First, sports greatly differ in their nature, and it is not always easy to choose the most suitable sport contexts to respond to particular research questions. Second, in sport settings, generalizability of results is less evident than in traditional industries, and readers and reviewers often display skepticism about external validity and generalizability of findings to business contexts. Building on successful editions of this workshop at AOM in the previous five years, this two-part PDW will (1) bring together a panel of scholars to share experience in publishing management research with sport data and (2) provide developmental support in the second part of the workshop for scholars that are in the process of using sport data in their projects or who plan to use sport as a setting to study their research questions.

Beyond-Human Methodologies in Management Research *Beyond-Human Methodologies*

Facilitator: **Jason Good**, *EGADE Business School, Tecnologico de Monterrey*
Facilitator: **Monica Nadegger**, *U. of Innsbruck*
Facilitator: **Frank Figge**, *ESCP Business School*
Participant: **Anu Valtonen**, *U. of Lapland*
Participant: **Seray Ergene**, *U. of Rhode Island*

Participant: **Costanza Sartoris**, *U. Ca' Foscari of Venice - Dept. of Management*
Participant: **Galina Kallio**, *Aalto U. School of Business*
Participant: **Maria Ehrnström-Fuentes**, *Hanken School of Economics*

This PDW aims to explore methodologies for involving 'beyond-human' phenomena in management and organizational research. These types of phenomena include what Bansal and Knox-Hayes (2013) call, emphasizing its temporal and spatial attributes, "physical materiality," and what Whiteman and Cooper (2000, 2011) call, emphasizing its ecological and biological attributes, "ecological materiality." Taken together, 'beyond-human' encompasses all non-human, non-artifactual phenomena (e.g., actors, objects, entities, processes) such as forest fires, atmospheric carbon, and biodiversity. Our aim is to explore and elaborate approaches to studying beyond-human phenomena in organization and management research, including indigenous perspectives, ethnographic methodologies, observational lenses, memory work, among others. This 120-min PDW has three main parts: the first involves short presentations by four scholars, in which they describe their experience with beyond-human methodologies. The second part involves the presenters taking questions in a panel discussion, and the third will be discussion groups aimed at helping participants develop their beyond-human research methodologies, no matter at which stage of development (e.g., research proposal, dissertation, scholarly paper). With this PDW, we continue recent efforts to develop a relational understanding of organizing with and in natural environments, particularly by expanding our methodological toolbox in this emerging but critical domain of organization and management research, and we build on recent conference sessions aimed at fostering a network of scholars who are engaging in beyond-human work.

For the panel discussion, no preliminary preparation is required. For the discussion groups, participants are expected to submit an extended abstract describing the project's purpose and research question, a (brief) theoretical overview, a sketch of the context, and an elaboration of their proposed methodology by June 30, 2022 via e-mail to monica.nadegger@uibk.ac.at.

One of the most expansive and influential research projects that scholars will work on during their careers is their dissertation. However, as the field of management research has evolved and grown so has our methodological toolkits, and the accompanying standards, for approaching complex organizational phenomena. In an attempt to meet the expectations of empirical rigor, theoretical importance, and practical relevance expected by top journals in the field, doctoral students are increasingly driven to incorporate mixed methods approaches into their dissertations and corresponding study designs. This methodological bricolage creates great promise for high-impact dissertation work (and eventual publications), however, mixed methods in management research lacks the formalization, institutionalization and templating found with monomethod designs. This PDW intends to catalyze a conversation around the use and misuse of mixed method designs in dissertation research, including matching data sources, collection and analyses to research questions, potential synergies and complementarities, the assumptions associated with combining methods, and how to present the set of methodological decisions and moves made to defend the use of mixed methods.

The first part of the PDW will be open to both in-person and online participants, however, the later half of the session will require advance submission and registration. Participants will need to fill out the form located here: <https://forms.gle/P5JseEcsaSMmBmtt5> with the following information: • Information about you (name, email, university, stage of your doctoral program) • Information about your dissertation o Introduction to your dissertation (no more than 10 pages double spaced) o The number of essays of your dissertation o The empirics of these essays (review, conceptual, qualitative, quantitative) o List of committee members • Three questions you would like to ask the experts

Organizer: **Jessica Jee Won Paek**, *Fuqua School of Business, Duke U.*

From underlying doubts about their leadership potential to brutal attacks across the US, Asians and Asian Americans confront numerous challenges both within and outside of their organizations. While anti-Asian hate has been particularly acute during the pandemic, these issues have long-standing historical roots that have received little attention in business academia. We seek to remedy this oversight. Bringing together researchers and practitioners, our goals are to educate and empower by facilitating discussions centered on common challenges that Asians and Asian Americans as a community confront within academia, the state of the research pertaining to Asian and Asian Americans specifically, and broader issues occurring in the workplace. As the first PDW to bring together Asian and Asian American members of the academy, we hope to inspire more research in this area that will help us create a better world together for Asians, Asian Americans, and their supporters.

This session will include both panelist presentations and interactive breakout discussions. While pre-registration is not required, if you plan to attend, please complete this form to assist the organizers in gauging interest and planning for the session: <https://forms.gle/HBq3qAmaJEpLkvyb7>

The Junior Faculty Consortium (JFC) is an annual event that provides an opportunity for early-career faculty members and postdocs that are members of the Social Issues in Management (SIM) division or the Organizations and the Natural Environment (ONE) division to network with senior faculty members and develop their research ideas. The goals of the session are twofold: (1) provide junior faculty with an opportunity to meet and interact with other junior and senior scholars in the field, and (2) discuss research ideas, career trajectory, publication issues, and non-research issues salient to the junior faculty's current position. Furthermore, under the subject 'How SIM-ONE scholarship can contribute to the creation of a better world', and echoing the 2022 annual meeting theme, we propose to delve into the discussion of our potential for contributing to meaningful and impactful research, in a context in which business organizations will have to address world problems at a pace and scale that was unpredicted.

The Junior Faculty Consortium (JFC) is an annual event that provides an opportunity for early-career faculty members and postdocs that are members of the Social Issues in Management (SIM) division or the Organizations and the Natural Environment (ONE) division to network with senior faculty members and develop their research ideas. Invitation required.

Around the world, researchers are engaged in exciting and innovative research projects on business strategy and policy. Unfortunately, many such researchers face various obstacles that prevent them from publishing in leading journals. This PDW has been designed to aid those researchers. A panel of editors from leading journals will provide insights into the requirements and submission processes of their journals, framing of research papers, demarcating contributions in the literature, and so on. Another panel comprising of scholars from various parts of the world will share their own successes and challenges, publishing strategies, and provide their own (un) successful experiences on journal publication. Finally, registered participants who submitted a working paper in advance will receive one-on-one feedback from facilitators on their manuscripts.

Please submit (a) a current CV and (b) a completed and edited manuscript that you plan to submit to a peer-reviewed research journal by June 15th here (<https://forms.gle/q1o6KzAXpja8Waoh8>). If you are not able to submit via this form, please send these to Joon Mahn Lee (joonmahn@korea.ac.kr) or Weiting Zheng (weiting.zheng@unsw.edu.au).

Luck, Serendipity, and Chance in Strategy Research: Where Are We Now, and Where to go from Here?
Luck, Serendipity and Chance

Organizer: **Madeleine Stefanie Rauch**, *Stanford U. & Copenhagen Business School*
Organizer: **Christian Busch**, *New York U.*
Distinguished Speaker: **Henry Mintzberg**, *McGill U.*
Panelist: **Raghu Garud**, *Pennsylvania State U.*
Panelist: **Shahzad Ansari**, *Cambridge U.*
Panelist: **Melissa Schilling**, *New York U.*
Panelist: **Chengwei Liu**, *ESMT Berlin*
Panelist: **Christina Fang**, *New York U.*

This Professional Development Workshop (PDW) will focus on serendipity, luck, and chance in the management and strategy context. The first part of the PDW is a facilitated panel discussion with leading academics studying serendipity, luck, and chance from different methodological and theoretical perspectives. The focus of the panel discussion is to highlight current research and ideas for interesting further research possibilities, as well as how to navigate the related review process. We will end this first part, with reflections by an eminent strategy scholar (Henry Mintzberg), as well as the group at large. Part 1 is open to all participants and does not require a pre-registration. In the second part of this PDW, participants will attend a pre-selected roundtable facilitated by an experienced scholar in the field. Participants who wish to participate in the individualized feedback session will need to submit a proposal (2 pages). We will limit the number of participants to 24-32 in the second part (individualized advice) of the PDW.

This PDW will consist of two parts: (1) facilitated panel discussion with esteemed speakers – open to all and NO registration needed – which can be attended in person or online; and (2) round table discussion and individualized feedback by an experienced scholar – only in person! Please register for Part 2 by sending an extended abstract (max 3,000 words), your preferred faculty roundtable discussant (preference of 3), and your CV by July 1st to Madeleine Rauch (rauch@stanford.edu) and Christian Busch (christian.busch@nyu.edu). We will only be able to accept a small group of participants for the round table discussions, as such we encourage early submission.

Panelist: **Ryan Adam Krause**, *Texas Christian U.*
Panelist: **Christine Shropshire**, *Arizona State U.*
Panelist: **Edward J. Zajac**, *Northwestern U.*
Panelist: **Anthea (Yan) Zhang**, *Rice U.*

Shareholders represent one key source of influence on firm strategy and can ultimately affect the performance and survival of firms. Despite growing research interest on topics such as shareholder activism, institutional investors, and family owners, we do not yet have a cohesive or coherent view on how shareholders impact firm outcomes. Moreover, we find that there is very little research at the intersection of these three sub-fields in the current corporate governance literature. This PDW aims to highlight common themes, established theoretical perspectives, and overarching ideas about shareholder influence to help propel this critical research stream forward with more scholarly cohesion and attention. The PDW—designed to be interactive, informative, and developmental—will be divided into two parts. Part 1 consists of a moderated panel discussion of ten experts, who will present their views on the current state of, and promising future directions for, research on shareholder influence on governance. The panelists will also discuss how to overcome possible challenges at the intersection of theories, data, and methodologies in this stream of research. In Part 2, participants—who have submitted proposals on one of the three topics or at the intersection of any of these three topics—will receive feedback from our expert panelists and will have a chance to ask the panelists questions, as well as discuss their ideas with other participants for further feedback.

We are accepting proposals on the three topics covered in this PDW (i.e., shareholder activism, institutional investors, and family ownership). The authors of accepted submissions will participate in Part 2 of the PDW, where they will receive feedback from our expert panelists, have a chance to ask the panelists questions, as well as discuss their ideas with other participants for further feedback. The participants will be chosen based on the quality of their proposal. A maximum of 12 submissions (four per each topic area) will be accepted. Submission Guidelines: Proposals should not exceed 7 pages (single-spaced). Please use 10 point font or larger. Please submit proposals in PDF format. Only one (1) proposal, either as an author or a co-author, may be submitted. At least one author from each proposal will be required to attend Part 2 of the PDW. To be considered, proposals must be sent to governancepdw@gmail.com by Friday June 17th, 2022. Authors will be notified on whether their proposal is accepted by July 15, 2022.

Organizational Scaling: New Research Frontiers
Organizational Scaling: New Research Frontiers

Panelist: **J. Daniel Kim**, *The Wharton School, U. of Pennsylvania*
Organizer: **Saerom Lee**, *The Wharton School, U. of Pennsylvania*
Panelist: **Alicia DeSantola**, *U. of Washington*
Panelist: **Thomas R. Eisenmann**, *Harvard U.*
Panelist: **Benjamin L. Hallen**, *U. of Washington, Seattle*
Panelist: **David Hsu**, *The Wharton School, U. of Pennsylvania*

Why do so many new ventures seem to have it all and yet fail to grow their business and transition to mature firms? As only a handful of startups succeed in organizational scaling, this phenomenon has garnered much attention from academics as well as industry practitioners. In particular, given the complexity in and around this phenomenon, a growing body of work has started to apply a variety of theoretical lenses and research methods to provide a systematic understanding of organizational scaling. The purpose of this professional development workshop is, thus, to draw attention to these latest scholarly developments and to enhance engagement across disciplinary and methodological boundaries, with the goal of promoting our comprehensive understanding of various aspects of organizational scaling. To this aim, we have gathered five prominent scholars with expertise and cutting-edge research in organizational scaling. These panelists will, first, frame our session by sharing each other's recent work on organizational scaling. Then, a subsequent panel discussion and audience Q&A will synthesize these presentations and push our collective thinking forward to inspire future research and directions on organizational scaling. Overall, this workshop will offer a structured opportunity to stimulate new research ideas and methods on organizational scaling and to network with scholars that share an interest in this strategically important yet under-explored phenomenon.

Presenter: **Seongwon Choi**, *Trinity U.*

Are you a junior faculty member, post-doc, or doctoral student with research and/or teaching interests in health care management? Join us for the Health Care Management (HCM) division Emerging Scholars Consortium (ESC) on Friday, August 5th in Seattle, where a diverse group of outstanding faculty will facilitate a highly interactive series of sessions geared towards emerging health care management scholars. In addition to the content, the ESC’s highly collaborative format is a fantastic opportunity to create relationships with other HCM emerging scholars from around the globe. Many long-time HCM members attest to the ESC as an origin for major research collaborations and employment pathways.

The ESC will be delivered in hybrid format this year, so please register and attend whether you’ll be in Seattle or online. For the morning portion of the ESC (Part 1), topics we will cover include: “Better Assessment Together: A practical workshop to improve learning and streamline grading” at 8:30 AM (Pacific) and “Finding Career Opportunities & Flourishing in a Transformed World” at 10:10 AM. For the afternoon portion of the ESC (Part 2), topics we will cover include: “Faculty Resilience during the Pandemic: Strategies and Tips” at 1:30 PM (Pacific), “Goal setting for highly ambitious scholars, understanding why and how to get there” at 2:30 PM, and “Look before You Leap: Making the Jump from Faculty to Leadership Roles” at 3:40 PM. Registration is required for all attendees—both in-person and online. For in-person attendees who pre-register, the ESC will include lunch and will conclude with an off-site social. To register for the consortium, please email Nick Edwardson (nedwardson@unm.edu) and indicate if you will be attending in person or online.

Human Resource Management and Gig Work: Exploring Differences Across Countries *HRM and Gig Work: Differences Across Countries*

Organizer: **Jeroen Meijerink**, *U. of Twente*
Organizer: **James Duggan**, *Maynooth U., Ireland*
Organizer: **Anthony McDonnell**, *U. College Cork*
Organizer: **Annabelle Hofer**, *U. of Bern, Work and Organisational Psychology*

Panelist: **Sandra Fisher**, *Münster U. of Applied Sciences and U. of Twente*
Panelist: **Rafael Grohmann**, *U. of Vale do Rio dos Sinos*

Online labor platforms (OLPs) like Uber, Upwork and Deliveroo, drive a transition towards ‘gig work’ where consumers and organizations outsource fixed-term activities performed by an independent contractor, with the involvement of the OLP as an intermediary. OLPs create a new reality for human resource management (HRM) theory and practice by operating HRM activities for non-employees by means of software algorithms. Since empirical studies predominantly draw on data from individual countries, we argue that the time has come for cross-national comparative studies into online platforms’ usage of HRM activities – and their impact on gig workers – across different legal, institutional and economic regimes. The current workshop therefore brings together scholars from different national backgrounds (1) to develop an agenda for cross-national research into HRM and gig work, and (2) to share best practices for conducting and coordinating empirical research into gig work across national borders. Participants of this workshop will compare insights on HRM and gig work from single-country studies, translate these into avenues for future cross-national research and learn about collecting data in cases where gig workers are dispersed and OLPs hesitate to share their (big) data. After a short introduction to the workshop, we organize round-table discussions on research questions. This is followed by a panel discussion and Q&A session with experts on challenges related to conducting cross-national research into HRM and gig work. This workshop provides three deliverables to its participants: (1) access to and initial development of a community focused on conducting cross-national research, (2) a set of research questions for cross-national comparative HRM and gig work research, and (3) techniques for accessing and studying OLPs and gig workers across national borders.

Sarvodaya – Gandhi’s Approach to Creating a Better World *Gandhi’s Sarvodaya*

Session Chair: **Anil K. Maheshwari**, *Maharishi U. of Management*
Session Chair: **R Ray Gehani**, *Akron U.*
Presenter: **Nisha Pandey**, *Vivekanand Education Society's Business School, Mumbai, India*
Presenter: **Vikram Gulati**, *Maharishi International U.*
Presenter: **Tanuja Sharma**, *MDI, Gurgaon, India*

Mahatma Gandhi was a champion of Sarvodaya, or upliftment of all. Gandhi transcended narrow mindedness and parochiality, and operated from a higher consciousness, which made him a global inspiration (Gehani & Maheshwari, 2020; Maheshwari, 2021). He carried all communities together in a peaceful manner in the pursuit of universal human flourishing. Gandhi learned key foundational values from his parents: non-violence, truth, and equality and love for all. He learned the principles of samatvam (even mindedness), samadarshinam (seeing without judging, or love for all) and swadhama (sense of one’s own duty), from Bhagavad Gita and other scriptures. Gandhi worked tirelessly especially for the welfare of the poorest and the most marginalized amongst us. He encouraged local village economy to be self-sufficient, and that small scale social entrepreneurs can do well by doing good. This workshop brings together a panel of management researchers with rich perspectives on Gandhian consciousness, principles, and practices. Through dialog and exercises, this workshop expects to create a rich, coherent, and practical perspective for the management research and practitioner communities on applying the Gandhian values-based management approach for building a better world together.

Creating a Better World Together: The Power of Exemplary, Emotionally Aware Educators and Managers
Exemplary, Emotionally Aware Educators - Managers

Session Chair: **Richard Jackson Major**, *Institut de Gestion Sociale Paris*
Facilitator: **Tom Elwood Culham**, *Beedie School of Business Simon Fraser U.*
Discussant: **Payal Kumar**, *Indian school of hospitality*
Discussant: **Richard Perego**, *U. of Dallas, Satish & Yasmin Gupta College of Business*

In the light of a more than ever turbulent and unpredictable world, Sharon A. Alvarez, AOM Program Chair for 2022, asks: “What skills will business organizations and managers of the future need?”, “How can business organizations, managers, and stakeholders develop and enhance capabilities to anticipate and agilely respond to pandemics, other world-wide concerns, and new challenges?” We respond with a simple yet challenging answer: Management educators and practitioners need to cultivate their inner life through heightened levels of consciousness and practice, and develop their emotional intelligence/maturity in such a way to create a ripple effect on their students and the teams they manage or will manage. Exemplary conscious leaders and educators have the ability to manifest effective behaviors to navigate chaotic environments. This PDW is an extension of past years’ PDWs “Broadening our insight by developing self awareness of faculty and future business leaders in the classroom” focused on identifying and processing emotional classroom situations. We are now raising the theoretical level to encompass the power of exemplars and role models in education and in management, particularly applied to VUCA environments. Through this PDW, we aim to contextualize research that suggests that emotional intelligence and consciousness is an essential step for leaders to grow and succeed in our current globalized economy and society. The purpose and expected outcome of this PDW is to advance participants’ competency in developing self-awareness and working with emotions skillfully. Presenters will share experiential pedagogies that can be enriching such as meditation, emotional intelligence exercises and journaling. Participants will be encouraged to delve into an emotional space through demonstrations of vulnerability, which is critical for developing self-awareness. By developing and modeling this skill in the classroom, faculty can favorably influence business students to become aware of this essential dimension of leadership and to apply it to themselves as future leaders.

2022 OSCM Division Joint Junior Faculty and Doctoral Consortium

I

OSCM Junior and Doctoral Consortium

Organizer: **John Aloysius**, *U. of Arkansas Sam M. Walton College of Business*
Organizer: **Maricela Arellano Caro**, *HEC Montreal*

The Operations and Supply Chain Management Division is pleased to announce a joint Junior Faculty and Doctoral Consortium at the annual meeting of the Academy of Management (AoM) in Seattle, WA, USA. The primary focus of the joint consortium involves an intensive research incubator session for doctoral students and junior faculty. Doctoral students are asked to give a short (15 minute) presentation about their research proposal to a panel of senior and junior faculty who then provide feedback and guidance on each proposal. Subsequently, the junior faculty will have an opportunity to present their research programs describing how they are extending their dissertation research and/or starting new research streams. The doctoral students are expected to ask questions and learn about building a research identity. In addition to the research incubator session, several panel sessions will further elaborate on publishing and the development of research streams, as well as the acquisition of soft skills necessary for professional development. Experts in the field are invited to provide their input and engage participants in Q&A sessions.

Sequence Analysis in Career and HRM Research: Techniques and Practical Applications

Sequence Analysis

Organizer: **Katja Dlouhy**, *U. of Mannheim*
Organizer: **Torsten Biemann**, *U. of Mannheim*

This is an introductory workshop on sequence analysis, specifically on optimal matching analysis. Optimal matching analysis can be used to assess similarity of sequence data, and to find patterns in longitudinal nominal data. The workshop is targeted at researchers and doctoral students who want to get started with this method. The objective of the workshop is to encourage and enable participants to apply sequence analysis in their own research. After introducing fundamentals of the method, we will provide examples of its use in empirical research. Attendees will then develop practical, hands-on skills for using optimal matching analysis by analyzing a sample data set. We will discuss important practical issues and introduce some advanced applications, giving enough room for discussion and questions. After registration, participants will be provided with a download link to the free software R, sample data, and some syntax for R that can serve as a blueprint for their own future analyses.

Studying Organizational Elites in an Unequal World: A Call to Action

Studying Organizational Elites

Panelist: **Maja Korica**, *U. of Warwick*
Panelist: **Brooke Harrington**, *Copenhagen Business School*
Panelist: **Anne Monier**, *ESSEC Business School*
Panelist: **Bruno Cousin**, *Sciences Po*

While organizational elites have received considerable attention in Sociology, Anthropology and Political Science, they remain under-researched in Organization Studies. This PDW is intended to spur engagement, inspire collaborations, and point to promising new horizons for elite research by organizational scholars. These objectives will also address the increasing calls for us to contribute insights on some of the world’s most pressing practical problems, such as skyrocketing political and economic inequality, in which organizational elites have played crucial roles.

Employee Reactions to HR Practices and Concepts

Session Moderator: **Theresa M. Welbourne**, *U. of Alabama*

GDO: Work-life Programs and Women in Management: Evidence from Japan

Author: **Yang Yang**, *Rowan U.*
Author: **Guo-Liang Jiang**, *Sprott School of Business, Carleton U.*
Author: **Alison M. Konrad**, *Western U.*

Although work-life programs (WLPs) are suggested to be useful for improving women’s representation in management, research findings are often mixed. We add a temporal perspective to this dialogue by examining the short-term and sustained effects of WLPs. Our analysis of 1,021 Japanese firms spanning 13 years reveals nuanced findings: while WLPs have an overall immediate but unsustainable effect on increasing the proportion of women in management, a sustained enhancing effect is detected in organizations with higher percentage of female employees. Additional examination of individual practices shows that flextime practices are more beneficial for promoting women into higher managerial positions while virtue offices are more advantageous for advancing women into lower-level leadership roles. Moreover, childcare has both short-term and sustained effects regardless of organizational gender composition or the levels of managerial positions. Both theoretical and empirical implications are discussed.

GDO: Structure Complexity as a Determinant of Employee Resource Group (ERG) Response to COVID-19

Author: **Theresa M. Welbourne**, *U. of Alabama*
Author: **Seth Butler**, *U. of Alabama*

Employee resource groups (ERGs) have expanded since COVID-19 started, in part, to help a challenged workforce. ERGs are “voluntary, employee-led groups” that are “dedicated to fostering a diverse and inclusive work environment” (Welbourne, Rolf, & Schlachter, 2017: 1817). These groups have been expanding in large, global, established firms like Amazon, Bank of America, and Coca-Cola; and they have also been started and growing in younger companies like Zillow, Twitch, and Riot Games. The general assumption is that ERGs are an integral part of a firm’s diversity strategy; however, many ERGs work in ways that are independent of the diversity office and certainly that take on goals beyond diversity and the human resource function. Examples of this type of beyond HR/diversity work include innovating new products for their firms, customer-centric work, and recently, helping companies respond to COVID-19. In this paper we focus in on ERG responses to the 2020 pandemic and examine the degree to which the ERG structure, in particular its complexity, is related to responses to COVID-19. We test the hypothesis that more complex ERGs, often formed as parallel organizations, were able to respond faster and in a higher impact manner with a broader audience, including helping non-employee community members. Our study uses survey data from ERG leaders and members; these data were collected in 2020 and 2021. Results show a pattern that supports our hypotheses. Keywords: Employee resource groups (ERGs), diversity, COVID-19, parallel organizations (POs)

Paper is Available to Meeting Registrants Only.

GDO: Successful Aging at Work: The Role of Development/Maintenance Context and HR Attributions in Burnout

Author: **Eda Aksoy**, *Koc U.*
Author: **Justin Marcus**, *Koç U.*

Fusing the lifespan perspective on age with organisational psychology theory on HR attributions, we examine the confluence of HR attributions, burnout, and the employee management context with regard to the study of work and ageing. Time-lagged, multi-level survey data were collected from a sample of N = 1,165 blue-collar employees working at the manufacturing plants of a large-scale firm operating in the Turkish energy industry. A cross-level moderated mediation model was tested using multi-level structural equation modelling (SEM). The results supported study hypotheses such that the positive association between age and burnout was mediated by well-being HR attributions, and this mediated association was moderated by the employee management context surrounding employee safety. At the organisational units level, development-oriented contexts—indicated by the degree of innovation strategy, safety training, and active unit safety leadership—weakened the positive association between age and well-being HR attributions, whereas a maintenance-oriented context indicated by passive unit safety leadership strengthened this association. The theoretical and practical implications of these findings for successful ageing at work are discussed.

GDO: Machine Learning Text Analysis of Corporate Diversity Statements Predicts Employees’ Online Ratings

Author: **Wei Wang**, *City U. of New York*
Author: **Julie Dinh**, *Rice U.*
Author: **Kisha Shannon Jones**, *Florida International U.*
Author: **Siddharth Kanakrai Upadhyay**, *Florida International U.*
Author: **Jun Yang**, *U. of North Carolina, Greensboro*

In response to increased public consciousness around racism after George Floyd’s killing, many organizations released public statements to condemn racism and affirm their stance on diversity, equity, and inclusion (DEI). However, little is known about the specific thematic contents of various diversity statements and their implications on important organizational outcomes. Taking both inductive and deductive approaches, the current research conducted two studies to advance our understanding in this area. We first employed novel unsupervised machine learning techniques and comprehensively analyzed the texts of diversity statements publicly released by Fortune 1000 companies in early June 2020. Our structural topic modeling uncovered six underlying latent semantic topics: 1) general DEI terms, 2) supporting Black community, 3) acknowledging Black community, 4) committing to diversifying the workforce, 5) miscellaneous words, and 6) titles and companies. Furthermore, drawing from the identity-blind and consciousness diversity ideologies framework and leveraging tens of millions of employee rating data points on Glassdoor.com, we further found evidence that companies that released (vs. did not release) diversity statements and companies whose diversity statements emphasized identity-conscious (vs. identity-blind) topics were more positively evaluated by their employees online. Our findings shed light on important theoretical implications for current diversity research and offer practical recommendations for organizational scientists and practitioners in diversity management.

Paper is Available to Meeting Registrants Only.

Author: **Jingyi Wei**, *U. of Macau*

The COVID-19 pandemic has stripped away the illusion of decency that many people maintained, which is evoking a rethinking of the nature and future of work. Actually, the nature and future of work have long been a defining issue for business and society, an increasing amount of research has examined how people may secure Decent Work and Quality Employment (DWQE) and how DWQE affect a variety of psychological and organizational outcomes. A comprehensive review of the existing literature will facilitate the rethinking of the nature and future of work in the post-crisis era. We define DWQE as being employed in conditions of human dignity, equity, security, and freedom. We then detail the antecedents and outcomes of the four dimensions of DWQE across individual and organizational levels of analysis. We then present a new theoretical framework where a DWQE profile plays a boundary condition in explaining why people perform different working behaviors toward similar stimulus within the organizational context. We conclude that the DWQE profile may help disentangle some of inconsistent findings in organizational and psychological research.

Participant: **Avi Kay**, *Jerusalem College of Technology (Lev Academic Center)*
Participant: **David Kaplan**, *Saint Louis U.*
Participant: **Jacob Eisenberg**, *UCD*
Participant: **Victoria Miller**, *Stevenson U.*

The purpose of this professional development workshop (PDW) is to offer AOM members the opportunity to learn innovative and experiential approaches to teaching topics in human resources. This interactive session is comprised of two parts. First, the session begins with presentations of 2021 Innovative Teaching Award winners, recognizing their achievements. They will present effective and innovative ways to teach human resources. Next, a diverse panel of faculty from different universities will share experiential approaches to teaching human resources for the audience of all levels (undergraduate, graduates, professional students). In this highly interactive 'potluck' session, attendees will have the opportunity to choose a topic of their interests (e.g., compensation, diversity, staffing, etc.) and to learn about innovative teaching methods experientially in round tables each led by one or two members of the panel. This workshop will provide the audience opportunities to expand their repertoire of experiential exercises that they can implement immediately into their classrooms.

**Owners as Strategists: Should Investors be more Involved in
Firms’ Global Strategies?**
Ownership and Global Strategy

Session Chair: **Anna Grosman**, *Loughborough U.*

Panelist: **Christina L. Ahmadjian**, *Rikkyo U.*

Panelist: **Margarethe F Wiersema**, *U. of California, Irvine*

Panelist: **Alessandro Zattoni**, *Luiss Guido Carli U.*

Panelist: **Virginia Bodolica**, *American U. of Sharjah*

There is a growing debate both in practice and in academia about the role that owners play in company strategy. Who owns the firm (local or foreign shareholders, governments or private investors, concentrated or diffused shareholders, traditional or alternative investors) has long been an essential topic for research on organizations. At the same time, our conceptualization of ownership has widened over time to incorporate owners as strategists (most prominently in the case of entrepreneurial financiers), sources of capital (as in the case of large joint-stock companies), and mechanisms of control (direct or via institutional intermediaries). The linkages and tensions among these conceptual foundations (for instance, the tension between ownership, ownership structures, and control) have been the focus of a large literature in global strategy. At the same time, this diversity in conceptual foundations provides numerous opportunities for advancing our understanding of the role of ownership in global strategy. Hence, the objective of this panel is to debate whether or how ownership affects global strategy and, by extension, how strategies are employed to accommodate owners.

Academics and Scholarly Impact

Session Moderator: **Ravi Ramani**, *Morgan State U.*

MED: Defining, Measuring, and Rewarding Scholarly Impact: It's the Level of Analysis, Stupid

Author: **Ravi Ramani**, *Morgan State U.*

Author: **Herman Aguinis**, *George Washington U.*

Author: **Jacqueline A-M. Coyle-Shapiro**, *London School of Economics*

We demonstrate that the pervasive practice of using journals' impact factor (JIF) as a proxy to assess researcher and article scholarly impact is inappropriate because it results in grossly incorrect conclusions about the impact of both individual researchers and individual articles. For example, using JIF underestimates the impact of some researchers by 123%, while overestimating it for others by 64%. Similarly, it underestimates the impact of some articles by 1,800%, while overestimating the impact of others by 1,100%. Using the multilevel paradigm, we explain that this practice is invalid because of confusion about the definition and measurement of impact at different levels of analysis. Specifically, JIF is a journal-level measure of impact, computed by aggregating citations of individual articles (i.e., upward effect), and is therefore not appropriate to use when measuring impact at lower levels of analysis such as that of individual researchers or individual articles published in a particular journal (i.e., downward effect). Accordingly, we advocate an immediate moratorium on the use of JIF and other journal-level (i.e., higher level of analysis) measures when assessing the impact of individual researchers and individual articles (i.e., lower level of analysis). Given the importance and interest in assessing scholarly impact of researchers and articles, we delineate measures that are level-appropriate and readily available. We discuss implications for theory and future research, the careers of researchers and educators and the administration and future of business schools, and conclude with actionable recommendations for internal and external stakeholders regarding the assessment of scholarly impact.

MED: Publication Concentration Trends of Top Business Journals, 1990–2020

Author: **Huijian Dong**, *New Jersey City U.*

Author: **Xiaomin Guo**, *U. of South Florida*

Author: **Steven Miller**, *U. of South Florida*

Author: **Tina Yang**, *U. of South Florida*

We conduct a comprehensive analysis of trends in publication concentration across seven business disciplines from 1990 to 2020. The predominant evidence has so far been limited to a single discipline, sometimes one journal. We construct different measures of publication concentration using over 64,000 articles in 24 top business journals. We find that the concentration of institutional affiliations has steadily declined. However, significant heterogeneities exist across and within disciplines. Additionally, there is an increasing democratization of institutional affiliations as measured by the number of business schools that contribute more than 20% of the top business journal articles. While there is significant churn in the makeup of the top contributors, a few business schools are able to consistently stay as the top contributors throughout the sample period. Textual analysis shows that the elite business schools have research visions very different from those of less successful competitors.

Paper is Available to Meeting Registrants Only.

MED: What Can Scholars do to Better Trade-off Between Their Core Functions and Their Transfer Activities? 

Author: **Nabil Amara**, *Laval U.*

Author: **Mehdi Rhaiem**, *Polytechnique Montréal*

This article examines the extent to which Canadian business scholars' activities are complements or substitutes. It also attempts to explore the heterogeneities in the determinants of these activities. A Multivariate Probit model is estimated to take into account the fact that, in practice, business scholars have to consider simultaneously whether or not to undertake many different academic activities. Overall, the results reveal that there are complementarities between publications and citations, publications and knowledge spillovers transfer, citations and consulting, and between consulting and knowledge spillovers transfer. The results also suggest that there are substitution effects between publications and teaching, publications and administrative load, citations and teaching load, and teaching load and administrative load. As for the extent to which explanatory variables explain the various business scholars' activities, results show that public funding is significant and positively associated with publications, citations, and knowledge spillovers transfer. Likewise, private funding and a scholar's strategies are significant and positively associated with consulting and knowledge spillovers transfer, whilst they are significant and negatively associated with teaching load and administrative load. Results also show that business schools' reputation is significant and positively related to publications and citations, while it is significant and negatively related to teaching load.

Paper is Available to Meeting Registrants Only.

MED: Impact of Knowledge Diversification on Research Performance from Optimal Distinctiveness Perspective 

Author: **Hai Guo**, *Renmin U. of China*

Author: **Luni Yang**, *Renmin U. of China*

Author: **Ping Chen**, *School of Business, Renmin U. of China*

Despite the consensus on the “double-edged sword” effect of knowledge diversification on individual performance, little is known about the internal mechanism behind this relationship. Our study distinguishes between two dimensions of knowledge diversification (knowledge variety and knowledge dissimilarity) and two types of key audiences (the reviewers and the readers). Drawing on the optimal distinctiveness theory, we highlight the tension between the innovative benefits and the illegitimate penalties. Analyses of 37046 articles published in the 2002-2021 period by 16400 management scholars reveal that knowledge variety has a positive effect on scholars' performance through innovation mechanism, and that knowledge dissimilarity plays positive and negative roles through both innovation and legitimacy mechanism, eliciting an inverted U-shaped effect. In addition, we disentangle the intertwined effects of the two, finding that combining both knowledge variety and dissimilarity is not conducive to boosting the publication counts, but can synergistically contribute to the citation counts. Theoretical and practical implications of our findings are discussed.

Paper is Available to Meeting Registrants Only.

Author: **Jose R. Beltran**, *Iowa State U.*

Author: **Herman Aguinis**, *George Washington U.*

Author: **Yanjinkham Shumarjav**, *ORGANIZATIONAL BEHAVIOR*

Author: **Mauricio Mercado**, *Iowa State U.*

How we define and measure scholarly impact is an ongoing challenge in the field of management because scholarly impact metrics are used to make decisions about hiring affects critical career outcomes (e.g., securing a tenure-track job, receiving a positive or negative promotion and tenure review decision, and attaining a chaired position). So, how we define and measure scholarly impact is not a mere “methodological curiosity.” Our study has two goals. First, we improve our conceptual understanding of scholarly impact by overcoming limitations of the use of total citations and offering a contextualized conceptualization of impact based on human capital theory called the contextualized h-index. This index incorporates both the quantity and quality facets of a researcher’s impact and explicitly considers researchers’ fields. Second, to facilitate the implementation of our conceptualization, we offer a freely-available enablement called the International Management Productivity Assessment Citation Tool (IMPACT). IMPACT can be used by researchers interested in learning about their own impact as well as those evaluating other researchers’ impact (e.g., search and promotion and tenure committee members, university leaders and administrators, research award committee members). The contextualized h-index, which can be easily computed using IMPACT, allows for “apples to apples” comparison of the scholarly impact of management scholars. Finally, we discuss implications for theory and research as well as practice.

The workplace in the 21st century has changed dramatically, as the internet connected the world, the “gig economy” changed work arrangements, globalization expanded the job market and individual work values such as autonomy and freedom became dominant (Rabenu, 2021). Just a few years ago, automation and technology were the heart of the conversation on the modern workplace and seemed to be replacing meaningful human connections. However, the COVID-19 pandemic, that required social distancing, demonstrated just how much people still need each other, and how technology cannot replace human relationships. The Positive Organizational Scholarship (POS) movement that started in the early 2000’s seeks to understand the role of positive relationships at work. The place of work in our lives makes it a source of meaning, purpose and identity-building, that are often created through positive relationships (Ragins & Dutton, 2007). For example, high-quality relationships enable human flourishing that in turn benefits the organization (Dutton & Heaphy, 2003). Another notable outcome of the movement is the Reflected Best Self Exercise (Quinn, Dutton, Spreitzer, & Roberts, 2003) that helps understand individual strengths through feedback from significant others. The purpose of this symposium is to contribute to understanding the role of positive relationships in the workplace. This collection of papers explores different types of work relationships with leaders, coworkers and work friends to examine how positive emotional connections help overcome challenges and promote well-being. By looking at processes on different levels of analysis, this symposium offers a broader perspective on workplace relations and unique roles they can play for employees and for organizations.

New to OB? Navigating the OB Division and AOM
Welcome to the OB Division

Organizer: **Amanda Ferguson**, *Northern Illinois U.*
Organizer: **Richard G. Gardner**, *U. of Nevada, Las Vegas*
Organizer: **Kylie Rochford**, *U. of Utah, David Eccles School of Business*
Panelist: **Serena Sohrab**, *Ontario Tech U.*
Panelist: **Christopher O.L.H. Porter**, *Indiana U.*
Panelist: **Patricia Caulfield Dahm**, *U. of Kansas*
Panelist: **Virgil Fenters**, *U. of Nevada, Las Vegas*
Panelist: **Brian W. McCormick**, *Northern Illinois U.*

If you joined the Organizational Behavior (OB) division within the last three years and want to learn more about the OB division and starting out in the field of OB, then this forum is for you! This PDW was created to answer your questions about the “essentials” of the AOM conference, the OB division, and the field of OB. The session is organized around a panel discussion between established members of the OB division and new OB members like yourself. The PDW will include a welcome and overview of the OB Division, a networking ice breaker, and a panel discussion prompted by questions from participants. As a participant in the forum, you can ask questions of your choice.

Pre-registration is required; details will be shared on the AOM OB Listserv.

**That's a (Science) Riot! Cultivating Research Impact
through Stand-up Comedy Part 1 (CANCELLED)**
Science Riot Research Impact

Organizer: **Sarah M. G. Otner**, *Kingston Business School*
Distinguished Speaker: **Jamie L. Gloor**, *U. of St. Gallen*
Facilitator: **Jessie Hanson**, *Science Riot*

Research impact is girded by a solid foundation of effective Knowledge Exchange – i.e., a two-way flow between researchers and end-users of ideas, research evidence, experiences, and skills. However, many of the “best” researchers deploy few strategies beyond teaching, websites, and social media; even fewer can confidently capture public engagement and evaluate its impact. This PDW will explore the benefits to humor at work and exploit comedy as a tool of connection in order to build individual scholars’ capacities for science communication and research impact. Participants will receive expert media training in writing and performing comedic delivery of research insights, culminating in a live comedy show! See Program for linked sessions’ details.

Training will be split across two ten-person cohorts. Cohort A will train remotely (approx. 8 hours of online class & up to 15 hours of self study, 1-22 July) and perform early in the AOM conference (approx. 5/6 August). Cohort A will perform Friday 5 AUG, and Cohort B will perform Sunday 7 AUG. Participation is open to those who self-identify that their involvement would expand access and enhance representation in the management academic community. Applications (via <https://forms.gle/qCy27Wkq2hSdhwMLA>) are due 15 June for Cohort A, and 8 July for Cohort B. The fee per participant is US\$300, non-refundable. This cost has been subsidized, and two fee-free places will be available to candidates from hardship backgrounds; please indicate in your application if you would like to be considered for a fee waiver. Contact Dr. Sarah Otner (s.otner@kingston.ac.uk) with queries. If your applications is approved, please register by using this link: <https://secure.aom.org/PDWReg/>.

Behind the Scenes of Highly Cited Organizational Ethnographies
Behind the Scenes – Organizational Ethnographies

Organizer: **Celeste Diaz Ferraro**, *U. of Texas - San Antonio*
Organizer: **Leanne Mara Hedberg**, *U. of Alberta School of Management*
Organizer: **Asma Zafar**, *Brock U.*
Panelist: **Beth Bechky**, *UC Davis*
Panelist: **Katherine C. Kellogg**, *MIT*
Panelist: **Davide Nicolini**, *U. of Warwick*
Panelist: **Jennifer Petriglieri**, *INSEAD*
Panelist: **Michael Smets**, *U. of Oxford*

This PDW is the fifth iteration of the highly popular ‘Behind the Scenes’ PDW conducted over the last seven years. Through this PDW we facilitate conversations and knowledge sharing about the process of developing and publishing organizational research that employs immersive research techniques. This year’s PDW builds on previous gatherings by expanding interaction to support hybrid (live and online) participation, while providing increased focus on in-depth developmental interaction. In three highly interactive segments, the PDW will allow participants to hear from and have conversations with our panelists as well as fellow participants. These segments include individual presentations in which panelists briefly reflect on their experiences in developing an impactful work, a moderated panel discussion in which panelists answer audience questions, and a developmental session in which small groups of participants will discuss their own work with an expert panelist. Pre-registration is required. All registrants will be asked to submit a question they would like to have addressed during the panel discussion. Registrants who would like to participate in the developmental session will submit a one-page summary of the project that they would like to discuss and to indicate their preference for being matched with panelists (to be assigned on a first-come, first-served basis). This PDW is highly relevant given the increasing interest in qualitative and mixed-method approaches, and will be of great interest to students, junior scholars, and senior members of the field who are interested in immersive research methods. Keeping in mind the hybrid format of the 82nd AoM, we have designed the PDW such that the content and participant engagement is easily accessible in both virtual and in-person formats.

Knowledge Management and Decision Making

Session Moderator: **Rocco Palumbo**, *U. of Rome Tor Vergata*

This session explores many aspects of knowledge management and its role in decisionmaking in the modern state, including open innovation, artificial intelligence, data use, and knowledge retention.

PNP: **Co-creating a Better Public Value Through Open Innovation: A Bibliometric and Interpretive Review** 

Author: **Rocco Palumbo**, *U. of Rome Tor Vergata*

Author: **Elena Casprini**, *U. of Siena*

Author: **Mohammad Fakhar Manesh**, *U. of Rome Tor Vergata*

The evolving institutional, technological, and social contingencies faced by public sector entities make open innovation to be a candidate for being the new normality of public sector management. However, there is little agreement on the distinguishing traits of open innovation in the public realm. The article systematizes the multiplicity of insights delivered by the extant scientific literature, providing a thick and comprehensive account of open innovation in the public sector. A dual approach was taken to conduct this literature review. A bibliographic analysis was implemented to shed light on main research streams driving recent advancements in the management discourse about open innovation in the public sector. Next, an interpretive account of research streams was rendered, highlighting the core arguments addressed by extant scholarly literature. The SPAR-4-SLR protocol was used to collect, assess, and analyze scientific items, enabling us to ensure the study replicability and reliability. Altogether, 108 items were clustered in 5 research streams, accounting for an evolutionary view of open innovation in the public sector. Public sector entities play different roles to foster open innovation. They conventionally act as “senior partners” of private companies, providing funding (Yellow cluster) and data (Purple cluster) to sustain open innovation ecosystems. An alternative perspective understands open innovation as an innovative public management model, which is purposefully enacted by public sector entities to generate public value (Red cluster). Fitting architectures (Green cluster) and mechanisms (Blue cluster) should be designed to propel open innovation in the public sector. Alongside unveiling compelling avenues for further developments, the paper points out insights for scholars and practitioners, emphasizing the need for reconceptualizing the role of public sector organizations in the open innovation context. Tailored management and organizational interventions are needed to overcome the obstacles and the barriers which prevent the exploitation of open innovation as a new public value creation model

Paper is Available to Meeting Registrants Only.

PNP: **The Impact of Distributed Leadership on Collective Performance Data Use**   

Author: **Alexander Kroll**, *Florida International U.*

Author: **Willow Jacobson**, *U. of North Carolina-Chapel Hill*

Author: **Kimberley Roussin Isett**, *Biden School, U. of Delaware*

Performance management theory has focused on organizations, with less attention given to non-hierarchical collaborations that use performance practices. We add a relational, group perspective to the performance management literature and contribute knowledge about the role of distributed leadership in fostering collective data use. We argue that a horizontal leadership approach fosters the group’s ownership of the collaborative and increases the number of information sources, both needed to make sense of, and stimulate interest in, performance data. Our analysis uses qualitative and quantitative data collected between 2019 and 2021 from a case study of community collaboratives founded to respond to the opioid epidemic in North Carolina. We find distributed leadership positively impacts collective data use and examine strategies as to how this mechanism could be activated. Our findings emphasize the importance of core teams, distributed structures, formalization, key leaders, and job resources.

Paper is Available to Meeting Registrants Only.

PNP: **Articulations of Automated Decision-making: Opportunities and Risks of Good Administration** 

Author: **Urik Bisgaard Ulsrod Roehl**, *Aalborg U.*

Use of semi and fully automated, administrative decision-making in public administration is increasing. Despite the increase, few studies have analysed its relations to good administration. Good administration are regulations and norms aiming to secure the correctness of administrative decisions as well as the legitimacy of those, and is often associated with underlying values such as transparency, accountability and due process. Based on a thematic analysis of qualitative interviews with 43 key public administration stakeholders in a wide area of policy-fields, it is shown that those “digital government insiders” perceive relations of automated decision-making and good administration as manifold. Automated, administrative decision-making is articulated as providing both opportunities of supporting good administration as well as risks of undermining good administration. Six values of good administration particularly related to automated, administrative decision-making are identified: Non-erroneous; respecting individual integrity; professional administration; trustworthy; responsive; and empowering. Put simply, risks to good administration can be expected to occur by themselves, while opportunities must be actively nurtured through managerial attention. Despite more popular conceptions of the threat of “robotic government”, the conclusions indicate a need for a more pragmatic view of relations of automated, administrative decision-making and good administration in-between outright techno-optimism and techno-pessimism.

PNP: **Entering The Bermuda Triangle: Knowledge Retention In A Public Service Organisation**  

Author: **Stephanos Anastasiadis**, *Polizeiakademie Niedersachsen*

Author: **Jens Bergmann**, *Polizeiakademie Niedersachsen*

Author: **Jonas Grutzpalk**, *Hochschule für Polizei und öffentliche Verwaltung Nordrhein-Westfalen*

Using data from interviews and ethnographic research, this paper presents the results of research on knowledge transfer in two police services in Germany. Results indicate three major themes: bricolage; incentives & promotion; and preference for generalists. Together, these combine to form a Bermuda Triangle of police organisational knowledge. The study shows how this ‘structure’ stands in the way of effective transfer of knowledge, by negatively impacting members’ willingness and ability to engage effectively in it. Breaking down the Triangle requires political involvement. The paper makes a theoretical contribution to knowledge management in public organisations, as well as making numerous practical suggestions at the political level.

Participant: **Wee Chan Au**, *Newcastle U. Business School*
Participant: **Johanna Mair**, *Hertie School of Governance*
Participant: **Marieke Huysentruyt**, *HEC Paris*

This symposium aims to unveil new insights into how individuals' and teams' self-views, values, cognitions, actions, interactions, and relationships as micro-foundations of prosocial venturing contribute to how prosocial ventures emerge, function, meet the needs of diverse stakeholders, maintain their mission, and create a better world. In particular, the symposium draws attention to the individuals engaged in prosocial venturing as employees, leaders, and entrepreneurs with diverse and dynamic values and self-views and to relational mechanisms, such as shared routines, contact with beneficiaries and diverse methods to engage with stakeholders, along the prosocial venturing process. By integrating cutting-edge qualitative and quantitative empirical studies from different contexts in the Global South (i.e., Philippines, Bangladesh) and the Global North (e.g., United Kingdom, Netherlands, United States) from post-communist (China, Russia, Hungary, Romania) and established Western democratic states (Germany, Portugal, Spain, Sweden, United Kingdom), this symposium provides a nuanced view of the micro-foundations of prosocial venturing from intentions and opportunity development to pivoting and responding to crises in established organizations.

AMJ Networking Workshop for Women *AMJ Networking Workshop for Women*

Organizer: **Susan Zaid**, *Academy of Management*
Presenter: **Floor Rink**, *U. of Groningen*

Current and former female editors of the Academy of Management Journal invite female junior faculty (as well as those identifying as women and non-CIS gendered) to attend an advice and networking session. The program will include some short presentations by current/former editors reflecting about their “path to power,” as well as advice about high quality reviewing and obtaining editorial board memberships. We will conclude with breakout groups for networking.

A 2022 feature topic of Organizational Research Methods (ORM) explores and evaluates current trends in employing methodological templates in qualitative research. Köhler, Smith, and Bhakoo (2021, p. 2) define methodological templates as “systematic, simplified, and repeatable approaches to data collection, analysis, and interpretation that have become standardized and legitimized through enactment (i.e., repeated publication especially in top ranked journals) and normative pressures from key gatekeepers (e.g., reviewers, editors, instructors, or co-authors) to align with dominant epistemological and ontological trends.” The eight papers included in the feature topic explore the origins and limitations of template use—such as the proliferation of template use through PhD training, constraints on methodological rigor and transparency, consequences for coding practices and theorizing from data—and offer new directions and alternatives for future research—such as suggestions regarding alternative epistemological frameworks, innovative research designs, underused research formats, and improved training. The feature topic is set to meaningfully influence qualitative research practices to advance innovative theorizing. In the current PDW, the author teams of the eight papers will offer 15-minute masterclasses on how researchers can incorporate the suggestions derived from the papers into their own research. In doing so, the author teams go beyond the content of their respective papers, which focused on a thorough analysis of the challenges template use introduces in qualitative research. Rather, in their respective masterclasses, the author teams will offer actionable steps and alternatives to template use researchers at any stage of their career can apply to improve their own qualitative work.

TIM Doctoral Research Development Workshop
TIM Doctoral Research PDW

Organizer: **Caroline Fry**, *Massachusetts Institute of Technology*
Organizer: **Sina Khoshokhan**, *U. of Colorado, Boulder*
Organizer: **Hyunjin Kim**, *INSEAD*
Organizer: **Jang Woo Kim**, *National Taiwan U.*
Organizer: **Maria Roche**, *Harvard Business School*

The workshop is designed as an idea-, paper-, and dissertation- development meeting for PhD students interested in technology, innovation, creativity, product development, and related topics. Students may be at any stage of a PhD program, and similarly the ideas brought to the workshop can range from initial ideas of a paper or dissertation to a fully-developed paper. The workshop will be comprised of a panel discussion of what makes quality research, as well as extensive time dedicated to round table conversations about submitted research ideas from doctoral students. Workshop facilitators will include a mix of junior, mid- career, and senior scholars whose research focus on TIM-related areas. Many of the facilitators have served as members of the TIM leadership committee or have been finalists of different TIM Awards including TIM Dissertation Award.

Participation and registration (restricted to 30 students): To apply, please complete the online registration form at <https://forms.gle/mQahT31VpjuTjJZf7> and submit a (1) CV and (2) extended abstract (maximum of 3 pages / 1500 words) of your doctoral research at tim.drdw.2022@gmail.com by June 19, 2022. For questions, please contact: tim.drdw.2022@gmail.com

Ideology, Authenticity and Leadership

Session Moderator: **Alison Pullen**, *Macquarie Business School, Macquarie U.*

CMS: The Concept of Ideology in Leadership Studies: A Critical Review

Author: **Eric Guthey**, *Copenhagen Business School*
Author: **Nicole Ferry**, *Copenhagen Business School*

We perform a meta-interpretive review of 70 articles in top leadership journals to explore how leadership researchers have defined and theorized the connections between ideology and leadership—as well as between ideology and leadership research. Our results indicate a sharp divide in approaches to ideology between mainstream and critical perspectives. The dominant mainstream approach defines ideology as an individual leadership style, thereby divorcing the concept from its traditional connections to power, collective consciousness, and hegemony. By contrast, critical research employs the concept to highlight the centrality of power relations in leadership theory and practice, and to critique mainstream leadership studies themselves as ideological. We conclude that these very different approaches to ideology lie close to the core of what distinguishes mainstream and critical leadership research from one another, and that leadership scholars on both sides of this divide need to define and theorize the concept of ideology explicitly and thoroughly when they address it in their work.

CMS: (Not) Becoming a Business School Dean: A Personal Tale

Author: **Mark Learmonth**, *Nottingham Trent U.*

This paper is one possible story about how and why I tried to become a Business School Dean as a committed 'critter'. It ends without success, at least in the conventional sense (I never got a Dean's job). I hope however, that the tale might be useful for those considering doing something similar. Particularly those whose aims as a Dean would include making a positive, critical difference to the world.

CMS: In Search for Leadership Authenticity at the Intersection of Tradition & Modernity

Author: **Louis Lines**, *AAU*
Author: **Romeo Turcan**, *Aalborg U. Business School*

This paper conjectures that the Authentic Leadership literature has fallen into a sample trap—primarily drawing its evidence base from modern Western, Educated, Industrialized, Rich, and Democratic (WEIRD) contexts. In seeking to address this bias this paper addresses Authentic Leadership at the intersection of tradition and modernity and seeks to advance understandings of Authentic Leadership by investigating insider-outsider dynamics that arise where traditional cultural groups interface with more modern WEIRD groups. It also addresses the importance of out-group legitimacy—this is particularly important in relation to the intersection of tradition and modernity where significant power disparities are regularly present between modern and traditional groups. This paper combines the concepts of insider perceptions of legitimacy and outsider perceptions of legitimacy into a typology that provides a framework for understanding authentic leadership roles at the intersection of tradition and modernity. This paper contributes to the Authentic Leadership literature, first by challenging an underlying assumption within Authentic Leadership, namely that the role of the individualised self is foundational in achieving Authentic Leadership. Instead this paper looks to broaden this concept to fluid alignment which includes degrees, not only of internalised self-alignment, but also socio-political or normative congruence with the in-group context. Whilst this may not be foundational in WEIRD highly individualised modern contexts in less or non-WEIRD contexts traditional alignment can be foundational for achieving legitimacy (perceived authenticity) with leaders frequently becoming paragons of traditional authenticity. Secondly this paper challenges the sole focus on internal leader follower (in-group) legitimacy, asserting that this should be considered in relation to an outsider external (out-group) legitimacy. This is particularly relevant at the intersection of tradition and modernity where power inequalities between traditional and modern groups has historically been and continue to be substantial.

CMS: Decolonizing Authenticity

Author: **Belinda Zakrzewska**, *U. of Sussex Business School*
Author: **Michael Beverland**, *U. of Bath*
Author: **Stephan Davys Manning**, *U. of Sussex*

In this review, we critically examine the concept of authenticity by reorienting scholarly attention to the South and historical structures of power. Existing accounts follow a Northern- and agency-centric line of reasoning that present a sanitized version of authenticity. This needs to be criticized due to its dangerous potential to simplify the social complexity of the South. To do so, we review 29 articles across leading business and management journals following a problematization methodology. We identified four current underlying assumptions: authenticity is socially constructed, it has a recursive relationship with institutions, it provides organizational benefits, and its examination is guided by an instrumental logic. Drawing on Critical Management Studies, we propose four new assumptions for former Western European colonies in the South: authenticity is orchestrated by local elites, it has a recursive relationship with dominant ideologies, it is a tool for indigenous oppression, and it is guided by a decolonizing logic. From this, we make two main contributions to the literature: we reveal that claims of authenticity made by local elites can act as carriers of coloniality and, on a positive note, we suggest the potential of authenticity claims as a resource to enable the agency of oppressed groups and challenge dominant ideologies that inform coloniality. Taken together, these contributions inform the concept of decolonizing authenticity.

A Fresh Look at the Gender Pay Gap

Session Moderator: **Yehuda Baruch**, *Southampton Business School, U. of Southampton*

GDO: **Using Big Data to Identify Meaning and Reasons for Gender Pay Gap of Local vs. Global Workforce**  

Author: **Yehuda Baruch**, *Southampton Business School, U. of Southampton*
Author: **David S. A. Guttormsen**, *USN School of Business, U. of South-Eastern Norway*
Author: **Stanley Gyoshev**, *U. of Exeter Business School*
Author: **Trifon Pavkov**, *U. of Exeter Business School*
Author: **Miana Plesca**, *U. of Guelph*

Gender pay-gap is a major organizational and societal factor hindering equality and merit-based labor markets. Using Big Data containing of the entire workforce of one country we are able to compare income of men and women as well as both local and global employees, to identify pay-gaps. We found that firms employing global employees pay higher wages especially to male workers, resulting in a larger gender pay-gap than in the rest of the economy. The problem was exacerbated at the higher end of the salary range and when people work in countries other than their origins. In terms of the factors driving the gender pay-gap, we document that native male workers engage in more career boundary crossings than female workers, and that higher pay-gaps can be found in larger firms, in professional and trades occupations, and in the manufacturing sector. The nationality of the managers mattered too.

GDO: **Women on the Front Line: The Growth of SMEs During Crises**   

Author: **Diego Antonio Marconatto**, *FDC - Fundação Dom Cabral*
Author: **Gaspar Antônio Peixoto**, *Unisinos Business School (Unisinos U.)*
Author: **Emídio Gressler Teixeira**, *Unisinos Business School (Unisinos U.)*
Author: **Adelar Fochezatto**, *PUCRS - Business School*

In this paper, we investigate the influence of women workers on the growth of SMEs operating in economic downturns. Our results suggest that the disproportional spikes in women unemployment observed during recessions are not only unjust but also harmful to SMEs striving to weather crises. Analyzing the performance of 10,445 SMEs during the Brazilian economic crisis of 2015-2017, we found that an increase in the percentage of women employees in the total workforce of SMEs boosts their growth. Additionally, we identified that these firms grow further by increasing women employees' wages, by preferring more women workers with higher levels of education and experience or, preferably, by retaining more educated women who are better paid at the same time. These results carry lessons for SMEs facing current and future crises and contribute to the study of gender and firm performance and to efforts to reduce the persistent gender gap in businesses.

GDO: **Education as an Equalizer? The Dynamic Effects of Education on Racial and Gender Wage Inequality**

Author: **Xueqing Fan**, *Rutgers U.*
Author: **Michael Sturman**, *Rutgers U.*

This study takes a dynamic approach to examine the different ways in which wage inequities occur, and specifically examines the role that education plays in explaining how and why wage inequities remain. Drawing on the framework of wage inequality processes (i.e., allocative inequality, valuative inequality, and within-job inequality), critical race theory, and feminist theories, we demonstrate that despite the generally positive effects of education on wages, differences in sorting processes, the value of human capital across occupations, and pay increases decisions, there remains significant race-based and gender-based pay inequities.

GDO: **Gender Pay Gap on Boards: Introducing State-Owned Enterprises in the Theoretical Debate**

Author: **Ulf Papenfuß**, *Zeppelin U.*
Author: **Christian Arno Schmidt**, *Zeppelin U.*

Gender pay gaps are an important societal issue at the intersection between business and society. Social role theory debates claim to enhance the understanding of gender pay gaps in different contexts. State-owned enterprises (SOEs) are an especially relevant research context in the middle between business and society and are considered role models. However, no empirical studies of SOEs exist, which substantially limits the current theoretical understanding. Drawing on social role theory and with an innovative methodological approach, this study analyzes gender pay gaps among 338 executive directors in turnover events in SOEs of German cities between 2006 and 2017. The results show a significant gender pay gap, mitigated by female board chairs but not influenced by age. The insights demonstrate a need for further reforms. For the overarching theoretical debates, the study derives research perspectives for SOEs to provide a bridge for future research in different disciplines.

Paper is Available to Meeting Registrants Only.

Author: **Emelie Fröberg**, *Stockholm School of Economics*

Author: **Jenny Säve-Söderbergh**, *Swedish Institute for Social Research, Stockholm U.*

Author: **Richard Wahlund**, *Stockholm School of Economics*

Author: **S Wiley Wakeman**, *Stockholm School of Economics*

Though extensive work documents the inferior outcomes faced by women relative to those of men in salary negotiations, few solutions have emerged. Exploring remedies that might reduce this gap, we examine how female (and male) negotiators respond when they learn that women are closing the gap in intended salary requests. In a preregistered study (n=1015), we randomly assign business school students to three treatment conditions where we manipulate information on previous students' intended salary requests for their first job interviews expressed in surveys over the previous five years, showing (a) a closing gender gap in salary requests from 11% to 4%, (b) a stable gender gap of 11%, or (c) a no-information control condition. For women, any information motivates an increase in their intended salary request. For men, information interestingly motivates a slight reduction in salary requests, an effect which is attenuated when it appears women are making progress in reducing the salary gap. We situate these findings within the literature on the psychological effects of position in status hierarchies, showing a basic aversion to being at the bottom (i.e., last-place aversion) and a magnifying effect of a perceived change in relative rank (i.e., status momentum). These results suggest that information on existing gaps helps to motivate women and men in ways that reduce the salary gap. Interestingly, highlighting the progress that women are making in reducing the salary gap—an outcome that is objectively true in many contexts—leads men to demand more than when presented with a static gap, manifesting the dynamic strategies that arise as we approach the tipping point in gender equality.

Once a research project has been completed, one of the most prestigious forms of publication is a journal paper. There is not only increasing pressure to publish, but to publish in ‘top tier’ journals. There is vast and comprehensive information about the range and scope of refereed research journals in every field. Through this Professional Development Workshop, the HR Division intends to provide insight to – and engage with – non-US scholars who plan to publish in top tier US journals in the HR field.

Panelist: **Zhenyu Yuan**, *U. of Illinois at Chicago*

Management and organizational scholars are increasingly being asked to translate their research and demonstrate their impact beyond academic circles. From maintaining online social media accounts, to publishing in practitioner-oriented journals, and speaking to the media, it is critical that researchers understand how to simplify typically complex studies into formats that are more readily consumable. This need for translation of research into practical impact is amplified when considering tenure and promotion decisions at business schools. For example, practitioner-oriented journals are increasingly being “counted” alongside top-tier peer-reviewed publications and review committees are considering the impact of research in both scholarly and practical terms. In some countries (e.g., U.K., Australia), demonstration of research impact is being introduced as a metric for academic research performance. Research impact is also important for business school accreditation; for example, AACSB International has standards for business schools to demonstrate their contributions to societal needs. The proposed PDW combines brief presentations by practical experts and leading scholars with interactive roundtables aimed at sharing best practices for translating research for practitioners and broader audiences.

Outcomes of Gender Differences

Session Moderator: **Elijah Wee**, *U. of Washington*

OB: Antecedents and Outcomes of Team Gender Diversity: The Boundary Condition of Managers' Inclusiveness 

Author: **Yi-Ting Lin**, *Department of Business Administration, National Chung Hsing U., Taiwan*
Author: **Jo-Tieh Chang**, *Department of Business Administration, National Chung Hsing U., Taiwan*

Integrating the diversity and inclusion literature, this study investigates the role of organizational inclusive staffing as the antecedent and team voice as the outcome of gender diversity in team contexts. In addition, managers' inclusiveness and inclusive climate are considered potential moderators and mediators in our research framework. Multi-wave and multi-source data collected from research and development (R&D) teams, including 71 team leaders and 257 team members, revealed that team managers' perceived organizational inclusive staffing is positively related to team gender diversity, and this relationship can be strengthened by top managers' diversity-valuing behaviors. Moreover, team gender diversity is also found to facilitate team voice through team inclusive climate when team managers have higher levels of leader inclusiveness. Finally, we discuss valuable findings as well as theoretical and managerial implications of the study.

OB: Gender Difference, Overconfidence and Corporate Social Responsibility A Rising Strength of Female 

Author: **Yu Tu**, *School of Economics and Management Tsinghua U.*
Author: **Yang Ouyang**, *School of Economics and Management Tsinghua U.*
Author: **Mengyi Zhang**, *School of Economics and Management Tsinghua U.*
Author: **Wenchao Richard Zuo**, *School of Economics and Management Tsinghua U.*

We present and examine a new theoretical framework that seeks to explain differences in CEOs' gender and firm-level corporate social responsibility (CSR) performance. In contrast to previous CEO-centered explanations, our theory emphasizes how executives as vital linkers construe their firms' CSR. Drawing from gender role theory and upper echelons theory, we contend that when females hold the post of CEOs, they experience treats rooted in negative stereotypes about gender determinism, which in turn enhances their firm's CSR performance. Our formal analysis suggests that executive overconfidence mediates the positive relation between CEO gender difference and CSR. Notably, female CEOs are associated with higher executive overconfidence, which further leads to an increase in CSR. An extension of our model also shows that, when the level of the board independence gets higher, the effects of CEO gender difference will lessen. We test our predictions empirically with a sample of Chinese firms from the Shanghai or Shenzhen stock exchange in the years 2010 to 2018. Our results are consistent with proposed hypotheses and are robust to different empirical operationalization. Implications and future research directions are discussed.

Paper is Available to Meeting Registrants Only.

OB: The Mediating Effect of PsyCap on Social Entrepreneurial Intention by Gender and Pandemic   

Author: **Jeonghwan Choi**, *Wenzhou-Kean U.*
Author: **Robert Marjerson**, *Wenzhou-Kean U.*
Author: **Sookyoung Lee**, *Wenzhou-Kean U.*
Author: **Kihwan Kim**, *Kean U.*
Author: **Bok Gyo Jeong**, *Kean U.*
Author: **Valerie Vaccaro**, *Kean U.*

This study investigated the mediating effect of positive psychological capital (PsyCap) on social entrepreneurial intention (SEI) by gender and the COVID-19 pandemic. Survey data were collected from two cohorts of graduating senior business college students at a Sino-American University in China. The samples of 249 and 253 responses came from before and during the pandemic situation. The pandemic affected SEI differently by gender. Results indicated that females were more likely to change their perceptions of environmental factors than males. However, positive psychological capital (PsyCap) universally mediates the relationship between environmental factors and SEI. Notably, hope emerged as a positive and universal psychological construct that creates and sustains SEI regardless of the pandemic and gender. This study contributes to the literature on RL, SEI, and PsyCap, which has implications for education and public policy about promoting responsible social leadership. Suggestions are also provided for future research.

Paper is Available to Meeting Registrants Only.

OB: Gender Differences in Idea Championing Strategies   

Author: **Jia Hui Lim**, *Hong Kong Baptist U.*
Author: **Elijah Wee**, *U. of Washington*

Our research investigates the impact of idea implementation performance on status and leadership potential outcomes. We draw on expectation states theory (EST) as a framework to shed light on how others interpret the idea implementation performance of their peers and how these interpretations matter for social order and perceptions of leadership potential. Across two studies—a multisource panel study and an experiment—we find that high idea implementation performance leads to higher status and perceptions of leadership potential and these effects are conditional on the gender of the idea implementor. Specifically, the positive effect of idea implementation performance on status conferral is stronger for women than men. Conversely, the positive effect of idea implementation performance on leadership potential is stronger for men than women. In addition, we find that idea implementation is positively and indirectly related to status via proximal championing, while idea implementation is positively and indirectly related to leadership potential via higher-up championing. Our theory and findings thus offer nuanced insights into the outcomes of idea implementation and suggest that implementing ideas may be sufficient for women to gain status among peers but not enough to be seen as a leader.

Leader (Mis)behavior

Session Moderator: **YIRAN YIRAN**, *Fudan U. School of Management*

OB: **Leader Job Insecurity and Leader Self-Serving Behavior** 

Author: **Mayowa Babalola**, *Graduate School of Business, Nazarbayev U.*

Author: **Yuanmei Qu**, *Rowan U.*

Author: **Muhammad Usman**, *NUST Business School, National U. of Sciences and Technology, Islamabad*

Author: **Moazzam Ali**, *COMSATS U., Islamabad, Lahore Campus*

Leader self-serving behavior has been associated with a range of adverse outcomes in the workplace. However, much remains to be explored about why and when such leader behavior emerges especially amid the pandemic. This research develops and tests a theoretical framework delineating the emotional and cognitive states that give rise to leader self-serving behavior. Specifically, we draw on uncertainty management theory to theorize that job insecurity heightens leaders' state anxiety and self-serving cognitions, subsequently motivating leader self-serving behavior. We further argue that the overall justice of the organization effectively mitigates the indirect relationship between leader job insecurity and leader self-serving behavior via leader state anxiety and self-serving cognitions. Results from a three-wave field study involving 481 unique leader-follower dyads provide support for our hypothesized model. We discuss the implications of our findings for leadership theory and practice.

OB: **The Double-edged Sword Effects of Job Insecurity on Supervisor-rated Performance**   

Author: **Qijie Ma**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Author: **Mingyan Chen**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Author: **Ningyu Tang**, *Shanghai Jiao Tong U.*

Author: **Yan Jin**, *School of management, Zhejiang U.*

Research evidences show that job insecurity has incongruent predictions on employees' performance. We suggest that the relationship between employees' subjective job insecurity and supervisor-rated performance is more complex than previously assumed. By integrating social exchange and proactive preservation mechanisms of job insecurity with the perceived workplace control contingency, this study investigates when and why job insecurity influences supervisor-rated performance via two opposing pathways. Specifically, we propose that the effects of employees' subjective job insecurity on impression management and workplace deviance are contingent on their leader-member exchange (LMX) relationships. In a three-wave survey using data collected from 69 supervisors and their 314 subordinates in China, we found that job insecurity exerted paradoxical effects on supervisor-rated performance via two opposing mechanisms. Specifically, job insecurity had a positive indirect effect on performance via more impression management when LMX was high, whereas job insecurity had a negative indirect effect on performance via more workplace deviance when LMX was low. The theoretical and managerial implications of the findings are discussed.

OB: **Mystery of Leader-Follower Conflict Management Style: Whether Collaborative CMS Always Leads to Good** 

Author: **YIRAN YIRAN**, *Fudan U. School of Management*

Recent theoretical work has developed theories regarding the relationship between conflict management styles (CMS) and employee emotional responses. This study extends the literature by exploring the psychological costs linked with enacting a certain CMS, especially collaborative CMS, since it is regarded as the most effective strategy when handling conflict. Rather than being examined in isolation, collaborative CMS of supervisors need to be considered as a boundary condition, exploring the distinct CMS-anxiety relation. Based on 571 employees in 84 work teams, we found support that when supervisor collaborative CMS is low, there is a curvilinear (U-shaped) relationship between employee collaborative CMS and job-related anxiety. We contend that job-related anxiety will reach the lowest level when members with a moderate level of collaborative CMS. However, when supervisor collaborative CMS is high, collaborative CMS is negatively correlated to job-related anxiety. Further, drawing upon conservation of resource theory, we hypothesize and test that job-related anxiety plays a role of mediator between employee collaborative CMS and subsequent deviant behavior (i.e., surface acting and work withdrawal). Our findings have crucial theoretical and practical implications for dispositional factors that shape individual emotions and facilitate negative outcomes in teams.

OB: All Roads Lead to Rome. Investigating Antecedents and Outcomes of Leader-Follower Identity Conflict

Author: **Xiaotong (Janey) Zheng**, *Durham U. Business School*
Author: **Olga Epitropaki**, *Durham U.*
Author: **Qiong Wang**, *Renmin U. of China*

Individuals' perceptions of leader and follower roles as orthogonal or complimentary have important implications for the self-views as potential leaders and their chances to step up to leadership positions. In the current paper, we introduce the notion of leader-follower identity conflict and enhancement and examine possible antecedents and outcomes. Based on the results of two time-lagged studies (N = 160, and N= 214 nested in 60 teams, respectively), we focus on the role of authoritarian and benevolent leadership as potentially shaping employees' views of leader and follower roles as conflicting or enhancing and further explore how perceived leader-follower identity conflict and enhancement affect individuals' leader identity strength and promotability ratings. Our results show authoritarian leadership to increase perceived leader-follower identity conflict whereas benevolent leadership is found to increase leader-follower identity enhancement. We further find leader-follower identity conflict to be negatively related to leader identity strength and manager-rated promotability whereas enhancement had non-significant effects. We also examine two motivational strivings, i.e., status and accomplishment motivation, as potential moderators of the serial relationship between authoritarian and benevolent leadership, identity conflict and enhancement, leader identity strength and promotability. Our results show that the serial indirect effect of authoritarian leadership to promotability via leader-follower identity conflict and leader identity was stronger when status motivation was higher than lower. Our paper casts light on the antecedents and outcomes of leader-follower identity conflict and enhancement and highlights their importance for leadership development processes.

OB: When Authoritarian Leadership Fuels Employee Self-interested Voice: The Roles of Authoritarian Type

Author: **Ming Lou**, *School of Management, Harbin Institute of Technology*
Author: **Honglei Zhao**, *School of Management, Harbin Institute of Technology*
Author: **Chao Ma**, *Australian National U.*
Author: **Li Zhang**, *Harbin Institute of Technology*

Drawing on uncertainty management theory, this research investigates whether different types of authoritarian leadership are associated with employees' work alienation and their subsequent self-interested voice, and whether employees' perceived overqualification moderates these relationships. We tested our hypotheses using multisource and two-wave data collected from 11 Chinese companies. Results showed that discipline-focused AL had a negative indirect effect on self-interested voice via work alienation, whereas dominance-focused AL had a positive indirect effect on self-interested voice via work alienation and this positive indirect effect are stronger for employees with high perceived overqualification. Through this study, we help inform managers of the different types of authoritarian leadership they can use and their impact on different employees' work alienation and self-interested voice.

Recent Advancements in the Application of Attachment Theory to Work
Attachment Theory in Work Domain

Organizer: **Emma (Lei) Jing**, *U. of Alberta*
Discussant: **Jeffrey Yip**, *Simon Fraser U.*
Distinguished Speaker: **Mario Mikulincer**, *IDC Herzliya*

In this symposium, we will present three empirical papers that adopt creative conceptual perspectives and methodologies to advance the attachment theory-based research in the work domain. We will also have in-depth introductions to and discussions about the contributions attachment theory has made to the study of organizational behavior, and more importantly, its potential to inspire future work.

This symposium aims to provide new perspectives and directions on forgiveness in organizations and extend research on forgiveness' predictors and consequences with four papers focusing on two core questions. First, this symposium seeks to unveil key "upstream" barriers to forgiveness. It features papers on why people are reluctant to apologize in certain cultures and how employees are affected by their own inability to forgive, in particular, in the face of an expressed apology by transgressors at work. The second major goal of this symposium is to advance the limited knowledge of boundary conditions and uncover new factors that moderate the "downstream" effects and effectiveness of forgiveness, including papers on factors such as incongruence between felt and expressed forgiveness that moderate the impact of forgiveness for the forgiving individual and both the bright and dark sides of leader forgiveness in shaping followers' responses in organizations. Furthermore, these four papers illustrate how a variety of methodological approaches (e.g., field study, experiment, panel data, large-scale language analyses) can be used to answer research questions regarding forgiveness as well as concomitant apology. Lastly, our symposium features a prominent scholar in this field of knowledge, offering theoretical and practical insights through interactive discussion to advance our understanding of forgiveness, spark new research directions, and ultimately move the research on workplace forgiveness forward with synergistic perspectives.

Panelist: **Marilyn Ang Uy**, *Nanyang Technological U.*
Panelist: **Melissa S. Cardon**, *U. of Tennessee*

Sponsored by the Kauffman Foundation, the aim of this PDW is to stimulate and help develop research at the interface of organizational behavior and entrepreneurship. To do so, this PDW invites researchers interested in participating to submit a short description of their research at this interface that they seek to further develop. During the PDW, a presentation by Michael Frese (one of the panelists) outlining the value and promise of research bridging organizational behavior and entrepreneurship will help set the tone of the overall workshop. Accepted participants will be matched with one of the expert panelists prior to the Academy of Management meeting and will meet in small groups for feedback and discussion of their research. Finally, a forward-looking discussion will occur of main themes with all panelists and participants.

Organizational social networks are dynamic systems that continuously emerge and evolve. The stability and change in social networks among employees, project teammates, and job applicants have important implications for organizations and the people in them. Much of the emerging organizational literature on network dynamics can be interpreted through the lens of the microfoundations of social networks, which drills down to basic factors that shape network evolution and dynamics. Building on and extending this stream of research, papers in this symposium shed light on issues of theoretical and practical importance, including the creation and retention of professional networks among job seekers, the formation and retention of idea sharing ties among employees, the dynamics of conflict roles in project teams, and the impact of increasing communication delay on network connectivity in instrumental and expressive team networks over time.

Although most jobs and roles are created by organizations, employees can also self-initiate changes to their job characteristics based on their abilities and needs, a process referred to as job crafting. This bottom-up, employee-initiated job redesign has captured surging attention from both academics and practitioners in recent decades, as it offers great value in informing how individuals can more adaptively navigate today's dynamic environment. Although existing research has greatly enhanced our knowledge on the antecedents and outcomes of employees' job crafting, theories remain limited when it comes to explaining how contextual factors interact to affect job crafting, how job crafting is sustained over a long time, as well as how unique populations like leaders and agency temp workers and how a group of people collectively initiate changes agentically in their jobs or career. The presentations and discussion in this proposed symposium seek to shed light upon these less charted territories. We include five studies examining different contexts and using different methodologies to extend our understanding of job crafting or, more generally, how individuals proactively exert changes in their jobs and career.

This PDW aspires to gain insights and create knowledge about early development processes of start-ups supported by an entrepreneurial ecosystem aiming to promote circular economy in a region/country. During this PDW we plan to discuss a range of perspectives and approaches that will tangibly analyse the interrelationships between start-ups, entrepreneurial ecosystems, and the circular economy. Furthermore, we seek to understand how start-ups working with circular business models can be supported by the sustainable entrepreneurial ecosystems successfully. Preliminary contents will include but are not limited to the following: 1) Circular entrepreneurship: opportunities and barriers to growth, 2) Circular start-ups and scale - an ecosystems perspective, 3) Climate change as external enabler of entrepreneurial action and success and 4) Growing for sustainability: A multi-level framework of start-up growth in sustainable transition pathways. We have invited a group of distinguished speakers from about 10 countries representing different disciplines within the sustainability and circular economy areas to contribute to our session. The chairs and organisers of the PDW are professors Magnus Klofsten (Sweden), Sarfraz Mian (USA) and David Audretsch (USA/Germany).

**Gendering Context, Gendering Entrepreneurship:
Developing a Research Agenda**
Gendering Context, Gendering Entrepreneurship

Organizer: **Sibel Ozasir**, *Assistant Professor (Strategic HRM)*
Organizer: **Ulla Hytti**, *U. of Turku, Finland*
Organizer: **Caroline Essers**, *Nijmegen School of Management*
Organizer: **Banu Ozkazanc-Pan**, *Brown U.*
Organizer: **Maura McAdam**, *Dublin City U.*

There is an emerging interest on how entrepreneurs interact with and enact context, acknowledging that context is not something that just “is” for entrepreneurs but instead is something they enact and construct. This PDW will explore current theories, data and methods that researchers are using to study gender, context and entrepreneurship and the findings that have been generated to date. The adoption of a more critical appraisal of how context is positioned within current theorizing around gender and entrepreneurial behaviors, offers potential to progress debate whilst acknowledging that competing and contrasting contextual influences require clearer recognition. By focusing on fatherhood, masculinity, (homo)sexuality, couple relationships, industry dynamics, and eco-systems (local, national, international), this PDW looks at different levels of gendered context and how they inform and shape entrepreneurship amongst men and women. The goal of the workshop is to bring together a set of researchers, each of whom examines gendering context and gendering entrepreneurship in different levels, and engage participants in the development of a research agenda. By gathering scholars with an interest in this area, we deploy this interactive workshop to discuss new research questions, concepts and theoretical foundations and empirical approaches, with the ultimate aim of advancing research in this area. Specifically, the workshop will be applied to launch a call for papers in a special issue and/or call for chapters in a book.

Transgressing the Masculine-Feminine Identity Divide

Session Moderator: **Julia Lee Melin**, *Stanford U.*

GDO: **When Women Do “Men’s Work”: Hybrid Femininity and Within-Gender Inequality in Job Search**

Author: **Julia Lee Melin**, *Stanford U.*

Author: **Jennifer M. Merluzzi**, *George Washington U.*

We introduce a novel theory of hybrid femininity, a mechanism by which women who engage in stereotypically masculine behaviors or activities gain status advantages relative to women without such experiences. We argue that external hiring managers evaluate women with career experiences in hypermasculine occupations more highly than women with career experiences in hyperfeminine occupations. This relative advantage is greatest when transitioning into a male-dominated occupation. Leveraging data from two online experiments (N = 3,003), we test and find strong support for our theory. External evaluators hiring for a male-dominated occupation award women candidates with hypermasculine occupational histories higher compensation than equally qualified women with hyperfeminine occupational histories. Evaluators also assess these “hybrid women” as more masculine, more competent, and better leaders than highly gender-congruent women candidates. These differences in perceived masculinity and status largely mediate the compensation award differences. A similar advantage for hybrid women is observed for job offers in a gender-neutral occupation. When moving into a female-dominated occupation, compensation differences are indistinguishable across women candidates, regardless of their gendered occupational backgrounds. Findings shed light on how gender inequality is maintained—even between women—through the privileging of masculinity over femininity, with important implications for labor markets and society at large.

GDO: **Managing Gender Role Conflicts in Interactions with Clients: Women’s Experiences in PSFs**      

Author: **NATHALIE BITBOL-SABA**, *PSB Paris School of Business*

Author: **Caroline Julie Demeyere**, *Copenhagen Business School*

Professional service firms have been described as male-dominated and client-oriented organizations. This article focuses on role conflict management for women during interactions with clients. Building on Goffman’s work on interactions, roles, and gender, we aim to understand how female professionals manage role conflicts during interactions with their clients and which gender dynamics underpin these interactions. The methodology combines observations of client-professional interactions, semi-structured interviews with professionals and their clients, and documentary collection. Our sample consists of a total of 66 informants. Data collection took place from 2011 to 2021, enabling insights into the impacts of the #MeToo movement on practices and discourses in professional service firms. Our findings suggest that female professionals engage in seven different ways of managing role conflicts during interactions with clients, especially mother-professional and sexual object–professional role conflicts. The typology we propose enriches the existing literature, which focuses mainly on role conflict management with internal stakeholders, and on the practice of women masculinizing themselves. Although most of the ways female professionals manage role conflicts reveal conformity to the established masculine order and contribute to reproducing male domination, the emerging voicing strategy we identify may challenge it.

Paper is NOT Available. Please contact the author(s).

GDO: **Deviant Men at Work: A Social-Motivational Theory for Change**  

Author: **Leire Gartzia**, *Deusto Business School*

This paper proposes a motivational theory of deviance from gender norms that recognizes, understands and purposely develops working men’s communal behavior. Combining key streams of analysis that integrate organizational and psychological research, I provide an overarching approach about specific routes to facilitate change from men with testable propositions that inform future research. I explore the critical role of accommodating social and organizational patterns that reinforce men’s communal orientations. These contexts enable a psychological process of discrepancy reduction that allow identity-restructuring processes and facilitate gender deviance by changing meaning and importance of the masculine identity. These contexts also serve as motivational mechanisms that increase perceptions that gender-deviant efforts: (a) are feasible, (b) lead to a fair balance of positive and negative rewards and (c) are personally desirable. Evidence from research corroborates that explicit representations of deviant men and the value of communion at work are necessary steps to assist these psychological processes and allow men engage in fruitful forms of gender deviant behavior. This transformation is critical for both gender equality and organizational functioning.

Paper is Available to Meeting Registrants Only.

GDO: **Category Status Reclamation: How a Marginalized Gender Reclaimed Its Status**   

Author: **Anupama Kondraya**, *Indian Institute of Management, Bangalore*

Author: **Dalhia Mani**, *Indian Institute of Management, Bangalore*

In 2019, a highly marginalized gender minority in India gained recognition as the first and only transgender monastic order (Kinnar Akhara) in a set of thirteen Hindu religious monastic orders that had been male dominated for more than a millennium. This is significant given that gender inequality is a persistent grand societal challenge, but the term tends to evoke the gender binary while transgenders continue to face violence and discrimination around the world. Gender is a social category and the persistence of gender inequality has been attributed to a difference of status. Thus, we take gender inequality as a case of category status inequality and study the category status change achieved by the Kinnar Akhara towards drawing insights for addressing gender inequality. We conduct a qualitative empirical study using 4 years of archival data between 2015 and 2019 from the public sphere, and find that the Kinnar Akhara referred to multiple histories to influence status beliefs about the third gender, make status claims and elicit status grants. The Kinnar Akhara leveraged constitutional, civilizational, and national histories to achieve its goal of reclaiming high status for the third gender. We contribute to the literature by proposing the idea of status reclamation as a return to high status after status loss, supporting the idea of dynamism in category status systems and demonstrating how religion may be used as a resource to address gender inequality.

Presenter: **Traci Sitzmann**, *U. of Colorado, Denver*
Participant: **Priyanka Dwivedi**, *Texas A&M U., Mays Business School*

Despite the fact that women comprise nearly half of the workforce worldwide, they occupy only 21% of all C-suite positions (Catalyst, 2020). A common reason cited for women's underrepresentation in leadership roles is the perceived lack-of-fit between feminine attributes and the attributes required for leadership roles (c.f., Zheng, Kark, & Meister, 2018). Yet, despite this reasoning, research suggests that perceptions of ideal leaders have become less agentic and more communal (Powell, Butterfield, & Jiang, 2021). Through a combination of theoretical and empirical studies, the papers in this symposium explore some of the myths and realities regarding the interplay among agentic and communal roles of leaders, with an eye toward facilitating women's career progress.

Mindsets in Action: Crafting Promising Avenues for Growth Mindset Research and Interventions

Mindsets in Action

Presenter: **Sarah Quataert**, *Vlerick Business School*
Participant: **Dirk Buyens**, *Vlerick business school & Ghent U.*
Participant: **Laura E. Mercer Traavik**, *Kristiania U. College*
Participant: **Sut I Wong**, *BI Norwegian Business School*

Participant: **Aneeta Rattan**, *London Business School*
Participant: **Ezgi Ozgumus**, *London Business School*

In a rapidly digitalising world, change readiness, employee learning, and self-confidence are crucial assets for both organisations and individuals. Business models are transforming, new organisational roles are emerging, and skills requirements are becoming more complex. Consequently, there's a growing interest within the field of management for developing workplace interventions that stimulate positive self-beliefs, as they positively impact motivation to learn and actual learning behaviour (Bandura, 1977; Burnette, O'Boyle, VanEpps, Pollack, & Finkel, 2013; Mangels, Butterfield, Lamb, Good, & Dweck, 2006; Rigolizzo & Zhu, 2021). One such intervention is to foster a growth mindset (Dweck, 2008), characterised by positive self-beliefs, such as high self-efficacy and strong beliefs about one's ability to learn new skills. However, while a theoretical understanding has advanced (Heslin & Keating, 2017), a challenge remains with respect to developing effective growth mindset interventions as well as methods to assess the effectiveness of these activities in the workplace (Berge, 2008; Griffin, 2011). Addressing methodological challenges is made more complex by the fact that mindset interventions do not only matter at the individual level, but also have a role to play at a meso-level when conceptualised as a team or organisational construct (Canning et al., 2019; Hanson, Bangert, & Ruff, 2016). Taking a practical and holistic perspective on growth mindset, this PDW contributes to creating a better world of work by introducing innovative projects that aim at influencing workers' mindset and by elaborating on learnings for academics and practitioners to craft new avenues for mindset research and interventions.

Virtual Teams: Discussion and Debate

Session Moderator: **Tobias Blay**, *U. of Goettingen*

MED: **A Double-Edged Sword? The Impact of COVID-19 on Work Relationships in Virtual Teams**

Author: **Tobias Blay**, *U. of Goettingen*
Author: **Fabian Jintae Froese**, *U. of Goettingen*
Author: **Marjaana Gunkel**, *Free U. of Bozen-Bolzano*
Author: **Christopher Schlaegel**, *U. of Groningen*

Due to COVID-19, remote work, online learning, and virtual team work have become ubiquitous in today’s higher education and corporate world. This study develops and empirically tests a conceptual model of how work relationships develop over time in virtual teams while under the influence of COVID-19. By integrating fundamental interpersonal relations orientation theory, the model of team development stages, and the threat-rigidity theory, we propose that work relationships in virtual teams progress through four stages (increase-decline-increase-decline). Moreover, we conceive external crises, as exemplified by COVID-19, as both opportunities and threats that exert positive and negative effects, respectively, on work relationships in virtual teams. We use a multi-level approach (e.g., time, individual, and country level) to analyze a longitudinal dataset from a virtual team work project of university students, with the random coefficient growth modeling approach. Results from a seven-wave survey of 3,578 participants from 62 countries and universities around the world, combined with archival data, largely support our hypotheses. We discuss the theoretical and practical implications of our findings.

MED: **Does Charter Quality Make a Difference to Global Virtual Team Performance?**

Author: **William H. A. Johnson**, *Pennsylvania State U.*
Author: **Charles Wankel**, *St. John's U., New York*

The following is still in the initial development stage, but we have already found a number of interesting findings that we wish to share with the AOM community. For example, contrary to prior claims, our preliminary results suggest that a team charter, in and of itself, does not result in higher quality outcome performance of global virtual teams. However, when considering the quality of the team charters and comparing the top and bottom quartiles of charter quality, differences in GVT outcome performance were marginally significant (at $p=0.051$). Teams that reported increasing process conflicts (but not task or relationship conflicts) also reported conflicts to the project’s administration and also referred to their charters. On the other hand, when teammates had greater respect for each other, they reported more conflicts to the administration. This suggests that informal processes may be most important than formal deliverables such as team charters, at least in terms of effectuating GVT outcome performance.

Paper is Available to Meeting Registrants Only.

MED: **Lessening the Negative Effect of Two Cultural Values on the Performance of Global Virtual Teams**

Author: **Dhruv Pratap SINGH**, *NEOMA Business School*
Author: **Justin Kraemer**, *Mae Fah Luang U.*
Author: **David S. Shaw**, *U. of Washington, Bothell*
Author: **Douglas Chun**, *U. of La Verne*

As Global Virtual Teams (GVTs) become an increasing component of management education, team members will undoubtedly encounter cultural differences that have the potential to influence team performance. This study aims to further understand the association between two specific cultural values and team performance as well as what alters these effects. Specifically, we propose that a team’s masculinity is negatively associated with team performance, with this effect weakening when the percentage of males on the team is lower. Further, we hypothesize that a team’s power distance is also negatively related to team performance, with this effect weakening when team members feel psychologically safe. We test and support our hypotheses via regression on 179 GVTs from the x-culture project. We conclude by discussing future research directions, implications and limitations.

Team Processes and Dynamics: Collective Mindfulness, Collective Self- Construal, and Learning

Session Moderator: **Sadia Jahanzeb**, *Brock U.*

MOC: How Collective Self-construal Buffers Opportunistic Silence After Ineffective Supervision?

Author: **Sadia Jahanzeb**, *Brock U.*

Using self-construal theory, this study seeks to investigate the relationship between employees' exposure to authoritarian leadership and job performance while also considering the mediating role of opportunistic silence and the moderating effect of collective self-construal. It aims to reveal that leader's controlling and demanding behavior hinders job performance because employees reserve their opinions to gain advantage for themselves while accepting harm of others. This mediating role of opportunistic silence is mitigated if employees care for collective welfare and group enhancement. This study accordingly identifies a key mechanism—employees' intentional attempt to withhold work-related ideas to achieve selfish gains—by which authoritarian supervision hampers job performance, and it reveals how this process might be contained if employees have interdependent self-construal.

MOC: Harnessing Collective Mindfulness for Alignment & Agility: A Phenomenological Study of Service Teams

Author: **Aniruddha Chatterjee**, *TA Pai Management Institute, India, & Macquarie U., Australia*

Author: **Kyle Bruce**, *Macquarie Graduate School of Management*

Author: **Saurabh Kaushik Pandya**, *Indian Institute of Management Nagpur*

Collective mindfulness enables organizational teams to overcome considerable challenges arising due to increasing uncertainties and complexities in the business environment. Surprisingly, there is a dearth of studies that explain the nuances of mindful functioning in teams. Our study explores how collective mindfulness may be relevant to service teams that are under the dual pressures of satisfying rapidly changing customer expectations, while also fulfilling organizational requirements. We interview 20 team leaders in Indian organizations and adopt a phenomenological approach to surface behavioral and relational aspects of collective mindfulness. We identify the essences of what it means to be collectively mindful in a service team, and unveil how such mindfulness facilitates internal alignment of diverse priorities and perspectives and enhances their agility to deal with quickly changing external situations. We highlight how mindfulness can be used to overcome some of the tensions and contradictions experienced in team functioning, and how it shapes future actions. Our core contribution is by way of demonstrating how collective mindfulness facilitates these teams to adapt and evolve as per fast changing situations. We present the potential implications for theory and practice, to advance the nascent field of research on collective mindfulness.

Paper is Available to Meeting Registrants Only.

MOC: Leveraging Collective Mindfulness in Dynamic Environments: Managing Performance in Sub-units

Author: **Aniruddha Chatterjee**, *TA Pai Management Institute, India, & Macquarie U., Australia*

Author: **Kyle Bruce**, *Macquarie Graduate School of Management*

The dynamic capabilities perspective highlights that higher order capabilities enable organizations to adapt and evolve by sensing changes in the business environment and reorganizing their resources and capabilities accordingly. Yet research has not clearly explained how dynamic capabilities emerge and develop. We build upon the sparse literature that indicates that collective mindfulness may facilitate the creation of dynamic capabilities, and empirically test how collective mindfulness affects sensing and reconfiguring capabilities, and performance in organizational sub-units. We collect data using an online survey from one of the largest housing finance organizations in India (n= 1450), and analyze it using multilevel structural equation modelling. We find that dynamic capabilities, particularly sensing capabilities, mediate the relationship between sub-unit mindfulness and sub-unit performance. Drawing from the attention-based view of the firm, our study contributes by strengthening the theoretical linkages between collective mindfulness and dynamic capabilities, and by offering recommendations for practice.

Paper is Available to Meeting Registrants Only.

MOC: How Learning-Goal-Oriented Newcomers Develop Leader-Member Exchange (LMX): A Dual Mediating Model

Author: **Shanshan Gao**, *U. of Macau*

Author: **Xiaowan Lin**, *U. of Macau*

Author: **Long Wai Lam**, *U. of Macau*

Incorporating Abele and Wojciszke (2014)'s dual perspective model of agency and communion (DPM-AC) with LMX theory, this study explores whether and how newcomer's learning goal orientation (LGO) can foster leader-member exchange (LMX) relationships. Through a three-wave field survey among 199 organizational newcomers in China, we found that newcomers' LGO is positively related to LMX after controlling other types of goal orientations. Our results suggest that newcomers' agentic behavior—self-improvement voice, and their communal behavior—knowledge sharing, build up dual mediating mechanisms of this relationship. This study addresses the call for more research on LGO's interpersonal outcomes in the workplace, especially the relationship with the leader. It also contributes to the emerging research on followership and investigating LMX development beyond the dyad. Theoretical and practical implications of the findings are discussed.

How to Manage Academic Collaborations: Tips and Strategies from Team Scholars (3rd Annual) *How to Manage Academic Collaborations*

Organizer: **Ulrich Leicht-Deobald**, *Trinity Business School, Trinity College Dublin*
Organizer: **Hendrik Johan Van De Brake**, *U. of Groningen*
Organizer: **Stefan Berger**, *U. of Groningen*
Panelist: **Lauren D'Innocenzo**, *Drexel U.*
Panelist: **Sujin Jang**, *INSEAD*
Panelist: **M. Travis Maynard**, *Colorado State U.*
Discussant: **Deborah Ancona**, *Massachusetts Institute of Technology*

In this PDW, we draw from current research on team diversity, multiple team membership, and virtual teams, to learn how we can successfully manage complex academic collaborations. The primary goals of this PDW are (1) to enhance participants' awareness of how they can effectively work together in diverse, multiple and/or virtual teams, and (2) to derive practical strategies they can use after the PDW to increase their own success in academic collaborations. The PDW will begin with a brief introduction to the concepts of team diversity, multiple team membership, and virtual teams, followed by small group discussions in which participants reflect on when they were most successful in their academic collaborations. Drs. Lauren D'Innocenzo, Sujin Jang, and Travis Maynard will then present their cutting-edge research in this field, proposing a set of practical strategies to help participants find opportunities to make their academic collaborations more rewarding and fruitful. Then, participants will develop an action plan for incorporating strategies in their daily lives to make their collaborations more effective and share them with other participants. Finally, the practical and theoretical insights will be discussed and put into perspective by Dr. Deborah Ancona. The PDW will conclude with a summative discussion of key learnings.

**Fostering DEIB Transformation Through the Lens
of Sense-making and Complex Responsiveness**
DEIB Transformation thru Collective Sense-making

Participant: **Gary Mangiofico**, *Pepperdine U.*
Participant: **Daphne DePorres**, *United States Air Force Academy*
Participant: **Terri Egan**, *Pepperdine U.*

There is seemingly a growing social mandate that organizations, including higher education, integrate DEIB into their core experience. We have explored the development of an intentional generative dialogical process as a method of complex responsiveness to facilitate a transformational journey. This PDW will utilize the techniques and processes we have developed to foster understanding for promoting the transformation of the non-linear emotional journey of exploring this complex and often volatile material of DEIB. This approach intentionally uses context setting and a mapping platform to foster sharing "what really mattered" to the individuals involved in a collective sense-making process that leads to a shared understanding of emergent meaning. Participants will emerge with an understanding of the process utilized, the transformative model, the use of context-setting/ mapping, and a higher appreciation of the co-creation of meaning through an intentional generative dialogical process.

This is an experiential dialogical session where your engagement is not only welcomed but critical to realizing the benefits of the session!

The Evolutionary Dynamics of Corporate Strategy
The Evolutionary Dynamics of Corporate Strategy

Organizer: **Lalit Manral**, *U. of Central Oklahoma*
Participant: **Xavier Castaner**, *U. of Lausanne*
Participant: **Constance E. Helfat**, *Tuck School of Business at Dartmouth*
Participant: **Michael J. Leiblein**, *Ohio State U.*
Participant: **Joseph T. Mahoney**, *U. of Illinois at Urbana-Champaign*
Participant: **Brian Silverman**, *U. of Toronto*
Participant: **Todd Zenger**, *U. of Utah, David Eccles School of Business*

The primary objective of the second edition of this PDW is to contribute to a forward-looking research agenda – concerning the dynamics of corporate scope decisions and their implications for firm performance – that draws on and contributes to an Evolutionary Theory framework. The structured and interactive panel discussions are aimed at matching unaddressed issues in Corporate Strategy to the current and/or potential analytical tools of Evolutionary Strategy Dynamics. The PDW will be of interest and benefit anyone with an interest in either Corporate Strategy or Evolutionary Theory. The PDW will be organized into three sessions. The discussions in the first session will focus on hitherto unaddressed – conceptual, methodological, and phenomenological – issues in Corporate Strategy that render themselves amenable to being addressed by taking an evolutionary perspective on Corporate Strategy. The discussion in the second session will focus on how the extant theories of the firm, which provide the conceptual underpinnings for a variety of theoretical arguments in Corporate Strategy, treat myriad dynamic issues. The discussion in the third session will clarify what it means to move beyond taking an evolutionary perspective on Corporate Strategy and address more complex issues by adopting the continuous disequilibrium approach that characterizes Modern Evolutionary Economics (MEE).

Participant: **Paolo Aversa**, *City U. London*

Do you have a burning question about teaching strategy but no answer yet? This hands-on, walk-in Teaching Clinic PDW will feature fifteen expert mentors who are ready to answer your individual questions pertaining to some of the most pressing teaching-related issues you may be facing. Topics include: (1) Online teaching, (2) MBA teaching, syllabus development, grading, and other teaching issues, (3) using interactive exercises, social media, and videos, (4) discussion leadership and teaching with cases, including live cases, (5) transitioning to executive education, (6) and teaching with simulations. Pre-registration is highly encouraged so that we may have enough mentors ready for you.

The dissertation stage is a critical time in the development of a scholar's research capabilities and their scholarly identity. Receiving advice, personalized guidance and feedback, and the opportunity to converse and network with more senior scholars during this time provides a vital entry point into a community devoted to the advancement of high-quality research. Because qualitative research has no "boilerplate" (Pratt, 2009), doctoral students who have chosen to use or incorporate qualitative methods into their dissertation research especially require tailored developmental attention. In this PDW, which is in its ninth year, students at all phases of the dissertation process—proposal, data collection, analysis, and defense—will be invited to receive personalized feedback from faculty facilitators on their study, as well as career advice as they approach the next step in their professional journey. Facilitators include scholars who have published qualitative research in top-tier journals and who have experience managing careers as qualitative researchers. Students will be matched with facilitators based on qualitative methodology, research interest, and/or level of analysis. In addition to practical guidance on research methods, students will also have the opportunity to meet with qualitative scholars to expand their networks.

This PDW has two components. If students wish to be paired with a faculty mentor to receive feedback on their dissertation projects, they need to apply (call to applications published separately). Mentorship sessions will take place virtually and asynchronously, according to the availability of faculty mentors. The second component is a public panel with experienced faculty, open to all AOM attendees. No application is required to attend this panel.

Women Workers in Emerging Markets

Session Moderator: **Poonam Barhoi**, *Indian Institute of Management Indore*

GDO: **Missing Voices of Adivasi Women Temporary Workers in Tea Gardens and the Covid-19 Pandemic**   

Author: **Poonam Barhoi**, *Indian Institute of Management Indore*

India is one of the leading tea producing countries, and around half of the total tea of the country is produced in Assam. The plantation wage laborers in tea gardens in Assam are one of the groups that have been facing oppression since the time of British colonial rule. The temporary workers here have to face various struggles due to less compensation and lack of social securities. They are also known as ‘Faltu’ (Useless) workers despite the fact that they share the majority of tea plantation-related work. The struggles further amplify for women who are in temporary positions. Gender-based discrimination in accessing facilities, lack of institutional support, and other livelihood opportunities make their social positions even more vulnerable. In this study, I explored the plights of women temporary workers in tea gardens in Assam and their increased vulnerability during the Covid-19 pandemic. I conducted in-person, in-depth interviews with seven women who identify themselves as Adivasis. For the discussion, I have mainly borrowed from Spivak’s arguments on the marginalization of subalterns. The paper contributes to the literature on intersectionality and postcolonial studies in the Global South by discussing the intersectional effect of colonialism, insecure work, gender, and the pandemic.

Paper is Available to Meeting Registrants Only.

GDO: **Gender inequality: Curious Practices**   

Author: **M. Fernanda Wagstaff**, *U. of Texas at El Paso*

Author: **Sarah Villanueva**, *U. of Texas at El Paso*

Author: **Gabriela Flores**, *Southwestern U.*

Author: **Rawia Ahmed**, *Zayed U.*

Author: **Erica Helena Salvaj**, *U. del Desarrollo*

The purpose of this study was to examine how female leaders reflect on a type of curiosity practice considering: a) the role of the asking of questions; and b) how women draw from the asking of questions in contexts of gender inequality. To accomplish this goal, we drew from social practice theory and a typology of questions. With this framework, we analyzed 31 interviews of women leaders from emerging markets across the world. Our analysis shows that female leaders’ reflections regarding the asking of questions, a type of curiosity practice, is instrumental to accessing and using human capital, as well as financial, relational, and symbolic resources. We discuss the implications of these findings in the light of current curiosity theorizing and leadership development.

GDO: **(Trans)forming Gender Regimes in Saudi Arabia: Norms and Normativity in Organisations**   

Author: **Claudia Eger**, *Copenhagen Business School*

This article makes an original contribution to the theorisation of the inequality-(re)producing mechanisms that persist in justifying organisational gender regimes in Saudi Arabia, by studying how gender and religious norms intersect in structuring organising processes and practises related to women’s integration in the labour force. Drawing on two focus groups and 33 semi-structured interviews with managers and government representatives in Riyadh, Saudi Arabia, this research explores how managers have navigated the process of organising to integrate female employees. The findings show that the normative structure of gender and associated differences are legitimized due to their anchoring in Sharia principles, making changes in the bases of inequality difficult and contentious. Managers adopted three organising principles—you have to dance (norms as practise), playing it safe (inhabiting the ‘ideal’) and this is not a party (norms as ‘law’)—to make sense, negotiate, and give effect to these norms. The complex intersection between the culturally embedded understanding of norms as ‘law’ and norms as normativity functioned as a key mechanism in the (trans)formation of organisational gender regimes, shedding a critical light on how inequalities become entrenched in workplace cultures and interactions. Session type preference: Discussion Paper Session

GDO: **Unwanted Consequences: The Trade-Off between Gender Equality and Precarity in Saudi Arabian Context**   

Author: **Faisal Alkadi**, *The U. of Edinburgh / King Saud U.*

Author: **Maryam Aldossari**, *Aston Business School*

Author: **Sara Chaudhry**, *U. of London Birkbeck*

This paper looks at the Saudi state policies impact on reducing labour market inequalities and increasing female labour force participation against the socio-institutional backdrop of enduring patriarchy and gender segregation. Analysis of twenty-six in-depth interviews with employees (men and women) and other stakeholders in the retail sector offered contributions to extant precarity research by unpacking both socio-institutional and organisational mechanisms that contribute to/exacerbate structural precarity. Specifically, we highlight psychological precarity as experienced by both genders. For men, this is heightened in job insecurity and weakening of the family ideology and the breadwinner model, while for women it is portrayed in the internalisation of sexual harassment given their socio-economic vulnerability and lack of organisational protection(s). We highlight how structural changes via state-driven policies may clash with the slower to change societal structures and socio-religious norms; resulting in the experience of both structural and psychological precarity in workplaces.

Author: **Florence Villeseche**, *Copenhagen Business School*

Social entrepreneurship is presented as a promising way to overcome women's precarity, especially in the Global South. However, there is scant documentation of such endeavours, especially if we want to understand how locals seize such 'alternative' organizing opportunities. In this article we examine how women in Tunisia experience and negotiate their positions inside and outside the social enterprise. We show how these women are affected by constraints but also how they deploy a range of infrapolitical tactics to try and overcome interconnected layers of precarity – individual, organizational and institutional. We identify three types of tactics: infra-institutionalization tactics, infrafeminist tactics, and infra-entrepreneurial tactics. We thus address the limits and potential of social entrepreneurship as a de facto better way to address precarity and ultimately develop sustainable economies in the Global South. We contribute to diversity research and to the decolonizing of management and organization studies by studying the agency of organizational participants with a de-centred, intersectional gaze. We furthermore contribute to scholarship by providing an intersectional feminist reading of agency in relation to social entrepreneurship in a setting where local populations tend to be regarded as passive beneficiaries or as interested only in day-to-day survival.

The objective of this two-hour interactive professional development workshop is to help faculty members develop and deliver a successful course on International Human Resource Management (or People Management across Borders) from a general management perspective, reflecting current business and societal challenges in a rapidly changing world. It will be led by experienced faculty members who will present a suggested outline for a modular course on IHRM, including options for suitable readings, cases, and exercises. Detailed suggestions will be made on how to teach three core sessions: (i) the introductory conceptual framework blending multiple perspectives on IHRM, (ii) talent management in the multinational firm, and (iii) promoting sustainability and corporate responsibility through people management. Two expert discussants will offer a commentary, leading up to a structured interactive workshop in the second half of the session. While providing practical guidelines, input and suggestions, the PDW aims to engage the participants in a joint reflection on our experiences in teaching HRM topics in different cultural and institutional contexts, as well as in a world that is facing grand challenges of digitalization, diversity and sustainability.

The need for high-quality comparative research that can identify commonalities and differences in management practice between countries and their root sources has only been exacerbated by the disruptions brought about by the COVID-19 pandemic. The questions remain as to how we can best produce rigorous and valid comparative international management research and how we can co-create it for dissemination and use at a time in which numerous restrictions have increased the need for telecommunications around the world. This PDW will examine opportunities and challenges that comparative research presents for international management researchers, and will discuss specifically the use of networks to conduct such research. Using the experience of a network of scholars (CRANET) that have conducted comparative research into Human Resource Management (HRM) for 30 years in over 40 countries, this session aims to exchange knowledge around comparative management work, identify the difficulties inherent in such research—particularly during the ongoing COVID-19 pandemic—and, based on the accumulated experience of this collaborative network, solidify an agenda for future improvements to research design in this area as well as how junior scholars can become involved. The workshop will use a combination of short presentations and roundtable discussions to achieve this aim.

**A Future Framework for Diffusion of
Innovation in Indian Healthcare Research**
A Future Framework for Diffusion of Innovation

Presenter: **Muthu Singaram, IIT Madras**

Indian government, based on report from the office of the Principal Scientific Adviser to the Government of India (2019), has reported that its Research and Development (R&D) expenditure has tripled in the last decade from Rs. 24,117 crores(2004-05) to an estimated Rs.1,04,864 crores (2016-17). It also states that it is difficult to provide the exact amount as there is no header under R&D. As India moves closer to be a developed nation, it is important to explore what the institutions have done in terms of converting basic research to applied research. This would reduce the burden of the healthcare system in India which has a huge population scattered around a large area. The majority of the healthcare expenses are out of pocket expenses. Unlike other parts of the world people in India live in extended families and when one ill everyone pulls together the resources. If healthcare can be made not only affordable but accessible this would reduce the burden on healthcare. This is an area of academic research that would have a huge potential to contribute. It is not clear what has been done by the institutions to work on innovations and what framework is in place.

Management, Organization, and Culture: Pathways for Flourishing

Session Moderator: **Raysa Geaquinto Rocha**, *NECE - Research Center in Business Sciences, U. of Beira Interior*

Papers on corporate social irresponsibility, culture, and organizational healing will be discussed.

MSR: **Bibliometric and Topic Modeling Analysis of Corporate Social Irresponsibility**

Author: **Anita Mendiratta**, *IIT Delhi & Keshav Mahavidyalaya, U. of Delhi*
Author: **Shveta Singh**, *Indian Institute of Technology, Delhi*
Author: **Surendra Singh Yadav**, *Indian Institute of Technology, Delhi*
Author: **Arvind Mahajan**, *Texas A&M U., Mays Business School*

This study investigates the intellectual structure of corporate social irresponsibility (CSiR) by identifying past developments, current areas, emerging topics, and suggesting future research directions. Complementing bibliometric analysis through the VOSviewer technique with topic modeling exercise, we map CSiR intellectual structure from 1990 to mid-2021. We discuss the foundation of CSiR literature by identifying the most relevant studies, journals, and authors based on their citations, links, and importance. Further, we inspect relevant and emerging themes and examine their development. We also discuss reasons for slow progress in CSiR. Underdeveloped CSiR conceptualization and operationalization impedes the growth of CSiR literature. We find that there is less collaboration among authors for CSiR research. Although there are intensifying investigations into research on the CSiR-corporate social responsibility (CSR) connection, there is comparatively less attention towards issues, problems, complications in the CSiR domain. We conclude by presenting potential areas for future research.

MSR: **Foundations and Trends in Management Research on Spirituality and Culture**

Author: **Raysa Geaquinto Rocha**, *NECE - Research Center in Business Sciences, U. of Beira Interior*
Author: **Louis W. Fry**, *Texas A&M U. Central Texas*

Culture and spirituality are relevant in society and organizations. Research concerning these areas thrived in the past decades. Accordingly, we map the research that simultaneously addresses spirituality and culture due to the longing to understand how this research domain has been established. To explore this issue further, we conducted a systematic literature review using Scopus to collect data – 1,449 authors published 676 papers in 288 journals. Afterward, using the Bibliometrix package of R Studio, we performed a bibliometric analysis and a content analysis of the conceptual and social structures of the metadata to reveal collaborations, networks, and research evolution from 1977 to 2021. It tracked the literature over the past thirty-five years, contributing to the awareness of state of the art and offering key themes and trends. Therefore, this paper provides outputs regarding journals, papers, authors, institutions, countries, and themes. Additionally, we categorized these results into four major thematic clusters – (i) pilgrimage, tourism, and leisure, (ii) leadership, (iii) spirituality and religion in business, and (iv) national and organizational culture – identifying their contributions and research agenda. Finally, we offer implications for future theory, research, and practice on spirituality and culture.

MSR: **Development of the Construct of Organizational Healing**

Author: **Aditya Agrawal**, *Indian Institute of Technology, Bombay*
Author: **Ashish Pandey**, *Indian Institute of Technology, Bombay*

Organizational healing, as an existing construct, refers to the process of repairing and restoring the social relationships of an organization after any external trauma. In this work, we aim to expand the nature and application of the construct of organizational healing by exploring additional areas of applicability. We examine the critical assumptions in the existing conceptualization of organizational healing and propose modifications and additions, which help make organizational healing a more robust construct. Finally, we identify the theoretical and managerial implications of this study and discuss future research implications. Keywords: Organizational Healing, Change Management, Organizational Dysfunctional Behaviors, Theory development.

OB: The Effects of Female-Only Competitions on Social Entrepreneurship and Social Innovation  

Author: **Robin Schnider**, *U. of Zurich*
Author: **Nadine Hietschold**, *Bern U. of Applied Sciences*
Author: **Andreas Georg Scherer**, *U. of Zurich*
Author: **Christian Voegtlin**, *Audencia Business School*

Empirical studies show that women tend to shy away from competition against men, especially in male-typed domains. Social entrepreneurship is such a competitive domain. Yet female engagement in social entrepreneurship would be desirable and important from a societal perspective. With the help of two experiments, we investigate whether offering female-only competitions can be an effective means to foster social innovation by encouraging more women to enter competition and thereby increasing market entry and overall social performance. Our results highlight the importance of the perception of the context (female- vs. male-typed) for the effectiveness of affirmative action. While women showed no difference in competitiveness between same- and mixed-gender tournaments for a female-typed task (developing a social business idea), offering female-only competitions drove more women into competition when confronted with a male-typed task (solving mazes). The latter was true for competitions featuring selfish rather than altruistic incentives. Hence, female-only competitions are particularly useful in male-typed contexts featuring selfish incentives, such as generally encountered in entrepreneurial competition. Since men also showed no adverse reactions to the affirmative action of female-only competitions, these competitions improved efficiency overall.

OB: Investors Increase Financial Support to Entrepreneurs who Share a Personal Shortcoming 

Author: **Lauren Christine Howe**, *U. of Zurich*
Author: **Jochen I. Menges**, *U. of Zurich*

OB Division AOM Meeting 2022 Best Paper with Entrepreneurship Implications Award, sponsored by the Kaufmann Foundation

Existing research emphasizes how possessing outstanding qualities helps entrepreneurs attract funding. However, we propose that exposing undesirable qualities (i.e., flaws) can sometimes enhance entrepreneurs' ability to acquire funding. Specifically, building on theories of similarity-attraction and identification, we suggest that entrepreneur flaws attract investors who share the same flaw. Further, drawing on insights from social comparison theory, we distinguish between "bridging flaws" that highlight a deficit in a desirable trait (e.g., insecurity, or a lack of self-confidence) and "distancing flaws" that indicate an excess of a desirable trait (e.g., arrogance, or an excess of self-confidence), and theorize that sharing bridging flaws increases investors' identification with entrepreneurs and thus financial contributions, whereas sharing distancing flaws fails to increase identification and investment. Two experiments and externally valid archival data from the reality television show Shark Tank provide support for our theory. We conclude that while entrepreneurs may benefit from exceptionalism, some succeed not despite but because of their flaws.

OB: Employees Entrepreneurial Behavior: The Effect of CSR for Employees and Organizational Prestige 

Author: **Aníbal António López**, *NOVA School of Business and Economics*
Author: **Sandra Pereira Costa**, *Instituto U. de Lisboa (ISCTE-IUL) Business Research Unit (BRU-IUL)*

Research about the micro-level processes of intrapreneurial behavior is scarce. Based on the self-determination theory and cue consistency theory, we explore the emergence of employees' intrapreneurial behavior. We propose that perceptions of internal corporate social responsibility (CSR) enact employees' intentions for self-determination (conceptualized as intrapreneurial intentions), and this relationship should be stronger when employees perceive greater organizational external prestige (PEP). Also, this interaction will carry consequences for employees' intrapreneurial behavior. Using a multimethod approach – a field study and an experiment – we found that high congruency between CSR for employees practices and PEP enacts employees' intrapreneurial intentions and, consequently, influences their intrapreneurial behavior.

Presenter: **Michael Blomfield**, *U. of Massachusetts, Amherst*
Participant: **Keyvan Vakili**, *London Business School*
Participant: **Denisa Mindruta**, *HEC Paris*
Discussant: **Matt Marx**, *Cornell U.*

The symposium features four papers that examine understudied theoretical questions and phenomena related to the role of scientists in driving innovation in the private sector. The four papers use diverse theoretical frameworks, methodologies, levels of analysis, and empirical contexts to address an interesting set of questions. In particular, they investigate the influence of corporate board directors with a scientific background on firm innovation, the role of open science policies on scientist hiring in firms, and the impact of national intellectual property rights institutions on the direction of scientists' research and their mobility at the international level. Together, they yield insights on how technology firms may leverage the particularities of their research environment to attract high quality scientific human capital and improve their innovative performance, thereby contributing to the establishment of their competitive advantage. The symposium will be of interest to scholars of strategic management (STR) and technology and innovation management (TIM).

This workshop imagines organization design as problem-solving entities to foster collective action that is needed to solve grand challenges. Through a combination of panel presentations by distinguished scholars and interactive roundtable discussions with workshop participants – with an emphasis on the interactive roundtables – we seek to advance research that addresses the design choices required to successfully implement sustainability initiatives within existing organizations, as well as explores new ways of organizing to meet the opportunities and challenges presented by the growing attention to grand challenges. The proposed workshop is likely to be of interest to researchers at the nexus of organization design and societal grand challenges, providing an informed perspective on cutting-edge research on this interface.

We plan to accommodate 40 participants in the interactive roundtable format. Interested participants should pre-register for the workshop by sending an e-mail to luoj@umn.edu, by July 15 2020. Registration emails should include the name, affiliation, and current position (student, assistant professor, full professor, etc.) of the participant. Participant should also send a bio, as well as a paragraph stating his or her area of research interest and / or any specific issue related to the workshop that he or she is interested in discussing. This input will be used to allocate participants to roundtables, and will be distributed among panelists and discussants prior to the session.

Crisis Management

Session Moderator: **Anne Marie Nuala Ward**, *Ulster U.*

This session explores various crisis management topics in the context of community resilience and response, particularly in the face of currently relevant natural disasters such as fire and the global pandemic.

PNP: Building Resilience: Towards a Heuristic Model of Collective Action in a Crisis 

Author: **Anne Marie Nuala Ward**, *Ulster U.*

Author: **Anita Mangan**, *U. of Bristol*

Co-operatives are frequently cited as out-performing other organisational forms in a crisis, though few studies have investigated why this is so. To explore this issue, this article uses an analytical lens of resilience and lessons from the Irish credit union sector's response to the COVID-19 pandemic, to design the Building Resilience Framework. This framework highlights the role of collective action, an important facet of relational resilience that is prevalent in the co-operative model, in ensuring an appropriate response to crisis. Discussion of the framework also extends the literature on resilience to include life-threatening events and the role of collective action in enabling dynamic, heuristic responses. Finally, the paper contributes empirically, by demonstrating how strong collective action capabilities enabled Irish credit unions to respond to social dilemmas. At first they adopted dynamic, agile, innovative ad hoc approaches that were sub-optimal but effective. As the crisis continued, they focused more on heuristic responses that prioritised sustainability and strategic business models to provide long-term solutions to the 'new COVID normal'. We argue that the social relationships at the heart of the co-operative model offer useful lessons about collective responses to crisis.

PNP: Co-Management During Crisis: Insights from Jurisdictionally Complex Wildfires 

Author: **Branda Nowell**, *North Carolina State U.*

Author: **Toddi Steelman**, *U. of Saskatchewan*

Author: **Anne-Lise Knox Velez**, *North Carolina State U.*

Author: **Kate Albrecht**, *U. of Illinois at Chicago*

There is a general agreement within the disaster response community that exclusively top down approaches to policy making and management are limited and that we need to build governance capacity to cooperatively manage across jurisdictional boundaries. No more is this true than in the context of jurisdictionally complex wildfires that span multiple jurisdictional boundaries. Accordingly, the concept of co-management has grown in popularity as a theoretical lens through which to understand cooperative multi-jurisdictional response to wildland fires. However, definitional ambiguity has led to on-going debates about what co-management is. Further, there is limited understanding about the nature of co-management during crisis events. In this paper, we seek to address this question based on interviews with leaders engaged in the management of jurisdictionally complex wildfire incidents. Based on the integration of these three streams, we propose a multi-level framework for conceiving co-management as strategic efforts of individual actors to cooperatively manage perceived interdependencies with others through one or more formal or informal institutional arrangements. We then demonstrate the value of the proposed framework in its ability to organize a series of diagnostic questions for diagnosing co-management situations within the context of jurisdictionally complex wildfires.

Paper is Available to Meeting Registrants Only.

 **PNP: Employee Retention in Law Enforcement: The Role of Pandemic Preparation and Capacity to Respond**

Author: **Alexander Henderson**, *Marist College*

Author: **James Melitski**, *Marist College*

The COVID-19 pandemic has placed significant stress on public services, including front-line personnel in variety of core government positions like public safety (Stogner, Miller, & McLean, 2020). Bureaucrats in these positions often encounter significant uncertainty and stress, which is made more complex by the nature of service provision in a global pandemic. Scholarly conversations centered on law enforcement personnel have long described challenges related to these ideas of uncertainty, stress, and situational difficulties, and the effects of those on individual and group behavior and work practices (Jaramillo, Nixon, & Sams, 2005; Spielberger, Westberry, Grier, & Greenfield, 1981). This exploratory research focuses on the retention of these key personnel in the midst of a pandemic, examining the impact of key individual and organizational factors along with pandemic-related factors of preparation for and response to the coronavirus pandemic. We draw on a survey of municipal law enforcement agencies in the United States that includes rural, suburban, and metropolitan departments. Survey data were collected in late 2020 and early 2021 from law enforcement personnel, including personnel at all departmental ranks from patrol officer to police chief. Results indicate that there is wide variation in feelings of preparedness and efficacy of response, and that those with stronger perceptions of organizational capacity to respond to the pandemic, increased job satisfaction, and higher organizational commitment were more likely to express an intent to remain in those positions on a short- and long-term basis. Concluding comments are provided with an eye on the future of street-level services in which personnel are faced with added stresses on multiple fronts.

Participant: **Eleonora Perobelli**, *Bocconi U.*

Since December 2019, the coronavirus pandemic has caused chaos and challenges in public organizations throughout the globe (O'Flynn, 2020). First, this pandemic has shaken countries and decreased the level of trust between governments and citizens when the accuracy of public health information has become doubtful (Fletcher et al., 2020). Second, there are ongoing changes to work design and decreasing work motivation among public employees that have affected the performance of public organizations. Also, we have seen good, bad, and ugly leadership behaviors in coping with this global health crisis. For instance, many citizens and public servants questioned the ethical behaviors of the former US President when running his second presidency campaign (Lipton et al., 2021). In Australia, the Prime Minister has been criticized for his personal and leadership behaviors during the COVID-19 lockdown (Karp, 2021). Also, UK citizens and public servants have raised concerns about the decision-making and the transparency of government procurement processes during the pandemic (Parker, 2021). By contrast, New Zealand's Prime Minister took prompt actions, reached out compassionately, and developed effective strategies in responding to the COVID pandemic (Matthews, 2020). These contrary behaviors highlighted the need to reconsideration the role of public leadership during the pandemic to improve public trust and motivate public servants (O'Flynn, 2020). contrary Public organizations have continuously undergone many changes to the nature of work (such as job cuts, new work arrangements, and increased workload) and new ways of public service delivery (Christensen & Læg Reid 2011, Hansen & Ferlie, 2016). During this period of ongoing and continuous organizational change, we have observed levels of conflicting values and goal ambiguity which affected the attitudes and behaviors of public servants (Battaglio & Condrey, 2009; Gould-Williams et al., 2014; Steen & Schott, 2019). Public servants have been expected to work more innovatively and effectively in response to the pandemic (Schuster et al., 2020). These challenging and stressful circumstances have required public servants to embrace sweeping and substantial changes to their work (Steen & Schott, 2019). We have seen reports of public servants experiencing more work strain, burnout, demotivation, and sickness during the pandemic (Schuster et al., 2020). Discrimination, mistreatment, or misbehaviors between colleagues have occurred substantially during the outbreaks when employees have worked remotely (Hickok, 2021; Liu, 2020). These contemporary issues have pressurized public leaders to re-think how to embrace effective leadership behaviors in supporting and motivating their subordinates in an ethical manner (O'Flynn, 2020; Schuster et al., 2020). Although previous studies have examined different leadership behaviors in the public administration area (see for a review, Crosby & Bryson, 2018), there remains an opportunity to expand the research on the ways positive employee behaviors safeguard the well-being of public servants (O'Flynn, 2020; Steen & Schott, 2019). This symposium, therefore, focuses on the extent to which leaders from different countries enact their leadership behaviors during the pandemic to resolve the contemporary workplace challenges faced by public organizations to enhance the work and well-being of public servants. This symposium comprises four papers, therein, expand our knowledge of when and how public leaders contribute to positive behaviors and the well-being of public servants in coping with the emerging issues in public administration. The four papers contain diverse contexts to explore the bright and dark sides of leadership, the work environment of public administration, behaviors, and the well-being of the public servants. Specifically, the four papers provide a holistic understanding of the different views of leadership in diverse public sector contexts (including developed and transitional economies). Finally, we contribute to the public and general management literature by extending our knowledge of workplace configurations in motivating employees to work better in the ongoing complex and uncertain environment. We expect this symposium to be effectively exploratory and empirical as per the AOM 2021 call for papers, broadening the literature on management and organizational studies by identifying and incorporating practices and policies that stimulate and sustain positive and healthy workplaces for a better future of work.

The global pandemic and recent social unrest have challenged the way we think, feel, and function. It has left us with ongoing uncertainties of the future, which organizations attempt to navigate. As organizations search for and create a new sense of normalcy, we highlight the role of individual mindfulness as a way of being that organizations, leaders, and employees may cultivate to better manage their feelings of uncertainty, stress, or conflict that may be associated with the broader societal changes. The interest of mindfulness has been surging among practitioners and academics as more and more organizations employ various forms of mindfulness training for their employees (Reb et al., 2020). To this end, we ask, “how can mindfulness impact individuals to improve workplace functioning, interactions, and behaviors to ultimately influence a better future of work?” In this symposium, we consider antecedents of mindfulness such as metacognition, and both intrapersonal (e.g., identity and belonging tensions, emotional labor, well-being, engagement, psychological safety) and interpersonal (e.g., relationship satisfaction, work-home conflict, leadership) outcomes of mindfulness. In doing so, we advance mindfulness theory and practice by including a diverse set of papers which allow us to consider how mindfulness may shape employees’ functioning in the new world of work and amidst the challenges associated with the recently challenged social structures.

Understanding and Supporting Early Career Academics' Identity Work

Early Career Academics' Identity Work

Session Chair: **Paul Hibbert**, *U. of St Andrews*

Organizer: **Lisa Jane Callagher**, *U. of Auckland*

Organizer: **Danna Greenberg**, *Babson College*

Organizer: **April L. Wright**, *Warwick Business School*

This interactive workshop will involve a group of facilitators who have been active in leading, facilitating or supporting early-career academic development programs in several countries. Together they will explore the tensions and challenges that early-career academics face from three perspectives. First, the nature of identity work, especially in the early stages of the development of a career, will be explicated. Second, the tensions associated with developing a coherent identity position spanning research, teaching and service will be explored. Third, the ways in which the reception of personal characteristics (such as gender and ethnicity) in the contexts of academic life impact on identity work will be considered. As we explore these issues, we also consider how the events of the past two years –both the global pandemic and broad social unrest – have affected early-career academics. The dual aims of the workshop are to (i) initiate a process of exploration and reflection that helps early-career academics to develop career resilience and coherence through identity work, and (ii) encourage continued research in this area.

This symposium aims to generate capabilities for critical interpretations and actions in the context of what appears as normal in management and society today (even when described as a “new normal”) and directly address shared desires to change towards better situations: How to imagine a fundamentally new enterprise today, one that forces us to abandon how we think of and enact “our field” and attempt “to manage our world”? The perspectives in this symposium, foster critical re-envisioning, experimentation, and often overturn what we have been taking for granted as normal, but also to conceive of different positive futures. The contemporary transdisciplinary conceptualizations and vocabularies of feminist new materialisms engage the imagination to envision other possibilities about our ways of organizing life and living.

At the core of “creating a better world together” is being able to work side by side, acknowledging our differences and embracing the strengths and challenges of a diverse and inclusive workplace. Recent events have shown how important diversity and inclusion is to societies and organizations: one can still hear the voices echoing in the growing social movements related to #BlackLivesMatter, #TimesUp, #MeToo, and others reminding us that the work of diversity and inclusion is only beginning. Events in the last several years alone have forced organizations to rethink diversity, equity and inclusion efforts, leading in some cases to radical policy and practice changes. Our symposium has two goals: investigate differences in sources of diversity through a set of theoretical and empirical papers; and discussing the possible connections and overlaps between findings to push the boundaries of the diversity and inclusion literature.

This PDW invites scholars and practitioner to explore and reflect on the longer-term effect of phenomena such as climate change, the rise of China, Brexit as well as populist politics on organizations, the economy and geopolitics. The effects of the now two-years-lasting Covid-19 pandemic have triggered important adaptation and resilience needs across societies, organizations, and governments and contributed to a turbulent and rather unpredictable future. These fast paced, changing times pose extreme challenges to organizations whose management needs to ensure their viability when anything may be questioned. This includes organization's capacity for flexibility and change to adapt and recognize new opportunities. In addition, business leaders must preserve and even enhance their organizations' capabilities to offer meaningful work to its people. Businesses, organizations, and institutions must be agile to survive and thrive. In turbulent and uncertain times, the first task of management is to ensure the organizations' capacity for resilience and survival and to adapt to continuous change and new opportunities. In addition, business leaders need to make sure to maintain the organisations' structural strength and soundness. They must preserve its capacity to offer meaningful work and projects to its people to strive while recognizing all other stakeholders and treating them respectfully and responsibly. This PDW discussion panel wants to contribute to a fresh and critical look on international business in volatile, ambiguous, complex, and uncertain times (VUCA) and explore the various requirements for a sustainable management and leadership, helping to create a fairer and better world for all stakeholders and societies.

Publications in top-tier journals are an important means by which our work is disseminated to our colleagues, as well as improved through the review process. Such publications are additionally important for career purposes, namely for the tenure and promotion process. While many scholars are familiar with the US-based top-tier journals and consider them as a primary outlet, several international management journals have also developed a reputation of excellence. These journals have thus evolved into outlets equally attractive for rigorous and impactful research. At the same time, international journals differ from US-based journals in subtle but important ways. Awareness of these differences is important for scholars who consider these international journals as a potential conduit for their work. The goal of this PDW is to share information and have a discussion regarding publishing in top international management journals. We bring together a panel of editors/associate editors from six top international journals. Each will introduce their journal's editorial policies, as well as highlight differences between their journals and leading US-based journals. This session will combine individual presentations by panelists, a general Q&A session with the audience, and breakout discussions.

Politics, Shaming, and Contempt in Organizations

Session Moderator: **Giselle Elaine Antoine**, *U. of Washington, Seattle*

OB: Prattling Politics: Examining the Effect of Perceived Organizational Politics on Workplace Gossip     

Author: **Aamna Khan**, *Indian Institute of Technology Patna*
Author: **Richa Chaudhary**, *Indian Institute of Technology Patna*

Often, gossip literature focuses on identifying meaning of gossip, its nature and the associated outcomes. However, there lies a gap in conceptual development of antecedents that give rise to gossip in the workplace. In this paper, the authors examine the most common yet unexplored antecedent to workplace gossip i.e., perceived organisational politics (POP) by drawing arguments from Affective Events Theory. While the commonly held belief is that perception of politics is consequential to the existence of negative workplace gossip (NWG), an alternate hypothesis can be that POP may enkindle positive workplace gossip (PWG) as well. The authors, further, examine how the course of POP to gossip meanders with compassion. The model was tested using time-lagged data from two samples- Sample 1: Private sector organisations, n= 366, and Sample 2: Public sector organisations, n= 206. The results revealed that POP correlates positively with NWG as well as PWG. Additionally, it was found that compassion moderated the relationship of POP with NWG, but failed to moderate in case of PWG. The present paper contributes to the emerging field of inquiry on workplace gossip by empirically establishing POP as a precursor to gossip at work and compassion as a moderator of this relationship.

OB: The Elicitation and Functionality of Contempt in the Workplace: A Values-Based Perspective

Author: **Gerardo A. Miranda**, *U. of Alaska Fairbanks*
Author: **Jennifer L. Welbourne**, *U. of Texas Rio Grande Valley*

In this study, we seek to extend knowledge of how contempt is elicited in the workplace, along with the functions it may serve in an organizational context. Specifically, we examine the following research questions: (1) How do values influence the elicitation of contempt at work? (2) What types of workplace behaviors are associated with feeling contempt? and (3) Does feeling contempt have [a] associative, [b] social-distancing, and [c] self-regulatory functions in the workplace? We employed a three-wave time-lagged online survey to 555 U.S. full-time workers. Results from a longitudinal SEM analysis suggest that workers feel more contempt for a coworker that fails to uphold their most prioritized value than for a coworker that regularly upholds their most prioritized value; however, perceptions of value incongruence did not mediate this relationship. Feeling contempt motivated workers to engage in uncivil behavior toward the coworker who was the target of contempt. Contempt was also associated with maintaining distance from the coworker, and appraising oneself as moral, supporting that contempt may serve social-distancing and associative functions at work. Contrary to prediction, contempt did not regulate future feelings of anger or disgust toward the coworker (self-regulatory function), but instead enhanced these emotions. Theoretical and practical implications are discussed.

Paper is NOT Available. Please contact the author(s).

OB: Witnessing Shaming as a Social Binding & Norm Reinforcing Process

Author: **Giselle Elaine Antoine**, *U. of Washington, Seattle*
Author: **Crystal I Chien Farh**, *U. of Washington*
Author: **Qiongjing Hu**, *Zhejiang U.*

This study develops and tests theory for organizational shaming, defined as a collective process of social disapproval that publicly punishes a norm violation. Prior research on shame in organizations has predominantly emphasized the negative effects of this discrete emotional experience for the violator, with little attention to shaming, as an interpersonal process involving multiple parties, including organizational observers. Meanwhile shaming is on the rise in the modern workplace, facilitated by surveillance systems, social media, and the Zoomification of work, suggesting a need to understand how and when this unique form of punishment is functional and dysfunctional to organizational outcomes. Drawing on retributive justice theory and integrating a two-wave survey study with qualitative interviews, we illustrate the specific conditions when witnessing a shaming punishment can enhance commitment and compliance for organizational members.

Paper is Available to Meeting Registrants Only.

OB: An Investigation of the Benefits and Detriments of High Justice Social Comparison 

Author: **Zengxin Li**, *Renmin U. of China*
Author: **Qiqi Wang**, *Wuhan U.*
Author: **Jun Liu**, *Renmin U. of China*
Author: **Xueling Fan**, *Nanjing U. School of business*

Although recent research has investigated the detrimental effects of low justice social comparison, we know little about the influences of high justice social comparison. Combining social comparison theory with the framework of individuals' two key desires, our study presents an integrative model that simultaneously examines the benefits and costs of high justice social comparison to answer how and when high justice social comparison influences employees' work engagement. Utilizing a multi-wave data, we find that high justice social comparison not only evokes pride but also incurs guilt. The pleasant feeling of pride mediates the positive effect of high justice social comparison on work engagement, but the unpleasant feeling of guilt mediates the negative influence of high justice social comparison on work engagement. Moreover, help receiving strengthens the relationship between high justice social comparison and pride, but help giving weakens the relationship between high justice social comparison and guilt.

Organizational Support

Session Moderator: **Koustab Ghosh**, *Associate Professor Indian Institute of Management Rohtak*

OB: Perceived Organizational Support and Transformational Leadership on Empowerment and Outcomes

Author: **Nathapon Max Siangchokyo**, *Old Dominion U.*

Author: **Ryan Lee Klinger**, *Old Dominion U.*

Drawing on the resource theory of social exchange, this study aims to provide a better understanding of the interactive effects of perceived organizational support and transformational leadership on employees' psychological empowerment and their subsequent job performance and commitment to the organization. More specifically, we examine the influences of perceived organizational support on employees' in-role performance and organizational commitment through the mediating role of psychological empowerment. We also examine the moderating role of unit-level transformational leadership on these mediated effects, arguing that transformational leadership can help strengthen the positive effects of perceived organizational support on employees' psychological empowerment and their subsequent affective and behavioral outcomes. Results based on multi-source and multi-level data obtained from 217 employees and 41 direct supervisors working in a large public construction company in Thailand provide support for our proposed multilevel moderated mediation model. Based on these findings, we discuss how our theoretical model expands research on the role of perceived organizational support as an antecedent of employees' psychological empowerment and organizational outcomes. This research also highlights several practical implications pertaining to positive treatments by the organization and the importance of leadership.

Paper is Available to Meeting Registrants Only.

OB: Can Organizational Support Pull the Voice of Front-line Employees? A Moderated Mediation Model 

Author: **QI CUI**, *Renmin U. of China*

Author: **Yinxuan ZHANG**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Author: **Yongjia Duan**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Although predecessors have recognized the important role of perceived organizational support (POS) in front-line employee initiative behavior, it is not clear whether and how POS affects employee voice behavior. To address this problem, this study developed and validated a moderated mediation model to explore the positive impact of POS on employee voice behavior through employee engagement (job engagement and organizational engagement) and the moderating role of supervisor's organization embodiment in this process. The data analysis of 353 Chinese front-line service staff shows that POS is positively related to employee voice behavior through employee engagement. In addition, supervisor's organization embodiment (SOE) strengthens both the direct effect of employee engagement on employee voice behavior and the indirect effect of POS on employee voice behavior through employee engagement. Our research findings not only further develop the previous research viewpoints on POS and employee active voice behavior, but also provide a potential management approach to promote employee voice behavior.

Paper is Available to Meeting Registrants Only.

OB: Furlough Status: The Effects of Contract Breach, Violation, and Perceived Organizational Support 

Author: **Marianna Delegach**, *Sapir Academic College*

Author: **Galit Klein**, *Department of Economics and Business Administration, Ariel U.*

Author: **Tal Katz-Navon**, *Arison School of Business, Reichman U. (IDC), Israel*

The current study, we design to address the effect of furlough status on employees' attitudes and well-being after returning to their previous employment status. Specifically, we suggest that the two constructs - psychological contract breach and violation - mediated the associations between the employees' furlough status and emotional exhaustion and affective commitment. Additionally, we propose that perceived organizational support attenuated the association between employment status and employees contract breach perception. A cross-sectional study conducted at two points in time - during the first lockdown and four months after the lockdown (N=336), confirmed the study hypotheses and supported the predicted indirect sequential associations. However, perceived organizational support served to buffer the association between employment status and perceived psychological contract breach only in the case of employees who continued to work during the lockdown period.

Paper is NOT Available. Please contact the author(s).

OB: Coworker Support and Occupational Identification: Identity, Exchange, Collective Self-Esteem Matter

Author: **Koustab Ghosh**, *Associate Professor Indian Institute of Management Rohtak*

Author: **Ayesha Irum**, *Indian Institute of Management, Rohtak*

With the recent conceptualization of emotional dirty work, there is a growing interest in investigating workers who perform such work. Those occupations where the central task encompasses engagement with those emotions of the beneficiaries which are considered to be threatening to the ideal order of the society or individual, are classified as emotional dirty work. Despite the challenges and taint associated with such jobs, workers are able to maintain a positive sense of self and occupational identity. In this study, we empirically examine the relationship between co-worker's support and occupational identification of workers performing emotional dirty work. Drawing from the social identity theory and social exchange theory, we also investigate collective self-esteem as a mediator. Data collected from 231 emotional counselors demonstrate a positive effect of co-worker's instrumental and emotional support on occupational identification. Further, results also support collective self-esteem as an explanatory mechanism. The findings shed light on the positive role played by co-workers in facilitating one's occupational identification and is one of the first studies to highlight the development of exchange relationships in such work. In this way, the study provides a deeper understanding of emotional dirty work, thereby advancing literature and theory.

Who Leaders Are and What They Do

Session Moderator: **Clare Rigg**, *U. of Suffolk*

OB: Leader Attributes, Behavior, and Leadership Outcomes: From Implicit Leadership Theory and Self-Comp

Author: **Xinyi Zhou**, *Xi'an Jiaotong-Liverpool U.*
Author: **Yanjun Guan**, *Chinese U. of Hong Kong*
Author: **Yujie Cai**, *SKEMA Business School*

This research aims to enrich the understanding of implicit leadership theories (ILT) by investigating how leaders may incorporate multiple sets of attributes in their leadership self-schemas and how these attributes may affect leadership effectiveness. In contrast to the traditional ILT research that only focuses on leader-specific attributes, we propose and differentiate leader-specific (i.e., attributes that specifically describe a typical leader in the organization), follower-specific (i.e., attributes that specifically describe a typical follower), and common attributes (i.e., attributes that are viewed to be possessed by both leaders and followers). Drawing upon implicit theories and self-complexity perspectives, we hypothesize that follower-specific traits could contribute uniquely in predicting follower perceived leader behaviors (i.e., Initiating Structure and Consideration) and in turn leadership effectiveness variables. Three empirical studies were conducted to examine these ideas. Results from the first two survey studies (Study 1, 2; N1 = 211, N2 = 205) identified these three sets of attributes. Further, a three-wave field study with 200 leader-follower dyadic responses (Study 3; N3 = 200) was conducted to examine the predicting effects of attributes. Results demonstrated that leader's follower-specific attributes are positively related to follower perceived leader considerate behavior, which further increases follower job satisfaction, affective commitment towards the leader, and organizational citizenship behaviors above and beyond another two sets of attributes. Moreover, leader-specific attributes are positively associated with leader structural behavior when another two groups of attributes were controlled. These findings have important implications for the implicit works and management practices.

Paper is Available to Meeting Registrants Only.

OB: Leader Personal Brand Equity and Team Resilience: A Resource Endorsing and Inhibiting Perspective 

Author: **Wei Wu**, *Renmin U. of China*

Drawing from the crossover model of conservation of resources theory (COR), we introduce leader personal brand equity (PBE) as the leader resource crossover endorsing mechanism to explore its function on team resilience, which is especially important team emergent-like capacity for teams to confront the inevitably adversities in today's turbulent business environment. Further, we take leader bottom-line mentality as the resource crossover inhibiting mechanism that negative moderate the relationship between leader PBE and team resilience, and the indirect effect of team resilience between leader PBE and employee performance. We conduct three sequential multi-wave survey studies to explore this research. In Study 1, a two-wave survey (319 employees and 58 teams), we find leader PBE is positively related with team resilience via crossover leader personal resource to team members; In the study two, which is a three-wave studies with 591 employees in 120 teams, we find the indirect effect of team resilience between leader PBE and employee task performance. Study 3, consists of 470 employees in 81 teams, replicates the previous findings and further shows that leader bottom-line mentality negatively moderates the indirect effect as the resource inhibiting mechanism. Theoretical and practical implications are discussed.

OB: Similar to Us or Leading Us? The Contingency Effectiveness of Leader Prototypicality 

Author: **Yiming Huang**, *Nanjing U. School of business*
Author: **Jane Jiang**, *Nanjing U. School of business*
Author: **Kenneth S Law**, *Chinese U. of Hong Kong*

Extant research demonstrated some ambiguities in leader prototypicality. This research proposes two views of leader prototypicality, labeled as representative prototypicality and ideal prototypicality. We draw on self-categorization theory and highlight the self-enhancement motivation to examine the contingency effectiveness of the two kinds of leader prototypicality, using group performance as a boundary condition. Specifically, when group performance is low, ideal leader prototypicality is positively associated with leader identification, which increases trust in the leader; when group performance is high, the two kinds of leader prototypicality make no difference in predicting leader identification and trust. The results of two experimental studies consistently supported our hypotheses. In sum, our findings reveal that group members prefer prototypicality which can optimize their self-esteem, and the context plays a key role in this unique leadership process.

OB: The Talking-Doing Gap in Leadership: On Managers Self-Romanticizing their Actions

Author: **Thomas Fischer**, *U. of Geneva*
Author: **Mats Alvesson**, *Lund U.*

We raise a puzzling question: Why do managers talk so much about (their) good leadership when many people lament an absence of good leadership in organizations? The first step we take to answer this question is to specify what leadership talk (LT) and leadership practice (LP) are. Then we examine how managers loosen the link between their LT and LP by talking about their deeds in a positively charged and temporally distant manner. We call such LT a self-romanticizing behavior that is a distinct type of leadership behavior. Next, we ask why managers engage in LT to a greater extent than they engage in LP. We argue that managers reap overlooked symbolic benefits from engaging in LT but incur overlooked practical costs from doing LP. The symbolic benefits that a manager obtains from LT result from her shaping people's attributions about her own work so they see it as effective and moral and, therefore, as a source of desirable outcomes. Practical costs, by contrast, result from managerial constraints rooted in daily work and organizational politics. Overall, we explain how a "talking-doing gap" in leadership—a theme largely missed by leadership scholars—arises as a result of managers' self-romanticizing behavior.

OB: "Unknowingness" as a Route to Distributed Leadership

Author: **Clare Rigg**, *U. of Suffolk*
Author: **Sarah Bloomfield**, *The Open U.*
Author: **Russ Vince**, *U. of Bath*

Centring on distributed leadership, the purpose of this paper is to illuminate what happens in the absence of knowing what to do, where this is a known unknown and impossible to resolve. Traditionally leadership has been assumed to be comprised of persons in positions of authority who know (or think they know) what to do and how to act (Luscher and Lewis, 2008; Simpson et al., 2002). Whilst a flourishing literature now helps us understand leadership as a collective and relational endeavour, and ideas of distributed leadership in particular provide insight to shared knowledge and mutual action, our paper contributes further to elucidating what happens when there is no knowledge of how to act. Our first contribution is a new theory of knowledge in leadership, a theory of unknowingness - which we define as a state of awareness of both absence of knowing and one's inability to know. This offers an alternative explanation for not knowing to those that see absence of knowledge as deficiency (Saggarthi and Thakur, 2016), a temporary state of not knowing something (Bernstein, 2009), or ignorance of how to do something that can be learned (Allen, 2017). Our second contribution is to show how unknowingness is a component of collective leadership, which, through its four features of legitimacy, discomfort, utility and dissemination, can generate mutual action and enable work to be done in a context of organisational ambiguity. Our third contribution is to show the integral and generative relationship between unknowingness and distributed leadership.

Observing is an often underestimated form of communication in workplaces. Yet, humans (and other species) learn most through observation. When we take the time to observe – co-workers, students, family, other members of society - with a positive mindset, we may discover qualities that are not only admirable, but that we would have otherwise overlooked. This is not about physical aspects, but primarily about the considerate, kind, caring things others do that we rarely praise them for. It’s about positive reinforcement, inspired by observation. Interacting in this PDW, which is a brief moment in time, may not give us ample opportunity to observe each other’s daily behavioral patterns, but we can still get a “peek behind the curtains” of our fellow attendees through the poetry they select to recite. We therefore invite those who plan to join us to bring along a short poem they truly identify with. Collectively, we will then engage in the exercise of listening, appreciatively observing, and positively reinforcing one another. We hope that this brief practice will spark some renewed energy within those who attend to further explore the power of these combined practices in their classrooms, offices, other work environments, and any other social environment they partake in. By infusing appreciative observation and positive reinforcement into our daily interactions with others, we are gently and meaningfully treading toward creating a better world.

This PDW is designed to expose management scholars from the ONE division and other AOM divisions (e.g. IM, ODC, OMT, PNP, SIM, and STR) to the opportunities for research examining how business respond to increased natural adversity conditions and disasters generated by climate change. Collectively responding to climate change is a grand challenge fundamental to create a better world where business competitiveness and humanity wellbeing can continue to improve. The first part of the PDW will provide a basic overview of the field, including examples of ongoing corporate climate change strategy research. Then, the PDW will progress to a round-table and open discussion format to identify unexplored questions, highlight publishing challenges, and pinpoint opportunities for collaborative research on climate change adaptation research.

Participant: **Melissa L. Intindola**, *Bucknell U.*

Participant: **Eric C. Martin**, *Bucknell U.*

Management education that is focused on the United Nations Sustainable Development Goals (SDGs) has certainly increased in the past decade, and recent AACSB standards toward social impact will likely accelerate this trend. This 90-minute PDW offers an opportunity to learn about designing courses with SDG content, and provides a platform for transforming your pedagogy to align with social and environmental justice goals. The session will begin with a brief presentation by scholars who have significant experience in implementing SDGs into their classes, and will then turn to a guided open dialogue with audience participants on the current state and future direction of SDG integration in management education. We encourage attendees to participate and share what is happening at their universities so we can all benefit in learning how to work on behalf of program/university goals and community impact.

CMS: **Against Shared Values: “Disadherence” and “Gaps” as Fruitful Ingredients of Organizational Culture**  

Author: **Youcef Bousalham**, *Rouen U.*

Against shared values: "disadherence" and "gaps" as fruitful ingredients of organizational culture Building on F. Jullien to develop a critical and performative approach of Organizational Culture Abstract This article questions the powerful call to conformity that hides behind the simple and apparently humanistic idea of “shared values” within contemporary organizations, as well as the tacit modalities that, in managerial discourse, determine a member’s “belonging” to his or her company, his or her loyalty to the organization. This paper argues that the philosophical work of François Jullien can prove particularly fruitful for rethinking the way we construe organizational culture in management claiming that belonging to an organizational culture should not only be understood by adhesion and conformity but also by tensions, disadherence and gaps. We ask the following question: might it be possible to envisage an alternative concept to that of organizational values, one that would allow organizational culture in management sciences to be thought of in terms that are pluralist, reflexive and performative? Through his critique of the notion of cultural identity, Jullien (2008, 2012, 2016) uses the philosophical concept of cultural resources to challenge totalizing academic and political discourses wherein national culture and identity are reduced to a sum of “shared values”. The notion of cultural resource has both an intellectual and a political background. For example, Jullien (2016) uses it to confront nationalist discourses claiming to defend the roots, culture and national identity of France during the presidential campaign. Building on this philosophy, this article attempts to provide researchers, employees and managers with a critical and yet performative approach to organizational culture that values gaps and deviations as positive and creative by no longer turning them into elements of exclusion of « poorly acculturated » subjects, but, on the contrary, into a fruitful ingredient of the collective future. This novel approach offers to make room for employees and managers that are “acculturated” but able, through deviations and as proof of their belonging, to question the group’s choices, its sacred values and its shared self-evident truths and beliefs. From a theoretical standpoint, harnessing the concepts of cultural resources, gaps and disadherence in organization theory also enables us to eschew a limitation at the heart of both mainstream and Critical Studies on Organizational Culture (CSOC) offering the possibility of developing CSOC which are in line with recent proposals on critical performativity and anti-stupidity management.

CMS: **Pray and Play: Challenging Social Order through Collective Corporeal Rituals in a Prison**

Author: **Ignasi Lanuza Martí**, *ESADE Business School-Ramon Llull U.*

Author: **David Courpasson**, *EMLYON Business School*

Author: **Claire Le Breton**, *EMLYON Business School*

Best paper sponsored by the journal Organization Studies

This paper examines how a collective of prisoners transform their everyday lives in a high security prison. We show how these individuals both become new beings, and significantly modify certain functioning rules of the prison and the relationships they have with the prison authorities; we theorize these achievements as produced by two body-related rituals created by prisoners themselves: one related to rugby games and trainings, another related to weekly collective prayers. We show how these rituals enhance the collective energy of the group and build capacities for prisoners to learn new knowledge and skills. Our analysis rests on an ethnographic study of the inmates’ rugby team “Los Espartanos”. We specifically analyze corporeal interactions during rugby games and collective prayers as embodied social practices that are meaningful and meaning making. We use carnal sociology to analyze how the acquisition and ritualization of corporeal collective capacities hold possibilities of transformation in very constraining organizational environments.

CMS: **‘You Just Earned 10 points!’: Gaming and Grinding at an Online Academic Conference**

Author: **Nick Butler**, *Stockholm U.*

Author: **Sverre Spoelstra**, *Lund U., School of Economics and Management*

Gamification is commonly defined as the application of a game layer to non-game contexts, such as work or education. It involves implementing a digital platform to turn ordinary organizational activities into fun, intrinsically motivating tasks. Empirically, this paper explores the gamification of an online academic conference – specifically, a ‘Conference Challenge’ that encourages participants to score points by engaging in conference-related activities. The challenge was meant to stimulate increased levels of participation, but instead it resulted in a series of unintended consequences. Precisely because it was all too easy to score points and ascend the virtual leaderboard by means of ‘grinding’, the game posed a moral dilemma for the players: each participant had to determine for themselves where the border lay between playing the game and gaming the system. This suggests that the boundary between fair play and bad sportsmanship is permeable and contested, an insight that raises questions about the ethics of game-playing. We conclude by suggesting that the Conference Challenge is a distorted reflection of what’s already happening in the broader academic game that the conference is a part of.

Author: **Anne Antoni**, *Grenoble Ecole de Management*

Author: **Marianna Fotaki**, *Warwick Business School*

The rationalized and commodified time of the ‘time economy’, conditions the value of work and in particular undermines the value of care work. Care – concern for and actual attending to the needs of the particular others for whom we take responsibility – requires enacting time in a way that clashes with the ‘industrial time’ dominating our lives. While the antagonism between care and industrial time has been highlighted by ethicists of care, how carers are juggling in practice between industrial time and specific care time is still to be researched. In this article, we address this question through an in-depth qualitative case study of a social care service in France. Building on Adam’s work on the multiplexity of time (1995, 2004), we discover that while enacting industrial time through ‘scheduling work,’ carers are nevertheless carving out specific temporal features – time as continuous, non-standardized and in the present moment – that are necessary for care. Moreover, we highlight how carers also utilize the clock time that pervades the work organization as resource for care through normative and social dimensions. Thus, this research contributes to deepening our understanding of how care workers cope with the clock time hegemony to carve out a space for care practices. Finally, this research also contributes to showing the affective workings of time, and how it shapes socio-economic practices.

Diverse Groups: Tensions, Faultlines, and Outcomes

Session Moderator: **Laura M. Graves, Clark U.**

GDO: **Double-Edged Sword? Effects of Identity and Information Faultlines on Group Performance**    

Author: **Linyuan Zhang, Shandong Women's U.**
Author: **Jee Young Seong, Jeonbuk National U.**
Author: **Doo-Seung Hong, Seoul National U.**

According to the categorization-elaboration model (CEM), this study examines two mechanisms through which identity and information faultlines might affect group performance. Specifically, this study investigates how other types of faultlines (i.e., identity faultlines and information faultlines) affect different types of group conflict (i.e. relationship conflict and task conflict). The inconsistent findings of group performance are interpreted. Using data from a sample of 701 employees in 70 groups, the results indicate that relationship conflict mediated the negative relationship between identity faultlines and group performance, and task conflict supported a mediating role in the positive relationship between information faultlines and group performance. The results provide theoretical and practical guidance for management, contributing to the development of performance and efficiency of groups and organizations.

GDO: **Shaping Work in Collaboration: The Role of Sex and Rank in Negotiating Demands and Control in Groups**  

Author: **Corinne McNally, Saint Mary's U., Canada**
Author: **Catherine Loughlin, St. Mary's U.**

Reducing sex-based workplace inequity is central to our ability to 'create a better world together'. However, our studies (using exploratory sequential mixed methods design), suggest that collaborative group work contexts are anything but equal when it comes to negotiating demands and control in structuring work between men and women in groups. Study 1a interviews suggest a gendered distribution of control and demands; whereby women have less control over their work and, consequently, face heavier demands than men studying in business schools. This contributes to increased frustration and burnout for women. Study 1b replicates and extends this finding among female faculty who again report less influence over their groups and their own roles, and as a result, face heavier demands than male counterparts. Study 2 tests a conceptual model finding that control has an inverse relationship with demands; is predicted by sex, rank, and fear of backlash; mediates the relationships between these variables and demands and burnout; and is a stronger predictor of burnout than demands among faculty. These findings make novel theoretical and practical contributions to the Job Demands-Control literature by testing the model in a collaborative context from a gendered perspective.

GDO: **How Many Are Too Few and How Many Too Much? Gender Group Composition and Absenteeism**  

Author: **Laura Guillén Ramo, ESADE Business School / Ramon Llull U.**
Author: **Florian Kunze, U. of Konstanz**

Increasing women's representation in organizations and politics has become a top priority for many organizations. The individual consequences of doing so, however, remain largely unknown. For example, how the rising number of women in the workplace affects withdrawal behavior of women and men is unclear. In this study, we bridge the diversity and withdrawal behavior literatures to explore the consequences of gender and gender composition in groups on individual absenteeism and ultimately on group abandonment. Using a dataset of 10,332 blue-collar workers in 1,064 groups at a public service company tracked over four years, we found that for women, gender group composition and absenteeism had an U-shaped curvilinear relationship, such that the higher the proportion of women in the group, the lower women's absenteeism up to a tipping point from which a further increase in the share of women in the group did not decrease absenteeism. As expected, the proportion of women in their groups did not impact men's absenteeism. Finally, we also found that these effects on absenteeism endured over time and increased group abandonment. We derive implications of our findings for managers and organizations.

GDO: **Millennials vs Boomers: Asymmetric Realistic & Symbolic Threat Patterns Drive Generational Tensions**   

Author: **Stéphane Francioli, NYU Stern**
Author: **Michael North, New York U.**
Author: **Felix Danbold, UCL School of Management**

Conflict between Millennials and Baby Boomers appears frequently in public discourse. However, some have argued that these tensions are just media-generated controversy. We build on intergroup threat theory to explore the strength and nature of these tensions in three online studies: an exploratory survey, a preregistered correlational study, and a preregistered intervention (N = 1,714). We find that: (i) Millennials and Baby Boomers do express more animosity toward one another than toward other generations (Studies 1-3); (ii) whereas hostility toward Baby Boomers derives primarily from Millennials' economic distress (realistic threat), Baby Boomers' hostility toward Millennials reflects fears of shifting worldviews (symbolic threat; Studies 2-3); (iii) highlighting the artificiality of generational labels reduces perceived threats and indirectly elicits more favorable outgroup attitudes (Study 3). These findings suggest that intergenerational tensions are real, rooted in asymmetrical concerns over symbolic versus realistic resources, and responsive to intervention.

An unprecedented "great resignation" resulting from reevaluating the meaning of work is impacting people across geographies and industries (Aroles et al., 2021), positioning the quest for meaning as the new "money" (Erickson, 2011), the currency that people expect to exchange at work, and an essential feature of modern work and careers (Hall et al., 2017, 2013). With the ongoing transformation of the nature and meaning of work, the modern, fluid, and individualized workplace will only heighten the quest for meaningfulness in life and at work. Interest in and research on meaningful work have increased over the last two decades, with diverse theoretical and empirical approaches (Bailey et al., 2019; Laaser & Bolton, 2021; Lysova et al., 2019), gradually positioning it as a complex phenomenon resulting from dynamic processes and social construction that transcends the significance of mere subjective experiences (Yeoman et al., 2019). Despite such growth, there is still no clear understanding of how factors interact to foster the emergence of meaningful work, emphasizing the continuous need for a comprehensive approach (Lysova et al., 2019) that is more integrative, dynamic, and moves beyond self-oriented mechanisms (Rosso et al., 2010). Considering this, the objective of this symposium is to advance discussions about the intricate interplay of factors that contribute to the emergence of meaningful work and how that, in turn, shapes employees' experience of meaningfulness in a dynamic and integrative way. The symposium will bring a diverse range of scholars, drawing on different theoretical, methodological, and contextual approaches to enrich our understanding of the emergence and experience of meaningful work and how can we move towards a more integrative and dynamic understanding that can move this timely field forward to impact individuals and organizational outcomes positively.

**Branding, Eco-Labeling and Eco-Friendly
Consumption (Virtual Live)**

Session Moderator: **Zsuzsa Borsa**, *U. of St. Gallen*

ONE: **Purchase Intention of Cheap and Eco-Friendly Products**    

Author: **Lasandahasi Ranmuthumalie De Silva**, *Birkbeck, U. of London*

Author: **Fred Yamoah**, *Birkbeck U. of London*

Author: **Norrin Halilem**, *FSA ULaval (Laval U.)*

Consumer behaviour research has shown that the premium attribute of green products among other factors is a major enduring determinant of purchase intentions. Yet, limited understanding exists on consumer behaviour towards non-premium, cheaper green alternatives such as Remanufactured Electronic Products (REP). Against this backdrop, by building on personal value theory, this article examines the role of personal value orientations (i.e. societal value vs individualistic value) and national culture (i.e. the UK vs China) in the purchase intention of REPs. Based on a survey of 956 consumers across the United Kingdom and China, we find that the relationship between societal value orientation [concerns the welfare of others] and purchase intention of REPs is positive in the UK whereas it is negative in China. In both the cultures, this relationship is partially mediated by the perceived quality of REPs. On the other hand, it is apparent that in both the UK and China, there is a positive relationship between individualistic value orientation [emphasises the pursuit of self-interest] and the purchase intention of REPs, fully mediated by perceived quality of REPs. The findings make original contributions to green consumption research and practice by advancing personal value theory to demonstrate how to factor personal value orientations, differing national culture and the mediation role of perceived quality in influencing the purchase intention of cheaper green products.

ONE: **Full throttle! Engaging Ethnic Minority and Majority Consumers in Car Sharing**  

Author: **Marie-Julie De Bruyne**, *Ghent U.*

Author: **Katrien Verleye**, *Ghent U.*

Author: **Hendrik Slabbink**, *Ghent U.*

Author: **Saskia Crucke**, *Ghent U.*

The world is affected by environmental and social challenges, resulting in calls for engaging consumers with initiatives focused on sharing underutilized resources in Western countries. Meanwhile, these countries are characterized by migration and ethnic diversity, giving rise to ethnic minority consumers. Although ethnicity is a driver of consumer engagement, little is known about the influence of ethnicity on consumer engagement with sharing initiatives in Western countries. To address this gap, we examine the role of perceived value and perceived trust for engaging ethnic minority (vs. majority) consumers with sharing initiatives by relying on survey data gathered in the Belgian car sharing context. The results suggest that ethnic minority consumers perceive more environmental value of car sharing and less trust in car sharing. Moreover, perceived value and perceived trust act as important mediating mechanisms for non-behavioral manifestations of consumer engagement but even more for behavioral manifestations of consumer engagement.

ONE: **All Clear? Firms' Options to Combine Different Eco-Labels and (Un)informed Consumer Responses**  

Author: **Myrthe Rietkerk**, *Amsterdam Business School, U. of Amsterdam*

Author: **Siri Nordland Boe-Lillegraven**, *Amsterdam Business School, U. of Amsterdam*

Clear CSR-related communication is important for firms if they want to benefit from their CSR efforts. Eco-labelling is a widely used form of CSR communication, but how effective is it and what are the likely returns for different types of labels? While most existing eco-labels provide consumers with information about the environmental performance of specific products, eco-labels focused on the environmental performance of entire firms are growing in popularity. Furthermore, both product-level and firm-level eco-labels can be based on claims made by the firm or manufacturer itself, or be externally certified. Relying on a 4 x 4 within-subject fractional-factorial vignette study design, this paper investigates the effects of different types of eco-labels on consumer response. Findings suggests that the type of eco-label matters when consumers are well informed about the labels' meaning, with externally certified and firm-level labels being preferred. Otherwise, using more than one label matters more than the nature of the labels as such.

ONE: **Sustainability Branding: Challenges with Building and Maintaining Stakeholder Trust** 

Author: **Zsuzsa Borsza**, *U. of St. Gallen*

Author: **Judith Louise Walls**, *HSG U. of St. Gallen*

Trust-based stakeholder relations are critical to corporate success. However, macro-level contextual influences and ever-changing, divergent stakeholder expectations make it challenging for corporates to build and maintain stakeholder trust. In addition, tensions arise due to different approaches of trust-building within corporates activities such between branding and sustainability. For example, corporate branding typically relies heavily on communication with stakeholders, but over-communication can lead to accusations of greenwashing. We build our theorizing on the notion of stakeholder trust as the key to resolving observed tensions in corporate sustainability branding. Acknowledging the compound nature of trust, we illustrate how sustainability influences all three dimensions of trust (affective, cognitive, and behavioral) and how trust-building processes change once sustainability is implemented into corporate (brand) strategies.

Managing with and among More-than-human Stakeholders: The Rise of Nature-based Legal Persons

Management and More-than-Human Stakeholders

Organizer: **Costanza Sartoris**, *U. Ca' Foscari of Venice - Dept. of Management*

Organizer: **Nicholas Poggioli**, *Appalachian State U.*

Distinguished Speaker: **Bobby Banerjee**, *Bayes Business School (formerly Cass)*

This PDW supports scholars interested in managing with and among more-than-human stakeholders. More-than-human stakeholders include entities like rivers, plants, and other actors. In the past decades, marginalized indigenous groups and others have acted to win recognition of such entities as right-holders (Banerjee & Arjaliès, 2021). Nowadays, these stakeholders are beginning to secure all over the world legal personhood rights in legal systems, rights like those extended to corporations. For instance, New Zealand has recognized a river as a legal person (Hollingsworth, 2020), while the United States recognized a plant, which has since sued a state government (Douglas, 2021). The rise of legal personhood rights for these more-than-human stakeholders challenges existing management theory and practice developed within a legal regime in which only humans, corporations, and states have legal standing. This PDW supports scholars working in this area to discuss cutting edge issues of research and practice. Also, this PDW intends to enunciate a research agenda to guide near-term work on management with and among more-than-human stakeholders. We explore how the emergence of new legal persons might affect management theory, practice, and teaching. We take a broad, interdisciplinary perspective and invite scholars and practitioners from all disciplines and industries to join the PDW.

Presenter: **Jason Russell**, *State U. of New York Empire State College*
Presenter: **Lucy Taksa**, *Macquarie U.*

Philosopher Herbert Marcuse argued for the centrality of the university to critical scholarship and social change in the 1960s, a period of social upheaval and rising expenditures for higher education. Since then, in many national contexts, universities have been hobbled by reduced government support and increased pressure from employer interests and hostile political forces. Academic freedom and tenure systems have given way to greater precarity in employment on an international level, although there is tremendous local and national variation. We propose an interactive session with a global set of scholars introducing particular cases of peril to faculty status and autonomy and commenting on potential remedies: faculty union strategies and other forms of activism.

Women's Access to Career Resources

Session Moderator: **Dirk Deichmann**, *Erasmus U. Rotterdam*

GDO: **Network Inequalities: Why Cohesiveness Hurts Women (and Helps Men) to Get Ideas Funded**  

Author: **Dirk Deichmann**, *Erasmus U. Rotterdam*
Author: **Balazs Szatmari**, *U. of Amsterdam*
Author: **Jasmien Khattab**, *Erasmus U. Rotterdam*
Author: **Romy Van Der Lee**, *Vrije U. Amsterdam*

In order to work on and implement new ideas, idea creators usually need funding. Provided that there are limited resources, however, not every idea can and will be selected for funding. In this study, we explore in what ways the network cohesion of an idea creator may influence idea funding decisions, and how these funding decisions differ between female and male idea creators. For this purpose, we analyze data on research proposals which were submitted to a national science foundation by early-career scholars in 2014 and 2015. We argue that the effects of network cohesion on the idea creator's competence (as perceived by idea assessors) are positive for male idea creators, but negative for female idea creators. In addition, we suggest that the effect of perceived competence on idea funding is stronger for male idea creators compared to female idea creators. Controlling for the assessed quality of the research idea, we find confirmation for our moderation hypotheses. Our findings demonstrate the complex ways in which gender bias continues to influence idea funding decisions, ultimately disadvantaging the development of ideas proposed by women.

Best Paper on Gender, Diversity, & Entrepreneurship

We examine the issue of entrepreneurial gender bias by focusing on the underlying mechanisms that impact the likelihood of receiving external venture capital financing. We claim that gender bias negatively affects socially attributed dimensions (such as the stigma ascribed to entrepreneurs who have previously suffered a failure), while it has no effect on objective dimensions (such as the experience gained by entrepreneurs). Our results, based on 2,088 US firms, show that female entrepreneurs are less likely to attract external funds if they have previously encountered failure. This negative effect becomes mostly nonsignificant when novel or serial successful entrepreneurs are considered.

Paper is Available to Meeting Registrants Only.

GDO: **Institutional Support is Good for Female Entrepreneurs but How?**    

Author: **Nastaran Simarasl**, *California State Polytechnic U., Pomona*
Author: **Pooya Tabesh**, *California State U., Los Angeles*
Author: **Timothy P. Munyon**, *U. of Tennessee, Knoxville*
Author: **Zahra Marzban**, *allameh Tabataba'i U.*

Female entrepreneurs often face challenges that can be magnified in constrained contexts where they lack the same rights and resources as men. Although past research suggests that institutional support may help contribute to female entrepreneurs' success, it is still unclear how this support affects post-founding entrepreneurial processes and outcomes in constrained contexts. Using a unique sample of Iranian female entrepreneurs, our moderated mediation analysis shows that institutional support moderates the effect of entrepreneurial actions on new venture performance through entrepreneurial self-efficacy. Thus, while female entrepreneurs face significant challenges in constrained contexts, institutional support can enable them to translate their entrepreneurial actions into higher self-confidence and better venture outcomes. Post-hoc comparisons with an American sample also suggest that the type of institutional support varies between constrained and less constrained contexts. In sum, these results suggest that institutional support helps female entrepreneurs succeed after the venture founding stage by strengthening the entrepreneurial action — self-efficacy relationship.

Paper is Available to Meeting Registrants Only.

GDO: **The Impact of Entrepreneur Gender and National Culture on Access to Capital** 

Author: **Angelica Gutierrez**, *Loyola Marymount U.*
Author: **Yongsun Paik**, *Loyola Marymount U.*

Drawing on gendered institutions and implicit gender role theory, we examine the interactive effect of entrepreneurs' gender and national culture on people's willingness to finance ventures. In an experimental setting, MBA students in the U.S. and South Korea evaluated a venture owned by either a male or female entrepreneur, and indicated their willingness to invest in the venture. Findings suggest that national context moderates the effect of implicit gender role theories on investment willingness. The relationship between implicit gender role theories and investment willingness is more negative in South Korea than in the U.S. The more individuals endorsed the belief that gender roles are fixed rather than malleable, the less they were willing to fund women entrepreneurs. Implicit gender role theories had no effect on the funding of male entrepreneurs in either the U.S. or South Korea. Results demonstrate gender bias in access to capital.

Author: **Fiona Murray**, *Massachusetts Institute of Technology*

STEM PhDs are a critical source of human capital in the innovation economy. However, their training may not have kept pace with expectations of their contributions, upon graduation, to commercial as well as academic science. We examine whether STEM PhDs engage in patenting as students, becoming new inventors (file their first patent) during doctoral training at leading U.S. universities. Overall, we find that 4% of STEM PhDs become new inventors while training. However, for advisees of faculty who are themselves top (prolific) inventors, this rises to 23%. Indeed, top inventor faculty train over 45% of new inventor PhDs by co-patenting with their advisees. Given concerns over gender inclusion, we also explore whether new inventors are equally distributed by gender. We find that in our sample, the share of female new inventors in patents is 9 percentage points lower than the share of female STEM PhDs. Various mechanisms explain this gap. First, female PhDs are less likely to be trained by top inventor faculty advisors than male PhDs (and more likely to be trained by the smaller number of female top inventors). Second, female PhDs (with either top inventor or other faculty advisors) have a lower probability of becoming a new inventor relative to male counterparts. Importantly, we find that male and female top inventors have similar rates of transforming their female advisees into new inventors at about 8 percentage points lower than for male advisees.

Participant: **Patrick Yanahan**, *USA Strategies, Inc*
Participant: **Haibo Liu**, *Shenzhen Wondale Management Consulting Company*

The past two years have created an amazing quasi-experimental condition for firms to find ways to succeed or fail dramatically during the economic catastrophe caused by the COVID-19 pandemic and other simultaneous crises. This gives us a unique opportunity to learn from successful firms what they did, and use that to generate new theory and practices that may generalize to a much broader audience. We often talk about how to integrate more field-work into our divisions. This is a wonderful opportunity to do just that. This global panel of business leaders from the United States, Lebanon, and China, will share how their firms not only survived, but thrived during these crises.

Maximising Teaching Impact: An Easy Guide to Turbocharging Learning Through Comparison Activities *Teaching Impact Through Comparison Activities*

Organizer: **Martin R. Fellenz**, *Trinity Business School, Trinity College Dublin*
Organizer: **Michelle MacMahon**, *Trinity Business School, Trinity College Dublin - U. of Dublin*
Organizer: **Mairead Brady**, *Trinity Business School, Trinity College Dublin*

This workshop supports educators in developing the skills and knowledge to design and implement effective comparison activities to significantly enhance student learning. Comparison activities, such as students comparing their work against a suitable referent (e.g., peer work; exemplars; instructions; rubrics) or informally comparing their opinion against that of their peers in a buzz group offer an extremely effective teaching strategy for supporting student learning. Well-designed comparison activities support self-regulated learning by facilitating students in engaging in inner conversations about their work and produce inner feedback that becomes the raw material for their learning and development. This highly interactive and collaborative workshop provides participants with immediately useable ideas that are applicable to a wide variety of teaching practices. It guides participants in developing insights about comparison activities for students self-regulated learning; helps participants identify the ubiquitous, implicit comparison opportunities already part of their educational practices; and facilitates participants in identifying concrete opportunities for enhancing existing and designing and implementing new comparison activities within their teaching practice. We introduce a design and implementation framework; provide instructive case examples; and offer a template that structures design and implementation in easily identifiable and manageable steps. In the workshop attendees will design opportunities to use this approach in their own teaching. The workshop intersperses useful input with with reflective and experiential exercises to highlight the benefits and processes of comparison-based internal feedback. Comparison activities can be deployed across all learning settings including in classroom settings, individual and group assignments, and online tasks and interactions.

The Covid-19 pandemic of 2020-22 has caused major disruptions to not only the AOM but also to the whole academic teaching and research process. In exploring these and other challenges to academic research, this PDW brings together editors from 4 journals: Journal of Management History, Qualitative Research in Organizations and Management, Management & Organisational History, and Relations Industrielle / Industrial Relations. Drawing upon their experiences, the PDW will discuss both the issues confronting journals and editors, and also those confronting authors. Among the former are an apparent decline of downloads during the pandemic and the forced retirement / redundancy of academic staff that is (or will) impact author and reviewer numbers. The opaque nature of the journal ranking process, most particularly the British and Australian Dean's Ranking Lists will also be discussed. Another issue confronting some journals is the outsourcing of the proofing and publication process to cheaper, low-quality firms. For authors, issues worthy of discussion include the cutback of research funding, the impact of virtual teaching, difficulty in accessing physical libraries and archives. The PDW will aim to be as interactive as possible so as to allow authors and other participants an insight into the publication process, the problems confronting journals in the management history, critical management studies and labor relations space, and the wider changes impacting the intellectual reach of academic journals.

Finalist for MOC Division Best Symposium Award

Emotional distress is a common occurrence in workplaces, with up to a third of the working population suffering from poor psychological health. With the emergence of the Coronavirus 2019 (COVID-19) global pandemic, concerns surrounding psychological health in the workplace are particularly relevant. The effects of the pandemic have been felt widely across society, and have significantly changed the ways that people engage in their work. While much of the current research on workplace distress focuses on the causes and consequences of distress, little research investigates this process in “ordinary” workplaces, many of which were hit hardest by the pandemic. To consider this topic, we have assembled a panel of scholars who study distress and well-being within organizations. Together, these panelists will shed light on distress in the context of ordinary workplaces, as well as how suffering emerges in organizational contexts, and the types of behaviours that employees engage in to recognize, make sense of, and communicate about their own and others’ distress

In many parts of the economy, technology plays an increasingly important role in the control and management of workers. In this presenter symposium, we bring together four studies that offer novel insight into different dimensions of the relationship between technology and work, including behavioral experiments, identity control, the importance of social and cultural context, and effects for professional identity and autonomy. Our studies taken together show the importance of technology in a wide range of settings—platform-mediated work, such as ride-hailing and software development, platform-work, such as Instagram influencers, and professional work performed in labor and delivery wards. By offering examinations of the intersections between technology and control in a variety of work contexts, both newer and more traditional, using both quantitative and qualitative methods, our symposium promises novel insights into the evolving and future role of technology in relationship between work and workers.

Achieving gender equity in entrepreneurship is a pressing societal concern. A growing number of studies have provided consistent evidence for gender disparities and barriers for female entrepreneurs. Yet, research also suggests that under certain conditions, tied to the unique features of the entrepreneurship context, there may also be a female advantage in venture evaluations and funding outcomes. In this symposium, we hone in on this burgeoning line of inquiry by bringing together four presentations that investigate when and why a female (dis)advantage emerges, and how certain features of this context help to mitigate gender bias. Based on a diverse array of methods (archival, experimental, and video metrics) and samples (angel investors, accelerators, and cofounders), the presentations highlight novel mechanisms underlying gender bias in entrepreneurship settings. Overall, this symposium aims to 1) offer actionable insights for recognizing and addressing gender bias in entrepreneurship and 2) identify new directions for gender research more broadly.

As in organizational life, there are numerous barriers that detriment female scholars in academia generally and in the field of organizational sciences, specifically. Indeed, akin to the ‘glass ceiling’ phenomenon within organizations, women in academia suffer from similar gender inequities (e.g., field-level structural barriers, lack of organizational support, social support concerns, and limited allyship). As such, the aim of the proposed professional development workshop (PDW) is to shed light on the challenges that female scholars face in our field and generate ideas and solutions for changes that can help women overcome some of these barriers. To do so, this session invites leading scholars to apply insights from their own, and others’, research and knowledge on gender and organizational bias to the field of management. The panelist presentations will be followed by breakout sessions where participants are able to have open conversations with the panelists and engage in a discussion of possible solutions to the barriers women scholars face. Combined, this PDW seeks to broaden our understanding of women’s experiences in the Academy and find solutions to better meet the needs of female scholars and facilitate their success in the field. This PDW is slated to be one of the flagship PDWs of the OB Division.

Pre-registration is required; details will be shared on the AOM OB Listserv.

This symposium aims to call attention to the fundamentally human challenges that lie ahead in the future of work and thus expand the focus of management research on the future of work beyond technology. Four papers bring together diverse perspectives from management on the human side of work in the future. The papers move beyond understanding technology as a key driver of changes at work to put people at the center, examining four fundamental human aspects that are critical to address to create a better future of work, namely: leadership in a global crisis, work-family conflict, work mattering, and belonging. The four speakers illustrate why solving these human challenges is as critical to the future of work as harnessing the promise of technology. First, Lauren Howe, Laura Giurge, Alexander Wagner, and Jochen Menges document the performance benefits of leaders who pay attention to the human costs of a global crisis such as employee health and well-being. Second, Jamie Gloor, Susanne Braun, and Jenny Hoobler document how leaders, especially male leaders, can positively shape their followers' perceptions and behaviors by being open about their experience with work-life conflict. Third, Hilary Hoyt Hendricks, Nathan Meikle, Julia Lee Cunningham, and Alaina Segura show how employees can rely on each other to harness a sense of mattering at work in a context where technology might make it difficult to do so. Finally, Felix Danbold draws attention to the challenge of creating a sense of belonging at work and documents when and why members of non-dominant groups claim belonging in organizations. By presenting these four human challenges in the future of work, this symposium illustrates how ignoring the human aspects of the future of work can be costly for organizational leaders who want to maintain a competitive advantage as well as for management scholars who care about expanding our understanding of the future of work so that humans, and not just machines, are in the spotlight.

Burnout and Strain

Session Moderator: **Izzy Gainsburg**, *Harvard Kennedy School*

OB: Associating Empowering Leadership and Occupational Burnout in Nursing: A Mediated Moderation Model

Author: **Hira Salah Ud Din Khan**, *School of Management, Jiangsu U., China*

Author: **Muhammad Salman Chughtai**, *Faculty of Management Sciences, International Islamic U., Islamabad*

Based on empowerment and hardiness theory, this study investigated the dual impact of empowering leadership on occupational burnout through the mediating role of workaholism and the moderating impact of psychological hardiness in the relationship between empowering leadership and occupational burnout. Additionally, the mediated moderation model was investigated. Temporal separation (two time-lags with one-month separation from first-lag to second-lag) data collection approach was applied to collect opinions from the study participants through survey method; 212 permanent employees (nurses) participated from the healthcare sector to test the proposed hypothesis of this study. Using PROCESS macros, the study's findings revealed that empowering leadership is a significant predictor of minimizing occupational burnout. Moreover, the study's findings also validate that workaholism is a critical mediator between empowering leadership and occupational burnout. The results indicated that empowering leadership also leads to burden nurses as they work excessively and leads to occupational burnout. Further, Psychological hardiness plays an important moderator role in the link between workaholism and occupational burnout. Finally, the results of mediated moderation model demonstrated that nurses with high psychological hardiness adjust and cope well with the stressful workload i.e., workaholism when empowered by their leaders/supervisors. The findings highlight the potential benefit and risks of empowering leadership for the nursing profession and healthcare management. This study extends the previous literature by empirically testing how workaholism and psychological hardiness affect the empowering leadership and occupational burnout relationship in the nursing profession of Pakistan. Key Words Empowering Leadership; Workaholism; Psychological Hardiness; Occupational Burnout

OB: Adaptive Work and Family Behaviors Link Support to Mental Health During a Pandemic

Author: **Shaun Michael Pichler**, *California State U., Fullerton*

Author: **Wendy J. Casper**, *U. of Texas At Arlington*

Author: **Luke Fletcher**, *School of Management, U. of Bath*

Author: **Nishat Babu**, *Loughborough U., School of Business and Economics*

Although social support is widely studied, how support from multiple life domains coalesce to predict psychological health is not well-understood. We address a key unresolved issue in the social support literature - how social support relates to psychological health - by examining adaptive behavior as a mechanism through which support from work and family domains, during the COVID-19 pandemic, impacts psychological health. Given support may not equally benefit all, we consider individual differences in demographics as moderators in the relationships between support, adaptive behavior and health outcomes. We examine both within-domain and cross-domain effects of support on adaptive behavior using a sample of 392 employees who responded to two surveys, three weeks apart, shortly after the COVID-19 lockdown. Consistent with expectations, adaptive behavior both within and across domains mediated the relationships between social support and psychological health. Relationship between family support and adaptation in the family domain and psychological health were stronger among participants without a cohabiting partner. Our findings highlight the important role social support and adaptive behavior play in maintaining well-being during crisis events, particularly for persons without cohabiting partners.

OB: The Interactive Effects of Job Demands and Present Temporal Focus for Time Pressure and Strain 

Author: **Nina Junker**, *Institute of Psychology, U. of Oslo*

Author: **Roman Briker**, *Maastricht U.*

Time pressure is ubiquitous in peoples' work lives and is associated with many negative consequences for employees' well-being. In general, scholars have viewed time pressure as a characteristic intrinsic to the job which—in isolation or jointly with other job facets—relates to employees' strain. This common operationalization of time pressure, however, is misaligned with time pressure's core definition to constitute an outcome (not a dimension) of job demands. Combining a subjective time lens with job demands-resources theory, we propose that time pressure transfers the effects of quantitative job demands on employee strain. Furthermore, we add insights from temporal personality theory to this model to hypothesize that employees' present temporal focus (i.e., the extent to which individuals pay attention to the present) strengthens this indirect relationship. We test this model in a three-wave, longitudinal study of 515 German employees. Cross-lagged panel analyses demonstrate that for moderately to highly present-focused employees (but not for less present-focused individuals), job demands relate to increased time pressure and, by extension, increased strain. These findings indicate that enriching the literature on job demands and time pressure with a subjective time lens provides critical insights into how and when time pressure emerges and decreases employee well-being.

Paper is NOT Available. Please contact the author(s).

Author: **Izzy Gainsburg**, *Harvard Kennedy School*

Author: **Julia Lee Cunningham**, *U. of Michigan*

People's compassion response often weakens with repeated exposure to suffering, a phenomenon known as compassion fatigue. Why is it so difficult to continue feeling compassion in response to others' suffering? One possibility is that the capacity to feel compassion in these situations is explained by people's belief that compassion is a limited resource and that feeling compassion can result in fatigue. We propose that mindsets about compassion as limited result in a self-fulfilling prophecy that reinforces compassion fatigue. If so, then inducing the mindset that compassion is nonlimited should enable people to continue to feel compassion in the face of suffering. Across three studies, we show that there is variability in people's compassion mindsets, that these mindsets can be altered through information supporting one view or the other, and that limited-compassion mindsets are associated with lower feelings of compassion, less helping, and more fatigue. This research not only identifies a novel factor predicting compassion fatigue; it also supports the idea that people's beliefs about the nature of emotions affect how emotions are experienced. Together, this research contributes to developing a strategy for increasing people's capacity to feel compassion and their prosocial behavior.

Participant: **Shuxia Zhang**, *Ohio State U.*
Participant: **Meng Zhong**, *Xi'an Jiaotong U.*

Servant leadership, which prioritizes the interests and wellbeing of those being served, is considered as a unique approach that offers much potential to enrich our understanding of leadership. Despite the growing interest in exploring the influences of servant leadership on followers and other stakeholders, several research questions that matter for both theory and practice remain largely unanswered. First, servant behaviors are modifiable and trainable. In addition to innate personality traits, what situational factors contribute to the display of servant leadership behaviors? Second, like other positive leadership approaches, servant leadership has been criticized to be overly idealistic and nice. Then how do servant leaders manage conflicts, deliver negative feedback, and help employees in their career progression? To extend our conceptual and empirical understanding of servant leadership, we offer five papers in this symposium that examine the causes and influences of servant leadership, highlighting how servant leadership can be developed through leaders' signals and followers' experiences, and how and when their servant behaviors can inspire followers to reach their fullest potential.

Discussions on decolonizing management and organization studies have recently gained attention. While worldwide concerns on institutional racism has increased the sensitivity on the matter, the debate is also relevant for management scholars to achieve their set goal of addressing grand challenges: Only from an unbiased cultural view on an investigated case, scholars can establish practical knowledge, able to tackle today’s Sustainable Development Goals beyond the Western world. Existing literature, i.e., has raised the awareness on ethnocentric concepts or has urged to develop ‘indigenous theories’ to respect diverse social-cultural contexts while researching. Beside these valuable inputs, though, few literatures exist on applicable measures for doing decolonized management studies. This hybrid PDW aims to address this gap. Prominent scholars will present different approaches by (i) elaborating the added value of investigating non-western contexts for management research, (ii) reviewing theoretical concepts that consider local contexts for theory development, and (iii) discussing methodologies for unbiased research. Drawing on these inputs, round table discussions will allow participants to jointly develop a Charta for raising awareness on the topic. The overall goal of the PDW is to improve theory development by avoiding western-biased research. We thus believe that this PDW is of particular interest for scholars of the OMT community. We also expect that CMS and SIM scholars will sympathize with our self-critical standpoint for impactful research. Finally, RM scholars will be curious to hear about methodological approaches for doing value-neutral research.

The first part of the PDW consists of presentations by prominent scholars who discuss reasons and approaches for decolonizing management studies. Anyone registered for the conference may attend the first part without pre-registration. The second part consists of round table discussions (in-person & online) during which attendees can elaborate together with the speakers the topic of the PDW in further depth by jointly establishing a Charta for raising awareness on the issue. This second part is limited to 10 participants per group (max. 80 participants). Participants who are interested in attending the second part of the PDW are invited to raise their motivation via the following registration form until the 30 of June 2022:
https://aom2022pdw.wufoo.com/forms/pdw_decolonizing-management-studies/ For any further enquiries, please contact: emamdeen.fohim@kpm.unibe.ch & c.k.kella@tilburguniversity.edu

Incorporating Machine Learning into Literature Search, Meta-analysis and Systematic Reviews *Efficient Systematic Review Using Machine Learning*

Presenter: **Hadi Fariborzi**, *Mount Royal U.*
Presenter: **Piers Steel**, *U. of Calgary*

Integrating findings of individual studies to depict the state of knowledge in a field is the cornerstone of scientific inquiry. Such evidence synthesis is achieved in systematic literature reviews, meta-analysis studies, or in any literature search. This workshop aims to introduce newly developed tools that incorporate advanced techniques such as Machine Learning to significantly increase the efficiency of conducting large scale systematic reviews. This will be achieved through an interactive plan involving the participants in updating an outdated meta-analysis study. Through collaborative work with the participants in the workshop, we will start from keyword search and importing data from multiple databases, involving participants in a step-by-step project, to get to the point of selecting the final set of papers to be included. We will highlight key challenges in conducting systematic reviews and then introduce software tools at each step that can improve efficiencies. Specifically, we will address ways to efficiently handle duplicate entries, conduct collaborative research, remove irrelevant records using title/abstract screening with Machine Learning, download full-text of articles and analyze those full-texts and provide better ways to update existing systematic reviews.

Panelist: **Erica Steckler**, *U. of Massachusetts, Lowell*
Panelist: **David M. Boje**, *Emeritus*
Panelist: **Wendelin Küppers**, *Karlshochschule International U.*

Business organizations are often criticized for not acting in the interest of the public good thereby harming the wellbeing of humanity and the planet. In fact, they are often accused of being a key cause behind the crises we now face—climate change, inequality, biodiversity loss, to name a few. Recent literature argues that the neo-classical/neo-liberal perspective that dominates the governing philosophy of business organizations is behind the lack of attention to public good (e.g., Farias et al., 2020; Waddock, 2020). This PDW convenes scholars from diverse management disciplines to delve deeper into these ideas with a critical examination of the language, narratives, and rhetoric that together created a dominant institutional logic, which has raised barriers to paradigm shift and prevented a more serious focus on sustainability and the public good. Furthermore, this PDW will enable scholars to share ideas, spark inspiration and co-generate solutions that have the potential for business as an institution to in fact, create a better world together for and with all. The PDW opens with thought-leading panelists, each introducing a challenging question to develop and advance new paradigms grounded in the idea of building new narratives. Panelists will then serve as facilitators of roundtable workshops designed to develop and amplify inclusive principles and practices that inspire novel thinking, energize solution-generation, advance scholarship, and support teaching across AOM divisions.

Participant: **Jiyoung Kim**, *Jonkoping International Business School*

Few scholars would disagree with the notion that no entrepreneur acts in a vacuum, yet the manner in which macro-environmental changes – consisting of technological, regulatory, socio-cultural, economic, political, demographic, and natural-environmental factors, among others – exert influence upon micro-level entrepreneurial actions and outcomes has been a scattered, challenging, understudied line of inquiry for entrepreneurship research. In recent years, however, scholars have begun to broaden and deepen their study of what Per Davidsson dubbed “external enablers”: exogenous, actor-independent drivers of entrepreneurship. The identification and incorporation of external enablement -- wherever it may occur in the new venture creation process -- offers a more workable and dramatically less contentious approach than “objective opportunities” to account for the emergence and fate of business ventures. With several dozen articles appearing in top entrepreneurship journals in the past three years, a Special Issue on EEs underway at the Strategic Entrepreneurship Journal, and numerous doctoral dissertations flowing from programs around the world, the study of external enablement has become an exciting font of scholarly activity. Yet, the pandemic has made it difficult for the emerging community of EE scholars to share novel insights and to welcome and educate newcomers about conceptual and empirical work on exogenous influences of entrepreneurial actions and outcomes. We plan to stage a workshop in which participants are invited to immerse themselves in the collegial debate and development of new research questions, conceptual gaps, compelling data, and fresh methodological approaches.

No invitation or prior preparation is required to attend this workshop. We welcome conference participants from all Divisions, though the primary sponsor is ENT. The session will appeal to PhD students, faculty, and practitioners regardless of whether one is an expert or newcomer to this research stream.

Participant: **Meredith Lauren Woehler**, *Purdue U.*

Aligned with the 2022 conference theme, “Creating a Better World Together,” the goals of this interactive PDW are to discuss lessons learned and reflections moving forward as academics personally and professionally, building on participants’ lived work-life inclusion experiences during COVID-19 regarding how individuals and organizations managed flexibility, well-being, and career equality. Work-life inclusion is defined as when individuals perceive work cultures and structures as supporting an individual’s ability to thrive authentically in family and personal life roles on and off the job, while progressing in a career (Kossek & Lee, 2021). Business schools and universities provide a unique context in order to assess such Covid-19 impacts due to the extreme underrepresentation of women full professors (less than 20%), the high job overlap between personal and professional identities reinforcing overwork cultures, and the rapid transition to remote working causing high work and nonwork intensification and disrupting boundaries and supports. Although work-life pressures have been documented to affect the career advancement, inclusion, and retention of faculty and scientists- especially women and other caregivers, and many business schools target advancing gender diversity and inclusion as a strategic goal- now assessed as criteria for AACSB accreditation, work-life issues are not well-integrated into diversity, equity, and inclusion initiatives; which the pandemic made very salient. The PDW will include faculty from a diversity of career stages, nationalities, family status, living arrangements, and gender and work-life backgrounds and will integrate gender equality inclusion insights from a recent U.S. National Science Foundation workshop and a National Academy of Science report. Participants will share equality, flexibility and well-being impact, discussing actionable insights.

The goal of this PDW is to establish short and long-term mechanisms to engage and support international students and early career faculty within the HR Division of the Academy of Management. International members (outside of USA and Canada) represent a large portion of the Division – in terms of both their share of the HR Division membership and participation in AOM/HR Division conferences. It is essential to engage international members, in particular international PhD students and early career faculty, for improving the global inclusiveness of the division. In the first offering of this PDW, international PhD students and early career faculty shared a range of experiences, needs, and challenges. This follow-up PDW builds on findings of last year’s PDW and will be more solutions-focused, aiming to create concrete plans to address challenges faced by this group. Attendees can expect to discuss – and volunteer to take part in – potential solutions to challenges related to being international members in a scholarly association that is becoming increasingly international, learn about opportunities for international members to become more involved in the HR Division and the AOM, and discuss "what's in it for early career scholars" to be members of the HR Division and the AOM (in terms of available activities and resources). Designed as a forum for discussing how to create meaningful experiences and lasting relationships of junior international scholars within the HR Division, this PDW will be structured in 4-parts: (1) sharing the vision and goals of the HR Division International Committee, (2) generating actionable solutions to support international PhD students and early career faculty and creating teams to further develop these plans, (3) learning from a panel of international guest speakers who will share their advice and experiences, (4) introducing the Junior Ambassadors group – the new delegates within the HR Division’s Ambassadors program – and think of ways to leverage on this program.

To register, please send an e-mail to Vanessa Shum at: vanessa_shum@sfu.ca. Please include your CV (with your name, name of institution, and location), number of years in the PhD program or post-graduation, and three research topics/areas you are interested in. Please register by July 22. We look forward to having you with us in this workshop!

This interactive workshop explores broad-based forms of employee financial participation such as equity compensation, employee share ownership, and profit sharing, and prepares attendees to teach about these concepts in a variety of business school courses. Research shows that sharing equity and profits with employees can spur positive employee and firm performance, particularly when combined with participatory decision-making processes. Sharing equity also boosts employee financial well-being and reduces wealth inequality. Nearly 20% of U.S. employees have equity ownership in the companies where they work and nearly half of U.S. employees are eligible for some form of financial sharing at work—whether equity sharing, profit sharing, stock options, or gainsharing. Despite the ubiquity of broad-based financial sharing and despite its positive effects, relatively few business school courses educate students about this widespread organizational tool. In this PDW, faculty describe tested strategies for teaching about broad-based financial sharing in a variety of business school and management classes—highlighting case studies, readings and films. The presenters will explain why teaching about equity and profit sharing is essential to advancing the annual meeting’s vision of “creating a better world together.” Through short presentations and small group discussion, attendees will gain knowledge, skills, and tools to better understand and teach about equity compensation and profit sharing. All will take away a stronger understanding of equity compensation and profit sharing as innovative and potent forms of financial sharing that are a key tool for building a more equitable economy in which prosperity is broadly shared.

MED: The Effect of Psychological Capital on Students’ Mental Health and Experience During the Pandemic 

Author: **Ming Li**, *U. of Liverpool*

Author: **Michal Wilczewski**, *U. of Warsaw*

Author: **Paola Giuri**, *Bologna U.*

Author: **Zhixi Zhuang**, *Ryerson U.*

Global Forum Best Paper Award for the paper that best creates the opportunity to address global issues of significance to management education and/or development.

This study examines the effect of students’ psychological capital, including resilience, positive thinking and persistence, on students’ mental health, online learning experience and, consequently, study adjustment and satisfaction during the Covid-19 pandemic. We collected online survey data from 2,663 domestic and international students in Canada, France, Italy, Poland and the UK (between November 2020 and August 2021). The results of path analysis and necessary condition analysis showed that psychological capital was both positively related to and a necessary condition for students’ mental health, online learning experience, study adjustment and study satisfaction. The relationships between psychological capital and study satisfaction were mediated by online learning experience and study adjustment. Interestingly, international students exhibited statistically significant higher levels of mental health and psychological capital than domestic students, which challenges the literature presenting international students as more prone to health problems than domestic students. This research contributes to positive psychology and higher education literatures by determining the positive and necessary role of psychological capital for students’ pandemic experience across various national contexts. Theoretical and practical implications of the results for students’ wellbeing during the Covid-19 pandemic and beyond are discussed. Keywords: Covid-19 pandemic, psychological capital, mental health, online learning experience, study adjustment, study satisfaction

Paper is Available to Meeting Registrants Only.

MED: Experiential Learning: Interventions and Implications for Enabling Learning in Uncertain Environments

Author: **Sinead O’Flanagan**, *Higher Education Authority, Ireland*

Author: **Michellana Jester**, *MIT Sloan School of Management*

In the years preceding the COVID-19 pandemic, surveys of top US business schools revealed an increasing trend in adoption and provision of experiential learning courses, particularly as part of MBA programs. Experiential learning within management education, refers to the application of business concepts, ideas, and theories in solving real-world problems, through the use of real-world learning projects. According to business school surveys conducted during 2020, COVID-19 brought with it a reversal of this trend, with a sudden lowering of reliance on experiential learning offerings and an increased emphasis on flipped classrooms. Schools that opted to continue with experiential programs did so amidst an environment of ongoing uncertainty. Program educators had to shift the paradigm in which they operated, revising and re-creating structure in the absence of predictability, and stimulating learning motivation in the absence of traditional learning spaces. This research draws attention to how management educators have grappled with supporting students and their learning under such uncertain conditions and considers the theoretical and practical implications for experiential learning theory. Findings from this empirical study, which includes graduate student and educator interviews, point to a greatly increased focus on planned and enhanced educator interventions. The results reveal that experiential learning during times of uncertainty fosters both resource-seeking and learning-opportunity seeking behaviors among students. Keywords: Experiential learning, Interventions, Resource-seeking, Learning- opportunity seeking

MED: Social Tie Formation of COVID-19 Students: Evidence from a Two-Cohort Longitudinal Study  

Author: **Magnus Torfason**, *U. of Iceland*

Author: **Margret Sigurdardottir**, *U. of Iceland*

Author: **Anna Jonsdottir**, *U. of Iceland*

The COVID-19 pandemic and the consequent move of higher education to online courses has disrupted the learning paths of many students. Social network data were collected from two cohorts of students, those starting their higher education in normal conditions in 2017 and those starting in 2020 during the pandemic. The findings showed that students in the 2020 cohort reported making fewer connections at the beginning of the first semester and developing significantly fewer connections during the first semester. Female students lost the relative advantage they had compared with male students in developing new connections. Based on our findings, and because of the importance of social connections made during the first year of study, the 2020 cohort will need considerable support in catching up with previous cohorts. The findings provide strong support for the assumption that online studies offer limited possibilities in building social connections compared with on-campus education.

Reviewing is a critical “professional responsibility” and an integral part of participating in the academic community (Trevino, 2008). Yet Tsang and Frey (2007: 129) noted that “there is no formal training for referees who usually pick up their review skills through learning by doing.” This raises a perplexing question for doctoral students and junior faculty: how to develop critical reviewing skills with so few opportunities to practice the art of reviewing? This PDW provides participants with a rare opportunity to learn and practice the art of reviewing. Prior to the conference, participants will be asked to prepare a practice review of the manuscript by Gabriel, Lanaj, and Jennings (2021) titled, “Is one the loneliest number? A within-person examination of the adaptive and maladaptive consequences of leader loneliness at work”, published in the Journal of Applied Psychology. The actual workshop will consist of two parts: (1) presentations on the reviewing process from editor’s, reviewer’s, and author’s perspectives, as well as (2) interactive breakout rooms. The panel will provide participants an opportunity to gain key insights about the review process and quality reviewing from scholars who have served as Associate Editors and Editorial Board Members at leading journals in our field. In the interactive breakout rooms, Allison Gabriel (representing the author team) will provide background information about the original submission of their manuscript. Participants will then break into small groups, each facilitated by an experienced faculty member, to discuss and receive feedback on their formal reviews. The PDW will conclude with Allison Gabriel sharing actual reviews the author team received and how they helped shape the final manuscript.

This is a two-part PDW. Part 1 provides an introduction to content and text analysis as a research methodology. Presenters will discuss appropriate applications, reliability and validity concerns, complementarities with other methods, data curation, programming, and different computer-aided content analysis tools. Experts will also walk through examples of content analysis techniques from published research and offer publishing tips. Part 1 is open to all AOM attendees and does not require pre-registration. Part 2 of the PDW models MOC's successful "Cognition in the Rough" PDW. Experts and authors will interact in small groups to discuss the content, structure, techniques, and potential journal outlets of submitted proposals. Part 2 requires pre-registration and a submission of a 2-3 page proposal to contentanalysis1@gmail.com. The deadline for proposal submissions is July 15. Details are available via AOM's Online Communities (e.g., Connect@AOM, Interest Group listservs) or by contacting the organizers at contentanalysis1@gmail.com.

**Mentoring for a Journey of Purpose: Preparation for the
Roles of Mentor and Protege**
Mentoring for a Journey of Purpose

Organizer: **Kevin David Frick**, *Johns Hopkins Carey Business School*

Facilitator: **Benito Teehankee**, *De La Salle U., Manila, Philippines*

Mentoring can go beyond a process in the workplace that is focused almost entirely on workplace development. Specifically, mentoring in the workplace can benefit from being placed in a context that extends well beyond the workplace, so that a mentor can facilitate a protégé's management of their intrapersonal identity network to optimize the value they perceive from their lived experience. The workshop will focus on the work that both mentors and protégés can invest time in before the formation of a high-quality mentoring relationship so that both are familiar with (1) their own values, (2) their own intrapersonal identity network, (3) the actions and outcomes in life from which they derive the most meaning, (4) key aspects of their lived experiences, and (5) their desired life narrative. Participants will have the opportunity to consider items (1)-(5) for themselves to develop at least a basic understanding of each, discuss perceived barriers to talking about each of these topics, and discuss ways to lower these barriers. With values, roles in an intrapersonal identity network, and key aspects of the lived experience at hand, the ultimate objective is to develop readiness and willingness to discuss these to facilitate a discussion of proteges' challenges reaching a desired narrative and mentors' experiences with managing their own struggles in the past. This is likely to maximize the impact of mentoring on both the protégé and mentor.

Speaker: **Meghna Virick**, *San Jose State U.*

The Organizational Behavior (OB) Mid-Career Faculty Workshop is designed for faculty members who have recently made tenure (within 3 years) or are 9-10 years post-Ph.D. The goal of the workshop is to provide a forum for attendees to connect with senior Faculty Fellows to receive advice and ask questions related to navigating the challenges and opportunities of this career stage. The discussion topics will be finalized based on input solicited from attendees but potentially include: (1) examining mid-career options (e.g., moving into administration); (2) career enablers (e.g., joint appointments, sabbaticals, changing institutions); (3) maximizing and enabling research (e.g., developing new research ideas, finding new collaborators, securing grants, expanding publication portfolio to writing and editing books); (4) service and engagement (e.g., department chair, center director, professional service, engagement with outside boards and institutions); and (5) planning for promotion. The Faculty Fellows include a mix of senior faculty from different countries and with varied career experiences. The format of the workshop is highly interactive with a combination of both panels and small group discussions. The workshop will be held on Friday (1:30pm – 4:30pm), and attendees must attend in person. Participation is limited, and pre-registration through the registration system is required.

Participation is limited; pre-registration is required by Wednesday, June 29th. To check availability and to register, please complete this form: https://wharton.qualtrics.com/jfe/form/SV_5ojV4T3sucm8vHg

Research on professionals and their workplaces is becoming increasingly popular, reflecting the growing importance of experts and other knowledge workers in contemporary society (Empson, et al., 2015). Following successful PDWs over the last eight years on various topics within professional organization research, this year we turn our attention to the issues of diversity and inclusion in professional settings. From the start we acknowledge that the professions have been traditionally characterized by inequity and exclusion, along a range of parameters including gender, race, social class, and religion. This is thus a challenging set of issues for researchers and practitioners in these traditionally stable and institutionalized contexts. Trusting that our work in these areas will indeed be stepping stones towards a world of wider diversity and inclusion, we propose that this PDW promotes the AOM 2022 Theme of “Creating a Better World Together.” The PDW will begin with four brief presentations by our panelists, each outlining a research project that includes professionals facing diversity and inclusion (details on topics and presenters below). Thereafter we will divide into a series of round tables, each around one of the panelists. The PDW will thus also afford opportunity for small group interactions with our expert panelists and organizers.

This Professional Development Workshop (PDW) is a continuation of the successful PDWs on organizational stigma organized and facilitated by the growing stigma research community for six years (2016-2021) at the Academy of Management annual meeting. Over the years, there has been an increase in organization and management research on stigma, stigmatization, and stigmatized contexts. Building on prior PDWs, we aim to encourage theoretically and methodologically consistent and rigorous research on stigma in organizational contexts and to identify opportunities for research. Additionally, we hope to contribute to enhancing our understanding of stigma’s role in influencing identities, organizations, professions, categories, industries, and fields. Overall, this PDW will consist of three components: (i) an overview of the topic and recent work; (ii) a dialogue between two leading organizational scholars—Cynthia Devers and Bryant Hudson—on the nature of stigma and the processes underlying it, with focus on how scholars can distinguish between stigma as an outcome and stigmatization as a process; and (iii) thematic roundtables / breakout sessions involving stigma scholars who will facilitate discussions on participants’ projects and challenges that researchers are experiencing in positioning, conceptualizing, and publishing their work. The opening dialogue will be open to all attendees, but roundtables will have a maximum of 3 participants each to encourage focused discussions and feedback. Participants will need to pre-register and submit a 1-2-page document with an abstract of a project and an outline of challenge statement to aonstigma@gmail.com by July 1st, 2022.

The opening dialogue will be open to all attendees, but roundtables will have a maximum of 3 participants each to encourage focused discussions and feedback. Computational Approaches to Studying Organizations & Markets: Methods to Push Theoretical Frontiers
Computational Approaches to Studying Organizations

Organizer: **Mitali Banerjee**, *HEC Paris*

Presenter: **Pedro Aceves**, *Bocconi U.*

Presenter: **Cassandra Chambers**, *Johns Hopkins Carey Business School*

Presenter: **Matthew Yeaton**, *HEC Paris*

Presenter: **Douglas Guilbeault**, *U. of Pennsylvania*

Participant: **James Evans**, *U. Of Chicago*

Participant: **Marlon Fernandes Rodrigues Alves**, *Federal Institute of São Paulo (IFSP)*

The PDW will highlight applications of natural language processing techniques to answer theoretical questions germane to management. These include the relationship between structure and culture, the role of reputation in shaping knowledge production and the structure of social categories. Across a range of online empirical settings, the panelists will combine computational techniques with creative research design to address a range of phenomenologically important questions such as hate speech, reward systems in online knowledge communities and bias in the curation of online content. In doing so, the PDW not only speaks to theoretically important themes across several AOM divisions but also to the AOM 2022 theme. In their presentations and, subsequent Q&A with the audiences, the panelists will share their insights on methodological best practices, the role of computational techniques in advancing theory and their experience going through the review process.

2022 OSCM Division Joint Junior Faculty and Doctoral Consortium
II
OSCM Division Junior and Doctoral Consortium

Organizer: **Maricela Arellano Caro**, *HEC Montreal*
Organizer: **John Aloysius**, *U. of Arkansas Sam M. Walton College of Business*

The Operations and Supply Chain Management Division is pleased to announce a joint Junior Faculty and Doctoral Consortium at the annual meeting of the Academy of Management (AoM) in Seattle, WA, USA. The primary focus of the joint consortium involves an intensive research incubator session for doctoral students and junior faculty. Doctoral students are asked to give a short (15 minute) presentation about their research proposal to a panel of senior and junior faculty who then provide feedback and guidance on each proposal. Subsequently, the junior faculty will have an opportunity to present their research programs describing how they are extending their dissertation research and/or starting new research streams. The doctoral students are expected to ask questions and learn about building a research identity. In addition to the research incubator session, several panel sessions will further elaborate on publishing and the development of research streams, as well as the acquisition of soft skills necessary for professional development. Experts in the field are invited to provide their input and engage participants in Q&A sessions.

Who am I, and What am I Doing? Crafting a Research Identity Narrative for Academic Career Transition

Crafting a Research Identity Narrative

Organizer: **Krista Pettit**, *Ivey Business School*

Organizer: **Fannie Couture**, *HEC Montreal*

Organizer: **Renate Kratochvil**, *BI Norwegian Business School*

Organizer: **Sophie Elizabeth Jané**, *Umeå School of Business, Economics, and Statistics*

Speaker: **Herminia Ibarra**, *London Business School*

Panelist: **David Oliver**, *U. Of Sydney*

Panelist: **Katharina Dittrich**, *Warwick Business School*

Panelist: **Tammar B. Zilber**, *Hebrew U. of Jerusalem*

Panelist: **Stephanie J. Creary**, *The Wharton School, U. of Pennsylvania*

Panelist: **Ravi S. Kudesia**, *Fox School of Business, Temple U.*

Panelist: **Keimei Sugiyama**, *U. of Wisconsin Milwaukee*

Early career academics face many challenging transitions such as moving from industry to academia, from student to faculty, or from pre to post tenure. Research highlights how crafting an identity narrative can play an important role in overcoming challenges during critical career transitions (Ibarra & Lineback, 2005). This Professional Development Workshop (PDW) focuses on how doctoral students and early career scholars can effectively craft their research identity narrative. That is, the way in which people construct and communicate their “professional image and identity” (Ibarra, 1999, p. 764). This PDW is designed to be part of the 2022 SAP Doctoral & Early Career Program and is tailored to PhD students and early career scholars (pre-tenure). However, the topic can be of interest to junior scholars from a wide range of interest groups. The PDW is divided into three parts: (1) Keynote: Professor Herminia Ibarra, an expert in identity narratives, will provide participants with an exclusive pre-recorded presentation on how to craft an effective research narrative; (2) Panel: A panel comprised of six diverse scholars will share their experiences crafting their research identity narrative; (3) Roundtable discussion: Participants will be asked to prepare a 1-minute research identity narrative ‘pitch’ and attend a roundtable where they receive feedback from the panelists and fellow participants on their narrative. We will end the workshop with a Q&A and insights from the roundtable discussions.

Please note that participation on the roundtable discussion is capped at 60. To register, potential participants must provide a brief (150 words) research identity narrative ‘pitch’ for their most relevant career transition (e.g. student to faculty) and one or two questions that they hope the session will address. On your submission please indicate ‘in-person’, ‘on-line’ or ‘undecided’ so we can allocate to roundtables accordingly. Please email your submission to kpettit@ivey.ca

Discussant: **Julie Yen**, *Harvard Business School*
Discussant: **Haram Seo**, *Texas A&M U., Mays Business School*

This workshop aims to explore research frontiers in the increasingly active area of nonmarket strategy. Through a combination of panel presentations by distinguished scholars and interactive roundtable discussions with workshop participants – with an emphasis on the interactive roundtables – we seek to identify how to advance research and how to address some shortcomings in existing approaches – both empirical and theoretical – in nonmarket strategy research. The proposed workshop is likely to be of interest to researchers working on topics such as corporate social responsibility, political strategy, (social) innovation, stakeholder governance, and sustainability, providing an informed perspective on cutting-edge research on these topics. This is a continuation of the AOM 2016, AOM 2017, AOM 2019, and AOM 2021 PDWs under the same name, sponsored by STR, IM, ONE, PNP, and SIM divisions.

Interested participants should pre-register for the workshop by sending an e-mail to joao.albino-pimentel@moore.sc.edu or galine@wharton.upenn.edu. Registration emails should include the name, affiliation, and current position (student, assistant professor, full professor, etc.) of the participant. Participants should also send a bio, as well as a paragraph stating their area of research interest and/or any specific issue related to the workshop that they are interested in discussing. This input will be used to allocate participants to roundtables and will be distributed among panelists and discussants prior to the session. Participants interested in pre-registering must do so by July 15, 2022. Pre-registration is recommended, but not compulsory. Those who have not pre-registered are welcome to attend the panel presentations in the first part of the workshop and may be allowed to participate in the roundtable discussion, space permitting.

AI and Firm Strategy: New Perspectives and Opportunities

AI and Firm Strategy

Organizer: **Harshvardhan Ketkar**, *Bocconi U.*

Organizer: **Hyunjin Kim**, *INSEAD*

Panelist: **Erik Brynjolfsson**, *Stanford U.*

Panelist: **Alfonso Gambardella**, *Bocconi U.*

Panelist: **Katherine C. Kellogg**, *MIT*

Panelist: **Bruce Kogut**, *Columbia Business School*

This symposium aims to bring together leading scholars conducting research at the intersection of AI and strategy. In particular, we aim to provide (1) an overview of ongoing work that looks at how predictive algorithms and automation of cognitive tasks shape various processes and decisions within organizations, as well as (2) perspectives and opportunities for new streams of research. The structure of the symposium is as follows. In the first part, a panel of four scholars will present their own recent research related to AI, organizations, and strategy. This will be followed by a panel discussion between the presenters, moderated by the organizers. We will conclude the symposium with a Q&A session involving the audience.

Multi-Level Research: Capturing and Analyzing Interdependence

Session Moderator: **Daniel Jacob Griffin**, *Michigan State U.*

RM: Beyond Agreement, Aggregation, and Centrality: Selection and Influence in Multilevel Theory

Author: **Ryan Scott Hemsley**, *Eli Broad School of Business, Michigan State U.*

Author: **Daniel Jacob Griffin**, *Michigan State U.*

Author: **Kenneth Frank**, *Michigan State U.*

Historical advances in the study of multilevel theory are often accompanied by methodological developments. Organizational scholars have primarily relied on multilevel modeling. However, mean aggregation makes the problematic assumption of configural equivalence. To avoid this issue, researchers have used social network analysis as an alternative. However, the dominant use of centrality indices makes a different—but equally problematic—assumption of nodal equivalence. To address these issues, we outline a theoretical and methodological framework that avoids the problematic assumptions made by the conventional conceptual and analytical tools of multilevel researchers. This approach centers on two key network processes: Selection and Influence. Selection processes focus on how networks change because of the people, while Influence processes focus on how people change because of the network. We discuss the role of these processes in addressing the microfoundations of multilevel theory as well as develop statistical models that quantitatively represent these processes. Importantly, we do not advocate for a single analytical tool to study every research question but acknowledge that different techniques are more suited to particular theories. However, we make the case that future research would benefit from greater attention to Influence and Selection processes in multilevel theory and methodology.

Paper is Available to Meeting Registrants Only.

RM: The Curious Case of Cross-Level Effects: Refining Our Understanding to Match Our Methods

Author: **G. James Lemoine**, *U. at Buffalo, The State U. of New York*

Author: **Kalan Robert Norris**, *U. at Buffalo School of Management*

Author: **Hamed Ghahremani**, *U. of New Orleans*

New methodological advances and guidance in estimating ‘cross-level effects’ in multilevel models have led to a proliferation of published research examining purportedly cross-level direct relationships, mediations, and interactions. However, our review of published ‘cross-level’ papers in top journals reveals that in many cases, scholars argue for or interpret relationships that are meaningfully different from the ones actually being tested. In this paper, we attempt to build an accessible explanation for what ‘cross-level effects’ actually are and how they operate in practice, detailing with sample datasets, results, and examples from the literature how they are frequently misunderstood. We conclude that to date the management literature has not yet developed and refined theory accordingly to match recent helpful methodological innovations. We attempt to address this issue by providing specific guidance on how to argue and interpret the various types of ‘cross-level’ effects, and spotlighting exemplar papers in the literature that accomplish this accurately.

RM: Unpacking the Bottom-Up Emergence Underlying Collective Phenomena: A Mixed Method Approach

Author: **Bowen Dong**, *City U. of Macau*

Author: **Song Wang**, *Zhejiang U.*

As one of fundamental process underlying collective phenomenon, bottom-up emergence or process involves both convergent and divergent forms through which different lower-level characteristics (e.g., cognition, affect, behaviors) of a group create meaningful higher-level properties. Until now, qualitative method has provided valuable insights for theory building. However, since the bottom-up process entails a complex casual structure, it is very challenging for qualitative method to unravel the multiple conjunctural causation, especially when it comes to understanding how related but diverse lower-level characteristics contribute to collective property (divergent forms). This paper therefore introduces approaches to work with qualitative method: Casual mapping technique to elicit the cognitive representation of interlinked concepts embedded in the expertise of participants around a domain and social network analysis to identify the casual structure through which bottom-up emergence unfolds. With the case of collective turnover, we illustrate how this mixed method can address these issues and provide an alternative way for researchers to interpret the reciprocal complexity of convergent and divergent forms and the structure role of constructs underlying the process, which in turn help both theorists and practitioners to manage collective phenomenon in organization.

Sage Publications/RM Division Best Paper Award Nominee

In this paper, we present an approach for rigorous analysis of interpersonal influence utilizing observation and video recordings, which is informed by ethnomethodology and conversation analysis (EMCA). We take interpersonal influence, as the core of leadership, to be illustrative of the methodological challenges in pursuing an interest in directly studying the lived dynamics of organizational life. While most leadership researchers seem to agree that interpersonal influence is central to leadership, they also tend to agree that it has proved to be hard to study directly. Our approach is to analyze the data in all its richness, with attention to the details and situated variation. Our research interest focuses on how interpersonal processes can be flexibly accomplished in a range of settings and situations, involving a range of linguistic expressions and physical artefacts. In line with the everyday romanticism of **LEADERSHIP** research to date has focused on the interacting individuals, and most of all, on the leader. As a consequence, such a methodological leader-centric approach, which necessarily abstracts from the situated influence relationships, means that the details of the interpersonal process are lost from view. Our procedure consists of four different steps, each taking a specific analytical stance and contributing to the study in a distinct way. Along the way, we suggest fundamentally shifting the analytical stance in a way that, whilst combining different research traditions, nevertheless also contrasts slightly with established canons.

Raising Awareness for Your Personal Resources: How to Develop Resilience and Cope with Setbacks *How to Develop Resilience and Cope with Setbacks*

Presenter: **Sonja Kugler**, *TUM Institute for LifeLong Learning, Technical U. of Munich*
Presenter: **Irmgard Mausz**, *Ludwig Maximilian U. of Munich (LMU)*
Facilitator: **Dieter Frey**, *Ludwig Maximilian U. of Munich (LMU)*

Null results, rejected articles, publication pressure or funding reductions - all of those are examples of challenging circumstances in the daily life of scientists. And recently, also the pandemic hit the work environment in academia, weather it was, working from home, shortly needed online courses or closed labs. Successfully coping with all those adversities is essential for a successful career in academia. Following this year's theme the PDW aims to create a better world together in developing academics' positive psychological state and their abilities to overcome challenging circumstances in two ways. First, we raise self-awareness to one's professional development including successful coping with setbacks. Second, we target the development of resilience based on research in the field of positive psychology. This considers individual reflection of strategies and resources as well as social support via peers. Additionally, through a highly interactive and reflective workshop design, we contribute to this year's theme by reflecting on our own personal and professional resources and learning from the experiences and exchanges with others.

Participants are assigned a reflective task one week prior to the workshop in order to encourage self-reflection and familiarize participants with the content of the PDW. Thereby, participants are asked to draw a line with all relevant past ups and downs during their current career. Following this, participants reflect on and note down significant situations. The detailed instruction will be sent via E-Mail.

**Advancing Women’s Leadership Through Social
Change Initiatives**
Advancing Women’s Leadership

Organizer: **Susan R. Madsen**, *Utah State U.*

Despite advances in research on gender and leadership, the number of women holding leadership positions still lags behind men in nearly all cultures and contexts (Goryunova, Scribner & Madsen, 2017). Women leaders are under-represented in business and industry, in government and communities, and despite a global focus on economic empowerment, the wage gap persists as a social justice issue (World Economic Forum, 2021). Moreover, women are disproportionately subject to domestic abuse, sex trafficking, workplace harassment, and other forms of violence (United Nations Women, 2021). Of course, women and girls are exerting leadership in tackling these issues whether they are in formal positions of power or not; but so far, the effects are far smaller than women’s numbers would warrant. Scholars and practitioners are not adequately connecting research about women’s leadership, gender-based discrimination in the workplace, electoral politics, and public policies to the art and practice of women and leadership. And, although we believe it is important to continue expanding the theory and research, it is now even more imperative to develop new ways of thinking about and scaling up the practical applications of research. Our goal as scholars and scholar practitioners should extend to achieving parity in representation of women in businesses, government, and nonprofit leadership positions, and to securing women-friendly public policies more generally. There are multiple routes forward to accomplish this goal. One area of practice that is becoming more important in advancing women in leadership roles is politics, public policy, and other types of social change initiatives. However, most women and leadership scholars and practitioners do not understand how to contribute to these social change efforts, particularly as it emerges from theory and research. Yet, social changes are critical to guide individuals, businesses, nonprofits, and governments to improve conditions of women and girls (and ultimately everyone) throughout society. Researchers continue to find that the foundation for positively impacting the lives of girls and women start with getting more women leaders in all decision-making spaces (Levin & de Ganay, 2021; USAID, 2020). The goal of this session is to provide Academy members the opportunity to engage in an innovative caucus where they can meet with others from across divisions to discuss advancing public policy change through women and leadership scholarship. A 10-minute introduction will provide background and need for women and leadership scholars to become engaged with various types of social change. The rest of the session will be a facilitated but informal discussion of the needs, challenges, and opportunities to move various social change efforts forward in government, communities, states, and regions of the world. If the group is large enough, roundtables will be available for participants to convene based on specific change or policy interests. The organizer will collect names and email addresses of attendees interested in future networking. This caucus will offer a convenient, informal way for Academy members who share a topical interest and professional concern regarding advancing women’s leadership through social change efforts. We hope this caucus will help participants consider ways to move women’s leadership scholarship into important changes in society.

This caucus provides attendees a forum to discuss the needs, challenges, and opportunities related to advancing women’s leadership through social change initiatives. The session goal is to provide Academy members with a space to discuss this topic in a setting where participants can engage with others from across divisions.

CMS: Ignoring Warnings: How Ambiguity and De-Ambiguity Juggling Enable Organizational Passivity (WITHDRAWN)

Author: **Anna Essén**, *House of Innovation*
Author: **Mats G Alvesson**, *Lund U.*

Published research exhibits an increasing interest in the ‘other side of knowledge’ by focusing on issues such as how individuals and organizations wilfully can avoid information and knowledge to escape liability, and how they deliberately can amplify ambiguity to prevent others from knowing about them and thus avoid scrutiny. Yet, the literature to date does not answer how actors receiving repeated warnings about organizational problems can behave to avoid responsibility for addressing and thus remain passive in relation to the warnings. We theorize how such passivity can be accomplished through the combination and juggling with de-ambiguating and ambiguating framings, which imply selective reduction and amplification of ambiguity of warnings, their target and carriers, and their context. We develop an empirically substantiated model outlining the mutually supporting relationship between a set of such framings (passivity tactics and lubricating worldviews), which contributes to the literature on wilful ignoring and strategic ambiguity, silencing and whistleblowing, and the maintenance of commitment in organizations. Several avenues for future research are identified, and practical implications outlined.

CMS: Feeding the Beast: The Experience of Meaninglessness at Work in the Public Sector

Author: **Christopher Belanger**, *U. of Ottawa*
Author: **Samia Chreim**, *U. of Ottawa*
Author: **Silvia Bonaccio**, *Telfer School of Management, U. of Ottawa*

Miserable and meaningless jobs are a ubiquitous theme in popular media, suggesting that meaninglessness at work is an experience with wide cultural resonance. However, management research to date has largely overlooked meaninglessness and focused on meaningful work and meaning at work. This paper addresses this acknowledged gap in the literature by presenting the results of a qualitative research study based on interviews of 25 Canadian public servants who self-identified as experiencing meaninglessness at work. Using the methodology of interpretive phenomenological analysis, we find that the experience of meaninglessness is overwhelmingly negative but also rich and multi-dimensional, and goes far beyond the mere absence of the experience of meaning. We identify four main dimensions of the experience: uselessness, powerlessness, isolation, and absurdity. We further identify the broader implications this experience can have for participants and outline the coping mechanisms they deploy. These findings deepen our understanding of meaninglessness in the work context and shed light on an important but often overlooked aspect of modern life.

CMS: The Representation of Workplace Stress in Business Textbooks

Author: **Isabella M. Krysa**, *Fairleigh Dickinson U.*

This paper conducts a content analysis on ten textbooks in the discipline of Organizational Behavior published between 1963 to 2021 to investigate how work-related stress is represented in business textbooks throughout the decades. The analysis reveals three emerging themes in how work-related stress is discussed within the specific time periods. The earlier textbooks place stress predominantly as the responsibility of the workers. Textbooks published in the 990s, represent the interactive relationship between the individual and the organization as both being exposed to environmental conditions and simultaneously both inheriting traits that contribute to organizational stress. Textbooks published starting in the early 2000s increasingly focus on the role of organizations in high levels of stress among employees. With its analysis, this paper illustrates the interrelated nature of textbook content and the wider socio-political climate textbooks are embedded in.

Are you a junior faculty member, post-doc, or doctoral student with research and/or teaching interests in health care management? Join us for the Health Care Management (HCM) division Emerging Scholars Consortium (ESC) on Friday, August 5th in Seattle, where a diverse group of outstanding faculty will facilitate a highly interactive series of sessions geared towards emerging health care management scholars. In addition to the content, the ESC's highly collaborative format is a fantastic opportunity to create relationships with other HCM emerging scholars from around the globe. Many long-time HCM members attest to the ESC as an origin for major research collaborations and employment pathways.

The ESC will be delivered in hybrid format this year, so please register and attend whether you'll be in Seattle or online. For the morning portion of the ESC (Part 1), topics we will cover include: "Better Assessment Together: A practical workshop to improve learning and streamline grading" at 8:30 AM (Pacific) and "Finding Career Opportunities & Flourishing in a Transformed World" at 10:10 AM. For the afternoon portion of the ESC (Part 2), topics we will cover include: "Faculty Resilience during the Pandemic: Strategies and Tips" at 1:30 PM (Pacific), "Goal setting for highly ambitious scholars, understanding why and how to get there" at 2:30 PM, and "Look before You Leap: Making the Jump from Faculty to Leadership Roles" at 3:40 PM. Registration is required for all attendees—both in-person and online. For in-person attendees who pre-register, the ESC will include lunch and will conclude with an off-site social. To register for the consortium, please email Nick Edwardson (nedwardson@unmedu) and indicate if you will be attending in person or online.

The Role of MNCs in Tackling Global Sustainability Challenges

Tackling Global Sustainability Challenges

Session Chair: **Stephanie L. Wang**, *Indiana U., Bloomington*

Panelist: **Jonathan P. Doh**, *Villanova U.*

Panelist: **Tatiana Kostova**, *U. of South Carolina*

Panelist: **Gurmeeta Vasudeva**, *U. of Minnesota*

Panelist: **Changqi Wu**, *Peking U.*

Panelist: **Shaker A. Zahra**, *U. of Minnesota*

It is increasingly urgent to address pressing global sustainability challenges. In particular, how multinational companies (MNCs), who serve as influential actors in multiple countries' economic, environmental, and social development, affect global sustainability challenges is under heated debate. The purpose of this PDW is to share insights on ongoing and emerging MNC-sustainability research from prominent scholars in this area and suggest directions to guide and focus future research efforts. The distinguished panelists include Professors Jonathan Doh, Tatiana Kostova, Gurmeeta Vasudeva, Changqi Wu, and Shaker Zahra. This PDW will be interactive and welcome questions from participants to stimulate relevant and meaningful discussion.

Novelty is a crucial element in achieving innovation in organizations (Woodman, Sawyer, & Griffin, 1993). However, in the past two decades, creativity and innovation researchers have established that not only is it challenging to identify novelty, but individuals also face biases that hinder the acceptance of novelty (Mueller, Melwani, & Goncalo, 2012; Perry-Smith & Mannucci, 2017; Zhou, Wang, Bavato, Tasselli, & Wu, 2019). Despite the odds stacked against perceiving and implementing novelty, individuals such as Art Fry, and organizations such as Tesla, are still observed to be capable of developing novel ideas into successful innovations. An important question thus arises: are there positive factors that can serve to help overcome the biases against novelty? To address this issue, scholars in recent years have started to examine what could positively influence the acceptance of novel ideas (Berg, 2019; Mueller, Waksak & Krishnan, 2014; Zhou, Wang, Song, Wu, 2017). Such research provides theoretical and practical implications to organizations on how they should organize to successfully select and implement novel ideas. It also provides guidance to creative individuals on what they can do to increase the extent to which their novel ideas are valued by others. This symposium seeks to present five lines of research on the bias against novelty. We start with a theoretical paper that highlights the importance of framing to overcoming the bias against novelty. Then, we delve into four lines of empirical research examining how framing of the idea, creators' incentive structure, evaluators' experience of magic, and creators' epistemic motivation can be used to help reduce the bias against novelty. The four empirical papers focus on different contexts and perspectives across different stages of the idea journey. A wide range of outcome variables is also examined, including support for crowdfunding projects, generation and selection of novel ideas, and creativity perception. The variety of contexts, factors, and outcomes discussed in the papers will facilitate the discussion in conducting empirical research and developing new theories for overcoming the bias against novelty.

Identifying, Accessing, and Utilizing Unconventional Sources of Archival Data

Unconventional Sources of Archival Data

Organizer: **Devin Burnell**, *Indiana U. - Kelley School of Business*

Organizer: **Alex Michael Murray**, *U. of Oregon*

Organizer: **Greg Fisher**, *Indiana U.*

Panelist: **Andrew Carton**, *The Wharton School, U. of Pennsylvania*

Panelist: **Christi Lockwood**, *U. of Virginia - McIntire School of Commerce*

Panelist: **Jeffery S. McMullen**, *Indiana U., Bloomington*

Panelist: **Andrew Nelson**, *U. of Oregon*

Unconventional sources of archival data include novel and unorthodox sources of information that exist in the world and can be used to build, elaborate, and test theory in management, organizational, and entrepreneurship research. While some researchers have thrived in identifying, accessing, and using unconventional sources of archival data, other researchers may find this research strategy relatively opaque. The taken-for-granted assumption of many researchers might be that they must go out and collect their own data, or leverage an established and recognizable database, to advance discourse in their respective domains. However, these more traditional data collection strategies tend to be relatively invasive and subject to biased findings simply due to the presence of a researcher. We propose a PDW in which management scholars from various disciplines come together to unpack the black box of identifying, accessing, and utilizing unconventional sources of archival data.

Please come with ideas for identifying, accessing, and utilizing unconventional sources of archival data. We look forward to a lively PDW with your attendance!

On Becoming an Influential Business Scholar in the African Context

Influential Scholarship

Moderator: **Viswanath Baba**, *Degroote School of Business, McMaster U.*

Discussant: **Bruce Lamont**, *Florida State U.*

Discussant: **Baniyelme D. Zoogah**, *DeGroote school of business*

This workshop will explore mechanisms that make a research paper interesting to its audience from an editor’s perspective. Couched within a theory of business, it will focus on what makes business scholarship influential. It will present a framework to combine several attributes of influential scholarship and provide a model for producing compelling research. Examples of thought-provoking scholarship will be presented, and a break down of characteristics that make them interesting and influential will be provided. The workshop will offer suggestions as to what academics and institutions in Africa can do to develop and sustain influential scholarship that is relevant in a global context.

There is no registration for this PDW. All are welcome. Maximum seating capacity is 50

Diversity-Related Discrimination in Hiring

Session Moderator: **Debra R. Comer**, *Hofstra U.*

GDO: **Seeing Past Different Signals: Information Improves Ratings of Job Candidates on the Autism Spectrum**  

Author: **Debra R. Comer**, *Hofstra U.*
Author: **Janet A. Lenaghan**, *Hofstra U.*
Author: **Daphna Motro**, *Hofstra U.*

We investigated whether watching a brief video showing that individuals on the autism spectrum can succeed at work if given the opportunity would improve ratings of a job candidate presenting as an individual on the autism spectrum. Participants 1) watched the video after receiving information that the social and communication differences of individuals on the autism spectrum keep them from attaining jobs for which they are qualified; or 2) received the information but did not watch the video; or 3) neither received the information nor watched the video. Then, they viewed a mock job interview and reported their first impressions of the candidate, their perceptions of the candidate's suitability for the job, and whether they would be more likely to reject or select the candidate, who presented as 1) on the autism spectrum or 2) neurotypical. Regardless of whether they had watched the video, participants who had received the information perceived the candidate presenting as on the autism spectrum as more suitable for the job and had greater intentions to interact with him and to select him for the job. We consider the implications of our research for theory and practice.

GDO: **The Effects of Religion on Social Media Assessments and Hiring**

Author: **Caren Goldberg**, *U. de Sevilla*
Author: **Philip L. Roth**, *Clemson U.*
Author: **Jason Thatcher**, *Fox School of Business, Temple U.*
Author: **Youngjin Kwon**, *Fox School of Business, Temple U.*
Author: **Kevin Matthews**, *U. of North Carolina Wilmington*

Religion has become an increasingly divisive issue in European countries and in the United States following terrorist attacks and waves of immigration. At the same time, social media has made accessing individuals' personal religious information more easily available than ever. Building on the handful of studies that have examined religious discrimination in hiring, we draw on research on stereotypes, identification, and similarity-attraction to develop and test a mediated model of religious discrimination in hiring. Further, as prior research has largely relied on Christian respondents, we tested our model with a stratified sample of Jewish and Christian raters, to determine whether prior results favoring Christian candidates represent a pro-Christian sentiment or a similarity effect. We designed an experiment using a social media screening task to test our hypotheses. Our results indicate that in the combined sample, religion did not affect expected task or OCB performance; however, in the Christian-only sample, religion had a marginally significant effect on OCB performance. Further, within each subsample, raters identified more strongly with applicants of their own religion than with applicants of other religions and in the Jewish sample, we also found that raters expressed less disidentification with Jewish applicants. In turn, these variables were associated with liking, warmth and competence, and ultimately, task and OCB performance.

GDO: **A Stalemate: The Road towards Gender Equality in the Indian Software Industry** 

Author: **Shreyashi Chakraborty**, *XLRI-Xavier School of Management*

Gender inequality manifests in the form of women getting concentrated in low-paying or low-status jobs. Such inequalities are stark in male-dominated and masculinized professions. Indian software industry constitutes 35% women employees in the industry; however, they are concentrated in entry level jobs. The study explores how the hiring process is creating or reproducing gender (in)equality in the industry. 49 semi-structured interviews were conducted with recruiters, hiring managers and candidates. Content analysis of the interviews indicated that employers are focusing only on recruitment activities to source more female candidates. Although supply of entry-level female successful applicants is high, availability of experienced female candidates is less. Despite such challenges, employers continue with unstructured interviewing, mostly single panel members who ask personal family related questions that may not be job relevant. The study also provides evidence that there is segregation in quality assurance and techno-functional roles that are not equally valued as other profiles.

Organizer: **Guler Kizilenis Ulusman**, *York U.*
Panelist: **Janice Hall**, *Virginia Tech*
Panelist: **Maria Kraimer**, *Rutgers U., School of Management and Labor Relations*
Panelist: **Jason R. Lambert**, *Texas Woman's U.*
Panelist: **Suzanne Mintz**, *AACSB*

In the wake of the killing of George Floyd and the racial reckoning that followed, several scholars have been called upon to serve and help drive diversity, equity, and inclusion (DEI) efforts in business schools and universities. The purpose of this Professional Development Workshop (PDW) is to offer a venue for scholars and practitioners to share DEI best practices and discuss the challenges that often derail DEI efforts in higher education. This PDW will help DEI scholars and practitioners exchange ideas for supporting and/or driving DEI efforts at their organizations. An additional goal of this PDW is to foster social connections and networks to aid attendees as they develop their DEI paths forward.

We Got by with a Little Help: Recent Perspectives on the Academic Job Market

Recent Perspectives on the Academic Job Market

Organizer: **Karen Landay**, *U. of Missouri - Kansas City*
Organizer: **David F. Arena**, *U. of Texas At Arlington*
Presenter: **Cameron Jay Borgholthaus**, *Southern Illinois U., Edwardsville*
Presenter: **Olivier D. Boncoeur**, *U. of Notre Dame*
Presenter: **Danielle Gardner**, *Colorado State U.*
Facilitator: **Sibel Ozgen**, *Florida International U.*
Facilitator: **Remy E. Jennings**, *Florida State U.*
Facilitator: **Jamila Maxie**, *U. of Central Arkansas*
Facilitator: **I-Heng Wu**, *U. of South Alabama*

Facilitator: **Viva Nsair**, *Western Michigan U.*
Facilitator: **Victoria Antin Yates**, *Oklahoma State U.*
Facilitator: **Ian Stuart Mercer**, *Auburn U.*
Facilitator: **Zahra Heydarifard**, *Bryant U.*

The academic job market can be ambiguous, tumultuous, and downright frightening; potentially doubly so in the wake of the COVID-19 pandemic. The purpose of this professional development workshop (PDW) is to reduce some of the inherent ambiguity of the job market by providing recent perspectives on a variety of job market topics and to create an interactive and inclusive space for prospective job seekers for the 2022 cycle and beyond to connect with each other. This interactive session will be comprised of two parts. First, three individuals who were on the job market in 2020-21 will give presentations on key aspects of the job market and beyond: (1) the application and initial interview process; (2) campus/virtual visits, offers, and negotiation; and (3) the transition from student to faculty. This will be followed by a Q&A period. Second, attendees will then participate in interactive roundtables led by individuals who were on the job market in 2021-22 and 2020-21. Roundtable topics will be more specific than the presentations and will include topics such as family concerns, career management, mental health, and backup plans. At the end of our PDW, participants will be provided with a Google spreadsheet of contact information (collected through pre-registration) in order to build their networks and foster a more lasting connection with presenters, roundtable leaders, organizers, and each other.

This session requires pre-registration and is limited to 100 attendees. To register, please send the following information to David Arena at david.arena@uta.edu: (1) Name, (2) Institution, (3) Year in your program, (4) Job market year, (5) Email address, (6) Primary AOM divisions, and (7) Brief summary of your research interests.

Introducing the “Digitally Curious” to Email Archives for Organizational Research and History *Using Email for Organizational History*

Organizer: **David A. Kirsch**, *U. of Maryland*
Participant: **Adam Nix**, *U. of Birmingham*
Participant: **Stephanie Decker**, *Birmingham Business School, U. of Birmingham*
Participant: **David A. Kirsch**, *U. of Maryland*
Participant: **Santhilatha Kuppili Venkata**, *National Archives of the United Kingdom*
Participant: **Ruby Martinez**, *U. of Illinois at Urbana-Champaign*
Participant: **Chris Prom**, *U. of Illinois at Urbana-Champaign*

This PDW will (1) introduce “digitally curious” management scholars to the use of email collections as contexts for research, (2) orient scholars to new tools for interacting with sample email collections, and (3) provide a forum for scholars to share and learn from each other about emerging best practices in the use of email as a context for research.

This is a hybrid session. Regardless of whether participating virtually or in-person, pre-registration is required. Please email Shubhangkar Girish Jain (shubhangkar.girishjain@marylandsmith.umd.edu) if you wish to attend the workshop. Attendees should plan to bring a laptop computer to the session to access the email collections and use the search and discovery tools. For questions or more information, please contact Shubhangkar Girish Jain, shubhangkar.girishjain@marylandsmith.umd.edu.

Developing Management Theory from Historical Case Studies
Developing Theory from Historical Case Studies

Organizer: **Rohin Borpujari**, *London Business School*
Panelist: **Andrew Hargadon**, *U. of California, Davis*
Panelist: **Roy R. Suddaby**, *U. of Victoria*
Panelist: **Daniel Wadhvani**, *U. of Southern California*
Panelist: **JoAnne Yates**, *MIT Sloan School of Management*

This PDW is aimed at stimulating an interactive and developmental exchange between scholars engaged in inductive research using historical case studies, who are aiming to publish in prominent management journals. The workshop will feature a panel of experts with a track record of publishing historical case studies in premier management and organizational studies journals. The goal of the workshop will be to help scholars learn how to develop and publish management theory from historical case studies. To this end, the core question that this PDW aims to unpack is – how do you build timeless theory from the study of time-bound historical cases? In the first half of the workshop, the panelists will lead exchanges around topics such as which research questions are best suited to historical case studies; how to balance the needs for contextualization vs. generalization in their theorizing; and how to write up a historical case study for publication in management journals. In the second half of the workshop, shortlisted participants will have the opportunity to engage in quick, entrepreneur-style “pitches” to one of the experts, with a view to receiving developmental feedback specific to their projects.

Participant: **Colin Muneo Fisher**, *UCL School of Management*

Our symposium focuses on the association between temporal individual differences and creativity, bringing together ongoing research which adopts a subjective temporal lens on the study of creativity. We present four empirical projects that incorporate different contexts and multiple levels of analysis. Two projects contribute insights into how temporal focus regulates leaders' creative behavior in response to negative feedback (Fink, Richter, & Kim) and leads to distinct evaluations of new products (Luan & Kim). A third project investigates how temporal trajectories of entrepreneurial narratives influence evaluations for innovative ventures from a crowdsourcing audience (Lin, Yang, Garimella, & Shaw). The fourth piece contributes an understanding to how individuals remain creatively engaged when experiencing the temporal passage of time by virtue of cultivating so-called enduring dilemmas (Fisher & Ramakrishnan). With the help of this symposium, we aim to appeal to more scholars studying temporality and creativity to join forces and pilot new areas of interdisciplinary research – pushing forward the frontiers of our knowledge on how psychological features of time affect creative outcomes and processes.

Many management scholars are interested in taking their career to a new culture and context. Although the opportunities around the globe to teach and conduct organizational research have significantly increased, first-hand information on non-US business schools can be hard to come by. This PDW is designed for both junior and senior OB scholars who would like more information regarding academic careers at reputable non-US business schools. It will bring together seven panelists currently working at schools in Europe, Australia, and Singapore, who are not originally from there or trained there. The panel will provide information, highlight challenges, and share distinctive features for academic careers in each country, including tacit knowledge and unspoken rules that the panelists have learned during their own adaptation process. Topics for discussion include: What does the job application process look like? How are faculty evaluated, and what types of tenure and contracts are used? What are key challenges in adapting to the national culture and university system? What was most surprising, so far? What are norms of professional conduct (i.e., dos and don’ts in presenting oneself and one’s work)? The PDW includes individual presentations by panelists, country-specific roundtable discussions, and a closing Q&A.

Panelist: **David A. Jones**, *U. of Vermont*

Panelist: **Haiyang Li**, *Rice U.*

Participant: **Shuhua Sun**, *Tulane U.*

Many management scholars from outside of the US are interested in working in American business schools. Despite this interest, many non-US candidates in the job market lack information on how to best navigate this competitive jobs market and obtain commensurate employment. This PDW is designed for both young and mid-career OB scholars who would like more information on seeking and obtaining employment at US business schools. It will bring together panelists currently working at schools in the US, who were trained overseas, and faculty who have been involved in recruiting scholars from outside the US. By hearing from each side, participants will be able to hear different perspectives from those both seeking employment in the US as well as from those on the hiring side for US institutions. The panel will highlight strategies for applying for and obtaining employment in the US, identify the key challenges faced by non-US scholars in the job search, application and interview process, and reflect on the tacit knowledge gained from their own experience. Topics for discussion include: What does the job search, application and selection process look like? What types of business schools are there in the US and how do different schools evaluate non-US candidates on the jobs market? What are key challenges faced by candidates in adapting to the national culture and university system? The PDW includes individual presentations by panelists, roundtable discussions focusing on strategies for job candidates at different stages in their careers, and a closing Q&A.

Diversity, Equity and Inclusion (Virtual Only)

Session Moderator: **Zachary Mohr**, *UNC Charlotte*

This session examines organizational efforts to create diverse and inclusive spaces. Researchers in this panel examine specific practices and their effects on particular groups or individuals, as well as on organizational outcomes more broadly.

PNP: Fostering Inclusive Museums: A Conjoint Experiment on Representation and Inclusionary Practices    

Author: **Zachary Mohr**, *UNC Charlotte*

Author: **Alexandra Olivares**, *Mint Museum*

Author: **Jaelyn Piatak**, *U. of North Carolina, Charlotte*

While art should be for everyone, museums are not always inclusive to all members of society. Arts participation varies by sociodemographic characteristics despite the numerous benefits of the arts. To date, much of the research has focused on how visitor characteristics influence museums, but how do museum characteristics influence arts participation? We employ a conjoint experiment where respondents to assess how they value different art museum attributes. In particular, we examine differences in cultural representation of artists and museum programming as well as accessibility in terms of labels and cost. Our findings support the need for greater use of inclusionary practices and cultural representation in museums, particularly for more relatable language labels and more community-based program events. We also find notable differences across subgroups, such as partisanship and race, emphasizing the need for more representative, accessible, and inclusive museums.

Paper is Available to Meeting Registrants Only.

PNP: Dismantling or Disguising Racialization?: Defining Racialized Change Work in Postsecondary Education 

Author: **Heather McCambly**, *Northwestern U.*

Author: **Jeannette Anastasia Colyvas**, *Northwestern U.*

Abstract Grantmaking organizations (GMOs) are critical actors influencing education systems, public policy, and its administration. We position the work of GMOs—in the distribution and management of funds for the public good—as a form of public management. Using recent work on racialized organizations from sociology, critical theories of race, and institutional theory, we address the role of GMO's in dismantling or reproducing inequalities. In doing so we develop a new construct—racialized change work—to refer to the purposive action that organizations take to build new, equitable organizational arrangements or tear down old, inequitable ones. We develop quantifiable and testable propositions for how racialized change work might spread (engagement), how it might stick (institutionalization), and what effects it may have on producing equitable outcomes (impact). We build these propositions in the context of GMOs in U.S. higher education policy and demonstrate their portability across areas of public policy and administration. We conclude with a discussion of our contributions back to the theories from which we draw and their relationship to public administration.

PNP: Organizational Characteristics Predicting the Appointment of a Racial Minority CEO 

Author: **Young-joo Lee**, *U. of Central Florida*

This study examines how nonprofits' organizational characteristics relate to their likelihood of hiring a CEO of color, focusing on board diversity, revenue streams, risk aversion, and organizational capacity. The analysis of 501(c)(3) organizations with a GuideStar Platinum Seal of Transparency reveals a positive association between the racial diversity of the governing board and the appointment of a minority CEO. The results also show that the likelihood of hiring a CEO of color increases with the number of paid staff, but not with the total expense, partially supporting the organizational capacity hypothesis. Overall, the findings suggest that building a racially diverse board is a key to improving the racial diversity of nonprofit executive leadership.

PNP: The Effect of Veteran Status on Job Candidate Assessments in U.S. Local Governments 

Author: **Justin Michael Stritch**, *Arizona State U.*

Author: **Ulrich Jensen**, *Arizona State U.*

Author: **David Swindell**, *Arizona State U.*

Author: **Michelle Allgood**, *Arizona State U.*

Author: **Allegra Fullerton**, *U. of Colorado, Denver*

Veterans are often framed as an untapped resource for local governments to boost the public service workforce. While past recruitment efforts tend to draw a straight line from military experience to civilian careers in policing and emergency services, it remains unclear how HR professionals, more generally, weigh military experience when assessing candidate preparedness for a managerial career in public service. We examine how veteran status affects U.S. city and county HR directors' evaluation of candidates for entry-level managerial positions in local government. Using an experimental design, we randomly assign candidate characteristics—veteran vis-à-vis non-veteran status and male vis-à-vis female—and observe HR directors' assessment of candidate preparedness. Our findings reveal a premium of veteran status on candidate assessments relative to similar private sector experience, while results are less conclusive when the comparison is made to similar public sector experience. Additionally, we find no clear evidence of disparate assessments of candidate preparedness as a function of candidate gender.

Paper is Available to Meeting Registrants Only.

Author: **Betina Agata Szkudlarek**, *The U. of Sydney Business School*

Meaningful employment in the receiving country dramatically improves refugees' integration outcomes. Yet, many refugees are significantly under- and unemployed, often needing re- or upskilling upon resettlement. Human resource development (HRD) forms a critical part of the human resource management (HRM) function, and as a result, there are multiple calls for employers and their human resource (HR) professionals to take an active role in refugee HRD. Despite the calls, HRM remains largely detached from this role, leaving the HRD mission to non-profit organizations (NPOs). Drawing on a qualitative study of NPOs in Australia, we find that, in carrying out a complex set of HRD practices within a resource-constrained environment, NPOs are forced to opt for those support practices that satisfy the resource-abundant stakeholders' interests. We find that this course of action can lead to the prioritization of organizational survival over social sustainability, resulting in suboptimal outcomes for the most vulnerable refugees. With this research, we offer a novel view of how well-intended stakeholder engagement can negatively influence HRD support and further disadvantage the most vulnerable individuals. With increasing calls for cross-sector solutions to the world's grand challenges, our study reveals the potential unintended dark side of collaboration. Simultaneously, we plead for active contribution from HR professionals in creating HRD opportunities for a wide range of refugee jobseekers.

Government Use of Social Media in Times of Crisis

Session Moderator: **Diego Ravenda**, *TBS Business School*

As government use of online and social media platforms continues to increase, this panel explores the implications of using these platforms in the context of responding to community crises.

PNP: COVID-19 Communication Management on Facebook Pages of Local Governments 

Author: **Diego Ravenda**, *TBS Business School*

Author: **Maika Valencia-Silva**, *EAE Business School*

Author: **Josep M. Argiles-Bosch**, *U. of Barcelona*

Author: **Josep García-Blandón**, *U. Ramón Llull, IQS School of Management*

We examine how Italian municipalities manage the COVID-19 communication on their official Facebook pages. For this purpose, we apply an automatic topic modelling procedure on a sample of 76,139 posts published on the official Facebook pages of 103 Italian provincial capital municipalities over the COVID-19 pandemic period from 1 March 2020 to 26 March 2021. We identify two topics related to COVID-19 consisting of COVID-19 restrictive measures and COVID-19 support measures. Using regression models with municipality and year-week fixed effects, we find that the prevalence of the topic on COVID-19 restrictive measures negatively affects the tone of the communication, computed through a sentiment analysis procedure, and it is negatively associated with the number of COVID-19 positive cases in the municipal area. In contrast, the prevalence of the topic on COVID-19 support measures positively affects the tone of the communication and it is positively associated with the number of positive cases. These associations are moderated by ideology, age, and political incentives of incumbent mayors. These results may reveal a strategic communication of municipalities to induce positive perceptions about the performance of municipal incumbents in responding to the pandemic and, therefore, enhance political consensus among voters. Finally, these findings may have practical implications for public regulators, public managers, and other followers of local governments' social media.

PNP: Government Crisis Messaging on Social Media, Citizen Online Engagement and Compliance with Policies   

Author: **Xu Han**, *U. of Maryland, College Park*

Author: **Cory Baird**, *U. of Maryland, College Park*

Government messaging constitutes an important part of its response to a crisis such as COVID-19. However, few studies examine how government crisis messaging on social media shapes citizen online engagement and realized compliance with policies. This study fills the gap. We draw on Situation Crisis Communication Theory (SCCT) to classify government messages on social media and develop theories about how these messages affect citizen online engagement and offline compliance. Leveraging the SCCT framework, we utilize machine learning techniques to classify all the tweets of fifty governors between January 21st and December 13th, 2020. Using the classified tweets in fixed-effect models, we show that governors' tweets related to informational, instructional, and compassionate messaging are consistently associated with increased citizen online engagement with state government. In addition, the results suggest a link between online engagement and compliance with stay-at-home orders and advisories to avoid non-essential travel. Meanwhile, governors' instructional, compassionate, and praising messages are directly associated with better compliance.

Paper is Available to Meeting Registrants Only.

PNP: Local Governments' Framing of Social Media Messages and Citizens' Responses (WITHDRAWN)

Author: **Hannes W. Lampe**, *Hamburg U. of Technology*

Author: **Dominik Vogel**, *U. of Hamburg*

Public administrations frequently communicate with citizens and often use social media to do so. The importance of such communication is elevated in times of crisis. Citizens have an increased demand for information and interaction and administrations want to limit the extent and consequences of the crisis. Previous research has analyzed how public administrations communicate during a crisis, but little is known about how citizens respond to these messages and how their responses change based on the framing of administrations' messages. We analyze how different rhetorical frames used in local governments' social media messages affect three types of citizen responses: approval, diffusion, and engagement. We hypothesize several relationships based on the expectancy-disconfirmation framework and emotions as social information theory. The hypothesized effects are tested on a novel dataset of German local governments' Twitter communications consisting of more than 50,000 messages posted over a period of six months and more than 700,000 reactions to these messages. The results show that the use of analytical framing increases citizens' approval, diffusion, and engagement. Affective framing is found to positively influence approval, while negatively affecting diffusion and engagement. Disentangling what drives these diverging effects, we show that positive emotional framing positively affects citizens' approval and negatively affects diffusion and engagement. On the other hand, negative emotions increase citizens' diffusion and engagement. Particularly these contrasting effects emphasize the need to better understand the role of rhetorical framing in public sector communication, as rhetorical frames might affect citizen reactions in opposing ways. Besides these theoretical implications, several managerial implications for public sector communication can be derived.

Corporate Sociopolitical Activism: Creating a Better World?

Corporate Activism: Creating a Better World?

Organizer: **Anna Eileen McKean**, *Northwestern U.*

Organizer: **Farhan Iqbal**, *U. of Georgia*

Organizer: **Maurice Jerel Murphy**, *U. of Southern California*

Panelist: **Forrest Briscoe**, *Pennsylvania State U.*

Panelist: **Mary-Hunter McDonnell**, *The Wharton School, U. of Pennsylvania*

Panelist: **Kate Odziemkowska**, *U. of Toronto, Rotman School of Management*

Panelist: **Michael Toffel**, *Harvard Business School*

Participant: **Abhinav Gupta**, *U. of Washington, Seattle*

Presenter: **Nicole West**, *U. of Washington*

Participant: **Majid Majzoubi**, *Schulich School of Business, York U.*

Presenter: **Raquel Renee Kessinger**, *Massachusetts Institute of Technology*

Presenter: **Christine Shropshire**, *Arizona State U.*

Participant: **Jisun Kim**, *U. of Mississippi*

Sociopolitical activism is growing as both a corporate practice and topic of research. One intriguing aspect of this practice is that the issues addressed have direct implications for society at large, but often do not have direct economic ramifications for firms themselves. However, given the sociopolitical – and often controversial – manner of topics addressed with corporate activism, it raises the question of whether it actually helps to create a better world as some seem to purport. Or is it merely an altruistic corporate endeavor, “woke washing,” or perhaps a means by which firms pander to morally-inclined consumers? This symposium provides an opportunity to explore these questions, as well as examples of research on the topic. The program includes three research presentations covering CEO-, employee-, and shareholder-activism; followed by a panel discussion with four expert scholars. Both the presenters and panelists will delve into the potential and promise of this type of business-society engagement, providing a critical examination of if (and how) it has made society and the world a better place.

How CEO Sociopolitical Activism affects Organizational Political Ideology

An Uncertainty-based View of Strategy

An Uncertainty-Based View of Strategy

Organizer: **Nathan Furr**, *INSEAD*
Participant: **Kathleen Eisenhardt**, *Stanford U.*
Participant: **Rahul Kapoor**, *The Wharton School, U. of Pennsylvania*
Participant: **Violina Rindova**, *U. of Southern California*
Participant: **Vaughn Tan**, *U. College London*

The purpose of this session is to explore whether uncertainty has the potential to open new areas of academic inquiry. Uncertainty has played an increasingly relevant role in both academic and practice discussions, with many scholars suggesting that uncertainty (and ambiguity) create a boundary condition to our existing theories. This session explores this question by asking the questions: what are uncertainty and ambiguity? What does research reveal about the appropriate tactics for navigating uncertainty? Is there an opportunity to develop new theories that more directly address uncertainty, such as an uncertainty-based view of strategy?

This PDW uses psychoanalysis to disrupt the assumptions embedded in contemporary modes of teaching and learning. We will explore the potential of psychoanalysis to further our understanding of the realities of education, both now and in the future. Insights from psychoanalysis include the importance of paying attention to unconscious anxieties, fantasies, and psychological defenses. Applying these insights to learning spaces, and their concomitant stresses and anxieties, provides critical scholars and educators with concepts useful for understanding the psychosocial (collective) defenses that arise in response to anxiety-inducing social, cultural, and institutional pressures. The unconscious permeates a range of phenomena across educational systems: individual (student, teacher), interpersonal (teaching dyad), group (classroom), organization (institutional), and social (discourses of pedagogy, politics). Psychosocial defenses often serve to create undiscussable and collusive resistance to the work of learning, essentially erecting a form of willful ignorance to avoid the anxieties of not knowing. We contend that through psychoanalysis, such dynamics may become knowable and discussable. Further, psychoanalysis lends both teachers and students useful strategies for managing the anxieties associated with undoing what we think we know about providing, or obtaining, management education. This PDW may benefit researchers and scholars who, regardless of career stage, wish to explore and engage with the potential of psychoanalysis for deepening their understanding of the complexities of teaching and learning, and in doing so deepen their potential for building a better world.

Author: **Sabine Khalil**, *ICD Business School*
Author: **Ibraiz Tarique**, *Pace U. - Lubin School of Bus*
Author: **Yuewei Jiang**, *UCMT*
Author: **Haibing Pan**, *Scott Systems China*

This research addresses the ongoing concern with the limits of Artificial Intelligence (AI) from a talent management perspective in non-technological industries, as opposed to high-tech industries. It undertakes a review of both the consulting and academic literature and suggests ten research propositions for improving the success of AI in organizations. These propositions include the need to start with identifying organizational requirements rather than hiring technological AI employees, hiring AI managers rather than AI engineers, outsourcing rather than hiring AI labor, assigning ownership to operations rather than to AI engineers, enabling cross-boundary communication rather than fragmentation, promoting interdisciplinary teams, focusing on organizational benefits rather than on technology, enacting a transformational view rather than a static view, promoting empowerment rather than hierarchy, and focusing on organizational development rather than technology implementation. Overall, rather than the current practice of hiring AI talent, this research calls for an AI-enabled transformational change management.

MED: On Playfulness: A Case of Hand-Mind Connection and Cognitive Complexity in Teaching (Strategy)      

Author: **Robert Phillip Wright**, *Hong Kong Polytechnic U.*
Author: **Gerard P. Hodgkinson**, *U. of Manchester*

Strategy-making is serious business. When performed well, it can bring meaningful (temporary) competitive advantage for organizational success. If not fully committed to the task at hand, it can mean disaster and the eventual downfall of the organization. As such, strategy courses must be taught in a serious way, or does it? Grounding our work in the literatures of play and Serious Play, we designed a 13-week quasi-longitudinal experimental design (with control and intervention groups) (using physical reflective/reflexive dice cubes) to see the impact of play and playfulness in helping our students open up the alternatives to complex unsolved problems, issues and challenges. Using clinical psychology interviews (from Personal Construct Theory) at time T1 (beginning of the term) and T2 (at end of the term), our results show that students studying strategy using play, as opposed to the control group with no play element (using traditional teaching methods), increased their capacity to be more cognitive complexity through better differentiation and integration to generate deeper insights. Implications to both theory, practice and management education are discussed in better preparing the next generation of future-leaders for a complicated world.

Paper is Available to Meeting Registrants Only.

MED: How to Measure Gameful Experience in Business and Education?

Author: **Angelika Lau**, *U. of Duisburg-Essen*

While there is increasing interest in gamification in the context of business and education and the use of business simulation games has increased, there is not yet a short scale for measuring gameful experience in business simulation games. Existing scales are rather general and include a large number of items. When it comes to using such scales, scholars often face practical issues and restrictions regarding the survey length and participants' response time. Furthermore, some of these rather general items are inappropriate in the business and education context. As such, gameful application evaluations are mostly incomplete and are not readily comparable, as they neglect the gameful experience itself. Thus, in this study, a short scale for measuring gameful experience in business simulation games (GxBusiness-Quest) was developed based on existing scales and related literature. Based on four samples from a business simulation game, a step-by-step scale reduction, an exploratory analysis, a confirmatory analysis, and a bivariate analysis were applied. The results confirmed that the short scale developed is a reliable and valid measure, and is a useful instrument for researchers and practitioners working in the context of business and education.

Paper is Available to Meeting Registrants Only.

Author: **Nibu John Thomas**, *IIT Madras*

MED Barry Armandi Award for Best Student Paper in Management Education and Development, for the paper submitted by a student or group of students (maximum of ONE non-student, not leading author) that offers the most significant contribution to advance management education and development.

Incorporating game design features in the learning settings is known as the gamification of learning. Research has revealed that gamification can enhance user engagement levels. This increased user engagement is due to the unique experience provided by gamification. However, the evidence on this unique experience, its routes, and the underlying mechanism is still lacking. Hence, the current study examines the mechanism of gamification in a gamified management course. The results reveal the engagement pathways in learning and the role of flow in each pathway. The study clarifies the process of gamification in the context of learning and offers new research avenues combining gamification, learning, and positive psychology. It also helps practitioners by offering insights about the target experiences when developing gamification in a learning environment.

Paper is NOT Available. Please contact the author(s).

Distinguished Speaker: **Frederik Dahlmann**, *U. of Warwick*
Distinguished Speaker: **Gerard George**, *Georgetown U., McDonough School of Business*
Distinguished Speaker: **Ans Kolk**, *U. of Amsterdam*
Distinguished Speaker: **Jonatan Pinkse**, *U. of Manchester*

We are witnessing the rise of digital sustainability where organizations advance ecological sustainability through the creative deployment of technologies that create, use, transmit, or source electronic data, such as platforms or algorithms. While some consider digital sustainability a game changer in the quest to tackle climate change, others are more skeptical whether digital technologies will truly help, pointing also to potentially adverse effects. To take stock and further advance this important debate, our symposium brings together distinguished scholars specializing in the interplay of digital technologies, organizations, and the natural environment. They will debate promises, pitfalls, and paradoxes of digital sustainability and discuss ways to move forward.

Research on entrepreneurship and mental health/well-being is growing rapidly. It includes understanding entrepreneurship as a career choice for those with mental health conditions (e.g., ADHD), as well as exploring entrepreneurship's potential for both great stress and fulfilment, and thus for both mental illbeing and well-being. The Covid-19 pandemic has further fuelled such research interest: Entrepreneurial action in the face of adversity can help individuals and communities to safeguard their well-being and build resilience, while the challenges of Covid-19 have also highlighted how precarious entrepreneurs' mental health and well-being is. This PDW brings together and seeks to grow the community of scholars who share an interest in entrepreneurship and mental health/well-being. We will take stock of what we know and reflect and co-create where we should go next and how research on entrepreneurship and mental health/well-being can inspire related research fields (e.g., organizational behavior, occupational health, etc.) by suggesting fusing research on positive and negative well-being into a complementary research stream. Through impulse presentations, an inspirational and interactive gallery walk involving participants from diverse backgrounds, as well as a plenary discussion with leading researchers and journal editors, this PDW will examine mental health/well-being from different perspectives, create new ideas, and facilitate scholarly networking. A similar format at previous AOM Meetings drew more than 100 participants. We invite scholars researching mental health/well-being from entrepreneurship, OB, and related fields to this exciting PDW which seeks to build new links for mutual inspiration.

Discrimination and Mistreatment of Diverse Employees

Session Moderator: **Anyi Ma**, *Tulane U.*

GDO: The Agency Bias in Creativity Evaluations: The Role of Implicit Beliefs about Creativity

Author: **Anyi Ma**, *Tulane U.*

Author: **Michael North**, *New York U.*

Author: **Dawei Wang**, *Northwestern Kellogg School of Management*

Author: **Xiuxi Zhao**, *Center for Creative Leadership*

Although past research has suggested that older workers are stereotyped as less creative, little is known about mechanisms that underlie this belief and the conditions under which this bias is likely to occur. Past research suggests that people construe creative individuals as highly agentic individuals who can produce radically different creative ideas. We suggest that these implicit beliefs about creativity would disadvantage creative evaluations of older workers as they are often perceived lacking in agency. Four studies, including experimental and archival data from Fortune 500 employees and M.B.A students, support our predictions. Study 1 analyzed archival data from M.B.A. students, finding that older targets were perceived as less innovative. Utilizing archival data from Fortune 500 employees, Study 2 found that older workers are evaluated as less creative; but this age bias in creativity evaluations occurred only when perceivers associate creativity with radical creativity. Study 3's experiment found that an older target was perceived as less creative, even when described as producing identical output as a comparable younger target. Finally, Study 4's experiment found that older targets were evaluated as less able to develop radically creative ideas because they were perceived as lacking in independent, diligent, and competent agency.

GDO: Too Old to be Promoted? Interactive Effects of Employee Age and Gender on Career Advancement

Author: **Lydia Gross**, *Rotterdam School of Management, Erasmus U.*

Author: **Tanja Hentschel**, *Amsterdam Business School, U. of Amsterdam*

Integrating Lack of Fit Theory with the Stereotype Content Model to explain workplace age bias, we proposed that supervisors would anticipate older employees being less successful in the future and would, therefore, view them as less promotable. Based on double jeopardy rationales we postulated that these effects would be stronger for female employees. We tested our assumptions with a sample of 116 European supervisor-employee dyads. Results indicated that employee age was negatively related to promotability and that this relationship was mediated by lower anticipated future success of older employees. Employee gender moderated these relationships, but contradictory to our expectations: With increasing age, only male, but not female, employees were rated lower on anticipated future success. A series of theoretical implications are discussed, and we consider whether there may be different prescriptive career timetables for male versus female employees. We also discuss practical implications to minimize age and gender bias in the workplace.

GDO: Weighing Down My Career: Exploring Body Fat's Impact on Career Success and Sex's Moderating Role 

Author: **Michael Addison Johnson**, *Louisiana State U.*

Author: **Manuela Priesemuth**, *Villanova U.*

The CDC recognizes that much of the worldwide population is obese or overweight. However, the effects of body fat on a person's workplace success, especially in the long term, are not well known. Further, we have relatively little insights into the dominant mechanisms by which obesity influences objective career outcomes. Aiming to understand if, how, and when employee body fat impacts career success over time, we challenge prior theory (i.e., stigma theory) and employ a novel medical perspective to suggest that an employee's health - in the form of illnesses like cardiovascular disease, diabetes, and joint issues - determines the relationship between employee obesity levels and long-term work success. Furthermore, we integrate research from evolutionary biology to further consider the moderating role of employee sex in the health process. Longitudinal results from a nationally representative, multi-wave sample (across 20 years) show that employee health - but not stigmatization or other explanations - mediates the negative relationship between employee body fat levels and objective career success. Moreover, findings revealed that employee sex did not moderate this indirect effect, indicating that the high body fat men and women equally experience adverse career effects due to the serious medical impairments they incur. Theoretical and practical implications are discussed.

GDO: Understanding the Complex Relationships Between Homophobic Bullying and Depression    

Author: **Karan Babbar**, *Indian Institute of Management, Ahmedabad*

Author: **Shreya Sharma**, *Indian Institute of Management, Ahmedabad*

Although homophobic bullying has been shown to play an important role in poor mental health outcomes, especially depression, little is known about the mediating and moderating role underlying this mechanism. Thus, as a part of this study, we try to understand whether gender-based bullying mediates the relationship between homophobic bullying and depression and whether the self-concept moderates this mediating process. A sample of 431 respondents, 18 years and above were surveyed through online mode to understand homophobic bullying and its implications on the mental health of the people who identify as LGBTQ. The results indicated that homophobic bullying was significantly and positively associated with depression. This relationship was mediated by gender-based bullying. Moderated-mediation analysis further revealed that self-concept moderates the relationship between gender-based bullying and depression. This relationship is stronger for LGBTQ individuals with higher levels of self-concept. Hence, there is a need to develop (a) strong supportive LGBTQ ally groups in educational and professional spaces to ensure safety and support for the bullied; and (b) create inclusive policies in academic and professional settings to ensure lower levels of bullying.

Is International Business Good for the World? A Dialogue
with Senior Global Executives
“Is international Business Doing Good?”

Organizer: **Gerhard Apfelthaler**, *California Lutheran U.*
Moderator: **Sumantra Sengupta**, *City U. of Seattle*

Prior to the COVID-19 pandemic, world trade has increased by about 26% (WTO, 2019) during the 10-year period between 2008 and 2018, worldwide exports of goods and services reached more than 35% of global GDP by the end of 2019 (World Bank, 2021), and global flows of Foreign Direct Investment (FDI) exceeded \$1.3 trillion for each year of the ten year-period from 2010-2019 period (UNCTAD, 2020). Despite some skepticism, it is commonly assumed that the expansion of international business has been essential to economic development and poverty reduction (World Bank Group and World Trade Organization, 2015; De Cordoba & Bouhey, 2008; OECD, 2008). Multinational corporations play a major role in this context. An estimated 83,000 multinational enterprises and their 230,000 foreign affiliates (OECD, 2018) are significant players in shaping the global economic and development agenda (Caprara & Nelson, 2007). In this context, multinational corporations are faced with social and environmental responsibilities (e. g. Roach, 2007) and have to develop coherent frameworks across countries, cultures, and business units. In this PDW, International Business (IB) scholars will discuss with a panel of senior executives from multinational corporations if international business activity can positively contribute to the corporate responsibility agenda. We will also address how instructors can prepare students better for their future roles in a global economy as well as ways in which practitioners' can be integrated into the classroom. During the PDW, participants will be able to interact with the panelists.

Flattening the (Learning) Curve: Course Design and Assessment in Engaged Learning Courses
Course Design & Assessment in Engaged Learning

Participant: **Kathy Lund Dean**, *Gustavus Adolphus College*

Participant: **Charles Fornaciari**, *La Salle U.*

Participant: **Jean M. Forray**, *Western New England U.*

Course design in learning is among the most researched topics in higher education at any level, in any discipline; this is certainly the case with engaged, or constructivist, pedagogies. But it is only relatively recently that the marriage among course design elements, their alignment to student learning, and how that alignment drives assessment of learning has been addressed in engaged pedagogical practice literature. Additionally, little, if any, educator development in engaged pedagogical practice is integrated into doctoral programs or early career development programs. In this PDW, we share key elements of engaged learning course design and assessment, including pre-course steps, running an engaged course in real time, and post-class assessment and closure activities. Special attention is given to equity and inclusion in engaged learning, ethical considerations, and institutional norms of assessment documentation. The PDW’s goal is to shorten the learning curve for educators who want to design and successfully implement active learning experiences with their students, but who have had little practical training or even coaching by which to do so. Using constructivist pedagogical theoretical framing as a foundation, we build on seminal course design research and practice supporting design clarity and transparency, and share best practices in creating and running engaged courses and designing learning outcomes assessment schemes in very practical terms. Participants will have an opportunity to talk with others, share ideas and get feedback on their course design schemes, and create networking and collaborative connections.

Entrepreneurial Cognition

Entrepreneurial Cognition

Organizer: **Matthew Grimes**, *Cambridge Judge Business School*
Participant: **Tyler Wry**, *The Wharton School, U. of Pennsylvania*
Participant: **Madeline Toubiana**, *Telfer School of Management, U. of Ottawa*
Participant: **Benjamin L. Hallen**, *U. of Washington, Seattle*
Organizer: **Michele Williams**, *U. of Iowa*
Moderator: **Dean Shepherd**, *mendoza*

The cognitive process that leads to the development of new ventures has been a central topic of ongoing concern to scholars of entrepreneurship. Are you a doctoral student or faculty member who studies cognition within the context of entrepreneurship and are looking for ways to connect with other similar researchers? The purpose of this PDW is to enable this year's AOM theme of "Creating a Better World Together" by convening a group of scholars who are interested in learning about the future of research on entrepreneurial cognition and its role in imagining and enacting that better world.

Publishing Inductive Qualitative Research in Prominent Academic Journals

Publishing Inductive Qualitative Research

Organizer: **Quy Nguyen Huy**, *INSEAD*

Panelist: **Melissa Graebner**, *U. of Illinois at Urbana-Champaign*

Panelist: **Davide Ravasi**, *UCL School of Management*

This PDW workshop is aimed at fostering information exchange among practitioner scholars interested in publishing inductive qualitative research in prominent academic journals. Practitioner scholars are individuals who pursue rigor in their research process and output as well as produce knowledge that is useful for improved managerial practice. This PDW has been offered for several years now and keep attracting hundreds of scholars each time. The content offered is not predetermined and varies every year depending on the audience's questions and evolving norms in the field. The workshop will feature scholars with a track record of publishing qualitative research in premier journals. The goal will be to build help practitioner scholars to disseminate their ideas through prominent journals, while still encouraging these scholars' focus on managerial relevance. The conference presenters will lead exchanges around topics such as understanding the expectations of premier journals; conducting a literature review; designing data collection and analysis processes; selecting and working with co-authors; writing a first research draft; refining a manuscript before journal submission; and dealing with the editor and reviewers during the review process.

A Multi-Level Approach to the Study of Reputation

A Multi-Level Approach to the Study of Reputation

Organizer: **Claudia Gabbioneta**, *U. of York*

Organizer: **Daniel Muzio**, *U. of York*

Organizer: **Philip Garnett**, *The York Management School*

Panelist: **Laura D'Oria**, *Iowa State U.*

Panelist: **Michael Andreas Etter**, *King's College London*

Panelist: **Robert A. Zinko**, *East Carolina U.*

Panelist: **Anastasiya A. Zavalova**, *Rice U.*

Reputation is a multifaceted construct (Ravasi et al., 2018) that can be analyzed at multiple levels, including the individual, the organizational, and the industry-level. Although academic research has generally recognized that these levels are not independent one from the others and that the reputation acquired – or lost – at one level can affect the reputation at the other levels, we still have a limited understanding of how reputations at different levels of analysis interact one to another. For example, we know relatively little about how individual reputations aggregate at the organizational level, or how the reputation of an organization transfers to its members. Similarly, we have yet to fully unveil the processes and mechanisms through which the reputation of individual organizations transfers to the industry they belong to, or through which mechanisms individual reputations influence the reputation of an industry. Against this backdrop, this PDW aims at bringing together scholars interested in the study of reputation at different levels of analysis to exchange views, compare theoretical and methodological perspectives, and discuss issues encountered while studying reputation at either the individual, the organizational, or the industry-level or when trying to combine these different levels of analysis. By doing that, the PDW hopes to provide further impetus to the study of reputation and to start bridging the divide between studies conducted at different levels of analysis.

Panelist: **Gary Sinclair**, *Dublin City U.*

This session introduces the swarm methodology and discusses its viability as a qualitative approach to research involving large, ephemeral events. It will also encourage interdisciplinary relationship-building and the elaboration of applications of the swarm methodology by integrating ideas from diverse fields including marketing, international business, organizational behavior, strategy, and social issues. This collaborative caucus session will invite attendees to identify potential swarm targets and research programs, ideally resulting in the conceptualization and seeding of at least one new swarm project (Steps 1 and 2 of the swarm research process; see Kilker, 2009; Exploring a new methodology: Background, planning and lessons from the 2007 tradeshow 'swarm' project).

If you are new to the Organization and Management Theory (OMT) division, are interested in joining OMT, or are an established member who has been away for a while, then this forum is for you! This forum was created especially to help members to feel “at home” in the OMT division. We have designed the forum so that you can meet leading scholars in the OMT division, meet other new members of the division, and discuss research with other scholars who share similar interests. The forum will include a welcome and overview of the OMT Division and research discussions moderated by renowned scholars who actively conduct research in a particular area of interest. As a participant in the forum, you can self-select into several research themes of your choice. Research themes will be organized by theory, context and methodology.

Sequence Analysis in Management Theory and Practice

Sequence Analysis: Theory and Practice

Organizer: **Stephen Thomas Downing**, *U. of Missouri*
Organizer: **Walter J. Ferrier**, *U. of Kentucky*
Organizer: **Riitta Katila**, *Stanford U.*
Organizer: **Jin-Su Kang**, *National Yang Ming Chiao Tung U.*

Sequence analysis captures the ordinal and temporal structure of discrete data, such as the progression of jobs in a career path, stages of a hostage negotiation, or longitudinal pattern of rivals' competitive attacks. Although the value of sequence analysis for organizational research was introduced over three decades ago, the adoption of sequence-related methods in management remains limited. We believe that this is due to a combination of unfamiliarity (with sequence concepts) and inaccessibility (of sequence analysis computations). Accordingly, we designed this professional development workshop (PDW) to tackle both challenges for scholars within the fields of strategic management, organizational theory, and organizational behavior. The PDW is formatted around a tutorial structure, which will be preceded by a phenomenological and theoretical background on sequences, and followed by an engaging, discovery-oriented discussion of the usefulness of sequence analysis in future research. The main tutorial contents of the PDW will incorporate two learning tools that facilitate hands-on practice with sequence analysis: (1) sets of colored toy blocks, representing discrete organizational events, aid in building intuition about sequence concepts, and (2) a user-friendly (graphical user interface) software program, SequenceR, aids in computing sequence measures. Thus, the key takeaway for participants will be the development of a new skill: understanding and computing sequence analysis measures. We expect that this tutorial format is suited not only to delivering a quality learning experience but also to fostering cross-divisional interactions for participants' professional development.

How do I register? There is no charge to attend, but pre-registration and conference registration are required. Attendance is limited to 50 participants. Please fill out the PDW registration form at this link by July 8 to receive confirmation of registration from the session organizer: https://missouri.qualtrics.com/jfe/form/SV_0p7XpEPGepGgyl8. What should I bring? Participants should bring their laptop with the SequenceR program (<https://github.com/sdownin/sequencer>) to use during the workshop. Please download the SequenceR program in advance: <https://github.com/sdownin/sequencer#download>. Tutorial data files will be made available to admitted participants before the workshop. For other questions, please contact: Stephen Downing (sdowning@missouri.edu) and Walter Ferrier (walter.ferrier@uky.edu). Please include "[AOM2022 Sequence PDW]" in the email subject line.

**The Road Less Travelled: Advantages of Positions in a
Balanced or Teaching University**
Advantages of Positions in Balanced Institutions

Participant: **Laura Guerrero**, *U. of Houston, Clear Lake*

Participant: **Mirit K. Grabarski**, *Lakehead U.*

Participant: **Amanda Hinojosa**, *Howard U.*

Participant: **Waheeda Lillevik**, *College of New Jersey*

Participant: **Michelle Ruiz**, *Saint Mary-of-the-Woods College*

Participant: **Luciana Turchick Hakak**, *U. of the Fraser Valley*

Participant: **Saul Valdiviezo**, *U. of Texas at El Paso*

Most students attend very research-intensive universities (R1) to get their PhD. As a result, they are socialized and mentored to enter the academic job market as if all positions were in R1 universities. However, there are many other types of universities which offer jobs that value both research and teaching, and that have different expectations in the selection process than R1 institutions. This PDW aims to inform and encourage PhD candidates to consider careers outside of R1 universities, and to provide them with information about other types of universities.

Participant: **Connie Shao-mei Zheng**, *U. of South Australia*

Building on the insights from five previous AOM caucuses and recent publications from this group, this caucus considers the cross-disciplinary and longer-term implications of organizations' unique institutional contexts. By better understanding them and the recursive practices they stimulate, we can develop new paradigms on organizations' strategic, operational and cultural issues. This work has the potential to inform strategic management, organizational behavior, organizational change, organizational theory, human resource and project scholarship. Previous caucuses have already led to a special issue, edited book of chapters involving 17 scholars and a symposium on the subject. Other collaborative projects are currently being planned. We believe this caucus would be of great interest to practitioners too, as we have already learned a great deal about the nature of the strategy-change interface and how organizations and their people can create a better world together.

All welcome whether attending the conference in person or virtually.

CMS: The Myth of Employee Experience: From False Premises to Benevolent Subordination

Author: **Riku Reunamäki**, *Aalto U. School of Business*
Author: **Rebecca Piekkari**, *Aalto U. School of Business*
Author: **Pekka Mattila**, *Aalto U.*

The concept of employee experience, developed by the management consulting industry to address the link between human resource management and firm profit, is fashionable among HRM professionals. In this ethnographic case study, we take a critical look at its evolution and show that it is based on two false premises: the false premise of perspectives and the false premise of relationships. We therefore question the underlying logic of employee experience and portray it as a myth. Given the lack of academic research on employee experience in general and critical research in particular, we make a contribution by introducing the notion of benevolent subordination. It describes how senior managers may frame HRM initiatives such as employee experience as well-intending and benevolent, obscuring their own subordinating acts and the adverse outcomes that these acts may bring about for the employees themselves.

Paper is Available to Meeting Registrants Only.

CMS: Two Routes to Degeneration, Two Routes to Utopia

Author: **Genevieve Shanahan**, *Cardiff Business School, Cardiff U.*

It sometimes appears that alternative organizations are doomed to perpetuate the systems they aim to transform, as efforts to avoid co-optation lead these organizations to retreat from the very engagement necessary for social change. Scholars then face a dilemma: reveal these degenerative processes in existing alternative organizations and reinforce disillusionment, or avoid such critique and endorse ineffectual strategies. This paper thus asks how we can engage in necessary critical work without thereby stifling social change efforts. Erik Olin Wright's real utopias approach is first used to distinguish two broad strategies adopted by alternative organizations – symbiotic and interstitial – associated with distinct degeneration risks. The former set, exposure degeneration, are well-studied by the alternative organizations literature, but the latter, insulation degeneration, have received less systematic attention. Thus, the first contribution of this paper is the classification of these degeneration risks and the specification of their dialogical relationship. In a second step, the paper draws upon the critical realist morphogenetic approach to understand social change strategies and degeneration risks in terms of structurally conditioned agency in cycles of simultaneous structural reproduction and elaboration. Thus understood, structural reproduction through exposure or insulation degeneration does not necessarily preclude structural elaboration. The second contribution of the paper is therefore a framework for engaging alternative organizations with genuine but constructive critique that accounts for the twin risks they face as well as the promise nevertheless inherent in their diverging strategies.

CMS: Activism in the Era of Social Media: Platform Activism and Affordances the Case of @GGreenpeaceBr (WITHDRAWN)

Author: **Marcus Vinicius Peinado Gomes**, *Cardiff Business School, Cardiff U.*
Author: **Mário Aquino Alves**, *FGV EAESP*
Author: **Fábio Grigolletto**, *Federal U. of São Carlos*
Author: **Caio Motta Luiz De Souza**, *Fundacao Getulio Vargas*

As social media platforms become more prevalent in our societies, it is critical to examine what they afford for activism. Hence, we ask, do social media platforms provide new spaces for activism for SMOs? To address this gap, we examined how one SMO, Greenpeace Brazil, translates its actions on social media platform Twitter. Thus, we investigate how @GreenpeaceBR affords GPBR's practices. Adopting a Critical Realist approach to technologies, we argue organizations exert agency and influence society while choosing how to use such technologies within their activities. We argue that such affordability characterizes activism in the era of social media platforms. We contribute to organization studies of social media literature firstly by advancing the understanding of how a particular organization reconfigures its practices and organizing into Twitter. Secondly, we identify Twitter's main affordances for SMOs and activism. Thirdly, while doing so, we reconfigure the idea of activism in the era of social media, further elaborating the concept of platform activism.

CMS: “Liberté, Égalité, Flashball”. Resisting Work to Absorb Violent Protests

Author: **Elise Lobbedez**, *EMLYON Business School*

Best Doctoral Student Paper is sponsored by the journal Organization

This paper explores how protest movements resist police violence, meaning the justified and unjustified use of physical force against citizens, in the context of violent protests. Drawing on an ethnographic study of the French yellow vest movement, I uncover the crucial role of actors resisting work in absorbing violent protests, in the sense of bearing and making their own. My findings show in particular that the articulation of three organized responses, namely physical care, paralegal assistance and violence publicization, enabled the yellow vests to sustain the deployment of violent protest tactics, through property damage, arsons or physical assaults to the police, while questioning the legitimacy of the use of physical force by the police to answer the conflict. This resisting work allowed actors to effectively resist to police violence, by controlling police behaviors and signaling the question as a public issue. Through this study, I first contribute to the literature looking at the efficacy of resistance by theorizing how activists have been able to challenge the use of physical force as part of protest policing. Second, I expand existing knowledge on the work involved in sustaining violence.

**Issues of Immigrant Women in US Workplace: The Role of
Reverse Mentoring as an Intercultural Tool**
Role of Reverse Mentoring as an Intercultural Tool

Participant: **Sanghamitra Chaudhuri**, *Metropolitan State U.*
Participant: **Sunyoung Park**, *Louisiana State U.*
Participant: **Karen Johnson**, *U. of North Texas*
Participant: **Ridhi Arora**, *Indian Institute of Management, Shillong*

The purpose of this workshop is to address workplace diversity and inclusion issues faced by immigrant women in the US using reverse mentoring as an intercultural organization development tool. Reverse mentoring has become a sought-after intervention to bridge the inter-generational knowledge gap. Reverse mentoring is defined as an inverted form of mentoring whereby the seasoned and more experienced workers are paired as mentees with organizational rookies, who are mostly fresh and less experienced as mentors (Chaudhuri & Ghosh, 2012; Hechl, 2017; Murphy, 2012). Specifically, reverse mentoring has been used to promote inclusivity among multiple generations in relation to gender, ethnicity and culture (Chaudhuri, Park, & Johnson, 2021). This workshop can help to promote the transfer of knowledge on diversity and inclusion of immigrant women and bridge the divide between intergenerational groups. The expected outcomes of this workshop are (a) to help increase visibility and mobility of immigrant women (mentors) in the workplace, (b) to improve cultural understanding of the executives and leaders (mentees), and (c) to promote intercultural communication between mentors and mentees. Additionally, our professional development workshop (PDW) attempts to offer opportunities to scholars and organizational practitioners to design and conduct evidence-based management studies on developmental relationships from the lens of reverse mentoring. Simultaneously, it would guide organizational policymakers, leaders, mentors, and mentees to deploy reverse mentoring as a tool with a thorough understanding of cultural perspectives.

Leadership, Spirituality, and Authenticity: A Look at Inner and Outer Impact

Session Moderator: **Lasse Lychnell**, *Stockholm School of Economics*

Papers on authentic leadership, OCBs, and spiritual management will be presented.

MSR: **Authentic leadership and Turnover Intention: The Role of PSS and Organizational Identification**

Author: **Kiho Jun**, *Beijing Normal U.-Hong Kong Baptist U. United International College*
Author: **Zhehua Hu**, *Beijing Normal U.-Hong Kong Baptist U. United International College*
Author: **Yi Sun**, *BNU-HKBU United International College*
Author: **Yuqing Shao**, *Beijing Normal U.-Hong Kong Baptist U. United International College*
Author: **Yefei Feng**, *Beijing Normal U.-Hong Kong Baptist U. United International College*

Drawing on organizational support theory and social identity theory, we examine the effects of authentic leadership on employee turnover intention. Especially, we focus on the mediating role of perceived supervisor support (PSS) and the moderating role of organizational identification. Using data from 433 respondents in several business organizations in South Korea, we found that PSS completely mediated the relationship between authentic leadership and employee turnover intention. Moreover, organizational identification moderated the relationship between PSS and turnover intention, such that the relationship between PSS and turnover intention is stronger for employees with high organizational identification. Herein, we discuss the managerial implications and future research directions arising from our study.

MSR: **Examining Link Between Compassion, Spiritual Leadership and Organizational Citizenship Behavior**

Author: **Upasna A. Agarwal**, *NITIE*
Author: **Pablo Zoghbi-Manrique-de-Lara**, *U. de Las Palmas de Gran Canaria*

Previous research has found that spiritual leadership motivates followers to help others by engaging in organizational citizenship behaviors (OCBs). However, no study has attempted to explain the way in which this relationship occurs. Suggesting that OCBs are compassionate acts (from Latin: com-: together, -passio: to suffer), this study examined experienced compassion at work as a mediator that explains the way in which spiritual leadership leads followers to engage in OCBs. Responses to two questionnaires from 192 employees and their direct supervisors at 14 business firms in India were analyzed. Results showed that: 1) a single higher-order construct of supervisors' ratings of spiritual leadership was significantly positively related to subordinates' ratings of compassion at work; and 2) compassion at work mediated the relationship between spiritual leadership and subordinates' ratings of OCBs, only partially in the case of organization-directed OCBs. Supporting OCBs as compassionate behavior, the findings suggest that spiritual leadership moves followers at work to notice and feel the setbacks and misfortunes of others; they ultimately respond with compassionate OCBs.

MSR: **On Becoming a Spiritual Manager: A Cosmology Episodes Approach to Spiritual Integration at Work**

Author: **Lasse Lychnell**, *Stockholm School of Economics*
Author: **Rebecka Arman**, -

The process in which managers integrate insights from spiritual development into their working lives is complex and has received only little scholarly attention. This paper employs a sensemaking lens and uses the cosmology episodes approach to analyze a 10-year longitudinal, in-depth single-case study. This unique study reveals that the process contains several iterations of successive cosmology episodes and the role of spirituality shifts accordingly. In addition, the concept of transformative pivots is used to understand how shifts advance the process in sensemaking as the manager is cast from rigid sense-losing into resilient sense-losing and improvising. While in alignment with previous accounts of spiritual integration, this paper adds by providing an in-depth longitudinal understanding of a single case and revealing the underlying structure seen through a sensemaking lens.

Participant: **Miha Skerlavaj**, *U. of Ljubljana, School of Economics and Business*

Creativity, though integral to organizational success, can be difficult to recognize. At times, creativity's role may be unclear because it functions as a kind of backdrop that sets the stage for productive behaviors that are not necessarily creative in their own right. When creativity is specifically desired, leaders may find themselves unable to recognize or accept it because it is perceived as incongruent with other priorities. Responding to these critical barriers to making the most of creativity at work, the five papers in this presenter symposium all consider some aspect of how creativity might be better recognized and extended in ways that foster its appreciation. Collectively, the papers provide a deeper look into the challenges facing organizations hoping to leverage creativity and suggest a symbiosis between recognizing creativity and extending it – both within the creativity domain and outward into various organizational settings.

“Creating a Better World Together” challenges business researchers to work closely with industry and social sector leaders to translate research insights into action. Translation can occur before the fact, while framing the research question, and/or after the fact, as an effort to communicate in plain language with business, social sector and governmental leaders with the power to implement new ideas (Shapiro, Kirkman & Courtney, 2007). In any case, the effective translation of research requires close engagement with the end users of the research insights. It also requires engagement with the institutional context of research: The documentation of the impact of business research has become an increasingly important part of accreditation and funding discussions worldwide, has been partially institutionalized through industry research centers in Europe and elsewhere, and has been fully institutionalized in Australia and the United Kingdom. But research faculty have little training or experience in engaging business, public and social sector leaders in the research process; practitioner scholars struggle to make sense of the expectations of academic research; and all are puzzled by the changing institutional context of business research. This PDW tackles several pieces of the engagement puzzle. Through a brief panel and longer facilitated discussion and workshop sessions, participants will 1) explore the institutional context of impact in which they operate; 2) articulate a theory and logic of impact that connects research activity to impact through engagement with business, public and social sector leaders; and 3) reflect on the opportunities, challenges and trade-offs involved in such engagement.

Please think in advance about the impact you would like to see from a current or recent research project. Questions? tl.hill@temple.edu

**For Goodness' Sake: The Next Wave of CSR Research in an
Impact-Oriented World**
CSR Research in an Impact-Oriented World

Organizer: **David Joel Skandera**, *U. of Central Florida*
Organizer: **Bram Van Der Kroft**, *Maastricht U., School of Business & Economics*
Organizer: **Kevin Chuah**, *London Business School*
Panelist: **Ruth V. Aguilera**, *Northeastern U.*
Panelist: **Michael L. Barnett**, *Rutgers U.*
Panelist: **Mark R. DesJardine**, *Tuck School of Business at Dartmouth*
Panelist: **Olga Hawn**, *U. of North Carolina, Chapel Hill*
Panelist: **Pushpika Vishwanathan**, *U. of Amsterdam*

The business case for CSR is a dominant paradigm in management research which argues that organizations should pursue CSR to maximize profits. However, stakeholders increasingly demand managers consider the short- and long-term societal impact of their decisions, such that many stakeholders likely remain unsatisfied by CSR that is primarily oriented toward short-term financial goals. Given this, two dominant theoretical perspectives of CSR have emerged over time: (1) an instrumental perspective that reflects the traditional business case for CSR, and (2) a more normative injunctive perspective that argues organizations have a duty to move beyond financial goals by reducing harm and creating societal value. For this panel symposium we bring together esteemed scholars with expertise in CSR and corporate sustainability to debate whether, why or why not, and how researchers should re-conceptualize the business case for CSR by comparing, contrasting, and reconciling the instrumental and injunctive perspectives of CSR. The panel will (1) offer a current perspective on the state of the business case for CSR, its importance, and its shortcomings; (2) debate the extent to which researchers should seek to re-conceptualize the business case for CSR; and, finally, (3) propose a launching point for future research on the topic. We thereby seek to chart a path forward for researchers interested in CSR at a time when increasingly impact-oriented stakeholder demands blur the line between instrumental and injunctive perspectives of CSR.

In preparation of this panel symposium, you may submit questions prior to the event by emailing david.skandera@ucf.edu. This is not required to attend the event, and the event includes a Q&A session where you will have a separate opportunity to ask questions of the panelists that come up during the panel discussion. By allowing prospective attendees to submit questions in advance, we hope to ensure there are enough audience questions for the Q&A session and to gain a sense of your expectations for the panel discussion. We cannot promise that all questions submitted in advance will be answered during the event, but we will attempt to pose a representative sample of the questions to the panelists during the Q&A session. For any other inquiries regarding this panel symposium, please also email david.skandera@ucf.edu.

The Interface of Human Resources and Entrepreneurship: A Research Incubator

HR & Entrepreneurship Research Incubator

Organizer: **Jake Messersmith**, *U. of Nebraska, Lincoln*
Organizer: **Brian Harney**, *Dublin City U.*
Panelist: **Melissa S. Cardon**, *U. of Tennessee*
Panelist: **Clint Chadwick**, *U. of Kansas*
Panelist: **Matthew W. Rutherford**, *Oklahoma State U.*
Panelist: **Theresa M. Welbourne**, *U. of Alabama*

Both the HR Division and the Kauffman Foundation are interested in encouraging more research at the intersection of entrepreneurship and HR. The purpose of this Research Incubator is to provide a forum for scholars to discuss promising directions in this nascent area. This Research Incubator consists of both a PDW session (90 minutes) and a Social (90 minutes), combined into one experience, for a total of three hours. Topics within this area include (but are not limited to): (a) the relationship between specific HR practices and/or HR system features, and entrepreneurial performance/growth; (b) the role of HR in the creation of new ventures; (c) HR in entrepreneurial firms and its role in maximizing entrepreneurial performance (including innovation) in any organization; (d) HR processes/systems in start-ups and younger organizations (emergent and developing firms), in smaller firms, and in family-owned businesses; (e) technological innovation and HR; (f) turnover/mobility into and out of entrepreneurial ventures; (g) acquiring; (h) experiences and expectations of employees in start-ups; and (i) human capital issues (e.g., required knowledge, skills, abilities and other characteristics, or KSAs) within entrepreneurs themselves. The panelists have extensive experience and interest in these areas, and they will share their perspectives and suggestions on research in this area (current and future). The session will include smaller roundtable groups, facilitated by the panelists, wherein attendees' specific research ideas or proposals will be discussed. Submitting a brief proposal ahead of time is encouraged, but not required for participation (see submission information below). There will be ample opportunities for one-on-one networking amongst scholars interested in this area, and both Ph.D. students and faculty with a variety of experience levels are encouraged to attend. Pre-registration is required.

The session will include smaller roundtable groups, facilitated by the panelists, wherein attendees' specific research ideas or proposals will be discussed. Value Creation and Appropriation in the Post-Pandemic Era
Business in the Post-Pandemic Era

Session Chair: **Minyoung Kim**, *U. of Kansas*
Session Chair: **Curba Morris Lampert**, *Florida International U.*
Panelist: **Constance E. Helfat**, *Tuck School of Business at Dartmouth*
Panelist: **Francisco Polidoro**, *U. of Texas at Austin*
Panelist: **Alain C. Verbeke**, *U. of Calgary*
Panelist: **Margarethe F Wiersema**, *U. of California, Irvine*
Panelist: **Anthea (Yan) Zhang**, *Rice U.*

The Covid-19 pandemic upended business as we once knew it. The pandemic brought a fatal blow to the already crippled phenomenon of globalization, as explained by the newly coined terms of deglobalization and slowbalization. Global supply chains were damaged, stymieing the delivery of necessary products to a world that had never before seen such deficiencies in recent history. In this time of uncertainty, organizations struggled to make sense of the new context and looked to their CEOs and top management teams for leadership. The c-suite had to define, in real time, what their organizations stood for while simultaneously keeping their employees from engaging in the “great resignation.” Moreover, technology and innovation redefined the way we conduct business as a significant number of firms are working remotely and never returning to their physical spaces. The totality of the events described above suggests that we need a paradigm-shifting approach to understanding business in the post-pandemic era. We believe the criticality of the timing to be especially true now that we expect the beginning of the end of the Covid-19 pandemic. This PDW brings together an accomplished group of scholars with diverse expertise, to provide a new prism of understanding on value creation and appropriation in the post-pandemic era. Our aim is to set the stage for paradigm-defining, scholarly conversation.

Women’s Voices in a Healing Circle: Practices to Amplify the Feminine To Balance the World Better
Women’s Voices Amplifying the Feminine

Distinguished Speaker: **Jyoti Bachani**, *Saint Mary's College of California*
Distinguished Speaker: **Kathryn Goldman Schuyler**, *Alliant Intl U. / Coherent Change*
Distinguished Speaker: **Sandra A. Waddock**, *Boston College*
Distinguished Speaker: **Nancy J. Adler**, *McGill U.*

Distinguished Speaker: **Stacie Chappell**, *Vancouver Island U.*
Distinguished Speaker: **Maria Teresa Farkas**, *Imperial College Business School*
Distinguished Speaker: **Elizabeth Davis**, *Saint Mary's College of California*

This experiential PDW offers a demonstration and participation in healing circles to learn about the practices women and men have used to sustain feminine qualities in patriarchal contexts where they are systematically under-valued. The organizers of the 2021 Women’s Wisdom Circle and the Nevertheless She Persisted series of PDWs of the past four years, have come together to propose this. Women, men, and people of all genders, across the entire spectrum of management academia are invited to come to learn the healing circle methodology by participating in sharing their stories in a supportive community, with the aim to heal and rebalance the masculine-feminine within and around us. Building on the first person truth-telling in a supportive community, participants go away understanding that there is not one dominant story, but a multitude of stories. The healing circle is designed to help find our joy with community sharing, commiseration, and liberating many truths. We aim to transform systems by bringing a better balance between masculine and feminine, with practices to share and reflect on the untold stories as part of building community. The healing comes from the collaboration, caring, listening and story sharing soft power of the experience, that affirms the feminine. The desired impact is that whatever the attendees do, in personal or professional lives, shifts to be better balanced as in the yin-yang or ardhnarishwar (half-man-woman form of Shiva) ways of being.

**Bringing “Class” into the Business Classroom: Addressing
Social Class in Management Education**
Bringing “Class” into the Business Classroom

Session Chair: **Jennifer J. Kish-Gephart**, *U. of Massachusetts, Amherst*
Session Chair: **Kristie Joy Neff Moergen**, *U. of Arkansas, Fayetteville*
Presenter: **Andrea Dittmann**, *Emory U., Goizueta Business School*
Presenter: **Kristen Lucas**, *U. of Louisville*
Presenter: **Sean Martin**, *U. of Virginia*
Presenter: **Jessi Streib**, *Duke U.*
Presenter: **Ghazal Zulfiqar**, *Lahore U. of Management Sciences*
Participant: **Carrie R. Leana**, *U. of Pittsburgh*
Participant: **Maureen A. Scully**, *U. of Massachusetts, Boston*
Participant: **Jacqueline Tilton**, *Appalachian State U.*

Social class profoundly impacts who experiences (dis)advantage in organizations. Class is influential starting as early as application and selection, and remains so even after individuals walk through an organization's front door—from the meaning of work to interacting with coworkers to achieving performance outcomes to scaling organizational levels. While social class scholars have contributed much in the way of research over the past decade, it is important to think about when and how to bring discussions of class into the business school classroom. This PDW brings together social class scholars, who will present on how they bring “class” into the classroom, including demonstration of experiential exercises and dialogue about the challenges they face navigating issues around class in their classroom policies and interactions with students. Their presentations will be followed by roundtable discussions with the audience, with the goals of helping instructors engage in reflexivity and developing actionable guidance and activities to bring into the business classroom.

If you are interested in attending this PDW, please email Kristie Moergen at Kmoergen@walton.uark.edu before July 15th. Attendance in this session is limited.

OMT Celebrates Andy Van de Ven's Wonderfully Full Life *Andy Van de Ven: It's a Wonderful Life!*

Organizer: **Alan D. Meyer**, *U. of Oregon*
Organizer: **Raghu Garud**, *Pennsylvania State U.*
Speaker: **Jean M. Bartunek**, *Boston College*
Speaker: **Ken Davidian**, *Virginia Tech*
Speaker: **Tim Hargrave**, *Central Washington U.*
Speaker: **Ann Langley**, *HEC Montreal*
Speaker: **Kevin W. Rockmann**, *George Mason U.*
Speaker: **Shaker A. Zahra**, *U. of Minnesota*

This PDW celebrates Andrew H. Van de Ven's wonderful life. Andy passed away on April 30, 2022, leaving behind a rich legacy of contributions that continues influencing scholars across the Academy. Andy served as AOM's 56th president, and the OMT Division gave Andy its Career Award for Distinguished Scholarship. His work has shaped our thinking on topics that include organizational change, engaged scholarship, abduction, process theorization, and innovation. Andy persevered in teaching a Ph.D. seminar in Organization Theory until just weeks before he passed away. Our PDW will begin with several colleagues' reflections on the principled causes and diverse ideas that sparked Andy's passions. Then, we will break into small groups to celebrate and memorialize Andy's Wonderful Life, drawing inspiration from Frank Capra's assertion that the removal of a single exemplary individual (like George Bailey or Andy Van de Ven) would have opened gaping holes in the social fabric of his community.

Presenter: **Betina Agata Szkudlarek**, *The U. of Sydney Business School*
Presenter: **Davina E. Vora**, *State U. of New York at New Paltz*

As organizations operate in and expand to multiple countries, employees must work across geographic, cultural, linguistic, and institutional boundaries. To be effective and compete in these diverse contexts, organizations need employees with global leadership skills. Such skills include, among others, multicultural competence, boundary spanning, influencing stakeholders, leading change, making ethical decisions, building community, managing oneself, valuing people, and empowering others (Bird, 2018; Steers & Osland, 2020). Despite their importance, the shortage of global leaders has been well documented from the mid-1990s to the present, and few business schools have courses or programs on global leadership. The purpose of this PDW is to share valuable teaching knowledge from highly experienced global leadership professors and practitioners who have taught courses and developed programs on global leadership. This highly interactive PDW is designed to provide participants with several benefits, including: 1) a summary of best practices for developing global leaders, 2) round-table discussions (with handouts) of teaching tools and exercises in developing class sessions, modules, or courses on global leadership, and 3) a forum for participants to discuss their own ideas and concerns related to applying best practices in their own settings. Participants will leave this workshop with practical information on best practices along with a variety of different approaches and exercises for teaching global leadership and related concepts (e.g. cross-cultural management, diversity).

Participant: **Rebecca J. Bennett**, *U. of Central Florida*

The innovation process in organizations usually involves collaborations and decisions about resource allocation on new ideas. Therefore, creative talents and ideas need to be first recognized to receive the support and resources needed to generate actual value for organizations. Creativity evaluation thus serves as the pivotal link between idea generation and implementation. Despite its nascence, research interest has burgeoned in creativity evaluations due to this topic's theoretical and practical significance. This symposium is intended to showcase new research on creativity evaluations using novel and diverse theoretical perspectives and methodologies. The papers that comprise this symposium investigate individual or group factors that influence creativity evaluations as well as the downstream consequences of endorsing or rejecting creative ideas. This symposium thus provides a comprehensive view of creativity evaluations. It also illuminates connections between creativity evaluations and various important topics in management research such as diversity, first impressions, status, and deviance.

Discussant: **Harry J. Van Buren**, *U. of Tennessee at Chattanooga*

The COVID-19 pandemic has exposed massive flaws in human health systems worldwide. Communities with higher health deficiencies suffered even more drastic effects when COVID-19 interacted with pre-existing diseases—making COVID a more lethal virus. Considering that business can only thrive if their stakeholders enjoy good health and well-being, the critical role of business in improving health spans from occupational health and public health policy and regulations to the health of external stakeholders such as consumers and the surrounding communities. Despite the intrinsic connection between business and human health, business scholars have mainly paid attention to internal stakeholders, such as employees, and public health policy and regulations as they directly affect business, while overlooking the impact of business on external stakeholder health. This symposium intends to open a place for discussion of the role of business in tackling human health challenges and the impact of business on the health of external stakeholders such as consumers and communities. This symposium will also be a springboard to propose a research agenda for business and management scholars interested in health and the advancement in the United Nations’ Sustainable Development Goals (SDGs) for not only SDG 3 on Good Health and Well-being but also related SDGs such as SDG 2 on Zero Hunger and SDG 13 on Climate Action.

Organizer: **Sophia Town**, *Fordham U.*

Careers of management professionals no longer reside solely within the physical realms of their organizations but also have an impact on the society as a whole. Amidst of the growing role of business world in our society and increasing societal and environmental challenges on the global level, most academic institutions focus on traditional business education in terms of teaching students to manage, run and lead organizations without repercussions on the external environment and all stakeholders. We address very important yet largely unaddressed issues in teaching on how to inspire business students to engage and take responsibility of societal challenges. The PDW will help identify ways to improve business education that can be used not only in the academia, the AOM community but also in the corporate training centers and businesses worldwide, which in turn will better the functioning of our society. The 2-hour workshop is intended for participants to learn and design new and innovative teaching methods to inspire humanistic flourishing and is divided in three sections: societal challenges, the hedgehog concept, and mindfulness exercises.

The future of work, or how work will change in the next decades because of advances in technology (e.g., robotics, artificial intelligence), demographic changes (e.g., aging populations), and other societal trends (e.g., shifting values), is a topic of increasing importance to practitioners and policymakers. But the future of work appears far less in management scholarship than would be expected given its prevalence in society, and research relevant to the topic in management thus far is fragmented (Santana & Cobo, 2020). The goal of this PDW is to drive forward research from management scholars on the future of work by collectively setting a promising research agenda, so that scholars can add to ongoing dialogues, offer solutions, and collectively shape the future of work. Both an academic perspective and a practitioner perspective on the future of work will be represented, so that we shape the research agenda on the future of work to be both rigorous and relevant. Participants will leave with a shared understanding of how management scholars can contribute to research on the future of work, a recognition of methodological challenges in conducting research on the topic, and an awareness of the possible opportunities and pitfalls of publishing on the topic. The PDW will involve several components that utilize different formats to facilitate engagement, including a panel with experts who have editorial experience at top Academy journals (AMA, AMJ, AMR, and AMD) and practitioners who are shaping the future of work in their companies, and breakouts clustered by themes involving a mix of senior and junior scholars. To spark collaboration that continues after the Academy meeting, the PDW will feed into a research grant competition sponsored by the University of Zurich to fund promising research proposals related to the future of work.

Prior to the PDW, participants who would like to participate in themed breakout sessions will be asked to submit a brief statement to share their opinion on areas where there is particular promise for management research on the future of work and to describe how their research interests relate to the topic of the future of work. Information for how to do so will be published online prior to the PDW and contact Prof. Lauren Howe from the University of Zurich (Lauren.howe@business.uzh.ch) with any questions.

How are we meeting? “Virtually.” Are you spending the holidays with your extended family? “Virtually.” Are you working with the same company? “Virtually.” Over the last two years, virtual options went from a workplace luxury to a global necessity. Virtual work, if integrated in the workplace properly and effectively, provides a pathway to “Create a Better World Together.” Thankfully, researchers have been exploring virtual work and its impact on different aspects of the workplace for over thirty years. In order to properly embrace virtual work, join our conversation featuring prominent virtual work researchers who each contributed a chapter to a Handbook on the topic and who have, over the last 20 months, played a key role in supporting organizations with their COVID virtual adjustments. The purpose of this PDW is to understand virtual work research, engage with virtual work scholars, and discuss current and future pathways for virtual work research. This PDW is designed to cover both breadth and depth, starting with a moderated panel discussion and distinguished speaker before splitting into smaller groups based on different aspects of virtual work. Topics will span multiple areas, including understanding and defining the virtuality continuum, remote work, AI, autonomy, and augmented reality, as well as individual, team, and organization phenomenon.

Whereas Artificial Intelligence (AI) has been identified Academy of Management Perspectives (AMP) as a way to create “an impact on a broader set of stakeholders than the research community” (Aguinis et al., 2019: 25), AMP is one of the only journals published by AOM where AI or “digital transformation” appear in an article title within the past four years. By contrast, most of the top ranked journals in the field of Information Systems (IS special issues about AI, including MISQ, EJIS, ISR, and JAIS. MISQ Executive (MISQE) will publish soon a special issue on digital transformation. Such concerns about this lack of research within management journals were echoed in an editorial in AMJ where the authors argued for the need for more research on the digital workforce and the workplace of the future and for greater understanding of societal grand challenges through management research. Digital transformation is now a significant practical problem, related to job destruction and creation, as well as to the management of the digital workforce (Colbert et al., 2016). During the COVID-19 pandemic, digital transformation played a pivotal role in helping organizations cope with the crisis, with digital capabilities becoming even more important than ever before as a mechanism to increase organizational resilience. Therefore, this PDW aims to develop a greater understanding of digital transformation management value. In many divisions at AOM annual meetings, theories have been suggested for the evaluation of digital transformation management value, such as on hidden work (Watson-Mannheim & Klein, 2018) at OCIS division or on hidden cost (Savall, Zardet, & Bonnet, 2008) at MC division. This workshop will address these concerns with a further goal of promoting publishable research on them. Therefore, AI in management may be a way to respond to the all-academy theme question related to the “creation of future organizations, systems, and processes”. Our response to this question is: “there is a need for a convergence across different domains to tackle a common theoretical and practical problem” such as digital transformation.

Participant: **Mihaela Dimitrova**, *WU Vienna*

Businesses are increasingly called upon to collaborate with community stakeholders to generate solutions to societal problems. Emerging pastures of research from multiple disciplines explore how effective community engagement can bear a positive impact on business performance, from improving talent retention to supporting a robust innovation ecosystem. While the importance of community is increasingly recognized, the lack of a precise consensus definition for “community” may impede meaningful scholarship and practical understanding of community engagement. Additionally, the concept of community is evolving, posing new facets of this stakeholder group ripe for exploration. Our symposium draws together five papers that provide new insights into the relationship between businesses and communities drawing from several disparate disciplinary traditions. Additionally, it offers a perspective from a community organizer of how to constructively and effectively engage communities in business practices.

The goal of MED's consortium is to facilitate the professional development of junior faculty (five years or less since the first faculty position) and doctoral students who are aiming for a successful career as a management faculty which involves management education, research, and development. This consortium is open to all AOM attendees across divisions. As a part of the consortium, participants would choose to attend workshops from a range of thematic categories that focus on skill development in areas including pedagogical innovation, teaching with technology, participation and engagement strategies, turning pedagogical research into intellectual contribution, creating inclusive classrooms, etc.

Online Teaching: Challenges and Opportunities for Students

Session Moderator: **Claudia Araceli Hernandez**, *Northwest Missouri State U.*

MED: The Impact of Engagement and Role Conflict on Academic Success for Online Graduate Students

Author: **Claudia Araceli Hernandez**, *Northwest Missouri State U.*
Author: **Benjamin John Blackford**, *Northwest Missouri State U.*

Higher education has changed radically as the prevalence of online education has increased. Moreover, students have changed. More adults with full time jobs are returning for a graduate education and many of them choose the online modality due to their responsibilities, priorities, and sources of support. Therefore, we need to analyze the factors that make online graduate students successful in their educational journey. This study examines the role of engagement and work-school-family role conflict in the success of online graduate students using SEM. Results show students' internal motivation has a positive impact on student success measured by self-reported learning ($\beta=.33$, $p<.01$, $R^2=.12$) and grade ($\beta=.21$, $p<.01$, $R^2=.05$). Engagement partially mediates this relationship greatly increasing the explanatory power of the model (learning $R^2=.34$, grade $R^2=.09$). Work-school-family conflict negatively moderates the relationship between intrinsic motivation and engagement ($\beta=.14$, $p<.01$). These findings increase our understanding of how to help students be successful. Educators can help students by increasing engagement and helping reduce role conflict. Recommendations on how to maximize the positive impact of intrinsic motivation and engagement and reduce the negative impact of role conflict, as well as suggestions for future research in the area, are provided.

MED: Geographical Location and Its Impact on Demand for Online MBA Programs

Author: **Eric Neuman**, *Creighton U.*
Author: **Kristie Briggs**, *Creighton U.*

This paper examines whether a university's geographical location contributes to demand for its online MBA program. The convenience provided by online education suggests that the location of an institution is unimportant in determining demand for online MBAs. Location, however, may still play a role in establishing students' familiarity with institutions and with creating competition among neighboring institutions for students. To assess whether the location of an institution influences its demand for online MBAs, we use local population and the number of online MBA competitors within 150 miles as proxies for location. We find that schools in larger populations see more applications and more entrants to their online MBA programs, while more local competition suppresses demand for a school's online MBA program unless the school is highly ranked. These results serve as caution to administrators who view online education as a solution to constraints they face attracting students locally.

MED: Deterring Cheating in Online Exams: The Effect of Passive versus Active Proctoring

Author: **Gerard Beenen**, *California State U., Fullerton*
Author: **Sinjini Mitra**, *California State U., Fullerton*

During the pandemic, tertiary institutions made an unprecedented shift to virtual teaching modalities. Administration of exams as learning assessments also shifted from in-person to online with a variety of approaches to proctoring and monitoring student behavior. Given that prior research shows business students are relatively more likely to cheat, the transition to online exams made business schools especially vulnerable to a potential surge in cheating behavior—something supported anecdotally by faculty experiences. To address this problem, we conducted a natural experiment to explore the differential impact of passive and active proctoring on potential cheating behavior during online exams in an introductory management course. Passive proctoring entailed the course instructor monitoring an online synchronous exam using Zoom with the instructor's camera off. Active proctoring entailed an external proctoring service taking control of the students' computer while they were aware their behaviors and activities were being tracked and recorded by the proctor with a live video feed. We use competing interpretations of a social facilitation framework to explore whether passive or active proctoring is more effective at reducing potential cheating. In support of a traditional social facilitation approach, we found nascent indirect evidence that active proctoring was relatively more effective than passive proctoring at reducing cheating behavior. We discuss the implications of our findings and suggest future research directions.

Author: **Katelynn Carter-Rogers**, *Sobey School of Business, Saint Mary's U.*

Author: **Vurain Tabvuma**, *Saint Mary's U., Canada*

Author: **Steven Smith**, *Saint Mary's U., Canada*

Author: **Sheila Sutherland**, *Saint Mary's U., Canada*

Author: **Tom Brophy**, *Saint Mary's U., Canada*

This research expands on previous findings that co-curricular First-Year Experience (FYE) courses have significant positive impact on first-year business students' academic performance and university transition. We adapted an existing co-curricular FYE course into an online course and assessed the academic performance, and university transition in comparison to our already successful in-person model. A multilevel modeling analysis shows that online students are experiencing increased university belongingness and successful time management abilities with the course relative to in-person students. In-person students fared better in terms of overall academic performance and transition. Importantly, online students are less likely to perceive their transition as successful, and students with more educational barriers (e.g., financial concerns, lack of social support, generational trauma, etc.) perceive less success regarding their transition. Further, when students have increased sense of belonging, higher self-efficacy, and time management abilities we see an increase in their perceived transition success in the co-curricular FYE courses. Our results suggest that we have been able to adapt these courses to an online learning environment, which is crucial given the realities of a post-pandemic circumstances.

The Dynamics of Shared Leadership: New Directions in Research
The Dynamics of Shared Leadership

Session Chair: **Jinlong Zhu**, *Renmin U. of China*
Session Chair: **Chu-Ding Ling**, *Renmin U. of China*
Session Chair: **Nan Wang**, *Lingnan U.*
Session Chair: **Li Zhu**, *National School of Development at Peking U.*

Shared leadership is an emergent team property resulting from the distribution of leadership roles and influence across multiple team members, where different team members may share different leadership functions simultaneously or across different time points. Although theories suggest that shared leadership is a dynamic process and an emergent team property, little is known about how shared leadership develops and evolves over time. Since shared leadership is gaining increased popularity in practice as a promising way to actively adapt to a team-based approach to work, studying shared leadership with a time-sensitive approach is urgently needed for more accurate understanding and better practical implications. In this symposium, we put forth a set of studies that examines the development trajectory, antecedents, and consequences of the dynamics of shared leadership from different approaches (e.g., latent growth curve, latent change score, and cross-lagged approaches) and different perspectives. In sum, these studies advance some new directions in shared leadership research and provide some examples for scholars and practitioners to better understand and investigate the dynamics of shared leadership. We hope this symposium can attract more attention to studying the dynamics of shared leadership and spawn a new genre of shared leadership research. Note. This symposium and the first and third papers included in this symposium were supported by the Research Grants Council of the Hong Kong Special Administrative Region of China (GRF Project Code - LU 13500817)

Incorporating Study Preregistration into Your Work?
Registered Research: A Panel Discussion
Registered Research: A Panel Discussion

Organizer: **Gretchen Renee Vogelgesang**, *San Jose State U.*
Moderator: **Michelle Hammond**, *Oakland U.*
Panelist: **Birgit Schyns**, *NEOMA Business School*
Panelist: **William L. Gardner**, *Texas Tech U.*
Panelist: **Floor Rink**, *U. of Groningen*
Panelist: **Jamie L. Gloor**, *U. of St. Gallen*
Panelist: **Rachel Clapp-Smith**, *Purdue U. Northwest*

This Professional Development Workshop is intended for those interested in registered research, either from the author or editor perspective. In the spirit of Creating a Better World Together, by creating better research together, five panelists will represent various approaches to the registered research process, including those who have published registered research articles, those who have edited registered research special issues, and editors who have embraced this process. Each panelist will discuss the requirements for a successful registered research manuscript, which he or she has learned in a career as author, reviewer, or editor. In addition, each panelist will share thoughts regarding the analysis of the process, including any specific changes to one’s past research process, and recommendations for how authors should approach this process in the future. Each panelist will detail necessary action steps, including requirements for reviewers for these journals. After the panelists conclude their remarks, the organizers will moderate an open Q&A. The session will conclude with a debriefing, where the organizers will summarize the main points generated throughout the session. Our goal is to help make the registered research process available and more effective for those in the field by enhancing rigor, relevance, and creating better relationships throughout the publication process.

SIM: Understanding Stock Price Implications of CSR during Different Presidencies

Author: **Inchan Kim**, *U. of New Hampshire*
Author: **Brandon McNeil**, *U. of New Hampshire*

Institutional theory suggests that organizational behaviors are interpreted and carry implications under a larger environment, including a national political environment. Although corporate social responsibility (CSR) is not an exception, neither the political nature of CSR nor CSR's impacts on firms' financial performance in different political contexts has been sufficiently explored. In this paper, we note the influential role of the presidents and their administrations in shaping policies and leading public opinion about social issues (e.g., LGBT rights), and examine how the impacts of CSR addressing a social issue may differ depending on the presidents' action and rhetoric on the issue. We zoom in on Presidents Obama and Trump and focus on social issues surrounding military veterans, LGBT, and communities by looking into the CSR reported in tweets and screened through machine learning. We found that CSR conducted to assist a social group results in higher stock prices during the presidency undermining the group than during the presidency supportive of the group. We also found that CSR conducted to assist those having a general appeal has similar impacts on stock prices regardless of the presidency during which it is conducted. Overall, our findings about CSR impacts have implications about politically contextual CSR, CSR from a social identity perspective, and the socio-business case of CSR.

SIM: Trust: Boundary Conditions for CSR on Firm Performance in Emerging Economies

Author: **Yah Ling Liew**, *Singapore Management U.*

Does doing good improve firm performance in emerging economies that are characterized by institutional voids? In any social structure, trust is the core mechanism that facilitates cooperation and coordination between two parties and facilitates the transition from informal institutions to formal institutions in emerging economies. Social trust shapes expectations on the outcome of interactions within the community and business transactions. High trust in government lubricates the effectiveness of changes in law and regulations, whereas low trust impedes government reforms. Low trust in government reduces the likelihood of stakeholders' dependence on the government to meet their demands. Using panel data from 1,315 firms from the period 2007 to 2018, this paper found that under the condition of low government trust and social trust, the positive signaling effect of CSR is strengthened, and improves firm performance. While trust does not directly affect firm performance, it moderates the stakeholders' reception of firms' signals sent via CSR.

SIM: Beneficial or Detrimental? The Relationship Between Mandatory CSR Disclosure and Firm Performance

Author: **Chuang Wu**, *Xi'an Jiaotong U. School of Management*

Using a sample of listed Chinese companies for the period 2003–2015, this study investigates the relationship between mandatory CSR disclosure and financial performance. To better clarify the mechanism between mandatory CSR disclosure and financial performance, this paper employed a dual model of financial performance, that is, short-term and long-term financial performance. The results suggest that mandatory CSR disclosure has a negative impact on short-term performance, but a positive impact on long-term performance. Moreover, this study found that corporate environmental investments mediate the relationship between mandatory CSR disclosure and short-term firm performance; the community-related, employee-related, and environmental CSR strategies mediate the relationship between mandatory CSR disclosure and long-term firm performance. The implications and future research directions are discussed.

SIM: Political Relations and CSR-Firm Performance: Evidence From India (WITHDRAWN)

Author: **Saptarshi Purkayastha**, *Indian Institute of Management, Calcutta*
Author: **Kannan Ramaswamy**, *Thunderbird School of Global Management at ASU*

The impact of corporate social responsibility (CSR) on performance is gaining increasing attention and has generated an ongoing debate. We contribute to this critical topic by proposing that this relationship varies with firms' political relations. First, we argue that in the domain of internal political relations, membership and board interlocks within a business group strengthen the relationship between CSR and performance because these connections provide valuable CSR experience from other business group affiliates. Second, in the domain of external political relations, we argue that the presence of former civil servants and government-connected members on the board facilitates access to important insights on government priorities that reinforce the impact of CSR on performance. Finally, we propose that in the domain of contextual political relations, the alignment of political parties at the national and subnational level enables companies to implement coherent CSR initiatives that increase the performance benefits of CSR.

External and Regulatory Pressures (Virtual Live)

Session Moderator: **Maoliang Bu**, *Nanjing U.*

ONE: Link Green Credit Policy and Green Innovation via Financial Constraints: A Moderated Mediation Study

Author: **Su Ruixin**, *School of Management, Jiangsu U., China*
Author: **Xiaolong Shui**, *U. of Bristol*
Author: **Jianguo Du**, *School of Management, Jiangsu U.*

While research on green innovation recognizes the influence of regulatory pressures exemplified by policies and regulations, scarce attention has been given to explore substantial influencing mechanism. We combine institutional theory with resource dependence theory (RDT) and develop a framework wherein external regulatory pressures lead to the changes in internal resource dependence problems, thereby triggering environmental innovation. We test this framework by specifically focusing on green credit policy in China and find that the policy leads to the financial constraints, and then improves green innovation on a sample of 1,485 listed firms from 2007 to 2019. Moreover, we find that the relationship between green credit policy and financial constraints are strengthened for firms with higher level of dependence on banks. Our study provides a comprehensive view on how regulatory pressures affect firms' responses by validating a moderated mediation framework.

ONE: Corporate Citizenship and Firm Valuation: Exploring Beyond National Systems

Author: **Stefania Camoletto**, *U. degli Studi di Torino*
Author: **Maria J. Montes-Sancho**, *U. Carlos III Madrid*
Author: **Erica Santini**, *U. of Trento*

Scholars in management and economics have vigorously debated the relationship between business responsibilities and corporate performance over several decades. In this paper, we limit our attention to the conceptualization of corporate citizenship and empirically examine the effect that materializations in the form of corporate philanthropy undertaken within the community have on company performance. As organizations can be embedded in different institutional environments, we also explore the derived benefits, using as a moderator the legal system where they are embedded. Based on a sample of 769 multinational enterprises (MNEs) that subscribe to the OECD Guidelines and/or UN Global Compact and operate in developing countries, the findings reveal the existence of a positive relationship between corporate citizenship and the market value of the firm. In addition, those firms that leveraged corporate philanthropy and are primarily embedded in the common-law tradition benefit more than those operating in a civil-law system.

ONE: How the Hazardous Smog Dampens Bank Executives' Commitment to Green Credit

Author: **Maoliang Bu**, *Nanjing U.*
Author: **Binqi Tang**, *Nanjing U. School of business*
Author: **Shili Chen**, *Xi'an Jiaotong-Liverpool U.*

This study examines the relationship between air pollution and bank executives' commitment to green credit. One may assume that bank executives who are exposed to severe air pollution are more likely to engage in green credit because they may be more anxious about the adverse consequences of environmental pollution. However, we draw on the theory of learned helplessness to argue that exposure to serious air pollution strengthens bank executives' cognitive expectation that their individual green credit efforts are unable to generate meaningful environmental benefits, thereby hindering their commitment to green credit. Using a sample of Chinese listed banks from 2017 to 2019, we show a negative relationship between air pollution at the bank headquarters and the proportion of green credit to total credit. We also find that air pollution weakens the positive relationship between bank executives' educational level and their commitment to green credit. Our findings highlight the impact of air pollution on managerial decision-making and call for attention to air pollution-induced learned helplessness as a barrier to the green transition.

Transition to a Circular Economy (Virtual Live)

Session Moderator: **Ebru Susur**, *U. Politécnica de Madrid*

ONE: A Transitions Perspective on Circular Business Models: Towards a Conceptual Framework

Author: **Ebru Susur**, *U. Politécnica de Madrid*
Author: **Mats Engwall**, *KTH Royal Institute of Technology*

The concepts ‘circular business models’ and ‘transitions towards a circular economy’ became modern-day buzzwords. Yet, an understanding of the interplay between these two concepts remains rather uncertain. This paper proposes a conceptual framework that illustrates the innovation processes of circular business models emerging within the structural context of transitions towards a circular economy. The paper follows a three-step methodology. First, a priori definitions of the core concepts are given. Second, a deductive conceptualization is proposed by adopting theoretical insights from transition studies, specifically from perspectives of technological innovation systems and strategic niche management. Third, a systematic literature review is employed. The review scrutinizes and synthesizes the selected literature to illustrate if and how the proposed conceptualization was reflected within the previously published research. Finally, based on the integration of deductive reasoning and systematic literature review, a conceptual framework is proposed. This framework proposes future lines of research to illustrate its plausibility. Moreover, it offers prescriptive help to managers, entrepreneurs, and policymakers, and other social actors enabling them to make informed decisions about and take innovative actions for circular business models.

ONE: How can Digitalisation Enable the Transition to a Circular Economy?

Author: **Agnes Toth-Peter**, *Queensland U. of Technology*
Author: **Rui Torres de Oliveira**, *Queensland U. of Technology*
Author: **Shane Mathews**, *Queensland U. of Technology*
Author: **Leonie Barner**, *Queensland U. of Technology*
Author: **Sandra Figueira**, *Grenoble Ecole de Management*

Our world is currently facing economic challenges, growing populations, resource scarcity, environmental challenges, and social issues. The linear economic model that led to this situation is not sustainable anymore. The circular economy is an emerging concept, and an alternative solution, representing an economic model that strategically reduces waste in a closed-loop system. New technologies of the Industry 4.0 era can potentially enable circular economy principles and facilitate the transition to a circular economy. However, the link between these fields is yet to be widely established and understood. Therefore, this study provides a comprehensive systematic overview to contribute to the understanding of circular economy business models and the enabling role of advanced digital technologies. The findings suggest new value chain characteristics, new operations models, and highlight the role of circular design, reverse flows, and collaboration. Merging circular economy and Industry 4.0 underlines that many factors are interrelated and indeed should be combined instead of analysed in siloes. This paper proposes a conceptual model to address how new circular business models can integrate digitally adaptive transformations and to emphasise the need for a more interconnected system. Finally, proposals for future research will be reflected upon.

Paper is Available to Meeting Registrants Only.

ONE: Corporate Social Responsibility and Circular Economy as a New Integrated Approach?

Author: **Donato Morea**, *U. of Cagliari*
Author: **Simona Fortunati**, *U. of 'Tuscia' of Viterbo*
Author: **Francesco Cappa**, *Luiss Guido Carli U.*
Author: **Raffaele Oriani**, *Luiss Guido Carli U.*

Scholars and managers pay constantly their attention on Circular Economy (CE) as it constitutes an innovative lever for achieving economic, social and environmental sustainability. For decades, companies have used the common pillar of Corporate Social Responsibility (CSR) to enhance the sustainability approach. Although CSR is a broad and longstanding concept, how CSR and the recent concept of CE might be related has been overlooked up until now. The paper has the objective to analyse how, under the stakeholder theory, CSR might favor the emergence of CE. The analysis has been conducted in the Agribusiness sector as a relevant context because it is technologically dynamic and requires paying attention to all the stakeholders. We used a qualitative approach and the results of the research highlight that companies adopting CSR models are oriented towards circularity. This research contributes to a better scientific understanding of the impact of CSR on CE, and provides useful indications to managers to favor the two approaches and benefit all the stakeholders.

Paper is Available to Meeting Registrants Only.

ONE: **Drivers and Enabler of Circular Economy in the Indian Pharmaceuticals Industry**

Author: **Kali Charan Sabat**, *Alliance U., Bangalore, India*
Author: **Som Bhattacharyya**, *Indian Institute of Management Nagpur*

India has evolved into a substantive base in the narrative of global pharmaceutical as a provider. Developing countries such as India however have been struggling with proper management and disposal of pharmaceutical waste. This has been causing rampant environmental pollution that was adversely impacting the ecosystem and human health. In this study, the circular economy model was adopted to find the drivers and enablers of the three Rs of waste management - Remanufacture, Reuse, Recycle in the context of Indian Pharmaceutical Supply Chains (PSCs). The study was anchored in the theoretical conversation of Stimulus Organism Response (SOR) theory. Data was collected using the survey method from 166 chief supply chain executives from various pharmaceutical companies based in India. The data was analysed with Smart PLS software. The results revealed that most of the green drivers such as regulatory pressure, customer pressure and public pressure have failed to drive the waste management practices in the PSC. Only, pressure from suppliers was driving energy and material input management in the PSC. Also, the other stakeholders (such as media, investors and NGOs) were the sole drivers for the safe disposal of pharmaceutical waste. Further, pressure from competitors and other stakeholders were driving the control of waste and emission leakages from the PSC. The results stated that Green Information Technology System (GITS) played a critical role in enabling waste management practices in pharmaceutical production. Furthermore, the study revealed that Internal Environment Management (IEM) was not just essential for the safe disposal in the PSC, but it also played a decisive role in controlling the waste and emission leakage. The study provided empirical evidence to support the SOR theory and helped to extend the scope of circular economy research to PSC. Additionally, it would benefit managers by fostering better decision-making to devise effective strategies for waste management.

ONE: **Doing Well by Doing Good: An Operationalization of Closed-Loop Orientation Using CATA**    

Author: **Antonia Samakovlis**, *Chair for Technology & Management, TU Dortmund U.*
Author: **Corinna Vera Hedwig Schmidt**, *Chair for Technology & Management, TU Dortmund U.*
Author: **Tessa Christina Flatten**, *TU Dortmund U.*

Closed-loop orientation is a strategic orientation to promote circular economy concepts, such as closed-loop supply chains, at the firm level. While linear business models are among the main causes of today's environmental challenges, such as pollution and depletion of resources, closed-loop supply chains provide a solution by focusing on value recovery. While research confirms that closed-loop orientation is positively linked to firm performance, closed-loop orientation has not been operationalized for secondary, and hence large-scale, longitudinal datasets. Moreover, existing research focuses solely on closed-loop orientation in efficiency-driven economies. In this study, we use computer-aided text analysis (CATA) to operationalize closed-loop orientation for secondary data. We validate our measure by linking closed-loop orientation to firm performance with data from S&P500 firms. We offer three contributions. First, we develop a methodology that enables future scholars to further investigate the nascent research area of closed-loop orientation. Second, we are among the first to extend existing closed-loop orientation research to secondary data. Third, we find evidence that closed-loop orientation is positively linked to firm performance in an innovation-driven economy, adding to the natural resource-based view. These findings encourage practitioners to consider closed-loop supply chains as source for competitive advantage in the face of today's environmental challenges.

**Sustainable Entrepreneurship and Green Creativity in
Diverse Contexts (Virtual Live)**

Session Moderator: **Kamal Badar**, *Victoria U. of Wellington*

ONE: Environmentally-Specific Empowering Leadership and Green Creativity 

Author: **Kamal Badar**, *Victoria U. of Wellington*

Author: **Yasir Mansoor Kundi**, *Institute of Business Administration, Karachi*

Author: **Ahmad Nabeel Siddiquei**, *Bond Business School, Bond U., Australia*

Synthesizing conservation of resources and social exchange theories, we build and test a theoretical model examining the association of environmentally-specific empowering leadership (ESEL) with green creativity as well as the mediating and moderating roles of green knowledge sharing behavior and green psychological climate, respectively, in this association. Using time-lagged data from 265 employees working in 29 hotels in Pakistan, we find that ESEL is positively associated with green creativity and green knowledge sharing behavior is an effective underlying mechanism between the ESEL-green creativity association. Furthermore, our findings suggest that green psychological climate moderates the direct and indirect associations such that the associations were stronger when green psychological climate was more positive rather than less positive. The study is the first to explore the green adaptation of empowering leadership, its effects, mechanisms and boundary conditions.

Paper is Available to Meeting Registrants Only.

ONE: Sustainable Entrepreneurship and Protected Areas: Influences of Embeddedness in a Semi-remote Context   

Author: **Hellen Dawo**, *U. of Groningen - Campus Fryslan*

Author: **Thomas Benjamin Long**, *U. of Groningen*

Author: **Gjalt De Jong**, *U. of Groningen*

This study examines the interaction between sustainable entrepreneurs and their socio-ecological environment. Previous studies postulate that fragile socio-ecological contexts by and large promote sustainable entrepreneurial practices. By being embedded in place, nature and culture, and communities, the entrepreneurs are able to revitalise semi-remote areas and drive development. However, how being embedded in fragile socio-ecological influences sustainable entrepreneurial activities is less understood. Using an exploratory qualitative study, we collected data from 15 sustainable entrepreneurs, operating in a protected area. We found that the entrepreneurs exhibited different forms of embeddedness. Embeddedness was either social, spatial or both. Further, the form of embeddedness determined the activities the sustainable entrepreneurs engaged in (adaptive versus transformative). Our study exemplifies that in addition to previously identified positive influences, the interaction between sustainable entrepreneurs and context in the form of embeddedness, results in certain negative influences on sustainable entrepreneurial activities, such as conforming.

ONE: Green Entrepreneurship Between Self-Employed Immigrants and Natives

Author: **Ji Li**, *Hong Kong Baptist U.*

Author: **Qianhong Su**, *School of Management, Shandong U.*

Author: **Zhenyao Cai**, *Shanghai U.*

Author: **Wenting Chen**, *Dongbei U. of Finance and Economics*

Author: **Xiaolong Tao**, *Yunnan U.*

Facing global environmental crises, can one observe differences between self-employed immigrants and their native counterparts in terms of green entrepreneurship? Also, should this difference influence the life satisfaction of the entrepreneurs? We address these issues through the lens of social identity while considering the interactions between social identity and cultural cognitive institutions. Analyzing empirical data of self-employed entrepreneurs in 33 countries, we find interesting differences. For instance, there is a significant difference between the immigrants and their native counterparts in terms of their social identity with the country that accepts the immigrants, and this difference can be significantly moderated by some cultural cognitive variables, such as Institutional and In-Group Collectivism. Moreover, this difference leads to different performance/behaviors in terms of green entrepreneurship between the two groups of the entrepreneurs, which can also be moderated by different cultural cognitive variables. Finally, in countries high in In-Group Collectivism, a positive relationship between the green entrepreneurship and life satisfaction among the entrepreneurs is more likely to be observed. We conclude by discussing the implications of our findings.

ONE: Social Entrepreneurs' Agency in Complex Institutional Environments of Emerging Economies  

Author: **Felix Ostertag**, *EM Strasbourg Business School, U. of Strasbourg, HuManiS UR 7308*

Author: **Christian Kabengele**, *Heinrich-Heine U. of Dusseldorf*

Author: **Carolin Johanna Waldner**, *Heinrich-Heine U. of Dusseldorf*

Author: **Emiel Eijdenberg**, *James Cook U.*

Entrepreneurial agency in complex institutional environments and the extent to which varying perceptions of institutional catalysts and impediments affect social entrepreneurs' navigation approaches in emerging economies remain untold. Based on an abductive analysis of 33 interviews with social entrepreneurs and hub representatives in sub-Saharan Africa, our findings point to distinct approaches that social entrepreneurs apply. We illustrate these approaches and corresponding techniques by drawing on selected cases with a specific emphasis on informal institutional catalysts and impediments. Through a contextualized micro lens on institutional theory, our findings enrich the social entrepreneurship literature in relation to institutional voids and entrepreneurial agency.

Corporate Social Responsibility Concepts and Theories

Session Moderator: **Gianluca Gionfriddo**, *Institute of Management, Scuola Superiore Sant'Anna, Pisa*

SIM: CSR vs. ESG vs. Corporate Citizenship: A Distinction Based on a Text Mining-based Review 

Author: **Jong Gyu Park**, *Chazanoff School of Business, CUNY College of Staten Island*

Author: **Kijung Park**, *Incheon National U.*

Author: **Bora Kwon**, *Sacred Heart U.*

Author: **Kyudong Kim**, *Incheon National U.*

Author: **Heena Noh**, *Incheon National U.*

Author: **Yong Geun Kim**, *POSTECH, Corporate Citizenship Research Institute*

Author: **Weichun Zhu**, *Bloomsburg U. of Pennsylvania*

The concept of corporate responsibility and accountability has become more critical among organizations. This paper used an advanced text mining technique to comprehensively analyze 1,235 articles on three representative concepts of corporate responsibility – i.e., corporate social responsibility (CSR), ESG (Environmental, Social, Governance), and corporate citizenship. We objectively and comprehensively evaluated the differences and commonalities among the three concepts by conducting term frequency analysis and correlated topic modeling. As a result, we found that corporate citizenship is not only a high-level concept that encompasses ESG and CSR, but also a broad concept with missions that must affect various areas of society. The results also showed that employees, as the principal agents of corporate citizenship practice, are the most critical factor among various stakeholders of corporate citizenship.

SIM: Overcoming Reductionist CSR: Empirical Evidence on the Formative Movement from CSR Talk to CSR Walk 

Author: **Gianluca Gionfriddo**, *Institute of Management, Scuola Superiore Sant'Anna, Pisa*

Author: **Daniele Licari**, *EMbeDS, Scuola Superiore Sant'Anna*

Author: **Francesco Testa**, *Scuola Superiore Sant'Anna*

The debate on CSR got stuck on a reductionist perception of the relationship between CSR talk and CSR walk. Representational approaches downgrade CSR talk to an instrument that merely represents reality, while optimistic approaches overestimate its aspirational, positive role on CSR walk. In our study, we offer a formative conceptualization on the dynamics between CSR talk and walk that contributes to solve the above-mentioned diatribe. We posit the existence of an iterative formative movement between CSR talk and walk, which mutually affect each other over time. Our conceptualization is supported by empirical results on 120 U.S. companies that signed the new Business Roundtable Statement on the purpose of a corporation in August 2019. In particular, we evaluated how these companies communicate CSR through semantic and cognitive-linguistic analyses of their extra-financial reports, using some of the most recent text mining techniques in the field of big data analytics. We found a positive association between the use of aspirational language in extra-financial reports – i.e., language that is semantically similar to the BRT statement language – and propensity to be a CSR decoupler. We also detected the opposite trend, i.e., a higher likelihood to be CSR implementor when using language that is semantically distant from the BRT statement language. Overall, our findings suggest that taking analytical snapshots of the relation between CSR talk and CSR walk can lead to misleading interpretations, thus awareness of the iterative formative movement is needed to understand the overall dynamic. We conclude with limitations and avenues for future research.

SIM: What Do We Mean by Corporate Social Irresponsibility? Examining the Concept in the Literature

Author: **Lígia Azevedo-Rezende**, *FGV EAESP*

Author: **Thomaz Novais Rocha**, *FGV EAESP Sao Paulo School of Business Administration*

In this paper, we examine the ontological and epistemological properties of Corporate Social Irresponsibility (CSiR), in order to provide an evaluation of its current status as a concept. More specifically, we analyze CSiR definitions, operationalization, related concepts, and empirical evidence in the business and management literature. We find that scholars adopt three different approaches to define CSiR: the stakeholder-based approach, the typification approach, and the reductionist approach. Moreover, our analysis shows that the field of CSiR is being developed with a strong quantitative orientation, and that the phenomenon is explored mostly on the context of large and multinational companies. Based on our findings, we provide a definition of CSiR and recommendations for future research in three main areas: (1) CSiR conceptualization and theory development; (2) methodology and measurement enhancements and (3) exploration of new contexts.

SIM: Unpacking Micro-CSR From an Internal Stakeholder Perspective: A Computational Literature Review  

Author: **Jiangtao Xie**, *Trinity Business School, Trinity College Dublin*

Author: **Tanusree Jain**, *Copenhagen Business School Department of Management, Society and Communication*

The role of individuals in corporate social responsibility (CSR), in other words micro-CSR, has garnered extensive scholarly attention over the past decade. The emphasis of this research stream has been on internal stakeholders (i.e., employees) who design, implement, and structure firm CSR activities. However, micro-CSR literature has developed in a rather fragmented manner across various sub-fields of management sciences. To unpack this literature, we employ a novel machine learning algorithm to conduct a computational bibliometric analysis of 461 research articles published between 1970 to 2021. We find that micro-CSR research is clustered across four different sub-fields within management sciences—namely organizational behaviour, human resource management, corporate governance, and leadership, with significant tensions within each cluster. Drawing on the theory of paradox, we discuss how micro-CSR research has developed differentially across multiple topic areas, indicating cross-fertilization of different fields. In doing so, our review sets forth an agenda for advancing micro-CSR research.

Paper is Available to Meeting Registrants Only.

**Building Strong Interdisciplinary Research Clusters that
Inform Management Research and Practice**
Building Interdisciplinary Research Clusters

Organizer: **Ravi Dharwadkar**, *Syracuse U.*
Moderator: **Kira Kristal Reed**, *Syracuse U.*
Presenter: **Danielle Smith**, *Syracuse U.*
Presenter: **Patrick Berry**, *Syracuse U.*
Presenter: **Carol Faulkner**, *Maxwell School, Syracuse U.*

The Social Differences, Social Justice Research Cluster provides a case study of its inception as one of ten research clusters at Syracuse University, and its endurance through challenges of a global pandemic, calls for social justice, including Black Lives Matter, organizational structure, and academic cultural barriers, to sustain and promote interdisciplinary research activities across the campus. Professional development workshop participants will discuss strategies for building collaborative research teams at their universities, obstacles that impede success, and pathways to address these obstacles. Barriers to be discussed include funding, supporting untenured faculty, measuring impact, and other topics of importance and relevance to participants. If participants do not have research clusters on their campuses or are not members of an existing cluster, we will offer guidance for creating a cluster, and hiring and gaining affiliation with the cluster. The intent is for participants to develop a strategic plan which can be vetted and if appropriate, with time, be implemented at their universities. Research clusters at other institutions need not be similarly themed as the Social Differences, Social Justice Research Cluster at Syracuse University for participants to benefit from the engagement. The professional development workshop is relevant to the Academy of Management 2022 theme of “Creating a Better World Together.” Academics and researchers interested in organizational change, social issues in management, and gender and diversity in organizations will benefit from this workshop, as the domains of these divisions are amenable to the use of interdisciplinary perspectives to address management related research questions and applications.

Careers in academia are different from those in any other industry. This type of career path entails going into the job market at a much later stage in life while seeking to attain one of the very few available open positions. The aim of this workshop is to bring together established scholars and early career academics – or others who are soon to become one – in order to learn about their experiences in different realms. Attendees will hear the different experiences from the panelists on specific topics, while also being given the opportunity to share their own thoughts and concerns with fellow junior scholars. The aim of this PDW is to create a allowing for a supportive community and expand networks for early career academics. Additionally, we have intentionally structured this PDW to be an all-female, global panel.

The goal of this professional development workshop (PDW) is to provide a session in which attendees receive constructive feedback and advice on health care management related research projects that are in progress, but not ready for journal submission. Projects may range from early conceptual stages to later stages (i.e. writing a manuscript). Participants will receive feedback, in a collegial setting, from health care management researchers in the field on key issues attendees are facing in their projects. Participants will be matched with two research mentors based on the nature of their research project and the expertise of our esteemed panel. While this workshop is open to researchers at all stages of their career, priority will be given to projects in their early stages and completed projects will not be accepted. Each participant will discuss their research projects with each of their assigned mentors, rotating in timed increments. This workshop is highly interactive, and uses experiential learning to make a potential impact on the professional success of participants. The preferred format for this workshop is in-person, but delivery of the PDW is flexible and the PDW organizers will work with AOM HCM leadership as the conference approaches to modify the PDW for a hybrid or 100% virtual session.

To participate in this PDW, you must have submitted an application or signed up previously to be a mentor.

Simulations in Healthcare Management: Conceptualization to Publication

Simulations in Healthcare Management

Presenter: **Tera Webb**, *U. of Alabama, Birmingham*

Presenter: **Michelle Brown**, -

Simulations are commonly used in healthcare in an effort to create positive change in learning. Oftentimes the goal is to promote a change in knowledge, attitudes, and/or skills. This workshop will illuminate how to leverage pedagogical theory to engage simulation participants and how to apply healthcare simulation best practices for the design of a simulation activity. Through this workshop, participants will be better positioned to conceptualize an effective, well-developed, and publishable simulation.

Yoga for Creating a Better World Together from the Inside Out *Yoga*

Participant: **Julia Storberg-Walker**, *George Washington U.*

Host: **Tracy F. Chang**, *Rutgers U.*

Host: **Tulsi Chase**, *SCCP BIDMC Harvard Medical School*

Host: **Sepideh Hariri**, *Sadhguru Center for a Conscious Planet, Beth Israel Deaconess Medical Center, Ha*

Join us for online yoga and meditation sessions in support of creating a better world together from the inside out! Learn a series of simple but powerful practices and experience their potential benefits. Physically, these practices exercise the muscles, lubricate the joints, activate energy, and improve flexibility. At the mental level, these practices improve focus, memory, awareness, and intellectual sharpness. Overall, these practices can enhance your overall wellbeing, productivity, and sense of inclusiveness. After learning these practices, you will be equipped to do them on your own wherever (e.g., travel, office, home) and whenever you need a boost of physical energy and mental clarity. These practices can be done while you travel and while you work in the office or at home. The instructors for the workshops are academics and researchers who are also certified Isha Hatha Yoga Teachers, completing an intensive and rigorous 21-week (1,750 hours) of training in Coimbatore, India.

Panelist: **Charlene E. Zietsma**, *Penn State U.*

Creating a better world is a challenging prospect that implicates multiple actors and the multiple types of work they perform to effect change. The purpose of this panel symposium is to foster a conversation on the work that must be done to create a better world together. Previous research has addressed many forms of “work,” including identity work, institutional work, emotion work, strategy work, and more. In a recent development, the Social-Symbolic Work perspective has been proposed as a theoretical framework for integrating the above streams of research to better understand how actors reflexively and intentionally work to produce, shape, and maintain the constituent elements of social life. Through interactive discussion and audience Q&A, our session will address the potential of the Social-Symbolic Work perspective to tackle questions that require an integrative approach, with a focus on the question of creating a better world together. To this end, the session includes experts in self work, organization work, and institutional work who have made advancements in bridging traditional divides in their areas of research. Broadly, this symposium is intended to catalyze future research that spans theoretical divides and levels of analysis.

**The General Theory of Leadership: A New Framework
for Leadership Practice in Organizations**
The General Theory of Leadership

Participant: **MWELWA MULENGA**, *Private Sector*

The General Theory of Leadership, as theoretical framework, would provide a unified view of leadership emergence and practice in organizations, regardless of size and location. The theory views leadership as an emergent phenomenon on one hand, and as a two-fold practice, on the other. Leadership emerges from stimulation, in Pavlovian fashion, by events in the organization's environment made possible by the structural coupling of organization and its environment. The purpose of emergent leadership is, firstly, to thwart critical threats against the organization, and secondly, to take advantage of critical opportunities for the organization. Thwarting threats ensures the organization survives and stays on its strategic course. Taking advantage of opportunities ensures the organization diversifies and grows in size, revenue, and profitability. It is these stable and growing organizations that will, ultimately, create a better world through creation of sustainable employment opportunities for individuals. Yet in the course of leadership emergence and practice, the individuals practicing leadership will have to deal with the human, organizational, and environmental complexities, all critical phenomena at the core of what leadership is and what type of leadership would be required for different emergent challenges and opportunities. How practitioners deal with these complexities will determine whether a better world is possible or what exist is the best world we can have. The general theory here, is an academic tool to teach and research leadership theory and practice, and a bold new lens, a framework, for practitioners, on one hand, to view and understand critical emergent phenomena and, on the other, to inform leadership practice in their organizations.

Our goal in this PDW is to offer an accelerator for developing research at the crossroads of Family Entrepreneurship, Sustainability and Social Responsibility. Indeed, although the importance of family business worldwide makes them unavoidable actors in transitioning towards post fossil-fuel economies, post market economies, or even post capitalist economies, extant research does not rise to the challenge, as the covid crisis has shown us. Key questions that are currently unaddressed include: 1. Shifting the business paradigm from sustainable growth (continuous growth) to growing sustainably (within the limits of the physical world we live in); 2. Rippling social responsibility from corporations (CSR) to family businesses (FBSR), to all organizational forms; and 3. Stakeholder theory: questioning the initial assumptions and paving a way forward. In order to support this, our PDW will have two parts. In the first part (asynchronous), attendees will view pre-recorded videos by editors of relevant publication outlets who share their tips and suggestions. In the second part (synchronous), attendees will have the opportunity to present their developmental research in themed break out rooms/tables with the editors and among each other. This session will provide first an excellent opportunity for current researchers of FE, CSR, and sustainability to connect and second to collectively sketch out a research agenda to that can in tum help advance teaching and practice by being geared toward creating a better world.

Sustainability education is undoubtedly in dire need at business schools. This subject area in particular faces a number of serious challenges. First, management educators often tend to re-invent the wheel instead of harnessing synergies by using the contents, concepts and materials that others have created. Second, management education is often not as hands-on and inspired by practice as it could be. Third, management students often remain in a passive role instead of co-creating course contents or graded projects. TRANSFORM, a collaboration between five universities that focuses on how entrepreneurship and innovation promote sustainability, sets out to change this. First, by building up an open-source online platform, which does not only provide course materials to educators worldwide, but also invites them to share their own contents. Second, by building strongly on practitioner voices and experiences in teaching the contents that are featured on the platform. Third, by enabling a high degree of student co-creation in teaching the contents. We will present how the platform works and let students who have used it share their experiences. The largest part of the PDW will be dedicated to developing an agenda with the participants for how more educators could collaborate to expand the platform and its usefulness for the sustainability education community. We seek to build a community of practice of likeminded educators, who care about making higher education more open, collaborative and innovative.

Panelist: **Roberto Verganti**, *Stockholm School of Economics*
Panelist: **Olivier Zeitoun**, *Centre Pompidou*

In recent years, agile methods have multiplied: from Business Model Generation to Lean Startup to Design Thinking (Girod and Kralik 2021). Their common point is a hyper-focus on customers. The creator is set aside. This “exclusion” of the creator is problematic for three main reasons. First, several perspectives underline that entrepreneurship mainly starts with the entrepreneur’s means, especially who the entrepreneur is (Sarasvathy 2008). How is it possible to include the entrepreneurs’ desires, passions, or ideologies when using current agile methods? Second, certain types of innovation – labelled design-driven innovation (Verganti 2009) – would not have been created with a strict focus on the existing users. From the Walkman to the first mobile phone, a client-centric approach is important but not sufficient. Lastly, in the Anthropocene era (Crutzen 2006), an obsession with expressed clients’ needs may not be the best way to support the ecological transition. Indeed, the single-minded optimization of our previous models of aggregated demand would create a tragedy of the commons (Hardin 1968), leading to a massive destruction of our living environments (Turner 2014). How to apprehend these dimensions better when using agile approaches? This PDW addresses these questions and introduces the Art Thinking approach which may be well suited to help in designing solutions to many of today’s most pressing challenges, such as the need to have a sense of purpose at work, the creation of more experiential learning formats to boost creative skills, and the capacity to challenge the status quo, especially with the ecological transition.

Diversity, Equity, and Inclusion Training and Practice

Session Moderator: **Stephanie Twin Sisco**, *U. of Minnesota*

GDO: **The Perceived Role and Expectations of Diversity and Inclusion Trainers**

Author: **Stephanie Twin Sisco**, *U. of Minnesota*
Author: **Neela Nandyal**, *U. of Minnesota*
Author: **Stacey Robbins**, *Saint Mary's College of California*
Author: **Crystal Fashant**, *Metropolitan State U.*
Author: **Rebecca Jean Evan**, *Metropolitan State U.*

In this study, “critical allyship” is defined as a critical approach to implementing strategies that promote the awareness, attitudes, and actions needed to support individuals and communities subjected to an ongoing history of marginalization and discrimination. This concept was used to examine the perceived roles and expectations of diversity and inclusion (D&I) trainers who self-identify as White and work for a corporate organization. The data consisted of 16 in-depth interviews analyzed using an interpretative phenomenological analysis (IPA) approach. The findings suggested that the participants’ racial identity and job responsibility present challenges and opportunities to practice critical allyship on an individual and organizational level. The participants described challenges concerning how the performance of diversity and inclusion trainers are evaluated, and how diversity and inclusion work is different from antiracism initiatives. The participants also explained how their personal development and ongoing journey of understanding White privilege and White supremacy has helped them guide the learning and development of their White colleagues. The teaching and support the participants receive from their Black, Indigenous, and other People of Color (BIPOC) colleagues was also acknowledged as an invaluable resource to help build their confidence and competence as a White ally and D&I trainer. In addition to the insights disclosed by the participants, this study also offers recommendations for future studies related to race-conscious diversity, equity, and inclusion outcomes in the workplace.

Paper is Available to Meeting Registrants Only.

GDO: **Intersectionality and Emotional Labor for HR Professionals**

Author: **Nicolina Leeann Weaver**, *U. of Kentucky*
Author: **Alicia A. Grandey**, *Pennsylvania State U.*
Author: **Kelly Pledger Weeks**, *Rhodes College*
Author: **Myrtle P. Bell**, *U. of Texas At Arlington*
Author: **Alison V. Hall**, *U. of Texas At Arlington*

Since the conception of emotional labor, the impact of race and gender has been prominent. However, few organizational researchers have explored the impact of race and gender on emotional labor experiences. Using a sample of 273 human resources and diversity, equity and inclusion professionals, we investigate the differences in surface acting between Black and White employees. We also take an intersectional perspective and examine the differences in surface acting among White men, Black men, White women, and Black women. Finally, we break it down further by examining the differences in up-regulating and down-regulating of positive and negative emotions among White men, Black men, White women, and Black women. Results indicate that Black women surface act more than others and Black women engage in more regulation of positive emotions than their colleagues. Future research and implications are discussed.

GDO: **How to Make Black Lives Matter to White AI Programmers**

Author: **Arlette Danielle Roman Almanzar**, *U. of Mannheim*
Author: **Laura Marie Edinger-Schons**, *U. of Mannheim, Business School*

Biases in the development of artificial intelligence (AI) have recently received increased attention. Specifically, biases relating to gender and race are frequently programmed into software, in many cases allegedly due to individual programmers who, consciously or unconsciously, replicate existing biases in their work. Past research has neglected to empirically investigate the role of individual programmers in overcoming or correcting biases, especially the question of how they can be motivated to engage in affirmative action and bias detection. The authors develop and test a conceptual framework on the effectiveness of motivational appeals directed at programmers, outlining the role of framing, the message speaker’s race and gender, and receivers’ individual differences in terms of social dominance orientation-egalitarianism (SDO-E) for the effectiveness of such appeals in driving implicit (i.e., ability to detect potential biases, e.g., an AI chatbot portrayed as a white male) affirmative action outcomes. The framework proposes that a problem framing (i.e., “you are part of the problem”) will be more effective than a solution framing (i.e., “you are part of the solution”) if the speaker is white and male (instead of black and female) and vice versa. Regarding individual differences, the authors propose that these results will only occur for respondents with low levels of SDO-E and be reversed for respondents with high levels. To empirically test the hypotheses, the authors recruited 590 real US programmers via Prolific to participate in a 2 (problem versus solution framing) x 2 (speaker white male versus black female) between-subjects experiment measuring their ability to detect potential biases. Results support the theorized framework. The study generates important conceptual implications for theories on biased AI, the role of individual programmers for affirmative action, intersectionality, and bias confrontation, as well as practical implications for the design of motivational appeals as interventions.

Does More Women Leaders Mean Greater Organizational Gender Equality?

Session Moderator: **Leire Gartzia**, *Deusto Business School*

GDO: **Female Top Representation as an Employer Brand: Effects on Prospective Employees** 

Author: **Leire Gartzia**, *Deusto Business School*
Author: **Josune Baniandrés**, *Deusto Business School*

Despite growing efforts to increase female representation at the highest levels in decision making, effects of proportion of women in such distal levels of management on employees' responses are unclear. The current paper proposes a moderated mediation model examining the psychological paths through which female representation at the top affects male and female prospective employees' work expectations and tests it with an experimental paradigm. In two studies, participants envisioned organizations with different proportions of women at the highest managerial levels. Participants held more positive images about potential employer organizations with greater proportions of female managers. Effects were stronger for women. Attributions of communion also engendered positive work expectations. Mediation analyses suggested that women's higher attribution of communal features to organizations with greater proportions of women on the top, as well as the slightly greater effects of communion for women compared to men, help explain the effects. Implications for the employee branding process in a digitalized world where it is necessary to overcome the outdated picture of a male-dominated and agentic context are discussed.

Paper is Available to Meeting Registrants Only.

GDO: **Chipping Away at the Glass Ceiling: A Social Psychological Perspective on the Role of Women Directors**   

Author: **Bartolome Pascual-Fuster**, *U. de les Illes Balears*
Author: **Ryan Federo**, *U. de les Illes Balears*
Author: **Rafel Crespi**, *U. de les Illes Balears*

The glass ceiling in corporate boards all over the world has sparked debate in research and practice. Advocates of chipping away at this glass ceiling argue the importance of gender diversity to improve board monitoring and eventually firm outcomes, while others dispute the benefits of increasing women on boards. In this study, we draw on the social psychological perspective to analyze whether increasing the proportion of women on the boards of publicly listed Spanish firms is relevant for corporate governance. Our findings show that the presence and leadership positions of women on the board and/or the nomination committee are not significantly associated with the increase in incorporating new women directors. Moreover, we find that women are less likely than men to be assigned with leadership positions, both in the board as a whole or its board committees. These findings suggest that women face gender bias, resulting in a double glass ceiling in corporate boards. Furthermore, the presence of women directors—even when assigned with leadership positions in the board or relevant board committees—does not improve or diminish the main board monitoring activities, thus uncovering that women on boards may yield similar outcomes despite being outnumbered by men in the boardroom.

Paper is NOT Available. Please contact the author(s).

GDO: **Meaningful Signals or Cheap Talk - Do Gender Targets Affect Employees' Perceptions of Equality?**  

Author: **Luise Pentzer**, *Otto-von-Guericke U. Magdeburg*

We investigate whether gender targets set by firms are associated with employees' perceptions of equality. To conduct our quantitative empirical study, we deploy a unique dataset of 38,460 employee reviews recorded from 2016 to 2020 for 68 German firms that reported gender targets for their executive boards. We carry out statistical analyses constructing a GEE population-averaged model. Our results suggest that gender targets are only associated with higher levels of perceived equality among employees if ambitions exceed a ratio of 1:7 and are followed by a female appointment. Meanwhile, we find that irrespective of target setting, female executive board representation is positively associated with employees' equality perceptions. We contribute to research on gender policy by providing a first quantitative study on equality perceptions following gender target setting.

Paper is Available to Meeting Registrants Only.

GDO: **Gender diversity, Labour in the Boardroom, and Gender Quotas**   

Author: **Katrin Scharfenkamp**, *Bielefeld U.*
Author: **Astrid Kunze**, *NHH Bergen*

This study investigates the novel question of whether employee representation on boards of directors has a positive effect on gender diversity on boards, and possible interaction effects with gender quotas. We exploit rich, newly assembled board-director matched panel data for Norway and Germany, which contain unique information on whether a director represents shareholders or employees during the period around 2008, when a Norwegian board gender quota came into effect. We present two novel results. First, we find a positive impact of employee representation before the gender quota reform on gender diversity in both Norway and Germany (2002–2009). Second, although overall the Norwegian gender quota has increased the probability of a director being female, the effect through employee representation has decreased since the announcement and implementation of the gender quota reform. We discuss potential mechanisms and implications for the design of gender quotas.

I Don't Mean to be Racist, But... Reviewing and Improving Reviewer Comments

Improving Reviewer and Editor Comments

Organizer: **Nicole C. Young**, *Franklin & Marshall College*
Organizer: **Darryl Rice**, *Miami U.*
Organizer: **Oscar Jerome Stewart**, *College of Charleston*

The racial unrest in 2020 may have initially resulted in increased support in research relating to the experiences of marginalized populations. However, as time moved on, reviewer comments may have once again signaled to scholars of the Global racial and ethnic majority that research on marginalized voices and perspectives is not consistently welcome. This PDW will allow participants to examine actual reviewer comments and explore how these types of comments may not only negatively affect the acceptance of a manuscript, but also the professional and personal implications to the scholar. Sharing actual reviewer comments will allow participants who have received similar comments to develop a sense of community, and for those who have not, to increase awareness. This PDW contributes to the conference theme “Creating a Better World Together”, because understanding and improving the experiences of all individuals in organizations requires the advancement of all, rather than dominant, perspectives. We anticipate an open exchange of ideas and community building related to broadening perspectives on providing constructive feedback and managing damaging reviewer and editor comments.

Women are leaving the workforce at historic rates due to the inability to negotiate work and household labor. Despite considerable gains in the workforce, women still account for a greater share of domestic work. To be ideal workers, women are expected to fulfill ideal worker norms of long hours and undivided dedication, in stark contrast with gender roles which dictate that ideal women should take primary care of the household. This imbalance of unpaid domestic labor stunts women's achievement in the paid workforce. Prior research has demonstrated the tension between work and family domains and COVID-19 has exposed the ubiquity of gender roles, as women have taken on a greater share of childcare and household chores during the pandemic (Gurge et al., 2021). In this symposium, we delve into the consequences of the push and pull of work and family responsibilities, and why women are feeling especially burdened during COVID-19. Across a variety of methodology, including longitudinal, survey, interview and experimental, we unpack the experiences of women and the undercurrent of work family conflict pushing women out of the workforce. In these four talks, we study how remote work effects work life balance, how domestic arrangements effect work outcomes, how work arrangements effect domestic arrangements, and a precursor and consequences of the conflict between the two realms. By examining the link between personal and professional lives, we demonstrate the interconnectedness of these two domains, with specific focus on the pressure women face from both, and how it may be alleviated.

This workshop is geared toward HR doctoral students in the middle of their program. The goal of this workshop is to help these students navigate the collection of career issues that begin to emerge when students are about halfway through a doctoral program. In many PhD programs, the middle stage is a critical point. Students are expected to begin the transition into independent scholars, start building professional networks, move beyond the structure of courses and exams, and develop skills as an instructor. The workshop topics are designed to help these students develop the knowledge and skills required to be successful at this middle stage and continue their development into strong researchers and teachers. It is also a way for HR doctoral students to build connections with others and become more involved in the HR Division.

This session requires pre-registration and is limited to 45 attendees. Please register by emailing Karen Landay at kmlanday@umkc.edu with the following information: (1) Name, (2) School, (3) Year in program, and (4) CV.

The New Faculty Consortium (NFC) provides a developmental forum for junior faculty to interact with peers and senior colleagues about how to survive and thrive in their academic careers. The consortium is open to all HR Division junior faculty members with less than 4 years of post- PhD experience who have been recently hired to research and/or teach in HR. The consortium includes a combination of panels, facilitated discussion, small roundtable sessions and as well as the opportunity to network with peers and leading global faculty alike.

Panelist: **Gerhard Schnyder**, *Loughborough U.*

State capitalism, the influence of the government in economic activity, is witnessing a renewal worldwide as government increase their regulation of private firms and direct intervention as owners of companies and investment funds. In this symposium we discuss how modern forms of state capitalism observed around the world bring together the institutional dynamics and governance practices of the state agencies and those of the private sector. The panelists use evidence from studies of state-owned and state-affiliated firms operating in different regions of the world to discuss the cross-national variation in hybrid institutions, governance, and strategies. They reflect on past advances in various aspects of state capitalism and provide suggestions to guide future research on this increasingly important topic.

Following our tradition in every AOM's annual meeting program, the Management Consulting Division will sponsor its Doctoral Consortium during the pre-conference period of the Academy of Management 2022 Annual Meeting. The objective of this Consortium is to provide support to students working on subject under the wide umbrella of management consulting in their PhD programs. The organizers, faculty members, and panelists will focus on providing participating students with opportunities to discuss their dissertation proposals in small groups, and to learn about various academic and professional steps and tasks they will encounter in the senior years of their doctoral studies and professional career afterwards. This year's consortium offers a financial prize to the doctoral student with the winning presentation.

Most management academics have been trained to do rigorous research in their chosen field, but few receive any guidance about how to translate that research into learning activities or create impactful intellectual contributions from their classroom activities. This professional development workshop is intended for authors, experienced or new to the management education and learning discipline, who are interested in developing their teaching and/or learning technique(s) into management education and learning academic conference presentations, publishable case studies, peer reviewed journal publications, and other intellectual contributions. This workshop brings together experienced management education teaching-scholars, teaching and learning journal editors, and publishers in a collegial environment that will allow participants to learn about and discuss ideas on converting research into classroom activities and the scholarship of teaching and learning, as well as build participants' networks and resources in this area of scholarship.

Presenter: **Robin Steegman**, *Performer & presentation coach*
Presenter: **Eugene Washington Walker**, *UCL School of Management*

This forum offers participants an opportunity to hear from both academics and practitioners, focusing on practicing and crafting effective virtual presentations. The session will include a panel discussion, integrating insights from academics and learnings from other industries that focus on presentation skills, followed by small group breakout rooms. Separately, there will be several slots available by application to work with the practitioner coaches.

Leadership and Inner Capacity Development: Research from Multiple Perspectives

Session Moderator: **Courtney E. Owens**, *Alliance Manchester Business School, U. of Manchester*

The papers in this session explore the connections between leadership and inner development in the workplace.

MSR: Transition of Owner-Manager Faith into the Professional Environment

Author: **Matthias Wuersten**, *U. of St. Gallen*

I develop a model explaining the process of owner-managers transitioning their Christian faith into the professional environment. Based on 20 interviews with representatives from eleven Christian-led, owner-managed firms, I find that the belief in accountability towards God, the belief in fate, and the urge to apply a moral code of conduct serve as the basis for owner-manager purpose. I find that Christian owner-managers understand their purpose in serving God and, in the context of their professional environment, in bringing God closer to stakeholders. Furthermore, my study sheds light on how Christian owner-managers enact their faith on the individual and organizational level. Thus, the developed model offers an understanding about the transition of Christian faith of owner-managers into their professional environment.

MSR: Well-being, Workplace and Religion: Insights from the Middle East

Author: **Tamer Koburtay**, *College of Business and Economics, Qatar U.*

Author: **Ahmad Sayel Abualigah**, *Al Falah U.*

This paper uses an interdisciplinary approach to examine how religious practices and spiritual facilities may affect employees' well-being in workplaces. Based on Ryff's (1989) well-being framework, a related aim is to contextually study the implications of Islamic practices and spiritual facilities for Ryff's (1989) model. Using a qualitative data collected from 22 employees, our findings show that worshipping Allah, contemplative practices, and patience are key factors of one's psychological well-being. The study also highlights specific spiritual provisions and contemplative practices as key factors for enhancing Ryff's six dimensions of employees' psychological well-being. The paper offers a novel and contextual extension of Ryff's framework by theorizing the notion of well-being in Islam. In the end, theoretical and practical implications are offered.

MSR: Reconceptualizing Work-Personality: Developing a Spiritually-based Framework

Author: **Courtney E. Owens**, *Alliance Manchester Business School, U. of Manchester*

We can create a better world together by improving our ability to flourish at work. Our ability to flourish at work can be improved by furthering our understanding of individual differences such as personality. While personality has been shown to be a significant predictor of work-related outcomes, variance explained is often weak. Reconceptualizing personality as work-personality profiles grounded in a spiritually-based framework provides new directions for understanding the conditions for flourishing at work. Herein, the well-established definition of personality is reconceptualized as parts of personality in a Venn diagram, which when overlapped and aligned with biblical text reveal seven work-personality profiles. The framework for these seven profiles is based on biblical text integrated with personality psychology literature. These seven profiles may improve variance explained when investigated as predictors of important organizational outcomes that affect flourishing at work, such as job satisfaction, emotional labor, or team effectiveness.

MSR: Lessons from Entrainment to Enhance Spiritual Practices

Author: **Danny Sandra**, *U. of Antwerp*

Entrainment is a phenomenon what we all have experienced in our personal daily life, typically as an elevated emotion, feeling or energy. But also in organizations, studies highlighted a positive relationship between entrainment and organizational outcomes. In these challenging times, spiritual practices can bring people closer to create a better world together. Hence, the objective of this article is to draw lessons from the phenomenon of entrainment for spiritual practices, because entrainment is a natural process that can be influenced and facilitated. Seven lessons were drawn from the learnings of entrainment to enhance spiritual practices: (1) an effective spiritual practice is a practice that enhances the level of entrainment in one or more quadrants of the Integral Entrainment Matrix; (2) a spiritual practice should focus initially on improving intra-entrainment, which will influence and enhance the other types of entrainment; (3) spiritual practices are ideally done in a healthy natural environment of your liking; (4) spend spiritual practice time with those people that really care about themselves, their environment and you; (5) pace the timing of the spiritual practice to establish a rhythm; (6) pace the spiritual practice itself to fit with your own biological rhythm, your own likes and environment; (7) enhance emotional and behaviour entrainment by selecting a spiritual practice that fits your values.

**Ram’s Epic Spirit-based Collaborations Including
Monkeys, Bears, and Eagles**
Ram’s Epic Spirt-based Trans-species Collaboration

Session Chair: **R Ray Gehani**, *Akron U.*
Facilitator: **Vikram Gulati**, *Maharishi International U.*
Participant: **Ellen L. West**, *Portland State U.*

We will share and exchange with participants in this PDW how the global contagion of COVID pandemic has impacted different strategic leaders, managers, and organizations in divergent ways. We will note that some rooted in their material gains resorted to more segregation, fear mongering, and attacks on the most vulnerable strata of their organizations and societies. At the same time, some empathetic leaders and administrators opened their hearts and reached out to the more vulnerable fellow-human beings in their enterprises. For a more flourishing world and organization, how do we improve and build our capabilities for more inclusive and diverse collaborations? Participants will draw key lessons and inspirations in diversity, equity, and inclusion from the inter-species collaborations of Ram, the hero of classical epic Ramayana, with monkeys, bears, and eagles. He has been considered the perfect role model for his humanity and justice by millions of Indians over the past 120 generations. Using an innovative spirituality paradigm, with world as an inter-connected family (in Sanskrit Vasudhaiva Kutumbakam), participants will explore learning from our rich historic past – often ignored or neglected in many business organizations in the U.S. and around the world for ulterior personal biased reasons. Collectively we will explore how our spirit – based diverse world-wide collaborations can enhance the quality of living and work across all layers of our pyramids of populations.

Voice, Proactivity, and Extra-role Behaviors

Session Moderator: **Louisa Antonia Bloedorn**, *WHU – Otto Beisheim School of Management*

OB: Proactive Strategic Behavior and its Relationship With Other Proactive Behaviors

Author: **Matthias Michael Pfisterer**, *Vlerick Business School & KU Leuven*
Author: **Katleen De Stobbeleir**, *Vlerick Business School*

This study explores how employees use proactive strategic behavior in combination with other proactive work behavior and proactive person-environment fit behavior. Specifically, by using 266 focal manager-supervisor dyads, we study the link between proactive strategic scanning, voice, feedback-seeking and performance. As hypothesized, proactive strategic scanning is positively related to voice. We argue that the link is sequential, in such a way that voice mediates the positive effect of strategic scanning on performance, which is supported by our results. In addition, we find partial support that higher levels of feedback-seeking moderate the strategic scanning-performance relationship. Implications for theory and practice are discussed.

Paper is Available to Meeting Registrants Only.

OB: The Joint Effects of Voice Importance and Leader Network Ability on Actual Voice Implementation

Author: **Xiaofei Hu**, *Hong Kong Polytechnic U.*
Author: **Wu Liu**, *Hong Kong Polytechnic U.*
Author: **Yeting Zhou**, *People's Hospital of Shuyang County*

While recent voice literature has begun to take a leader-centric perspective to explore how leaders react to employee voice, we still know little about their psychological impetus and constraints regarding ongoing voice implementation. In this paper we investigated the antecedents of leaders' actual implementation towards employee voiced issues. Based on theory of planned theory, we posited that both issue characteristics (i.e., voice importance) and leader characteristics (i.e., network ability) affected actual voice implementation. To test our model, we observed 160 monthly meetings of 32 healthcare teams in a hospital for 5 months. Finally, 346 pieces of voice from 201 nurses were recorded and evaluated by both voicers and their nurse managers. Our results suggested that while voice importance enhanced leader voice implementation motivation towards the focal issue, it led to actual voice implementation only when leaders had high network ability. Theoretical and practical implications were also discussed. Keywords: Voice importance, voice implementation, leader network ability, theory of planned behavior

OB: Dancing with the Rebel: Followers' Successful Insubordination, Leaders' Status Threat and LMX

Author: **Louisa Antonia Bloedorn**, *WHU – Otto Beisheim School of Management*
Author: **Miriam Muethel**, *WHU - Otto Beisheim School of Management*
Author: **Anson Seers**, *Virginia Commonwealth U.*

Follower insubordination violates the social hierarchy inherent to leader-follower relationships. In this vein, past research focused on insubordination as dysfunctional behavior that is to be sanctioned (DeCelles & Aquino, 2020; Klaas, Olson-Buchanan, & Ward, 2012). However, we argue that insubordination can also be functional when followers' alternative actions prove more successful than the leader's instructions. It is thus the outcome, i.e., the success of insubordination, that determines the effects of insubordination on leaders and leader-follower relationships. Based on three scenario experiments with four samples (N = 214, N = 299, N = 439, N = 395), we find that followers' successful insubordination, i.e., followers' disobedience to their leaders' orders in favor of alternative actions that successfully promote organizational goals, increases leader status. We find further that this status threat decreases social leader-member exchange perceptions (SLMX) but increases economic leader-member exchanges (ELMX). Taken leaders' increased self-interest when interacting with successful but insubordinate followers, we thus point to leaders' taking advantage of successful insubordinate followers despite their status threat.

OB: A Psychological Contract Perspective of Employee Promotive Voice and Promotability

Author: **Chenwei Li**, *San Francisco State U.*
Author: **Chiahuei Wu**, *Leeds U. Business School*
Author: **Yuntao Dong**, *Peking U.*
Author: **Hannah Weisman**, *Harvard Business School*
Author: **Li-Yun Sun**, *Macau U. of Science and Technology*

While promotive voice is conventionally considered a favorable work behavior to the organization, whether engaging in promotive voice will help employees move up the career ladder is inconclusive across a handful of studies. Drawing on a psychological contract perspective, this study aims to understand why and when employees' promotive voice can contribute to supervisor-rated employee promotability. We propose that employees' engagement in promotive voice will strengthen supervisors' balanced psychological contract with the employees and increase their rating of employees' promotability, and these effects will be stronger when the employees and supervisors have higher versus lower quality of leader-member exchange (LMX) relationship. Results of a three-wave field study with 281 employees and their 59 supervisors supported our hypotheses. In brief, we found that promotive voice was positively related to supervisors' balanced psychological contract, especially when the quality of LMX was higher, which in turn, positively impacted supervisor-rated employee promotability. We conclude by discussing the important implications of these findings for theory and practice.

The Organizational Behavior Doctoral Consortium is held annually and designed for doctoral students who are in the final stages of their programs. The consortium includes a mix of presentations, discussions, and interactive sessions designed to help doctoral students navigate the job market, build connections with their cohort as well as invited experts, and launch them into their academic careers. The consortium will be held in-person on Saturday, August 6, 2022, from 8:00AM-6:30PM local time. The in-person program includes faculty presentations and roundtable sessions on topics such as crafting the right academic job, acing the job talk, an editor's panel on succeeding in research and publishing, and effective and inclusive teaching and mentoring. We will host a networking reception after the program sessions. More than 50 faculty members have volunteered to present or host roundtable discussions. Students who want to attend the consortium must be nominated by their programs and endorsed by their advisors. Only one student can be nominated from each program at a respective institution. In October, after the Annual Meeting, we will also remotely host a "booster session" for attendees to offer additional support and advice related to the job market and dissertation process as well as strengthen connections among members of their cohort.

Behaviors and Cognitions Related to Tasks

Session Moderator: **Qiang Fu**, *Colorado State U.*

OB: **The Easier-Is-Better Heuristic: The False Allure of Easy Work** 

Author: **Eliana Polimeni**, *Northwestern Kellogg School of Management*
Author: **Loran F. Nordgren**, *Northwestern U.*

People are highly sensitive to effort expenditure and have an evolved goal to minimize it. As such, people tend to favor tasks that are easier over more difficult tasks. However, there are several downsides to reducing task demand, such as experiencing boredom, that make easier tasks less enjoyable. Across six studies, we examine people's beliefs about the relationship between task demand and task enjoyment. We find that people inaccurately anticipate that making a task less demanding will increase its enjoyability (Study 1). We extend our findings to a more objective conceptualization of task demand (Study 2) and find that the effect persists even when tasks are familiar (Study 3). We test our proposed mechanism that people fail to consider other task dimensions that impact task enjoyment because effort avoidance is a highly salient goal (Study 4). In Study 5 we find that people accurately anticipate that challenging, yet attainable, tasks will be more enjoyable than tasks which exceed their abilities. Finally, in Study 6 we surveyed working professionals to test the implication of the effect on job satisfaction and retention. Taken together, these results suggest that people operate on an "easier-is-better" heuristic, meaning they believe that any decrease in task demand will lead to an increase in task enjoyment. These beliefs matter because they likely guide people's decisions about what work to pursue and what work to avoid.

OB: **Unpacking Overconfident Behavior: Revisiting the Hard-Easy Effect** 

Author: **Mohammed Abdellaoui**, *HEC Paris*
Author: **Han Bleichrodt**, *Erasmus U. Rotterdam*
Author: **Cedric Gutierrez**, *Bocconi U.*

We investigate overconfident behavior as resulting from two discrepancies from Bayesian behavior: a bias in beliefs, usually known as overconfidence, and a bias in attitude towards ambiguity. We propose a method, valid under recent theories of decision under uncertainty, to separate the effects of subjective probabilities and ambiguity attitudes on overconfident behavior in two incentivized experiments. Our first study reveals the impact of ambiguity attitudes on overconfident behavior. While subjective probabilities were underconfident, subjects were ambiguity seeking. In the second study, our method replicates the hard-easy effect on beliefs: easy tasks lead to understimation of absolute performance and overplacement whereas hard tasks lead to the opposite. Additionally, we find that the task's difficulty affects not only beliefs but also ambiguity attitudes. Easier tasks lead to more optimistic ambiguity attitudes for absolute and relative performance. In other words, while hard and easy tasks have opposite patterns on the belief component of overconfident behavior, easy tasks always contribute more to overconfident behavior than hard tasks.

OB: **A New Look at Unconscious Thought Theory: Elicitation of Dynamically Varying Strategies** 

Author: **Chao Lei**, *School of Management, Huazhong U. of Science and Technology*
Author: **Pengcheng Zhang**, *School of Management, Huazhong U. of Science and Technology*
Author: **Huan Tao**, *School of Management, Huazhong U. of Science and Technology*
Author: **Guoxuan Wang**, *School of Management, Huazhong U. of Science and Technology*

Unconscious thought theory (UTT) suggests that people apply compensatory strategy (weighting) in unconscious thought (UT) in complex decisions (e.g., multiple alternatives and attributes) (Dijksterhuis & Nordgren, 2006; Dijksterhuis & Strick, 2016). However, some researchers have reported different findings of the strategies elicit during UT. Payne et al. (2008) indicated that people relied on compensatory strategy (Dawes) in UT, but others argued that people use a noncompensatory (lexicographic) strategy instead (Huizenga, Wetzel, Ravenzwaaij, & Wagenmakers, 2012). Thus, these empirical studies have shown mixed results. In this article, our study aims to replicate the unconscious thought effect (UTE) and reconcile the controversy by introducing the prominence effect. To clarify the ostensible controversy, three studies involving 800 participants were conducted. The results replicated the UTE and suggested that weighting was more widely elicited than Dawes in UT when the importance of alternatives' attributes that were not identical and combinations that were extreme. In addition, the controversy between weighting and lexicographic strategies stemmed from the varying strategies elicited by the degree of difference (e.g., decisive versus nondecisive) between primary and other dimensions of the alternatives. In a nondecisive situation, UT tends to elicit a weighting strategy; conversely, it tends to elicit a lexicographic strategy.

OB: **What To Do First? A Demand-ability Fit Perspective on Task Motivation and Carryover Effects**

Author: **Qiang Fu**, *Colorado State U.*
Author: **Anna Connors Lennard**, *Oklahoma State U.*
Author: **Lindsey Greco**, *Oklahoma State U.*
Author: **Nikolaos E. Dimotakis**, *Oklahoma State U.*

In the course of a workday, employees attend to a variety of distinct tasks. Considering that motivation may vary from one task to the next on a daily basis, our understanding of motivation at work is incomplete without understanding (1) how demand-ability fit affects motivation at the task, instead of job, level and (2) how motivation on previous tasks carries over into subsequent tasks. Drawing on research in task complexity and situational motivation theories, we develop a theoretical model that examines the moderating effects of intrinsic motivation on a previous task on the relationship between characteristics of a later task and task intrinsic motivation, which in turn influence task performance and task engagement for the later task, and end-of-day recovery. We find that when previous levels of task motivation are higher, the positive effects of congruence between task complexity demand and ability on later task motivation will be stronger (i.e., carryover effect); nevertheless, the negative effects of any incongruence between task complexity demand and ability on later task motivation will also be stronger (i.e., contrast effect). In addition, intrinsic motivation for the later task is positively associated with task performance, task engagement, and recovery. The implications for theory and research on dynamic motivation and task transitions are discussed.

Participant: **Stephanie Jingxian Yu**, -

Curiosity is a topic of great interest for both scholars and practitioners. It has been associated with numerous positive outcomes in the workplace including job performance (Reio & Callahan, 2004), organizational commitment (Mussel & Spengler, 2015), proactive behaviors (Wang & Li, 2015), and work engagement (Kashdan et al., 2020). However, there remain key unanswered questions about the effects of curiosity in the workplace. The four papers in this symposium each address an important unanswered question about the effects of curiosity in the workplace, providing both scholars and practitioners will a more comprehensive understanding of how curiosity can be used to help individuals and organizations attain their goals. These papers examine both the positive and negative aspects of curiosity in the workplace and explore how the curiosity of one individual can affect those around them.

Leaving the Office, Leaving the Lead? Conceptualizing Leadership Identity Across Time and Domains *Leadership Identity Across Time and Domains*

Organizer: **Susanne Helena Braun**, *Durham U.*
Organizer: **Karolina Wenefrieda Nieberle**, *Durham U.*
Discussant: **Robert G. Lord**, *Durham U.*
Discussant: **Hannes Leroy**, *Erasmus Research Institute of Management*

With this presenter symposium we seek to challenge the status quo of how individuals get to see themselves as leaders in organizations. The four presentations expand current conceptualizations of leader identity through the medium of time and across domains, thereby going beyond to-date predominantly static and work-centric approaches. The evidence derived from three empirical presentations contributes to the understanding of long-term and short-term change in leadership identities as well as the predictors of such change including: (a) claiming and granting across domains (work, community, personal); (b) automatic activation of leadership self-schemas; and (c) employee centrality in buy-in networks in organizations. The studies utilize experience sampling, reaction time experiments, and social network analysis, reflecting a range of important advancements in quantitative methodology for a better understanding of identities from a dynamic perspective. The fourth, theoretical presentation develops a novel model that integrates temporal perspectives on leader-follower identities with self-regulatory theory. It offers insightful perspectives on the relevance of time by incorporating long-term development (e.g., employee career stages) as well as short-term changes related to momentary requirements (e.g., project stages) as predictors of leader identity. Two discussants synthesize these theoretical and empirical contributions to address (a) implications for future theorizing and measurement of identities in organizational scholarship, and (b) the development of leadership and followership identities in future managerial and organizational practice.

Despite persistent calls for organizational scholars to explore the experiences of women at work more deeply, we still know relatively little about: (1) processes involved in women's invisible experiences; (2) the impact invisible experiences have on women's well-being and work outcomes; (3) the circumstances that exacerbate or alleviate these outcomes; and (4) how colleagues, leaders, and organizations can best support women at work. The proposed symposium advances scholarship by bringing together qualitative and quantitative research that sheds light on women's invisible experiences at work. Specifically, the four papers within this session reveal that postpartum experiences, barriers related to menopause, and the lasting effects of gender-based trauma are impactful for women's career transitions and outcomes, and highlight roles that organizations, leaders, and coworkers may play in providing support. In this manner, this symposium strongly aligns with the Academy of Management's conference theme "Creating a Better World Together" by focusing on the voices, needs, and perspectives of groups that have historically been silenced: mothers suffering from postpartum depression and reentering organizations after maternity leave; survivors of gender-based violence facing transitions in their careers; and women experiencing menopause. In sum, the papers and resulting discussion provide insight into the consequences of these invisible experiences for the women affected, and how colleagues, leaders, and organizations can provide support.

Team Resilience: Recent Developments and Building a Microcommunity *Team Resilience*

Organizer: **Silja Hartmann**, *Freie U. Berlin*
Organizer: **Kyle Brykman**, *Odette School of Business, U. of Windsor*
Panelist: **Danielle D. King**, *Rice U.*
Panelist: **M. Travis Maynard**, *Colorado State U.*
Panelist: **Edward H. Powley**, *Naval Postgraduate School*
Panelist: **Adam C. Stoverink**, *U. of Arkansas*
Panelist: **Timothy J. Vogus**, *Vanderbilt U.*

Over the past decade, we have observed a surge of publications on team resilience, but little integration across these different research endeavors. The lack of synthesis across these approaches has resulted in substantial ambiguity about the definition and nomological network of team resilience, as well as differing perspectives on conceptualizations, operationalizations, research designs, and critical directions. This PDW responds to these challenges with two goals: (a) develop greater coherence within the literature by facilitating intensive discussions with leading experts, (b) build a microcommunity of team resilience scholars to facilitate future research collaborations. The PDW is divided into three parts: First, our expert facilitators will each present their perspective on team resilience followed by an engaging panel discussion. Next, facilitators and participants will break into small roundtables, each of which will focus on a pressing topic on team resilience. Finally, we will share learnings from each roundtable, involve the audience in a final round of Q/A, and provide an opportunity for scholars to share current events/publications to sustain our microcommunity momentum following the session. This PDW addresses the AOM 2022 Theme of Creating a Better World Together by addressing the important question of what knowledge, skills, and abilities organizational teams of the future will need in order to successfully manage unpredictable events and uncertain environments.

Uncovering the Social and Emotional Aspects of Leadership and Followership

Social and Emotional Aspects of Leadership

Session Chair: **Andreas Wihler**, *U. of Exeter Business School*
Session Chair: **Jennifer Linda Sparr**, *U. of Zurich*
Presenter: **B. Parker Ellen**, *Mississippi State U.*
Presenter: **Julia Rieg**, *Kühne Logistics U.*

Presenter: **Ilke Inceoglu**, *U. of Exeter*

Leadership not only comprises formal relationships where employees are influenced by their leaders but also more team-based structures where informal leader- and followership is shared. Therefore, this symposium focuses on the interplay of leader and followership and considers two broad areas that affect how leader- and followership is enacted: Social and emotional aspects. Both aspects have long been recognized as vital for successful leadership. Bringing together research on the political environment, the fragile state of leader- follower interactions, and emotions in the emergence of leadership, this symposium sheds light on how the leadership process is affected by social and emotional factors that need to be considered when creating effective and successful roles for leaders and followers. Collectively, the papers included in this symposium advance knowledge of formal and informal leadership by broadening our scope on how the different forms of leadership are enacted.

Synchronicity in the Morning: The Eclecticism of Change Processes and Practices

Session Moderator: **Lokesh Malviya**, *Doctoral Student at Indian Institute of Management, Ahmedabad*

ODC: **Empathy, Autonomy, and Trust Critical for Organizational Culture in a Hybrid Workplace**   

Author: **Lokesh Malviya**, *Doctoral Student at Indian Institute of Management, Ahmedabad*
Author: **Vishal Gupta**, *Indian Institute of Management, Ahmedabad*

This study extends the literature on organizational culture by examining how it may have undergone a change after the introduction of the hybrid mode of working in many firms. Results from this qualitative study, which involved 10 participants working in a hybrid arrangement, revealed three major themes – empathy, autonomy, and trust as the important dimensions of culture in this new way of working. The comparison of these findings with the L-E-A-P framework revealed several insights for practitioners which included the importance of understanding an employee’s emotions, impact of lower frequency of social interactions, placing more trust in the employees, and providing them adequate autonomy and flexibility to carry out their tasks.

ODC: **Collective Change Reactions, Emotional Exhaustion and the Buffering Role of Distributive Justice** 

Author: **Birgit Thomson**, *Federal Institute for Occupational Safety and Health (BAuA)*
Author: **Kai Klasmeyer**, *Federal Institute for Occupational Safety and Health (BAuA)*
Author: **Karina Nielsen**, *U. of Sheffield*

Adaptation to external demands is important for organization’s prosperity, and according change measures affect all levels of the organization. Yet research has so far neglected collective reactions in the course of these measures. Drawing on conservation of resources theory we analyze job impact perceptions as collective restructuring reaction and its association with emotional exhaustion. We put specific focus on the question whether distributive justice on team and organizational level moderate the association of job impact and emotional exhaustion on the individual level. In total 1,523 employees, nested in 166 teams and 26 organizations participated in our study. To test our hypotheses we used Bayesian multilevel modeling. We found positive associations between job impact and emotional exhaustion on all three organizational levels. Distributive justice on the team level moderated the relationship between job impact and emotional exhaustion on the individual level. Our study contributes to the understanding of multilevel collective perceptions of changing working conditions in restructuring and the moderating role of distributive justice – particularly on the team level – with respect to emotional exhaustion. Based on our results, teams and team leaders should particularly be supported in restructuring in order to prevent employees emotional well-being.

ODC: **Asian American Burnout Experiences in Local Government**    

Author: **Thai Le**, *U. of Southern California*
Author: **Cynthia Wilkes**, *U. of Southern California*

How the Paradoxical Treatment of Asian Americans as Model Minorities and Perpetual Foreigners Shape Their Burnout Experiences in Local Government
Abstract: Asian Americans are the fastest growing racial group in the United States. This trend signals a need for greater representation and retention of Asian American employees in local government to ensure this growing population is well-represented in bureaucratic decision-making processes and public service provisions. In our study, we examine burnout and emotional labor among Asian Americans in local government through a mixed-methods approach. Our sample consists of local government workers from a large and diverse county in California. We surveyed participants in 2018 and surveyed and interviewed a subset in 2020. We find that Asian Americans in the public sector are dealing with emotional stressors from multiple sides: internal expectations and collectivist values, external pressures from interpersonal relationships at work and from residents, and racialized collective trauma from the public display of anti-Asian acts that only heighten feelings of being perpetually foreign. The interaction of these stressors is leading Asian Americans in the public sector to experience burnout and its many dimensions in greater intensity than non-Asians employees in general.

ODC: **The Role of Social-Symbolic Work in Addressing Grand Challenges: The Case of Women Empowerment** 

Author: **Mohsen Abumuamar**, *Lecturer*

This study examines the role of social-symbolic work in addressing grand challenges. To do so, I draw on an in-depth qualitative study of efforts to address the grand challenge of women empowerment in Kuwait. I explore how actors performed different forms and types of social-symbolic work to create a business incubator to empower unemployed women to unleash their entrepreneurial potential. The findings reveal that addressing grand challenges begins with one type of self work that I call “awareness work”, which refers to the efforts of individuals, collective actors, and networks of actors to shape individuals’ perception by raising their awareness of a given phenomenon. The results culminate in a model of social-symbolic work for grand challenges that unpacks the forms and types of social-symbolic work actors performed as well as their combining strategies.

Hybrid organizations is a well-studied field, known for being challenged by tensions of competing and rivalling logics, causing cognitive confusion, mission drift and loss of performance (Boone, Özcan, & Li, 2021). We investigate how a top management team (TMT) navigate an organizational transformation from a not-for profit to a hybrid form, initiated by a deregulation of the energy industry in Europe. Surprisingly, we found that apparently conflicting logics may not always be the victim of competition and compromise, often suggested in literature, but can become “enveloped”, forming a hybrid of both logics.

“Enveloping logics” is a concept of one logic framing another logic, embracing both equally. We conducted a qualitative case study, analyzing intimate interviews of TMT members and archival data over a period of 20 years. In that period the company developed from a regulated monopoly, dominated by a not-for profit-logic into a hybrid organization. TMT practices, adopted from outside the company, and from acquired and merged companies, was found to play a central role in creating hybrid logics. We developed a grounded theory process model explaining how the TMT enveloped logics over a period of 6 years, and what role adapting and deploying TMT practices played herein.

Firms and nature reciprocally influence each other. Businesses’ extraction and use of natural resources has pushed the natural environment to its limits. At the same time, businesses depend directly or indirectly on natural resources and are facing growing pressure. Proponents of the Resource Dependence Theory have recognized more than 50 years ago that organizations depend on external resources. However, only recently has this theory been extended to also include the firm’s reliance on the natural environment. With increasing scarcity of natural resources or even a cease in supply, the power relationship between nature and businesses is rapidly changing and becoming increasingly relevant for business. In this PDW, we ask participants to consider the role of power in the Natural Resource Dependence Theory. We also aim to gauge interest in developing a special issue on this topic for further theorizing and testing.

In all scientific fields, accurate measurement of the constructs we study is critical to the advancement of knowledge. Over the years, multiple reviews have criticized research in management for a general lack of attention to construct measurement validity, with particular criticism of survey measurement scales. We believe this criticism is accurate, and hope to improve the state of our field by providing researchers a simple, psychometrically-sound programmatic approach to help them establish construct validity for new scales (and evaluate the validity of existing scales). The first half of the session will focus on establishing a general understanding of construct validity as well as best practice approaches to evaluating construct validity. The second half of the session will be “hands-on”, conducted in small break-out groups, providing participants the opportunity to apply this information and work on their own measures as well as the ability to pose any questions they may have to facilitators.

Participant: **Itziar Castelló**, *Surrey Business School*

We propose a symposium on Artificial Intelligence (AI) to encourage research about a burgeoning phenomenon that poses significant implications for the business and society domain. AI refers to computer applications that have the ability to acquire their own knowledge (LeCun et al., 2015). In the last decade, AI has spread dramatically, showing great potential for different industries (Ma & Sun, 2020; Munoko et al., 2020). Given their widespread use, scholars (Crawford, 2016; Floridi et al., 2018; Pasquale, 2015; Taddeo & Floridi, 2015; Tsamados et al., 2021) have urged to study the ethical implications of AI agents for business and society such as privacy and surveillance (Floridi et al., 2018; Flyverbom et al., 2019; West, 2019); algorithmic discrimination (Mittelstadt et al. 2016; Buhmann et al., 2020); and opaque responsibility of an AI agent’s output (Floridi & Taddeo, 2016; Martin, 2019). Even though the current debate on AI ethics is heated, the emergence of new dilemmas follow the recent development of AI agents for automated text generation such as GPT-3 (Illia, Colleoni, Zyglidopoulos, 2021; Illia, 2021). Such third-generation language models can impressively mimic human communication to the point that it is quite hard to distinguish their messages from human generated text (Floridi & Chiriatti, 2020). In this symposium we are looking at a potential “winter of despair” scenario and develop reflections on how we can study AI text agents in order to foresee a “spring of hope.” By stimulating a discussion on the challenges ahead, panelists will develop a reflection on challenges at the individual, business, and society levels. At the individual level, what is the AI text agents’ morality and how does it differ from the one of humans?; How good are AI agents to mimic the conversational style of humans? And will this imply that they will silence humans’ voice, given their superior ability to produce and spread content massively? Will we end up dialoguing with AI agents without even realizing it?; At the business level, what is the extent to which AI text agents represent agents of automated mass manipulation and disinformation that change the process of social evaluation of organizations?; Can AI text agents substitute professions and human roles in businesses?; At the societal level, is the text produced by them credible but low quality? If so, what is the implication of this for the societal deliberation process? What are the moral deliberative processes that need to be initiated at societal level to regulate AI text agents? What is the role of regulators and moralizing discourse? (Organizers of panel: Laura Illia - U. de Fribourg / U.ät Freiburg & Elanor Colleoni - U. of Milan)

Scholars in the field of strategic management are developing an analytical approach to stakeholder governance that has the potential to yield foundational insights about how organizations orchestrate stakeholder interaction to deliver superior organizational performance. In this PDW, we aim to present five leading speakers who are working in this domain, and to conduct roundtable discussions among the participants that are led by these speakers, the organizers, and five roundtable leaders. We will conclude with a panel of Q&A from the audience. The purpose of the roundtable discussions will be to identify promising areas for future research on stakeholder governance, including particularly the development of theory and empirical insights. We anticipate that each roundtable will be staffed with both a speaker and a round-table leader, and that each will address one of five specific issues: attracting stakeholders, stakeholder retention, team production, stakeholder claimancy, and governance adaptation. The goal will be to use the PDW to support the development of participant papers and to promote a collegial conversation on these topics among scholars at all stages of their careers.

Dear attendees, This PDW is open to all AOM members interested in stakeholder governance. No preparation is required. Thank you for your interest. Sincerely, the organizers.

Now in its eleventh year, the Junior Faculty Paper Development Workshop aims to provide junior scholars with the opportunity to receive developmental feedback on their current research projects. The workshop features a panel of distinguished scholars with expertise in a diverse range of topics and methods. It targets junior faculty who are struggling with one of their papers, as for instance the paper has been rejected or has received contradictory reviews. Junior scholars will meet with senior mentors to discuss their paper and get advice on how to advance it.

Requirements: If you hold a faculty position as an Assistant Professor or comparable rank and your research focuses on STR related topics, we encourage you to apply to the JFPDW. Applications should include: Your curriculum vitae, including name, email address, title, institutional affiliation The paper you want to receive feedback on (a new working paper, or even a paper that's been through the review process already). An indication of three faculty mentors who are of most interest to you. (We will do our best to facilitate matches but this will depend a little on demand.) Please submit your application online to STR.PaperDevelopmentWorkshop@gmail.com If you have any questions, please contact one of the organizers: Bruno Cirillo (bruno.cirillo@skema.edu), Aline Gatignon (galine@wharton.upenn.edu), Srividya Jandhyala (srividya.jandhyala@essec.edu) or Daniel Keum (dk2721@columbia.edu).

Doctoral students are confronted with a plethora of challenges, which can be both daunting and exciting. This consortium is intended to help PhD students navigate various challenges and chart a course for successful academic careers. This year's CAR Doctoral Consortium will provide a forum for early to mid-stage doctoral students to meet, connect, and learn from each other, guest speakers, and a panel of distinguished career scholars. Our aim is to bring together scholars from a broad range of national cultures and institutions that mirror the diversity of the CAR Division's membership. For instance, our speakers represent distinguished junior and senior international faculty who will share insights on the following seven topics: (1) Finding your first academic job; (2) Surviving: Accessing and leveraging formal and informal resources during your doctoral program; (3) Thriving: Recruiting mentors and collaborators for your network; (4) Make it happen: Effectively navigating the dissertation process; (5) Head of the class: Preparing for your first course assignment and teaching role; (6) Balancing act: How to juggle demands of academic life during your doctoral program and beyond; (7) Need field data: Find out how to get it. The PDW will include two additional elements—a session on ethics within the academy and a panel discussion with highly published career scholars along this year's AoM theme of “Creating a Better World Together.”

**Seek the Controversy: How You Can Benefit from Listening to
Others' Opposing Views**
Receptiveness to Opposing Views

Host: **Carolin Krieweth**, *Innovation and Entrepreneurship Group (WIN) – TIME Research Area, RWTH Aachen Un*
Moderator: **Sebastian Kruse**, *WIN Lehrstuhl RWTH Aachen*
Speaker: **Michael Yeomans**, *Imperial College Business School*
Speaker: **Julia Alexandra Minson**, *Harvard Kennedy School*

Disagreement between individuals is a common and ever-recurring part of our social lives: We encounter disagreement not only in friendships or families, but also in organizations. While encountering disagreement is a common experience, dealing with such a situation is difficult for many individuals. For this reason, our proposed workshop supports participants to share experiences with engaging in opposing views, and to reflect on one's own attitude and behavior towards holders of opposing views. As individuals tend to ignore opinions which do not reflect their own and develop negative impressions about other individuals that share opposing views, disagreements can result in negative conflicts between individuals. However, recent research has shown many benefits of disagreement, describing how different viewpoints help individuals to gain information and develop new perspectives. To explore these new avenues further, this workshop will provide an understanding on both, why and how we should engage more in opposing views in order to build cooperation between disagreeing others, increase the willingness to engage with holder of opposing views, reduce deconstructive conflict, and increase trust. Thereby, the proposed workshop has the objective to give participants the opportunity to gain practical approaches in order to handle disagreement better, and learn to engage in conversational receptiveness. Hence, participants can improve their way of communication with others' that do not share the same opinion. For this purpose, this workshop is not only designed for managers and entrepreneurs, but rather for everyone that wants to improve their attitude and behavior towards disagreement.

This PDW is available for anyone registered for the conference (no invitation required). However, please note that this workshop is limited to 60 participants - make sure to sign up for the PDW quickly. We are looking forward to an inspiring and interactive session with you. In case you have any questions in advance, feel free to contact Carolin Krieweth (krieweth@time.rwth-aachen.de).

Participant: **Robert Perey**, *U. of Technology, Sydney*

Two global events now dominate our lives, the SARS-COV-2 pandemic and Global Warming. Our responses, individual and collective, to these events are grounded in our relationships with Nature. Both these events have disrupted our social and economic systems. SARS-COV-2 has inflicted dramatic short-term harm to the flow of goods and materials, compared with the longer-term structural harm arising from Global Warming that people are now cognisant of. Both these events have reignited calls to governments and businesses to urgently undertake structural institutional change to address these problems, including calls for a radical break from traditional growth-based models. Whilst humans acknowledge that natural systems provide the raw materials needed for a good life our worldviews, in the main, assume natural systems and human systems can function independently of each other. This highlights an ontological separation of nature and society creating a dialectical vortex (Whatmore 2002 p.1) that is a barrier to changing the worldviews needed to transition to post-growth societies: how do we create a world where humans and non-humans are equals? In the previous PDW we applied the concept of degrowth (Latouche, 2004; 2010) on how new forms of organising may unfold at the micro/meso scale, and how these interrelate to the macroeconomic scale of decision-making and design. In this PDW we will build on those discussions to explore how new ontologies of nature and humans can be created.

Health Policy: Elevating Health Care Management Research
Elevating Health Care Management Research

Participant: **Olena Mazurenko**, *Indiana U., Indianapolis*
Participant: **Leeann Comfort**, *Agency for Healthcare Research and Quality*
Participant: **Gary J Young**, *Northeastern U.*

In this professional development (PDW) workshop, attendees will discuss how to elevate health care management theory and scholarship into the realm of health policy. First, the attendees will hear from a panel of researchers and policy experts about examples of where and how management scholarship has influenced health policy. Panel members will discuss specific strategies for identifying influential policymakers and disseminating research. Next, attendees will engage in small group discussions moderated by PDW organizers and panelists to identify individual and community strategies for elevating health care management research into health policy. The attendees will leave the session with tangible tools to disseminate their research to policymakers. The attendees will also learn practical lobbying efforts that the health care management community can adopt to bring our theory and scholarship to the forefront of health policy debate and implementation.

The HR Division Late-Stage Doctoral Student Consortium will take place at the Academy of Management annual meeting, in-person in Seattle, on Saturday August 6, 2022. Depending on circumstances, the consortium may be held (partially) online. Details and any adjustments will be provided accordingly. Highlights of this year's Consortium include a free dinner and networking event on Friday August 5th (separate submission); a keynote address by Dana Minbaeva; a research feedback session with leading scholars in the field of HR; sessions about job talks and campus visits, evaluating and negotiating offers, socialization as an academic, getting published, and effective teaching; and an assembly with the major journal editors. Ideal candidates are doctoral students who have finished coursework and are currently working on their dissertations. There is no attendance fee, but pre-registration is required. To register: 1) sign up for this PDW session, 2) sign up for the separate Friday night networking/dinner PDW session (session #18300), and 3) complete the pre-registration form (https://curtin.au1.qualtrics.com/jfe/form/SV_esUJRqvsDtc0Jw) by May 16, 2022. You will be asked to upload a 1-2 page CV with contact information, education, research/teaching interests, publications, and conference presentations for distribution to all attendees. Your faculty advisor or doctoral program supervisor will also need to complete the form to endorse your application.

Session Chair: **Sumit Kumar Kundu**, *Florida International U.*

Sustaining entrepreneurship in resource constrained and fluid and weak institutional environment in emerging markets pose theoretical and practical challenges. This panel will discuss and address some of these challenges by adopting a middle-range theoretical approach and proposing the concept of 'Entrepreneurial Adaptation' (EA). Complementing the concept of entrepreneurial mindset and subsuming those of strategic orientation and adaptive capabilities, we posit that EA consists of a set of cognitively derived, action oriented strategic entrepreneurial choices that foster certain dimensions of adaptive capabilities which in turn sustain entrepreneurship in emerging markets. Drawing upon empirical analysis from various case studies and statistical analysis from primary data collected through survey as well as interviews the PDW will showcase how institutional changes affect strategic choices made by entrepreneurs and how it affects their adaptation and consequently their performance –in terms of their evolution, sustenance, profitability, and growth.

A mini-conference within the AOM conference, the New Doctoral Student Consortium (NDSC) is one of the longest running and most well-attended pre-conference activities. The NDSC's central mission is to provide a professional development outlet for doctoral students entering the first or second year of a doctoral program, as well as those considering entering a doctoral program. The NDSC provides an interactive environment in which doctoral students can learn skills to succeed in a doctoral program and enter the academic profession. Participants will meet representatives from Academy of Management divisions and interest groups, network with fellow doctoral students from around the world, and learn how to get the most out of the Academy of Management Meeting. The NDSC is committed to facilitating doctoral students' initial experience with, and further integration into, the Academy of Management and the academic community at large.

This event is invitation only. If you would like to be added to the waitlist, please contact Christopher Winchester at winch092@umn.edu

Entrepreneurship and Growth

Session Moderator: **Qian Li**, *U. of Dundee*

OMT: **Shaping Strategy Formation Processes of Emerging Ventures**

Author: **Qian Li**, *U. of Dundee*

This qualitative study explores how industry discourse shapes the strategy formation processes of new ventures. Based on a field study about the technology ventures in the insurance industry from 2017 to 2019, I unpack the insurance technology (InsurTech) discourse as a socially constructed condition and track the strategy formation processes of four ventures that are embedded in the discourse. I identify two primary streams of discourse, relational and arm's length, and show how these streams shape the ventures' strategy formation processes into two patterns: derivative and puzzle-piecing. The study thus highlights the role that socially constructed enablers play in shaping venturing processes and calls for attention to understanding ventures' strategy work as an evolving process embedded in the discursive context.

Paper is Available to Meeting Registrants Only.

OMT: **Agreeing to Be Different: Startup Founding Teams, Cultural Legacy, and Atypicality**

Author: **Yeonsin Ahn**, *INSEAD*

Forming an atypical organizational culture is unusual, and requires agreement among founding team members. I propose that startup teams with high diversity in cultural legacies that co-founders bring from previous employers tend to converge to the culture that is already taken for granted in the industry to resolve cultural disagreements. This convergence is amplified when startup teams belong to a cultural cluster in which stronger norm is manifested. However, teams with co-founders who are equipped with more diverse cultural elements can cultivate a more atypical culture by recombining cultural tools. Furthermore, cultural recombination is facilitated when a team incorporates cultural elements that broker two otherwise disconnected elements. These ideas are examined in an analysis of U.S. technology startup teams in CrunchBase and their parent organizations. I use 3.1 million employee reviews of the total technology company population from Glassdoor to identify the key cultural elements of technology companies over the past 12 years. Findings are consistent with the predictions. Implications for the study of startup culture, team diversity, and cultural recombination are discussed.

Paper is Available to Meeting Registrants Only.

OMT: **Hacking Culture: Does Entrepreneurship Training Make Entrepreneurs Better Cultural Operators?**

Author: **Francesca Bacco**, *Vrije U. Amsterdam, School of Business and Economics*

The literature suggest that entrepreneurship training is an important means through which entrepreneurs learn to develop narratives of their ideas that can elicit appreciation from external evaluative audiences. However, available studies do not consider how different approaches to idea development and validation entrepreneurs can be exposed to during training can shape the ways they narratively construct their ideas, and, by consequence, how external audiences will perceive those ideas. In this study, I address this issue by analyzing the evaluations of written descriptions of new business ideas submitted by 231 firms that participated in a field experiment embedded into a 4-months training program for aspiring and early-stage entrepreneurs, during which participants received training according to different approaches. The results show support for the idea that firms who are trained to think according to a scientific approach to idea validation develop narratives that elicit more positive evaluations from external evaluative audiences compared to other approaches. I elaborate on the mechanisms behind these results and discuss the implications for current and future research.

Boundary Work in Organizations

Session Moderator: **Yang Liu**, *U. of Southampton*

OMT: **Boundary Work for Structural Recombination**

Author: **Yang Liu**, *U. of Southampton*

To demonstrate dynamic capability, firms conduct structural recombination of units to adapt to changing environments. It involves boundary work (regarding boundary blurring and boundary protection) for recombined units. However, we still know very little about the specific approaches and processes for structural recombination. Through a qualitative case study, I found that the firm tried different boundary blurring approaches (regarding whether the boundary was viewed as a whole or as different parts), which involved different processes and led to different outcomes. It is also found that the role of specialization was contingent on the boundary blurring approaches. This study advances our understanding of structural recombination by uncovering how boundary work can unfold in such a context. It also draws implications for studies on boundary work and specialization.

Paper is NOT Available. Please contact the author(s).

OMT: **Balancing the Boundary: Sustaining Self-Managing Modes of Work Within Hierarchical Organizations**

Author: **Anna Stöber**, *Copenhagen Business School*

Author: **Dennis Schoeneborn**, *Copenhagen Business School*

This paper addresses the question of how self-managing teams can sustain their alternative mode of organizing within a more hierarchical organizational setting. We look at this issue as a phenomenon of intra-organizational boundary work. By drawing on communicative understanding of boundary work, we specifically examine the communicative practices used to negotiate intra-organizational boundaries. Based on a qualitative case study of a self-managing team within the more hierarchical environment of an international medical technology company, we show how the team uses communicative practices of nurturing, exposing and blending-in their self-managing mode of organizing to negotiate their internal boundaries. Through this communicative boundary negotiation and balancing, the team was able to maintain its mode of organizing in an otherwise largely traditionally organized firm.

Paper is NOT Available. Please contact the author(s).

OMT: **Let's eat together! The production of commensality in the spatial setting of the flexible office**

Author: **Marie Hasbi**, *Vrije U. Amsterdam*

Author: **Alfons Van Marrewijk**, *BI Norwegian Business School*

This paper draws attention to commensality -eating and drinking in the presence of others- and the spatial production of sharing food at work. We propose to add a socio-spatial perspective to the research agenda on the triad of food, work, and organization. In particular, we conceptually and empirically discuss the potential for understanding commensality space in a way that addresses its productive force, and its inherent dialectics and tensions. Applying insights from Lefebvre's work on dialectics and space, we analyze the case of a French Banking organization's new flexible office, and we argue that and how commensality is meaningful to everyday working life. The contribution of this paper is three-fold: it argues that organizational space is a set of multiplicities that enact particular practices and organizational dialectics; it extends the concept of commensality; it adds to typical forms of commensality in sociology.

Paper is NOT Available. Please contact the author(s).

OMT: **The Realm of The Ridiculous: Straddling Intimacy and Professionalism in College Admission Consulting**

Author: **Minh Phuong Cao**, *U. of California, Irvine*

This paper presents an ethnographic study on Icarus, an admission consulting firm serving international students applying to college programs in English-speaking countries. My study focuses on the relationship between consultants at Icarus and their customers. The customers demanded personal care and associated this care with intimacy and personal connections, while the consultants wanted personal boundaries in their relationship with customers. As a result, consultants at Icarus constantly straddled intimacy and professionalism by eroding and rebuilding personal boundaries in their daily interactions with customers. Eventually, consultants became exhausted and accepted the indeterminacy of the paradoxical tensions in their relationship with customers.
Keywords: emotion, interpersonal relationships, service workers

Paper is Available to Meeting Registrants Only.

Panelist: **Christine Beckman**, *U. of Southern California*
Panelist: **Stefano Brusoni**, *ETH Zürich*
Panelist: **Anita Williams Woolley**, *Carnegie Mellon U.*
Panelist: **Teppo Felin**, *U. of Oxford*

What does it mean for organizations to act intelligently? The concept of organizational intelligence has been of a topic of research since the early days of the field, yet there is a surprising paucity of theory around it. Organizational intelligence is an ability that is essential in helping organizations adapt to changing environments and find new avenues for growth. At the same time, how firms develop the consistent ability to make intelligent decisions and adapt is unclear. This symposium brings together a diverse group of scholars to consider organizational intelligent from multiple perspectives and levels of analysis. We ground our initial perspective in the later work of Jim March, who argued that achieving intelligence means maintaining openness to non-obvious paths of action and goals, which requires organizations to embrace both rationality as well as alternatives, such as sensible foolishness. We suggest in particular that while individuals are essential to creating organizational intelligence, we also must consider how the emergent properties of organizations – such as routines, technologies, and distributed attention – can foster and sustain intelligence. The aim is for each panelist to provide their perspective, engage in discussion about critical questions for future research directions, and then participate in audience Q&A.

Presenter: **Gianluca Carnabuci**, *ESMT Berlin*
Presenter: **Elisa Operti**, *ESSEC Business School*
Presenter: **Meredith Lauren Woehler**, *Purdue U.*

The purpose of this PDW is to create an ongoing forum for Academy members interested in teaching social networks to undergraduate, MBA, and executive audiences to share and learn practical insights on how to prepare and deliver individual sessions or entire courses on the topic. The PDW will be organized into two modules – substantive topics and an open innovation session – that are designed to assist participants in transforming research on social networks into effective educational experiences. Whereas the substantive topics module will focus on how experienced faculty have leveraged network concepts to develop and deliver thematic courses, the open innovation module will focus on the issues, challenges, and questions that the participants have experienced or anticipate with teaching social network modules or courses.

To ensure a high-quality experience and an atmosphere conducive to interaction and exchange of ideas, participation in the PDW will be limited to 50 individuals. To apply, please fill out the following form by July 1: https://lbs.eu.qualtrics.com/jfe/form/SV_01iHtSH7CukG7H

The last several years – with the global pandemic, the resurgence of the Black Lives Matter movement, and increasing concerns about climate change – have brought a renewed focus on market actors’ contribution to social and environmental problems and the role activists play in addressing it. At the same time, there have been growing calls within the Academy for scholarly work to have a greater impact on society. For five years, we have convened this professional development workshop (PDW) as a means of integrating the various research lenses through which social movements and markets are studied. This year, we are addressing these dual shifts by turning our focus toward the impact of our research—examining how well our collective scholarly efforts address the “grand challenges” currently influencing nearly all aspects of organizational life. The objective of this PDW is to unite researchers interested in the relationship between social movements and firms, despite the different analytical toolkits they employ, and to discuss how we can engage in research that is rigorous and theoretically rich while also being relevant to managers, policymakers, and other practitioners. Additionally, our goal is to increase the inclusivity of our community by inviting the participation of scholars who have not yet studied social movements and markets, but who would like to contribute to this area in the future.

Theory and theory testing are the underpinnings of Management research. This symposium consists of four presentations, each of which takes a critical stance on how Management scholars build and refine theories. Papers surrounding this topic may be widely applicable to a plethora of interest groups and subdisciplines, and the papers themselves may come from a variety of perspectives, as they will in this session. Within each presentation, authors review previous literature and offer best practices and insights to the issues plaguing Management literature.

TIM Junior Faculty Consortium    
TIM Junior Faculty Consortium

Organizer: **Annamaria Conti**, *U. of Lausanne*
Organizer: **Colleen Cunningham**, *London Business School*
Panelist: **Karin Hoisl**, *U. of Mannheim*
Panelist: **Jeffrey Furman**, *Boston U.*
Panelist: **Ashish Arora**, *Duke U.*
Panelist: **Robert Channing Seamans**, *NYU Stern*
Panelist: **Giada Di Stefano**, *Bocconi U.*

The Consortium will provide junior members of faculty in Technology and Innovation Management with insights on how to thrive in the increasingly challenging academic environment. It focuses on strategies for building a career and increasing impact as a scholar and teacher. It will feature outstanding senior faculty members with proven research and teaching records, who will lead four interactive discussions about how to balance the competing pressures of teaching, research, and service. They will provide first-hand and detailed advice about how to build a successful academic career in a range of different institutional settings. Participants will also learn about strategies for publishing in top journals and engage with editors of prestigious journals in the field. Most importantly, participants will receive feedback on their “research trajectory” from their peers and senior faculty. The Consortium will also provide participants with opportunities for networking with new peers and senior colleagues with interests in technology and innovation.

25 Years of Research Based on Venkataraman (1997): Assessing Progress and Exploring Future Avenues
25 Years of Research Based on Venkataraman (1997)

Presenter: **Sana Zafar**, *Auburn U.*

In 2022, we celebrate the 25th anniversary of Venkataraman’s (1997) landmark work. Since publication, entrepreneurship scholars have frequently cited his work when examining foundational issues within the field. Thus, we will present a Professional Development Workshop (PDW) to honor this seminal research, discuss its place in the field’s development, show its contributions over time, and discuss its potential applications in future research. First, the PDW will celebrate Venkataraman’s contributions to the entrepreneurship field’s development. Literature and bibliometric reviews of entrepreneurship research often recognize his work as a seminal contribution, and several other foundational entrepreneurship studies (e.g., Shane & Venkataraman, 2000) have also built upon it. Consequently, we will begin by reviewing the chapter’s place in the field’s historical development before exploring its continuing contribution. Second, Venkataraman (1997) provided some initial steps in clarifying the field’s distinct domain. He examined two critical concepts, uncertainty and information asymmetry, which represent fundamental concepts in the field and underlie many theories (e.g., transaction costs and the resource-based theory of the firm) that entrepreneurship scholars employ. As he noted, many of the challenges that entrepreneurs face (e.g., accessing funding) arise based on these issues, so discovering how entrepreneurs overcome these issues represents a primary challenge for entrepreneurship research. Thus, we will discuss research that specifically examines these issues and assess progress, to date. Third, Venkataraman’s (1997) work continues to inform entrepreneurship research. Thus, after demonstrating applications to several current research projects, we will conclude with an open forum-discussion of future research that builds on his contributions.

Speaker: **Gianvito Lanzolla**, *Bayes Business School (formerly Cass)*

Digital technologies and online platforms continue to transform the environment within which companies and industries operate. These technologies are reshaping the ground for competition and thereby are impacting the context within which new firms, existing organizations, and the infrastructure for entrepreneurship. On one hand, they offer new opportunities for innovation. However, on the other hand, these technologies increase uncertainty and create new risks. The remarkable scale of the digital transformation is attracting increasing interest in the entrepreneurship research community. More recently, it is being recognized that the digital platform firms, such as, Amazon, Apple, Facebook, Google, and many smaller platforms are integrating entrepreneurs into their ecosystems. In fact, some are arguing that the context for entrepreneurship itself is changing from the traditional one described by Schumpeter to one where the context for entrepreneurship is facilitated, but dependent upon a platform. Today, it is difficult to imagine establishing a new firm without ensuring that its website is found on Google or without advertising on Instagram or some other platform. It is vital that we understand the implications of these changes in context and how a firm expresses its existence for entrepreneurship, business models, and entrepreneurial ecosystem Dynamics.

Gender and Professional Identity

Session Moderator: **Guler Kizilenis Ulusman**, *York U.*

GDO: **Women's Gender-Related Challenges at Multinational Companies - A Cross Societal Perspective**    

Author: **Guler Kizilenis Ulusman**, *York U.*

Author: **Ebru Alpay Oraman**, *The Fluid You*

Author: **Neslihan Turnalar-Çetinkaya**, *MEF U.*

This study examines the experiences of women along with perceptions of gender equity in multinational companies (MNCs). Specifically, we explored the influence of (1) gender egalitarianism in the host country and (2) the global Gender Diversity Management (GDM) practices of the MNCs on the challenges faced by women in these firms. Twenty-five women working in 5 MNCs operating in 7 countries (i.e., Sweden, Netherlands, United Kingdom, Switzerland, Germany, Turkey, and Egypt) were interviewed. Participants were drawn from different departments and differed in their seniority-levels. Our findings indicated that these factors significantly altered the women's work experience. Interviewees reported feeling tension between their GDM experience of the MNC versus the local host environment. Drawing on the institutional duality of the global MNC context versus the host environment, the implications of these findings are explored. Keywords: MNC; gender; equity; diversity

GDO: **Identities between the lines: Re-aligning gender and professional identities in job advertisements**    

Author: **Joyce He**, *U. of California, Los Angeles*

Author: **Sonia Kang**, *U. of Toronto*

Advertisements for male-dominated jobs tend to contain more masculine language, which can deter women from applying because it highlights the incongruence between their gender and professional identities. A commonly proposed intervention is to remove this masculine language to attract more women. However, research on masculinity and gender suggests that men can also experience incongruence with stereotypical expectations for masculinity. In this paper, we build theory to explain how a "gender de-biasing" intervention on masculine language in job advertisements for male-dominated jobs increases gender diversity of applicants by attracting more people (not only women, but also men) who may not strongly adhere to the expectations traditionally associated with male gender identity. Across an extensive database of 576 job postings and over 30,000 applicants from a large organization, a quasi-experiment in the field, and a pre-registered online experiment, we find that removing masculine language from job postings leads to an increase in application rates from individuals who appear incongruent with the masculine identity – including both women and men who identify as less masculine. Theoretically, our research suggests the importance of aligning multiple identities when signaling who is welcome to apply for job opportunities. Practically, our findings suggest a concrete, feasible intervention to increase the gender diversity of applicants.

GDO: **The Whole Pack of Female Leadership: What Women Overcome and Negotiate to be Endorsed as Leaders** 

Author: **Kelly Weires Avelino**, *EBAPE/FGV*

Author: **Juliana Arcoverde Mansur Kopp**, *FGV EBAPE*

With the substantial increase in women's participation in the workforce and the challenges they face in the workplace, understanding female leadership has become a tenet in the literature. Drawing on gender-role stereotypes, this work addresses the contrasting demands that women face in their career path toward leadership. By looking at how women narrate their path toward leadership and higher hierarchical positions, we aim to shed light on what distinguishes female leadership. Twelve in-depth interviews were conducted with top female managers from diverse segments in Brazil. Based on thematic and narrative analysis, interviewees' narratives were considered to understand how female leaders make sense of their experiences. Data showed a shared narrative concerning women's career paths, requiring a set of behaviors and strategies to be legitimized as a leader and shatter the glass-ceiling. Moreover, we propose 4 four mechanisms for female leadership.

Paper is Available to Meeting Registrants Only.

GDO: **Rebel or Relent: Matching Female Entrepreneurs' Self-Presentation to Recipients' Perceptions**  

Author: **Nadine Albrecht**, *U. of Bayreuth*

Author: **Sonja Kristin Franzke**, *U. of Bayreuth*

Entrepreneurs have the ability to actively manage stakeholders' perceptions of them, influencing whether they are seen as successful or not (Nagy, Pollack, Rutherford, & Lohrke, 2012; Davis, Hmieleski, Webb, & Coombs, 2017). For female entrepreneurs this is a crucial aspect in building their businesses, as they need to more strongly communicate their legitimacy to overcome inherent gender biases especially on social media that can negatively influence their businesses (Alsos & Ljunggren, 2017). Thus, it is vital to better understand how female entrepreneurs develop successful communication strategies and how these (mis-)match with the perceptions of key stakeholders, furthering our understanding of successful female-owned businesses. Drawing on role congruity theory and choosing a theory-building approach to data analysis (Glaser & Strauss, 1967), we conducted 20 semi-structured interviews with female entrepreneurs as well as their key stakeholders (data collection ongoing). Results show two main strategies that female entrepreneurs choose for their social media self-presentation: to rebel or to relent. A comparison of sender intentions and receiver perceptions revealed strong (mis-)matches. We expand role congruity theory (Eagly & Karau, 2002) by developing a holistic model of female entrepreneurs' communication strategies on social media to cope with perceived incongruity.

As global economic competition becomes increasingly innovation-driven, policymakers in both government and business are actively searching for ways to increase innovation at all levels of society. Past research on innovation policy tended to take a piece-meal investigative approach with focus on a single or narrow-set of explanatory variables, resulting in limited or ineffective policy recommendations. The proposed PDW seeks to develop a programmatic, cross-national research agenda to investigate the respective roles of a nation’s formal and informal institutions, knowledge infrastructure, and firm capabilities in affecting innovative performance at multiple levels of analysis and examine policy implications for governments, businesses, entrepreneurs, and other stakeholder groups. The session will be highly interactive with keynote speakers, panel commentators, and participants engaging in small group discussions to develop a preliminary research agenda that combines individual members’ research interests with the aim of forming a global research network for follow-on collaboration.

The recent world's economic, social and political turbulence, along with the Covid-19 pandemic and the climate change disasters have demonstrated how interconnected and co-dependent we all are internationally. Solutions to these global challenges can only come by better understanding and pondering the consequences of our decisions on others across the world. As management educators, we have an important responsibility in this matter. In order to increase impact from the field of Business and Management Education, we need to actively listen to those colleagues from diverse geographical regions. We need to pause and reflect upon experiences from those all around the world, who have solved problems differently. We need to reach new expertise networks and creatively propose solutions. We also need to encourage in our students better learning using innovative methods. The MED Ambassadors' Program brings to the table those rich conversations and varied points of view. In this PDW, we aim to share international know-how in management education teaching, research and practice. We welcome and invite those academics & practitioners around the world to the conversation. First, we will present the MED Ambassadors' Program objectives. Then, current ambassadors and collaborators from Europe (France, Lithuania, Finland, Austria and Germany) as well as from Latin America (Brazil, Ecuador and Mexico) will share their projects as examples of how others can contribute. In the third part of this PDW, we will facilitate new connections, ideas and foresee the future in a collaborative workshop. We look forward to increasing the MED Ambassadors' Program. Come and enjoy the conversation, no obligations attached.

MED: Overcoming Unpleasant Affective Experiences when Learning: A Latent Profile Analysis of Resilience     

Author: **D Christopher Kayes**, *George Washington U.*
Author: **Jing Tian**, *George Washington U.*
Author: **Phil Wirtz**, *George Washington U.*

Drawing on conceptualizations of affective experience (Seo, Barrett, & Bartunek, 2004) and experiential learning theory (Kolb, 2014), resilience in learning is considered the capacity to initiate, persist, and direct effort towards learning when experiencing unpleasant affective states such as frustration. In this study, factors shown to support learning were reviewed, a four-factor model of resilience was developed and tested, and a latent profile analysis was completed to test the likelihood of resilience based on profiles associated with differences in scores when learning during frustration and learning during progress. The four resilience factors were positive emotional engagement, creative problem-solving, learning identity, and social support. Results provided support for two latent profiles of resilience: A quarter of individuals could activate the four learning resilience factors under both pleasant and unpleasant affective experiential states, while most saw decrements in these factors when faced with unpleasant affect such as frustration. The results support an underlying structure of resilience factors and the view of resilience as a process of buffering and self-regulation when experiencing unpleasant affective states. Further studies are needed on how to buffer the decremental impact of unpleasant affective experiential states.

MED: Conducting Service-Learning Projects for Undergraduate Students in a Global Context     

Author: **Sarah Easter**, *Abilene Christian U.*
Author: **Laura Phillips**, *Abilene Christian U.*

While there is a large body of management education literature focused on conducting service-learning projects for students in support of addressing today's sustainable development challenges, the majority of articles in this area focus on the graduate student population. What's more, there is a lack of emphasis on the importance of incorporating cultural context when designing and implementing service-learning projects on a global scale. Based on our experiences creating and carrying out a semester-long consulting class where US-based undergraduate students worked with Costa Rican rural entrepreneurs in support of building their sustainable livelihoods, we examine the benefits, challenges, and outcomes related to conducting service-learning projects for undergraduate students in a global context. We focus, in particular, on projects designed to address sustainable development challenges. In doing so, we identify critical success factors related to designing and implementing global service-learning projects for this student population. When these critical success factors are utilized, we argue that such global service-learning projects can be beneficial for undergraduate students and partners alike.

Paper is NOT Available. Please contact the author(s).

MED: Employer Perception of New Hires: What Determines Their Overall Satisfaction with Recent Graduates?

Author: **Michael Stoica**, *Washburn U.*
Author: **Thomas Hickman**, *Washburn U.*

This study investigates how new hires are perceived by their employers in a structurally different way than previous studies that investigated employer's satisfaction with new hires using a formative approach for measuring the construct. They looked at satisfaction as a sum of measured indicators such as oral communication or technology skills. Our model embodies a reflective-formative measurement representation. We are interested in the overall satisfaction that employers express when asked about new hires, positioning the employer as the customer in the evaluation process. Satisfaction is built as a reflective construct and operationalized accordingly. A hierarchical regression method is used to understand the impact of the independent formative variables, represented by student learning outcomes, on satisfaction. The findings led to post-hoc (PLS SEM) analysis looking at satisfaction through the lens of the stereotype content model, providing further evidence of the importance of the formative-reflective approach adopted. The findings provide a guidepost for schools of business to follow as they consider ways to make their curriculum more meaningful to the external stakeholders they serve.

MED: A Schema Theory Perspective on the Psychological Contracting Processes of Interns Over Time

Author: **Kim Margaret Coogan**, *National U. of Ireland, Maynooth*
Author: **Marian Crowley-Henry**, *Maynooth U.*
Author: **Jean Cushen**, *National U. of Ireland, Maynooth*

This study explores the evolving expectations of undergraduate interns from a psychological contract schema theory perspective over time. Psychological contracts have been conceptualised as a type of schema, which is a mental model or construct through which individuals filter and understand social life. Scholarly endeavours have focused heavily on the negative effects of mismanaged psychological contracts. Less insight is available on the process through which a psychological contract is constructed, formed, and becomes impactful over time. Researching this process is vital to understanding and managing the evolution of the employment relationship. Taking a process methodological approach, we interviewed 30 interns from an Irish university between three to five times each over a 12-15 month period. We also collected written reflective accounts once they returned to the final year of study. Our findings reveal the importance of antecedents, such as normative expectations and goals, and the anticipated psychological contract on the psychological contracting process. We provide an empirically informed process model of the psychological contracting process of undergraduate interns. Our model incorporates factors such as the antecedents influencing the construction of the psychological contract, the formation and development of employment schemata, affective events, the role of agency, and the influence of internships on learners who return to the final year of undergraduate studies. We contribute to scholarly work on schema theory, the psychological contract as a dynamic process, and undergraduate internships. This research is of importance to educators preparing learners for the working world, organizations employing interns or fresh graduates, and learners themselves.

Author: **David Rosch**, *U. of Illinois at Urbana-Champaign*

Author: **Scott Jeffrey Allen**, *John Carroll U.*

MED Best Paper in Management Education Award sponsored by MOBTS and the Journal of Management Education for the paper that offers the most significant contribution to management education.

Postsecondary institutions that purport to build leaders are ubiquitous. Graduates need skills for leadership effectiveness in complex, diverse, and dynamic organizational environments. Yet, given this need, the curriculum and co-curriculum dedicated to student leadership development is diffuse. Without specific outcomes, orientations to student leadership learning are inadequate, and the data supporting the success of the student leadership development enterprise is lacking. We propose a model for the leader development of undergraduates that describes what leadership education should exist to accomplish, which includes aspects of leadership skill mastery, adult learning principles, and outcomes grounded both in leadership theory and constructive developmental approaches. We describe each aspect of this conceptual model and illustrate how it might be enacted in diverse postsecondary contexts.

Cognition is a central concern in organizations, and courses in management (e.g., entrepreneurship, strategy, and organizational behavior) repeatedly deal with topics that involve understanding the cognition of individuals and groups. A challenge for instructors is to find exercises, activities, and methods for teaching in ways that students can better appreciate the challenges of cognition “in the rough” (i.e., situated, in real-time, influenced by organizational politics and time constraints, and emotions among other contextual influences). The purpose of this PDW is to bring together expert instructors to share classroom-tested experiential exercises, activities, and lesson plans for teaching about cognition in the rough. The PDW will proceed in a “round-robin” workshop format, whereby participants will have the opportunity to rotate to three different breakout rooms in which expert instructors provide interactive, 20-minute explanations/demonstrations of their exercise/activity/lesson. Thus, participants will have the opportunity to take home three unique activities or instructional ideas that they can use in their own classes.

Rise and Shine! How to Present Your Academic Research
Rise and Shine!

Organizer: **Christine Moser**, *Vrije U. Amsterdam*
Presenter: **Dirk Deichmann**, *Erasmus U. Rotterdam*
Presenter: **Markus Perkmann**, *Imperial College London*
Presenter: **Alexandra Gerbasi**, *U. of Exeter Business School*
Presenter: **Thorsten Grohsjean**, *Bocconi U.*
Presenter: **Christine Moser**, *Vrije U. Amsterdam*

With this workshop we continue our successful previous AOM PDW and draw attention to the importance of presenting academic research in the best possible way. In academia, presentations at conferences or during seminars are key to communicating one's work. Conference presentations are a great way to reach a large audience, and seminar presentations are often required when on the job market. Yet, presentation skills receive scant attention during PhD programs and academic careers in general. To address this gap, in this PDW we identify the best (and worst!) ways to present academic research by focusing on the content and design of academic presentations, as well as presenter skills. In addition, we will address the important role of the context, or setting, in which the presentation takes place. The presenters, who have ample experience in presenting their research in different settings and to different audiences (academic and practitioner conferences, workshops, companies, television, YouTube, radio), will shed new light on the art of presenting using illustrative data from a dedicated survey among academics. Workshop participants will gain an understanding of the important components of an academic presentation and will gain hands-on experience in applying their new knowledge. With this PDW, participants will broaden their sight and learn how to develop academic presentations that are tailored to their own discipline, preferred design style, and personal skills.

Organizer: **Felipe Csaszar**, *U. of Michigan*

The Behavioral Theory of the Firm (BTOF) has had a foundational impact on the development of much work in both organization theory and strategy. We seek to build an annual PDW that will be the touchstone of theoretical development based on the BTOF. The PDW will link past research with future opportunities, both narrowly within the BTOF, and more broadly, reaching out to research domains in which the BTOF is a substantive building block. Our goal is to provide a discussion forum where scholars can develop a shared understanding of past BTOF research and insights into how they may develop future research to advance theory and applications. AOM Seattle 2022 will represent the second edition of this PDW featuring as its core theme the origin, role, and implications of multiple goals in understanding firm behavior.

**Designing Research Around Empirically Grounded
Research Questions**
Empirical Grounding of Research Questions

Speaker: **Tyson Browning**, *Texas Christian U.*
Speaker: **Aravind Chandrasekaran**, *Ohio State U.*
Speaker: **Suzanne De Treville**, *U. of Lausanne*
Speaker: **Rogelio Oliva**, *Texas A&M U.*

We propose a PDW that takes us back to basics by illuminating the path towards publishing “pretheoretical” work that contributes to developing empirically grounded research questions (EGRQs). The broad field of management and even OSCM already has methods for this type of research, but we face several challenges in that training in such methods seems to have diminished in contemporary doctoral programs, and the results of such work are especially difficult to publish in the top journals. We propose to frame this discussion, provide examples, and moderate an energetic discussion among participants about directions for the OSCM field.

2022 Doctoral Student Professional Development Consortium
Doctoral Consortium

Coordinator: **Obed Pasha**, *U. of North Carolina at Chapel Hill*
Session Chair: **Alexander Kroll**, *Florida International U.*

The Public and Nonprofit Division Doctoral Student Professional Development Consortium is an intensive workshop that seeks to provide doctoral students in public and nonprofit administration with guidance on the job market, the publication process, presentation skills, and dissertation research. Doctoral students at any stage are welcome to apply to the consortium, and the consortium is especially beneficial for students who are in the dissertation proposal development stage or later. The Consortium will give participants the opportunity to a) get tips on finding an academic job, b) present their research or a proposal to get feedback from accomplished scholars, and c) network among peers, future colleagues, and potential employers.

Strategy for Nonprofits

Strategy for Nonprofits

Participant: **Janet E.L. Bercovitz**, *U. of Colorado, Boulder*
Participant: **Aseem Kaul**, *U. of Minnesota*
Participant: **Jennifer Kuan**, *California State U., Monterey Bay*
Participant: **Kate Odziemkowska**, *U. of Toronto, Rotman School of Management*
Participant: **Jeremy Thornton**, *Brock School of Business, Samford U.*

Scholarship involving nonprofit organizations has been gathering steam in management journals for several years now. The intent of this PDW is to help scholars develop ideas on using nonprofits in their management research. While specialized journals have long published research on nonprofits, management and strategy journals are taking a keen interest in nonprofits for several reasons. First, nonprofits are increasingly recognized as interacting with for-profits as competitors, complementors, and customers. This motivates a second stream of efforts, to make nonprofits analytically tractable using management and economic theory. Third, publicly available data on nonprofits can serve empirical studies in management. And finally, nonprofits may act as focal organizations for addressing social and environmental grand challenges. We will present diverse perspectives on nonprofit scholarship in management journals and then conduct breakout groups to bring participants together to share and develop research ideas. Included among the organizers are scholars who have successfully published nonprofit research in top management and strategy journals, including those who serve in editorial positions. Thus, we hope this workshop will provide a high-quality experience for participants from across the Academy’s divisions. We propose a short format for the workshop, with the first half involving presentations by organizers and the second half involving roundtables.

Video Methods In Organizational Studies

Video Methods

Organizer: **Marlys K. Christianson**, *U. of Toronto*
Organizer: **Philip Gylfe**, *Aalto U. School of Business*
Organizer: **Curtis LeBaron**, *Brigham Young U.*
Facilitator: **Zhike Lei**, *Pepperdine U.*
Facilitator: **Feng Liu**, *Saint Mary's U., Canada*
Facilitator: **Sotirios Paroutis**, *Warwick Business School*
Facilitator: **Matthias Wenzel**, *Leuphana U. Lüneburg*

Management scholars have increased their use of video as a research tool in organizational studies. It helps them to see, understand, codify, and make sense of the strategizing process. Video methods uncover the micro-interactions of organizational actors and allow insights into actors' implicit practices that emerge in their moment-to-moment exchanges. Consistent with the interests of many divisions of AOM, video makes explicit the links between micro-dynamics and broader organizational outcomes. This PDW is timely – the newly online world of social distancing in the pandemic has switched many in-person interactions to video-based ones, thus increasing the need and opportunity to study video. This PDW affords an opportunity to revisit the recent progress scholars have made using video-based research. The PDW welcomes both newcomers to video methods and those who have past experience using video. Our session will highlight the benefits and challenges of video methods and create an opportunity for discussion between participants and facilitators around how scholars might use video methods to advance their research. We aspire to co-create good research practices and build a community of engaged scholars.

Panelist: **Joost Rietveld**, *UCL School of Management*
Panelist: **Juan Santalo**, *IE Business School*

This PDW aims to facilitate an interdisciplinary dialogue on platform design, governance, and evolution by bringing together experts from across disciplines such as innovation, strategy, information systems, entrepreneurship, marketing, and communication. In the first part of the workshop, three consecutive panels will provide a state-of-the-art overview of research on each topic, discuss remaining gaps in knowledge, and identify unresolved challenges facing platforms. In the second part of the workshop, roundtable paper discussions will provide authors of works in progress with opportunities to discuss their research, receive feedback from mentors, and directly engage with platform researchers from different theoretical paradigms, methodological approaches, and perspectives. Together, these panels and roundtable discussions seek to lower disciplinary silos, encourage cross-pollination of ideas and collaboration across disciplines, and ultimately inspire novel approaches to studying some of the most challenging and unresolved issues facing platformed firms.

Registration Process Part I – Panel Discussions No registration is required for attending the two panel discussions. Participation will be on a first come first served basis, and limited by room capacity. Part II – Roundtable Paper Discussions A brief application and registration are required for attending the roundtable paper discussions. Interested participants should submit extended abstracts of their research in progress related to platforms (up to 3 single-spaced pages) by July 15, 2022 using this link: <https://form.jotform.com/221434481420345>. Although we welcome submissions on a variety of platform-related topics, priority will be given to submitted work related to platform design, governance, and evolution. Both empirical and theoretical work is welcome. Acceptance decisions will be sent via email by July 21, 2022. Questions about the event, including any applications after the deadline, can be addressed to the organizers at christina.kyprianou@ie.edu and h.ozalp@uva.nl.

Managing the Unexpected in Innovation: Toward an Understanding of the Discovery Journey

Managing the Unexpected in Innovation

Organizer: **Giacomo Marchesini**, *IESE Business School*
Facilitator: **Arnaldo Camuffo**, *Bocconi U.*
Facilitator: **Stefano Brusoni**, *ETH Zürich*
Facilitator: **J.P. Eggers**, *New York U.*
Facilitator: **Chengwei Liu**, *ESMT Berlin*
Facilitator: **Jacqueline Lane**, *Harvard U.*
Facilitator: **Madeleine Stefanie Rauch**, *Stanford U. & Copenhagen Business School*
Facilitator: **Christian Busch**, *New York U.*

Many great ideas, scientific discoveries, and game-changing inventions happen thanks to unplanned events like fortuitous coincidences or multiple failed attempts. Yet, exactly because they are not easy to plan or foretell, most management literature assumes these events should be avoided or limited. For instance, failures tend to be considered errors or mistakes, whereas there are contexts where they can be valuable. Similarly, serendipity and uncertainty are constantly minimized, yet they are integral parts of how individuals search, learn, memorize, and forge the structures of novel ideas. This PDW aims to advance the debate on how organizations can better manage and capture value from unexpected events when they are supposed to be embraced rather than avoided if we want to accomplish breakthrough ideas that can benefit society. Specifically, this workshop focuses on two key domains: innovation failures (i.e., managing and capturing value from unexpected adverse events) and serendipity (i.e., managing and capturing value from unexpected positive events). The workshop will bring together a diverse array of perspectives, such as scientists' and inventors' cognition and decision-making, how organizations learn from failure and serendipitous events, and how fault-tolerant and incidental learning can help face societal grand challenges. The invited scholars will first introduce the main arguments and then facilitate various roundtables in the form of "research incubators". Participants are recommended to join with a preliminary draft of their research projects, research ideas, or novel methodological approaches. The organizers will collect the main insights in a report to outline future research agendas and collaboration opportunities.

Please find all the information at: <https://www.giacomomarchesini.com/managing-the-unexpected> Interested participants should pre-register by emailing marchesini.pdw@gmail.com by July 17, 2022 (limited number). In the first part of the workshop (60 min), invited speakers will introduce different topic areas and present the future of the research, sharing their experience working in the field. Pre-registration for the first part will not be required. The second part of the workshop (60 min) will be open to pre-registered participants only. Participants will be allocated to roundtables ("research incubators") before the event based on their expressed preference, profile, research interests, proposed inputs, and order of registration. A number of 5 to 7 research incubators is expected (depending on the number of participants) covering the presented topic areas and facilitated and chaired by the seven invited speakers. Research incubators are aimed at nurturing early-stage ideas and research projects. Each research incubator will include one (or more) of the following activities: (1) ideas generation, providing opportunities for brainstorming; (2) ideas validation, discussing, assessing, and collecting feedback from proposed ideas; (3) ideas implementation, finding potential co-authorship opportunities, validating methodologies, and boosting the development of research projects. Interested participants should pre-register by emailing marchesini.pdw@gmail.com by July 17, 2022. Registration emails should include the following information: (i) name, affiliation, and current position; (ii) one research incubator preference; (iii) research interests and/or reasons why they are interested in the workshop, including types of inputs they plan to bring to the incubators. Examples of inputs that participants can bring to the research incubator are (but are not limited to): a research project currently under development; an early-stage research project idea to engage in preliminary debates; competencies and expertise; a proposal of data or novel methodological approaches; a set of well-defined research questions. In particular, participants in bringing and proposing their inputs should think about questions such as: What are the main theoretical gaps and limitations of our current understanding of the topic? What are the empirical challenges? How do you think this topic should be addressed?

Novel Perspectives on Industry Evolution: Firm Strategies Across the Industry Stages *Novel Perspectives on Industry Evolution*

Organizer: **Fernando Suarez**, *Northeastern U.*
Organizer: **Won Kyung Min**, *Fordham U.*
Panelist: **Elizabeth J. Altman**, *U. of Massachusetts, Lowell*
Panelist: **Mary Tripas**, *U. of California, Santa Barbara*
Panelist: **Anders Dahl Krabbe**, *King's Business School*
Discussant: **Carliss Baldwin**, *Harvard Business School*
Discussant: **Kim Clark**, *Brigham Young U.*

Extant industry evolution has been associated to underlying patterns of technological change that define important milestones that present different challenges to firms. Classical studies on technology evolution have taken a broader perspective, for instance by relating technology to wider economic activities or studying industry-wide bottlenecks that inhibit industry development. Recent research has focused on some less-studied aspects of industry evolution, such as how firms overcome technology bottlenecks, the role of product aesthetics, and how firms adapt to industry changes over time. The three panelists will present their recent work that is extending our theories of industry evolution by studying new phenomena, in new settings or with new methods. Then, a senior scholar will comment on the three research papers including her perspectives on their context, potential contribution, and, more generally, future avenues for industry evolution research. In the second part of the workshop, we will hold a 30-minute roundtable discussion where participants will gather in small groups to share research ideas, network, and provide feedback on the workshop.

United Nations Sustainable Development Goals and Entrepreneurship Education in Africa *UN SDGs & Entrepreneurship Education in Africa*

Organizer: **Constant D. Beugre**, *Delaware State U.*
Participant: **James Calvin**, *Johns Hopkins U.*
Participant: **Jean Dibondo Kabongo**, *U. of South Florida, Sarasota-Manatee*
Participant: **Mzamo P. Mangaliso**, *U. of Massachusetts, Amherst*
Participant: **dt ogilvie**, *Rochester Institute of Technology*

This PDW proposal focuses on the integration of the United Nations’ Sustainability Development Goals in entrepreneurship education in Africa. Because these goals represent important challenges (SDGs) for the African continent, it is important that entrepreneurship educators incorporate them in their curriculum to allow students to develop the necessary skills required to become successful entrepreneurs. To the extent that entrepreneurship is context-specific, the types of businesses to create depend on the problems faced in the specific environment. Hence, this PDW uses the expertise of four scholars to tackle the issue of integrating the UN’s SDGs into entrepreneurship education in Africa. The expected outcome of this PDW is to provide guidelines for entrepreneurship educators in Africa in designing more relevant curricula.

Anthropocentric Practices and Multispecies Possibilities

Session Moderator: **Caroline Clarke**, *The Open U. Business School*

CMS: Re-Organizing for Public Value in the Anthropocene

Author: **Martin Quinn**, *U. of Leicester*
Author: **William Green**, *U. of Leicester*
Author: **Simon Lilley**, *U. of Lincoln, UK*
Author: **Michael Saren**, *U. of Leicester, Leicester, UK*

This paper reconceptualises public value for the era of the Anthropocene and suggests that the best site for organizing for the creation of public value is the City. Existing understandings of public value are human-centric and only consider economic values. If public value is to be fit for the world of the Anthropocene and the climate crisis, local ecologies and other non-human actors need to be included as beneficiaries of public value creation. Including these new, non-human, actors facilitates a new understanding of what is value to focus on sustainability and resilience in the local natural ecosystem. The paper argues that City leadership and governance are best placed to both understand the needs of the local ecology and to produce the networks to create value for it.

Paper is Available to Meeting Registrants Only.

CMS: Amplifying Solidarity in The Anthropocene: Public Engagement for Hope in Dialogic Organizing

Author: **Marta Gasparin**, *Copenhagen Business School*
Author: **Marius Gudmand-Hoyer**, *Copenhagen Business School*

In this paper, through the analysis of ethnographic accounts of citizens engagement events, we will explore manners in which experiences with the momentous impacts of the Anthropocene has given way to calls for new ways of organizing our lives. These engagement events were organized in Vietnam and UK with the purpose of presenting the concept of the Anthropocene, its stakes and its effects; taking into account the participants impressions and everyday experiences; and contemplating and discussing alternative forms of business models less detrimental to/impactful on the environment and the Earth System. A common theme emerging in these workshops was that of doing something in a form of solidarity: a commitment to the idea that we owe it to ourselves and others to unite in new ways, to act and organize differently, forgoing what we already have and do, redressing, reinventing and reconfiguring, for the sake of an (ever) emerging “we” that cuts across the borders of time and space and species that we usually identify ourselves by. We investigate specifically the impetus for the questions most frequently posed by the participants of the ethnographic work: what can we do as engaged citizens, how to become active together, and in which ways is it possible to hope for a future in this new geological time unit of the Anthropocene. In the paper, we theorise two of the features to the Anthropocene Experience: the practical question of when and where and, especially, on which scale to begin reorganizing our ways of living when apprehending the Anthropocene ramifications — which we will show some features of in the narrative account concerning the citizens engagement events; and how the responses to the Anthropocene challenges are motivated when people begin to consider them together. Our paper contributes, in the first instance, to the body of work on the grassroots movements and forms of activism in different spaces of hope and to theorise the concept of solidarity

Paper is Available to Meeting Registrants Only.

CMS: Multispecies Organizing. How Humans and Plants Organize Embroidering Hills and Growing Bridges

Author: **Costanza Sartoris**, *U. Ca' Foscari of Venice - Dept. of Management*

This article aims to extend the notion of organizing (Weick, 1969) from a human perspective to a multispecies one. To do so, it critically addresses the literature streams of sociomateriality and sensemaking, highlighting how organizing has always been studied only through an anthropocentric perspective. Then, it presents the developments in the elaboration of non-humans' agency in social sciences. Afterward, it develops a theoretical framework illustrating multispecies organizing. It adopts notions stemming from biology and ecological psychology to explain how the organizing between humans and non-humans unfolds. To discuss the implications the model entails, it presents an example of organizing between humans and plants using two illustrative vignettes, guiding the reader to mentally 'visualize' the plants' 'point of view' when organizing with humans. The vignettes present two real-case scenarios, one coming from a Western context, the other from an indigenous one. They are the winegrowing landscape of the prosecco hills in Italy and the native infrastructures of living root bridges in Meghalaya, India. These examples illustrate how multispecies organizing de facto always occurred between humans and other species. Management science might then engage with this framework to critically account for the relationship between humans, and non-humans, by framing them as multispecies organizing.

Paper is Available to Meeting Registrants Only.

Author: **Elaine Jammaers**, *Hasselt U.*

William H. Newman Award Nominee

The idea that a ‘single category’-focus in the study of workplace inequality leads to oversimplification and obscures its complex nature is now generally accepted. Yet little concerns have been raised with regard to the ‘single species’-focus of inequalities in the context of management and organizations. Through the case study of professional show jumpers, I shed light on the complex interplay of multispecies inequalities in the equestrian field, a sector celebrated for its sex integration. Indeed, beliefs of gender equality are typically high in this sector as horses are believed to ‘mediate’ the sex-performance relationship, levelling the playing field for male and female riders. An Ackerian analysis however reveals the persistence of gendered patterns despite women’s ‘theoretically’ improved chances of identifying with the ideal worker, following changed breeding preferences and an organizational logic of ‘passion-merit’. Rather, female showjumpers needed to provide proof and reassurance of being ‘unconventional’ indicating an incomplete acceptance of femininity in the field. Popular imageries of horses paradoxically reveal the lack of agency awarded to animals and the instrumental nature of the human-horse bond. This study adds to the literature on gender in organizations by integrating non-humans into a number of core feminist organizational concepts, looking at organizational logics through an interspecies lens. It thereby gives a post-humanistic flavor to earlier claims of how different forms of inequality overlap and interact with each other, producing often-surprising outcomes. Indeed, although sex-based discrimination was deemed unacceptable in the field, such reservations were reserved only to humans, not horses. Similarly, class privilege was only problematized when critiquing showpiece ‘daughters of Jobs, Springsteen and Gates but never for men. This study concludes that more-than-human analyses can enrich existing knowledge about inequality regimes in professional fields. Embracing post-humanist perspectives within the study of inequality regimes may thus open up new and challenging ethical, theoretical, methodological and practical issues.

Equality, Diversity and Inclusion in Academia

Session Chair: **Fida Afiouni**, *American U. of Beirut*
Session Chair: **Eleni Apospori**, *Athens U. of Economics and Business*
Organizer: **Fida Afiouni**, *American U. of Beirut*
Organizer: **Eleni Apospori**, *Athens U. of Economics and Business*
Organizer: **Claire Leitch**, *Queen's U. Belfast*
Discussant: **Julia Richardson**, *Curtin U.*

Women remain under-represented in all disciplines and at all levels of academia, especially at the professorial level, in senior leadership roles, including deans, university vice-chancellors, and presidents (Shepherd, 2017), and in gate-keeping positions, such as editorial boards and research funding bodies (Metz et al., 2016, Fotaki, 2013). In line with the current AOM theme “Creating A Better World Together”, this symposium brings together 5 papers to showcase theoretical and practical insights to achieve gender equality and inclusive culture in higher education institutions. The symposium highlights both theoretical advancements as well as the status of gender actions in higher education across multiple countries across the globe including Lebanon, Netherlands, United States, Canada, UK, Belgium, Sweden, and Greece, providing us with culturally diversified insights into the progress made towards achieving gender equality in academia.

Gamification in Management Education: How to Spice Things Up and Better Engage Students

Gamification in Management Education

Organizer: **Mai P. Trinh**, *Arizona State U.*

Organizer: **Rachel Reed**, *Arizona State U.*

Panelist: **Andreas Janson**, *U. of St. Gallen*

Panelist: **Jan Marco Leimeister**, *U. of St. Gallen and U. of Kassel*

Panelist: **Sofia Schöbel**, *U. of Osnabrueck*

Panelist: **Mai P. Trinh**, *Arizona State U.*

Panelist: **Gergana Vladova**, *U. of Potsdam*

Panelist: **Dezhi South Wu**, -

Gamification is the use of video game elements such as badges, leaderboards, quests, and resources in non-game contexts (Deterding, 2012). In recent years, the use of gamification has been on the rise due to its ability to use “game-based mechanics, aesthetics, and gamethinking to engage people, motivate action, promote learning, and solve problems” (Kapp, 2012, p. 125). In education, the use of gamification has been associated with positive results in student performance, motivation, engagement, attitude towards gamification, collaboration, and social awareness (Antonaci et al., 2019). In this PDW, we aim to provide higher educators, especially those who are teaching hybrid or online courses, with insights regarding how to gamify their classes. The organizers have gathered a diverse panel of experts in gamification with a wide range of experience using gamification in teaching, research, and practice in different settings. We propose a gamified PDW that will last for two hours, divided into two parts. In part I, our diverse panelists will briefly introduce how they have applied gamification in their own teaching and research. They will also answer several questions prepared by the organizers, such as "What are the strengths and limitations of gamification in management education?". In part II, we will ask panelists to each lead a roundtable discussion to help participants brainstorm gamification ideas that they can readily apply in their own classes. Throughout the PDW, each participant will have a quest list to complete to earn a participation badge for this PDW.

Behavioral Strategy and Microfoundations *Behavioral Strategy and Microfoundations*

Organizer: **Luke Rhee**, *U. of California, Irvine*
Panelist: **Donal Crilly**, *London Business School*
Panelist: **Felipe Csaszar**, *U. of Michigan*
Panelist: **Metin Sengul**, *Boston College*
Panelist: **Libby Leann Weber**, *U. of California, Irvine*

Although behavioral strategy research has long been a central subject in organizations and strategy, it has not been sufficiently microfoundational. The goal of this panel symposium is to highlight this gap and propose future directions to advance our understanding for the human element in an organizational phenomenon. Our distinguished group of panelists will introduce their own research program and discuss how behavioral mechanisms (e.g., cognitive biases, communication, conflicts, decision-making structures, and resource allocation) occurring at the lower-level in an organizational hierarchy shape a variety of macro-level organizational outcomes.

Presenter: **Sarah Ward**, *U. of Illinois at Urbana-Champaign*

Technological advancements, such as the increasing use of algorithms and artificial intelligence (AI), have become embedded in organizations. This introduction of algorithms and AI is drastically changing the nature of work, impacting organizations, the individuals within them, and the work itself. Given the importance of understanding the impacts of such technological advancements on the future of work, more research has started focusing on this topic. This symposium brings together papers identifying the impacts and outcomes of AI and algorithms upon individual perception, cognition, and behavior across various organizational domains, such as advice taking, management, and the automation of work. The research showcased in this symposium explores how (1) AI influences employees' perceptions of the meaning of work, (2) automation affects individuals' valuation of employees' skills, (3) algorithms impact employees' perceived status, and (4) people show different anticipated preferences for algorithmic versus human judgment and actual use of those sources. Furthermore, this set of papers demonstrates ways to harness the benefits of AI and algorithms while mitigating the adverse consequences that can arise when AI and algorithms are implemented in organizations without consideration for individual cognitive processes and perceptions. Taken together, this symposium features the effects of the implementation of technological advancements on individual perception, cognition, and behavior and the resulting consequences for individual and organizational outcomes.

Creativity Inputs and Outcomes

Session Moderator: **Zizhen Geng**, *Xi'an International Studies U.*

OB: The Impact of Financial Forecasts on Creativity Assessments 

Author: **Gerhard Speckbacher**, *WU Vienna U. of Economics and Business*
Author: **Christoph Feichter**, *WU Vienna U. of Economics and Business*
Author: **Lea Zwickl**, -

Concerns have long been voiced that taking account of expected financial outcomes early in the product development process inhibits the recognition and appreciation of creative product ideas. We look at a common situation in product development processes and propose that beyond the economic value of the financial information, social concerns influence the extent to which evaluators rely on incomplete (short-term) financial forecasts. Holding the economic value of the information constant, we argue and find in three experiments that concerns about whether other people endorse, accept or sanction their judgment behavior induce evaluators to rely more heavily on incomplete financial information than they would do in a situation where such social approval concerns do not play a role. Our study extends prior research on creativity assessments and on individuals' use of accounting information for legitimizing their judgment and decision-making behavior to others. The evidence we provide on the importance of information distribution, need for justification, and source credibility offers new insights on how organizations can influence the social use of accounting information.

OB: Ordinary Creativity as a Process: How Crisis Generates and Sustains Creative Cycles

Author: **Ana Villanova**, *Nova School of Business and Economics, U. Nova de Lisboa*
Author: **Miguel Pina Cunha**, *AMJ-2020-1765*

We follow a systemic view of creativity, emphasizing everyday creative processes' dynamics, continuity, and influence of the external environment to investigate how crises generate and sustain creative cycles. Based on an inductive qualitative study derived from data collected during the COVID-19 pandemic from informants who created services to help society respond to problems caused by the pandemic, we explore how connections between creators and the intended beneficiaries of their work can encourage subsequent cycles of creativity. We contribute to expanding knowledge on creative cycles and related incentives showing that changes on the intended beneficiary of creative work - benefit others or self-interest - can exert a positive influence on individuals' enthusiasm to continue their efforts throughout the creative process. These changes may serve as a spark reinforcing creator's persistence to re-engage in creative cycles; therefore, we suggest that prosocial motivation and self-interest can be complementary, synergistically sustaining individuals' persistence for creativity. Furthermore, we emphasize that individuals' engagement in subsequent cycles of creativity depends on their ability to explore external environmental conditions, such as identifying opportunities. We recommend that pursuing potential opportunities to solve current problems highlighted by crises is more likely to be successful in the long run than attempt to solve problems created by crises; thus, we propose that crises can play an essential role in generating innovations by encouraging individuals to create ideas to solve already existing problems.

OB: Too Much (Or Not Enough) For Creative Work? A Review of Curvilinear Effects at Multiple Levels 

Author: **Stefan Razinskas**, *Freie U. Berlin*

Although teams are increasingly tasked with creative work, enabling them to deliver outcomes that are novel and useful remains challenging. Team literature on antecedents of creativity is informative with regards to moderators taxing antecedent-outcome relationships such that they inverse an otherwise desirable effect. However, research also reveals that the positive potential of some antecedents of creative work diminishes and even turns negative when taken too far. Despite the empirical evidence supporting such curvilinear effects on important outcomes of creative work at the individual and team levels, the theorizing behind them unfortunately remains rather incomplete such that theoretical attention has been paid more to the upward than to the downward slopes of such curves. By synthesizing 117 quantitative-empirical studies on curvilinear effects with help of a multilevel antecedent-benefit-cost (ABC) framework, the present literature review guides this field of research toward more conceptual clarity and methodological precision across levels. This is important because the cost-related mechanisms of certain antecedents—which start outweighing the benefit-related mechanisms once they have reached their threshold magnitude—are still not well understood. Without such a more balanced account of benefits and costs, organizational behavior literature remains challenged in its ability to reliably inform organizational practice.

OB: Radical and Incremental Creativity: a Systematic Review

Author: **Fengmei Ren**, *Shanghai U. of International Business and Economics*
Author: **Zhigang Song**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Employee creativity is vital for contemporary companies to survive and develop in the VUCA era. Although numerous research has contributed to employee literature by examining organizational factors that improve employee creativity, a better understanding is still needed regarding the differences between radical and incremental creativity, especially the different mechanisms to impact two kinds of creativity. To address this problem, we aim to provide a systematic review of radical and incremental creativity by a) clarifying the definitions and measurements of radical and incremental creativity; b) identifying the antecedents of radical and incremental creativity and developing an integrative framework; and c) comparing the differences regarding how to improve radical and incremental creativity. We also address several future research directions in the end.

Author: **Zizhen Geng**, *Xi'an International Studies U.*

Author: **Mengmeng Xiao**, *Xi'an International Studies U.*

Author: **Yanfen Wang**, *Xi'an International Studies U.*

In order to explain the complex impact of supervisor's negative feedback on subordinate creativity, this study draws on a self-regulatory perspective to develop a theoretical model, in which supervisor's negative feedback provided in different ways trigger subordinates' challenge/hindrance appraisals of job stressor through inducing their perceived threat/support and, thereby exert a positive/negative influence on subordinate creativity. Using the data collected from 179 participants in an experimental study, it is found that (1) supervisor's developmental negative feedback induces subordinates' perceived support and threat, thus triggering subordinates' challenge stress, while supervisor's controlling negative feedback only induces subordinates' perceived threat and increases subordinates' hindrance stress; (2) Supervisor's developmental negative feedback exerts a positive effect on subordinate creativity via challenge stress, while supervisor's controlling negative feedback has a negative influence on subordinate creativity via hindrance stress; (3) Promotion focus strengthens the positive effect of subordinate's developmental negative feedback on subordinate creativity via challenge stress. The results of this study add to the literature on the complex links between supervisor negative feedback and subordinate creativity from a new (self-regulatory) perspective.

Withdrawal and Turnover

Session Moderator: **Veronique Robert**, *Toulouse School of Management*

OB: Consistency Matters: The Curvilinear Effects of Climate Variability on Turnover 

Author: **Tatiana Iwai**, *Inspere Institute of Education and Research*
Author: **Adriana Bortoluzzo**, *Inspere Institute of Education and Research*
Author: **Joana S. Story**, *Fundação Getulio Vargas - EAESP*

Climate research has been conducted through different lenses, ranging from global perspectives (summary of employees' perceptions about an organization as a whole or of what we call "positive" or "negative" climates) to relatively focused perspectives (strategic climates, such as a climate for of service or justice). In this study, we examined climate variability, defined as the level of dispersion across climate dimensions, to explain turnover at the organizational level. Drawing on signaling theory and the stressor-strain perspective, we tested the curvilinear and moderating effects of climate variability on turnover using a large and heterogeneous database composed of 25,288 individuals from 150 small-sized to large organizations in different industries. After controlling for global climate, we found that climate variability has a curvilinear effect on turnover. Although low levels of climate variability have mild effects on turnover, moderate to high levels of climate variability are associated with increasingly high turnover rates. Moreover, climate variability also plays a moderating role in the relationship between global climate and turnover such that a high level of climate variability impairs the beneficial effects of a positive global climate on turnover. Implications for theory, practice and future research are discussed.

Paper is Available to Meeting Registrants Only.

OB: Effects of Transformational Leadership on Employability and Employee Retention 

Author: **Sophia Rose Thomas**, *Arizona State U.*
Author: **Mai P. Trinh**, *Arizona State U.*

Employee retention is a major problem for organizations, especially for small and medium-sized organizations, which make up 99.7 percent of U.S. Organizations. Research reveals how leadership style affects employee retention, showing that supervisors who are transformational help to reduce employee turnover. However, little research has assessed the interdependent dynamics of transformational leadership, employability, and employee retention. Furthermore, employability is a sparsely discussed concept in the literature, making it a novel inquiry to consider in the dynamics of employee retention. This research employs agent-based modeling (ABM) to examine the dynamics of employee retention while considering the interdependent nature of modern organizations and workforce. The goal is to look at the relationships between the degree of transformational leadership of leader, the employability factors of individual employees, and employee turnover. The model will input data from previous empirical research to define parameters for these variables in NetLogo. This simulation model shows how workers and leaders interact and how these interactions affect the employability and retention of each employee over time, as well as how employability affects the individual's turnover behavior once they become dissatisfied with their leader. Results demonstrate that there is a positive relationship between transformational leadership and employability, and transformational leadership and employee retention, in some organizations from the model. This study contributes to organizational research on retention by looking at the dynamic impacts of both transformational leadership and employability in an employee's decision to leave their organization. Additionally, changes in this study can look at other factors affecting employee retention. The resulting research will impact practice by clarifying the interdependence of leadership and employability on employee retention, leading to new innovations to decrease the turnover in organizations. This model will be replicable and adjustable to look at other factors impacting employee retention that are worth studying.

Paper is Available to Meeting Registrants Only.

OB: Why Leader Workaholism is Linked to Subordinate Work Withdrawal? A Moral Licensing Perspective

Author: **Yaqing He**, *U. of Illinois at Urbana-Champaign*
Author: **Sunjin Pak**, *California State U., Bakersfield*
Author: **Sang-Hoon Lee**, *U. of Illinois at Urbana-Champaign*
Author: **Amit Kramer**, *U. of Illinois at Urbana-Champaign*

Based on moral licensing theory, we propose that employees who work with a leader that shows high workaholism are more likely to experience after-hours work-related ICT demands, which would be considered morally praiseworthy under a leader who spends more time on work than on other activities in life. After-hours work-related ICT demands, in turn, activate two psychological mechanisms that ultimately affect work withdrawal. First, after-hours work-related ICT demands are associated with greater psychological entitlement, which increases work withdrawal. Second, after-hours work-related ICT demands are associated with greater emotional exhaustion, which increases work withdrawal. Results show that the serial mediation relationship between leader workaholism and work withdrawal was positive and significant for subordinates with high and low family identity salience, but the effect was stronger for subordinates with high family identity salience. Therefore, this study illustrates that leader workaholism and subordinates' work withdrawal are related through subordinates' after-hours work-related ICT demands and two psychological mechanisms (psychological entitlement and emotional exhaustion). The strength of this serial mediation relationship varies depending on the family identity salience.

Paper is Available to Meeting Registrants Only.

OB: Laissez-faire Leadership and Turnover: The Role of Employee's Organizational Identity Threat

Author: **Veronique Robert**, *Toulouse School of Management*

Author: **Christian Vandenberghe**, *HEC Montreal*

While research has largely explored the effects of leadership on employee turnover, the mechanisms explaining the effects of passive forms of leadership, such as laissez-faire leadership, on turnover remain unexplored. As agent of liaison between employees and the organization, leaders have an important role in fostering the meaning of their employee's membership in the organization. According to social identity theory, employees develop a sense of organizational identity based on their membership to the organization. When laissez-faire leaders do not interact with their employees and neglect them, they may threaten the value of employees' membership in the organization, and as such their organizational identity. Thus, we introduce the construct of organizational identity threat to explain how laissez-faire leadership enhances turnover among subordinates. We specifically posited that laissez-faire leadership would relate to reduced employee psychological attachment (i.e., affective organizational commitment) to the organization, increased psychological detachment (i.e., turnover intentions), and increased likelihood of voluntary turnover through organizational identity threat. These predictions were tested in two studies using three-wave time-lagged designs. Study 1 (N = 757) found that organizational identity threat mediated the relationship between laissez-faire leadership and turnover intentions and affective organizational commitment. Study 2 (N = 731) replicated these results, while controlling for the effect of workplace isolation. Moreover, we found that laissez-faire leadership had positive indirect effect on employee actual turnover through organizational identity threat. The implications of these results for laissez-faire leadership and turnover research are discussed.

Employee voice, the proactive communication of ideas, suggestions, concerns, or opinions with the intent to improve organizational functioning, has the power to significantly improve both team and organizational performance. Despite the well-documented benefits of encouraging employee voice in organizations, there is relatively little research about how to empower employees to speak up in organizations, or the contextual cues and employee behaviors that can create an organizational context conducive to voice expression, a key antecedent of voice. This symposium is designed to advance organizational research by building a deeper understanding of how contextual cues – manager and employee behaviors and perceptions – shape the voice context. Specifically, we examine how such cues influence the decision to voice or not, as well as reactions to the decision to voice (including voice recognition and endorsement), and related employee outcomes.

There is an extensive body of work on global work and cross-cultural collaboration. However, there is reason to believe that unique dynamics emerge when work occurs across and between the Global North and Global South, a phenomenon which has been understudied in management scholarship. The research in this symposium seeks to explore those dynamics. When considering dynamics between the Global South and Global North, management research has often focused on the mechanisms by which status hierarchies between the Global South and Global North are maintained. This symposium moves scholarship on collaboration between the Global South and Global North beyond the status hierarchies that have importantly been examined to consider a more scope of questions and uncover dynamic processes. For example: How do the Global North and South influence one another as individuals and organizations in each seek to build capacity? How do the Global South and Global North shape one another's imaginations, work identities and sense of the meaning of their work? In what ways do work interactions and collaborations challenge and frustrate respective parties, and in what ways do these interactions empower and enrich participants?

**Proceeding With Caution: On a Thoughtful and Just
Integration of Technology into Society**
Integrating Technology into Society

Coordinator: **Maya J. Cratsley**, -

Coordinator: **Vincent Rice**, -

Discussant: **Nathanael Fast**, *U. of Southern California*

Presenter: **Maya J. Cratsley**, -

Presenter: **Thema Monroe-White**, *Berry College-Campbell Sch. of Bus*

Presenter: **C. Malik Boykin**, *Brown U.*

This symposium will explore, from various perspectives, what it might mean to thoughtfully integrate technology into our society. The first presentation (Cratsley, Fast, & Boykin) will highlight the ways in which augmentation of social-contextual information may encourage people to endorse the use of technological surveillance tools that they might have otherwise rejected. In illuminating these vulnerabilities, this project encourages more thoughtful deliberation about the use of surveillance technologies in society. The second presentation (Kozlowski, Larivière, Sugimoto, & Monroe-White) demonstrates how algorithms may be used to help us uncover important inequities in society. In doing so, it highlights the perils of algorithmic bias as well as the promise of un-biased algorithms. The final project (Boykin, Rice & Brown) will discuss varying notions of fairness, and offer new tools for teaching algorithmic fairness to diverse learners and assessing their preferences between fairness definitions in machine-learning applications. These tools provide opportunities for future research that may help us improve machine-learning algorithms to better serve the interests of society at large, with a focus on incorporating the perspectives of diverse populations.

Proponents present the circular economy (CE) as an alternative to traditional, linear systems that use natural resources indiscriminately. The puzzle guiding this AOM PDW is that the CE model needs to be ‘tested’ under more diverse and ‘extreme’ (i.e., unstructured, uncertain) contexts. With economic growth at the top of the agenda for Global South (GS) countries, it is important to explore how production and consumption systems could become more circular, and what would be the consequences of doing so. How could GS countries move away from precarious, informal economic contexts to build circular modes of production and highly collaborative supply chains that compete in global markets? What are the impacts of expanding circular systems on local ecosystem resources? How are societal issues such as justice, equity and inclusion related to the adoption and diffusion of circular practices in informal contexts, under weak regulatory regimes, where opportunities for exploitation are prevalent? We anchor the PDW not in a particular theoretical perspective, but a problem-based framing that ‘stress tests’ the CE model in ‘extreme’ contexts. Through a three-phase process, the aim of the PDW is to bring together interdisciplinary perspectives to explore tensions associated with the diffusion and scaling up of CE principles and practices in four informal contexts: agro-forestry in the Amazon, waste picking in South Africa, ocean plastics in the Philippines, and cross-sector COVID management in India. The PDW is organised by Future Earth CE Working Group, offering an established network and digital infrastructure to facilitate long-term active engagement for AOM researchers beyond the PDW.

**International Business and Global Peace: Investigating
Casual Mechanism**
Business and Peace: Investigating Casual Mechanism

Presenter: **Diana Madibekova**, *U. of Liverpool Management School*

While the idea that economic prosperity fosters peace and lessens conflict between and across countries is relatively old, the field of business and peace within management studies is surprisingly new and unsurprisingly interdisciplinary. The reason that the topic of peace and business are important to business scholars and practitioners is the prevalence of conflict around the world (Oetzel et al, 2009). Given the challenges of navigating unpredictable phenomena in a constantly changing world, there has been growing policy, corporate, and academic attention to how business people do or should relate to issues of peace and conflict (Ford, 2015). Some authors argue that existing frameworks on how business can enhance peace, often referred to as “business and (for) peace” or shortly “B4P” is a small, emerging field, with considerably fewer scholars researching it and therefore with fewer studies (Katsos, 2020). The causal mechanism proposed by Fort and Schipani (2007) argues that economic development, support for rule of law, sense of community within diverse teams and two-track diplomacy are what business for peace is about that was empirically tested by Katsos and Alkafaji (2019) who subsequently suggest that the field remains on a delicate footing and this theoretical shortcoming that has practical and policy implications needs a remedy. Continued inattention to this under-studied field of business can no longer be ignored. The aim of the research is to better understand the relationship between business and peace. What is the casual mechanism between the two? Mechanism is nearly a synonym for relationship, but when we use the metaphorical term mechanism, we are stressing that there is a causal relationship between two variables. It is possible to think in those terms even when we are doing qualitative research. The existing literature (Fort & Schipani, 2007; Oetzel et al., 2009; Forrer & Katsos, 2015) is unclear about what exactly it is that firms do that results in peace. Is it that they create symbolism through their activities of shaping public discussion on climate change, equality and human rights? Is it that they bring people of different nationalities into cross-cultural teams or employ diverse managerial staff? Is it the creation of cross-border economic interdependency that makes countries more unwilling to go to war? Is it something else? The field of business and peace is a new, emerging one as it is only recently has attracted increased scholarly attention and there have been several qualitative empirical research conducted so far. Therefore, the research is guided by the following questions: 1) How can we (management academics) better understand the connection between business and peace in “buffer states: countries that are neither at war nor fully in peace”. [Turkey is the context of this research] (Katsos and Alkafaji, 2019)? 2) How do managers in multinational firms operating near conflict zones think about the relationship between business and peace? The attempt is to develop a study that will travel to a variety of audiences and construct a contribution to knowledge that is sophisticated, insightful, reasoned. In summary, this project may be interpreted as the starting point for a significant evolution of the business and peace research. Keywords: business and peace, conflict risk, qualitative methods, semi-structured interviewing

Future of Managing Work and Life in the Post-COVID-19 Era

Future of Managing Work and Life

Organizer: **Boram Do**, *Yonsei U.*
Organizer: **Najung Kim**, *Kookmin U.*
Participant: **Yan Shen**, *U. of Victoria*
Participant: **Taeyeon Kim**, *Yonsei U.*
Presenter: **Sungchul Noh**, *Saitama U.*
Participant: **Yeunmee Ryu**, *Seoul National U.*
Participant: **Dongil Jang**, *Carlson School of Management*
Presenter: **Matthew CB Lyle**, *U. of Colorado, Colorado Springs*
Participant: **Ashley Hockensmith**, *U. of Massachusetts, Amherst*
Participant: **Ovidiu Cocieru**, *U. of Massachusetts, Amherst*
Discussant: **Jean M. Bartunek**, *Boston College*

This symposium aims to explore how to generatively and proactively respond and manage a pandemic or other uncontrollable and physically restricted circumstances especially in the emerging work contexts. The presenters will explore key phenomena that are relevant to enhancing such capability: a personal domain, mobile leisure behaviors, gig working, and organizations being enablers of life. Drawing on different theoretical lenses and empirical contexts, the presenters will examine the changed meanings and impacts of each phenomenon after the arrival of COVID-19.

Race and Identity in the South African MBA Classroom: Insights for the US and Beyond
Race-Identity in the MBA: South Africa US & Beyond

Organizer: **Anthony Prangley**, *Gordon Institute of Business Science*
Organizer: **Dorothy Ndletyana**, *Organisation Behaviour*
Organizer: **Michele Ruiters**, *GIBS*

The workshop aims to help you, your colleagues and importantly your students work with issues of race and identity in the pressure cooker of the MBA. Participants in this workshop will hear from diverse leading faculty working with race and identity in the post-Apartheid South African MBA classroom. South Africa has transitioned to a democracy but many of the entrenched inequalities and social fractures remain. The presenting faculty will draw mainly from their MBA course, which won the Aspen Institute award for pioneering teaching to resolve the world's grand challenges. The South African experience will be compared to the participants' US and global experience in order to identify shared and differing perspectives. We hope Africa can be the source of theory building rather than only a location for the adaptation of global (often western) theory. The workshop will be participatory involving small group discussion and the visual capturing of the issues raised. Participants will leave with a useful summary of success (and failure), shared stories, tough questions, solid resources and relevant theory. Come and join us to hear unearthen new insights and make innovative conceptual connections.

This is limited to 40 attendees on a first-come basis to allow for effective small group discussions.

There are emerging perspectives in entrepreneurship such as effectuation, improvisation, bricolage, design thinking, lean startup, and business models. Efforts have been dedicated in entrepreneurship education to develop multiple frameworks based on these emerging perspectives to guide students and entrepreneurs successfully explore and exploit entrepreneurial opportunities. Moreover, some scholars in entrepreneurship education analyzed the role of business model frameworks, lean startup methodology, and design cognition. However, research on entrepreneurship education largely remained limited about how to reframe various aspects of entrepreneurship education (e.g., learning objectives, pedagogies, assessment tools) to better reflect the emerging perspectives in entrepreneurship education. This PDW is intended to extend research community activeness to study the opportunities for entrepreneurship education based on emerging perspectives in entrepreneurship. Multiple perspectives related to future research initiatives, but also on managerial suggestions, policy agendas, and educational innovations are encouraged.

Pre-registration is not required for this session. Interested scholars are welcome to drop in the day of workshop. To receive feedback on paper, interested applicants should submit by July 5: (1) the full paper (25-30 pages) or paper proposal (4-5 pages). (2) brief overview outlining any questions or specific concerns they are hoping to receive feedback on. Submissions should be sent via e-mail to mimran@jyu.fi with subject heading "AOM PDW 2022 Entrepreneurship education".

Whisky, Shortbread and Internationalisation: Adam Smith Challenge and Networking Event *Adam Smith Challenge and Networking*

Organizer: **Belgin Okay-Somerville, U. of Glasgow**

We invite friends of the Adam Smith Business School to our Smith Challenge and Networking event! During the 90-minute session, we will discuss the challenges and opportunities afforded by internationalisation and explore joint ventures and initiatives for a post-pandemic age, for example stackable degree portfolios and impactful research. Part of the Smith Challenge is a fun-packed competitive exploration of the great man, culminating in Smith tercentenary prize!

Women Workers as Victims of Covid-19 Working from Home: Fact or Fiction?

Session Moderator: **Myleen Leary**, *Montana State U.*

GDO: Working Moms’ Perceptions of Fairness at Home and Work: A Textual Analysis of Sentimental Polarity  

Author: **Matthew Aplin-Houtz**, *U. of Missouri -St. Louis*
Author: **Emily Lane**, *College of Business Administration, U. of Missouri - St. Louis*
Author: **April Rowsey**, *Union U.*

ABSTRACT The current literature depicts highly unfair circumstances for working mothers. However, the theories within this literature carry inherent bias per Hawthorne/secondary observer effects. Using a naturalistic approach, we sampled social media comments to determine if current theory associated with fairness perceptions of working mothers translated into real world settings. With the qualitative turned quantitative variables, we conducted a nonparametric factorial ANOVA to determine if a significant relationship were present between fairness perceptions in the work and home environments. Additionally, we evaluated if Covid-19 augmented fairness perceptions. Our findings suggest that the current theory of negativity translates to real world settings for working mothers for both the work and home environments. Additionally, the Covid-19 pandemic in itself presented negatively for comments for working mothers. However, the current theory associated with the pandemic amplifying overall perceptions of fairness in both the work and home environment was not able to be validated per our findings. Additionally, our finding of a shift to more positive tone in fairness perceptions when a working mother discussed both the home and work environment gives further support for the literature associated with the overall positive impact of remote work.

Paper is Available to Meeting Registrants Only.

GDO: A Commentary on the Research About the Impact of COVID on Women 

Author: **Myleen Leary**, *Montana State U.*

COVID-19’s impact on the economy, unemployment, and women around the world has been shown repeatedly since the first lockdown in 2020. Studies that have focused on the impact on women have largely come to their conclusions based on an implicit two-parent, heteronormative assumption of women’s roles and responsibilities in the family. As the world’s economies begin to open and organizations hope to rebound to pre-pandemic levels of staffing, it is important to highlight the existence and impact of this implicit assumption. I argue we would be better served if we can use a more inclusive approach to discuss the impact of non-work responsibilities. With this expanded view, organizations can promote policies and practices that benefit women as well as anyone in non-traditional families in an effort to promote equity.

GDO: The Relentless Times: Exploring Newspaper Discourses on Shecession and Gendered Inequalities  

Author: **Lakshmi Balachandran Nair**, *Luiss Guido Carli U.*

The multitude of societal disruptions caused by COVID-19 also includes large-scale unemployment. Both men and women have encountered job losses during the pandemic. However, the inequalities experienced by women in the workforce were intensified due to COVID-19, which led to a disproportionate negative impact on working women. According to International Labor Organization’s new policy brief, the number of employed women has decreased by 13 million from 2019 to 2021 (ILO, 2021). During the pandemic, women have faced a drop of 4.2% in employment, which amounts to 54 million job losses globally. Indeed, there are regional variations to this large-scale employment losses, with the Americas experiencing the worst (9.4%), followed by the Arab states (4.1%), Asia-Pacific (3.8%), Europe-Central Asia (2.5%), and Africa (1.9%). Building forward a fairer global society involves placing gender equality and exploring gender-responsive measures in the forefront of the pandemic recovery efforts. Hence the main aim of this article is to discuss the role of COVID-19 on the lives of working women. In particular, we are interested in exploring a contemporary phenomenon namely “shecession”. In the sections below, we provide a background of the role of working women in the labor market, followed by a discussion of shecession, social time, and intersectionality. In particular, our focus is on identifying the repertoires underlying shecession as well as on examining the role of social time as an agent in shecession. Our study thus contributes to the literature on time, gender, and business ethics by exploring how social time and gender play a role in accentuating inequalities in the labor market and thereby shaping shecession.

Paper is Available to Meeting Registrants Only.

GDO: The Female Face of COVID-19: Burnout in Working Women and the Quest for Resilience    

Author: **Yvette Mucharraz Y Cano**, *IPADE Business School*
Author: **Diana Dávila Ruiz**, *U. Anáhuac*
Author: **Karla Cuilty**, -

Gender inequity seems to have worsened during the COVID-19 contingency. Work-life conflict and burnout were preexisting conditions when the pandemic started, but the increment in job demands as well as household and maternal responsibilities resulted in an increase in burnout in working women. The present study was developed to understand how the COVID-19 pandemic impacted burnout among working women. The theoretical background was based on the Job Demand-Control-Support (JDCS) conceptual framework and considered the model of support and resilience in which organizational and family involvement act as moderators. As part of our online survey, the Maslach Burnout Inventory was applied to a universe of 704 working women in Mexico during the pandemic in 2021. Our results revealed an increase in burnout for working women, reflected in the levels of exhaustion, depersonalization, and the self-perception of personal efficacy. As the findings show, the COVID-19 pandemic was an aggravating factor, and the development of resilience as a moderator required organizational and structural support to mediate the effect of burnout. This study provides evidence for the variable of structural support in the conceptual model, introduced to reflect the influence of external aid, which differs from family support, and the results show its relevance.

Author: **Ann Sophie Lauterbach**, *U. of Konstanz*

Author: **Carolina Opitz**, *U. of Konstanz*

This study aims to examine whether the transition from working in an office to working remotely, forced by the Covid-19 pandemic, impacts employee absenteeism and presenteeism over time. Based on conservation of resources theory, we hypothesize that changing from an office to a remote work setting leads to decreased absenteeism and increased presenteeism among employees. We further assume that these relationships differ between gender subgroups as women experience the boundaries between the work and life area as more permeable, take over more domestic responsibilities, and, thus, have fewer resources available to cope with work tasks. We investigated how absenteeism and presenteeism developed using a sample of 514 white-collar workers tracked over two years. In a discontinuity growth model framework, zero-inflated negative binomial regressions showed decreased absenteeism and increased presenteeism after the transition to remote work. Contrary to our assumptions, subgroup analyses revealed that women showed a stronger decrease in absenteeism than men and a similar level of presenteeism. We discuss our contributions and the implications for corporate leadership and occupational health management.

The 2022 AOM conference theme, *Creating a Better World Together*, highlights the need for scholars to reflect on how we conduct, understand, and employ management research in increasingly diverse contexts. In this professional development workshop (PDW), we focus on decisions and outcomes related to defining, measuring, and accessing diverse samples in management research. On one hand, management research aims to include a diverse sample of individuals to increase the generalizability of findings (Simons, Shoda, & Lindsay, 2017). On the other hand, experiences of professionals from different underrepresented backgrounds may significantly diverge, thus illuminating the need to study heterogeneous samples to precisely observe patterns within and between social groups. These methodological quandaries related to representative sampling procedures are a primary consideration of this PDW. Further, the PDW will seek to address the current lack of definitional clarity surrounding the construct of diversity which significantly hampers knowledge development in organizational studies. Moreover, this PDW will serve as a space to generate dialogue on how decisions affect the interpretation of empirical findings and implications for practice. Finally, we will discuss practical considerations for researching historically understudied, marginalized populations. Workshop attendees will have an opportunity to receive feedback about specific challenges related to current and future research projects from the expert panelists and other participants.

Exploring the Diversity and Inclusion-Business Ethics Interface

Exploring the DEI-Business Ethics Interface

Session Chair: **Lauren E. Aydinliyim**, *City U. of New York, Baruch College*
Session Chair: **Dorothea Roumpi**, *Pennsylvania State U.*
Discussant: **Jessica Alynn Kennedy**, *Vanderbilt U.*

Different socio-cultural groups may engage with and respond to diversity and inclusion initiatives in different ways. As a result, diversity and inclusion initiatives may actually perpetuate continued inequalities, regardless of the intentions of an organization, raising important question about what diversity and inclusion initiatives should look like. This highlights the critical – but all too often unclear or under recognized – connection between the fields of diversity, equity, and inclusion (DEI) and business ethics research. In this presenter symposium, we explore the DEI-business ethics interface via five current projects that clarify this research interface and clarify how different socio-cultural groups of employees engage with or respond to diversity and inclusion initiatives.

India has emerged as a dominant economic player in the global economy, which calls for paying attention to the theories and practices that it contributes to scholarship in management. In this workshop, we propose a pluralistic framework to classify research by crossing type of research (the etic-emic framework) with type of construct (the atomistic-holistic framework). This allows us to show what types of research are carried out thus far in the Indian management. We also present the framework that incorporates core cultural ideas, uniqueness and hybridity of institutions and behavioral manifestations of Indians to further develop indigenous Indian management research and teaching.

Participant: **Louise Tourigny**, *Retired*
Session Chair: **James M. Wilson**, *U. of Glasgow*

This workshop combines the experiences of seasoned management professors, editors, editorial board members, researchers and authors to provide publishing tips for those starting this aspect of academic life. Publishing strategies for articles and similar academic manuscripts will be covered and a valuable system for staying on track and establishing a pipeline of research will be shared. Lessons learned in publishing will be stressed and the editor’s perspective will also be covered.

Paradoxical Leadership and Behaviors

Session Moderator: **Sherzodbek Murodilla Ugli Dadaboyev**, *Kyungpook National U.*

OB: Unpacking the Paradoxical Effects of Leaders' Follower-Directed Prosocial Rule Breaking on Followers 

Author: **Iris D. Zhang**, *Harbin Institute of Technology*
Author: **Mo Chen**, *School of Management, Harbin Institute of Technology*
Author: **Yitong Fu**, *Harbin Institute of Technology*

Given the paradoxical nature of leaders' follower-directed prosocial rule-breaking, which simultaneously involves sincere effort to help the followers yet violates organizational norms, our work builds a theoretical model to explain employees' psychological and behavioral reactions to this specific form of leader deviant behavior. Drawing upon social information processing theory, we propose that leaders' follower-directed prosocial rule breaking signals different social cues and elicits followers' simultaneously but contrasting feelings: On one hand, perceived acceptability of norm violations (for having behaved in norm-violation ways) and on the other, gratitude (for having done something helpful for the followers). In turn, perceived acceptability of norm violations motivates follower deviance, whereas gratitude motivates leader-directed helping. Results of a time-lagged multisource field survey data offer support for our hypotheses. We discuss the theoretical and managerial implications of these findings.

OB: Are Bad Leaders indeed Bad for Employees? A Meta-Analysis and Review of Longitudinal Studies

Author: **Peikai Li**, *Ghent U.*
Author: **Kui Yin**, *U. of Science and Technology Beijing*
Author: **Jian Shi**, *Vrije U. Amsterdam*
Author: **Toon Taris**, *Utrecht U., Department of Social, Health, & Organizational Psychology*
Author: **Tom Damen**, *Social, Health and Organizational Psychology, Utrecht U.*

Does having bad leaders have long-lasting adverse outcomes for employees? To address this question, we conducted a meta-analysis by focusing on longitudinal field studies (i.e., multi-wave and panel designs), and investigated the long-term impact of destructive leadership on employee outcomes. Results from 87 articles with 111 independent studies (N = 31,546) showed that destructive leadership has a detrimental impact on employee behavioral (e.g., OCB, deviance, CWB, and avoidance) and attitudinal outcomes (e.g., job satisfaction and work commitment). Interestingly, the cross-lagged analysis showed that whereas destructive leadership did not predict employee negative behavior over time, employees' negative behaviors did predict destructive leadership across time. Theoretical for future research and practical implications are discussed.

OB: Trouble with Big Brother: Counterproductive Consequences of Monitoring through Erosion of LMX 

Author: **Chase Thiel**, *U. of Wyoming*
Author: **Shawn T. McClean**, *U. of Oklahoma Price College of Business*
Author: **Jaron Harvey**, *Utah Valley U.*
Author: **Nicholas Ryan Prince**, *U. of Wyoming*

Changing workplace dynamics have led employers to increasingly adopt electronic monitoring technologies so supervisors can observe and ensure employee productivity—an outcome the monitoring literature has long supported. Yet, employee engagement and success depend on strong leader-member exchange (LMX), and the relational consequences of electronic monitoring for supervisor and employee are surprisingly unknown. To help resolve tension within the monitoring literature and add understanding regarding the effects of electronic performance monitoring on employee productivity, we use social exchange theory to examine the implications of electronic monitoring for the supervisor-employee relationship. We theorize that employee electronic monitoring facilitates (rather than inhibits) production deviance and inhibits (rather than facilitates) task performance by eroding the leader-member exchange relationship between supervisor and employee. Acknowledging the potential for electronic monitoring data to be useful to employees, we further argue that supervisors can buffer the negative relational consequences of electronic monitoring by using monitoring data for developmental purposes (i.e., developmental feedback). Across an experimental online study and a field study, we find converging support for our predictions and rule out alternative explanations. This research provides timely insights into how to effectively use electronic performance monitoring without promoting unintended consequences.

OB: Differential Consequences of Unethical Pro-organizational Behavior: Dual-path Mechanism  

Author: **Sherzodbek Murodilla Ugli Dadaboyev**, *Kyungpook National U.*
Author: **Soyon Paek**, *Yonsei U. Wonju Campus*
Author: **Sungwon Choi**, *Yonsei U.*

Grounding upon relevant theories and insights (i.e., self-completion, self-consistency, moral licensing, and moral cleansing), we propose and test a broader framework that can explain the effects of UPB, together with its underlying processes and contextual factors. Precisely, we suggest a dual-path mechanism (state of self-esteem vs. state of guilt) of UPB consequences. We argue that UPB can have both desirable (volunteering and prosocial behavior) and undesirable (subsequent UPB and instigated incivility) consequences due to its mixed features (pro-organizational but unethical). We also examine the conditional roles of potential variables within an organization (corporate social responsibility [CSR]) and an individual (moral identity) that can influence the consequences of UPB. The results from two studies with distinct designs (Study 1 – experiment-based, and Study 2 – multi-wave survey-based) suggest empirical evidence for the proposed model. The implications and limitations are discussed, and future research considerations are identified. Keywords: unethical pro-organizational behavior (UPB); state of self-esteem; state of guilt; volunteering; instigated incivility; corporate social responsibility (CSR)

Panelist: **Bobbi Thomason**, *Pepperdine Graziadio Business School*

Part of the training for an academic scholar includes how to conduct high-quality research. Such training typically consists of courses in research methods, study design, and literature reviews. Largely missing from this training is formal instruction on how to navigate the publication process. This is surprising given that publishing academic papers is a crucial skill in an academic career and often used as a metric to determine career outcomes. To that end, the aim of this PDW is to go behind the scenes of published papers and learn about the publication journey from prolific scholars. Our panel of distinguished scholars will share how they developed one of their papers from initial journal submission to the final published paper. This will include how they navigated the peaks and troughs in the review process, how they dealt with reviewer comments, and how they handled paper rejections. To facilitate learning about different publication processes, we have invited scholars with experience across different top management journals including *Academy of Management Journal*, *Management Science*, *Organization Science*, and *Administrative Science Quarterly*. By going “Behind the Publication” to embrace the full publication process, this PDW will provide valuable insights to early career academics. Participants will leave our PDW with a better understanding of what happens behind the scenes of a published article, including the challenges involved in the process and how to overcome them.

Change Dynamics Through the Lenses of Event System, Strong Structuration, and Improvisation

Session Moderator: **Oskar Bronsgeest**, *PhD candidate, School of Business and Economics*

ODC: **Proactive Events and the Nature of Event Chains: An EST Perspective on Employee Participation**

Author: **Oskar Bronsgeest**, *PhD candidate, School of Business and Economics*
Author: **Onno Bouwmeester**, *Vrije U. Amsterdam*
Author: **Ard-Pieter De Man**, *U. of Amsterdam*

Event System Theory (EST) suggests that understanding event chains is essential to our comprehension of organizational change dynamics. However, the question of whether different proactive events trigger different event chains remains unresolved. In this study, we analyze the effects of proactive employee participation (EP) events on the nature of event chains in planned change. Our analysis shows that different EP event types lead to different event chains in terms of development over time and across hierarchical levels. Also, the impact of the event chains on the organization is triggered by the chosen EP timing strategy. This adds to our understanding of EST by proposing that event type is an important variable when determining the nature of event chains. Our findings point to a research agenda focused on the relationship between EP timing strategies, the event chains, and the impact of planned change initiatives.

Paper is Available to Meeting Registrants Only.

ODC: **Advancing Strong Structuration Theory in Organizational Change Research**

Author: **David B. Szabla**, *Western Michigan U.*
Author: **David Jarrett**, *U. of Missouri, Kansas City*

Researchers studying organizational change can struggle to capture the full extent of phenomena, tending to focus on either agency or social structure but not both (Kennedy, O’Gorman & Lee, 2021). Because both agency and structure are implicated in change research questions, having a research method sophisticated enough to incorporate them is essential. Recent organizational change studies using Strong Structuration Theory (SST) from Rob Stones (2005) have shown promising results in taking structure and agency into account and balancing perspectives from objectivism and subjectivism. This paper examines SST as theory in detail, explains how it can represent an improvement for empirical research over older structuration theory (Giddens, 1979, 1984), and provides guidance on how to organize change research with SST. From a diverse set of published SST studies, best practices in creating effective change research case studies emerge. The paper closes by exploring how change researchers might expand SST use going forward.

ODC: **Exploring Organizational Improvisation through the Experience of Small Business Managers**   

Author: **José Osvaldo De Sordi**, *Centro U. Campo Limpo Paulista (UniFACCAMP)*
Author: **Wanderlei Paulo**, *Centro U. Campo Limpo Paulista*
Author: **Carlos Jorge**, *Univeridade de Marília - UNIMAR*
Author: **Marcos Hashimoto**, *Millikin U.*
Author: **Manuel Meireles**, *Faculdade Campo Limpo Paulista*

Improvisation is an important organizational resource for dealing with unforeseen events, recurrent events typical of times of crisis, such as the Covid-19 pandemic. To analyze the phenomenon of organizational improvisation (OI) with regard to the heuristics used to achieve it, as well as its results in the business context, the narrative interview technique was used in this study to interact with 28 managers and owners of small businesses. Forty-one episodes of OI were described by the informants and analyzed using the content analysis technique. From these analyses, five categories of outcomes of OI episodes were identified, four positive and one negative. The application of seven creative tactics associated with the OI episodes in question was also evident: adaptation, copy, exaptation, frugal innovation, improvement, new combination, and nonadaptation spandrels. In terms of results, emphasis is placed on the description and analysis of two episodes of OI associated with the category of Strategic Repositioning of the organization, a phenomenon that was hitherto identified in the literature as rare but possible. As for the seven creative tactics that were identified, they provided evidence that the Adaptation construct used in some OI frameworks is incomplete and restrictive in terms of possible actions.

Paper is Available to Meeting Registrants Only.

ODC: **Motivated by Agility, Hampered by Switching: A Boundary Perspective**  

Author: **Julian Nuessle**, *PHD student in Organization and Management at U. of Tübingen*
Author: **Sylvia Gaiser**, *PHD student in Organization and Management at U. of Tübingen*
Author: **Philip Yang**, *U. of Tuebingen*
Author: **Steffen Wütz**, *Head of digital products at Porsche*

While agile working methods become more and more important in practice, the implications from applying this new work form are largely underexplored. In this paper, we contribute to the literature on the downstream effects of agile working methods from a Job-Demand-Control perspective. Our moderated mediation model suggests that agile working methods increase employees’ intrinsic task motivation through role clarity. Furthermore, we argue that this indirect effect diminishes with the frequency of switching projects. We find empirical evidence for both hypotheses using data from a field study in a manufacturing company with 206 observations of 103 employees, who were surveyed in terms of their experience with working in agile and traditional projects.

Engaging with the Media as Academics

Engaging with the Media as Academics

Facilitator: **Susan R. Madsen**, *Utah State U.*

This professional development workshop is designed to assist researchers in gaining media skills to effectively communicate their work to the public. Specifically, it is for faculty, graduate students, and scholarly practitioners who are interested in sharing their research and research-based ideas beyond conferences and academic journals. It is for individuals who are interested in influencing the public toward some type of action including, but not limited to, changing public policy and other types of social change efforts. It is also intended to help scholars enlarge their impact and raise their reputations as leaders in their fields and communities. In light of the 2022 annual meeting theme—Creating A Better World Together—it seems that this session should be of interest to all attendees. We cannot help in creating a better world unless we get our research out in ways that can impact practice.

Presenter: **Stephen L. Jones**, *U. of Washington, Bothell*
Presenter: **Amanda Ferguson**, *Northern Illinois U.*

In this professional development workshop (PDW), we address narrative construction and evidence presentation in management research, focusing on situating theoretical and empirical contributions within prior literature. In the Improving Evidence Presentation PDW in 2019 AOM Annual Meeting, editors of Administrative Science Quarterly encouraged using pre-estimation data visualizations for transparency, and authors of exemplar ASQ papers demonstrated good evidence presentation using different methods. This year’s PDW focuses on comparability, and specifically on developing theoretically-informed, empirical narratives that explicitly connect the focal study to prior research, facilitating knowledge accumulation. Editors of Administrative Science Quarterly will discuss their views on how authors can construct narratives that distinguish both theoretical argument and empirical evidence from prior work. Multiple ASQ authors will discuss how they constructed the narratives for their papers, blending theory and evidence to establish a compelling contribution. Audience members will be able to ask questions of authors and editors.

Distinguished Speaker: **Brian Connelly**, *Auburn U.*
Distinguished Speaker: **Laszlo Tihanyi**, *Rice U.*

The PDW seeks to address the growing call for more research on the strategic role of ownership. We know a lot about how managers shape firm strategy; however, much less is known about how owners shape firm strategy. This is unfortunate because ownership implies control over the firm and its resources and gives owners the right to decide how value is created. Our PDW aims to develop novel perspectives on the role of ownership in the strategic management of the firm. A strategic ownership perspective acknowledges that owners are heterogeneous such as in terms of their social identities, skills and competences, investment preferences and activism, just as in the way they exercise influence over their firms. The first part of the PDW features impulse presentations by distinguished scholars, who offer their perspectives about the role of ownership in the strategic management of the firm, followed by a moderated panel discussion. The second part of the PDW features roundtable discussions to engage participants in deeper discussions with keynote speakers and receive valuable feedback to sharpen their own research. While the first part is open to everyone without pre-registration, the second part is limited to participants, who successfully submitted their one-page abstract summarizing their research idea or research project relevant to the topic. Our goal is to create awareness on the role of ownership for firm strategy, to facilitate idea generation and further development of research projects as well as scholarly networking.

The first hour of the PDW is open to anyone registered for the conference. To participate in the roundtable discussions with speakers, please submit a 1-page abstract of your research idea or research project by June 30 to OwnershipPDW@unisg.ch. Successful applicants will be informed by July 15.

Corporate Purpose: Current Research on the Role of Firms in Societies

Corporate Purpose: Firms and Societies

Moderator: **Chang Wa Huynh**, *HEC Paris*

Moderator: **Shun Yiu**, *The Wharton School, U. of Pennsylvania*

Panelist: **Vanessa Burbano**, *Columbia Business School*

Panelist: **Rodolphe Durand**, *HEC Paris*

Panelist: **Claudine Madras Gartenberg**, *The Wharton School, U. of Pennsylvania*

Panelist: **Anita McGahan**, *U. of Toronto*

The notion of corporate purpose has gained a tremendous traction among scholars and practitioners, providing them with a way to reflect on the role of corporations in societies. The current pace of social disruption urges decision-makers and employees to aim at creating a common social impact. Decades of scholarship have pushed forward our understanding of the role of companies in societies. Yet, corporate purpose, as the possible inclusion of societal goals into an organization's core, may involve new enabling mechanisms, drawing more on individuals. We need not only to explain better how they derive meaning from their work, but also how their behaviors scale up to the firm and societal levels. This PDW aims to bring together scholars from the fields of strategy, organization theory, and organizational behavior to discuss these issues. Those scholars seek to understand how individuals articulate their firms' and their own social impact. Through this PDW, we intend to highlight the convergence and nuances of those different disciplinary lenses and to reflect on future research directions.

The Landscape of Research on Organizational Search: Diverse Approaches and The Path Forward

The Landscape of Research on Organizational Search

Organizer: **Sukhun Kang**, *London Business School*
Organizer: **Cha Li**, *U. of Texas at Austin*
Panelist: **Gautam Ahuja**, *Cornell U.*
Panelist: **Vibha Gaba**, *INSEAD*
Panelist: **Martin Ganco**, *Wisconsin School of Business*
Panelist: **Abhishek Nagaraj**, *U. of California, Berkeley*
Panelist: **Melissa Schilling**, *New York U.*

The topic of organizational search has received extensive attention from strategy and management scholars. Over the last two decades, several sub-fields started to emerge that advance our understanding of organizational search on different fronts and utilize various theoretical and methodological approaches. This PDW aims to promote conversations across the different sub-fields and facilitate a joint reflection on the current state of the literature and the unexplored opportunities. In particular, we bring together a group of leading scholars who will exchange their insights on topics such as (i) overview of the search literature, (ii) local vs. distant search, (iii) problemistic search, (iv) adaptive search under complexity, and (v) experimental search. Overall, the goal of this PDW is to provide a forum where scholars can develop a shared understanding of research on organizational search and provide useful insights into how next generation scholars may employ novel theories and methods to develop future research. This two-hour PDW will follow a three-part format. In the first part, five leading scholars (Gautam Ahuja, Vibha Gaba, Martin Ganco, Abhishek Nagaraj, Melissa Schilling) will share insights on each of the key current topics and methodologies for studying organizational search. The second part will consist of a semi-structured panel discussion among the presenters. The last part will contain roundtable discussions with each one focused on different topics and methods of organizational search. Prospective participants will apply to the PDW by submitting a brief description of a research idea to be explored with the discussants and other participants.

Participation is open for the panelist presentation and discussion, but pre-registration is required for the round table discussion. To Participate in the round table discussion, please fill in this form prior to Friday July 8, 2022: <https://forms.gle/d6JM8of9b6J1a7N78>. Acceptance notifications will be sent by Mid July, 2022. If you have any questions, please contact skang@london.edu or cha.li@mcombs.utexas.edu.

Panelist: **Brian Wu**, *U. of Michigan*

In order to help to build a community of scholars interested in studying platform-based and digitally-enabled business models through the lens of classic core strategy questions, popular PDWs were organized at AOM 2020 and 2021 conferences (both with over 200 live participants, and the former with over 1600 YouTube views, the STR division's second most popular YouTube video). These two past PDWs used, respectively, corporate-level strategy and organization governance theories as lenses for understanding digital businesses. This year, as an extension of this series, we propose to examine digital businesses through a resource-based theoretical lens by considering the implications of digitization for theories of competitive advantage, and vice versa. We will focus on both how digitization broadens the application of existing theories, and how its novel features require changes to resource-based theory. We especially want to explore how these phenomena relate to emerging stakeholder-based theories on competitive advantage.

No registration is required for the first part of the PDW. To participate in the final part of the workshop -- i.e., the paper-development breakout discussion -- participants must in advance required to complete the following online form with their name, title, institutional affiliation, and email address: <https://forms.gle/dmU7LPonj64oWeej8>. They can also choose to complete the optional question in the online form that articulates an idea for a research project on the topic of the workshop. It will help us to identify the suitable facilitator in the breakout discussion.

Management of Neurodiverse Employees

Session Moderator: **Adrianna Sorensen**, *Portland State U.*

GDO: **Balancing the teeter totter: A dialectical view of managing neurodiverse employees**   

Author: **Christopher Whelpley**, *Virginia Commonwealth U.*
Author: **Haley Woznyj**, *Longwood U.*

Effective management of autistic employees is a topic germane to the successful integration of autistic employees into the workplace, but is a question that management researchers are only starting to broach (Vogus & Taylor, 2018; Beatty, Baldrige, Boehm, Kukami, & Colella, 2018). Unlike past research, we explore successful management for employees on the spectrum without applying specific leadership constructs to the research. Instead, we use a grounded approach to investigate what autistic employees and managers of autistic employees have found useful in the workplace. In doing so, we identify a dialectic in wanting to treat all employees as equal while understanding that different employees have very different needs. Based on this dialectic, we propose managerial types associated with the poles that they favor and explore how these different management types are associated with different outcomes for employees and organizations.

GDO: **I'm Doing it Right, Right? Reassurance-Seeking in the Workplace: Employees with OCD** 

Author: **Adrianna Sorensen**, *Portland State U.*
Author: **Timothy Carsey**, *Portland State U.*
Author: **Liana Bernard**, *Portland State U.*
Author: **Xander Kahle**, *Portland State U.*
Author: **Larry R. Martinez**, *Portland State U.*

Despite the breadth of literature in clinical psychology, obsessive-compulsive disorder (OCD) and reassurance-seeking behaviors remained unexamined in workplace contexts. This is a critical omission considering OCD symptomatology spans contexts and reassurance-seeking is the most common interpersonal manifestation. The general population is also likely to engage in reassurance-seeking. The present research examined antecedents and consequences of reassurance-seeking using purposive sampling of people with OCD. We leveraged archival data from online forums where participants built upon the responses of one another's ideas. We collected 53 comments from 20 different forums using web-based data extraction in R in which authors discussed their experiences with OCD and reassurance-seeking at work. Three coders completed thematic analysis to determine antecedents and consequences of reassurance-seeking behavior at work. Our findings suggest that lack of clarity and poor communication are prevalent antecedents of reassurance-seeking behavior in the workplace. Further, lower perceptions of competence, increased turnover, and worsening OCD symptoms were pervasive consequences of workplace reassurance-seeking for people with OCD. The findings illustrate a strong connection between the antecedents and consequences of reassurance-seeking, such that actions to improve task clarity, workplace communication, and positive reinforcement could have a vast positive impact on employee performance, burnout/turnover, and OCD symptoms.

Paper is Available to Meeting Registrants Only.

GDO: **Invisible Diversity: Multilevel View of Work Related Issues Facing Individuals with Schizophrenia**   

Author: **Afaf Khalid**, *Lahore U. of Management Sciences (LUMS)*
Author: **Jawad Syed**, *Lahore U. of Management Sciences*

Informed by a relational perspective of managing diversity, this study focuses on the following question: what multilevel issues are experienced by individuals with schizophrenia in their work and career? Drawing on 30 semi-structured interviews with schizophrenic individuals, their family members, healthcare professionals and NGO representatives, the findings suggest that at the societal-level, social stigma, economic conditions and lack of government support pose challenges to schizophrenic individuals. At the organizational-level, workplace support and person-job fit affect their employment. At the individual-level, self-stigma affects their employability in a negative way whereas personal motivation and resilience, support and realization of illness are facilitating factors. The study adds to diversity and disability literature by highlighting not only the invisibility of diversity and inequality facing individuals with schizophrenia but also demonstrates the interconnectedness of the factors and suggests that their work and employment-related issues may be simultaneously addressed at multiple levels.

**Succeeding Together as a Health Services Researcher in a “B”
School**
HSR in B schools

Organizer: **Deborah M. Mullen**, *U. of Tennessee, Chattanooga*
Organizer: **Justin Lord**, *Louisiana State U. Shreveport*
Organizer: **Timothy Hoff**, *Northeastern U.*
Organizer: **Amber Stephenson**, *The David D. Reh School of Business, Clarkson U.*

This Professional Development Workshop (PDW) features a panel discussion about the challenges and opportunities of being a healthcare / health services researcher within a College of Business (“B” School), often as an N of 1 or a few. Doctoral prepared healthcare management (HCM)/ health services research (HSR) faculty typically graduate from schools/ colleges of public, allied, or health professions, not business. “B” school healthcare faculty member panelists will discuss being part of a much smaller cohort within an academic unit, representing a whole industry constituting 17.7% of the U.S.’s GDP (CMS, 2021). As the meeting theme suggests, we can create a better world together by collaborating not only with our fellow B school faculty, but with others in the HCM division. The PDW includes lightning rounds about: understanding the type of B school and its expectations for faculty (e.g., public vs. private; Research one vs. other; accreditation requirements; publishing requirements), gaining peer acceptance in B schools, the credibility of HSR literature, and journals within B schools, collaborating with pure disciplinarians when you are a multi-disciplinary and industry-focused scholar, career crafting, and collaboration across campuses and communities from a B school home base as well as attendee questions. This session will allow scholars of all levels and practitioners who are interested in joining academia to consider the pros and cons of B school positions in several different types of universities and how to compete effectively for one, through an open, frank, and non-judgmental discussion.

Managing Growth and Learning Across Career Stages: Academia and Beyond

Managing Growth and Learning Across Career Stages

Coordinator: **Victoria Parker**, *U. of New Hampshire*
Coordinator: **Christy Harris Lemak**, *U. of Alabama, Birmingham*
Facilitator: **Wiljeana Jackson Glover**, *Babson College*
Facilitator: **Andrew N. Garman**, *Rush U.*
Facilitator: **Michael Lin**, *Telligen*

This workshop is designed to create a space for reflection and sharing about the varied career paths and choices HCMD members face across their career and life stages. How and/or when does one decide to go back on the job market after moving to and settling down at one institution? Is it possible to evolve in place, and if so, how? Which factors can lead to changes in one’s emphasis on research, teaching, and/or practice? What’s appealing (or not) about moving into academic leadership roles? Workshop organizers whose careers represent different pathways (e.g. evolving in one institution; moving into academic leadership, combining research and entrepreneurship, moving institutions and roles) will briefly share their career learning and growth journeys. Next, participants will apply the concepts of job crafting to their own career journeys in both individual reflection and then small group discussion, examining the potential for growth and learning in their current roles, as well as possible future choice points and changes. Finally, the full group will re-convene to discuss mechanisms for keeping these conversations going amongst division members over the course of our career journeys.

Bayesian Statistics: How to Conduct and Publish High-Quality Bayesian Studies

How to Conduct and Publish Bayesian Studies

Presenter: **Andreas Schwab**, *Iowa State U.*
Presenter: **William H. Starbuck**, *U. of Oregon*
Presenter: **David Krackhardt**, *Carnegie Mellon U.*
Presenter: **Mark H Hansen**, *Brigham Young U.*
Presenter: **Anup Menon Nandialath**, *U. of Wisconsin, La Crosse*

This workshop introduces management researchers to the opportunities of Bayesian statistics for empirical management research and provides guidance on how to execute high-quality Bayesian studies. A secondary objective is to develop a platform for knowledge transfer between researchers engaged in Bayesian research. The workshop will cover the following topics: (1) Fundamental conceptual nature and potential advantages of Bayesian approaches compared to statistical significance tests; (2) Step-by-step execution of a Bayesian study and comparison to a regression analysis; (3) How to develop meaningful prior distributions; (4) Execution of Bayesian analyses: Markov-Chain Monte Carlo Simulations and available software solutions; (5) How to communicate Bayesian analyses and results in research manuscripts and (6) How management scholars can support the more extensive use of Bayesian statistics in the field of management research. This workshop also intends to support community-building efforts among Bayesian researchers. For this purpose, we have already created an internet platform to distribute presentation material, provide links to additional helpful publications and other sources (<https://sites.google.com/site/bayesianresearch/>). In the end, this workshop will enable and inform participants on how to better incorporate advanced Bayesian statistics in their future research.

Are you working on cognition-related research? Would you like to discuss your work with major scholars in the field? The 25th Annual Cognition in the Rough (CIR) workshop provides an excellent opportunity to discuss and get feedback on your research, meet others with similar interests, and learn from experienced scholars. In an informal, collegial, virtual roundtable setting, 2 facilitators will provide feedback on 3-4 early-stage research papers. This will be followed by a joint, in-person, session, with tips from the facilitators for advancing research past the CIR stage and panel discussions regarding important directions and evolution within key CIR research domains. We will also celebrate the 25th Anniversary of Cognition in the Rough! Regardless of whether you are a senior or a more junior researcher, this workshop offers you an invaluable opportunity to engage with MOC scholars and receive detailed feedback from scholars who are often editors or on the editorial board of top journals.

Invitation is required. Please review the call for submission for more information on how to participate: <https://moc.aom.org/intherough/cir>

 OMT: **Constructing Proximity for Distanced Moral Action during an Ebola Outbreak**   

Author: **Ryann Elizabeth Manning**, *U. of Toronto, Rotman School of Management*

Winner of the OMT Louis R. Pondy Best Paper Based on a Dissertation Award

William H. Newman Award Nominee

To respond effectively to crises caused by events like disease outbreaks, climate-related disasters, or technological failures, it is often necessary to mobilize help from people located far away. However, this kind of distanced moral action faces various barriers and challenges. In this paper, I examine efforts by members of Sierra Leone’s global diaspora community to respond to the West African Ebola crisis in order to answer the question: how do people organize help from afar in times of crisis? Combining retrospective interviews with real-time qualitative data from diaspora organizations, online public conversations, and my own participation in the response to Ebola, I find that members of the diaspora overcame the liabilities of physical distance by using three narrative practices to construct narrative proximity to Sierra Leone: linking current events to stories of past resilience; linking current events to multiple imagined futures; and featuring ordinary people in the role of everyday heroes. These narrative practices created narratives of moral action, which in turn contributed to moral proximity—a sense of both moral obligation and moral efficacy—and shaped the actions members took to respond to the outbreak. Based on these findings, I develop a process model of how distanced actors can construct narrative proximity for moral action. This model advances our understanding of how people located far away from a place in crisis come to define their responsibilities to distant others and act to safeguard lives, livelihoods, and valued institutions.

OMT: **The Role of Aesthetics Communication in Communicative Institutionalism**

Author: **Francois Duhamel**, *U. de las Américas Puebla*

Author: **Alexander Niess**, *Rennes School of Business*

Connecting “communicative institutionalism” (Comelissen, Durand, Fiss, Lammers & Vaara, 2015) with aesthetic communication is an important topic, as explanations of the lived experience of institutional inhabitants would be impoverished without addressing the power of human imagination in the way people communicate to produce institutional arrangements, beyond the role of shared sensibilities. In this article, our research question is: how can aesthetic communication produce shared institutional arrangements? To address this question, we propose to elaborate a specific notion of aesthetic communication, based on the mobilization of Kant’s notion of the free interplay between imagination and understanding to activate institutional inhabitants’ power to act in communicative institutionalism.

OMT: **Strategically Constructing a Grand Challenge? The Case of Health Care Undersupply in Rural Germany**  

Author: **Carolin Auschra**, *Freie U. Berlin*

Author: **Jana Deisner**, *Technical U. Berlin*

Author: **Joerg Sydow**, *Freie U. Berlin*

Author: **Anne Berghöfer**, *Charité - U.smedizin Berlin*

Grand challenges (GCs) are complex, uncertain, difficult to address and deal with, and affect large parts of a population. In this paper, we argue that some GCs are not only socially but even strategically constructed in order to support organizational goals. Based upon a single case study of the undersupply of health care in rural Germany, we analyze the discourse about this potential GC over 15 years with the help of data from secondary sources and expert interviews. We use Berger & Luckmann’s classic work to show that organizational actors pursue three discursive practices to construct health care undersupply as a GC: forecasting a GC as a future threat, spreading synergetic awareness of a GC, and stressing the consequences of a GC. Moreover, we show that discursive practices can also aim to deconstruct a GC by using comparisons, denying the existence of the GC per se, or highlighting an alternative problem. We thereby aim to add to the knowledge on GCs by illustrating how some of them are strategically (de-)constructed, and thus suggest how the respective struggle can complicate the development of collective goals and practices to address them. Moreover, we show that certain actors strategically construct a GC as they hope to mobilize additional resources, and to protect existing institutions – and, thereby, their own interests.

Collaborating with Multiple Actors

Session Moderator: **Anne-Laure Fayard**, *NOVA School of Business and Economics*

OMT: **Common Grounding: How to Nurture Cross-Sector Collaborations for Social Innovation** 

Author: **Anne-Laure Fayard**, *NOVA School of Business and Economics*
Author: **Anne-Claire Pache**, *ESSEC Business School*

In this paper, we identify the role of common grounding, a continuous and interactional alignment of understandings and emotional engagement, in initiating and sustaining cross-sector collaborations for social innovation. Through a 32-month inductive qualitative study, we explore how Green City Force (GCF), a NYC not-for-profit organization, successfully initiated and sustained collaborations with public, not-for-profit, and for-profit partners to produce new solutions to longstanding social and environmental issues. We found that GCF engaged partners through common grounding, which involved two types of interactions: conversations that created mutual understanding and trust; and rituals which provided evidence of the value of the collaboration and generated emotional attachment to it. Common grounding was enacted within a flexible scheme delineated along four dimensions – two objectives and two modes of engagement. By allowing multiple interpretations, the scheme was key in fostering the interests of diverse partners. Our paper contributes to the literatures on cross-sector collaboration and social innovation. It highlights collaboration as a continuous social accomplishment requiring both cognitive and emotional engagement. It also shows the value of ambiguity, defined as the quality of being open to more than one interpretation, to trigger and sustain collaborations when their purpose is the production of innovative solutions

OMT: **Street Smarts and Org Charts: Professional Expertise and the Pursuit of Urban Integration** 

Author: **Christof Brandtner**, *EMLYON Business School*
Author: **Krystal Laryea**, *Stanford U.*

The presence of organizations has been shown to causally affects a community’s connectedness, crime, entrepreneurship, and crisis resilience. But extant studies of communities conceal how organizations pursue the production of two types of urban integration. Organizations may produce social integration, creating social ties among constituents, as well as systemic integration, connecting constituents to institutional resources. We argue that organizations’ ability to produce social and systemic integration is principally due to the degrees to which organizational members draw on suite-level expertise (“I know the system”) and street-level expertise (“I know the people”) when they make decisions. Representative survey data of nonprofit organizations in the San Francisco Bay Area collected over 15 years shows that nonprofits’ pursuit of urban integration depends on these forms of expertise. Comparative interviews explain why professional staff and managers boost systemic integration, whereas volunteer staff and members foster social integration. The paper contributes to scholarship in organizational and urban sociology by examining how organization-level features influence the pursuit of urban integration and by shedding light on unintended consequences of professionalism. Our results challenge the stylized fact that nonprofits necessarily create community and suggest alternative ways to understand and operationalize how organizations are embedded in their urban environment.

OMT: **Towards a Theory of Organizationality: A Gradual View on Collective Actorhood** 

Author: **Dennis Schoeneborn**, *Copenhagen Business School*
Author: **Leonhard Dobusch**, *U. of Innsbruck*
Author: **David Nils Seidl**, *U. of Zurich*

The literature on the concept of organization is struggling with the dilemma of defining “organization” in a way that it is specific enough to distinguish it from other social phenomena but also open enough to capture novel forms of organization. To address this openness-specificity dilemma we draw on the emerging literature on organizationality, which treats organization as an attribute of social phenomena that can vary by degree. To advance this view, we propose to focus on collective actorhood as the main criterion of organizationality, distinguishing between higher or lower levels of organizationality according its degree of collective actorhood. Based on this focus, we develop a theoretical model that explains how different attribution practices “charge” a collective with actorhood. We identify three main types of attribution practices: identity-claiming, boundary-drawing, and decision-making. Overall, we add to organizational scholarship (1) by gradualizing the notion of collective actorhood (thus bridging narrow and wide views of organization), (2) by dynamizing the notion of collective actorhood (thus being able to explain processes towards higher or lower degrees of organizationality), and (3) by expanding the scope of organizational scholarship so that it can gain a stronger relevance for the social sciences more broadly.

Knowledge Transfer: Theory and Evidence

Session Moderator: **Kejia Zhu**, *U. of Waterloo*

OMT: **Internal vs. External Knowledge Sourcing of Organizational Rules: An Exploratory Study**

Author: **Kejia Zhu**, *U. of Waterloo*

Author: **Martin Schulz**, *U. of British Columbia*

In this study, we examine how organizational rules source knowledge from intra- and extra-organizational contexts. By knowledge sourcing of rules, we mean that rules reference knowledge sources located outside of rules. Knowledge sourcing of rules can be captured by formation of citation ties to the referenced knowledge sources within (i.e., other rules) and outside the organization (e.g., research publications, policies, standards, etc.). Our theoretical model proposes that knowledge sourcing of rules is driven by inherent incompleteness of rules as a result of bounded rationality of rule makers and rule making process. Incomplete rules can lead to experiences of insufficient rule knowledge, termed 'knowledge gaps', which are shaped by rule dynamics at the levels of rule system, individual rules, and rule networks. Our theoretical model leads to several hypotheses that we test with longitudinal archival data of clinical practice guideline (CPG) changes in a Canadian healthcare organization. We find evidence that provides overall support to our theoretical model. The theoretical and practical implications of the findings are discussed.

OMT: **A Network Approach to Stress: Brokerage and Knowledge Transfer in the Frontline Against COVID-19**

Author: **Stefano Tasselli**, *Erasmus U. Rotterdam*

Author: **Paola Zappa**, *U. College London*

Work stress permeates contemporary organizations. However, its network underpinnings are still largely unexplored. In this paper, we introduce a network approach to stress, arguing that stress can be seen as a relational phenomenon with important consequences for organizational coordination and knowledge circulation in organizations. In a longitudinal study of medical professionals working in a frontline hospital during the COVID-19 pandemic, we drew on theory on the constraints and opportunities associated with brokerage between cliques, or Simmelian brokerage, to show that individuals spanning otherwise unconnected cliques are more exposed to stress increase over time, although stress increase is lower for individuals who engage in mediation brokerage behavior, i.e. for people who act as intermediaries between disconnected parties. Simmelian brokerage, in turn, influences ease of knowledge transfer over time; and stress change mediates the relationship between Simmelian brokerage and ease of knowledge transfer dynamics. For those Simmelian brokers, increase in ease of knowledge transfer to coworkers is explained by stress increase.

OMT: **Managing Knowledge Transfer in Chinese MNEs: The Reciprocity Between ACAP and DCAP**

Author: **Tina Miedtank**, *Erasmus U. Rotterdam*

Author: **Yu Zheng**, *School of Business and Management, Royal Holloway, U. of London, UK*

This study examines reciprocity between absorptive capacity (ACAP) and disseminative capacity (DCAP). Drawing on the social exchange theory (SET), reciprocity is conceptualised as bi-lateral enactment of connectivity between ACAP and DCAP. Reciprocity builds on what connects ACAP and DCAP in terms of relevance, compatibility and transparency in the abilities, willingness and opportunities for the parent and subsidiary firms to collaborate in two-way knowledge transfer. In addition, key stakeholders from parent and subsidiary firms enact reciprocity by necessitating, bridging, and consolidating ACAP and DCAP. Our conceptual framework of reciprocity therefore signifies a process of bi-lateral enactment of ACAP and DCAP, in which material exchanges, organisational commitments, and stakeholder consents are created at both ends of reverse knowledge transfer.

Time for Purpose: Leading an Impactful and Meaningful Academic Career
Time for Purpose: Leading an Impactful Career

Organizer: **Jennifer Leigh**, *Nazareth College*
Facilitator: **Debbie Haski-Leventhal**, *Macquarie U.*
Facilitator: **Petra Molthan-Hill**, *Nottingham Business School, Nottingham Trent U.*
Facilitator: **Holly Slay Ferraro**, *Villanova U.*

A recent survey of citizens in the US and UK showed that most want to create a better world after the pandemic and not go back to the old normal (Lewandowsky & Ecker, 2020). In tandem, many academics feel quite drained by the ongoing global pandemic and are seeking to inject new energy and purpose into their working life (Gerwin, 2021). In this workshop, we will introduce the Impact Purpose Model to (re-) discover the joy and meaning an academic career can bring (Haski-Leventhal, 2020). We will share some inspiring life stories of academics who could create a working life fueled by their interests, passion, and calling (Bunderson & Thompson, 2009). We will then offer some interactive exercises so that participants can evaluate their own choices and might be inspired to make some meaningful changes to their careers. This workshop is for everyone wherever they are in their career but especially for academics who feel a bit stuck or need fresh energy for their career.

Following this year’s conference theme “Creating a Better World Together” while interrogating it, this PDW is oriented towards facilitating scholars to engage with critical insights informed by recent articulations of feminist theorizing and new materialisms. These critical insights would serve first as tools and means to observe fundamental metatheoretical premises and knowledge production practices defining Organization Studies as a disciplinary field which possibly function as accomplices in fostering contemporary harms. Concurrently, these tools and means would contribute to dislodging the field’s “common sense” while facilitating its engagement with affirmative possibilities in a world that may be coming otherwise. Influenced by recent writings in the humanities, social sciences, natural sciences, and technology in intersections with critical feminist posthumanism and new materialisms, organizers and presenters take critical positions outside their/our own common disciplinary domain of Organization Studies aiming to produce rich spaces of radically interdisciplinary scholarship and beckoning each and all involved in the PDW to open up to them. Two overarching themes perform in these spaces: the first one experiments with what could be thought-said otherwise and resulting consequences if “the human” on which fundamental premises of Organization Studies are centered becomes displaced (not replaced) by “the-more-than-human” appearing in new materialisms and critical feminist posthumanism. The second theme focuses on practices, envisaging and attempting to show what could be done otherwise and how, once those fundamental premises are displaced. A collective ending activity aims directly at exploring how can we now ‘create a better university together’ to maintain and foster these openings.

Session Format: **Hybrid Interactive: Seattle + Virtual; Zoom “meeting” style**
Scheduled: **Saturday, Aug 6 2022 11:00AM - 1:00PMPT (UTC-7)** at **Seattle Convention Center in Room 211**

**Artificial Intelligence, Health Care and the
Changing Nature of Organizations and
Professional Work**
AI, Health Care and Organizations

Organizer: **Angela Aristidou**, *U. College London*
Organizer: **Giulia Cappellaro**, *Bocconi U.*
Organizer: **Natalia Levina**, *New York U.*
Panelist: **Michael Barrett**, *U. of Cambridge*
Panelist: **Samer Faraj**, *McGill U.*
Panelist: **Rebecca Karp**, *Harvard Business School*
Panelist: **Stella Pachidi**, *U. of Cambridge*
Panelist: **Batia Mishan Wiesenfeld**, *New York U.*

Artificial Intelligence (AI) systems, especially those that rely on data-driven machine learning technologies, are increasingly implemented in a range of organizational settings to support professional tasks and enhance organizational performance. Among others, healthcare is considered one of the key sectors in which AI has the potential to transform organizational realities. While extensive knowledge has accumulated on the technical features of AI systems, less is known about the implementation of such systems in real healthcare settings such as hospitals and communities. We are only starting to build some understanding of how these systems shape organizational processes, routines and professional work. In this highly interactive PDW, we will provide participants with the opportunity to reflect on the theme: how do we as management researchers should study AI in healthcare? How can we meaningfully study the effects and the consequences of AI implementation on healthcare organizations and professionals? By bringing together a selected number of scholars actively researching this topic, the PDW will explore the implications of AI for organizational dynamics and professional work.

Structure: Part 1 will center on a Panel discussion in which the audience will contribute questions in advance (when registering to the PDW, Part 2) and in real-time during the event. In Part 2, round tables will be created that will allow participants to interact with panelists and to engage in deeper conversations. Part 1 does not require registration and it will be open to both online and on-site participants. Part 2 requires registration and it will be open to on-site registered participants only.

The event is aimed at researchers at different career stages, interested in and pursuing work at the intersection of AI and Healthcare. Specifically, we welcome scholars across information systems, organization theory, and healthcare management regardless of their preferred theoretical perspectives and research methods/approaches. Participation in Part 2 of the PDW requires pre-registration. To register, please send an email to aomaihealthcare@gmail.com indicating: (1) the question for the Panel members; (3) a brief, one-sentence explanation of your research interests as they relate to the PDW topic. Registration deadline: Friday, 15 July 2022. For further information, please write to the PDW Organizers: Giulia Cappellaro (giulia.cappellaro@unibocconi.it), Angela Aristidou (a.aristidou@ucl.ac.uk).

Facilitator: **Diana Maria Hechavarría**, *U. of South Florida*
Facilitator: **Jeffrey M. Pollack**, *NC State U.*

In this professional development workshop (PDW), we explore the topic of entrepreneurship and race, with particular although not exclusive attention to underrepresented minorities (URM), minorities with a disproportionately low presence in positions of power and status (i.e., African, Hispanic, and Native Americans). This PDW will introduce the audience with an important yet distressingly neglected area of research and provide the audience an opportunity to discuss pre-submitted extended abstracts with editors from top entrepreneurship journals. The ultimate goal we have for this PDW is to encourage a broad research agenda on race and entrepreneurship that captures both the structural qualities of marginalization and the agentic qualities of entrepreneurship.

Assessments, Feedback and Assurances of Learning

Session Moderator: **Andres Fortino**, *NYU School of Professional Studies*

Author: **Andres Fortino**, *NYU School of Professional Studies*

Background – Measuring learning outcomes is a desirable activity in graduate programs. It is vital for programs that purport to educate practitioners in specific industries. Assessing that students adequately acquire prescribed knowledge and adjusting curricula upon discovering gaps is an important element in program evaluation and management. We present a process to align the program curriculum with industry standards to assure the acquisition of those desirable competencies. This paper presents how to: (1) select the appropriate professional BOK for each knowledge domain in question; (2) map a curriculum to the elements of the body of knowledge; (3) create assessment instruments based on the BOKs; (4) assess alignment; and (5) propose curricular revisions. Contribution – The process was applied to the curriculum of a technology management program master’s program to measure the student’s acquisition in three domains: data analytics, business analysis, and project management. Assessment instruments for each discipline based on corresponding BOK were developed and used to measure students’ acquisition of the skill sets. The results were used to drive curriculum reform. Assessment Questions - To align the curricula to professional BOKs, we asked: (1) whether students graduating from the program had acquired adequate competencies in each TM domain; and (2) If they had not, how the curriculum should be modified to help students acquire those competencies. Methods - The curriculum was reviewed, and we assured initially that topical coverage of the pertinent courses aligned adequately with each BOK knowledge domain. We ascertained curriculum alignment to the BOK by using text similarity scoring of the course descriptions to the BOK domain descriptions. Assessments in the form of multiple-choice exams based on each BOK were created and administered to students in their last semester of study. Results were analyzed, gaps were discovered, and curricular changes to identified courses to fill those gaps were proposed to faculty. Results - Using the existing curriculum, we found that most of the students at the end of the program were able to pass the assessments based on the BOKs. The exam results were sufficiently granular to allow proposals of modifications to the curriculum and course contents to improve the passing rate in future assessments. This appears to be an adequate process of identifying gaps in students’ knowledge of industry-specific topics.

Author: **Graham Manville**, *Zayed U.*

Author: **William E. Donald**, *Southampton Business School, U. of Southampton*

Author: **Anita Eves**, *U. of Surrey*

The purpose of this paper is to explore whether embedding authentic assessment into the university curriculum can enhance the employability of business school students. Three research questions are addressed: (1) What is the rationale for authentic assessment in the curriculum?, (2) What are the opportunities for authentic assessment to enhance the employability of students?, and (3) What are the challenges of embedding authentic assessment into the university curriculum? The findings indicate that authentic assessment has the potential to increase the employability of students graduating from university business schools. The opportunity to develop human capital, collaborate with fellow students, and solve real-world problems can help students to develop and signal their employability to prospective employers. However, lecturers and administrative staff require additional time to plan and deliver modules using this form of assessment. Students also need to be convinced of the benefits of the additional time investment if the module is not a compulsory component of their degree course. Our paper proposes that authentic assessment should be utilised to a greater extent by university business schools. The benefits of such an approach can transcend students, graduates, universities, organisations, and wider society. Directions for future research are also discussed to maximise the benefits of authentic assessment and seek to reduce the barriers to embedding authentic assessment in the curriculum.

Author: **Vijay Edward Pereira**, *NEOMA Business School*

In 2020 when the COVID-19 pandemic hit the world, academic institutions around the world scrambled to switch to online platforms like zoom. While the new medium posed challenges for both the teacher and the student, there were additional challenges involved with the new instruction medium, such as online assessment. In this two-phase study (phase 1, n = 602 teachers; phase 2, n = 320 teachers), we examined the perceptions of teachers and students in higher education in India, on the students’ academic integrity when taking examinations on-campus versus online. We found that while teachers believed that students would cheat more in online exams as compared to on-campus exams, students perceived the opposite. We discuss our findings, highlight the key implications, and offer suggestions for future research.

Author: **Gina Phelps Thoebes**, *U. of Akron*

The feedback paradox – the concept that negative feedback should be the most useful is also the kind most likely to be rejected. There is hot debate amongst researchers and practitioners around the utility of negative feedback due to its tendency to illicit negative reactions. Utilizing feedback preferences to influence feedback reactions is a gap in the literature that needs to be explored. An experimental study was conducted to test if utilizing feedback preferences could improve recipient reactions to negative feedback. Participants were given a choice between two types of feedback (diagnostic or normative) and the type of feedback received was manipulated to test if receiving feedback that matched their preference was able to improve recipients’ satisfaction, perceptions of accuracy and motivation to use the feedback. Feedback orientation was also explored as a moderator of the effect between matching feedback preferences to reactions. Results indicated that participants preferred diagnostic feedback, and that providing diagnostic feedback to a recipient who preferred that kind, did lead to increased perceptions of accuracy and motivation to use the feedback. Results provide insights for both practitioners and educators around feedback preferences how they can be potentially utilized to improve feedback processes in organizational and educational settings.

Predictors and Paradoxes of Employee Performance

Session Moderator: **Mustafa Akben**, *Fox School of Business, Temple U.*

OB: Do Birds of a Feather Flock Together? Effects of Manager and Subordinate Narcissism on Perf. Eval.

Author: **Miriam Maske**, *U. Bundeswehr, Munich*

Author: **Matthias Sohn**, *European Uni Viadrina, Frankfurt (Oder)*

In this study, we investigate the interactive effect of superior and subordinate narcissism on subjective performance evaluation. Based on the homophily effect (i.e., the tendency of like to associate with like), we hypothesize that narcissistic superiors show greater tolerance towards narcissistic subordinates than non-narcissistic superiors. We conduct an online experiment with experienced managers and find that both superiors high and low in narcissism evaluate a narcissistic subordinate less favorably than non-narcissistic subordinates. Our results show that this effect is mediated by the superiors' weaker feelings of closeness to narcissistic subordinates. In line with our hypotheses, this mediation is moderated by superior narcissism. Superiors high in narcissism show greater feelings of closeness to narcissistic subordinates and, hence, evaluate narcissistic subordinates more favorably than non-narcissistic superiors. Our results provide novel insight into the pivotal role of individual traits in subjective performance evaluation.

OB: Explaining the Gap in Performance Evaluations of Supervisors and Employees 

Author: **Erez Yaakobi**, *Ono Academic College*

Author: **Jacob Weisberg**, *Bar Ilan U.*

Organizational success in the global market is driven by performance quality, innovation, and efficiency, particularly in today's competitive and dynamic era. However, there may be gaps in performance evaluations between supervisors and employees. The current paper aimed to discover the factors that predict this gap in terms of the demographics and personality of the two parties as well as disparities in their four efficacy (self, occupational, collective and means) evaluations of their employees. A sample of dyads of 94 employees and supervisors (Total N = 188) in high-tech industries took part. The findings indicate that supervisors' and employees' tenure was the main demographic predictor of performance evaluation gap. The personality of supervisors and employees only explained the gap in efficiency performance. The gap in efficacy evaluations between supervisors and employees in predicting the gap in performance evaluations was associated with the gap in internal efficacy evaluations (self and occupational efficacies) in predicting the gap in performance evaluations with respect to the quality and creativity performance evaluation facets. However, as regards the gap in efficiency performance evaluations, the gap in means efficacy between supervisors' and employees' evaluations was the only predictor for the efficacy gap. This model thus explains a vast majority of performance gap evaluations between supervisors and employees ranging from 61%-88% of performance evaluation differences. These results shed light for the first time on predictors of the gap in performance evaluations between supervisors and employees.

OB: Paradoxical Effect of Exploitative Leadership on Employee Performance (WITHDRAWN)

Author: **Jinyun Duan**, *East China Normal U.*

Author: **Xiaoyun Ren**, *Soochow U.*

Author: **Yue Xu**, *Xi'an Jiaotong-Liverpool U.*

Author: **Jie Li**, *Xi'an Jiaotong-Liverpool U.*

Based on paradox theory, this study aims to investigate the paradoxical consequences of exploitative leadership on employee work outcomes. From the perspective of the 'performing-learning' lens, we hypothesize that exploitative leaders boost employee task performance, yet inhibit employee creative performance. In a three-wave time-lagged field study with 106 leaders and 249 matched subordinates, the results confirm our hypotheses, and we also find mediating effects of performance pressure and intrinsic motivation, as well as a moderating effect of traditional value. When leaders exert more exploitative behaviours, employees with a high level of traditionality show enhanced task performance via performance pressure, while those low in traditionality display worse creative performance because of their poor intrinsic motivation. These findings contribute to the destructive leadership literature, emphasising the distinct influences of exploitative leadership on different aspects of employee performance, and have implications for management practice.

OB: A Meta-Analysis of the Relationship Between Prosocial Motivation and Performance Behavior    

Author: **Mustafa Akben**, *Fox School of Business, Temple U.*

Author: **Joseph Kim**, *West Chester U.*

Based on 43 studies with 59 independent samples (N = 12,641), we examine the relationship of prosocial motivation with task performance and citizenship behaviors in this preliminary meta-analysis. We also identify and investigate two theoretical moderators: interaction with beneficiaries and culture, as well as one methodological moderator: rating source. The findings suggest that prosocial motivation has a smaller effect size on task performance ($r = .24$) than it does on overall citizenship behaviors ($r = .36$). Furthermore, there are no cross-cultural differences in the relationship between prosocial motivation and task performance or citizenship behaviors. The interaction with the beneficiaries, on the other hand, moderates the relationship between prosocial motivation and citizenship behaviors but not the relationship between prosocial motivation and task performance. The findings also indicate that the relationship between prosocial motivation and self-rated citizenship behaviors ($r = .50$) is stronger than the relationship between prosocial motivation and other-rated citizenship behaviors ($r = .20$), indicating a possible common method bias. Theoretical and practical implications are discussed, with an emphasis on the study's limitations and future research directions.

Status and Boundaries

Session Moderator: **Cheryl Rathert**, *Saint Louis U.*

Author: **Jacob Levitt**, *The Wharton School, U. of Pennsylvania*
Author: **Nancy Rothbard**, *U. of Pennsylvania*

Who decides who is a bona fide member of the group? Past work on group membership, social identity theory, and self-categorization theory focuses on static, binary, and top-down definitions of bona fide membership. We propose a new framework that argues for a dynamic, continuous, and co-created membership boundary, through granting, claiming and informal relationships, between a group and prospective group members. We extend prior work by defining group membership as a process where the mutual granting and claiming of formal membership and acquisition of informal relationships co-produce a continuous and dynamic description of the group boundary. We further propose several different types of membership that range from no membership (outsider) to partial membership (reluctant/emergent) to full membership (embraced). Last, we propose pathways that describe how people pass through partial membership states as they join and leave groups. We argue that they do so through mutual processes of granting and claiming membership as well as the development of informal relationships. In these ways, existing and prospective group members collectively manage both changes in the actual boundary, and membership across the group boundary. We conclude by discussing the implications of this framework for socialization, identity, and teams literatures.

OB: Virtually Equal: A Theory of Status Leveling in Organizations

Author: **Rebecca Hinds**, *Stanford U.*
Author: **Melissa Valentine**, *Stanford U.*
Author: **Justin M. Berg**, *Stanford Graduate School of Business*

Through a qualitative study of 77 full-time technology workers across multiple organizations, we theorize the process of successful status leveling in organizations, in which a dysfunctional status hierarchy is replaced with common perceptions of greater equality. We find that when remote workers' organizations shifted to a default remote work arrangement during the COVID-19 pandemic, previously high-status in-office workers began to recognize the expertise, challenges, and marginalization experienced by remote workers. Workers collectively adopted practices that enabled more objective and visible work product evaluations, and more equitable distribution of resources, as well as inclusive norms, emerged. In contrast to past research documenting resistance, resentment, skepticism, and defensiveness in response to status hierarchy changes in organizations, our theory explains why this shift was largely accepted and deemed durable by formerly low and high-status workers alike. Therefore, our work suggests how, despite being entrenched and often difficult to change, some dysfunctional status inequalities in organizations can be leveled to shape feelings of inclusivity and greater equity.

OB: Status Similarity and Conflict: Evidence from Charness et al. (2014)  

Author: **Nghi Truong**, *Max Planck Institute for Research on Collective Goods*

We examine how the ambiguity of who dominates whom in social relationship results in conflicts among agents. Using data from the experiment by Charness et al. (2014), we empirically show that status similarity motivates people to compete more intensively, and results in more conflict among them. The study also highlights the moderation effect of gender norms in the relationship between status ambiguity and conflicts. We discuss different implications of our findings for conflict prevention and gender relations in organizations.

Paper is Available to Meeting Registrants Only.

OB: An Empirical Investigation of System Justification in the Context of Workplace Bullying

Author: **Cheryl Rathert**, *Saint Louis U.*
Author: **Ghadir Ishqaidef**, *California State U., Chico*
Author: **Tracy Hopkins Porter**, *Cleveland State U.*

Workplace bullying is prevalent, and substantial research has established its negative outcomes for employees. System justification theory (STJ) posits that people have a motivational tendency to justify the status quo of the systems in which they are embedded (i.e., their workplace), even if these systems are inequitable or unjust. This survey study (n=334) examined relations between system justification (SJ) and two important worker variables: engagement and organizational commitment, in the context of workplace bullying. Positive associations between SJ and engagement, and SJ and continuance commitment, were stronger for workers reporting higher levels of workplace bullying. But bullying also had direct effects on continuance commitment, suggesting that if workers experiencing higher levels of bullying felt they had better opportunities they would leave. These findings suggest that organizations need to understand the effects of system justification in the context of bullying in a more nuanced way than they have thus far. The role of system justification in organizations should be further studied.

Voice, Collaborating, Crafting, and Coping

Session Moderator: **Michael Daniels**, *U. of British Columbia*

OB: [Who Can Afford to Voice? Examining the Role of Resources in the Employee Voice Process](#) 

Author: **Cassandra Phetmisy**, *Rice U.*
Author: **Danielle D. King**, *Rice U.*

Work, money, and the economy are the most common stressors for adults in the United States (APA, 2020a, 2020b). Financial stressors may highlight the importance and precarity of work—motivating employees to avoid risky behaviors, even those that may be necessary or beneficial. Thus, it is valuable to explore how financial stress may increase barriers for positive risk-taking in the workplace. Grounded in Conservation of Resources theory (Hobfoll, 1989), the current study investigated how financial stress and leader-member-exchange (LMX) affects employee behavior at work. We examined how financial stress impacts a critical, desired form of risk-taking at work: voice, through perceived riskiness of voice. Further, we consider the potential role of leadership protective resources (i.e., high-quality LMX), such that high LMX may buffer the negative association between perceived riskiness and voice. The study utilized a multi-source and multi-time point design to understand the effects of employees' financial stress on their voice behaviors at work. Results demonstrated that financial stress impacts employees' perceptions of voice riskiness, and that perceived riskiness of voice influences voice outcomes. This work offers both theoretical integration and expansion to the voice and financial stress domains, and offers actionable practical implications for organizational leaders and decision-makers.

OB: [Collaborating Together, Coordinating Better? Examining Emotional and Physiological Dynamics in Teams](#) 

Author: **Emily Hsu**, *Washington U. in St. Louis, Olin Business School*
Author: **Yumeng Gu**, *U. of California, San Diego*
Author: **Jeremy Jamieson**, *U. of Rochester*
Author: **Christopher Oveis**, *U. of California, San Diego*

Coordination between teammates is critical for team success. However, little is known about the biological processes that reflect team coordination, or how team members' actions contribute to coordination between teammates. Specifically, little is known about how intrapersonal efforts to regulate emotion might have interpersonal consequences. The present study thus aimed to (1) test how emotion regulation strategies influence mutual, simultaneous changes in parasympathetic nervous system responses, as assessed via respiratory sinus arrhythmia (RSA) and (2) explore RSA linkage in different contexts of teamwork. To examine this, N=266 strangers were paired for a dyadic experiment that measured in vivo responses during stressful collaborative and individual tasks. RSA linkage manifested during collaborative work but not during the individual performance task. Notably, emotion suppression moderated this parasympathetic physiological linkage. Our findings offer important contributions to the scholarship on teams, as well as the emotion regulation and physiological linkage literatures. In addition, this work opens up new avenues for research on the interpersonal dynamics of teams.

Paper is Available to Meeting Registrants Only.

OB: [Leader Job Crafting to Develop Paradoxical Leadership](#) 

Author: **Soniya Dabak**, *Tata Institute of Social Sciences*
Author: **Zubin Rumi Mulla**, *Tata Institute of Social Sciences*

Job crafting has gained increasing significance as a strategy for adapting to organizational change. However, despite the paradoxical tensions encountered by leaders who are entrusted with driving organizational change, there is little or no research on how leaders can, themselves, craft their roles to manage the conflicts and tensions inherent in leadership. We explain the impact of leader job crafting on leaders' ability to actively transcend paradoxical tensions. In the first step, an experimental intervention conducted with participants in one organization across two conditions; general reflection on the tension (N=44) and job crafting (N=48) revealed that job crafting led to higher demonstration of paradoxical leadership than reflection, measured through observer ratings. Further, by qualitatively analyzing the data collected from participants in the job crafting condition of the intervention, we found six strategies through which job crafting helps leaders not only accept and confront, but actively transcend the tension between control and empowerment. This study contributes to existing research by establishing leader job crafting as a method to develop leaders' ability to not only accept, but actively transcend paradoxical tensions by co-creating role expectations. It also establishes the use of leader job crafting as a tool for leader development, which is a relatively unexplored area in job crafting literature.

Paper is Available to Meeting Registrants Only.

OB: [Online Social Coping with Work-Related Stressors During COVID-19](#) 

Author: **Sima Sajjadiani**, *Sauder School of Business, U. of British Columbia*
Author: **Michael Daniels**, *U. of British Columbia*
Author: **Hsuan-Che Huang**, *Sauder School of Business, U. of British Columbia*

The COVID-19 pandemic has significantly changed the work and employment experience for employees, resulting in novel or exacerbated stressors and challenges. At the same time, worker isolation resulting from layoffs, work-from-home arrangements, and social distancing policies have prompted workers to turn to online social platforms to cope with these stressors. The goal of our research is to elucidate the online social coping process. We integrated the Transactional Model of Stress and social support theories and applied computational grounded theorizing and various machine learning techniques to a large corpus of work-related conversations on Reddit to propose a microanalytic theory of online social coping process. This model sheds light on the interactive and dynamic nature of the online social coping process and shows how sharers and responders interact and react to one another depending on the content of shared stressors, the social coping strategies the sharers adopt, and whether the sharer and responder belong to the same occupational category. We contribute to the social coping literature by demonstrating the importance of considering the listener's response to the social coping attempt and by extending the theory on social coping to the online domain.

Predictors, Forms, and Processes of Creativity

Session Moderator: **Maria Pajuoja**, *U. of Vaasa*

OB: The Benefits and Burdens of Work Moralization on Creativity 

Author: **Timothy Kundro**, *U. of North Carolina, Chapel Hill*

Although morality has long been considered an important and integral element of organizational life, current research suggests that moral considerations will reduce creativity. However, emerging evidence hints that morality may not always be a burden and instead could spark creativity. In this paper, I develop a model that investigates how work moralization – or the degree to which individuals integrate moral considerations into their work tasks – influences employee creativity. Drawing on regulatory focus theory, I argue that work moralization can lead to prevention focused cognitions – namely rumination – which impairs and redirects cognitive resources needed for creativity. However, I also posit that work moralization can lead to promotion focused cognitions – namely cognitive flexibility – leading employees to adopt cognitive approaches that increase creativity. Moreover, integrating research on value congruence, I suggest that work moralizers are the least likely to ruminate – and the most likely to become cognitively flexible – when they perceive their values are aligned with that of their organization, which ultimately fosters high levels of creativity. I test my theoretical model in a sample of federal scientists, employees at a sanitation plant, and an immersive pre-registered experiment. This research challenges the consensus that morality will negatively impact creativity and offers important contributions to research on organizational ethics, creativity, and moralization.

OB: Why Visionary Leadership May Limit Employees' Contribution to Ideation Contests    

Author: **Christopher Garrelfs**, *Kiel U.*

Author: **Julia Kroh**, *Kiel U.*

Author: **Carsten Schultz**, *Kiel U.*

Author: **Claudia Buengeler**, *Kiel U.*

OB Division AOM Meeting 2022 Best Student Paper with Entrepreneurship Implications Award, sponsored by the Kaufmann Foundation

To promote innovation in the turbulent era of digital transformation, visionary leaders can provide attractive visions of the future. However, recent empirical findings also reveal a "dark side" of visionary leadership. We investigate the effect of visionary leadership in ideation contests as one of the most popular innovation management instruments. Arguing that visionary leadership may have positive or negative impacts on employees' contribution to ideation contests, we test competing hypotheses. As research highlights vision communication as a core determinant of effective visionary leadership, we further investigate how the organizational vision communication (promotion vs. prevention-oriented) influences this relationship. Additionally, we argue that employees' competences may help to cope with the challenges of a prevention-oriented vision communication. By combining objective data from four real world ideation contests and survey data from a vignette study of 184 employees as participants, this article provides empirical evidence that (i) visionary leadership has a negative effect on employees' number and quality of ideas; (ii) the negative effect of visionary leadership gets more negative when vision communication is prevention-oriented and more positive when it is promotion-oriented; and (iii) this two-way interaction has a greater impact on the number and quality of ideas for employees with lower competence.

OB: Insights into the Individual Innovation Process in the 2020s: Updating Prevalent Understanding

Author: **Maria Pajuoja**, *U. of Vaasa*

Author: **Maarit Laiho**, *Turku U. of Applied Sciences*

This paper examines individuals' experiences of their innovation process. The aim is to gain deeper insight into the features of individual innovation and thereby update the prevailing theoretical understanding of the concept of individual innovation process. To achieve this, the paper uses a qualitative single case study approach. A systematic data-driven analysis of 34 semi-structured interviews - conducted in an agile product development environment - showed that at the team member level, the individual innovation process consists of six activities: identifying needs, managing constraints, developing solutions, testing, evaluating, and implementing. The paper extends previous understanding by zooming in on the individual experience and highlights the previously unidentified role of individual agency in the innovation process. The study contributes to innovation and management literatures by challenging the current understanding of how individuals innovate, and how this process can be managed.

Paper is Available to Meeting Registrants Only.

OB: Different Forms of Creativity? Regulatory Focus & Cognitive Processes on Novelty and Usefulness

Author: **Till Nicolas Deuschel**, *U. Carlos III de Madrid*

This paper examines how individual differences in regulatory focus (promotion and prevention focus and their combination) influence individuals to generate creative solutions that vary in their degree of novelty and usefulness. In an experimental design using a product development task (n = 227), we disentangled the effect of individual regulatory focus on the cognitive processes and creativity facets. Individuals with a high promotion focus produced creative prototypes that were more novel. Flexibility was a partial mediator of this relationship with a positive effect on novelty, while fluency had a negative mediating effect. Although prevention focus did not have an effect on either novelty or usefulness, it had a conditional effect on the relationship between promotion focus and novelty. The positive effect of promotion focus became insignificant for both low and high levels of prevention focus. Overall, our findings suggest that the impact of promotion focus on creativity is mainly on the novelty side of creativity, while prevention focus in itself has no relationship with either creativity facet. We discuss implications of the findings for future research on creativity in workplace settings.

OB: Intrinsic and Extrinsic Motivation and Employee Creativity: An Empirical Test

Author: **Sirkwoo Jin**, *Merrimack College*

Author: **Chaerin Yun**, *Salem State U.*

We explore how and when intrinsic and extrinsic motivation are related to creative process engagement and, in turn, lead to creativity level and frequency at work. Analyses of data collected from 163 employees and their supervisors showed that both intrinsic and extrinsic motivation have indirect effects on creativity level and frequency via creative process engagement; only intrinsic motivation had a direct effect on creativity level, whereas both intrinsic and extrinsic motivation had a direct effect on creativity frequency. Importantly, the effect of extrinsic motivation on creative process engagement was moderated by the level of creative problem solving expected in one's job, such that employees who were not required to engage in much creativity actually engaged in greater levels of creative process behaviors, which increased both creativity level and frequency. Theoretical and practical implications are discussed.

How to Review a Manuscript? A Review Development PDW Sponsored by Journal of Managerial Psychology

How to Review a Journal Manuscript?

Coordinator: **Jeremy D. Meuser**, *U. of Mississippi*

Coordinator: **Carrie A. Bulger**, *Quinnipiac U.*

Moderator: **Bella Galperin**, *U. of Tampa*

Moderator: **Ulrich Leicht-Deobald**, *Trinity Business School, Trinity College Dublin*

Moderator: **Peter Harms**, *U. of Alabama*

Moderator: **Adam J. Vanhove**, *James Madison U.*

Moderator: **Frankie Jason Weinberg**, *Loyola U. New Orleans*

Reviewing a manuscript and providing solid recommendations to action editors is a critical part of the scientific process. Yet, as critical as it is, there seems to be little opportunity to develop this skill, called a “professional obligation” (Treviño, 2008). This PDW, targeted at students and junior scholars, gathers JMP action editors to discuss reviewing experiences with current and potential reviewers in a round-table format. Preregistration will be required and registrants will receive a paper written by one of the AEs earlier in his/her career to practice review. At the round tables, participants will discuss their reviews and thoughts about the manuscript. AEs will provide feedback on the reviews. Participants will receive resources for use later when executing their own reviews.

Panelist: **Majken Schultz**, *Copenhagen Business School*
Panelist: **Garima Sharma**, *Georgia State U.*

The aim of this PDW is to focus on research approaches for studying grand challenges and, thereby, doing impactful research. However, much of this research focuses on past or present impact. In this workshop, such as through impactful research already conducted or being conducted, we shift the focus to research that impact practice in the future. The workshop has been designed to be highly interactive and dialogic. The overall goal of the PDW is to facilitate a structured discussion among presenters and the audience to rethink current and potential future scientific methods for studying grand challenges and to develop a research agenda for researchers' impact on the future.

Panelist: **Gyöngyi Kovács**, -

An innovative supply chain might support the development of higher risk management capabilities of all the supply chain parties, which helps to prevent disruptions from happening (Kwak et al., 2018). Equally, disruptions create opportunities and motivations for innovations. A new environmental policy that bans sourcing certain materials or materials from certain places could cause supply chain disruptions, while also motivating the firm to invest in green innovations (Gao et al., 2017). The recent COVID-19 pandemic, though devastating at a global scale, has also created slack resources in some sectors (i.e. idle workforce and facilities due to the stay-at-home orders), motivating firms to revise business processes, create new products, improvise new business models, or seek new customers to survive or even thrive during the crisis (Harris et al., 2020; Kovács & Falagara Sigala, 2021; Nandi et al., 2021; Wang et al., 2020). This PDW is intended to create a discussion between two groups of researchers, one on supply chain disruption management and one on supply chain innovation, to seek interesting research questions, useful databases, novel methodologies, etc. in the interface of the two areas.

Panelist: **Michael J. Leiblein**, *Ohio State U.*
Presenter: **Bilgehan Uzunca**, *ESADE Business School / Ramon Llull U.*

Research on incumbent-entrant dynamics has a long history in the strategy, entrepreneurship, and innovation literatures going all the way back to Bain (1956). This PDW illuminates several conceptual, methodological, and empirical insights associated with modern scholarship on incumbents' responses to entry and disruptive innovation. In this session, we aim to showcase the work of several leading scholars who are working in this domain, allowing each to share emerging insights from their particular point of view on the topic; conduct a dialogue with the participants as a collective; and field questions from attendees. The purpose of the presentations is to showcase active research and illuminate opportunities for future work. We anticipate that the first part of our panel discussion will be driven primarily through structured questions that encourage dialogue and constructive engagement between the panelists, orchestrated by the organizers.

Panelist: **Mitchell J. Neubert**, *Baylor U.*
Panelist: **Sen Sendjaya**, *Swinburne U.*

This panel symposium brings together eminent and emerging servant leadership scholars to debate about the future and value of the servant leadership model. The goal of our panel is to explore the conceptual, theoretical, and methodological challenges faced by servant leadership researchers. Participants will engage in an open discussion with the panelists about the current state of servant leadership's construct clarity, methods, and the universal application of servant leadership, to meaningfully move the field forward.

Alternative Perspectives on Organizing

Session Moderator: **Richard Longman**, *U. of the West of England*

CMS: From “Bad Apples” to “Bad Barrel” to “Bad System”

Author: **Nathan Gerard**, *California State U, Long Beach*

The purpose of this paper is to widen the scope of workplace bullying to include an analysis of neoliberalism and its propensity for violence. Applying a relational psychoanalytic frame, the paper draws hitherto underexplored connections between abusive relational dynamics and the system of neoliberalism, demonstrating how such dynamics permeate both organizational and domestic spheres, and rely upon an intergenerational transmission of trauma that has its roots in the toxicity of neoliberal forms of work. Findings suggest that workplace bullying becomes normative in a system defined by the steadily erosion of basic social provisions in the interest of market forces. In order to solicit compliance and ultimately wield control in this impoverished environment, neoliberalism shapes individuals into hyper-individualized selves who project their unwanted parts onto denigrated others, while simultaneously identifying with fantasized images of invincibility and self-made success. The irony, however, is that this form of defensive autonomy renders individuals particularly susceptible to narcissistic injury, and thus to identifying with contrasting images of absolute dependency. This oscillation between defensive autonomy and defensive dependency is shown to underpin sadomasochistic relations in both the home and work environment, as bully and bullied mirror each other in an enactment of neoliberal violence.

CMS: Deserving Freedom: A Bourdieuan Analysis of the Work Experience in a Self Proclaimed Liberated Firm 

Author: **Marine De Ridder**, *JCHEC Brussels Management School*

Author: **Eline Jammaers**, *Hasselt U.*

This study aims to further knowledge on the ambivalent work experience in “liberated” organizations, responding to calls for more empirical evidence on the threats and virtues of popular “new” managerial ideologies. In this article, we empirically draw on the findings of a case study undertaken in a liberated medium-sized enterprise, active in the field of IT consulting. By mapping out how the rules of the game have changed since the self-proclamation of being a liberated firm, we outline how enchanted values of freedom and autonomy serve to mask a new form of symbolic violence. We illustrate how workers themselves are complicit in their own demise by buying into and reproducing the liberated firm ideology whilst paradoxically being silenced and made to feel “freedom unworthy”. This study contributes to deepen our understanding of elusive forms of domination and to reveal ambivalences of worker experience in supposedly happy workplaces. Especially in light of the new world of work and the Covid 19-crisis, a better understanding of how the control-autonomy association works is timely.

Paper is Available to Meeting Registrants Only.

CMS: Communitarian Organising: Maya Women’s Lived Experiences through Decolonial Feminist Theory

Author: **Jennifer Manning**, *Technological U. Dublin*

Applying decolonial feminist theory to management and organisation studies provides space to value the specific experiences of work associated with indigenous, non-modern and alternative ways of organising by women in the Global South to produce original indigenous knowledge and break the mechanical transfer of management and organisation knowledge from the West to the Global South. This paper introduces the concept of communitarian organising, a way of organising by Maya women working together in community weaving groups in the rural remote Highlands of Guatemala. By way of decolonial feminist theory, communitarian organising is explored to encourage us to embrace an epistemic move towards a pluriversity of knowledges, ideas and experiences in organisation studies. Bringing the lived experiences of Maya women into organisation studies helps to create a pluriversal space for diverse epistemic encounters that recognise and value knowledge that has been produced from the lived experience of the gendered colonial differences.

Paper is Available to Meeting Registrants Only.

CMS: Democratic Practices Tackling Grand Challenges - Affect, Dissensus and Ethics of Alterity  

Author: **Jonas Friedrich**, *Research Institute for Organizational Psychology*

Democratic enterprises have been claimed to contribute to tackle grand challenges. This claim, however, has mostly stayed on a theoretical level. Disjunct research on alternative organizing has leaned into empirical practice and affect studies. It is currently not clear how dissensus relates or coins democratic organizing and whether this is linked to a novel democratic ethics. This research explores democratic practices in an ethnographic study of a small professional cooperative, investigating their affectual coloring by ethics of alterity and dissensus. We find six interrelated practices that coin the democratic collaboration: societizing (1), acknowledging (2), translucitizing (3), delegating (4), flowing (5) and second order deciding (6). Especially, the core social practices display a democratic ethics of alterity, which however goes beyond respecting gender, race and class developing sensitivities for a multiplicity of life situations of the co-workers. Dissensus becomes mostly prevalent in eclectic political discussions for example on the theories of change but gets tamed when issues are to be integrated into concrete operations of the enterprise. We contribute to grand challenges research, extend practice and affect literature on alternative organizing and further develop democratic ethics of alterity and dissensus. This research displays preliminary, intermediate results of an ongoing ethnographic field research.

The framing of the “future of work” has grown in visibility and scope over the past few years. Researchers have been positing deep change impacts from the data- and machine-enmeshed transformations in work for many years (Keynes, 1930; Zuboff, 1988; Adler, 1992; Rifkin, 1995; Brynjolfsson & McAfee, 2012; Susskind & Susskind, 2015; Hodgson, 2016; Frey & Osborne, 2017; Daugherty & Wilson, 2018; Hirschi, 2018; Tschang & Albiral, 2019; Raisch & Karkowski, 2020; Schulte et al, 2020). Large consulting organizations have taken up the challenge, building full practice and research areas (PWC, 2014; Illanes et al, 2018; Schwartz et al, 2019). This PDW will be held as a hybrid session. It will be a collaboration between scholars and practitioners at both the in-person and virtual versions of the Academy of Management (AOM) Conference for 2022. We will examine the accelerating changes impacting three frames of work - the work, the workplace, and the people/systems -- from different points-of-view. Using the World Cafe framework, participants will explore emergent change, frictions, and our own organizations. During this era of unprecedented instability, our core question will be how organizations and leaders can thrive in this changed landscape by embracing the future of work through new insights and capabilities.

MSR Best Symposium Proposal

As is fitting for the 2022 theme of the AOM meeting “Creating a Better World Together,” the presenters in this panel symposium will explore how mindfulness/meditation contributes to creating a world that supports the flourishing of humans and all sentient beings—which is how we perceive the meaning of a “better” world. We intentionally use the combined term “mindfulness/meditation” in the title because of their close historical connection within wisdom traditions and because we focus on the area of intersection between them. A number of perspectives can be gleaned from discussions about mindfulness/meditation and societal change, but there is little research as to how it generates or is conducive to change towards healthier, more wholesome societies. We bring together panelists with considerable experience in terms of personal practice, scholarship, and coaching with regard to mindfulness/meditation and propose to explore their perspectives on this question, looking towards creating a theory of mindfulness-based societal change as a component of social change theory for the social sciences and management. This session will be a rousing conversation, following short presentations by the panelists, intended to help all of us challenge our own current thinking on how [the process by which] mindfulness/meditation influences change in societies. We intend for the session to lead to a symposium-type article on this question, so as to generate more awareness and research on this topic.

Participant: **William Benjamin Ward**, *U. of South Carolina*
Participant: **Silvia Clark**, *Darla Moore School of Business, U. of South Carolina*
Participant: **Jonathan Hendricks**, *U. of Nebraska, Lincoln*

Within and outside of the workplace, individuals regularly engage in impression management, or attempts to manage how they are perceived by others to create positive impressions of themselves (Bolino & Turnley, 2003; Jones & Pittman, 1982; Wayne & Liden, 1995). Despite the importance of cultivating a good impression, it is not uncommon for individuals to misunderstand how certain behaviors will be perceived by others (Steinmetz, Sezer, & Sedikides, 2016). The five papers in this symposium each address an important aspect of impression management and highlight nuances that provide a greater understanding of 1) when and why impression mismanagements might occur and 2) how individuals can become better impression managers so they can more effectively reach their goals. These papers examine various forms of impression management, both through language and actions, and discuss how context affects the extent to which impression management is successful.

Using AI and Machine Learning to Generate Novel Insights about Prejudice In the Workplace *Machine Learning for Insights into Prejudice*

Organizer: **Elizabeth Demissie Degefe**, *Fuqua School of Business, Duke U.*
Organizer: **Abhishek Sheetal**, *Department of Management and Marketing, The Hong Kong Polytechnic U.*
Presenter: **Louis Hickman**, *The Wharton School, U. of Pennsylvania*
Presenter: **Kevin Nanakdewa**, *U. of Toronto*

Our symposium presents three projects that use machine learning to generate theoretical insights about prejudice in organizations. The first project illustrates the uses of natural language processing to examine how commonly used AI-based HR hiring tools are biased against applicants who sporadically use African American English instead of Standard American English. The following two projects use machine learning to identify antecedents of racism and xenophobia through abductive reasoning. Both studies identified novel antecedents that were not predicted by existing theories, and verified the antecedents suggested by machine learning with multiple correlational, experimental, and archival studies. These insights can subsequently be used to develop interventions to reduce racism and xenophobia in the workplace.

**Science With Impact: How To Engage Executives in Research Business
Leaders in Research That Makes A Difference**
Science With Impact

Organizer: **Svetlana Khapova**, *Vrije U. Amsterdam*

The overarching purpose of management scholarship is to create research that has impact in science and is at the same time considered useful by practitioners. To create impactful research, we need to mobilize our theories and methods to tackle important societal problems and improve the well-being of others. Collaboration, openness, inclusivity, and social responsibility are the ways forward. One of the means by which we seek to promote impactful research that makes a difference is by involving executives in research - not as informants and research subjects, but as those doing the scholarly inquiry into pressing societal challenges. At the Vrije Universiteit Amsterdam, we offer a part-time PhD programme in Business Administration for executives, business leaders and professionals who are eager to expand the frontier of knowledge based on the practical problems that matter to them. Equipped with the relevant tools and skills, they combine rigor and relevance to conduct problem-driven research that makes a difference for themselves, their organizations, and for society at large. This networking event will illustrate the principles and values of our part-time executive PhD program and offer a space to discuss how practitioner-researchers can contribute to science with impact. During the session we invite everyone to think about fresh ideas to bring research and practice closer together and offer a space for discussing how practitioner-researchers can help us craft more impactful research.

Presenter: **Matrecia James**, *St. Bonaventure U.*

Some of the events occurring in the United States during the last couple of years have made people worldwide aware of the need for diversity and inclusion. When many people think of diversity, they think of surface-level characteristics that represents an individual's visible physical features such as age, disabilities, race, ethnicity, or gender. While all of these areas of diversity are important, one of the most enduring is diverse ideas that can come from those differences. The coronavirus pandemic has also exposed a variety of ideas, some which have caused disunity and discord among many throughout the world. Leaders in academic and non-academic settings must make decisions about how to navigate in an environment where there are diverse ideas and strong opinions about how businesses should operate. We will investigate the concept of voice to demonstrate the need for employees/students to be heard in businesses as well as in academic settings. When leadership listens to the points of view of all, they not only provide voice and satisfaction from others, but they can also receive a wealth of information and ideas to propel the organization forward. This PDW will discuss the importance of leaders listening to everyone's ideas and explore strategies/techniques for optimizing voice.

Currently more than 60.9 million Latinx-identified individuals live in the U.S., making up more than 18% of the population, and trending to be approximately 30% by 2050. However, while Latinx individuals have increased as a proportion of the population, (1) business schools have been slow at addressing the needs of their Latinx students and faculty, and (2) with a few exceptions, the management scholarly literature has practically neglected research on Latinx populations. This PDW seeks to address these two issues by offering: (1) an opportunity for Latinx scholars to discuss navigating their professional lives as an under-represented group within business schools, and (2) a venue for exchanging insights and for setting a research agenda focused on this significant minority in organizations. Lastly, after two years of social distancing due to the Covid-19 Pandemic, this PDW will provide structured and in-person space to reconnect and reinvigorate the Latinx community of scholars and allies at the Academy of Management.

Academics: Management and Career Issues

Session Moderator: **Akhila Veldandi**, *Indian Institute of Management, Indore*

MED: Complexity of Ability-Motivation-Academic Performance Relationship: Revisiting AMO Model

Author: **Akhila Veldandi**, *Indian Institute of Management, Indore*

Drawing from the overarching ability-motivation-opportunity (AMO) model, this study is an effort to extend the AMO literature by exploring the sparsely researched combinative effect of ability and motivation dimensions on academic performance. Furthermore, we offer a novel operationalization of ability as a combination of objective, subjective, and perceptual measures. Additionally, the variations in the impact of ability over performance based on the work experience of an individual were also investigated. The data was collected from 220 students over a period of nine months of the first academic year of the postgraduate program in a management institute. We argue that while individuals with a certain amount of ability secure good scores in academics, motivation significantly helps those individuals whose abilities are comparatively low. We also argue that an individual's work experience would act as a complement for ability.

MED: Examining the Causes of Misconduct in Management Academia Through Theoretical Triangulation 

Author: **Lakshmi Balachandran Nair**, *Luiss Guido Carli U.*
Author: **Andrea Ascani**, *Gran Sasso Science Institute*

This article investigates low-profile misconducts, which are the difficult-to-identify research misdemeanors in management research. Due to their inconspicuous nature, low-profile misconduct could cause more damage to management scholarship than high-profile misconducts such as plagiarism, fabrication, or falsification. Prior literature on misconduct predominantly functions under a rational choice theory perspective. However, without acknowledging the intricate interactions between the individual traits of the researchers, their organizational contexts, their external environments, and the specificities of the concerned situations, understanding low-profile misconduct is improbable. Therefore, we examine the causes of low-profile misconduct by combining the lenses of five criminological and sociological theories – i.e. rational choice, differential association, general strain, self-control, and anomie theories. By taking a multidisciplinary stance and by triangulating, we offer a perspective that departs from the linear idea of misconduct by exposing an articulated set of complex dynamics operating at multiple stages of the research process and different levels of management academia. Based on this perspective, we discuss how management academia can address low-profile misconduct through a transformative research ethics education. Our holistic conceptualization of low-profile misconduct also serves as the foundation for future research in academic misconduct.

MED: Playing the Dignity Roulette: Deciphering Academic Dignity from the Perspective of Doctoral Scholars 

Author: **Divya Tyagi**, *Indian Institute of Management, Indore*
Author: **Mudit Shukla**, *Indian Institute of Management, Indore*
Author: **Jatin Pandey**, *Indian Institute of Management, Indore*

The publish or perish culture is a reality that management scholars deal with every day. It is a means of gaining legitimacy for the business schools while providing an objective approach to measure the performance of the scholars. At the same time, it paves the way for excessive competition, sham authorships, questionable research practices. While the literature on the implications of this culture is quite voluminous, it is primarily based on the experiences of seasoned academicians. So, in this study, we look at this culture from the viewpoint of doctoral scholars, specifically those pursuing their doctorate in a non-Western context. Our findings illustrate that the publish or perish culture subjects these scholars to a never-ending dignity struggle. They lose their dignity as they get dehumanized as machines for publications and stigmatized for their location and being non-native English speakers. These scholars internalize their inferior position and resort to internal divisions to recuperate their lost dignity. In sum, we propose that the publish or perish culture leads to the commoditization of dignity.

Participant: **Robert Wolcott**, *U. Of Chicago*

The objective of this workshop is to explore the mechanisms that encourage the transmission of positive social values and behaviors across multiple generations within an organizational context. While shareholder capitalism has encouraged considerable economic gains for humanity, corporations must now account for the negative consequences of their economic success. These consequences now comprise existential challenges to humanity—climate change, systemic poverty, inequality and related social ills. Corporations are under growing pressure to justify their pursuit of profits by acquiring a sense of purpose that attends to broader social issues and to reorganize production in ways that consider the effects of shareholder capitalism on future generations. However, modern executives and the business schools that train them know little about creating a sense of social purpose in corporations and even less about how to sustain a sense of social purpose across multiple generations. Increasingly, corporations turn to other organizational forms to understand both social purpose and intergenerational transmission of values. Associations, clubs, charities, religious societies, museums, philanthropic foundations, family businesses and related actors have a long history of honing entities that operate for social welfare, civic improvement, family aspiration, recreation, cultural pursuits and other purposes that are less focused on profit. Many of these organizations, moreover, have developed the capacity to endure for many generations without loss of mission or purpose. Yet we know little about the mechanisms by which they create and embed their sense of purpose or how they manage to sustain the sense of purpose over time.

Preregistration is required for this workshop. To preregister please fill out the following form <https://forms.gle/8AQ74LBjvcLdPor5>. This workshop is open to both virtual and in-person attendees and has two components. The first component is a panel discussion and the second is a paper development session. The first component will be open to all preregistered attendees. Participation in the second component will be limited to attendees selected through an application process. To apply for participation in the paper development session, please submit an abstract (500 words excluding references) for review that fits the thematic scope of the workshop. Please submit the abstract at <https://forms.gle/8AQ74LBjvcLdPor5> by July 22.

**A Non-Quant’s Guide to Reviewing Quantitative Papers: From
Minor Mistakes to Malfeasance**
Reviewing Quant Papers for the Non-Quant

Participant: **Lisa T. Stickney**, *U. of Baltimore*

Participant: **C Melissa Fender**, *Rutgers Business School*

Do you dread being asked to review quantitative papers? Are you more comfortable with qualitative research or theoretical papers? Are you new to reviewing and need some guidance for quantitative papers? Has it been a while since you have reviewed a quantitative paper? Have you noticed that other reviewers spot quantitative issues that you didn’t? If so, this PDW is designed for you. Join us, as experienced journal editors who happen to be serious “quants” (quantitative thinkers) take you through the steps of reviewing a quantitative paper. You’ll learn what to look for, how to spot red flags, how to handle them, and practice doing so.

**That's a (Science) Riot! Cultivating Research Impact
through Stand-up Comedy Part 2 (CANCELLED)**
Science Riot Research Impact

Organizer: **Sarah M. G. Otner**, *Kingston Business School*
Facilitator: **Jessie Hanson**, *Science Riot*
Distinguished Speaker: **Jamie L. Gloor**, *U. of St. Gallen*

This session is Part 2 of Submission #12480. Attendees must be pre-approved, and must register for both sessions. Research impact is girded by a solid foundation of effective Knowledge Exchange – i.e., a two-way flow between researchers and end-users of ideas, research evidence, experiences, and skills. However, many of the “best” researchers deploy few strategies beyond teaching, websites, and social media; even fewer can confidently capture public engagement and evaluate its impact. This PDW will explore the benefits to humor at work and exploit comedy as a tool of connection in order to build individual scholars’ capacities for science communication and research impact. Participants will receive expert media training in writing and performing comedic delivery of research insights, culminating in a live comedy show! See Program for linked sessions’ details.

Applications (via <https://forms.gle/qCy27Wkq2hSdhwMLA>) are due 8 July for Cohort B Public shows will be performed Friday 5 AUG & Sunday 7 AUG; all are welcome to attend. There is a US \$300 registration fee, non-refundable. If your application is approved, please register by using this link: <https://secure.aom.org/PDWReg/>.

Synchronicity at Noon: The Eclecticism of Change Processes and Practices

Session Moderator: **Jun Li**, *Metropolitan State U.*

ODC: Momentum, Deceleration, or Both? The Effect of Prior Changes on a Subsequent Change of the Same Kind 

Author: **Jun Li**, *Metropolitan State U.*

A conventional consensus on organizational change is the momentum view, which claims that prior changes of a given kind increase the probability of a subsequent change of the same kind. This consensus has been recently challenged by the deceleration view, which argues that prior changes decrease the probability of a subsequent change. By making a distinction between experienced changes and internalized changes, this study postulates that the two views complement and coexist with each other. A change of a given kind is less likely to occur with more experienced changes of the same kind, while it is more likely to occur with more internalized changes of the same kind. This integrated view is supported in a sample of 477 U.S. local governments making decisions about whether to outsource public services during 1982 to 2007. This study also looks into how relatedness to internalized changes affected the occurrence of a subsequent change of the same kind. The impact of operational relatedness was positive at an early time and increasingly negative in the long run. The impact of skill relatedness, however, was positive and steadily increased as time went on.

ODC: Sources of Power in Inter-Organizational Strategizing – Explaining Power Dynamics 

Author: **Henrike Schmidt**, *U. of Hamburg*

Author: **Eva Maria Wild**, *U. of Hamburg*

Author: **Carl Rudolf Blankart**, *U. of Bern*

Inter-organizational strategizing is associated with opening up the strategy-making process in order to pool expertise and resources across different organizations. However, some organizations still tend to exercise more power than others in the strategy-making process. Thus, understanding inter-organizational strategizing requires understanding how and by which resources actors are able to exercise power on strategic decisions and how power relations between involved organizations change over time. Providing a deep understanding on these power dynamics that shape the constitution of strategy advances and knowledge on inter-organizational strategizing processes. Our study explores inter-organizational power dynamics and identifies the relevance of different sources of power during the different phases of a strategy-making process. We exploit the case of a health care partnership of eleven different organizations that we follow over three phases of the strategy-making process over the period from 2015-2019. We find that organizational, economic, symbolic, and cultural capital constitute a priori sources of power, explaining basic underlying power relations. In contrast, social, knowledge, and reputational capital constitute emerging sources of power, explaining shifts in power relations over time. We contribute to the field on inter-organizational strategizing by providing novel insights into the sources of power that explain changing power relations and by revealing concealed, underlying power dynamics.

ODC: Understanding Organizational Tensions During Artificial Intelligence Transformation 

Author: **Annika Engström**, *Jönköping U., School of Engineering*

Author: **Alice Mohlin**, *Jönköping U., School of Engineering*

Author: **Nina Edh Mirzaei**, *Jönköping U.*

Author: **Daniel Pittino**, *Jönköping International Business School*

Author: **Anette Johansson**, *Jönköping International Business School*

AI has the potential to be a disruptive technology causing paradigm shifts in industries and greatly impacting both operational and strategic decision making. Adopting AI technologies requires proactively engaging both the technical and social system of the organization as processes, workflows, as well as individual employees, are influenced. This paper explores potential tensions between the social and technical systems in the early change process of AI transformation to understand the nature and degree of AI transformation. We do this by analyzing in-depth inquiry from 23 focus groups involving 112 white-collar industrial employees in large multinational industrial firms using a change management perspective. Our study revealed nine categories of tensions divided into tensions between the current and future state and tensions between humans and machines. This stresses the need to adopt a socio-technical perspective in the attempt to understand organizations approaching AI and provides practical implications for organizations considering adopting AI technologies.

Author: **Pisitta Vongwasdi**, WHU Otto Beisheim School of Management

With the increasing speed of change and disruption that is taking place, this paper presents findings and views on the increasing importance of brand change for family businesses seeking to build legacy. Whilst change and family business have attracted broad based research interest, past studies are however limited and overly focused on “Outside” brand change. Through Interpretive Phenomenological Analysis (IPA) in-depth interviews, this paper uncovers both the conscious and unconscious brand change elements and redefines brand change in layers of “Outside” and “Inside” change - through analysing the differing approaches family businesses have taken on their brand change journeys. By adding the lens of the Psychodynamic Approach in the field of brand change in family business, this paper aims to provide better insight as to where a family business is in relation to its brand change journey and an understanding of how to navigate the varying degrees of “Outside” and “Inside” change to deliver transformational brand change to build family business legacy.

This paper addresses the transformational changes taking place in the Microfinance Banking (MFB) industry in Pakistan, and the way these changes have led to ethical tensions and issues for the Human Resource and the other top management stakeholders in the MFB Pakistan. The MFB is crucial for the social and economic development of the country, its business and, more vitally, for the communities in which it operates. Since 2007, the MFB has undergone a transformation of sorts in Pakistan not least of which is its Mission Drift (MD) which warrants an in-depth analysis as in this paper especially the main drivers of this change

**A Human Rights Approach to Management Education: Research
with and for Corporate Practitioners**
A Human Rights Approach to Management Education

Organizer: **Natasja Sheriff**, *New York U.*
Organizer: **Michael Posner**, *New York U.*
Organizer: **Dorothee Baumann-Pauly**, *U. of Geneva*
Organizer: **Berit Knaak**, *GSEM - U. of Geneva*

In today's increasingly complex global economic and political environment, multinational companies confront a range of human rights challenges that are core to their business operations. While they differ significantly by industry, each presents growing reputational and financial risks to these companies. The co-organizers of this workshop are developing approaches to research and teaching that respond to these growing challenges, which are of relevance to the 2022 Annual Meeting theme Creating a Better World Together. The approaches presented combine (a) rigorous academic assessment of the challenges, with (b) development of practical recommendations that companies can adopt to address human rights problems. They are designed to produce research products and pedagogical tools that are readily accessible to a broad audience, including business leaders and government policymakers who have the capacity and authority to drive better outcomes. We recognize the need to develop and win support for industry-specific human rights standards, and the development of practical metrics to measure compliance with those standards. It is also essential to address the current lack of adequate data pertaining to company operations, a deficit that seriously hampers a meaningful assessment of performance against these standards. The approaches we present thus offer scholars organizational frameworks that integrate managers, organizations, and stakeholders to address today's human rights challenges. This two-part professional development workshop, incorporating a moderated panel discussion and interactive workshop, will explore this evolving approach to human rights research and teaching and examine how it is being applied to labor rights issues in global supply chains.

As the health care industry undergoes dramatic shifts in response to changes in population needs, policy reform, fiscal constraints and technological developments—in addition to the unfolding COVID-19 pandemic—the need for more research on key topics has become apparent. This PDW invites participants to engage in discussion of six of the “hot topics” in health care management research and practice: 1) compassion, kindness, and well-being at work; 2) organizational learning and retention of lessons learned from COVID-19; 3) building inclusive and equitable health care and workforce; 4) telemedicine, health care technology/digitalization; 5) changing health professions in a changing world, and 6) new models for delivering and integrating care. There will be two rounds of discussion. During each round, participants will gather at topic-specific research roundtables where they will meet other researchers who share similar interests and discuss with them the state of research on their shared topic, challenges in conducting research on this topic, and future research, for examples. Discussion at each roundtable will be facilitated by two or three accomplished scholars, with active research on the hot topic. Participants will self-select into the topic area of their choice at the beginning of the session. This PDW offers participants the opportunity to engage in rich research discussions, share new ideas, and make meaningful connections with potential collaborators.

The phenomena of international business and international management morphed substantially in the last couple of decades. Theoretically, large multinational corporations (MNCs) have the resources for gaining global scale and scope economies, and also the capability for local adaptation in multiple countries and cultures and are expected to be dominant forces in shaping the international economy. However, this MNC superiority appears to face several challenges. MNCs appear to face decline in profits from international operations owing to declining aggregation and arbitrage advantages, among other reasons. Also, although MNCs adapt to local environments in host countries, such adaptations do not necessarily pay-off. Domestic firms in several countries appear to perform better than multinationals. Small and medium enterprises are able to access the world and are becoming global in their operations. In several parts of the world, MNCs face significant competition from small and medium enterprises in the local environments and, perhaps, global environments as well. This PDW brings scholars together to discuss and debate the following questions: What is the difference between the traditional MNCs and small and medium enterprises that are global? Is it just the difference between the “big” and “small”? What is the role of MNCs that makes them distinctive as opposed to SMEs? What are the areas of cooperation and collaboration between large MNCs and small firms?

Since 1997, ISEOR research center has been a partner of the MC Division along with a few other research centers focused on management consulting methodologies. This partnership has been an opportunity to set up debates between various scientific approaches to management consulting, in particular with the Tavistock Institute, Benedictine University, Center for Effective Organizations (USC), etc. In addition, international comparisons took place in the past 22 years through the organization of nine co-sponsored conferences and doctoral consortia in Lyon, France. Such conferences gave rise to an overall 900 papers, in addition to the 200 papers submitted by Iseor researchers to MCD over the past twenty years. In the wake of an overall 40 paper presentations at the MCD in the past twenty years and 9 co-sponsored MCD-ISEOR conferences in Lyon, the Socio-Economic Approach to Management has gained visibility through ten of the books edited by A. F. Buono in the Research Series in Management Consulting published by Information Age Publishing. Therefore, this proposed symposium to the MCD is an opportunity to formalize the learning of this long cooperation and its contribution to the scientific legitimacy of management consulting as a science that is as worthy as medicine, while focused on the health of companies and organizations.

This interactive PDW explores how to harness the power of social media to enhance: student preparation, student engagement, student learning and retention, student presentations, and student sharing of their accomplishments in management courses. This PDW will also demonstrate how faculty have used social media to create long-term collegial relationships among students and faculty. An excellent panel of faculty from five countries (United States, Canada, United Kingdom, Singapore, and Switzerland) will demonstrate how members of the Academy can successfully use many social media platforms in their own management courses, including: Facebook, TikTok, Slack, WhatsApp, LinkedIn, Flipgrid, YouTube, Instagram, Twitter, and Pinterest. The PDW facilitators will briefly explain each social media platform and show how to access it. Next, the facilitators will demonstrate and explain how they specifically used each of the social media platforms successfully in their management classes. The facilitators will explain the advantages and disadvantages of using each platform and will explain about possible pitfalls or issues to look out for, such as privacy issues and settings, data, and personal information security and protection. Lastly, the facilitators will have those interested make some TikTok videos about management concepts during the session that will be posted for any member of the Academy to view. In sum, this will be an exciting and entertaining PDW session that will enable those members of the Academy in attendance to immediately incorporate what they have learned to successfully improve their own management courses.

Participant: **Giuseppe Labianca**, *U. of Massachusetts, Amherst*
Participant: **Hiroki Sayama**, *Binghamton U.-State U. of New York*

Employee creativity is crucial for organizational success in this turbulent and competitive environment. Although a large volume of research has shown leader's influence on employee creativity, the understanding on how leader influences employee creativity is still incomplete. In particular, prior research has largely been one-sided such that leader has received disproportionately more attention than employee, and leader's positive influence has received disproportionately more attention than leader's negative influence. The four studies in this symposium contribute new theoretical perspectives to investigate employee's role in the process, and offer more balanced view on leader's influence on employee creativity.

OB: **Employee-AI Augmented Collaboration: A Qualitative Study of Fashion Designers and Stylists** 

Author: **Alentina Vardanyan**, *Cambridge Judge Business School*

OB Division AOM Meeting 2022 Best Dissertation-Based Paper Award, sponsored by Wiley-Blackwell on behalf of the Journal of Organizational Behavior
William H. Newman Award Nominee

Creative work requires effective collaboration (Rouse, 2020), however, it is unclear how traditional forms of collaboration apply when individuals co-create with artificial intelligence (AI). Collaborating with AI is nuanced and complex. As AI becomes more prevalent in organizations, it is important to understand how employees and AI can work together on creative work. This inductive study of fashion designers and stylists reveals the dynamic ways in which creatives first lean in to learn, disconnect to protect their work and creative identity, and then reconcile ways to reconnect again for co-existence. My theory of employee-AI augmented collaboration shows how the iterative process of multiple disconnections and reconnections enables and improves collaboration between employees and AI.

OB: **#BlueBloods: Fictive Kinship, and Unethical Pro-Organizational Behavior in Police Organizations**   

Author: **Alexandra Noel Figueroa**, *U. of Utah, David Eccles School of Business*

Author: **Jared Mitchell Poole**, *U. of Massachusetts, Boston*

We report an internet-based ethnographic study which examines how unethical pro-organizational behavior (UPB)—in this case, violence—emerges as an expression of a profession’s moral identity. We specifically examine the professional culture of law enforcement officers in the United States. We argue that fictive kinship metaphors (the use of family language between unrelated people) facilitate increased moral identity overlap within the organization. Using an ethnographic approach that includes publicly available police-published documents, we find that fictive kinship metaphors can alleviate—even entirely remove—moral tensions one may feel when committing unethical pro-organizational acts. Indeed, unethical pro-organizational behavior can be purely morally motivated. Previous discussions of organizational ethics have highlighted the importance of morality in preventing unethical behavior. However, we show that a strong moral identity that is widely shared in a profession can have detrimental consequences for members of the public and other organizational stakeholders.

OB: **Multiple Identities of Employed Informal Elderly Filial Carers and Their Impact on Carer Wellbeing**

Author: **Elena Maniatopoulou Hadjipanayi**, *Mrs*

Relying primarily on work-family conflict theory (WFC), informal care has attracted attention by researchers, policy makers, and society, but few studies have explored specifically informal filial elderly care. Few attempts have been made to investigate the role of the multiple identities of the informal elderly filial carers, those being carer identity, employee identity and personal identity. No study has looked specifically at the impact of those identities to carer wellbeing, which incorporates their subjective and psychological wellbeing. We build on a multiple identity theoretical framework to propose that the three aforementioned identities have an impact on carer wellbeing. We further combine these identities in different configurations and propose that they vary in the ways in which they affect informal elderly filial carers’ wellbeing. Drawing from this configurational framework, we put forth a typology of employed informal elderly filial carers that postulates the possible outcomes for carer wellbeing.

OB: **Losing While Gaining: A COR Perspective of Organizational and Occupational Identifications** 

Author: **Yangxin Wang**, *Chinese U. of Hong Kong*

Author: **Dora C. LAU**, *Chinese U. of Hong Kong*

Drawing on the multiple identities research and conservation of resources (COR) theory, this research investigates both a losing and a gaining effect of dual identifications (i.e., employees’ simultaneous identification with organization and occupation). In particular, we introduce two important but unrecognized characteristics—the commensurateness and aggregation of the strength of organizational and occupational identifications and explain how a high commensurateness will drain employees’ vigor resources, while a high aggregation will replenish employees’ social support resources. We additionally examine how identity conflict will moderate the relationships between dual identifications and vigor/social support resources, and how these two types of resources will further mediate the relationships between dual identifications and three important individual outcomes (i.e., job performance, organizational citizenship behaviors, and subjective well-being). We used a multi-wave, multi-source survey study to test our hypotheses. Theoretical and practical implications are discussed.

Author: **Jean-François Harvey**, *HEC Montreal*

OB Division AOM Meeting 2022 Most Innovative Student Paper Award, sponsored by Sage Publications.

This article aims to trace the antecedents of promotive and prohibitive voicing in the police workforce. We draw from trait activation theory to develop a model that includes individual and organizational factors that can create or hinder the social support necessary for police officers to adopt voice behavior. Specifically, we argue feelings of psychological safety emerge and encourage voicing from imaginative individuals depending on the centralization dynamics in which they operate. We used time-lagged, survey-based data from 326 Canadian police officers to test our theory. We found that imaginative officers operating in a decentralized context exercise more voicing thanks to heightened feelings of psychological safety. However, imagination can backfire in a context of centralization because officers feel less psychologically safe and refrain from speaking out. Our study helps shed light on which officers can become inclined to engage in voice behavior and under what circumstances, which offers significant contributions to both theory and practice.

Knowledge Sharing and Learning

Session Moderator: **Silu Chen**, *Central China Normal U.*

OB: Is Motivation Needed for Knowledge Sharing? 

Author: **Tatiana Andreeva**, *Maynooth U.*
Author: **Paola Zappa**, *U. College London*
Author: **Veronika Kabalina**, *National Research U. Higher School of Economics*
Author: **Anita D. Bhappu**, *U. of California, Merced*

Employee motivation to share knowledge is widely acknowledged both as an important predictor of knowledge sharing behaviors, and as a challenging factor to manage. In this light, it would be useful to know - will the lack of motivation fully block knowledge sharing, or can one still share their knowledge being unmotivated to do so? In other words, is motivation to share a necessary condition for knowledge sharing? Building on self-determination theory, past research suggested to differentiate between intrinsic and extrinsic motivation to share, as intrinsic motivation is a stronger predictor of knowledge sharing, and, at the same time, is more difficult to influence by managerial interventions. We do not know if both types of motivation are equally necessary for knowledge sharing to happen, or if, when intrinsic motivation is lacking, extrinsic motivation can compensate for it. We explore these questions using three datasets (total N = 610) on organizations from different countries and industry sectors and applying a new methodological technique, Necessary Condition Analysis (NCA). Our findings, largely replicated across three samples, demonstrate that intrinsic motivation is a necessary condition for the employees to share knowledge, while extrinsic motivation is not. Implications for managing knowledge sharing behaviors are discussed.

OB: Sharing or Hiding? The Influence of Supervisor Bottom-Line Mentality on Employee Knowledge Behaviors 

Author: **Yanghao Zhu**, *Zhongnan U. of Economics and Law*
Author: **Wenxing Liu**, *Zhongnan U. of Economics and Law*
Author: **Silu Chen**, *Central China Normal U.*
Author: **Kai Gao**, *Zhongnan U. of Economics and Law*
Author: **Peipei Shu**, *Zhongnan U. of Economics and Law*
Author: **Dongmei Zhao**, *Zhongnan U. of Economics and Law*

Because of the COVID-19 global pandemic, organizations are facing significant challenges to their survival and development. To counter these challenges, striving for bottom-line outcomes has become the most important objective of supervisors. However, there is little research on the influence mechanism of supervisor bottom-line mentality (BLM) in the field of knowledge management. Drawing on the dual-strategies theory of social rank and leader distance theory, we investigated the mediating role of perceived leader prestige or dominance by employees and the moderating role of supervisor-subordinate guanxi (SSG) in the relationship between supervisor BLM and employee knowledge-related behaviors. The results of a multi-wave survey of 185 adults working in Chinese companies showed that perceived leader prestige or dominance mediated the relationship between supervisor BLM and employee knowledge sharing or hiding. They also showed that SSG moderated the relationship between supervisor BLM and perceived leader prestige or dominance, as well as the indirect effects of supervisor BLM on employee knowledge sharing or hiding via perceived leader prestige or dominance. We discuss the theoretical and practical implications of our results for scholars and practitioners.

OB: Multilevel Analysis of the Effects of Experiential and Observational Learning on Team Performance

Author: **Jiantao Zhu**, *U. of Science and Technology of China*
Author: **Bingqing XIONG**, *U. of Science and Technology of China, City U. of Hong Kong*
Author: **Zhao Cai**, *U. of Nottingham Ningbo China*
Author: **Eric.T.K. Lim**, *UNSW Sydney*
Author: **Chee-wee Tan**, *Copenhagen Business School*
Author: **Hefu Liu**, *U. of Science and Technology of China*

In spite of competing in an increasingly large number of tournaments, do e-Sports players have the ability to learn and improve on a continuous basis? This question is deeply connected with experiential learning theory because players could acquire experience through repetitive participation with diminishing marginal gains. Observational learning serves as a complementary learning mechanism, allowing players to utilize external sources of knowledge (or others) to accelerate their learning process. This study hence advances a dynamic and integrated research model that scrutinizes peer- and rival-based observational learning as moderators of the influences exerted by experiential learning on incremental absorptive capability and team performance. Analyzing data collected from 78,645 teams and 36,422 players involved in e-Sports games, we revealed that peer- and rival-based observational learning steepen the inverted U-shaped relationship between experiential learning and players' incremental absorptive capability. In addition, peer-based observational learning flattens the U-shaped relationship between experiential learning and team performance, whereas rival-based observational learning steepens the U-shaped relationship between experiential learning and team performance. It is also found that a player's incremental absorptive capability enhances team performance.

OB: Which Traits and Leadership Styles Best Predict Job Performance? A Machine Learning Approach  

Author: **Abhishek Sheetal**, *Department of Management and Marketing, The Hong Kong Polytechnic U.*

Author: **Changjun Li**, *Xi'an Jiaotong U. School of Management*

Author: **Fuli Li**, *Xi'an Jiaotong U.*

What are the most important antecedents of employees' job performance? Two influential research streams have identified a wide range of personality traits and constructive leadership styles as independent predictors of job performance. However, virtually all past research has assessed the contributions of a few constructs at a time, leaving several open questions: Which personality trait and/or constructive leadership style matters most for high job performance? As a group, are personality traits or constructive leadership styles more relevant for job performance? Which are the strongest personality-constructive leadership interactions that predict job performance? Given the large number of personality and constructive leadership predictors identified in the literature, answering these questions using traditional regression-based approaches is not feasible. This research adopts a machine learning approach (i.e., a gradient boosting model) with a large-scale field study of 5,849 employees to answer these questions. The machine learning results revealed optimism and leader-member exchange are the most predictive personality and constructive leadership variables; concluded that as a group, personality traits and constructive leadership styles have equivalent predictive power; and identified multiple novel personality \times constructive leadership interactions. Our research highlights that machine learning methods can help generate novel theoretical and practical insights in the organizational sciences.

Panelist: **Cynthia S. Halliday**, *U. of Texas at El Paso*

Discussant: **Katie Badura**, *Georgia Institute of Technology*

Discussant: **Daniel A. Newman**, *U. of Illinois at Urbana-Champaign*

Acknowledging recent critiques, this interactive panel symposium will provide a forum for scholars to discuss several promising areas of inquiry for future LMX research and spark new ideas to help us better understand the leader-follower relationship. Panelists are LMX researchers who will discuss the recent critiques of LMX and innovative topics in the area of LMX research in which they are presently engaged. Participants will be able to network with these scholars in order to advance LMX research, and perhaps develop collaborator relationships. Question and answer periods, and breakout sessions with senior scholars will give opportunities for small group interaction with them.

The management literature is rich with theoretical and empirical insights into the processes and outcomes associated with interpersonal relationships at work. Whereas some workplace relationships and relational experiences have received a great deal of scholarly attention, others have been cast to the shadows. In this presenter symposium, we offer five papers uncovering the processes and consequences associated with taboo, counter-normative, and marginalized relational experiences in the workplace. Specifically, our symposium shines a spotlight on oft-overlooked relationships and relational experiences, including unrequited love in the workplace, workplace romances, relational experiences of Black women executives, and luck’s existence in employees’ relationships and careers. The theoretical and empirical papers included in this symposium offer novel contributions to the workplace relationships literature and its intersections with identity, careers, and gender and diversity, generating fruitful avenues for future research.

Participant: **April L. Wright**, *Warwick Business School*

Research in Management Learning and Education has gained increased prominence within the Academy as external stakeholders demand evidence of student learning, accreditors require institutions to show evidence of impact and recent crises have set numerous practical challenges and theoretical puzzles. In this session, a panel Editors and Associate Editors from the three major Management Learning and Education publications (i.e., Academy of Management Learning and Education, Journal of Management Education, and Management Learning) will discuss and provide advice on how to design and conduct novel, impactful, and meaningful research in management learning and education. The goals are to obtain a better understanding of core characteristics and quality criteria of good research in our field and knowledge of opportunities for developing publications. More specifically, we want to provide current and prospective authors with a supportive, encouraging and interactive platform where they might share their ideas for designing and conducting management learning and education research projects and gain initial feedback and direction from experienced editors. All are welcome to attend.

This workshop offers practical advice to doctoral students on completing their dissertations and transitioning to their first academic positions. It is anticipated that the workshop will be held in live on-site format (conditions permitting). The workshop is open to all doctoral students. Pre-registration will be required. The workshop will be conducted in an informal setting where students will be able to interact with faculty and other students in small groups. The finalists for last year's STR Outstanding Dissertation Award share the coordination of the workshop. The format of the PDW will include presentations and perspectives from last year's finalists and a panel of senior faculty. Attendees will break out into groups to meet with faculty and Q&A will be held after all sessions.

This PDW (professional development workshop) session engages workshop attendees to debate and get feedback on their research related to the role of digital technologies for producing healthcare that ensures “healthy lives and promote well-being for all at all ages” (SDG 3, UN). In particular, the PDW is aimed at examining accessibility to digital innovation in healthcare, i.e., access to the digital innovation process and access to digital innovation as health services. While many have seen the healthcare industry struggle, digital technologies are constantly evolving and finding new applications in healthcare (Das, 2019). Since the COVID-19 pandemic has started, we have seen an increasing pace in which digital innovations have emerged (Oborn et al. 2021; Thomas et al., 2020). At the same time, the pandemic has also revealed tremendous disparities in access to innovations for different groups within and between societies (e.g., Rosenbaum 2020). To this point, there seems to be no equal access to the innovation processes, the new products and services, or the fruits of these digital innovations. This is in so far surprising as digital technologies carry the potential to raise accessibility by reducing transaction costs and enabling decentral decision making. In order to produce digital innovations for a more inclusive healthcare, diverse participants including private sector actors are needed to invest and share data in common infrastructures and engage in joint service delivery. We invite scholars to reflect on the entrepreneurial efforts and environments needed for these health futures.

We invite researchers to submit their extended abstracts (2-5 pages) to us (hannes.rothe@icn-artem.com) until July 15, 2022. Find more information on www.de-hub.org/aom

The objectives of this PDW are to report on the status of the Third Edition of the Global Human Resource Management Casebook and to meet the editorial team and fellow case contributors, having kick-started this project at last year's Annual Meeting with a PDW held synchronously. In line with this, we will discuss with the participants their initial learnings from organizing and participating in such a global project. More importantly, we would like to engage with the wider Ambassador Community of the HR Division and use the PDW to discuss potential new project(s) for both the HR Division and its Ambassadors, in particular reflecting upon learnings from the pandemic. Peer reviews were conducted by the Casebook's sponsor and publisher, Routledge, after the last PDW, with input on potential topics, design, and format of the Third Edition. Prior to this year's Annual Meeting, the authors/author teams of the 33 HRM cases shall have received the reviews of their cases from two members of the editorial team and have made the first revisions of the same.

Contributors to the casebook, as well as other HR Ambassadors, are welcome to attend the PDW.

This PDW will allow division members to participate in research discussions moderated by accomplished HR scholars, as well as network with other scholars researching similar topics. Attendees will have an option to participate in two 40 minute roundtable discussions from a variety of research areas. The tables research themes span a range of 18 HR topics: Alternative Work/Work Arrangements, Compensation, Diversity, Global HRM, HR & Entrepreneurship, HR Analytics, Leader Development/Executive Coaching, Onboarding & Socialization, Organizational Culture & Climate, Performance Management (performance appraisal and feedback), Recruitment/Job Search, Research on Social Sexual Behavior, Selection/Staffing, Sex & Gendered Work Disparities, Stigma and Status, Strategic HR, Training & Development, and Turnover/Absenteeism/Withdrawal.

Advice on Writing an Award-Winning Dissertation from Dissertation Award Finalists

Award-Winning Dissertation Writing Advice

Session Chair: **Davina E. Vora**, *State U. of New York at New Paltz*

Panelist: **Marica Grego**, -

Panelist: **Vera Kunczer**, *WU Vienna*

Panelist: **Noman Ahmed Shaheer Siddiqui**, *U. of Sydney Business School*

Panelist: **Nan Zhang**, *California State U. Stanislaus*

Deciding on a dissertation topic and completing a dissertation, let alone an award-winning one, can be a daunting task. Are you a Ph.D. student who could use some advice about the process? Do you have questions for others who have not only completed their dissertations, but also whose dissertations were recognized as being among the best in their field? If so, this session is for you! Recent finalists and winners of dissertation awards in international management talk about their experiences and share advice with you. Their points cover the entire scope of the dissertation process as well as both professional and personal issues. Even if you are not striving to have the best dissertation in the world, their tips and suggestions may be valuable to you. Regardless of your stage in the dissertation process, we encourage you to attend.

**Methods for Teaching International Business Which
Work Well in Hybrid and Blended Modes**
Methods for Teaching in Hybrid and Blended Modes

Presenter: **Carl Fey**, *Aalto U. School of Business*
Presenter: **Ho Howard Yu**, *IMD International*
Presenter: **Andreas P.J. Schotter**, *Ivey Business School*
Presenter: **Jean SK Lee**, *China Europe International Business School (CEIBS)*
Presenter: **Lynn Imai**, *Ivey Business School*
Presenter: **Christopher Clark**, *Terrafricanados*

Hybrid teaching is when some of the students are in the classroom and some of the students are on-line. Blended teaching is when part of a program is delivered in-person and part is done on-line. Both of these methods of delivery are becoming increasingly common as our world evolves with COVID and will continue to be important in a post-COVID world. Thus, there is a need to reflect about how we can best teach international business via hybrid and blended modes of delivery as this PDW will do. This PDW will present some best practice examples of methods that can be useful for teaching international business in hybrid mode. We will discuss how to modify an international emersion capstone consulting project from an international business masters program for on-line and blended format, how teaching with video cases can help make hybrid teaching engaging and effective, successful approaches to teach about multicultural teams via hybrid mode, and how to teach traditional paper-based case studies in hybrid and blended modes so that they are most engaging. We will also discuss what components of blended programs work best in-person and which can be done effectively or even better on-line. The session will draw on the experience of several leading business schools as well as that of several very experienced educators. Following some presentations, the session will include a panel discussion where attendees can ask questions and share their ideas and experience. Participants will leave this session with new skills and ideas that they can immediately implement to make their teaching more effective.

Recognizing Bi-Directional Authority as a Factor in the Great Resignation

Bi-Directional Authority Factors in Leadership

Facilitator: **Kimberly Carlson**, *Virginia Tech*
Facilitator: **Charity Boyette**, *Virginia Tech*

Good leaders scan their environment and industry to align management decisions with societal norms. Great leaders further connect those decisions with organizational need, rather than personal preferences. In this workshop, we will explore theories of bi-directional authority and how decisions by leaders may empower their employees to succeed or compel them to seek opportunities elsewhere. The purpose of the workshop is to develop a working document of best practices for organizational leaders to address current and future engagement challenges, including the COVID-era’s “Great Resignation.”

Organizations are a patchwork of individuals that gather in order to constitute a community. There are people from different countries that come from neither different organizations nor companies and speak different languages. They also have different religions and sometimes different political issues and opinions. In spite of these differences, people have to work together in order to achieve common objectives. In several cases of intervention, we can notice that consulting outcomes can build a new common language for the organization, grounded among different cultures. The presenters will share with the participants what they have learned through intervening in different cases in France, UK, USA, Lebanon, and Dubai.

**Arts in Management Education: Creative Exercises Using
Poetry, Literature, Music & Film**
Art Based Exercises for Management Education

Organizer: **Jyoti Bachani**, *Saint Mary's College of California*
Speaker: **Mary Vradelis**, *St Mary's College & Sequoia Consulting Associates*
Speaker: **Lili Yan**, *Saint Mary's College of California*
Speaker: **Grant Rozeboom**, -

Scholars who have used different art forms in their teaching, research and practice, as a way to explore, experience, understand, and re-imagine various management topics, will share their expertise and offer demonstrations to train peers. These immersive experiences promote reflection and critical thinking, and go beyond the dry analytical theories that tend to be divorced from practice but are currently dominant. This workshop offers: 1. Presentations by a panel of their individual expertise in using the arts in the strategy, sustainability, organizational behavior and ethics class rooms, to share why and how they pursue this work and its impact. 2. Direct experience with the art forms, poetry, literature, music, and film to understand its soft power, with participatory and contemplative reflections as a community. 3. A dialog and question and answer session to share resources and build connections for future work. This workshop builds on four year of previously offered PDWs, the Contemplative Art Salons, where hundreds of attendees were trained in the use of arts. Now, we share how these exercises have worked in creating memorable classroom experiences for a variety of different subject areas and students. Art is an important form of self-expression and social commentary, it engages people, captures the zeitgeist, entrains or challenges assumptions. Artistic creation and experience influence what we see, notice, think, and decide to do subsequently. This work humanizes management and inspires creativity to develop managers who are better prepared to work collaboratively for the common good.

The Influencer Economy: Exploring the Work of Social Media Cultural Production

The Influencer Economy

Organizer: **Farnaz Ghaedipour**, *McMaster U.*
Organizer: **Yun Ha Cho**, *U. of Michigan*
Participant: **Angèle Christin**, *Stanford U.*
Participant: **Judith A Clair**, *Boston College*
Participant: **Julianna Pillemer**, *New York U.*
Participant: **Njoke Thomas**, *Boston College*

Social media platforms such as Instagram, TikTok, and YouTube have created a new group of workers who are commonly referred to as ‘influencers’, ‘content creators’, or ‘creators’. These terms have a loose connotation and generally refer to people with a large number of followers/subscribers who engage in digital cultural production on social medial platforms and can mobilize their audience’s attention to generate income. It is estimated that the influencer marketing industry, marketing based on the contents created by influencers on social media, will grow to be worth up to \$15 billion by 2022 compared to \$8 billion in 2019 (Geyser, 2019). Leading corporations are increasingly incorporating influencer marketing in their budget; Estée Lauder, for example, announced that the company is committing to spend 75% of its marketing budget towards influencer marketing (Gerdeman, 2019). While this growth has implications for the organization of work and the experiences of workers, most research in this area is conducted by scholars of media and communication studies (e.g., Baym, 2018; Duffy, 2017; Marwick & Boyd, 2011) and management and organizational scholarship on the topic is scarce. More research is needed in order to understand the nature of this work, the experiences of workers, and the role of different social identities such as those based on gender or race in this market. The aim of this symposium is to initiate a conversation about studying social media cultural production and the influencer economy in management and organization studies. The dialogue will focus on questions concerning theory, methods, and future directions. This symposium will provide conceptual depth in terms of philosophical underpinnings for digitally-mediated cultural production, and will explore theoretical frameworks and methodological tools most suitable for studying social media content creators.

The 10th annual Diamonds in the Rough (DIR) offers early-stage career guidance for emerging scholars across theoretical perspectives and methodologies. Are you looking to refine your research identity or cultivate your career plans? DIR is for you! DIR strives to meet junior scholar's (doctoral candidates, postdocs, assistant professors) demands for professional development in a warm, welcoming, and inclusive environment. As always, the PDW contains two components. 1) Feedback Sessions (registration required): Registrants will be paired with an influential scholar and 2-3 other registrants for a friendly chat and feedback on their individual portfolios. These personalized sessions will be arranged at various times at the convenience of the facilitating scholar and their designated registrants. Participants who complete this session receive an MOC division "Bright Diamonds" certificate. 2) Live Synchronous Session (open to all): This live session features presentations, panel discussions, and networking opportunities for facilitators and participants. Come to be treated to stories about how prominent scholars forged their paths, advice on how to best navigate your own, and the opportunity to connect with colleagues with similar goals. To remain flexible in the ongoing pandemic, we will announce the specific format of this session later at <https://moc.aom.org/intherough/dir>. To register, please complete our brief survey here and submit your CV and a one-page overview of your research identity for feedback. MOC prides itself in being a 'bridging division' and we consider DIR the ultimate 'bridging PDW' - we're excited help you "think it through".

As always, the PDW contains two components. 1) The in-person session in Seattle (open to all, no registration required) will feature presentations and networking opportunities for facilitators and attendees. To remain flexible in the ongoing pandemic, we will announce the specific content and format of this session later at <https://moc.aom.org/intherough/dir>. 2) Virtual Personalized Feedback Sessions (registration required): Registrants will be paired with an influential scholar and 2-3 other registrants for a friendly chat and feedback on their individual portfolios. These personalized sessions will be arranged at various times at the convenience of the facilitating scholar and their designated registrants. Participants who complete this session receive an MOC division "Bright Diamonds" certificate. Registration link: https://washington.co1.qualtrics.com/jfe/form/SV_bfn9D8AzuraECeq

In line with this year's AOM theme of "Creating a Better World Together," we propose that creating a better world ultimately hinges on creating better communities – in workplaces, classrooms, and society more generally. Given that the fragmentation, disconnection, and loneliness that typically exists in society have been amplified due to the ongoing COVID-19 pandemic, now, more than ever, we have the opportunity to intentionally cultivate meaningful communities in our post-pandemic world. This PDW invites participants to seize the opportunity to intentionally adopt the role of community builder in their organizations, classrooms, and neighborhoods. To this end, this PDW brings together leading practitioners from industry and top educators to share their insights on building better communities in their respective contexts. Following expert panel presentations, participants will have an opportunity to attend a round table discussion with one of the expert panel members, discussing how to: create and sustain community distributed organizations (Table 1), utilize technology to drive community engagement (Table 2), build purpose-driven business communities (Table 3), create and sustain community in hybrid work environments (Table 4), build thriving communities in service of our higher selves (Table 5), and build community in the classroom (Table 6). We will conclude with a large group discussion on where we go from here in creating better communities together, and close with a community building exercise that participants can take with them into their respective contexts. Participants will leave this PDW having identified concrete tools that will assist them in connecting in our new world.

**Portable EEG Technologies and Organizational Neuroscience
Research**
Portable EEG Technologies

Organizer: **Constant D. Beugre**, *Delaware State U.*
Presenter: **Chris Berka**, *Advanced Brain Monitoring*
Discussant: **Susan Zhu**, *U. of Kentucky*
Discussant: **Danni Wang**, *Rutgers Business School*

Most organizational neuroscience research is conducted in laboratory settings, thereby limiting the application of its findings to organizations. However, recent advances in portable brain technologies represent a ‘game changer’ in helping to move organizational neuroscience research from the lab to the real world. Hence, in this PDW, our aim is to provide evidence of how portable brain technologies, particularly portable electroencephalogram (EEG) instruments could be used to conduct field-based organizational neuroscience research. In so doing, we combine a demonstration of a portable brain technology and a discussion by organizational neuroscience scholars on how this technology could facilitate the transfer from laboratory to field research in organizational neuroscience.

Behavioral Theory of the Firm: New Empirical Research

Session Moderator: **Anran Li**, *NEOMA Business School*

Author: **Elizabeth Lim**, *Georgia State U.*

Using a Russell 3000 sample of diversified firms spanning 1998–2016, we extended the behavioral theory of the firm by examining types of risky change through related and unrelated diversification in response to internal and external aspirations among business units within diversified firms. We argued that business units employing sister peers as internal comparison group respond by taking responsibility for performance shortfalls, seeking profitability by facilitating proximal search and advocating for low-risk change through related diversification rather than high-risk change through unrelated diversification. Those benchmarking against market peers, representing external comparison group, attribute performance shortfalls to an organizational problem, prompting distant search and unrelated rather than related diversification. Drawing from contingency theory, we further posited that environmental dynamism is more conducive for related than unrelated diversification in response to performance shortfalls. Our hypotheses were largely supported.

Author: **Anran Li**, *NEOMA Business School*

Author: **Michael Jensen**, *U. of Michigan*

This study examines the relationship between status and uncertainty-increasing and uncertainty-decreasing investments. Focusing specifically on financial uncertainty, we argue that middle-status firms engage in more uncertainty-increasing investments than low- and high-status firms, whereas higher-status firms engage in more uncertainty-decreasing investments than lower-status firms. Regardless of whether the focus is on uncertainty-increasing investments or uncertainty-decreasing investments, the extent to which firms perform above their historical and social aspirations mitigates the relationship between status and uncertainty-increasing and -decreasing investments. We find broad support for our arguments in a longitudinal sample of privately-owned Chinese firms traded on the Shanghai and Shenzhen stock exchanges. Specifically, social aspirations in the form of same-industry comparisons mitigates the inverted-U relationship between status and uncertainty-increasing investments, whereas social aspirations in the form of both same-industry and same-status comparisons mitigates the linear relationship between status and uncertainty-decreasing investments.

Proper pricing strategy is a key component in hotel revenue maximization but determining the right room rate is not an easy task. Although many advanced revenue management systems have been introduced for hoteliers to optimize room rates and inventory allocation based on expected demand, hoteliers keep adjusting their expectations and pricing based on various external factors. Using the theory of performance feedback, this study attempts to analyze the role of positive customer review feedback on hoteliers' pricing decisions in cases where hoteliers find that their actual financial performance is lower than expectation. The quantitative analysis of 63,492 US properties in monthly observations found that positive customer reviews moderate the relationship between negative RevPAR performance feedback and pricing decisions. The findings of this study add valuable insights to the debate regarding the role of customer reviews in the hospitality industry.

Knowledge sharing contributes to firms in terms of knowledge resources and society in terms of common knowledge and technological advancement. Yet, while knowledge sharing implications are well documented, the micro-level drivers of why knowledge holders decide to share their knowledge with peers remain relatively unexplored. Drawing upon a dual-process theory of social interactions, we propose that cognitive types, i.e., intuitive vs. reflective, differ in how they shape knowledge-sharing behaviors. The analysis of 2 million online interactions from startup members over 15 years shows that greater (lower) reliance on intuition is associated with more (less) knowledge sharing. Further, we hypothesize and find that this effect is stronger for demands from knowledge seekers in a common social group, i.e., in-group members. These findings contribute to the micro-foundations of knowledge sharing and strategic decision-making.

Paper is Available to Meeting Registrants Only.

Author: **Anna Pak**, *Kean U.*

Firms learn from the failure of others, but unlike their own failure, the cause of others' failure is ambiguous, i.e. open to varying interpretation. Varying interpretation, in turn, is likely to lead to differences in what firms learn and the effect it has on their future behavior. This paper investigates whether or not a characteristic of failing firms, specifically their scope, affects observing firms' strategic choices in the future. This study thus seeks to improve our understanding of a firm's strategic choice between exploration and exploitation activities following the failure of others, highlighting the role of firm scope or breadth of operations, by drawing on attribution theory and organizational learning literature.

Shareholder activists target firms on issues related to corporate governance and performance, as well as social, political, and environmental concerns. Corporations are central to modern societies, and research suggests that both financially and non-financially motivated shareholder activism can influence the manners in which firms conduct their businesses. While the scholarship on shareholder activism is extensive, it is not devoid of limitations and controversies. For instance, how shareholder activists exert their influence on corporate behaviors and when firms concede or do not concede under such pressures remain open questions. Additionally, the positive and negative consequences of financial activism continue to be a source of scholarly debate. Furthermore, although socially and environmentally motivated shareholder activism is on the rise, empirical investigations of non-financial shareholder activism remain sparse. This symposium will explore these various dimensions of shareholder activism and develop a future research agenda for this evolving scholarship.

Discursive Dynamics In and Around Organizations

Session Moderator: **Claudio Biscaro**, *Johannes Kepler U. Linz*

OMT: **Toward a Theory of Organizational Identity as Polyphony** 

Author: **Hannah Trittin**, *Leuphana U. Lüneburg*
Author: **Matthias Wenzel**, *Leuphana U. Lüneburg*

A growing body of research departs from classical notions of organizational identity as a shared, consensual self-understanding of ‘who we are as an organization’ by arguing that polyphony, i.e., a plurality of voices, is involved in organizational identity construction. Studies of the communicative processes through which an organizational identity comes into being through polyphony, however, remain rare. To uncover the processes through which polyphony contributes to the constitution of an organizational identity, we examine communication at Premium, a collective that produces and distributes a coke in socially and ecologically sustainable ways. Based on our analysis, we identify three communicative processes of polyphony—multiplicity, dissonance, and resonance—through which an organizational identity is produced; and we theorize the enablers that invoke the performance of these communicative processes. We also show that an organizational identity vanishes into moments of ‘silence’ if it is not talked into existence through polyphony. These findings have important implications not only for understanding organizational identity as a guide for collective action, but also for research on the ‘communicative constitution of organizations’ (CCO).

 OMT: **Making Sense of Subjective Experiences with Metaphors** 

Author: **Nora Meziani**, *U. of Liverpool Management School*
Author: **Laure Cabantous**, *Bayes Business School (formerly Cass)*
Author: **Joep Cornelissen**, *Erasmus U. Rotterdam*

In this paper, we seek to understand how metaphors facilitate sensemaking by providing a focused, detailed, and comprehensive account of how they help practitioners surface and convey subjective experiences. Our study, inspired by a phenomenological perspective, draws on 32 interviews with film workers narrating their work experience. We show how film workers used and combined different types of metaphors in a dynamic way to communicate their experiences in four steps—naming (using dead body metaphors), specifying (using conventional body metaphors), singularizing (using novel body metaphors), and fictionalizing (using a novel professional metaphor). With our study we extend prior sensemaking research by theorizing the various roles that metaphors play, above and beyond their ability to facilitate understanding. Specifically, we offer three novel insights on metaphors: we explain how some types of metaphors help sensemaking by redistributing agency; we theorize the retroactive power of metaphors—i.e., how the use of metaphors affects the utterer in return by highlighting some of their qualities. Finally, we explain how, by fostering imagination, metaphors allow people to transcend subjectivities.

Paper is Available to Meeting Registrants Only.

OMT: **Establishing Legitimacy through Figures of Speech: The Lady and The Beast**  

Author: **Claudio Bis caro**, *Johannes Kepler U. Linz*
Author: **Elena Bruni**, *Luiss Guido Carli U.*
Author: **Katharina Musil**, *Johannes Kepler U. Linz*

Although the process of legitimacy construction is crucial to maintain social order and ensure acceptance of actions and decisions, relatively little institutional research has explored how rhetoric, and in particular figures of speech, affect it. Empirically, we engage with the figures of speech used by multiple stakeholders vying to impose their ideas and actions to shape the future of cruise ships in Venice. Drawing on the cognitive linguistic concept of image schema that allows us to unveil the topological structure of meaning, we show how three mechanisms – exploiting core (or peripheral) features of the context in which legitimacy is needed; creating hierarchies; creating containment vs creating openness – that are based on movement and affect the assumptions of appropriateness and desirability underpinning legitimacy. Our findings contribute to the literature on legitimation by providing a model of how to employ figures of speech to the sense of appropriateness and desirability and in turn legitimacy.

Paper is NOT Available. Please contact the author(s).

OMT: **Validating the Narrative Construction Process in Cancer Management...With Some Twists.**

Author: **Barbara DeVivo**, *Christian Brothers U.*

The purpose of Tumor Boards is for multidisciplinary healthcare specialists to integrate perspectives and devise the best evidenced-based clinical treatment program for cancer patients, but the treatment decision-making process does not always follow a linear path. While few studies have criticized Tumor boards, questioning their effectiveness, none have deconstructed the treatment decision-making process to understand how social-organizational structure and patient case ambiguity affects the way patient information is processed. Through ethnographic exploration of 44 Tumor Boards in the United States and the United Kingdom, this inductive qualitative study investigates how hierarchical and collaborative structures influence the treatment decision-making process for cancer patients under various conditions of case complexity. Tumor board observation and interview data were gathered over three years at seven research hospitals in the United States and United Kingdom. Results show that the Narrative Construction Process of Sensemaking, previously based on a single-actor model, is transferable and applicable to decision-making in multi-actor settings, such as those that make up Tumor Boards. Moreover, using the Narrative Construction Process as a guide, this study uncovered that the Narrative Construction Process can be influenced depending on social organizational structure and level of uncertainty. Keywords: Narrative Construction Process, Sensemaking, Decision-making, Tumor Boards

Organizer: **Hyejun Kim**, *HEC Paris*
Presenter: **Greta Hsu**, *U. of California, Davis*
Presenter: **Elizabeth Pontikes**, *UC Davis*
Presenter: **Daphne Ann Demetry**, *McGill U.*
Presenter: **Ethan Mollick**, *The Wharton School, U. of Pennsylvania*

Cultural industries are sites of innovation and entrepreneurship. However, scholarly research on innovation and entrepreneurship is often confined to technology industries. The two contexts – culture and technology – have much in common but are separated by a chasm. The goal of this PDW is to bridge the chasm that separates the research in these contexts. In the context of their own research, the PDW panelists will demonstrate how cultural industries can be rich contexts for developing and testing theories of innovation, entrepreneurship, and creativity. The panelists will also share insights and advice, based on their role as authors, reviewers and editors, to help scholars successfully navigate the challenges of publishing work in unique cultural contexts.

Facilitator: **S. Arzu Wasti**, *Sabancı U.*

Trust is a fundamental characteristic of organizational relationships and one of the most frequently studied concepts in management research today. This annual PDW is aimed at advancing research on trust by serving as a platform for scholars to discuss critical issues, engage in dialogue, and help further research-in-progress. The workshop consists of three segments: (1) The first segment starts off with a panel discussion, in which leading scholars share their thought-provoking ideas on this year's focal topic of "trust and culture"; (2) For the second segment, attendees break into roundtables to discuss various relevant issues in current trust research. Each table will start out with a particular topic but may move on to other issues as the discussion unfolds. Topics may include (but are not limited to): trust asymmetries, trust violation and recovery, trust in teams, trust in interorganizational relationships, trust across levels of analysis, trust in networks, trust dynamics, and trust and contracts; (3) The third segment consists of a paper development workshop, in which the facilitators provide in-depth feedback on work-in-progress trust research previously submitted by workshop participants. These papers should be in an advanced developmental stage, targeted at a scholarly management journal, and no more than 40 double-spaced pages in length. If you are interested in participating in the third segment (paper development), please upload your manuscript while completing your preregistration no later than July 24, 2022.

This symposium explores the contestation and appropriation of public space. The ways in which public spaces are used, misused, and even abused have become of growing interest to scholars across the social sciences. However, we know relatively little about the ways how public space is used, changed, and maintained. This has led to the emergence of important questions regarding public space that we begin to address in this symposium, including: How do different groups of individuals define and use public space? What types of public space are needed and for what purposes? How and why has the understanding of public space changed over time? How does the privatization of public spaces impact social stability and equality? To address these questions, we present four studies about public space that embrace a variety of empirical and theoretical contexts. Our intent is that the four papers will set up some lively discussion with members of the audience that will in turn spark new directions of research in an understudied area.

Panelist: **Juliane Reinecke**, *King's College London*

Panelist: **Garima Sharma**, *Georgia State U.*

Despite the widely-acknowledged potential of cross-sectoral partnerships to solve complex social issues, the process of cross-sectoral collaborations is saturated with conflicts and tensions. Researchers have investigated the antecedents, processes, and outcomes of cross-sectoral collaborations with different theoretical frameworks and primary foci. In this panel symposium, the panelists will present five theoretical perspectives, explore the conceptualization of theoretical boundaries, and discuss how to produce knowledge by spanning theoretical fields. The perspectives to be presented include (1) collective action theory, which helps us understand how parties with conflicting interests build collaborative institutions and governance norms to overcome collective action dilemmas; (2) the institutional logics perspective, which focuses on the value differences among partners and the associated outcomes; (3) the interactional framing perspective, which looks at how interpretations and sensemaking are constructed and deconstructed in partnerships; (4) the resource dependence perspective, which examines the resource dependencies among partners and external stakeholders; and (5) the paradox perspective, which focuses on the contradictory but interrelated elements that persistently coexist in cross-sectoral collaborations. This symposium aims to respond and contribute to diverse discourses both within the management academy and around societal challenges. This interactive session will include Q&As and discussions on strategies for developing new interactions between different fields of inquiry.

Panelist: **Letian Zhang**, *Harvard Business School*

Management scholars have been increasingly interested in how history and historical processes affect current organizational behaviors. Recognizing this trend, several leading management journals have recently devoted special issues to urge researchers to pursue more historically oriented work, including the *Academy of Management Review*, *Strategic Management Journal*, *Organization Studies*, *Strategic Entrepreneurship Journal*, and *Family Business Review*. Despite the significant advances, scholars have also noted that much work remains to be done to realize the full potential of historical processes in management research and we still have limited and fragmented knowledge on how to leverage history to understand management phenomena. Through a combination of panel presentations by distinguished scholars with significant work on this topic and interactive round table discussions with workshop participants, we seek to bringing together a diverse group of scholars whose work helps delve into this active area of organizational research, identifies important questions and interesting phenomena in this area, and points out future directions. The proposed workshop is thus likely to be of interest to researchers working in the areas of organization and management theory, strategic management, entrepreneurship, international management, and management history.

The increasing urgency of tackling grand challenges, such as climate change and inequality, has fostered a lively discussion among management scholars about producing work that is both rigorous and relevant for practice. Few practitioners appear to find scholarly research useful, leaving organizational and management scholars often excluded from public discussions and solutions. Increasingly, many scholars, often early-career scholars, are beginning to question traditional models that privilege academic impact, and want to produce meaningful research that also tackles pressing grand challenges. Doing so is difficult for early-career scholars, however, who face promotion and tenure requirements based on academic-focused publication and citation counts. To address this dilemma, this PDW from the Impact Scholar Community supports early-career scholars in successfully navigating their impact research through the publication process at top journals. With three teams of top editors (ASQ, Strategic Organization, and Business & Society) paired with the early-career scholars they mentored through the publication process, we offer practical advice on how to both publish and have impact. In short, we seek to achieve the ‘holy grail’ of scholarship and hope you will join us!

Participant: **Hart E. Posen**, *U. of Wisconsin, Madison*
Participant: **Todd Zenger**, *U. of Utah, David Eccles School of Business*

An active and growing literature spanning strategy and entrepreneurship is developing an analytical approach to search and experimentation that has the potential to yield foundational insights about how economic actors design, enact, and interpret experiments that lead to innovative products, services, and organizational approaches. In this session, we aim to present N leading scholars who are working in this domain, allowing each to share emerging insights from their particular point of view on the topic; conduct a dialogue with the participants as a collective; and field questions from attendees. The purpose of the presentation will be to showcase areas of active research and illuminate opportunities for future work, in particular the elaboration of new theory and how current theory could be further developed through empirical insight. We anticipate that the first part of our panel discussion will be driven primarily through structured questions that encourage dialogue and constructive engagement between the panelists, orchestrated by the organizers. The overarching goal is to use the session to support the development of participant papers and to promote intellectual interchange on the topic of experimentation among scholars at all stages of their careers.

Organizer: **Sarah Resnick**, *Binghamton U.-State U. of New York*

As conceptualizations of leadership have shifted to embrace the relational, multilevel, and co-constructed nature of leadership, perspectives that incorporate social networks have garnered increasing attention from scholars and practitioners alike. This increasing prevalence of social network approaches in the leadership literature has challenged researchers to change the way they understand and examine leadership. Accordingly, this shift has come with additional complexities in terms of measurement and analysis. Thus, there remain critical issues in both theorizing about and empirically examining leadership from a network perspective that must be addressed to capitalize on the potential strengths of social networks for advancing a relational, contextual, and multilevel understanding of leadership. This panel symposium session aims to propel this mission by focusing on three key goals: 1) highlighting the benefits of a network-based perspectives for advancing leadership theory and methods, 2) clarifying the challenges of employing various types of social network models in the study of leadership, and 3) identifying where leadership and networks research needs to improve and advance in order to continue answering important organizational questions. To do so, we have brought together an esteemed group of panelists to address these questions and provide additional insights to advance the science and practice of social network perspectives of leadership. Their combined expertise will not only provide the audience with a view into state-of-the-art science on leadership and networks, but will also introduce rich insights into the future of social network approaches to leadership.

Ethics Forum: Better Together, How to Support Each Other *Ethics Forum #1*

Host: **Deborah M. Mullen**, *U. of Tennessee, Chattanooga*
Participant: **Lucy Leety-Wheeler**, *Academy of Management*
Organizer: **Rebecca Wendy Frankel**, *Sage Publications*
Organizer: **Jessica Peck**, *Department of Management, Cleveland State U.*
Organizer: **Rachel McCullagh Balven**, *Arizona State U.*

This session serves to promote conversations about mental health within the university context. AOM's Code of Ethics principles and standards require us to avoid harm, build trust, and treat each other with dignity. In the spirit of that code, as well as this year's theme, "Creating A Better World Together," the Ethics Education Committee has dedicated this session to a presentation and discussion of how best to support mental health during these trying times. Social isolation, depression, and anxiety among other problems plague faculty and students alike. In the context of a global pandemic, these issues may be exacerbated, and even harder to combat as those suffering may be limited in their access to healthcare. Our in-person session is open to all AOM members and aims to identify mental health best practices from three different perspectives: student, teacher, and administrator. We hope that this safe space will foster helpful discourse regarding how to support students and university personnel alike.

Participant: **Swati Nagpal**, *La Trobe U.*

As people learn that climate change is anthropogenic, they realize they hold the key to mitigate it by embedding the right high-impact climate solutions and institutional policies into organizations. However, there is a need to increase research and understanding in management studies on how to support managers in this task, which is an objective of this caucus.

Concern about human induced climate change and its impacts is rising, particularly among younger generations who will experience these impacts more acutely in the future but also among business leaders as they seek to prepare their organisations for an uncertain climate future. Youth climate leaders such as Greta Thunberg have led the #FridayForFuture campaign prompting unprecedented numbers of young people to become involved in the campaign for action on climate change. During a single week in March 2019 more than 1.6 million young people across all seven continents took part in the youth climate strike demanding governments, policy makers and business leaders take action to make climate change their top priority. It is these students, many of whom will study in business and management schools, who will have to devise and implement strategies for successfully competing in a world subject to major challenges such as technical and demographic changes, growing inequality, ethical scandals, and climate change. Alongside this, the role of business in addressing climate change issues and the need for organisations to develop mitigation and adaption strategies is becoming increasingly clear. During COP26 it emerged that businesses are far more engaged than ever before, taking the initiative and not waiting for governments to act. This was demonstrated by the Glasgow Financial Alliance for Net Zero (GFANZ), which has US\$130 trillion of assets under its control. Indeed John Kerry, United States special presidential envoy for climate stated that ‘We are trusting big business, not states, to fix the climate crises.’ The question is how may both current and future business leaders develop the skills, knowledge and perhaps more importantly the sustainability mindset required to understand high-impact climate solutions and their contributions to a positive, equitable future for all. In this caucus we aim to explore the skills, knowledge, and sustainability mindset that climate conscious managers and leaders require. We seek to encourage a debate on how this may transform our existing organizational practices to become more climate change conscious and establish new approaches to mapping out appropriate research priorities. We will share some existing approaches: The Sustainability Mindset Indicator, an instrument designed to guide educators on how to move their students along their development of a sustainability mindset and to assess the impact of their courses; and Carbon Literacy Training for Educators, Communities, Organisations and Students (CLT-ECOS), a virtual Train-the-Trainer developed and upscaled by Nottingham Business School in collaboration with the UN Global Compact PRME Working Group on Climate Change designed to empower people to embed high-impact climate solutions in their personal, professional and community life. We will then invite the participants to share new approaches they have and end with an interactive activity to facilitate collaboration and start this journey together.

 **CMS: Narratives of Workplace Resistance: Reframing Saudi Women in Leadership**

Author: **Liela A. Jamjoom**, *Dar Al-Hekma U.*

Author: **Albert J. Mills**, *Saint Mary's U., Canada/U. of Eastern Finland*

Despite considerable social, economic, and organizational advancements that Saudi women have achieved in the past two decades, research on Saudi women in leadership continues to focus on the structural, organizational, and societal challenges the women face. Often missing from analyses are the micro ways in which the women resist and negotiate with/against organizational challenges. Using a postcolonial feminist lens, we asked: How do Saudi women leaders resist power in the workplace? This question was posed to reinsert the value of Saudi women within organizational narratives, generate deeper understanding of a marginalized group of women, and understand resistance as located within socio-political-ethical structures. Our contributions are threefold: (1) this study advances the literature on Saudi women in organizations by focusing on resistance as a point of entry and analysis; (2) we add a less antagonistic relationship between power/resistance, and reconceptualize agency/resistance as one inclusive of subtle and individual forms of resistance, and one that moves beyond the limits of the liberal imaginary; (3) our study also adds to the burgeoning scholarship on workplace resistance in Non-Western contexts, which advocates for situated knowledge and the decolonization of management.

CMS: The Political Economy of Slow Genocide, Racial Capitalism and Making of De facto Stateless Rohingya 

Author: **Habib Urahman**, *Coordinator Australian Burmese Rohingya Organization (ABRO)*

Author: **Fahreen Alamgir**, *Monash U.*

Best Critical Ethics Paper sponsored by the Journal of Business Ethics

The paper discusses the political economy of genocide by exploring the organising of genocide against the world's largest de facto stateless community – the Rohingya community of Myanmar – over the past forty years. Amartya Sen categorises Rohingyas' experience of genocide as a slow genocide. His categorisation is borne out in our experience. To situate our understandings, we draw from Sanayal's arguments on the developmental state and the organisation of postcolonial capitalism. We argue that the core understanding of the political economy of slow genocide calls for the characterisation of genocide in relation to the capitalist formation of a developmental state and of particular social relations; this was conducted by organising the hierarchies of both civil and political societies as dominant and dominated factions within the project of the nation-state and nation-building. Examining the management of de facto stateless people reveals how substitutability evolves as a management strategy by the militarised form of the nation-state project. This strategy also characterises the politics of institutionalising and legitimising violence in the forms of expulsion, displacement, and death. Hence, we argue that the substitutability strategy is underpinned by the logic of extinction; thereby, this strategy institutionalises and legitimises violence in the forms of genocide. Thus, racial capitalism is organised and reconfigures the lives of minority communities in the context of the developmental states. Finally, we extend our debate by asking what role business academics should undertake in an increasingly corporatised academy in contemporary global capitalism. Keywords: Slow genocide, Rohingya, stateless people, Myanmar, substitution, racial capitalism

Author: **Carl Rhodes**, *U. of Technology, Sydney*

Best Critical Paper on Gender sponsored by the Journal of Gender, Work & Organization

For decades Western organizations have been subject to equal opportunity and anti-discrimination laws, gender equality policies, and diversity and inclusion strategies. Still, this paper suggests that there has been little fundamental change to the structure of outcomes for the workforce labelled diverse. This paper draws on data from three Australian organizations with advanced gender diversity and inclusion (GDI) programs to explore why this is the case. Our research found: 1) dominant managerial GDI practices co-exist with multiple, unacknowledged, local discourses and competing interests; 2) managerial GDI practices operate in a system that segregates 'diverse' employees and the performance of 'equity' work; and 3) GDI strategies inadvertently legitimize dominant western forms of leadership associated with white masculinity. We explain our findings through the concept of 'repressive equality regimes': organizational diversity and inclusion practices and policies that confirm an organization's positive engagement with equality but remain wedded to the structural conditions that perpetuate legitimize unequal social and organizational hierarchies.

CMS: Destigmatizing The Occupation: Role of Occupational Branding and Collective Identity Work 

Author: **Prakriti Soral**, *Indian Institute of Management, Kozhikode*

Author: **Surya Prakash Pati**, *Indian Institute of Management, Kozhikode*

Author: **Sanjay Kumar Singh**, *Maynooth U., Ireland*

Author: **Shuang Ren**, *Deakin U.*

By questioning the fundamental nature of the occupation and targeting the occupational members as 'dirty' and 'immoral,' occupational stigma is a big concern still plaguing our employment landscape worldwide. It threatens employees' identity, develops the feeling of being undervalued, and lowers their dignity. However, by focusing only on coping rather than stigma removal, existing studies fall short of offering a solution to the issue. In the current study, we address this gap by proposing how destigmatization of the occupation can be achieved by changing the existing societal narratives about occupation and by building occupational branding. We empirically explore our idea by conducting a qualitative study on the Indian beauty occupation to understand how they have achieved the destigmatization of their occupation. We employ the method of critical discourse analysis (CDA) as it helps understand the discourses of social wrong and unravels various means of eliminating the social wrong. Accordingly, we propose that by using collective identity work, occupational members brand 3Ps of the occupation i.e. people, process and purpose to achieve destigmatization. Our study contributes by exploring how the prominent discourses of stigma on the professions get modified into stigma-free legitimate discourses with the help of occupational branding.

Participant: **David F. Arena**, *U. of Texas At Arlington*
Presenter: **Hayden DuBois**, *U. of Texas At Arlington*
Discussant: **Eden King**, *Rice U.*

This symposium brings together a set of four papers that aim to advance our understanding of LGBTQ identity management. All these papers draw from diverse theoretical perspectives to identify and understand the factors that may contribute to managing LGBTQ identities and their outcomes. Multiple papers in this session also examine other forms of identity management strategies that move beyond the decision between disclosure and concealment. To tease apart identity management processes both within and across each unique identity group, multiple papers take an intersectionality perspective to further our understanding of managing LGBTQ identities at work. These papers contribute empirically to research on diversity and invisible marginalized identities, and offer practical implications for building a more inclusive workplace.

How To Make Up Data: An Introduction to Computer Simulation

An Introduction to Computer Simulation

Coordinator: **Michael Sturman**, *Rutgers U.*
Facilitator: **Hanbo Shim**, *U. of Texas At Arlington*
Facilitator: **Sanghee Park**, *Hanyang U.*
Facilitator: **Xueqing Fan**, *Rutgers U.*

While computer simulation is increasingly being seen as a powerful tool for research and teaching, instruction on simulation is absent from most methodological texts and doctoral education. Furthermore, most books on simulation assume a level of programming knowledge that those interested in beginning to learn simulation may not possess. This PDW will provide introductory instruction on conducting computer simulations for both research and teaching. Specifically, participants will learn the methods to data that has specified true correlations, means, and standard deviations. Participants will also learn how to create data more typical of observed data, including generating multi-item measures with a specified reliability, creating dichotomous and categorical data, adding skew and kurtosis, including moderated relationships, and creating models with mediated relationships. The PDW will cover (briefly) the mathematics needed to create desired data, yet the focus will be on participants engaging in a series of exercises where participants will generate desired data. Because this PDW is an introduction, examples will be conducted in Excel, Mplus, and R, with participants choosing which program they wish to use when engaging in the exercises. No programming knowledge or advanced mathematics is required, although participants should be familiar with at least one of the three example programs and be comfortable with correlations and regression. Participants will receive the files in all three programs for the examples covered during the session. By the end of the sessions, participants should be able to create on their own a given dataset with their desired characteristics.

Panelist: **Luis Diestre**, *IE Business School*

Scholars from science, technology, engineering, and math (STEM) backgrounds are increasingly entering the field of management. Yet, an undergrad, master's, or PhD training in STEM is currently underutilized in the management field, and even at worst, seen as a liability. Transitioning to management often demands that these scholars unlearn their previous habits and ways of thinking. Indeed, their previous field may require a different way of asking questions, employ different methodologies, use different styles of writing and conceptualize research impact differently. Apart from these paradigmatic differences, the skills needed to navigate the social landscape in management academia may be challenging to newcomers. In this PDW, we explore how scholars with previous science experience can overcome the challenges in transitioning to management. More importantly, we explore how they can leverage their unique STEM background to thrive in their new field. With the current crisis surrounding the value and impact of management research, this PDW will also serve as an avenue to discuss the impact of management research in comparison to the tangible outcomes from laboratory work. Finally, this PDW will also explore whether these individuals with scientific backgrounds can serve as a bridge to the wider scientific community to promote inter-disciplinary collaborations.

Trauma and Entrepreneurship: Engaging the Dialectic of Trauma

Trauma and Entrepreneurship

Organizer: **Arielle M. Newman**, *Syracuse U. Whitman School of Management*
Organizer: **Lisa Mali Jones Christensen**, *Brigham Young U.*
Organizer: **Elizabeth Embry**, *U. of Colorado, Boulder*
Organizer: **Johan Wiklund**, *Syracuse U.*
Organizer: **Ute Stephan**, *King's College London*
Organizer: **Trenton A. Williams**, *Indiana U. - Kelley School of Business*
Panelist: **Dean Shepherd**, *mendoza*

This workshop offers an opportunity for scholars to discuss trauma and its permeating impact throughout the entrepreneurial journey, and collectively (and interactively) co-create a research agenda on this topic—participants may organize around topical areas, target populations, theoretical orientations, or the intersectionality of trauma—among other options. The workshop will begin with an introduction to the topic, followed by roundtable discussions to converse and brainstorm new ideas and a gallery walk, wherein participants work to organize these collective thoughts into emerging themes. A panel of subject matter experts will lead a moderated discussion surrounding identified themes to create a research agenda. As we seek to create a better world together through this annual meeting, we implore scholars to validate the largely invisible pain and permanent scars of trauma.

MSR: The Effects of Spiritual Expression at Work During the Covid-19 Crisis: Evidence from a Hospital

Author: **Johanna Anzengruber**, *Upper Austria U. of A.S*

This paper aims to explain the effects of spirituality at work on organizational commitment during the Covid-19 pandemic. In detail, it investigates whether the active part of spirituality at work, called spiritual expression, has a positive influence on organizational commitment in a hierarchically organized private hospital. In addition, it explores whether the sense of belonging at work mediates spiritual expressions and a person's commitment towards the employer during times of severe crisis. We test our hypotheses on a range of healthcare personnel, including doctors, nurses, physicians, administrators, managers, and cleaning staff. Drawing on quantitative data of more than one third of the employees of that private Austrian hospital (n=96) and on insights from 12 qualitative interviews over a period of four months during spring 2021, we find strong evidence that spiritual expression at work is directly related to belonging and indirectly related to organizational commitment through belonging. Furthermore, our study provides insights on how to facilitate spiritual expression at work in order to increase flexibility and resilience in the healthcare sector.

MSR: Spirituality as Buffer between Negative Effects of the Corona Pandemic and Life and Job Satisfaction

Author: **Dorothea Alewell**, *U. of Hamburg, Germany*

Author: **Kira Conen**, *U. of Hamburg*

Author: **Tobias Moll**, *Hamburg School of Business Administration*

Author: **Marie-Therese Wiese**, *U. of Hamburg, Germany*

The COVID-19 pandemic is having various consequences on employees that negatively affect their work and personal lives. According to previous research, spirituality helps one to cope with negative life events relating to uncertainty and Unverfügbarkeit. We investigate whether spirituality at work moderates the relationship between the pandemic's negative consequences and both job and life satisfaction. In a large-scale two-wave panel study with 1,468 participants (December to November 2019 and June to July 2020) in Germany, participants were surveyed for the severity of individual negative consequences of the pandemic, their job and life satisfaction, and their spirituality at work. The results show that job and life satisfaction are negatively related to the pandemic's negative consequences. Spirituality at work significantly moderates the relationship between negative consequences and life satisfaction as well as job satisfaction. However, the moderation effect on the job satisfaction model is only weakly significant. Thus, within the (work) life-changing circumstances of the pandemic, high spirituality at work can help one to cope with the negative consequences, buffering their impacts on job and life satisfaction. Employers can help to maintain or strengthen their employees' well-being by facilitating and supporting spirituality at work via HRM.

Paper is Available to Meeting Registrants Only.

MSR: Impact of Spiritual leadership on Resilience and Burnout.

Author: **Rabia Malik**, *169227*

Author: **Sara Hassan**, -

Author: **Khuram Shahzad**, *U. of management and technology, Pakistan*

Drawing on the conservation of resources theory and value congruence theory, the present study theorizes that spiritual leadership is negatively related to employee burnout, both directly and indirectly via employee psychological resilience and that employee' spiritual intelligence and fear of COVID-19 moderate the relationship between spiritual leadership and employee psychological resilience. Based on time-lagged (two waves, one months apart) survey data collected from 228 hospitality employees, our findings reveal that spiritual leadership is negatively associated with employee burnout, both directly and indirectly via employee psychological resilience. We also find that employee spiritual intelligence and employee fear of COVID-19 weakens the positive relationship between spiritual leadership and employee psychological resilience. These findings not only highlight core theoretical contributions towards the existing literature on spiritual leadership, psychological resilience, spiritual intelligence, fear of COVID-19 and employee burnout but also offer useful practical implications for hospitality managers concerned about the repercussions of burnout for employees' and organizations' outcomes during pandemic.

Predictors and Processes of Creativity

Session Moderator: **Peirong Xiang**, *Guanghua School of Management, Peking U.*

OB: The Impact of Individualism and Collectivism on Employee Radical and Incremental Creativity

Author: **Yong Zhang**, *Chongqing U.*

Author: **Hao Qu**, *Chongqing U.*

Author: **Yuwei Ding**, *Chongqing U.*

Author: **Mingxuan Wang**, *Chongqing U.*

Although individualism-collectivism orientations play pivotal roles in determining individual creativity, the conclusions on the topic are inconsistent. Based on sensemaking theory, our research aims to examine how individualism and collectivism differentially affect individual creativity by classifying creativity into radical creativity and incremental creativity. Time-lagged data from 342 Chinese employees and their supervisors indicated that vertical individualism has a stronger positive impact on radical creativity than on incremental creativity, whereas horizontal individualism has no significant effect on radical or incremental creativity. Meanwhile, the positive effect of vertical collectivism on incremental creativity is stronger than that on radical creativity; in contrast, the difference between the effects of horizontal collectivism on radical creativity and incremental creativity is insignificant. Our research further underscores the crucial theoretical perspective of multifaceted creativity for explaining how individualism-collectivism values drive employee creativity and highlights the vital implication for predicting employee creativity on the basis of employees' cultural values (individualism vs. collectivism).

OB: The Creative Thinking Profile: Measuring Internal Preferences for Multiple Creative Thinking Styles 

Author: **Johnathan Cromwell**, *U. of San Francisco*

Author: **Jennifer Haase**, *U. of Potsdam*

Author: **Gergana Vladova**, *U. of Potsdam*

Creative problem solving in organizations is getting more complex, and yet theory on creative thinking has remained stagnant as scholars have argued for the need to better understand the multifaceted nature of creativity. This paper helps advance research on this topic by developing and validating a new scale that measures individual preferences for multiple creative thinking styles. Drawing upon a wide range of literature that has theorized about several cognitive processes people can use to generate novel and useful ideas on a task, we found evidence through psychometric research that people can have distinct preferences for three different thinking styles, which we call divergent thinking, bricoleur thinking, and emergent thinking. Furthermore, when validating this scale through an experiment, we found that each style seems to be more strongly aligned with different underlying structures of a creative task, which varied based on the degree to which the problem was either open versus closed and the resources available were either abundant versus constrained. Altogether, this paper makes both theoretical and empirical contributions by developing a scale that integrates multiple thinking styles into a creative thinking profile, which can help scholars better understand—and study—the complex nature of creativity in future research.

Paper is NOT Available. Please contact the author(s).

OB: Creating Cognitive Style and Employee Creativity in the Uncertain Work Context  

Author: **Wen Pan**, *Macau U. of Science and Technology*

Author: **Li-Yun Sun**, *Macau U. of Science and Technology*

Drawing on trait activation theory, we examine the mechanism through which creating cognitive style influences employee creativity in the uncertain work context. Using multi-level, multi-source, and multi-wave sample of 221 employees from 42 teams in mainland China, we have four major findings. First, work uncertainty activates the trait of creating cognitive style and enhances its effect on creative role identity. Second, creative role identity mediates the relationship between creating cognitive style and employee creativity. Third, work uncertainty is positively related to team problem-solving demand, and team problem-solving demand enhances the positive effect of creative role identity on employee creativity. Fourth, work uncertainty and team problem-solving demand moderate the indirect effect of creating cognitive style on employee creativity via creative role identity. The indirect effect of creating cognitive style is highest when both work uncertainty and team problem-solving demand are higher. The theoretical and practical implications are discussed. Supplementary analysis suggests that the moderated mediation effects remain when planning cognitive style serves as a parallel independent variable or creative self-efficacy serves as a parallel mediator. The result attenuates omitted variable bias. The study contributes to creativity literature.

Paper is Available to Meeting Registrants Only.

OB: Perfectionism as a Double-Edged Sword: How does Perfectionism Influence Innovation Performance  

Author: **Peirong Xiang**, *Guanghua School of Management, Peking U.*

Author: **Yingya Jia**, *Shanghai U.*

Author: **Shibo Ma**, -

This paper offers a novel theoretical account of how and when employee perfectionism leads to better innovation performance. Grounded in achievement goal theory, we develop a moderated-mediation model showing: (a) learning goal orientation mediates the different effects of negative and positive perfectionism on innovation performance (how), and (b) failure analysis (as an organizational culture) moderates this mediated effect (when). We examine our model by a survey of 378 core developers from nine high-tech manufacturing companies in China, the results show that: (a) negative perfectionism negatively affect innovation performance while positive perfectionism positively affect innovation performance both via learning goal orientation, and (b) the mediated effects between positive perfectionism and innovation performance is stronger when failure analysis is higher than lower, while makes no difference for negative perfectionism. Our study advances our knowledge of employee perfectionism and innovation performance in three ways. First, it highlights the multidimensional characteristics of perfectionism and its impacts on innovation performance through the mediating effect of learning goal orientation. Second, it emphasizes the importance of learning during the innovation process by introducing learning goal orientation as a mediator. Third, it considers organizational culture as analyzing failure and discusses its impacts on the individual motivational innovation process.

Morality and Wisdom

Session Moderator: **Laurenz Weiße**, *Teaching Assistant and Research Fellow*

OB: It's Not Just All About the Money: The Effects of Scandals on Organizational Affiliation and Competition 

Author: **Erik Lehmann**, *U. of Augsburg*
Author: **Robert Ullmann**, *U. of Augsburg*
Author: **Drahomir Klimsa**, *U. of Augsburg*
Author: **Laurenz Weiße**, *Teaching Assistant and Research Fellow*

This paper investigates the effects of scandals on organizational affiliation and competition. We introduce a novel framework that links the conceptual origin of a scandal, i.e., individual-caused vs. institutional-caused, with its impact on an organization or its competition, i.e., a scandal-stricken organization vs. the scandal-stricken organization's competitors. In our analysis, we exploit the changes in diocese-level and regional church-level indicators of church affiliation that followed numerous scandals that occurred in German Catholic dioceses and Protestant regional churches between 2002 and 2016. We find that both individual-caused and institutional-caused scandals are associated with a local decline in affiliation with a scandal-stricken organization. However, individual-caused scandals have a significantly larger effect on affiliation with a scandal-stricken organization than institutional-caused scandals. We also find evidence for a scandal's local interorganizational spillover effects to the scandal-stricken organization's competitors, but only for institutional-caused scandals. Our results thus contribute to the emerging field of studies on the effects of scandals on organizations and their stakeholders. Moreover, due to the economic character of religious organizations, i.e., they compete in a religious market to provide pastoral care, our results can be generalized beyond our empirical setting to secular organizations and their stakeholders.

OB: Exuding Moral Character or Rocking the Boat? Observers' Reactions Towards Displays of Moral Courage

Author: **Yanhong Li**, *Telfer School of Management, U. of Ottawa*
Author: **Laurent Lapierre**, *Telfer School of Management, U. of Ottawa*
Author: **Jane O'Reilly**, *Telfer School of Management, U. of Ottawa*

Recognizing the organizational and social benefits of moral courage, management researchers and practitioners alike encourage business students and employees to engage in morally courageous behaviors (Comer & Sekerka, 2018; Sekerka & Godwin, 2010). However, we lack the understanding of how others perceive and react to organizational members' acts of moral courage (Detert & Bruno, 2017). Utilizing an experimental vignette design (N = 329), we demonstrate that engaging in acts of moral courage is associated with being perceived by observers as having stronger moral character and more leader-like. Observers also preferred to interact with courageous actors in both work-based and personal domains compared to non-courageous actors. However, such positive reactions from observers depended on certain factors. Drawing from theories of stereotypes (Rudman & Phelan, 2008) and social dominance orientation (SDO) theory (Pratto, Sidanius, Stallworth, & Malle, 1994), we further examined the influence of actor gender and observer SDO on observer reactions to acts of moral courage. While actor gender did not influence observer reactions, SDO emerged as a crucial factor such that observers with high-levels of SDO rewarded acts of moral courage less compared to those with low-levels of SDO.

OB: Social Dominance Orientation Predicts Attraction to Hierarchically Structured Organizations

Author: **Sangah Bae**, *Cornell U.*
Author: **Sean Barrett Fath**, *ILR at Cornell*

Existing research demonstrates that social dominance orientation (SDO) impacts people's job preferences: People who prefer the maintenance of social hierarchy (i.e., anti-egalitarians; high SDO) prefer jobs that facilitate social hierarchy, and people who prefer the attenuation of social hierarchy (i.e., egalitarians; low SDO) prefer jobs that attenuate social hierarchy. However, might other aspects of organizations interact with job seekers' SDO to predict organizational attraction? We addressed this open question in the present research. Specifically, we explored whether observers' SDO predicts their preference for managerial hierarchy—i.e., the number of layers of management between the highest- and lowest-ranked employee in an organization. Using both within-participants (Study 1) and between-participants designs (Study 2), we find that participants with lower (vs. higher) SDO prefer an organization with a low (vs. high) degree of managerial hierarchy. We test two competing mechanisms—ability to succeed in an organization (i.e., efficacy) and anticipated sense of belonging—as drivers of organizational attraction (Study 3) and find that participants' SDO interacts with organizational structure to uniquely predict anticipated sense of belonging and consequentially organizational attraction. We discuss implications for research on social dominance orientation and job fit.

OB: The Robust Benefits of Social Exchange for the Wisdom of Individuals in the Crowd  

Author: **Joshua Becker**, *UCL School of Management*
Author: **Seth Fletcher**, *UCL School of Management*

The century-old dispute over whether social exchange helps or harms estimate accuracy has been popularized through research on the “wisdom of crowds,” i.e. the accuracy of group estimates. Some evidence suggests that social exchange e.g. conversation can improve group accuracy, while other evidence suggests that social exchange reduces accuracy. Overall this research presents a picture of the wisdom of crowds as a fragile scenario where optimal conditions improve accuracy, but where many common social processes reduce accuracy. Importantly, this research focuses only on the average belief in the group, i.e. the “crowd” estimate. In contrast, there are many cases where individual outcomes—not group outcomes—are practically important. In contrast with the fragility of group accuracy, we show that social exchange nearly always benefits individuals in a crowd even when it simultaneously reduces group-level accuracy. We examine two theoretical models and reanalyze previously published experimental data to show that individuals can and usually do become more accurate, even as their groups become less accurate.

OB: What Predicts Psychological Detachment from Work? A Literature Review and Agenda for Future Research

Author: **Anastasiia Agolli**, *Fox School of Business, Temple U.*

Author: **Brian C. Holtz**, *Temple U.*

Contemporary work environments are characterized by increasing job demands, extensive use of communication technologies, blurred boundaries between work and private lives, and growing uncertainty. Under these conditions, employee health and well-being are among the central topics studied by organizational researchers. Extant research has shown that psychological detachment from work is a key recovery experience that is essential for employees' health, well-being, and work performance. This systematic qualitative review aims to advance our understanding of what facilitates or inhibits detachment. First, our paper evaluates the conceptualization of detachment and develops greater conceptual clarity on what detachment from work is (and is not). Next, we review 159 empirical studies and evaluate the accumulated knowledge on predictors of detachment. In addition, our review contributes to the ongoing debate about whether detachment and work-related thoughts are distinct constructs by reviewing studies on predictors of select work-related thoughts in a supplemental manner and comparing them with predictors of detachment. Our review offers valuable directions for future advancements of this line of research and provides recommendations to practitioners on how to facilitate this important recovery experience in their organizations.

OB: Silver Linings in the Covid-19 Pandemic: The Importance of Resilience  

Author: **Amélia Rita De Olive Rita Monteiro**, *NOVA School of Business and Economics*

Author: **Pedro Neves**, *NOVA School of Business and Economics*

The COVID-19 pandemic is both a universal health calamity and a global economic and social crisis that impacted workers and workplaces around the world in a dramatic manner. However, there are employees that were able not only to recover from workplace adversities, but to grow and learn from those challenges, emerging stronger than before. We leverage conservation of resources theory to examine the extent to which resilience mitigates the consequences of COVID-19 pandemic. Resilient individuals are less likely to experience the pandemic's negative impact in their work and personal lives and have the capacity to control and influence their changing work environment in a successful way. In times of uncertainty, employees' personal growth initiative is a very important factor to guarantee the success of any contemporary organization. Using a time-lagged design, we found that more resilient individuals, faced with a threat, are the ones who engage more in job crafting and are also the ones who grow. On the other hand, less resilient individuals lack the resources to deal with a perceived threat, and are unable to activate job crafting behaviors nor grow.

Paper is Available to Meeting Registrants Only.

OB: Leadership Thriving In Disruptive And Stressful Work Environments

Author: **Wendy Elizabeth Rowe**, *Royal Roads U.*

This paper explores leadership thriving used by mid level managers when faced with disruptive and stressful events occurring in the workplace. In an analysis of 18 narratives provided by 10 managers in the public sector - events described as having gone well by the managers - six domains differentiated a thriving manager from those who had only coped or survived the ordeal. Using an a priori theory and emergent qualitative coding strategy, data were extracted and coded into subthemes. Managers who were thriving: were able to regulate their own emotional reactions, reframed the problem or situation as solvable and an opportunity, utilized personal self-care strategies, adopted a systems perspective, were communicative about what was happening, helped others to cope, and created collaborative strategies to address the issues in constructive ways. Results are discussed in terms of the lessons for leadership effectiveness when dealing with complex and disturbing organizational events.

OB: What Makes You Proactive Can Burn You Out: The Downside of Proactive Skill-Building

Author: **Xue Yang**, *U. of Pittsburgh*

Author: **R David Lebel**, *U. of Pittsburgh*

Author: **Sharon Parker**, *Centre for Transformative Work Design / Curtin U.*

Author: **Daniya Kamran-Morley**, *U. of Pittsburgh*

It is generally assumed that proactivity at work is motivated by positive motivational states and has positive outcomes for employees. However, recent perspectives suggest a downside to proactive behavior, as it may be driven by negative emotions and experienced by employees as depleting. Building on self-determination and discrete emotions theories, we argue that perceived financial precarity starts a motivational chain that leads employees to proactively learn new skills out of fear, and that proactivity driven by precarity and fear creates feelings of burnout. We further argue that the effect of proactivity on burnout will be particularly strong for employees with high impression management motives. We test our hypotheses in a four-wave study of 1,315 employees at a large university in the United States during the COVID-19 pandemic, when employees' concerns about their finances were heightened and many felt the need to learn new skills. Theoretically, our findings shed light on both the antecedents and consequences of the downside of proactivity. Practically, our findings help to understand both how employees proactively adapt to financial precarity and how those proactive efforts are experienced as draining.

When Hierarchy Helps: Exploring Positive Outcomes of Social Hierarchies at Work *When Hierarchy Helps*

Discussant: **Edward McClain Wellman**, *Arizona State U.*
Session Chair: **Tyler Sabey**, *Arizona State U.*
Session Chair: **Remy E. Jennings**, *Florida State U.*
Presenter: **Rui Zhong**, *Sauder School of Business, U. of British Columbia*

Author: **Ajay Somaraju**, *Michigan State U.*

Social hierarchies—vertical differences among individuals in relation to a socially valued resource (Anderson & Brown, 2010)—are a fundamental feature of organizations (van Kleef & Cheng, 2020). The main two types of hierarchical differentiation in organizations are power, which refers to control over valued resources, and status, which refers to respect afforded by others. These social hierarchies may emerge both formally (e.g., receiving a promotion to a leadership role wherein one has authority over subordinates) and informally (e.g., referent power in a team from one’s expertise) (Magee & Galinsky, 2008). Although there are recognized benefits for organizations of formal social hierarchies (e.g., division of labor, motivating performance through hierarchy-related incentives; Halevy et al., 2011), at the individual and team levels, social hierarchies have traditionally been viewed through a negative lens by scholars and practitioners alike. This is demonstrated through maxims like “power corrupts” and “heavy is the head that bears the crown,” and supported through empirical studies. For example, studies have suggested that feeling powerful is associated with negative outcomes such as less trust in others (Schilke et al., 2015), greater abuse of subordinates (Foulek et al., 2018), overconfidence in decision making (Fast et al., 2012), and reduced connection with others (Galinsky et al., 2006; Lammers et al., 2012). At the team level, hierarchy may hurt team effectiveness (Greer et al., 2018) and hinder collective learning (Bunderson & Reagans, 2011). Summarizing these ideas, Fleming and Spicer (2014, p. 3) remarked that “power generally has negative connotations when it comes to understanding organizational life.” Despite their negative reputation, social hierarchies may not always be detrimental in organizational settings (e.g., Foulek et al., 2020; Tost & Johnson, 2019). Recent work has suggested that the effects of social hierarchies may be more nuanced than previously recognized (e.g., Foulek et al., 2021), and therefore, in this symposium, we seek to explore ways that power and status may be beneficial to individuals and teams, in addition to the more traditionally recognized costs of social hierarchies. In highlighting some positive effects of power and status, we contribute to management scholarship by bringing more balance to the literature on social hierarchies, underscoring the complex impact of social stratification in organizational settings. Taken together, the papers in our symposium suggest instances where power and status may be a welcome resource for enhancing work performance, wellbeing, and team functioning.

**Leadership And Progression Experiences By
Leaders From Marginalized Groups**
Leadership Experiences By Marginalized Leaders

Participant: **Obiageli Heidelberger-Nkenke**, *Henley Business School, U. of Reading, United Kingdom*

Abstract Leadership diversity has been a prominent topic over the years with research and practitioners investing much time and resources into achieving equity and inclusion at every level of the organization. Despite these efforts organizations and literature have failed to link well-intentioned diversity intentions to outcomes, such as leadership progression or taking on leader identities among marginalized groups due to complex individual-level and organizational-level challenges. Early insights show that gender and ethnic stereotyping and bias in leadership are the most tenacious barriers to the progression of all non-dominant work groups, especially women of color. However, despite the acknowledgement that individual-level factors, such as cognitive barriers, prevent diversity efforts from succeeding, we lack an in-depth understanding of how members of minority groups in organizations, especially women and other aspiring leaders from non-dominant groups, experience and make sense of their particular leadership and diversity challenges. With this symposium we contribute to closing this critical knowledge gap, providing four sets of qualitative and quantitative insights into how minority leaders experience intra- and interpersonal factors to either hinder or facilitate their career advancement within specific organizational contexts. The aim of the symposium is to help create a better world, together, by offering this knowledge exchange, helping to generate follow-up research ideas and forge collaborations between scholars and practitioners, in order to make leadership diversity a reality in our world.

Speaking Science 
Speaking Science

Organizer: **Katelyn Zipay**, *Purdue U.*
Organizer: **Elizabeth Margaret Campbell**, *U. of Minnesota*
Organizer: **Theresa M. Glomb**, *U. of Minnesota*

Experts acknowledge that the relationship between science and the public is at a precarious stage (Public Face of Science Initiative, 2018). In this critical moment, it is imperative that we engage in relevant conversations directly and deliberately to positively impact the future of society and build cultures that value science. In line with the All- Academy Theme, this workshop focuses on “creating a better world together” by promoting the effective translation of research and developing additional skills for sharing science in an accessible and provocative way. This PDW aims to equip attendee with broader skills necessary for communicating science with varied non-academic audiences and, ultimately, seeks to promote greater impact of our scholarship. We will discuss key skills in effective science communication: saying “yes” to sharing your knowledge, crafting a coherent and compelling story, tailoring the message to your audience, and navigating the opportunities and obstacles in science communication. Throughout the interactive workshop, there will be “cameos” from renowned voices in our field to share advice, encouragement, and an invitation to join them in “speaking science.” We will couple best practices in media communications with improvisation skills to provide participants with the opportunity to learn and practice science communication strategies. We welcome all faculty interested in building their confidence and capabilities to broadly speak about their science and expect the session will be especially valuable to junior faculty and they prepared to say “yes” to opportunities as they advance in their careers.

Pre-registration is required. Please email Kate Zipay (KZipay@purdue.edu) to sign up for this session. Participants should come ready to actively practice how to more comfortably and confidently speak about science and their own research to broad audiences. No pre-work is required for the session.

What Role Does Work Design Play in Adaptation to Unprecedented Change? Insights from COVID-19 *Work Design and Adaptation to Change*

Discussant: **Russell A. Matthews**, *U. of Alabama*
Presenter: **Caroline Knight**, *Curtin U., Perth*
Presenter: **Daniela Andrei**, *Curtin Business School*
Presenter: **Nathan Baker**, *Michigan State U.*
Presenter: **Anita Keller**, *U. of Groningen*
Presenter: **Georgia Hay**, *Centre for Transformative Work Design / Curtin U.*

Participant: **Chu-Hsiang Chang**, *Michigan State U.*
Participant: **Ruodan Shao**, *York U.-SSB*
Participant: **M.K. Ward**, *Curtin U.*

In this symposium, our goal is to explore adaptation to work during COVID-19 over time, and who was likely to adapt better than others, and why. Multiple studies have demonstrated that mental health and performance deteriorated during COVID-19 (Zacher et al., 2021), with increases in distress (e.g., O'Connor et al., 2020; Pierce et al., 2020), and loneliness (Wang et al., 2020) particularly salient. Yet our preliminary research also shows that not everyone had the same experience. Some employees and organisations were able to adapt to the unprecedented situation and fared better than others, in terms of well-being and performance. Specifically, we draw on a work design perspective to unpack some of the change processes involved. The five included papers highlight work design predictors of positive outcomes (e.g., manageable job demands), and individual (e.g., procrastination, detachment from work) and contextual (e.g., organisational factors) mediators and moderators implicated in positive adaptation. Using a range of methods, from mixture models, to random-intercept cross-lagged panel models, and longitudinal qualitative case studies, we uncover potential change processes which may help explain positive adaptation to work during unprecedented events beyond the pandemic, such as environmental disasters or major life stressors. Further, we explore predictors and moderators of these change processes for different groups of people, including younger and older workers, and entrepreneurs. We discuss important implications for designing work for these different groups of people. We hope to stimulate conversation around the importance of understanding processes underlying adaptation to work during unprecedented events, and the role of work design in adaptive processes.

This proposed PDW is the continuation of a joint effort to develop and grow a community of scholars with the common research interest of intersection of work and volunteering. This research goes beyond the traditional employee relationship to include additional stakeholder relationships such as the community, volunteer beneficiaries, and the third sector. Building on the successes of multiple past caucuses and symposia organized by the same group, this workshop will bring together scholars interested in developing research projects in an interactive, supportive and interdisciplinary environment. The PDW is aimed at attracting scholars from various contributing disciplines, including Organizational Behavior, Human Resources, Public and Nonprofit Management, and Social Issues in Management. Research topics include, among others, corporate volunteering programs, volunteer management, and individual strategies for managing the intersection of work and volunteering. Our objectives are: (1) bringing together the inter-divisional research community focusing on work and volunteering; (2) supporting and developing ideas and manuscripts through feedback and discussions; (3) discussing ways forward and visions for the research community and the literature to which we contribute. Sections of the workshop will include an overview of the field of research, round-table discussions of pre-submitted papers and research ideas as well as a plenary discussion.

To register for this PDW please email your extend abstract or working paper to the workshop organizers Bethania Antunes (b.antunes@surrey.ac.uk) or Jonathan Booth (j.booth@lse.ac.uk) by the deadline 10th July. We will accept a maximum of 20 working papers/extended abstracts based on research relevance and quality.

The Impact of Leadership on Innovation and Transformation

Session Moderator: **Art Uprety**, *IE Business School, IE U.*

ODC: **The Role of Affective Encounters in Collective Leadership Processes**

Author: **Leni Grünbaum**, *Aalto U. School of Business*
Author: **Saija Katila**, *Dr.Sc. (Econ. & Bus. Adm.) Senior Lecturer*

With the increase of uncertainty, complexity and ambiguity of organizational life, a growing number of scholars have questioned traditional leader-centric theories and claim that leadership is a relational process in which all the individuals involved actively participate. We join the discussion on collective leadership, in which leadership is understood as producing direction and creating space for collaborative action. To date, scholars have mainly examined this process by focusing on conversations. This leaves unaddressed affect as a visceral force which precedes our conscious perception and knowing, and emerges relationally between human and non-human bodies such as artifacts, ideas and discourses. In order to discuss the affective nature of collective leadership processes we offer the concept of ‘affective encounters’ to the literature on collective leadership. Our study asks: How does the concept of ‘affective encounter’ help to understand collective leadership processes? How do affective encounters contribute to the development of collective leadership in a workshop setting? Zooming in on the flow of affect, we narrate how collective leadership unfolds during the facilitated workshop of a troubled multiprofessional group. The study contributes to the discussion on collective leadership by introducing the concept of ‘encounter’ for tracing the micro-movements through which collective leadership unfolds. Further, it provides theoretical and empirical insight about the role of affect in the collective leadership process and shows how attentiveness to sociomateriality can help scholars to explore the process of collective leadership.

ODC: **Senior Leaders’ Experience of Transformational Change: A Process Model**

Author: **Art Uprety**, *IE Business School, IE U.*
Author: **Jill Waymire Paine**, *IE Business School*
Author: **Sara B. Soderstrom**, *U. of Michigan*

Winner of ODC Division Best Paper Award
ODC Division Best Paper Finalist
Carolyn Dexter Award Nominee

Organizational change research has largely focused on the reaction of change recipients, with little attention paid to the experience senior change leaders (SCLs) have while leading organizational transformations. Using an interpretivist grounded theory approach, we examined the experience of 32 SCLs in a wide range of geographies, industries, and change contexts, to develop a process model of their reactions. The findings reveal that SCLs perceive their roles to be stressful, but the type of stress they experience depends on their appraisal of their situation. If they perceive their stress to result from challenges that can be addressed, they experience positive emotions, which can lead to a self-reinforcing ‘gain loop’. However, if SCLs appraise their stress to be the result of hindrances outside their control, they experience negative emotions and may enter a self-reinforcing ‘doom loop’. Throughout the implementation of change, SCLs continually reappraise the demands of their role, available resources and the value of the change to the organization and themselves. Accordingly, the type of stress they experience can shift over time and lead to different reactions. Our study findings offer novel insight into the study and practice of change leadership that can lead to higher levels of leader and organizational change effectiveness.

ODC: **Linking Entrepreneurial Leadership and Innovation Performance in Construction Firms**

Author: **Giang Truong Hoang**, *Victoria U. Australia*
Author: **Huong Nguyen**, *Victoria U.*
Author: **Tuan Trong Luu**, *Swinburne Business School, Swinburne U. of Technology*
Author: **Thuy Thu Nguyen**, *Vietnam Ministry of Education and Training; Foreign Trade U.*

To achieve business success in a competitive market, construction firms are searching for different ways to enhance their innovation capabilities. This study aimed to examine the role of entrepreneurial leadership in promoting product and process innovation among small- and medium-sized enterprises (SMEs) in the construction sector through the mediating effect of innovation strategies and the moderating effect of knowledge acquisition. Data was collected from 402 employees working in 254 Vietnamese construction SMEs. The findings revealed that entrepreneurial leadership is positively associated with both product and process innovation. In addition, these relationships are mediated by innovation strategy. While innovation strategy and product innovation is moderated by knowledge acquisition, evidence was not obtained for the moderation effect of knowledge acquisition on the link between innovation strategy and process innovation. The findings contribute to dynamic capability theory by identifying the roles of entrepreneurial leaders in managing an organization as a dynamic system and developing appropriate innovation strategies to adapt to rapidly changing environments. This study offers important implications for construction firms that are investing in innovation activities and are seeking ways to promote their innovation of products and processes.

The acquisition process spans a wide variety of activities from setting acquisition strategies, to searching, analyzing, comparing targets, to negotiating the deal and setting a price, and to implementing post-merger integration. It is a complex and challenging process that continues to attract much attention from scholars and practitioners, and bears important consequences for firm performance. To deepen our understanding of the acquisition process, this PDW brings together scholars from diverse sub-disciplines along with executives that manage and live through the acquisition process. The goal of this workshop is to share cutting edge research and teaching, and reflect on recent contributions of the field, to gain deeper insight from thoughtful practitioners, and thus bridge scholars from various sub-disciplines and practitioners to advance our understanding of the pre- as well as the post-merger phase. This year, the emphasis will be put on the micro foundations of acquisitions, a perspective in the acquisition research which has received increased academic interest in recent years.

Discussant: **Eva Boxenbaum**, *Copenhagen Business School*
Discussant: **Renate Elisabeth Meyer**, *WU Vienna & Copenhagen Business School*

This is the 20th annual iteration of this workshop that provides students at the pre-proposal stage to draw on the wisdom and expertise of a group of established OMT scholars to develop a defensible dissertation proposal. Classes and preliminary exams usually have clear structures and guidelines, but we often get little sense of how to turn our vague good ideas into dissertation proposals that will intrigue potential committee members, pass a defense, and grow into a high-quality dissertation. This workshop aims to address this gap by improving the focus and framing of research questions, identifying and addressing methodological issues, and constructively critiquing conceptual foundations. As well as these important content issues, discussions may also address process issues like managing your dissertation committee, and completing the dissertation. The workshop consists of small group discussions between faculty panelists and doctoral students working on dissertation proposals in the panelist’s area of expertise.

Flipping the Classroom to Teach Social Issues

Flipping the Classroom

Session Chair: **Jae Hwan Lee**, *Hamline U.*

The Social Issues in Management (SIM) Curriculum Development Committee (CDC) proposes a Professional Development Workshop (PDW) to present a “flipped classroom” method to teach stakeholder management, corporate social responsibility (CSR), ethics, and sustainability. Flipping the classroom is a type of blended learning which aims to increase student engagement and learning. In this learning environment students are tasked to complete readings at home and work on live problem-solving during class times. In this PDW the organizer will discuss major benefits of flipping the classroom and provide teaching tips using this approach. Also, during this presentation attendees will have opportunities to ask questions and participate in discussions. At the end of the PDW attendees will receive a resource packet helpful for flipping the classroom in teaching major social issues. The PDW does not require pre-registration and is open to all AOM members.

No pre-registration is needed. Everyone is welcome!

Facilitator: **Wim Vanhaverbeke**, *U. of Antwerp*

Open innovation (OI) is a management concept that describes the purposive management of knowledge flows across organizational boundaries. It has attracted significant attention from management researchers and has been studied using a variety of theoretical and methodological perspectives. At the same time, researchers in a growing number of disciplines and divisions are attracted to this domain. While our understanding of OI is increasing, many challenges in researching OI remain and new ones emerge. Being the seventh consecutive PDW on this topic, this PDW gathers a number of active scholars conducting research related to OI. These scholars will share and build on their experiences in researching OI to identify some key challenges—and associated opportunities—to help advance research in this domain. By building on recently identified OI research categories, the facilitators will introduce and discuss these challenges, which cover a broad range of levels of analysis, various theoretical perspectives, and methodological approaches. Following this, they will moderate a virtual roundtable breakout room discussion with interested participants. Pre-registration (by submitting a short text with research interests) is recommended for the virtual roundtables, which have pre-defined topics, but attendance is open as long as space permits.

On the 1st of July, we will open the PDW registration form, which will facilitate the roundtable allocation. If you would like to join the session please fill it out by July 31st. <https://foms.gle/JUJu1nW19a32MMZW8>

The Organization of Science: A Paper Development Workshop

Organization of Science

Organizer: **Christopher C. Liu**, *U. of Oregon*
Presenter: **Ryan Scott Coles**, *U. of Connecticut*
Presenter: **Waverly W. Ding**, *U. of Maryland*
Presenter: **Lee Fleming**, *U. of California, Berkeley*
Presenter: **Riitta Katila**, *Stanford U.*
Presenter: **Matt Marx**, *Cornell U.*
Presenter: **Wesley Sine**, *Cornell U.*
Presenter: **John P. Walsh**, *Georgia Institute of Technology*

What are the costs and benefits of pursuing research projects on the organization of science? A focus on science and the production of knowledge has spurred the development of managerial and innovation topics ranging from status differentials to regional spillovers to the core capabilities of firms in the knowledge economy. And yet, in an age when Science is increasingly important, it is our belief that a significant amount of research on the Organization of Science, the examination of science as conducted by individuals embedded in organizations, has fallen dormant. Why is this so? And what can be done about it? In this Professional Development Workshop (PDW), we take a fresh look at a long-standing topic from a developmental perspective. This proposed PDW unfolds in two acts. In a first segment, we present short presentations by top management scholars that focus on an array of topics including a) gender status, and organizational age in Science, b) atypical organizational forms, and c) science spillovers and general purpose technologies. Second, and more importantly, we provide an interactive venue for audience participants to receive direct feedback on their working papers and projects. The goal of this PDW is to promote a better understanding of the of the rewards and pitfalls of research in the Organization of Science, as well as to foster a burgeoning community on this important topic.

Dreaming About Health Care: Reject the Is *Dreaming about Health Care*

Organizer: **Maïke Vanessa Tietschert**, *Vrije U. Amsterdam*
Organizer: **Geoffrey Silvera**, *U. of Alabama, Birmingham*
Organizer: **Patrick Shay**, *Trinity U.*
Organizer: **Dennie Kim**, *U. of Virginia Darden School of Business*

“Healthcare lives in the 20th century, while patients use technology from the 21st century. Health care needs a trip to Mars.” (Dr. Bertalan Mesko, Healthcare Futurist). The healthcare sector is notoriously slow to innovate as it is complicated by professional, organizational, and socio-cultural boundaries, coupled with long-standing institutional arrangements and geopolitical differences across health care systems. As such, innovation tends to be - with some exceptions - painstakingly incremental, often replicating existing constraints. In other words, today's answers are based on yesterday's questions. While research in healthcare management has made significant contributions to improving healthcare performance, challenges remain. As researchers are often constrained by funding structures, data availability, research paradigms, and career processes, we rarely have the opportunity to “dream” of what health care could be as we are so entrenched in understanding what it presently is or has become. This PDW meets this challenge by providing a space for participants to collaborate and dream through creative problem solving activities. Tasked with designing the new planetary health system, participants will apply healthcare futurism mindsets and principles of design thinking to reimagine what healthcare can be, to identify and challenge our common assumptions that constrain our thinking, and to discover new possibilities for future research that is unbound to the status quo. Comprised of three phases of creative thinking exercises, this PDW challenges healthcare management scholars to dream big, reframe collective challenges, and foster innovative research, equipping them with tools to catalyze their dreams to spark transformational change in our existing healthcare systems.

Panelist: **Eric McNulty**, -

The Covid-19 pandemic has exacerbated many healthcare systems’ workforce challenges such as burnout, moral distress, retirements, layoffs, and turnover due to workload issues, fatigue, and/or personal issues such as caring for family members. These trends are of concern both in the United States and internationally. Healthcare workers are the cornerstone of any high-performing health system, and, by 2030, the field will require 53 to 80 million new workers across the globe. The decrease in the number of healthcare workers during the pandemic has resulted in several adverse outcomes including reduced quality of patient care, increased wait times, reduced patient satisfaction scores, and increased patient safety incidents and medical errors. Research into strategic human resource approaches regarding the healthcare workforce crisis is needed to identify the underlying reasons behind these issues and to map appropriate protocols towards potential solutions. The purpose of this Professional Development Workshop (PDW) is to discuss the current state of the healthcare workforce in an international context. This PDW aims to foster an interactive & experiential brainstorming session whereby researchers can share ideas for a research agenda to address the expanding healthcare workforce crisis. The PDW will begin with a variety of established scholars to provide context to this crisis. Then participants will be invited to small group breakout sessions to reflect on their own experiences, share ideas, and gain knowledge that would be of value to their own health system. Finally, the closing discussion will focus on next steps with a targeted and actionable research agenda.

Challenging Neoliberalism Through a Posthuman Ethics of Care *Challenging Neoliberalism Through Posthumanism*

Panelist: **Guy Huber**, *Oxford Brookes U.*
Panelist: **David Knights**, *Oxford Brookes U.*
Panelist: **Barbara Simpson**, *U. of Strathclyde*

This PDW adopts a critical stance towards neoliberal assumptions that privilege the individual ahead of community while also neglecting the wider ecology that is both the condition and consequence of how we live together. The individualism of neoliberalism partly relies on an ontological essentialism that implies ‘some bounded and coherent core—whether it is an autonomous will, a capacity for reason, or... biological genetic code—which defines humanness’ (Bagg, 2018: 209). As a potentially productive alternative, the workshop will explore the implications of a posthuman revisioning, which directs our attention towards a more plural, collaborative, and affirmative approach to social life that might stimulate the pursuit of greater equality, justice and productive wellbeing. Posthumanism retains the positivity and productivity of behaving humanely but without reproducing the myth of autonomy and the often-oppressive demand that every individual realise their own human potential. It recognizes that dynamic entanglements between humans and non-humans engender a consciousness of shared existence that invites an ethics of caring. The workshop is designed for hybrid delivery on the AoM Annual Meeting platform, but it can also be readily rejigged for either in-person or virtual-only participation. It will adopt a format that is intended to inform participants about the posthuman and encourage an ethics of caring, as well as generating new thinking for future research. Towards this future, a Padlet will be established as an emergent artefact for ongoing development by an interested community of researchers and practitioners.

Session Chair: **Juan Bu**, *Indiana U. Bloomington*
Session Chair: **Stephanie L. Wang**, *Indiana U., Bloomington*

Writing good theory is the key to career success in our profession. However, less agreement exists about definitions of “theory”, and even less agreement exists regarding the meaning of a “theoretical contribution”. The purpose of this annual PDW since 2014 is to present the audience with the successful experiences and valuable insights on writing good theory by prominent scholars and editors. The panelists of this year include Professors Tailan Chi, Alvaro Cuervo-Cazurra, Klaus Meyer, Jeffrey J. Reuer, and Laszlo Tihanyi. This PDW will be interactive and welcome questions from participants to stimulate relevant and meaningful discussion.

Management History, Business, and Partnership: A Vision for the 2020s

Management History, Business, and Partnership

Participant: **Michael Heller**, *Brunel U.*

This PDW will examine the concept and practice of partnership between management and organizational history (MOH) and business, organizations, and management and the benefits that can accrue to both sides from such partnerships. The workshop is grounded in work on Uses-of-the-Past and Rhetorical History in Organization Studies, in addition to broader themes of business history, MOH, knowledge exchange, impact and engagement between academics and practitioners (Carroll, 2002; Suddaby, Foster, & Quinn Trank, 2010; Foster, Suddaby, Minkus, & Wiebe, 2011; Foster, Diego, Suddaby, Kroezen, & Chandler, 2017; Wadhvani, Suddaby, Mordhorst, & Popp, 2018). At the heart of the workshop is the question of whether there is a role for MOH and business history beyond publication (Wilson et al., 2022)? What role can historians play in the creation of rhetorical histories which extends beyond theorisation, how can impact, engagement, and knowledge exchange take place, what are the challenges to the creation of such partnerships, and what are the values and benefits that historians, management, business, and organizations can provide to each other?

Participant: **Elizabeth Eve Umphress**, *U. of Washington*

Research on behavioral business ethics, which aims to understand the causes and consequences of (un)ethical behavior in organizations, first emerged in the 1980s. It was a niche literature until the early 2000s, when a wave of organizational scandals inspired scholars from divisions across the Academy to start studying ethics topics. With the goal of developing and generating future scholarship, this PDW provides an overview of foundational behavioral ethics topics and explores how these foundational works inform contemporary research. The theme for the sixth rendition of this annual PDW is therefore “From Past to Present: Classic Ideas and Contemporary Applications.” The PDW is set up in two parts. Part 1 will feature four sets of two (timed 5-minute) Pecha Kucha presentations. Four foundational scholars—Tom Jones, Ann Tenbrunsel, Mike Brown, and Elizabeth Morrison—will each talk about their influential ideas (modeling ethical decision making, framing, ethical leadership, and voice), about what triggered the development of their original thinking and reflections on how their ideas have developed over time. Four contemporary scholars (Celia Moore, Ting Zhang, Ryan Fehr, and Anjier Chen) will then present about how they have applied and extended these foundational ideas in their own research. Part 2 of the PDW consists of roundtable networking discussions, where attendees can foster connections and engage in conversations with experts on eight behavioral ethics topics—the four topics from the presentations and four other growing topics in the literature: the normalization of unethical behavior, moral trade-offs, the ethics-technology interface, and ethics in publishing.

Pre-registration for this session is required, which you may do through the below link. While the number of online attendees will remain uncapped, we will limit the number of in-person attendees to 100. In-person attendees will be able to attend the full session, while online attendees will only be able to attend the first (presenter) part of the PDW. The deadline to register is July 15. Please only register for the in-person PDW if you are truly committed to attending the session. Email niki@ku.edu for any questions. https://kuservey.ca1.qualtrics.com/jfe/form/SV_6nAteTsZrQ5OEVU

Integrating Sustainability into Teaching

Organizer: **Nancy E. Landrum**, *Independent Scholar / Researcher*
Coordinator: **Shelley F. Mitchell**, *Hult International Business School*
Moderator: **Stuart A. Allen**, *Robert Morris U.*
Panelist: **Robert Sroufe**, *Duquesne U.*
Panelist: **Ivan Montiel**, *City U. of New York, Baruch College*
Panelist: **Andrew J. Hoffman**, *U. of Michigan*
Panelist: **Rae Andre**, *Northeastern U.*

This panel symposium will offer ONE Teaching Award winners' best practices and tips for incorporating sustainability into teaching strategies. The goal is to equip our academic colleagues with knowledge to share with students, our future business managers and leaders, on the role of business in tackling our greatest environmental, societal, and economic challenges. In the context of an ongoing global pandemic, it is more important than ever that we work toward Creating a Better World Together.

Organizational Capabilities and Competencies

Session Moderator: **Jim Hazy**, *Adelphi U.*

OMT: Leadership and Social Complexity: How Individual Interactions Scale to Organized Agency

Author: **Jim Hazy**, *Adelphi U.*

Author: **Murat Sakir Eroglu**, *Adelphi U.*

This article develops a new approach to studying leadership and collective agency. It is inspired by recent research in social biology and complex social network modeling in the natural sciences. The approach explicitly situates leadership in the context of emergent scale-crossing mechanisms that form individual interactions into organizations and does so in the context of a system dynamics model of global properties that characterize human organizing. By exploring recent empirical and numerical modeling results from the natural sciences the article identifies three order parameter types: Expectancy Alignment, Instrumental Momentum, and Cooperating Valence. Moreover, arguing that together, these parameters characterize the state of dynamic order in human organizations. Next the article offers testable propositions that describe the mechanisms that enable leadership activities to impact these parameters, and by doing so organizational outcomes. If supported empirically these results allow researchers and practitioners to build simulation models to show how well-specified locally-enacted leadership activities impact organizational outcomes.

OMT: Indexing Capability: Reducing the Discrepancy Between the Perceived and Actual Competencies

Author: **Mengyue Su**, *Peking U.*

Author: **Hao Ma**, *National School of Development at Peking U.*

This article advances a theory of the firm's indexing capability which consists of stocking capability and retrieving capability and examines its impacts on reducing the discrepancy between the perceived and actual firm competencies. During competencies' acquisition and accumulation, the firm needs proper stocking that allows it to track what competencies it possesses and where they should be archived within the architecture of competencies. The retrieving capability concerns searching the needed competencies and assessing via the matching function their availability, suitability, and readiness for latter orchestration and deployment. The efficacies of indexing capability affect the discrepancy between the perceived competencies that the firm thinks it possesses and the actual competencies it does possess, as reflected in false-possession or false un-possession. We propose that the indexing capability's impacts will be moderated by the attributes of firm competencies and the attributes of the contexts in which competencies are called for. The theoretical construct of and the framework on indexing capability advanced in this article contribute to our understanding of how stocking and retrieving matter in the overall process of a firm's management of its competencies.

OMT: Intrapreneurship, Technological Enabling, and Value Re-construction in the Sharing Economy

Author: **Jialei Li**, *Dalian Jiaotong U.*

Author: **Zenghui Hao**, *Dongbei U. of Finance and Economics*

Platforms based on the logic of sharing economy achieved tremendous growth within a decade. Especially during the global ongoing against COVID-19 pandemic, these platforms as growing organizations perform a strong potential for stimulating idle resources, employment, and economic recovery. However, we still know little about the growth mechanisms regarding the sharing economy organizations. Drawing on theoretical views about the inner growth mechanisms, we develop a theoretical framework from resource orchestration theory. We then design a fsQCA study and suggest that "intrapreneurship, technological enabling, and value re-construction" are the key mechanisms. We further find that there are four formation paths for the rapid growth of these platforms. For each formation path, although different mechanism performs different strength, the three core leading mechanisms need to work at the same time. The findings mainly contribute to the resource and capability literature, and thus reveal how different types of platforms succeed in the sharing economy.

Paper is Available to Meeting Registrants Only.

OMT: Intended Revolution with Unintended Evolution: The Case of Proactive Self-Disruption

Author: **Joakim Hans Netz**, *Jönköping U.*

How does proactive self-disruption—from search for breakthrough to revolutionized industry—unfold? Many incumbents fail when their industry change, yet others, putting their own dominant positions at risk, change their established industries. Such self-disruption is challenging, and unattractive for investors and CEOs. Where CEOs are contracted for periods, disrupting with radical technological innovation takes a decade or more. Using literature on absorptive capacity as a dynamic capability of disruptive technologies, we extend explanations of established firms' failure that converge in pointing to attachments to history as a handicap. Examining this point empirically, we followed the tradition of in-depth historical case studies (e.g., Tripsas & Gavetti, 2000; Danneels, 2011). A longitudinal research design allowed us to track how Asea Brown Boveri invented the HVDC Light technology and renewed its power system market leadership by disrupting its industry. Our findings show that proactive self-disruption is promoted by the CEO and middle managers, but its realization depends on differentiated temporal roles of middle managers' persistent use of history in relation to stakeholders. We present a conceptual framework that explains how incumbents self-disrupt by relying on the stories that middle managers tell.

Discourse About and Through New Technology  

Session Moderator: **Enlan Wang**, *U. of Southern California*

OMT: Sensemaking of Emerging Technologies on the Coordinates of Science Fiction 

Author: **Enlan Wang**, *U. of Southern California*

Institutional support is crucial for the development of emerging technologies. However, the institutional sensemaking of emerging technologies can be challenging due to high uncertainty and ambiguity. I take an ethnomethodological approach to investigate the institutional deliberation of emerging technologies in U.S. congressional hearings and records. I found that science fiction plays a vital role in the institutional sensemaking of emerging technologies. Specifically, I discover that the legislators and experts engage with three discursive practices to resolve challenges in the sensemaking of emerging technologies: 1) the communicative use of culture resources in science fiction to evoke the shared memory of concepts, prototypes, scenarios, emotions about new technology; 2) the diametric use of science fiction to emphasize the accountability and rationality of institutional context and to justify the perceived “appropriateness” policy timing and time horizon; 3) the analytical use of science fiction to juxtapose science fiction with practical reasoning to establish the perceived “rationality” of the risk and benefit evaluation for emerging technologies.

OMT: Expressive Apologies: Being Socially Responsible Firms    

Author: **Wei Wang**, *Northwestern Kellogg School of Management*

Author: **Klaus Weber**, *Northwestern U.*

Studies in Corporate social responsibility often focus on firms’ routine ESG (Environmental, Social, and Governance) practices. In our paper, we highlight that an apology is another way of taking social responsibility that manages perceptions of responsibility towards firms facing external accusations. We posit that firms’ expressive orientation towards social responsibility and their relationship with local communities would influence their usage of apologies and their sensitivity to situational factors such as publicity. We verified our hypotheses through an empirical examination of Fortune Global 500 companies’ apologies in China.

OMT: Cybershaming: Conceptualizing Organizational Shaming in the Digital Age 

Author: **Ramesh Krishnan Thekke Parambu Madom**, *Hitotsubashi U.*

Author: **Jin-Ju Lee**, *Hitotsubashi U.*

Author: **Satoshi Akutsu**, *Hitotsubashi U.*

Recent years have seen a dramatic rise in the cases of Cybershaming of businesses. Social media has enhanced organizational transparency to actors both within and outside, consequently disrupting institutional arrangements and logics. Actors defend the institutional logics they cherish, and any contradiction between competing logics may trigger conflict and uncertainty. In the absence of clear institutional illegality, various actors on social media will amplify competing ideological bases and logics. Outgroup actors may resort to Cybershaming to secure compliance and enforce community prescriptions, thereby ensuring respect for inclusivity and capacity for rich, meaningful lives for everybody. Our conceptual paper seeks to theorize how organizational ingroup actors may choose to respond to Cybershaming from outgroups through the lens of confrontation, disruption, and resettlement of logics on social media. When confronted with disruption from institutional complexity, how will institutional ingroup actors react to restoring or defending cherished logics? Specifically, how will this play out amidst the transparency and visibility afforded by social media? Given the emergent and evolving nature of this phenomenon, we build on the theoretical foundations of institutional logics and complexity while simultaneously drawing from a wide range of empirical sources, including studies on internet policy, cybercrime, activism, business ethics, news articles, popular books, and traditional group-based Shame studies. Ultimately, we seek to contribute to the urgent and opportune discussion on institutional complexity and disruption in the digital age.

OMT: The Effect of Exogenous Critical Events on the Mobilization of Digital Social Movements

Author: **Sarri Nykänen**, *Aalto U., Department of Industrial Engineering and Management*

Author: **Zeerim Cheung**, *U. of Jyväskylä School of Business*

We study the effect of exogenous critical events on the mobilization of digital social movements in the context of Finnish citizens’ initiatives. Critical events are occurrences that direct unusual and high levels of public attention to an issue for a brief and limited point in time. We argue that critical events mobilize social movements because they focus attention on movement issues, trigger activating emotions, and synchronize the actions of activists. Our study combines data from the Finnish justice ministry, the national public broadcasting agency YLE, Google Trends search interest data, and hand-collected data from online sources for a sample of 573 initiatives. We find that critical events greatly increase the mobilization of supporters for initiatives. Critical events increase mobilization especially when events are unpredicted or stay salient for longer times. Media attention and coalition resources also increase mobilization. Our findings suggest that timing can substitute for coalition resources. The combination of critical events and high coalition resources is rare as only small coalitions seem to be quick enough to mobilize in response to critical events. The results imply that timing matters but that it is difficult for large and well-resourced coalitions to time campaigns opportunistically.

OMT: **Under Pressure: External Monitor, Managerial Attention and Organizational Learning from Major Errors**

Author: **Francisco Polidoro**, *U. of Texas at Austin*
Author: **David Chandler**, *U. of Colorado, Denver*
Author: **Wei Yang**, *China Europe International Business School (CEIBS)*

Research on organizational learning from serious errors has uncovered several influences related to a firm's own experiences and those of its peers. While the learning literature therefore acknowledges that the external environment affects organizational learning, research has largely overlooked the possibility that organizations other than competitors might also shape learning by the focal firm. We explore this proposition by studying the collective influence of an essential monitor (financial analysts) on repeat incidences of a serious organizational error (major oil spills). Specifically, we theorize that monitors apply pressure by setting expectations in the immediate aftermath of an error (encouraging learning from that error by directing managerial attention toward safety), but that these effects are counteracted by subsequent pressure to meet a different expectation (encouraging forgetting by diverting managerial attention away from safety and toward profit). We also theorize that analysts further shape organizational learning from errors by conditioning what we know about both experiential and vicarious learning. We test this theory by studying the effects of evolving analyst pressures on major oil spills in the U.S. by firms in the oil and gas industry, from 1980 to 2016. By showing that analysts apply differential pressures to firms following a serious error (immediately and, then, subsequently), this study highlights the role of external monitors in encouraging both organizational learning and forgetting due to socially set expectations that shift the attention of managers among competing foci in ways that affect the likelihood of repeat serious errors.

OMT: **When Firms Benefit from Public Criticism: Oscillating Pressures of Conformity and Differentiation**

Author: **Nareuporn Piyasinchai**, *Cambridge Judge Business School*
Author: **Matthew Grimes**, *Cambridge Judge Business School*

While organizations are increasingly expected to conform with industry-based sustainability standards, it is less clear how the accumulation of public criticism directed toward the industry might reshape such expectations. This paper argues that depending on the accumulation of public criticism directed toward an industry in a given year, organizations are likely to face oscillating pressures to both conform with and deviate from industry sustainability norms. We test our hypotheses using a balanced panel dataset of 2,313 companies across 62 industries and 70 countries from 2013 to 2018. Our results suggest that although on average firms that conform with industry sustainability norms benefit from positive long-term investor evaluations, once annual public criticism of industry peers reaches a threshold, both positive and, surprisingly, negative deviation from industry sustainability norms are rewarded. Moreover, amid such accentuated public criticism, rewards are even greater for deviating firms within the context of highly homogenous industries with respect to sustainability practices and performance. Our findings contribute to longstanding research on categorization, while advancing the growing and important literature at the intersection of social evaluations and optimal distinctiveness.

OMT: **Combating Sociopolitical Contagion with Countervailing Claims: Evidence from Charlottesville**

Author: **William Reuben Hurst**, *U. of Michigan, Ross School of Business*

Winner of the OMT Division Best Student Paper Award

Prior research suggests that, from a strategic perspective, firms make sociopolitical claims to compensate when their own actions misalign with the sociopolitical preferences of their stakeholders. Drawing on theories of intracategorical contagion, however, I propose conditions under which firms make sociopolitical claims not to compensate for their own actions, but rather to compensate for the actions of others within the broader categories to which they pertain (such as others within their geographic location, industry, etc.). Specifically, I argue that sociopolitical claims serve to remedy excessive misalignment between stakeholders' preferred sociopolitical positions, and the sociopolitical positions these stakeholders would otherwise presume the firm holds based on the actions of other actors within the firm's category. I examine these predictions in the context of the August 2017 Unite the Right rally, in which white supremacist rioters suddenly imbued the Charlottesville, Virginia area with a newfound anti-diversity reputation. I show these events significantly increased employers' use of pro-diversity claims in Charlottesville-area job postings, and that this effect was larger among postings targeting workers with stronger pro-diversity preferences. These empirical findings substantiate my novel theoretical argument that, ceteris paribus, corporate claims to sociopolitical positions are most likely to arise in geographies, industries, and other categories in which audiences least expect these positions to be held.

Session Moderator: **Michelle Karen Westermann-Behaylo**, *U. of Amsterdam*

OMT: [Does Corporate Hypocrisy Predict When Firms Will Shirk Remedy Responses For Human Rights Abuses?](#)   

Author: **Michelle Karen Westermann-Behaylo**, *U. of Amsterdam*

Author: **Annie C. Snelson-Powell**, *U. of Bath*

Author: **Tricia Olsen**, *U. of Denver*

Author: **Kathleen Rehbein**, *Marquette U.*

Following an overview of literature on corporate human rights abuse and remedy, we employ a qualitative comparative analysis approach based on the logic of fuzzy sets (fsQCA) (Crilly et al., 2012; Fiss, 2007; Ragin, 2008), to explore varying configurations of talk, decisions, activist NGO initiatives, and state involvement that may lead to additional action steps toward remedy for corporate human rights abuses. Our findings show that aspirational talk alone is not sufficient to lead to action, contrary to recent theorizing within organized hypocrisy scholarship (Christensen, et. al., 2020). Without NGO pressure, corporate hypocrisy prevails when it comes to human rights remedy: Firms that engage in human rights talk are no more likely to take action toward remedy than indifferent firms who do not engage with human rights. But with NGO involvement, firms' human rights talk seems to provide leverage to pressure firms to take consistent action. When it comes to human rights abuse, firms that make empty promises should be prepared to match their talk with action because organized hypocrisy provides a trigger for NGOs to effectively apply pressure for remedy.

OMT: [How Local Mass Protests Influence Corporate Board Composition Change](#)   

Author: **Muhan Zhang**, *Penn State Smeal College of Business*

This paper seeks to examine how and under what conditions firms respond to large-scale street protests that do not target business. Corporate elites are more likely to notice and identify with certain social issues when high-volume street protests occur in their community. In addition, a firm's governance structure shapes its reaction to such mass mobilizations. Using a dataset of S&P 1500 companies for the period 2017-2020, I examine the effect of Women's March protests on firms' appointment of new female directors. Empirical analysis demonstrates that a firm is more likely to appoint new female directors when more people participate in Women's March activities around its headquarters. This effect is stronger when firms have more incumbent female directors and a lower level of transient ownership, and when male directors leave the boardroom. My findings offer new insights into research on how and under what conditions mass mobilization triggers responses from corporations. In addition, this research contributes to the literature on corporate governance by showing how macro-level sociopolitical contexts influence corporate governance and how existing governance structure influences firms' responsiveness to the social movement.

OMT: [Breaking Silence or Not: Evidence of Corporate Polarized Voices in Hong Kong Protests](#) 

Author: **Fangwen Lin**, *National U. of Singapore*

Author: **Yishu CAI**, *City U. of Hong Kong*

Author: **Lori Qingyuan Yue**, *Columbia Business School*

Author: **Shipeng Yan**, *U. of Hong Kong*

Businesses have been increasingly implicated into political contentions, but extant studies know relatively little about how these politicalized businesses would be evaluated by the highly divided society. Drawing on the incumbent/challenger concepts in social movement theory, we theorize that challengers categorize businesses into challenger/incumbent group and translate crisis from political incumbents to the incumbent-sided businesses. However, such categorization unexpectedly helps incumbents identify ingroup businesses to favor and support. By examining review numbers and ratings of local restaurants in Hong Kong during the 2019 Anti-Extradition Movement, we find that even though businesses sided with incumbents received less reviews than businesses on the challenger side, both politicalized restaurants were more positively evaluated during the protests than other-equivalent but apolitical restaurants, and such rating premium would be strengthened if the majority of restaurant diners are from the ingroup. Our findings give implications for research on category evaluation, social movements, and political polarization studies.

OMT: [Diminishing Returns to Social Capitalist Firms and Their Employee Advocates: Evidence from WeChat](#)  

Author: **Chaitanya Kaligotla**, *Beedie School of Business Simon Fraser U.*

Author: **Sarah Wittman**, *George Mason U.*

Author: **Jingyuan Yang**, *George Mason U.*

Author: **Yuan Qu**, *Rutgers Business School*

Author: **Wei Zeng**, *School of Business Administration, Hunan U.*

When employees act as advocates on their firms' behalf, their personal social media networks provide a potentially powerful platform for social capitalistic companies to access a broad audience. Existing theories exploring employee advocacy and companies' social capitalistic efforts essentially assume, however, that employees willingly act as a tertius iungens, linking firms with potential job-, information-, or product seekers from their social networks, and that employees' contacts are interested or—at worst—neutral message recipients who respond to the information they want, and ignore the rest. However, a motivated information processing view, proffering information overload and audience preference for uniqueness, would predict audience disconnect from company efforts and possibly adverse relational effects for overly zealous employees. Reconciling these perspectives, we theorize that firms that push their employees to act as their advocates on social media will be rewarded, but will see diminishing returns in information diffusion and audience attention. We test and find support for our hypotheses on a unique data set of 3,050 company messages sent on two Chinese interior design companies' combined 2,162 employees' WeChat Moments with 200,240 readers. Both company and employee "push" efforts and message recipients' "pull" (due, e.g., to the fear of missing out) do increase message diffusion, but there are diminishing returns for employees posting messages in terms of reader count and attention. These findings contribute to our understanding of the limits of utility for social capitalist firms leveraging their employees' networks and the relational costs employee advocates experience in promoting their firms, and help to better define the boundaries between potential and activated social capital.

Panelist: **Edward Gerald McKeever**, *Lancaster U.*

Panelist: **Natalie Slawinski**, *U. of Victoria*

In this panel symposium, we collectively explore the nuanced nature of community dynamics and their consequences for individuals and organizations. Although the concept of community has longstanding presence in management literature, our understanding of the concept remains relatively vague. Many different definitions and types of communities have been discussed in various streams of literature, contributing to ambiguity around the term. Moreover, as studies about communities most often focus on their positive aspects, communities' potential dark sides are understudied. The purpose of this panel symposium is to unpack the various definitions of communities, debate their ramifications, and rebalance our view of communities by bringing the potential dark sides of communities back into the academic fore. By considering different theoretical conceptualizations of community in organizational scholarship and in the empirical reality of communities, we hope to further the growing conversations about community and around the potential challenges of responsible engagement with the communities for organisations and scholars.

Organizational search permits organizations to solve challenges, explore opportunities, and develop new solutions. This symposium takes inspiration from the coalitional perspective advanced in A Behavioral Theory of the Firm. The papers collected in the symposium examine search performed at different hierarchical levels of organizations and by diverse groups within organizations. We also offer perspectives on bridging the micro-macro gap in organizational search – and the micro- macro gap in organizational research more generally. Considering how search occurs at the micro-, meso-, and macro-levels in organizations provides insights into what elements of the processes remain the same across levels, what elements differ, and cross-level differences.

In this Professional Development Workshop (PDW), we aim to focus on the relationship between religion and entrepreneurship through the experiences related to multilayered identities of entrepreneurs and the social and symbolic boundaries between religious values and practices and entrepreneurship as an economic activity. Within the scope of this PDW, participants will gather their experiences and knowledge on areas of mutual interest in order to contribute to the theory development of both identity theory and the emerging literature deal with the relationship between religion(s) and entrepreneurship from various aspect by providing a better understanding of the management of overlapping social identities and roles stemming from simultaneity of religious identity and entrepreneur identity. As a result of this collaboration, we aim to further of the research stream at the intersection of religion and entrepreneurship which is a growing trend in the field of entrepreneurship (Balog et al., 2014; block et al., 2020; Smith et al., 2019; Khurana et al., 2021; Smith et al., 2021). In addition to published studies, Small Business Economics Special Issue on Entrepreneurship and Religion and the 1st Annual L.I.F.E. Research Conference on the intersection of Faith and Entrepreneurship are precursors of future studies on the relationship between religion and entrepreneurship.

Facilitator: **Radha Rani Sharma**, *New Delhi Institute of Management (NDIM)*
Facilitator: **I-Heng Wu**, *U. of South Alabama*
Panelist: **Minna Marinova Paunova**, *Copenhagen Business School*

Our broad goal is to connect and support emerging international members from emerging economies, the global South, and other geographies where our AOM/GDO membership is under-represented. The GDO's Global Ambassadors will partner with AOM-partner organizations to identify and invite Management scholars around the world to take part in our PDW. Participants will request and be matched with mentors who will help them feel more supported at future AOM conferences and more confident in their future AOM paper development efforts. Four panelists with connections to/in underrepresented/emerging economies will present ideas, and Global Ambassadors will facilitate roundtable discussion on overcoming outsider status at AOM and developing high-quality conference submissions. In alignment with AOM's four driving goals, our PDW aims to (1) connect and support members of the global management/organization community who might otherwise be overlooked at AOM, (2) enhance the diversity of the membership to which AOM provides indispensable value, (3) advance knowledge relevant to an even more diverse set of stakeholders/institutions around the world, and (4) enhance AOM's standing as a globally-led association. Key take-aways to participants of the PDW include stronger (1) connection to and belonging within the GDO community, and (2) honing of paper development skills, making future AOM attendance more likely. PDW participants will also be invited to a Social Hour on the evening prior to this PDW to network with mentors and panelists.

Please pre-register for this event by emailing your name, university, job title, and country to akward@vt.edu.

Pandemic and Post Pandemic Teaching and Academics/Instructor Challenges

Session Moderator: **Mai P. Trinh**, *Arizona State U.*

 **MED: Gender Disparity in COVID-19 Impacts on Academic Careers: An Agent-Based Model**   

Author: **Mai P. Trinh**, *Arizona State U.*

Author: **Chantal Van Esch**, *Cal Poly Pomona*

MED Junior Faculty Best Paper Award. Sponsored by SAGE/Journal of Leadership and Organizational Studies for the most significant contribution to management education by a Junior Faculty authors hip team (all earned doctorates since 2014 or working on it).

The gender gap in academia has arguably been widened by the COVID-19 pandemic, but little systemic data exists to quantify this gap, let alone to predict how it will play out in the near future. This study sets out to answer the research questions, “What are the short- and long-term impacts of the COVID-19 pandemic on the gender gap in academia?” and “How effective would institutional policies designed to help faculty during the pandemic be?”. To answer these research questions, we use agent-based modeling (ABM) coupled with secondary data from various sources to develop a simulation of academia before and after the pandemic. Drawing from existing databases, this simulation uses demographic parameters such as gender, partner status, and parent status as determinants of productivity and ultimately, promotion and tenure. Our simulation helps us understand the immediate impacts of COVID-19 on productivity and career trajectories of male and female academics, simulate its long-term impacts on gender (in)equality in academia as a whole in 3, 5, 10, or 20 years, and explore how much institutional interventions such as tenure clock extension, support for dependent care, and holistic wellbeing initiatives would relieve such systemic inequality. This study presents concrete data to institutions and administrators to critically re-examine faculty performance evaluation policies and how they can be improved to minimize systemic inequality.

MED: Pandemic Disruption: A Personal Response and Classroom Transformation    

Author: **Ming-Jer Chen**, *U. of Virginia*

Author: **Chawit Rochanakit**, *Eli Broad School of Business, Michigan State U.*

The COVID-19 pandemic disrupted classroom instruction at every level, in every field, around the world. Graduate business programs faced a common challenge: a possible compromised learning experience for students resulting from the suspension of in-person education. Online learning, although well established, is still generally considered a less effective instructional medium. This may be particularly true in MBA programs, which are largely centered on “high-touch” interaction and exchanges among peers and with instructors via student-oriented learning approaches, such as case teaching, in physical classrooms. This paper chronicles personal and professional transformations experienced while teaching four second-year electives at a graduate business school during the 2020-21 academic year. We reflect on how a particular mindset and specific strategic choices led to effective online teaching, mitigating the negative impact of the upheaval. We also consider this experience as a basis for developing online/offline “ambicultural” teaching methods for adoption in the post-pandemic world. Academics may find this account to be a useful learning tool and a guide for transforming their teaching in both the virtual and in-person classroom environments.

MED: Teaching Professional Skills During the Pandemic: Does Delivery Mode Matter?

Author: **Sarah E. DeArmond**, *U. of Wisconsin, Oshkosh*

Author: **Barbara L. Rau**, *U. of Wisconsin, Oshkosh*

Author: **Jennifer Buelow-Fischer**, *U. of Wisconsin, Oshkosh*

Author: **Ashay B. Desai**, *U. of Wisconsin, Oshkosh*

Author: **Andrew Miller**, -

The current study explores how the transition to online course delivery during the pandemic impacted a professional skills course which incorporates a variety of in-class and out of class experiential learning activities. In this paper, we compare student performance on a resume writing assignment, a LinkedIn profile creation assignment, a mock interview with members of local businesses and overall class scores during Fall 2019 when the professional skills course was delivered face-to-face with student performance during Fall 2020 when the course was delivered online. We explore whether the effect of delivery mode varied as a function of student sex, race and first-generation college status. Our results indicate that there were some significant differences in student performance across the two semesters. Students performed better on the resume and LinkedIn assignments when the course was delivered online. There was no difference in mock interview performance across the two class delivery modes. Students taking the online version of the course in Fall 2020 did significantly worse in the course overall than students taking the face-to-face version of the course in Fall 2019. Despite concerns that women, racial minorities and first-generation students could suffer disproportionately in the online version of the course, the relationship between class delivery mode and student performance did not vary as a function of these student characteristics. This underscores the importance of future research which can help to identify changes that can be made to online courses to assist students.

Paper is NOT Available. Please contact the author(s).

There has been tremendous change for faculty in the past two years with classes suddenly moving fully online due to the pandemic and then evolving to some combination of online, hybrid, and face-to-face. This change continues and requires faculty to continually adapt to the changing circumstances often with little notice or involvement. Few would say this has been easy or quick whether they are new to teaching or a seasoned instructor. This 4th Annual Teaching Bootcamp at AOM addresses the continuing pandemic-driven changes and provides the opportunity to obtain tips, techniques, and resources covering a variety of topics to help you design, develop, and implement your classes to be the best they can be going forward. This lively, interactive session features a variety of topics related to teaching across all management disciplines with various delivery formats presented by experienced instructors in a roundtable format. In alignment with the conference theme of “Creating a Better World Together,” faculty need to collaborate and cooperate so we can all be better off together. This PDW will provide teaching resources to help faculty effectively manage their classes in today’s environment supporting the AOM vision to “inspire and enable a better world through our scholarship and teaching..” We anticipate an interactive and informative session, so come join the fun as we explore the basics from syllabus construction to building community in an online/hybrid classroom and motivating students.

What's Really on the CEOs' Developmental Agenda?

CEOs' Developmental Agenda

Presenter: **Carol Kauffman**, -
Presenter: **Konstantin Korotov**, *ESMT Berlin*

This PDW builds on a recent survey of 1000 CEOs of global companies with a combined annual revenue of four trillion dollars, and on cases from the experience of executive coaches working with global executives. Participants explore perceived developmental agendas of senior leaders, including their "Achilles heels." Understanding the current context of CEOs will help educators align their academic or consulting experiences with the immediate needs of top executives. Those working with aspiring leaders (e.g. students) will be able to offer them a more nuanced view of today's senior managers' work requirements. For example, the PDW will explore the CEOs' challenge of being more compassionate and meeting the emotional needs of the employees. The PDW is built around small group and plenary discussions on the basis of short inputs from the facilitators. Participants work with survey data and very short cases that they can later use in their teaching, and they receive a more substantial case book after the workshop as a resource. The PDW also offers further materials for course design and delivery (e.g. references to survey data, additional cases, and practice examples).

MOC Connecting *MOC Connecting*

Organizer: **Jean-Nicolas Reyt**, *McGill U.*
Organizer: **Adaora Ubaka**, *U. of Illinois at Chicago*

Join a conversation with like-minded scholars on a cognition-based topic. We pre-select a broad set of popular cognition topics for scholars to discuss with one-another in small groups. This fun and interactive event will include discussions with scholars researching "hot topic" areas in MOC. Participants will rotate to two different discussion groups of their choice. Hopefully many new research-based collaborations are formed and new ideas are sparked.

**The Power of Play in Organizations: Implications for
Well-being and Work Effectiveness**
Play in Organizations

Panelist: **Simon Lloyd D. Restubog**, *U. of Illinois at Urbana-Champaign*
Panelist: **Lu Wang**, *Australian National U.*
Panelist: **Kohyar Kiazad**, *Monash U.*
Panelist: **Gillian Yeo**, *U. of Western Australia*
Panelist: **Karl Aquino**, *U. of British Columbia*

Fantasy football, virtual escape rooms, trivia nights, ping pong, and tables of Lego alongside office workstations—these are just some examples of how play exists in contemporary workplaces (Stewart, 2013). Broadly defined, play refers to a type of activity carried out primarily for fun and enjoyment (Celestine & Yeo, 2021; Petelczyc, Capezio, Wang, Restubog & Aquino, 2018). Focusing on the role of play in work and organizational contexts, this PDW assembles a world-class panel of Special Issue Guest Editors to introduce and answer questions regarding a forthcoming special issue in *Journal of Organizational Behavior* on workplace play.

To be eligible to partake in this PDW, participants will be asked to submit proposals for manuscripts to be considered for publication in *Journal of Organizational Behavior*'s forthcoming Special Issue on “The Power of Play in Organizations: Implications for Well-being and Work Effectiveness”. Participants can either submit a clearly developed proposal (10 pages double-spaced, all inclusive) or a developmental research idea (2 pages double-spaced, all inclusive) with the potential to advance our understanding of workplace play. While the former will clearly and concisely articulate the key research questions, theoretical underpinnings, contributions, and methods of the proposed research, the latter would briefly describe an innovative idea and outline some preliminary research questions, hypotheses, and proposed methodology. We are open to both empirical (e.g., qualitative, field, experimental, meta-analytic reviews) and conceptual (e.g., theory development and integrative reviews) contributions that stimulate discourse in the research agenda of workplace play, significantly contribute to the advancement of coherent bodies of knowledge in the area, and provide clear, compelling, and actionable recommendations to guide future scholarship. Please refer to the *JOB* Special Issue Call for Paper for additional details. Participants will be asked to submit proposals and developmental research ideas to Lu Wang (nick.wang@anu.edu.au) by June 17, 2022. If we receive more interest than our time allotment can accommodate, those with the highest potential for inclusion in the special issue will be invited to participate in the PDW.

Panelist: **David Reimer**, *HR People + Strategy*

Many research studies have commenced with the hope they will have significant theoretical and practical implications. Many researchers want to help create a better world by making a difference within their scholarly communities and within organizations where managers and professionals practice. Yet, these important insights are often not read by “real world” leaders, managers, and professionals. In our quest to be more inclusive in sharing our research, it is increasingly important to consider new ways of providing managers greater access to our research findings. This PDW focuses on how researchers can have a greater impact on practice by publishing in journals that are circulated beyond the Academy. Senior editors representing “bridging” journals (Harvard Business Review, MIT Sloan Management Review, People + Strategy Journal, California Management Review) will share insights on how to publish in venues that impact both academics and practitioners. In addition, researchers will share a priori research development strategies that set up projects with a greater chance to make a difference beyond the academy in the “real world” to improve lives. Researchers and editors will lead a highly interactive and participative session on this topic, which will include audience dialogue and roundtable discussions.

This inclusive PDW will provide students and junior faculty from diverse backgrounds the opportunity to discuss their leadership research in a collegial setting with prominent leadership scholars. The junior scholars are required to submit brief research proposals prior to the conference, and will be matched with a more senior scholar with similar research interests (not from their home university). At tables organized by themes (in person or in ZOOM), the senior scholars will then discuss these proposals with the 1-3 junior scholars they are matched with, providing insights and suggestions for future research directions. A general networking session with all participants will follow, whereby current and former editors of top leadership journals will discuss how to transform the proposals into publishable journal articles. The focus will be on developing theoretical foundations and designing high quality empirical studies. This is a great opportunity for the junior scholars to develop their ideas, and it may even lead to future academic collaborations and foster ongoing mentoring relationships. In each of the last 2 years, our virtual version of this Leadership PDW was a great success. On both occasions, there were numerous ZOOM sessions in 4 different time zones with over 75 participants from all over the globe.

Participation is by invitation only. Please contact Dr Marie Dasborough for more details at: m.dasborough@miami.edu

Publishing in Academy of Management Collections
Publishing in Academy of Management Collections

Organizer: **Susan Zaid**, *Academy of Management*
Presenter: **Elizabeth L. Rose**, *Indian Institute of Management Udaipur*
Presenter: **Benjamin Martell Galvin**, *Brigham Young U.*

Academy of Management Collections (AMC) is a new and exciting publication that will make an important contribution to the AOM's portfolio of publications. AMC has a unique format, in that each issue consists of a selection of articles from AOM publications, tied together by an original paper that serves to curate the collection. In this session, the AMC editors will introduce you to the publication, share its mission, and talk about how AMC will benefit both scholars and practitioners. They will also provide an overview of what a collection – including the curating essay – will look like, how a successful proposal can be developed and submitted, and how the review process works. There will also be time to ask questions and obtain insights directly from the AMC editors.

The Academy of Management Discoveries (AMD) is hosting a dedicated idea and paper development workshop to guide and help scholars who are considering submitting a paper to the AMD Special Research Forum (see full call at this link; submission deadline: January 1st, 2023). The AMD Editor-in-Chief Kevin Rockmann and a selection of the Guest Editors will present the aim of this AMD Special Forum and illustrate the kinds of works they hope to receive. In order to provide initial feedback to specific research ideas or working papers, a roundtable will follow to discuss potential submissions with the authors. For those who would like to circulate their preliminary ideas with the guest editors, please send a short or full paper to amd@aom.org by July 15th, 2022. The participation to this workshop does not guarantee the inclusion to the Special Forum. For more information, please contact any of the Guest Editors.

Participant: **Jacobo Ramirez**, *Copenhagen Business School*

Aligned with this year's conference theme "Creating a Better World Together", we undertake an important discussion on grand challenges and the United Nations Sustainable Development Goals (SDGs) by focusing our attention on the often-neglected SDG 16 Peace, Justice, and Strong Institutions to understand business strategies for peacebuilding and the importance of promoting this particular SDG to achieve the 2030 17 SDGs. In this Symposium we provide a space for scholars from various disciplines and different parts of the world who have a common subject: peace. And share their thoughts on how firms can specifically contribute to peacebuilding and build stronger institutions.

Ethics Forum: Mentorship and Supporting Each Other's Careers *Ethics Forum #2*

Participant: **Lucy Leety-Wheeler**, *Academy of Management*
Host: **Deborah M. Mullen**, *U. of Tennessee, Chattanooga*
Organizer: **Deborah M. Mullen**, *U. of Tennessee, Chattanooga*
Organizer: **Benson Honig**, *McMaster U.*

This session seeks to help graduate students and early faculty define what they want/need in a mentorship relationship, how to identify individuals, how to engage as well as end mentorships. The AOM Code of Ethics charges all members to support each other, strengthening and renewing the academy through making creating space for new members. By being better supporters for others, boosting their careers, we better AOM overall and our profession. This session will offer roundtable sessions focused on attendee questions with suggestions and active takeaways for how to improve mentorships for both the mentee and mentor.

Politics and the Planet

Session Moderator: **Caroline Clarke**, *The Open U. Business School*

CMS: **Geopolitics in Business Schools? (WITHDRAWN)**  

Author: **Nathalie Bernoud-Belhoste**, *Grenoble Ecole de Management*

The impact of geopolitics on business activities is undeniable as all MNCs now consider it to be a specific risk. Yet, business school curricula only rarely contain standalone geopolitics modules. I suggest that it is time to bring geopolitics into business schools as a subject worth of serious attention can only enrich our teaching by providing a geopolitical approach of the international business context. I first explain the different streams of thoughts in geopolitics (classical and critical) and methodological foundations. Integrating classical geopolitics helps understand the new world order and how states' grand strategies may impact business activities (and helps avoid “geopolitical traps”); critical geopolitics helps deepen the political risk perspective with a relational and multiscale geopolitical approach (and helps avoid “geopolitical mistakes”). I suggest two ways of incorporating geopolitics into our teachings: offering classical geopolitics courses to ensure the conceptual integration of key strategic issues into the class discussion and teaching the students the systemic method of analysis. Adopting a geopolitical perspective will also help fulfill our broader mission as business schools: to develop our students' capability to generate sustainable value in business and society.

CMS: **“No One Treated it as a Crime”: An Empirical Study of Corruption Rationalization**

Author: **Caio César Coelho Rodrigues**, *Fundação Getulio Vargas - EAESP*

Rationalization of corruption relieves oneself from moral imperatives. It comes from the concept of moral disengagement, the cognitive misperception that some inhuman or immoral activity is not wrong, nor against the moral principles of the agent. These concepts are empirically understudied due to the difficulties of acquiring qualitative reliable data of corrupt agents. The research question that underlies this study is: How do corruption perpetrators rationalize corruption? We aim to empirically explain these mechanisms and understand how organizations can foster or prevent corruption rationalization. To achieve these goals, we conducted a content analysis of the testimony of 49 Odebrecht executives, a large Brazilian construction and energy company, who pled guilty to an international corruption scheme. These executives described and deconstructed the rationalization approach they used to commit the crimes over the years in plea bargains. This research summarized previous rationalization studies in eight categories to which we found empirical evidence. Moreover, executives in different hierarchical levels use different mechanisms, impacting organizational prevention and corruption combat.

Paper is Available to Meeting Registrants Only.

CMS: **Risking the Planet. How Finance Understands the Natural Environment**

Author: **Matthias Taeger**, *The London School of Economics and Political Science*

This paper employs the concept of cognitive frames to answer the question of how financial market actors understand the natural environment. It argues that financial risk serves as frame making the environment meaningful within finance. Advancing the concepts of frames and framing, the notion of nested frame structures is introduced to show how this risk frame relies on a series of subframes in instructing and shaping financial market actors' behaviour, action and judgement. While making the natural environment more meaningful within finance, this nested frame structure decouples thinking about the planet's climate from ideas of environmental sustainability. The paper also shows, however, how the preliminary nature of this frame structure can facilitate partially emancipatory interventions into its structure and use. Thus, this paper contributes to the literature mapping the limitations of environmental risk as vehicle for 'green' finance.

CMS: **Animals' Roles and Relations with Humans in Organizations**  

Author: **Katja Dlouhy**, *U. of Mannheim*

Author: **India Jana Kandel**, *Leibniz U. Hannover*

Author: **Antje Schmitt**, *U. of Groningen*

Animals (i.e. all species except humans) are mostly disregarded in management research. However, the enormous numbers of animals in organizations and of humans working with animals call for scholarly attention. By introducing a typology of roles that animals are assigned within organizations, we highlight the presence of animals and the significance of human-animal relations in organizations. We explain how organizations reinforce and institutionalize speciesism in human society, and how this affects animals and humans who work with animals through joint exploitation, stigmatization, and suffering. On the other hand, we also outline when human-animal interactions in organizations can be beneficial for humans and animals. We argue that a scholarly perspective on human-animal relations in organizations can help to make animals visible, explain and prevent negative effects on humans, and improve organizational and societal life.

Paper is Available to Meeting Registrants Only.

Presenter: **Chade Darby**, *Cornell U.*

Discussant: **Modupe Akinola**, *Columbia U.*

Despite the increasing demographic diversity in the workforce, discrimination against marginalized social groups remains a prevalent issue for many modern organizations (Hebl et al., 2020). However, the nature of discrimination is constantly evolving. While overt and explicit animus is often taboo, biases continue to creep into daily interactions in subtler ways and seep into the fabric of organizations in a manner that can be harder to detect. These challenges lead to questions about how discrimination can be overcome. In some cases, individuals who are subjected to discrimination respond at an individual level through confronting biased behaviors (Czopp & Monteith, 2003) or pushing back on organizational practices (Meyerson & Scully, 1995). Marginalized employees also attempt to engage in collective action with similarly situated individuals who are motivated to push back on the status quo (Scully & Segal, 2002). Finally, enlisting the help of allies from historically advantaged groups can be another tactic to shift the system (Droogendyk et al., 2016). While each of these approaches to fighting discrimination has promise, the present symposium investigates the obstacles that prevent these tactics from reaching their full potential. Drawing upon multiple methods (qualitative, survey, and experimental) and theoretical lens (identity management, collective action, allyship, intersectionality), we highlight issues in each of the above domains of individual action, collective action, and allied action. Collectively, these studies shed light on the experiences of employees navigating and responding to discrimination in the workplace, the barriers that undermine these efforts, and what may offer hope of effectively disrupting organizational discrimination and inequality.

Panelist: **Ursula Ott**, *Nottingham Business School*
Panelist: **Martin Schneider**, *U. of Paderborn*

Following the recent emergence of neo-configurational theorizing and Qualitative Comparative Analysis in management studies, we are seeing their growth in international management scholarship as well. However, although many of the phenomena international management researchers examine are inherently configurational, configurational approaches to theorizing and empirical analysis are still scarce. The neo-configurational approach – with its focus on equifinality, conjunctural causation, and causal asymmetry – provides promising opportunities to revisit core theoretical notions in international management literature as well as to break new ground in our understanding of phenomena of interest, including cross-national Grand Challenges often characterized by causal complexity. In this PDW, we seek to support the diffusion of configurational theorizing and methods specifically tailored to the needs of international management researchers. As such, this PDW is a specialist extension, or complement, to the main QCA PDW typically sponsored by the Research Methods Division. We plan to bring together scholars with strong expertise in configurational research and international management scholars seeking to leverage configurational perspectives and analytical techniques. The PDW would be structured around two main components: Presentations by senior scholars on the potential applications for international management research, and collective brainstorming in small groups with subsequent debrief on novel future research opportunities culminating in a table (similar to that found in a literature review paper) that can be circulated among IM division members. Ultimately, our aim is to help international management scholars develop impactful research using configurational theorizing and techniques as well as to share insights with interested scholars that could further the application of configurational research in international management scholarship

Honing Values and Developing Empathy in Times of Crisis:   
A Theater-based Approach
Honing Values and Developing Empathy with Theater

Organizer: **Marco Aponte**, *Saint Mary's College of California*
Organizer: **Mary Vradelis**, *St Mary's College & Sequoia Consulting Associates*

The COVID-19 pandemic has presented unprecedented economic and social challenges for people, organizations and governments. At the center of the crisis, managers, leaders, and other key decision makers have seen their values and empathy put to the test. In this context, creating an awareness of one's values and developing one's capacity for empathy have become essential skills to work effectively with others, end the divisions that have resulted from the crisis, and create a better world. This professional development workshop will provide consultants, coaches and educators with theater-based strategies, grounded in management theory, aimed at honing values and developing empathetic skills. Its main purpose is to give participants the opportunity to experience theater-based exercises that they can apply when working on their clients' and students' values and empathetic skills, as well as in their own development as leaders. The workshop's objectives include developing self-reflection habits, understanding the power of values to tackle divisions and bring people together, and using the imagination to strengthen empathy and improve teamwork. Participants will also have a chance to discuss ways to integrate these techniques into their own teaching and work. (186 words)

Ideation, Innovation, and Work Passion

Session Moderator: **Velina Serafimova**, *Macquarie Business School, Macquarie U.*

OB: The Firm’s Role in Creating Work Passion

Author: **Velina Serafimova**, *Macquarie Business School, Macquarie U.*
Author: **Denise Mary Jepsen**, *Macquarie Business School, Macquarie U.*

Work passion has received increasing attention from scholars and practitioners who recognise its individual and organisational benefits. The work environment has been suggested as a major antecedent to work passion, however, its role in the creation process is significantly underexplored. Therefore, organisations may be missing out on opportunities to improve individual and organisational outcomes stemming from passion’s unique characteristics. This study focused on the role of leaders and human resource management (HRM) representatives as the main organisational actors shaping the work environment. The semi-structure interview design allowed leaders and HRM representatives to report their understanding of work passion, their role in creating and maintaining passion, and their perception of its possible negative effects. Analysis of 26 interviews revealed three key findings. First, leaders and HRM representatives demonstrated low awareness of the work passion concept. Second, the role of leadership in work passion was considered significant, while the relationship between HRM and work passion was perceived as distant and indirect. Third, having passion for a specific aspect of the job was seen to potentially cause an adverse effect on employee performance and well-being. These findings expand knowledge about work passion by providing the organisational perspective on work passion.

OB: More Innovative, More Delay? A Self-Control Model of the Effect of Creativity on Procrastination

Author: **Jing-hao Zhang**, *Faculty of Economics and Business, U. of Groningen*
Author: **Onne Janssen**, *U. of Groningen*
Author: **Yan Zhang**, *Peking U.*

Existing research on creativity mainly investigates abundant antecedents of creativity to reveal how to foster it, which is based on the assumption that creativity is always beneficial. Recently, several scholars indicated that creativity might result in potentially negative consequences. However, the research line of the dark side of creativity only focused on morality- and interpersonal issues, whereas task-related behavioral consequences at work rarely attracted attention. Drawing on the integrative self-control theory, the present research hypothesized that creativity leads to disinhibition and then undermines self-control, which in turn results in self-control failure as well as more procrastination at work. Besides, we also proposed the boundary condition of this relationship. We conducted two experimental studies, one multi-wave survey study, and one diary study to examine our theoretical model. Cross-cultural experimental studies revealed that induced creative mindset had a causal influence on state self-control and intention to procrastinate. The survey study revealed that creativity had a negative effect on state self-control and a positive effect on procrastination at work, and that job autonomy strengthened such effects. The diary study revealed that within-person creative engagement had a negative effect on state self-control and a positive effect on procrastination at work within the same day, and that job autonomy strengthened such effects. Our research provides a novel perspective on the dark side of creativity and empirical evidence for the hypothesis of creative disinhibition. Theoretical and practical implications are also discussed.

OB: Team Cognitive Composition and Innovation: The Role of Leader Behavior and Ambidextrous Learning

Author: **Kai Zhao**, *School of Labor and Human Resources, Renmin U. of China*
Author: **Shanshan Zhang**, *School of Labor and Human Resources, Renmin U. of China*

Integrating the theoretical perspective of innovation ambidexterity and the complementarity theory, this study elaborates a complementary approach between team cognitive composition and leader behaviors to reconcile the creation–implementation tension at the team level. Using the multi-time and multi-source data gathered from 702 team members in 116 teams across six Chinese high-tech companies, we found that when team at relatively low levels of systematic-intuitive cognitive composition, that is, the proportion of members with systematic cognitive style is higher than that of members with intuitive cognitive style, the weaker management control and stronger power sharing from the team leader would promote team ambidexterity. In contrast, when team at relatively high levels of systematic-intuitive cognitive composition, that is, the proportion of members with intuitive cognitive style is higher than that of members with systematic cognitive style, the stronger management control and the weaker power sharing from the team leader would enhance team ambidexterity. Additionally, we integrated the above findings to examine two moderated mediation models, which suggest that team ambidexterity mediated the interactive effects between team cognitive compositions and two team leadership behaviors-leader management control and leader power sharing on team innovation. The theoretical and practical implications of these findings, the limitations of our study, and future research directions are discussed as well.

OB: Upward Social Comparison toward Proactive and Reactive Knowledge Sharing

Author: **Yixin Li**, *Nanjing U.*

Author: **Sun Young Sung**, *Nanjing U.*

Author: **Jin Nam Choi**, *Seoul National U.*

Integrating knowledge management and social comparison literature, the present study provides a nuanced perspective on the socio-emotional processes underlying knowledge sharing based on the proactive-reactive framework. We theorize that upward social comparison indirectly predicts proactive and reactive knowledge sharing of employees by eliciting benign and malicious envy, respectively. We further hypothesize that learning and performance goal orientations moderate the indirect effects of upward social comparison on the two types of knowledge sharing. Two studies based on data collected from 176 employee-supervisor dyads in various industries and a scenario-based online simulation supported most of the hypotheses. For employees with high learning goal orientation, upward social comparison had a significant positive indirect effect on proactive knowledge sharing through benign envy. For employees with low performance goal orientation, upward social comparison exhibited a significant negative indirect effect on reactive knowledge sharing via malicious envy. The current analysis revealed mostly positive implications of upward social comparison toward employees' emotional reactions and knowledge sharing, which highlight the distinct function of the social comparison of abilities and performance in workplaces.

OB: Does Political Savviness Enhance Employee Voice? Speaking Up when Coworkers are Ostracized 

Author: **Amy Yaimai Wang**, *The Hang Seng U. of Hong Kong*

Author: **Eko Yi Liao**, *Hang Seng U. of Hong Kong*

Given that organizations are functions of intricate and interpersonal systems, the severity and pervasiveness of workplace ostracism—defined as the extent to which an individual perceives he or she is being ignored in the workplace—can have devastating effects on both employee and organizational outcomes. Much of the literature has largely established workplace ostracism to be a dyadic event between the perpetrator and the target by mainly examining targets' reactions from a need-threat perspective. Yet, as individual employees interact with and are often nested within a team environment, ostracism may impact not only the target but also the other individuals that share the same social context (i.e., group members, coworkers). To address the understudied indirect effects of workplace ostracism on third parties, this study adopts a social information processing approach to examine how the ostracism of an employee's coworkers affects his or her own work outcomes such as voice behavior. We contend that individuals are not merely passive recipients of the social environment but can utilize their abilities and knowledge (i.e., political savviness) to successfully navigate socially disruptive environments. A study was conducted involving a sample of 154 employees and their supervisors from a large biotechnology firm in China. The results showed that employees were less likely to engage in voice behaviors when their coworkers were ostracized in the workplace. The study also revealed a significant three-way interaction effect between political understanding and political skill on the relationship between coworkers' ostracism and employee voice, supporting the notion that political savviness is a valuable resource in mitigating ostracism's negative effects. Organizational implications, recommendations and future research ideas are also discussed.

OB: Stepping Back to See What Matters: Reducing Diagnosticity Neglect in Social Comparison 

Author: **Daniel Alexander Yudkin**, *The Wharton School, U. of Pennsylvania*

People frequently compare themselves to others, and these comparisons have important affective and organizational consequences. Social comparisons differ in their diagnosticity—the degree to which they are attributable to features of the person versus the situation. While logic suggests people should give more credence to diagnostic than nondiagnostic comparisons, research shows they may overlook diagnosticity when comparing themselves to others. This tendency, which we call “diagnosticity neglect,” can lead them to draw inaccurate conclusions about themselves. Here we test whether psychological distancing strategies can mitigate diagnosticity neglect. Because diagnosticity neglect may come from people's tendency to overestimate the self-relevance of social information, adopting a distanced perspective may increase the salience of causal sources outside the self, thereby reducing diagnosticity neglect. Four experiments (three preregistered, total N = 4,008) test and support this prediction. Experiment 1 shows that people exhibit less diagnosticity neglect when imagining participating in an anagrams task than when actually doing so. Experiment 2 shows that people who are prompted to take a distanced (versus immersed) perspective exhibit less diagnosticity neglect in response to a poorly attended birthday, and Experiment 3 suggests this effect is mediated by internal versus external attribution. Experiment 4 shows that this observation also holds for favorable comparisons. Overall, this research highlights interventions that may provide people a more balanced understanding of where they stand relative to others.

OB: Should We Talk About the Government? Politicized News and Employee Affective Well-Being 

Author: **Kristine Kuhn**, *Washington State U.*

Author: **Teng Iat Loi**, *U. of Minnesota - Duluth*

Author: **Leah Sheppard**, *Washington State U.*

Breaking news often elicits emotions. In an increasingly crisis-ridden and fractured society, we propose politicized news can cause employees' state affect to diverge along ideological lines. Integrating theory on social sharing of emotions with evidence from political science and related disciplines, we explore the proximate workplace consequences of politicized events external to the organization. Our novel methodological approach incorporates national level events in conjunction with experience sampling methodology that assesses within-person change; 132 employees in the United States were surveyed over fifteen working days surrounding the highly contentious 2020 election. Questions did not reference the election, yet results indicate significant changes in state positive and negative affect that varied according to political orientation and corresponded to daily lead news. Although many organizations discourage discussion of political or societal issues due to fear of conflict, our results challenge this conventional understanding. We find apparent affective benefits from an observed increase in coworker communication linked to emotionally-charged politicized news. These results are the first to show meaningful divergent effects of external events for a broad cross-section of employees in real time, and highlight the need for management research to address societal factors as relevant to employee well-being.

This PDW was created especially for members to feel “at home” in the Organizational Behavior (OB) Division by expanding their network of scholars interested in similar research areas. We designed the forum to provide members a platform to meet leading scholars in specific OB research topic areas, get to know other members of the Division, and discuss research ideas. The PDW will include three rounds of discussion that are moderated by accomplished scholars who serve as experts in a particular topic area of OB research. As a participant in the forum, members can self-select into three research themes of their choice, one choice for each round of discussion. The research themes will span a wide range of OB topics, including: alternative work arrangements; contextual aspects of work (e.g., socialization, culture, & climate); creativity & innovation; dark side of OB; diversity; emotions, affect and attitudes; ethics, justice/fairness, and trust; identity & identification; leadership (tables for relational leadership, behavioral leadership, destructive leadership); motivation and engagement; personality and individual differences; power, politics, and social influence processes; stress and well-being; team composition and diversity; team processes and dynamics; time and temporal dynamics; social networks; voice and proactivity; and work-life interface. As in years past, we anticipate in-depth research discussions and the facilitation of many meaningful connections among the participants and members of the OB Division. This session was previously titled “Research Networking Forum” but was renamed to clarify its focus on research-related conversations and distinguish it from other sessions such as social hours.

The number of participants for this PDW is limited. Pre-registrations will be accepted on a first-come, first-served basis. Please register by using the following link: https://uiowa.qualtrics.com/jfe/form/SV_5gWjZHFYHaghf0. Please email OBRoundTables@gmail.com with any additional questions.

Presenter: **Emily D. Champion**, *U. of Iowa*
Presenter: **Sujin Jeong**, *U. of Iowa*

In recent years, technological advancements have fundamentally changed how, when, and where individuals work. An increasing number of modern workers have jobs outside of the 9-to-5 traditional work arrangement and instead seek work through alternative work arrangements, such as gig work or multiple jobholding. This trend has accelerated during the COVID-19 pandemic and will likely continue due to the benefits inherent in these alternative work arrangements such as increased income and flexibility. This symposium focuses on both the benefits and challenges of alternative work arrangements. Throughout this proposed symposium, we elaborate on the experiences of workers with alternative work arrangements face. More specifically, the papers in the symposium focus on the work identities and relational strategies of the modern worker, the status inconsistencies between the types of work they perform, the freedom they receive from the alternative work arrangements, and whether or not they disclose their alternative forms of work and how their alternative work arrangements impact important work outcomes. Thus, each paper offers insights into what the future of work will look like and what organizations and managers should consider to successfully retain talent and cooperate with new types of workers. With this symposium, we see the potential to bridge the perspectives of organizations and individual workers so that both parties can benefit from these new types of work arrangements.

A Comparison of the Relational Challenges of Organizational Workers Versus Gig Workers.

Walk with ONE! Guided Walk to Olympic Sculpture Park and Elliott Bay *Walk to Olympic Sculpture Park and Pocket Beach*

Organizer: **Nicole West**, *U. of Washington*

Organizer: **Sanjana Prabhu**, *U. of Washington*

Join us for some fresh air on a guided walk from the Hyatt Regency Seattle Main Lobby to Olympic Sculpture Park, then on to Pocket Beach on Elliott Bay, and back. The walk will include a discussion about local environmental and coastal preservation. Please dress for the weather (bring sunscreen and hat, an extra layer, or an umbrella according to the day's forecast). The walk is a 2.8 mile walk round trip, so wear your walking shoes and bring water. To join us, meet us 5-10 minutes before the starting time at the 8th street entrance of the Hyatt Regency Seattle main lobby.

Panelist: **Anne D. Smith**, *U. of Tennessee, Knoxville*

This PDW has a long-standing tradition as a crowd favorite. It is a great opportunity to ask experts any questions you might have about qualitative research methods, such as ethnography, grounded theory, discourse analysis, interpretative phenomenological analysis, participant observations, case studies, interviews, focus groups, conversation analysis, narrative inquiries, coding, content analysis, and computer-assisted qualitative data analysis. No preregistration is required and the format is very laid back. Attendees are encouraged to come and go as they please to have their questions answered by qualitative method experts in the field.

Panelist: **Angela K. Miles**, *North Carolina Central U.*
Panelist: **Sally Sledge**, *Norfolk State U.*

This is a two-part PDW designed to help both late-stage doctoral students preparing for and mid-career academics going back on the job market. We understand few doctoral programs provide specific guidance and preparation to their students before they enter the job market in search of academic jobs. Thus, we feel such a workshop is an essential aspect of career building for academics at any level. The goal of this PDW is to provide insight into what people on the other side of the table (i.e., search committee members) have experienced that can better prepare job candidates for the search process. Panelists representing research, balanced, and teaching universities, and HBCUs will give their unique insights. Part 1 will consist of a panel discussion led by the co-organizers focusing on do's and don'ts of the job application process including application materials, screening interviews, and campus visits. We will also include anecdotes from prior searches, lessons learned, and information from Career Services about the current job market. Part 2 will include breakout sessions where participants can ask the panelists questions specific to their institution type.

The Scholar Practitioner's Role in the Entrepreneurial Ecosystem As We Emerge from Covid-19 Constraints
Becoming an Entrepreneurship Scholar Practitioner

Host: **Kenneth A. Grant**, *Ted Rogers School of Management, Toronto Metropolitan U.*

Presenter: **Sean Evan Wise**, *Ryerson U.*

Participant: **Lincoln Brown**, *Southwestern Oklahoma State U.*

Participant: **Thomas J. Mierzwa**, *U. of Maryland*

Participant: **John Martin Mueller**, *St. Edward's U.*

Participant: **Gilberto Sarfati**, *FGV-EAESP*

This Professional Development Workshop will help entrepreneurship scholars and industry practitioners investigate potential roles as Scholar Practitioners. It supports the overall theme of this year's conference by considering how we can engage in the wider entrepreneurial ecosystem to help develop a better world in a post COVID-19 economy. Participants will first hear about, and then investigate through roundtable discussion, how they can identify appropriate Scholar Practitioner roles for their background and future interests. This workshop should be useful to both scholars who aim to be more engaged with entrepreneurship activities and practitioners who aim to become more scholarly in their work.

The purpose of this PDW is to provide a forum and foster a community in which health care management scholars can discuss pertinent issues about teaching, from common questions and challenges that educators confront to helpful practices, tips, and ideas to becoming more effective instructors. The PDW will be conducted as a series of discussions, with participants receiving advice and helpful guidance on challenges and issues confronted in a range of educational settings. Each discussion will focus on a specific theme and include assigned "teaching mentors" who can provide expert guidance and feedback on topics relating to a variety of themes.

Potential attendees are encouraged (but not required) to complete the following optional form in advance, in which they can note their areas of interest and teaching-related questions so that they can have their specific questions incorporated in the facilitators' planned topics to address. The form can be accessed at: <https://forms.gle/oUaovxridHvTBow5A>

MED: Sexual Harassment Bystander Training Effectiveness: Experimentally Comparing 2D Video to VR Practice

Author: **Shannon Rawski**, *Ivey Business School*
Author: **Joshua Foster**, *Ivey Business School*
Author: **Jeremy Bailenson**, *Stanford U.*

Sexual harassment (hereafter, SH) is a dysfunctional workplace behavior, resulting in negative outcomes for individuals, workgroups, and organizations. Since #MeToo, companies have been innovating to increase the effectiveness of SH training by incorporating new content (e.g., bystander intervention skills) and new technology (e.g., virtual reality, hereafter VR). However, research has yet to determine the best practices or the effectiveness of these new innovations. The current study hypothesizes that SH bystander intervention training will be more effective when VR practice scenarios are used rather than 2D video practice scenarios. We argue that the increased presence (i.e., the perception that people and places in a virtual simulation are real) afforded by VR should better replicate bystander experiences in real SH situations, thereby allowing trainees to develop bystander skills in a more realistic practice experience than 2D video provides. We experimentally test our hypothesis in a laboratory setting (N = 100). Our results show that the VR practice condition outperformed the 2D video condition by increasing trainees' intentions to engage in indirect, non-confrontational, and widely applicable interventions (e.g., intervene by removing the target from the situation, approach the target to offer support later). However, our manipulation showed a negative effect on practice engagement (i.e., those in the VR condition explored fewer response options) and no effect on other operationalizations of training effectiveness (e.g., motivation to learn, knowledge, attitudes toward the training, intentions to directly confront the harasser, and intentions to formally report the harassment). Implications, limitations and directions for future research are discussed.

MED: Equity and Equality Perspectives to Promoting Digital inclusion in Higher Education

Author: **Geraldine Hardie**, *U. of Wollongong*
Author: **Mario Fernando**, *U. of Wollongong*
Author: **Jan Turbill**, *13847*

Given the continuing pandemic context, examining the issue of digital inclusion is both timely and significant. Using equity and equality perspectives, we examine the extent to which digital inclusion policies have improved students' access to digital technologies and promoted digital inclusion in an Australian university. Grounded in Adams' Equity Theory and Espinoza's, Equality and Equity Conceptual Model, we share our findings from a mixed methods study of a survey of 284 undergraduate students and interviews with 15 staff members and 9 students. While students shared their experiences of undertaking an undergraduate university degree, teaching and support staff shared their views on the design, development and support experience of undergraduate students' digital literacy. The findings suggest the critical need to promote a better understanding of equity and equality perspectives across key stakeholders in higher education institutions during policymaking, particularly on resource allocation to promote digital inclusion.

MED: “On-Screen” Versus “In-Person” Learning Related Student Expectations and Apprehensions

Author: **Patturaja Selvaraj**, *Gettysburg College*
Author: **Jerome Joseph**, *Independent Researcher*

Instructors handling courses during the sudden onset of the Covid-19 pandemic had to display the Senge (1990) learning agility to respond swiftly to student concerns following the abrupt change from dorm and campus to home and screen. Based on 55 combined years of teaching in business management programmes, we believe that the real questions go beyond the in-person versus on-screen debate. The fortuitous circumstances provided an action research opportunity to deeper concerns through the lens of what Freire (1993, p.52) conceptualized as the “narration sickness” of the “banking concept of education” Data was collected via Zoom using semi-structured conversational interviews from twenty six under-graduate students majoring in Business Management from a college in Pennsylvania. Four sources of narration sickness - learning delivery, social isolation and loneliness, student disconnect from learning content and organizational-managerial process constraints – suggest that the debate goes beyond the in-person versus on-screen preoccupation. The four insights suggest that the mitigation of narrative sickness could be achieved through the organization of in class experiences which engage with the world through problemposing methodologies, dialogic modes of shared exploration, point of engagement autonomy and responsive agility, and an atmosphere of continuous experimentation and innovation. The design of learning engagements as dialogic opportunities transcending the teacher-student contradiction, and as an exploration of the world together with students as co-learners and co-creators of deeply compassionate understanding of problems, could bring the romance of learning back into the class room irrespective of mode of delivery. Narration sickness can indeed be mitigated.

Evolutionary Theory's Practical Relevance for Management Research, Teaching, and Action

Evolutionary Theory's Practical Relevance

Organizer: **Kevin M. Kniffin**, *Cornell SC Johnson College of Business*
Participant: **Mark Van Vugt**, *Vrije U. Amsterdam*
Participant: **Katinka J.P. Quintelier**, *Vrije U. Amsterdam, School of Business and Economics*
Participant: **Charleen R. Case**, *U. of Michigan, Ross School of Business*
Participant: **David Sloan Wilson**, *Binghamton U.-State U. of New York*
Discussant: **Reggie Fils-Aime**, *Reggie Fils-Aimé Network LLC*

Evolutionary theory offers a framework for researching and teaching a wide range of management topics. In this boundary-spanning Professional Development Workshop (PDW), an overview of prior applications of evolutionary theory to management will be integrated with a presentation of four use-cases, commentary from a leading senior executive, and two waves of roundtable discussion. Use-cases will cover core management topics including the nature of mentoring relationships, the importance of stakeholder and profit orientations, the relevance of organizational design, and the varied responses of individuals and organizations to major crises such as the COVID-19 pandemic. Commentary from a veteran chief operating officer promises to identify areas where evolutionary theory offers particular value. Similarly, through two waves of roundtable discussion, this PDW will actively engage attendees to (i) identify their initial “priors” regarding the relevance of evolutionary theory for management and, later, (ii) their reaction to the use-cases and commentary as well as their consideration of future directions.

Instant Buddhism for Managers
Instant Buddhism for Managers

Coordinator: **Eric Gautier**, *IRG, U. Gustave Eiffel, U. Paris-Est Créteil, F-77454 Marne-la-Vallée*
Speaker: **Patrick Mathieu**, *Patrick Mathieu Singularity*
Speaker: **Richard Jackson Major**, *Institut de Gestion Sociale Paris*
Session Chair: **Catherine Voynnet Fourboul**, *U. Pantheon-Assas (Paris II)*

Unethical behavior in business increasingly calls for higher levels of consciousness, reflection and action. Furthermore, to satisfy the search for lasting solutions to our society’s current problems, we see growing interest in alternative philosophies and ethical systems (Marques, 2012). From this standpoint, this workshop, developed since 2020, seeks to discover and explore a model of singular consciousness (Gautier, Voynnet-Fourboul, 2019) that provides the means to decrypt one’s singularity scenario (Mathieu & Monneyron, 2015). After modeling the leadership of a world-renowned entrepreneur in the 2021 PDW, this 2022 edition seeks to deepen the spiritual component of one’s singularity process. It attempts to examine the element of consciousness from a Buddhist perspective, based on a singular analysis of the four noble truths: Suffering; The Origins of Suffering; The possibility of Cessation of suffering; Applying Methods to Cure Suffering. It offers a process developing ownership and application in management. How can the noble truths constitute a form of spiritual practice? How can they be inspiring for a manager? The workshop enables participants to apprehend the four stages. For this we will analyze and offer a new reading of the Buddha’s path, thanks to the singularity model -identifying enlightenment as a point of singularity-, and show how these stages can be modeled independently of any Buddhist affiliation. This workshop can be useful for students, teachers, researchers and practitioners who are considering a transdisciplinary approach to human well-being in personal and professional environments.

Perceptions of Job Seekers and the Consequences

Session Moderator: **Ee Hwee Lau**, *London Business School*

OB: **The Unanticipated Consequences of Hiring Favorites**   

Author: **Kun Wang**, *UCL School of Management*
Author: **Sunyoung Lee**, *UCL School of Management*
Author: **Martin J. Kilduff**, *UCL School of Management*

We investigate how an individual's favorable perception of a colleague who was hired based on the individual's referral drives deference to the colleague's opinions. Through three experiments with 603 employed adults, we found that the heightened likability toward referral hires led referrers to overestimate the referral hires' competence. As a result of the inflated competence perceptions, namely the competence perception bias, referrers were more likely to compromise with referral hires than with other hires. Whereas prior research has consistently highlighted the benefits of referral hiring, our findings demonstrate that post-hire interactions between employees and their referred workers can instead stifle healthy disagreement. Overall, our findings extend the field's understanding of referral hiring by exploring referrers' post-hire outcomes.

OB: **#Happy: Job Seekers' Personality, Happiness on Instagram, and Recruiters' Evaluations of Hireability** 

Author: **Kristie Joy Neff Moergen**, *U. of Arkansas, Fayetteville*
Author: **Andrew B. Blake**, *U. of Arkansas*
Author: **Tsutomu Doiguchi**, *U. of Arkansas, Fayetteville*
Author: **Oleg V. Petrenko**, *U. of Arkansas*
Author: **Ryne Sherman**, *Hogan Assessment Systems*

As organizations increasingly use cybervetting as a tool in personnel selection, scholars have begun to consider how the information derived from social media sites (e.g., pictures of excessive drinking or demographic characteristics) shape perceptions of job seekers' hireability. Still, we know less about how more subtle forms of information, such as emotional expressions, influence this process and if any of these subtle cues indicate traits relevant to hiring. Thus, we argue how a job seeker's extraversion, emotionality, and openness to experience relates to the intensity of happiness (a valued emotion in organizations and personnel selection) expressed on their social media site. To measure the intensity of happiness presented, we utilize an open-source deep learning algorithm to capture the facial expressions on 241 Instagram profiles. Next, we argue and show how the presentation of happiness on a job seeker's social media site shapes recruiters' assessments of hireability. Our findings support our hypotheses, extending knowledge on personnel selection in the age of social media.

Paper is Available to Meeting Registrants Only.

OB: **Why is Incivility Making Job Seekers Worse? A Time-Lagged Research** 

Author: **Qingxiang Weng**, *U. of Science and Technology of China*
Author: **Xiujuan Wang**, *U. of Science and Technology of China*
Author: **Wenyang Gao**, *U. of Science and Technology of China*
Author: **Liyan Xi**, *U. of Science and Technology of China*

The phenomenon that job seekers experience incivility in job search is becoming more and more common, but the consequences are still limited. In light of this gap, we integrate affective events theory with job search literature to examine how job seekers experienced incivility in job search influences affective and job search behavior. In a 4-weeks longitudinal cross-lagged investigation, we sought to test the time-lagged relationship between incivility and haphazard job search; additionally, we examined negative affect as a process that mediates this time-lagged relationship. The result indicated that experienced job search incivility led to job seekers' negative affect, which in turn led to haphazard job search, negative affect mediated the time-lagged association between experienced job search incivility and haphazard job search. The results highlight the need for more attention to be paid to the negative consequences of uncivilized behavior in job search context.

Paper is Available to Meeting Registrants Only.

OB: **Do People Always Prefer Revealers over Hiders? Role of Perceived Immorality** 

Author: **Ee Hwee Lau**, *London Business School*

Do observers assume the worst when people hide potentially unfavorable information? Some research has found that revealing unfavorable information is advantageous, whereas other research has found that hiding unfavorable information is better. We identified a boundary condition to bring together these contradictory findings: When people can readily infer the target's immorality from the missing information, they assume the worst about the missing information, and hence prefer targets who reveal. Specifically, across three experiments, we found that it is better to reveal information when targets failed to engage in good behaviors, engaged in bad behaviors unintentionally, or engaged in other behaviors that can serve as diagnostic cues to fill in the missing information. Whereas, it is better to hide information when targets engaged in morally bad behaviors, engaged in bad behaviors intentionally, and when no other diagnostic information is available.

Author: **Chao Ma**, *Australian National U.*

Author: **Zhongqiu Li**, *Northeast Agricultural U.*

Overqualification has become a prominent phenomenon in modern society. Despite the growing research on the effects of individual perception of overqualification, the linkage between perceived overqualification and career outcome has been largely overlooked. In this study, we draw from the competency-based view of careers to clarify how, why, and when employees who feel overqualified can achieve favorable career outcomes. To be specific, we predict that employees having a perception of overqualification tend to emphasize the value of their personal brand (i.e., they have greater personal brand equity), which contributes to their career success (i.e., career ambition, career role performance, and promotability). Across one experiment (N = 389) and one multi-wave and multisource field study (N = 220), we found evidence that perceived overqualification is positively related to personal brand equity, and perceived overqualification has a positive indirect effect on career ambition, career role performance, and promotability through the mediating effect of personal brand equity. In addition, our results reveal that the self-promotion motive plays a key moderating role in strengthening the positive relationship between perceived overqualification and personal brand equity. Our study makes several important contributions to the literature on perceived overqualification and career as well as to practice.

Navigating Grief in Organizations: Managing Chronic Illnesses

Navigating Grief in Organizations

Organizer: **Yu Tse Heng**, *U. of Virginia*
Organizer: **Jessi Hinz**, *Case Western Reserve U.*
Panelist: **Reut Livne-Tarandach**, *Manhattan College*
Panelist: **Hooria Jazaieri**, *Leavey School of Business, Santa Clara U.*
Panelist: **Elizabeth E. Stillwell**, *London School of Economics and Political Science*
Panelist: **Nancy Isenberg**, *Swedish Neuroscience Institute*
Panelist: **Allison Fine**, *Center for Chronic Illness*

This PDW brings together an expert panel of grief scholars and practitioners to continue an important and timely conversation on grief in organizations. Grief is a ubiquitous human experience resulting from a profound loss. Whereas conversations involving grief typically revolve around the death of a close other, grief can also be a result of other forms of losses (e.g., divorce, job loss, pet loss). Following a successful initial PDW on grief in the workplace at AOM 2021, we plan to organize a series of panels on grief in the years to come, with each panel taking on a specific lens to understanding grief at work. For AOM 2022, we plan to focus on grief with respect to experiences with chronic illnesses (e.g., hypertension, mood disorders, diabetes) which result in the loss of health and functioning. Given the prevalence of chronic illnesses in the United States, and the growing conversation around the long-term consequences of COVID-19, this PDW aims to discuss how organizations can better support employees' management of their chronic illness and resultant grief. To maximize the audience experience, prior to AOM, the organizers will update the PDW-dedicated website, which is a platform for prospective participants to engage with the panelists and pose questions. During the PDW, panelists will weigh in on a set of discussion questions from various perspectives (e.g., research-focused, on-the-ground experiences). Thereafter, panelists will answer questions from the audience. Finally, the organizers will collate valuable insights from the panel discussions and share them on the PDW website.

Reactions and Adaptations to Change from Employee, Consultant, and Manager Perspectives

Session Moderator: **Herbert Nold**, *Polk State College*

ODC: **The Dunning-Kruger Effect on Organizational Agility**  

Author: **Herbert Nold**, *Polk State College*
Author: **Lukas Michel**, *Management Insights AG*

Designing organizations to quickly adapt to changing conditions, agility, has become a key dynamic capability for success in the 21st century. The Dunning-Kruger effect suggests that people overestimate their ability and that of the organization because they are ignorant of unknown, unknowns. Said another way, people tend to overestimate their ability because they don't know what they don't know. Conversely, executives tend to underestimate the ability of subordinates in the organization. This research project used the Performance Triangle model and accompanying diagnostic instrument to analyze the difference in perceptions between executives and workers in 374 organizations to identify possible disconnects in important capabilities of organizational agility: success, leadership, systems, culture, people, and resilience, along with 27 underlying individual elements. The results show that executives consistently, and significantly, overestimate the ability of themselves and their organization to adapt a change while underestimating the capabilities of workers. Executives were significantly overconfident in the dimensions of success, culture, people, and resilience. Differences in trust emerged as the single most statistically significant element that drives organizational agility. The authors conclude with a discussion of the managerial implications on how this condition influences the ability of organizations to quickly adapt to changing conditions ...agility.

ODC: **Modes of Processing Change: How Organizations' Actions Cause Employee Reactions to Fluctuate**

Author: **Goh E-yang**, *National U. of Singapore*

Organizational change triggers a period of processing, wherein employees attempt to make sense of the change and determine how they should respond. During this process, employees may fluctuate between experiencing a sense of loss about the past, excitement about the future, or even simultaneous experiences of both. Yet how employees process change is typically construed as largely static and impervious to fluctuations after their initial reactions. This view limits the ability to explain growing empirical observations of dynamic fluctuations in how employees process change across time. The purpose of this article is hence to highlight how both the temporal directionality and emotional valence of employees' reactions can shift in response to actions by organizations throughout the period of processing change. Specifically, I suggest employees can enter three distinct modes of processing change – loss, restoration, or oscillation – each mode comprising distinct cognitions, emotions, and behaviours. I further postulate how an organization's actions can shift employees across the three modes of processing, which in turn have implications on employees' reactions in the new equilibrium. Through this model, I suggest that viewing how employees process change as a more dynamic process which can be constantly influenced by organizational (in)actions enriches understanding of employee reactions to change. In doing so, I take steps towards reconciling conflict within and introducing a more dynamic perspective to organizational change and meaning-making literatures.

ODC: **The Dynamicity of Legitimacy and Sensemaking by Top Management and Consultants During Complex Change** 

Author: **Rahul Chandra Sheel**, *XLRI-Xavier School of Management*
Author: **Shivin Tikoo**, *XLRI-Xavier School of Management*

We examine how organizational consultants shape the change process in a large-scale and complex organizational change and establish legitimacy by studying a longitudinal change process in a large automotive company in India. We study legitimacy tactics used by the consultants, the implementation team and change sponsors from the perspective of institutional theory and understand the temporal dynamics of the tactics as used by these actors. We show that the consultants and the implementation team often operate with a single identity during the change process and study the loss and repair of legitimacy during the change process.

Improvisation and the New Normal (Including a Paper on the Circular Economy)

Session Moderator: **Kim Louisa Dillenberger**, *Frankfurt School of Finance and Management*

ODC: **Between Old and New Normal: Reconciling Improvisational and Routinized Action in Pulsating Normality**

Author: **Kim Louisa Dillenberger**, *Frankfurt School of Finance and Management*

Numerous organizations around the world currently operate between old and new normal. In face of routine breakdown, organizations are challenged to improvise novel solutions, while they face yet another challenge as routines become (partially) executable again: they need to decide to go “back to normal” or “towards a new normal”. That raises the question how existing routines change in face of improvised solutions. Although the complementing role of improvisational and routinized action has been invoked in research, it has hardly been assessed. We have yet to understand how actors reconcile improvisational and routinized action embracing organizational change. To find an answer to this question, we study improvisational and routinized action in an in-depth processual case study of a higher education organization during the Covid-19 pandemic, drawing on 70 interviews and ethnographic insights from 66 meetings. Our findings show that the formation of normality is a pulsating process, continuously challenging actors’ perceptions of what is considered “normal”. In drawing out six mechanisms of normality formation which generate, stabilize or refuse novelty, we introduce a pulsating normality as the dynamic reconciliation of improvisational and routinized action. Our study speaks to both organizational improvisation and routine dynamics literature contributing to a better understanding of how improvisational action turns into routinized action, changing routines over time. In particular, we show how normality forms as actors allow for imperfection, holding the potential of creating a better normal.

Paper is Available to Meeting Registrants Only.

ODC: **Improving the New Normal: A Processual Perspective on Improvisational Tuning of Collective Action**

Author: **Kim Louisa Dillenberger**, *Frankfurt School of Finance and Management*

Author: **Matthias Waldkirch**, *EBS Business School*

Understanding how organizations improvise in face of routine breakdown has gained increasing attention in organizational research during past decades and has shown to be particularly relevant during the Covid-19 pandemic, in which immediate design and execution of novel solutions was required. Yet, to which degree actors improvising collectively relate their improvisation to existing and novel referents has received little attention. To find an answer to this question, we study improvisational enactments in an in-depth processual case study of a higher education organization during the Covid-19 pandemic, drawing on 33 interviews and ethnographic insights from meetings. Our findings depict three phases of grooving, which we conceptualize as familiarization, negotiation, and pursuance. We introduce grooving as a concept explaining how actors tune their actions to shared referent(s) allowing for collective action. Our study contributes to a better understanding of the role of improvisational referents in improvisational organizing, providing guidance for organizations improvising the new normal.

ODC: **Organizational Change towards the Circular Economy: A Systematic Review of the Literature**

Author: **Sophie Felicia Graessler**, *Maastricht U. School of Business and Economics*

Author: **Hannes Guenter**, *Maastricht U.*

Author: **Simon Barend De Jong**, *Maastricht U., School of Business & Economics*

Scholars have long studied how organizations respond to climate change but have only recently begun to investigate a fundamentally new stream in sustainability thinking, that is, the circular economy paradigm. Instead of the “make-use-dispose” approach of a linear economy, a circular economy aims at closing resource loops, reducing waste, and lowering damage to the environment. Given the recent surge of research interest in the ways in which organizations change towards a circular economy, it is important and timely to verify what we have learnt, what remains contested, and what to do next. To this end, we review the literature on the emerging field of “Organizational Change towards a Circular Economy” (OCCE). We identify and analyze research that sits at the interface of organizational change theory and circular economy and provide a systematic literature review. Our review reveals common themes and discrepancies along three main dimensions of organizational change (i.e., content, process, and context). We develop a novel and encompassing definition of OCCE, highlight shortcomings in the literature, and outline research opportunities. Overall, our study brings together the growing, but fragmented, OCCE research and outlines scientific and practical avenues for making progress in a more unified and systematic way.

Meta-Science and Technology (Meta-ST)
Meta-Science and Technology

Organizer: **Victor Zitian Chen**, *Fidelity Investments*
Organizer: **Kai R. Larsen**, *U. of Colorado, Boulder*
Organizer: **Benjamin Mueller**, *U. of Lausanne, HEC Lausanne*
Organizer: **Sebastian K. Boell**, *U. of Sydney Business School*
Organizer: **Roland M. Mueller**, -
Organizer: **Frank A. Bosco**, *Virginia Commonwealth U.*
Organizer: **Mayank Kejriwal**, *U. of Southern California Viterbi School of Engineering*
Organizer: **Brian Fisher**, *Simon Fraser U.*
Organizer: **Carina Hallin**, *IT U. of Copenhagen*

This PDW serves as a platform to showcase the current advancements in meta-science and technology (meta-ST) for knowledge synthesis, integration, and engineering (KnISE). It is organized by the new Connect@AOM working group on KnISE. The cumulation of scientific knowledge is difficult to implement in the absence of a convergent and integrated knowledge ecosystem. The current technologies, outlets, and incentives of business and management scholarship emphasize discipline-based, reductionist research, and are relatively incapable of solving complex social problems concerning management (Chen & Hitt, 2021). As an unintended consequence, the universe of data, knowledge, and communities is becoming exceedingly fragmented. Organized by champions who devote their works to advancing meta-science, meta-methods, and technologies and have built exemplar infrastructures, this PDW provides a unique platform for the audience to learn and discuss the current advances in synthesizing and cumulating management research into timely, widely accessible, and actionable collective wisdom. This PDW proposes to have two sessions. In the meta-science session (1 hour), the focus will be on current topics of concept synthesis, theory synthesis, and empirical synthesis. In the meta-technology session (1 hour), the focus will be on knowledge graphs, visualization and human-computer interaction (HCI), and collective/hybrid intelligence platforms.

Panelist: **Di Zhou**, *School of Economics & Management, Tongji U.*
Discussant: **Xinwei Shi**, *Capital U. of Economics and Business*
Panelist: **Longtian Zhang**, *Central U. of Finance and Economics*

This workshop aims to better understand a full landscape of digital transformation from Digital Economy towards Digital Civilization. Emerging Information and Communications Technologies (ICT) (e.g., AI, 5G, internet of things) are more or less affecting and disrupting traditional economy, despite the COVID-19 is still threatening the economy of countries around the world. The boom of digital economy is backed by the widespread use of ICT across all industry sectors in order to further boost its productivity, which it is the key to prospering our economic future and securing recovery from COVID-19. Digital transformation of the economy is shaping how businesses are structured, how nations need to address new regulatory challenges. With the increasing development of ICT, we are becoming more digital society, more empowered, and nations are becoming borderless, which is rightly the times of digital civilization. In such case, it is imperative for the international community to work more closely to seize opportunities and meet challenges by following the trend of digitalization. In this workshop, we will mainly discuss four aspects of digital economy which will be not limited to, including ‘Digital Transformation to Consumer’, ‘Digital Transformation to Business’, ‘Digital Infrastructure-driven Innovation Ecosystem’ and ‘Data Ecosystem’. These topics are quite in accordance with the AOM 2022 conference theme “Creating a Better World Together”. In addition, this workshop will specifically advocate the Journal of Digital Economy (JDE) and welcome any scholars who are interested in digital economy related topics to submit their manuscripts.

Despite increasing awareness of differences in management among world regions, management theory still provides little specific understanding of the African context and has taken even less benefit from this culturally rich continent in developing new theory. The Africa Academy of Management (AFAM) and the Academy of Management Review (AMR) call for “development of theories of management and organization that are indigenous to Africa. The aim is to develop indigenous theories not necessarily with a capital “I” (i.e. to be purely African, devoid of all external influences, as if it is at all possible), but indigenous with a small “i” (i.e. to be primarily drawing on and accounting for African experiences)” (AMR, 2021). This PDW intends establishing three interrelated conversations: One to develop a deeper understanding on generalizing from African specificity, which has been broadly ignored for the vast majority of today’s management theory developed based on the Global North context; another to concretely understand theorizing based on the African experience and phenomena; and a third to discuss such theory development in action. Given that various scientific communities investigating business organizations in the African context contribute different perspectives to this conversation, with promising opportunities for research, we envisage participants in this workshop to work with senior editors and prominent scholars from different disciplines to develop ways to address these challenges. The PDW ends with a future research-oriented discussion with all participants, based on results generated in three parallel roundtables.

This ceremony will announce and celebrate the winners of the 2022 Responsible Research in Management (RRM) Award, sponsored by AOM Fellows Group. Selected authors of the 10 winning papers and one book will reflect on the challenges and rewards of conducting research that is beneficial to society and useful to practitioners. Executives who helped select the winners will be invited to explain what makes these research studies valuable to them. Since its founding in 2018, the RRM Award has assembled a canon of “responsible research” which now contains 70 exemplary articles and 13 books that are academically credible, practically useful, and beneficial to society. Click here <https://bit.ly/3naBluO> to view the list of 2022 winners, along with brief descriptions of each work. Amidst the drumbeat of calls for research that is relevant to practice, RRM is the one award signifying that practicing executives regard the research findings as actionable. Please join us to celebrate management research that can move the world. Sponsored By: OB, OMT and STR

**Corporate Governance: Effects on Strategic Behavior, Leadership
Change, and Market Response**

Session Moderator: **Joris Berns**, *Tilburg U.*

OMT: [How Incongruence Between Managers' Tone of Voice and Word Sentiment Influences Security Analysts](#) 

Author: **Joris Berns**, *Tilburg U.*

Author: **Tal Simons**, *Erasmus U. Rotterdam*

Maintaining favorable analyst recommendations is important to organizations and their management, as these recommendations provide stakeholders with expert opinions about organizations' well-being. Hence, there is a strong impetus for managers to prevent analysts downgrading their organization. In verbal communication, such as in earnings calls, managers not only try to influence analysts via the words that they use, but also via the tone in which they speak (i.e., paraverbal communication). Paraverbal communication is both an extra channel of information for analysts, and a strategic tool managers may use to exert influence. On the one hand, management wants to signal trustworthiness through congruency in their communication, but on the other hand is inclined to offset negative information by speaking positively, or downplay expectations by using a negative tone when discussing positive information. Leveraging several state-of-the-art Natural Language Processing algorithms, using earnings calls' audio and textual data, we analyze the incongruence in managers' communication. We find that paraverbal communication affects analysts' recommendations and show which paraverbal strategies characterize organizations that are least likely to get downgraded. Our study therefore contributes to the literature on corporate communication, demonstrating the importance of verbal tone in managing the relationship with market intermediaries (analysts). Furthermore, this is one of the first studies in management that utilizes audio data quantitatively.

OMT: [Changing Regimes: CEO Succession with Change in Political Ideology and New CEO Early Departure](#)  

Author: **Dimitrios Georgakakis**, *U. of York*

Author: **Albert Cannella**, *Texas A&M U., College Station*

We advance theory on CEO succession by examining the effects of strategic leadership transitions coupled with change in political ideology—i.e., when a conservative CEO is replaced by a liberal, or vice-versa. Drawing on the organizational-disruption theory of succession, we postulate that value-related ideological differences between the new CEO and the predecessor amplify succession-related disruption and increase the likelihood of new CEO early departure. We further conjecture that the effect of shifting CEO ideology on successor's early departure strengthens when (a) the predecessor remains board chair after succession, (b) the new CEO ideologically misfits the incumbent executive group, and (c) the shift in CEO ideology occurs under conditions of poor pre-succession firm performance and low industry munificence. Survival analyses of 1,699 CEO succession events in S&P 1500 firms support our predictions. Based upon our findings, we offer a mid-range theory on the disruptive nature of shifting CEO ideology in strategic leadership, and highlight a set of parameters that organizations should consider in the CEO succession process.

OMT: [The Elephant-Donkey Divide: Ideology-Based Faultlines and Strategic Renewal in Turnaround Situations](#)  

Author: **Dimitrios Georgakakis**, *U. of York*

Author: **Priyanka Dwivedi**, *Texas A&M U., Mays Business School*

Author: **Albert Cannella**, *Texas A&M U., College Station*

Research on political psychology suggests that ideological differences among individuals in groups become salient in situations characterized by 'uncertainty and threat'. We integrate faultlines theory with the uncertainty-threat principle from political psychology to introduce the notion of ideology-based top management team (TMT) faultlines – and examine its effects on strategic renewal in an uncertainty-threat context (i.e., turnaround situations). We argue that, in turnaround situations, differences in political ideology can fracture the TMT into distinct ideological factions (i.e., conservatives vs. liberals) with divergent attitudes toward the adequate management of 'uncertainty and threat'. Such divergent attitudes cause decision-making fragmentation in the executive group, and thereby reduce the TMT's ability to swiftly enact strategic renewal. Further, our research also considers the contingency impact of external environmental factors (i.e., shareholder unrest and industry performance decline) that may strengthen the job demands and uncertainty-threat facing executives in turnaround firms and further hamper renewal response. Building upon our findings, we offer a midrange theory of ideological separation in organizational upper echelons and highlight its impact on corporate strategic responses to situations requiring swift and adaptive action.

OMT: [Expropriation or Coinsurance? Legal Environment and Stock Market Responses to RPTs](#)  

Author: **Lisha Liu**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

How does the legal environment influence investors' distinguishing between related-party transactions that are part of the 'coinsurance' strategy of a business group and those enabling the ultimate controller to expropriate minority shareholders? Using a longitudinal (2008–2015) dataset of loan guarantees offered by Chinese publicly listed firms to their parent firms or subsidiaries and stock market responses, I find an exacerbated negative effect on the stock price of corporate governance structures, incentivizing the ultimate controller to expropriate minority shareholders, and stronger positive effect of corporate governance structures, indicating the monitoring of controlling shareholders in regions where the legal environment is less developed. The results reveal the important role of the local institutional environment in influencing how investors interpret related-party transactions.

OMT: [The Effects of the Degree of Internationalization on the Market Value of Cash](#) 

Author: **Aviner Augusto Silva Manoel**, *USP*

In this paper, we advance the literature on cash holdings and international business by analyzing whether the degree of internationalization influences the value investors place on cash holdings in Latin American companies. Consistent with the research hypothesis, we find strong and robust evidence that investors do not perceive the cash holdings of multinational corporations from Latin America or Multilatinas as providing greater benefits relative to the cash of their domestic peers. As a consequence, we document that investors do not place a higher value on the cash of Multilatinas than on that of Latin American domestic companies, despite the fact that the former has higher growth opportunities. This paper is an important step in understanding Latin America and the multinational corporations from this region. Furthermore, our research has implications for managers of multinational corporations that have subsidiaries in countries with valuable growth opportunities, but the risk of cash expropriation is substantial due to the poor protection of shareholders rights. Finally, our study also highlights the relevance of considering the mandatory disclosure of foreign cash, in location and amount, to improve efficiency in stakeholder decision-making and also to advance the understanding the effects of foreign cash on Multilatinas' investment decisions.

New Thinking About Communities In Organization Studies

Session Moderator: **Andreas Georgiou**, *U. Ramon Llull, ESADE Business School*

OMT: **Communities, Organizing and Organizations: A Review and an Institutional Logics Perspective** 

Author: **Andreas Georgiou**, *U. Ramon Llull, ESADE Business School*
Author: **Daniel Arenas**, *ESADE Business School*

Almost a decade ago, community was conceptualized as a distinctive institutional logic, providing social and cultural resources to its members, influencing organizations, and determining community-organization relationships. However, some more recent studies challenge this view, stating that the community logic does not exist, or exposing that it is not even followed by community groups themselves. Acknowledging the implications of this theoretical puzzle for organization theorists, we review 172 papers published in highly ranked organization and management journals during the past 30 years and summarize insights on four types of communities for which discussion has flourished: communities of place, of practice, of users, and of firms. Next, we conduct pattern matching to explore whether these four types adhere to the community logic. Our findings reveal the existence of a unique community logic, which is consistent across different types of communities and forms the basis for a comparative research agenda. Furthermore, we show that multiple logics compete for influence and primacy against the community logic and create instances of institutional complexity. In doing so, we specify the unique principles and categorical elements coming from the community logic and those coming from conflicting institutional logics and draw implications for communities and community-organization relationships. The paper ends by emphasizing the benefits of applying the institutional logics lens to communities and points to future research avenues.

OMT: **Isomorphic Symbolic Value of Community-Oriented Names for U.S. Community Foundations**

Author: **Shinwon Noh**, *U. of St. Thomas*

This study examines the effects of community-oriented names on the amount of donations received by U.S. community foundations. Drawing upon the symbolic management perspective, this study focuses on the word 'community' as a symbol that carries isomorphic symbolic value which derives from the desirable contextual meaning ascribed to the symbol. The longitudinal analysis of panel data of U.S. community foundations for a 22-year period (1989-2010) finds that the presence of the word 'community' in an organizational name led to more donations over time. This study identifies two other community-related name attributes that increased the symbolic value of the foundation's name: presence of specific geographic label and absence of business-related label. The analysis finds that a specific geographic label in a foundation's name had a positive influence on donations received by the foundation whereas a business-related label had an opposite influence. This study also reveals that community wealth and the number of community foundations in the same community are significant moderators of the relationships between the three name attributes and donations.

OMT: **Certifying Need: Can Expanding Certification Access Help Ventures in Impoverished Communities?** 

Author: **Daniel Erian Armanios**, *Oxford U., Saïd Business School*
Author: **Lauren Lanahan**, *U. of Oregon*
Author: **Amol M. Joshi**, *Wake Forest U.*
Author: **Ouafaa Hmaddi**, *U. of Oregon*

Prevailing theory assumes certifications signal quality. However, ventures that most require certifications are frequently constrained from generating such signals. Thus, extremely few can ever access certifications. Critically, this marginalizes ventures from impoverished communities. Alternatively, we surmise that certifications can improve venture performance in such communities through signaling need rather than quality. In so doing, we consider the implications of certifying the geographic place where a firm is located. We argue that place-based (as opposed to firm-based) certification is useful in detaching certification from a particular venture and, when signaling need, jolts audience members to widen their social gaze and include otherwise marginalized ventures. Our empirical context is the U.S. Historically Underutilized Business Zone program. This place-based certification flags need in specific places. Analyzing a nationwide sample of 77,241 U.S. ventures founded between 2014 to 2017, we find evidence that place-based certifications indeed improve firm performance and help audience members avoid conflating their own contextual unfamiliarity with venture quality. We offer guidance for rethinking and advancing organizational theory to direct attention towards marginalized contexts. We make theoretical contributions that unshackle certification from its dependency on quality in hopes of broadening access to those who can acquire and benefit from certifications.

OMT: **The Enduring Effect of Cultural Brokerage: From Merchants and Missionaries to Foreign Firms (WITHDRAWN)**

Author: **Sonja Opper**, *Department of Management and Technology, Bocconi U.*
Author: **Enying Zheng**, *Peking U.*

This study explores the largely neglected long-term effect of cultural brokerage on local community cultures and international business. We argue that communities with a rich history of cross-cultural exchange between locals and foreigners developed a local culture that continues to influence international business today. Drawing on a matched sample of 68 colonial cities and 80 neighboring cities in China, we connect local variation in central domains of cultural brokerage—trade and missionary activities in the late 19th and early 20th century—with foreign production today. Our results demonstrate the long-term implications of socially-built cultural capacities on local strategies of action and challenge the dominant legalistic approach in colonial heritage research.

Paper is NOT Available. Please contact the author(s).

Author: **Yi Zhao**, *Stanford U.*

How are exchange partners matched to each other in the market given a great amount of uncertainty facing these actors about the match quality? Different from prior studies that focus mostly on the actor and dyadic level factors, I argue that the process of matching is embedded in the concrete social and geographic settings, and the social contexts—especially the level of social capital—of local communities can mitigate the uncertainty facing exchange partners and therefore facilitate their resource exchanges. I test my theory in the nascent but fast-growing market of impact investing. In addition to financial returns, impact investors explicitly seek to create social and environmental impacts but often must face great uncertainties in selecting investment targets due to the difficulty of measuring the social and environmental impacts of their investments. Empirical results support my argument showing that to mitigate uncertainty, “impact-first” investors that are nonprofits and less concerned about financial returns, in contrast to “financial-first” investors that are forprofits and more concerned about financial returns, select target companies located in geographic communities rich in social capital. The findings of this study contribute to organization literature on the matching problem and growing research on impact investment and have practical implications regarding the important role of the local community in social innovations.

Management scholars are increasingly seeking to understand organizational phenomena in developing countries. Yet, extending organization theory to these new contexts is often challenging and poses novel theoretical and empirical hurdles related to the design, execution, and publication of research set in these contexts. This PDW seeks to create a platform for a wide-ranging discussion on these issues by bringing together eminent scholars at the forefront of organization research in developing country contexts, and those who seek to undertake such research in the future. Ultimately, this PDW aims to build a community of scholars interested in developing economies, who will help globalize organization theory and articulate an ambitious agenda for the future of organization theory in those contexts.

**Social Hour for Global Ambassadors and Emerging
International Members**
Global Connections Social Hour

Organizer: **Anna Katherine Ward**, *Virginia Tech*
Organizer: **Joy E. Beatty**, *Eastern Michigan U.*

This Social Hour is intended to accompany the PDW “Global Connections: GDO’s Global Ambassadors Broadening the AOM Experience for Emerging International Members”. Between the Social Hour and PDW, our broad goal is to connect and integrate emerging international members from emerging economies, the global South, and other geographies where our GDO membership is under-represented. We will invite GDO Global Ambassadors and PDW participants to a one-hour on-site social event on the evening prior to the PDW. Our intention is to provide an opportunity for participants to begin to network with Global Ambassadors early in the conference so that later interactions are less intimidating. Through casual socializing at this Social Hour, we hope participants will begin to identify Global Ambassadors who might mentor them over the next year in developing paper submissions for AOM 2023. Key take-aways to participants of the Social Hour and PDW include stronger (1) connection to and support within the GDO community, and (2) honing of paper development skills, making future AOM attendance more likely.

Please pre-register for this event by emailing your name, university, job title, and country to akward@vt.edu.

The coronavirus disease 2019 (COVID-19) pandemic has had a profound impact on both businesses and higher education, sending many courses into often underdeveloped online environments with minimal notice (Spicer, 2020). Throughout the pandemic, courses remained in synchronous, asynchronous, and hybrid formats, necessitating re-engineering of delivery, assessments, and other course components. Although online courses are not new, many lessons were learned during the COVID-19 pandemic from the volume of alternate format courses that can be carried over into the new normal environment and positively impact management education. Management courses have the additional utility and benefit of creating and exhibiting professional best practices to future organizational leaders, increasing the value of these lessons learned (Brammer & Clark, 2020). This PDW is designed to engage participants in discussions of these lessons learned, facilitated by experienced management faculty with significant teaching experience before, during, and “after” COVID-19. After listening to brief panel presentations on specific focus areas, participants will choose three areas for further discussion in a roundtable setting. Topics will include mechanisms for engagement (e.g., polling and feedback using Google suite); replicating professional hybrid working environments (e.g., developing virtual and hybrid etiquette); alternate communication mechanisms and techniques (e.g., using discussion boards to stimulate brainstorming); auxiliary or substitute assignment types (e.g., interactive video introductions); and asynchronous design, wellness checks, and flexibility (e.g., exam flexibility and delivery options). Participants are encouraged to bring their own lessons learned in these areas and will be encouraged to ask questions from area experts using a small group, roundtable discussion format.

Dance Meditation: An Experiential Workshop for Exploring Dance as Mindfulness Practice

Dance Meditation

Facilitator: **Lasse Lychnell**, *Stockholm School of Economics*

Facilitator: **Rebecka Arman**, -

Facilitator: **Catarina Ahlvik**, *Hanken School of Economics*

Facilitator: **Judith A. Neal**, *Edgewalkers International*

Facilitator: **Louis W. Fry**, *Texas A&M U. Central Texas*

This experiential workshop invites you to explore dance as a mindfulness practice and reconnect with your body and yourself between sessions and presentations. No previous experience is needed, and everyone is welcome to join the inclusive space held by the facilitators. You may bring a water bottle and an extra T-shirt if you feel for it. Kabat-Zinn (1994) suggests that “mindfulness practice means that we commit fully in each moment to being present. There is no ‘performance’. There is just this moment.” We usually think about mindfulness practice as silent sitting, but there is no limit to our mindful practices. This is a moment to entirely turn your attention inwards as there is no choreography to remember and nothing to achieve. While we move our bodies to the rhythms of tunes from all over the world, we simply observe thoughts, feelings, and physical sensations from moment to moment without reacting and without judging. Compared to mindfulness meditation (Kabat-Zinn, 1990/2009), dance and movement in clinical and applied settings have received little scholarly attention. A recent literature review, however, suggests that “engaging in musical and dance activities can make people feel trust and connectedness, promote pro-social behavior within a group, and also reduce prejudices between groups” (Bojner Horwitz, 2021, p. 1). Other studies suggest dance may reduce depression equally effective as mindfulness meditation (Pinniger et al., 2012), and contribute to improvements in emotional and spiritual well-being (Marich & Howell, 2015), as well as pro-social behaviors, stress management, and communication skills (Barton, 2011).

OB: Role of a Sense of Urgency in Driving Employees' Innovative Behavior: Empirical Evidence from Japan  

Author: **Hao Anh Nguyen**, *Yokohama National U.*

Author: **Kodo Yokozawa**, *Yokohama National U.*

Author: **Toru Takagi**, *IT Management Institute*

Author: **Tim Wolput**, *Lean Consultancy Group*

This study investigates antecedents of a sense of urgency and its effect on innovative behavior. Data from 481 employees working in Japanese manufacturing companies were collected by administering an online questionnaire survey, then were analyzed using structural equation modeling and moderation analysis. The findings suggest that a sense of urgency among employees can significantly improve innovative behavior, including idea generation, promotion, and realization. Moreover, the effect of a sense of urgency on idea realization will be more substantial if there is a higher level of trust in management. Furthermore, our results indicate that a sense of urgency is triggered by managerial actions of external benchmarking and challenging goals setting, but it is hindered by reducing bonuses. Additionally, change leadership behavior was found to strengthen the positive impact of benchmarking and the negative impact of bonus reduction on a sense of urgency. As an early work that empirically tests the antecedents and outcomes of a sense of urgency, this study contributes to change management and behavioral operations literature. Furthermore, it guides managers to utilize motivation from a sense of urgency to leverage employees' innovative behavior.

OB: The role of ambivalence for innovative work behavior during crisis: A longitudinal quasi-experiment   

Author: **Ann-Carolin Ritter**, *TUM School of Management, Technical U. of Munich*

Author: **Theresa Treffers**, *TUM School of Management, Technische U. München*

A crisis can cause a firm's demise or catalyze employees' innovative work behaviors (IWB), enabling the firm to thrive. Crises are complex, generating perceptions of both threat and challenge (i.e., ambivalence) and eliciting multifaceted behavioral reactions. We evaluate how ambivalence influences IWB during a crisis, taking the extreme case of the COVID-19 pandemic as a research setting. In a longitudinal quasi-experiment with 216 employees, we explore the relationship between ambivalence and IWB as the crisis unfolded through the first two government-mandated crisis phases of the COVID-19 pandemic, and how this relationship depends upon whether workers were classified as critical or non-critical. Our findings show that high ambivalence has both positive and negative effects on IWB that depend upon government mandated worker classification and crisis phases. In addition, we find that ambivalence has different effects on IWB over time. Based on our results, we explore differences and similarities between four different combinations of classification and work phase taking place in our quasi-experiment, and develop a conceptual model which suggests that during crisis, work phases of productivity enhance the relationships between ambivalence and IWB, but work phases of sensemaking and exhaustion reduce the relationship between ambivalence and IWB. Our study contributes to theory about the dual nature of ambivalence and drivers of IWB in crisis.

OB: Value of ESG in the Time of COVID-19 Crisis: How Corporate ESG Promotes Employee Innovative Behavior  

Author: **Jeong-won Lee**, *Kyonggi U.*

Environmental, social, and governance (ESG) has emerged as an important pillar in integrating corporate business and social responsibility. However, as existing studies have focused on external stakeholders or corporate-level performance, we have a very limited understanding of the impact of corporate ESG performance on organizational members, important internal stakeholders of companies. In addition, the role that corporate ESG can play in uncertain crisis situations such as COVID-19 remains largely unexamined. To fill the gaps, this study explores the effect of corporate ESG on employees in crisis situations. Specifically, based on corporate reputation and the conservation of resources theory (hereafter, COR), this study investigates whether corporate ESG evaluation can act as a positive reputation of a company during the COVID-19 crisis, lowering psychological stress of members and promoting their innovative behavior. Furthermore, this study examines whether team cohesiveness can act as a social resource for employees in a crisis and interact with corporate ESG to reduce their stress. Data were collected from 980 employees of 51 companies in Korea and analyzed through multilevel structural equation modeling. Results showed that employees with high corporate ESG evaluation experienced less psychological stress during the COVID-19 crisis, and as a result, they put more effort into workplace innovation. In addition, the effect of ESG evaluation on lowering employee stress was stronger for employees who perceived high levels of team cohesion. These results suggest that a company's pursuit of social values through ESG can increase employees' well-being and innovation efforts in crisis situations, ultimately increasing the company's likelihood of overcoming the challenges of a crisis.

OB: Demonstrating Talents! A Self-Determination Perspective of Employee Hubris and Innovative Behavior 

Author: **Jih-Yu Mao**, *Southwestern U. of Finance and Economics*

Author: **Xianhui Ning**, *Southwestern U. of Finance and Economics*

Author: **Jing Quan**, *Southwestern U. of Finance and Economics*

Author: **Li Guo**, *U. of International Business and Economics*

Hubris is generally considered an undesirable personality trait that hinders organizational functioning. However, we suggest that hubristic employees can potentially contribute to organizational development by being innovative. Adopting a self-determination framework, we argue that employee hubris is positively related to innovative behavior and that this relationship is mediated by ability-demonstration strivings. In addition, we propose perceived intraorganizational competition to be an important boundary condition. Specifically, the indirect relationship is likely strengthened when employees perceive stronger than weaker intraorganizational competition. The results of a scenario experiment and a survey support all of the hypotheses. Insights into the literature, practice, and future research are discussed.

Drawing on the social-symbolic work perspective, we define “history work” as purposeful, reflexive efforts intended to change or maintain the history of an organization, a field, or a society for and among critical audiences. In particular, history work involves intentional efforts to shape or reshape a combination of discursive, relational, and material elements that constitute a meaningful presentation of the past. Building upon existing studies that regard history as socially constructed, we seek to develop this research agenda by reflecting on three distinct characteristics of history work: First, while previous studies tend to see history as strategically used by executives or entrepreneurs, history work in our view may be employed both in a top down fashion and from the bottom up. In other words, history work is not necessarily a deliberate product of firm strategy, as it can be emergent from organizational processes. Second, while previous studies often focus on the discursive aspect of constructing history, involving cultural framing and interpretation of the past, history work in our view also entails a material aspect that attends to the discovery, recovery, and recreation of historical artifacts. Thus, the construction and maintenance of history might entail a more comprehensive set of activities than previously assumed. Lastly, history work is often not just about history. Instead, the purpose of history work is often connected to the construction or destruction of other social-symbolic objects, including identities, strategies, and institutions. In other words, history work is adopted for its power to change or maintain other important objects in organizational life.

Perspectives on Sustainability Reporting

Session Moderator: **Martina K. Linnenluecke**, *Macquarie U.*

SIM: Planetary Boundaries: Disclosure Quality of Sustainability Reports   

Author: **Chanyuan Ge**, *Macquarie Business School, Macquarie U.*

Author: **Martina K. Linnenluecke**, *Macquarie U.*

Author: **Rui Xue**, *Macquarie Business School, Macquarie U.*

This study develops a new framework to analyze the disclosure quality of planetary boundary information in firms' sustainability reports. Specifically, we construct a comprehensive disclosure index by mapping each planetary boundary to existing Global Reporting Initiative (GRI) standards, and by deriving a set of criteria to measure the quality of disclosure. Next, we employ a text mining technique to apply the disclosure index to analyze the sustainability reports lodged by the top 100 companies listed on the Australian stock exchange (ASX100) over the period from 2016 to 2020. We find an increase in reporting quality across the nine Planetary Boundaries over the five years of our analysis. A cross-sectoral analysis shows that firms in industries with a higher environmental impact, such as those in the Materials and Energy sector, tend to have a higher reporting quality. We validate our text-mining results against a manual analysis and examine the robustness of the results by showing positive associations of our disclosure scores with environmental performance measures from other data sources. This is the first academic study to examine planetary boundary disclosures of large, listed companies. Researchers and decision-makers may consider using the framework and method to identify potential planetary boundary risks for decision-making purposes.

SIM: The Influence of Directive 2014/95/EU on the CSR Reporting of Stock-Listed European Companies

Author: **Christian Hüning**, *Goethe U.*

Author: **Eva Maria Katharina Koscher**, *Goethe U.*

Author: **Mehdi Hosseinkouchack**, *EBS U.*

Purpose – Even though CSR reporting has recently received considerable scholarly attention, far too little consideration has been paid to the contextual factors affecting reporting quality. This paper, therefore, aims to investigate how Directive 2014/95/EU influences the CSR reporting behavior of large, stock-listed European companies, especially concerning CSR reporting credibility and comparability. **Design/methodology/approach** – We use two different panel data models on variables derived by computer-aided textual analysis and human coding to uncover the effects of Directive 2014/95/EU on the credibility and comparability of CSR reports. Our analysis is based on a sample of 2,650 CSR reports from stock-listed European companies published between 2010–2019. **Findings** – The findings indicate that the introduction of Directive 2014/95/EU had a mixed influence on the credibility of CSR reporting as it reduced the analytic sentiment in CSR reports and led to a more distanced and less positive presentation of CSR engagement, but at the same time also to a more confident reporting language. In addition, we find a negative effect of the Directive on the comparability of CSR reports. **Originality/value** - This study contributes to the literature on CSR by investigating CSR reporting behavior beyond the firm level and within wider institutional settings. By examining the influence of the institutional environment on the credibility and comparability of CSR reports in a European setting, this paper provides new input for the scholarly and practical debate regarding further CSR reporting regulations.

SIM: Once A Conformist, Always A Conformist? The Discontinued Conformity to Sustainability Norm 

Author: **Yahan Hu**, *Fudan U. School of Management*

Author: **Qinjin Zheng**, *Fudan U.*

Although institutional scholars have well established the value of conformity to institutionalized norms, researchers have paid limited attention to the subsequence of the norm-conforming behaviors. Motivated by the abnormal phenomenon that some organizations deviate from the sustainability norm after their original conformity – which is described as discontinued conformity, we identify institutional immunity as a key mechanism to explain the inconsistent responses. We then introduce the distinction between ascribed and achieved immunity based on their different origins. While ascribed immunity is predetermined by organizations' structural attributes, achieved immunity can be enhanced by intentional actions. Both types of immunity filter institutional pressures and reduce legitimacy loss, which enable the deviation afterward. We further argue that institutional quality moderates the relationship between institutional immunity and discontinued conformity. We test our hypotheses with 22,949 global observations covering 2012–2017 and find solid support. Our work enriches the conformity literature by adopting a dynamic view and advances the institutional perspective in sustainability and CSR researches.

SIM: Crowding out Morality: How the Commensuration of Sustainability Reporting Sidelines Moral Reflection   

Author: **Koen Van Bommel**, *Vrije U. Amsterdam*

Author: **Andreas Rasche**, *Copenhagen Business School*

Author: **Andre Spicer**, *City U. London*

Drawing on extensive case study evidence, this study unpacks sustainability reporting's evolution from a moral values-based practice towards a financialized value-based one. We argue that this transition can be seen as a commensuration project. We examine the dynamics of this process and its implications for sustainability related outcomes. We find that increased levels of commensuration have moved sustainability reporting away from an original emphasis on morality and values to a focus on strategic value creation for the firm. We theorize this process as a 'crowding out of morality' that is enabled by a rigid cognitive framing of social and environmental issues (objectification) and the monetized coordination of relevant social interactions (marketization). We outline implications of our analysis for the scholarly debates on the institutionalization of sustainability reporting and commensuration.

Transitioning from a Faculty to an Administrator Role
Transitioning from Faculty to Administrator Role

Organizer: **I. M. Jawahar**, *Illinois State U.*
Distinguished Speaker: **Steve H Barr**, *North Carolina State U.*
Distinguished Speaker: **Sharon Oswald**, *Mississippi State U.*
Panelist: **Gillian Warner Soderholm**, *U. of South-Eastern Norway School of Business*
Panelist: **Julia Richardson**, *Curtin U.*

The purpose of this Professional Development Workshop (PDW) is to help faculty moving into administrative roles, such as a department chair or head of school, program director, an associate dean. Faculty members selected or asked to serve in administrative roles have very little formal training or background and often struggle through the assignment. In this PDW, we will discuss key issues that confront administrators and provide participants with the opportunity to share experiences with - and learn from - other experienced administrators.

The COVID-19 pandemic accelerated teaching with technology as management educators rapidly adapted to the risks of face-to-face learning. In-person classes were transitioned to online courses in either synchronous or asynchronous formats using technologies like learning management systems, social media, online resources (e.g., YouTube), and video conference platforms. Educators have engaged technology in new and additional ways with lasting effects on management education practices. Many organizations similarly shifted to remote work, creating a seemingly permanent move to the increased use of virtual and remote technologies in the workplace, and creating new demands on the education of future managers. While many students have adjusted, others continue to struggle given issues like their preferred learning styles or challenges with accessing and using technology. In the Annual Meeting theme of “Creating a Better World Together”, this professional development workshop (PDW) will focus upon improving educators’ use of technology to meet students’ needs and ensure that those struggling with the use of technology in learning are not disadvantaged, thereby enabling a better balance between the costs and benefits of teaching with technology. This PDW is now in its 24th year at AOM (since 1998). For 2022, we will showcase new technologies and techniques for teaching with technology in management. This PDW is relevant to novice and experienced educators and focuses upon technology’s practical applications through demonstrating and sharing teaching techniques and technologies in an interactive presentation format. The PDW includes five presentations by nine experienced management educators.

While researchers have identified a variety of situations when leaders engage in morally hazardous behaviors at work such as abusing subordinates, engaging in unethical behaviors that benefit the organization and/or its members, and requesting subordinates to engage in unethical behaviors as well as the antecedents and outcomes of those unethical leader behaviors, there are still many unknowns when it comes to when those unethical leader behaviors occur and what the consequences are. This symposium includes four papers that approach the above questions using diverse theoretical perspectives and thus contributes the (un)ethical leadership literature.

This PDW is a response to the AOM 2022 call, “To what extent is there a need to create future institutions, relationships, systems, and processes that are different from the past?” (p. 1). First, practitioners from China will describe how to they face the problems related to digital transformation in their companies. Then, Academics will compare the potential responses of two methods: hidden costs /Socio-Economic Approaches to Management (SEAM) and Business Process management (BPM). This PDW is an invitation to collaboration and free exchange of ideas between AOM divisions. The goals and desired outcomes are to create a cross-divisional collaboration and to provide researchers with approaches and methods to evaluate the effects of digital technologies at the workplace of the future that can be used for further publications in academic journals. Through this cooperation between practitioners and academic, this PDW also intends to contribute to “Creating A Better World Together.”

Social Impact Assessment and Investing for a Better World

Session Moderator: **Deike Schluetter**, *Heinrich-Heine U. of Dusseldorf*

SIM: **Forward-Looking Impact Assessment – An Interdisciplinary Systematic Review and Research Agenda**

Author: **Kiia Strømmer**, *Maastricht U.*

Author: **Jarrod Ormiston**, *U. of New South Wales*

Both new and established ventures are under increasing pressure to consider how their current actions impact our future world. Whilst many practitioners are paying greater attention to the future impact of their activities, the majority of impact assessment research focuses on the retrospective measurement of impact, with only limited insights on how impact assessment is used as a tool to forecast or predict the intended impact of organisational action. This study aims to overcome this gap by exploring forward-looking approaches to impact assessment. We conduct an interdisciplinary systematic review of the impact assessment literature to answer the question: “How and why do organisations incorporate forward-looking, future-oriented approaches to impact assessment?”. In our findings we elaborate on the common research themes, challenges, and gaps in understandings of forward-looking impact assessment. We develop an organising framework to show how research on forward-looking impact assessments has explored various antecedents, processes and outcomes. Based on our review, we put forward a research agenda to provoke further inquiry on forward-looking, future-oriented approaches to impact assessments related to four research themes: uncertainty, values and assumptions, stakeholder cooperation, and learning. Our study contributes to the impact assessment literature by providing an overview of how the current literature comprehends forward-looking approaches, and providing insights on how the field can develop a more holistic view of temporality in impact assessment.

Paper is Available to Meeting Registrants Only.

SIM: **Mechanisms of Impact Investing – From a literature Review to a Multistage and Multilevel Model**

Author: **Deike Schluetter**, *Heinrich-Heine U. of Dusseldorf*

Author: **Lena Schätzlein**, *Heinrich-Heine U. of Dusseldorf*

Author: **Rüdiger Hahn**, *Heinrich-Heine U. of Dusseldorf*

Impact investing (II) aims at achieving an intentional social impact next to a financial return, thus embracing a high level of hybridity and potentially conflicting goals of different actors. We find that a growing academic literature on II is currently scattered across a variety of disciplines, topics, and levels of analysis with inconsistencies in terminology and concepts and a lack of theoretical explanations and frameworks. Our systematic and integrative literature review of 99 articles clarifies conceptual ambiguities by developing a typology of II differentiating a weak and strong interpretation. We analyze research based on antecedents, management and outcomes of II to provide an overview of common research areas and point to inconsistencies in the overall scholarly contribution. We develop a mechanisms-based multistage and multilevel model of the II market to link diverse current theoretical contributions and elaborate future research avenues.

SIM: **Impact Investing Firms and Institutionalization in High-Risk Countries**

Author: **Gilbert Kofi Adarkwah**, *BI Norwegian Business School*

Author: **Birgitte Groggaard**, *BI Norwegian Business School*

Author: **Sverre Tomassen**, *BI Norwegian Business School*

We build on institutional work theory to examine the association between impact investments and institutional development. We extend prior work that focuses on the purposive and practical actions to change institutional and argue that institutional work is not only carried out by skillful insiders but also by outsiders with nonpecuniary intent to change prevailing taken-for-granted institutions. While earlier work shows that institutional work is performed by actors associated with the institution, we introduce a new type of institutional work, catalytic institutional work, and actor, the impact investor, that engages in this type of institutional work. Analyzing a comprehensive hand-collected sample of 1,029 impact investments from 7 European countries in Africa, we find support for our hypotheses.

In this session, members of the Critical Management Studies Executive Committee will facilitate a discussion around 'being critical today'. Mindful that, across the Academy, there are conversations about Creating a Better World Together, this is a chance for us to pause, reflect, and renew ourselves, focusing on what being critical today means. We warmly invite members of the Division - old and new - to join our plenary discussion as we connect up our past, present, and look to the future.

Rethinking Corporate Political Activism

Session Moderator: **Douglas A. Schuler**, *Rice U.*

SIM: Corporate Sociopolitical Activism and Stakeholder Influences: A Conceptual Framework

Author: **Douglas A. Schuler**, *Rice U.*
Author: **Moritz Appels**, *U. of Mannheim*

Corporate Sociopolitical Activism (CSA) is the public involvement, predominantly via speech, of companies in controversial social and political issues. The predominant models of CSA draw heavily from upper echelons, agency, and other CEO-centric theories of organizational behavior, as well as managerial perceptions of issue alignment with employees and customers. While instructive, these models fail to explain both the increased incidence of CSA as well as its concentration primarily in the USA over other countries. We offer a stakeholder-centric model of CSA, specifically examining the influences of government, non-governmental organizations, and the media on CSA. The model establishes a set of testable propositions that we believe better explains CSA than existing frameworks.

SIM: Corporate Activism and Organizational Authenticity

Author: **Lambert Zixin Li**, *Stanford U.*
Author: **Sarah A. Soule**, *Stanford U.*

Corporate activism is when a firm takes a public stance on a social or political issue. Although the public increasingly expects corporations to engage in activism, public support varies across individual corporate activist campaigns. While social movement theories would predict that the public will support corporate activism in general, organizational authenticity theory suggests that corporate activism may backfire if firms lack type or moral authenticity. Using semi-structured interviews with diverse stakeholders, a national survey on 525 corporate activist statements, and two pre-registered experiments, we find that the public generally supports corporate activism, but that a firm's type and moral authenticity substitute each other in shaping both attitudes (support for and intention to join) and behaviors (donation and writing letters of support). We contribute to social movement theory by bringing in organizational theories of authenticity to add nuance to our expectations about public support for corporate activism, and we extend research on organizational authenticity by showing an interaction between type and moral authenticity.

SIM: Riskier Business? How Consumer Perceptions of Corporate Political Advocacy have Evolved

Author: **Candace Esken**, *Bradley U.*
Author: **Laurence Weinzimmer**, *Bradley U.*

In the past, companies have largely avoided taking sides on political issues due to their risky polarizing nature and focused their efforts on business operations and controlling what impacts the bottom line. However, there has been a shift in the past decade where companies have increasingly taken very public stances on politically charged social issues, referred to as corporate political advocacy (CPA). With the increasingly polarized political nature of the population coupled with the consumer's desire for organizations to help drive social change, abstaining from engaging in CPA is becoming less of an option for organizations. The purpose of this research is to investigate how consumer perceptions of CPA have changed and which social issues have the strongest influence and impact on consumers' purchasing decisions. Using comparative analyses from two datasets collected nearly 10 years apart, we find that CPA has had an increasingly significant impact and influence on consumer purchase decisions but mostly when an organization takes a stand on a social issue they care about. Ultimately, the data revealed that COVID-19 and healthcare are by far the most influential social issues currently impacting consumer perceptions.

Open Innovation Track: Novel Empirical Approaches to the Drivers of Innovation

Session Moderator: **Oscar Bustinza**, *U. de Granada*

TIM: Are You Listening?: Sentiment Diffusion in GitHub

Author: **Swagatam For Sinha**, *ETH Zürich*

Do expressed sentiments affect remote-workers? My paper addresses this question in the important context of open innovation, using extensive online communication data on GitHub. I use the VADER sentiment analyzer to determine latent sentiment in open source software developer communication, and study the correlation of individual sentiments within developer teams. I employ an instrumental variable identification strategy to identify peer effects in sentiment diffusion. I find significant, positive correlation within in-group sentiments, which suggests potential channels through which sentiments can propagate. I also find sentiments expressed by an individual does not affect the entire team, and this suggests expressed sentiments tend to attenuate rather than magnify via propagation. These findings provide useful lessons to managers of remote working teams regarding ways to manage employee morale and team cohesion.

TIM: Treble Innovation Firms: Implications for Open Innovation Strategies and Profitability

Author: **Ferran Vendrell-Herrero**, *U. of Birmingham*

Author: **Oscar Bustinza**, *U. de Granada*

Author: **Marco Opazo-Basaez**, *Deusto Business School*

Author: **Emanuel Gomez**, *Nova School of Business and Economics, U. Nova de Lisboa*

Manufacturing firms can develop three forms of technological innovation: process, product, and service. While previous research has primarily analyzed service innovation in isolation, this study compares the profit position of firms adopting all technological innovations simultaneously (treble innovation firms) to firms that “only” adopt process and product innovation (dual innovation firms). Drawing on the premises of the resource-based view (RBV), we argue that treble innovation firms can build on innovation cross-fertilization to develop valuable, rare, and inimitable resources that translate into higher profitability. Consistently with the RBV, we also expect treble innovation firms to benefit more from open innovation because they can save considerably more in internal R&D investment while maintaining differentiated supply. We test our hypotheses on a random and representative survey of 423 Spanish manufacturing firms, of which 62% are dual innovators and 22% treble innovators. The results support our hypotheses. Based on propensity score matching and doubly robust estimations, we find causal evidence supporting the conclusion that treble innovation firms are more profitable than dual innovation firms. Our results also confirm that open innovation positively moderates the relationship between treble innovation firms and performance, but this moderation is statistically significant only when internal R&D investment is low.

TIM: Sources of Innovation Revisited: Patterns in Firms’ Usage of Internal and External Search

Author: **Wenjing Lyu**, *Massachusetts Institute of Technology*

Author: **Neil Thompson**, *MIT Computer Science and Artificial Intelligence Laboratory*

Author: **Keld Laursen**, *Copenhagen Business School - Department of Strategy and Innovation*

Recent open innovation literature has emphasized external knowledge search and the use of a diverse set of external innovation sources. But firms also have a diverse set of internal innovation sources, and we show that there are distinct patterns across external and internal sources that reflect differences in how firms create and capture value. Our analysis of the innovative activities of 256 large firms from seven countries and across seven industry sectors reveals two distinct innovation search strategies: “tech-focus,” which emphasizes exploration and is associated with more innovative outcomes, and “market-focus,” which emphasizes exploitation and is associated with higher market value. Finally, we show that characterizing innovation sourcing as tech-vs.-market better explains differences in firm performance than traditional measures such as openness.

Paper is Available to Meeting Registrants Only.

TIM: SMEs and Open Innovation: Challenges and Costs of Collaborating

Author: **Alessandra Costa**, *U. of Messina*

Author: **Antonio Crupi**, *U. of Messina*

Author: **Chiara Eleonora De Marco**, *Haas School of Business, UC Berkeley*

Author: **Alberto Di Minin**, *UC Berkeley*

Traditional literature in terms of Open Innovation broadly explored the potential benefits firms might achieve in collaborating with external partners. However, in such a recognized framework, the investigation of the costs firms face remains an underexplored field. Understanding the immediate economic impact of Open Innovation strategies is crucial, especially for SMEs that usually suffer from a structural lack of financial resources. To fill this gap, the present study explores the costs sustained by SMEs in the short run while implementing Open Innovation strategies. Moreover, in line with the new challenges introduced by new technologies, the study explores how Open Innovation costs vary for digital- and non-digital-oriented SMEs. In doing so, the study relies on a sample of 377 digital- and non-digital-oriented European SMEs. In general terms, results show that Open Innovation represents a short-term cost for both types of SMEs. However, in investigating the different Open Innovation challenges addressed by SMEs, findings reveal that especially digital-oriented SMEs may limit costs by reducing their external activities and keeping their activity focused on the core business. These findings have implications for both SMEs and scholars, which are expected to lead to further investigations.

Author: **Shilpam Dubey**, *Indian School of Business*

Author: **Deepak Jena**, *Indian School of Business*

Understanding the determinants of repeat collaboration and its effect on creative performance has long been a subject of research in innovation studies. Do teams generate more novel and useful productions when they share a history of interactions on several projects? Or do the pre-existing ties erode creative performance over time? While the literature has addressed this tension, not enough emphasis has been placed on disentangling correlation and causality in this relationship. We perform a granular examination of this question by using dyadic interactions of inventors and systematically address endogeneity by employing coherent framework with diverse model specifications and identifying assumptions using an extensive set of controls. Our empirical evidence shows that repeated interaction is detrimental to innovative performance.

Technology Strategy and Competition Track: New Perspectives on Business Models

Session Moderator: **Fathiro Hutama Reksa Putra**, *U. of Cambridge*

TIM: Get Ready for Quantum Age: The Implications of Quantum Technologies for Business Model Innovation 

Author: **Chander Velu**, *U. of Cambridge*

Author: **Fathiro Hutama Reksa Putra**, *U. of Cambridge*

Quantum technologies (QT) are nearing a phase of commercialization where technology adoption and business model design are becoming a major topic among practitioners and policymakers. This paper explores the potential impact of QT in transforming the way firms create and capture value. We identify the key properties of quantum mechanics and explain their potential in enabling new applications around computation, communication, and sensing. We propose that the application of QT has the potential to enable business model innovation by generating new market demand through novel customer value propositions, changing the structure of transaction costs, and enabling unique capabilities. This study aims to highlight the theoretical challenges and opportunities for management scholars and help organizations prepare for the quantum-enabled economy by analyzing the impact of QT on business models.

TIM: How to Boost Business Model Evaluation? Interpersonal Configurations and the Role of the Environment   

Author: **Caroline Kettner**, *Chair for Technology & Management, TU Dortmund U.*

Author: **Bastian Kindermann**, *Chair for Technology & Management, TU Dortmund U.*

To establish or maintain competitive advantage, firms need innovative business models. One way to develop innovative business models is to evaluate different alternatives during new product and service development. This team-level business model evaluation capability can help to proactively initiate innovation. However, managers and their teams lack knowledge about the necessary structures they need to establish to successfully build business model evaluation capabilities. Thereby, team interpersonal configurations could play a major role in deploying the capabilities. However, various conditions in firms' environments could impact developing these capabilities, which has largely been disregarded in the literature to date. This is problematic because variances in teams' compositions and structures can impact how they identify and leverage opportunities. We investigate our research model and related hypotheses by using cross-sector survey data from 238 heads of R&D and innovation departments. We thereby highlight the value of team interpersonal configurations for business model evaluation and reveal the interacting effects of internal and external factors. We contribute to research on innovation and business models by unravelling a fine-grained understanding of the driving and conditional forces on business model evaluation, and thereby set out to further uncover the boundary conditions of business model innovation.

TIM: Industry 4.0 Base Technologies and Business Models: A Bibliometric Analysis    

Author: **Giulio Ferrigno**, *Catholic U. of the Sacred Heart, Milan*

Author: **Nicola Del Sarto**, *Scuola Superiore Sant'Anna*

Author: **Andrea Piccaluga**, *Scuola Superiore Sant'Anna*

Author: **Alessandro Baroncelli**, -

Industry 4.0 base technologies allow firms to develop technological innovations that revitalize their innovation processes and reshape their business models. Many studies have been published showing the potential of these technologies in firm's business model and this number has grown exponentially in the last decade. However, extant research on the topic is particularly fragmented and this huge number of studies calls for a systematic approach to analyse the overall trend in this research field. Therefore, this study presents a bibliometric analysis of scientific publications investigating industry 4.0 base technologies and business models in the business and management fields. We collected 368 documents from the Scopus database and conducted a cocitation analysis to provide an overview of the research about the impact of these technologies on business models. The results reveal the existence of five research themes: smart products (cluster 1); business model innovation (cluster 2); technological platforms (cluster 3); value creation and appropriation (cluster 4); and digital business models (cluster 5). Moreover, this analysis is complemented through bibliographic coupling clustering techniques to track trends and trajectories. Drawing on these analyses, we submit a useful baseline for developing industry 4.0 base technologies and considering their implications for business models.

Paper is Available to Meeting Registrants Only.

Author: **Sara Moqaddamerad**, *OBS - Oulu Business School Finland*

Author: **Efstathios Tapinos**, *U. of Strathclyde*

It is well established that technology—and particularly the uncertainty caused by disruptive emerging technologies—has an impact on industrial dynamics, forcing organizations to reimagine their business models. This paper investigates the way in which uncertainties arising from the imminent disruption caused by 5G technology are influencing business model innovation. This in-depth qualitative case study of a Nordic telecom organization shows that the uncertainty created by disruptive technologies initiates a parallel process of sensemaking and business model innovation. The newly developed business model has three dimensions, reflecting value-centric activities, internal changes in the organization and its attempt to capitalize on external opportunities. By investigating the way in which managers deal with uncertainties associated with 5G, this research characterizes business model innovation as a future-oriented sensemaking process, revealing three distinct phases which entail five underlying novel mechanisms explaining this process model. The present study advances our understanding on the impact of future uncertainty on the business model innovation process.

HR: [Internal CSR Under Constraints: When Working from Home Hurts the CSR-Creativity Link](#)  

Author: **Zita Katharina Lucius**, *Hamburg U. of Technology*
Author: **Martin Meinel**, *Friedrich-Alexander U. of Erlangen-Nürnberg*
Author: **Svenja Damberg**, *Hamburg U. of Technology*
Author: **Christian M. Ringle**, *Hamburg U. of Technology*

The COVID-19 pandemic situation hit companies worldwide unexpectedly and created a momentum of tremendous change when governmental restrictions of social distancing caused an increase in employees suddenly working from home. To address this uncertainty and provide companies with measures to face identification crisis, diminishing creativity, and overall reduced well-being among employees, we conducted this study based on current research trends in human resource practices and emphasized the newly established research interest on the impact that internal corporate social responsibility (CSR) actions have on creativity. Further, we theorize that internal CSR actions not only influence creativity but also lead to threatening stress when mal established. We analyze these relationships via an empirical model using partial least squares structural equation modeling (PLS-SEM). Our results show that companies should focus on internal CSR for two main reasons. First, it increases employees' creativity. Second, it reduces one severe aspect of stress namely threat followed by a capacitive liberation for more creativity. Emphasizing internal CSR actions may also prevent employees to distract from the company and lose their identification in times of uncertainty, as working from home as working from home reduces the positive effect of internal CSR on creativity which can be grounded in social identity theory.

HR: [How Leader Creativity May Undermines Follower Creativity: A Dominance Complementarity Approach](#) 

Author: **Yuqing Sun**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*
Author: **Xin-an Zhang**, *Shanghai Jiao Tong U.*

Research on leadership has long hinted that followers benefit when they work under a creative leader. Drawing upon dominance complementarity theory, we developed and tested a model in which leader creativity undermines rather than facilitates follower creativity. Specifically, we propose leader creativity promotes follower dependency on the leader, which in turn reduces the likelihood of followers engaging in creative work. Moreover, this indirect inhibiting effect is particularly stronger for male than for female leaders because creativity of male leaders is more likely to stimulate follower dependency. Paired data from 98 leaders and 549 followers supported our hypotheses and implications were discussed.

Paper is Available to Meeting Registrants Only.

HR: [Why Do They Come Back? Returnees' Presence, Talent Management and Firms' Innovative Capabilities](#)

Author: **Maria Shagalkina**, *Graduate School of Management, St. Petersburg State U.*
Author: **Marina Latukha**, *Graduate School of Management, St. Petersburg State U.*
Author: **Vyacheslav Telov**, *Graduate School of Management, St. Petersburg State U.*

Investigation of returnees from developed countries and their effects for firms from emerging markets receives much attention in international business field. In particular, due to obtained international human and social capital, returnees contribute to economic and non-economic performance, internationalization, corporate social responsibility activities, innovativeness, and competitive advantage of companies in emerging markets where those returnees work. Returnees' effect on innovative capabilities, i.e. antecedents of innovativeness, is dependent on the extent to which these individuals can share their knowledge and experience. As highly-skilled returnees may be considered talents, talent management (TM) system may facilitate knowledge sharing and eliminate possible issues in cross-cultural adaptation and integration. Using a sample of 80 Russian companies with returnee employees at different management levels, we show that TM practices aimed at attraction, development, and retention of returnees are positively associated with innovative capabilities and innovativeness of companies. Moreover, TM for returnees moderate positively the relationship between innovative capabilities and innovativeness in firms with returnee employees.

HR: [Enhancing Innovation Performance. How do IC-enhancing HR Practices Work?](#)

Author: **Hossein Heidarian Ghaleh**, *Phd candidate at allameh tabataba'i U.*
Author: **Azadeh Pazouki**, *teesside U.*
Author: **Mohammad Moradi**, *Graduate Student*
Author: **Gholamhossein Mehralian**, *Nottingham Business School*

Scholars debate over departing away from the standard and human capital-centered HR practices and paying attention in social and organizational side of a HR system, highlighting the concept of intellectual capital (IC)-enhancing HR practices. To improve our understanding of how IC-enhancing HR practices help firms achieve innovation performance, we develop and empirically test a framework investigating the joint effects of IC-enhancing HR practices, innovative work behavior (IWB), and transformational leadership (TL), and innovation performance. We designed rigorous time-lagged research with three waves of data gathering from CEOs, R&D employees, and R&D managers. Analysis of 279 manufacturing companies in the healthcare industry demonstrates that individual-level IWB positively and significantly mediates the relationship between IC-enhancing HR practices and innovation performance. More conspicuously, we found that the effect of IC-enhancing HR practices on IWB is higher when TL exists. We discuss outright novel theoretical and empirical insights that our study offers.

Ethics and Corporate Social Responsibility Issues in the Workplace

Session Moderator: **Bryan W. Husted**, *Tecnologico de Monterrey*

SIM: **How Stakeholders' CSR Attribution is Formed: The Role of Workplace Incivility among Employees**

Author: **NAIDAN ZHANG**, *U. of Nottingham Ningbo China*
Author: **Alim J. Beveridge**, *U. of Nottingham, China*

Although numerous studies have examined that CSR is associated with stakeholders' favorable attitude and behavior to the company, the benefits brought by CSR can be undermined if stakeholders have an unfavorable CSR attribution. Yet, how and why stakeholders form favorable or unfavorable CSR attribution, remain open questions. CSR is becoming an ambiguous signal to stakeholders because of increasing greenwashing and corporate scandals. Hence, stakeholders are would likely search for other information related to a company and form more reliable CSR attribution. Drawing on attribution theory and signaling theory, we develop and test an attributional model and confirm that workplace incivility among employees can be a signal to external stakeholders and affect their CSR attribution via influencing their perception of corporate prosocial identity and perceived company warmth. Moreover, we find that external stakeholders who received proactive CSR signals can compensate for the negative effect of workplace incivility on external stakeholders' CSR attribution. Overall, this study highlights the importance of a company's internal signals in understanding external stakeholders' CSR attribution.

SIM: **Skilled Workforces and Law-abiding Organizational Climates in Emerging Markets**

Author: **Bryan W. Husted**, *Tecnologico de Monterrey*
Author: **Shoeb Mohammad**, *Lakehead U.*

Scarcity of skilled workers in the emerging market context is considered a severe challenge facing organizations since it limits the quality and depth of their labour force. Despite the prevalence of the issue, and the wide-spread illegality that often characterizes emerging markets, the relationship between skilled workers at the organizational-level and law-abiding climate, a measure of an organization's adherence to the rule of law, has not been examined. In this paper, we investigate this relationship, hypothesizing that skilled workforce negatively affects law-abiding organizational climate, by reducing an organization's ability to adapt to its environment. Furthermore, we explain the impact that managerial ties have on this relationship, hypothesizing how ties with industry firms and ties with government influence a firm's adherence to law-abiding norms. Hypotheses were tested with survey data collected from 150 Mexican companies.

SIM: **Shifting to Generation 'We': How Gen Z's Foci of Ethical Concerns Differ from Previous Generations**

Author: **Jennifer Franczak**, *Pepperdine U.*
Author: **Doreen E. Shanahan**, *Pepperdine U.*

As a whole new generation begins to enter the workforce, it is important to understand the ethical concerns of these emerging professionals, who represent the future leadership of organizations. It is particularly crucial because forces such as technology, globalization, and social responsibility are transforming the business environment and impacting the new generations of working professionals. The present study defines ethical concerns as topics of ethics that are important to oneself that are influenced by the social context and affect attitudes and behaviors. This research replicates previous work to examine a four-decade historical perspective of ethical concerns spanning distinct generational cohorts. Our findings indicate that concern for business-related ethical issues remain high among incoming professionals, but the foci of concern have significantly shifted. Consistent with Generation Z cohort shaped ethical ideology, survey participants expressed high ethical concern related to the environment and society. However, reported increased pressure to act unethically to succeed and pressure to overlook ethical concerns related to application of new technologies raise future questions about business ethics, ethical climate, and workplace voice and silence as emerging leaders join company ranks.

Ecosystems and Platforms Track: The Dynamics of Business Ecosystems

Session Moderator: **Dize Dinckol**, *Oxford U., Saïd Business School*

TIM: Control Point Dynamics in Emerging Digital Business Ecosystems: The Case of the Digital Agriculture

Author: **Carolin Block**, *U. of Bonn*
Author: **Rene Bohnsack**, *Catolica Lisbon School of Business and Economics*
Author: **Michael Wustmans**, *U. of Bonn*
Author: **Stefanie Bröring**, *U. of Bonn*

With the emergence of digital technologies, companies move from vertically integrated value chains towards digital business ecosystems. In such ecosystems, companies leave their original bargaining position, where they are aware of who creates how much value and how much control they have in negotiating value capture. In digital business ecosystems, however, the control over value creation is dispersed among multiple actors, across different industries and encompassing different layers (e.g. physical devices, networks, services and content). As a consequence, tension between value creation and value capture increases, as value creation occurs by means of cooperation and value capture is determined by a bargaining relationship. Prevailing theories and concepts such as Porter's five forces or the resource-based view provide an insufficient explanation of how companies manage to achieve a competitive advantage in a digital business ecosystem. This paper sheds light on the less explored concept of control points reflecting the dynamic bargaining situation in emerging digital business ecosystem. Therefore, we conduct a multiple-case study with 15 companies, industry associations and consultancies in the digital agricultural ecosystem. We identify nine different control point categories emerging on the way from the traditional linear value chain towards digital business ecosystems. Subsequently, we derive six exemplary strategies based upon various control point constellations and thus actor's superior power in e.g. having digital or physical customer access or being able to provide the necessary infrastructure to connect various actors in the ecosystem.

TIM: Platform Enablement: How do Platform Firms Enable Users with Governance Mechanisms?

Author: **Xuanqi Ji**, *School of Business, Renmin U. of China*
Author: **Fang Su**, *Management School of Jinan U.*
Author: **Bing Wang**, *Chongqing U.*

Platform enablement is an increasingly important research topic in management domain. Although existing research have identified two kinds of platform enablement, there is still a gap between a platform's value offerings and a user firm's value capture because of insufficient capabilities of user firm. By incorporating perspectives of platform enablement and governance, we focus on understanding how platform firms can effectively enable users. We adopt a single case study of Nxin and find three enablement mechanisms (data enablement, structure enablement and process enablement) that enable users through the process of "Implementing digitalization – Providing linkages – Facilitating reconfiguration". Two governance mechanisms facilitate this process. We make three contributions: 1) we identify a new mechanism called process enablement, which refers to improving users' process management capabilities by integrating resources and business processes. 2) We expand the definition of structure enablement, emphasizing that platform firms could eliminate barriers between competitive resources in addition to that of cooperative resources. 3) We introduce the perspective of platform governance into platform enablement research, providing a new perspective for research on platform enablement.

TIM: Platform Competition: Boundary Conditions of the Winner-Take-All Hypothesis

Author: **YANG LI**, *Nanyang Business School*
Author: **Seung Ho Park**, *Nanyang Technological U.*

This study explores the validity of the Winner-Take-All (WTA) hypothesis and the underlying mechanisms that condition the relationship between the installed base of a platform and the platform's performance in the context of emerging markets. We propose a positive relationship between the existing user base of a platform and the platform's performance and explore the moderating effects of two boundary conditions: existing users' evaluation ambiguity and economic policy uncertainty (EPU). By utilizing a longitudinal sample of 124 Chinese peer-to-peer lending (P2P) platforms from 2017 to 2019, we confirm the positive relationship between the installed base of a platform and the platform's performance, however, the positive relationship will be weakened when the existing users provide ambiguous evaluation information and will be strengthened when the level of EPU is high in the external environment.

TIM: Regulatory Standards and Consequences for Industry Architecture: The Case of UK Open Banking

Author: **Dize Dinckol**, *Oxford U., Saïd Business School*

In this inductive qualitative study, we analyze the standardization efforts in the UK banking sector via Open Banking regulations. We examine the role of regulatory standards and how these standards evolve, highlight key decisions and factors in the process of standardization, and show how the standards implementation can lead to changes in the industry architecture and emergence of new roles within it. We find that standardization is a continuous, multi-stakeholder process where not only formulation decisions, but also the adjustment of industry players to roadblocks in implementation cause recalibration of standards and shifts in industry architecture.

MOC: [Grounded Model of Personal Rivalry and Covert Politics in Field-Identity Formation](#) 

Author: **Ina Toegel**, *International Institute for Management Development*

Author: **Shubha Patvardhan**, *Indian Institute of Management Bangalore*

Existing literatures by and large portray field-identity formation as an organic, distributed, and democratic meaning-making process—with members across the field negotiating to arrive at a consensus on shared meanings that constitute collective identity. Our inductive study of the formative years (1890-1920) of a century-old academic-professional field revealed however an unobserved dimension of field-identity formation—one marked by personal conflict and collusion to manipulate the field's identity. Our emergent grounded model, pivoted around an episode of identity contestation in the emerging field, maps how a soured personal relationship and growing rivalry spurred the nascent field's founder to employ covert politics to mount an overt contestation against his successor in defense of the central feature of the field's founding identity—ultimately, forcing his successor out of the field and manipulating a consensus over the founding identity. Effectively, we theorize field identity construction as potentially Janus-faced in that it involves actions unfolding, in a complementary and recursive manner, across two levels: an overt level marked by open discourse and debates, to create an illusion of emergence of consensus over the field's identity; and a covert level marked by personal rivalry and collusion to secure control over the field's identity. Overall, beyond advancing theory on the hitherto underrecognized psychological and political dimensions of field-identity, our model uncovers the underexplored, dark side of institutional entrepreneurship, and reveals how micro, individual-level interactions inform macro-, field-level processes.

MOC: [Is my Organization is “Good” or “Bad”? An Examination of Ethical Organizational Anthropomorphism](#) 

Author: **Felix Martin**, *Lancaster U.*

Author: **Davide Secchi**, *U. of Southern Denmark*

We elaborate the meaning of organisational anthropomorphism from an ethical perspective. We propose that organisational anthropomorphism is mediated by members' evaluation of the organisational legitimacy. An organisation that has legitimacy from all relevant audiences has a strong organisational identity (through the alignment of personal, relational and social identity levels) and exemplifies “good individualism”, as opposed to “bad individualism”. Members ought to use positive anthropomorphism to describe good individualism and negative anthropomorphism to describe bad individualism. However, in practice, members may be prevented from recognising bad individualism through the effect of organisational identification on their moral's self conceptions. When this happens, they will use positive anthropomorphism to describe bad individualism. We account for this by distinguishing between “organisational” self esteem and self continuity from “moral” self esteem and self continuity, and arguing that the latter will be overlooked in situations of loss aversion

MOC: [“Despite the Lockdown, the University Has a Lot to Offer”: Exploring University Identity During Crisis](#) 

Author: **Toma Pustelnikovaite**, *U. of Abertay Dundee*

Author: **Margarita Nyfoudi**, *U. of Birmingham*

Author: **Hannah Williams**, *Cardiff Business School, Cardiff U.*

Author: **Marcus Vinicius Peinado Gomes**, *Cardiff Business School, Cardiff U.*

Author: **Constantine Manolchev**, *U. of Exeter Business School*

Universities are some of the most stable institutions, surviving over centuries and maintaining a lot of their structure and functions while numerous other organisations ceased to exist. The global Covid-19 pandemic, however, has presented universities with a major crisis, rapidly shifting the mode of operation and serving as a critical juncture to consider not only short-term survival, but also long-term development and societal role. Our paper examines universities' adaptation to crisis through the lens of organisational identity, seeking to understand to what extent and how did universities deviate from, or accentuate, their espoused identity in the early stages of the pandemic. We analysed 130 publicly available communications from 8 Vice-Chancellors of UK's Russell Group universities and from the Russell Group, uncovering the diverging priorities of elite universities in adapting to the crisis. Presented in a typology of identity archetypes, our findings extend the understanding of organisational identity endurance and distinctiveness.

Individual Identity Processes and Meaning-Making

Session Moderator: **Shuwei Hsu**, *Department of Business Administration, National Chengchi U.*

 **MOC: From Under-Institutionalized to Self-Guided Liminality: The Role of Situational Meaning-Making**  

Author: **Shuwei Hsu**, *Department of Business Administration, National Chengchi U.*

Author: **Jennifer Hui-Han Gao**, *U. of Melbourne*

Finalist for MOC Division Best Paper Award

Carolyn Dexter Award Nominee

Liminality, defined as an uncertain and ambiguous state of being betwixt and between, has become more and more prevalent in contemporary career landscapes. So far, scholars have suggested that liminality in the contemporary precarious and fluctuating careers differs from its original highly-institutionalized anthropological focus; liminality could become under-institutionalized and unfold in a self-guided manner. However, the connection between under-institutionalized and self-guided liminality is not self-evident and remains unclear. To examine this theoretical void, we conduct qualitative research to examine the mechanism that bridges under-institutionalized and self-guided liminality. Our findings suggest that self-guidance in under-institutionalized liminality emerges via situational meaning-making. Moreover, we identify two varied forms of situational meaning-making—open-ended and closed-ended justifications—that pave different but equally purposeful meanings for liminal workers to enact, and in turn, feed individuals with different lived experiences to shape their identities.

MOC: The Negative Interpersonal Consequences of Demeaning Extrinsic Motivation

Author: **Liuxin Yan**, *National U. of Singapore*

Author: **Valentino Chai**, *National U. of Singapore*

Author: **Kai Chi Yam**, *National U. of Singapore*

People who are extrinsically motivated are negatively stereotyped and are viewed less positively compared to those who are intrinsically motivated. As a result, individuals can strategically express their intrinsic motivation as an impression management tactic to gain more favorable evaluations from others. Aside from direct expressions, one can also achieve the same goal of signaling his or her intrinsic motivation through demeaning extrinsic motivation (e.g., “being motivated by money is meaningless!”). In the present research, we document this prevalent yet understudied phenomenon and investigate its effectiveness across different contexts. Although being extrinsically motivated is found to be negatively stereotyped, we posit that demeaning extrinsic motivation leads to even worse interpersonal outcomes, which are driven by perceptions of hypocrisy. We further find that these effects are strengthened when the focal actor is higher in socioeconomic status. In sum, although people often demean others’ extrinsic motivation in order to gain social approval, such a strategy often backfires.

MOC: The Prodigy: Mastering Multi-Role Identity Management to Obtain a Behavioral Competitive Advantage  

Author: **Nicole Alexandra Rosenkranz**, *EHL Hospitality Business School, HES-SO*

Author: **Georg Windisch**, *TUM School of Management, Technical U. of Munich*

A prevalent phenomenon in modern organizational contexts is for individuals to operate in multi-role environments that drive them to define themselves through multiple, often simultaneously salient role identities. These role identities function as filters of appropriateness, as to how individuals as well as their social context would expect them to behave in a role. In a context where individuals adopt multiple role identities, they need to evaluate which role identities are most appropriate to enact for that given situation, potentially forcing them to move between different role identities frequently, also referred to as micro role-transitions. Prior research highlights many potential cognitive, emotional, and performance-related effects on the enactment of multiple role identities in the organizational context. Our qualitative case study of CarCorp (Technical Vehicle Testing Company - name changed for reasons of anonymity), one of the four nationwide accredited car inspection organizations in Germany, adds to these insights by pointing to the creation of a ‘behavioral’ competitive advantage that allows CarCorp operating in a highly regulated market to generate above-average performance as a result of successful role identity management. These findings provide insights that complement recent studies that have looked into the micro-foundations of strategy as to how identity may drive individual and ultimately organizational performance. Specifically, we develop a theoretical model of how multi-role identity management may provide flexibility and empowerment to individuals, which ultimately allows them to drive superior organizational performance.

Author: **Jinzhao Qu**, *School of Labor and Human Resources, Renmin U. of China*

Author: **Ying Zhang**, *Renmin U. of China*

Author: **Zhen Wang**, *Renmin U. of China*

Individuals constantly live in contradictory yet competing roles, values, and demands at work. Tensions arise and accompany individuals' everyday work practice, sparking destructive or constructive responses. While previous studies have offered some insights on how individuals experiencing paradoxical tensions perform their job, the empirical evidence is rare and limited to in-role performance and creativity. How individuals take ownership and exert agency to shape, mold, and redefine the paradoxes within their work boundaries remains uncovered and urges exploration. In a three-wave study of 256 employees, we followed the job demands-resources approach of job crafting to examine why and how employees' experience with organizational paradoxes influences their avoidance and approach crafting behavior. Results showed that employees' experiencing tensions has positive effects on both avoidance resource crafting and approach resource crafting, showing a double-edged sword effect. Furthermore, ego depletion and proactive motivation mediated employees' experiencing tensions on avoidance resource crafting and approach resource crafting respectively. We also found that paradox mindset (i.e., individuals' general propensity to be comfortable and embrace the paradoxes) negatively moderated the tensions-ego depletion-avoidance crafting path, so that the mediated relationship is mitigated among employees with a high paradox mindset.

Yoga for Creating a Better World Together from the Inside Out *Yoga*

Participant: **Julia Storberg-Walker**, *George Washington U.*

Host: **Tracy F. Chang**, *Rutgers U.*

Host: **Tulsi Chase**, *SCCP BIDMC Harvard Medical School*

Host: **Sepideh Hariri**, *Sadhguru Center for a Conscious Planet, Beth Israel Deaconess Medical Center, Ha*

Join us for online yoga and meditation sessions in support of creating a better world together from the inside out! Learn a series of simple but powerful practices and experience their potential benefits. Physically, these practices exercise the muscles, lubricate the joints, activate energy, and improve flexibility. At the mental level, these practices improve focus, memory, awareness, and intellectual sharpness. Overall, these practices can enhance your overall wellbeing, productivity, and sense of inclusiveness. After learning these practices, you will be equipped to do them on your own wherever (e.g., travel, office, home) and whenever you need a boost of physical energy and mental clarity. These practices can be done while you travel and while you work in the office or at home. The instructors for the workshops are academics and researchers who are also certified Isha Hatha Yoga Teachers, completing an intensive and rigorous 21-week (1,750 hours) of training in Coimbatore, India.

Innovation and Search: Antecedents and Consequences

Session Moderator: **J.P. Eggers**, *New York U.*

STR: Unpacking The Search Process: The Role of Managerial Experience 

Author: **Petteri Leppänen**, *IE Business School*

Author: **J.P. Eggers**, *New York U.*

Organizational search is central to essential management tasks, including the creation of new strategies, development of new products, and pursuit of promising opportunities. Yet models of the underlying process of search are relatively limited. We respond to this need with a conceptual model identifying search intensity (degree of response to stimulus), search decline (decline of search over time), and search duration (time to reversion to pre-stimulus levels) as defining characteristics of the search process. To study heterogeneous patterns of search, we then take a cognitive perspective on the offline and online search process and use our model to offer theory around the role of managerial experience in organizational search behavior. Our core suggestion is that more experienced managers both have high quality ex ante theories that direct search and are more willing to engage in search when the need arises, leading to specific and measurable search behavior. We demonstrate the overall model of search and validate our theory using data on 376 changes of teams' resource configurations (player trades, injuries, and returns from injury) in the National Basketball Association (NBA). Our study contributes to the burgeoning literature on the process of search and to a theoretical perspective on the role of managerial experience in the search process.

STR: Individual-Level Routinization and Exploration-Exploitation Choice: An Experimental Study 

Author: **Luigi Mittone**, *U. of Trento*

Author: **Azzurra Morreale**, *LUT U., School of Business and Management*

Author: **Paavo Ritala**, *LUT School of Business and Management*

The question of why individuals choose to explore or exploit as their routines accumulate remains largely unexplored in the organizational literature in a strict causal sense. To bridge this gap, we conducted an experimental laboratory study of individual decision-making sequences using a real-effort task and a two-phase procedure involving a training phase and an active phase. The former involved a learning process in which participants used their own skills to solve the same task across eight rounds to simulate the development of individual-level routines. In the active phase, we observed sequential choices to exploit an established routine, explore a new routine, or exploit a new routine. Participants were financially incentivized to abandon an established routine by providing higher performance-related payoffs for exploring unknown task environments. Our findings show that initial conditions related to task environment complexity matter; we found that when individuals are initially exposed to simpler tasks, they were more likely to continue exploiting an established routine. When initially exposed to more complex tasks, they were more likely to explore new and more profitable tasks, and then to continue exploiting the new routines they learned. Interestingly, we find not only that different kinds of performance feedback lead the exploration-exploitation choice, but our results also show how the feedback-choice linkage is contingent upon the task environment, i.e. the context (simple or complex) in which initial routines are formed. These findings contribute to the literature on individual search by demonstrating the important role of routinization and initial conditions in exploration and exploitation behavior.

STR: Resource Complexity and Technology Development Decisions

Author: **Nianchen Han**, *U. of Colorado, Boulder*

Although resource-based theory long counsels that firms constantly update their resource base by developing new knowledge, research rarely examines where such development effort should be directed. We argue that in making knowledge development decisions, firms consider how knowledge complexity, built on the interdependence between new and existing knowledge, may act as an imitative barrier to help sustain their competitive advantage. A firm's decision to enter a new knowledge domain therefore is shaped by the extent to which the entry increases such interdependence, up to a certain level. Further, we theorize how different organizational structures, in the form of hierarchy and divisionalization, may moderate such decisions. We find supporting evidence by building a novel dataset linking firms' patents with their organizational structures in computer devices industries. (125 words)

STR: Power Consumption Efficiency in Multiunit Firms   

Author: **Sergei Musaji**, *U. of New Brunswick*

Strategic management literature suggests that business units/subsidiaries have learning benefits from their intra-organizational knowledge networks. In this paper, we continue exploring those benefits by examining the contingent effect of the network size on the business units' resource consumption efficiency in the context of power consumption. We argue that by facing a wider range of power consumption practices within their structure, multiunit organizations can develop better power consumption practices and then share those with their business units. However, building on the attention-based view, we contend that the internalization of that knowledge would require the units' managerial attention. We suggest that such managerial attention is more likely to be provided when a business unit is facing higher competition, experiences financial problems, and when its management's employment risks are stronger tied to that business unit. Our findings from a multilevel analysis of the power consumption efficiency in 2,347 subsidiaries of Canadian private firms in 2012-2016 support those contentions. The implications for theory and practice are discussed.

Coping Strategies of (Social) Entrepreneurs in Times of Change (CANCELLED)
Coping Strategies of (social) Entrepreneurs

Discussant: **Julia Bahlmann**, *U. St. Gallen*

Discussant: **Caroline Schweizer-Schätzle**, *U. St. Gallen*

This project employs the COVID19-pandemic to examine the differences and implications of coping strategies of (Social) Entrepreneurs in the presence of insecurities. Primary results show that during the pandemic first reliable partnerships and solidarity, second flexibility and fast adaptation were the most important pillars to tackle challenges.

Organizer: **Ghazal Zulfiqar**, *Lahore U. of Management Sciences*

The Critical Management Studies Division Doctoral Student and Early Career Scholar Consortium is aimed at meeting the needs of both doctoral students and early career scholars interested in critical research. The consortium provides a great opportunity for participants to connect with like-minded individuals, from varied nationalities and backgrounds, and explore ideas, share knowledge and contribute to the discussion on a diverse range of topics and issues. Also, the consortium affords participants the opportunity for one-on-one discussion with more experienced critical management scholars.

Presenter: **Zhewei Zhang**, *Temple U.*

Artificial intelligence (AI) is increasingly common and important across multiple domains of work and leisure such as design, medical diagnosis, law, music composition, video games, and farm crop management. AI has begun to informate, automate, augment, and alter many forms of knowledge practices. Due to complex algorithms feeding on vast data stores, AI-based technologies are often opaque and difficult to understand, and therefore require new approaches, whether they concern the development of AI-infused products and services, or the practices required to use such artifacts. Hence, we need to understand how AI is developed and used in the wild. While the expectation that incorporating AI into practice will improve the quality of decisions and eventual outcomes is widespread, it may also fundamentally alter how practitioners engage with tools, technologies, and information systems. Therefore, research is necessary to understand how AI technologies are developed and used practically in various, idiosyncratically structured settings. In this PDW, we seek to examine the development and use of AI in several different industry settings and practice domains to identify commonalities and differences. Through presentations of empirical work, group discussions, and conversations with a panel of senior scholars, this workshop is intended to contribute a nuanced and grounded view of the opportunities and obstacles to using AI in practice.

**Future Literacy Lab for Social Impact of Digital
Entrepreneurship**
FLL for Social Impact of Digital Entrepreneurship

Participant: **Tatiana Iakovleva**, *U. of Stavanger*
Participant: **Jill R. Kickul**, *USC Marshall School of Business*
Participant: **Elin Merethe Oftedal**, -
Participant: **Elisa Thomas**, *U. of Stavanger*

The future is uncertain. Climate change, pandemics, economic crisis, social exclusion, gender issues, inter-generational conflict, and more, shatter the conventional images of the future that humans use to plan, to feel secure, to be confident enough to invest in tomorrow. Digital presence becomes a must for any business that certainly changes their business practices. How will these changes affect the role of entrepreneurs and businesses in society? What future do we create? Futures literacy laboratories (FLLs) are co-creative learning- by- doing processes with the objective to enable participants to reveal, reframe and rethink the assumptions they use to imagine the future. The approach was developed within the UNESCO network on anticipation. Futures Literacy (FL) is a «capability and a skill that allows people to better understand the role that the future plays in what they see and do. According to Riel Miller, «FL is important because imagining the future is what generates hope and fear, sense-making and meaning. The futures we imagine drive our expectations, disappointments and willingness to invest or to change» (Miller, 2018). During a three-hour long workshop, we will together create three future scenarios for development of entrepreneurship field of research with social impact of digital entrepreneurship in mind. This will allow participants to see new research opportunities, practice anticipation and reflexivity. Participants will have a chance to develop “future literacy” skills.

Board Diversity and Firm Performance

Session Moderator: **Felix Hoch**, *U. of Münster*

 **GDO: How Institutions Moderate the Effect of Board Gender Diversity on Firm Performance** 

Author: **Felix Hoch**, *U. of Münster*
Author: **Lilo Seyberth**, *WWU Münster*

Using data on 7,642 firms in 71 countries, we employ a multilevel linear regression with fixed effects to examine the moderating effect of formal as well as informal institutional characteristics on the relationship between board gender diversity and firm performance. Research investigating this relationship has so far reported conflicting evidence: Some studies find firm performance to benefit from gender diversity, others find negative results or no effect at all. Taking this inconclusive evidence as a sign for moderators influencing the effect of gender diversity on firm performance, we investigate the moderating influence of institutions on this relationship. We find that institutions indeed moderate the relationship between gender diversity and firm performance. In particular, informal institutions seem to moderate the effect of diversity on market valuation (Tobin's Q), while formal institutions moderate the effect of gender diversity on firm financial performance (ROA). These results have important theoretical implications for the academic debate on gender diversity and firm performance as well as practical implications for both businesses and lawmakers.

GDO: The Influence of Diverse Board on Cooperative Performance: The Mediating Effect of Conflict

Author: **Hyunju Kang**, *Sungkonghoe U.*
Author: **Sunhee Lee**, *Sungkonghoe U.*
Author: **Sangyoun Lee**, *Sungkonghoe U.*

This study examines the relationship between board diversity and performance through the mediating effects of conflict in consumer cooperatives. Cooperative boards play a dual role, stimulating business activity and helping boards democratically controlled by their members. We argue that decision making, policy, and performance depend on the composition of a board. Analyzing 423 questionnaires submitted by 66 local cooperatives, this study shows that diverse boards can have a negative effect on performance, even though their functional diversity may be positive, while conflicts over performing tasks may mediate background diversity and performance.

Paper is NOT Available. Please contact the author(s).

GDO: Endosymbiosis in the Boardroom and ESG Performance: A Generational Perspective 

Author: **Emmanouil Papavasileiou**, *Hellenic Open U.*
Author: **Panagiotis Tzouvanas**, *U. of Sussex Business School*
Author: **Renatas Kizys**, *Southampton Business School, U. of Southampton*

This paper introduces an endosymbiotic framework for studying the role board's generational composition on firm's ESG performance. The board and the generations comprising the board are conceptualised as two distinct organisms with the firm (the third "parent" organism), all with mutual dependencies. Accordingly, we frame the ESG performance (dependent variable) as the outcome of the symbiotic relationships among the generational diversity of the board (independent variable), the characteristics of the board (control variable; e.g., board size, education level, female representation and cultural diversity) and the characteristics of the firm (control variable; e.g., industry, ROA, sales growth, total assets, intangible assets, and leverage). The framework has been empirically tested with three propositions following the three outcomes of endosymbiosis: \textit{parasitism} (significant negative ESG) \textit{commensalism} (insignificant ESG) and \textit{mutualism} (significant positive ESG). In total we used complete financial, ESG and board data for an unbalanced panel of 24,202 firm-year observations containing 4,364 firms publicly traded in the Anglo Saxon cultural cluster; namely the United States, United Kingdom, New Zealand, Canada, and Australia between the fiscal years 2005 and 2019. Using panel data regressions and various robustness checks, (e.g., sensitivity analysis, placebo tests and endogeneity controlling) we found that generational composition has a parasitic effect on ESG performance composite score, the Environmental (E) performance score, the Social performance score (S) as well as the ESG controversies score. Only the Governance score was insignificant signifying a commensalism effect. Further interaction tests revealed that this parasitic effect stems from the members of Generation X. However, when the generational diversity of the board interacts further with female participation, thus increasing the diversity, the effect shifts to mutualism signifying the need for further inclusion of females in board decision making.

Paper is Available to Meeting Registrants Only.

GDO: The Double-Edged Effects of Institutional Deviance

Author: **Fatemeh Askarzadeh**, *U. of Houston Downtown*
Author: **Alireza Askarzadeh**, *PhD student at Old Dominion U.*

Previous studies acknowledge the importance of isomorphic institutional norms to explain performance implications of the gender profiles of board of directors, leaving the variation within the same national or industry context unexplored. Building on insights from resource dependence theory, we examine whether and how deviating above the industry norms (i.e., over-conformity) for female representation on boardrooms has different performance consequences for firms, depending on the stakeholder group influenced. Specifically, we find that accounting performance is reinforced as perceived by the managers and employees within the firm; market performance is unaffected as perceived by shareholders, and innovation performance is decreased as perceived by innovation resource providers. Hence, the performance effect of over-conformity depends on the stakeholder group considered. Overall, we contribute to resource dependence theory by emphasizing the role of various stakeholders in valuation of women's presence. Moreover, this study extends our understanding of the boundary conditions for value creation by female directors by focusing on corporate governance deviance literature.

Panelist: **Stacey Fitzsimmons**, *U. of Victoria*

As multiculturalism is on the rise, and the number of people resettling abroad continues to increase, researchers and practitioners alike have turned their attention to the inclusion of international economic and humanitarian migrants into local organizations and society. Connectedly, research endeavors have become more complex as scholars face new dilemmas related to conducting and disseminating research with highly mobile and sometimes disadvantaged populations. The aim of this PDW is to draw together scholars of diverse backgrounds and methodological orientations to engage in conversation about the complexities involved in research with international migrants, ranging from issues of access to making an impact. Through interactive panel debates and roundtable activities, this workshop will unpack extremely important yet rarely discussed topics related to the entire process and intricacies of research with globally mobile populations. Topics include traditional research designs (e.g., surveys, interviews, archival data), less common methodologies (e.g., ethnography, art-based methods, action research), as well as considerations of justice and ethics, the role of the researcher, empathetic research techniques, managing the emotional context of the research situation, and triangulation through the integration of qualitative and quantitative research designs. In small groups facilitated by the panelists, attendees will be invited to explore context-suitable practices and tools for conducting inclusive and reflexive research with international migrants and refugees.

Digital HRM

Session Moderator: **Luyuan Jiang**, *Sun Yat-sen Business School, Sun Yat-sen U.*

HR: Effects of Electronic Performance Monitoring on Employee Work Engagement: A Multilevel Investigation

Author: **Shuaib Ahmed**, *Sukkur IBA U.*
Author: **Yasir Mansoor Kundli**, *Institute of Business Administration, Karachi*
Author: **Nasib Dar**, *Sarhad U. of Science and Information Technology Peshawar*

This study investigates the effects of electronic performance monitoring (EPM) on individual work engagement. It draws on a data set consisting of 277 employees from 11 higher education institutions in Pakistan. Multilevel analyses demonstrate that EPM is positively related to employee work engagement, not only directly, but also indirectly through a sequential mediating mechanism of perceived organizational justice and organizational identification. We argue that when employees' performance is monitored electronically, they will be more likely to perceive the performance monitoring process as fair and just. As a result, they will be more likely to identify themselves with their organizations, ultimately enhancing their work engagement. Our study extends the knowledge on EPM, perceived organizational justice, organizational identification, and work engagement.

HR: Twittering on Digital HRM: Social Media Communication as a Form of Institutional Work

Author: **Kalliopi Platanou**, *Aalto U. School of Business*
Author: **Maria Sdraka**, *National Observatory of Athens*
Author: **Hertta Vuoremaa**, *Aalto U. School of Business*

The digital human resource management (HRM) has attracted considerable attention from practitioners and mass media channels alike, but we still lack an understanding of what kind of institution it will become in the end and more specifically, what kind of tactics individual and organizational actors adopt in building the new institution. By identifying a discursive space of 472 actors around digital HRM on a social media platform, Twitter, we find three different types of institutional work in which these actors are involved whilst working to create an institution of digital HRM: advocating, educating, and virtual networking. In addition, we elaborate the specific strategies used by these groups of actors when building the digital HRM institution and illustrate that promoters of digital HRM tap into multiple types of institutional work selectively and pick and mix them thus employing a broader than usual discursive strategy. Overall, our study contributes by illustrating how social media communication expands the traditional institutional work by crossing the physical, local, and geographical boundaries of a discursive space as well as bridging the physical and local boundaries with the virtual ones thereby allowing the actors to reach a wider HR community which, in turn, collectively and in turn shapes the emerging institution of digital HRM. Keywords: digital human resource management; institutional work; social media communication; topic modeling

Paper is Available to Meeting Registrants Only.

HR: Linking Digital HRM Practices with HRM Effectiveness: The Moderate Role of HRM Capability Maturity

Author: **Lijun Wang**, *Renmin U. of China*
Author: **Guoyang Zheng**, *Renmin U. of China*

In recent years, increasing attention has been paid to digital human resource management (HRM) practices. Nonetheless, the impact of digital HRM practices is not yet fully understood by practitioners and researchers. Drawing from adaptive structuration theory (AST), we suggest that HRM capability maturity is a key boundary condition for understanding the effectiveness of digital HRM practices. By employing a path analysis approach on a sample of 1,770 enterprises in China, this study found that the use of digital HRM practices impacts HRM effectiveness through internal consistency of HR practices and external social networking of HR managers with line managers. The positive or negative effects of digital HRM practices depend on the enterprise's HRM capability maturity. While the majority of previous studies have explored the impact of digital HRM on organizations, including the effects on cost reduction and organizational performance, our study expanded the focus on the outcomes of digital HRM to include employees' perceptions of HRM effectiveness, which can further influence employees' attitudes and organizational behaviors. The implications of our findings for research and practice are discussed.

HR: How and When AI-Human Order Influences Procedural Justice in a Multistage Decision-Making Process

Author: **Luyuan Jiang**, *Sun Yat-sen Business School, Sun Yat-sen U.*
Author: **Xin Qin**, *Sun Yat-sen Business School, Sun Yat-sen U.*
Author: **Xiaowei Dong**, *Sun Yat-sen Business School, Sun Yat-sen U.*
Author: **Chen Chen**, *Sun Yat-sen Business School, Sun Yat-sen U.*
Author: **Wanqi Liao**, *Sun Yat-sen Business School, Sun Yat-sen U.*

Artificial intelligence (AI) has fundamentally changed the way people live and has largely reshaped organizational decision-making processes. Particularly, AI decision making has become involved in almost every aspect of human resource management, including recruiting, selecting, motivating, and retaining employees. However, existing research only considers single-stage decision-making processes and overlooks more common multistage decision-making processes. Drawing upon person-environment fit theory and the algorithm reductionism perspective, we explore how and when the order of decision makers (i.e., AI-human order vs. human-AI order) affects procedural justice in a multistage decision-making process involving AI and humans. We propose and found that individuals perceived a decision-making process arranged in human-AI order as having less AI ability-power fit (i.e., the fit between the abilities of AI and the power it is granted) than when the process was arranged in AI-human order, which led to less procedural justice. Furthermore, perceived AI ability buffered the indirect effect of the order of decision makers (i.e., AI-human order vs. human-AI order) on procedural justice via AI ability-power fit. Together, our findings suggest that the position of AI in collaborations with humans has profound impacts on individuals' justice perceptions regarding their decision making.

Session Moderator: **David Kaplan**, *Saint Louis U.*

HR: Perceptiveness and Confidence of Politically Skilled Raters  

Author: **David Kaplan**, *Saint Louis U.*

Author: **Robyn A. Berkley**, *Southern Illinois U., Edwardsville*

This paper takes a novel approach to the study of political skill during the selection process. Specifically, it focuses on the political skill of raters who assess applicants rather than the political skill of applicants trying to influence raters. Participants were presented with, and asked to respond to, a scenario involving the hiring of a prospective hotel manager. Two characteristics of politically skilled individuals form the basis of the study's hypotheses. First, consistent with prior research, the study proposed that individuals high in political skill would be more perceptive than those low in political skill when faced with contextual nuances. In addition to finding support for a direct effect for political skill, political skill also mediated the relationship between sources of knowledge and rater decisions. Second, based on prior research that politically skilled individuals exhibit greater resilience, the study proposed and found support that this relates to their rating of job applicants. Further, political skill mediates rater decisions when asked about placing applicants into positions of power. Implications for practice and directions for future research are provided.

Paper is Available to Meeting Registrants Only.

HR: Improving Assessment Center Criterion Validity for Salesperson Selection: A Socioanalytic Approach (WITHDRAWN) 

Author: **Bastian Paul Kückelhaus**, *U. of Bonn*

Author: **Julia Leonore Titze**, *Rückenwind Health Care & Business Consulting*

Assessment centers (AC) are one of the most common selection and recruitment methods in today's business world, with very high acceptance in practice. The AC research literature, however, has focused on managerial performance and neglected sales performance. Therefore, we assessed the features of ACs for sales positions. The results indicated that AC ratings designed for sales positions exhibited good interrater agreement and were distinct. The criterion-related validity of AC observer ratings was in the normal range of ACs designed for managerial jobs in terms of overall assessment rating scores. Additionally, we tested a new approach to ACs for salesperson selection based on the socioanalytic theory of personality. We hypothesized and found that motivation for sales success combined with social competence predicts field sales performance one year later. This interaction effect explained incremental variance in objective performance above and beyond exercises and overall assessment rating scores. Operational validity compared to the traditional approach increased by 24%. The true score criterion validity of the new approach was .49. We discuss implications and limitations.

Paper is NOT Available. Please contact the author(s).

HR: Validity and Reliability of Virtual Versus Face-to-Face Assessment Center   

Author: **Eynav Avni**, *U. of Haifa, Department of Human Services*

Author: **Gil Luria**, *U. of Haifa*

Technological advances in the last decade have changed personnel selection processes. This study compares virtual assessment centers (VACs) and face-to-face assessment centers (FTF-ACs) in terms of validity, reliability and psychometrics. It reports two closely-related studies. The first is a field study that included 11,157 candidates participating in an FTF-AC or a VAC in a selection process for military positions. The study compared the assessments of the candidates in these two ACs while focusing on the assessment distributions, reliability, and structural validity. Many similarities between these two ACs: their distributions were similar; the average assessments were similar, or slightly higher in some of the VACs' dimensions; reliability between the assessors was high in both ACs, and the validity appeared similar. The second study tests the validity of a VAC by having 85 employees perform a VAC, and checking the correlation between the VAC's assessments and measures of outcomes (leadership emergence and job success indicators). The study shows predictive validity for only some of the VAC's assessed dimensions. These results point to similarities in psychometric aspects between VACs and FTF-ACs. Recommendations for human resource managers and for further research are discussed.

HR: Employer Branding and Talent Recruitment: A Systematic Literature Review

Author: **Xia Chen**, *Organizational behavior and human resource management*

Author: **Michal K. Lemanski**, *Nottingham U. Business School China*

Author: **Cong Cao**, *U. of Nottingham Ningbo China*

In the contemporary highly competitive business environment, employer branding is of greatest importance to talent attraction. However, studies on employer branding and talent recruitment are scattered in diverse disciplines due to the multidisciplinary nature of the problem, and a synthesis is needed to understand what we know, and what we should know about this important problem. This study aims to systematically and comprehensively review extant literature, map out the state of research, and propose avenues for future research on this important subject. Using the method of systematic literature review, we conducted both a descriptive analysis and a thematic analysis of 79 relevant studies. Descriptive analysis was adopted to present research trends in employer branding and recruitment. Thematic analysis was organized in a heuristic model of antecedents, moderators and outcomes of employer branding. Further, dimensionality of employer branding was also examined in this study. We discuss results and implications of our findings, to suggest promising avenues to advance research on employer branding and recruitment. Keywords: employer brand, employer branding, talent, recruitment

Creating Supportive Environments for Consulting and Service Learning
Supporting Consulting and Service Learning

Presenter: **Daphne DePorres**, *United States Air Force Academy*
Presenter: **Claudia J. Ferrante**, *U.S. Air Force Academy*

Capstone courses in higher education curricula are quite common, as is the utilization of service learning as an educational approach for both facilitating learners’ integration of the content of their degree programs and benefitting the organizations they serve through service learning projects. This PDW focuses upstream of the literature that often emphasizes the techniques and processes utilized in service learning and targets the support mechanisms consultants (both students and academics) need to successfully undertake service learning. This aligns with the conference theme, “Creating a Better World Together” as humans’ lived experiences of the current environment demands that those who want to contribute to making the world a better place through their consultative efforts, have the skills and support to do so. In pursuing the development of these skills, it is critical that learning environments enable the rapid development of consulting competence. Keenly aware that there are many approaches to this work, the PDW is structured to welcome diverse perspectives and interests. As such, it will be highly interactive, and emphasize sharing knowledge and conceptualizing ideas, processes, and practices for supporting learners as they undertake service learning projects, especially those that require the learner to embrace a consultative role. Collaterally, this PDW would be of interest to academics who also want to explore the importance of, and structures for, support as they themselves consult to create a better world.

MED Global Forum Best Symposium Award for the symposium that best creates the opportunity to address global issues of significance to management education and/or development.

The pandemic brought many challenges, stress and difficulties and, for many individuals and institutions, an unprecedented uncertainty levels. Many countries are still moving from relaxing to tightening lock-downs. While causing major disruptions, VUCA situations provide important and acute lessons. Our symposium brings together an international group of authors whose four papers (spanning quantitative, qualitative and case study methodologies) that investigated how students, academics and business schools responded to the challenges brought by the pandemic. The four papers discuss complimentary issues: Swiss school faculty emotional reactions and gaining resilience; the challenges that lecturers in Canadian business schools using Experiential Learning faced when attempting to translate those methods to the virtual classroom; how lecturers used a Transformative Learning Pedagogy approach to design a doctoral research methods course delivered online in the US; and an analysis of several ethical dilemmas that faced a leading Indian business school and how they were met. The insights that these scholars bring are relevant not only for the changes in teaching modes brought about by the pandemic but for a host of unexpected situations faced in an increasingly VUCA world.

MED: “Do I Have the Right?” The Process Model of Identity Work in a Leadership Development Program

Author: **Andrey Shapenko**, *Moscow School of Management Skolkovo*

Through a qualitative study of thirty Russian managers and entrepreneurs who graduated from an eighteen-month Master of Business Administration Program (MBA) in Moscow, Russia, the research proposes a process model of leadership identity work and leader efficacy development within a management education program. Key research findings reveal that the leadership identity work in a leadership development program is fuelled by people's efforts to promote their leader efficacy, and the institution helps them in this process as a holding environment. The study proposes that the identity work in a leadership development program unfolds in four phases: preparation, orientation, experimentation and confirmation. In this process, an institution serves as a supporting community, training camp, exploratory journey and a confirmation agent.

MED: Reframing Teaching: Interdependent Reflexivity for Developing Student Self-Awareness and EI Leaders    

Author: **Susan S. Case**, *Case Western Reserve U.*

Author: **Hyacinthe Michael Schwartz**, *Organizational Behavior Case Western Reserve U.*

Author: **Sharon F. Ehasz**, *Organizational Behavior Case Western Reserve U.*

REFRAMING TEACHING: INTERDEPENDENT REFLEXIVITY FOR DEVELOPING STUDENT SELF-AWARENESS AND EMOTIONALLY INTELLIGENT LEADERS Developing self-awareness as a management instructor and modeling this process for students' similar awareness has notable benefits on the overall learning environment in a classroom. In this paper, we reframe faculty and student selves in terms of usual roles and responsibilities, providing an iterative, holistic process of embedded interdependent self-awareness development with a flexible, changeable instructional design where students experience a sense of empowerment and control over their learning, integral to mutual success. Our experiences about teaching and learning draw on aspects of experiential learning, Gestalt psychology, and self-determination theory. We explore reframing teaching including the approach to designing a course, centering the autonomy of students, co-creating cultures of psychological safety, and the instructor's use of self as a tool for creating an intrinsically motivating student-centered learning environment in an undergraduate leadership course. This evidence-based reflective paper uses three team profiles from one class, drawing on student reflection assignments. Each team developed self-awareness through different experiences, facilitated by their choices, which enabled their learning about self, group process skills, and emotional management for future success as emotionally intelligent leaders. The team profiles illustrate methods of modeling, use of self, and the importance of student and faculty reflexivity for self-awareness of patterns of behaviors, feelings, and thinking. Finally, we discuss practical applications, identifying reflexivity, psychological safety, modeling, iterative feedback, and student autonomy as key to the process.

MED: Authentic Leader(ship) Development and Psychological Well-being: An Outcome-Wide Analysis    

Author: **Ayse YEMISCIGIL**, *Harvard Kennedy School*

Author: **Dana H Born**, -

Author: **Scott A Snook**, *Harvard U.*

Author: **Emily Pate**, *MIT Sloan School of Management*

Despite a growing interest in leadership development, there is limited research on the impacts of leadership development and a narrow focus on changes in professional skills and competencies as outcomes. In this research, we propose and test whether identity-based leadership development approaches, such as authentic leadership development (ALD), may improve leaders' psychological functioning and well-being. In a large sample of leaders (N = 532) across five different ALD programs, we conducted a pre-registered outcome-wide analysis of within-person changes in psychological well-being and explored individual differences moderating these changes. Results showed significant increases in self-concept clarity, sense of purpose in life and personal growth, and some decreases in perceived stress. These changes did not differ across socio-demographic status (gender, age), work-related factors (leadership, tenure) and most personality factors (extraversion, agreeableness, and openness to experience). Individuals with higher baseline self-concept clarity (i.e., those with higher income and conscientiousness) experienced less beneficial changes. Those with high emotional variability reported greater reductions in stress. This study demonstrates identity-based leadership development as a potential well-being intervention in support of employees' mental health which is growing in importance during the COVID-19 pandemic and concurrent social-economic challenges.

MED: Lost but Found: Bringing Strategy Practice Back into Strategy Teaching   

Author: **Duncan Angwin**, *U. of Nottingham*

Author: **Robert Demir**, *Lancaster U. Management School*

Author: **Monique Steijger-Storm**, *U. of Nottingham*

In this paper, we contend that what may have been lost in strategy teaching, through over emphasis on theory and plunging-in biases, is an attention to the 'practices' of strategy. Many of the critiques of strategy teaching, and the current demands upon practitioners, can be addressed by more explicit recourse to a practice perspective on strategy teaching. Through identifying five core practice concepts and using an abductive method, we report on a longitudinal comparative video graphic analysis of two outstanding masters level strategy modules, to identify strategy practices in use. Each strategy module teaches very similar strategy content and with similar stated objectives, but comparison reveals that core strategy practice pillars are deployed very differently to very different effects. In addition, additional practices are identified (immersed repetition and professionalization) that extend the pillars of strategy practice. These findings show how a practice perspective can go a long way to advance the theory and practice of strategic management teaching.

Affect and Emotions Research: New Directions

Session Moderator: **Zahra Heydarifard**, *Bryant U.*

MOC: Linking Creative Self-efficacy and Emotional Exhaustion

Author: **Na Yoon Kim**, *Wilkes U.*

This study suggests that creative self-efficacy?belief in one’s own creative ability?protects individuals from emotional exhaustion through the mediating effects of cognitive reappraisal and positive affect. The results of Study 1 demonstrated a causal relationship between creative self-efficacy and cognitive reappraisal. Individuals who have higher creative self-efficacy are more likely than those have lower creative self-efficacy to engage in cognitive reappraisal because they reinterpret potentially emotion-eliciting situations in a way that reduces their emotional impact. Study 2, which was conducted at an organization operating in the Electronics industry, reaffirmed that creative self-efficacy leads to cognitive reappraisal. Further, creative self-efficacy was found to drive the mechanism that reduces emotional exhaustion. Cognitive reappraisal enhanced by creative self-efficacy promotes positive affect which, in turn, reduces emotional exhaustion. Finally, the indirect effect of creative self-efficacy on emotional exhaustion was confirmed.

MOC: Late-night Smartphone Usage and Job Performance: Roles of Work Withdrawal and Emotional Regulation

Author: **Shazia Nauman**, *Riphah International U.*

Author: **Connie Shao-mei Zheng**, *U. of South Australia*

Author: **Ahsan Ali**, *School of Economics and Management, Zhejiang Sci-Tech U.*

Author: **Hina Yaqub**, *Riphah International U.*

Applying the dual theories of stressor-strain-outcome and ego-depletion in the technology-based working environment, this study examines how late-night smartphone usage for work could impact on employee’s job performance. Using two-waves of data collected from 373 valid responses by supervisor-subordinate dyads, we test the mediating effect of work withdrawal and moderating role of self-emotional regulation ability on the relationship between late-night smartphone usage and job performance. Results reveal that more late-night smartphone usages by employees lead to a higher level of withdrawal behavior, which in turn lower their job performance. However, employees’ self-emotion regulation ability help mitigate the negative impact of late-night smartphone usage on their withdrawal intentions. The second stage moderation result shows that people with a higher level of self-emotion regulation ability tend to better manage their late-night smartphone usage with less work withdrawal behavior, which enables them to achieve better job performance. Implications of the findings to research and practice especially under the changing technology and work patterns are discussed.

MOC: Self-Distancing Moderates the Effect of Incidental Fear vs. Anger on Risk Taking and Loss Aversion

Author: **Lewend Mayiwar**, *BI Norwegian Business School*

Author: **Thorvald Haerem**, *BI Norwegian Business School*

Studies have shown that incidental and normatively irrelevant emotions can carry over and bias decisions. However, people respond to and manage their emotions in different ways. Thus, incidental emotional influences might depend on how individuals regulate their emotions. In a preregistered experiment, we examined how the regulation of fear and anger impacts risk-taking and information processing in a task that mimics complexity and uncertainty. Drawing on the appraisal tendency framework, we propose that fear and anger lead to opposite effects on risk-taking and that these effects are moderated by decision makers’ use of a tactic of emotion regulation known as self-distancing. Participants were asked to recall and describe a fear-inducing or anger-inducing event from either an immersed or self-distanced perspective. Next, they completed the Iowa Gambling Task for our measure of risk-taking. A series of linear mixed random-effects models supported our hypotheses. First, incidental fear reduced risk-taking relative to incidental anger, and this effect reversed among participants who engaged in self-distancing. Second, self-distancing reduced reliance on intuitive information processing during the task. Third, analytical (but not intuitive) processing was negatively related to risk-taking. Finally, exploratory analyses revealed that fearful and angry people’s choices were driven more by their sensitivity to losses and gains than their sensitivity to risk. Incidental fear led to an aversion to decks associated with frequent losses.

MOC: Effects of Social Media Feedback on Proactive Behaviors: The Role of Affect and Cognitions

Author: **Zahra Heydarifard**, *Bryant U.*

Author: **Dina Krasikova**, *U. of Texas At San Antonio*

In this study, we examine how feedback received by employees on social media affects their proactive behaviors at work. Drawing from the broaden-and-build theory of positive emotions, we posit that employees who receive favorable feedback on social media posts will experience elevated positive affect, energy, and relational self-efficacy, which will ultimately prompt their engagement in more proactive behaviors at work. To test this model, we surveyed 123 employees twice a week for eight weeks. The results indicated that the receipt of favorable feedback in the form of written comments (but not in the form of likes) on social media posts had an indirect effect on workplace proactive behaviors via increased positive affect, energy and relational self-efficacy.

Leading and Mindfulness: Implications for Managers and Organizations

Session Moderator: **Aldijana Bunjak**, *U. of St. Gallen*

The papers in this session present various perspectives on the connections between mindfulness, engagement, performance, and creating a better world.

MSR: **Better to Be Optimistic, Mindful, or Both? Interaction between Optimism, Mindfulness, & Engagement**

Author: **Aldijana Bunjak**, *U. of St. Gallen*
Author: **Andrew Hafenbrack**, *U. of Washington*
Author: **Matej Cerne**, *U. of Ljubljana*
Author: **Johannes Friedrich Walter Arendt**, *UMIT Tirol*

This paper investigates the relationships between optimism, mindfulness, and task engagement. Specifically, we hypothesized that optimism, mindfulness, and their interaction would facilitate individuals' task engagement. We tested our research model in four studies: two surveys among gig workers and two experiments. The results of the two surveys among gig workers indicated that optimism predicted higher task engagement, but trait mindfulness did not, and that a multiplicative interaction existed between high optimism and high mindfulness in stimulating task engagement. Our two experiments confirmed a significant interaction between optimism and induced state mindfulness and showed that the most engaging situation is being high in both mindfulness and optimism. Although optimism predicted task engagement, the experiments indicated the effect of the state mindfulness manipulation was above and beyond that of optimism. Finally, we discuss the nuances of the interaction between optimism and mindfulness in predicting task engagement.

MSR: **"Mindformance" Putting Mindfulness in Practice in a Performance-Oriented Finance World**

Author: **Kamila Moulai**, *Rotterdam School of Management, Erasmus U.*
Author: **Gazi Islam Islam**, *Grenoble Ecole de Management*
Author: **Marie Holm**, *INSEEC Business School*

The implementation of humanistic movements and approaches in the workplace has drawn critical attention to control and performance management as distortions of the goals of mindfulness. Most work in this area continues to focus on the positive and productivity related features of mindfulness practices. However, attention is increasingly given to the appropriation of spiritual practices in work settings and its relation to capitalistic the objectification of workers. Through an empirical case study of the implementation of a Buddhist-inspired mindfulness program in a bank, we examine negotiations over the meaning of mindfulness, its appropriation by workers, corporate stakeholders, and coaches, and its envisioned promises. Through multi-source collection of data, including ethnographic material, we go beyond assumptions and "a priori" to analyze how finance workers actually internalize and reshape a mindfulness program. Through this study, we theorize a four-component process of meaning-making by the participants, according to a mental, temporal, spatial, and social dimensions. On this basis, we theorize how mindfulness interventions – and by extension, broader humanistic interventions – can lead to complex negotiations over their meanings in practice.

MSR: **Creating a Better World Through Oneness**

Author: **Tom Elwood Culham**, *Beedie School of Business Simon Fraser U.*

Addressing alienation of the individual from their innate universal given Self is necessary to relieve our alienation from others, our communities, and nature. The process of realizing our innate Self results paradoxically in achieving a sense of oneness that is often considered spiritual and is described in Daoist and Buddhist literature. These traditions hold that brief moments of Oneness are a part of everyday human experience and only need to be cultivated. The view, expressed herein, is that the experience of sustained oneness is a human phenomenon often thought of as mystical not because it hasn't occurred in the past to many people but because it doesn't align with current socially accepted rational ways of thinking and being. Oneness is achieved through cultivating equanimity or tranquility in the presence of change. It is particularly important to be tranquil in the presence of positive and negative emotions as they are indicators of who we are at heart. In addition, the process of cultivating tranquility, conceptual thought gradually slips away enabling direct awareness of phenomena. How meditation is applied in a third-year business class for the purpose of developing ethics is discussed. Some students' statements indicated that they experienced phenomena related to Oneness. Therefore, it is proposed that it is possible to design Oneness education under the right conditions. It is argued that the hyper-individualism witnessed in society today can be shifted towards a broader view of the self and hypothesized that this result in a deeper sense of connection to others, and the environment creating a better world.

Author: **Parijat Lanke**, *Indian Institute of Management, Tiruchirappalli*

Author: **Papri Nath**, *Indian Institute of Management, Tiruchirappalli*

Author: **Bal Krishna Upadhyay**, *Indian Institute of Forest Management*

This study has a twofold purpose: to provide an overview of mindfulness research in management literature and trace future research directions. It uses the bibliometric review technique to empirically analyze the data on extant literature of mindfulness specific to management available on the Web of Science database. Three hundred fifty-nine articles and 20010 references are analyzed using citation and co-citation analysis. The study results reveal the intellectual structure of the field of research on mindfulness in the management domain. A total of 10 clusters have been identified that relate to different sub-fields of research, thereby contributing to the overall growth of the field to date. The study also identifies the influential articles and authors, along with publications that gained popularity within the domain via citations in a smaller span of time. The network analysis of the topics also reveals the centrality measures, which aid in understanding the overall research network of mindfulness in management. Mindfulness and ethics research has also been discussed. Apart from tracing the evolution of the research on mindfulness in management, directions for future research are also explored.

The MSR community has an extensive research history that makes a distinction between Religion and Spirituality. In recent years, this research has become critical in explaining societal trends and, more recently, declines in the number of individuals choosing to associate with organized religion. In this PDW, we share both practical (experiential) and theoretical insights to this departure as panelists and members from the MSR community share stories and perspectives that define the true nature of this distinction. To better understand this trend, we propose this PDW series as an ongoing discussion of ways to bring forth the authentic spiritual self to the scholarly research community.

Leadership: Charismatic and Transformational

Session Moderator: **Dustin Maneethai**, *U. of Houston*

OB: A Coin Needs Both Sides: Transformational Leadership, Cognitive Work Engagement and Creativity 

Author: **Yushen Shi**, *Currently a PhD student at Shanghai Jiao Tong U., Shanghai, China*
Author: **Yuqing Sun**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*
Author: **Xin-an Zhang**, *Shanghai Jiao Tong U.*

Although many studies have established that transformational leadership promotes creativity, the variability in the strength of this relationship calls for more clarity in this area, especially when considering the dual-focused nature of transformational leadership (encompassing group-focused and individual-focused TFL). Drawn on motivated information processing theory, we propose that the relationship between group-focused TFL and creativity is promoted by the self-oriented cognitive processes. Cognitive work engagement, as generated by individual-focused TFL, guides employees to produce ideas that are novel as well as useful. In two studies, we found that individual-focused TFL strengthened the association between group-focused TFL and individual creativity. Moreover, cognitive work engagement mediated this moderating effect. Our findings provide a more nuanced perspective on understanding how transformational leaders promote individual creativity.

OB: Is Transformational Leadership Past its Prime or Increasingly Useful? A Temporal Meta-Analysis

Author: **Dustin Maneethai**, *U. of Houston*
Author: **Thomas Rockstuhl**, *Nanyang Technological U.*
Author: **Robert Eisenberger**, *U. of Houston-Main Campus*
Author: **Blaine Austin Lewis**, *U. of Houston*

Transformational leadership (TL) is one of the most studied leadership constructs found in the literature and has been related to positive follower outcomes (i.e., performance, job satisfaction, and organizational commitment). However, as the nature of work and employees continually change in the modern era, scholars have questioned the extent to which the relevance and importance of TL has strengthened or weakened over time. Using a sample of U.S. based studies consisting of 105 studies, 173 effect sizes, and a total sample size of 44,566 between the years of 1987 and 2018, we examined changes in the use of TL and the strength of the relationship between TL and the organizationally relevant outcomes of follower in-role performance, extra-role performance, job satisfaction, organizational commitment, satisfaction with leader, and leader effectiveness. Our results show that over the past thirty years, supervisor usage of TL behaviors, as indicated by mean level changes, has increased over time. Furthermore, the relationships between TL and follower job satisfaction, organizational commitment, satisfaction with leader, and leader effectiveness have remained stable over the past thirty years. In contrast, preliminary evidence suggests that the relationship between TL and supervisor rated follower in-role and extra-role performance has increased over time.

OB: Emotional Development of Transformational Leaders: Emotional Regulation Efficacy and Engagement 

Author: **Yan Qiao**, *Xi'an Jiaotong U.*
Author: **Fuli Li**, *Xi'an Jiaotong U.*
Author: **Jinglin Bai**, *Xi'an Jiaotong U.*
Author: **Tingting Chen**, *Lingnan U.*
Author: **Zhiyuan Yan**, *Yashili International Group Co.,Ltd.*

A leader-centric perspective on transformational leadership suggests that this leadership approach benefits employees, teams, and organizations, but may bring mixed emotional consequences for leaders themselves. Extending the self-regulatory resource depletion perspective, we integrate the learning and adaptation perspective with social cognitive theory to present a model examining how the process that transformational leadership develops their self-efficacy for emotional regulation and work engagement unfold. Using a cross-lagged panel design with four-wave, multisource field data from 243 leaders and 1807 followers, we found that transformational leadership had a positive cross-lagged effect on leader self-efficacy for emotional regulation, which in turn had a positive cross-lagged effect on leader work engagement. The indirect effects with reversed directionality were also significant, suggesting the reciprocal feature of these effects. Theoretical and practical implications are discussed.

Author: **Cemre Çinar**, *Istanbul Bilgi U.*

This study aims to contribute to clarifying a dilemma in the perspective of signaling concerning the paradoxical role of charismatic leadership as an evolutionary tool to enhance chances of group survival. A challenge to the evolutionary perspective involves charismatic leaderships that resulted in their groups' deterioration, rather than their development. We provide a theoretical, three-phase, motivational model of leader-follower relations to outline how an initial charismatic elevation may remain on a constructive track or turn into destructive outcomes. Our model centers on the idea that charismatic elevation is a desirable but provisional experience, which, we argue, triggers collective motives that underly destructive and constructive outcomes. Phase 1, charismatic bliss, refers to an ephemeral, emotionally elevated, euphoric leader-follower relationship including a strong bond, admiration, identification, and trust in the pursuit of achieving a collective aim. Phase 2, trials, following goal attainment, stands for events that signal de-escalation in charismatic elevation, which the group may perceive as a threat or opportunity. Phase 3, juncture, qualifies leader and follower motives in response to closure of charismatic bliss as (a) leaderthink or (b) followerthink. Leaderthink is destructive charismatic leadership, an egoistic, collective threat response, in which the motive to maintain collective elevation overrides critical judgement of the leader. In leaderthink, the group preserves elevation by engaging in destructive behavior, such as expelling a critical minority, initiating its versus the leader's thinking, and participating in excessive self-sacrifice. Or (b), constructive followerthink, a collective, prosocial response, in which the leader and the followers assent closure of charismatic bliss and are motivated to constructively respond to trial events as opportunity to foster individual and collective growth. **Key words:** constructive charismatic leadership; destructive charismatic leadership; charismatic bliss; leaderthink; followerthink

Gossip, Anxiety, and Awe

Session Moderator: **Shanshan Zhang**, *School of Labor and Human Resources, Renmin U. of China*

OB: **Superficial Harmony and Negative Workplace Gossip: Resulting from Social Anxiety in the Workplace**  

Author: **Zhe Shang**, *Department of human resources, School of Government, Beijing Normal U.*
Author: **Ziyan Cui**, *School of Economics and Management Tsinghua U.*
Author: **Shanshan Kong**, *School of Government, Beijing Normal U.*

Individual value on superficial harmony is especially common and prevailing in Chinese culture in which people tend to avoid direct confrontations and pretend to be inclusive and harmonious in a group, which is more socially desirable. However, drawing on uncertainty reduction theory, this research proposed that superficial harmony can lead to undesirable negative gossip. Based on a multi-wave survey data of 481 civil servants in China, we found that employees' value of superficial harmony had an indirect relationship with negative workplace gossip, mediated by social anxiety. Employees' uncertainty avoidance not only moderated the effect of superficial harmony on social anxiety but also the effect of social anxiety on negative workplace gossip. Furthermore, employees' uncertainty avoidance moderated the indirect effect of superficial harmony on negative workplace gossip via social anxiety, such that this indirect positive relationship was stronger when their uncertainty avoidance was high. We also discussed the theoretical and practical implications of this research.

Paper is Available to Meeting Registrants Only.

OB: **How and When Leader Anxiety Expression Elicits Subordinate Emotional and Behavioral Reactions**

Author: **Diwan LI**, *Hong Kong Polytechnic U.*

Extant research has focused on the leader dominant emotion (i.e., anger, pride) and demonstrated their functions. However, little is known about how leader emotions that signal weakness and limitation (i.e., anxiety) impacts subordinates' consequences. Drawing on the emotional as social information (EASI) theory and the framework about interpersonal anxiety, this research builds a theoretical model that depicts both the dark side and bright side of leader anxiety expression from subordinates' perspective. This study proposes that, when the subordinate has the cooperative goal with the supervisor, leader anxiety expression elicits subordinate's empathic concern, which, in turn, increases organizational citizenship behavior towards leader (i.e., comfort-seeking pathway); besides, it arouses subordinate's attentiveness, then leading to improved job performance (i.e., alerting pathway); finally, it triggers subordinate's similar anxiety, resulting in lower job performance (i.e., emotional contagion pathway). Results of the experience sampling study of 2333 responses from 281 subordinate-supervisor dyads provide support largely for hypothesized relationships. Theoretical and practical implications derived from this work are discussed.

Paper is NOT Available. Please contact the author(s).

OB: **A Crisis of Global Scale: How Threat-based Awe Affected Performance During the COVID-19 Pandemic** 

Author: **Leonie Jolanthe Hentrup**, *U. of Zurich*

When in awe, individuals often feel small and insignificant compared to the world around them. Although awe is often studied as a positive emotion, it can also be negative, based on a threat. Yet, little is known about how threat-based awe affects individuals. We study the emotion in the context of the COVID-19 pandemic which awed people given its sheer scale. We propose that threat-based awe impaired self-management during the crisis and, in turn, lowered performance. We further suggest that emotional intelligence acts as a buffer against these aversive consequences of awe. In a study of Swiss business students we show that individuals struggled to meet the increased self-management demands at the beginning of the crisis regardless of the degree to which they were in awe of the pandemic; however, as the crisis progressed, only those for whom the emotion persisted continued to struggle to self-manage. Emotion regulation abilities offset this aversive effect, suggesting that this component of emotional intelligence may be particularly important for coping with threat-based awe during crisis. The findings contribute to the growing literature on awe, self-management, and performance showing how and for whom threat-based awe affects self-management and performance.

Paper is Available to Meeting Registrants Only.

OB: **The Ripple Effect: How Leader Workplace Anxiety Shapes Follower Job Performance** 

Author: **Shanshan Zhang**, *School of Labor and Human Resources, Renmin U. of China*
Author: **Lifan Chen**, *Renmin U. of China*
Author: **Aaron McCune Stein**, *Ipsos*

Although the dominant view in the literature suggests that work-related anxiety experienced by employees affects their behavior and performance, little research has focused on how and when leaders' workplace anxiety affects their followers' job performance. Drawing from Emotions as Social Information (EASI) theory, we propose dual mechanisms of cognitive interference and emotional exhaustion to explain the relationship between leader workplace anxiety and subordinate job performance. Specifically, cognitive interference is the mechanism which best explains the link between leader workplace anxiety and follower task performance, while emotional exhaustion is the mechanism which best explains the link between leader workplace anxiety and follower contextual performance. Additionally, we examine how follower epistemic motivation serves as a boundary condition for the effect of leaders anxiety on follower performance outcomes. Results from a 2-wave study of 228 leader-follower dyads in a high-tech company mostly supported our theoretical model. We conclude the study with a discussion of the theoretical and practical implications of our findings.

Can’t We Just Talk about This? New Insights into Difficult Conversations *New Insights into Difficult Conversations*

Session Chair: **Katherine Qianwen Sun**, *Columbia Business School*

Session Chair: **Olivia Foster-Gimbel**, *New York U.*

Presenter: **Mindy Truong**, *Northwestern Kellogg School of Management*

Presenter: **Kristina Wald**, *U. of Chicago Booth School of business*

Discussant: **Alison Wood Brooks**, *Harvard U.*

The current symposium provides new insights into difficult conversations. We first highlight which conversations people find difficult, looking at whether people want to initiate sensitive conversations or wait to confess something. We then discuss other factors beside the topic of the conversation that can make conversations difficult. Different class backgrounds might create anxiety for the interlocutors and having different mindsets in a conversation might lead to different outcomes. However, with all these difficulties of having a conversation with someone who is different from you, we show that people still try to find opportunities to talk about difficult topics.

Participant: **Xavier Parent-Rochelleau**, *HEC Montreal*

The future of work design is a topic that is receiving increasing attention from management scholars. Parker and Grote (2020) propose that new technologies (e.g., AI, Robots, Algorithms) can have positive or negative impacts on work design, depending on various macro, meso and individual factors. In the current symposium, we unpack these multi-level factors that shape future work design (Parker, Van Den Broeck, & Holman, 2017). Including five empirical studies that explore the macro (institutional and technological influences), meso (leadership and HRM activities) and micro (individual perceptions of and proactive actions towards algorithmic management) antecedents of work design, this symposium provides an integrative discussion of how organizations, leaders and individuals prepare for a changing world of work from a work design perspective.

There are indicators we are entering a new era for MTM research, by moving beyond the structural approach that has characterized MTM research to date, to focus on important and under-researched issues, such as the nature of employees' experiences in an MTM context. Although team research suggests that the experiences of members impact team functioning, these lines of reasoning have not, until recently, made their way to MTM research. To overcome this limitation, this symposium showcases five papers that use a variety of theoretical perspectives, research designs, contexts, methodologies, and analytical methods (i.e., archival, field-based, laboratory) to extend theory and examine critical individual and firm-level outcomes (e.g., firm performance, individual proactivity, individual learning, individual turnover, and individual career-related outcomes) in the experiences of MTM employees across their teams (e.g., identification, learning, etc.). We hope to provide a forum to advance unanswered questions that offer fruitful directions for MTM research.

Sustainable Development and the SDGs (Virtual Live)

Session Moderator: **Gift Garikai Dembetembe**, *PhD Candidate, U. of St. Gallen*

ONE: Testing the Economic Strength of a Sustainable Base of the Pyramid

Author: **Gift Garikai Dembetembe**, *PhD Candidate, U. of St. Gallen*

Author: **Lize Duminy**, *U. of Bern*

The mining industry has abundant leverage points as well as the potential to contribute to all the 17 United Nations Sustainable Development Goals (SDGs). To date, significant efforts have been made to mitigate the negative impacts of mining and enhance its positive contributions, especially by large scale mining (LSM) houses. Nonetheless, a lot remains to be done in mining areas where people at the base of the pyramid operate. These areas are exploited by Artisanal and Small-Scale Mining (ASM) actors who constitute 80% of the global mining workforce. The ASM industry is responsible for widespread negative environmental, social, and economic impacts. A lot of research has been done in ASM, but sustainable development remains far from being realized. In this study, we apply the institutional complexity lens to investigate forces impeding sustainability in this sector. Furthermore, we avoid applying any existing method of analysis and rather try synthesis as a methodological path in search for the missing knowledge. The results include identification of leverage points for sustainable development in fields where no large-scale mining houses exist; development of suitable business models; and a methodological contribution of holism to cases of institutional complexity.

ONE: The Nexus between Cultural Heritage and the Sustainable Development Goals: A Network Perspective

Author: **Yang Gao**, *HEC Montreal*

Author: **Ekaterina Turkina**, *HEC Montreal*

Author: **Ari Van Assche**, *HEC Montreal*

The sustainable development goals (SDGs) were adopted by UN in 2015 as a framework to guide collective efforts towards sustainability globally. More recently, it has been argued that we also need to explore sustainable development from a more localized lens since regions and cities face their own specific challenges. It is also necessary to obtain comprehensive empirical evidence of local business networks collectively contribute to the SDGs since the very last goal of the SDGs is about partnership. We engage these topics by analyzing the nexus between cultural heritage and sustainability through local cultural and creative industries. By analyzing business investment networks around 1355 cultural heritage sites composed of 66473 organizations in 293 cities in China, we found evidence that a city's investment network structure and composition matter for a city's progress in SDGs. Specifically, the network structure of many cohesive communities contributes to progress in local SDGs, and more frequent local knowledge sharing (compared to trans-city knowledge sharing) strengthens this relationship. As one of the first studies exploring the nexus between cultural heritages and the SDGs of cities through network analysis, it provides new insights on importance of integration of local actors in achieving the SDGs.

ONE: A Grounded Theory Study of Sustainable Innovations Created by the UNEP Young Champions of The Earth

Author: **Nakita N. Bruno**, *Maharishi U. of Management*

In recent years there has been increased dialogue on the urgency of grand challenges and the role of sustainable innovation in facilitating sustainable development. Individuals are central to this phenomenon in that they provide the ideas and actions which build innovations for sustainable development. Nonetheless, many scholars agree that the sustainable innovation literature is limited by a restricted epistemology which lacks a multilevel approach to the phenomenon as well as a theoretical understanding of how individuals pioneer sustainable development. A more refined understanding of this phenomenon at the individual and multi-level can offer the insights necessary for mankind to transcend existing grand challenges. Hence, this paper presents a grounded theory study on why and how the United Nations Environmental Program (UNEP) Young Champions of the Earth (YCE) award winners create innovations for a flourishing planet. The UNEP YCE have successfully tackled several of the UN's Sustainable Development Goals (SDGs). The data from this research has culminated into a 4 E Model which explains that sustainable innovations are created through four different stages – Entangling, Enlightening, Enacting and Evolving. These findings illuminate how macro level conditions trigger micro level processes on the intellect and feeling level that then propel individual actors to create synergy at the mesal level and innovate responsibly for social and environmental evolution.

Firm Political Strategy, Environmental Responsibility and Self-Regulation (Virtual Live)

Session Moderator: **Emmanuelle Reuter**, *U. of Neuchatel*

ONE: Firms’ Policy Reference Frames and Political Strategy Choices in Environmental Policy Transitions     

Author: **Emmanuelle Reuter**, *U. of Neuchatel*

Prior research has not yet sufficiently explained why firms with similar organizational characteristics – i.e. comparable incumbents – may still vary in their political strategy choices when faced with (environmental) policy transitions. Based on comparative case studies of the four leading Swiss electricity utilities’ political strategies during Switzerland’s EnergieStrategie 2050 development, we find that firms’ selected policy reference frames critically explain variations in their political strategy choices via the induced loss aversion. When the firm selected a reference frame with a narrow (broad) problem reference and a close (distant) temporal reference, it was more likely to identify certain threats (probable opportunities) and as a result to engage in political influence (compliance) and value maintenance (creation). Further, we find that threat-mitigating policies may reduce certain threats’ salience, without which opportunity-creating policies may fail to succeed. We contribute to the literatures on business-government relationships, managerial cognition, (environmental) policy transitions, and derive policy implications.

ONE: Environmental Self-Regulation and Firm Survival: Evidence from China    

Author: **Yanying Chen**, *Dalian U. of Technology*

Author: **Jingke Liu**, *Dalian U. of Technology, School of Economics and Management*

Author: **Feng Liang**, *Western Kentucky U.*

Environmental self-regulation (ESR) is an increasingly important instrument to solve environmental problems. Although ESR is linked to improved firms’ environmental performance, it is unclear whether ESR benefits firms’ long-term survival. We use environmental certifications, an externally certified form of ESR, and operation data of Chinese manufacturing firms from 1999 to 2013 to examine the impact of ESR on firm survival. We find that ESR participation significantly improves firm survival, and this effect is more evident on heavy-polluting firms and non-state-owned firms and in regions and periods with more stringent environmental regulations. Mediating effect analysis shows that this enhanced survival effect is mainly from favorable governmental treatment including lower regulatory cost and higher subsidies, instead of from market factors including cost reduction, higher demand, and technology improvement. This study contributes to our understanding of the performance consequences of firm environmental conduct and the underlying mechanisms.

ONE: A Practitioner’s Definition of Corporate Environmental Responsibility  

Author: **S.M. Ramya**, *Indian Institute of Technology, Madras*

Organizations are partly responsible for the pollution in the world and are expected to contribute towards curbing climate change. Despite the growing importance of the environmental aspect of CSR, i.e., corporate environmental responsibility (CER), current literature focuses more on its antecedents and outcomes rather than drilling deeper into the essential elements of the concept. This has resulted in conceptual confusion as researchers use different aspects to define, understand and measure CER. Hence, this study aims to identify the key dimensions of CER from a practitioners’ point of view. Twenty-eight interviews with senior sustainability professionals reveal encompassing environmental responsibility mindset, optimized resource consumption, neutral water, energy, and air status, multi-level environmental responsibility approach and targets, compliance, disclosure and reporting and policy formation, and green supply chain as the key dimensions of CER. This study builds on the extensive practical knowledge and foresight of experts in the field to provide conceptual clarity on CER, thereby bridging the gap between research and practice.

**Step ONE: Starting Your Sustainability PhD
Journey with ONE**
Step ONE

Organizer: **Kevin Chuah**, *London Business School*
Organizer: **Ash Ganzoury**, -
Organizer: **Sara Graves**, *Simon Fraser U.*
Organizer: **Anja Grill**, *WU Vienna U. of Economics and Business, Institute for Managing Sustainability*
Organizer: **Lucrezia Nava**, *Cambridge Judge Business School*
Speaker: **Ivan Montiel**, *City U. of New York, Baruch College*
Speaker: **Katrin Heucher**, *U. of Michigan*

Step ONE is a moderated PDW to support early-stage sustainability PhD students to begin and bolster their journey with the Organizations and the Natural Environment (ONE) Division. It complements and is a precursor to the ONE Doctoral Consortium, which is targeted at later-stage students. In times of hybrid meetings, it is especially challenging for these early-stage PhD students to not only get involved with academic communities, but also to stay involved, while sustaining their own resilience and well-being. Thus, as a group of five doctoral researchers and early-career scholars, we wish to create a vibrant and inclusive space to welcome these individuals, as they navigate their first moments with AOM in the ONE Division. Building on the success of its first edition during AOM 2021, we aim to help (1) cultivate a sense of confidence and community, particularly through shared insights and advice; (2) guide early-stage PhD students in navigating, participating in, and thriving at AOM and in the ONE Division; and (3) develop their interests in ONE-related topics, while helping them articulate their interests and impact in sustainability, as well as to identify potential theoretical lenses, collaborators, and pathways that might amplify that purpose. With Ivan Montiel and Katrin Heucher as invited keynote speakers, we offer opportunities for participants to find and build their home, within an inclusive, open-minded, and open-hearted global academic community.

Participation will be based on pre-registration. We will pre-register participants on a first-come, first-served basis. Please register at this link: <https://forms.gle/pRvBwTRAsHqko3af7>. Please contact Kevin if you have any additional questions: kchuah@london.edu.

Sage Publications/RM Division Best Paper Award Nominee

We know very little about the performance measures executives use to make decisions. To fill this void, we investigate the performance variables that executives reference in corporate filings with the SEC. Our analyses suggest that executives refer to monetary variables (i.e., revenue, profit, and cash flow) in over 98 percent of filings. In contrast, executives refer to the unitless performance measures scaled by size (i.e., return on assets, return on equity), which are favored by organizational scholars, in less than 15 percent of filings. We find that this preference for unscaled measures remains across market capitalization and actual firm performance. In other words, even observations with the highest levels of ROA and ROE prefer monetary measures as opposed to ratios. In fact, we find that almost every observation that references ratios also includes monetary measures of firm performance. Stated differently, our findings suggest executives use ratios in addition to—and not instead of—monetary measures. We discuss research opportunities for scholars to further align with the practitioner perspective and to revisit conceptualizations of firm performance.

Problematizing is vaunted in the literature for developing interesting and influential theories but the role of problem-solving in research is much more contentious. Some argue it is merely a form of consulting, others that problem-solving leads to impactful research but at the expense of theoretical contribution, and yet others contend that it develops theories that are interesting, influential and impactful (Strübing, 2007). The canonical method for problem formulation and solution is Van de Ven's grouping of methods under the banner of engaged scholarship. Developed over 15 years ago, Van de Ven outlined a four-step method of problem formulation, theory building, research design and problem solution, but it is more often espoused than it is used. Similarly, action research, a commonly used form of engaged scholarship, often adopts Van de Ven's principles, but not necessarily the processes of engaged scholarship. We represent three generations of scholars (two of whom are project management scholars) who believe in the power of engaged scholarship and action research for researching complex phenomenon and helping solve wicked problems. In particular, we have found these methods suit the research of complex domains such as project management, but have found methodological and epistemological confusion and challenges in doing so. This paper explores the potential and challenges with these methods, and explains the techniques and strategies we have developed to overcome the challenges.

Author: **Anders Ryom Villadsen**, *Aarhus U.*

Innovation is of crucial importance for firms and a vivid area of research. In empirical studies firms' innovation is often measured as the proportion of sales that can attributed to new products or services. In a review of 20 years of research on innovation, we find this variable to be used in 141 studies providing a useful common ground to compare and contrast findings. We argue that two-part models are attractive when modelling innovation as they separate the decision to innovate from the amount sales generated by an innovation. Our review shows that only a minority of studies employ two-part models and most often in sub-optimal ways. We develop a two-part modelling framework suitable for innovation research and provide a worked example of how it can be implemented. The paper contributes with new knowledge about two-part models for innovation research and hope to lay the ground for new theorizing in the future.

Recent decades have seen a rapid increase in migration around the world. How migrant employees influence firm efficiency is an important area of inquiry for organizational scholars. In theory, migrant employees may improve firm efficiency through knowledge transfer. In practice, such transfer involves uncertainty and often requires time. Because deductive approaches may prove inadequate in discovering the true relationship, we use an abductive approach to learn about the effect of migration on firm efficiency. We do so by using a machine learning method to identify the effect of migration on firm efficiency across a wide range of time lags and discovered that migration's effects are strongest at two specific time points: in the initial year and six years later. Firms headquartered in states receiving more international migrants show greater efficiency at both time points; however, the strength of the effect is much stronger after six years. These findings imply that while migration positively affects firm efficiency, its greatest benefits are only realized after a few years. Our paper highlights the importance of considering abductive approaches when evaluating the effect of migration on firm efficiency.

During the past decade, interest in set-analytic methods such as Qualitative Comparative Analysis (QCA) and configurational thinking in management research has grown exponentially. QCA’s more widespread use has been driven by both growing scholarly interest in capturing causal complexity as well as improvements in its methodological application and software. By now, QCA has become a more established approach in management researchers’ toolbox, and we have designed this year’s proposed PDW to serve the needs of three different audiences. Part 1 serves management researchers and practitioners with no or only little knowledge of, and experience with, QCA who want to learn the basic “nuts and bolts” of QCA and configurational logic and understand if this might be the right tool for their research project. Part 2 serves more advanced management researchers and practitioners interested in current methodological issues and advances in QCA. Part 3 serves all participants who seek to discuss their ongoing QCA research with other participants and the experienced PDW organizers. Participation in this PDW is open to all conference attendees and requires no registration except for Part 3, for with researchers should submit an extended abstract. Participants who wish to receive a list of recommended pre-readings and resources may contact Johannes Meuer (johannes.meuer@the-klu.org) before the meeting.

The last two decades have seen increasing calls for commercial enterprises to create value beyond that which can be captured by their shareholders. While effective approaches to generating stakeholder value at the organization level are increasingly well-understood, relatively little empirical research examines the factors that influence how direct social impact can be generated at the individual level, i.e., by private sector founders, managers, and employees acting outside their corporate affiliations. The papers in this symposium address this gap through two lenses. First, they explore how individual-level characteristics, either formed in early life or developed through earlier career experiences, shape entrepreneurs' choices about how to create public and/or private value at a later stage in their careers. Second, they focus on critical events in the entrepreneurial process and examine how they facilitate action-taking by individuals with philanthropic preferences to make social impact. Collectively, the papers in this symposium highlight different pathways on which entrepreneurs might embark at an advanced stage in their careers to create value beyond their current for-profit entrepreneurial endeavors, including engaging in philanthropy, and supporting the larger entrepreneurial ecosystem as experienced founders, joiners, and impact investors.

Research on organizational ecosystems and multi-sided platforms has recently attracted a lot of scholarly interest. The structure of technological interdependencies varies across ecosystems, resulting in different governance and market structures. In this symposium we will not present a dichotomy between “decentralised” ecosystems and “centralised” platforms. Instead, we bring together ecosystems and platforms research by highlighting different types of interdependencies and by examining how organizations gain influence within these different ecosystem structures.

Research in R&D Management: Past Experiences and Future Trends

Research in R&D Management

Organizer: **Giulio Ferrigno**, *Catholic U. of the Sacred Heart, Milan*
Organizer: **Alberto Di Minin**, *UC Berkeley*
Organizer: **Paavo Ritala**, *LUT School of Business and Management*
Facilitator: **Elias George Carayannis**, *George Washington U.*
Organizer: **Emanuel Gomez**, *Nova School of Business and Economics, U. Nova de Lisboa*
Facilitator: **Thomas Clauss**, *U. of Witten/Herdecke*
Facilitator: **Letizia Mortara**, *Institute for Manufacturing, Engineering Department, U. of Cambridge*
Facilitator: **Andrea Urbinati**, *LIUC U. Cattaneo, Castellanza (VA), Italy*

The field of research on R&D management has substantially evolved over the last 50 years, especially in terms of main topics and themes. What started as a focus on corporate research and development labs has evolved to a diverse investigation of innovation activities across different organizational forms, networks, and ecosystems. Currently R&D management research covers a wide range of topics in research, development, design and innovation, and related strategic and human resource issues - from exploratory science to commercial exploitation – with a broad outlook to social, economic and environmental implications. The PDW “Research in R&D Management: Past Experiences and Future Trends” will bring together the most cited scholars and editors that have contributed to the latest evolution of R&D and innovation management, grounding on their experience of the R&D Management (a journal with over a 50-year track record, published by Wiley) and RADMA (the R&D Management Association). The PDW provides a forum through which researchers, together with people who have an active editorial and influencer role in this area, can share reflections, solicit feedback, and develop a better understanding of the directions that this discipline is taking. Participants will join the session with a preliminary draft of their research, including a well-defined set of research questions, as well as an idea about methods and intended contribution. In the end of, the participants will leave the session with insightful feedback to advance their study, as well as potential new co-authorship and publication opportunities and ideas.

The Individual and the Organization in Women’s Leadership

Session Moderator: **Ximing Yin**, *School of Management and Economics, Beijing Institute of Technology*

GDO: Gender-Differences in Affective Motivation to Lead. The Roles of Risk Propensity & Self-Stereotyping

Author: **Marie-Therese Wiese**, *U. of Hamburg, Germany*
Author: **Kira Conen**, *U. of Hamburg*
Author: **Dorothea Alewell**, *U. of Hamburg, Germany*

Compared to men, women are still underrepresented in top leadership positions. With regard to gender differences, empirical research lacks studies examining “want-to-factors”, i.e., motivational factors. This study closes this research gap by investigating affective motivation to lead (AFF-MTL), i.e. an individual’s desire to lead. By examining the influence of the individual characteristics (1) gender stereotypical self-characterization and (2) domain-specific risk propensity (career, financial, health, and social risk propensity), this study contributes to the understanding of gender differences in AFF-MTL. The empirical analysis is based on an online survey of German employees in 2020 (N = 651). The results show, that on average, men have higher AFF-MTL than women. For both men and women higher self-described agency assertiveness is related to higher AFF-MTL. Scoring higher on self-described communion morality is related to lower AFF-MTL only for women. While financial risk propensity does not relate to an individual’s AFF-MTL, for men both higher health and social risk propensity are related to higher AFF-MTL. For women higher career risk propensity relates to higher AFF-MTL. Further, we find that the largest part in women’s and men’s difference in AFF-MTL can be explained by gender differences in agency assertiveness, and the control variables leadership responsibility and leader self-efficacy. Theoretical and practical implications are derived.

Paper is Available to Meeting Registrants Only.

GDO: Are You as Effective a Leader as You Think? The Impact of Gender and Personality Traits

Author: **Wendy Farrell**, *Management Center Innsbruck*
Author: **Hafsa El Kamous**, *Africa Business School, Mohammed VI Polytechnic U., Benguerir, Morocco*
Author: **Lydia Karnadi**, *i3L School of Business*
Author: **Lucia Farriss**, *Saint Leo U.*
Author: **Dhruv Pratap SINGH**, *NEOMA Business School*
Author: **Marc Idelson**, *HEC Paris*

This research proposes differences between how males and females are perceived as displaying leadership characteristics in self-organized global virtual teams (GVTs). This longitudinal study analyzes participant responses to questions of leadership characteristics over a nine-week period during March and April of 2019, incorporating the responses of 2,516 individuals from 90 countries. Perceived leadership was analyzed, both in self and peer evaluations, with each team member rated along a five-point Likert scale. Both parametric and nonparametric tests were conducted, indicating that females are perceived as showing more leadership characteristics than males. Furthermore, a significant difference exists between how individuals rate themselves as leaders and how peers perceive that individual. Females exhibit a smaller gap between self and peer evaluations in their perceptions of leadership. Partial Least Squares (PLS-SEM) equation modeling further revealed that when considering the big five personality traits, conscientiousness and extroversion mediate the relationship between females and self-perception of leadership. Furthermore, conscientiousness and extroversion also mediate the relationship between females and peer-perception of leadership. This research adds to the body of literature by addressing gender differences in perceptions of leadership with an understanding of the importance of certain personality traits.

Paper is Available to Meeting Registrants Only.

GDO: A Review and Future Research Agenda on Female Leadership & Organizational Context Factors

Author: **Lioba Gierke**, *WHU - Otto Beisheim School of Management*
Author: **Sofia Schlamp**, *Vrije U. Amsterdam*
Author: **Fabiola Heike Gerpott**, *WHU - Otto Beisheim School of Management*

Scholars have begun to study different organizational context factors (i.e., organizational variables that could affect behavior occurring in the organization) that may impact whether women obtain and retain leadership positions. So far, scientific insights in this field lack an overarching framework that contextualizes existing research findings and points out overlooked themes as well as promising future research areas. To provide an overview of the current state of research, we conducted a systematic literature research and identified 91 articles studying organizational context factors and female leadership. Using VOSviewer, we extracted three clusters representing underlying areas: (1) structures & workforce composition, (2) career & development, (3) second-generation gender bias. The first cluster includes articles on HRM processes, gender diversity of board members or industry types. The second and smallest cluster consists of articles on leadership development programs. The third and largest cluster contains articles on stereotypes and invisible barriers in organizations that characterize corporate cultures and negatively impact female leaders, as well as initiatives to overcome these obstacles. We suggest future theoretical and methodological research directions such as overlooked contextual factors (e.g., company reputation), introducing an intersectionality perspective, and field (intervention) studies. We end with a systematic overview summarizing practical implications.

Paper is Available to Meeting Registrants Only.

GDO: **Cooperative Organizational Cultures: A Factor Promoting Equal Gender Representation in Leadership**  

Author: **Nora Elena Daher Moreno**, *Faculty of Business Administration, Memorial U., Canada*
Author: **Kara Anne Arnold**, *Memorial U. of Newfoundland*

The present study investigates the relationship between feminine gender identity and leadership intention. Based on the theory of planned behaviour and social role theory, the indirect relationship between feminine gender role identity and leadership intention was analyzed through affective motivation to lead and perceived leadership self-efficacy. Additionally, drawing on person-environment fit theory, feminine gender role identity was examined as a moderator of the relationship between cooperative organizational culture and leadership intention. A cross-sectional survey was administered among a sample of 183 full-time employees and results demonstrated that, controlling for sex, perceived leadership self-efficacy mediated the relationship between feminine gender role identity and leadership intention. In addition, feminine gender role identity acted as a moderator strengthening the relationship between cooperative organizational culture and leadership intention, such that highly feminine individuals in high cooperative organizational cultures showed higher intentions to become leaders than individuals with less feminine identities. Limitations of the study and future research suggestions are discussed.

Paper is Available to Meeting Registrants Only.

GDO: **Friend or Foe? Institutional Investors and Firm R&D: The Moderating Effect of Female Executives**   

Author: **Ximing Yin**, *School of Management and Economics, Beijing Institute of Technology*
Author: **Su Yaxin**, *School of Management and Economics, Beijing Institute of Technology*
Author: **Jin Chen**, *School of Economics and Management Tsinghua U.*
Author: **Victor Cui**, *U. of Waterloo*

Innovation financing is crucial to the firm's technological advancement and sustainable development, yet how does institutional investors affect firm innovation behaviors, and the contingent impact of top management team (TMT) diversity on this relationship, are still on debating. Drawing from literature on institutional investors, firm innovation, and the upper echelons theory, we empirically investigate the impact of institutional shareholding on firm's R&D, and the moderation effect of female executives by employing a multiple panel dataset covering 2,066 China's A-share listed companies from 2011 to 2019. Results show that 1) introducing institutional investors significantly improves firm's R&D, while when the shareholding ratio passes a certain point (17.79%), it turns to inhibit R&D, and 2) the presence of women in the TMT mitigates this relationship. Additional analysis finds that 3) the curvilinear impact of institution ownership is consistent regarding on firm's innovation performance, and furthermore 4) institutions are more effective in stimulating R&D in state-owned enterprises (SOEs) than that of private-owned enterprises (POEs). This study reveals the double-edged sword impact of institutional investors on firm R&D investment, reconciles controversial arguments on their role in corporate management. It also fills the gap between female executives on institutional shareholders and firm's R&D, providing meaningful context-based evidence for the upper echelons theory and gender research. Practically, this paper suggests that government from emerging markets should continue encouraging institutions to participate in the capital market as a powerful tool to promote innovation and the reform of SOEs, while keep watch its dark side; and firms need to further embrace diversity in strategic management, and leverage the important value of female leadership in utilizing multiple sources for technological innovation.

The International Management Doctoral Student Consortium is designed for current PhD students with an interest in international management as either the primary or secondary field of inquiry. We welcome participants from all areas related to international management and all stages of the PhD program to attend. The consortium will offer both structured and informal discussion between participants and faculty panelists on research, job opportunities, and early stage career strategies. A substantial amount of time will also be set aside for dissertation development, featuring feedback from faculty in small groups. This is both an excellent opportunity to get valuable feedback on your work and a chance to network with fellow doctoral students and leading scholars in the International Management field.

The International Management Junior Faculty Consortium is designed for junior colleagues who have defended their dissertation in the last 1-5 years and are building their academic careers in the field of IM. It will provide a unique opportunity for junior faculty to engage in a conversation around the key issues of careers, research, publishing, teaching, and service with leading IM scholars from around the world. The senior faculty panel includes a diverse and international group of scholars in with a variety of academic, leadership and editorial experience. Through a combination of structured panels, round table discussions, and informal interactions, we will tackle the questions of risks and opportunities of choosing a career in IM, getting tenure, building a scholarly reputation, developing a research/publishing strategy for greater impact on the field, and maintaining a healthy balance between research, teaching, and service.

Climate change is a grand challenge affecting every country across the globe, disrupting life on earth and under water, affecting national economies, and resulting in extreme weather events, amidst the pandemic. While all the focus in the past few years has been on green strategies, which has increasingly featured in country-specific government policies and United Nations Sustainability Development Goals (COP26), the covid-19 pandemic has led to the emergence of a complex and challenging environment for business organisations, managers and human resource management practitioners who must find ingenious solutions to sustain their company's business, competitiveness, resilience, green goals and simultaneously help their employees to cope with the challenges resulting from this unprecedented situation. This workshop will present a multidisciplinary research agenda, framework and conceptual model that will facilitate development and co-creation of new knowledge, evidence-based research recommendations, roadmap and digital tools to mutually support low carbon productivity (LCP) and employee wellbeing (EWB), which will catalyse sustainable and employee-centric socio-economic business transformation. This will pave the way forward to develop interdisciplinary, transnational collaborations and cooperation between researchers in developed and developing economies driving the direction of international and national dialogue in the thematic area. Bringing together recent conceptualisations and perspectives we envisage developing research networks that will create impact through empirical studies, joint research publications, research projects, and engagement with businesses and policymakers which will be instrumental in building a more resilient, inclusive, and sustainable society.

Presenter: **Joy Humphries Karkiker**, *East Carolina U.*
Presenter: **Joseph M. Goodman**, *Illinois State U.*

This workshop will explore how educators should prepare themselves to develop students' skills for tech literacy in the face of dramatic changes in how managers go about their work. Management education, like organizations, are experiencing challenges they have never encountered before. While technology has put organizations and educators in a continual state of flux for quite some time, many researchers have concluded that society is now in the fourth industrial revolution where both the business models and the model of management education are dramatically shifting. Using technology to teach is not new. For example, utilizing technology as a mechanism to receive instructional content is familiar to students, but how the latest technology will be applicable in their future managerial work remains unfamiliar to students. Preparing students will inevitably include enhancing our understanding of technological disruptions, our students, and the context of shifting relationships between technology, corporations, and universities. In a round table setting, facilitators will introduce technological influences, and faculty will facilitate conversations intended to address Allen, Edelson, and Stratton's (2020) Journal of Management Education Special Issue Call for Papers "From Taylor to Tableau: Technology as a Tool, Topic, and Differentiator in Management Education." Participants will hear about instructional strategies to address a technology disrupting management education delivery and student preparation. Participants will then discuss the appropriateness of the approach, ideas for further improvements (brainstorm better delivery methods during the workshop), and ways faculty can continually develop strategies for preparing students for the new world of work. In this format, each table facilitator presents a delivery method while discussing ideas with participants who can go back to their courses to improve course outcomes. The workshop facilitators will share materials to easily implement experiential tools when they return to their home institutions.

 **MOC: Access for All? Custodial Authority in Legitimizing Places of Social Inclusion**   

Author: **Stephanie J. Creary**, *The Wharton School, U. of Pennsylvania*
Author: **Boram Do**, *Yonsei U.*

Finalist for MOC Division Best Paper on Diversity and Cognition Award

The current scholarly view of places of social inclusion in management scholarship positions the societal-level tenet of “open accessibility” as taken-for-granted by local actors who are committed to maintaining citizens’ access to these places. Little is known about instances in which custodians differ in supporting the values of places of social inclusion and, consequently, question one another’s rights to uphold these values. In this paper, we conducted an inductive, qualitative, and sequential, comparative case study of two US community hospital emergency departments (EDs) to examine authority dynamics in places of social inclusion. We found that although federal and private health insurance companies in the US were tying patient satisfaction scores to financial reimbursement, the value of open access to ED care was not taken for granted in these places nor was asking patients to make judgments about their access to services. Our findings reveal how these dynamics triggered different authority dynamics and custodial work in the two EDs we studied, which ultimately shaped whether patients’ access to care improved. In doing so, we bring together and elaborate recent research on heterogeneous custodianship, places of social inclusion, and authority in organizations. We also offer practical solutions to health care challenges based on our research.

MOC: How to Promote Effectiveness of Dual Leadership: Perspectives from Power Distribution

Author: **Shengming Liu**, *Fudan U.*
Author: **Wei Hu**, *Renmin U. of China*
Author: **Zhang Yue**, *Fudan U., School of Management*
Author: **Gengzi Peng**, *Fudan School of Management, Fudan U.*
Author: **Jiayi Du**, *Fudan School of Management, Fudan U.*

In a dual leadership condition, two leaders share formal power in team decision-making. How to distribute the power between dual leaders in the decision-making process determines team effectiveness. Our research proposes a new perspective to solve the tension between the unity of command and the shared command in a dual leadership condition. We advance and distinguish between decision-participation power and decision-making power. Furthermore, we posit that the decision-participation power gap has a negative effect on team performance through decision-making comprehensiveness whereas the decision-making power gap has a positive effect on team performance through the decision-making speed. A multi-time and multi-source data of 127 dual leader pairs provide support for our hypotheses. Our research discusses the theoretical and practical implications for dual leadership and power distribution.

MOC: Morality Not Identified: Leader Moral Identity Symbolization and Follower Perceived Moral Hypocrisy 

Author: **Qianyao Huang**, *Peking U.*
Author: **Hui Wang**, *Peking U.*
Author: **Ying Wang**, *U. of International Business and Economics*
Author: **Yuqing Liu**, -

This article utilizes behavioral integrity theory to examine when and why leader moral identity symbolization might fail. Specifically, we propose a model wherein leader moral narcissism influences the relationship between leader moral identity symbolization and follower perceived moral hypocrisy, and the downstream implications for follower helping and deviant behaviors toward leader. We suggest that leader moral identity symbolization is particularly likely to be perceived as moral hypocrisy when leader hold a high level of moral narcissism, and that this perception of leader moral hypocrisy in turn reduces follower helping and increases follower deviant behaviors toward the leader. We test and find support for our hypothesized model using data from a multi-source, multi-wave survey. Implications for theory and practice are also discussed.

Paper is NOT Available. Please contact the author(s).

MOC: CEO Narcissism and Corporate Credit Risk 

Author: **Tsung-Kang Chen**, *National Yang Ming Chiao Tung U.*
Author: **Yijie Tseng**, *Fu Jen Catholic U.*

We investigate whether CEO narcissism affects a firm’s credit risk from bondholders’ perspective. We find that CEO narcissism is significantly and positively related to corporate bond yield spread (namely credit risk), indicating that bondholders care more about the increase on asset value volatility and financial constraint than the increase on asset value due to the risk-taking behaviors conducted by a narcissistic CEO. The implications are empirically supported by the path analyses. In addition, better corporate governance quality (especially internal governance), higher management team background homogeneity, and lower likelihood of future growth weaken the positive effect of CEO narcissism on bond yield spread while higher management team shared working experience, cash conversion cycle, and R&D intensity all enhance the CEO narcissism effect. Moreover, we also find that bondholders have less concern about a narcissistic CEO when the CEO simultaneously has the personality traits of conscientiousness and openness. Finally, our findings are robust when considering endogeneity issues and controlling for several well-known CEO-, firm-, and bond-level characteristics.

The Cross-Level Effect of Individual Status and Reputation

Session Moderator: **Ali Radford**, *Aston Business School*

OMT: Should We Judge a book by its Cover? How TMT Social Status Impacts New Knowledge Generation    

Author: **Ali Radford**, *Aston Business School*
Author: **Luca Pistilli**, *UCD Dublin*

Scholars investigated the effect that Top Management Team (TMT) status has on several organizational dimensions, including strategic decision, risk propensity, and, ultimately, performance. However, the existing literature is relatively silent on the effect of TMT status on knowledge generation. Our scope is to cover that research gap. Grounding our reasoning on two different yet intertwined literature streams – the one on the TMT status and the one on knowledge generation – we predict that TMT status should be positively correlated with new knowledge generation and its market value, but not with its scientific value. Relying on a unique, hand-crafted dataset composed of 833 firm-years observations for the period 2005-2010, we are able to validate our hypotheses. Our study contributes to better understanding the relationship between TMT status and the knowledge generated by the respective firm. Limitations and hints for further research are finally discussed.

Paper is Available to Meeting Registrants Only.

Status research typically assumes that status hierarchy is legitimate and stable, but this assumption may not hold during social revolutions which destabilize political, economic, and social institutions. We predict that, during revolutionary times, businesses whose founders are linked to a declining “power elite” group have higher failure rates than businesses without such a “status birthmark.” Moreover, this status birthmark effect is stronger for larger businesses whose resources and salient identity could become their liability. We tested these hypotheses by examining business survival in late Imperial Russia (1861-1914), one of the major revolutionary times in world history. Results show that firms whose founders were from the declining “power elites” (nobles, government officials, and military officers) were more likely to fail during this period than other status groups (e.g., merchants), and this risk was stronger for larger firms. Our study highlights how a once coveted status symbol may become a liability for businesses during radical institutional changes. Keywords: Status; Founder; Social Revolution; Institutional Change; Organizational History

OMT: Burden of Being Atypical: (A)typicality in Leader Biographical Profile and Organizational Reputation

Author: **Young-Chul Jeong**, *Concordia U.*
Author: **Jaegoo Lim**, *Hong Kong Polytechnic U.*
Author: **Donghoon Shin**, *U. of Wisconsin, Whitewater*
Author: **Saeid Bazmohammadi**, *John Molson School of Business, Concordia U.*

Despite growing interest in the advantages of appointing leaders with diverse profiles, most organizations follow typical expectations of what a leader’s profile should look like and avoid deviations from such expectations in their leader selection. This paper aims to answer why such changes are difficult by examining a major disadvantage of atypical over typical leader profiles—reputational penalties for an organization whose leader’s biographical profile is atypical. Drawing on the institutional theory of organizational reputation and leadership categorization theory, we propose that atypical components in a leader’s biographical profile will create credibility problems in the eyes of external observers, thereby having a negative impact on organizational reputation.

OMT: Status and Consensus: Heterogeneity in Audience Evaluations of Female Lead Films

Author: **Bryan Kaiser Stroube**, *London Business School*
Author: **David Waguespack**, *U. of Maryland*

Research finds that status characteristics such as gender are frequently related to average quality evaluations by various external audiences. Yet little is known about whether such characteristics are also related to the level of consensus in quality evaluations. We examine 380 million film ratings by consumers to assess 1) whether female-led movies elicit more or less consensus in quality evaluations than male-led movies, and 2) the potential performance consequences for producers. We find that female-led movies elicit ratings distributions with higher standard deviations and more positive skew. This effect stems in part from how subsets of men and subsets of women differentially rate female-led movies compared to male-led movies. We also find evidence that producing female-led movies is a profitable and increasingly prevalent strategy for independent studios who target niche audiences.

OMT: [From Coordinating in Space to Coordinating through Space](#) 

Author: **Daniel Geiger**, *U. of Hamburg*

Author: **Tania Ulrike Weinfurter**, *U. of Zurich*

Author: **David Nils Seidl**, *U. of Zurich*

In this study we examine the role of physical space in the coordination of crisis response operations. Drawing on Lefebvre's theory of spatial production, we build on a case study exploring the unfolding spatial coordination practices of relief organizations in a refugee camp in Uganda. Our study yielded three main results. First, we show how coordination happens not only in space but through space. The actors we observed both designed and enacted physical space in their efforts at coordinating the relief operations. Second, we identified three different practices of spatial coordination, which we termed authoritarian spatial coordination, responsive spatial coordination and collaborative spatial coordination. Third, building on a process model of spatial coordination practices we show how the successive combination of different spatial practices allow balancing coordinative complexity.

OMT: [Transcending Mundane Struggles: How Mission-Reality Tension Shapes The Genesis of Founder Imprinting](#)

Author: **Meng Zhao**, *Nanyang Business School*

Author: **Wenpei You**, *Indiana U., Lilly Family School of Philanthropy*

How does the founder's initial impact become entrenched in employees' mindset and behavior when they encounter day-to-day tensions that challenge this impact? Extant research shows that the founder can generate a lasting impact on employees, indicating a founder imprinting effect. But the micro-dynamics underlying the formation of founder imprints have received less attention. This paper unpacks the genesis of founder imprinting through a case study of the seven-year struggle of establishing the founder's mission in Grameen China. We found that employees build faith in the mission through a multi-phase process where they continuously rationalize the tension between the mission and reality and ultimately transcend this tension. Those who fail to rationalize the tension experience mission decay and abandonment. Our analysis also identifies senior colleagues' role in disabling or enabling employees' preservation of the mission at individual and organization levels. Focusing on employees' mundane struggles at work, this paper offers new insights into the time frame, the unintended feature, and the secondhand imprinter's multi-level influence in the process of founder imprint formation. The paper also enriches the conversation about the tension between the value-laden and instrumental aspects of organizational life.

OMT: [Institutional Voids and Entrepreneurial Responses to a Societal Crisis](#) 

Author: **Joakim Hans Netz**, *Jönköping U.*

Author: **Rob Jansen**, *Tilburg U.*

Author: **Patrick Reinmoeller**, *IMD*

Author: **Mattias Axelson**, *Stockholm School of Economics*

This paper assesses how societal disruptions lead to collective action that addresses institutional voids. Examining field data from Sweden's response to the Covid-19 outbreak, we track institutional voids related to four product market categories. We construct a process model and elaborate on what we conceptualize as entrepreneurial constellations, which consist of collaborating business firms, public organizations, and the government. These entrepreneurial constellations facilitate the functioning of markets or forming of new ones to deal with a disruption. Through collective action, constellations coordinate problems and self-interest to overcome regulatory obstacles. Findings point to institutional voids that relate to surges during the need to scale up existing critical product markets, creating and innovating new critical product markets. Recognizing such institutional voids helps constellations coordinate expertise that collectively enacts regulatory changes and innovation in coordinative functions. While emerging, they accomplish ongoing evaluative reflections that permit them to autocorrect. This new conceptual understanding of the surprising presence and consequences of institutional voids in market economies, where they are not expected to develop and cause insufficiencies and suffering, explains how entrepreneurial constellations improvise solutions to societal disruptions.

OMT: [Ambidextrous Meta-Organizing for Tackling Grand Challenges: Insights from Cairo's Housing Crisis](#)

Author: **Nuno Gil**, *U. of Manchester*

Making grand challenges seemingly intractable problems are difficulties to pursue goals that are jointly desirable, but which paradoxically have incompatible requirements. To further our understanding of the intricacies of overcoming this duality, this study examines foreign aid projects set up to tackle the housing crisis in Cairo, one of the world's fastest-growing megacities. To be effective, aid needs to quickly fill pressing gaps in basic infrastructure whilst helping to build robust institutions. But there is a duality in that it is hard to pursue both goals simultaneously because of the time it takes to get the power holders to agree to policy reforms. By deploying an organizational ambidexterity lens, I uncover a process by which three mechanisms are deployed concomitantly to go around the tensions caused by contradictory goals: 'temporal' ambidexterity, where one goal is tackled at a time; 'structural' ambidexterity, where the focus is on one goal at the expense of the other; and 'contextual' ambidexterity, where there is an effort to realize synergies between the tasks of the other two mechanisms to tackle both goals simultaneously. After discussing the boundary conditions for the realisation of meta-organizational ambidexterity, I conclude with a discussion on implications to management scholarship on spurring action after mobilizing broad support for a common goal.

Pivoting and its Challenges: Pushing the Frontiers of an Emerging Domain *Pivoting and its Challenges*

Organizer: **Alicia DeSantola**, *U. of Washington*
Organizer: **Christian E. Hampel**, *Imperial College Business School*
Organizer: **Cheng Gao**, *U. of Michigan, Ross School of Business*
Panelist: **Susan L. Cohen**, *U. of Georgia*
Panelist: **Rebecca Karp**, *Harvard Business School*
Panelist: **Timothy Ott**, *U. of North Carolina, Chapel Hill*
Panelist: **Sandeep Pillai**, *Department of Management and Technology, Bocconi U.*
Panelist: **Yuliya Snihur**, *TBS Education*
Discussant: **Suresh B Kotha**, *U. of Washington, Seattle*

This Symposium examines entrepreneurial pivoting and its challenges through the lenses of key theoretical conversations motivating research on this topic. While pivoting has become increasingly ubiquitous in new venture strategy, particularly with the rise of the Lean Startup approach, pivots can also be challenging to effectively execute. Yet, scholarly research on this topic is still nascent. This Symposium seeks to bridge this gap by providing a deep dive into key theoretical conversations related to pivoting research, with the aim of exploring key commonalities and differences between different “theoretical conversations” that can inform further research. To this end, the Symposium will bring together scholars doing frontier research on pivoting who will reflect on the state of entrepreneurial pivoting research and its implications for stakeholders from the perspective of different theoretical conversations (e.g. cognition and pivoting, learning and pivoting, the “historic turn” in pivoting, firm governance and pivoting, and business model innovation and pivoting). The symposium will start with an introduction of pivoting research, and then will feature insights from each of the panelists, followed by integrative comments from a distinguished scholar discussant, and finally, an Q&A discussion session with the audience. The Symposium intends to provide participants with a cross-cutting, multidisciplinary understanding of the frontier theoretical conversations on entrepreneurial pivoting and its challenges.

Distinguished Speaker: **Sandra Janoff**, *The Future Search Network*
Distinguished Speaker: **Malvina Klag**, *HEC Montreal*
Distinguished Speaker: **Ann Langley**, *HEC Montreal*

While the oftentimes uneasy relationship between academics and practitioners is a persistent theme in management research, it is less and less acceptable for management scholars to have no impact outside scholarly communities. However, despite considerable attention towards attempts to achieve both rigor and relevance in theory-building over the years, management scholars continue to observe little progress concerning the performance of more impactful research. We contribute to this debate by offering a “new way of seeing” academic–practitioner relationships in management research. Specifically, we draw attention to apparent “boundaries” between academic and practitioner communities, as well as the “boundary work” that can be performed in both rigorous and relevant management scholarship. We argue that understanding and embracing boundaries as constructions that seemingly divide academic practitioner communities enables management scholars to find ways to work through these boundaries so as to perform scholarship that is both rigorous and relevant. To do so, the session gathers an esteemed panel of distinguished academics and practitioners who engage in dialogues about (1) what the boundaries are that seem to inhibit impactful management scholarship through a division of academic and practitioner communities, and (2) how management scholars and practitioners can work through these boundaries.

Some of the panelists will participate through ZOOM.

The Asset Durability Premium
The Asset Durability Premium

Presenter: **Chi-Yang Tsou**, *Alliance Manchester Business School, U. of Manchester*

This paper studies how the durability of assets affects the cross-section of stock returns. More durable assets incur lower frictionless user costs but are more "expensive", in the sense that they need more down payments making them hard to finance. In recessions, firms become more financially constrained and prefer "cheaper" less durable assets. As a result, the price of less durable assets is less procyclical and therefore less risky than that of durable assets. We provide strong empirical evidence to support this prediction. Among financially constrained stocks, firms with higher asset durability earn average returns about 5% higher than firms with lower asset durability. We develop a general equilibrium model with heterogeneous firms and collateral constraints to quantitatively account for such a positive asset durability premium.

TIM: The Emerging Role of Research-focused Rare Disease Foundations in Therapeutic Development

Author: **Caroline Marra**, *Harvard Business School*

TIM Division Best Student Paper Award Finalist

Several innovation incentives for rare disease product development exist, yet more than 90% of the 7,000 conditions have no treatment options. Over the last two decades, a novel type of nonprofit – the patient-led, research-focused rare disease foundation (RDF) – has emerged in many of these underserved markets with a singular goal to accelerate progress toward a cure. However, the collective role of RDFs in shaping product development for otherwise unattractive markets has been largely overlooked by the literature. In this paper, I assemble a new dataset to provide clarity around the role of RDFs and propose a conceptual framework to explain how RDFs lower the risk of therapeutic development for firms by proactively engaging in activities that build a research infrastructure within the disease. Empirically, I show that when an RDF adopts an active strategy characterized by generation of data, creation of research tools, and establishment of collaborations across stakeholders, new clinical trial activity in the disease increases at a faster rate than when an RDF takes a passive, grant-funding approach. I supplement this finding with a quantitative case study describing one RDF’s success engaging biopharmaceutical firms. These findings have implications for managers of foundations as they urgently pursue cure-seeking missions and biopharmaceutical firms as they decide which diseases merit investment.

TIM: Circular Economy Actions on a Firm’s Performance: A Self-Determination Perspective

Author: **Viviana D’Angelo**, *U. Cattolica del Sacro Cuore*

The circular economy (CE) activities have positive effects on the production processes, on the environment and on society. However, the manner in which it affects a firm’s economic performance. has been overlooked by previous researches. To this end, using data from European SMEs, we empirically investigate, under the self-determination theory, to what extent the number of CE activities affects a firm’s economic performance. Our results show that the number of CE activities affect a firm’s economic performance in a dual manner, both positive and negative, showing an inverted U-shaped relationship. In particular, while increasing the number of CE activities positively affect a firm’s economic performance, a broader implementation may negatively impact operations and consequently the economic performance. This research advances the scientific understanding of the CE and provides managers with suggestions on how to maximize the benefits brought by the CE in terms of economic performance by implementing the right amount of CE activities.

TIM: Two Tales of Science Technology Linkage: Patent In-text versus Front-page References

Author: **Jian Wang**, *Leiden U., The Netherlands*

Author: **Suzan Verberne**, *Leiden U., The Netherlands*

There is recurrent debate about how useful science is for technological development, but we know little about what kinds of science are more useful for technology. This paper fills this gap in the literature by exploring how the value of a patent (as measured by patent forward citations and the stock market response to the issuing of the patent) depends on the characteristics of the scientific papers that it builds on, specifically, basicness, interdisciplinarity, novelty, and scientific citations. Using a dataset of 33,337 USPTO biotech utility patents and their 860,879 in-text references to Web of Science journal articles, we find (1) a positive effect of the number of referenced scientific papers, (2) an inverted U-shaped effect of basicness, (3) an insignificant effect of interdisciplinarity, (4) a discontinuous and nonlinear effect of novelty, and (5) a positive effect of scientific citations for patent market value but an insignificant effect on patent citations. In addition, in-text referenced papers have a higher chance of being listed on the front-page of the same patent when they are moderately basic, less interdisciplinary, less novel, and more highly cited. Accordingly, using front-page reference yields substantially different results than using in-text references.

Paper is Available to Meeting Registrants Only.

TIM: Specialization in Different Innovation Tasks and the Generation of High-value Innovations

Author: **Lipeng Ge**, *U. of Groningen*

Author: **Jieyu Zhou**, *School of Management, Xiamen U.*

Building on the learning theory and technology landscape literature, this study examines how a firm’s specialization in different innovation tasks affects its ability to generate high-value technological innovations. Specifically, we argue that the specialization in invention patent projects contributes to generate high-value innovations through helping firms develop a holistic view about the technology landscape, while specialization in utility model patent projects generates valuable innovations by engaging firms in quick experimentation and adaptation. We further propose that specialization in invention patent projects and in utility model patent projects can complement each other to generate high-value innovations. Finally, we suggest that institutional contexts such as government intervention and technology market development serve as boundary conditions for these two specialization activities’ effects. Our hypotheses are supported by the empirical analysis of Chinese publicly listed firms’ patenting activity during the period of 1999-2011.

Organizational Learning and Search Track: Delving Into the Sources of Innovation

Session Moderator: **Herica Righi**, *Alma Mater Studiorum U. di Bologna*

TIM: Valuation of Early-stage Technology via Machine Learning: An Application to UK Pharmaceutical Firms 

Author: **Xiaolan Fu**, *U. of Oxford*

Author: **Du Liu**, *U. of Oxford*

We present a conceptual and analytical framework for valuing early-stage technology using machine learning and deep learning techniques, with a focus on UK pharmaceutical startups. We demonstrate that the value of technology can be quantified using technological novelty, market potential, risks, incentive regulation, and product lifecycle. Non-linear machine learning algorithms, such as tree and boosting methods, outperform traditional linear regression and can achieve over 90% predictive power. We also extend our framework to integrate hand-collected company descriptions in order to capture more details in technical content using deep learning. This paper gives implications for technology financing, transfer and decision making.

TIM: Innovation after Failure (WITHDRAWN)

Author: **A-Sung Hong**, *Aarhus BSS, Aarhus U.*

Although innovation failures are inevitable, common, and even praiseworthy, it remains unclear how an innovation failure affects a firm's innovation search. In this paper, we theorize when shareholders' monitoring is low and thus they are more likely to attribute bad luck to poor managerial skills, managers are driven to increase innovation intensity upon failure to compensate for the observed low performance. By exploiting late simultaneous patent applications as exogenous failures in the difference-in-differences framework, we find evidence consistent with our theory. We additionally document the direction, outcomes, and financial consequences of innovation search upon failure. In sum, we show that Thomas Edison's famous remark, "I have not failed 1,000 times—I've successfully found 1,000 ways that will not work," should mostly be applied to well-governed firms.

Paper is NOT Available. Please contact the author(s).

TIM: Multi-organisational Collaboration: Practices and Processes of Knowledge Work 

Author: **Ermal Hetemi**, *KTH Royal Institute of Technology, Dept of Industrial Economics and Management*

Author: **Anna Jerbrant**, *KTH Royal Institute of Technology, Dept of Industrial Economics and Management*

Over the last two decades, new forms of collaboration involving a network of a larger variety of actors across institutional settings have become more prevalent. These more fluid forms of collaboration as ecosystems and platforms allow organisations to collaborate at arm's length with organisations and individuals searching for knowledge, developing complementary products, and services in project patterns. In this paper, we provide an exploratory understanding of the process of knowledge-work in such a new multi-actor organising platform (CLOSER) in Sweden. Taking a process perspective, we explore how the actors in the transport sector and forest industry, find difficulties to search for and transform the program network-related knowledge in a cooperative context. Building on an in-depth longitudinal case study, we do that by shedding light on the High-Capacity Transport (HCT) program organizing and its (dis-) embeddedness in the platform. Based on the longitudinal analysis, the paper sets forth context features linking the search for and knowledge transformation activities within the multi-organisational network and among the participant organisation based on the interplay between industrial settings and the underlying conditions suggesting implications for practice in such new forms of collaboration and beyond.

TIM: Across Disciplines, to make an Impact. The Technological Impact of Boundary-spanning Research Projects 

Author: **Herica Righi**, *Alma Mater Studiorum U. di Bologna*

Author: **Federico Munari**, *U. of Bologna*

Boundary-spanning research is increasing recognition among scholars and policymakers due to its potential in generating novel and breakthrough scientific contributions. However, while previous studies investigated its effect on the scientific audience, less is known about how boundary-spanning approaches are related to technology transfer activities. To investigate this issue, we examine the relationship between boundary-spanning research projects, that integrate knowledge from diverse disciplinary fields, and their ability to generate technological impact. We analyze the set of scientific publications generated by 3,697 research projects funded by the European Research Council - the most important funding agency for frontier research in Europe - and identify the subsequent patents citing them in order to trace the linkages between science and technology. Our results show that boundary-spanning research projects and technological impact are linked through an inverted U-shape relation, thus recognizing both benefits and costs of this approach. Moreover, we hypothesize that this relationship changes according to the characteristics of the organizational context in which the scientific activity unfolds, by analyzing the moderating effect of the applied nature of the host institution of the project.

Active Digital Design In Practice   
Active Digital Design In Practice

Facilitator: **Anna Holland**, *U. of Surrey*
Facilitator: **Christine Rivers**, *U. of Surrey*

The necessity of moving to online and hybrid learning and teaching due to Covid-19 has created opportunities for a new approach that enhances learning and teaching at scale. Based on robust research in the area of blended learning, we developed such a unique approach called Active Digital Design. ADD is a philosophy and a practical methodology underpinned by the three “gogies”: pedagogy, andragogy and heutagogy. It utilises social and inclusive learning theory as well as web design practices. At the heart of ADD are the balance of consistency and individuality. This session will give attendees an insight into how to balance consistency and individuality through the creation of a distinct module personality and academic voice by means of narratives. Each module or learning unit space created in a virtual learning environment can be viewed as a supermarket with a particular structure. If each module follows a consistent structure, students feel safe and can orient themselves easier, enabling learning. However, it is important that modules are not rigid so to stifle learning and teaching. The creation of a distinct module personality and retention of academic voice are key in this process of balance but also to motivate student learning and engagement.

Assessing Climate Solutions to Create a Better World Together

Assessing Climate Solutions for a Better World

Coordinator: **Jennifer Leigh**, *Nazareth College*
Facilitator: **Petra Molthan-Hill**, *Nottingham Business School, Nottingham Trent U.*
Facilitator: **Lia Blaj-Ward**, *Nottingham Business School*
Facilitator: **Florian Kapmeier**, *ESB Business School, Reutlingen U.*

Using the lens of assessment this interactive session will provide attendees with resources on how to integrate climate solutions and climate change mitigation tools into any business school discipline and on every level including curriculum, program, or course. We illustrate how academic discipline areas without an explicit environmental or climate science focus can and have to play a fundamental part in transforming our societies to low carbon societies. We will also demonstrate how this transition will in turn benefit many other societal and economic challenges we care about such as reduced poverty, job security and/or inequality. The session will begin with a brief literature review of climate assessment resources. Next, we will offer several case study examples--: an established, award-winning undergraduate capstone module, in existence for over ten years, combining the assessment of climate solutions with a holistic understanding of how all disciplines in business such as accounting, marketing, etc. contribute to climate solutions; principles and tools for feedback and feedforward that help students derive the highest learning value from experiential learning activities; tried and tested guidance on meeting AACBS' Assurance of Learning (AoL) accreditation requirements and create lasting impact through the integration of climate leadership. We will share assessment tools, approaches, strategies, and good practices that gauge the level of learning at the individual and whole cohort levels. This session is designed for educators from any business school discipline and at any career stage.

Creating Your Own Mini-Ethics Cases for the Classroom

Creating Your Own Mini-Ethics Cases

Participant: **Kelly A. Mollica**, *U. of Memphis*
Participant: **Nicole M. Coomber**, *U. of Maryland*
Session Chair: **Melissa L. Intindola**, *Bucknell U.*

Using cases when teaching ethics can be an effective approach to raise students’ awareness of ethical issues and expose them to situations and contexts they may not have previously experienced. In this session we focus on cases based on real-world situations, which allows students to apply ethical concepts and frameworks to actual situations. The purpose of this session is to provide guidance for participants who wish to create their own ethics mini-cases based on recent news events or highly newsworthy situations that will be interesting and engaging to students. Participants will work in small groups, guided by the facilitators, to outline learning objectives and ideas for an ethics mini-case based on recent news events. Takeaways include a complete example of an ethics mini-case authored by the facilitators along with discussion questions and teaching notes, and a framework for creating an ethics mini-case for use in classroom or online discussion or written assignments.

Socrative: A Student Engagement Tool

Socrative

Participant: **Ankur P. Nandedkar**, *Millersville U. of Pennsylvania*
Session Chair: **Ian Norris**, *Berea College*

The primary purpose of this presentation is to demonstrate the use of a web-based platform called Socrative. It is an application designed to aid instructors in formative assessment and student engagement. The presenter of this session will demonstrate the application of Socrative by involving the audience in the application. At the end of the session, the presenter will discuss various ways to integrate Socrative in the course, and Q&A will follow.

Finding and Creating Experiential Learning Activities for Your Classroom

Finding/Creating Experiential Learning Activities

Presenter: **Vicki L. Taylor**, *Shippensburg U.*

Presenter: **Karen MacMillan**, *Wilfrid Laurier U.*

Although many educators are convinced of the benefits of experiential learning and are interested in incorporating more such activities in the classroom, it can be a struggle to find exercises that adequately meet learning objectives. This can be a significant obstacle to instructors motivated to bring active learning to their students. This session is designed to help instructors either (1) find existing experiential material that meets their needs or (2) build customized experiential activities that promote precision learning. Presenters will offer information on where participants can source academically rigorous activities. In addition, the session itself will incorporate active learning by challenging participants to create (in real time) an experiential activity that fulfills a particular learning objective. Experienced experiential educators will guide participants working in groups through the process of creating, aligning, debriefing, and assessing experiential exercises. This session will be of interest to members from every division and interest group in the Academy – anyone motivated to create improved teaching outcomes through experiential learning.

**The COVID-19 Creative Pedagogy: Doing It
Compassionately with First Time Cartoonists!**
Surviving in COVID-19 With One's Own Comic Books

Facilitator: **Saloni Sinha**, *Birla Institute of Management Technology, Greater Noida, Uttar Pradesh India*
Presenter: **Surbhi Cheema**, *Birla Institute of Management Technology, Greater Noida, Uttar Pradesh India*
Session Chair: **Madeleine Stevens**, 39122

The presenters aim to share the journey of a Comic Book Project, a virtual pedagogical experiment during COVID-19, 2020, on Gen –C business students at a leading Indian business school. In the scope of the session, they aim to showcase the global impact of a highly rigorous, beyond the classroom collaborative group project offered in Cross Culture Module in the core subject 'Business Communication'. This innovation was motivated by recommendations of future skills reports of OECD (2018, 2019) and McKinsey (2018, 2019, 2020). Intentionality, Learnability, Lifelong learning, Resilience, Compassion, Creativity, Storytelling, Spatial and Visual Thinking, Growth Mind-set, Curiosity Mind-set, Cultural Intelligence, Virtual Team Dynamics, Digital agility, adaptability etc. were cited as some of the fundamental skills for career advantage in the Post-COVID Era. The presenter was inspired to instil these employability skills in her students through a Comic book project on the theme "Coping with COVID-19 Across Cultures". It was designed to encourage the students to embrace adversities by making them research on various social problems faced by the globe (like suicide, job loss, domestic violence, fake news, fear, isolation, hunger, humour, death and inter-generational crisis etc.) and present their findings through a visual story (handmade or digitally created). The students had to present their findings in creative stories by developing comic book/graphic novel (either handmade or digitally created using new tools). The group also successfully achieved action research papers on future skills and a business case in comic format for a global publication as an outcome of this.

Dear attendees, Here are some prerequisites to the symposium- 1. You will need an active Canva Log in / in case you are an artist then your required stationery like drawing paper, color pens, sketching pencils etc. 2. It will be good if you carry a 1000 word case-let (not mandatory) in case you want to build the compact case with us 3. Please identify a course in which you wish to integrate this activity (Target students group should be clear) 4. Get familiar with 5DCR Curiosity Scale of Todd Kashdan (<https://toddkashdan.com/wp-content/uploads/2020/01/Curiosity-5DCR-measure-Kashdan-Disabato-Goodman-McKnight.docx>) 5. Explore the Comic book project sample here <https://www.flipbookpdf.net/web/site/6cf7ecd3e89866826745f20882d8e7b9dd887aaf202204.pdf-29d0adb991d0b26f55e7b7eb738d6d8baef4deb7.html#page/1> 6. Negotiating Better Worlds in the ‘Anthropocene’: Critical Histories and Future Livelihoods

The Anthropocene: Histories & Future Livelihoods

Organizer: **Damian O'Doherty**, *Critical Management Studies*
Organizer: **Marta Gasparin**, *Copenhagen Business School*
Distinguished Speaker: **Bobby Banerjee**, *Bayes Business School (formerly Cass)*
Distinguished Speaker: **Richard Marens**, *California State U. Sacramento*
Distinguished Speaker: **Bill Cooke**, *U. of York*
Discussant: **Rafael Alcadipani Da Silveira**, *FGV-EAESP*
Discussant: **Sheena Vachhani**, *Department of Management, U. of Bristol, UK*
Participant: **Seray Ergene**, *U. of Rhode Island*
Participant: **Shelley Price**, *Gustavson School of Business, U. of Victoria*

This symposium provides an opportunity to discuss, with a distinguished panel of scholars, some of the challenges for business and management arising from the epoch of the Anthropocene, developing things we have learned about organization from the experience of COVID-19. Presentations will address three principal challenges: (a) how to 'open up' negotiations with materials and practices (meat, plastics, animals, guns, food, clothing) that have been typically neglected in the standard histories of modern business and management in an effort to explain: how did we get here? (b) how management and organization studies can develop sustainable and cooperative models of working and living together in the Anthropocene based on these negotiations; and (c) assess what the future of work and management will look like in the Anthropocene by drawing on recent studies of contemporary but non-standard and non-modern business practices. The panel presentations are followed by interactive discussions and dialogues across the panel and with audience members. Each round-table is led by a chair and supported by a discussant. The round table sessions will allow participants to share ideas and critical reflections on living together in the Anthropocene.

Crafting Predictive Organizations: Learning From the Challenges of Differently-abled Entrepreneurs *Venture Creation by Disabled Entrepreneurs*

Organizer: **Wilson Ng**, *IDRAC Business School*
Organizer: **Dianne HB Welsh**, *U. of North Carolina, Greensboro*
Organizer: **Norris F. Krueger**, *Entrepreneurship Northwest*
Organizer: **Felix Arndt**, *U. of Guelph*

Differently-abled entrepreneurship fits naturally with AOM 2022’s focus on “Creating a Better World Together” by addressing communal challenges in and beyond the pandemic, chiefly, sustainability, well-being, economic opportunity. These and other challenges are faced routinely by people with severe physical and/or mental impairments who create ventures despite or because of their impairments. In the pandemic, communities globally have been confronted with similar challenges that threaten their survival. Reactive strategies have failed to ease multiple pressures, for example, from an increasing number of unhealthy workers. As people with impairments- or “disabilities” in a few languages- commonly create ventures, the PDW seeks to build knowledge of predictive organizations by focusing attention on those entrepreneurs who build ventures by drawing on different abilities from those of abled entrepreneurs. To do so, the PDW will explore persistent questions on (dis)ability among researchers, entrepreneurs, and organizations. What may be learned from ventures created by differently-abled entrepreneurs? How will organizations benefit from their activities? Answers to these questions are expected to feed into organizations that can envision and prepare for business and society post-pandemic. This promise of differently-abled entrepreneurship is based on research of venture creation among entrepreneurs with physically-visible (Ng & Arndt, 2019) and mentally-invisible (Wiklund et al., 2017) impairments. The PDW’s principal takeaway will be at least six outline research proposals, with learning outcomes, on differently-abled enterprise. The cross-disciplinary nature of these proposals will invite follow-up research, which will be tracked by the PDW’s polling and activity tools.

For face-to-face attendees, please apply asap to be allocated to any table in this session by emailing wilson.ng@reseau-cd.fr & famdt@uoguelph.ca. Please specify your area of interest in entrepreneurship. Organizers at their discretion will allocate attendees to tables. Organizers will then email each attendee with the outcome of their application. Attendees who are not allocated to tables will observe the games played at tables and can post questions and comments virtually.

Language-based Workplace Exclusion

Session Moderator: **Natalia Lorinkova**, *ESADE Business School / Ramon Llull U.*

GDO: **Double Jeopardy: Moderators and Mediators of Non-Native Speaker Status on Stress And Performance**   

Author: **Natalia Lorinkova**, *ESADE Business School / Ramon Llull U.*

Author: **Sara Jansen Perry**, *Baylor U.*

Author: **Gabriela Fernandez Castillo**, *Baylor U.*

We integrate arguments from the diversity, stress, and linguistics bodies of literature to specify the relationship between non-native speaker status and stress at work, and subsequent customer service performance. In two field studies, we find that non-native speakers who are also either female or older report the highest level of stress. In our first study, we also uncover a curvilinear mediated relationship with customer service performance via felt stress, such that performance improves as stress increases from low to moderate, then plateaus. Moderated mediation analyses in our first study further reveal that felt stress functions as a mediator of the effects of non-native speaker status on performance, but only for female or older employees. In our second study, we delineate three mediating mechanisms of the relationship between non-native speaker status and stress, finding that perceived discrimination based on accent or ethnicity as well as language anxiety each help explain why certain non-native speakers may experience more stress than native speakers. In particular, non-native speakers in general report higher levels of perceived discrimination based on accent or ethnicity, resulting in more stress. Further, female non-native speakers report more discrimination based on accent, leading to more stress. Finally, older female non-native speakers report more language anxiety, also leading to more stress. We conclude with a discussion of theoretical and practical implications.

GDO: **The Workplace Bullying from the Perspective of Estonian and Russian-Speakers in Post-Soviet Country**

Author: **Maja Vadi**, *MaajaV*

Author: **Janika Sillamäe**, *U. of Tartu*

Author: **Merle Tambur**, *Levellab*

Workplace bullying is a negative deviant behaviour, which has gained little attention in the former Soviet countries. Soviet Union's policy created two distinct groups – Estonian- and Russian-speaking populations in Estonia. This study aims to investigate the prevalence of workplace bullying in Estonian organisations from the perspective of cultural background, which derives from belonging to the Estonian- or Russian-speaking population. The empirical research is based on a sample of 1707 respondents and two instruments were implemented: first, evaluating the perception of workplace bullying with the Negative Acts Questionnaire-Revised by Einarsen & Raknes (2009); and second, examining the values of the national cultures in question based on G. Hofstede's model (1980). The results demonstrated that cultural values and the degree of reported workplace bullying manifest differently in the Estonian- and Russian-speaking working environments. Power distance as a cultural value was shown to increase the probability to report workplace bullying. Employees from organisations having more than 20 per cent of speakers of Russian report a significantly higher degree of all kinds of workplace bullying when compared with those that work in a primarily Estonian-speaking company.

GDO: **Masked in Virtuality: Subtle Discrimination of Migrant Professionals in Virtual Work**   

Author: **Hilla Back**, *Aalto U. School of Business*

Author: **Rebecca Piekkari**, *Aalto U. School of Business*

This empirical paper explores how migrant professionals experience subtle discrimination enacted by supervisors, co-workers and customers at a multilingual workplace. The minority status of these professionals of foreign descent stems from their inability to speak the language of their country of location. We undertake a case study of a multinational professional services company before and after the outbreak of the pandemic and combine it with a mixed method design. The results indicate that the shift to virtual work served as a mechanism to mask discriminatory behaviors. While migrant professionals experienced more open linguistic discrimination during face-to-face work, these discriminatory acts turned into covert exclusion during virtual work. The shift to virtual work thus further deepened the divide between employee groups and rendered the faultlines that were previously translucent more impenetrable. We contribute to research on the mechanisms of subtlety behind subtle discrimination and language-based exclusion in virtual work.

MH: **Academic Athena?: ‘Writing In’ Africa In Management And Organization Science**

Author: **Baniyelme D. Zoogah, DeGroot school of business**

Journal of Management History Award for Best International Paper

Carolyn Dexter Award Nominee

Given the increasing globalization of management and organization science (MOS), it has been suggested that scholarly communities examine the contributions of their contexts to the discipline. Accordingly, the contributions from Africa to MOS across the pre-modern, modern, and post-modern eras are examined using generative theory. Evidence from historical, philosophical, anthropological, and sociological sources demonstrates that significant contributions to MOS have originated from Africa. Even so, those contributions have not been acknowledged especially in the post-modern era, due to the “writing out” of Africa. Several implications for the research and the pedagogy concerning MOS and Africa are considered given the current trend of decolonization.

MH: **Do Historical Imprints Lead to Corporate Transgressions? A Study of Regulatory Transition in India**

Author: **Manish Popli, Indian Institute of Management, Indore**

Author: **Mehul Raithatha, Indian Institute of Management, Indore**

In this paper, we investigate the impact of history of an organization on its practices of corporate misconduct. Using the context of institutional transitions in India, we hypothesize that the protectionist and constraining economic policy regime of the closed economic era lead to a competitive deficit for incumbent firms and inscribe imprints in the form of organizational routines of rent-seeking and corruption. By virtue of the stamping of these routines, we find support that the degree of imprinting of incumbent firms positively impacts corporate misconduct of earnings manipulations in the post-liberalization period. By utilizing the historical data of the Indian economy during 1956-1991 and analyzing a sample of 2396 listed Indian manufacturing firms during 1994-2007, we find support for our baseline hypothesis. Furthermore, we find that this effect diminishes by the moderating effect of international exposure and internal innovation development by the focal firms. By foregrounding the effect of history on a firm’s contemporary actions, this study aims to contribute to the literature of determinants of corporate misconduct of emerging economies’ firms.

Paper is Available to Meeting Registrants Only.

MH: **A Progressive Turn on Corporate Ownership in the Second Republic of Korea**

Author: **Francis Kim, Chulalongkorn U.**

This study traces the evolution of corporate governance and state regulation in the context of Korean chaebols during and after the state led industrialisation of the 1960s. A description of changes in corporate ownership and control structures in response to progressive measures towards corruption and wealth concentration by the state reveals the establishment of new corporate and political networks which facilitated the persistence and growth of surviving chaebols. This study also illustrates the trajectory of family control of chaebols consequent to strong inheritance regulation and financial liberalization.

Paper is NOT Available. Please contact the author(s).

MH: **A Story of Historical Events: An Event-based Analysis of Ambidexterity in Family Firms**

Author: **Pilar Marques-Gou, U. de Girona**

Author: **Anna Arbussa, U. de Girona**

Author: **Andrea Bikfalvi, U. de Girona**

Historical events affect ambidexterity in family firms. This article distinguishes between critical and cumulative events along the time existence of firms finding that the first have a crucial role in driving exploitation, while the second have a crucial role in driving exploration. It also highlights the role of the family firm leader’s life cycle as a driver of the changes in ambidexterity by moving the initial focus from past and present (preserving the legacy) to future (attracting the next generation). These contributions uncover the adequacy of event-based research to study ambidexterity processes and confirm the need for history-oriented approaches on family firms.

The Organizational Behavior (OB) Junior Faculty Workshop is held annually and is designed for faculty members who consider themselves junior (e.g., are untenured or within the first 4-5 years of an academic position). The goal of the workshop is to provide a forum for junior faculty members to cultivate meaningful relationships with each other and with senior Faculty Fellows as well as to receive useful insight into career-related issues facing junior scholars. Participants must attend in person. The program will begin with Faculty Fellows sitting on two different topic panels. In the following segment, Fellows will sit at tables and have more focused discussions with smaller groups of Junior Faculty participants around specific topics. These tables will rotate after 30 minutes so that each participant will join two different topic tables. The goal of the panels and topics tables is for junior faculty participants to learn from senior faculty members how to manage their careers in terms of research, teaching, and service but with a particular emphasis on research issues such as being a productive scholar and getting known the field. Fifty junior faculty members will be selected to participate; pre-registration through the PDW registration system is required.

This workshop is designed for junior scholars who are untenured or within the first 4-5 years of an academic position. Participation is limited; pre-registration is required by Wednesday, June 29th. To check availability and to register, please complete this form:

Burnout and Work-Life Balance Reflection Gathering
Burnout and Work-Life Balance

Participant: **Anna Connors Lennard**, *Oklahoma State U.*
Participant: **Amy Bartels**, *U. of Nebraska, Lincoln*

Learning to balance work and life outside of work continues to be one of the largest challenges of academe. Amplified by the COVID-19 pandemic—it is easy to understand why we are currently facing a mental health crisis. In the face of these challenges, it is critical for members of the Organizational Behavior (OB) Division to hear from topic experts in the field regarding their academic discoveries and personal experiences, as well as connect with others, receive support, and develop personal strategies to maintain a healthy work–life interface. We have developed a hybrid program with two key components—an off-cycle virtual event in late spring hosted by the Making Connections Committee of the OB Division and in-person PDW event during the AOM 2022 Conference in Seattle, Washington. The off-cycle virtual event includes speakers’ presentations, provide networking opportunities through round table discussions, and help guiding participants in making their own action plan for managing burnout and implementing work–family balance in the coming summer (a time many academics struggle to balance recovery and productivity). The in-person PDW event focuses on informal socializing and debriefing on the work–life interface experiences as a follow-up to the virtual event. This submission is exclusively for the 1-hour in-person session at the Conference. This session will occur at the annual AOM conference with a “Making Connections Social Hour” where attendees can gather and meet one another in-person, discuss how their action plans unfolded over the summer, and support each other in making the appropriate course corrections to these plans for the fall. The presenters from the virtual event will attend to recap the main points from the off-cycle meeting and invite participants to ask follow-up questions, network, and share their personal experiences trying to find balance and fight burnout over the past few months. Our hope is that attendees will meet and network with one another and gain practical skills regarding work–life balance and how to prevent/ameliorate burnout.

Pre-registration is required; details will be shared on the AOM OB Listserv.

Social Issues in Management Division: Doctoral Student Consortium 2022 Academy of Management Annual Meeting The goal of this PDW is to connect, inspire, and inform doctoral students about elements leading to success in their scholarship, teaching, service, and lives as academics, especially in the area of Social Issues in Management (SIM). We anticipate hosting this daylong, virtual event on Sunday, August 7, 2022. The PDW is designed to be interactive, with ample time for students to ask questions of the panellists and interact with each other, building the SIM community. SIM-affiliated scholars will share their knowledge, participate in panel discussions, and engage with students. Participating students will develop a toolkit for successfully finishing their doctoral programs and entering their professional career.

STR Junior Faculty Teaching Consortium 
STR Junior Faculty Teaching Consortium

Organizer: **John Mawdsley**, *HEC Paris*
Organizer: **Melissa Schilling**, *New York U.*
Panelist: **Juan Alcacer**, *Harvard U.*
Panelist: **Ethan Mollick**, *The Wharton School, U. of Pennsylvania*
Panelist: **Maciej Workiewicz**, *ESSEC Business School*
Panelist: **Elena Novelli**, *Bayes Business School*
Panelist: **Valentina Tartari**, *Copenhagen Business School*
Panelist: **Philipp Meyer-Doyle**, *INSEAD*

This consortium focuses on core business- and corporate-level strategic management teaching concepts, methods, and class management topics. The content will be most impactful to those early in their career, and the topics should be of particular interest to those relatively new to teaching strategic management. Our target audience is both research- and teaching-oriented Junior Faculty who are 0-5 years out. In particular, the consortium is organized around a series of topics: a) designing your syllabus; b) combining teaching and research; c) experiential teaching; d) online teaching; d) practical issues such as student engagement and class management; e) teaching with simulations; and f) teaching to different audiences.

Creating and Capturing Value with Platforms and Ecosystems: The Road Ahead

Value-oriented Lens on Platforms and Ecosystems

Organizer: **Georg Reischauer**, *WU Vienna & JKU Linz*
Organizer: **Jovana Karanovic**, *Rotterdam School of Management, Erasmus U.*
Distinguished Speaker: **Hans Berends**, *Vrije U. Amsterdam*
Distinguished Speaker: **Carmelo Cennamo**, *Copenhagen Business School*
Distinguished Speaker: **Annabelle Gawer**, *U. of Surrey*
Distinguished Speaker: **Tobias Kretschmer**, *LMU Munich*
Distinguished Speaker: **Pinar Ozcan**, *Oxford U., Saïd Business School*

More and more firms across industries create and capture value by leading or participating in platforms and ecosystems. This PDW provides a forum to reflect recent developments, learn from each other, and find novel ways to move forward. Two objectives are pursued. First, participants will learn key insights on value creation, value capture, and the interplay of value creation and value capture in platforms and ecosystems. Second, interactive roundtable discussions will nurture the next generation of value-oriented strategy and innovation research on platforms and ecosystems.

Distinguished Speaker: **Jeffrey H. Dyer**, *Brigham Young U.*

Distinguished Speaker: **Jan W. Rivkin**, *Harvard U.*

This professional development workshop (PDW) features innovative approaches to teaching strategy using in-person, hybrid, and online classes. After being thrown in the deep end almost two years ago, we seek to provide PDW participants with an overview of how the lessons learnt during the pandemic can enhance our teaching across formats as we transition back towards a post-pandemic world. The primary objectives of this PDW are twofold. First, it will introduce and provide short demonstrations of teaching, in-person “flipped” classrooms, hybrid, and online classes, distinguishing between undergraduate and masters/MBA level teaching as well as between synchronous and asynchronous content. Second, it will provide participants with the opportunity to engage with our highly experienced presenters during an interactive Q&A to learn how to replace seat time with online teaching in their own courses. The PDW will conclude with summary comments from the presenters and organizers.

Best Practices for Formal Modeling in Management Research *Best Practices for Formal Modeling*

Organizer: **Elena Plaksenkova**, *The Ohio State U. Fisher College of Business*
Organizer: **Liyue Yan**, *BI Norwegian Business School*
Panelist: **Veronica Roberta Cappelli**, *Santa Fe Institute*
Panelist: **Olivier Chatain**, *HEC Paris*
Panelist: **Douglas Hannah**, *Boston U.*
Panelist: **Aseem Kaul**, *U. of Minnesota*
Panelist: **Michael D Ryall**, *U. of Toronto*

The purpose of this PDW is to enhance participants' understanding of formal modeling and how it can be used to contribute to management theory, to explore linkages between formal modeling and other methods in management research, and discuss the best practices of developing, writing, publishing, and reviewing formal model papers. The PDW aims to promote the effective use and consumption of formal modeling to a larger audience, provide practical tips and advice to those interested in this method, examine the role of formal modeling in management research alongside other methods, facilitate a conversation between experts and learners, and foster a community of researchers. To this end we invite panelists who have extensive experience in formal modeling as producers, editors, and reviewers, as well as with other research methods. The PDW consists of two parts: a 100-minute panel session and a 45-minute breakout room session (virtual format).

Evolutionary Approaches to Innovation: New Developments *Evolutionary Theory*

Organizer: **Mariano Mastrogiorgio**, *IE Business School*
Organizer: **Silvia Rita Sedita**, *U. of Padova*
Organizer: **Andrea Ganzaroli**, *U. of Milan*
Distinguished Speaker: **Gino Cattani**, *New York U.*
Distinguished Speaker: **Teppo Felin**, *U. of Oxford*
Distinguished Speaker: **Saras Sarasvathy**, *U. of Virginia*
Distinguished Speaker: **Pierpaolo Andriani**, *Kedge Business School*
Session Chair: **Aldona Kapacinskaite**, *Department of Management and Technology, Bocconi U.*
Facilitator: **Isabel-Maria Bodas-Freitas**, *Grenoble Ecole de Management*

Evolutionary approaches have grown significantly over the last decades, and they have stimulated a variety of research trajectories in the fields of innovation, entrepreneurship, and strategy. The last few years have witnessed new developments: important advancements in biology—like punctuated equilibrium and speciation, exaptation, and niche construction, among others—have begun to challenge the dominant paradigm of evolutionary theory. By involving leading scholars in the field, the PDW will take stock of the current state of evolutionary theory, review these last developments, and explore avenues for future research. The PDW will last two hours and consist of two main parts: I) introduction of the PDW (organizers), followed by the presentations of the panelists; II) parallel roundtable debates, followed by a plenary discussion of key outcomes, and by the conclusions (organizers).

Please send us an email informing of your willingness to attend the PDW.

Advances in Patent Research 
Advances in Patent Research

Organizer: **Elie J. Sung**, *HEC Paris*
Organizer: **Sina Khoshokhan**, *U. of Colorado, Boulder*
Speaker: **Deepak Hegde**, *New York U.*
Speaker: **Karin Hoisl**, *U. of Mannheim*
Speaker: **Maxim Sytch**, *Ross School of Business, U. of Michigan*
Speaker: **Ashish Arora**, *Duke U.*
Discussant: **Stuart Graham**, *Georgia Institute of Technology*

This workshop focuses on the empirical analysis of patent data, emphasizing the use of patents both as a measure of knowledge and innovation, and as an institutional phenomenon worthy of research in its own right. The goals of the PDW are twofold. First, it will provide an introduction to patent data for management scholars new to the field, including a discussion of data sources, data limitations, and methods for effectively analyzing patent data. Second, it will provide examples of in-depth analyses using patent research. The panelists will engage in discussions with the audience to address the current state of patent research and future directions for research.
