Embracing Ronald Coase's (1974) recognition of the role of private enterprise in resolving problems with lighthouse services and other public goods, we suggest that the evolution of property rights is rooted in entrepreneurial action. We argue that property rights entrepreneurship is more important and pervasive than recognized and support this argument using examples ranging from evolving intellectual property protections for radio frequencies to the control of Alaskan king crab fisheries. Moreover, we argue that the standard institutional economics logic of rational analysis of costs and benefits does not adequately characterize the phenomenon. We propose that property rights entrepreneurship is best portrayed as an iterative and evolutionary interaction between entrepreneurial action and economic structures. Broadly, we add to the entrepreneurship literature by emphasizing the importance of property rights entrepreneurship and advancing a dynamic model of property rights entrepreneurship. We also introduce new constructs such as property rights voids, enabling conditions, the activation level of excludability, the presumption of rights, and distinctions between asset-rights and product-rights entrepreneurship.

ENT: Perceptions of Opportunity and Fear of Failure: Does the National Demography Matter?  

Author: **Mazhar Islam**, *Loyola U. New Orleans*

Author: **Alfred Marcus**, *U. of Minnesota*

Author: **Chuang Wu**, *Xi'an Jiaotong U. School of Management*

Focusing on demographic transitions, we develop a theoretical framework grounded in the sense making literature that suggests that people in nations undergoing demographic transitions relate their entrepreneurial behavior to perceptions of enhanced opportunity and fear of failure. Prior studies in the entrepreneurship literature scrutinized these two tendencies separately. Our argument is that they operate in tandem that demographic deficits unleash both perceptions of opportunity and fear of failure. We also maintain that government policies to promote private sector development moderate these relationships. Using a database that covers fourteen years, and 67 countries, we test hypotheses derived from the framework and obtain results that are mostly consistent with it. We discuss the implications of our study for the potential entrepreneurs and policymakers in the conclusion.

ENT: Not Merely a Game of Cat and Mouse: Regulatory Categorization of Contemporary Entrepreneurial Firms

Author: **Agalagurki Nagaraj Manjunath**, *Indian Institute of Management Bangalore*

Author: **Aman Bhuvania**, *Indian Institute of Management, Bangalore*

Regulatory categorization is a process which sets legal limitations to the production and sales of products or provisions of service within the jurisdiction of a regulator. Extant literature on the process is very limited and the few studies that have explored the process do not engage with contemporary entrepreneurial firms. Studies on the regulation of contemporary entrepreneurial firms suggest multiple actors influence their regulation and the dynamics between the local and central state regulatory authorities plays a significant role in how these firms navigate the process. Adopting an institutional work theoretical perspective in line with extant work, we study in detail the case of regulatory categorization of ride hailing app-based firms at the subnational level in the state of Karnataka in India. The preliminary analysis suggests that the process is a multi-actor contested negotiation unlike extant work which suggests it to be a contest between firms and regulator. We identify two sets of actors - 'stakeholders' and 'third-party actors' who engage in category work, and maintenance work on their own. This is a departure from extant work which emphasizes the agency of the firms in activating other actors to influence the regulator.

ENT: Entrepreneurial Identity Construction in Stigmatized Places 

Author: **Liudmila Iwonen**, *Léonard de Vinci Pôle U., Research Center*

Author: **Palesa Charlotte Felix-Faure**, *Burgundy School of Business*

Author: **Marcos Pereira Fernandes De Barros**, *Grenoble Ecole de Management*

In this paper, we explore the power effects of place stigma on entrepreneurial identity construction through a narrative analysis of the lived experience of entrepreneurs living in marginalized places. Our research contributes to the narrative studies of entrepreneurial identity construction, where there is a historical prevalence of the discourses of individuality, heroics, and masculinity (Drakopoulou, Anderson, 2007; Johansson, 2004; Nicholson, Anderson, 2005; Pettersson, 2012). Our results shows that the usually idealized narrative of the heroic entrepreneur, while still much alive and initial influential in our participants stories, is reappropriated and changed to better represent and change their communities' situated struggles. Our cases of entrepreneurship identity construction therefore follows a different path where the reinsertion into stigmatized place pushes participants to strategically deconstruct the typical entrepreneurial identity and build different role models for their community.

ENT: **Design Artifacts: Understanding how Entrepreneurs use Artifacts during Opportunity Development**

Author: **Lennart Grave**, *U. Utrecht School of Economics*
Author: **Gabi Anja Kafka**, *U. Medical Center Utrecht*
Author: **Norris F. Krueger**, *Entrepreneurship Northwest*

Design research recognizes the relational and temporal dimensions inherent (ly relevant) to new venture creation, and these aspects receive increasing attention in entrepreneurship research. The current study examines how entrepreneurs use artifacts during early stages of opportunity development from a design perspective. To do so we draw on insights from previous research on artifacts in entrepreneurship studies and apply them to a qualitative study of longitudinal data. This was collected in the form of weekly diary reports from thirteen during a one-year program in a business incubation setting. By identifying seven distinct roles in which entrepreneurs employ artifacts in interaction with relevant stakeholders, a design model of opportunity development as artifact-based problem-solving is derived. The results of our study provide a more nuanced understanding of which and why artifacts are used by entrepreneurs during opportunity development, advance our understanding of the way in which artifacts facilitate the co-creation of entrepreneurial opportunities as well as offer practitioners with concrete illustrations on how to consciously use artifacts for successful opportunity development.

ENT: **Relationship Between Effectuation/Causation and New Venture Performance: A Situational Perspective**

Author: **Morteza Sardari**, *John Molson School of Business, Concordia U.*

Although some studies have addressed circumstances under which effectual or causal actions yield better venture performance, until now, there are still unanswered questions about whether entrepreneurs can cognitively recognize when effectual/causal actions are likely to yield better performance and execute them. In this research, we utilize a contingency theory lens to address this question for different levels of product/service disruptiveness. Based on a sample of 200 entrepreneurs in Canada, we study the effect of openness to change and ambition on the ventures' capability of choosing and fulfilling the best course of action (effectuation vs causation) at different levels of product/service disruptiveness.

ENT: **Experts and Expos and Shark Tanks (Oh My!): Managing the Influence of the Entrepreneurship Industry**

Author: **Richard Hunt**, *Virginia Tech*
Author: **Kip Kiefer**, *Rollins College*
Author: **Parul Manocha**, *Virginia Tech*

Entrepreneurship has become an industry, a reality that is both constructive and corrupting. Equal parts enabler and enigma, the entrepreneurship industry (EI) is at once a well-spring of energizing economic activity and bombast of self-parodic entertainment. EI – comprised of all manner of firms selling goods and services to aspiring entrepreneurs – is an increasingly influential sector; but, because it is highly fragmented, its emergence and growth have largely passed unnoticed, despite the prominent role that management scholars have played in giving birth to the industry. As a remedy, this piece offers the first sector-level treatment of EI. Our approach unearths features of EI that are highly germane to entrepreneurship research, practice, and pedagogy. The exposition also illuminates the responsibilities weighing upon management scholars to play a constructive role in shaping how emerging sectors and emerging research impact individuals and society.

Paper is Available to Meeting Registrants Only.

ENT: **Effectuation as an Advanced Theory- A Study of Alliance Between Academic Entrepreneurs & Large Firms**

Author: **Somayeh Taghvaei**, *ISM International School of Management*

Efforts to promote Effectuation as an advanced theory have recently taken a new direction by deviating from the dichotomy of Effectuation and causation and embracing more inductive approaches that enable scholars to advance Effectuation itself theoretically. In line with the recent works, this research adopts a theory elaboration approach with the aim of advancing Effectuation as an independent theory. Through a field study of twenty-five alliances between technology-based academic entrepreneurs and large firms, this study reveals how academic entrepreneurs' means-based attitudes and behaviors and its intertwined notion of goal ambiguity respectively facilitate and impede building opportunity trust and commitment-based trust between two parties; and how large firms' adoption of affordable loss contributes to alliance control. By doing so, this research contributes to both scholarship of Effectuation and inter-organizational relationships through building inter-relationships between Effectuation and two dominant alliance governance mechanisms (i.e., trust and control).

Diversity in Teams: Perceptions and Outcomes

Session Moderator: **Debjani Ghosh**, *Indian Institute of Management, Ranchi*

GDO: **Gender and Ethnic Dissimilarity and Organizational Embeddedness: A Study of Team Climates** 

Author: **Debjani Ghosh**, *Indian Institute of Management, Ranchi*
Author: **Jorge A. Gonzalez**, *U. of Texas Rio Grande Valley*
Author: **Richard Aristeo Rodriguez**, *U. of Texas Rio Grande Valley*

Drawing upon relational demography and conservation of resources theory, we study the relationship between gender and ethnic dissimilarity and organizational embeddedness to understand why dissimilar employees stay in their work organizations. Further, we study the role of team justice climate and climate for inclusion as moderators ameliorating this adverse effect. The study was conducted on 82 work teams in Malaysia. We conducted this study in a unique national context where a societal numerical minority—Chinese—has higher socioeconomic status than the Malay majority, as well as less gender egalitarianism than Western countries. The results show that climate for inclusion ameliorated adverse ethnic dissimilarity effects on organizational embeddedness, but not for gender dissimilarity, and that justice climate ameliorated adverse gender and ethnic dissimilarity effects on organizational embeddedness. Further, the ameliorating effects of justice and inclusive climates were more pronounced for women and non-Chinese employees, demographic groups who are more sensitive to justice and inclusion due to lower status and relative lack of social and material resources in the workplace. Our study points to the importance of fostering positive team climates for justice and inclusion to retain traditionally underrepresented employees in Malaysia and other nations.

GDO: **The Effects of Nationality Diversity on Leadership Perceptions in Multinational Teams**   

Author: **Gouri Mohan**, *IESEG School of Management*
Author: **Minna Marinova Paunova**, *Copenhagen Business School*
Author: **Yih-teen Lee**, *IESE Business School*

Transnational Research Best Paper Award

We combine social identity and status perspectives on nationality to address the question: how does nationality diversity in terms of heterogeneity and inequality affect leadership perceptions in multinational teams? We investigated this question in terms of the effects of two types of nationality-based subgroups (i.e., identity and status) on interpersonal leadership perceptions in 36 teams, comprising 289 members from 51 countries. Our results show that membership in nationality-based subgroups affected leadership perceptions in two distinct ways. On one hand, team members perceived as leaders peers who belonged to the same identity subgroup (ingroup members) and this effect was mediated by perceptions of warmth toward members of same identity subgroups. On the other hand, team members also perceived as leaders peers who belonged to higher status subgroups (irrespective of whether they were ingroup or outgroup members) and this effect was mediated by positive perceptions of competence toward members of high status subgroups. We discuss implications of our study for research and practice of leadership, intergroup relations, and international management.

GDO: **Age Diversity as a Risk Factor for Psychological Safety in Teams of Older Employees**   

Author: **Tarek Benedict Carls**, *U. St. Gallen*
Author: **Stephan Alexander Boehm**, *U. of St. Gallen*

Age diversity has become a more and more pressing issue in modern working teams. Yet the effects of age diversity are not fully understood. While psychological safety is both dependent on interpersonal relationships and an important antecedent of team performance, it has never been studied as a potential mediator of the link between age diversity and team performance. In this study, we aim to close this gap in the literature and introduce team age as a moderator of this relationship as we argue that perceptions of age diversity might shift between different age cohorts due to stereotype threat. We tested our assumptions using a sample of 1441 white-collar workers, nested in 109 working teams. Using aggregated team-level data, we tested a moderated mediation model with age diversity as a predictor, psychological safety as a mediator, team age as moderator, and team performance as an outcome. We found a negative relationship between age diversity and psychological safety for teams of older employees. This moderation translated into a negative moderated mediation effect of age diversity on team performance via the mediator psychological safety for older teams. In conclusion, age diversity seems to be a significant risk factor for psychological safety and subsequently team performance in teams of older employees but not in teams of younger employees. Our study complements the existing literature integrating psychological safety literature, age diversity literature, and stereotype threat literature by demonstrating, that age diversity is a risk factor for psychological safety and subsequently team performance in teams of older employees.

GDO: **Organizational Diversity: A Multidisciplinary Meta-Analytic Structural Equation Model with Mediation** 

Author: **Franziska M. Renz**, *California State U. Sacramento*

Following the theme “Creating a Better World Together” of the 82nd Annual Meeting of the Academy of Management, this study develops and tests meta-analytic structural equation models (MASEMs) to integrate research from multiple disciplines (i.e., management, economics, finance, and accounting research) on the diversity-performance relationship. Based on dominant theories of these disciplines, the results show that various diversity dimensions (i.e., gender, ethnic/racial, age, cultural, personality, functional, and tenure diversity) significantly affect team performance dimensions (i.e., task performance, innovative behavior, constructive deviant behavior, and destructive deviant behavior) and organizational performance dimensions (i.e., financial performance, innovative performance, and sustainability performance). Controlling for study-specific effects, the true effect sizes for each relationship are provided at the population level. These effect sizes indicate team compositions with regards to workforce diversity to reach specific outcomes. Mediation analyses provide various theoretical implications and empirically support the significant effect of team performance on organizational performance, which often has only been implied or assumed by previous research. Implications for future research and actionable practices for managers are derived to support responsible business conduct and social change.

Presenter: **Ashleigh Shelby Rosette**, *Duke U.*

Delving into conversations around diversity, equity, and inclusion (DEI) can be challenging. For those involved, these conversations often require patience, flexibility, and perspective taking. This is especially true for those who facilitate these conversations in the classroom. Serving as an instructor for topics that focus on DEI presents an array of experiences and opportunities, some rewarding and some challenging, that are unfamiliar to novice DEI instructors. The purpose of this workshop is to prepare faculty members of all levels and demographic backgrounds to manage and facilitate classroom discussions related to DEI. This includes direction on how to introduce sensitive topics, how to engage with students, how to handle difficult questions, and more. This workshop will utilize an array of session formats (i.e., teaching demonstrations, panels, and roundtable discussions) and involve faculty who have extensive experience leading DEI courses. As an initiative launched by the late Dr. Katherine Phillips and colleagues to build community among DEI instructors, we see this workshop as an opportunity to further the goal of cultivating connection among those who value and contribute to DEI-related conversations in the classroom.

HCM: Transformational Leadership in Collaborative Entrepreneurial Healthcare in Developing Regions

Author: **Prashant Borde**, *Indian Institute of Management, Shillong*

Author: **Ridhi Arora**, *Indian Institute of Management, Shillong*

Author: **Sanjeeb Kakoty**, *Indian Institute Of Management Shillong*

Transformational healthcare leaders having collaborative entrepreneurial aims with an analogous mission and professional expertise can contribute to the provisioning of essential specialized healthcare in developing regions. Qualitative synthesis employing focused-group-discussions and interviews was conducted in a phased manner. In this, we have used stakeholder-theory and dynamic-capabilities approach. Our study explores the intricacies of collaborative entrepreneurship-based healthcare ventures in developing regions and reveals five emerging pertinent attributes, namely, control, synergy, commitment, empathy, and satisfaction. We recommend that entrepreneurial collaboration, especially by transformational healthcare leaders, can significantly contribute to the creation of an endogenous healthcare ecosystem with advanced facilities and technology-enabled modern infrastructure, as well as augment regional development.

HCM: What Constitutes a Competitive Environment? A Case Study of the FQHCs Industry In California

Author: **Hani Almaliki**, *Umm Al-Qura U.*

Author: **Stephen O'Connor**, *U. of Alabama, Birmingham*

Objective: This study aims to identify competitive forces in the FQHCs environment using Porter's Five Force model. Data Sources: The study utilized various secondary data sources. The Health Resources and Services Administration (HRSA) requires FQHCs to submit a performance report using the measures defined in the Uniform Data System (UDS). The UDS provides data such as the scope and volume of services provided by FQHCs, staffing, number of delivery sites, and finances. The UDS consider being a census of aggregate level health center data for FQHCs. Secondly, the American Hospital Association Annual Survey (AHA), which provides organizational details regarding hospitals. The third dataset is the Area Health Resources File (AHRF). It includes county-level data about health services volume, demographics, and health professional supply. The fourth dataset is the Internal Revenue Service (IRS) Form 990, which was used to calculate FQHCs' total margin. The fifth dataset is the California Health and Human Services Open Data Portal (CHHS), which includes county-level data such as the number of Medicaid eligible populations and the number of primary care clinics. Finally, the study used the U.S. Department of Housing and Urban Development (HUD) United States Postal Service Zip Code Crosswalk Files. The Crosswalk Files was used to allocate both FQHC's and FQHC's sites Zip-Codes to counties. Method: this was a descriptive study. Descriptive statistics included frequencies and percentages to describe categorical variables. In addition, means (standard deviations, SD) will describe continuous variables. The study utilized bivariate analysis, including the chi-square test and ANOVA test, to find differences regarding the competitive forces variables among counties that had a new established FQHCs and counties that did not have newly established FQHCs in California for the years 2014 and 2015. Result: the study found that the number of FQHCs sites and primary care clinics in a county is statistically different between counties that had a newly established FQHC compared to counties that did not have a newly established FQHC. Counties that had newly established FQHCs had on an average a lower number of FQHCs sites and primary care clinics. Competition for FQHCs might arise when more FQHCs exist in a market. More research can be conducted to understand how FQHCs behave in a competitive environment.

HCM: The Longitudinal Analysis of Length of Stay and Readmissions of THA and TKA Patients

Author: **Fatma Pakdil**, *Eastern Connecticut State U.*

Author: **Steve Muchiri**, *Eastern Connecticut State U.*

The demand and cost of Total Hip Arthroplasty (THA) and Total Knee Arthroplasty (TKA) have been on the rise, as projected in the literature. This rise coincides with population aging, increasing life expectancy, and increased clinical success. Unplanned admissions, for instance, take a large portion of healthcare costs, along with the length of stay (LOS), and are monitored to control the cost of healthcare services to improve the quality of care. This study aims to analyze the trends of LOS and readmission rates of THA/TKA patients, illustrate various readmission trends depicted by patients under different payers, medical comorbidity, and discharge type, and estimate the impact of LOS on the probability of readmission.

HCM: Community Coalitions' Perspectives on Engaging with Hospitals in Ohio to Address the Opioid Crisis  

Author: **Karen Shiu-Yee**, *The Ohio State U. College of Medicine*

Author: **Sadie Chen**, *The Ohio State U. College of Medicine*

Author: **Ann Scheck McAlearney**, *Ohio State U.*

Author: **Rebecca Jackson**, *The Ohio State U. College of Medicine*

Author: **Daniel M. Walker**, *Ohio State U.*

Community coalitions have been leading the multi-sector response to the opioid epidemic in the U.S. However, with the medicalization of opioid use disorder and changing healthcare policies, hospitals have moved to the forefront, and they have become more active in collaborating with community coalitions. Little is currently known about how community coalitions view and approach engaging with hospitals despite its importance for understanding and advancing inter-organizational approaches to combating the opioid epidemic. Using qualitative data collected from semi-structured interviews (n=122) conducted from November 2019 to January 2020 as part of the HEALing Communities Study (HCS), we examine how community coalition members perceive hospital collaborations and explore the opportunities and challenges of these partnerships. We characterized three emergent themes around these collaborations: coalitions' approaches to engaging with hospitals; barriers to collaboration; and opportunities for sustainable relationships. This new evidence highlights the value that coalitions place on hospital engagement, as well as mechanisms that may help support ongoing and sustainable partnerships.

HCM Division Best International Paper

Carolyn Dexter Award Nominee

In the onset of the pandemic, scholars quickly synthesized prior healthcare management literature to offer insights and strategies that could help healthcare managers and systems cope with and respond to the challenges the crisis brought on. Yet, as healthcare organizations come close to entering the third year of the crisis, the field has been significantly altered and it is important to take stock of the challenges facing healthcare management in the wake of the crisis. In this paper, we examine the central challenges facing healthcare managers in the present day, working to extend current scholarship and bridge the practice and theory divide. We draw upon the initial scholarly work that emerged in the onset of the crisis and employ a longitudinal study with hospital executives and management to explore the persistent challenges facing managers in practice. Initial literature identified several categories relevant for healthcare management amidst the COVID-19 pandemic: Human Resources, Operations, Team dynamics, External Collaboration and Leadership. While these categories remain salient, our study adds important contextual differences and puts a spotlight on three key issues facing healthcare managers beyond the crisis: the centrality of human resource constraints (amidst increased demand), expanding the focus on collaboration (and rethinking competition), and reconsidering the approach to leadership (inclusive versus decisive). We conclude by drawing upon relevant management theories and offer insights for future research to support the creation of novel solutions and approaches to persistent challenges in practice.

HCM: **Collaboration in Complex Institutions: Contradictions of Patient-Centered Interprofessional Care**   

Author: **Issac Lim**, *U. of Oxford*

Previous studies of complex institutional environments have tended to focus on contestations rather than collaborations. This paper contributes to the institutional theory literature on institutional complexity by unpacking how different health care professionals collaborate in environments with contradictory institutional logics. Specifically, I study how health care professionals respond to the contradictions brought about by the meta-institutional logic of patient-centered care. In response to contradictory institutional logics, health care professionals enact lubricative collaborative practices to allow the concomitance of multiple institutional logics. This paper presents a stark contrast to prior depictions of institutional logics in the literature in which scholars described institutional actors as participants in institutional contestations as opposed to institutional collaborations. The former assumed the presence of incommensurable institutional logics as a bug whereas the latter assumed the presence of incommensurable institutional logics as a necessary feature of a complex society. In fact, low capacity and low capability for incommensurable institutional logics are indicators of a highly homogenous institution that will struggle with complex institutional environments because of its limited relevance and scope of influence.

HCM: **Effective Leaders(hip) in Community-Academic Health Partnership Projects: A Qualitative Study**   

Author: **Choiwai Maggie Chak**, *U. of Twente*
Author: **Lara Carminati**, *U. of Twente*

To deepen our understanding of how project leaders can lead effectively in different community-academic health partnerships (CAHPs), we conducted an inductive, qualitative study through semi-structured interviews (N = 32) and analyzed the data with Grounded Theory approaches. By presenting a process model illustrating the cycle of effective leaders(hip) in CAHP projects, we contribute to the literature on CAHP, leadership development, and complexity leadership theory in three ways. Firstly, the model depicts the strategies enabling leaders to navigate typical project challenges and perform leadership tasks effectively. Secondly, we distil four beneficial qualities (i.e., adopting a proactive attitude, having an open and adaptive mindset, relying on peer learning and support, and emphasizing self-growth and reflexivity) which CAHP project leaders require to develop themselves into effective leaders. Thirdly, we illustrate leaders’ dynamic developmental logics and processes of effective leadership and their contributions to better project functioning in diverse CAHPs.

Author: **Alexandra Bray**, *Yale School of Management*

Author: **Rohit Sangal**, *Yale School of Medicine*

Author: **Marissa King**, *Yale U.*

Research on fluid teams has consistently found positive effects of team familiarity on performance in a variety of settings. Conventional wisdom suggests that during times of crisis, when stress and uncertainty are likely to disrupt team function, familiarity would be especially important to performance. However, there is little empirical research investigating the relationship between familiarity and performance during crisis. To study this, we collected patient and provider data from the emergency department (ED) of a large hospital from January 2018 through November 2020. We then used the provider data to create care teams for each patient in our data. In general, team familiarity was significantly associated with patients spending less time in the ED, a key metric of ED performance. However, team familiarity was less important during COVID-19 than during more routine periods. We further explored this using a second type of crisis – times of high acuity – and found that crisis not only decreased the importance of familiarity but might even render it disadvantageous. Based on these findings, we suggest team familiarity is not as important to performance during a crisis as it is during routine times. Analysis of qualitative interviews with providers suggested two potential explanations: (1) the pandemic created an overarching sense of camaraderie among providers that existed regardless of past relationships, and (2) the fact that ED providers have experience working in crisis situations, rendering them uniquely able to handle them, even in the absence of a shared history with teammates.

HCM: Determinants of Coordination Across Healthcare System Levels 

Author: **Christian Gadolin**, *School of Business, Economics and IT, U. West, Trollhättan, Sweden*
Author: **Erik Eriksson**, *U. of Borås*

Coordination across healthcare system levels is a global imperative in order to assure efficient resource utilization and provide high-quality care. Whereas coordination in healthcare is a prominent research topic, this substantial body of research mainly concerns coordination across professional and organizational domains. Consequently, there is a dearth of empirical research aimed at delineating the determinants of coordination across healthcare system levels. Therefore, this paper describes and analyses the barriers and enablers of healthcare coordination across system levels. Individual interviews and focus group discussions, encompassing a total of 63 individuals, were conducted. The findings of the paper underscore that the barriers identified most often were of a structural or institutional character, whereas the enablers of the studied cross-level coordination were mostly relational. Therefore, we propose that future research should aim to further delineate the prerequisites for personal relationships to emerge, as well as how they may act as enablers of coordination across healthcare system levels.

HCM: A Systematic Review of Respect Between Acute Care Nurses and Physicians

Author: **Derrick Paul Bransby**, *Harvard Business School*
Author: **Anna Mayo**, *Johns Hopkins Carey Business School*
Author: **Matthew A. Cronin**, *George Mason U.*
Author: **Christina T. Yuan**, *Johns Hopkins U. School of Medicine*
Author: **Katie Park**, *Johns Hopkins U. School of Medicine*

Interprofessional collaboration between physicians and nurses has become an increasingly important part of patient care and yet remains a well-known and pervasive challenge. One possible explanation for ineffective nurse-physician collaborations is that respect may be lacking. The purpose of this review is to enhance our understanding of respect by highlighting the value of a particular, profession-based respect as distinct from a general, humanistic respect. To do so, we performed a systematic, PRISMA-guided literature review across five databases to synthesize the evidence about the role of respect between nurses and physicians in acute care. An analysis of 51 studies provides evidence to support the existence of professional respect, which is a belief in one's value based in their relevant competence. We highlight what has been shown to foster and follow from this professional respect. We suggest that while general respect for colleagues as humans is essential to facilitate civil interactions, it may not be sufficient. Instead, our findings suggest that effective collaborations demand that leaders foster a kind of professional respect that implies our coworkers are worth listening to.

HCM: Identity Constructions of Healthcare Middle-Managers: Exploring the Two Faces of Janus  

Author: **Andres Salas-Vallina**, *U. de València*
Author: **Juani Swart**, *U. of Bath*
Author: **Yasin Rofcanin**, *School of Management, U. of Bath*

Based on an interpretive research design, this study responds to the need to understand the complexity of middle-managers organizational life in public healthcare. Middle managers are crucial to supporting the effective and efficient delivery of healthcare services. However, we know little about how they experience and respond to their managerial function, operating at the junction of top-down and bottom-up predicaments and the double professional and managerial role. Based upon interviews with heads of medical units, nurses and administrative staff in public healthcare hospitals, and the observation of managerial actions and interactions, we explored how heads of medical units define their work identities. Four middle manager configurations were found: puppet, foreman, integrator and process promoter. The influence of each configuration on interpersonal relationships and decision making is examined. The research results invite the reader to take a closer look at the two faces of middle managers in healthcare organizations, and how they identify their role and deal with organizational complexity.

HCM: Above and Beyond: Helping Behaviors Among Nurses During COVID-19

Author: **Matthew Leon**, *U. of North Florida*
Author: **Meagan Eleanor Baskin**, *U. of Tulsa*

The coronavirus pandemic has created a crisis in the healthcare industry, with unprecedented levels of turnover, burnout, and stress. As such, frontline healthcare workers must rely more and more on each other to maintain their safety and performance. Integrating social exchange theory (SET), research on task-focused and person-focused helping, and reciprocal models of exchange, the current study extends the literature on social exchange and reciprocity by examining helping behaviors that occur without expectation of return. In the novel context of COVID-19, results from self-report surveys provide support that, despite assumptions of SET, individuals may continue to invest in partners regardless of perceived reciprocity. In addition, perceived coworker efficacy predicted helping behaviors independent of reciprocity, suggesting that individuals are willing to engage in helping behaviors despite a lack of calculated return at the individual level. These findings open several avenues for future research into the behaviors and reactions of individuals working under the stress of negative reciprocity relationships.

 Participant: **Matthew John DePuccio**, *Rush U.*
 Participant: **Kathleen M. Sutcliffe**, *Johns Hopkins U.*

The aim of this symposium is to explore the concept of organizational resilience and ask what it means to organize resiliently. Researchers on four separate projects will present emerging empirical findings on how organizations in Africa, Europe, and North America organized in the face of significant adversities during Ebola and COVID-19 pandemics. The presentations included in this symposium promise to further understandings of organizational resilience by exploring how organizations emergently adjust in the face of unprecedented and long-lasting crisis and adversity. The projects also explore how capability endowments, including routines, staff, and other resources are made to work together in novel ways in response to dynamic unfolding situations. The role of temporal dynamics in resilience is also taken up by several projects. Kathleen Sutcliffe, a well-known expert on the topic of organizational resilience, will lead a group discussion not only of the four presentations, but also of her own thoughts about how future work could advance theory and practice of organizational resilience.

Knowledge Management

Session Moderator: **Khuram Shahzad**, *U. of management and technology, Pakistan*

HR: **Knowledge-intensive HRM Systems, Team Reflexivity, Team Knowledge Sharing, and Team Performance**  

Author: **Khuram Shahzad**, *U. of management and technology, Pakistan*

Understanding how to effectively stimulate performance potential of knowledge-intensive teams (KIT) through targeted human resource management (HRM) systems is critical to enhancing organizational knowledge-based competitiveness. This study builds on ability-motivation-opportunity (AMO) framework to investigate the effect of knowledge-intensive HRM systems (KIHRS) on KIT performance. Furthermore, team adaptability theory is employed to conceptualise dual effects of team reflection and adaptability which on the one hand forms a facilitating underlying mechanism, whereas on the other hand at the same time, can create a boundary condition that undermines the effect of KIHRS on KIT performance. This study draws on a multi-time (3 times), multi-source (3 sources) data set consisting of 397 knowledge workers from 123 teams in 74 organizations in Pakistan. The multilevel results reveal that KIHRS are positively related to KIT performance, not only directly, but also indirectly through a simultaneous as well as sequential mediating mechanism of team reflexivity and knowledge sharing. Impression management climate however is found to negatively moderate the mediated effects of KIHRS on KIT performance. Theoretical and practical implications of the findings are presented accordingly.

HR: **Can Global Talent Management Increase Knowledge Sharing in Foreign Subsidiaries?**

Author: **XIAOYUAN LI**, *Yonsei U.*

Author: **Fabian Jintae Froese**, *U. of Goettingen*

Author: **Yong-Suhk Pak**, *Yonsei U.*

Multinational enterprises rely on host-country nationals (HCNs) to manage and work in their foreign subsidiaries. The purpose of this paper is to shed light on whether and how global talent management (GTM) contributes to HCNs' knowledge sharing. We developed a conceptual model integrating social exchange, social identity, and attribution theories to examine how GTM influences HCNs' knowledge sharing via increased organizational identification and the moderating role of GTM climate strength in the subsidiary. Survey results from 744 HCNs working for 28 foreign subsidiaries in South Korea showed that HCNs' perceived GTM increases their knowledge sharing through their increased organizational identification. In addition, results showed that subsidiary climate strength strengthens the positive relationship between GTM perceptions and HCNs' knowledge sharing, emphasizing the alignment between the perceived GTM of HCNs and actual GTM.

HR: **Flexible Work Arrangements and Employees' Knowledge Sharing in the Post-Pandemic Era** 

Author: **Jin Cheng**, *Xiamen U.*

Author: **Xin Sun**, *School of Management, Xiamen U.*

Author: **Kunlin Li**, *School of Management, Xiamen U.*

Author: **Yana Zhong**, *Xiamen U.*

Flexible work arrangements (FWAs) have become the norm in the post-epidemic era, but are they really beneficial to employees' work? Previous literature, based on Social Exchange and Resource Conservation Theories, has viewed FWAs as signals caring for employees and resources supported to employees, arguing that FWAs triggered employees' positive attitudes and behaviors. Our study challenges this view. We propose a moderated mediation model based on Affective Event Theory (AET) by exploring the relationship between FWAs and employees' knowledge sharing, and further examining the mediating role of workplace loneliness and the moderating role of task interdependence. The analysis of a three-wave survey of 343 employees in a large group of companies in the field of information technology shows that: (1) FWAs can both negatively affect employees' knowledge sharing directly and (2) negatively impact employees' knowledge sharing through the mediating mechanism of workplace loneliness. Further, task interdependence can weaken (3) the positive relationship between FWAs and workplace loneliness, (4) the negative relationship between FWAs and knowledge sharing, and (5) the indirect effect that FWAs negatively affect knowledge sharing via workplace loneliness. Our study contributes to the negative effects of FWAs. Keywords: FWAs; workplace loneliness; knowledge sharing; task interdependence

HR: **A Systematic Literature Review of Knowledge Management: Directions for Future Research**  

Author: **SK Tasthekur Hossain Kowshik**, *Monash U., Malaysia*

Author: **Yin Teng Chew**, *Monash U., Malaysia*

Management and international business scholars have studied the influence of knowledge management on the success of global organizations in the past three decades. To explore the current state of knowledge management research and push it further, we systematically reviewed 199 articles from 47 leading journals in the business (IB) and management field published from 2001 through 2020. Adopting qualitative content analysis, we analyse the literature and categorize it into nine frontier issues: knowledge creation and acquisition; knowledge storage; knowledge transfer and sharing; knowledge application; knowledge management process; learning and absorptive capacity; distance; embeddedness; and innovation. Our analysis also covers knowledge management research: publication outlets, methodological approaches, global reach (home and host countries), and theories adopted by the scholars. This thematic analysis approach helps us identify knowledge management research areas that received dominant and less scholarly attention. By doing so, our findings suggest that knowledge management research is far from being diversified from knowledge transfer and sharing related topics, and there is still room for knowledge management research to grow around other suggested themes in this study. We concluded our study by discussing emerging issues and future directions in knowledge management scholarship, practical implications, and limitations of this study.

Leadership and Leader Behaviors

Session Moderator: **Jie Li**, *Hong Kong U. of Science and Technology*

HR: **Leader Negative Feedback and Employee Creativity: A Latent Growth Modeling of Challenge and Threat** 

Author: **Jie Li**, *Hong Kong U. of Science and Technology*
Author: **Yaping Gong**, *The Hong Kong U. of Science and Technology*

The role of leader negative feedback (LNF) in creativity is theoretically and empirically equivocal in extant literature. It remains ambiguous why and for whom LNF may hamper or help creativity. Moreover, little is known how an employee's reaction to LNF may change between two performance evaluation periods and whether such change uniquely (independent from the initial reactions to LNF) affects employee creativity. In this research, we propose a dual-mechanism model to simultaneously account for LNF's benefit (via challenge appraisal) and harm (via threat appraisal) to employee creativity. Taking a dynamic perspective, we also model the formation and function of challenge and threat appraisal changes. In particular, we theorize an increasing trajectory (growth) of both appraisals over time. Challenge appraisal enhances employee creativity, whereas threat appraisal reduces employee creativity. The growths of both appraisals have unique effects on employee creativity above and beyond their initial levels. Finally, employee avoidance and approach orientation are introduced as moderators, with the former amplifying the negative indirect effects via the initial level and the magnitude of growth of threat appraisal, and the latter amplifying the positive indirect effects via the initial level and magnitude of growth of challenge appraisal. Results based on a multi-wave and multi-source field study supported the key predictions.

HR: **Cross-Cultural Leadership Behavior Adjustment and Leader Effectiveness**  

Author: **Chin-Ju Tsai**, *U. of London*

In this paper, we propose a theoretical framework delineating the conditions under which expatriate business leaders are likely to adjust their leadership behaviors and how leadership behavior adjustment is related to leader effectiveness. The adjustment of leadership behaviors in cross-cultural contexts has been argued to be crucial for the effectiveness of leadership; however, little effort has been made to conceptualize the relationship between leadership behavior adjustment and leader effectiveness. We propose that factors at multiple levels can influence leadership behavior adjustments and that there is a reciprocal relationship between leadership behavior adjustments, leadership behaviors, and leader effectiveness. The theoretical contributions and extensions of the framework and practical implications for expatriate business leaders and multinational companies are discussed.

HR: **Scale Development and Validation of a Multi-dimensional Measure of Workplace Favoritism** 

Author: **Laura Walker**, *Troy U.*
Author: **Mark Alan Davis**, *U. of North Texas*
Author: **Robert Pavur**, *U. of North Texas*
Author: **Julie Irene Hancock**, *U. of North Texas*

Workplace favoritism research has been steady but limited for decades, yet a rigorously validated, comprehensive measure is not available to researchers. Furthermore, there continues to be concern among management scholars as to whether the concept is worthy of being examined as a stand-alone construct. A general consensus among management scholars is that favoritism is similar enough to organizational justice that it cannot provide additional explanatory value in employee emotional, attitudinal, or behavioral outcomes. This study challenges that ideology through the development and validation of a multi-dimensional workplace favoritism scale that can explain noticeably more variance in turnover intention than what organizational justice dimensions (i.e., procedural, distributive, interpersonal, and informational) can account for. Following Hinkin's (1998) suggested approach to scale development and procedures used by Akremi and colleagues (Akremi, Gond, Swaen, Roeck, & Igalens, 2018), a five-phase scale development and confirmation process revealed three favoritism subdimensions including cronyism, nepotism, and a dimension related to an individual's pleasantness and agreeableness. Results indicate that the sub-dimensional favoritism scales are valid and have predictive abilities that go beyond that of which can be accounted for by organizational justice measures.

HR: **Challenger But Not Follower? The Chain Effect of Leaders' Perceived Team Overqualification**  

Author: **Jing Jiang**, *Beijing International Studies U.*
Author: **Yanan Dong**, *School of Economics and Management, Beihang U.*

Despite the prevalence of employee overqualification in the workplace, most extant research has focused on the incumbent's perceptions and the effect of these perceptions on themselves or peers, paying little attention to leaders' perceptions of team members' overqualification and then their psychological and behavioral reactions. The present study serves to fill in this gap based on 73 leaders and 286 employees from a steel company corporate in southern China. Drawing on social cognitive theory, the study found that leader perceived team overqualification was negatively related to leadership efficacy, and the reduced leadership efficacy would then hinder team performance via limiting leader empowering behavior. In addition, leader social face consciousness strengthened the negative effect of leader perceived team overqualification on leadership efficacy, which in turn, strengthened the indirect negative effect of leader perceived team overqualification on team performance through leadership efficacy and leader empowering behavior. The study contributes to the overqualification literature by considering the perspective of leaders, which allows us to reveal how leaders would respond to overqualified employees.

Considering ongoing social unrest and contextual demands, employee mental health has been tried over the past 24 months, and reports of depression, anxiety, stress and burnout are consistently rising. Although the implications of such mental health problems on workplace performance and attitudes have been broadly identified, a closer look at how mental health affects specific workplace behaviors and employee experiences remains underdeveloped. The purpose of this symposium is to identify and explain novel and diverse workplace outcomes predicted by employees' mental health. Research integrated in this symposium demonstrates that employees' mental health problems increase workplace injuries (Presentation 1), increase silence behaviors (Presentation 2), decrease leader role occupancy (Presentation 3) and increase self and others' disengagement, job dissatisfaction, and turnover intentions (Presentation 4). Given these outcomes, this symposium concludes with an intervention study that demonstrates effective means by which organizations can support employees' well-being and reduce burnout (Presentation 5).

The Role of HR Actors in HRM

Session Moderator: **Wolfgang Mayrhofer**, *WU Vienna*

 **HR: Contextual Effects on HRM Systems and the Role of HRM Departments. A 34-Countries Analysis.**

Author: **Wolfgang Mayrhofer**, *WU Vienna*
Author: **Torsten Biemann**, *U. of Mannheim*
Author: **Irmela Koch-Bayram**, *U. of Mannheim*
Author: **Marco Rapp**, *WU Vienna*

Using the comparative contextual framework of HRM, we investigate the effects of external and internal context on HRM systems. Further, we add HRM's organizational integration that presumably fosters the adoption of context-specific HRM systems. We draw on data from 4,768 organizations across 34 countries and analyze the similarity of HRM systems with distance matrices, a widely used approach in geographic science. Our results show that both external and internal context affect (dis)similarity of HRM systems and highlight that organizations that operate in a similar institutional environment have more similar HRM systems. Furthermore, we find that devolvement of HRM activities from HRM to line management leads to less similarity of HRM practices between organizations. Future research needs to take a broad set of context dimensions as well as the role of the HRM department into account and also include organisational power dynamics.

HR: Linking CEO Leadership to Corporate Entrepreneurship: Effects of HRM Practices and Firm Life Cycle  

Author: **Yueyue Liu**, *Nanjing U.*
Author: **Meng Xi**, *Nanjing U.*

Drawing on the literature of chief executive officer (CEO) leadership behaviors and corporate entrepreneurship (CE), this study examines how CEO leadership behaviors (task-focused and relationship-focused) facilitate CE through human resource management (HRM) practices and how the mediating effect is affected by organizational life cycle. Using data from 192 Chinese firms, the study finds that both CEO task-focused leadership and relationship-focused leadership positively lead to CE; CEO task-focused leadership is positively related to HRM expectation-enhancing practices and CEO relationship-focused leadership is positively related to HRM inducement and investment practices. In addition, HRM expectation-enhancing practices mediated the positive relationship between CEO task-focused leadership and CE, and the indirect effect was stronger when the organization was at the growth stage. These findings give rise to theoretical and practical implications, which are discussed.

HR: Who Manages the “Most Important” Asset? Antecedents and Outcomes of HR Executives in the C-Suite   

Author: **Daniel M. Peat**, *U. of Cincinnati*
Author: **Huimiao Zheng**, *U. of Cincinnati*
Author: **Kaiqi Zhang**, *U. of Cincinnati*
Author: **Rhett Andrew Brymer**, *U. of Cincinnati*

Firms increasingly employ human resource executives (HREs), demonstrating a recognition of the strategic importance of human capital. Yet, prior empirical research linking HREs to financial performance has demonstrated very little effect, inconsistent with extant theory. While one interpretation for this inconsistency is that HREs have symbolic rather than material value, we follow instrumental stakeholder theory that suggests broader and more proximal performance implications for firms that employ HREs. By viewing the antecedents and outcomes of HREs through the instrumental stakeholder lens and using a 26 year panel sample of firms in the biosciences industries, we find that they are more likely present in firms with employee profit-sharing but also in firms where there are employee relationship concerns. Further, we find HREs are more likely to increase value from innovation while buffering the firm from volatility.

 **HR: The Sociopolitical Dynamics of Front-Line Managers' HRM Implementation at an Earlier Stage** 

Author: **Hussein Kurdi-Nakra**, *Trinity College Dublin*

This conceptual paper discusses how the implementation of HRM practices leads to variation in the HRM delivery process. Whereas existing research focuses on FLMs' proactive position in making implementation decisions, the current study portrays a dynamic relationship between different HR roles enacted by different HR actors involved in the implementation process. I draw on the political lens, social constructionism, and role identity perspectives to develop propositions specifying that implementation variation depends on the relative power of the enforcers (HR managers) and the endorsers (senior managers). I suggest that their dynamic interactions with FLMs should be central to developing any theory about how FLMs' implementation behaviors unfold. I further situate my theoretical analysis by updating and extending the approach to relational dynamics in this area of scholarship to introduce an integrative framework into an earlier phase of HRM implementation. Overall, this study offers novel abstractions about the effects of sociopolitical dynamics on HRM implementation, contributing to the current debates on the relational perspective and HRM execution process.

Employee Performance

Session Moderator: **Farid Jahantab**, *Pennsylvania State U., Worthington-Scranton*

HR: **How Line-Manager Leadership Styles and Perceived HRM Practices Contribute to Employee Performance**

Author: **Bolong Liu**, *Jilin Jianzhu U.*

Author: **Zhisong Cui**, *Jiangxi U. of Finance and Economics*

Author: **Chilombo N Nanyangwe**, *School of Management, Jilin U.*

Plenty of studies presented how leadership styles and HRM practices influence employees in organizations separately, but only a few considered the combined effects of some certain types of leadership and HR management practices. Based on configurational theory, we provide a more holistic view by integrating task-oriented, relations-oriented, and change-oriented leadership, and hygiene-motivate HR practices to detect distinct configurations of leadership styles and HRM practices that may lead to high and not-high employee performance. Using fuzzy set qualitative comparative analysis (fsQCA) and data of 108 pairs of line-managers and followers in China, we find five sufficient configurations for the presence of high employee performance, and three for its absence, which provides evidence for the three propositions of “multiple conjunctural causation”, “equifinality”, and “asymmetry”.

HR: **The Tenuous Relationship Between Working From Home and Job Performance**   

Author: **Yea Hee Ko**, *Binghamton U.-State U. of New York*

Author: **Charlie Trevor**, *U. of Wisconsin, Madison*

The COVID-19 crisis has led to massive increases in working from home (WFH), compelling many individuals to telecommute in challenging circumstances. Further, the strong emphasis on WFH is likely to continue after the pandemic. In this study, we examine the impact of WFH on job performance before and during the COVID-19 crisis. Using longitudinal data on patent examiners at the United States Patent and Trademark Office, we assess the WFH efficacy under various conditions, such as self-selection into WFH, degree of WFH, transition to a WFH mandate, and the passage of time during that mandate. Results show an overall detrimental impact of the WFH mandate on job performance. Even individuals who initially opted into WFH can suffer job performance reduction when circumstances worsen and presumably due to prior expectations for the WFH setting being unmet. However, we also find that such performance decline begins to recover over time, suggesting individual and organizational learning. Although the pandemic is an extreme example of unfavorable circumstances, our study suggests a more tenuous relationship between WFH and job performance than emerges in literature generally focused on voluntary WFH and favorable context.

Paper is NOT Available. Please contact the author(s).

HR: **Overqualification, Idiosyncratic Deals, and Employee Performance in the Workgroup Context**

Author: **Farid Jahantab**, *Pennsylvania State U., Worthington-Scranton*

Author: **Smriti Anand**, *Illinois Institute of Technology Stuart School of Business*

Author: **Prajya Raks hit Vidyarthi**, *U. of Texas at El Paso*

Author: **Satvir Singh**, *Angelo State U.*

Drawing upon social exchange theory, we contend that idiosyncratic deals (i.e., i-deals) transpire the effect of overqualification on employee performance (operationalized as task performance and organizational citizenship behaviors: OCB). Furthermore, we extend i-deals theory to the workgroup context and assert that the extent of overqualification and team orientation in the workgroup influence the overqualification-i-deals-performance relationship. Per our expectations, hypothesis tests using time-lagged bi-source data from 682 employees nested in 115 workgroups revealed a significant relationship between overqualification and employee performance via i-deals. Further, the positive relationship between overqualification and i-deals was weakened by group overqualification and team orientation. Finally, moderated mediation path analyses showed that the indirect effect of overqualification on employee performance through i-deals was weaker in workgroups with high overall overqualification and high team orientation. Theoretical and practical implications and directions for future research are discussed.

HR: **Multilevel Antecedents of Individual Social Capital and its Effect on Task Performance**

Author: **Hai Viet Nguyen**, *National Sun-Yat Sen U.*

Author: **Hao-Chieh Lin**, *National Sun Yat-Sen U.*

Author: **Huu Lam Nguyen**, *U. of Economics Ho Chi Minh City*

This research employs the social information processing theory to examine the multilevel antecedents of individual social capital and its effect on task performance. Based on a dyadic sample collected from Vietnamese employees, the findings show that organizational citizenship behavior (OCB) can enhance an individual's stock of social capital, which in turn is advantageous to task performance. At the same time, individual-level leader-member exchange (LMX) quality and firm-level innovative culture, respectively, play a prominent moderating role in the link between OCB and social capital. This research contributes to the coevolution perspective of social capital by identifying the significance of individual's social endeavors in accumulating his/her social resources under the influences of social contextual factors.

Coaching and Mentoring

Session Moderator: **Ashley Fournet**, *Louisiana Tech U.*

HR: Coaching Isn't Just for Little League Anymore: A Theory of Coachability

Author: **Ashley Fournet**, *Louisiana Tech U.*

Author: **Marcia Simmering**, *Louisiana Tech U.*

Coaching is a form of employee development that has grown in use in practice, despite little attention in the academic literature. Coaching and mentoring are addressed in multiple literatures, yet despite being distinct activities, they are often conflated. Further, the notion of what makes an employee coachable is not consistent in published research. Therefore, the purpose of the current manuscript is to more clearly define coaching and its elements, focusing specifically on employee coachability. This paper thus attempts to begin to close the scientist-practitioner gap in regards to employee coaching.

HR: Generative Proteges Reciprocate High Quality Mentoring  

Author: **Ryan Musselman**, *Virginia Tech*

Author: **William J. Becker**, *Virginia Tech*

Competition for talent in the current labor market is fierce. Organizations stay competitive by developing and retaining the talent they already have. At the same time, employees increasingly value quality relationships with their leaders and organizations. Generativity is a concept from social psychology that reflects the value individuals tend to place on social investments in the future. As such, it has many potential applications for understanding organizational phenomenon. In the paper, we apply generativity to the context of mentoring and explore how protégé generativity impacts their attachment to the organization and willingness to mentor others when they receive high quality mentoring. In a sample of 351 working adults, we found that in employees who were high in generativity, high quality mentoring was positively associated with organizational identification and reciprocated mentoring and negatively associated with turnover intentions. These results suggest that organizations receive the greatest benefits from providing high quality mentoring to employees that are high in generativity.

HR: Can Safety Initiatives Do More? Examining the Impact of Safety Coaching on Work-Related Outcomes  

Author: **Mudit Shukla**, *Indian Institute of Management, Indore*

Author: **Divya Tyagi**, *Indian Institute of Management, Indore*

Author: **Jatin Pandey**, *Indian Institute of Management, Indore*

The COVID-19 pandemic has coerced organizations all around the globe into changing their operations both to ensure the continuity of their business and the safety of their employees. While for some organizations, it was easy to switch to work from home to ensure the safety of their employees, for the others, it wasn't that effortless, and more so for some, it was outrightly not possible. Regardless, most organizations, in the post-pandemic world undertook measures to ensure the safety of their employees while keeping in mind the prevention of the spread of the COVID-19 pandemic. These measures, while expected to ensure the safety of the employees, are likely to have a spill-over effect on the employees' work outcomes. Adopting the lens of the conservation of resources theory, the authors analyzed the responses of 250 working professionals in a three-wave study with the aim to uncover the impact of safety coaching undertaken by the organizations on one such aspect, i.e., work engagement. In the process, the study also sheds light on the mechanism through which safety coaching impacts work engagement, i.e., via satisfaction with corporate philanthropic COVID-19 response and organizational trust. The study is expected to have various practical implications for organizations around the globe.

HR: Strengths-Based Performance Coaching: A Randomised Trial in the UK Civil Service

Author: **Jonny Gifford**, *Vrije U. Amsterdam, School of Business and Economics*

Author: **Peter James Urwin**, *U. of Westminster*

Author: **Augusto Cerqua**, *U. of Westminster*

Author: **Matthew Gould**, *Brunel U.*

Applying a strengths-based approach to performance management has previously been proposed as an improvement. We present results from a large, randomised workplace trial in the UK civil service of management training in strengths-based performance coaching. The trial sheds new light on the impacts that accrue and changes in the nature of performance conversations. Our findings suggest that a strengths-based approach helps employees develop, but evidence on this translating into improved job performance is weaker. As hypothesised, we observe changes to performance conversations, in that the manager training leads to more developmental and supportive performance conversations. However, we see no significant increase in discussion of job-related challenges and no reduction in discussion of performance assessment. Whilst the strengths-based approach does not change conversations exactly as hypothesised it nonetheless helps them to be purposeful and constructive.

HR: **From Individual to Society: A Multi-Level Model for Diversity Training Reaction**  

Author: **Jiawei Li**, *U. of British Columbia*

Author: **Sima Sajjadiani**, *Sauder School of Business, U. of British Columbia*

Increasing diversity in the workforce and the #BlackLivesMatter movement compel organizations to invest in diversity initiatives, among which diversity training is of growing popularity. However, diversity training outcomes are not consistent. While abundant literature has explored factors influencing outcomes at the levels of the individual, the training program itself, and the organization in which it is applied, several concerns remain unaddressed. This paper explores the factors that lead to divergent diversity training outcomes and focuses on individual-level reactions toward training programs. We apply computational grounded theorizing and machine learning techniques to analyze discussions on Reddit and propose a multi-level model of diversity training reaction. This model reveals how factors at the unit, organizational and social levels influence individuals' cognitive, affective, and behavioral reactions to diversity training. We contribute to diversity training literature by demonstrating the important yet rarely studied influence of social context on the individual's reactions.

HR: **Does a Women's Quota Trickle Down to Employees? An Analysis of Workforce Perceptions and Reactions** 

Author: **Madleen Meier-Barthold**, *U. of Mannheim*

Author: **Torsten Biemann**, *U. of Mannheim*

While scholars have investigated the consequences of a women's quota at the upper management levels, there is little to no focus on the effects it has on the general workforce. As the introduction of a women's quota often aims at increasing gender equality throughout the entire organization, it is crucial to understand factors that influence employees' perception of the existence of a women's quota and their reaction to it. We propose and test factors using the Linked Personnel Panel, a federal data set which includes observations from 4,152 employees nested in 719 German organizations. Our findings reveal that an actual women's quota in place influences employees' perceptions of the existence of a women's quota in their organization, but this relationship is weaker than expected. We also find that the relationship is stronger for women and when employees perceive a low clarity of organizational goals. Furthermore, we show that employees who perceive that their organization has implemented a women's quota have higher levels of engagement, but this relationship is weakened when an organization complies to legal regulations instead of making a voluntary decision to introduce a women's quota.

HR: **A Network View on Workplace Inclusion: The Role of Closure, Centrality, and Need for Affiliation**  

Author: **Travis Grosser**, *U. of Connecticut*

Author: **Christopher Sterling**, *California State U., Fresno*

Author: **Rohit Subhash Piplani**, *U. of Connecticut*

Author: **Kristin Cullen-Lester**, *U. of Mississippi*

Author: **Theresa M. Floyd**, *U. of Montana*

Organizations are increasingly recognizing the important role employee inclusion perceptions play in promoting positive employee attitudes and behaviors. Although social networks are frequently cited as being a driver of perceived inclusion, little empirical work has examined the social network conditions that give rise to it. We address this gap by examining how both network position (indegree centrality) and network structure (network closure) relate to perceived workplace inclusion. We test our hypotheses with a sample of 364 professionals in a multinational pharmaceutical firm. We find that both indegree centrality and network closure are positively related to perceived workplace inclusion. In addition, the relationship between network closure and perceived workplace inclusion is strengthened by both a high level of indegree centrality as well as a high need for affiliation. Our results therefore suggest that both network position and structure play an important role in employee perceptions of inclusion and demonstrate the importance of considering need for affiliation as a boundary condition. We conclude by discussing implications for theory and practice.

HR: **When Diversity Met Integration: The Role of Ethnic Integration on Firm Performance**

Author: **YOON Thomas HYOUNGWON**, *PhD Candidate at Bocconi U.*

Extensive interest in human capital ethnic diversity has produced somewhat conflicting findings on the benefits of human capital diversity in the strategic management literature. I argue that human capital ethnic diversity cannot be standalone without considering its integration. Building on previous research on human capital diversity and integration, I examine whether both are indeed required to increase firm performance and investigate the extent to which firms should achieve diversity and integration. By proposing a simple measure of excessive ethnic imbalance at a firm, I illustrate how and why ethnic integration is as crucial as ethnic diversity to the firm's innovation outcomes. The empirical analyses on the patent data from all U.S. patenting firms provide support for the importance of ethnic integration in the firm.

Presenter: **Lynn Shore**, *Colorado State U.*

Presenter: **Amy Randel**, *San Diego State U.*

Despite good intentions and well-thought-out goals and initiatives, companies continue to grapple with how exactly to create a diverse and inclusive work experience. Meaningful and sustainable advancement in this arena is a complicated process that extends beyond mere policies and practices. Given these, and many other, challenges found in harnessing the power of diversity, there is a need for studies within the organization sciences that push the current scope and boundaries of DEI research. The proposed symposium aims to answer this call to "move beyond traditional views of diversity" by presenting five papers that provide a more nuanced understanding of various diversity related topics (e.g. leader/group inclusion, diversity attitudes, relational demography), in a way that challenges current assumptions in the literature and creates a foundation for future research.

Participant: **Kaifeng Jiang**, *Ohio State U.*

Strategic human resource management (SHRM) research has shown that employees' perceived human resource (HR) practices, rather than the implemented HR practices as rated by managers, have a larger influence on employees' behavior and outcomes. This highlights the importance of studying employee perceptions of HR practices. However, despite the acknowledgment given to employees as key recipients of HRM, we still have a limited understanding of what factors explain and influence employee perceptions of HRM. Accordingly, the papers in this symposium aim to shed light on (a) the role of coworkers in influencing employee perceptions of HRM, and (b) the role of line-managers in influencing employee perceptions of HRM. Collectively the papers suggest that coworkers and line-managers play an important role in how employees experience HR practices.

Participant: **Jeffrey T Polzer**, *Harvard U.*
Participant: **Noshir Contractor**, *Northwestern U.*
Participant: **Susan Biancani**, *Netflix*
Participant: **Keith McNulty**, *McKinsey & Company*

The current landscape of academic research on networks is exciting and innovative, often pushing the boundary on causal inference (endogeneity), computational and analytic techniques, and new data sources. The results of network analyses are also finding their place in analytics teams, HR departments and executive suites, acknowledging the reality that formal systems only capture a portion of the collaboration and communication occurring among employees. Increasingly, people with deep expertise in network methods are conducting this work from within organizations, reflecting a growing overlap and cross-fertilization between academia and practice. The convergence of people with ONA expertise, network data, and org challenges that lend themselves to ONA makes this an exciting time for everyone working in this domain. In this symposium we discuss challenges, draw inspiration from successful examples, and explore ideas for future work.

Artificial Intelligence (AI) is transforming the way we work. The autonomous quality of AI and its ability to perform tasks that previously required human intelligence present a new set of trust challenges to organizations and employees and is reconfiguring the relationship between humans and technology. This symposium responds to a growing consensus of the need to understand employee trust in the context of AI at work. It showcases global research using diverse methodologies to advance novel empirical insights and conceptual developments on 1) the nature and determinants of employee trust and acceptance of AI systems at work, 2) how leaders and employees can manage and navigate AI technology adoption in a way that is enabling, human-centric, and supportive of trust, and 3) how AI integration is affecting trust relationships at work.

Theorizing on Firm Internationalization

Session Moderator: **David M. Brock**, *Ben-Gurion U.*

IM: Higher Order Capabilities in International Firms: Review, Analyses and Future Directions

Author: **David M. Brock**, *Ben-Gurion U.*

Author: **Michael A. Hitt**, *Texas A&M U.*

This paper aims to add to our understanding of both the international as well as the dynamism aspects of higher order capabilities in the international context. Beginning with the ubiquity of the dynamic capability construct in management research over the past two decades, we survey research in the international context to promote understanding of these important strategic assets. We begin with a brief overview of resource-based research in the international context, with more attention to higher order capabilities. A systematic review follows, resulting in 98 articles from 16 leading journals. Our analysis of the capabilities studied in these articles, led to a classification of 13 higher order capabilities in international contexts—six of which we call meta dynamic capabilities, and seven strategic dynamic capabilities. Looking separately at each of these 13 capabilities, we present evidence from the literature to help understand both the internationality as well as the dynamic aspects of these capabilities. Finally we consider directions for future research on capabilities in the international context.

IM: Theories of Multinational Enterprises: Untested Assumptions

Author: **Minyoung Kim**, *U. of Kansas*

Author: **Midam Kim**, *U. of Kansas*

Author: **Ann Bradlow**, *Northwestern U.*

Author: **Tailan Chi**, *U. of Wisconsin, Milwaukee*

Theories of multinational enterprises (MNEs) maintain that internal exchanges within an MNE are likely more effective in reducing the impediments to international knowledge transfers, including the costs of language communication. The underlying reasoning in the established theories, however, is based on certain explicit or implicit behavioral assumptions at the individual level that have not yet been tested empirically. This is a critical void in the literature because it underscores insufficient microfoundations upon which micro-level theoretical constructs aggregate, interact, and emerge to develop macro-level theories of MNEs. Drawing on transaction cost economics, the knowledge-based view, and psycholinguistics, we take a microfoundational approach, introduce a micro-level theoretical framework on the untested assumptions, and conduct lab experiments to quantitatively validate the assumptions. Results of our experimental analysis offer quantitative evidence to support the untested assumptions in the prevailing theories of MNE and further strengthens the basis for the proposition that the MNE is a superior vehicle for the transfer of knowledge across borders, thus contributing to the microfoundations of the theory of the MNE.

Paper is NOT Available. Please contact the author(s).

IM: Imagination and Firm Internationalization

Author: **Manuel G Serapio**, *U. of Colorado*

Author: **Ivo Zander**, *Uppsala U.*

In this paper, we explore the connection between imagination and firm internationalization. We review existing internationalization process models to suggest that these models have paid limited attention to the imaginative and forward-looking aspects of managerial decision making. A set of conjectures outlines how imagination in managers' decision making matters for variance and jumps in foreign establishment chains, modes of foreign expansion, and how it may affect success in firm internationalization. We discuss how incorporating imagination into the research agenda on firm internationalization opens up new possibilities for research, with particular emphasis on developing a better understanding of how at the micro level managers think about internationalization, and its methodological implications.

IM: Highlighting Asymmetries: Re-Examining the Firm-Level Impacts of Pro-Market Reforms in Latin America 

Author: **Bruno Buscariolli**, *FGV EAESP Sao Paulo School of Business Administration*

Author: **Elizabeth Marie Moore**, *Northeastern U.*

Author: **Luis Alfonso Dau**, *Northeastern U.*

Impacts of pro-market reforms on profitability have been investigated for more than two decades, but accumulated results still prove inconclusive. While there seems to be consensus highlighting why pro-market reforms would lead to higher profitability, findings remain mixed. We refine past research by 1) employing causal analysis methods (specifically, vector autoregression and impulse response functions) that improve upon previous techniques 2) using more appropriate sampling of countries and of firms (specifically, multiple countries that are comparable and that illustrate opposing directions of reforms), and 3) including additional key financial indicators as dependent variables to parse out the complex impacts of the reforms. Using firm-level data from 1,248 publicly listed firms from seven Latin American countries (2000-2016), our results offer novel insights. Interestingly, our results do not demonstrate a statistically significant result for the impact of pro-market reforms on profitability (return on sales). However, our findings do indicate a positive relationship between pro-market reforms and operational efficiency (reduction in administrative and selling expenses) as well as between pro-market reforms and financial leverage (corporate indebtedness and interest expenses). Understanding these asymmetric effects, while also considering pro-market reversals, offers a more finely variegated lens to extant literature.

IM: Environmental Stringency and Green Innovation Spillovers to Emerging Market Industries     

Author: **Roisin Donnelly**, *Tilburg U.*

Industries in emerging markets often have exposure to countries with much more stringent environmental regulations. While partners in these countries may push their green innovation practices to emerging market industries through positive spillovers, institutional arbitrage and pollution haven arguments suggest that these industries will profit from their comparative advantage in non-green practices. Using a comprehensive sample of 18 manufacturing industries across 30 countries, we investigate these ideas by examining the institutional and competitive factors that influence the green innovation rate of emerging market industries. We find evidence that more exposure to countries with stringent environmental regulations reduces the rate of green innovation in emerging market industries. We find that this result is driven by industries from countries with low levels of environmental stringency and lower openness to global norms. This relationship is also driven by emerging market industries with higher technological sophistication, suggesting that these industries will focus on innovation in non-green technologies to serve the institutional arbitrage needs of their buyers and maintain their comparative advantage.

IM: Cross-Border M&As and Green Innovation among Emerging Market Multinationals: Evidence from China

Author: **Xiaoting Hu**, *Beijing Information Science and Technology U.*

Author: **Wenjing Lyu**, *Massachusetts Institute of Technology*

Author: **Huanyong Ji**, *Beijing Information Science and Technology U.*

The reverse spillover effect of the foreign expansion of multinational enterprises (MNEs) from emerging economies (EMNEs) on their green innovation in home countries have been largely ignored; by contrast, the main focus has been directed toward the spillover effect of MNEs from developed countries in emerging economies. The only related research available limits their analysis to the regional level, rendering the relationship between the foreign expansion of EMNEs and their green innovation unclear. Specifically, as an increasing foreign expansion strategy adopted by EMNEs, how do cross-border mergers and acquisitions (CBMAs) affect the post-merger green innovation of EMNEs? To examine this question and explore the boundary conditions, this study integrates institutional theory and the business ethics literature to construct a motivation-ability framework in the context of green innovation. Using the Propensity Score Matching with Difference-in-Difference (PSM-DID) method, we tested our hypotheses on a sample of Chinese listed manufacturing firms between 2009 and 2017. Results suggest that Chinese MNEs decrease their green innovation in response to CBMAs. Moreover, the CBMA-green innovation relationship varies across firms and is determined by heterogeneity in state ownership, government subsidies, and industry openness. These findings not only elucidate the reverse effect of the foreign expansion of EMNEs on their green innovation in home countries; they also provide an approach to reconciling mixed conclusions on the relationship between CBMAs by EMNEs and their innovation performance by clarifying types of innovation in international business research.

Paper is Available to Meeting Registrants Only.

IM: Chinese Multinationals and the Politics of Internationalisation  

Author: **Maria Altamira**, *UBI Business School*

Author: **Gaston Fornes**, *U. of Bristol*

Framed within Institutional Theory and the Resource-Based View of the firm the purpose of the study is to understand how the development of Chinese firms' capabilities expanding its operations within the BRI in the European Union, is influenced by two distinctive home institutions interrelated with the state; (i) the support from the state, and (ii) the pervasive reliance on personal relationships (guanxi); and how far these capabilities contribute to the success of Chinese firms in the BRI. The study adopts a Narrative Inquiry strategy and a qualitative narrative analysis of twenty narratives from managers from three different types of Chinese firms involved in the BRI (State-Owned Enterprises, National Champions, and Private Firms). A thematic analysis in the context of biographical narrative research was considered as method of analysis. Finally, a coding process was followed and categories and themes for each of the narratives identified. The main finding of the study is the understanding of the development and application of two capabilities that are unique to the Chinese context, the adaptive capability and the resource bridging capability, following the analysis of a process and sequence of events related to the domestic development and further internationalisation expansion within the BRI of Chinese companies in the European Union (EU). Findings also show how these capabilities are the source of competitive advantage of Chinese firms in the EU. This article will contribute to the academic literature in two areas: (i) Institutional Theory, by providing an understanding of the influence of home institutions on the expansion of Chinese companies in Europe when following a state-led internationalisation strategy (the BRI); and (ii) the Resource-based view (RBV) and capability-building, by analysing the development of capabilities in Chinese companies and how Chinese home institutions shape these capabilities in the EU. The study bears implications for practitioners and policymakers as well as academics.

International Knowledge Transfer and Sourcing

Session Moderator: **Maksim Belitski**, *U. of Reading*

IM: The Role of Knowledge Spillovers in Promoting Multinational Enterprise Scale-Ups ➔

Author: **Maksim Belitski**, *U. of Reading*

Author: **Jeffrey A. Martin**, *U. of Alabama, Tuscaloosa*

Author: **Tatiana Romanova Stettler**, *Kent State U.*

Author: **William John Wales**, *U. at Albany, State U. of New York*

Based on insights from the spillover, international business and knowledge management literatures, we study factors that increase the propensity of multinational enterprises (MNEs) to scale up. Viewing MNEs and their employees as potentially rich knowledge sources, we draw attention to MNE-to-MNE knowledge spillovers and employ panel data spanning 44,256 UK-based foreign and 21,246 domestic MNEs during 2004-2017. Our results show that (a) MNEs benefit from peer MNE knowledge externalities available in a geographic region, (b) domestic co-ownership of foreign MNEs increases an MNEs propensity to scale in sales, yet (c) decreases the MNEs propensity to scale efficiently with enhanced productivity.

Paper is Available to Meeting Registrants Only.

IM: The Influence of Recipient Unit Spatial and Temporal Context on Transfer Effectiveness in the MNC ➔

Author: **Olof Lindahl**, *Uppsala U.*

By means of an exploratory investigation of headquarters transfer of capabilities to subunits in multinational corporations, this paper shows how local subunit influences on transfer effectiveness may surface outside the anticipated transfer context as well as outside the transfer time frame. Utilizing a 100-interview, inductive multiple-case study of 18 transfers between headquarters and subunits in Europe, Asia, and North America of the same capability in a single multinational corporation, this paper highlights the importance of considering the roles of both time and space to understand influences on transfer effectiveness as arising over time, with important implications for future research.

Paper is Available to Meeting Registrants Only.

IM: Who Can Help When Information Is Needed? Differential Effects of Inward, Outward and Reciprocal Ties

Author: **Xiaoou Bai**, *Georgia State U., J. Mack Robinson College of Business*

Author: **Wei Xia**, *U. of Washington*

Author: **Eric WK Tsang**, *U. of Texas at Dallas*

Investing in a distant industry, an agent in a network consisting of directional ties may suffer a decline in performance due to its lack of industry-specific knowledge. We argue that not every contact in such a network is able to advise the focal agent equally well because contacts connected by variant tie types possess different industry-specific knowledge and tie directionality affects the likelihood of having contacts that possess needed knowledge. We test our hypotheses based on a population of venture capital (VC) firms spanning the entirety of Chinese VC history from 1991 to 2017, supplemented by qualitative interviews with VC partners. Our findings indicate that the focal lead VC benefits more from contacts connected by outward ties than inward ties, while contacts connected by reciprocal ties provide the most informational benefits. Furthermore, cross-border contacts provide the focal VC informational benefits to improve its performance.

Paper is Available to Meeting Registrants Only.

IM: Knowledge Transfer Speed in Low Carbon Sector: Roles of IJV's DC and Organizational Relations

Author: **Linlan Huang**, *SOAS U. of London*

Author: **Huan Zou**, *SOAS U. of London*

Prior studies emphasise parent-IJV knowledge flows and dynamic capabilities to influence the speed of international knowledge transfer. However, the interaction between IJV-local relationships and dynamic capabilities to boost knowledge transfer speed over time are still debated in emerging markets. In this paper, we build on the dynamic capabilities concept and discuss their interplay with IJV's organisational relationships to understand the changing speed of knowledge transfer in inter-phase and intra-phase perspectives. Based on a longitudinal multiple case study, we undertook two rounds of fieldwork in 2018 and 2020, with 37 informants in 66 semi-structured interviews. Our findings propose the knowledge transfer of IJVs both reside within the outset of the IJV-parent and the IJV-local relationship. IJVs can develop their sensing, assimilation and transformation capabilities by effectively developing and leveraging their relationship with their parents and various local partners to facilitate knowledge transfer speed across absorption, implementation, and innovation phases. To facilitate knowledge transfer speed, sensing capabilities enable IJVs to identify knowledge gaps in learning transferred knowledge and access external knowledge to fill the gaps, while assimilation/transformation capabilities use acquired external knowledge to enhance IJV's knowledge base through integration or reconfiguration. Overall, the interaction between dynamic capabilities and external knowledge across phases builds a sustainable competitive advantage in operating in the domestic market and approaching international markets.

IM: Contextualizing Necessity Entrepreneurship: A Cross-National, Comparative Perspective  

Author: **Joshua Ault**, *Thunderbird School of Global Management at ASU*
Author: **Andrew Spicer**, *U. of South Carolina*

While the comparative international entrepreneurship literature has explored the effects of national context on the discovery, evaluation, and exploitation of market opportunities, less comparative work has examined the national characteristics that drive the intensity of needs-based pushes into self-employment. To fill this gap, we apply a needs-based perspective to explain the wide cross-national diversity in levels of own-account self-employment across 167 country cases. Our results provide evidence that a needs-based lens offers an important framework to not only compare the conditions of self-employment between developing and developed country settings, but also to identify significant variation within the developing world itself. By splitting our global sample in half by income level, we find that the institutional-based causal conditions that explain cross-national variation in the scale of own-account self-employment are only recognized if the world's poorest countries are included in comparative analysis. In the discussion section, we address the issue of country-level selective sampling bias to advance a more inclusive international entrepreneurship research agenda that includes the analysis of needs, as well as opportunities, when comparing national contexts.

IM: Performance Implications of Startups' Growth Speed: A Moderating Role of National Innovation Systems

Author: **Jukyeong Han**, *U. of Kansas*
Author: **Minyoung Kim**, *U. of Kansas*

This study investigates the relationship between speed of startups' growth and their performance, and the moderating role of national innovation systems (NISs) on the relationship. Drawing on diffusion of innovation, startup growth, and NIS literature, we develop a theoretical framework on (1) how the rapid growth of startups creates relative advantages in diffusing their innovation and (2) how the extent of the advantages from rapid growth changes across NISs. We maintain that startups' rapid growth provides visibility and legitimacy to facilitate diffusion of their innovation, resulting in higher likelihood of startups' success. We further maintain that the speed of growth and the nature of NISs are functionally equivalent in diffusing startups' innovation and, thus, are in a substitutional relationship when influencing startups' performance. Results of the empirical analysis with 6,154 startups operating in 21 countries corroborate our theoretical predictions that there is a positive association between speed of startup growth and performance; and that favorable NISs substitute the role of rapid growth in enhancing startups' performance.

IM: Political Tension and the Internationalization of Innovation by Emerging Market Firms 

Author: **Ziyi Chen**, *HKUST*

There is increasing evidence that suggests a trend of de-globalization and highlights the importance of political factors in firms' international activities. The issue is more salient for emerging market firms which are trying to foster global innovation but face potential discrimination in advanced countries because of the increasingly intense political climate. While political tension reduces the attractiveness of a prospective foreign market, it increases the need for a firm to protect their knowledge assets in that market, especially if the market is critical for the firm's competitive advantage. Using the data of worldwide patents originally developed by Chinese listed firms, we show that political affinity between a firm's home country and a potential host country is negatively associated with the likelihood of filing foreign patents in that country. Moreover, we theorize and find that the negative relationship is contingent on the competition from domestic rivals, the strength of intellectual property rights protection in the host market, and the political objective of the state.

IM: Where Does Working from Home “Work”? Effects of National Environment  

Author: **Hilla Peretz**, *ORT Braude College*

After being forced to adopt work-from-home (WFH) arrangements during the COVID-19 outbreak, many organizations are considering whether to continue these arrangements post-pandemic. To make such decisions, it is necessary to understand the environmental factors that influence employees' capacity to WFH effectively. This study contributes to this understanding, drawing on institutional theory—and specifically the country institutional profile (CIP) approach, in conjunction with the attribution theory—to develop a model that characterises how employees' WFH outcomes are shaped by their national institutional environment. I tested this model using data from multiple national-level sources, together with individual-level data obtained via a survey of 749 employees, from 10 countries, who worked from home during the pandemic. The findings show that a country's human capital and technological infrastructure (cognitive institutions), as well as its labour legislation (regulatory institutions), are positively related to employees' perceived WFH productivity and satisfaction. Conversely, cultural-level uncertainty avoidance and masculinity (normative institutions) are negatively related to these outcomes. These relationships are intensified among employees with high individual ability to adjust to WFH demands. The study's findings can improve the capability of organizations, especially multinational organizations, to properly select where to continue implementing WFH post-pandemic, and to develop country-specific WFH strategies.

IM: Retaining Marketing Professionals in Foreign MNC Subsidiaries: The Role of Learning Opportunities  

Author: **Wolfgang Sofka**, *Copenhagen Business School*

Author: **Ulrich Kaiser**, *U. of Zurich*

Author: **Christoph Grimpe**, *Copenhagen Business School*

Skilled marketing professionals are of strategic importance for foreign MNC subsidiaries because they understand the particularities of local customers and can balance them with the MNC's global marketing strategies. However, the factors keeping them from leaving for other career opportunities are hardly understood. We reason that MNC subsidiaries are more likely to retain marketing professionals if they can offer valuable learning opportunities. We suggest that these arise when subsidiaries have digital expertise that enables professionals to deploy digital technologies in a creative way for innovative marketing. Integrating the learning opportunities from digital expertise for innovative marketing with strategic human capital mechanisms explaining retention, we argue that digital expertise creates non-monetary incentives and hence voluntary mobility constraints for marketing professionals. Moreover, we argue that the retention effect from digital expertise is stronger than for a subsidiary's R&D expertise and in subsidiaries specialized in marketing activities. We test and support all hypotheses using employer-employee data for 5181 marketing professionals working for 539 foreign MNC subsidiaries in Denmark from 2010 to 2012. Our findings have important implications for the persistence of marketing capabilities in MNC subsidiaries and the effect of digital expertise for the retention of skilled subsidiary employees.

IM: Equality, Diversity and Inclusion in International Business: A Review and Research Agenda    

Author: **Stacey Fitzsimmons**, *U. of Victoria*

Author: **Stella M. Nkomo**, *U. of Pretoria*

Author: **David C. Thomas**, *U. of Victoria*

Increasingly, social movements are pushing international organizations to consider a more universal as opposed to local approach to global equality, diversity and inclusion (EDI) responses. We review research on EDI in international business (IB) and in other business fields to understand how international business research could reframe the way international organizations manage EDI effectively across borders. Our review includes a text analysis that finds EDI research in IB emerged about a decade later than research outside of IB, that gender is the most studied diversity category, and that performance and institutional arguments are more common than moral or resistance arguments. We follow this with a narrative review, in which we find that IB research on EDI excels in modeling complexity and theorizing foundational mechanisms. We argue that incorporating the traditions of EDI research with IB theories can refocus IB research toward arguments that consider moral principles as well as performance, power differentials, resistance to EDI and the dynamic, contextualized nature of EDI in international organizations.

Panelist: **Dana B. Minbaeva**, *King's College London*
Panelist: **Jane Lu**, *City U. of Hong Kong*
Participant: **Mustafa Ozbilgin**, *Brunel U.*

International organizations must respond to increasing pressures to support equity, equality, diversity and inclusion (EDI) consistently across countries, while also respecting local norms and institutional differences. In addition, the unique characteristics of international organizations may provide opportunities to lead in creating environments around the globe that work for everyone. In this panel we consider how equity/equality, diversity, and inclusion influence international organizations, and how international organizations manage and leverage these phenomena. The panelists will explore and debate this influence from the perspective of antecedents, implementation processes, outcomes, and expanding theory beyond cultural diversity in IB. They will also address both top-down and bottom-up mechanisms between people and organizations. Finally, this set of panelists is drawn from the editors of two recent special issues on EDI in IB: The former was published recently in AIB Insights, and the latter is upcoming, with a submission deadline of September 2022 in JWB. Authors interested in submitting to the JWB special issue are encouraged to come to this panel to discuss their plans with editors.

Storytelling, SEAM, Public Service, and Coaching

Session Moderator: **Veronique Zardet**, *U. of Lyon, IAE Lyon, MAGELLAN, ISEOR, FRANCE*

MC: Qualimetric Storytelling Techniques {Words and Numbers} for Decision Making and Effective Management

Author: **Veronique Zardet**, *U. of Lyon, IAE Lyon, MAGELLAN, ISEOR, FRANCE*
Author: **Maité Rateau**, *ISEOR*

Carolyn Dexter Award Nominee

Combining qualimetric concept with storytelling principles could allow each stakeholders to better appropriate the various issues of the organization, make them involved in the figures of the company and so improve their decisions and actions. The many observations made during interventions-researches, and which the chapter details, show that qualimetric storytelling makes possible to potentiate the energies of change of the actors, then to put this energy at the service of a better level of professionalism.

MC: Value Creation and Internationalization of Performing Arts: SEAM Evaluation in Flamenco Festivals

Author: **María Angeles Rastrollo-Horrillo**, *U. of Málaga*

This paper tells the story of a consulting research project in the International Association of Flamenco Festivals, with the aim of evaluating their role in the internationalization of flamenco and thus legitimizing their position in the performing arts (PAs) network. It would seem that the contribution of Flamenco Festivals (FFs) to the internationalization of flamenco companies is not known by other agents in the domestic network (artists, producers, or Spanish public administrations), nor has it been the subject of study in the literature. Using the Socio-Economic Approach to Management (SEAM), this research highlights the areas of value creation of these festivals, and their contribution to the internationalization of Spanish flamenco artists. Together with the organizers of festivals held in Spain and in 8 other countries, Spanish artists and producers are incorporated into the evaluation to generate a shared storytelling. The result shows that FFs have a central role in the creation of value (economic, social-cultural) by mobilizing PAs agents in origin and destination, helping to reduce the tensions that limit the creation of value in international markets. This research supports the important contribution of management consulting in the generation of useful and innovative knowledge with and for organizations.

MC: Role Tensions of Local Authority Executives: An Empirical Study in a Local Authority

Author: **Florence Noguera**, *U. Paul Valery, Montpellier*
Author: **Eric Scarazzini**, *U. Paul Valery, Montpellier*
Author: **Laurent Cappelletti**, *LIRSA-Cnam Paris*
Author: **Jean-Michel Plane**, *U. Paul Valery, Montpellier*

The governance of local authorities is strongly linked to political leadership. Based on an empirical study based on an intervention-research process carried out in a local authority of 797 employees, the article proposes to analyze the causes and effects of role tensions experienced by local authority executives on involvement. How do these role tensions manifest themselves between elected officials and local executives? The article develops a reflection on the perspectives of improvement allowing a better balance between political and managerial leadership in the governance of local authorities.

MC: Managing Metaphors—Executive Coaching and the Role and Power of Analogy

Author: **Evan Hayden Offstein**, *Frostburg State U.*
Author: **Ryan Kentrus**, *Frostburg State U.*
Author: **Stacy Wassell**, *Frostburg State U.*
Author: **Ronald L. Dufresne**, *Saint Joseph's U.*

For the better part of two decades, the practice of executive coaching seems to have outpaced the scholarly study of this popular managerial development intervention. Cemented now as commercially mainstream and pivotal in the portfolio of executive education tools, academics have urged fellow scholars to better understand the “black box” of how coaching is enacted and how it unfolds in practice. Indeed, some of the mixed results concerning the efficacy of executive coaching appear anchored to the confusion and surrounding ambiguity of the episodic and processual nature of coaching. In this conceptual paper and field study, we turn to the power of metaphor to explore how executive coaches, either consciously or subconsciously, approach and enact their role. In particular, we identify two core metaphors that enjoy some dominance in how executive coaches make sense of their role and duties: coach as pastor and coach as therapist. Even more, and in light of some of the limitations of the existing metaphors, we offer an alternative metaphor, coach as physical trainer, that may offer a more compelling, comprehensive, and accurate portrayal of the executive coach.

Teaching and Enhancing Teamwork Development Skills

Session Moderator: **Rosalyn J. Rufer**, *State U. of New York Empire State College*

MED: Succeeding in a Virtual World – Best Practices for Teaching Teamwork Skills  

Author: **Rosalyn J. Rufer**, *State U. of New York Empire State College*
Author: **Betul Lus**, *SUNY Empire State College*

Effective teamwork has grown to be one of the most important aspects of any organization to enhance its performance and success in today’s highly competitive global business environment. As a result, business programs are including teamwork as part of their curricula; and higher business education accrediting agencies have identified teamwork as one of key student learning outcomes. This paper identifies strategies for incorporating teamwork as part of developing effective teamwork pedagogy in online graduate business courses. Building on the work by Tuckman (1965) and Matthews and McLees (2015), this paper discusses a pedagogical approach to teamwork that is organized around the four steps of successful group process, namely forming, storming, norming, and performing, and how to develop team leadership skills for each of these in a virtual learning environment. Empirical data from a case study provides statistical evidence that supports our recommendations

MED: Reconceptualizing Extremes in Global Virtual Teams and Their Effect on Performance

Author: **Theresa Bernhard**, *FAU Erlangen-Nürnberg*
Author: **Justin Kraemer**, *Mae Fah Luang U.*
Author: **Michael Raisinighani**, *Texas Woman's U.*
Author: **Erika Vaiginiene**, *Vilnius U.*

In global virtual teams (GVTs), members need to navigate across various types of differences to achieve common goals, whereby cultural, language and organization-related distances have been at the center of attention of extant literature. Research has largely neglected to focus on the dispersion of cognitive ability among members and time zone differences. We integrate insight from social comparison theory and the choice effect to better understand how members of GVTs reconceptualize these differences in their efforts to achieve team performance. To test our hypotheses, we employed Hierarchical Linear Regression on 173 GVTs from the x-culture project. Our analysis reveals that the individual with the highest cognitive ability drives the performance of the team, while the team member with the farthest geographical positioning from the center of instruction depicts an impediment to team performance. Thereby, both the cultural diversity within the team as well as the dispersion of time zone differences among team members influence these relationships.

MED: Managing Groups: Skills to Uncover the Pre-forming Stage and Distributing Roles 

Author: **Ankit Agarwal**, *U. of Adelaide*

Until organizations exist, groups will continue to exist. As the literature is abundant on what managers could do to ensure that groups function properly, it also discusses group failure and managers' mismanagement the cause of the failure. In this paper, I have kept Tuckman & Jensen's (1977) Stages of Group Development Model at the centre of the discussion and introduced the Pre-Forming Stage that precedes the Forming stage of the Tuckman & Jensen's (1977) model. In this stage, using scholarly concepts, I have identified how people harbour positive or negative mindsets (mostly unaware) about others before starting a conversation at a group level and how adjourning stage from the previous group experience play an active role in it. I have discussed how exploring the Pre-Storming stage managers can identify the source of conflict that could plague the group work if not uncovered. In addition, I have discussed how managers can allocate roles and responsibilities according to group members' strengths and allowable weaknesses (Belbin, 1993) by looking at the strengths of one team member and how they complement the weaknesses of another team member(s). The discussion in this paper adds value to the literature on group development and conflicts, showing skills and mindsets that managers could develop to manage their group. This paper discusses how the seeds of its development (the start of a conflict) are self-sown in the pre-forming stage at an individual level, well before the forming and storming stages of Tuckman and Jensen's (1977) group development model.

Teaching Entrepreneurship: Challenges and Opportunities

Session Moderator: **Marco Van Gelderen**, *Vrije U. Amsterdam*

MED: Entrepreneurship Education for Gross National Happiness in Bhutan 

Author: **Marco Van Gelderen**, *Vrije U. Amsterdam*

The Buddhist Kingdom of Bhutan enjoys global fame for its pursuit of GNH (Gross National Happiness) as an alternative model of development. An increase in youth unemployment has made it look at entrepreneurship as a possible solution. What would entrepreneurship education look like in a context where policies and culture promote simple living and contentment, are cautious with regard to cultural change, and seek to constrain wealth accumulation of private sector entrepreneurs? This essay offers a number of suggestions for entrepreneurship education guided by GNH principles in the service of “Gross National Happiness entrepreneurship”. The essay concludes by discussing what Western cultures can learn from GNH infused entrepreneurship education.

MED: Creation, Control, and Co-existence as the Foundations of Experiential Entrepreneurial Education

Author: **Apurva Ganoo**, *Aalto U. School of Business*

Author: **Ville Eloranta**, *Aalto U. School of Business*

This study explores the key foundations of experiential entrepreneurial education. More specifically, the study looks at experiential methods in teaching entrepreneurial education, and understanding the roles and responsibilities of the key stakeholders. Connecting to the universities as a whole, possible implications of experiential entrepreneurial education on universities are assessed. Utilizing a grounded theory approach, this study looked at the Young Innovators and Entrepreneurs Pilot, a pilot under the EU ATTRACT initiative. A total of 22 semi-structured interviews were conducted over two rounds, focusing upon the students involved within the pilot, the organizing committee, and the educators responsible for the implementation of the pilot. The results show that three aspects – 1) creation, referring to a constructivist approach towards entrepreneurial education, 2) control, pertaining to the level of involvement of students and educators, and 3) co-existence, the ability for entrepreneurial education to co-exist within existing educational paradigms – can provide suitable foundations for the implementation of experiential entrepreneurial education.

MED: Ideation Stage STEM Entrepreneur’s Cognitive Frame on Sustainability: A Leadership Development   

Author: **Sushil S. Chaurasia**, *U. of New Brunswick*

Author: **Dominic J. Blakely**, *U. of New Brunswick*

Author: **Dhirendra Shukla**, *U. of New Brunswick*

There are consistent appeals for STEM (Science, Technology, Engineering and Mathematics) entrepreneurial efforts, to sync with real-world problems and sustainability. Even though most entrepreneur acknowledge their efforts for tackling sustainability concerns, it is uncertain how serious they are or whether they truly comprehend the basic sustainability understanding. So, it’s important to have a critical understanding of underlying cognitive components that drive the sustainability leadership paradigm, as young entrepreneurs find it difficult to interpret and make sense of it. By using a cognitive approach to sustainability leadership development, the current investigation looks at how nascent entrepreneurs think about sustainability leadership and how they make sense of them to be sustainability leader. Qualitative data from 113 ideation stage startups showed that sustainability leadership identity is associated with implicit leadership theory and leadership-structure schema. Sustainability Leaders were categorized as sustainability agnostic leaders, sustainability compliance leaders, situational sustainability leaders and sustainability evangelists. Managerial and policy for nurturing sustainability leadership development are discussed.

MED: Institutional Entrepreneurship and Curriculum Development in the European Higher Education Area      

Author: **Toyoko Sato**, *Copenhagen Business School*

Author: **Charles Thomas Tackney**, *Copenhagen Business School*

This paper examines institutional entrepreneurship in curriculum development within the Bologna Process and European Higher Education Area. As an exploratory qualitative paper focusing on a business university in Scandinavia, we interviewed 22 individuals variously involved in curriculum development at the school and included two scholar-practitioners from another EHEA member state along with four scholars working with curriculum development in the U.S.A. for contrast and complementary perspectives. We demonstrate the inside-out and the outside-in dynamic flows and specify key factors that constitute contemporary institutional entrepreneurship for university level curriculum change in the European Higher Education Area.

Paper is Available to Meeting Registrants Only.

MED: Developing Enterprising Competencies by Means of Deliberate Practice  

Author: **Marco Van Gelderen**, *Vrije U. Amsterdam*

This submission describes an entrepreneurship training in which participants, over a seven-week period, learn about deliberate practice (DP) and use this approach to develop an aspect of an entrepreneurial competency of their choosing. Participants first identify a point of improvement, and investigate this point conceptually. They then co-design, together with the teacher, a learning task in daily life in which they are able to repeat the behavior to be practiced for approximately one hour a day for two weeks (depending on each participant’s task). Applying Deliberate Practice principles, they collect a range of feedback on their performance and make small adjustments to their practice if necessary. Evaluation results show that participants find both short- and long-term gains in their competency development, and value having not only developed a competency, but having learned a competency development method as well.

Using Humor in Management Education: A Tool to Thrive Positive Change *Using Humor in Management Education*

Organizer: **Florian Findler**, *WU Vienna U. of Economics and Business*
Organizer: **Anja Grill**, *WU Vienna U. of Economics and Business, Institute for Managing Sustainability*
Presenter: **G. James Lemoine**, *U. at Buffalo, The State U. of New York*
Presenter: **Lisa T. Stickney**, *U. of Baltimore*
Presenter: **Patrick Chandler**, *U. of Colorado, Boulder*
Presenter: **Beth Osnes**, *U. of Colorado, Boulder*
Presenter: **Andre Martinuzzi**, *WU Vienna U. of Economics and Business*
Presenter: **Angelo Spörk**, *WU Vienna U. of Economics and Business*

Research shows that utilizing humor in the classroom helps to motivate students and build a positive relationship between them and educators. When integrated into course design, humor increases students' understanding of the topic and improves their learning outcomes. Humor also helps to increase awareness among students for current social and ecological problems, while also encouraging them to positively deal with these issues. However, management educators often regard their role and the topic they cover as too serious to engage with humor and are afraid of negative responses in case humor comes across inappropriately. This might be a potential reason why humor has not become commonplace within the professional development of educators. This PDW addresses this gap by demonstrating tools that allow participants to utilize humor in their teaching strategies. It introduces the basic functions of humor and illustrates how it can be successfully applied inside the classroom and through online education. It also introduces approaches to integrate humor in course design that enable students to address social and ecological problems. In this regard, the PDW will illustrate a successful format in which students collaborate with professional comedians to create stand-up comedy on climate change, and an award-winning course, in which students create scientifically sound scripts centered upon sustainability problems in the style of late-night comedy (e.g., John Oliver). In an interactive exercise session participants gain novel insights into how to effectively utilize humor in their teaching strategies while avoiding possible negative effects.

Leadership Matters: Contemporary Topics in Leadership

Session Moderator: **Karyn L. Wang**, *U. Of Sydney*

MOC: Social Outcomes of Leader Covering up Errors for Employee: A Relational Identification Perspective

Author: **Qiao-Ting HU**, *School of management, Zhejiang U.*
Author: **Junjie WEI**, *School of management, Zhejiang U.*
Author: **Xiaoyun Xie**, *Zhejiang U.*

Leader covering up errors for employee defined as the act of leaders keeping employee's errors known only to those who make mistakes is common in today's workplace, yet research on errors has focused on how employees coping with their own errors (e.g., learning from errors, reporting errors) and has paid less attention to how leaders dealing with employee's errors. Thus, existing theory is unclear on the consequences of leader covering up errors for employee. Drawing on relational identification theory, we propose that leader covering up errors for employee produces social gains for leaders. The results of a multi-source, three-wave field study revealed that leader covering up errors for employee was positively related to OCB toward leader via relational identification with leader. Furthermore, the extent to which leader covering up errors for employee was associated with relational identification with leader depended upon employee psychological entitlement, such that employees experienced higher relational identification with leader when their psychological entitlement was high rather than low. Overall, our work provides insights into the social consequences of leader covering up errors for employee and offers theoretical contributions for research on errors.

MOC: Make your mark: How leaders' Implicit Voice Theories Affect Team Voice Dynamics and Patient Safety

Author: **Karyn L. Wang**, *U. Of Sydney*
Author: **Helena Nguyen**, *U. Of Sydney*

To date, researchers have largely examined the implicit voice theories of individual employees on their behaviors at work. But these implicit voice theories are generally acquired through life experiences and can be held by organizational leaders. The extent to which the implicit voice theories held by leaders influence their team's voice dynamics is currently unknown. In this study, we examine a theoretical model detailing how leaders' implicit voice theories interact with empowering leader behaviors to influence downstream emergent team states (psychological safety), team motivation (team potency), and team behaviors (team voice), as well as its impact on the end-user (patient falls in acute hospital settings). Using a sample of over 2,000 nurses and midwives working across 159 wards/teams in hospitals, we find that leaders' implicit voice belief of negative career consequences together with low empowering leader behaviors increase patient falls by decreasing team psychological safety, team voice, and team potency. On the other hand, the implicit voice belief of needing solid evidence combined with high empowering leader behaviors to increase patient falls through these cascading downstream team dynamics. We conclude by discussing the theoretical advancements and practical implications of our findings.

MOC: A Moderated Mediation Model of Self-Leadership and Innovative Work Behaviors

Author: **Hira Salah Ud Din Khan**, *School of Management, Jiangsu U., China*
Author: **Ma Zhiqiang**, *School of Management, Jiangsu U.*
Author: **Muhammad Salman Chughtai**, *Faculty of Management Sciences, International Islamic U., Islamabad*
Author: **Li Mingxing**, *School of Management, Jiangsu U.*

By infusing social cognitive theory, the present study examines the moderated mediation model of self-leadership on innovative work behaviors. This study investigates the mediating effect of creative self-efficacy and the moderating influence of knowledge sharing in the proposed model. To assess this phenomenon, the data were collected at two different times from 283 voluntary participants working in different software houses in major cities of Punjab, Pakistan. The findings indicated that self-leadership is essential for promoting innovative work behaviors. The results also support the mediating role of creative self-efficacy in the association between self-leadership and innovative work behaviors. Moreover, the moderating impact of knowledge sharing indicated that a higher level of knowledge sharing strengthens the relationship between self-leadership and innovative work behaviors. This study recommends ways for organizations to develop innovative work behavior through self-leadership attributes. MOC: Deciphering The Perils Of Working With A Psychopath Leader: A Dual Moderated Mediation Model

Author: **Tasneem Fatima**, *International Islamic U., Islamabad, Pakistan*
Author: **Muhammad Ali Asghar Sandhu**, -

This study aims to examine the relationship between psychopathic leadership and subordinates' work alienation through a serial mediation and moderation mechanism. The study suggests that malicious envy and anger rumination sequentially mediate the relationship between psychopathic leadership and employee work alienation. Hostile Attribution Bias is proposed as a moderator both between leader psychopathy and malicious envy relationship along with malicious envy and anger rumination relationship. The study takes its theoretical foundation from Affective Events Theory (AET) as an overarching theory. We suggest that psychopathic leadership causes malicious envy, an emotional reaction that further leads to an employee's cognitive appraisal of such a situation in the form of anger rumination, which further manifests into work alienation. The study employs a time-lagged survey method to quantify the 417 responses from service sector organizations at three-different time lags. Results indicate psychopathic leadership is positively associated with work alienation; this relationship is further sequentially mediated by malicious envy and anger rumination. Moreover, Hostile Attribution Bias, a dual moderator, strengthens psychopathic leadership's impact on malicious envy and malicious envy's impact on anger rumination for employees with high levels of hostile attribution bias.

Author: **Donald H. Klueemper**, *Texas Tech U.*

Abusive supervision undermines subordinate's extra role behaviors such as voice. However, certain subordinates see positive motives in their supervisor's abusive behaviors. Taking insights from the attribution-based theory of workplace harassment, we suggest that subordinates attribute leader's abusive supervision to three motives: injury initiation, leader-centric performance promotion and follower-centric performance promotion. We contend that the more the follower attributes their leader's abusive behavior to injury initiation and leader-centric performance promotion motives, the more likely they are to engage in defensive voice. Contrarily, we posit that the more the follower attributes their leader's abusive behavior to follower-centric performance promotion motive, the less likely they are to engage in defensive voice. Pilot Study employs a one-time, single-source design to test the psychometric properties of the focal measures and construct validity of the follower-centric and leader-centric performance promotion motives. Main Study employs a multi-source, time separated design to test mediation and moderated-mediation hypotheses via structural equation modeling. Further, the theoretical and practical implications of the findings are discussed.

Resilience and Growth: Individual, Relational, Team, and Leader Perspectives

Session Moderator: **Daniela Datzer**, *LMU Munich*

MOC: Trait Resilience: Jingle Fallacy or Triangulation? 

Author: **Mehri E. Baloochi**, *Alberta School of Business*
Author: **Arran Caza**, *U. of North Carolina, Greensboro*

This study investigated conceptual and empirical concerns related to trait resilience through systematic review and meta-analysis. First, investigating multiple conceptualizations and operationalizations of trait resilience, we found imprecision and incompatibility in definitions and measures of this construct. Then, based on an analysis of 85 samples comprising 23,983 participants, we assessed whether the eight most commonly used measures of trait resilience in the organizational literature reflected a jingle fallacy (i.e., calling different constructs by the same name) or triangulation (i.e., assessing different aspects of a complex construct) across different measures. The results indicated that the specific measure used to operationalize trait resilience explained between 18% and 85% of the variance in the relationship between trait resilience and its correlates. Moreover, an item-level examination of the measures revealed little consistency across scales and uneven theoretical correspondence with the concept of trait resilience. The findings suggested the presence of a jingle fallacy in the literature. To advance the study of trait resilience and stimulate theoretically informed new research, we used the results to propose a different way of thinking about trait resilience and its measurement.

MOC: Team Members' Resilience and the Emergence of Team Resilience as Drivers of Innovation Performance

Author: **Daniela Datzler**, *LMU Munich*
Author: **Stefan Razinskas**, *Freie U. Berlin*

Resilience — the capacity to bounce back from adversity — is critical for innovation. However, most studies have examined resilience and its positive effects for innovation performance at the individual level, which does not fully capture the organizational reality of individuals working together in teams. By following core tenets of conservation of resources theory, we ask whether resilient individuals also build a more resilient and, eventually, a more innovative team. To address this critical question, we conduct a three-wave study of 58 newly formed innovation teams with 169 individuals and external performance ratings. Specifically, we examine whether the average level of members' individual resilience initially available to their teams translates into innovation team performance via team resilience as an emergent state later in the process. We further test whether this indirect effect is contingent on teams' collective exposure to setbacks. The results support our theorizing that only when there is little exposure to setbacks early in the project, team members' average resilience capacities relate to innovation team performance via team resilience. We conclude that resilient individuals do not necessarily make resilient teams because the experience of intense setbacks in early project phases tend to inhibit team members' resilience capacities to materialize in team resilience and innovation team performance. Our findings contribute to current discussions on the emergence of team resilience as a critical process in innovation teams.

MOC: Resilient Leadership: The Role of Leaders in Facilitating Positive Adaptation to Adversity

Author: **Elen Choi**, *Ted Rogers School of Management, Toronto Metropolitan U.*
Author: **Kristyn A. Scott**, *Ted Rogers School of Management, Toronto Metropolitan U.*
Author: **Ramzi Fathallah**, *Telfer School of Management, U. of Ottawa*
Author: **Pearlyn Ng**, *Ted Rogers School of Management, Toronto Metropolitan U.*

Despite the increasing need to understand the processes that underpin resilience in organizations, leader resilience and the role of the leader supporting the resilience of their followers are understudied. Adopting an exploratory and inductive qualitative approach we draw on 32 in-depth interviews with leaders in a wide variety of industries and occupations to advance a model of leading with resilience. We propose that leaders who respond to adverse situations with resilience do so by drawing on their intrapersonal resources so that they can function as affective, behavioral, and cognitive resources for their followers. This, in turn, allows them to strengthen their ability to lead. We conclude by integrating regulatory focus theory, proposing that resilient leaders filter their intrapersonal responses to adverse situations to model resilience for their followers. In turn, they learn from the resulting follower responses, strengthening their ability to lead with resilience.

 MOC: Organizational Attention Towards Relationships: A Dynamic Model of Loneliness and Resilience

Author: **Caroline A Bartel**, *U. of Texas at Austin*
Author: **Kevin W. Rockmann**, *George Mason U.*

Reported rates of loneliness recently have reached unprecedented levels, suggesting that organizations can be difficult places to cultivate interpersonal connections. Research shows that loneliness carries numerous negative outcomes for individuals and casts loneliness as an individual problem that requires individual-oriented solutions. This view ignores the possibility that loneliness is symptomatic of a broader organizational problem, and further that organizations may be a root cause of widespread loneliness. This conceptual paper develops a framework that construes loneliness as a collective-level property; a crucial indicator that the relationships organizations need to be resilient during crises are deficient. We theorize a dynamic system in which the attention paid to relationships at the organizational-level continually shapes and is shaped by the quality of relationships emerging at lower levels. We adopt the attention-based view to outline how different patterns of attention are animated by different configurations of structures for building relationships, creating distinct relational systems. We contrast three prototypical relational systems: relational advocacy, relational antipathy, and relational indifference. These relational systems trigger different relational networks that affect loneliness at the individual-level and resilience at the organizational-level. This framework offers an entirely novel view of loneliness with notable theoretical and practical contributions.

Group Morality: Perceptions and Presentations

Group Morality: Perceptions and Presentations

Presenter: **Julia A. Langdon**, *London Business School*
Presenter: **Ana Gantman**, *Brooklyn College*
Presenter: **Aharon Cohen Mohliver**, *London Business School*
Presenter: **William Brady**, *Yale U.*

Perceptions of the morality of organizations drive important outcomes for both organizations themselves and their stakeholders. In this symposium four teams of scholars present research on morality in groups explaining the psychological processes behind our perceptions of group morality as well as providing insight into the consequences that these perceptions create. Ana Gantman begins the symposium with evidence for a mental model through which people assess wrongdoing in hierarchical organizations. Next, Julia Langdon also explores perceptions following unethical behavior by group members. She investigates the relationship between the number of group members responsible and perceptions of the group as a whole, making the case that perceptions of collusion mediate this relationship. Subsequently, Aharon Mohliver explores how closing loopholes – an act done in the service of reducing deviance and increasing compliance – can, under certain conditions increase subversion. Finally, Bill Brady submits research that shows how the medium through which many people learn news – social media – is itself triggering systemic over perception of the moral outrage of groups. Together these talks provide insights into the underlying psychological mechanisms driving our perceptions of group morality, as well as the consequences that this can have.

The Good in the Bad and the Bad in the Good: The Counterintuitive Self in Organizational Life

The Counterintuitive Self in Organizational Life

Session Chair: **Danbee Chon**, *Stanford U.*
Session Chair: **Kristina Wald**, *U. of Chicago Booth School of business*
Discussant: **Richard Paul Larrick**, *Duke U.*
Presenter: **Danbee Chon**, *Stanford U.*
Presenter: **Kristina Wald**, *U. of Chicago Booth School of business*
Presenter: **Marius Van Dijke**, *Erasmus U. Rotterdam*
Presenter: **Rebecca Schaumberg**, *The Wharton School, U. of Pennsylvania*
Presenter: **Daniel Newark**, *HEC Paris*

In this symposium, we seek to bring together a collection of papers that not only broaden our understanding of self-oriented research in organizations, but also that highlight the ways in which these self-processes—some of which have been considered as largely positive and others as negative—may have unexpected upsides and downsides. In our first presentation, Chon, Sitkin, and Wiesenfeld propose that conceptions of self-awareness should distinguish among its three distinct focal targets (internal, external, and social) and present a new measure grounded in these distinctions through the lens of experienced (self-reported) and perceived (other-reported) self-awareness. The authors then use this reframing to challenge lay beliefs regarding the positive influence of self-awareness. In our second presentation, Wald and Chaudhry examine how self-awareness affects interpersonal judgment. They find that in some cases, self-awareness actually lowers trust, and that this effect is strongest when the target's behavior is perceived as easy to change (i.e., highly mutable). In our third presentation, Brockner and Van Dijke examine how self-affirmation can affect workplace behavior. They find that self-affirmation and work engagement interactively influence employees' return to work behavior. In our fourth presentation, Schaumberg and Chavez disentangle the consequences of shame, a self-conscious emotion. They find that the affective core of shame proneness relates positively to task performance, but that avoidance tendencies in response to transgressions are unrelated or negatively related to performance. Finally, in our fifth presentation, Newark and Dane examine the upside of abandoning a self-narrative. They consider why and how one might do so – and what one may stand to gain when one does.

MSR: **Gender and Religious Diversity, Task-Related Team Attributes, and Organizational Embeddedness**   

Author: **Debjani Ghosh**, *Indian Institute of Management, Ranchi*
Author: **Jorge A. Gonzalez**, *U. of Texas Rio Grande Valley*
Author: **Richard Aristeo Rodriguez**, *U. of Texas Rio Grande Valley*

Drawing from the categorization elaboration model, we examine gender and religious diversity as antecedents of organizational embeddedness, including the moderating effects of team-level cognitive diversity and goal interdependence. The study was conducted in Malaysia, a country where religious diversity has become more prominent following a wave of Islamic fundamentalism and that is also less gender-egalitarian than Western societies. Study results found that the main effects of gender and religious diversity were not associated with organizational embeddedness, and that there were no asymmetrical group differences. However, results for moderation showed that cognitive diversity exacerbated an adverse relationship between religious diversity and organizational embeddedness for Muslim employees, but not for non-Muslim employees. Further, goal interdependence weakened an adverse relationship between gender diversity, an effect that was more pronounced for female employees.

MSR: **Gender, Civic Engagement, and the Importance of Integrating Spirituality**   

Author: **Jeffrey Miles**, *U. of the Pacific*
Author: **Stefanie E Naumann**, *U. of the Pacific*

Spirituality is associated with a variety of positive life outcomes, and the university experience has long been regarded as a critical period of spiritual identity development. We empirically examine a model of the relationships between gender, civic engagement, and the importance of integrating spirituality into one's life in a large sample of undergraduates. We propose that a key explanation for why gender differences exist in the importance of integrating spirituality into one's life may be that civic engagement is intervening in the relationship between gender and spirituality. To test our hypotheses, we administered surveys to 964 first-year undergraduate students in the western United States. We found that women had higher scores for civic engagement and the importance of integrating spirituality into their lives than men. In addition, civic engagement mediated the influence of gender on the importance of integrating spirituality into one's life. Implications for theory and practice are discussed.

MSR: **Valuing the Good. Female Top Leaders Development of a Sustainable Mindset (WITHDRAWN)**

Author: **Gry Espedal**, *VID Specialized U.*
Author: **Ingunn Ulfsten**, *VID Specialized U.*

While much literature on female leadership has been concerned with gender equality and female and men's different qualities, little research has investigated how women develop into becoming leaders, as well as how they build a sustainable mindset. Based on life story interviews of three female top leaders, this study empirically analyzes the women leaders' way to top positions in organizations with national and international affairs. The findings indicate that despite resistance and cultural differences, the interaction between specific values from their upbringing and leadership qualities motivated the women to work for sustainability. Values and leadership skills were reinforced when values and capabilities were part of repetitive processes. The growth of resilient capabilities, as well as a sustainable mindset, became the result of the process.

MSR: **How and when Workplace Spirituality leads toward Employees' Voice Behavior: A Gender Perspective**

Author: **Muhammad Arshad**, *U. of Lahore*
Author: **Omer Farooq**, *Zayed U.*
Author: **Mariam Farooq**, *Al-Ain U., UAE*
Author: **Muhammad Muavia**, *COMSATS U., Islamabad, Lahore Campus*

This research enhances our current understanding of the effects of workplace spirituality on voice behaviors of male and female employees i) by examining the multiple underlying mechanisms of psychological safety and psychological empowerment and ii) by comparing the diverse use of these mechanisms across gender. Particularly, we posit that the strength of the two mechanisms varies across male and female in such a way that the impact of spirituality on females' voice behavior primarily flow via psychological safety and for male employees, this effect mainly flows via psychological empowerment. The analysis of our theoretical model relies on two independent studies. Study-1 (n=331 employees) tested our model in the manufacturing sector whereas study-2 (n=255 employees) replicated the results in the service (banking) sector. The aggregate results obtained from both studies by using structural equation modeling in MPlus revealed (with some variations) that spirituality, directly and indirectly, influences the voice behaviors of both male and female employees. However, the direct effect of spirituality on female voice behavior was stronger than the male employees. Moreover, the specific indirect effects obtained from moderated mediation analysis in Mplus demonstrate that the indirect effect of spirituality on female voice behavior mainly flows via psychological safety whereas on male voice behavior via psychological empowerment. The results are discussed in terms of their implication for theory and practice.

Meeting Your Leadership Shadow: A Jungian Approach for Building Better Organizations
A Jungian Approach for Better Organizations

Participant: **William L. Sparks**, *Queen's U. of Charlotte*

Abstract This highly interactive PDW is designed to provide participants an opportunity to assess their management style and "shadow" and outline a process for integrating their management shadow (i.e., negative qualities and tendencies exhibited under stress) in order to be more effective and agile. The Actualized Leadership Framework is based primarily on the seminal work of Carl Jung, who stated that the only way to live an authentic life is to acknowledge and accept our darkness. This session will allow participants to complete a short online assessment (<http://www.ALFree.com>) to determine their dominant motive need and resulting management style and "shadow." The ALP framework consists of three styles and shadows: Achiever/Fear of Failure, Affirmer/Fear of Rejection and Asserter/Fear of Betrayal. The strengths of each style will be discussed before providing an overview of the three resulting Leadership Shadows and their impact on others in organizational settings. The session will conclude with discussing strategies for becoming more fully integrated individual. The Actualized Leader Framework has been developed over the last 20 years of the author's applied research efforts is the subject of the author's recent book "Actualized Leadership: Meeting Your Shadow & Maximizing Your Potential" (Society for Human Resource Management (SHRM) Publishing) published in 2019.

Participant: **Agnieszka Slomka-Golebiowska**, *Warsaw School of Economics*
Discussant: **Morten Huse**, *Professor Emeritus*
Discussant: **G. T. Lumpkin**, *U. of Oklahoma*

The recent period challenges many assumptions about the way organizations should act and perform. The Covid-19 pandemic and the economic crisis led to many changes, some temporary and some permanent. However, a more profound inspection must be made about some paradigms. For example, Alvarez et al. (2020) placed a question mark over the need for organizations to adapt economic theories. The worldwide crisis pointed at the need for an added value, and as Alvarez et al. (2020) noted - perhaps the economy needs to learn from organizational theories and not the other way around. The purpose of this symposium is to look at the concept of "Capital", not as a financial concept but as an intangible asset that promotes organizations and employees, by investing in their different kinds of capital such as human, social, psychological, and relational. An acquisition and sharpening of intangible capital skills will allow organizations and employees to respond better to unpredictable situations and to better manage future needs. The studies in the symposium provide different perspectives and views on different types of intangible capital in organizations. Despite the differences, there is an agreement that a common effort of implementation intangible capital will lead to better and more satisfied employees, will weaken gender biases, and by that lead to a better world together.

Creating a Better World: Mindfulness and Organizational Practices

Session Moderator: **Yanina Rashkova**, *U. degli Studi di Cagliari*

OB: Toward an Organizational Capability-Based Theory of Mindfulness for Social Justice 

Author: **Yanina Rashkova**, *U. degli Studi di Cagliari*
Author: **Ludovica Moi**, *U. of Cagliari*
Author: **Francesca Cabiddu**, *U. of Cagliari*

The impact of mindfulness on many organizational practices is well documented in the literature, but its influence on social justice issues has been largely overlooked. The present study attempts to fill this research gap and explain how mindfulness may lead to a higher collective orientation toward social justice issues in organizations. Drawing on microfoundations of organizational capability, we explain what resources and collective practices organizations may use to develop sensitivity in organizations toward social justice issues. By conducting an integrative literature review, we develop a framework that identifies the key microfoundations of a collective mindfulness capability for social justice, defined as an organizational capability that helps companies recognize and overcome social inequalities ingrained in their organizational practices by operating in a sustainable and ethical way. With this study, we contribute to extending the literature on mindfulness and organizational capabilities by examining the main mechanisms and interactions that contribute to developing a collective mindfulness capability for social justice. Moreover, by examining mindfulness from multiple perspectives (individual and collective), we contribute to research progressing towards a multi-level theory of mindfulness. Managerial implications and future research directions are also discussed.

OB: The Underlying Mechanism and Behavioural Outcomes of Working from Home During the Lockdown  

Author: **Mojdeh Mehrganrad**, *Northumbria U.*

Purpose -This paper examines the implications of remote working on employees' well-being during the COVID-19 lockdown. To this aim, we invoked boundary theory and source attribution perspective. We identified the underlying mechanisms and within-domain (i.e., family) behavioural outcomes when work and home are physically intertwined during the pandemic. **Design**-A theoretical model is proposed and empirically tested in a two-waves study of 141 university teachers in London, England (N = 282), who adapted remote working with computer-based assisted technology during the pandemic. **Findings** Our findings revealed that family-to-work interruption increases family-work conflict and the consequent spouse undermining behaviour. However, the extent to which employees engage in undermining behaviour at home depends on how these interruptions delay work goals achievement (Path A). In the alternative path, we observed that work interrupting during family time directly increases work-family conflict and is only partially explained by family goal obstruction (Path B). **Originality/value** This study was the first to use source attribution perspective to extend boundary theory and specify, in two asymmetrical paths, a different mechanism for the effect of work-to-family and family-to-work interruptions, WFC/FWC and their within-domain behaviour outcomes. **Keywords**-Boundary theory; Source attribution theory; Spouse undermining behaviour; Work-family conflict, Family-work conflict; London, UK, COVID-19 pandemic.

OB: Organizational Walking. The New Normal of Bodily Movements In and Around Organizational Life

Author: **Peter Holdt Christensen**, *Copenhagen Business School*

A central characteristic of the workday of the millions of people working from home during the pandemic was the monumental lack of movement. Not physical exercise as such, but sheer movement like walking from one office to another, walking to the watercooler or to the cantina, or walking from one meeting room to another. In this conceptual paper I focus on one type of movement: walking, and I first define and distinguish four types of organizational walking: transition-related walking, recovery-related walking, visibility-related walking, and relational-related walking. Second, I elaborate on why organizational walking – beyond increasing employees' well-being – has important outcomes. In bringing back the body and bodily movements to the corporate office, and to working-from-home arrangements, the concept of organizational walking helps explain how and why walking has important consequences for everyday organizational life, and why we in a new normal also needs to facilitate and foster organizational walking.

OB: Is Mindfulness Good or Bad for Work Motivation? The Role of Ambition as Boundary Condition

Author: **Mariana Toniolo-Barrrios**, *Simon Fraser U.*

The investigation of the effects of mindfulness on work motivation has been limited by a piecemeal approach, with mixed findings and predictions. While a number of scholars draw on Self-Determination Theory to contend that mindfulness is beneficial for motivation, other scholars draw on Goal-Setting Theory to argue that mindfulness is detrimental for motivation. This paper proposes a theoretical model that reconciles these two different lines of debate, by explaining the mediating mechanisms (i.e., self-awareness, needs fulfillment, future focus, goal setting) and boundary conditions (i.e., ambition) of the effects of mindfulness on motivation. In particular, I propose that mindfulness leads to enhanced work motivation for individuals that are low in ambition, whereas it leads to reduced work motivation for individuals that are high in ambition.

Causes and Consequences of Workplace Gossip

Session Moderator: **Yating Wang**, *National U. of Singapore*

OB: Structural Foundations of Concrete Outcomes: Embeddedness Fosters Gossip, Trust, and Performance ➔

Author: **Kevin Nanakdewa**, *U. of Toronto*

Author: **Yi Huang**, *Nanyang Technological U.*

Author: **Xi Zou**, *Nanyang Business School*

Prior work has shown that employees are more likely to trust colleagues that are more embedded in their professional network. The prevailing assumption is that embeddedness serves a social monitoring function: the more third-party connections employees share, the less they would risk engaging in behaviors that might destroy trust, such as lying and cheating. We propose that embeddedness not only deters behaviors that are harmful to trust, but also serves as a structural foundation for behaviors that establish and increase trust, such as gossip. We thus propose a structural theory of gossip. Data from field studies across three organizations in Mainland China supported the hypothesis that gossip mediated the positive relationship between embeddedness and trust. The higher levels of trust linked to embeddedness and gossip was associated with positive downstream consequences in colleagues' peer performance evaluations of the gossip. We further discuss the role of gender in moderating trust relationships developing from positive and negative gossip. This research underscores the role that seemingly passive network structures can play in shaping concrete behaviors that have important interpersonal and organizational outcomes.

OB: Don't Shoot the Messenger? A Morality- and Gender-based Model of Reactions to Workplace Gossip 🖨

Author: **Maria Kakarika**, *EM Normandie Business School*

Author: **Shiva Taghavi**, *NEOMA Business School*

Author: **Helena Gonzalez**, *NEOMA Business School*

We examined workplace gossip recipients' inferences of the sender's morality and their subsequent behavioral responses in three studies with experimental and observational methods. Study 1 provided experimental evidence that gossip recipients perceive the senders as low in morality, with female recipients rating the sender's morality more negatively than male. In a follow-up experiment (Study 2), we replicated these results and found that, in turn, perceived morality translates into behavioral responses in the form of career-related sanctions to the gossip sender. A critical incident study (Study 3) enhanced the external validity of our findings and extended the moderated mediation model by showing that gossip recipients also penalize senders with social exclusion. We discuss implications for practice and research on workplace gossip and understanding gender differences in attributions of morality and behavioral responses of gossip recipients.

Based on social information processing theory, this study explored the impact of perceived negative workplace gossip on employees' knowledge sharing behavior. It further examined the mediating role of work engagement and the moderating role of caring ethical climate in the process. Data from 295 employees from 10 hotels indicated that: (1) employees' perceived negative workplace gossip negatively affected their knowledge sharing behavior; (2) work engagement mediated the relationship between perceived negative workplace gossip and knowledge sharing behavior; (3) caring ethical climate moderated the direct influence of perceived negative workplace gossip on work engagement as well as the process of perceived negative workplace gossip influencing knowledge sharing behavior through work engagement. This study expanded the understanding about the effects and influencing mechanisms of negative gossip in the workplace. It also has practical implications for organizations and managers to better deal with negative gossip in the workplace, to foster a good team climate, and to promote knowledge sharing among employees.

OB: Filling The Secrecy Vacuum: How Perceived Leader Secrecy Invites Gossip and Feedback Seeking?

Author: **Yating Wang**, *National U. of Singapore*

Author: **Rui Zhong**, *Sauder School of Business, U. of British Columbia*

Author: **Jingxian Yao**, *Catolica Lisbon School of Business and Economics*

Our organizational lives are awash with secrecy. Despite its importance in shaping social dynamics at the workplace, interpersonal reactions to secrecy have rarely been empirically investigated within specific relationships. By locating secrecy in the most significant dyadic relationship in organizations (i.e., leader-member relationship), this study aims to reveal how employees respond to and deal with their experienced leader secrecy—leader intentionally keeping some information secret from them at work. Drawing from cognitive theories of rumination, we contend that perceived leader secrecy signals to employees for their failure in achieving interpersonal goals and thus gives rise to rumination, which in turn triggers employees to gossip with their coworkers and seek information from the leader and, at the same time, leaves employees in a state of emotional exhaustion. Such mediating effects of perceived leader secrecy on dependent outcomes via rumination are stronger for employees in higher-quality relationships with their leader. By employing an experiment in the Western context (i.e., Study 1) and an experience-sampling study with three daily assessments in the Eastern context (i.e., Study 2), we find support for most of these predictions, except for the relationship between rumination and feedback-seeking from the leader. Interestingly, we found in Study 2 that both gossip and feedback-seeking could not actually eliminate employees' following perception of leader secrecy. We conclude by discussing the theoretical and practical implications of our work.

OB: Antecedents of Multicultural Identity: The Role of Stereotypes and Need for Cognitive Closure

Author: **Ademola Ajeyomi**, *LSBU Business School, London / UK*
Author: **Karin S. Moser**, *LSBU Business School, London / UK*
Author: **Barbara Czarnecka**, *LSBU Business School, London / UK*

A noticeable rise in global mobility has led to an increase in people identifying with more than one culture. This has been described as 'effects of globalisation' on the microlevel by some authors (Arnette, 2003; Fitzsimmons et al., 2017). The reasons for this are manifold and include: increase in migration for both economic and political reasons, increase in binational relationships and marriages, easier access to education abroad with international recognition of degrees, increased travel for both leisure and work, and not least, the increase in digitalisation. These developments facilitate private and professional interactions and relations with people across the globe. Building on previous work on multiculturalism, this paper aims to make a theoretical contribution to understand how daily behaviour is impacted by antecedents of multiculturalism, ranging from monocultural to multicultural individuals. Specifically, we hypothesise multiculturalism as relevant for behavioural outcomes, only to the extent of antecedent a) situational cues of in- vs outgroup cultural identity, b) degrees of stereotype activation and moderated by c) the individual need for cognitive closure. We postulate a theoretical model that explains the impact of various degrees of individual multiculturalism on behaviours. With this, the paper contributes to understanding the psychological antecedents and underlying processes of people within an increasingly multicultural environment.

OB: Encouraging Better Treatments Through Macro Faultlines  

Author: **Chester S. Spell**, *Rutgers U., Camden*
Author: **Yekaterina Bezrukova**, *U. at Buffalo, The State U. of New York*
Author: **Huiru Evangeline Yang**, *U. at Buffalo, The State U. of New York*
Author: **Terry Blum**, *Georgia Institute of Technology*
Author: **Paul Roman**, *U. of Georgia*

Drawing upon demography and intergroup relations theory, we introduce the novel construct of macro-faultlines that separate groups of interdependent organizations into distinct subgroups of organizations based on their similar demographic and intrapersonal profiles. We test these ideas in three multi-level, multi-source, and multi-wave studies spanning 10 years of research based on national samples of substance abuse disorder (SUD) treatment centers, organized into regionally selected groups of organizations intended as collaborative platforms for the execution of clinical trials. We found that faultlines based on employee life events (e.g., addiction) overpowered demographic faultlines in their effects on adoption of innovation. Divides within client populations (e.g., relapse status) encouraged innovation via information availability, whereas divides within employee populations discourage innovation. Finally, both employee and client-based faultlines were related to increased adoption of evidence-based treatments over a ten-year period. Implications for innovative responses to the opioid epidemic and substance abuse treatment in general are discussed.

OB: Three-way Interaction of Team Faultline, Value Diversity, and Task Design on Team Effectiveness    

Author: **Dongwon Choi**, *Ewha Womans U.*
Author: **Bo-young Kim**, *Kookmin U.*
Author: **Eunhong Min**, *Kookmin U.*

In the current organizations, successful management of diversity at work has become the most important and challenging issue for managers. While scholars have deepened the understanding on the nature of diversity by proposing new concept such as faultline, previous studies on diversity and faultline have focused more on structural aspect of diversity, while neglecting the role of psychological aspect of diversity among team members. In addition, although team task design plays an important role in interactions among team members, the extent literature has not examined how team task design changes team processes under the different structural and psychological team compositions. To overcome the above limitations, this study constitutes an integrative model of team faultline, value diversity, and team task design on team process and on team effectiveness. Integrating the categorization-elaboration model and the false-consensus bias theory, we suggest that team faultline has positive effect on team effectiveness through team mental model only when both team value diversity and team task design are high. This paper intends to contribute to the literature of team diversity, team design, and team mental model.

OB: Committing to the Digital Change in Organizations: A Study on Aging Blue-Collar Workers 

Author: **Kilian Hampel**, *U. of Konstanz*

Industrial companies and their workforce are currently facing several trends that challenge them in their working environment: First, the ongoing digitalization and automation of the workplace leads to unprecedented career challenges for blue-collar employees and requires them to increasingly incorporate digital technologies at work. Second, the demographic change leads to an aging workforce and a higher proportion of older employees at work. Therefore, it becomes increasingly important for blue-collar employees of all age groups to be willing to commit to the digital change at their organization and adapt to the changing working environment. Drawing from the socioemotional selectivity theory, I argue that age is generally negatively related to blue-collar employees' readiness for digital change. Furthermore, I assume this relationship to be moderated by technological insecurity and promotion-oriented change communication. Testing multiple regression analyses with survey data on 158 blue-collar employees at a manufacturing company, I find support for three of my four hypotheses: While age is generally negatively related to readiness for digital change, promotion-oriented change communication moderates this effect. Furthermore, promotion-oriented change communication was shown to, when absent, amplify or, when present, countervail the particular negative effects of technological insecurity on the age-change readiness relationship. Therefore, my findings have important theoretical and practical implications.

OB: Facilitating Knowledge Sharing: The Role of Knowledge Sharing Identity 

Author: **Anne Burmeister**, *Rotterdam School of Management, Erasmus U.*

Author: **Yifan Song**, *Texas A&M U.*

Author: **Andreas Hirschi**, *U. of Bern, Work and Organisational Psychology*

Existing research has typically adopted a social exchange perspective to portray employee knowledge sharing as an act of reciprocation for received support at work. In this study, we adopt an agentic perspective to understand the role of knowledge sharing identity as an inner driving force of knowledge sharing. We integrate identity theory with social cognitive theory to depict how knowledge sharing identity triggers a self-verification process that facilitates knowledge sharing through knowledge sharing envisioning and knowledge sharing self-efficacy as two agentic mechanisms. We further argue that the positive effects of knowledge sharing identity are strengthened by employee self-verification striving. We conducted two studies with Swiss employees from diverse industries to understand why, how, and when employees share knowledge. In a within-person field experiment (Study 1), we showed that knowledge sharing identity activation intervention increased an employee's daily knowledge sharing via knowledge sharing envisioning and knowledge sharing self-efficacy. In a between-person field study with time-lagged data (Study 2), we replicated the within-person findings regarding the two agentic mechanisms and identified self-verification striving as a moderator strengthening knowledge sharing identity's effects. Our findings provide theoretical and practical implications to the literature on knowledge sharing, work role identities, and personal agency.

OB: Workplace Romance and Job Performance: Mediation Through Relational Capital and Knowledge Acquisition

Author: **Muhammad Aamir Shafique Khan**, *Jiangsu U.*

Author: **Du Jianguo**, *School of Management, Jiangsu U., China*

Author: **Mohsin Altaf**, *The U. of Lahore*

Author: **Ahmed Abdul Hameed**, *The U. of Lahore*

Author: **Shuja Iqbal**, *Jiangsu U., Zhenjiang China*

There is a lot of loving going on in the offices. The fact is that we are all human beings and when you put human beings together for 8 or 10 hours a day stuff is just going to happen which have its impact. This study examines the effect of lateral heterosexual workplace romance on employee performance. We examined the role of relational capital and knowledge acquisition as serial mediators in the relationship between workplace romance and employee performance. By collecting data in three rounds from 394 doctors working in Chinese hospitals through surveys and using structural equation modeling and bootstrapping, we found that lateral heterosexual workplace romance positively influences employee performance. We also found that the two serial mediators—relational capital, and knowledge acquisition—significantly mediate the effect of workplace romance on employee performance. Our study has important implications for managers and policymakers as the positive effects of a workplace romance are not confined to those involved; instead, these effects go beyond personal knowledge and job-related and psychological outcomes to have constructive, as well as affective influences in the form of positive emotions, care, trust, and reciprocity.

OB: Self-interested Knowledge Sharing Behavior: Examination of Role Overload

Author: **Jessica Good**, *York U.*

Author: **Mark Podolsky**, *York U.*

Author: **You-Ta Chuang**, *York U.*

Author: **Janet Boekhorst**, *U. of Waterloo*

Author: **Michael Halinski**, *Ted Rogers School of Management*

Encouraging knowledge sharing is crucial for organizational success; however, employees are reluctant to share knowledge because it decreases their strategic advantage. It is essential for us to understand the different ways in which employees share knowledge (i.e., self-interested knowledge sharing behavior). Drawing from the stressor-emotion model of Counterproductive Work Behavior, we examine the indirect effect of role overload on two self-interested knowledge-sharing behaviors (i.e., knowledge hiding and manipulation) via negative affect. In a time-separated field study (n= 161), our analysis reveals that role overload is positively related to negative affect. Also, negative affect was positively associated with both self-interested knowledge sharing behaviors (i.e., knowledge hiding and knowledge manipulation). Finally, our analysis found that negative affect fully mediates the relationship between role overload and (a) knowledge hiding and partially mediates the relationship between role overload and (c) knowledge manipulating.

Author: **Tomislav Hernaus**, *Faculty of Economics & Business, U. of Zagreb*
Author: **Ales Sasa Sitar**, *School of Economics and Business, U. of Ljubljana*
Author: **Nikolina Dragicevic**, *Faculty of Economics & Business, U. of Zagreb*

We take a knowledge hider's perspective and follow the conservation of resources (COR) theory to investigate performance consequences of hiding knowledge from colleagues, particularly focusing on the contextual role of job design in stimulating or demotivating such behavior in work relationships. Two field survey studies were conducted (Study 1, N = 155 business and economics scholars; and Study 2, N = 178 bank employees and 61 direct supervisors) to examine the influence of job resources (i.e., job autonomy and task variety) on task performance of evasive knowledge hidiers. Hierarchical regression analyses were run and confirmed the main positive effect of evasive hiding on (factual and supervisor-rated) task performance. In addition, conditional process analyses were applied to examine 2-way and 3-way interactions of evasive hiding, job autonomy and/or task variety. The data analysis results led us to conclude that having higher levels of job resources might motivate knowledge holders to hide knowledge less while maintaining the same level of performance, as well as offers an evidence that premium performance is reached when a knowledge holder has an adequate (instead of an excess) level of resources.

Broader societal concerns in the past few years have fueled greater emphasis on addressing important social issues within organizations, such as sustainability, culture, and diversity, equity, and inclusion (DEI). Employee voice—in which employees raise concerns, issues, problems, or ideas—is a key mechanism through which organizations can change and improve their efforts in addressing these important social issues. However, studies on such social issues typically do not examine employee voice. Likewise, existing research in the voice literature typically neglects social issues as a specific content of voice and instead primarily addresses issues directly related to work (i.e., task-related issues). As such, the projects in this symposium examine voice on social issues. Collectively, they examine why and when employees are more likely to speak up about social issues, as well as why and when leaders are more likely to listen to and implement employee voice on these issues. In doing so, they contribute to the management literature by uniquely advancing knowledge on employee voice and social issues at work.

The global pandemic left the world with prevailing uncertainties, which leaders continue to navigate and adapt to in attempts to create a new sense of normalcy for their employees. This major shift in work elicits intense emotions (e.g., ambiguity, tension, fear) that leaders must manage both for themselves and their followers. Consequently, leaders must now, more than ever, pay attention to their own and their followers' emotions. Leadership and emotions both inherently have interpersonal outcomes, thus, it is important to understand the psychological mechanisms that are at play and its relevant outcomes. In the present symposium, we advance the role of emotions in workplace relationships, namely the leader-follower relationship, in hopes to further develop academics' and practitioners' understanding of the interpersonal effects of emotions (gratitude, positive and negative affect) and emotional capacities (emotional intelligence) that may influence a more successful, healthier, and happier work environment. It is our hope that practitioners and scholars will recognize the importance of and take action to create healthier social interactions at work to ultimately improve workplace behaviors and well-being during the challenging transitions the workforce currently faces.

For many workers, COVID-19 catalyzed a rapid disappearance of the physical organization and a dramatic rise in technologically mediated forms of organizing. Prior research on remote and virtual work has largely focused on what changes enable virtual workers to succeed, under the assumption that these virtual workers would represent a minority of the workforce and would primarily occupy specialized roles. Key questions to be asked are: do we need to revisit our thinking about virtual work in light of our changed, and changing, circumstances? And what might the recent, widespread virtualization of work teach us not just about virtual work, but, also, about workers and organizations, more broadly? Our goal with this symposium is to feature future-of-work scholars who can share their insights into the ways that we might understand virtual work anew, as well as the ways that virtualization can impact how workers understand themselves, their work, and their organizations. The presentations contained in this symposium cover newcomer socialization, the doing of virtual work, the emotional costs of that work, and workers' reflections upon the transition to virtual work. In so doing, they invite us to question both scholarly and practitioner assumptions about virtual work and highlight the ways in which workers shape their experience of work.

Adept Leaders and Organizational Change

Session Moderator: **Michael E. Palanski**, *Rochester Institute of Technology*

ODC: **Leader Development in Work and Volunteer Contexts: Expected Practice and Unexpected Opportunities** 

Author: **Michael E. Palanski**, *Rochester Institute of Technology*

Author: **Michelle Hammond**, *Oakland U.*

Author: **Shalini Khazanchi**, *Rochester Institute of Technology*

Although engagement in leadership in both work and volunteer contexts is a fairly common occurrence, little is known about ways in which leaders develop through these experiences. To better understand leaders' experiences leading in both work and volunteer roles, we interviewed 40 leaders, seeking to understand their motivation to lead in multiple domains, the process of development, and the outcomes of development. Our findings highlight how leaders develop through intentionally seeking leadership roles, learning, and developing skills, and how they develop through incidental means of unanticipated - even serendipitous - situations that represent new opportunities to lead, exposure to new people and ideas, and new perspectives. Further, leaders reported developing a more integrated leader identity (leading as a "whole person") through both intentional and incidental development. We discuss ways in which the findings suggest that an expanded approach to leader development beyond intentional, workplace-based approaches may open other important avenues for leader development.

ODC: **The Role of Leadership Political Skills in the Context of Organizational Change** 

Author: **Noufou Ouedraogo**, *MacEwan U.*

Author: **Mohammed Laid Ouakouak**, *Gulf U. of Science and Technology*

Author: **Gertrude Iranganie Hewapathirana**, *Gulf U. of Science and Technology*

In this research, we measured the impact of leaders' political skills on employee behavioral support for organizational change and the latter's effect on change fatigue and change outcome. Organizations nowadays face dynamic environments that require constant change. Therefore, leaders should develop the political skills necessary to gain employee behavioral support for organizational change, manage employees' change fatigue, and ultimately achieve positive change outcomes. We based our study on a sample of 197 participants from Canadian organizations and used structural equation modeling to test our research hypotheses. We found that leader networking ability and apparent sincerity positively affect employees' intentions to support change, whereas interpersonal influence and social astuteness do not. In turn, employees' intentions to support change positively affect change outcome, although it has no significant effect on employees' change fatigue. Finally, we found that change fatigue negatively affects change outcome. The findings have implications on organizations' HRD practices to facilitate effective change management efforts and have a theoretical contribution.

Paper is Available to Meeting Registrants Only.

ODC: **Giving Sense to Change Leadership: Towards a Narrative-Based Process Model**

Author: **Antonio Sadaric**, *U. of Ljubljana, School of Economics and Business*

Recent studies on change agency and organizational change failure have significantly broadened the organizational behavior perspective on individual change experiences and related group dynamics. However, the underlying mechanism for change leaders' influential behavior remains a relatively underspecified area. We examine the various strands of research in management concerned with change leadership and persuasive communication, and propose a multidisciplinary perspective from developmental psychology, linguistics and consumer psychology. This approach draws on key theoretical perspectives from social cognitive theory and commensurable interdisciplinary findings as the basis for a narrative-based process model of change leaders' influential behavior. Our model includes propositions about the change leader's interpretation of ideological change as well as the change leader's process of sensemaking and sensegiving. We argue that the change leader's persuasive communication efforts are based on the leader's narrative intelligence and influence, which promote the change recipient's attachment formation. We conclude by addressing the theoretical limitations of interdisciplinary perspectives and suggesting future directions for the importance of narrative research in change agency.

 ODC: **The Impact of CEOs Winning Awards on Firm Strategic Change**

Author: **Veronika Ciarleglio**, *Old Dominion U.*

Author: **Anil Nair**, *Old Dominion U.*

Author: **Jing Zhang**, *Old Dominion U.*

Author: **Stav Fainshmidt**, *Ivey Business School*

Author: **Ashley Salaiz**, *U. of Tampa*

ODC Division Best Paper Finalist

Research on award-winning CEOs have led to two contradictory assertions: some scholars argue that CEOs who win awards may engage in strategic change and risk-taking behavior, while others argue that such CEOs become complacent, risk-averse, and less likely to engage in strategic change. Using theories of cognition, especially prospect theory (PT) and behavioral theory of the firm (BTOF), we examine the effects of CEOs winning awards on firm strategic change. Using S&P 500 data from 2009 to 2021, we found that award-winning CEOs are less likely to engage in strategic change; moreover, performance below or above firm aspirations had no impact on subsequent strategic behavior. Thus, the results help resolve the contradictory assertions in the CEO award literature. The theoretical contributions to the literature on firm strategic change and BTOF are discussed.

Facilitator: **Alexandra Rheinhardt**, *U. of Connecticut*
Presenter: **Marshall Scott Poole**, *U. of Illinois at Urbana-Champaign*

This Professional Development Workshop (PDW) on New Perspectives of Organization Change Processes gives scholars and practitioners an opportunity to learn about and engage with the latest research on organization change processes. More specifically, this PDW focusses on processes of change, or the sequence of events in which organizational characteristics and activities change and develop over time, and the factors that influence these processes. The PDW is organized around themes from the 2nd edition of the 2021 Oxford Handbook of Organization Change and Innovation. The PDW aims to expand participants' perspectives and develop new ways to think about organization change processes that expand upon (Van de Ven & Poole's 1995) teleology, life cycle, evolutionary, and dialectical models of change. The format of the PDW consists of impulse presentations by authors of selected chapters of the Oxford Handbook, small group breakouts which are facilitated by the presenters, a plenary session of small group reports and a panel questions and answers session.

ONE: Does Environmental Regulation Induce Service Transition? Evidence from Manufacturing Firms

Author: **Feng Zhang**, *School of Economics, Nankai U.*

Author: **Xiangcen Zhan**, *Nankai U.*

Author: **Haina Zhang**, *U. of Aberdeen*

Author: **Xile Yin**, *ZheJiang GongShang U.*

The Glasgow Climate Pact at COP26 requires emission-intensive sectors initiate a strategic transition towards low-emission energy system. However, investigations on the roles of environmental regulation policies in promoting service transition of manufacturing firms remains to be limited. We employ the DID (difference-in-difference) method using the year 2008 policy in China as an exogenous shock. As per our findings, we have determined that firms in regulated industries are more likely to conduct service transition than those in non-regulated ones. Specifically, when facing environmental regulation, firms prefer developing basic rather than advanced services. Furthermore, resource slack strengthens the positive effect of environmental regulation on service transition. Thus, this study provides policy suggestions for governments to design environmental regulation policies and managerial implications for manufacturing firms to develop business model innovations.

ONE: Dealing with an Identity Threat: Porsche and the Transition to Electric Mobility  

Author: **Marcelo Brull**, -

Author: **Christina Bidmon**, *Copernicus Institute of Sustainable Development, Utrecht U.*

An important and underexamined topic in the literature on innovation and sustainability concerns situations in which dramatic shifts in the environment require an organization to make time-sensitive changes to its corporate identity. We conduct a qualitative study of luxury sports car manufacturer Porsche during the breakthrough of electric mobility and explore the discursive process of quickly 'fitting in' a novel product category. We find that revisionist work takes place in two stages; first, by re-framing product and market-fit of the new category and, second, by authenticating the modernization of the organization. Our findings explain under what conditions a novel product category is likely to trigger changes to a corporate identity, and how this is accomplished. This is important for sustainability scholars, because it can help to explain how organizations account for the integration of novel, more sustainable product categories that pose a threat to their current, less sustainable operations.

ONE: From Opportunity to Transformation: How Impact Entrepreneurs Lead in Fighting the Climate Crisis 

Author: **Felix Decker**, *Rotterdam School of Management, Erasmus U.*

Author: **Joris Meijaard**, *RSM, Erasmus U. Rotterdam*

This study investigates how impact entrepreneurs contribute to the sustainable transition of markets and systems. It examines the paths of four successful European ventures leading bottom-up change, and it develops a model for a sustainable transition driven by impact entrepreneurs, which consists of three phases. Firstly, in the opportunity emergence phase, impact entrepreneurs seek a societally desired niche that did not innovate as yet. Secondly, throughout the action formation phase, impact entrepreneurs develop an innovative and attractive solution and mobilize resources. Finally, in the transformation phase, the entrepreneurial ventures contribute to market and system transition.

ONE: The Way to Net-Zero: Exploring Stakeholder Perceptions 

Author: **Lucrezia Nava**, *Cambridge Judge Business School*

Author: **Celina Scott-Buechle**, *Stanford U.*

Author: **David Reiner**, *Cambridge Judge Business School*

Achieving the goal of net-zero emissions, set by many governments for the next decades, requires the joint effort of policymakers and stakeholders, primarily the private sector and NGOs. Even if the target is defined, the way to reach it is still under discussion, due to the fragmentation of opinion and polarization of stakeholders. In this exploratory study, we seek to shed light on the perceptions of different stakeholders about potential instruments to achieve net-zero emissions, such as the use of carbon dioxide removals (CDR) or the further development of a carbon market. Moreover, to measure the presence of in-group/out-group biases affecting the discussion, we also investigate the perceptions about other stakeholders participating in the discussion. Through text mining and sentiment analysis of 691 organizational documents, produced by either companies or NGOs, we are able to outline the perceptions of stakeholders in different sectors and how these perceptions change over space and time. Important implications for policymakers emerge, along with a contribution to the literature on stakeholder participation in policymaking processes and collaborative governance.

Corporate (Ir)responsibility and Responses to Adverse Events (In-Person)

Session Moderator: **Guido Berends**, *U. of Groningen*

ONE: Forgetting Work: Its Role in Sustaining Corporate Social Irresponsibility

Author: **Nilufer Yapici**, *Middle East Technical U.*
Author: **Ratan Dheer**, *Eastern Michigan U.*

Irresponsible behaviors by corporations continue despite institutional pressures for corporate social responsibility, resulting in disasters like the Kalamazoo River Oil Spill and the Exxon Valdez Oil Spill. We develop a comprehensive model explaining how firms revert to their usual self after committing environmental disasters. Our in-depth abductive analysis of the Kalamazoo River Oil Spill illustrates that forgetting work allows corporations to protect their image and maintain legitimacy in the shareholder and state's eyes, attenuate institutional pressures, and co-opt external stakeholders, communities, and the society while continuing irresponsible behaviors. While forgetting work's success relies on the corporation's political activities, the success of corporate social responsibility is less clear. Corporate social responsibility fails when it contributes to the marginalization of involved communities, making it ineffective and unethical. Our research contributes to the forgetting work literature by showing how irresponsible corporations engage in short and long-term social forgetting after stimulating environmental disasters. We highlight the plurality of voices and interpretations in the mnemonic processes involved in narratives regarding corporate irresponsibility.

ONE: Rehabilitating from Environmental Misconduct: The Potential of Orchestrating Corrective Actions

Author: **Guido Berends**, *U. of Groningen*
Author: **Bjoern C. Mitzinneck**, *Groningen U. (RuG)*
Author: **Jordi Surroca**, *U. of Liverpool Management School*

Most firms attempt to regain lost public reputation after reports of corporate misconduct. Prior research has focused on identifying individual corrective actions for reputation repair, suggesting a costly and disruptive action such as replacing organizational leadership is necessary. This research, however, gave limited consideration to the use of multiple corrective actions over time. Integrating signaling theory and the literature on rehabilitation and corrective actions, we argue that the orchestration of corrective actions can restore reputation, even if individually taken these actions do not meet the conventional criteria of successful repair signals. We find support for our theory in a sample of publicly traded U.S. firms implicated in environmental misconduct between 2008 and 2018. We advance the literature on rehabilitation by providing insights into the orchestration of corrective actions over time and caution firm stakeholders that well-crafted reform efforts do not necessarily reflect underlying attributes of the firm. In doing so, we also alert signaling research to the importance of signal orchestration when combining multiple signals to form a set.

ONE: Organizational Ambidexterity and Environmental Catastrophes: Lessons from the Covid-19 Experience

Author: **Md Kamrul Hasan**, *U. of North Texas*
Author: **Derrick ED'Souza**, *U. of North Texas*

How organizations respond to environmental catastrophes has drawn significant attention among management scholars. Investigations have focused on either the short- or long-term organizational actions and outcomes related to such events. However, the short- and long-term organizational actions occur concurrently, and this concurrency has not been adequately addressed in the literature. The environmental effects induced by the Covid-19 pandemic may offer opportunities to refine our understanding of how organizations manage the long and short-term effects of catastrophic events concurrently. Drawing on published Covid-19 experiences, we use the ambidexterity lens to frame how organizations address short and long-term effects of catastrophic events concurrently, and we offer a generalized model to reflect the underlying relationships. Next, recognizing that organizations act within their referent group, we explore how the relative ambidexterity construct can be used to explore the competitive actions of individual organizations.

Interorganizational Projects & Buyer-Supplier Relationships

Session Moderator: **Jesus Diego Castillo**, *U. Carlos III de Madrid*

OSCM: **Looking Outwards and Inwards to Improve Patient Care Quality and Clinical Outcomes in U.S. Hospitals**  

Author: **Subhjit Chakraborty**, *Coastal Carolina U.*

Keeping a typical U.S. hospital in mind, we draw support from quality management and lean systems theory to empirically test a framework that links variables looking outwards (supplier relationship management), and inwards (internal lean orientation) to patient care quality and two important hospital clinical outcomes—mortality rate and readmission rate. This integrated framework can help U.S. hospitals identify and solve issues—both internal and external, some of which lie outside their current boundaries, with their supply chain partners. Contrary to our expectations, we do not find support for a link between patient care quality and readmission rate; and instead, internal lean orientation is positively associated with the mortality rate for a hospital. We offer plausible explanations and conclude with broader implications of our research for both health care research and practice. **KEYWORDS:** Supplier relationship management; internal lean orientation; patient care quality; 30-day risk-adjusted mortality rate (RAMR); 30-day risk-adjusted readmission rate (RARR); hospital clinical outcomes

OSCM: **Relational Dynamics of Inter-Organizational Projects in the Wake of Digitalization**  

Author: **Timo Braun**, *Darmstadt U. of Applied Sciences*

Author: **Eskil Ekstedt**, *Uppsala U.*

Author: **Rolf A. Lundin**, -

Focusing on operational coordination and the related dynamics of relations, we ask how inter-organizational projects respond to digitalization. A comparative study of two inter-organizational projects in the construction industry not only shows that such projects are embedded into wider networks of inter-organizational relations, but also that digitalization causes additional relational dynamics. This is particularly the case regarding Building Information Modeling (BIM), which aims at supporting operational coordination across organizations, although its usage differs significantly in the two projects studied. With its focus on embedded inter-organizational projects, operational coordination, and relational dynamics in the light of the recursive interplay between stability and change, the study contributes to operations management as well as project management scholarship.

Paper is Available to Meeting Registrants Only.

OSCM: **The Impact of Interorganizational Strategic Activities on Product Recall Risk**

Author: **Julian Schulte**, *U. of Münster*

Author: **Karl Lucas Kleine-Stegemann**, *Westfälische Wilhelms-U. Münster*

Product recalls can pose major financial and reputational risks for firms. However, there is limited empirical research about the antecedents of these harmful events. This study investigates the impact of mergers and acquisitions and joint ventures on product recalls. Furthermore, we introduce the strategic flexibility of the firm's industry rivals as a moderator, influencing these relationships. We draw on the punctuated equilibrium theory and a large longitudinal dataset from the U.S. Food and Drug Administration. Our results indicate that mergers and acquisition activity has an inverted U-shaped relationship and that joint venture activity has a U-shaped relationship with product recalls. Additionally, we show that the latter relationship is flatter when the strategic flexibility of rivals is higher. Our findings contribute to theory in several ways: First, we advance punctuated equilibrium theory by identifying why firms can change from the equilibrium period to the revolutionary period and, more importantly, what negative outcomes can emerge in this period. Second, we advance mergers and acquisition and joint venture literature by demonstrating that inorganic growth can be related to increased product recalls, especially if the firm has a moderate level of mergers and acquisition activity, as opposed to either a low or a high level of it. Third, the findings contribute to product recall literature by giving another explanation for the increase of product recalls for firms. Practical implications are discussed.

OSCM: **Creating Better Supply Chains Together: Influence of Supply Chain Orientation and Knowledge Sharing** 

Author: **Kip Kiefer**, *Rollins College*

Author: **Timothy Pett**, *Rollins College*

Author: **Mark Heileman**, *Rollins College*

Author: **Laurent Sie**, *ESC Pau Business School*

This study examines the relationship between supply chain orientation and knowledge sharing on small business strategy and firm performance. This paper also explores potential differences that may exist across national boundaries for international firms. 392 surveys were administered to managing directors of small- and medium-sized enterprises in the United States, France and India and explored how managerial practices may impact firm's financial and non-financial performance outcomes via triple bottom line assessments. Interestingly, findings suggest that differences in managerial practices for business strategy exist across the three countries and that these differences are associated with differences with respect to firm performance outcomes. The paper discusses implications for scholars and practitioners, suggests future research opportunities, and provides concluding thoughts.

Nonprofit Structure and Finance

Session Moderator: **Gowun Park**, *U. of Washington*

This panel explores nonprofit financial instruments and philosophies. In particular, the papers explore the relationships between nonprofit finance and the structure and relative stability of nonprofit organizations.

PNP: **Which Nonprofits Are More Financially Stable? Organizational Attributes And Revenue Diversification** 

Author: **Gowun Park**, *U. of Washington*

This paper examines the effects of organizational attributes on nonprofit financial stability measured by revenue diversification. By combining institutional theory, resource dependence theory, and financial portfolio theory literature, this study seeks to provide a systematic understanding of nonprofits' organizational factors that influence their financial stability and, furthermore, organizational sustainability. A structural equation model was developed for an empirical test, based on survey data of nonprofits in the Washington state. This research finds that nonprofits with higher managerialism or higher collaboration are more likely to have diversified revenue portfolios, controlling for other organizational factors. In contrast, community ties have a negative impact on revenue diversification.

PNP: **Less Than Zero: A Positive Theory of Negative Prices in for Donative Nonprofits**  

Author: **Jennifer Kuan**, *California State U., Monterey Bay*

Author: **Jeremy Thornton**, *Brock School of Business, Samford U.*

The paper introduces a simplified platform model of nonprofit pricing, where client and donor prices are determined jointly. The interaction of donor and client markets has been discussed for decades but has not been addressed formally. Recent advances in economic theory offer analytic tools to model interaction of multiple markets explicitly, via a platform theory of the firm. Our model extends this tool to the case of pricing decisions for donative nonprofits and offers novel guidance to managers based on the relative elasticities among its clients and donors. We demonstrate that negative prices may be optimal for the nonprofit when cross-market elasticity between clients and donors is less than the own-price elasticity to its clients. Under this circumstance, the losses endured by lowering prices to clients will be more than offset by higher donation revenues. We further demonstrate analytically that low or negative prices are not an indicator of altruistic preferences of the organization. Alternatively, altruistic preferences are not necessary to drive prices below marginal cost. Our formulation offers a novel and clearly defined framework for nonprofit managers, funders, and researchers to distinguish optimal pricing decisions for their distinct charitable missions.

PNP: **Nonprofit Capital Structure and Financial Determinants of Nonprofit Debt Instruments**   

Author: **Qingqing Sun**, *Universsity of Maryland-College Park*

Nonprofits that want to finance infrastructure need to design a capital structure - the mix of accumulated funds and external debt - that can raise enough capital while minimizing borrowing costs. Many scholars test two competing capital structure theories - the pecking order and static trade-off theories - in the nonprofit context by examining the determinants of leverage but cannot find results that conclusively support either theory. The inconsistent results raise the question of whether the applicability of two theories vary by debt instruments, due to the varying issuance costs, and default risks associated with debt instruments. To answer these questions, I investigate the financial determinants of the use of debt instruments by nonprofits using IRS 990 form data on public charities from 2010 to 2016 and two-step Heckman selection models. I find the pecking order theory can explain the use of tax-exempt bonds better, while the static trade-off theory can interpret the use of mortgages better. When nonprofits have diversified revenue streams, and rely on a predictable source of revenue, nonprofits increase the use of mortgages but reduce the use of tax-exempt bonds. This paper makes theoretical contributions by delineating the applicability of pecking order and static trade-off theories. Keywords: nonprofits, capital structure, mortgages, tax-exempt bonds

PNP: **The Impact of Flexible Labor Arrangements on Nonprofit Financial Performance and Program Outcomes (WITHDRAWN)**

Author: **Qiaozhen Liu**, *Georgia State U.*

Author: **Hala Altamimi**, *Georgia State U.*

The use of flexible labor in the nonprofit sector raises the question about the organizational implications of this strategic decision. Studies on for-profit firms suggest that flexible labor brings benefits to organizations in the form of cost reduction and improved program outcomes, yet evidence remains inconclusive. To understand whether nonprofits can accrue similar benefits from using flexible labor, we examine the link between flexible labor and organizational performance in the nonprofit sector. Using panel data from 2008-2016, we observe the financial and programmatic outcomes of a large sample of arts nonprofits and find that the increase in the share of flexible labor spending is associated with improved financial health and a decline in program outcomes.

Perspectives on Cross-sector Value Creation

Session Moderator: **Jessica Weaver**, *U. of Liverpool*

This session explores a range of theoretical perspectives on inter-sector collaborations and partnerships, particularly across the lines that divide the public, private, and nonprofit sectors.

PNP: Unlocking the Full Potential of Transformative Service Research by Co-Creating Value

Author: **Jessica Weaver**, *U. of Liverpool*
Author: **Philippa Hunter-Jones**, *U. of Liverpool Management School*
Author: **Rory Donnelly**, *U. of Liverpool*

Research aiming to transform services requires the disruption of power dynamics to ensure that service users are fully embedded in decision-making and disparities are not reproduced. This article presents a systematic review of how service users have been included in the co-creation of Transformative Service Research (TSR) in published articles. Despite consensus over the scope for value co-creation to improve wellbeing, our analysis reveals that user collaboration does not feature in most TSR papers, and even when it is reported, it has rarely been embedded extensively across all stages of the process, thus missing the potential for greater value co-creation. We contribute to the existing literature in two important ways. Firstly, by highlighting how this imbalance provides the opportunity for the reflexive application of TSR knowledge within the research process, drawing on the relationship between ethics-based and impact-based motivations for co-creating value. Secondly, we add to literature calling for deeper reflection on how TSR should be approached by proposing five working principles for TSR practice. These principles provide a guide to assess ethical engagement with disempowered groups and embed service users in the research of critically important fields such as healthcare, finance, and social services.

PNP: Identity Implications of Cross-Sector Partnerships: A Case Study in the Nonprofit Sector

Author: **India Jana Kandel**, *Leibniz U. Hannover*
Author: **Alina McCandless Baluch**, *U. of St Andrews*
Author: **Erk Peter Piening**, *Leibniz U. Hannover*

Best Conference Paper by a Public and Nonprofit Division Doctoral Student

Nonprofit organizations increasingly engage in various forms of collaboration with corporate actors. Business collaborations can aid nonprofit organizations in fulfilling their mission; however, they are also likely to bring about internal tensions, particularly, when nonprofit members feel that partnerships are not aligned with the nonprofit's mission or core values. Indeed, previous research has indicated that "who we are" as an organization has important implications for "what we should do" and thus, who "we" should associate with, highlighting the role of organizational identity in assessments of inter-organizational relationships. To date, we still have a limited understanding of how nonprofit members perceive corporate collaborations and their implications for member perceptions of organizational identity. To address this important gap, we examine how nonprofit members make sense of nonprofit-business partnerships and how they manage identity tensions arising from them. Our study employs a qualitative research design including 40 semi-structured interviews across 15 nonprofit organizations over two phases of data collection. We show the identity tensions arising from corporate partnerships and identify four identity work tactics that nonprofit members engage in to alleviate these tensions. By offering a grounded model of identity work in cross-sector partnerships, we bring attention to relational elements of organizational identity.

PNP: Articulating the Regulation Logics in Governments-Nonprofits Collaboration

Author: **Caroline Julie Demeyere**, *Copenhagen Business School*

Calls for the construction of a post-New Public Management paradigm to engage collaboratively in wicked public problem solving are important. However, the shift toward more horizontal relations between public and civil society actors is constrained by an institutional environment. This article studies the efforts of public and nonprofit actors to articulate the network logic carried in the collaboration with the preexistent hierarchical and market logics. A two-year inter-organizational ethnography was conducted within a government-association collaboration structure: the Equality Group as a community of public and nonprofit actors seeking to co-construct regional public policies on gender equality in France. The results highlight two different conceptions of the articulation of collaboration with regulation logics: mandated collaboration and co-competition. This discrepancy generates a collaborative distrust. A positive role of the public actor's hierarchical authority in the collaboration between governments and nonprofits is highlighted with the theorization of a collaborative ratchet effect. The research argues for the need to shift the debate from the legitimacy of hierarchical authority in collaboration to the legitimate and ethical ways in which hierarchy could be exercised for collaborative purposes. It supports practitioners wishing to develop collaboration by shedding light on the mutual representations and expectations of partners.

PNP: Overcoming Information Asymmetry in Public-Private Relationships: Boundary Objects in Contracts

Author: **Florence Karaba Stadler**, *School of Management, U. of Bath*
Author: **Jens Roehrich**, *U. of Bath*
Author: **Steve Conway**, *U. of Leicester*
Author: **Jack Turner**, *Janssen pharmaceuticals*

The paper builds on information processing theory to investigate the yet under-explored roles of contracts and their nested boundary objects to address information asymmetry in public-private relationships. Drawing on interviews, observation, archival data and contracts, we examine relationships between a pharmaceutical company and three public healthcare organizations. While findings reveal that contracts can function as a common reference point, boundary objects differ both in their information processing capacities and effect on information uncertainty and equivocality. Also, where one partner is more dominant than the other, boundary objects may have a negative impact on information asymmetry.

Author: **Stephan Leixnering**, *WU Vienna*

Author: **Markus A. Höllerer**, *UNSW Sydney & WU Vienna*

Author: **Tobias Polzer**, *WU Vienna*

Author: **Michael Schiffinger**, *WU Vienna*

Contemporary public services are regularly delivered by a broad range of decentralized providers across the public, private, and non-profit sectors. In these fragmented settings of ‘delegated’ governance, central administrative overview and accountability have become increasingly elusive objectives. Public audit institutions, on the other hand, occupy a unique position at the nexus of central administrative units and decentralized service providers. Our work addresses the often-underestimated role that public auditing plays in such organizational arrangements by unpacking how administrative units respond to audits that identify performance and coordination issues in the delivery of public services. Empirically, we examine survey data from organizations audited by the City of Vienna Court of Audit. We find that audits indeed make administrative units (re-)act – but also talk and listen to service providers. Thus, audits strengthen central administrative accountability and lead to (re-)engagement and improved relationship management in settings of delegated governance.

Advances in Text Analysis for Management Research

Session Moderator: **Janice Wobst**, *Leuphana U. Lüneburg*

RM: [Computer Aided/Assisted Qualitative Data Analysis Software in Management and Organizational Research](#) 

Author: **Paula Marie O'Kane**, *U. of Otago*

Author: **Anne D. Smith**, *U. of Tennessee, Knoxville*

This paper analyses 128 journal articles, published in the field of management and organizations between 2011 and 2020, which articulated the use of CAQDAS programs in their data analysis. Our analysis of these articles revealed that scholars are using CAQDAS in many novel ways to support their data analysis process. Yet, many scholars tend to over-legitimize the role of CAQDAS in their study, without a detailed description of the CAQDAS techniques used in the data analysis. We provide examples and exemplars of CAQDAS explanations and point to the continued need to grow and refine CAQDAS terminology in order to communicate our data analysis effectively and enable readers to both understand and learn from other researchers.

RM: [Avoiding Algorithm Error in Computer-Aided Text Analysis: Selecting Text Analysis Software](#) 

Author: **Janice Wobst**, *Leuphana U. Lüneburg*

Author: **Rainer Lueg**, *Leuphana U. Lüneburg*

The use of computer-aided text analysis as a tool to quantify qualitative information continues to grow in management research. Academia increasingly develops guiding principles that aid scholars in addressing reliability and validity issues. However, there is little guidance in selecting a proper software solution that aligns the features of the software with the features of the underlying construct. Further guidelines are particularly relevant because computer-aided text analysis is highly software dependent. This paper demonstrates a systematic software selection process using two illustrative constructs: a theoretically complex construct (value-based management sophistication) and a more straightforward construct (firm's future orientation). The paper develops generalizable principles for selecting proper software solutions. After reviewing relevant literature, this paper compares the algorithmic proximity of frequently applied software solutions in management research, performing analysis of variance and convergent validity analysis. The results demonstrate that the algorithmic performance depends on the construct type. The analysis of variance indicates statistically significant differences in mean values between various software solutions. However, these differences do not lead to substantial deviations in convergent validity results between the applied software solutions. This paper contributes to the literature by assisting scholars in choosing a proper software solution when conducting computer-aided text analysis.

RM: [Leveraging Text Mining for the Grounded Theory Method in Qualitative Research](#) 

Author: **Dillon Berjani**, *Vrije U. Amsterdam*

Despite the broader recognition of the grounded theory methodology in qualitative research, this methodological approach bears limitations mainly concerning its analytical rigor, including unreliable generalizations about language use or inaccurate conclusions that result from subjective preconceptions about the data. Reflecting these considerations, this study reports on two specific text mining features, namely keywords and keyword combinations. It discusses their relevance for researchers and applicability in reducing analytical weaknesses of the grounded theory approach explicitly relating to the analysis of extensive textual data. In particular, their relevance lies in enabling researchers to localize and contextualize general themes in the data, commonly performed manually, indicating where and in what context such themes have been used. This approach enables more rigorously grounded and accurate findings by making more reliable and objective generalizations of language use. It helps researchers more accurately identify relevant themes in the data and build a data structure. This paper contributes to scholarship focused on organizational research using qualitative methods. It informs about specific features in the context of text mining, allowing researchers to improve analytical rigor and the overall quality of their qualitative study.

RM: [Quantifying Narrative Data in Qualitative Analysis: An Abductive Approach and Interactive Process](#)  

Author: **Hongxia Peng**, *Rouen U.*

The analysis of narrative data frequently raises methodological concerns oscillating between, on the one hand, the necessity to structure and highly heterogeneous and descriptive data for operationalizing analysis and, on the other hand, the interest to preserve the subtlety and context of narration for enhancing analysis. Based on existing research that evidences the inherent coherence of qualitative analysis for narrative data and the operational advantage of quantifying narrative data via textual analysis, this paper presents a methodological exploration combining textual analysis and qualitative content analysis to analyze narrative data. Positioning this methodological process within an abductive approach, this research assesses an analysis conducted on 75 narrative texts written by employees and managers about their work and shows that 1) the textual analysis, with its quantifying techniques, helps peruse and structure narrative data, particularly heterogeneous and massive data; 2) the interaction between quantifying techniques supported by textual analysis and qualitative content analysis based on interpretation favors the interaction between deductive reasoning and inductive reasoning during the analytical process and therefore reinforces the interpretative robustness of qualitative content analysis; 3) if qualitative content analysis cannot intrinsically dissociate from the subjective interpretation, textual analysis might provide relative objectifying adjustments to the subjectivity of interpretation. The paper ends by presenting propositions and recommendations with regard to the utilization of quantifying techniques in the qualitative analysis of narrative data.

SAP: **“Senator, We Run Ads!”: On The Persistence of Facebook’s Paradoxical Tensions** 

Author: **Lorenzo Skade**, *European Uni Viadrina, Frankfurt (Oder)*

Author: **Jochen Koch**, *European Uni Viadrina, Frankfurt (Oder)*

Author: **Eric Knight**, *Macquarie Business School, Macquarie U.*

Despite the ongoing interest in studying organizational paradoxes, we still lack knowledge of how and why these paradoxes persist over time. Based on a critical discourse analysis of video data of Facebook’s Congressional hearings in 2018, we develop a process model of the dynamic persistence of paradoxical tensions. We argue that CEO Mark Zuckerberg mobilized embodied four discursive practices—conforming, rejecting, transcending, and generalizing—in an attempt to create complexity to conceal Facebook’s strategic tensions. As a result, these practices led to circles of resolving, exposing, and concealing tensions, giving rise to the persistence of the paradox of the company’s business model. Based on Luhmann’s systems theory, our study contributes to the theoretical advancement of the dynamics of the persistence of paradoxes that showcases the evolution of tensions over time. Doing so, our study advances the knowledge of the persistence of paradoxes and extends the literature on paradoxes in system theory.

SAP: **Communication of Crisis or Crisis of Communication**

Author: **Elisa Lehrer**, *European Uni Viadrina, Frankfurt (Oder)*

Author: **Jochen Koch**, *European Uni Viadrina, Frankfurt (Oder)*

All over the world, scientists and governance systems are currently challenged to assess and strategically communicate information towards the public to contain the COVID-19 pandemic. Spurred by the global outbreak of COVID-19, affecting all areas of social and economic life the interest of management and organization scholars into the topic of crisis has rekindled. However, little is known about how organizations communicate to monitor, detect, prevent, and/or control crises, that are characterized by high levels of uncertainty and complexity. In our empirical study we investigate the communication of the Robert Koch-Institute, a federal institution of the German government, throughout the early stages of the pandemic in 2020. Thereby, we seek to understand how organizations perform such mission-driven communication, by drawing on speech act theory and the concept of performativity. Finally, we develop a process model of a process-model of performative communication.

SAP: **Tracing Paradoxes: The Nonlinear Movement of Paradoxical Tension in Interorganizational Partnerships**

Author: **Jane Kirsten Le**, *WHU - Otto Beisheim School of Management*

Author: **Margaret Koli**, *WHU Otto Beisheim School of Management*

Interorganizational partnerships are a key mechanism to address grand challenges including climate change, poverty, energy security, and health crises. These partnerships are beset with paradoxes and must thus continuously respond to tensions at multiple levels. By studying paradoxical tensions and the responses to these tensions across the various levels of an interorganizational partnerships, this thesis traces the movement of paradoxical tension across levels and over time showing consequences for Grand challenges. Specifically, this longitudinal case study of interorganizational actors addressing the grand challenge of renewable energy in emerging economies, shows – in contrast to existing studies – that tensions continuously move between the individual, organizational, and interorganizational levels of the partnership in non-linear movements. This study explains these non-linear movements and highlights the implications for interorganizational partnerships and their ability to address grand challenges. Specifically, the research shows how critical incidents, can occur at any level, making tensions salient, sometimes at multiple levels simultaneously, with tensions then moving dynamically between various levels of the partnership based on how paradoxes are experienced and responded to by actors. The simultaneous dynamic movements, experience and response to paradoxical tension can provide an explanatory mechanism for how interorganizational partnerships are beset by paradox which in turn creates tensions and how the experience and response to tensions influences the focus on the grand challenge. Our narratives of dynamically moving tensions challenge existing depictions of paradoxical movement and highlights critical mechanisms in understanding the role of paradoxes in interorganizational settings.

 SAP: **NASA’s Inter-Organizational Open Innovation Practices to Tackle the Exploration-Exploitation Paradox**  

Author: **Christina Angelika Wawarta**, *Warwick Business School*

Author: **Loizos Th. Heracleous**, *Warwick Business School*

Author: **Sotirios Paroutis**, *Warwick Business School*

Carolyn Dexter Award Nominee

While open innovation has become an established approach to exploration we still remain with a limited understanding of how incumbent firms use open innovation practices at the inter-organization level and what effects these might have. This is a surprising omission for strategy scholarship as many firms rely on inter-organizational engagements to execute complex projects. Drawing on a longitudinal study of open innovation practices in NASA, we reveal the multi-layered effects of open innovation practices and their implications for the inter-organizational level. We theorize an inductive model that shows how open innovation practices can mitigate exploration-exploitation paradoxes.

SIM: On Becoming a Purpose-Driven Firm: Practices and Drivers of Corporate Purpose

Author: **Zahra Kashanizadeh**, *Amsterdam Business School, U. of Amsterdam*
Author: **Jatinder Singh Sidhu**, *Leeds U. Business School*
Author: **Kevin Heij**, *Amsterdam Business School, U. of Amsterdam*

There is currently much interest in the notion of business or corporate purpose as an organizing concept to capture for-profit firms' balanced attention to the simultaneous pursuit of financial performance goals and social impact goals. Recent years have seen a steady flow of conceptual and empirical articles seeking to illuminate the concept and shed light on how and why companies differ in their purpose orientation. Speaking to this line of research, our article reports a study of ten prominent companies in the Netherlands, offering a new and unique perspective on companies' varied engagement with and expression of purpose as well as the factors that influence the direction and speed of companies' purpose orientation. Based on qualitative analysis of archival material and 58 semi-structured interviews with the companies' internal and external stakeholders, we present a network of the drivers and practices central to having an explicit purpose orientation. We moreover identify two alternative pathways or trajectories that companies tend to follow on their way to becoming more purpose-driven. The empirically grounded insights of this study contribute a more fine-grained understanding of companies' commitment to a purpose orientation as they strive to find the right balance between the attainment of financial and social goals in the context of their specific industries. The study also contributes to laying the foundation for variance research interested in operationalizing the purpose concept to examine the relative strength of internal and external contingencies affecting a company's purpose, and the impact this last has on different performance parameters.

SIM: The Conjoint Effects of Accountability and Capability on Financial/Social Balance

Author: **Fengbin Wang**, *School of Business, Renmin U. of China*
Author: **Changwei Guo**, *School of Business, Renmin U. of China*
Author: **Jianxun Chen**, *U. of International Business and Economics*

Dual-purpose companies with financial/social tradeoffs face conflicting expectations from various stakeholders. We theorize this issue by a combinatory consideration of accountabilities regarding what the focal organization “should do” and the capabilities that guarantee what they “could do”. By distinguishing accountabilities in terms of upward vs. downward relationships and organization capabilities in terms of orientations toward presence and the orientations toward presence and future, our research addresses the two aspects of strategy holistically through qualitative analysis. Then we applied a QCA analysis to explore the causal configurations of these conditions. Our findings reveal three configurational patterns that enable the financial/social balance and three patterns that inhibit it. These patterns demonstrate complementary and substitutive relationships within and between accountabilities and capabilities, and provide empirical evidence for how dual-purpose companies can deploy different accountabilities and capabilities to achieve financial/social balance.

SIM: Do Board Characteristics Affect the Adoption of Purpose-Driven Strategies? Evidence from EU firms

Author: **Francesca Collevocchio**, *U. Politecnica delle Marche*
Author: **Gianluca Gionfriddo**, *Institute of Management, Scuola Superiore Sant'Anna, Pisa*

The debate around corporate purpose in the modern economic system has gained considerable momentum in the last decade, and the growing awareness of the social role played by firms has triggered an urgent call to pursue purpose-driven strategies (PDSs), i.e., strategies aimed at satisfying one or more societal needs other than profit maximization. Since the board of directors plays a key role in defining the corporate purpose and supporting decision-making in the definition of strategies, it is fair to assume that the characteristics of the board can impact the adoption of PDSs. However, the relationship between the board and PDSs has not yet been examined. Our study aims to fill this gap by investigating whether and which specific board characteristics influence the adoption of PDSs. To this end, we employed propensity score matching and logistic regression methods to analyze a sample of 580 European firms. Results show that board independence, network size, gender diversity, and education positively affect the adoption of PDSs, while the impact of directors' age and board tenure is negative. In addition to contributing to research by connecting the board literature with the corporate purpose literature, our results provide practical implications for directors and investors.

SIM: The Effects of Ownership Structure and CEO Duality on Family Firm CSR Performance

Author: **Lin-Hua Lu**, *National Taipei U. of Technology*
Author: **Chien-Cheng Chen**, *National Taipei U. of Technology*
Author: **Meng-Rou Li**, *National Taipei U. of Technology*

In our study, we investigate specific issues related to how family firms engage in corporate social responsibility activities. In addition, we make predictions about how family firm corporate social responsibility activity engagement is moderated by CEO duality and professional manager equity ownership. We find that a higher divergence between control and cash flow rights will attract family firms to engage in more corporate social responsibility activities. Moreover, two contingency variables, CEO duality and professional manager equity ownership, are found to have negative interaction effects on the relationship between the divergence between control and cash flow rights and corporate social responsibility activities. A longitudinal data set from 2008 to 2019 prove our predictions.

SIM: The Relationship Between Ethics and Firm Turnover Among Investment Brokers

Author: **Steven Mueller**, *Longwood U.*
Author: **Daniel Nelson Jones**, *U. of Nevada Reno*
Author: **Shelby Curtis**, *U. of Nevada, Reno*
Author: **Jessica Carre**, *Mind Research Network*

Unethical brokers wreak havoc on the personal and financial lives of their clients. However, in order to have confidence that a broker is ethical, clients must be able to identify warning signs. The occupational and demographic history of brokers may hold clues to a broker's ethics. For example, brokers who move from firm to firm may be doing so to avoid legal trouble. However, moving from firm to firm may also simply reflect ambition. Thus, research is needed to determine if turnover is a legitimate warning sign for unethical behavior. Study 1 used an archival sample from the Financial Industry Regulatory Authority organization (i.e., FINRA; www.finra.org) to replicate and extend previous findings that frequent turnover is a warning sign for unethical behavior. We found that having been banned from trading or having high amount disclosures was associated with more turnover and less time spent at each firm. Study 2 surveyed 235 full time workers in the financial sector. Although we found no evidence that firm turnover was associated with legal concerns, we did find a negative relationship between time spent at their longest appointment and legal concerns. This association remained even when controlling for personality, workplace culture, greed, and ambition. These findings contribute to a greater understanding of how demographic variables may be useful for flagging unethical brokers.

SIM: Family Ownership, Financial Performance, and Social Performance: A Stakeholder Salience View

Author: **K. Praveen Parboteeah**, *U. of Wisconsin, Whitewater*
Author: **Hsi Mei Chung**, *I-Shou U., Taiwan*
Author: **Andy Yu**, *U. of Wisconsin-Whitewater*

Employing an integrated framework from stakeholder salience and socioemotional wealth perspective, this study addresses family firms' heterogeneity on corporate social performance (CSP) issues by utilizing balanced panel data from 2007-2018. We found that family firms prioritize CSP dimensions (i.e., shareholder, employee, society, and environmental protection) as salient or not based on the socioemotional wealth concern (measured by the family ownership). Additionally, firm financial performance increases the positive relationship between family ownership and the overall CSP. Specifically, the moderating effect helps the shareholder, employee, and the society dimension of CSP. This study provides insights on realizing how and under what kind of conditions that family ownership matters on distinct aspects of CSP in family firms

SIM: Entrepreneurs' Childhood Family-Decline and Corporate Social Responsibility Performance

Author: **Mengyu Cai**, *Business School at Nankai U.*
Author: **Nan Zhou**, *Tongji U.*

We examine the impact of entrepreneurs' childhood family-decline on a firm's corporate social responsibility (CSR) performance, and investigate the mediation mechanism of long-term orientation. We first argue that entrepreneurs' childhood family-decline will foster their long-term orientation by enhancing their cognitive judgment and self-control ability. Long-term orientation further leads to a firm's CSR activities. Moreover, we explore two moderators of the relationship between childhood family-decline and long-term orientation: entrepreneurs' social experience and education, both of which influence their cognitive judgement and self-control ability. We test our hypotheses in a sample of private-owned listed firms in China and find support for our predictions.

Author: **Clarissa Rene Steele**, *Kansas State U.*

Author: **Sarah Marie Holtzen**, *Missouri Southern State U.*

Over the last few decades, CEO compensation has been increasing at a rate much faster than the pay of the average worker. Though a recent AFL-CIO (2021) report notes that the average CEO-to-worker compensation ratio currently sits at 299:1, differences exist in the extent to which this value is seen as a topic of concern. These differences may depend, in part, on the extent to which individuals' knowledge of and perceptions surrounding CEO compensation are accurate. For example, in a year when CEOs earned an average of \$15.5 million, American adults incorrectly estimated CEOs earned a substantially smaller amount of \$1 million (Larcker, Donatiello, & Taya, 2016). To begin investigating such discrepancies in how the compensation of CEOs is perceived, we use equity theory (Adams, 1965) to test a series of hypotheses in a sample of students and adults. While we expected students to be less knowledgeable about and hold less accurate perceptions of CEO compensation, our results found no significant differences in initial perceptions held by the two groups. Following an experimental manipulation that presented participants with accurate information on both CEO compensation and average worker pay, both groups reported that CEO compensation was more of a concern. Contrary to the principles of equity theory, however, participants also reported that CEO pay was more justified after reading the information. We close the paper by addressing these contradictory findings while providing concrete directions for future research.

STR: Selective Revealing for Building Innovation Ecosystems: Incumbent Firms' and New Ventures' Behaviors  

Author: **Pia Kerstin Neudert**, *EBS Business School*
Author: **Markus Kreutzer**, *EBS Business School*
Author: **Katrin Burmeister-Lamp**, *EBS U. of Business and Law*

Incumbent firms and new ventures form innovation ecosystems that provide innovative value propositions based on their complementary resources. To jointly build these innovation ecosystems, firms must open their organizational boundaries by sharing information with each other. Research suggests that selective revealing contributes to tie formation in innovation ecosystems: As firms voluntarily, purposefully, and irrevocably disclose information to third parties—including competitors—they hope to gain access to other firms' resources and thereby create multipartner innovations. However, theory on selective revealing and the formation of innovation ecosystems is still sparse, as the two phenomena have been studied from different management perspectives: open innovation research and ecosystem research. We overcome this disparity by drawing on the resource-based view to disentangle the threats of substitution and imitation that impact selective revealing behaviors in building innovation ecosystems. Specifically, we develop propositions on how the radicalness of innovations, incumbent firms' diversity of knowledge bases and resource commitments, as well as new ventures' use of power change tactics and intentions for ecosystem learning influence the propensity for selective revealing. We thereby theoretically illuminate information sharing tensions in emerging innovation ecosystems and derive new research impulses for open innovation and ecosystem research, including configurational and organizational learning perspectives on ecosystem building.

STR: Legitimizing Nascent Platforms: The Dynamics and Complementarities of Strategic Framing

Author: **Saeed Khanagha**, *Vrije U. Amsterdam*
Author: **Joost Rietveld**, *UCL School of Management*

Nascent platforms face important legitimacy issues arising from the need to gain visibility and to meet the expectations of users and complementors on whom the platform depends for its success. Heterogeneity in these stakeholders' expectations and the absence of demonstrable value in the early stages escalate such legitimacy issues. We investigate how platform sponsors may deal with these challenges by using framing strategies that complement technological and economic strategies to convince audiences that the new platform is credible, legitimate, and valuable. Our framework identifies firm- and ecosystem-specific issues as two boundary conditions that determine the nature and sequence of framing strategies. We derive framing strategy archetypes—disruptive and sustaining framing—and highlight how these can add to the platform's technological and economic strategies by either making their salient aspects more noticeable (supplementary effect) or neutralizing the hazards of those strategies (compensatory effect). These complementarities between framing and other strategies help the sponsor deal with the tensions in creating a new platform.

STR: When Uber Eats its Own Business, and That of its Competitors Too 

Author: **Hyuck David Chung**, *U. of Michigan*
Author: **Yue Maggie Zhou**, *U. of Michigan*
Author: **Christine Choi**, *U. of North Carolina at Chapel Hill*

How does diversification influence a platform firm's existing business? We conjecture that a diversifying platform firm faces a unique challenge in allocating complementors' resources between businesses due to its lack of ownership over them. At the same time, the potential synergy from serving multiple businesses in a diversifying platform firm can divert ownership-free complementors away from competing platform firms. We analyze changes in the rideshare business in Manhattan, New York City, after Uber launched Uber Eats in the city. We find that the launch of Uber Eats was associated with a reduction in trip volumes for both Uber and Lyft. Both effects were weakened during rush hours, when the opportunity costs of resource reallocation to Uber Eats were higher for the rideshare drivers.

STR: Within Platform Diversification: The Performance Implications of Diversification Breadth and Depth

Author: **Kenan Guler**, *Rochester Institute of Technology*
Author: **Ettore Spadafora**, *Rochester Institute of Technology*

We add a new dimension to the diversification literature by investigating the diversification behaviors of complementors within a platform ecosystem. Drawing on resource based-theory and transaction cost economics, our theoretical framework suggests that the existing diversification measures inappropriately gather diversification breadth and depth under a single construct and treat related and unrelated diversification as if they are exogenous. Collecting and analyzing a unique Airbnb hospitality dataset, 2,969,737 listings by a total of 218,532 Airbnb hosts over 55 months, we provide performance implications of diversification breadth and depth by accounting for the "multi-faceted" nature of these constructs. Our findings on the relationship between diversification breadth and performance suggest that combined related and unrelated diversifiers are the highest performers based on financial metrics but lowest based on "evaluated performance." We also find that pure related and pure unrelated diversifiers outperform single businesses based on financial metrics but underperform based on evaluated performance. Finally, we found an inverted-U shape relationship between diversification depth (related/unrelated expansion) and performance.

Author: **Karl Taeuscher**, *U. of Manchester*

Author: **Hannes Rothe**, *ICN Business School*

How can providers of multisided platforms grow their user base? A central tenet in platform research is that user growth is driven by increases in a platform’s ecosystem, but this tenet rests on the implicit assumption that potential users attend to and perceive such changes. Such an assumption might be problematic in the case of platforms provided by new ventures (platform ventures) because attracting stakeholder attention generally represents a major challenge for any new venture. In this paper, we aim to address this complication by developing and testing theory about how platform ventures can strategically attract user attention through growth announcements – public claims about the growth of their ecosystem and user base. We study the performance consequences of growth announcements in the market for Massive Open Online Courses (MOOCs), in which new ventures like Coursera and Udacity launched competing MOOC platforms in 2012. Our fixed-effects time series of the monthly user growth of nine competing MOOC platforms between 2012 and 2021 shows that growth announcements substantially drive platforms’ user growth. We find that the benefits of growth announcements are strongly contingent on a platform venture’s pressure to attract attention – reflected in its prominence and the prominence of its direct competitors – and its ability to leverage its existing ecosystem to make compelling growth claims. We discuss how these findings contribute to research on platform strategy and cultural entrepreneurship.

CEO Personal Characteristics and Firm Strategic Decisions

Session Moderator: **Evans Ofosu Boamah**, *Lancaster U. Management School*

STR: Narcissistic CEOs Promise More than they Deliver: A Case from Share Repurchases 

Author: **Evans Ofosu Boamah**, *Lancaster U. Management School*

The paper examines how CEO narcissism affects a firm's likelihood of share repurchase announcement. Using the novel signature size measure of narcissism, we find that firms with narcissist CEOs are more likely to make repurchase announcements and announce higher repurchase amounts. However, they are unlikely to make the actual repurchase and are likely to repurchase a small amount if they do. The announcement effect is pronounced in poor-governed firms. Further, actual repurchases only happen when the repurchase can be made at a discount. To mitigate endogeneity concerns, we use a matched sample and difference in difference analysis and find a statistically significant and supportive result. Finally, controlling for overconfidence and using an alternative measure of narcissism provide supportive and more robust results.

Paper is Available to Meeting Registrants Only.

STR: Curb Your Enthusiasm! Concentrated Institutional Ownership as a Check on CEO Overconfidence

Author: **Yi Huang**, *Syracuse U. Whitman School of Management*

Author: **Pamela Brandes**, *Syracuse U.*

Author: **Ravi Dharwadkar**, *Syracuse U.*

Extensive research has documented the consequences of CEO overconfidence. However, we know precious little about governance factors that curtail it. We argue that monitoring intensity and informational advantages of concentrated institutional ownership are associated with surveillance and oversight necessary for curbing CEO overconfidence. Using a sample of S&P 1500 firms from 1998-2018, we find that concentrated institutional ownership is negatively associated with CEO overconfidence across multiple measures and model specifications. We further examine the moderating effects of CEO power indicators and the firm's information environment, documenting when these contingency factors strengthen or weaken the primary association. Finally, we investigate the direct and indirect monitoring effects (through CEO overconfidence) of concentrated institutional ownership for firm acquisition intensity and find significant support for our mediating hypothesis. Our contributions highlight the importance of concentrated institutional owners for curtailing CEO overconfidence and identify multiple channels through which their monitoring capabilities reduce acquisition-related agency problems.

STR: The Effects of Family Firm CEO Political Ideology on Successor Choice 

Author: **Chunhui Cao**, *School of Business and Management, Shanghai International Studies U.*

Author: **Zi Yun He**, *Shanghai International Studies U.*

Integrating upper echelons theory and socioemotional wealth (SEW) literature, this study examines how family CEOs' political ideology influences their decisions on family firms' successor choices. Using donations records to measure CEO political ideology, we test our ideas on a sample of 157 family CEOs from S&P 1500 firms from 1991 to 2021. We show that a family CEO's political ideology regarding conservatism has a significant positive effect on the probability of choosing a family member as a successor. In addition, the SEW endowment (family control and management) mediates the positive relationship between CEO conservatism and intrafamily succession. By showing that CEO political ideology manifests in family business succession, we contribute to research on family business succession, CEO political ideology, SEW, and upper echelons theory.

Paper is NOT Available. Please contact the author(s).

STR: CEO Political Ideology: Revisiting its Responsibility Implications

Author: **Marc Kowalzick**, *U. of Mannheim*

Author: **Michael Woywode**, *U. of Mannheim*

As an integral component of their value system, CEOs' political ideology—their stance along the liberal–conservative continuum—has come to be regarded a major determinant for (ir)responsible behavior. Yet, prior work remains inconclusive on whether a more liberal or a more conservative ideological leaning induces CEOs to engage in more or less (ir)responsible behavior. Applying an upper echelons perspective to assess the effect of CEO political ideology on a highly controversial corporate practice, earnings management, we argue that what distinguishes the (ir)responsibility of liberal versus conservative-leaning CEOs may at times rather be its configuration than its degree and depend on the context in which managerial action occurs. Analyzing a panel dataset of 872 S&P 1500 CEOs, we find considerable support for our arguments that liberal-leaning CEOs particularly prefer to inflate reported earnings in line with their preference for current achievement. Conservative-leaning CEOs likewise engage in earnings management, yet particularly tend to deflate reported earnings in line with their preference for inhibition to forestall potential future ambiguity. We show how this ideological inclination to manage earnings varies along contextual characteristics inducing variance in CEOs' short-term versus long-term orientation and thus offer a comprehensive contribution to our understanding of the irresponsibility of liberal and conservative-leaning CEOs.

Managing the Unexpected: Signals, Surprises, and Search

Session Moderator: **Karen Van Gia Tu**, *U. of Groningen*

STR: **Multiplicity and Simultaneity in Signaling: The Effect of Summary Signals on Partner Selection** 

Author: **Karen Van Gia Tu**, *U. of Groningen*

Author: **Pedro Faria**, *U. of Groningen*

Author: **Pasi Kuusela**, *U. of Groningen, Faculty of Economics and Business*

Author: **Jordi Surroca**, *U. of Liverpool Management School*

Prior signaling research has shown that a signal portfolio can communicate multiple underlying attributes of a partner to an organization. However, we know relatively little about how multiple attributes can be effectively signaled to multi-goal organizations. A multi-goal organization often prefers to collaborate with partners who act in accordance with multiple attributes simultaneously, that is, at the same time and in the same context. Although a signal portfolio can show multiple attributes of a partner, a portfolio does not reflect the simultaneity of attributes. We introduce the concept of summary signals, defined as signals that show multiple underlying attributes of a partner simultaneously. We argue that a partner's likelihood of being selected as a collaboration partner increases with its use of summary signals, and the effect of summary signals is stronger than that of an equivalent signal portfolio. Using data on government procurement of innovation from 2010 to 2019, we find that firms possessing highly cited, green, and joint patents, our measure of summary signals, are more likely to be selected by the government, and that this effect is stronger than the effect of signal portfolios. Our study has important implications for research on signaling, partner selection, and government procurement.

STR: **The Construct of Surprise. A Review**

Author: **Jeffrey Baker**, *U.S. Army War College*

While the construct of surprise has increasingly been used in recent years, its proliferation across the social sciences has led to different words and meanings for the same construct that create confusion and a distinct lack of construct clarity. In addition, organizations are increasingly subjected to surprises that draw executive attention, additional resources, and organizational energy. In our review of the construct, the author searched the top journals in Management, Economics, Psychology, Sociology, and Political Science and found that three prominent perspectives emerge. The author, therefore, provides a concise overview of the construct and its key concepts and provides guidance about promising avenues for future research.

STR: **When M&A Attempts Fail: M&A Deal Termination and Subsequent Corporate Strategy Transactions** 

Author: **Heejung Byun**, *Purdue U.*

Author: **Koungjin Lim**, *Purdue U.*

Despite the prevalence and severity of M&A deal termination, the consequence of deal termination on corporate strategy is largely unexplored, missing out on a significant portion of the population in analyzing M&As. In this paper, we study whether and when firms switch to alliance after a failure of initial M&A attempt due to deal termination. Drawing on the notion of problemistic search, we argue that deal termination triggers problemistic search which makes the firm recalibrate its sourcing strategy and switch to alliance. Using a sample of 1,009 M&A deal terminations among publicly-traded U.S. firms between 1984 and 2019, we find that firms are more likely to make a subsequent switch to alliance for failed technological acquisition attempts compared to failed attempts with other M&A motives. Consistent with the theory, we find that the switch to alliance after a termination of technological acquisition is stronger when the stock market reaction to termination is negative. While some firms internally develop to fill capability gaps when M&A attempts fail, we find that firms are relatively more likely to switch to alliances compared to internally building particularly after a negative market. These findings shed a new light on the choice between acquisition and alliance.

STR: **Firms' Political Connection Adaptations in the Aftermath of Political Faulting** 

Author: **Han Jiang**, *Tulane U.*

In this study, we develop a novel framework to highlight the two central concerns for firms to manage political connections. We theorize that firms will craft their political connections to strategically balance the value of political connections in seeking government resources and the downside risks for those connections to get firms entangled in political conflicts and struggles. In light of these two concerns, we further highlight that firms can adopt two strategies to adapt to political changes: adding new political connections to promote resource seeking in the post-change political system, and removing existing political connections to avoid being implicated by political conflicts. Drawing on this nuanced theoretical framework, we explore how political faulting—defined as the political shocks caused by the sudden downfall and replacements of major political leaders—drive firms to add new political connections and remove existing ones in distinct and asymmetric fashions. We conceptualize an inverted U-shaped relationship between political faulting intensity and the addition of new political connections, while predicting a monotonically positive relationship between political faulting intensity on firms' removal of existing political connections. We further argue that such effects of political faulting will be moderated by firms' government dependence. Evidence from Chinese listed firms' political connection adaptations in response to the indictment and replacements of high-level corrupt officials in their headquarter provinces between 2012 and 2019 lends strong support to our theory.

Presenter: **Dong-Nghi PHAM**, *ESSEC Business School*

In this symposium, we seek to advance the current state of several theoretical paradigms that deal with multiple goals at multiple levels. In doing so, we aim to explicate the mechanisms connecting the micro-level processes to organization-level outcomes. We hope to provide a forum for reviewing prior work in this area and identifying new avenues for future research that will further elucidate the complexities of having multiple goals at the individual- and firm-level. Our ultimate objective is to advance scholarship on multiple goals across and between theoretical areas using theoretical, empirical and simulation approaches.

Firms’ Market and Non-market Strategies in Response to the Climate Crisis

Firms Strategies in Response to the Climate Crisis

Organizer: **Xia Li**, *Boston U. Questrom School of Business*

Moderator: **Caroline Flammer**, *Columbia U.*

Panelist: **Rodolphe Durand**, *HEC Paris*

Panelist: **Andrew J. Hoffman**, *U. of Michigan*

Panelist: **Bruce Kogut**, *Columbia Business School*

Panelist: **Marvin B Lieberman**, *UCLA Anderson School of Management*

Panelist: **Xia Li**, *Boston U. Questrom School of Business*

The purpose of this panel symposium is to engage a group of expert panelists in a moderated, interactive discussion of (1) the impact of the climate crisis on market strategies such as location choice, M&A, and product innovation; (2) the impact of the climate crisis on non-market strategies such as political actions and sustainable business practices; (3) the implications for the broader business environment and policy; and (4) the measurement and disclosure of firms’ climate risk exposure and impact.

Participant: **Ron Adner**, *Dartmouth College*

Participant: **Catherine Maritan**, *Syracuse U.*

Participant: **Carliss Baldwin**, *Harvard Business School*

Participant: **Giuseppe Stigliano**, *Spring Studios*

Over the last few years, “ecosystems” as a term has become an ever more important part of the management vernacular, in practice and research alike. This symposium aims to take stock of the progress we have made in ecosystem research, and consider three complementary angles. First, to look at progress and areas yet to be developed in terms of ecosystem research proper – offering a critical assessment from some of the leading scholars in this emerging field. Second, taking ecosystem as a real-life experiment, a source of variation that can be used to answer broader questions about how we organize and how we jointly create and add value. And third, as an opportunity to revisit our existing, established construct and abstractions, and see how they need to be adjusted, modified or evolve in this shifting, fluid context. Finally, this analysis should all be in the service of the needs of organizations and of polity, which is striving to adjust – for instance, through the very real question of how we should regulate platforms and ecosystems, a question that our intellectual community can contribute to. This symposium is meant to be discussion, rather than presentation-focused, and combine research questions with an exploration of how such research can, true to this years’ theme, help us “build a better world”

Panelist: **Ron Boschma**, *Utrecht U., Department of Human Geography and Planning*

The purpose of this panel symposium is to generate new insights into the theoretical and empirical challenges and opportunities that lie ahead for scholars interested in agglomeration research. Though the extensive literature on agglomeration has documented the positive externalities, boundary conditions, and moderators of outcomes among clustered firms, there are a variety of theoretical and methodological aspects related to agglomeration literature that remains to be explored. This panel symposium will bring together thought leaders engaged in scholarly work at the frontiers of agglomeration research to reflect on the state of agglomeration research and its implications for management scholars. The scholars will identify questions, mechanisms and phenomena that can guide frontier scholarly work by STR, TIM, and ENT division members.

Participant: **John Eklund**, *U. of Southern California*
Participant: **Jeffrey J. Reuer**, *U. of Colorado, Boulder*

The purpose of this symposium is to foster and accelerate scholarly conversations around the strategy and innovation of the bio-pharmaceutical and healthcare sectors. Our goal not only includes highlighting the aspects of importance of these sectors, but also involves contributing to the emergence of new ideas and research agenda, in light of recent events including Covid-19. We bring together a great set of five working papers and two senior scholars as discussants, who all study important theoretical issues and emerging phenomena in the biopharma and healthcare sectors. We have organized this presenter symposium with three goals in mind. First, to provide and motivate the importance of these sectors as an important empirical setting for strategy and management scholars. Second, to provide a brief overview of the strategy literature that has grounded their studies in these settings. We especially would like to highlight the theoretical insights from studies ranging from the management of innovation to the relationships between incumbents and entrepreneurial firms. Lastly, to introduce the working papers that use these settings that shed light on the direction and trajectory of the literature.

Rewriting Diversity into Theory and Method

Session Moderator: **Henriett Primecz**, *Johannes Kepler U. Linz*

GDO: **Blind-Spots of Diversity Management in CEE: Sexual Minorities, Ethnicity, and Religion**  

Author: **Henriett Primecz**, *Johannes Kepler U. Linz*
Author: **Peter Munkacsi**, *ELTE U.*

Diversity management concepts originated in the USA, and reflect social problems there, yet academic literature on diversity management, textbooks, and diversity management practices has spread across the world. Diversity management has, however, proven to be strongly context dependent. Local diversity management theories and practices should reflect local social problems. This paper aims to map social problems unique to post-socialist societies, concentrating on Central Eastern European countries. Three diversity categories (gender, age and disability) are considered to be important for the practitioners in the region, whereas the other three (sexual-orientation, ethnicity and religion) are blind-spots.

GDO: **Barriers and Boosts: Expanding the Lens on Mechanisms of Racial and Gender Inequity**   

Author: **L Taylor Phillips**, *NYU Stern*
Author: **Sora Jun**, *Rice U.*
Author: **Angela Shakeri**, *NYU Stern School of Business*

Managerial scholarship has made great strides in documenting persisting demographic inequities in organizations, and suggesting promising interventions. However, progress has also stalled, as many organizational solutions to race and gender inequities continue to fall short (Apfelbaum, Stephens, & Reagans, 2016; Kalev, Dobbin, & Kelly, 2006; Leslie, 2019). Here, we consider whether the scientific lens scholars themselves use to approach this topic may affect their findings (e.g., Kaplan, 2008). To do so, we first review research on inequity frames theory, which provides a theoretical foundation for distinguishing advantage versus disadvantage lenses on inequity, and the potential effects of these lenses. Then, taking the critical perspective of inequity frames theory, we undertake a comprehensive review of recent literature on race and gender inequity in organizations, which reveals that scholars have largely relied on a disadvantage lens to study mechanisms of, and thus solutions to, such inequity. This implicit lens obscures the reality that both advantaging and disadvantaging mechanisms contribute to race and gender inequity in organizations, leading scholars to mis-specify or miss entirely some root causes and solutions.

GDO: **Making Waves – An Examination of Major Trends in Feminism and Gender and Entrepreneurship Research**  

Author: **Aardra Chandra Mouli**, *UCL School of Management*

The research literature in gender and entrepreneurship has been punctuated by regular and recurring appeals for exploring and adopting feminist theoretical underpinnings, especially in response to contextual changes. In spite of the same, there has not been a conspicuous upturn in the adoption or blending of feminist concepts in gender and entrepreneurship research. In contrast, feminist scholarship appears to have been more responsive to critique, evolving in new conceptual and practical directions that address concerns raised in prior literature. Using the narrative tool of waves to organise thematic and temporal trends, this paper attempts to examine and consolidate major trends in feminist history, feminist literature and gender and entrepreneurship research. Based on a comparative analysis of trends in the two disciplines, I identify commonalities and divergences, highlight lacunae in how foundational concepts are treated and updated, and propose directions for future research.

 GDO: **Social Exchange Between Racial Minority Small Businesses and Small Business Support Organizations**

Author: **Tanja R. Darden**, *Towson U.*
Author: **Jay O'Toole**, *Old Dominion U.*

Small business owners provide needed economic growth to their communities while fulfilling their own desires for financial and personal success by pursuing their entrepreneurial dreams. Often, small business owners seek help from business support organizations, entering into relationship with the support organization. Over the past 2 years due to the pandemic and racial and social injustices witnessed around the globe, many organizations are focused on how to better serve minority clients. Although social exchange theory (SET) has been a dominant paradigm for organizational behavior (Cropanzano & Mitchell, 2005) that explores the economic and social nature of transactions and relationships between parties, little research has explored the theory within the context of race. That is, how do we address the issues of racial and social justice within the paradigm of SET, why is this important, and what does it mean in the specific context of racial minority small business owners and small business support organizations? We conduct a qualitative study to answer this research question, interviewing staff members, clients, and nonclients of a federal support organization in the U.S. Although we interviewed and analyzed data of small business owners of varying racial backgrounds, this paper focuses on the findings specific to racial minority small business owners because they are at the center of the research question proposed as well as the practical interest of the support organization that we teamed with. We contribute to SET by extending the conversation to include how race influences social exchanges.

GDO: **More Than Just Sex: Reviewing How Gender Constructs Are Conceptualized and Measured in Leadership**

Author: **HeyIn Gang**, *Iowa State U.*
Author: **Marc H. Anderson**, *Iowa State U.*

Scholars have long been interested in explaining and rectifying the persistent lack of gender equality in management and leadership positions, and in addressing gender inequality in its many guises in organizational behavior. Although there have been many reviews concerning diverse gender-related topics that take various forms (e.g., narrative reviews and meta-analyses), none has directly reviewed how gender-related constructs have been conceptualized and operationalized in leadership studies. Using a sample of 199 articles published between 2000-2020 from 14 leading management and psychology journals, we reviewed the constructs that appeared in formal hypotheses. We identified nine distinct categories of gender-related constructs (as well as a tenth "other" category) and analyzed how conceptualizations in each of these categories have been operationalized. Our analysis highlights several disconnects between the conceptualizations and operationalizations of gender-related concepts, as well as several other issues that represent future research avenues.

Network Centrality and Brokerage

Session Moderator: **Carolyn Yesse Ngowi**, *U. of New South Wales*

OMT: **Disentangling the Effects of Interpersonal and Interfirm Network Centrality on Knowledge Transfer**

Author: **Carolyn Yesse Ngowi**, *U. of New South Wales*

Author: **Steven Siu-Yun Lui**, *U. of New South Wales*

Author: **Suzanne Chan-Serafin**, *UNSW Sydney*

Author: **Salih Zeki Ozdemir**, *U. of New South Wales*

Social network scholars have placed emphasis on the benefits of occupying central network positions on knowledge transfer. Yet, there is a limited understanding on the boundary conditions influencing the relationship between centrality and knowledge transfer. We conduct a meta-analysis to unravel and provide a systematic and comprehensive account of the effects of centrality on knowledge transfer in interfirm and interpersonal networks and identify potential moderators. From meta-analysing 77 empirical studies representing 82 independent samples with 147 effect sizes, we find that the relationship between centrality and knowledge transfer varies depending on the level of analysis but remains consistent across various cultural context. Moreover, the magnitudes of effects of centrality on knowledge transfer significantly differ when diverse centrality types and transferred knowledge dimensions are teased apart, simultaneously examined and compared. To this end, we contribute to social network theory and knowledge-based view by providing a more elaborate account of effects of centrality on knowledge transfer, their boundary conditions, potential theoretical advancements, and managerial implications.

Paper is Available to Meeting Registrants Only.

OMT: **Whistleblower as Broker: Social Networks of the 2017 Hollywood Whistleblowers**

Author: **Azusa Nakamura**, *U. of Groningen, Faculty of Economics and Business*

Author: **Tanya Menon**, *Ohio State U.*

Author: **Giuseppe Soda**, *Bocconi U.*

We study the network structure of the 2017 Hollywood whistleblowers—who, despite career risks, identified sexual harassers in the industry. Whereas brokerage is often associated with access to positive resources, whistleblowers broker negative resources. The whistleblower-as-broker: 1) Threatens certain powerful ingroup members by revealing their unethical behavior to an audience; 2) Faces significant risk from exclusive occupancy of the structural hole; and 3) Benefits by attracting others to it. We propose that this unique role is ideally filled by the Protected Broker, who has both the informational power of an open network, and a protective shell of support. Exploratory analyses reveal that brokers who had high proportion of women in the network were less likely to be whistleblowers. One explanation is that protected brokers remained silent, and the other is that they were protected, and therefore victimized less. A follow up analysis of whistleblowers only revealed that protected brokerage predicted speed of whistleblowing—suggesting that this network composition empowered rather than inhibited action. We consider distinct types of protection (status via Oscar nominations, centrality, and proportion of women in the network), finding effects for only gender. We characterize whistleblowing, not as a solo act, but as contagious and dynamic over time, with protected brokers simultaneously insulated from threat, and driving social change when they confront it.

Paper is Available to Meeting Registrants Only.

OMT: **A Theory of Social Capital Transference**

Author: **Ambra Mazzelli**, *MIT Sloan School of Management*

Author: **Emanuela Rondi**, *U. degli Studi di Bergamo*

Author: **Alfredo De Massis**, *Free U. Bozen, Bolzano and Lancaster U.*

Brokerage – occupying a social network position that spans two otherwise disconnected alters – is a well-established construct in the social network literature. While most academic attention has been devoted to examining brokers’ role and interests in keeping the two alters separated, theorists have yet to clarify the mechanisms through which brokers act as connectors. Integrating socio-cognitive and discursive perspectives, we conceptualize social capital transference as the process enabling a broker to join the two alters by facilitating goodwill between them. More specifically, we theorize the discursive strategies that brokers use to engender, in each of the two alters, cognitive expectations on the nature of their potential relationship that, if validated, lead to the formation of a closed triad. Our study sheds new light on social capital dynamics through cognitive and discursive perspectives and improves understanding of the microfoundations of brokering.

Presenter: **Daphné Baldassari**, *U. of Toronto*

Sociologists and organizational scholars interested in the social aspects of creative industries have paid increasing attention to the structural conditions that facilitate the generation and production of creative work, particularly in the cultural markets. Drawing upon but extending seminal ideas from Coleman (1988) and Granovetter (1973), literature has bred substantial development in the field both in theory (Perry-Smith and Shalley, 2003; Schilling, 2005) and empirics (Burt, 2004; Uzzi and Spiro, 2005; Perry-Smith, 2006; Cattani and Ferriani, 2008). These studies investigate structural and relational antecedents for creativity in an effort to explore which configuration of actors’ social networks is likely to foster the emergence of novel outcomes. One consistent finding across various studies in the field is that social networks serve as an interface through which individuals may tap novelty for the creative production of culture. Our aim in this symposium is to introduce the most up-to-date research that cuts across social networks and creativity. Concretely, we intend to address a long-lasting but still ongoing debate such as how and why individual actors’ structural position in the social field shapes not only their ability to generate creative work but also whether this work conforms to or departs from a field’s established norms and standards—thus affecting its reception by relevant social audiences. Social networks could be the main driver in the persistent inequalities in who gets to create and present their work in cultural markets. The nature of creators’ networks based on their past activity can enable or constrain their future career path. This symposium will bring together scholars drawing on research in organizational behavior, strategic management, and organizational theory to make progress on this overarching topic area.

Political Ideology and Politics In and Around Organizations

Session Moderator: **Ludovica Castiglia**, *IESE Business School*

OMT: **Purple Innovation? The Negative Effect of Political Diversity on Corporate Innovation**

Author: **Ludovica Castiglia**, *IESE Business School*

Does political diversity in an organization affect its innovation outcomes? Researchers have begun to explore how political ideologies of organizational members affect corporate outcomes, but they have focused primarily on the effect of the firm's dominant ideology. Showing that the workplace can expose individuals to dissimilar political beliefs, I introduce the concept of organizational political diversity as heterogeneity in members' political ideologies. Building on research on political polarization from political science, I propose that firms with greater political diversity are less innovative. Negative sentiments toward individuals with opposing ideologies hinder the willingness to cooperate and the coordination needed to foster innovation. This negative effect prevails over the benefits of having access to multiple perspectives, and it is stronger the more salient politics is in the workplace. I test my theory using data on the political affiliation of employees of 394 publicly traded companies and their corporate patenting activity for the period 2008–2015 in the United States and find a negative relationship between political diversity and innovation. These results inform research on political ideologies in organizational theory and on diversity and innovation, suggesting that political polarization in society might directly affect corporate innovation, a central driver of value creation in the economy.

OMT: **Organizational Politics: A Multi-factor Explanation**

Author: **Pradeep Kumar Mishra**, *XIM U., Bhubaneswar*

The existing literature attributes organizational politics (OP) to behavioral and structural factors. This attribution suggests that OP originates at the level of individuals or groups and sometimes from structural ambiguity, and the organizational processes become a platform for political activities. The present paper argues that the root causes of political behavior are not adequately explained, and proposes that economic and institutional factors play a key role in generating OP. Further, organizations, as political entities, engender to a sense of entitlement and rights among their employees; that such rights and entitlements (or the perception of it) are embedded in the organization's power structure; the origins of which can be found in the political roots of organizations.

OMT: **Political Ideology and Collaboration: Evidence from the Artist Blacklist Disclosure in South Korea**

Author: **Yoon Jae Shin**, *Seoul National U.*

Author: **Keun Woo Jeong**, *London Business School*

Author: **Sun Hyun Park**, *Seoul National U.*

While political ideology has been discussed as an important source of social identification, less has been investigated on the impact of political ideology on the formation of collaboration relationships. In this study, we examine whether the alignment in terms of political ideology affects the degree to which collaboration relationships are established. We conceptualize the idea of ideological homophily, which refers to the perception of similarity in terms of political orientation, and suggest that this may serve as a strong driver of collaboration decisions. We exploit the exogenous disclosure of the artist blacklist created by the South Korean government in 2016 and show that the film directors who were blacklisted by the conservative regime in South Korea are significantly more likely to establish collaborative relationships with fellow blacklisted actors. We also show such collaboration decisions based on homophily are stronger for directors who are of lower status in the industry and who possess greater social capital. A series of analyses including alternative model choices and matching techniques provide additional support for our predictions. We contribute to the literature on homophily by showing that individuals of the same political ideologies are more likely to collaborate. We also shed light on various boundary conditions that helps explain when and how ideological homophily influences collaboration decisions.

OMT: **The Elephant in the Room: How Workers Infer and Disclose Political Beliefs in the Workplace**

Author: **Christopher James Lam**, *UC Irvine*

Finalist for the OMT Division Best Paper Award

In the US, workers across industries are trying to resolve the new norms for discussing national-level politics with coworkers, especially when they are in the political minority in their organization. While existing research has focused on the negative outcomes of differences in political ideology at work, it has not yet examined how workers deal with the risk of such outcomes. By conceptualizing minority political ideology status as a situationally determined form of stigma, I argue that its nature allows workers to be strategic in how they disclose their beliefs to others. Through interviews with workers in the political minority within their workplace, I find that workers first use a practice of "ascertaining" to infer the political beliefs of others through use of statistical stereotypes or probing questions. Ascertaining the political ideology of their coworkers enables them to use disclosure practices I term "thresholding," which can involve mitigating the political context, establishing common ground, and acknowledging the other side of the debate to share their own position. This serves to project a roughly accurate image of their political ideology to their coworkers, while avoiding the harsher consequences of revealing more objectionable parts of their beliefs.

Author: **Cameron Verhaal**, *Tulane U.*

Author: **Samira Reis**, *U. Carlos III de Madrid*

Author: **Olga Khessina**, *U. of Illinois at Urbana-Champaign*

A documented rise in the polarization of American legislative politics in the last 50 years underscores the question of how increasing political polarization affects organizations and industries. Yet, so far organizational scholars have not directed significant attention to the impact of polarization. In this paper, we demonstrate that political polarization may play an important role in organizational dynamics, by revealing that polarization may expedite destigmatization of legal yet historically stigmatized markets. To this end, we develop a theory explaining how political polarization normalizes counter-normative behavior and, consequently, encourages customers to become open about their engagement with stigmatized products and organizations – a key step towards market destigmatization. We find empirical evidence for our theorizing in GLM and two-stage instrumental variable analyses of all U.S. dispensaries of medical marijuana that existed on the online forum Weedmaps.com from its beginning in 2008 to 2014. Ultimately, this paper suggests that political polarization can significantly influence organizations and industries, and thus warrants more systematic investigation and attention from organizational scholars, particularly in stigmatized markets.

Category Dynamics and Career Trajectories

Session Moderator: **Federica De Stefano**, *HEC Paris*

OMT: **The Optimal Project Portfolio: Career Consequences of Content and Collaboration Specialization** 

Author: **Federica De Stefano**, *HEC Paris*

Author: **Matthew James Bidwell**, *U. of Pennsylvania*

Research on careers often focuses on understanding the sequence of jobs that people move through. In project-based organizations, though, different career trajectories tend to reflect differences in the kinds of projects that people work on over time. In this paper we explore two aspects of the project portfolios that people assemble – variety in the content that they involve and variety in the collaborators worked with. Drawing on theories of human and social capital and careers, we propose that increased diversification in both the kinds of projects that an employee works on and the collaborators that they work with are likely to lead to faster promotion. We also suggest that the effects of increased content diversity and collaborator diversity are likely to offset each other, so that the benefits of content diversity are less when employees work with a greater variety of collaborators. We explore this question using project data from a services organization. We leverage variation in client demand as an exogenous source of variation in project portfolios to generate instruments for project variety. We find that increased diversification in content and collaborators is associated with increased promotion and that their effects do offset each other. We also find strong non-linearities in the effects, as increases in content diversity show strongly diminishing returns, while returns from collaborator diversity are highest for those who have the most collaborators.

OMT: **Job Titles and Mobility of Knowledge Workers** 

Author: **Diego Zunino**, *SKEMA Business School - U. Côte d'Azur*

Author: **Filippo Carlo Wezel**, *USI Lugano*

Author: **Bruno Cirillo**, *SKEMA Business School*

Author: **Stefano Breschi**, *Bocconi U.*

How do job titles affect an employee's propensity for outward mobility? In high-tech contexts, firms are constantly at risk of losing their high quality human capital, such as inventors, due to an increasingly significant threat of employee poaching. Recruiters seek for credible quality signals to assess candidates, and job titles are the first piece of information available. In this paper, we study the role of job title ambiguity for knowledge workers' mobility. Specifically, we whether ambiguous job titles may create a barrier to outward mobility for knowledge workers in markets with high risk of poaching. Ambiguous job titles may confuse prospective recruiters when they scan poaching targets; they exert more cognitive effort to make sense of the value of those candidates and, thus, are less likely to contact them for mobility opportunities. We utilize the resumes and patent data of 12,719 corporate inventors employed at 172 US corporations in the Information and Communication Technology industry between 2000 and 2014 to test our hypothesis. Our results indicate that individuals holding job titles associated with a high ambiguity are less likely to leave the firm. The result is robust to different measurement techniques of titles' ambiguity. Our study highlights how job titles as a form of symbolic cues can constitute a meaningful barrier to poaching that complements existing human capital retaining tactics.

OMT: **Reputation on Career: An Antecedent of Category Spanning in External Labor Market**

Author: **Seongbin Yoon**, *U. of California, Irvine*

Author: **Ming De Leung**, *U. of California, Irvine*

This study examines the role of reputation in career progression decisions in external labor markets. While many prior studies have been devoted to investigating the consequences of generalist and specialist careers in labor markets, much less work has examined the antecedents to whether or not one chooses to work across disparate jobs. Drawing on social category, reputation, and self-efficacy theories, we investigate how reputation influences job seekers to have different interpretations and expectations for their own abilities, leading to varying decisions and behaviors. Better reputation triggers self-efficacy, or one's belief on their own abilities, helping to believe that their abilities can be generalized from one to others. Our analyses of one of the largest online freelancing platforms, Elance.com, between 2008 and 2013 demonstrate that job seekers with better reputation will be more likely to span disparate job categories than those with worst reputation. Moreover, we suggest this relationship is attenuated for more competitive market conditions in the main job categories and strengthened for more failures in the periphery job categories that they have experienced. Since self-efficacy helps to perceive these threatening situations as things to be overcome rather than things to be avoided, job seekers facing stressful situations such as high competition in their own main job areas and failures in the periphery job areas are more likely to choose to persist in the face of threats. The results provide some evidence that whether generalist or specialist careers are chosen depends on the reputations of job seekers.

OMT: **Don't Go Changing to Try and Please Me: Firms Market Expansion and Professionals' Mobility**

Author: **Eugene Taeha Paik**, *U. of Mississippi*

Author: **Joseph P. Broschak**, *U. of Arizona*

We investigate whether, and how, firms changing their market position affects their likelihood of losing professionals. We posit that market expansion is a strategic change that can divert firms' attention and resources from existing categories to new ones, damage social relationships through internal structure reorganization, and disrupt current routines. These can constrain professionals' career advancement, triggering mobility events within the firms. Using data of the music recording industry between 1963 and 1999, we find that record labels' adopting new genres, and greater number of those, increases the likelihood that they lose artists to other labels. The detrimental effect of genre adoption is amplified for record labels that have larger genre portfolio and that tend to maintain longer relationships with their artists. Our findings bridge the literature of category and turnover by uncovering the effect of market category expansion on mobility events within firms.

Evaluation, Biases, and Diversity

Session Moderator: **Andrew von Nordenflycht**, *Simon Fraser U.*

OMT: [Passing on Power in Professional Partnerships: Who Inherits Client Relationships?](#)  

Author: **Andrew von Nordenflycht**, *Simon Fraser U.*

Author: **Heidi K. Gardner**, *Harvard U.*

We analyze internal records of a large law firm to assess whether female partners experience disadvantages in the process of the transfer of responsibility for client relationships across partners. We outline a framework that identifies multiple stages and sources of potential gender-driven biases that may make female partners less likely to “inherit” clients from senior partners. Using the firm’s records, we identify 102 client accounts where internal responsibility (“ownership”) transferred from a senior partner to another partner, and then further identify all the partners who logged work either on projects for those clients or for other clients also owned by the owners of the 102 accounts (the “contenders”). In this sample, we find little evidence of a female partners being at a disadvantage in inheriting a client, relative to male partners. There is no evidence that female partners have less opportunity to work on these transferred clients; no evidence of gender homophily (men favoring men; women favoring women); and no evidence of women needing to work harder than men to inherit a client. There is at best weak residual evidence that female partners, all things equal, are less likely than male partners to inherit a client. We discuss how these findings are both consistent with and yet also inconsistent with prior findings in professional partnerships, suggesting an urgent need for conducting similar analyses in additional firms

OMT: [Platforms and Prejudice: The Cycle of Racial Disparities on a Labor Platform](#) 

Author: **Tristan L. Botelho**, *Yale School of Management*

Author: **Katherine Ann DeCelles**, *U. of Toronto*

Finalist for the Responsible Research Award

We examine a multistage evaluation process to understand the conditions under which racial minorities are at risk for disparate work outcomes using data from a platform-based skilled labor market for small business entrepreneurs. Analyzing various evaluative outcomes including job cancellations, ratings, and job allocation for nearly 100,000 jobs, we find that workers perceived as racial minorities (relative to white) receive significantly more cancellations, as well as more one-star ratings and fewer five-star ratings, even among top performers. Factors that reduce uncertainty, including worker quality, and both worker and customer experience, help attenuate the disparity in cancellations but not in ratings. Further, we demonstrate the cyclical nature of bias entrenchment and the interplay of bias with formal practices—ratings and cancellations are mutually reinforcing, and feed back into priority algorithmic work assignments. Our research illustrates the critical role that uncertainty plays in magnifying bias against racial minorities in labor market contexts and that the mechanism driving bias is a function of the evaluation stage. We contribute to the sociological literature on bias in labor market processes, status and inequality in organizations, and work precarity.

 OMT: [What it Takes to Reach the Top: An Analysis of Gender Differences in Status Benefits for Shaping Pay](#) 

Author: **Mabel Abraham**, *Columbia Business School*

Author: **Tristan L. Botelho**, *Yale School of Management*

Gender is commonly thought to factor into evaluations, leading to worse outcomes for women. Even when objective performance information is available, women often face double standards whereby they are disadvantaged relative to similarly performing men. While most research on double standards has focused on performance metrics, we advance this research by examining whether similar gender-based double standards emerge in assessments of attained status. Using data from a digital platform that collects compensation information from a diverse set of professionals, we find that women must cross a higher threshold of educational status than men to receive status benefits, even within the same firms and positions. Because men begin receiving status benefits at a lower point in the status hierarchy, the gender gap widens among men and women at this level of attained status. An implication of this differential threshold is that men, overall, realize a larger cumulative advantage to status than women. Further, this differential threshold is only for non-salary compensation (e.g., bonuses), highlighting the importance of considering the structure of evaluation processes. Our research reveals how attained status serves as a lever that may both exacerbate and reduce gender inequities at different points of the status hierarchy.

Paper is NOT Available. Please contact the author(s).

 OMT: [Making Intuition Count](#)

Author: **Amisha Miller**, *Boston U. Questrom School of Business*

Investors have concentrated their investments into ideas led by white, male founders and this situation is problematic for talented underrepresented founders and investors who aim to invest in valuable opportunities. Audit studies and experiments have modelled demographic disparities as conditional on a given or fixed evaluation process, but evaluation practices can vary across investment organizations, which could affect outcomes. To reduce demographic disparities, investment organizations face a tension between structuring evaluation to enable equitable comparison across novel ideas by all evaluators and founders, and leveraging evaluator intuition, which can improve decision-making in uncertain environments. I conducted a multimethod field study leveraging interviews, observation data, and two field experiments with 69 trainee investors making over 510 \$20,000 investment decisions. I theorize that by structuring intuition – providing organization-level evaluation tools to encourage individual investors to systematically seek and report data gathered through intuition – organizations could reduce demographic disparities in outcomes. I provide causal evidence that when investment organizations structure evaluation they can reduce gender disparities in evaluation, with meaningful implications for startups with female founders. I discuss the implications for investment organizations, and any organization managing the tension between using structured data and leveraging employee intuition when making decisions in innovation settings.

Strategic Leadership in Organization Theory

Session Moderator: **Cyndi Man Zhang**, *Singapore Management U.*

OMT: **Coalition Support and Priority of Multiple Goals**

Author: **Cyndi Man Zhang**, *Singapore Management U.*
Author: **Helen Wei Hu**, *U. of Melbourne*
Author: **Toru Yoshikawa**, *Singapore Management U.*

Organizational goals are interdependent and follow a priority order to enable decision makers to fulfill the top priority goals before they proceed to pursue the succeeding ones. Previous research has shown that profitability is the top priority goal of firms. However, what determines the pursuit of lower priority goals after the profitability goal is met has remained unexplored. We leverage dominant coalition theory in the behavioral theory of the firm to theorize that whether a lower priority goal is subsequently pursued depends on the power of its supporting coalition on the board of directors. In particular, we identify resource allocations to the shareholders and to the society as two goals secondary to profitability goal and examine whether firms' pursuit of these goals depends on the power of coalitions supporting or opposing them. By examining 2,071 Chinese listed firms, we find that the fulfillment of the profitability goal encourages the pursuit of two secondary goals. We also find that the membership of different board coalitions, namely, shareholder-value coalition and state-endorsement coalition, affects firms' engagement in rewarding the shareholders and rewarding the society differently. These findings support our theory that coalitions shape the prioritization of multiple secondary goals in organizational decision making.

OMT: **CEO Personality: The Cornerstone of Organizational Culture?**

Author: **Charles A. O'Reilly**, *Stanford U.*
Author: **Xubo Cao**, *Stanford Graduate School of Business*
Author: **Don Sull**, *London Business School*

Organizational culture is widely seen as an important element in a firm's success or failure. While there is almost universal agreement that leaders define and shape organizational culture, there is little research exploring how they do this. We propose that a leader's personality and values are the cornerstone of organizational culture. Using a validated natural language processing instrument, we used earnings call data to collect data on the personalities of 460 CEOs in 309 firms and matched this to organizational culture ratings based on Glassdoor employee ratings for the period 2015-2019. Results show strong, interpretable associations between a CEO's personality and the culture of the firm—and this association is strengthened the longer the CEO is in the role. Further, by examining 128 succession events during this period, we also show that, consistent with attraction-similarity-retention logic, there is some weak evidence that the existing culture of a firm can be related to the selection of a new CEO. We discuss the implications of these findings for future research on organizational culture.

OMT: **Top Management Teams Hierarchical Structures: An Exploration of Characteristics and Determinants**

Author: **Aras Can Aktan**, *Department of Management and Technology, Bocconi U.*

Although researchers started to focus on the role structure of top management teams (TMT), the hierarchical structure of TMTs remains under researched. In this study, I conduct an empirical analysis to better understand how TMTs are hierarchically structured and what drives different hierarchical configurations across TMTs. My exploratory analysis of 260 Standard & Poor firms between 2007 and 2018 offers unique insights. In descriptive terms, I find that even though TMT sizes remained constant between the years of observation, their hierarchical stratification decreased slightly meaning that TMTs became relatively flatter hierarchically. In prescriptive terms, I find that several factors related to CEO characteristics, strategic leadership, firm, and environmental conditions, as well as firm performance influence the hierarchical structure of TMTs. These combined empirical insights call for nuanced theoretical explanations of TMT hierarchical structures. I contribute to the TMT literature by highlighting the characteristics of different TMT hierarchical structures and providing new insights into their determinants.

OMT: **Do Bad Times Cultivate Courage?: CEO Downcycle Imprinting and Counter-Cyclical Strategies**

Author: **Jangwoon Kim**, *Seoul National U.*
Author: **Sun Hyun Park**, *Seoul National U.*

While scholars and practitioners alike emphasized the importance of counter-cyclical strategies for achieving competitive advantage in highly cyclical industries, little research attention has been paid to the qualities of CEOs who establish and implement such counter-cyclical strategies. Drawing from the literature on career imprinting, we propose downcycle imprinting as one of the CEO characteristics that leads CEOs to implement counter-cyclical strategies. We suggest that downcycle-imprinted CEOs (i.e., CEOs who started their industry career during industry downturns) are imprinted with downcycle-specific cognitive capabilities and interpretive frames, which make them more capable of sensing and seizing investment opportunities that emerge amid industry downturns. We tested our argument using firms operating in the semiconductor industry between 2001 and 2020. We found that downcycle-imprinted CEOs engaged in more counter-cyclical investments in terms of capital expenditures (capex) during downturns. Moreover, capex executed by downcycle-imprinted CEOs yielded higher post-downcycle performance. Our idea about CEO downcycle imprinting suggests the importance of strategic leadership in cyclical industries, in particular, the origins of the micro-foundations of dynamic capabilities to cope with the changes in business environment.

Paper is Available to Meeting Registrants Only.

Author: **Christina Matz Carnes**, *Indiana U. - Kelley School of Business*

Author: **Jonathan O'Brien**, *U. of Nebraska*

Author: **Palash Deb**, *Indian Institute of Management, Calcutta*

By integrating ideas from upper echelons and relative deprivation theory, we extend the work on the microfoundations of the behavioral theory of the firm to articulate how deviations from a CEO's personal aspirations can impact firm behavior. Specifically, we explore how CEO pay relative to peers impacts the firm's competitive aggressiveness. We theorize that CEOs' peer comparisons and need for visibility motivate them to chase the next higher level, suggesting that unlike firms that have relatively stable aspiration groups based on factors such as size and industry, CEOs adapt their peer groups to fit their increasing aspiration. We propose industry competitive intensity as a boundary condition to our theory, arguing that it both reduces CEO discretion over competitive repertoires and increases self-evaluation that reduces the impact of cognitive biases. Our empirical analysis of 1,536 firms and 92,018 competitive actions over a 15-year time span provided strong support for our hypotheses.

‘Resilience Activation’: Exploring Relational Mechanisms in Strategy and Practice

A Relational View: Resilience Activation

Organizer: **Jacqueline Jing You**, *Durham U. Business School*
Discussant: **Trenton A. Williams**, *Indiana U. - Kelley School of Business*
Discussant: **Mathew Hughes**, *Loughborough U.*

Participant: **Franklin Nakpodia**, *Durham U. Business School*
Participant: **Aljona Zorina**, *Leeds U. Business School*
Presenter: **Jacqueline Jing You**, *Durham U. Business School*

‘Rebuilding resilience’ has received extensive attention from practitioners, policy-makers and scholars alike since the outbreak of the Covid-19 pandemic and the issue presents a fundamental challenge to our society, economy and ways of living. The aim of this symposium is to bring together scholars working on resilience, inter/intra-organizational relationships, strategy and entrepreneurship (RISE) to delve deeper into the discussion of how conventional theories inform our understanding of the ‘fluid’ phenomenon and how the role of RISE can help to address the pressing and complex issues faced by business and society in achieving sustainable development goals. More specifically, our symposium features four empirical studies conducted in various adverse situations, including a remote island, China, Nigeria and professional communities, with a particular focus on relational mechanisms. The first two presentations focus on external relationships organizations form and maintain. In the first paper, authors draw on the Instrumental Stakeholder Theory (IST) to investigate how close relationship capabilities with stakeholders affect small business resilience on the remote tourist destination of St Helena. The second presentation draws on the perspective of inter-organizational relationships (IORs) to examine how various attributes of IORs shape organizational resilience in a Chinese context. The third presentation investigates how SMEs in Nigeria utilize the emerging technologies (e.g., social media, communication-based digital technologies) to cope with supply chain disruptions prompted by the COVID-19 pandemic. The fourth presentation uses qualitative methods to examine how the multiple voices and emotional reactions of different professional communities involved in digitally-mediated open strategy influenced the development of a new, resilient strategy for a professional association. This symposium makes several important contributions to different divisions. First, the issues addressed at the symposium lie at the OMT division’s mission, aiming to explore emerging or understudied research questions and encourage engagement with relevant but underexplored phenomena around organizations and organizing. The existing literature has recognized that relational connections are essential for organizational resilience because they provide the conditions under which other resilience-related resources are activated in the face of adversity. We know little about the nature of these relational mechanisms and how they affect resilience in organizations. The empirical papers presented at this symposium explore and illustrate how these relational mechanisms discovered in different adverse contexts affect resilience in organizations, which, in turn, provides scholars with a common ground to discuss and develop a more unified theory of relational resilience. Second, our symposium is in line with the mission of the Entrepreneurship division by providing the audience with insight into how enterprises survive in such a way as to thrive in the face of adversity generated through either sudden-onset or slow-onset events. The symposium explores this phenomenon in various contexts (e.g., remote island, Nigeria, China, professional communities) and covers various research constructs ranging from economic-oriented theory to behavioural-oriented theory, which are widely examined in the field of strategy and organization. These are all of interest to entrepreneurship scholars. Additionally, presentations in this symposium demonstrate how ecological modelling (Fuzzy Cognitive Mapping) can be used as a tool in business and management studies. It offers new ways of seeing the phenomenon, which may stimulate new theoretical insight and generate debate amongst entrepreneurship scholars and practitioners. Third, this symposium is relevant to the STR division, which aims to develop and disseminate knowledge relevant to general managers and those who study, shape, or influence the strategy of organizations, as well as to the effective teaching of these issues. Prior to the Covid-19 pandemic, over 70 percent of firms experienced disruptions at least once per year, of which 9 percent suffered in excess of \$1 million losses (BSI, 2016). Crises news stories have exceeded 1.7 millions, since the outbreak of Covid-19. The ability of firms to anticipate and manage these challenges, therefore, will be a determining factor in how well they maintain their continued existence and sustainability. This is the other side of coin in addressing the question of when and why some firms perform better than others over time. Resilience, as a critical resource for individuals and organizations, particularly when facing the unfamiliar adversity, would be of interest to strategy scholars and practitioners, while exploring how firms bank resilience-related resources in such a way as to improve their performance. Additionally, in the STR division, there is a research stream which is dedicated to investigating the relationship between various forms of inter-organizational relationships (e.g., alliances, networks) and decision-making in order to gain a competitive advantage. Our symposium, which will focus on relational mechanisms, expands this line of inquiry from the relatively stable environment to the disruptive environment. As such, the symposium will stimulate a conversation with scholars and practitioners on the role of relational mechanisms. Finally, the symposium will contribute to the Communication, Digital Technology, and Organization division, by highlighting the role of emerging technologies that can help organizations to function better, in coping with supply chain disruption. Supply chains, as economic systems, constitute a wide variety of individuals, groups, and organizations, which are highly interconnected. The Covid-19 pandemic has exemplified how the use of digital technology can facilitate communication and collaboration amongst actors in supply chains for information sharing and resource deployment. Due to the size and heterogeneity of enterprises, however, the difference between large- and small-medium sized enterprises (SMEs) in terms of adopting different technologies is revealed. Compared to the wealthy studies of how large enterprises adopt digital technology in responding to adverse situations, our symposium features how SMEs, in a weak institutional context, manage adversity through the adoption of emerging technology presented at the symposium. With these efforts, our symposium will benefit to scholars and practitioners in the CTO division, and stimulate debate on the emerging paradigm aimed at addressing values such as sustainability, justice, dignity and integrity in order to generate an ethical, positive, and meaningful contribution to organizational change.

Presenter: **Rany Salvoldi**, *Ben Gurion U.*

In this symposium, we will focus on how leaders cope with the competing tensions ubiquitous in organizational life and how paradoxical leadership improves their followers' willingness and ability to navigate tensions and competing demands. As much as ever, two years into the COVID-19 global pandemic, tensions from contradictory elements are highly salient, posing significant challenges to organizations and their leaders. To cope with increasing uncertainty and change, leaders must inspire optimism while remaining realistic, cultivate psychological closeness despite employees working remotely and balance health and economy related needs. Moreover, leaders influence the way their followers make sense of tensions and manage competing demands. Their navigation and articulation of paradoxes are therefore closely tied to virtuous dynamics. This symposium will present a theoretical paper and four empirical works, all exploring how, why and when a paradox approach is conducive for leaders in volatile times. Adopting a multi-method, multi-level approach, it investigates how leaders experience and communicate paradoxes, as well as develop paradoxical leadership mindsets and abilities. We address the following questions: 1) How do paradoxical leaders influence their followers identity and creativity? 2) How does a paradoxical approach influence leaders' position in the social network? 3) How should leaders articulate paradoxical messages? and 4) How can leaders cultivate a paradox mindset? Our discussant, Marianne Lewis, will tie together the research and contribute her unique perspective on the implications for paradox theory and leadership, as well as offer future directions for research.

**A Critical View on Achieving Organizational Resilience:
Unpacking the Underlying Trade-offs**
A Critical View on Organizational Resilience

Organizer: **Ekin Ilseven**, *INSEAD*
Panelist: **Hazhir Rahmandad**, *MIT Sloan School of Management*
Panelist: **Vibha Gaba**, *INSEAD*
Panelist: **Heidi Elizabeth Askin**, -
Panelist: **Hart E. Posen**, *U. of Wisconsin, Madison*

In past decades, many natural disasters and social crises that occurred even before the 2020 Coronavirus pandemic have directed the attention of many scholars towards organizational resilience. There have been many reviews and reconceptualizations of this construct that are paramount for rigorous future research which have highlighted the complex multi-level nature of this phenomenon. However, a critical view of organizational resilience seems to be left out of the conversation. With this panel symposium, we expand the discussion - both from academic and practitioners' perspectives - by delineating and discussing three underlying trade-offs: 1) Efficiency vs. resilience, 2) Buffering vs. adaptation, 3) System resilience vs. component resilience. While doing this, we elaborate on the multi-level sources and mechanisms leading to organizational resilience as well as associated challenges.

SIM: Guided Effectuation: Shaping the Market to Create a Better World Together 

Author: **Wouter Rosingh**, *the OMREUS Companies*

Author: **Michele Simoni**, *Parthenope U. of Naples*

Author: **Peter Moran**, *China Europe International Business School (CEIBS)*

Author: **Han Ming Daniel Chng**, *China Europe International Business School (CEIBS)*

Author: **Byron Y. Lee**, *China Europe International Business School (CEIBS)*

Market forces greatly impact our world. Such forces and the world they help forge are constantly changing, albeit blindly. This paper suggests that market forces can be shaped so that the help of many can be harnessed to address prevailing social problems on a large scale. Coaxing the market to allocate resources to more solutions will enable us to create a better world together. But this requires changes in what the market signals as valuable so resources can be allocated to new uses. The argument introduces the concept of guided effectuation – i.e., a process by which firms play an active role in shaping the market, and thereby change what it values. Through this process, firms render new services that both influence the perceptions of market actors regarding what the market should value and establish new conditions for the market efficiency of those services that are consistent with their shaping purpose. Our argument contributes to the effectuation literature by highlighting how effectuation can be leveraged to shape the market. It also contributes to the literatures on performativity and those theories of the firm that cast the firm in a more agentic role than one of merely adapting to a given market.

Author: **Andrea Piccaluga**, *Scuola Superiore Sant'Anna*

In recent years, a growing number of firms have implemented the concept of shared value creation and recognized themselves as purpose-driven organizations. It is argued that such a dynamic will influence and eventually drive the next wave of innovation and productivity growth in the global economy and - most importantly - will also reshape capitalism and its impact on society. In this sense, the active participation of people, both users/consumers and businesses, to innovation processes is fundamental for producing wider value. In this study, we aim at providing a contribution by exploring the creation of value by purpose-driven businesses which introduce innovations in the field of frail people (for example, people with disabilities) with a participative innovation approach using relatively simple technologies. More concretely, drawing on the literature about purpose-driven innovation management concerning innovation from frailty, we develop a conceptual framework for understanding how businesses create social value for society in order to investigate the facilitating factors and the obstacles they experience in implementing innovations from frailty.

SIM: Exploring Diversity of Hybrid Business Models: Institutional Logic Perspective on Social Enterprises  

Author: **Li-Hsiang Yi**, *National Tsing Hua U.*

Author: **Jingjing Weng**, *National Taiwan U. of Science and Technology*

Author: **Ying-Che Ali Hsieh**, *National Tsing Hua U.*

Author: **Wan-Jung Tsai**, *National Tsing Hua U.*

To extend the discussion of hybrid business models (HBMs) in the literature, this study examines how multiple logics interact and facilitate the construction of HBMs, using empirical evidence from 30 social enterprises that are hybrid organizations with both social and business missions. Taking a qualitative multiple-case-study approach, we identify three factors (social mission, industrial segment, collaborative relationship with stakeholders) as sources of institutional hybridity. We also illustrate why institutional hybridity differs among businesses by exploring from where incompatibility and centrality are derived. As a result, an HBM with five typologies (interaction, integration, co-production, bridging, self-branding) is proposed. Based on this, we adopt an institutional logic perspective in explaining how the HBM emerges, develops, and creates and delivers value. This study makes an important contribution in bridging the institutional logics theory and HBM literatures, as well as informing practitioners engaged in hybrid organizations.

SIM: Orchestrated Intervention to address Multifaceted Farmer Poverty: Cases of Digital Social Innovation    

Author: **Mohammad Zainuddin**, *Australian National U.*

Author: **Babita Bhatt**, *ANU College of Business and Economics*

Author: **Israr Qureshi**, *Australian National U.*

Although existing research highlights different instances of ICT-enabled social innovation for socially disadvantaged or excluded groups, it largely overlooks how multiple facets of smallholder farmer poverty can be addressed by intermediaries through the use of digital platforms. In this paper, we discuss piecemeal, synchronized and orchestrated interventions of social intermediaries through a combined strategic framework which identifies three strategic decision levels—structuring decision, scoping decision, and symbiotic decision—that are progressive in nature in terms of strategic engagement and complexity. We argue that the present form of intermediation theory only explains the first tier of strategic decisions made by a social intermediary. The theory focuses exclusively on the depth of intermediation and not the breadth of intermediation. It offers little to explain the phenomenon of multiple interventions and, in particular, why social intermediaries internalize several interventions themselves. In the study, we illustrate three cases of social intermediaries who each makes a set of combined interventions to address multifaceted smallholder farmer poverty. We explore why and under what conditions an intermediary internalizes multiple synergistic interventions to deliver an augmented social impact and how digital technology can be leveraged during the process of implementing such interventions to bring about transformative change in marginalized settings. Our research digs deeper into the strategic orientation of social intermediaries, unveils the organizational mechanisms of internalizing the breadth, and thereby contributes to the organization-centered reasoning of the theory of intermediation.

Shaping the Future: Past, Present, and Future Avenues for Research on Market Shaping

Shaping the Future

Organizer: **Mana Heshmati**, *U. of Washington*
Organizer: **Carolyn Fu**, *Harvard Business School*
Organizer: **Hui Sun**, *Northwestern Kellogg School of Management*
Panelist: **Ron Adner**, *Dartmouth College*
Panelist: **Constance E. Helfat**, *Tuck School of Business at Dartmouth*
Panelist: **Elizabeth Pontikes**, *UC Davis*
Panelist: **Violina Rindova**, *U. of Southern California*
Panelist: **Tiona Zuzul**, *Harvard Business School*

An emerging stream of behavioral strategy research has examined how firms can engage in shaping strategies to alter the competitive landscape of a market such as by altering the market (Pontikes & Rindova, 2020) or payoff structure (Gavetti, Helfat, & Marengo, 2017). This stream of work has shown that firms often shape the competitive landscape by introducing new products, building ecosystems, and sculpting consumer preferences. Despite the pervasiveness of firms' shaping strategies, empirical answers to when and how firms engage in shaping and what capabilities lead to successful shaping remain rare. We contend that this gap arises from both theoretical and empirical challenges to delineate shaping from adapting, shaping intentions from shaping outcomes, and the specific role of different stakeholders. Given these fundamental challenges, this symposium seeks to bring together a group of scholars from diverse theoretical and methodological backgrounds to share their expertise on market shaping to facilitate future research on this important yet understudied topic. Specifically, this symposium will shed light on ways to: (i) differentiate between adaptive and shaping strategies, (ii) examine the capability antecedents of shaping firms, (iii) identify the role of various stakeholders in determining the success of focal firms' shaping strategies, and (iv) understand how new markets and ecosystems emerge from the dynamics of shaping processes.

**Innovation and Entrepreneurship Track: Gender Gap and
Radical/Incremental Innovation**

Session Moderator: **Ana Cristina O. Siqueira**, *William Paterson U.*

TIM: Entrepreneurial Patching: How do Start-ups Implement Incremental Innovation through Complementarities

Author: **Shilong Jia**, *Peking U., College of Engineering*

Author: **Delin Yang**, *School of Economics and Management Tsinghua U.*

Author: **Xiao Hu**, *Southwestern U. of Finance and Economics*

Mass phenomena of incremental innovation in start-ups in hybrid markets through complements have continued to emerge. However, the existing literature lacks such categories of research. Thus, it is necessary to explore how start-ups implement incremental innovation. By studying four SaaS exceptional growing start-ups that service four distinct traditional industries in the Zhongguancun Science Park of Beijing in China, we contribute a theoretical framework describing an incremental innovation process of dominant products in start-ups through complementarities in hybrid markets as entrepreneurial patching: (i) The dominant logic of entrepreneurial patching is the logic of learning by patching within start-ups; (ii) and the framework indicates that entrepreneurs focus on top-down patching in product markets while dominant product teams focus on bottom-up patching in product development. Central to our contribution is the notion that entrepreneurial patching effectively helps illustrate incremental innovation processes of dominant products in start-ups.

TIM: Entrepreneurial Ingenuity Enabled by Information Technology: Insights for Women Entrepreneurship

Author: **Ana Cristina O. Siqueira**, *William Paterson U.*

Author: **Benson Honig**, *McMaster U.*

Author: **Javid Nafari**, *McMaster U.*

We examine how entrepreneurial ingenuity can be facilitated by information technology (IT)-enabled community-based applications, such as multimedia content and online social interaction, to support underserved women entrepreneurs in a context of physical distancing constraints. Many women entrepreneurs have been intensely affected by the COVID-19 pandemic. The entrepreneurial ingenuity perspective maintains that constraints may serve as catalysts for entrepreneurs to pivot, adapt, and identify novel solutions. Using a qualitative approach and the Gioia methodology, we analyze data from interviews with underserved women entrepreneurs in Canada and the United States. We find that IT-enabled community-based applications provide opportunities for women entrepreneurs to develop their entrepreneurial ingenuity by facilitating reflection about their community and personal transformations, awareness of their broader definitions of success, and expression of their economic and social goals. In this way, this study extends knowledge on the entrepreneurial ingenuity perspective and thereby brings new theorizing to enrich the information systems theoretical literature.

TIM: How Does Big Data Capability Drive Firm Innovation? 

Author: **Ao Zan**, *Hunan U.*

As a key prerequisite for data-driven innovation, big data capability is crucial for firms to gain a competitive advantage. However, the role of big data capability on innovation is still in its infancy. Using the data from 228 Chinese firms, we investigated how and under what conditions big data capability affects radical innovation and incremental innovation. Our results show that big data capability is positively associated with radical/incremental innovation. Further, spontaneous improvisation plays a partial mediating role between big data capability and radical innovation, and creative improvisation plays a partial mediating role between big data capability and radical/incremental innovation. Additionally, data-driven culture strengthens the positive impact of big data capability on creative improvisation. These findings highlight novel pathways and contingencies through which improvisation may prove to be a potential means for big data capability to drive firm innovation.

TIM: Closing the Gender Gap in Patenting: Evidence from a Randomized Control Trial at the USPTO  

Author: **Nicholas Pairolo**, *USPTO*

Author: **Andrew Toole**, *USPTO*

Author: **Charles DeGrazia**, *EMLV*

Author: **Mike Horia Teodorescu**, *U. of Washington*

Author: **Peter-Anthony Pappas**, *USPTO*

TIM Best Paper Award Finalist

Women are underrepresented in patenting and the gap is not closing quickly. The challenge for policy is that the sources of this gap are complex and not well understood. Using a randomized control trial (RCT) at the United States Patent and Trademark Office (USPTO), we identify the heterogeneous causal impacts (across gender) of increased patent examination assistance on the probability of obtaining patent rights. Women applicants were 11 percentage points more likely than men to benefit from this assistance, and the benefits were largest for new inventors, and in areas of technology where women have the worst relative outcomes.

Technological Change Track: Automotive Industry - Past and Future

Session Moderator: **Johann Peter Murmann**, *U. of St. Gallen*

TIM: Exploring the Structure and Modularity of Internal Combustion Engine and Battery Electric Vehicles  

Author: **Johann Peter Murmann**, *U. of St. Gallen*
Author: **Benedikt Alexander Schuler**, *U. of St. Gallen*

How will the technological shift from internal combustion engine vehicles (ICEVs) to battery electric vehicles (BEVs) change the architecture of the automotive industry? Based on unstructured interviews with engineers at large automobile companies and start-ups, we create design structure matrices to compare the technological structure and modularity of ICEVs and BEVs. Based on these results, we derive hypotheses about the future architecture of the automotive industry focusing on firms involved in the manufacturing of automobiles.

 **TIM: How It's Made: A General Theory of the Labor Implications of Technological Change**

Author: **Christophe Combemale**, *Engineering & Public Policy (EPP), Carnegie Mellon U.*
Author: **Laurence Ales**, *Carnegie Mellon U. - Tepper School of Business*
Author: **Erica R.H. Fuchs**, *Carnegie Mellon U.*
Author: **Kate S. Whitefoot**, *Engineering & Public Policy (EPP), Carnegie Mellon U.*

This paper develops a general theory relating technology change and skill demand, capable of rationalizing the labor impacts of various technology changes since the 19th century. Performers (human or machine) face stochastic issues that must be solved in a given time to complete tasks. Firms choose how production tasks are divided into steps, the rate at which steps need to be completed, and the type of performer assigned to a step. Performers differ in the breadth of issues they can solve (generality) and in their tolerance for working at higher rates. Human performers tend to be generalists with low rate-tolerance. Machine performers tend to be specialists less sensitive to rate. Central to the theory are the cost of fragmenting tasks into smaller steps, the cost of allocating performers to multiple steps, and the negative relationship between step complexity and the rate of completing that step. We derive the cost-minimizing division of tasks and level of automation of production and the demand for workers of different skills that those conditions create. Our theory predicts that the division of tasks under increased complexity is skill polarizing; automation is skill polarizing at lower production volumes and upskilling at higher volumes; and that parts consolidation increases the demand for mid-level skills. We find counterparts to the theory across a range of industrial contexts and time periods, including the Hand-Machine Labor Study covering mechanization and process improvement at the end of the 19th century, automotive body assembly, and emerging techno-logical changes in optoelectronic semiconductors used for communications.

TIM: Integrating the Technology Acceptance Model with Innovation Diffusion Theory: An Empirical Research

Author: **Nicole Xanthi Vartziotis**, *Athens U. of Business & Economics*
Author: **Matina Dimitropoulou**, *Athens U. of Business & Economics*
Author: **Dimitris Kardaras**, *Athens U. of Economics and Business*
Author: **Dimitris Manolopoulos**, *Athens U. of Economics and Business*

The present study aims to explore the extent to which factors of technology acceptance influence the innovation diffusion process in organizations. In response to the highly competitive global market, organizations seek to promote technological innovation and facilitate the proper context for employees to foster change and innovation diffusion. For this purpose, we suggest the integration of the two most prominent innovation models; the Technological Acceptance Model and Innovation Diffusion Theory model. The research question focuses to the predictive ability of factors of TAM to the factors of IDT in order to bridge a research gap in the literature. The contribution of this study has also managerial implications, as TAM can be used to predict whether and how an innovation will be successfully diffused in organizations. Our empirical findings, deriving from our research conducted in the largest companies of the automotive industry in Germany, suggest that several factors of the Technology Acceptance model, such as attitude and perceived usefulness have significant impact on diffusion of innovation.

Technology and Competitive Strategy Track: Entry Decisions and Resource Allocation

Session Moderator: **Sung Hoon Lee**, *PhD Candidate at Bocconi U.*

TIM: Where do firms come from? Knowledge Relatedness and Firm Entry

Author: **Sung Hoon Lee**, *PhD Candidate at Bocconi U.*
Author: **Roberto Fontana**, *U. of Pavia & Bocconi U.*
Author: **Franco Malerba**, *Bocconi U.*

The role of knowledge, in particular its relatedness to that of the target industry, has often been emphasized as one of the main drivers in firms' entry decisions. However, empirical analyses seem to show that knowledge relatedness may not always have a positive impact on entry, because the relationship is potentially nonlinear and may vary by entrant type. This study aims to explore these issues by proposing a perspective that may shed light on the mechanisms that govern the relationship between knowledge relatedness and firm entry. It then empirically tests these mechanisms by using a dataset constructed from the Western Electronics Manufacturer Association (WEMA) directory, spanning a time period from 1960 to 1990. The results suggest that the relationship takes an inverted U shape, which however can change drastically depending on the type of entrant.

Paper is NOT Available. Please contact the author(s).

TIM: Pre-entry Knowledge Context and Post-entry Firm Innovation

Author: **Jarrod Humphrey**, *U. of Florida*
Author: **Dong Hyun Shin**, *City U. of Hong Kong*

Knowledge contexts are the setting where founders develop informational advantages that serve as the basis for the formation of a new venture. When individuals depart an organization, such as incumbent firms or universities, to launch a new venture they are endowed with knowledge that reflects their prior affiliation and shapes the behavior and performance of their startups. Surprisingly, however, it remains unclear whether differences between the academic or industry knowledge context influences heterogeneity in how firms allocate resources to innovation. Using a sample of over 700 firms and 1,400 founders I address this gap using a mediation model. I find that in knowledge-intensive industries, academic and employee entrepreneurs both allocate substantial financial resources to innovation activities. However, I show that for academic spinouts the key driver of R&D expenditure is R&D employment intensity. In other words, academics form startups with more employees engaged in R&D than founders from other contexts. This reflects both their need to further incubate new technologies and their preference for a research-friendly organizational culture.

TIM: Exploring with Predictive and Control Strategies under Uncertainty

Author: **Danilo Messinese**, *PhD Candidate at Bocconi U.*

Prior research suggests that managers and entrepreneurs adopt explorative approaches to cope with uncertainty. This paper studies the implications of adopting (explorative) predictive and control-oriented strategies, empirically operationalized respectively as scientific and effectual approach (Camuffo et al. 2021; Sarasvathy 2001), and directly tests a potential mechanism driving the different decision outcomes. By analysing data from a Randomized Control Trial (RCT) involving 308 start-ups and 2,772 data points over time, I find that predictive decision-makers terminate ideas more frequently and earlier, while control-oriented decision-makers terminate less frequently and later, due different strategies of dynamic information acquisition during the exploration phase.

TIM: Fuels for Moving Forward and Staying Ahead: Effective Knowledge Sourcing Strategy for Leaders

Author: **Hyunseob Kim**, *Jackson State U.*

This paper examines leading firms' strategies in the strategic factor market for technological competition. We try to examine the effects of knowledge sourcing for leaders' performance in competitions with followers. Particularly, this paper focuses on where leaders can obtain knowledge to move forward and keep their technological leadership. The findings of this paper suggest that the optimal knowledge sourcing strategy in the strategic factor market for a leader may be different from the strategy for a follower. Relying on the other leading firm's knowledge does not provide benefits to leaders, but relying on the exploitation of their own knowledge hinders future innovative performance. In addition, knowledge sourcing from followers also shows positive impacts on leaders' innovative performance. It suggests that relying on other similar players in the same area does not provide enough benefit to leaders for future innovation. However, relatively new knowledge from followers is beneficial for leading firms. Regarding distant knowledge sourcing, outer knowledge contributes to the better innovative performance of leaders. On the other hand, regarding the capability of staying ahead, the findings of this paper show interesting results. Path dependence and outer knowledge show the same results with the innovative performance. However, in contrast to the previous model, knowledge sourcing from leading firms benefits leaders for staying ahead, but knowledge sourcing from followers does not help the leaders. It suggests leaders have to consider the proper knowledge sourcing in the strategic factor market according to their status and goals. Empirical analyses using US patents data on 3,357 firms in chemicals, pharmaceutical, and semiconductor industries over the 1981-2004 period largely support our arguments.

People and Innovation Track: Role of Personality Traits in Shaping Innovation

Session Moderator: **Matthew Aplin-Houtz**, *U. of Missouri -St. Louis*

TIM: Tales from the Dark Side of Technology Acceptance: The Direct Effects of the Dark Triad on TAM 

Author: **Matthew Aplin-Houtz**, *U. of Missouri -St. Louis*
Author: **Sean Leahy**, *UMSL School of Business*
Author: **Sarah Willey**, *UMSL School of Business*
Author: **Emily Lane**, *College of Business Administration, U. of Missouri - St. Louis*
Author: **Sachin Sharma**, *UMSL School of Business*

With a dramatic shift in the American workforce in the post-Covid-19 world, workers' emotions present very negatively, causing people to overtly display the dark aspects of their personality while at work. Additionally, organizations must use new technologies to fill the gaps in outcomes and changes in market demand. Sadly, an intense conflict exists between the current environment of workers' negative emotions and the need to implement new technology. Most people would perceive having learned a new technology to do their job as 'one more thing,' thus resulting in adverse work outcomes. We hypothesized that dark personality traits (narcissism, Machiavellianism, and psychopathy) individually would have a direct relationship with elements in the technology acceptance model. We tested our hypotheses using a sample of general workers from multiple industries. We found that narcissism alone was significant in technology acceptance among the tested variables. We conclude with a summary of our findings' theoretical and practical implications and managerial implications.

TIM: Executive Job Demands and Innovation: Exploring the Role of CEO Emotions

Author: **Andres Felipe Cortes**, *Sacred Heart U.*
Author: **Pol Herrmann**, *Iowa State U.*

Our study explores how Chief Executive Officers' (CEOs) job demands and emotions influence innovation. Drawing on upper echelons theory and research on emotions, we propose that CEOs' perceptions of job difficulty can hurt firm innovation through CEOs' experience of negative emotional reactions. Additionally, we explore how CEOs with higher levels of emotional intelligence can mitigate how perceptions of job demands translate into negative emotional reactions. We test our predictions in a sample of CEOs and top management team members from 120 small- and medium-sized enterprises. We find that CEO job demands are positively associated with CEOs' negative emotional reactions, which in turn have negative implications for firm innovation. We also find that two dimensions of emotional intelligence (self-appraisal and regulation) weaken the influence of CEO job demands on negative emotional reactions. Our research contributes to strategic leadership research by studying the organizational implications of executive job demands and CEO emotions.

Paper is Available to Meeting Registrants Only.

TIM: The Impact of Leader Humor on Creativity    

Author: **Ahmad Nabeel Siddiquei**, *Bond Business School, Bond U., Australia*
Author: **Kamal Badar**, *Victoria U. of Wellington*
Author: **Fahad Asmi**, *Dept. of Science Communication, U. of Science and Technology of China*

As the construction industry faces several human resource challenges, leaders need to maintain a positive working ethos to cope with the creative challenges. This study examined the direct and indirect impact of leader humor on team creativity and employee creativity. We draw on Benign Violation Theory to hypothesize that the display of leader humor signals the acceptability of norm violations in the team, hence facilitating employee creativity and team creativity. Further, we integrate Benign Violation Theory with Social Learning Theory to propose that leader humor while signaling norm violation enables the team's learning orientation, influencing team creativity and employee creativity. We use multi-level modeling and ordinary least squares regression to examine data gathered from 165 team members nested with 45 construction projects in China. The results show that leader humor has a dual positive direct effect on team creativity and employee creativity. Furthermore, the direct effects are partially mediated by team learning orientation. We discuss the theoretical and managerial implications of our study.

TIM: Does Strategic Agility Matter for Product Development Performance? The Role of Employee Resilience

Author: **Abderaouf Bouguerra**, *Surrey Business School*
Author: **Ismail Golgeci**, *Aarhus U.*
Author: **David Gligor**, *U. of Mississippi*
Author: **Zaheer Khan**, *U. of Aberdeen Business School*
Author: **Ahmad Arslan**, *OBS - Oulu Business School Finland*

As firms conduct their product development in increasingly dynamic and continuously changing environments, strategic agility can be an important source of product development performance (PDP). However, little attention has been paid to the micro individual capabilities that translate strategic agility into greater PDP. This study examines the mediating roles of employee resilience and self-efficacy as key dynamic micro-level (individual) capabilities that connect firms' strategic agility to their PDP. Adopting a microfoundations approach and multilevel analysis and using data of 758 managers from 185 firms in Turkey, the findings suggest that strategic agility's impact on PDP is conveyed through individual-level capabilities of employee resilience and self-efficacy. We draw on the microfoundations of dynamic capabilities and provide important insights on how firms developing individual capabilities attain higher PDP.

Digitalization Track: Creation and Consumption in Online Markets

Session Moderator: **Poruz Khambatta**, *UCLA Anderson School of Management*

TIM: NFT Marketplaces – Digital Artists’ Perspectives and Strategies (WITHDRAWN)

Author: **Ferdinand Thies**, *Bern U. of Applied Sciences*
Author: **Leon Pawelzik**, *U. of Innsbruck*

When a digital picture, that can be copied and distributed at zero costs, goes on sale for \$69 million, something is up. Non-Fungible-Tokens, or simply NFTs, which became one of the most exciting topics in the digital realm in 2021 due to the rise in interest in blockchain technologies and the hype generated by internet personas and celebrities. This study is a short-term explorative approach towards understanding the motivation, needs, goals, and strategies of creating and selling non-fungible tokens on Art Platforms. To do so we utilize a qualitative, inductive category formation methodology with nine semi-structured interviews with digital artists that sold their creations on newly established NFT marketplaces for up to \$400.000 apiece. Creator’s motivations to engage in these new platform ecosystems ranged from to Social, Monetary, to Technological aspects, with classical platform aspects such as control mechanisms and network effects playing a major role in their adoption.

TIM: Targeting Recommendation Algorithms to Ideal Preferences Would Make Users and Companies Better Off 

Author: **Poruz Khambatta**, *UCLA Anderson School of Management*
Author: **Shwetha Mariadassou**, *Stanford Graduate School of Business*
Author: **Joshua Morris**, *Stanford Graduate School of Business*
Author: **Christian Wheeler**, *Stanford Graduate School of Business*

People often struggle to live up to their ideals because of a tension between what they actually want and what they ideally want. Unfortunately, rather than helping people with this, the way recommendation algorithms on social media are programmed may make this struggle worse. However, this need not be the case. Here we show that tailoring recommendation algorithms to ideal (vs. actual) preferences would provide meaningful benefits to both users and companies. To examine this, we built algorithmic recommendation systems that generated real-time, personalized recommendations tailored to either a particular person’s actual or ideal preferences. Then, in a high-powered, pre-registered experiment (N = 6,488), we measured the effects that these algorithmic recommendation systems had on individuals’ perceptions of the recommendation, perceptions of the company, and reactions after reading the recommended content. Our results suggest that both users and companies would be better off if recommendation algorithms learned what each person was striving for and nudged individuals toward their own unique ideals.

TIM: How Online Creators Gain Traction: A Simulation Model of Content Provision  

Author: **David Maslach**, *Florida State U.*
Author: **Rod B. McNaughton**, *U. of Auckland*

Online creators create, make, or combine informational content on social media platforms. Despite understanding platform strategy and social media for organizations, few studies focus on online creators’ content creation strategies to gain traction with their followers. We provide a model of content provision for online creators and investigate the effects of these strategies on provisioning. The impact of a creator’s appeal to followers and the follower’s influence over the creator is also explored. The results suggest that different content strategies and contexts impact content provision heterogeneity and growth. These results contribute to our understanding of online platform strategies, strategy and social media, and the emerging phenomenon of online creators.

TIM: I Know What You Want Before You Know It: A Model for Predicting Time-Dependent Customer Behavior

Author: **Tobias Kollmann**, *U. of Duisburg-Essen*
Author: **Simon Hensellek**, *TU Dortmund U.*
Author: **Katharina De Cruppe**, *U. Duisburg-Essen*
Author: **Cornelia Flatten**, *SOPTIM AG*
Author: **Christina Then-Bergh**, *U. of Duisburg-Essen*

Today, customers are intensively exposed to (digital) information, such as advertisements. However, many advertisements appear irrelevant for customers. But what would happen if advertisements could match the precise customer interests better, even over time? Using psychological reactance theory, we show that there is a high need for targeting customers along their current and future interests as precisely as possible to prevent consumer reactance such as advertising avoidance. A specific branch of research dealing with this topic is behavioral targeting and more specifically, predictive behavioral targeting (PBT) models. PBT models allow a more accurate prediction of interests to personalize advertising and generate clicks that push sales. However, many models assume temporally stable consumer interests without considering that interests vary over time. Hence, we develop a dynamic PBT model based on decision trees and neural networks that allows a temporal differentiation of of interests into short-, medium-, and long-term. Thereby, we introduce a transformation function based on a time series of interest rates that permits the model to switch between multiple behavioral targeting (BT) and PBT models depending on the type of interest. By underlining the effects of our model with the psychological reactance theory, we offer insights for research and practice.

AI and Emerging Technologies Track: Automation and Employment

Session Moderator: **Emilia Filippi, U. of Trento**

TIM: The Impact of Automation Technologies on Employment: A Review and Future Research Agenda

Author: **Emilia Filippi, U. of Trento**
Author: **Mariasole Bannò, U. of Brescia**
Author: **Sandro Trento, U. of Trento**

This article aims to review prior studies that investigate how automation technologies affect employment. Our structured systematic review resulted in 105 publications. Relevant publications are presented by distinguishing the type of method applied in evaluating the effects of automation technologies, i.e., distinguishing between publications estimating the probability of automation and those evaluating the net impact on employment. Moreover, evidence is exposed at different levels of analysis (i.e., global, international, continental, country, regional, labour market, industry, firm, occupational, worker, work activities). Based on the findings, research gaps and research agenda are identified and discussed.

TIM: The Key to Digital Scaling: Simultaneous Automation, Individualization and Interdisciplinarity

Author: **Johannes Gartner, Lund U., School of Economics and Management**
Author: **Daniela Maresch, Grenoble Ecole de Management**
Author: **Robert Tierney, Northern New Mexico College**

In this paper, we develop a theoretical framework that explains how digital technologies can help firms generate competitive advantages that enable firms to scale. To gain and sustain competitive advantages firms traditionally had the strategic choice between cost leadership and differentiation. Digital technologies, however, enable more and more firms to reduce their costs and at the same time enhance the value of their market offerings through differentiation. The aim of this paper is to explain the role of digital technologies in such hybrid strategies. We first identify automation, individualization and interdisciplinarity as the dimensions of digital technologies that together enable technology-driven firms to gain and sustain considerable competitive advantage and to scale rapidly. Second, we integrate the three dimensions into a theoretical framework, which we, third, test and confirm in an explanatory case study.

TIM: A.I. and Post-Truth: Will 'Virtual Robots' Replace Humans on the Internet

Author: **Paula Chimenti, COPPEAD Graduate School of Business, UFRJ, Rio de Janeiro**
Author: **Antonio Batista Da Silva Oliveira, COPPEAD Graduate School of Business, UFRJ, Rio de Janeiro**

The use of "virtual robots", or post-human brands, such as Virtual Influencers (VIs) has been growing in marketing campaigns in recent years and receives investments from several relevant brands that hire or develop artificial influencers for activities previously performed by humans (influencers, celebrities, etc.). Some VIs are highly humanized in image and behaviour, which raises a debate—and fascination—from many. Through a netnography with the profiles of @lilmiquela and @imma.gram, this study analyses the emerging phenomenon of the replacement of human brands by VI post-human type brands. The results suggest that VIs have the potential to meet some human needs in similarity and eventual superiority to humans. As a theoretical contribution, the study proposes adding a new analytical category to the Theory of Human Brands: "Synthetic Human Brands" or "Post-Human Brands". Furthermore, the study connects authenticity and post-truth and contributes risk-free endorsement theory and management practice, which is unprecedented. The replacement of human influencers with "virtual robots" raises debates about the future of marketing and other areas, especially since that future has in fact already begun.

TIM: To Automate or not to Automate? The Impact of Algorithmic Technologies on Improving Knowledge Work

Author: **Javier Ricardo Amaya Silva, Oxford U., Saïd Business School**

In this paper we study the application of algorithmic technologies in improving knowledge work in four areas of a multinational engineering firm, which were selected as to cover the varying degrees of social interaction and task discretion commonly present. Our findings show that the automation of knowledge work is well established in practice, where it demonstrates considerable performance improvements. However, they also show that the automatability of knowledge work varies greatly depending on the task at hand. We propose that two primary aspects determine a firm's ability to successfully automate white-collar work: the 'nature of the process' (the degree of repetition and standardisation of the process) and the 'nature of the task' (the degree of creativity, social interaction, and physical manipulation inherent in the task). Our findings provide an important qualification to the present discourse on the future of work, suggesting that the characteristics of the task at hand, as well as the process the task is embedded in, determine the degree to which it is possible to automate such processes. In practice, this means that digital transformation strategies should be implemented at task and process rather than occupational level, as present studies commonly would suggest.

Organizational Learning and Search Track: Networks and Knowledge Flows

Session Moderator: **Valentina Tartari**, *Copenhagen Business School*

TIM: Bridging The Gap: Boundary Spanners' Selective Network Mobilization

Author: **Valentina Tartari**, *Copenhagen Business School*
Author: **Anne L.J. Ter Wal**, *Imperial College Business School*
Author: **Bálint Diószegi**, *Imperial College Business School*
Author: **Maureen McKelvey**, *U. of Gothenburg*

Network boundary spanners have been shown to be in a privileged position to generate innovation outcomes, yet it is unclear how they decide which contacts to rely on when. This paper posits that many boundary spanners will forgo the opportunities their structural position affords, as stronger identification with one of the two domains they span may lead them to predominantly mobilize network contacts in that domain, irrespective of the type of input specific situations may require. We argue that those with a high self-monitoring orientation, however, will overcome tendencies to have identity inform network choices, and will thus selectively mobilize contacts from both sides of the boundary. We test these predictions in the context of scientists with dedicated boundary-spanning roles between industry and academia who are expected to routinely draw on network resources on both sides of the “divide” to perform their jobs. Using a multi-study setup which includes two framed field experiments, we find support for our predictions. Our findings imply that it may not be sufficient for organizations seeking to promote the cross-fertilization of ideas to allocate individuals to boundary-spanning roles; they need to train and encourage their staff to identify with the domains at both sides of the boundary to enable selective network mobilization to help them leverage the potential from boundary spanning.

TIM: Strategies of Network Formation and Development: An Historical Account 

Author: **Francesca Mariotti**, *Cardiff Metropolitan U.*

A great deal of research has investigated the structural properties of networks and how these are central in explaining knowledge transfer and innovation. However, much less is known about how networks change and evolve over time and the extent to which these dynamic processes affect collaboration patterns. Using longitudinal data from the motorsport industry, this paper examines the dynamics of networks through a comparative analysis of the histories, industry contexts and lead firm networking actions to explain network formation and subsequent development. It finds that historical variation in terms of structure, resources and technology has influenced, to some extent, the strategic actions of key actors in forming and developing their networks.

TIM: Knowledge Generation and Knowledge-, Individual-, and Interfirm-Level Network Structural Features

Author: **Yang Gao**, *HEC Montreal*
Author: **Ekaterina Turkina**, *HEC Montreal*
Author: **Ari Van Assche**, *HEC Montreal*

Although there has been consensus that networks play critical roles in organizations' innovation, the multilevel feature of networks that nest into each other is underexplored. Despite empirical evidence that has been found at various levels of our social system, without multilevel analysis, our understanding in the relationship between networks and knowledge generation and innovation is limited. To address this limitation, this study adopts a multilevel lens to analyze the three level networks that composed of patent network, individual collaboration network, and interorganizational network in China's railway industry in a decade to illustrate how network positions at different levels are related to knowledge generation. We find that both knowledge network and interorganizational network contribute to knowledge generation.

TIM: Dyadic Relationships for Collaborative Innovation: Lessons from the Danish Wind Industry 

Author: **Kamran Rashidi**, *Jönköping International Business School*
Author: **Agnieszka Radziwon**, *U. of California, Berkeley & Aarhus U.*
Author: **Peter Enevoldsen**, *BTECH, Aarhus U.*

Local and global businesses need to innovate otherwise they perish. Simply stated, companies need to open their doors to external partners to combine internal and external ideas for achieving values. However, establishing collaborative innovations with external partners in supply networks is not an easy task to execute for managers. This study examines different dyadic relationships within the Danish wind industry to highlight facilitators and barriers of such collaborations. Our data revealed that high vertical integration during the last two decades in the industry has limited the suppliers' R&D competencies. Additionally, more vertical complexity in upstream supply is required for involving suppliers in other tiers than the first one in innovation projects. Low order volume is another barrier for taking advantage of suppliers' R&D competencies as they prefer to allocate more resources to innovation projects in other industries with higher order volumes such as automotive industry. Other barriers for establishing collaborative innovations in the industry are information leakage, IPRs, intra-organizational communication, and lack of commitment.

Ecosystems and Platforms Track: Healthy Ecosystems and Ecosystem Health

Session Moderator: **Maryia Zaitava, U. of Cagliari**

TIM: Ecosystem Health: A Systematic Review and Conceptual Framework

Author: **Denis Boevskiy, Geneva Business School**
Author: **Llewellyn D W Thomas, IESE Business School**

In our ecosystems-driving economy, organizations strongly depend on health of the ecosystems they participate in, so they search for healthy ecosystems and try to avoid unhealthy ones. Although the importance of ecosystem health was highlighted in the fundamental papers on ecosystems, further research was mostly fragmented. In our study, we systematically review the construct of ecosystem health and present our findings and contributions. First, we propose ecosystem health components of viability, and reactive and proactive health that capture essential health characteristics relevant for ecosystems. Second, we integrate these components into a conceptual framework representing the ecosystem health construct and interrelations between the ecosystem health components. Third, our work provides a clarification of future research directions on ecosystem theory for management scholars.

TIM: Emergence of Multi-Sided Platforms: A Value-Based Perspective in Digital Health

Author: **Maryia Zaitava, U. of Cagliari**
Author: **Elona Marku, U. of Cagliari**
Author: **Maria Chiara Di Guardo, U. of Cagliari**

The present paper aims at understanding the emergence process of a multi-sided digital platform by applying the value-based perspective of (digital) health. While new emerging multi-sided platforms (MSPs) play a critical role in the shift towards digital health, with the prevailing interest in the established and mature platforms, the platform emergence phenomenon is almost neglected. Existing research on MSPs has mainly focused on the value and growth of established platforms enabled by network effects and the aggressive attraction of more new users. Exploring the case of the Safe Steps healthcare MSP, the present paper revealed the fine-grained process of the MSP emergence that consists of the three phases, namely, 1) platform activation, 2) platform scale-up, and 3) shared values merger. Moreover, we found that shared between the platform actors' values are the drivers of the platform emergence, platform actors' attraction, and value creation. The present research contributes to the digital platforms literature, specifically, platforms emergence. Moreover, the paper put the break into an understanding of the nature of value creation of an MSP health platform.

TIM: Healthy Reviews! The Impact of Online Physician Ratings on Healthcare Outcomes

Author: **Michael Kummer, U. of East Anglia**
Author: **Cyrus Rich, Georgia Institute of Technology**
Author: **Ulrich Laitenberger, Telecom ParisTech**
Author: **Danny Hughes, -**
Author: **Turgay Ayer, Georgia Institute of Technology**

We show that review platforms reduce healthcare interruptions for patients looking for a new physician. We employ a difference-in-differences strategy using physician retirements as a “disruptive shock” that forces patients to find a new physician. Using insurance claims data combined with web-scraped physician reviews, we show that physician reviews help patients find a new physician faster. Our results are robust to including a variety of controls and various instruments for the availability of physician reviews, but are not found for patients of nonretiring physicians. By reducing interruptions in care, reviews can improve clinical outcomes and lower costs.

Paper is Available to Meeting Registrants Only.

TIM: Customer Interdependencies: Deepening the Ecosystem Lens

Author: **Dennis Van Kampen, Vrije U. Amsterdam**
Author: **Fleur Deken, Vrije U. Amsterdam**
Author: **Hans Berends, Vrije U. Amsterdam**

In this study, we explore how focal firms address existing customer interdependencies during ecosystem development for novel offerings. Customers are underexplored in ecosystem research despite their essential role in adopting ecosystem value propositions. We examined how three ventures of an incumbent in healthcare developed an ecosystem with a joint value proposition. Surprisingly, we find that adoption of the value proposition was hampered, despite focal firms aligning interdependencies with suppliers and complementors, jointly offering a compelling ecosystem value proposition to customers. We explain how existing interdependencies between customers and other actors limited their ability to adopt the focal firms' innovations. We identify three strategies to address constraints presented by such customer interdependencies – delegating, facilitating, and attuning – and explain their distinct consequences. We extend ecosystem research by explaining the importance of the customer ecosystem for integrating novel value propositions.

Session Type: **Showcase Symposium**

Program Session: **1753** | Submission: **12042** | Sponsor(s): **(TIM, STR)**

Session Format: **In-person Only: Seattle**

Scheduled: **Tuesday, Aug 9 2022 2:00PM - 3:30PMPT (UTC-7)** at **Sheraton Grand Seattle in Jefferson B**

**Technology Strategy and Competition Track: Causal
Inference and Strategic Management**
Causal Inference and Strategic Management

Session Chair: **Jorge Guzman**, *Columbia Business School*

Participant: **Bo Cowgill**, *Columbia Business School*

Participant: **Jermain Christopher Kaminski**, *Maastricht U., School of Business & Economics*

Participant: **Paul Huenermund**, *Copenhagen Business School*

Discussant: **Caroline Flammer**, *Columbia U.*

This session introduces a few papers hoping to understand the role and opportunities of causal inference in strategic management research and practice. Its goal is to consider how the identification revolution influences strategy research, and what new avenues and opportunities exist given recent advances in causal identification. The workshop will conclude with a summary of the discussion and an outlook for future research.

Innovation Processes Track: Endogenous Shaping of the Business Environment

Endogenous Shaping of the Business Environment

Organizer: **Charlotte Jacobs**, *Louisiana State U.*

Organizer: **Gwendolyn Kuo-fang Lee**, *U. of Florida*

Panelist: **Felipe Csaszar**, *U. of Michigan*

Panelist: **Constance E. Helfat**, *Tuck School of Business at Dartmouth*

Panelist: **Joseph Porac**, *New York U.*

Panelist: **Nathan Furr**, *INSEAD*

The purpose of our panel symposium is to stimulate the emergent research on endogenous shaping of business environments. Distinguished scholars who have studied this subject from different perspectives will provide their insights on the ‘who,’ ‘when,’ and ‘how’ of shaping, as strategic actors seek to construct and alter their future business environment. Bringing these different perspectives together creates the opportunity to move the field forward in a systematic way. In addition, the discussion would highlight future avenues for theorization and empirical research that will take our understanding of shaping of the business environment a step further.

Biases That Plague Us: Overconfidence, Loss Aversion & Sunk Costs

Session Moderator: **Sandy Campbell**, *Haas School of Business, UC Berkeley*

CM: Overprecision in the Survey of Professional Forecasters

Author: **Sandy Campbell**, *Haas School of Business, UC Berkeley*

Author: **Don Moore**, *U. of California, Berkeley*

Every decision depends on a forecast of its consequences. We examine the calibration of the single longest and most complete forecasting project. The Survey of Professional Forecasters has, since 1968, elicited predictions of key economic indicators such as unemployment, inflation, and economic growth. Here, we test the accuracy of those forecasts ($n = 12,359$) and measure the degree to which they fall victim to overconfidence, both overoptimism and overprecision. We find forecasts are overly precise; forecasters report 53% confidence in the accuracy of their forecasts, but are correct only 28% of the time. By contrast, forecasts show little evidence of optimistic bias. These results have important implications for how policy makers ought to interpret forecasts. Moreover, we employ novel methodology in analyzing archival data: we split our dataset into exploration and validation halves. The current manuscript presents results from the exploration half. The final manuscript will include results from the hold-out sample, as guided by editorial input.

CM: Managers' Use of Sunk Costs as a Nudge: A Misinfluence Perspective on "Escalation of Commitment"

Author: **Goh E-yang**, *National U. of Singapore*

Author: **David P. Daniels**, *NUS Business School*

Many current theoretical perspectives suggest that managers will be good at strategically leveraging others' decision biases to influence them. A common decision bias in organizations is the "sunk-cost fallacy," where individuals pursue an inferior course of action merely because resources were previously invested in it. In a series of experiments, we tested how good managers are at strategically using the sunk-cost effect as a nudge to influence others' commitment levels in desired directions. Managers were randomly assigned a goal – to escalate or de-escalate others' commitments to a project – and then decided whether to highlight or hide sunk costs of the project. In contrast to theoretical predictions, we find that managers often fail to optimally use the sunk-cost effect to nudge others in desired directions. In exploring why this happens, we find that while managers do understand some mechanisms which contribute to the sunk-cost effect (self-justification theory), they fail to understand others (self-presentation theory and prospect theory). Perhaps most startlingly, on average, managers appear to not believe in the sunk-cost effect at all. Our results support an emerging "misinfluence perspective" which suggests that managers will often fail to leverage influence tactics (such as decision biases) when trying to influence others, due to managers' own psychological limitations.

Paper is Available to Meeting Registrants Only.

CM: The Strategic Misuse of Loss Aversion in Social Interactions

Author: **David P. Daniels**, *NUS Business School*

Decisions are widely influenced by biases such as loss aversion, the overweighting of losses relative to gains. Loss aversion is a central driver of human behavior, and "is certainly the most significant contribution of psychology to behavioral economics" (Kahneman, 2011, p. 300). However, while much is known about the role of loss aversion in individual decision-making, its role in social interactions remains controversial. Current theories and indirect evidence suggest that individuals will be good at using loss aversion as an influence tactic in strategic interactions (e.g., negotiations). In contrast, across six studies, we show that individuals ($n = 3875$ managers, policymakers, and students) are strikingly bad at using loss aversion as an influence tactic. Specifically, across 17 cases where we measured whether individuals optimally used loss aversion as an influence tactic, individuals' performance in terms of optimally using loss aversion ranged from 40% worse than chance ("backfiringly bad" misuse of loss aversion) to only 18% better than chance (relatively bad performance that is closer to random chance than to optimality). For example, when individuals were given three opportunities to use loss aversion as an influence tactic (i.e., deciding whether to frame an outcome as a "gain" or a "loss"), only 10.5% of managers and 19.0% of policymakers used loss aversion optimally across all three opportunities. In exploring why this happens, we show that individuals' understanding of loss aversion is (also) strikingly bad. Across 8 cases where we measured whether individuals demonstrated correct beliefs about the direction of loss aversion, individuals' performance in terms of demonstrating correct beliefs ranged from 59% worse than chance ("backfiringly bad" misunderstanding of loss aversion) to only 15% better than chance (relatively bad performance that is closer to random chance than to correctness). These findings suggest that individuals may fail to understand even the most widespread and powerful of biases, and in many cases will fall prey to "metabiases" – attempts to exploit others' (decision) biases which backfire, thereby creating a new class of second-order (influencer) biases.

Paper is Available to Meeting Registrants Only.

CM: **High Stakes Overconfidence** 

Author: **Sandy Campbell**, *Haas School of Business, UC Berkeley*

Author: **Don Moore**, *U. of California, Berkeley*

Cognitive heuristics simplify decisions, even if they introduce biases. This can be an efficient tradeoff when the costs of bias are low, but may be problematic when the stakes are high. Study 1 (N = 118 contestants) examines the confidence of contestants on a game show, the Million Dollar Money Drop. The results show that, even in the presence of substantial incentives, contestants are more confident than they are accurate. Study 2 (N = 1567 MBA students) analyzes course examinations and finds again that test-takers are more confident than accurate. Study 3 (N = 226 Amazon Mechanical Turk Workers) demonstrates that these results are robust to variations in payoff schemes. These findings attest to the durability of overconfidence in judgment, even when stakes are high.

Managing “No” to Work-Related Requests: What, Really, Do We Know?

Managing “No” to Work-related Requests

Participant: **Debra L. Shapiro**, *U. of Maryland*

Participant: **Hillary Anger Efenbein**, *Washington U. in St. Louis*

Participant: **Sudeep Sharma**, *U. of Illinois Springfield*

Participant: **Laurie R. Weingart**, *Carnegie Mellon U.*

Participant: **Matthew A. Cronin**, *George Mason U.*

Participant: **Maurice Schweitzer**, *U. of Pennsylvania*

Participant: **Zhiying Ren**, *The Wharton School, U. of Pennsylvania*

Participant: **Catherine Tinsley**, *Georgetown U., McDonough School of Business*

Participant: **Renee M. Rinehart**, *George Mason U.*

Despite the many changes that have occurred in workplace trends over time and, especially since the onset and still-not-ended global pandemic of Covid 19, one aspect of managing remains unchanged: the need to manage “no” to variety of work-requests. Indeed, decades ago in his classic study regarding how managers spend their time, Mintzberg (1973) noted that managing conflict was the bulk of it. The need to manage “no” is probably exponentially higher now than ever given that employees over time have become increasingly culturally diverse, hence more likely to bring divergent values and/or preferences to their work (Kirkman & Shapiro, 2001; Von Glinow, Shapiro, & Brett, 2004); and have also become increasingly self-managing, or empowered (Kirkman & Rosen, 1999), hence expected to autonomously (without managerial intervention) resolve conflicts they have at work. It is, thus, a matter of practical as well as theoretical importance to understand how to effectively manage “no” in the workplace—wherever this may occur. What, really, do we know about how to manage “no” at work? The answer is surprisingly little; and the papers comprising this symposium each promise to meaningfully address this gap. More specifically, as a set, these papers illuminate the fact that the source of “no” that may cause tensions or frictions among individuals at work is broader than traditionally thought; this is because these tensions may arise from conflicts individuals at work have—not only between individuals who may or may not be teammates, but also—within themselves. As a result, this symposium promises to alert managers (which includes self-managing employees) as well as management scholars to a broader array of potential strategies for effectively managing “no”—and thereby enhancing agreements and their associated positive affect and behaviors—in the workplace.

Digital Entrepreneurship, Innovation and Legitimacy

Session Moderator: **Florian-Marco Fengel**, *Chair of Innovation Management, TU Dortmund U.*

CTO: **Technology Entrepreneurship is More Than One Might Think**

Author: **E Burton Swanson**, *U. of California, Los Angeles*

Technology entrepreneurship, by which we mean entrepreneurship on behalf of a new technology and its organizational and social acquisition, is more than one might think, given present use of the term, which focuses on technology as device. Here, taking the perspective of technology as routine capability, we reframe the concept to incorporate not only distributed agency involved around devices, but also distributed agency concerned with use through associated routines. We argue that technology acquisition in the form of capabilities concerns use and that technology entrepreneurship typically entails substantial institutional work in the promotion of adoption and use. We illustrate this in the case of the long and painful history of the acquisition of electronic health records (EHR). Our reframing leads to new insights. Among these is the identification of what we term path convergence and its importance in the social acquisition of a technology. We argue that technology entrepreneurs must attend to this path convergence, or the technology may not be widely taken up.

CTO: **Paradoxical Tensions in a Digital Era: The Impact of Digital Orientation on Innovation Ambidexterity**

Author: **Florian-Marco Fengel**, *Chair of Innovation Management, TU Dortmund U.*

Author: **Steffen Stresse**, *TU Dortmund U.*

Disruptive changes in organizations driven by the pervasive impact of digital technologies call for novel theorizing and empirical investigations on innovation management in a digital era. To thrive in an increasingly digital world, companies need to follow a dual imperative: constantly reinventing themselves while at the same time refining current viability. Following a recent literature shift from treating digital technologies as enablers of organizational efficiency to triggers of organizational change, we study how a firm's digital orientation (DO), a strategic posture aimed at realizing vital gains from digital technologies, fosters a simultaneous pursuit of exploitative and explorative innovation behaviors, i.e., innovation ambidexterity. We further introduce a firm's absorptive capacity (ACAP) and market turbulence as moderating influences into this relationship. In deriving our hypotheses, we extend the resource-based view (RBV) with a dynamic capabilities lens, and enrich our theoretical arguments with novel perspectives on technology affordances, openness and generativity. Our research model is empirically tested through multi-industry survey data from 1,474 German companies.

CTO: **Legitimizing Illegitimate Practices: How Data Analysts Compromise Standards to Promote Quantification**

Author: **Ryan Stice-Lusvardi**, *Stanford U.*

Author: **Pamela Hinds**, *Stanford U.*

Author: **Melissa Valentine**, *Stanford U.*

Most studies of new expertise focus on the ways different occupations attempt to legitimate that expertise and thereby secure credibility and deference from other organizational groups. In this study, we similarly examine the work that an expert occupation did to legitimate their expertise – but in this case they were legitimating practices that they actually considered illegitimate. We report findings from our 20-month ethnography of data analysts at a financial technology company to explain this process. We show that the company had structured the data analysts as a captive occupation (Bechky 2021) that was dependent on their collaborators' cooperation to accomplish their work and demonstrate the value of quantification. Under these conditions, the data analysts constantly encountered or were asked to provide illegitimate data analysis practices such as hacking, peeking, or poor experimental design. In response, they sometimes resisted but more often reconciled themselves to the requests because they were so reliant on collaborators' cooperation. Notably, they also explicitly lowered their stated standards and then worked to broadly legitimate those now illegitimate versions of their expert practices through standardization, technology platforms, and evangelizing. Our findings connect the conditions of captive occupations to explain why and how experts work to legitimate illegitimate practices.

This symposium combines five high-quality papers that shed light on the changing role of artificial intelligence for teamwork. Artificial intelligence is becoming a major part of our work environment, especially now that digital technologies become more and more agentic, possibly even equivalent to human agents. This means that artificially intelligent agents not only support various tasks, such as monitoring and decision making, but they gradually evolve from a technology used as a tool to becoming our teammate. Therefore, in this symposium, we move beyond prior work (1) by exploring the future roles and functions of AI agents in teams, (2) by investigating the impact of human-AI collaboration on team processes, emergent states, and outcomes, and (3) by considering the interdisciplinarity of human-AI teamwork. With our findings, we aim to guide and inspire future research on AI in teams and support the introduction of human-AI-teamwork in practice.

Participant: **Elisa Operti**, *ESSEC Business School*

We seek to understand how individuals from different groups conceive, build and gain benefit from their social networks in order to be able to generate better predictions and interventions that could help more disadvantaged individuals to nurture more productive networks and extract greater gains from such networks. The projects included in the symposium tackle the idea of different network use and returns distinguishing categories of individuals along the lines of race, individual traits, and gender. The projects give insights on how actors that belong to specific social and demographic categories can use and leverage their networks to achieve positive outcomes and overcome their disadvantageous positions. Structural barriers, cognitive impediments, or beliefs about the other make minority groups unable to benefit from the networks in the same ways as the majority group. Yet, our symposium seeks to understand and propose different ways to solve the issue and create a better world in which all individuals have an equal opportunity to thrive, regardless of their group membership. With this symposium, we argue that there is a need to consider the different paths and conditions that impact individuals' intentions to create, maintain, and utilize their network ties more closely, in order to deepen our understanding of individuals networking patterns and be able to implement effective interventions.

Finalist for MOC Division Best Symposium Award

Research on meaningful work has highlighted factors at various levels of analysis that can contribute to sense of meaningfulness, such as individual callings, organizational purpose, and even societal discourse. However, a significant opportunity remains for examining the mechanisms by which experiences and expressions of meaningfulness occur across these various levels of analysis. The presentations in this symposium answer this important call by addressing cross-level influences on meaningful work such as team dynamics, interpersonal interactions, organizational pressures, occupational values and norms, and even societal influences.

Laddering: Using Means-end Chains to Discover Shared Motivations of a Group

Laddering Research Technique

Organizer: **Anup Krishnamurthy**, *St. Joseph's Institute of Management*
Organizer: **Caren Rodrigues**, *St. Joseph's Institute of Management*

The laddering technique is a lesser-known research method developed in the marketing domain and is based on the means-end theory. This technique, employed to discover the shared cognitions in a group, has been used successfully by researchers in both marketing and organizational behavior. Since this technique uniquely combines qualitative and quantitative methods to obtain results, it provides a way to introduce rigor without sacrificing the richness of the qualitative data. The workshop will use real (possibly live) data to increase the impact of its methodology. This workshop would be best suited for those who wish to use mixed methodologies for their research or for those who seek a method to understand the shared cognitive schema underlying a group-related phenomenon.

Corporate Social Responsibility, Varieties of Capitalism and Institutional Systems

Session Moderator: **Stephen Brammer**, *U. of Bath*

SIM: Upper Echelons and the Transmission of Institutional Norms: Varieties of Capitalism and CSR

Author: **Stephen Brammer**, *U. of Bath*
Author: **Layla Jayne Branicki**, *U. of Bath school of management*
Author: **Stephen Pavelin**, *U. of Bath*
Author: **Lynda Porter**, *U. of Bath*

Both national institutional context and the attributes of firms' upper echelons (UE) are well known to shape corporate social responsibility (CSR) policies, practices, and outcomes. However, prior research has paid little attention into interdependencies between the two, and especially to the role played by the attributes of firms' UEs in transmitting CSR norms internationally. In this study, we integrate the upper echelons perspective (UEP) and the varieties of capitalism (VOC) perspective to theorize upper echelons as critical to the transmission of CSR practices. Our theory suggests that representation among firms' UEs from multiple VOCs tends lead firms to exhibit less nationally stereotypical patterns of CSR and instead to exhibit hybrid forms of CSR that reflect the diversity of their UEs. Additionally, we propose that this tendency towards CSR hybridization is moderated by the degree of critical mass, positional power, and long tenure among “alternate” VOC UE members. We test our hypotheses on a sample of 4,010 large firms from 68 countries between 2009 and 2018, and find evidence that largely confirms our hypotheses.

SIM: Exploring the Mirror versus Substitute Dichotomy in Social and Environmental Disclosure

Author: **Rômulo Soares**, *U. of Fortaleza (UNIFOR)*
Author: **Mônica Cavalcanti Sá De Abreu**, *Federal U. of Ceará*

Much of the debate over how the institutional context can shape corporate social responsibility (CSR) is focused on the dichotomy between liberal and coordinated markets drawn from Varieties of Capitalism. CSR in liberal market economies (LMEs) is seen as a substitute for institutional voids and relies on market incentives, while in coordinated market economies (CMEs), such practices are seen as a mirror of their institutional strengths and rely on stakeholders' networks. Recently, this view has been criticized for its neglect of developing countries since their CSR practices may not fit properly into this LME-CME dichotomy. We add to this debate by comparing the social and environmental disclosure practices of 86 companies from eight different countries: Australia, Brazil, Canada, Germany, India, South Africa, South Korea, and the United Kingdom. We show how institutional characteristics have different effects on social and environmental disclosure, depending on the context in which companies are operating. We show that social and environmental disclosure in LME countries is driven by market forces and is shareholder-oriented, while in CME countries, it is driven by regulatory provisions. Regarding developing countries, the inclusion of different institutional features may be required to better explain companies' social and environmental disclosure practices

SIM: Effect of Varieties of Institutional Systems on Dynamics of Explicitization

Author: **Rômulo Soares**, *U. of Fortaleza (UNIFOR)*
Author: **Mônica Cavalcanti Sá De Abreu**, *Federal U. of Ceará*

We investigated the dynamic process of explicitization of Corporate Social Responsibility (CSR) through environmental disclosure and how this process unfolds in different varieties of institutional systems. We rely on the Varieties of Institutional Systems (VIS), a novel institutional comparative approach proposed by Fainshmidt et al. (2018), which encompasses the configurational context encapsulated by state, financial markets, human capital, social capital, and corporate governance institutions. We used a sample of 97 firms from four countries, Canada, Spain, Brazil and India, ranging from 2011 to 2018, summing up to 776 firm-year observations. We consider that the process of explicitization varies among VIS and is motivated by different institutional characteristics. We show that the explicitization process is weaker in Spain, standing for coordinated markets, while in Canada, which represents liberal markets, is significantly influenced by the extent of shareholder governance. In emerging countries under state-led configurations like India, the explicitization process is not significantly influenced by the institutional context, while Brazilian companies under family-led configurations are influenced by the capital market development and government integrity.

SIM: The Public as a Definitive Stakeholder of Corporate Green Management?

Author: **Ziko Konwar**, *U. of Leeds*
Author: **Yingqi Wei**, *U. of Leeds*
Author: **Jeremy Eng-Tuck Cheah**, *Nottingham Business School, Nottingham Trent U.*

There is an emerging body of literature that links the well-known Varieties of Capitalism framework to the relative propensity of nations to move away from hydrocarbons. This research extends this work through exploring relationship between institutional configurations and what the general public expects from firms with respect to green management. Utilizing a theoretically well-refined recent construct, namely, the Varieties of Institutional Systems, and connecting a multi-country survey of the public-as-stakeholders to institutional configurations from 16 countries (N=7156), we find significant variations of stakeholder expectations across different institutional systems. The findings, however, do not confirm a neat dichotomy between mature and emerging markets, nor that mature institutional systems are necessarily associated with a willingness to hold firms to higher environmental standards. Rather, and somewhat counter-intuitively, we find that stakeholder expectations for green management were the highest in State-Led institutional systems.

The Stability and Success of Alliances

Session Moderator: **Olga Bruyaka**, *West Virginia U.*

STR: Stick Together or Break Apart? Stigmatizing Adverse Events and Unplanned Alliance Dissolution 

Author: **Olga Bruyaka**, *West Virginia U.*
Author: **Gulnara Zaynutdinova**, *West Virginia U.*
Author: **Deborah Philippe**, *U. of Lausanne*
Author: **Miles A. Zachary**, *Auburn U.*

Our paper contributes to the emerging research on event-based explanations of alliance instability by conceptually linking theories of organizational stigma, status, and corporate governance to explain unplanned alliance dissolution. Our empirical study of alliance dissolutions by publicly traded US firms operating in the passenger air transportation industry in 1985-2016 confirms our prediction that (a) stigmatizing events affect alliance instability indirectly; (b) the extent of a firm's external corporate governance exacerbates positive effect of high stigma events on media vilification of a firm but attenuates negative effect of media vilification on the probability of unplanned alliance dissolution; (c) firm status has a penalizing effect when high stigma events occur. However, contrary to our predictions, firm status loses its buffering power when media vilification intensifies.

STR: When Friends Are Near Foes: The Choice of Steering Committees to Govern Nonequity Alliances

Author: **Chiung-Hui Tseng**, *Institute of International Business, National Cheng Kung U.*
Author: **Nguyen Thi Kim Lien**, *Institute of International Business, National Cheng Kung U.*

Knowledge leaking to rivals through alliance partners nearby the rivals has received scant scholarly attention thus far despite the importance of this topic, and it remains unknown as to how to manage this type of risk, hereinafter referred to as the partner-rival co-location risk, in nonequity alliances. This study argues that forming a steering committee can help tackle the risk, and there is a positive relationship between the partner-rival co-location risk and the likelihood of setting up a steering committee in a nonequity alliance; further, this relationship is moderated by two key conditions, i.e. the breadth (alliance scope) and depth (reciprocal interdependence) of interaction between allying firms. Drawing upon the agglomeration, knowledge management, and alliance governance literature, we developed a set of hypotheses and tested them on a sample of 499 nonequity alliances formed between the U.S. pharmaceutical firms (focal firms) and biological firms (partners). Empirical results confirm our conjectures. This research advances the alliance literature significantly and provides important insights for managers.

STR: Using Machine Learning to Uncover the Role of Outside-Industry Catalysts in Multi-party Alliances 

Author: **Prothit Sen**, *Indian School of Business*
Author: **Vivek Tandon**, *Fox School of Business, Temple U.*

Participating in a multi-party alliance with competitors is an important yet tricky decision for firms. By focusing on interactions with industry peers, the extant literature has largely ignored the role of outside industry participants. We posit that industry outsiders impact this decision by behaving as catalysts that influence the governing principles and the milieu that underlies the alliance. While some catalysts induce an environment of formal governance that reduces inter-partner trust and disincentivizes collaboration among industry rivals, others create an opportune environment for learning that supports collaboration. Given little theoretical guidance by prior literature, we employ a novel methodology that uses pattern recognition by machine learning algorithms to inductively develop and test our theory by analyzing heterogeneous deal syndicates in the private equity (PE) industry.

Paper is Available to Meeting Registrants Only.

STR: Strength in Number: Scope, Scale, and Performance in Multipartner Alliances

Author: **Ramin Vandaie**, *UNCA*
Author: **John Bechara**, *Tilburg U.*

The received wisdom is that multipartner alliances are increasingly favored by firms as means of creating larger pools of shared resources and capabilities. Yet, extant literature has hardly moved beyond anecdotal evidence to systematically address the mechanisms driving their configuration and performance. This study is a step toward clarifying important unknowns about multipartner alliances by proposing and testing a model of multipartner alliance performance that involves two key intermediary mechanisms, i.e., alliance scale and scope, that may explain how higher performance is achieved in these increasingly popular forms of organizing interorganizational efforts. The empirical context of the study is the motion picture industry where multipartner alliances have become exceedingly popular in recent decades. Empirical results are strongly supportive of our proposed theory and hold important implications for the growing literature on multipartner alliances.

Governing the Ship During Hard Times: CEO Dismissal, CEO Succession, and Scandals

Session Moderator: **Wenxin Wu**, *Guanghua School of Management, Peking U.*

STR: CEO Succession Type, Agency Risk and Firm Innovation: A Power Perspective

Author: **Jipeng Fei**, *National U. of Singapore*
Author: **Wei Yu**, *National U. of Singapore (NUS)*

How a firm choose a new CEO will significantly influence the potential agency risk, which results from the information asymmetry between the new CEO and the board. However, succession type could also induce agency risk by influencing the CEO’s managerial incentive, on which previous literature has provided limited understanding. We adopt a power perspective and theorize how succession type would affect a CEO’s power insecurity, which reflects the CEO’s concern over the ability to establish authority and wield control among various stakeholders and hence induce agency risk. Specifically, we argue that non-relay inside succession, which is associated with greater internal competition, creates greater agency risk compared to outside succession and relay succession. And such a negative impact would be smaller when the CEO has greater power. To test our theory, we investigate the innovation quality and quantity after succession using a sample of public firms in North America. The parametric event study estimation results provide overall support for our hypotheses. These findings provide new insights on CEO succession literature by exploring CEO succession as a continuous process and emphasize the role of the power dynamic, an under-investigated construct, within the process in shaping a CEO’s managerial incentive and organizational decision-making.

Paper is Available to Meeting Registrants Only.

STR: Vulnerability in Transition Period: Newly appointed CEO Dismissals and Rivals’ Competitive Actions

Author: **Wenxin Wu**, *Guanghua School of Management, Peking U.*
Author: **Mengying Yang**, *Peking U. Guanghua School of Management*

Dismissal of newly appointed CEOs has become increasingly prevalent and attracted significant scholars’ and practitioners’ attention. Prior studies on this topic have mainly focused on its implication for the focal firm. This study extends the extant research by investigating how a focal firm’s dismissal of its newly appointed CEO may influence its rivals’ competitive actions. Building on CEO dismissal and competitive dynamics literature, we argue that as focal firm may experience organizational disruption from dismissing its newly appointed CEO, its rivals may seize opportunities in the vulnerable transition period and benefit from initiating more intense competitive actions toward the focal firm. Using data on dismissals of newly appointed CEO and rivals’ competitive attacks in public firms listed in United States from 2000 to 2019, we find that rival firms initiate more intense competitive actions upon the announcement of the focal firm’s dismissal of its newly appointed CEO. Moreover, the main effect would be moderated by the degree of competition intensity in the focal-competitor dyad level, which are captured by geographic market overlap and product similarity. We find that geographic market overlap and product similarity between focal and competitor firms both will strengthen our main effect. These results suggest that closer competitors to the focal firm benefit more from the focal firm’s disruption. This study contributes to the CEO dismissal literature by demonstrating the impact of CEO dismissal beyond the focal firm.

STR: Blown Away by hurricane Katrina: The Impact of Exogenous Shocks on CEO Dismissals 

Author: **Johannes Luger**, *Copenhagen Business School*
Author: **Ali Mohammadi**, *Copenhagen Business School*

We utilize natural exogenous shocks to contrast alternative theoretical mechanisms underlying CEO dismissal. Specifically, in the context of major natural disasters, we analyze forced CEO dismissals occurring in over 2,500 US companies over 19 years (1994 – 2013). When contrasting existing theoretical explanations (e.g., natural shocks to have a zero effect because they are exogenous to CEO quality; natural shocks to have a negative effect because boards aim for internal stability during times of external instability, etc.), we identify a novel mechanism. Specifically, our results suggest that boards utilize shocks as a publicly visible excuse to legitimize dismissals—highly visible, high-stakes decisions that are often controversial. For example, we find that shocks’ entire dismissal effect goes back to CEOs showing low pre-shock peer-adjusted performance (i.e., signaling low quality) or that different board compositions (differing in their degree of aiming for public acceptance) moderate our main effect.

Paper is Available to Meeting Registrants Only.

STR: Role of Slacks on Firm Performance During a Corporate Scandal

Author: **Dimitri Simonin**, *UTS Business School*

Author: **Jan Hohberger**, *U. Ramon Llull, ESADE Business School*

Author: **Ljubomir Pupovac**, *UNSW Business School, Australia*

Corporate scandals have far-reaching consequences on firms in the short and long terms; however, only limited studies have examined how to mitigate them. Addressing this gap and drawing on a resource-based perspective, our study examines whether organizational slacks mitigate a corporate scandal's short- and long-term impact on firm value and firm risk. We posit that this mitigating effect depends on the timeframe of the strategic vision and the firm's needs and follows a curvilinear effect for each timeframe, short and long terms. In addition, we explore the role of different industry specifications in the mitigating effects of slacks in a scandal situation. Using an event study approach on 873 corporate scandals between 2012 and 2018, our empirical analysis first confirms that corporate scandals decrease short- and long-term firm value and increase firm risk. Then, based on a resource-based perspective, we reveal that holding slacks mitigates the corporate scandal's impact on short- and long-term firm values, represented as an (inverted) U-shape. Conversely, the mitigating effect of slacks follows a U-shape on firm risk. Overall, our study highlights how specific resources can mitigate corporate scandals' shock and how distinct levels of slacks and timeframes impact firm performance. From a practical perspective, we reveal that managers will benefit from accumulating slacks during shock-free periods to a certain amount which they can use when facing corporate scandals. Furthermore, we find that managers need to consider both short and long terms in using slacks during a corporate scandal. Finally, our findings shed light on the importance of considering industry characteristics when using internal resources to deal with a scandal.

Nonmarket Strategy During Crisis

Session Moderator: **Andrea Sottini**, *U.Cattolica del Sacro Cuore*

STR: Unveiling Mechanisms to Achieve Institutional Support Against COVID-19 Restrictions

Author: **Andrea Sottini**, *U.Cattolica del Sacro Cuore*

Author: **Benedetto Lorenzo Cannatelli**, *U. Cattolica del Sacro Cuore*

Entrepreneurs during global crises cope with formal institutional failures pursuing activities in the informal economy. However, informal institutions may become also unreliable or inefficient in hard times. Recently, COVID-19 pandemic created relationships barriers due to a lack of trust in society, health risks from participation in societal life and economic activities; resulting in extra costs for economic exchanges and risk of failures for businesses. We investigate the practices followed by 55 entrepreneurs that during the pandemic purposefully violated COVID-19 restrictions while activating mechanisms to achieve informal institutional support. We find that leveraging informal institutions entrepreneurs stimulated legitimacy for their actions from key social agents – customers and law enforcement agents – thereby leading them to violate formal prescriptions. Our study combined multiple data sources and rounds of data collection, such as direct interviews, observations, and archival data. We propose a grounded model and offer implications at the crossroad of entrepreneurship, institutional domains, and crisis.

Paper is Available to Meeting Registrants Only.

STR: Institutional Schisms and Strategic Responses: Understanding the Cascading Effects of the COVID-19 Pandemic  

Author: **Larissa Marchiori Pacheco**, *Northeastern U.*

Author: **Elizabeth Marie Moore**, *Northeastern U.*

Author: **Kristin Brandl**, *Gustavson School of Business, U. of Victoria*

Author: **Luis Alfonso Dau**, *Northeastern U.*

We set out to understand how communities, in particular firms within communities, were impacted by the COVID-19 pandemic. The pandemic represents an exogenous shock and while (we hope) the next exogenous shock will not be the same in nature, scholars of resilience and disaster have taught us that we can learn from each crisis. In particular, we posed three main research questions. First, we sought to understand how specifically the pandemic generated institutional uncertainty for local communities. Second, our goal was to understand how this uncertainty, and the pandemic itself, caused institutional schisms (or policy misalignments) at multiple levels (e.g., local-state-national). Third, our intention was to understand how firms, as critical stakeholders in communities, both experienced and responded to the schisms. To answer these questions we employed an in-depth, targeted, and intensive interview process. In total, we conducted interviews with 437 individuals across 18 diverse communities nested in 6 New England states within the USA. By using a structured and consistent interview process that was internally validated and created by experts in the fields of strategic management, resilience, and community-based economic development, our robust findings offer a more finely variegated lens through which we can understand the relationship between exogenous shocks, institutional schisms, and firm strategic responses.

STR: The Performance of Environmental and Social Activities in a Crisis 

Author: **Ismail El Fassi**, *U. of Lausanne, HEC Lausanne*

Author: **Daniel Oyon**, *HEC Lausanne - UNIL*

Author: **Giovanni Battista Derchi**, *Ecole hôtelière de Lausanne, HES-SO / U. of Applied Science Western Switzerland*

The financial crisis induced by covid-19 pandemic presents a unique exogenous setting to test the relationship between corporate social responsibility (CSR) and corporate financial performance (CFP). We analyze this relationship in the travel and leisure industry, being the most affected during this period, using both stock returns and risk measures. Consistent with stakeholder salience theory, our results suggest that the effect of CSR activities on financial performance depends on the salience of the stakeholders involved. Firms that invest more in activities that benefit the most salient stakeholders (i.e., customers and the environment) have higher stock returns and lower idiosyncratic risk. On the contrary, pre-crisis investments in human rights actions and community engagement are negatively related to firm value. Moreover, we find a concave relationship between CSR and CFP suggesting an optimal level of CSR. These two results provide an explanation for the mixed findings in the literature, in fact, when we exclude the two hypotheses of a contingent and non-linear relationship, we find a neutral relationship, consistent with recent articles

Paper is Available to Meeting Registrants Only.

STR: A Stakeholder Perspective on Crisis Management: Stakeholder Sensegiving and Firm Sensemaking  

Author: **Alanna Hirshman**, *Texas Tech U.*

Drawing on sensemaking, sensegiving, and stakeholder theory, I extend inquiry on stakeholder perceptions following an integrity-based organizational crisis. Whereas past studies focus on stakeholder perceptions as consequents, I take a dynamic, reciprocal approach that argues stakeholder perceptions are also important antecedents that influence a firm's selection of a crisis response strategy. Taking a mixed-methods approach, I conduct an event study of 577 integrity-based crises experienced by 188 S&P 500 companies and develop a novel policy capturing experiment that isolates focal sociocognitive mechanisms. Collectively, these studies support that media (moderate support) and investor (strong support) reactions to an integrity-based organizational crisis increase the likelihood of a firm selecting an accommodative, as compared to defensive, crisis response strategy. Interestingly, results from both studies support that media reactions to an integrity-based organizational crisis decrease the likelihood of a firm selecting an accommodative response strategy when firms have high endowments of social approval. As such, this paper extends theory on affective sensemaking and sensegiving, emotional-based social evaluations, the reciprocal relationship between firms and stakeholders, and the stakeholder perspective to crisis management. Methodologically, this paper introduces a novel sampling technique for crises events and develops a proximal measure for endowments of social approval.

 **CAR: Wanting, Getting, Using, and Staying: Exploring the Capabilities and Sustainable Employability Link**    

Author: **Bram Fleuren**, *Maastricht U.*
Author: **Daan Westra**, *Maastricht U.*
Author: **Lieze Poesen**, *Maastricht U.*
Author: **Fred Zijlstra**, *Maastricht U.*
Author: **Dirk Ruwaard**, *Maastricht U.*
Author: **Frank Christian Van De Baan**, -
Author: **Rachel Gifford**, *Maastricht U.*

Changes in work complicate and necessitate facilitating individuals’ sustainable employability (SE), which refers to workers’ long-term abilities to function at work and in the labor market. Initial papers conceptualize SE as capability set – having several opportunities to achieve value at work – while more recent work suggests this set describes antecedent conditions of SE. The present paper examines how capabilities relate to change in SE indicators (i.e., employability (internal and external), work ability, and work engagement), by presenting a structural equation model fitted to two wave self-report data from 388 Dutch hospital employees. The results show that change in internal and external employability relates positively to developing knowledge and skills, but negatively to using knowledge and skills. Moreover, change in external employability relates negatively to involvement in decision-making and earning a good income. Change in work engagement relates positively to developing knowledge and skills, involvement in decision making, and contributing to something valuable, but negatively to using knowledge and skills. Finally, change in work ability relates to none of the seven capabilities. These findings suggest capabilities can be relevant to SE and thus be targeted by interventions for SE, but the capability set in general does not cover SE.

Paper is Available to Meeting Registrants Only.

CAR: Career Hurdle or Booster: Consequences of Ambition on Promotability Evaluations 

Author: **SIJIA ZHAO**, *East China Normal U.*
Author: **Ting Liu**, *Kyoto U.*

Existing research has shown that ambition acts as a personality variable for better understanding employees’ behaviors and work outcomes. However, research on how it is displayed and its impact is in its infancy. In this study, we propose that an ambitious employee may show more self-improvement behaviors, so a supervisor may consider them more promotable. An ambitious employee may also display unethical pro-organizational behaviors to obtain more money or power, thereby becoming less promotable. We adopt construal level theory to explain this dual mediating process in which employees consider either immediate or global rewards more, thereby determining their ambition realization pathway. The empirical results help us understand how career ambition helps or hinders career promotion. Our study provides significant theoretical and practical contributions to both ambition literature and construal-level theory.

CAR: Sustainable HRM, Training for Employability and Organizational Outcomes: the Employers’ Perspective

Author: **Mattia Martini**, *U. of Milano-Bicocca*
Author: **Egidio Riva**, *U. of Milan-Bicocca*
Author: **Elisabetta Marafioti**, -

The present study builds a bridge between sustainable HRM and employability streams of literatures to investigate the relationship between sustainability-oriented HR actions and organizational outcomes. More specifically, the paper explores the effect of training for employability on employer-employee relationship and employee retention, and considers competitive intensity as a potential moderator in these relationships. The analyses draw on the fourth European Company Survey (ECS 2019) with a sample of 21,869 firms with more than 10 employees. Results show that training for employability contributes in improving the employer-employee relationship and competitive intensity positively shapes this relationship. Contextually, training for employability reduces the overall employee retention capacity of the firms. Thus, while the study provide support for the potential win-win nature of employability support, especially for companies that operate in competitive markets and uncertain environment, it also brings out the existence of some paradoxical sustainability tensions which should be managed by the employers.

Building a personal brand is a key concern of many celebrities. However, despite a growing need for self-promotion in the context of invisible work, little attention to this phenomenon is given for regular employees. In this paper, we argue that in the context of invisible work all knowledge employees need to invest in developing their personal brand to be internally and externally marketable. Specifically, we focus on the recently proposed concept of personal brand equity (PBE) and test its effects on employees perceived (internal and external) marketability. Following assertions of the signalling theory, we propose that career planning will lead to stronger PBE especially for employees with a proactive personality, and that PBE will have positive effects on employees perceived internal and external marketability. We test our model in two studies: an online experiment with 585 students from a Dutch public university (Study 1) and a time-lagged survey study with 278 Chinese employees (Study 2). Our findings suggest that PBE mediates the relationship between career planning and perceived marketability, particularly for individuals with a strong proactive personality. We discuss these findings in light of future research and practice.

CAR: The Dynamics of Career Sustainability: A Latent Transition Analysis

Author: **Zhongda Wu**, *Peking U., School of Psychological and Cognitive Sciences*

Author: **Changqin Lu**, *Peking U., School of Psychological and Cognitive Sciences*

Careers Division Best Overall Paper Award Nominee

As individuals are facing more and more uncertainties and challenges in their career development, building up sustainable careers with balanced health, happiness, and productivity is important for both employers and employees. In the field of career management, however, there are few empirical investigations on career sustainability and its dynamics. Integrating the theoretical framework of sustainable career and person-environment fit theory, the current study uses two-wave longitudinal data (N = 529) to empirically identify the profiles of employees' career sustainability and further examine the effect of person-environment fit on profile transitions. For each wave of data, Latent Profile Analyses (LPAs) consistently revealed four latent profile classes of employee career sustainability: highly sustainable, health-oriented, performance-oriented, and unsustainable. Moreover, a Latent Transition Analysis (LTA) model indicated that employees with higher person-environment fit were more likely to go through positive transitions in career sustainability; on the contrary, employees with lower person-environment fit were more likely to go through negative transitions in career sustainability. This study enriches the literature on employees' sustainable careers and further deepens the understanding of career dynamics and sustainability transitions from the perspective of person-environment fit. Also, this study provides practical implications for career management.

CAR: Talent Retention and Ostracism: Examining a Moderated Mediation Model

Author: **Anand Prema Aschwin Van Zelderen**, *KU Leuven*

Author: **Nicky Dries**, *KU Leuven*

Author: **Elise Marescaux**, *IESEG School of Management (LEM-CNRS 9221)*

Based on social identity theory, we hypothesize that exclusive talent programs—which facilitate upward organizational mobility for a select subset of employees—divide employees into two distinct groups and create a setting where ostracism is likely to occur. We use an innovative study design—experimental 360-video vignettes—to recreate a fictional organization and empirically tested a moderated mediation model (N = 184). We found that employees identified as a talent exhibit lower intentions to leave their organization, partially suppressed by their anticipation of being ostracized by out-group members. Furthermore, the emotional responses of ‘non-talent’ co-workers moderate anticipated ostracism, with non-talents' negative emotional responses to the talent program causing talents to anticipate being more ostracized by them. The present study addresses researchers' and practitioners' concerns about talent retention, and provides important theoretical and practical implications for the field of talent management, social identity theory, and intergroup conflicts on the work floor.

CAR: No more career resilient and passionate! A longitudinal experimental insight into work overload

Author: **Ahmad Raza Bilal**, *Sohar U. Oman*

Author: **Tehreem Fatima**, *The U. of Lahore Pakistan*

Author: **Muhammad Kashif Inran**, *The Islamia U. of Bahawalpur, Pakistan*

Complex and excess work demands are a byproduct of corporate model in higher educational settings, however, how work overload manifests in long-run career outcomes is yet to be examined. We therefore built on the ‘primacy of resource loss’ corollary of the Conservation of Resources theory to find out the repercussions of work overload on career resilience via reduced harmonious passion. We conducted a longitudinal natural field experiment of 402 faculty members (N=198 in the standardized group (optimal load) and N= 204 in the non-standardized (overload) group working in Higher Educational Institutions in Pakistan. Data were collected in three waves (six months apart). The analysis was performed through group comparisons, trend analysis, and longitudinal mediation analysis, using SPSS and MPlus. Our findings suggest that, as opposed to the much-held conception of harmonious passion and career resilience as buffering resources to sustain work overload, these resources are also depleted by the same phenomenon. Based on these results, we suggest that faculty members should be given optimal workload to retain their passion and resilience for teaching.

Based on career construction theory, career adaptability is a psychological resource for individuals to deal with career events, and it is a system of human-environment interaction. The components of the career adaptability concept are not independent of each other, but rather an interactive network. Network analysis, as a new method in recent psychometric studies, is more suitable for revealing the internal structure of career adaptability by providing information on the different relationships between indicators. The present study aims to shed light on the nomological network of career adaptability and the job search outcome by investigating their facet levels using network analysis, to reveal their structural networks and interrelationships. In addition, we compared the similarities and differences between the networks of different gender groups. Each model analyzes the centrality indices to determine the relative importance of each facet in each network, and conducts the central-stability coefficient and bootstrapped difference tests. Results indicate that career adaptability is directly connected to job search outcome for students, realizing that today's choices shape the future and learning new skills may be the key adaptive factors that influence job search outcome. Second, the global structure of the gender-specific networks is very similar, although some differences have been detected, such that the overall strength of the male networks is higher than that of the female networks. Becoming curious about new opportunities is the core of the male network, while the core of the female network is doing what's right for me.

In the stressful times of the pandemic, civil unrest, and other worldly concerns, it's easy to slip into a negative mindset. Yet, in the recent two decades, positive organizational scholars have resiliently asked positive research questions to identify how we flourish in the workplace. Focusing on the positive side during such bleak societal times has become even more important, as we wrestle with dark feelings and mentalities. As such, this symposium will highlight the good with an emphasis on positive outcomes. Positive organizational scholarship (POS) is the study of positivity of organizational states following four approaches: adopting a positive lens, taking an affirmative bias, explaining extraordinary positive outcomes, and examining the best of the human condition (Cameron & Spreitzer, 2012). Key topical areas of POS include positive individual traits, states, emotions, strengths, and virtues, all of which have specific dependent variables of measurement (Caza, 2015). For example, broaden and build theory examines how physical, intellectual, social, and psychological resources are built (Fredrickson, 2001), and self-determination theory examines workplace wellness, success, and achievement (Deci, Olafsen, & Ryan, 2017). The purpose of this symposium is to contribute to our understanding of positive individual outcomes by examining dependent variables in three key topical areas across four cultures and countries (Australia, Israel, United Kingdom, United States). The symposium's papers examine outcomes of well-being, prosocial identity, helping behaviors, work meaningfulness, career success (positive individual traits and states), emotions and empathy (positive emotions), and perceived fairness and justice (strengths and virtues). By examining such positive outcomes across multiple cultures and different levels of analysis, this symposium creates an opportunity for cross-pollination of ideas and research on questions focused on individual thriving at work. This cross-pollination of ideas and research addresses the grand challenges being faced around the globe (George, Howard-Grenville, Joshi, & Tihanyi, 2016), thereby, contributing towards the conference's theme of 'Creating a Better World Together'.

Incubators and Accelerators 2

Session Moderator: **Guillaume Dumont**, *EMLYON Business School*

ENT: **Accelerator as Entrepreneurial Identity Workspace** 

Author: **Yerim Jo**, *Pennsylvania State U.*

In a longitudinal qualitative study of an accelerator program, I build theory about how accelerator plays a role as an identity workspace for entrepreneurs, helping entrepreneurs manage the dual liminality and emotional tension. My findings show that entrepreneurs engage in identity work at both individual and venture levels. Specifically, entrepreneurs who attempt to accelerate their early-stage ventures from the conception to the commercialization stage (or the commercialization to the growth stage) would not only feel angst with the liminality of their venture but also with the liminality of themselves, trying to figure out what it means and what it takes to be an entrepreneur. In this regard, participation in the accelerator implies identity work of occupational embedding – during which the accelerator supports their potential and normalizes such dual liminality – and provokes identity work of market embedding – through which the entrepreneurs would clarify the identity of their ventures as well. In so doing, I contribute to both the entrepreneurial identity literature in showing the central role of emotional dynamics in managing “both” entrepreneur and venture identities and the accelerator literature in discovering the importance of accelerator as an identity workspace.

ENT: **Good Match: Feedback Interaction in Nascent Entrepreneurship (WITHDRAWN)**

Author: **Guillaume Dumont**, *EMLYON Business School*

Feedback is a key entrepreneurial practice that requires a good match between parties, but we have little theory that explains under what condition such a good match emerges. This article addresses this gap throughout 18 months of ethnographic fieldwork at a business accelerator to investigate the relational work performed by entrepreneurs and mentors and unpack the role of the relational infrastructure of the accelerator in framing their role and social interaction. The findings show that a good match requires the creation of a shared understanding of the situation and the media of exchange that overcomes its original framing by the third party and power asymmetry. Accordingly, a good match emerges because of the relational work making the relationship meaningful based on the construction of an alignment between relations, transactions, and resources.

 ENT: **Teaching Them How to Fish? The Makings of Business Accelerators** 

Author: **Chuan Chen**, *U. of Wisconsin, Madison*

Author: **Junnan He**, *Sciences Po*

One-third of early-stage venture financing currently goes to business accelerator-backed startups. We examine whether startups join accelerators to alleviate financing constraints or to improve human capital for long-term growth. Using a novel three-stage two-sided matching econometric framework, we quantify and compare explanatory powers of short-term financing prospects and long-term growth prospects for the revealed preference during the accelerator admission process. We find that short-term financing prospects explain 48% of the variations in the matching values, while variations of key five-year startup performance prospects can explain 96%.

 ENT: **Unconventional Entrepreneurship: Shaping Practices Within Fablabs** 

Author: **Maria Rita Micheli**, *IESEG*

Author: **Mario Campana**, *U. of Bristol*

Author: **Marta Gasparin**, *Copenhagen Business School*

Author: **Amanda Shantz**, *U. of St. Gallen*

Unconventional entrepreneurship, driven by passion and hobby-related interests, rather than by conventional professional opportunities, can be facilitated within collaborative spaces, which provide access to collective resources. However, aspiring entrepreneurs might also experience uncertainty within these spaces, because of the lack of structured mechanisms to leverage resources. Prior research has not fully uncovered the practices through which actors' interactions in the space can be structured in order to manage uncertainty. We explore these practices within Fablabs (fabrication laboratories). We contribute to research on uncertainty in the context of unconventional entrepreneurship and on collaborative spaces. We specifically identify three practices to manage uncertainty: community shaping, knowledge shaping and entrepreneurial culture shaping. Through an inductive qualitative research, we show how they shape the space by setting boundaries to it, allowing uncertainty to be managed and unconventional entrepreneurship to flourish.

Emotion, Intention, Motivation 5

Session Moderator: **Niklas Frederik Kuehsel**, *KLU Hamburg*

ENT: Affect Versus Cognition: Examining the Nature of Entrepreneurial Self-Efficacy

Author: **Niklas Frederik Kuehsel**, *KLU Hamburg*

Author: **Prisca Brosi**, *KLU Hamburg*

Author: **Björn Michaelis**, *Kühne Logistics U.*

We examine whether affective constructs – positive affectivity, negative affectivity, and emotional intelligence – explain variance in entrepreneurial self-efficacy (ESE) over and above the established cognitive constructs – need for cognition, faith in intuition, and counterfactual thinking – and whether they may be even more important for the understanding of ESE. We examined these research questions with two longitudinal studies with two measurement points, sampling students (Study 1 N = 195) and entrepreneurs (Study 2 N = 144). Results of a hierarchical regression analysis complemented by a relative weight analysis confirm expectations that affective dimensions explain substantial variance in ESE above and beyond cognitive predictors. This holds for all its sub-dimensions related to searching for ideas, planning, marshalling, implementing-people, and implementing-financial. These findings open ways for new theorizing about ESE using established emotion theories in addition to social cognitive theory. The study has implications for entrepreneurial education and trainers in showing the need to include both emotional and cognitive components.

ENT: A Reexamination of Antecedents of Entrepreneur Performance During Covid-19 Pandemic 

Author: **Arpita Joardar**, *UMass Dartmouth*

Author: **Sibin Wu**, *U. of Texas Rio Grande Valley*

Due to liability of foreignness, international entrepreneurs may face heightened barriers than domestic entrepreneurs at times of crisis such as the COVID-19 pandemic. In this paper, we examine the effects of various dimensions of individual entrepreneurial orientation (IEO) on performance of immigrant entrepreneurs in a situation like the global pandemic and whether cultural intelligence (CQ) may offset the effects. Our results suggest that while innovativeness has positive effect on entrepreneur performance, risk-taking and proactiveness have negative effects on it during times of crisis. Further, there is also evidence of CQ moderating the effects of IEO on performance. Specifically, innovative entrepreneurs need cultural skills to produce positive outcomes. During pandemic, innovative entrepreneurs with cultural knowledge and cultural cognition may delay the needed responses and hence there may be a negative effect on performance. The results and their implications are discussed.

ENT: What Influences the Success of Academic Entrepreneurship? A Framework of Motivation Theory  

Author: **Apan Zhou**, *Tianjin U.*

Author: **Feng Guo**, *Tianjin U.*

Author: **Chaozhi Yang**, *Tianjin U.*

Author: **Qingyuan Tan**, *Tianjin U.*

Author: **Na Luo**, *Tianjin U.*

What influences the success of academic entrepreneurship? Drawing on motivation theory, this study aims to explore the effects of entrepreneurial intrinsic motivation and extrinsic motivation on entrepreneurial persistence and academic entrepreneurship performance by considering the contingency role of innovation and entrepreneurship support institutions. Data from 211 academic entrepreneurs from Chinese universities were adopted to test our research model. The results indicate that entrepreneurial intrinsic motivation increases entrepreneurial persistence which then results in promoted academic entrepreneurship performance, while entrepreneurial extrinsic motivation reduces entrepreneurial persistence. Entrepreneurial persistence mediates the effects of entrepreneurial intrinsic motivation and extrinsic motivation on academic entrepreneurship performance. Innovation and entrepreneurship support institutions alleviate the negative effect of entrepreneurial extrinsic motivation on entrepreneurial persistence and enhance the positive effect of entrepreneurial persistence on academic entrepreneurship performance. This study advances the literature on academic entrepreneurship and motivation theory and provides practical implications to academic entrepreneurs and governments.

Paper is Available to Meeting Registrants Only.

ENT: From Unemployed to Business Owner: Learning through Experimentation.

Author: **Elena Lizunova**, *Brigham Young U.*

Author: **Denisa Mindruta**, *HEC Paris*

Recent research in entrepreneurship has started to emphasize the view of entrepreneurship as experimentation, broadly understood as taking deliberate actions to reduce uncertainties concerning the viability of an idea. Building on this work, this paper employs unique, nationally representative data to examine the entrepreneurial process in an institutional context that offers protection against early failure and makes entrepreneurs more inclined to experiment after they found a venture. We document that entrepreneurs who transition into self-employment from unemployment engage in a greater number of both core and peripheral experimentation activities compared to other entrepreneurs. We also look at how individual characteristics influence the level of experimentation and find that there is more experimentation among individuals with higher human capital. The findings are robust to multiple alternative measures of experimentation. To validate that tolerance for failure is the main mechanism leading to experimentation, we look at an alternative pathway towards entrepreneurship that also offers insurance against failure— hybrid entrepreneurship—and find that both settings are associated with higher levels of experimentation. The study contributes to the literature by providing large-scale evidence for the link between tolerance for failure and experimentation. In doing so, it adopts a process view on entrepreneurial phenomena and gives complementary empirical insights on experimentation in terms of the actions entrepreneurs take in order to reduce the uncertainties of opportunity exploitation.

Session Moderator: **Katja Bringmann**, *U. Ghent*

ENT: Which Way to Grow? Startup Internationalization and Innovation in Latin America and Europe

Author: **Katja Bringmann**, *U. Ghent*

Author: **Ilka Weichert**, *Eberhard Karls U. Tübingen*

Internationalization and innovation are both critical strategies for growth-oriented startups. Whereas high uncertainty and unique learning challenges in emerging markets such as Latin America make the respective startups set their preference on internationalization, and only thereafter on innovation, in developed markets like Europe internationalization and innovation are more and more regarded as “vicious circle”, reinforcing each other. This suggests that the institutional context of firms shapes the priorities set on innovation and internationalization, and the relationship of the two strategies. In this paper, we investigate potential tradeoffs between internationalization and innovation in Latin America and Europe by having a closer look at the legal business context in a startups home country. Our paper contributes to the literature on international and strategic entrepreneurship and the institutional context startups face in their home countries. Relying on proprietary data of a globally operating European ICT corporation that is listed at the EUROSTOXX 50 index, we analyze the strategic choices between internationalization and innovation in an unbalanced panel of 359 (336) ICT startups and 1,613 (1,422) observations from seven Latin American countries and five European countries during the years 2014-2016. Our findings suggest that the legal business context in a startup’s home country influences the likelihood of startup internationalization.

Paper is Available to Meeting Registrants Only.

ENT: Internationalization of Kuwaiti Entrepreneurship: Motives, Strategies, and Benefits  

Author: **Ruqayah Abdullah**, *U. of Essex*

Author: **Mohammed Shamsul Karim**, *U. of Essex, Essex Business School*

Author: **Nour Abdullah**, *U. of Essex*

Although the motives and strategies of internationalization of firms is a widely studied topic, the literature on the motives, strategies used by firms during their internationalization remains limited, especially within Kuwaiti entrepreneurs and more generally, in a Gulf Cooperation Council (GCC). In this context, the impact of benefits and effects derived from the internationalization process also remain very untouched by previous studies related to Kuwaiti entrepreneurs and the GCC region. Therefore, a qualitative approach and in-depth interviews were conducted with thirteen international entrepreneurs who have started up their own business abroad or are in the process of doing so in order to investigate the factors that motivate Kuwaiti entrepreneurs to internationalize their businesses, understand the strategies involved in international entrepreneurship and recognize the benefits and effects of the internationalization of entrepreneurship on business performance. The findings show that Kuwaiti entrepreneurs are motivated to internationalize their businesses due to personal achievement, knowledge and experience, a desire to expand sales and profits, and increase the company’s value, whereas, networking motives are considered very important for internationalization. The results also show that Kuwaiti entrepreneurs use different strategies while internationalizing their businesses. The main contribution of this study relates to the fact that it is the first to examine these issues in the context of Kuwait and thus it could be used as a basis for other researchers to conduct further research on entrepreneurship, internationalization, and the factors that motivate entrepreneurs, internationalization strategies and what benefits provide to companies in Kuwait and the Gulf Cooperation Council (GCC). The research was limited by the fact that only a few Kuwaiti businesses were included in the study sample and all of them were already involved in international entrepreneurship.

ENT: Institutional Support for Entrepreneurship and New Venture Internationalization  

Author: **Kun Yang**, *Central Michigan U.*

Author: **Jintong Tang**, *Saint Louis U.*

Author: **Francis Donbesuur**, *Loughborough U., School of Business and Economics*

Author: **SAMUEL ADOMAKO**, *Birmingham Business School*

We build on institutional theory to predict that (1) home country institutional support for entrepreneurship promotes new venture internationalization, (2) entrepreneurial alertness positively impacts this relationship, and (3) political ties negatively impact the moderating effect of entrepreneurial alertness. We confirm our hypotheses with two sets of primary data collected in the emerging economy of Ghana. We conclude that home country institutional support for entrepreneurship exhibits the strongest effect on new venture internationalization for founders with higher levels of entrepreneurial alertness and weaker political ties.

Paper is Available to Meeting Registrants Only.

ENT: Incentive for Speed: an Incentive-Based View of Post-Entry Internationalization Speed of New Venture

Author: **Orhun Guldiken**, *Florida International U.*

Author: **Dasol Sim**, *Florida International U.*

Author: **Le Xu**, *Florida International U.*

While the initial international expansion of new ventures has received substantial research interest in extant international entrepreneurship research, our understanding of the pace of international expansion of new ventures after they already expand abroad – the post-entry internationalization speed (PEIS) – is limited, despite its theoretical and practical importance. For new ventures that have already expanded abroad, or international new ventures (INVs), PEIS acts as a double-edged sword that can bring tremendous upside potential and at the same time substantial downside risk for INVs. Using agency arguments, this study theorizes that stock options given to the CEO and outside directors of INVs insulate these individuals from downside risk but still expose them to tremendous upside potential associated with faster PEIS. Empirical analyses from the population of publicly held U.S. INVs over the 2005-16 period show that while INVs expand faster abroad when their CEO or outside directors are compensated with more stock options, PEIS becomes slower when both the CEO and outside directors are compensated with more stock options. By developing an incentive-based view of PEIS of INVs, this study departs from and complements previous studies in the international entrepreneurship literature that have predominantly focused on the role of firm-level resources or capabilities as a driver of internationalization speed of INVs.

Entrepreneurial Ecosystems 2

Session Moderator: **Andac T. Arikian**, *Florida Atlantic U.*

ENT: Does Misery Love Company? Small Business Clustering and the Development of Psychological Capital 

Author: **Andac T. Arikan**, *Florida Atlantic U.*

Author: **Juliet Oriairo**, *North Carolina A&T State U.*

Author: **Sam Ekwuribe**, *Path to Growth Entrepreneurship Centre*

In this study, we uncover a previously unacknowledged, yet highly significant source of performance advantage small businesses enjoy when they geographically cluster. Specifically, we argue that geographical clustering, and the associated increase in small business owners' (SBOs) density of interactions with other SBOs, facilitate SBOs' development of higher levels of positive psychological capital – a psychological resource whose significance for SBOs is uniquely acknowledged in the small business literature. We develop a set of hypotheses that explicate two specific paths – the 'psychological sense of community path' and the 'informational path' - through which increased density of interactions with other SBOs in a cluster leads to an SBO's development of positive psychological capital, ultimately resulting in improved business performance. A structural equation model using survey data from the Aba Industrial Cluster in South East Nigeria provides strong support for all of our hypotheses. We discuss contributions, implications, and future research directions.

Paper is Available to Meeting Registrants Only.

ENT: Towards a Theory of Ecosystem Catalyst 

Author: **Paulo Savaget**, *U. of Oxford*

Author: **Tyrone Pitsis**, *Durham U.*

Organizational growth, size, and longevity are core assumptions within the notion of 'scale' within the entrepreneurship literature. The concept of scale, however, has limited use when taken-for-granted in the social impact context because it neglects that a social venture may synchronize growth in value creation, exchange, and capture for their intended beneficiaries through changes that occur within an ecosystem, rather than through growth that is confined to the boundaries of the organization. In this study, we inductively explore the case of ColaLife - an organization created to scale up access to diarrhea treatment in Zambia while also rendering itself gradually more redundant until ceasing its operations. We ask an undertheorized question in entrepreneurship literature: How do social entrepreneurs scale social impact while simultaneously scaling away their own organizations? By studying ColaLife in-depth and over time, we theorize the role of Ecosystem Catalysts as the combinatorial function of instilling in an ecosystem a shared purpose, leveraging existing capabilities and resources, and enhancing the autonomy of local players. We argue for a more nuanced and value-based conceptualization of 'scale': one that is more adequate to interpreting scaling efforts at the intersection between social entrepreneurship and entrepreneurial ecosystems.

ENT: Broadening the Reach: Effectual Entrepreneurs Building Impact Ecosystems Across Geographical Divides 

Author: **Marleen Wierenga**, *Nijmegen School of Management*

Author: **Jarkko Levänen**, *LUT U. School of Energy Systems*

Author: **Sara Lindeman**, *Aalto U. School of Business*

Author: **Mokter Hossain**, *College of Business and Economics, Qatar U.*

Author: **Paavo Ritala**, *LUT School of Business and Management*

Effectuation theory focuses on entrepreneurs using available means to create artefacts such as firms and markets. In this study, we explore three case companies which have initiated entrepreneurial innovation processes initiated in developed countries to address grand challenges in emerging markets. In these entrepreneurial processes, happening simultaneously in two geographical locations, the firms struggled to understand the local context, find themselves in a pioneering position and are inefficient in their operations. We find that the studied entrepreneurs build an "impact ecosystem" to develop and disseminate their solutions. Our findings contribute by linking effectuation theory with the literature on ecosystems and demonstrating how entrepreneurs engage in effectuation processes to create a new artefact, the impact ecosystem.

ENT: A Conceptual Framework for Entrepreneurial Ecosystems Policy Formulation

Author: **João Carlos Candeias**, *PACT - Science and Technology Park of Alentejo*

Author: **Soumodip Sarkar**, *U. of Évora*

The entrepreneurial ecosystem concept has attracted the attention of many governments and regional authorities, encouraged by the ubiquitous belief in the value of entrepreneurship as a source of economic growth. However, the study of entrepreneurial ecosystems is recent, undertheorized and fragmented. Specifically, it has a limited capacity to explain the effect of policies in the development of entrepreneurial ecosystems, while two competing views of how to develop an entrepreneurial ecosystem coexist, the 'curator' versus 'builder' government. Without solid and coherent theoretical foundations to guide its formulation, policies risk being ineffective. We hold the development of entrepreneurial ecosystems requires a customized mix of policies adapted to the unique characteristics of each ecosystem; promote the quality of entrepreneurship to ensure allocation of resources to productive use; and address the complexity of entrepreneurial ecosystems with a holistic policy approach. Considering the unfeasibility of generic, 'one size fits all' solutions, we follow a different path to advance research and assist policymaking, by providing guidance on key parameters to inform the formulation of entrepreneurship policies for entrepreneurial ecosystems (EPE). Based on our findings we present a conceptual framework and discuss three parameters for policy formulation top-down versus bottom-up implementation, support to systemic versus framework conditions, and holistic versus siloed approaches.

ENT: **What Does it Take to be a Changemaker? A Comprehensive Review of Social Entrepreneurship Competences**    

Author: **Anne-Karen Hueske**, *Copenhagen Business School Department of Management, Society and Communication*
Author: **Kai N. Hockerts**, *Copenhagen Business School*

The growing interest in social entrepreneurship has led to a nascent research interest into social entrepreneurship competences. This paper is the first to systematically review this research, examining studies on the competencies needed for social and sustainable entrepreneurship. Our review results in the synthesis of three competence groups: impact competences (analytical competence to understand wicked problems, future thinking competence, impact assessment competence, normative competence, commitment competence), entrepreneurship competences (problem solving competence, opportunity identification competence, action competence under uncertainty, opportunity exploitation competence, innovation diffusion competence) and engagement competences (perspective-taking competence, interpersonal communication competence, stakeholder commitment competence, participatory competence, tensions management competence). Our findings provide several avenues for future research. Comprehensive measurement scales are required to research dependencies and trade-offs among competences, the level of competences needed by whom at which stage and on what level of competence, their impact on the economic, ecologic and social performance of the venture, on its governance structure and its entrepreneurial ecosystem.

ENT: **The Threshold-Level Determinants of Social Entrepreneurial Activity** 

Author: **Paulami Mitra**, *IESEG School of Management, France*
Author: **Jill R. Kickul**, *USC Marshall School of Business*
Author: **Mark Griffiths**, *Miami U. Ohio*

Market failures and governmental inadequacies often result in activities related to social entrepreneurship. If this is the case, why and how do social entrepreneurial activities (SEA) exist in developed countries like Norway, Switzerland or USA where macro-level factors are conducive to organised and efficient business and entrepreneurial practices? Additionally, since social entrepreneurship is expected to exist among institutional voids and BOP markets, SEA should occur in abundance in developing or least developed countries due to their fractured economic, cultural or socio-political structures. The purpose of this paper is to incorporate Compans and McMullen's (2006) distinctive framework based on supply and demand side theories on entrepreneurial opportunities to empirically test the macro-level factors that stimulate or impede SEA. By employing a number of robust empirical tests across fifty-three countries, this study makes theoretical and practical contributions by proposing that in addition to the existence of certain institutional voids and BOP markets related to weak governance, unpredictable GDP, wealth disparity and lack of personal freedom, a minimum threshold level of economic, cultural or socio-political infrastructure is often necessary in a country for an unstinted amount of SEA to occur. Theoretical and practical implications as well as limitations are discussed.

ENT: **Connecting the Prosocial Action Mosaic: An Identity Lens on Student Food Insecurity**  

Author: **Andrew E. F. Fultz**, *U. of Texas at El Paso*
Author: **E. Erin Powell**, *North Carolina State U.*
Author: **Ted Baker**, *Rutgers U.*

A longitudinal field study of 11 on-campus food pantries and their founders allowed us to investigate what we label the "Prosocial Action Matrix" that interconnects the various forms of prosocial action that coalesce around an emerging social issue—in this case, student food insecurity. We discovered that the connection between the social movements that shape who founders are outside of work and who they seek to be through their prosocial venturing is strongly shaped by the nature of the broader role through which they are attached to a university bureaucracy. This has powerful implications for how founders enact the social issue, for continued activism as founders, and for how their strategies envision the social identities of beneficiaries and the social construction of stigma. The theory and process model we develop broaden and enrich Founder Identity Theory and provide a platform for research that better comprehends how various overlapping forms of organizing importantly shape the context of prosocial venturing.

ENT: **How Dynamic Capabilities Facilitates Thriving Versus Reviving Resilience in Social Enterprises**

Author: **Kajari Mukherjee**, *Indian Institute of Management, Indore*
Author: **Bhavani Shankar Saripalli**, *Indian Institute of Management Indore*

The purpose of our study is to identify how dynamic capabilities facilitate the resilience of social enterprises facing environmental turbulence, namely pandemic and prolonged lockdowns in a developing country. We employ an inductive study of 18 social enterprises in India and propose that confluence of the social entrepreneur (the person), social entrepreneurship (the process), and dynamic capabilities – regenerative and renewing – drive resilience. We delve deeper and find that resilience can be categorized as thriving or reviving, based on the expected growth trajectory by these enterprises in near future, namely up to the next financial year. We link the regenerative capabilities to thriving resilience while renewing capabilities to reviving resilience. We further raise a pointer towards a probable explanation for such divergence. Finally, we draw some practical implications that dynamic capabilities play in creating resilient social enterprises.

Securing sufficient capital is an imperative for any entrepreneurial venture’s growth, development, and survival. As such, it should be of little surprise that scholars have dedicated significant time and journal real estate to exploring the antecedents to, and implications of, different types of entrepreneurial investments. While many nascent entrepreneurial endeavors utilize a combination of both equity and debt financing, the former is indicative of greater entrepreneurial growth and as a result, has garnered much more interest from scholars. Equity financing can consist of a single investment type or multiple, but typically has at least one of the “Big Three:” venture capital, angel investment, or crowdfunding. As such, we focus our symposium discussion specifically on these investment types, including discussing the current and future directions of financing research, the influence of global pandemics, such as COVID-19, on the availability of funding, and other avenues for financing research outside of the equity investment space (e.g., accelerators, government funding programs).

This PDW targets university Administrators, academic leaders, and faculty interested in the development of Gender Equality Plans within higher education institutions and is based on materials developed within the TARGETED-MPI project funded by the Horizon H2020-SwafS-09- 2018-2019 Programme. In line with this year's AOM theme "Creating a Better World Together", The TARGETED-MPI project focuses specifically on institutional changes through the development and effective implementation of GEPs in business and management (B&M) schools to drive more inclusive, sustainable, and transparent academic cultures. Partner organizations in the TARGETED-MPI consortium include Athens University of Economics and Business (AUEB), Greece; Lancaster University (ULANC), United Kingdom; Stockholm School of Economics (SSE), Sweden; Vrije Universiteit Brussel (VUB), Belgium; and, American University of Beirut (AUB), Lebanon. The PDW will run in two parts. The first part will run for 80 minutes and will include 4 presentations about the methodology used by the TARGETED-MPI project to develop, implement, monitor, and evaluate GEPs in the partner institutions. The second part of the PDW will include round table discussions and will run for 60 minutes. Participants will have the chance to engage with the presenters and to share their experiences about the development of GEPs in their institutions. The PDW aims to raise awareness about the importance of developing GEPs in higher educations, to disseminate the results of the TARGETED-MPI project to the broader B&M professional and academic community to foster collaborations and build a network of scholars interested in bridging the gender gap in Academia.

MOC: **Examining Idiosyncratic Deals in an International Context**    

Author: **Sargam Garg**, *California State U. Sacramento*

In today's business world, expatriates play a strategic role by assisting organizations with control and coordination of global operations, as well as in knowledge transfer between headquarters and subsidiaries. However, in the absence of emotional and instrumental support from Host Country Nationals (HCNs), expatriate adjustment and assignment success can be a challenge. So far, scholars have highlighted some organizational factors, e.g., compensation and job design, that can influence HCNs' attitudes and behaviors towards expatriates. This work weaves research on expatriates with the literature on idiosyncratic deals (i-deals; employee-employer negotiated personalized employment arrangements) to further enrich this discussion. Theory developed in this work discusses how HCNs' perceptions of availability of i-deals to expatriates and/or themselves can impact HCNs' organizational citizenship behaviors (OCBs) towards expatriates. These OCBs are known to impact expatriate adjustment. Moreover, this work identifies factors that can make some i-deals of expatriates more prominent to HCNs, and in turn influence HCN reactions. In doing so, this theoretical work also stimulates research on i-deal-related employee outcomes, which till now has ignored the context of expatriates (and hence the mobility of the i-dealer), as well as research on the juxtaposition of HR practices and i-deals. This work also contributes to the strategic human resource management (HRM) research by elucidating the role of i-deals in explaining variance in employee perceptions and reactions to HR practices.

MOC: **The Curiositor's Dilemma: Why Curious Employees are Perceived as Insubordinate and Unlikeable**

Author: **Kalan Robert Norris**, *U. at Buffalo School of Management*

Author: **Shu-tsen Kuo**, *Virginia Tech*

Author: **Haozhen Zhang**, *Virginia Tech*

Author: **Phillip S. Thompson**, *Virginia Tech*

The popular business press has portrayed workplace curiosity – defined as the need to seek information, knowledge, or learning in the workplace – as the most valuable characteristic employees can possess. Most research examining workplace curiosity has found that it is positively related to desirable employee outcomes; however, little is known about the potential dark sides of this well-intentioned, yet, risky workplace act. Further, past research suggests that well-intentioned risky follower acts can lead to unintended negative leader perceptions. In this paper, then, we utilize implicit followership theories to develop a theoretical model predicting a negative relationship between follower curiosity and leader ratings of follower likeability that is mediated by leader perceptions of follower insubordination. Across three independent organizational samples consisting of data from leader-follower dyads collected at three time points, we find support for this prediction. To examine a potential boundary condition, we find uniform support that this mediation model is moderated by follower political skill, such that the indirect effect of follower curiosity on follower likeability via perceptions of follower insubordination is stronger for followers with lower (rather than higher) political skill. This suggests that curious followers who also have strong political skills are more likely to avoid being viewed as insubordinate and, in turn, disliked by their leaders. These findings highlight the slippery slope that curious followers must negotiate to avoid leaders' negative perceptions associated with workplace curiosity (i.e., Curiositor's dilemma). Implications and future research directions are discussed.

MOC: **How Outsiders Promote Organizational Change: Active Mediation in Adaptive Sensemaking** 

Author: **Katsuki Aoki**, *Meiji U.*

This study aims to build a framework for understanding the process of 'active mediation' in which outside mediators promote adaptive sensemaking through jointly using material artifacts with organizational members. To achieve this aim, I conducted in-depth analysis on qualitative data collected from two manufacturing plants of a Chinese company which tried to implement organizational change through the use of a Japanese consultant with more than 30 years' experience at Toyota. My analysis resulted in two different, but interrelated mediation patterns—instruction-oriented and experimentation-oriented active mediation. The former pattern did not lead to adaptive sensemaking, but laid the groundwork for implementing the latter pattern through enhancing the social position of an active mediator. The experimentation-oriented active mediation led to adaptive sensemaking and organizational change through the processes of problematizing, encouraging reflection and projection, and setting new standards. My study uncovers an inherent paradox in the role of active mediators—i.e. paradox between hands-on and hands-off, as well as shedding new light on a dual role of material artifacts in promoting adaptive sensemaking and organizational change—i.e. providing resources for deliberate sensemaking, and the basis for immanent sensemaking.

MOC: **The Downside of Ranking Systems: Qualified Contenders May Quit**

Author: **Nuria Tolsa-Caballero**, *U. of Michigan, Ross School of Business*

Author: **Sunyoung Lee**, *UCL School of Management*

Ranking systems may deter qualified but lower ranked contenders from persisting or re-entering competitions ("ranking effect"). Using archival data from the U.S. Primary elections to the House of Representatives, we find that ranking one position lower is associated with a 22% decrease in the likelihood of the candidate running again in the next electoral cycle, even after controlling for differences in the percentage of votes, the level of funding and other potential confounders. Experimental evidence confirms that lower rankings, even when performance is similar to that of higher ranked contenders, undermines confidence in future success, discouraging lower ranked individuals from re-entering competitions. We extend the prior research that has focused on the positive consequences of ranking systems and show that rankings can have detrimental consequences for retaining talent. If ranking systems discourage competent and talented individuals from re-entering competitions, this could lead to significant losses for both individuals and organizations.

MOC: [Endorsing Deliberation but Selecting Intuitive Decision-Makers](#)

Author: **Nuria Tolsa-Caballero**, *U. of Michigan, Ross School of Business*

Author: **Chia-Jung Tsay**, *U. of Wisconsin-Madison*

Author: **Lishi Tan**, *Leeds U. Business School*

Given that effective decision making is a critical responsibility in many jobs, decision-making skills are coveted in the selection of leaders and the recruitment of personnel. Whereas scholars have explored the role of intuition and deliberation in decision making, little is known about whether deliberative or intuitive decision makers are more valued. We find that although people explicitly assign more value to deliberative decision-making styles, they display an implicit preference for intuitive decision makers. Using videos from actual electoral races, we show that political candidates perceived as more intuitive are more likely to be elected, suggesting that impressions about others' decision-making style are consequential. In subsequent experiments, people report more positive attitudes towards intuitive decision makers and more confidence in their decision-making abilities, relative to deliberative decision makers. The belief that intuitive decision-makers come to good decisions more quickly (decision-making efficiency) appears to account for these implicit preferences; the speed of decisions, the use of emotions, and accumulated knowledge are ruled out as alternative mechanisms. The implicit preference for intuitive over deliberative decision-making styles, which emerges even from limited exposure, may drive our choices of leaders and decision makers, at odds with our explicit endorsement for deliberation. Understanding these contradicting preferences will allow more targeted efforts to improve decision making.

MOC: [On Whether to Meditate Before a Negotiation: Mindfulness Slightly Impairs Negotiation Performance](#)  

Author: **Andrew Hafenbrack**, *U. of Washington*

Author: **Sigal Barsade**, *The Wharton School, U. of Pennsylvania*

Author: **Zoe Kinias**, *INSEAD*

What little prior empirical research there is that investigated the effects of mindfulness meditation on negotiation performance was conducted in Singapore and the UK and finds benefits. This research reports a mini meta-analysis of ten studies ($N > 1100$) we conducted in the US on the effect of a brief mindfulness meditation induction on negotiation outcomes and finds a small detriment in terms of value claimed. We had initially hypothesized that mindfulness meditation would help individuals obtain better objective outcomes by claiming more value for themselves. However, the first study we ran found a moderately strong result in the opposite direction – participants who had just meditated obtained worse objective outcomes by claiming less value than participants in the control condition who had not meditated. In terms of subjective negotiation outcomes, participants in the mindfulness condition reported less satisfaction with the instrumental outcome and their sense of self compared to participants in the control condition. Then we ran nine more experiments and never obtained a significant effect of mindfulness on objective outcomes again. The meta-analysis of the total effect on objective outcomes across these ten studies was significant ($p = .021$), negative, and very small (aggregated $d = -.139$, 95% confidence interval $[-.256, -.021]$). If Americans wonder whether they should meditate before a negotiation, our suggestion is that they probably should not, as it is unlikely to help performance, and may weakly hamper performance.

MOC: [That's So Rude! Perceptions of Eating and Drinking During Virtual Meetings](#)

Author: **Julie Irene Hancock**, *U. of North Texas*

Author: **Michele N. Medina-Craven**, *Mississippi State U.*

Author: **Karen Landay**, *U. of Missouri - Kansas City*

The increased prevalence of virtual work in light of the COVID-19 pandemic has led to an increase in the amount of time that employees are spending in virtual meetings. This shift has blurred the lines of home and work, catapulting workers into uncharted territory with regards to proper etiquette. In this study, we aim to better understand the impact that engaging in certain behaviors during virtual meetings may have on perception formation of colleagues and referent others, as well as on subsequent outcomes. Drawing on signaling and attribution theories, we propose a model where observable consumption in virtual meetings (eating/drinking during a meeting versus not eat/drinking) signaled rudeness to coworkers and subsequently led to negative behavioral attributions. The results of an experimental vignette methodology (EVM) with a between-person design using 419 individuals partially supported our model, with supplemental analyses suggesting that coworkers' knowledge of an employee's health concern that requires eating or drinking influences perceptions of rudeness and cyber incivility. Our study provides key insights for organizations and managers as we move towards the "new normal" of remote work.

Paper is Available to Meeting Registrants Only.

MOC: [The Relationships Between Emotion Dimensions and Level of Construal](#) 

Author: **Dorit Efrat-Treister**, *Ben Gurion U. of the Negev*

Author: **Shaul Oreg**, *Hebrew U. of Jerusalem*

Author: **Yaniv Dover**, *Hebrew U. of Jerusalem*

The relationship between emotion and cognition is a central topic of interest in psychology. In the present study we focus specifically on the relationship of the affect dimensions of valence and activation with construal level. Although several studies have looked into this relationship, findings have been inconsistent. We propose that these inconsistencies may result from the fact that valence and activation, which have been typically linked with construal level separately, are not independent of each other. Specifically, we propose that emotion valence and activation interact in their effects on construal level, such that activation moderates the relationship between emotion valence and construal level. The relationship between the two increases the higher the emotion activation. We test this interaction effect through a text analysis of real-life descriptions of events. The content of 330,853 TripAdvisor online hotel reviews were analyzed, using the: (a) Affective Norms for English Words, (b) Warriner et al.'s Emotion Norms, and (c) Brysbaert et al.'s Concreteness Ratings. Results confirm the predicted U-shaped relationship between valence and activation, and the interaction effect between valence and activation on construal level.

Finalist for MOC Division Best Paper on Diversity and Cognition Award

Increasing diversity in workgroups and workplaces has accentuated the importance of inclusion, which allows to leverage diversity such that distinct perspectives and approaches are recognized and respected, flexibility and synergy are encouraged, information and resources are equitably available, and everyone can contribute. This work makes a case that the very concept of inclusion in diverse workgroups and workplaces might be viewed and enacted differently by diverse members due to variations in their culturally-shaped perceptions and behaviors. It is suggested that to reconcile these variations in perceptions and behaviors to achieve greater inclusion in workgroups and organizations, individuals must develop cultural intelligence (CQ) that will allow them to be aware of differences, adjust and regulate their perspectives and approaches to fit diverse contexts, have flexibility and empathy to be able to learn from interactions with different others, and contribute. Implications for research and practice will also be considered.

Paper is Available to Meeting Registrants Only.

Author: **Madeline Ong**, *Texas A&M U.*

Author: **Henrik M. Bresman**, *INSEAD*

The current research on reflection largely finds that reflection benefits performance. Most of this research has focused on the cognitive implications of reflection. We argue that when we account for the affective consequences of reflection, the link between reflection and performance becomes less clear-cut. Drawing from self-regulation theory, we argue that neuroticism, an affective personality trait governing individuals' emotional responses, moderates the relationship between reflection and performance. We hypothesize that individuals who are high in neuroticism are likely to experience less positive emotions and more negative emotions when they reflect on their work. These emotions limit their ability to realize the performance benefits of reflection. We conducted two weekly experience sampling studies to test our hypotheses. Study 1 involved a sample of mid- to top-level global executives (N = 101). Study 2 involved a sample of online platform workers (N = 202). In both studies, we found that neuroticism prevented individuals from reaping the positive performance benefits of reflection, and even led reflection to hurt certain types of performance (i.e., extra-role performance in Study 1). In Study 2, we also found that positive emotions, but not negative emotions, played an important mediating role. For workers low in neuroticism, reflection amplified their positive emotions and therefore their performance improved. However, those high in neuroticism had a muted positive emotional response when engaging in reflection and thus their performance did not improve.

New Developments in Leadership Research

Session Moderator: **Eric Yuge Lou**, *INSEAD*

MOC: In Integrity We Trust: Organizational Crisis Elevates the Importance of Integrity for Leaders  

Author: **Eric Yuge Lou**, *INSEAD*

Author: **Li Huang**, *INSEAD*

Organizations today are increasingly exposed to crises of various magnitudes. Although research has started to highlight the positive impact of leader trust in facilitating adaptive responses to organizational crises, it has overlooked the flip side of the coin: how do organizational members assess leader trustworthiness in crises? The current research proposes that individuals experiencing organizational crisis prioritize leader integrity over ability and benevolence, and leaders who demonstrate integrity garner trust more easily. We further propose that the experience of organizational crisis leads to the primacy of integrity via a need to relieve anxiety. We tested these hypotheses in four studies using mixed methods. One field study (multiwave surveys from an organization operating through COVID-19), two classroom experiments (MBA students taking part in a complex business simulation), and one scenario-based online experiment (full-time employees from Prolific; total N = 975), together suggest a robust main effect across different types of organizational crises, and the mediating mechanism of anxiety. Connecting and advancing the research on organizational crises, leadership, and trust, our research sheds much-needed light on how organizational leaders can foster trust in times of crisis.

MOC: Presidential Prototypes: Who Our Leaders Are Shape Who We Think Leaders Should Be  

Author: **Theodore Charles Masters-Waage**, *Singapore Management U.*

Author: **Nicolas Bastardo**, *KU Leuven*

Author: **Jayanth Narayanan**, *National U. of Singapore*

Individuals hold internal representations for the characteristics of the ideal leader, termed leadership prototypes, which affect how people engage with leaders and their own behaviors when in leadership roles. This paper examines how this prototype can change within a population in reaction to a prominent leadership transition, specifically, the 2020 US presidential election. A sample of Republicans (N=200), Democrats (N=200), and Independents (N=200), surveyed eight times between October 2020 and January 2021, reported their perceptions of the characteristics of the ideal leader. Results from parametric regression discontinuity in time and repeated measurement analyses found that the US election altered participants' leadership prototypes, such that post-election people's ideal leader became less tyrannical and less masculine. Contrary to our hypothesis, political identification did not moderate this effect, however, posthoc analysis did reveal that the shift in leadership prototypes was only present in individuals who accepted the result of the election as legitimate. Our results demonstrate a mechanism through which leadership prototypes shift and more broadly the societal impact of prominent leadership transitions.

MOC: The Hauntings of Past Leaders: Why do Employees Invoke the Ghost?

Author: **Eneli Kindsiko**, *Associate Professor*

Author: **Aet Kiisla**, *Junior lecturer*

Author: **Maaja Vadi**, *Maaja V*

Author: **Anne Reino**, *U. of Tartu*

This article uses discursive positioning approach to reveal the multidimensional power of a 'sense' during a change of leadership. We investigate the presence of an organisational ghost in organisational discourses after the change of leaders in two university colleges. A ghost as a medium, a carrier of culture, history and meaning, reveals multiple ways of how organisational members perceive the ongoing situation. We apply discursive positioning theory, by highlighting the ways in which the interplay of various senses during the change of leaders helps to translate the hidden meanings that have the power to help the new leader to settle in. A longitudinal study gives evidence that not only the way people perceive their environment changes in time, but also "sensing" itself has multiple dimensions. Past leaders as ghosts highlight important messages via organisational discourses, the ones we are able to interpret as we make notice of variations in sensegiving, sensemaking, sensekeeping, and sensebreaking.

MOC: Why Are There So Many Narcissistic Leaders? Subordinates Don't Give Them Negative Feedback

Author: **Emily Zitek**, *Cornell U.*

Author: **Rachel Schlund**, *Cornell U.*

Author: **Michelle Yang**, *Cornell U.*

Narcissists fill many prominent leadership positions even though they often do not perform better than non-narcissists and they have a leadership style that their subordinates do not like. Why is this the case? We hypothesized that negative feedback makes leaders want to quit and that narcissistic leaders do not receive as much of this discouraging negative feedback from their subordinates as non-narcissistic leaders do. We tested these hypotheses across a series of studies. In Study 1, we found that leaders who received negative feedback were less likely to want to continue in their current leadership roles or take on new leadership roles as compared to leaders who received positive feedback. The discouraging effect of negative feedback occurred for both more and less narcissistic leaders. In Studies 2 and 3, subordinates said that they would be less likely to provide negative feedback to a narcissistic manager than a non-narcissistic manager because they thought that the narcissistic manager would be less likely to be receptive to their concerns. Taken together, these results support our hypotheses and provide evidence that subordinates may be unwittingly forcing out the non-narcissistic leaders they would prefer to have by providing them with more negative feedback.

OB Division AOM Meeting 2022 Best Symposium Award sponsored by Cambridge University Press

Social class provides a fundamental lens through which individuals see themselves and others and is a robust predictor of how people behave in organizations. As an intersectional form of diversity that intertwines with many other forms of difference, social class holds the potential to impact a wide range of individual work experiences, team processes, and organizational practices and cultures. This panel aims to contribute to our collective understanding of social class and class inequality in organizations by bringing leading social class experts into a conversation to explore how addressing class issues could uniquely improve organizational functioning amidst the current world challenges. The panel will shed light on understanding what social class is, what it is like to be an employee from a particular social class, and how social class dynamics influence a broad range of outcomes at work.

Emotions, Moral Potency, and Spiritual Leadership

Session Moderator: **Farrukh Moin**, *Rabat Business School, International U. of Rabat, Morocco*

The papers in this session explore individual attributes (emotion regulation, moral potency, and spiritual leadership) in the workplace.

MSR: **Effect of Emotion Regulation at Work**

Author: **Farrukh Moin**, *Rabat Business School, International U. of Rabat, Morocco*

Drawing on cognitive appraisal theory of stress and personal resource allocation perspective, we examined the direct relationship between emotional labor strategies (i.e. surface and deep acting), and outcomes (i.e. psychological strain, and creativity). In addition, we investigated the indirect relationship between emotional labor strategies and outcomes via job stressors (i.e. challenge and hindrance stressors). We collected lagged survey data from service sector employees in Italy. Further, we tested the data using regression analysis. We found that surface acting predicted both psychological strain and creativity and that indirect relationships between surface acting and outcomes via hindrance stressor were also significant. In contrast, deep acting predicted only psychological strain but not creativity and that indirect relationship between deep acting and psychological strain via challenge stressor was significant, our data failed to support indirect relationship with creativity. Our results showed that employee emotion regulation strategies are related to work stressors. Moreover, surface acting is negatively related to creativity, at the same time both emotional labor strategies lead to psychological strain. We have built and tested a theoretical model thereby we have attempted to expand the scope of emotion regulation, stress-related literature, and creativity research by investigating the mechanism and outcomes of emotion labor.

MSR: **Spiritual Leadership and Adaptive Selling: Intervening and Interaction Mechanisms**

Author: **Muhammad Usman**, *NUST Business School, National U. of Sciences and Technology, Islamabad*

Author: **Shoaib Shafique**, -

Author: **Moazzam Ali**, *COMSATS U., Islamabad, Lahore Campus*

Author: **Adeel Khalid**, -

Given the importance of adaptive selling for customer satisfaction and customer loyalty and the scarcity of research on the role of leadership in shaping salespeople's adaptive-selling behavior, building mainly on the conservation of resources theory, the present study proposes that spiritual leadership is positively associated with salesperson adaptive-selling behavior, directly and indirectly, via salesperson resilience. Furthermore, we hypothesize salesperson political skill as a boundary condition of the direct relationship between spiritual leadership and salesperson resilience and the indirect relationship between spiritual leadership and adaptive selling. Our results, based on time-lagged and two-source survey data collected from 505 supervisor-salesperson dyads, support the proposed relationships. Our findings offer several important practical suggestions that can help managers develop appropriate interventions for improving salespeople's resilience and encourage them to engage in adaptive-selling behaviors.

MSR: **Moral Potency Profiles in the Context of Ethical Organizational Culture: A Multi-Sample Study**

Author: **Eina Riivari**, *U. of Jyväskylä*

Author: **Mari Huhtala**, *U. of Jyväskylä*

Author: **Marjo Elisa Siltaoja**, *U. of Jyväskylä*

Author: **Taru Feldt**, *U. of Jyväskylä*

Moral potency is a critical factor for individual's conation to act based on their moral judgments thus inhibiting or prohibiting ethical behavior. It is a three-dimensional individual psychological state and resource consisting of moral ownership, moral efficacy, and moral courage. However, what remains a black box is how moral potency varies among subgroups (i.e., profiles) in an organization, and how the profiles are linked with individuals' perceptions regarding the ethicality of their organizational culture. Our data consisted of three individual samples that enabled us to study the focal phenomena in different contexts (Top sports, Leaders, Followers). Individual latent profiles of moral potency were estimated based on the three dimensions. In addition, we used regression analyses to study the relationship between different moral potency profiles and ethical culture. Three moral potency profiles were identified among all three samples: Average, Below average, and Above average. Sample 3 (Followers) also included a fourth moral potency profile: Low. Our findings provide strong support for the relationship between moral potency profiles and ethical organizational culture. We contribute to the discussion on moral potency in different contexts and discuss how contextual factors, namely ethical organizational culture can effect moral potency profiles.

Working Towards Positive Outcomes

Session Moderator: **Anurag Gupta**, *London Business School*

OB: Measuring Digital Communication and Collaboration Competencies at Work: Validation of a Short Scale  

Author: **Maren OBERLÄNDER**, *U. of Heidelberg*
Author: **Tanja Bipp**, *U. of Heidelberg*
Author: **Sophie Schepp**, *U. of Heidelberg*

Digital communication and collaboration competencies are needed by most white-collar workers to successfully and efficiently accomplish their job tasks. In three studies, we further developed and validated an initially developed scale (Oberländer & Bipp, 2021) measuring these competencies. In Study 1 (N1 = 117, N2 = 102), we extended the item pool with adapted versions to broaden the range of the scale and empirically selected the items for an adapted scale. In Study 2 (N = 201), we reduced the adapted item set based on a combination of indicators from Classical Test and Item Response Theory and assessed the psychometric properties of the new viable short-scale including six items. In Study 3 (N1 = 137, N2 = 209), we cross-validated the internal factor structure and provided evidence of its convergent and discriminant validity, assessing the nomological net of digital communication and collaboration competencies at work. In summary, we contribute to practice by providing a free, available, and valid short-scale to measure digital communication and collaboration competencies at work and to theory by providing a solid base for much-needed theory building and expansion in this field.

OB: Linking Implicit Motives and Explicit Motives with Negotiation Performance  

Author: **Cafer Bakaç**, *TUM School of Management, Technical U. of Munich*
Author: **Hugo M. Kehr**, *TUM School of Management, Technical U. of Munich*
Author: **Jonas W. B. Lang**, *Ghent U.*

Recently, some scholars voiced out a demand, to give a second chance to the study of individual differences in negotiation performance. The current study aims to do so, whilst building on McClelland's motives framework, and focusing on the Big Three classes of motives: achievement, affiliation and power. We hypothesized that achievement- and power-motivated individuals would exhibit high negotiation performance, whereas affiliation-motivated individuals would exhibit low negotiation performance. Further, we hypothesized that implicit motives explain additional variance in negotiation performance beyond explicit motives and traits. To test these hypotheses, in study 1, we collected data from 140 individuals (56 females) using self-report measures of negotiation performance. In study 2, we conducted a mixed-motive negotiation experiment with 84 participants (34 females). Results showed that explicit achievement and affiliation, and implicit power motives were positively related negotiation performance. Further, in study 2, we found that implicit achievement motive was positively associated with negotiation performance while explicit achievement motive was negatively related. We, also, found that implicit motives explain extra variance in negotiation performance beyond traits in study 2. We are among the few researchers who showed that motivational perspectives of personality should be taken into consideration when theorizing on antecedents of negotiation performance.

OB: Stimulating Open Innovation Culture Emergence through Corporate-Startup Collaborations

Author: **Nora Varesco Kager**, *ETH Zürich*
Author: **Jennifer Linda Sparr**, *U. of Zurich*

An open innovation (OI) culture is crucial for successful inter-organizational innovation. While it is clear that an OI culture emerges in actual corporate-startup collaborations (CSCs), little is known about how these collaborations stimulate OI culture emergence in large organizations. To close this gap, we conducted 52 semi-structured interviews within a corporate accelerator. Our findings show that CSCs confront involved corporate employees from strategic and operative levels with different perspectives, working modes and actions. These demands pull their attention into different directions, resulting in tensions that create an adaptive space for OI culture emergence. Five practices help employees to navigate in this space and to integrate different demands, constituting visible signs of OI culture emergence. We contribute to OI research on culture and exemplify the complex cross-level nature of OI. We encourage corporates to engage employees broadly in CSCs, empowering them in realizing identified practices to convey openness into the organization.

OB: Desensitizing Taboo Tradeoffs: Can Communication By Scientists Reduce Outrage? 

Author: **Anurag Gupta**, *London Business School*
Author: **Aman Kabra**, *Penn State Smeal College of Business*
Author: **Madan M Pillutla**, *London Business School*

Most governments responded to the spread of COVID-19 with lockdowns and social distancing measures. These decisions involve taboo tradeoffs between saving lives and limiting economic damage. Past research has shown that individuals harshly judge those who consider such tradeoffs and react with outrage. We build on the theory of the spyglass self to suggest that communication of taboo tradeoffs by individuals who do not overlap with people's self-concept could reduce outrage. In line with this hypothesis, we conduct sentiment analysis on people's responses (N = 5,324) to taboo tradeoff tweets posted by 14 major UK news channels and show that people have lower outrage to taboo tradeoffs presented by scientists than politicians. Our preregistered experiments (NStudy 2 = 1,397, NStudy 3 = 2,085) confirm that reduction in outrage is because of participants' lower self-concept overlap with the scientists. We discuss implications for policymakers who often have to make taboo tradeoffs.

Paper is Available to Meeting Registrants Only.

Author: **Selen Oskan**, *Vrije U. Amsterdam, School of Business and Economics*

Employees' proactive motivations are central to most contemporary management theories. However, the empirical investigation of this subject is limited to predicting employee-related outcomes. Little research attention has been given to the organizational outcomes of employee proactive motivations and behaviors. Using multisource and time-lagged data, this study aims to fill this gap by examining a mediation model in which the relationship between employees' proactive motivation and organizational innovativeness is mediated by two organization-oriented proactive behaviors: organization member proactivity and proactive strategic scanning. The results suggest that proactive motivation is directly positively linked with organization member proactivity and proactive strategic scanning but that only proactive strategic scanning is positively linked with organizational innovativeness. Therefore, only proactive strategic scanning is found to mediate the link between proactive motivation and organizational innovativeness. The paper concludes with a discussion of these findings and their implications for future proactivity research and practice.

Presenter: **Shona G. Smith**, *U. of Texas At Arlington*
Participant: **Ariane Froidevaux**, *U. of Texas At Arlington*
Presenter: **Suzanne Shu**, *Cornell U.*
Participant: **Helen Colby**, *Indiana U.*

Organizational scholars are coming to identify retirement as an important component of careers, with important implications for phenomena such as employee well-being and organizational competitiveness. However, important questions related to the psychological and social processes that predict individuals' retirement-related decisions, and well-being in retirement remain unexplored. This symposium advances our understanding of retirement by addressing some of these questions. We present four papers that draw on a variety of theoretical perspectives, levels of analysis, and research designs to offer novel insights into different aspects of retirement. Following the presentations, Mo Wang, a leading voice in the retirement literature will lead the audience in an interactive discussion.

Gratitude versus Incivility

Session Moderator: **Guanglei Zhang**, *Wuhan U. of Technology*

OB: A “Thank You” From Leader Energizes Employees to Voice: Power Distance Orientation as a Moderator

Author: **Xiaoyue Wu**, *Nanjing U. School of business*

Author: **Wenxing Liu**, *Zhongnan U. of Economics and Law*

Author: **Xuting Jiang**, *Nanjing U.*

Author: **Wei He**, *Nanjing U.*

Previous research on relational energy has examined various ways that leader can increase employees' relational energy. However, as a ubiquitous leader-follower interaction, whether leader emotion expression facilitates relational energy is still unknown. Based on recent theories and research about relational energy and workplace gratitude, we develop a conceptual model to explain whether and when leader emotion expression generates relational energy for employees. We hypothesize that leader downward gratitude expression enhances employees' relational energy at work, which further promotes employees to speak up. Besides, we also propose that the effect of gratitude on relational energy and its subsequent extra-role behavior (i.e., employee voice) are contingent on employees' power distance orientation. We found general support for our hypothesized model in a two-wave and multi-source field study and a pre-registered scenario experiment. We also discuss the theoretical and practical implications of our research.

OB: “A Little Thanks Changes My World”: When and Why Dirty Workers Feel Meaningfulness at Work

Author: **Guanglei Zhang**, *Wuhan U. of Technology*

Author: **Huaying Wang**, *Wuhan U. of Technology*

Author: **Mingze Li**, *Wuhan U. of Technology*

Past research suggests that due to pervasive occupational stigma, employees performing dirty work derive their work meaningfulness from social identity process, through which they enact stigma-countering tactics at collective or individual level. However, identity research suggests that relational identity achieved through positive responses from specific and significant others at interpersonal level can be equally important in edifying employees' meaning of work. Based on this theoretical lens, we argue and find in a multi-source and multi-wave study that dirty work employees' (i.e. dirty workers') perceived work dirtiness renders their work less meaningful through a decreased sense of social worth; however, positive responses such as gratitude perceived at a relational level-from clients can mitigate the negative effects of perceived work dirtiness. A field study of 268 employees performing dirty works demonstrate that employees' perceived work dirtiness is negatively related to their sense of meaningfulness at work via social worth perception, and that gratitude from dirty workers' clients can attenuate this negative relationship. We extend research on dirty work literature by revealing that relational self can also be an important source for employees' meaningfulness at work.

OB: Does Abusive Supervision Trigger Displaced Aggression?

Author: **Harry Wang**, *Rutgers Business School*

Author: **Shiyong Xu**, *Renmin U. of China*

When investigating the consequences of abusive supervision, studies often argue subordinates who experience abusive supervision will not directly confront their supervisor out of fear of further retaliation. Instead, abused subordinates will displace their aggression on coworkers or family members, known as displaced aggression. However, such an argument focused only on target displacement instigated by abusive supervision, but whether abusive supervision is a sufficient stimulus to disinhibit aggressions initiated by other sources goes unanswered. Drawing on the approach-avoidance framework of workplace aggression and using a field sample of employees in a two-wave design (N=178), we found time one abusive supervision strengthen the relationship between time one workplace ostracism and time two interpersonal counterproductive workplace behavior (CWB-P), with the relationship to be only significant in the high abusive supervision condition. Moreover, we also hypothesized perceived performance promotion motives of abusive supervision mitigate the interaction effects, and found support for the relationship. This study contributes to abusive supervision and displaced aggression research. We provided a theoretical explanation for why abusive supervision could also be a disinhibitor to displaced aggression. Moreover, perceived intent for abusive supervision as boundary condition highlights that displaced aggression is not merely the result of affective arousal but a cognitive process.

Paper is Available to Meeting Registrants Only.

OB: Norm Violations, Transgressor Status, and Punishment Intentions: A Meta-Analysis and Experiment

Author: **Kelly Nault**, *IE Business School*

Author: **Stefan Thau**, *INSEAD*

Do people desire to punish high-status wrongdoers relatively more or less than low-status ones? The existing body of evidence examining whether high- or low-status transgressors elicit greater punishment intentions is mixed. In Study 1, we meta-analyze 36 studies testing the effect of transgressor status and transgression type on punishment intentions. We observe no main effect of transgressor status ($d = .08$). We find that high-status transgressors elicit greater punishment intentions for severe transgressions ($d = -.13$), whereas low-status transgressors encourage greater punishment intentions for non-severe transgressions ($d = .37$). The meta-analysis also shows that high-status transgressors generate greater punishment intentions for harm-based acts (i.e., acts that violate norms of kindness), and low-status transgressors for betrayal acts (i.e., those which undermine a sense of self-sacrifice for the group), but these results seem to be driven by differences in transgression severity. Overall, the results of the meta-analysis support a role schema explanation: People seem to view transgressions violating high-status role-specific expectations as more severe, encouraging greater punishment intentions for these acts. In Study 2, we retested these role schema theory-consistent findings in a preregistered experiment. The results replicated the findings that high-status transgressors elicit greater punishment intentions for acts of harm, but not acts of betrayal, because such acts are deemed to be more severe when committed by high- (versus low) status transgressors. Our findings reveal that observers appraise transgressive behavior as a function of the transgressor's status as well as the nature of the transgression. Transgressive behavior that is deemed to violate status role-specific expectations elicits perceptions of greater severity and greater punishment.

Humor in the Workplace

Session Moderator: **Si Qian**, *Beijing Technology and Business U.*

OB: The Mixed Blessing of Turning down Employee Voice with Humor: Implications for Subsequent Voice

Author: **Si Qian**, *Beijing Technology and Business U.*
Author: **Bert Schreurs**, *Vrije U. Brussel*
Author: **I. M. Jawahar**, *Illinois State U.*
Author: **Melvyn Hamstra**, *IESEG School of Management*

Not all employee suggestions can be implemented. How do you turn down suggestions while ensuring employees will voice in the future? In this study, we examine the implications of leaders' use of humor when turning down employees' constructive, voiced suggestions. Drawing on social information processing theory, we propose that the use of humor is beneficial for voice safety but detrimental for voice efficacy and, accordingly, indirectly impacts future voice behavior. We also hypothesized that the degree of interpersonal sensitivity that leaders employ in turning down voice with humor will moderate these relationships, such that it strengthens the positive effect of humor on voice safety and weakens the negative effect of humor on voice efficacy. Our study among 345 workers, using a time-lagged design, supported our overall model. Results indicate that using humor when turning down voice can be a double-edged sword in terms of affecting employees' future voice and using interpersonal sensitivity may be an effective way of capitalizing on the benefits of humor in turning down employee voice. We discuss implications for theory, research, and practice.

OB: Helping You Also Benefits Me? Leader Self-deprecating Humor and Subordinate Learning from Failure

Author: **Xi Wang**, *Renmin U. of China*

From the standpoint of motivated information processing theory, we cast perspective taking as a novel explanatory mechanism and further propose leader-member exchange as a boundary condition to explain why and when leader self-deprecating humor has the potential to spur subordinate learning from failure. We conducted a multi-wave survey and tested our model with a sample of 604 members of 152 teams in the context of a Chinese high-technology company. Through multilevel path analyses, we demonstrate that leader self-deprecating humor is positively associated with subordinate learning from failure via perspective taking, and this mediated effect is stronger when leader-member exchange is higher. Our work enhances theoretical understanding of the pro-social nature of leader self-deprecating humor, and also highlights its boundary condition of leader-member exchange, thereby yielding useful insights for practitioners who aim to encourage subordinates to learn from failure.

OB: Faking it With the Boss's Jokes: Leader Humor Expression, Follower Surface Acting, and Power Distance 🌐 ✈️ 📄

Author: **Xiaoran Hu**, *London School of Economics and Political Science*
Author: **Michael Parke**, *The Wharton School, U. of Pennsylvania*
Author: **Randall S Peterson**, *London Business School*

Leaders are often advised to use humor at work because it can promote positive work experiences for followers. However, research on leader humor has not fully considered the uneven power dynamics inherent in leader-follower interactions that could constrain and even aggravate follower reactions to leader humor. We theorize that leaders who attempt to express humor, regardless of its quality, put pressure on followers to fake positive emotional reactions and/or suppress negative emotions they may be feeling (i.e., surface acting). In turn, by increasing follower surface acting, we propose that leader humor expression can paradoxically harm followers' emotional wellbeing in the form of increased emotional exhaustion and reduced job satisfaction. Importantly, we propose that these negative outcomes of leader humor expression are more likely to occur when followers hold high power distance values, such that they more willingly accept the power differentials and obediently comply with expectations to display positive emotions in response to leader humor. Results from three field studies—including one randomized field experiment—of working professionals across three distinct national samples (the USA, India, and China) provide consistent support for these hypotheses. We discuss the managerial and theoretical implications for research on leadership, emotional labor, and employee wellbeing.

Paper is Available to Meeting Registrants Only.

OB: Utilizing Leader Humor to Conquer Paradoxes at Innovative Work: An Incongruity Theory Perspective

Author: **Xi Wang**, *Renmin U. of China*

Building upon incongruity theory, we cast paradox mindset as a novel explanatory mechanism and further propose subordinate interpersonal influence as a boundary condition to explain how and when leader humor has the potential to spur subordinate innovative behavior. We conducted a multi-wave survey and tested our model with a sample of 408 members of 133 teams in the context of a Chinese information and technology (IT) company. Results of multilevel path analyses demonstrate that leader humor facilitates subordinates' paradox mindset, which contributes to their innovative behavior. These predictions are stronger when subordinate interpersonal influence is higher. Our work enhances theoretical understanding of the incongruous nature of leader humor, and highlights its boundary condition of interpersonal influence, thereby yielding useful insights for practitioners who aim to improve subordinate innovative behavior.

Examining Individual and Team Phenomena in the Context of Robots and AI Agents

Individual and Team Phenomena within Robotics

Organizer: **Jestine Philip**, *U. of New Haven*
Organizer: **Vasiliki Kosmidou**, *U. of New Haven*
Discussant: **Prithwiraj Choudhury**, *Harvard U.*

As AI-led robotics is a newly evolving technology that is steadily impacting organizational practice, it is crucial and timely for management research to study the consequent effects on employees. Hence, to bring to light current research being conducted on (embodied and unembodied) robotics from a behavioral perspective, this Symposium brings together five papers, each of which discusses a management phenomenon (collaboration, perception, conflict, performance, leadership) at the individual- or group-level. The purpose of this Symposium is to provide OB and management scholars several specific examples of robotics research and to offer a platform for a broader conversation about the future of behavioral research in the AI era. The Symposium will also allow the presenters and organizers to learn from each other about the array of opportunities available in behavioral management for robotics research - from extending the boundaries of micro-level theories to contemporizing conventional research questions and discussing practical and policy implications. Lastly, as several of the Symposium presenters/lead authors are doctoral and post-doctoral candidates, student attendees interested in robotics research will have the opportunity to connect and engage in dissertation-related conversations.

Strategists Creating a Better World

Session Moderator: **Igor Pyrko**, *U. of Bristol*

SAP: **Understanding the Role of Courage and Phronesis in the Strategy Work of Sustainability Professionals**   

Author: **Igor Pyrko**, *U. of Bristol*
Author: **Gary Thomas Burke**, *Aston U.*
Author: **Bimal Arora**, *Aston Business School*
Author: **Divya Jyoti**, *Lancaster U. Management School*
Author: **Omid Omidvar**, *Aston Business School*

Scholars have turned their attention to the notion of ‘radical sustainability’, which entails reorganizing organizations around sustainable values rather than treating sustainability as an add-on to ‘business as usual’. Calls for radical sustainability are seen as urgent in the turbulent world affected by grand challenges and wicked problems. However, the implementation of sustainability strategies is obstructed by tensions with mainstream strategies traditionally concerned with efficiency and profitability. We argue that these tensions can be unpacked and understood better by investigating sustainability professionals’ courage as everyday experience, which they must have and employ to carry on with their strategy work. Building on MacIntyre’s virtue ethics, we present courage as a ‘virtue’ requiring delicate balancing acts through practical judgements and fine sensing of the situations for the right moment to push the sustainability agenda forward incrementally. Such practical judgments, we argue, are affected by the multi-stakeholder interests and pressures as well as internal mainstream business priorities that complexify sustainability professionals’ work.

SAP: **Working in the Gaps: Exploring the Strategy Work of Accomplished Sustainability Professionals**    

Author: **Gary Thomas Burke**, *Aston U.*
Author: **Bimal Arora**, *Aston Business School*
Author: **Divya Jyoti**, *Lancaster U. Management School*
Author: **Omid Omidvar**, *Aston Business School*
Author: **Igor Pyrko**, *U. of Bristol*

This study explores how experienced sustainability professionals perform strategy work to integrate sustainability into business strategies and processes. Drawing on in-depth interviews and research on strategy-as-practice, sustainability, and paradox, we bring to light how divergent frames and competing temporalities conjointly work against sustainability integration. We develop a theoretical model that explains how sustainability professionals use persistent optimal cyclical stretching to navigate these barriers and integrate sustainability into businesses. We show that cyclical stretching constitutes an essential form of strategy work that requires sustainability professionals to continuously open and stretch others’ cognitive frames, temporal horizons and practice domains before cementing gains. By unpacking the complex process of cyclical stretching, the study offers new insights into the hard-fought strategy work involved in realizing sustainability transitions and draws attention to how divergent temporal orientations are central to the study of sustainability paradoxes and tensions.

SAP: **Humanizing Organizations: The Coordinated Response of News Organizations to Defamatory Attacks**  

Author: **Krista Pettit**, *Ivey Business School*

We use the rare event of coordinated action among news organizations to advance our relational understanding of how organizations respond strategically to dehumanizing attacks by an influential intermediary. Our study highlights shortcoming in our current approach to image management research by demonstrating organizations consider an audience’s relationship with influential intermediaries when responding. Our findings reveal the theoretical underpinning of dehumanization and document how organizations use humanizing work in response. Finally, this study brings a well-established concept of ‘dehumanization’ into the field of management research.

SIM: Distances Matter: Parent's CSR Reputation and CSP of Multinational Enterprises' Subsidiaries

Author: **Meijui Sun**, *Ming Chuan U.*

Author: **Chienchou Su**, *Shih Hsin U.*

Prior studies found that foreign subsidiaries of multinational enterprises (MNEs) suffer from liability of foreignness (LOF). According to stakeholder theory, foreign subsidiaries may be able to improve their legitimacy of business practices and overcome LOF by demonstrating social commitments to host-country constituents through corporate social responsibility (CSR). This study doesn't only investigate whether the distances between the MNE home countries and China (host country) affect multinational enterprises (MNEs) foreign subsidiaries' corporate social performance (CSP), but also examines how sub-national institutions affect the subsidiaries engaging in CSR in China. The study further tests the moderating role of parent's CSR reputation. Using the data from 2009 to 2015 in the blue books of corporate social responsibility issued by Research Center for Corporate Social Responsibility Chinese Academy of Social Sciences (CASSCSR), the study adopts the top 100 foreign-invested enterprises in China as our sample. The CASSCSR collected the CSR information via their CSR reports, financial reports and official websites; they did an all-around research and valuation on their current CSR information disclosure. The results show the effect of distances on subsidiaries' CSP in China, and highlight the importance of parent's CSR reputation as a mechanism that may induce foreign subsidiaries to engage in CSR in China.

SIM: Mind the Gap: How Institutional Complexity Influences CSR Performance Within MNEs

Author: **Marloes Korendijk**, *U. of Groningen, Faculty of Economics and Business*

Author: **Alan Muller**, *U. of Groningen*

Author: **Rieneke Slager**, *U. of Groningen*

In a world where organizations are increasing in size and are scattered around the globe, the complexity with regards to strategy implementation throughout multinational enterprises (MNEs) has increased as well. Especially corporate social responsibility (CSR) strategies are often differently implemented across the MNE, which may result in underperforming subunits relative to their headquarters. We examine these CSR differences by focusing on institutional complexity through an institutional logics lens. Specifically, we hypothesize that cultural distance between the home and host country positively relates to subsidiary CSR underperformance relative to their headquarters. In addition, we examine whether the institutional complexity within the home and host country, based on the logic multiplicity within the country, positively moderates the former effect. Analysis consisting of 82 firm-dyads over 11 years (555 dyad-year observations) offers general support for our hypothesized relationships. Our findings have important implications for CSR and institutional logics scholars.

SIM: Does MNCs Bribery Strategy Work in a Highly-Corrupt Host Country?

Author: **Yu-Ching Chiao**, *National Chung Hsing U.*

Author: **Tang-Shun Chuang**, *Department of Business Administration National Chung Hsing U.*

This study examines and tries to explain how corruption and bribery in a country impacts firm performance and how they interact. After examining a sample of 125 Taiwanese manufacturers' foreign direct investment (FDI) cases in the Southeast Asian countries, the empirical results revealed: Corruption and bribery in a host country have negative impacts on the performance of multi-national companies (MNCs); with high corruption, firms that participate in bribery perform better than those that don't. Our study aims to shed light on bribing behavior implications for future FDI in Southeast Asian countries.

STR: What's In a Name: The Impact of Executive Patriotic Names on Corporate Philanthropy 

Author: **Ying Cao**, *Renmin U. of China*
Author: **Jun Zheng**, *School of Business, Renmin U. of China*
Author: **Majid Ghorbani**, *Renmin U. of China*

Integrating implicit egotism theory and upper echelons theory, this study investigates how an executive's patriotic name may be related to corporate philanthropy. Because of the implicit psychological motive for maintaining positive self-evaluation, individuals tend to appreciate their names and internalize the connotations embodied in the name, which will further influence their decisions and behaviors. Accordingly, we propose that executives with patriotic names have higher levels of pro-social orientation, and hence firms led by them are more generous in philanthropic giving. Considering the degree of favorable self-evaluation and the influence of social norms, we further suggest that this positive relationship is strengthened if executives attract more public attention and weakened for firms in regions with higher levels of openness. We find evidence for our arguments in the archival data from 2007 to 2019 of China's publicly listed firms. This research provides new insights on the antecedents of corporate philanthropy by highlighting the implicit egotism motive within executives' names.

STR: Bias is Not Always a Bad Thing: Non-Local CEOs and Environmental, Social and Governance Performance 

Author: **Mengyao Li**, *Harbin Institute of Technology*
Author: **Min Huang**, *Renmin U. of China*
Author: **Xiaobo Li**, *Xiamen U.*

This study builds on social identity perspective, to examine the influences on environmental, social and governance (ESG) performance of non-local CEOs. We argue that because non-local CEOs who are perceived as out-group members by the local stakeholders, companies with non-local CEOs would engage in a higher level of ESG performance to enhance their trustworthiness, legitimacy status, and the availability of local resources as a response to intergroup bias. Moreover, we explore the moderating role of organizational and environment factors (i.e., Confucianism, media coverage and firm slack). We show that companies located in the richer Confucianism region and faced on more media coverage will promote the relationship between non-local CEOs and ESG performance; conversely, firms with less slack will ease the positive relationship between non-local CEOs and ESG performance. Our empirical evidence, from 836 firms in China during 2006 - 2019, support for our ideas.

STR: CEOs' Tenure and the Synergistic Effect Between Mandatory and Voluntary Environmental Pressures

Author: **Martial Stephane Ndtoungou Pfouga**, *Grenoble Ecole de Management*

ABSTRACT This study investigates how the interplay of mandatory environmental pressure from governments and voluntary pressure self-imposed by firms themselves influences the environmental performance of the firm at different stages of the CEO's career horizon. The result reveals that there is only a synergistic effect between mandatory and voluntary environmental pressures when the CEO's career horizon is low. We argue that this phenomenon could be explained by the fact that the motivation to improve the firm environmental performance decreases as the CEO's career horizon shortens because of the associated economic short-termism. Theoretically, this study builds on the Awareness-Motivation-Capability framework to provide a social cognitive model that links mandatory environmental pressure, voluntary environmental pressure, CEOs' career horizon and the environmental performance of the firm.

STR: A Network Perspective on Corporate Social Responsibility

Author: **Jimi Kim**, *U. of New South Wales*
Author: **Chuljin Park**, *U. of New South Wales*

The connectedness of outsider directors affects firm outcomes, including corporate social responsibility (CSR). Focusing on the structural aspects of board interlock networks, we investigate the impact of outsider director networks on CSR and how such an impact is influenced by insider directors. We posit that informational benefits and long-term views stemming from networks rich in structural holes enhance outsider directors' positive impact on CSR performance. Such an influence is reinforced when insider directors also hold external connections, as it leads to stronger incentives to be concerned about the firm and personal reputation. However, with the lone-insider board structure, where only one insider is on the board of directors, the structural holes of outside directors become less influential due to the reduced impact outsiders can have under such a board structure. We test our hypotheses and find supportive evidence using a sample of 931 U.S. firms from 2002 to 2015.

Putting Mindsets into Context: Extending the Study of Fixed-Growth Lay Theories to the Workplace

Mindsets in the Context of the Workplace

Organizer: **Eva Hsin-Lian Lin**, *London Business School*
Organizer: **Ezgi Ozgumus**, *London Business School*
Presenter: **Eva Hsin-Lian Lin**, *London Business School*
Presenter: **Jeffrey M. Pollack**, *NC State U.*
Presenter: **Krishna Savani**, *Department of Management and Marketing, The Hong Kong Polytechnic U.*
Presenter: **Ezgi Ozgumus**, *London Business School*
Discussant: **Aneeta Rattan**, *London Business School*

Over the last two decades, organizations across a wide range of industries have increasingly started to discuss mindsets, or lay beliefs, about the fixedness or malleability of human attributes could shape employees experiences, performance, and thus organizations. These organizations build their approaches from initial research showing that the growth (vs. fixed) mindset shapes how managers evaluate their employees, how employees respond to challenges and setbacks in their environments, and how much trust and belonging they feel in organizations (Canning et al., 2020; Emerson & Murphy, 2014; Heslin & VandeWalle, 2008, 2011; Murphy & Reeves, 2019; Rattan & Ozgumus, 2019). Despite these encouraging insights, however, mindsets research in the workplace settings is still in its nascent stages. The purpose of this symposium is to feature new research that examines whether, how, and which mindsets shape important outcomes in the workplace, in order to more rigorously build a scholarship of mindsets in organizations. We believe that researchers in organizational behavior must seize upon this moment of engagement to accelerate the development of a substantial body of rigorous research on mindsets in workplace contexts. Inspired by the Academy of Management 2022 theme, "Creating a Better World Together," these projects extend research and theory on how mindsets help individuals to overcome challenges in their careers and workplaces, as well as organizational leaders to foster a better workplace for the employees. By elucidating the processes with which mindsets shape previously understudied outcomes in the workplace, we hope to contribute to a fascinating new area of mindsets research that promotes human flourishing in organizations.

The Role of the Manager in IM

Session Moderator: **Felix Hoch**, *U. of Münster*

IM: **Building Bridges: Bilateral Manager Connections and International Trade**

Author: **Felix Hoch**, *U. of Münster*

Author: **Jonas F. Rudsinske**, *Georg-August-U. Göttingen*

We investigate whether top managers with personal ties to a foreign country facilitate trade with that country by overcoming bilateral trade barriers that obstruct international business relationships. Using individual managers' nationality, we construct a novel database of bilateral top manager connections. We analyze the trade effects of these bilateral manager connections both on the firm and on the country level. On the country level, we provide evidence for a positive effect on both bilateral exports and imports. On the firm level, we find positive effects on destination-specific foreign sales. We show that this firm-level effect is especially pronounced for institutionally distant destinations, which we interpret as bridging the gap between institutionally dissimilar countries. Furthermore, the effect is stronger for destinations with less developed institutions indicating that manager connections help overcoming trade barriers created by low institutional quality. Moreover, we show that the strength of this effect also depends on characteristics of the individual manager. Namely, the effect differs between connections of male and female managers. Gender discriminating institutions in the destination country severely downsize the pro-trade effect of female managers' connections, which could give rise to an unintended importing of gender inequality regarding management positions.

IM: **Let's Talk About Senior Managers. Investigating Managerial Roles in Foreign Divestment Decisions**

Author: **Ha Nguyen**, *U. of Vaasa*

Global economy has been damaged severely by the pandemic, macroeconomics and geopolitical tensions, leading to a significant amount of foreign divestment made by several large multinational enterprises. This research delves into roles of top managers at headquarters in foreign divestment through their executive decisions. Adopting the dynamic managerial capabilities framework, we establish the linkage between global dynamic managerial human capital, social capital and managerial cognition on divestment probability. In addition, we examine if a turnover of a chief officer leads to foreign divestment decisions. We further investigate how the influences could be modified by cultural, economic and political differences. Accordingly, we fill the gap voiced by prior scholars about the striking omission of managerial roles in divestment studies and develop our understanding of the microfoundations of the dynamic capabilities. Several theoretical and practical implications have been also discussed in this study.

IM: **Managerial Flexibility Implications of Globalization Strategies**

Author: **Xuejing Yang**, *ESCP Europe*

Author: **Regis Coeurderoy**, *ESCP Business School*

Author: **Valerie Duplat**, *Vrije U. Amsterdam, School of Business and Economics*

This research is a first attempt to provide empirical evidence with a unique panel database on the strategic value implications of corporate globalization of the largest multinational enterprises (MNEs) in terms of R&D expenditures. In the extant multinationality-performance research, only financial performance indicators are used. The value of active management under high uncertainty is therefore ignored. In the process of business global expansion as well as R&D investment, high market uncertainty is precisely the reality that MNEs face. Our research builds on the real options perspective to investigate the managerial flexibility implications of home-region orientation of top R&D spending MNEs. The current research has three main findings. First, host-regional MNEs have higher upside potential and downside risk than home-regional MNEs. Second, MNEs can exploit innovation FSA in the home-region more efficiently, compared to non-home regions. Finally, we also found that the corporate globalization strategies of companies contribute to the company's managerial flexibility, to certain extent, due to the specificities of company's regional culture, institution and economic development, as well as the industrial structure of the company's industry.

IM: Re-internationalization and Firm’s Post-re-entry Performance: The Role of International Heritage (WITHDRAWN)  

Author: **Arash Sadeghi**, *U. of Leicester*
Author: **Jun Du**, *Aston Business School*
Author: **Mustapha Douch**, *U. of Edinburgh business school*
Author: **Stephen Roper**, *Enterprise Research Centre, WBS*

This paper studies the drivers of re-internationalization to export market and post-re-entry performance from the perspective of international heritage. We develop a conceptual framework to explain how three key aspects of international heritage (firm specific competitive advantage, market and product diversification strategies, and overall exporting experience) as well as firm’s time-out period drive re-internationalisation. Using granular trade transaction-level firm exports data from UK HM Revenue & Customs linked with profit records for 2002-2013, we found that, despite their inter-relationships, re-entry and post-re-entry performance are driven by different mechanisms, and therefore, the same factor may influence them differently or even in an opposite direction. In other words, what increases the chances of firm’s re-entry, may prove to be detrimental for their performance and vice versa.

Paper is NOT Available. Please contact the author(s).

IM: Divestiture of Foreign Subsidiaries for Deletion and Recombination: A Reconfiguration Viewpoint 

Author: **Toshimitsu Ueta**, *Copenhagen Business School*
Author: **Naoki Yasuda**, *Rikkyo U.*

This study develops a reconfiguration view of foreign subsidiary divestitures, arguing that multinational firms selectively implement divestitures for deletion (DD) and divestitures for recombination (DR) depending on the value of the divested operations and the viability of their redeployment. Instead of seeing divestitures as uniform actions, the study identifies several types of divestitures based on a unique dataset of Japanese manufacturers in the period 2004–2013 and examines them jointly as competing risks. The result of the empirical analysis supports this argument, demonstrating that even well-established factors associated with divestitures require further consideration on their distinctive relation to DD and DR. The findings reveal how DD and DR coexist and thus contribute to our understanding of reconfiguration in international business management.

IM: Foreign Firms’ Outsiderness, Status, and Cross-Border Tie Formation Through Local Intermediaries 

Author: **Tae-Seok Kim**, *Emory U., Goizueta Business School*
Author: **Eunjung Hyun**, *Hongik U. College of Business*

In this paper, we develop and test the idea that the extent to which foreign firms benefit from third-party referral, introduction, and endorsement, especially those provided by local intermediaries, in obtaining cross-border exchange relationships depends on the perceived outsidership associated with their country of origin. Using the empirical setting of M&A legal advisory markets across 40 different countries from 2001 to 2016, where we tracked both collaborative relationships among law firms and market relationships between foreign law firms and local client companies, we find evidence consistent with our prediction that intermediary-induced cross-border tie formation is most likely to occur when local companies have low familiarity with and high distrust toward foreign firms’ country of origin. Further, we show that lower-status (higher-status) foreign outsiders tend to benefit more (less) from local intermediary ties and that higher-status local incumbents (intermediaries) are less likely to connect their high-status foreign collaborators to their local clients. By bringing together divergent research on triadic closure, the liability of foreignness, and status, this study provides valuable opportunities for cross-fertilization across different research streams, enhancing our understanding of a complex phenomenon of cross-border triadic closure that manifests as the needs and motivations of multiple parties become more or less aligned with structural opportunities provided to them.

IM: Organizational Field Positions and Institutional Change: Evidence from MNCs in an Emerging Market (WITHDRAWN)

Author: **Dimitry Jacob**, *Newcastle U. Business School*

Although the relationship between field position and agency has been established in institutional research, until recently this debate mostly concerned central and peripheral actors. Using a qualitative study of the multinational corporations (MNCs) in the pharmaceutical industry in Russia, we find that intermediate companies, positioned in between the center and periphery of the field, were more successful in managing the shifting conditions within the institutional context. This agency was manifested through discursive, performative and identity strategies, which enabled such firms to maintain their intermediate position and subtly introduce institutional change. We extend the emergent research on middle-status actors in neo-institutional theory. Our findings also provide novel insights into the international business and management debate on MNCs and organizational fields.

MNE Political Strategies

Session Moderator: **Mirzokhidjon Abdurakhmonov**, *U. of Nebraska, Lincoln*

IM: Boss is Out of Sight, The Underling is in Sight? How Firms Respond to Politician Ideological Values

Author: **Mirzokhidjon Abdurakhmonov**, *U. of Nebraska, Lincoln*
Author: **Ke Gong**, *U. of Southern Mississippi*
Author: **Scott G. Johnson**, *Iowa State U.*
Author: **Jason Ridge**, *U. of Arkansas*

We theorize how firms seek to meet regional leaders' expectations when those leaders' ideological values are at odds with central government priorities. Particularly, we consider how firms in China reduce their social and community engagement priorities in response to regional communist party leaders' grooming in the governing period of Mao Zedong, a Chinese communist party founding leader. Further, we argue that such disengagement from social and community engagement in response to provincial official ideological beliefs increases as firm foreign ownership increases. However, firms are less likely to respond to a regional leader's ideological value when a firm CEO has ties to the central government political system. Our study contributes to international business and firm-government literature broadly by considering how firms may respond to a regional leader's expectations that may be at odds with central government priorities.

Paper is Available to Meeting Registrants Only.

IM: The Involvement of Firms in Chinese Foreign Aid Projects: A Data Overview and Research Agenda

Author: **Guus Hendriks**, *U. of Amsterdam*

Governments increasingly give for-profit companies key roles in the implementation of foreign aid projects, thereby forming public-private partnerships with the aim of promoting development. These projects bring together various stakeholders, often with their own distinct set of objectives. Case evidence suggests that such conflicting aims seem to be particularly reflected in the foreign aid projects carried out by stakeholders from certain emerging economies, such as China. Yet, on a larger scale, relatively little is known about the characteristics of Chinese public-private partnerships in foreign aid. Using project-level data available for 1308 Chinese aid projects in 50 countries across Africa, I characterize the projects undertaken by firms and government agencies in a public-private partnership, and contrast them to those executed by government agencies without firm involvement. My exploratory data overview suggests that important differences apply, as Chinese public-private partnerships tend to target different Sustainable Development Goals, work on the basis of distinct aid conditions, and implement projects that tend to be larger than those that are solely run by governments. Such observations raise important questions of an ethical, theoretical and international nature, and warrant further research, so that I develop a research agenda that takes aim at issues particularly important for business ethics scholars, organization theorists, and international business scholarship.

IM: 'If We Don't Win the War': MNE Political Behavior and Bargaining Outcomes During Political Conflict

Author: **Thomas DeBerge**, *U. of Illinois at Urbana-Champaign*

This paper explores two questions: how do MNEs engage opposing political actors when they enter host country political conflicts? What factors underscore which political behaviors prove to yield more favorable outcomes for the firm? Through an abductive case study of mining MNEs during the Congo Wars, I explore how institutional changes during host country political conflicts introduce new dynamic considerations into the kinds of political behaviors MNEs adopt during entry into these environments. I develop two dimensions of MNE political behavior – a passive-active one and a neutral-partisan one – that I integrate into the bargaining power model; specifically, I find that MNEs exhibiting more partisan political behaviors benefit from the enhanced bargaining power, while more neutral behaviors tended to meet unfavorable outcomes.

Multiculturalism and Innovation

Session Moderator: **Anca Metiu**, *ESSEC Business School*

IM: Multicultural Employee Roles in New Product Development    

Author: **Anca Metiu**, *ESSEC Business School*

Author: **Hae-jung Hong**, *NEOMA Business School*

Managing the product innovation process in multinational corporations is a major challenge, especially because these organizations operate across a multitude of boundaries: cultural, functional, and organizational. Based on a 18-months field study in a leading cosmetic multinational corporation, we found that multicultural employees who were hired at the headquarters mainly for bringing knowledge about local markets, actually performed several roles that went far beyond this initial purpose and, in the process, brought together the various components of the multinational corporation and its collaborators. Specifically, multiculturals engaged in bringing local and product knowledge for the development of products for the local market; pre-empting tensions and conflicts; solving conflicts; connecting disparate actors and creating synergies for the development of products for the headquarter and global markets. Through these practices, multiculturals reached across cultures, functions, and organizational boundaries, within the multinational's home country and abroad. Our work enriches the understanding of the innovation process, of multinational corporations, and sheds new light on the contributions of multicultural employees to their organizations.

IM: Top Management Team Internationalization and Innovation: The Role of International R&D Collaboration

Author: **Eline Wijns**, *Maastricht U., School of Business & Economics*

Author: **Rene Belderbos**, *KU Leuven*

Author: **Bart Leten**, *KU Leuven*

Author: **Boris Lokshin**, *Maastricht U., School of Business & Economics*

Author: **Mark Vancauteren**, *Hasselt U.*

While Top Management Team (TMT) internationalization is an increasingly observed phenomenon, we know little about the mechanisms through which TMT internationalization fosters firm performance. In this paper we argue that an international TMT, as indicated by the international work experience (IWE) or the international origin of its members, can enhance innovation performance by steering the firm towards (successful) international R&D collaborations. Analyzing a unique employer-employee dataset of match with innovation surveys (2012-2018), we find that international TMTs show a higher propensity to engage in international R&D collaborations, which in turn positively contributes towards firm innovation performance. We do not find a direct effect of TMT internationalization on innovation performance. Our findings highlight the importance of examining the complex mechanisms through which TMT configurations and the hiring of foreign material talent can have firm performance consequences.

IM: Initial Steps in Developing a Scale for Individual-Level Multiculturalism

Author: **Davina E. Vora**, *State U. of New York at New Paltz*

Author: **Salma Raheem**, *U. of Liverpool Management School*

Considering the grand challenge of migration and the increasing attention on this topic in international management, exploring the experience of multicultural individuals is highly relevant in today's world and particularly in international organizations. We therefore develop a scale to measure this construct. We follow standard procedures in developing our scale. First, we use Vora et al.'s (2019) conceptual definition of individual-level multiculturalism, which was based on a review of the literature across five disciplines, as a basis for our scale. Second, we generated items by reviewing existing scales, adapting and developing items to tap into this construct. After we generated an initial set of items, we asked for feedback from experts and multicultural individuals, revising the scale as needed. Third, we engaged in content validation, revising the scale after results from the first content validation, and then conducting a second content validation test. Fourth, we conducted an exploratory factor analysis (EFA). Results suggest that items generally load upon the three dimensions of knowledge, identification, and internalization by culture. Future steps include conducting confirmatory factor analyses (CFAs) and testing for convergent, discriminant, and predictive validity.

International Knowledge Transfer and Integration

Session Moderator: **Jill Juergensen**, *Henley Business School, U. of Reading*

IM: Learning-by-exporting? Examining Firm-level Access and Integration of International Knowledge ➔

Author: **Jill Juergensen**, *Henley Business School, U. of Reading*
Author: **Rajneesh Narula**, *Henley Business School, U. of Reading*
Author: **Irina Minodora Surdu**, *Warwick Business School*

Drawing on learning and evolutionary theory, this paper explores the nature of the relationship between exporting and innovation performance. We use longitudinal data on German manufacturing firms, collected as part of the European Community Innovation Survey (CIS), to illustrate that, in fact, only some firms significantly benefit from a greater commitment to export markets. We unpack the firm-specific mechanisms that enable some exporters to better access and integrate international knowledge. We find that firms which export beyond their home-region experience stronger learning-by-exporting (LBE) effects due to their access to diverse knowledge, and pressures to identify new solutions to strategic problems. Additionally, in line with our argument that firms are mainly characterized by their routines, we explain how changes in a firm's internal organizational routines - through organizational innovation (OI) - strengthen the positive relationship between exporting and innovation performance by enabling exporters to evolve and internalize lessons learned from exporting to foreign markets. Whilst firms may often experience trade-offs between key strategic decisions such as exporting and innovating, OI, we propose, serves as an important organizational mechanism to achieve both. Overall, our findings contribute to a nuanced and dynamic understanding of the so-called LBE effect.

IM: Managing RKT: The Role of Knowledge Relevance and Impact on Exploitative and Exploratory Innovation ➔

Author: **HUIMIN OUYANG**, *Central U. of Finance and Economics*
Author: **Chansoo Park**, *Memorial U. of Newfoundland*

Building on knowledge management theory, this study develops a theoretical model and empirically examines the impact of reverse knowledge transfer on parent companies' exploitative and exploratory innovation of Chinese multinational corporations (MNCs). The model was tested using survey data obtained from a sample of 197 MNCs. We estimated a structural equation model using AMOS 24.0. Our study suggests that reverse knowledge transfer significantly enhances exploitative innovation and it also have a positive effect on exploratory innovation. Moreover, the association between reverse knowledge transfer and the two types of innovation is moderated by knowledge relevance. There is an insignificant result for the positive moderating effect of knowledge relevance on the relationship between reverse knowledge transfer and exploitative innovation. We also find that the association between reverse knowledge transfer and exploratory innovation is weaker when the level of knowledge relevance is high. These results confirm the significance of reverse knowledge transfer towards innovation in MNCs. In addition, it indicates that to inspire exploratory innovation what is a-priori considered relevant (in terms of the class of primary technologies dominant in the parent firm) is not important. Indeed, ideas for truly new inventions often are discovered in other industries.

**Advances in Conceptualizing and Measuring Globalization and
Cross-National Distance**
Globalization and Distance

Moderator: **Sinziana Dorobantu**, *NYU Stern School of Business*

Presenter: **Steven Altman**, *NYU Stern School of Business*

Presenter: **Heather Berry**, *George Washington U.*

Presenter: **Witold Jerzy Henisz**, *U. of Pennsylvania*

Presenter: **Thomas Lindner**, *U. of Innsbruck*

Presenter: **Harald Puhr**, *U. of Innsbruck*

Our goal is to bring together a group of leading scholars pioneering novel approaches and the use of big data in measuring globalization, cross-national distance and its dynamics. The panel's structure starts with a discussion on the conceptualization of globalization, cross-national distance, and their relationships. It will then proceed to include short (12-15 minute) presentations by the panelists featuring novel empirical and methodological approaches to studying these phenomena. This will be concluded by a moderated roundtable discussion and questions & answers with the audience. Our list of confirmed speakers includes Prof. Steven Altman (NYU, Stern School of Business), Prof. Heather Berry (George Washington School of Business), Prof. Sinziana Dorobantu (NYU, Stern School of Business), Prof. Witold Henisz (University of Pennsylvania, Wharton School) and Prof. Thomas Lindner (University of Innsbruck). Panelists provide useful learnings for the audience. These include novel measures, novel data sources and statistical packages. They will introduce novel and unique data sources such as Google Trends or GDELT and cover more advanced methodological approaches such as permutation entropy, natural language processing, and gravity models.

Adaptation to and Mitigation of Climate Change (In-Person)

Session Moderator: **Xia Li**, *Boston U. Questrom School of Business*

ONE: Firms' Adaptation Strategies to Climate Change: A Literature Review

Author: **Joana Huaman**, *U. del Desarrollo*
Author: **Roberto Ponce Oliva**, *U. del Desarrollo*

Climate change will impose high costs on different societal actors, including firms and organizations, forcing them to adapt to this new situation. Although the relevance of implementing adaptation strategies is widely recognized, studies on firms' adaptation to climate change are still in their infancy. This study aims to identify the most suitable management theories for climate adaptation research, with a special interest in ski tourism that is one of the most vulnerable ones to climate change's impacts. Here we conduct a literature review. First, there is a review of the management and organizational theories used in climate research. Second, we inform about the studies that have used the theories that were found in the first part. Results show that the majority of literature is focused on mitigation strategies and related to the corporate dimension. The most frequently studied industries are the ones under high institutional pressures like oil and gas, energy, and transportation. And the theories representing the different adaptation responses that organizations could adopt as a result of the direct climate change pressures are the resource-based view and resource dependence theory. But only the last one was used in previous research to analyze firms' adaptation to climate change.

ONE: Physical Climate Risk and Firms' Adaptation Strategy

Author: **Xia Li**, *Boston U. Questrom School of Business*

Physical climate risks increasingly impact firms. While scholars have investigated how firms mitigate their impact on climate change, we know little about how firms adapt to climate change. I build a novel dataset that compiles information on the adaptation strategies of publicly traded companies across the globe, and merge it with climate science data. Using this dataset, I examine whether, how, and under which conditions firms adapt to physical climate risks. I find that the average adaptation rate across firms and climate risk drivers is 23%. Firms are more likely to engage in risk management as opposed to business strategies. On average, firms facing higher climate risks are more likely to adapt and do so with a broader range of adaptation strategies (which include both risk management and business strategies). The impact of climate risks on firms' adaptation strategies increases over time, particularly for business strategies. I further examine the mechanism and find that higher level of climate risk increases managers' risk perceptions, which triggers them to increase their adaptation strategies.

ONE: Firm Adaptation to Climate Change: Applying the GISTe Model to a Cohort of FT500 Firms 2004-2020

Author: **Bob Schulz**, *U. of Calgary*
Author: **Charles Backman**, *Northwestern Polytechnic (Alberta, Canada)*
Author: **Alain C. Verbeke**, *U. of Calgary*
Author: **Helen Reinhilde Heger**, -

We develop a 17-year longitudinal data-driven application of the GISTe model aggregating data involving how firms adapt to climate change and decarbonization at five four-year intervals between 2004 and 2020. We apply the model to a cohort of 117 FT500 North American and European firms, by coding firm-level responses to the 2004, 2008, 2012, 2016, and 2020 Carbon Disclosure Project (CDP) database with high-quality information. The GISTe model comprises a two-stage process, namely Walk I and Walk II. Walk I represents devoting scarce resources to governance (G), information management (I), and systemic (S) capabilities. Walk II builds on Walk I by making technology investments (Te) and ultimately transforming firm behavior. Walk I investments initiate and prepare the firm to transition to a greater level of proactivity towards climate change, while long-term capital investments along Walk II lead to meaningful large and permanent reductions in the firm's carbon footprint and transforms the firm. Initiating the transition paradigm towards greater integration of climate change into a firm's business operations starts with the importance of climate change to the Board and top management C-suite team. This level has responsibility for the vision, allocation of scarce resources, and strategic direction of the firm.

ONE: Climate-Related Managerial Performance Incentives and Corporate Carbon Emissions Reduction Targets

Author: **Patrick J. Callery**, *U. of Vermont, Grossman School of Business, US*
Author: **Eun-Hee Kim**, *Fordham U.*

Institutional investors have increased calls for firms to address carbon emissions, leading more firms to disclose formal carbon emissions reduction targets. Extant research offers mixed evidence on carbon target effectiveness in ultimately attaining meaningful emissions reductions. While recent research has revealed new insights into outcomes associated with environmental performance incentives in executive compensation, we have yet a limited understanding of the relationship of climate-related incentives on firm-level emissions. This study draws on agency theory to articulate mechanisms by which climate-related management incentives drive corporate carbon emissions performance management. Using data on corporate carbon targets and climate-related executive incentives from CDP, we find that incentive programs are associated with more difficult firm-level carbon targets, but that meaningful progress toward firm-level carbon target attainment may require specific targeted incentive metrics, and executives may exploit more subjective incentive metrics to enhance compensation without directly reducing emissions.

Author: **Xiaolong Shui**, *U. of Bristol*

Author: **Minhao Zhang**, *Newcastle U.*

Author: **Palie Smart**, *Cranfield U.*

Research on environmental disclosure and performance implicitly assumes that coercive pressures from the government are consistent over time. Yet, polarised political debate over climate change may lead to the inconsistency and even backlash. This article investigates whether – under downshifting pressures from the government – firms can sustain their transparency and stewardship in response to climate change. We consider U.S. withdrawal from the Paris Agreement under Donald Trump’s administration as an exogenous policy shock, and study public firms’ changes in climate change disclosure and environmental performance in reaction. Using difference-in-differences analysis, we conclude that firms in carbon intensive industry had a worsened environmental performance, although there was no significant decrease in their climate change disclosure. This suggests on the one hand, firms’ climate change disclosure practices are primarily used for mitigating societal pressures rather than governmental pressures. On the other hand, an arbitrary withdrawal from the internationally agreed climate accord can be detrimental to deal with the current global climate emergency.

Building Resilient Organizations and Socio-Ecological Systems (SEs) (In-Person)

Session Moderator: **Kathryn Pavlovich**, *Waikato Management School*

ONE: **Organising Food Systems Through Ecologies of Care**

Author: **Kathryn Pavlovich**, *Waikato Management School*
Author: **Alison Mary Henderson**, *U. of Waikato*
Author: **Maree Roche**, *U. of Waikato*

We propose a conceptual framework based on ecologies of care to examine how the organising of local food systems can flourish and become more resilient. The concept of ecologies of care brings together theoretical understandings of relationality, ecology, care along with an Aotearoa New Zealand indigenous perspective. We examine how local food production can be underpinned by interdependent webs of relationships (whanaungatanga), stewardship (kaitiakitanga), and care and support (manaakitanga) with healthy land and healthy people at the core of organising and governance.

ONE: **Organizing in the Era of the Anthropocene: The Role of Human Agency in Building Resilient SEs**

Author: **M. Saidur Rahman**, *U. of the Fraser Valley*
Author: **Monika Winn**, *U. of Victoria*
Author: **Stefano Pogutz**, *Bocconi U.*

Naming our current geological epoch the Anthropocene reflects human impact on social, physical and ecological systems as unprecedented in scale and scope. It also highlights the critical role of human agency and human organizing for reversing current trends. Aiming to contribute to research on this important topic, this paper builds on work from the natural sciences and conceptualizes organizations as part of interconnected social-ecological systems (SEs). To lay theoretical foundations for future research, we develop a comprehensive conceptual framework of first- and second-order system properties, illustrated by the case of the superweeds epidemic transforming agriculture globally. We advance organizational sustainability research by highlighting the critical, yet understudied, property of human agency to a system's resilience and adaptive capacity.

ONE: **Antenarratives of Natural Resources and the Emergence of New Industrial Clusters**

Author: **Mohamed Hassan Awad**, *California State U., Los Angeles*

Natural resources are the bedrock of many market and industrial processes. However, the role of natural resources in the emergence of new industrial clusters has received limited attention. This article addresses this gap through synthesizing insights from the industry emergence and entrepreneurial ecosystems literatures. I adopt a microfoundational lens to analyze actors' antenarratives on natural resources during the early phases of inception and pre-commercialization. I analyze a nascent industrial cluster and entrepreneurial ecosystem in the Netherlands centered around phosphorous, a critical element for human survival and an indispensable input in agribusiness and other sectors. My findings highlight the role of diverging actors' concerns as triggering engagement with natural resources, and of cross-sector platforms in bridging these concerns through experimentation, knowledge brokering, and market creation.

Paper is Available to Meeting Registrants Only.

ONE: **Orchestration of Natural Resources as a Sustainable Alternative to the Resource-Based View Paradigm**

Author: **Guillaume Carton**, *EMLYON Business School*
Author: **Julia Parigot**, *Institut Supérieur de Gestion*

This article aims to solve a dilemma inherent to current management thinking: while natural resources have become increasingly scarce, the paradigm in which management scholarship is anchored has contributed to natural resource depletion. To solve this dilemma, we focus on the resource-based view of the firm (RBV), which is the dominant paradigm in studying management and resources. We show that the anchoring of this view in Ricardian economics cannot lead to a sustainable evaluation of natural resources. We thus offer an alternative model that focuses on the management of resources and adapt it to natural resources by borrowing three theories and concepts from other fields: the commons, the ecocentric paradigm, and the industrial symbiosis paradigm. Our model suggests that firms should orchestrate natural resources by structuring their portfolio to include natural resource access, bundling them by contextualizing their value, and leveraging them by favoring their natural life cycles. Our propositions offer a novel model of natural resource management, redefine the sources of competitive advantage with respect to the natural environment, and contribute to "reworking" management theories that consider the natural environment.

Disruption Responses in Operations & Supply Chain Management

Session Moderator: **Adela Drozdibob**, *Operations and Supply Chain Management*

OSCM: **Buyer's Perception of Supplier-Induced Disruptions by Large versus Small Firms** 

Author: **Yu Chu**, *U. of Northern Iowa*

While size asymmetry (i.e., large buyer and small supplier) has been discussed in a no-disruption operation context (Lee & Johnsen, 2012), it is unclear whether and how a large buyer reacts differently when different-sized suppliers cause different types of disruptions. Extant research suggests in a supplier-induced disruption that a supplier's recovery actions are more effective when the supplier is more dependent on the buyer, indicating a need for deeper understanding of what buyers prefer in order to resolve disruptions caused by facing different sized suppliers. Accordingly, we examine the effect of supplier size and supplier-induced disruption type on commitment as well as buyers' preferred use of mediated power. Grounded in commitment-trust theory, our test examines the key mediating role of commitment in inter-organizational relationships in supplier-induced disruptions. Conducting scenario-based experiments with sample size of 266, we find that a large buyer is more committed to a large supplier than to a small supplier in a supplier-induced disruption. Interestingly, a large buyer prefers to use mediated power strategies with a large supplier than with a small one. Commitment is found to mediate the effect of supplier size and mediated power, particularly with reward and monitor strategies. Although the interaction of supplier size and disruption type does not impact commitment or mediated power, integrity disruption damages buyer commitment more than competence disruption does. Moreover, only in an integrity disruption does supplier size significantly impact the buyer's preference for using a reward strategy.

The author would like to acknowledge and thank Dr. Daniel Bumblauskas from the University of Northern Iowa, Department of Management for his contributions to this work. Dr. Bumblauskas provided advisory support to the author for this paper.

OSCM: **Inter-Firm Transfer of Environmental Disclosure in Global Supply Chains**    

Author: **Chengguang Li**, *TUM School of Management, Technical U. of Munich*

Author: **William Diebel**, *Ivey Business School*

Author: **Jury Gualandris**, *Ivey Business School*

Author: **Robert D. Klassen**, *U. of Western Ontario*

This study investigates the inter-firm transfer of environmental disclosure, a voluntary corporate sustainable practice that improves transparency in global supply chains. Building on the liability of foreignness and organizational learning frameworks, we propose that the strength of the association between the multinational enterprise's (MNE's), i.e. buyer's, disclosure and its foreign supplier's environmental disclosures is systematically weakened by the cultural, administrative, geographic, and economic distances between the home countries of the firms involved, as these cross-country distances hamper the ability of buyers to efficiently share knowledge and to credibly lead by example. We also postulate that the buyer's prior supply chain experience in the supplier's country strengthens the association between buyer's disclosure and supplier's disclosure, because previous experience helps buyers to improve their ability to share their expertise and leverage their credibility. By assembling a unique panel dataset of 17,540 cross-border buyer-supplier relationships gathered from Bloomberg databases, we find evidence for the influence of different forms of cross-country distances and the buyer's prior supply chain experience on the association between the environmental disclosures of buyers and those of their foreign suppliers. Our study contributes to literatures on corporate sustainability, international business, and supply chain management by extending the liability of foreignness concept to global supply chains, demonstrating the important role of supply chains in the inter-firm transfer of corporate sustainability practices.

OSCM: **Supply Chain Integration and Resilience Building in the Context of Natural Disasters**    

Author: **Adela Drozdibob**, *Operations and Supply Chain Management*

Author: **Amrik Sohal**, *Monash U.*

Author: **Christopher Nyland**, *Chris.nyland@monash.edu*

This study clarifies how Supply Chain Integration (SCI) supports Supply Chain Resilience (SCRES) building in natural disaster contexts and posits a model of exact SCI practices and other possible practices in multiple SCRES building stages. Structural Contingency Theory (SCT) enables the recognition of SCI orientation and scope, and the structure of the SCRES building process, segmented in active and inactive stages. The study examines 13 natural disasters as environmental contingencies affecting one or more of 22 supply chains (SC) by drawing on semi-structured interviews and secondary data applying replication techniques. The findings provide a unique model that captures how SCI is utilised to support the SCRES building process, captures trust as relevant SC practice, unpacks the role of SCI in face of natural disasters, and inductively captures relevant attributes of SCI and additional practices important in building resilience.

Author: **Xabier Barriola**, *Aalto U. School of Science*

Author: **William Schmidt**, *Cornell SC Johnson College of Business*

Responding to natural disasters requires a large and rapid deployment of resources to relieve the immediate needs of the victims. This includes immediate access to food, shelter, and medical assistance. These services are supported by, and eventually fully transitioned to, local infrastructure, such as grocery stores. We test for differences in the prices paid for grocery products between low-income and high-income communities in the months following three large Atlantic hurricanes. We identify impacted communities using major disaster declarations by the United States federal government, and marry this information to U.S. Census Bureau data on household income, and third-party data on grocery store sales. Using a triple difference regression specification, we isolate the percentage change in prices paid by low-income versus high-income communities in disaster affected versus unaffected areas, before and after the disasters. Across the events we study, a common outcome is that low-income communities in the disaster-zones endure higher average percentage price increases within grocery categories compared to high-income communities. Such differences can sap the purchasing power of those communities that are least able to absorb it. We establish the presence of several mechanisms that contribute to these results. Compared to high-income communities, low-income communities experience a larger drop in price promotions, higher unit percent price increases, a larger decrease in offer sets of low-priced products, and a larger increase in substitution from low-priced products to high-priced products. The latter two mechanisms are consistent with more stock-outs of low-priced products in low-income communities. Our results highlight how companies and emergency response agencies can make use of readily available, cross-organizational data to facilitate more targeted and equitable operational interventions in the aftermath of a disaster, such as improved forecasting of substitution patterns after disasters and flexible vouchers that respond to local changes in paid prices.

Effects of Public Sector Leadership

Session Moderator: **Sarah Krøtel**, *Aarhus U.*

This session explores the effects of public sector leadership—including but not limited to executive leadership—on individual and organization-level outcomes.

PNP: **Does Executive Turnover Affect Government Transparency?**

Author: **Ting Huang**, *Aarhus U.*

Author: **Anders Ryom Villadsen**, *Aarhus U.*

Author: **Chen Lu**, *Chinese Academy of Sciences*

Research has underscored the role of executive turnover in organizational processes and outcomes. However, little research has linked turnover events to externally oriented outcomes such as government transparency. We theorize that executive changes are likely to increase transparency as new incumbents respond to demands from the public and superior government levels, but that this effect is contingent on contextual conditions. Using panel data from 113 Chinese cities, this paper explores the impact of executive turnover on government transparency in environmental information. Results show that mayoral and party secretary's turnover positively affect government transparency. This effect is weakened by severe air pollution, which harms organizational reputation. Career incentive shows no moderating effect. Implications for research on executive turnover and government transparency are discussed.

PNP: **Organisational Changes in the Public Sector and Employee Presenteeism: Does Leadership Matter?**

Author: **Sarah Krøtel**, *Aarhus U.*

Author: **Ann-Kristina Løkke Møller**, *Aarhus BSS, Aarhus U.*

This study investigates the effect of organizational changes on presenteeism among public employees. By the lens of change management theory and leadership literature, we explain how leaders mitigate presenteeism among their employees during an organizational change context. We explore this relationship by using a quantitative two-wave panel survey from 2011 and 2014, with the same 689 pedagogical employees in Denmark. Results suggest that individual's exhibits higher presenteeism in the context of organizational change, but that both leadership quality and change leadership helps to mitigate the effect.

Paper is Available to Meeting Registrants Only.

PNP: **Virtue and Competence: the Case of Directors Evaluation at Chinese State Owned Enterprises**

Author: **Xuhong Xu**, *Queen Mary U. of London*

Author: **Shang Chen**, *Queen Mary U. of London*

Author: **Rui Guo**, *Chinese Academy of Sciences*

Author: **Tiancheng Hu**, *Queen Mary U. of London*

Author: **Lutao Ning**, *Queen Mary U. of London*

SOE directors are now facing a more complex set of goals and diverse groups of stakeholders than their peers from the private sectors as Chinese state-owned enterprises (SOEs) are undergoing an unprecedented reform to enhance their performances. We argue that current theoretical works on director evaluation require a set of virtue and competence indicators different from private firms in assessing SOE directors. This paper, therefore, proposes a framework for director evaluation in the context of Chinese SOEs, considering of the influences of traditional and modern Chinese ideologies. Through interviews based on the Delphi Method with prominent Chinese SOE directors, we have validated our framework by examining seven dimensions of virtue and four dimensions of competence functions in Chinese SOEs. Furthermore, we offer advice by examining the effective characteristics of each dimension to help the government streamline the director evaluation process to highlight the representative characteristics of virtue and competence.

PNP: **A National Study of Irish Leadership in STEM Education**

Author: **Amy Fahy**, *Trinity Business School, Trinity College Dublin*

This study draws on AMO framework to explore principals' perceptions of leadership in STEM education in addition to their role as leaders within their schools. This study addresses the following research question: How do principals influence or promote STEM education? An online survey instrument was administered to 3200 Irish Elementary School Principals. Quantitative findings were analysed via SEM analysis using SPSS and thematic analysis was carried out on the qualitative data using NVivo. The findings showed that overall, transformational leadership is significant on influencing principal commitment to STEM education, principal intention to adopt STEM education, school implementation of STEM education and school participation in STEM-related weeks. Furthermore, important findings emerged in relation to principals' positive experience and value of STEM education in addition to challenges including time pressures and resources. The research project focusing on the principals' role in STEM education, makes several significant contributions to education and leadership research as well as to policy and management practices. For education and leadership research, this research extends our understanding of principals as leaders in the education sector.

Artificial Intelligence and Machine Learning in Management Research

Session Moderator: **Deanna M. Kennedy**, *U. of Washington, Bothell*

RM: **Multi-Class Text Classification for Automated Team Communication Encoding**

Author: **Jeffy Jahfar Poozhithara**, *U. of Washington, Bothell*
Author: **Deanna M. Kennedy**, *U. of Washington, Bothell*

Team communication can be a window into team processes and the generation of team performance. Current methods of team communication encoding typically call for the manual application of a researcher derived coding scheme. Yet, such a coding approach can be resource and time intensive given the need for multiple coders and high reliability in the interpretation and assignment of codes. Such approaches on top of the time for audio data collection and processing may create difficulties in reaching the critical mass needed for methodological analyses in a useful time-frame. To enable faster, consistent team communication encoding, we evaluated different natural language processing techniques on team communication transcripts in assigning a coding scheme of process and purpose types to messages. We conducted a classifier selection of known multi-class text classification models, and a feature selection comparing word segmentation and parts-of-speech tagging. We were able to identify that the ensemble method using n-grams of parts-of-speech tags vectorized using TF-IDF Vectorizer and a composite classifier created using a pipeline of Standard Scalar Transformer with Decision Tree classifier was able to achieve an average accuracy of 91.6% for automatically assigning process codes and an average accuracy of 94.9% for message purpose codes. We discuss how researchers can use machine learning methods to move beyond the manual encoding of coding schemes to a more efficient and consistent approach.

RM: **Natural Language Processing for the Study of Institutional Change**

Author: **Luna Ansari**, *MIT/Aalto School of Business*

Text Classification has been a well-studied task in Natural Language Processing. In this study deep learning methods are applied to train classifiers for the purpose of analyzing a data set of institutional change propaganda technique samples. Specifically this study explores how collective emotions underpin individuals' participation in disruption of the hydropower institutionalized energy system. By exploring the context of local initiatives which seek to undermine the hydropower energy system, this study taps into micro-foundations of institutional disruption. The preliminary qualitative study reveals existing patterns in how emotions are tied to various steps of instigating and promoting institutional change. Text classification techniques are further applied to confirm and complement the preliminary findings. In particular Long short-term memory neural networks as well as transformer-based models are applied at two levels of classification: sentence level and token level. The trained classification models help investigate how generalizable the preliminary findings are. By combining qualitative and quantitative this study extends prior research by unpacking emotional dynamics implicated in institutional disruption by explaining how actors mobilize collective emotions as a basis to build support for institutional change.

RM: **Structural Topic Modeling: A Machine Learning Model to Text Analyzing Corporate Diversity Statement**

Author: **Wei Wang**, *City U. of New York*
Author: **Julie Dinh**, *Rice U.*
Author: **Kisha Shannon Jones**, *Florida International U.*
Author: **Siddharth Kanakrai Upadhyay**, *Florida International U.*
Author: **Jun Yang**, *U. of North Carolina, Greensboro*

Although text data are ubiquitous in organizations, the advancement of text analysis methods has created an unfortunate bottleneck for many organizational researchers. This paper introduced the Structure Text Model (STM; Roberts et al., 2014), a cutting-edge text modeling method that uses an unsupervised machine learning model to statistically derive latent semantic topics underlying a collection of text documents. More importantly, the STM method has the advantage of modeling document-level variables (i.e., metadata) as covariates, which is critical for organizational research. We also demonstrated the application of STM in diversity research: comprehensively analyzing a large number of diversity statements publicly released by Fortune 1000 companies. Our structural topic modeling uncovered six underlying latent semantic topics: 1) general DEI terms, 2) supporting Black community, 3) acknowledging Black community, 4) committing to diversifying workforce, 5) miscellaneous words, and 6) titles and companies. We further explored and found that the prevalence of these topics varied as a function of company characteristics, including industry sector, CEO race, corporate political orientation, etc. Our paper not only demonstrates the promising application of Structural Text Models in organizational research, but also provides important theoretical implications for current diversity research through the meaningful findings.

RM: **Double Machine Learning and Automated Confounder Selection — A Cautionary Tale**

Author: **Paul Huenermund**, *Copenhagen Business School*
Author: **Beyers Louw**, *Maastricht U. School of Business and Economics*
Author: **Itamar Caspi**, *Bank of Israel*

Double machine learning (DML) is becoming an increasingly popular tool for automated model selection in high-dimensional settings. These approaches rely on the assumption of conditional independence, which may not hold in big-data settings where the covariate space is large. This paper shows that DML is very sensitive to the inclusion of even a few “bad controls” in the covariate space. The resulting bias varies with the nature of the causal model, which raises concerns about the feasibility of selecting control variables in a data-driven way.

Organizer: **Jayci M. Robison**, *Oklahoma State U.*

While AOM members are often exposed to graduate training involving the application of research methods, few have been trained regarding the development of methodological contributions to the research methods literature. As such, authors may find the substance and form of a research methods article to be challenging. Authors benefit from advice regarding how to structure an empirical or theoretical paper using a discipline-based research question as foundation. Similarly, they may benefit from advice involving methodological contributions. The panel symposium will act as a source of advice by offering insight from the editorial team of Organizational Research Methods on how to conceptualize and write methodology articles. The presenters include the current Co-editors and Associate Editors of Organizational Research Methods. Collectively, these editors represent expertise in methods that span all divisions of the Academy from micro to macro and from quantitative to qualitative methods. We anticipate discussion topics to be broad, with specific topics prompted by attendees' questions. Potential topics include how to identify and select a valuable methodology contribution, ways to compare existing methodological approaches, how to structure a methodological paper, the differences between quantitative and qualitative methods papers, discrepancies between micro and macro methodological topics, and how to effectively communicate methods research to a diverse audience.

Antecedents to CEO Dismissal: The Role of Attribution and Boards

Session Moderator: **Marketa Rickley**, *U. of North Carolina at Greensboro*

STR: **Liabilities of Foreignness in CEO Dismissals** → 

Author: **Marketa Rickley**, *U. of North Carolina at Greensboro*
Author: **Yannick Thams**, *Florida Atlantic U.*

While foreign-born individuals are being appointed to lead US corporations in record numbers, little is known about whether foreign CEOs are held to the same performance standards as local CEOs once in their role. To offer insights to this question, we analyze the incremental effect of CEO foreignness and firm performance on CEO dismissal. We draw on social identity and attribution theories to propose that, as firm performance declines, CEO foreignness will become more salient in the eyes of the board and foreign CEOs will be more likely to attract blame, increasing their likelihood of dismissal relative to local CEOs. Using a longitudinal sample of publicly traded US firms ($n = 11,323$ firm-year observations) and controlling for many factors including endogeneity, we find that the board of directors is more likely to dismiss a foreign CEO than a local CEO. Our findings suggest that although there has been a notable increase of foreigners at the helm of large firms, which would indicate that nationality matters less in the C-suite, boards of directors' evaluations of these 'elite migrants' may still be subject to bias. We advance research on how liabilities of foreignness affect individual outcomes among corporate leadership in organizational settings and highlight the need for firms to take ameliorative steps to fully harness the benefits of international diversity in their top ranks.

STR: **Empire-Building or Bridge-Building: Value-Destroying Implications of Preemptive CEO Departure** 

Author: **Shuo Yang**, *Kent State U.*
Author: **Ilgaz Tahir Arikan**, *Kent State U.*
Author: **Asli Musaoglu Arikan**, *Kent State U.*

The agency theory predominately assumes that CEOs are likely to entrench themselves unless a force acts to remove or recruit them. Building on this assumption, substantial studies emphasize the board's effectiveness in assessing leadership efficacy and removing incompetent or self-serving CEOs to eliminate agency costs. We theorize that CEO career concerns make anticipated board intervention a possible source of agency cost. From CEOs' perspective, they can preemptively time their exits from the current position if they believe employment termination is unavoidable. In this way, CEOs actively manage their career path and leverage their current positions for better career opportunities. Therefore, possible board intervention may give rise to more preemptive voluntary CEO departures, which disrupt organizational routine and impose managerial talent loss. We empirically examine the value-destroying implications of preemptive CEO departure conditional on the elevated likelihood of board intervention. Main findings suggest that peer CEO dismissals and volatile industry conditions can lead to preemptive voluntary CEO departures. These preemptive departures diminish the firm value. This paper proposes a new form of agency costs due to CEOs' bridge-building rather than empire-building practices.

STR: **One of These Things is Not Like the Other: How Firms' Post-Misconduct Actions Differ by Misconduct**

Author: **Michael Seth Nalick**, *U. of Denver*
Author: **Scott Kuban**, *Tulane U.*
Author: **Karen Ashley Gangloff**, *Elon U.*
Author: **Aaron Hill**, *U. of Florida*
Author: **Jason Ridge**, *U. of Arkansas*

To mitigate potential negative consequences of corporate misconduct to the firm, CEO changing of the guard (dismissal and replacement) is commonly used to signal that the firm is remedying the underlying cause of its misconduct. However, scholars have yet to disentangle the outcomes on this type of corrective action in different misconduct contexts. Accordingly, in this study, we theorize the degree of CEO attribution for misconduct, whether it be dispersed or concentrated, helps to better understand differences in firm changing of the guard actions for misconduct. We test our arguments on two misconduct contexts (CEO personal misconduct and firm-level financial misconduct) and find that CEO dismissal and successor type are influenced by misconduct context-attribution type and firm performance moderates these relationships. Thus, we provide a deeper understanding of theory on corporate misconduct and changing of the guard actions.

STR: **Board of Directors versus the CEO: Social Networks and CEO Dismissal**

Author: **Andreas Procopiou**, *U. of Liverpool Management School*
Author: **Andreas Petrou**, *Cyprus U. of Technology*

This study draws on social capital theory and social network analysis literature to examine the research question of when CEOs are dismissed. It views CEO dismissal as a contest between the board and the CEO powered by their position within the upper echelons social network. We test hypotheses on firms listed in Standard and Poor's ExecuComp for the period 2000-2016 using a Cox (1972) semiparametric proportional hazard model. Findings show that the higher the network centrality of directors in the upper echelons social network, the more likely they are to dismiss the CEO. In addition, this relationship is negatively moderated by the centrality of the CEO's position within the social network, and the overlap of the CEO's and the directors' social networks. The study extends the literature on the socio-political perspective as it finds that the directors' social networks affect CEO dismissal. Findings have implications for the criteria used to select board directors.

The Performance Effects of Adaptation and Learning Strategies

Session Moderator: **Mirjam Goudsmit**, *Radboud U. Nijmegen*

STR: **Aiming and Adapting: How Multiple Goals and Adaptive Capabilities Affect Competitive Performance** 

Author: **Mirjam Goudsmit**, *Radboud U. Nijmegen*
Author: **George A. Shinkle**, *UNSW Sydney*
Author: **Feifei Yang**, *East China Normal U.*

How effective are multiple organizational goals and how do firm adaptive capabilities influence their effectiveness? We suggest that a firm's set (repertoire) of multiple goals can vary in intensity and focus, culminating in a different pattern. Building on the organizational goal-setting and strategy literatures, we hypothesize that goal repertoire intensity and focus have important performance consequences and that firm's adaptive capabilities moderate these relationships in different ways. Hypotheses are tested via multi-country survey data from top executives from 203 firms operating in different industries. Findings show that performance benefits from goal repertoire intensity but diminishes with goal repertoire focus. Increasing levels of adaptive capability enhance the performance benefits of repertoire intensity but degrade performance when repertoire focus is high. This research contributes to the goal-setting literature by providing insight into performance effects of patterns of multiple goals when firms vary in adaptive capability.

 STR: **The Strategic Costs of Experimental Learning in Early-Stage Ventures**  

Author: **Andrea Contigiani**, *The Ohio State U. Fisher College of Business*

William H. Newman Award Nominee

Entrepreneurs often rely on experimentation to navigate the uncertainty of starting a new enterprise. While the benefits of experimental learning are mostly undisputed, we know little about its costs. I develop a stylized formal model to illustrate the key channels through which experimentation drives performance: information, adaptation, and appropriability. The model describes a nascent venture seeking to develop and commercialize a product based on an initial idea. The venture chooses one of two strategies: direct entry or experimental entry. Following direct entry, it develops the initial idea without information from the market and commercializes the product. Following experimental entry, it gathers market feedback through experimentation, incorporates it into the development process, and commercializes the product. The analysis suggests that experimental learning is optimal only under certain organizational and environmental conditions.

STR: **Contractual Learning and The Development of Heterogeneous Contracting Capabilities**

Author: **Niklas Lars Hallberg**, *Lund U.*

Previous research suggests that parties in contractual relationships adopt a governance structure that economizes on transaction costs, and then over time learn to govern the contractual relationships in a more efficient manner by incrementally aligning contractual terms with transaction attributes based on new experiences made in the relationship. This implies that learning to contract and the development of contracting capabilities are largely experiential and directly related to the parties' amount of contractual experience. We argue that this model is likely to underestimate the level of heterogeneity in contracting capabilities across firms. Hence, we add to the learning to contract literature by suggesting a series of firm- and industry level moderators of the relationship between contractual experience and the development of contracting capabilities. We specifically highlight the role of organizational specialization and integration as factors likely to increase heterogeneity across firms. Because firms with heterogeneous contracting capabilities are subject to differential incentives, a counterintuitive implication of the argument is that strong contractual learning dynamics may in fact lead to reduced incentive alignment and intensified contractual hazards.

STR: **A Three-Stage Model of Innovation and Imitation in Complex Search Spaces: Evidence from the Lab** 

Author: **Stefano Benincasa**, *U. of Southern Denmark*
Author: **Marco Faillo**, *U. of Trento*

In competitive settings, boundedly rational search for a satisfactory alternative unfolds through two main pathways: innovation and imitation. Over the past decades, a rich body of work in the behavioral strategy tradition has investigated the mechanisms of innovative and imitative search, shedding light on the relative efficacy in improving organizational performance and gaining (or maintaining) a competitive advantage across diversely complex environments. Despite substantial research and groundbreaking contributions, however, we still lack a full procedural understanding of how search efforts unfold through potentially recursive stages, binding together self-directed innovation and socially-informed imitation in an overarching adaptive process of learning from own and others' experience. In this paper, we seek to extend prior theoretical and empirical work by providing a comprehensive assessment of this process using a three-stage logic. In so doing, we integrate insights from the behavioral model of adaptation in response to own as well as vicarious performance feedback. We test our three-stage model using data from a laboratory search task in which we contrast the availability and accuracy of imitation (Not Available, Perfect, Imperfect) with the level of complexity (Low, Moderate, High). The results indicate that innovation and imitation entail a self-reinforcing dynamic of increasing performance and mutually adjusting aspirations. Our contribution is two-fold. First, we show how the decision to imitate-the-best is negatively moderated by the degree of uncertainty about the outcome of imitation. And second, we observe that, over the long run, marginal improvements in maximum performance have a less-than-proportionate effect on average performance.

Paper is NOT Available. Please contact the author(s).

Author: **Gianluigi Giustiziero**, *Frankfurt School of Finance & Management*

Author: **Aseem Kaul**, *U. of Minnesota*

Author: **Dirk Martignoni**, *U. of Lugano*

In this paper, we study how competitive pressures shape organizational adaptation in complex environments with heterogeneous demand. To do so, we combine a standard NK simulation with a differentiated duopoly competition game to model firms simultaneously engaging in an internal search for superior technical proficiency and an external search for horizontally differentiated competitive positions. We show that such ‘strategic search’ limits innovation in low complexity environments, as firms sacrifice technical proficiency in order to differentiate from each other, but boosts it in high complexity environments, and examine the implications of this pattern for competitive advantage and consumer welfare. We also explore how these findings are moderated by the extent of demand heterogeneity, as well as asymmetric exposure to competition among firms. Our study integrates research on competitive positioning and organizational adaptation, contributing insights to organizational shaping, innovation, and competitive advantage.

Innovation Across Firms and Within Alliances

Session Moderator: **Carsten Christian Guderian**, *FAU Erlangen-Nürnberg / LexisNexis IP Solutions*

STR: Open Innovation Performance in SMEs: Strategic Insights from Patent Analytics 

Author: **Carsten Christian Guderian**, *FAU Erlangen-Nürnberg / LexisNexis IP Solutions*
Author: **Peter M. Bican**, *Friedrich-Alexander U. of Erlangen-Nürnberg*
Author: **Ting Wang**, *Friedrich-Alexander U. of Erlangen-Nürnberg*

Prior research has identified a positive relationship between open innovation collaboration and innovation performance. This paper asks whether this positive relationship reported in the literature is partially driven by measurement error, e.g., misclassifications of firms' intra-group transfers of knowledge as interactions external to the firms. Using a unique, self-compiled secondary dataset of 21,898 patent families from 44 German small- and medium-sized enterprises with 9,902 entities, we show that open innovation collaboration's impact on innovation performance becomes insignificant when measurement distinguishes between patents from collaborations by firms within and firms beyond the same corporate trees. Boundary conditions and robustness checks yield stable results when tested against 12 patent quality-based measures of innovation performance. Our contributions motivate to revisit the assessment of open innovation performance to prevent biased results and suboptimal decision-making in implementing innovation and subsequent commercialization strategies across firms' boundaries. We further show that complementing open innovation theory with patent quality measures enriches analytical options and allows additional insights. This adds to the broader understanding of open innovation theory, in particular open innovation outcomes.

STR: How Platform Gatekeeping Affects Complementors' Strategy to Profit from Innovation?     

Author: **Anparasah Mahalingam**, *U. of Utah, David Eccles School of Business*

Joining organizational governance research in corporate strategy with emerging research on platform-based markets, we argue that platform owners can leverage gatekeeping as a governance instrument to mitigate information asymmetry in the marketplace, thus shaping complementors' strategies to profit from innovation. Leveraging the jailbreak of Apple's iOS 10 as a shock to Apple's strong gatekeeping policy and using Android app publishers as a control, we show causal evidence that weakened gatekeeping reduces iOS app publishers' release of paid apps, while increasing their release of free apps with in-app purchase options and apps with advertisement support. The linkage between gatekeeping and a complementor's value appropriation strategy highlights the critical role of platform owners in orchestrating the multilateral relationships in platform-based organizations.

STR: Open Innovation, Informal Competition, Corruption and Power Outages in Africa. 

Author: **Sam Njinyah**, *Manchester Metropolitan U. Business School*
Author: **Isaac Ofori**, *U. of Insubria*
Author: **Lesly Chofor Lepawa**, *U. of Buea*

Existing studies on the effect of open innovation (OI) has been contradictory due to empirical and theoretical reasons. Empirically, aside from the dearth of studies on Africa, prior studies have focused on different contexts and different operationalisation of OI. Theoretically, there are contingent factors that could moderate this relationship that has not been given due consideration in existing research. This research, therefore, examines the moderation effects of power outages, corruption and informal competition on the relationship between OI and firm performance in Africa. To this end, we draw on country-level data for 43 African countries from the World Bank Enterprise Survey (WBES) to test our hypotheses. The findings suggest a high level of power outages and corruption weakens the effect of foreign licence technology on firm performance and the effect of informal competition was negative but not significant. The above result contributes to the existing literature by developing and testing a framework that examines how the effect of FLT on firm performance could be contingent on some institutional factors and doing so in a context (Africa) where existing studies are limited though highly needed.

STR: Mobility Constraints, Interfirm Collaboration, and the Dual Role of Knowledge Centrality

Author: **Thiago J. Soares**, *Inspere Institute of Education and Research*
Author: **Charles Kirschbaum**, *Inspere Institute of Education and Research*

This paper investigates how constraints on employee mobility affect the joint development of technologies by firms. In addition, we explore how a firm's geographic embeddedness and its centrality in the knowledge network of firms moderate this relationship. To obtain exogenous variation in the likelihood of employee mobility, we exploit a natural experiment provided by the legal adoption/rejection of the inevitable disclosure doctrine (IDD) by different U.S. states. Our results indicate that mobility constraints lead to a decrease in the rate at which firms identify and pursue collaborative opportunities that lead to shared IP rights. We also find that this negative effect is weaker for firms that are embedded in dense technology clusters. Finally, in line with our expectations, we found that a firm's centrality in the knowledge network possesses a dual and to some extent paradoxical role in our results. On the one hand, in the presence of mobility constraints, firms central in the knowledge network experience a sharper decrease in the number of jointly owned patents. On the other, our results show that the attenuating effect of the local concentration of firms on the negative relationship between mobility constraints and shared IP rights is stronger for firms that are central within the knowledge network.

Creating A Safer Workplace: What Role for CEOs, Boards, And Regulators?

Creating A Safer Workplace: The Role CEOs, Boards

Organizer: **Veronica Haydee Villena**, *W. P. Carey School of Business, Arizona State U.*
Organizer: **Corinne A. Post**, *Villanova U.*
Discussant: **Jill Ann Brown**, *Bentley U. - College of Business - Management Department*

Neglected so far from management studies on workplace safety is the role of executives (e.g., CEOs and TMTs), boards, and regulators. CEOs and executives are likely to influence safety priorities throughout their companies, albeit indirectly, via other groups of organizational actors (Tucker et al., 2016), for example, depending on the extent to which their speeches focus on efficiency and cost control (Amernic et al., 2013), or on how powerful they are relative to other executives on the board (Haga et al., 2021). Boards of directors, who increasingly agree that workplace safety falls under their responsibility (Ebbevi et al., 2021), may influence product safety and culture through decisions such as the appointment of a named health and safety director (Wright et al., 2006), the monitoring of safety key performance indicators (KPIs), and the inclusion of such KPIs in CEOs compensation contracts (Bradley et al., 2021) as well as by monitoring and advice giving (Ebbevi et al., 2021). As the research on political CSR shows, companies also interact with, influence, and sometimes substitute for government responsibilities (Matten et al., 2020; Ozcan et al., 2018), raising the strategic question of how regulation and regulators affect firms' workplace safety initiatives and results – all of which trickle down from the top to other organizational layers (Lomudd et al., 2021). By showcasing studies that investigate the role of CEOs, boards, and regulators on workplace safety, our symposium hopes to stimulate additional strategy research (particularly on the role of upper echelons) on workplace safety – and on social responsibility along the supply chain more broadly. With almost two million people dying around the globe each year from exposure to workplace risk factors (WHO/ILO Report, 2021), we aim to show how C-suite executives, boards of directors, and regulators may play a more central role in leading their corporations to create safer workplaces for workers and society – addressing the central theme of the Academy of Management's 2022 conference. To embrace diversity of thoughts, we invited a highly accomplished group of scholars from Europe and the US across multiple disciplines, including strategic decision making, corporate social responsibility, operations and supply chain management, and organizational behavior. This diversity allows us to examine in-depth how we could create a safer working environment based on experiences from multiple countries and including theoretical lenses.

**Creating a Better World Together: The Power of Collective
Action in Restoring Academic Well-being**
Collective Action to Restore Academic Well-being

Presenter: **Sarah Robinson**, *U. of Glasgow*
Presenter: **Linda M Sama**, *St. John's U.*
Presenter: **Nicholas Rhew**, *U. of Southern Indiana*
Presenter: **David Jones**, *Newcastle U. Business School*
Presenter: **Victor Friedman**, *Oranim College of Education*
Presenter: **Mark Egan**, *The York Management School*

In 2021, we invited a community of scholars from across the Academy to join us in reflecting on individual and collective self-care, sharing experiences around restoration and well-being within an increasingly corporatized institutional environment. While putting our individual houses in order was an important first step towards achieving well-being, and one which workshop participants found helpful, there was less space to discuss collective spaces and action—a mutually acknowledged, critical next step. In this PDW, we extend our work to create an inclusive space for the larger community where we examine challenges to the status quo and to our own motivations that have guided this research. Attending to this year’s conference theme of “Creating a better world together”, we focus on what it means to engage collectively in forging paths of resistance to institutional myopia, and how to do so in more equal partnership with not only ourselves, as academics, but with the communities we affect – our students, civil society, and practitioners. We critically examine our narratives used in our teaching and research, our interactions within and outside the academy, and our willingness to enact meaningful change. In doing so, we employ metaphors of bridge-building, meandering, and healing as forms of collective action and activism for transforming the workplace into a disease-free zone, attacking the various root causes of ill-being that might otherwise lead to the spread of academic dissonance – a dis-harmony between what academic life should be and our lived reality.

CTO: **Organizational Continuities and Discontinuities and the Job Satisfaction of Global Contractors**  

Author: **Jennifer Gibbs**, *U. of California, Santa Barbara*

Author: **Julia Eisenberg**, *Pace U.*

Author: **Chengyu Fang**, *U. of California, Santa Barbara*

Author: **J. Nan Wilkenfeld**, *UC Santa Barbara*

Global outsourcing arrangements have become a key strategy for international staffing, especially in the software industry. However, global contractors are likely to experience identity challenges that create role ambiguity for them and reduce their job satisfaction. Drawing on survey data from 193 global contractors from an outsourcing firm headquartered in Eastern Europe, we test a model grounded in Organizational Discontinuity Theory and find that organizational continuities of team identification and shared vision are both linked to greater job satisfaction. On the other hand, organizational discontinuities (geographical dispersion, lack of face-to-face dependence, cultural diversity, and dynamic structure) have no association with job satisfaction. Our findings suggest that organizational discontinuities may have become normalized such that they are not problematic in and of themselves, and that continuities at the team level may be beneficial for global outsourcing organizations in providing global contractors with greater job satisfaction and helping them feel connected to their employing organization.

CTO: **Technostress, Work-home Boundary, and Emotional Exhaustion During the Crisis of COVID-19**

Author: **Derek Eldridge**, *U. of Manchester*

Author: **Tahir M. Nisar**, *U. of Southampton*

Since the start of the pandemic, many employees have not been able to work in the usual way due to restrictions imposed by national and local governments to control COVID-19. This made technologies that support home working a critical factor for organizations to weather the crisis. However, solutions to this form of work-home invasion may depend on different levels of employees' work-home boundaries and boundary tactics. Positive or successful adaptations toward the work-home spillover (e.g., high level of psychological detachment) may minimize employees' perceived negative effects. On the other hand, negative or failed adaptations or strategies toward the work-home spillover may increase negative consequences for employees' well-being (e.g., high level of emotional exhaustion). This study investigates the relationships between positive and negative adaptation techniques and well-being and their implications for the organizations and employees in the context of COVID-19 pandemic. Particularly, we evaluate the relationship among technostress, work-home boundary, psychological detachment, and emotional exhaustion. Findings reveal that psychological detachment mediates the relationship between technostress and emotional exhaustion. Importantly, results also prove that when the boundary strength at home partially mediates the relationship between technostress and emotional exhaustion, psychological detachment could moderate the impact of technostress on emotional exhaustion. We examine the implications of these findings for both organizations and HR professionals working in the COVID-19 pandemic.

CTO: **Algorithmic vs. Managerial Prioritization: Evidence from an Industrial B2B Sales Organization**  

Author: **Jukka Luoma**, *Aalto U.*

Author: **Samu Ahola**, *Aalto U.*

Algorithms are increasingly deployed in organizations to replace and augment human intelligence. To understand more precisely the potential benefits of algorithms in organizations, there is a need to understand how and why the decisions of human organizational members are likely to differ from those of algorithms. We draw on the behavioral theory of the firm to elucidate the origins of those differences in the context of customer prioritization, using a unique dataset comparing managerial prioritization and algorithmic classification of customers in a large business-to-business (B2B) organization. We discuss two potential benefits of algorithms in prioritization tasks: enhancing the accuracy of existing prioritization logics and identifying new ones. The potential gains from enhancing accuracy of an existing prioritization logic are relatively easy to realize but the potential for performance improvement may be incremental. Identifying new prioritization logics has greater potential because organizations have a tendency to become anchored in replicating past successes and, thus, ignore latent opportunities. Algorithmic prioritization can counter this. However, the practical value of using algorithms to create new prioritization logics is constrained by the fact that the organizational repertoire of actions is tailored to the existing prioritization logic.

CTO: **Development and Validation of a Scale to Measure Communication Behaviors in Hybrid Teams**

Author: **Martina Hartner-Tiefenthaler**, *TU Wien*

Author: **Ivana Loerinc**, *TU Wien*

With the Covid-19 pandemic, remote work was increased all over the globe. As a consequence, workers had to adapt their communication behaviors to smoothly coordinate work in their so-called hybrid teams (i.e., when team members divide work between the office and their home). In order to capture effective team coordination in hybrid teams, we constructed and validated the team communication scale (TCS) in hybrid teams drawing on relational coordination. The scale comprises three dimensions: focused communication, spontaneous communication and sharing knowledge. We validated the scale in six independent samples from individuals and teams. Confirmatory Factor Analyses supported the proposed three-factor structure. Moreover, the subscales showed convergent validity and predictive validity with team outcomes and team viability. We conclude that the TCS is a reliable and valid measure for assessing team communication in hybrid teams.

Emerging Research Themes in Entrepreneurship Research: A Conversation with Entrepreneurship Emerging Scholars *Entrepreneurship Division Plenary Session*

Session Chair: **Jon C. Carr**, *North Carolina State U.*
Participant: **Alex Kier**, *Washington State U.*
Participant: **Eric Y.-F. Zhao**, *Indiana U., Bloomington*
Participant: **Matthew Grimes**, *Cambridge Judge Business School*

For the last several years, the Entrepreneurship Division has recognized several Emerging Scholars as part of our Division Program. These Emerging Scholars have been recognized for their solid theoretical and empirical research scholarship, and their commitment to our division and the growth of our field. Now is the perfect time to have a conversation with some of these scholars - to have them share their own perspectives on the state of the field, and more importantly to have a conversation about where we are going. Our panel will explore new research opportunities and trends, and provide the audience with a chance to ask questions and share their own perspectives. Please join us for a spirited and lively conversation with these research scholars!

Participant: **Sandra Matz**, *Columbia Business School*

Recently, there has been a growing push for organizations to diversify and address issues of inclusion and inequality. In the wake of both scholarly and corporate attention to diversity, research attempting to understand how organizations can increase their diversity has proliferated. However, initiatives to increase organizational diversity often fail or produce mixed results, and overall progress towards increasing diversity in organizations has been slow. Across five presentations, this symposium brings together papers that examine issues of diversity and inequality in organizations, with two key areas of focus: (1) identifying hurdles that may impede organizational diversity efforts, (2) illuminating theory-driven solutions organizations can implement to diversify. Following the presentations, Dr. Peter Belmi, a renowned scholar who studies diversity and inequality in organizations, will facilitate a discussion about the papers and insights generated to advance future research on this topic. Thus, this symposium will illuminate key considerations that can help organizations effectively address issues of diversity and inequality.

Leading in Tech: How Can Women Negotiate the Labyrinth to the C-Suite?

Leading in Tech: Women Negotiating the Labyrinth

Discussant: **Asha Rao**, *California State U., East Bay*

Panelist: **Radhika Krishnan**, *Hitachi*

Panelist: **Purnima Padmanabhan**, *VMWare*

Panelist: **Anusha Agrawal**, *Nimbella*

Two years into the pandemic, we find that women have made gains in representation in senior leadership (McKinsey/Leanin 2021). Yet, these are hard fought gains where women need to strategically position themselves for executive leadership roles and successfully manage career transitions. In this panel, hear from technology industry veterans & CEOs as they debate the best ways to position oneself and grow into a more strategic role; how to leverage functional expertise in general management; and whether to adopt a “captain or coach” leadership approach.

Health Care Communities

Session Moderator: **Deirdre McCaughey, U. of Calgary**

HCM: Hospital Reflections on Community Relationships in the Time of Covid

Author: **Cory Cronin, Ohio U.**

Author: **Kelly Choyke, Ohio U.**

Author: **Berkeley Franz, Ohio U. Heritage College of Osteopathic Medicine**

Throughout the COVID-19 pandemic, hospitals and their staffs have been pushed to (and sometimes beyond) the limits of their capacities. As community organizations, often serving in an anchor institution role, hospitals are typically seen as supporting the needs of those around them, but the demands of the pandemic have challenged their ability to do so. In qualitative data collection regarding for-profit hospitals' community relationship, collection that occurred during the COVID-19 pandemic, participants made regular and frequent references to the ways in which the pandemic shaped interactions with community members, with staff, and with other community organizations. This paper examines the themes that emerged regarding COVID-19's influence on hospital-community relationships. Participants were recruited from the leadership of for-profit hospital facilities, systems, and interest groups. Researchers interviewed 28 participants in various leadership roles via telephone or video conferencing. Interviews were thematically coded upon reception of interview transcriptions, and preliminary findings guided forthcoming interviews. Three themes emerged regarding COVID-19's influence on hospital-community relationships: a new focus on inter-organizational outreach and engagement; the necessity of partnering and identification of new ways to engage; and a focus on social and cultural factors. Hospitals may well be able to use lessons learned throughout the pandemic, including the importance of meeting the needs of their own staff and the advantages of developing partnerships with other community organizations, to better respond to community needs, not only in times of crisis but to improve day-to-day experiences of community members.

HCM: Public Health Messaging During COVID-19 and its Impact on Family Caregivers' COVID-19 Knowledge

Author: **Deirdre McCaughey, U. of Calgary**

Author: **Gwen McGhan, U. of Calgary**

Author: **Whitney Hindmarch, U. of Calgary**

Author: **Kristin Flemons, U. of Calgary**

Author: **Kim Brundrit, Dementia Network Calgary**

Background: Providing accurate, accessible public health messaging (PHM) is a critical role of public health officials during a pandemic, but family caregivers (FCGs) of people living with dementia (PLWD) have rarely been specifically addressed in PHM. Objective: To examine how FCGs of PLWD access and evaluate the public health messaging in Alberta. Methods: An online survey was conducted with FCGs of PLWD (n=217). Results: Most respondents rated PHM as good or excellent (63.9%), but specific information about how to access caregiving information (69.5%) and what to expect in the future (49.1%) was rated less than good. FCGs also identified how to care for a PLWD during the pandemic (57.5%) as a key information need. Healthcare providers/workers were the least frequently used source of public health information. Almost all FCGs (94.4%) rated their own COVID-19 knowledge as good or excellent. Discussion: Tailored, context-driven PHM for FCGs of PLWD is critically needed. Three key points that summarize the policy relevance and recommendations of the paper 1. Utilize diverse media sources to communicate PHM, including television, radio, and print media in addition to online sources. 2. Tailor information to the needs of specific vulnerable populations such as FCGs of PLWD, including information and advice on topics such as: explaining public health measures to people with dementia and cognitive impairment; accessing respite if the caregiver contracts COVID-19; accessing long term care; and how and when community resources are being adapted/reinstated. 3. Focus on building capacity in FCGs through targeted supports and services to address the heterogeneous needs in the caregiving role.

HCM: What is Driving Hospital-Community Partnerships to Address Social Determinants of Health?

Author: **Neeraj Puro, Florida Atlantic U.**

Author: **Reena Joseph Kelly, U. of New Haven**

Author: **Philip Cendoma, U. of Alabama, Birmingham**

Social determinants of health (SDOH) are strongly linked to individual and population health outcomes. Hospitals and health systems are in a unique position to initiate or partner on community-wide efforts address SDOH. However, such efforts typically require collaboration with other healthcare and local community organizations since SDOH affect more than just medical care. Despite studies that have identified specific organizational and environmental factors associated with hospital-community partnerships, the role of social capital and community health needs as drivers of such partnerships remains unexplored. This study examines whether hospital partnerships with community organizations in the United States are driven predominantly by community social capital or the prevailing health needs of the community, and whether these drivers are similar for overall partnerships as well as for partnerships with individual organizations. We use 2020 data from the American Hospital Association, US County Health Rankings, and Social Capital Project and employ feasible generalized least-squares (FGLS) regression and logit models to assess the relationship between social capital, community health needs and hospital-community partnerships to address SDOH. Our results indicate that for community social capital was significantly and positively associated with total hospital partnerships ($\beta=0.05, p=0.01$). We also found that community social capital was significantly more likely to be associated with hospitals' partnerships with local/state public health agencies, schools, local service agencies, other healthcare providers, and organizations that assist with food insecurity. On the other hand, community health needs were not associated with total partnerships and had limited associations with hospital partnerships with individual organizations. Overall, this research suggests that social capital is a critical determinant of hospital partnerships with community organizations, and hospitals may seek partnerships with organizations that allow them to address community health issues outside of their own expertise since such partnerships and collaborative efforts can help address SDOH and manage population health.

Author: **Sara Singer**, *Stanford U.*

Business-nonprofit hybrid organizing – i.e., moving beyond inter-organizational collaboration to combine for-profit and nonprofit organizational elements within a single organization in unconventional ways - offers a novel approach to supporting health and social initiatives. What form of hybrid organizing is optimal remains elusive, however. We conducted three, qualitative case studies of business-nonprofit hybrid organizing to identify lessons for optimizing this approach to supporting health and social initiatives. Data comprised 114 interviews with case study organization members, collaborators and local leaders, and observations, analyzed thematically. We characterized two forms of business-nonprofit hybrid organizing – an Appended form where a nonprofit unit is embedded within an established business, and a Blended form where a nonprofit entity functions as a revenue generating retail store. Each form engendered both benefits and costs for supporting the initiatives. Significance of these costs and benefits shifted over time contingent on initiatives' changing strategic priorities and dimensions of local and wider contexts. Optimizing hybrid organizing entails an ongoing process of assessing and seeking fit between form and context in ways that allow the form to evolve. We elaborate implications for theory and for practitioners looking to harness the potential of hybrid organizing to support initiatives targeting social drivers of health.

Innovations and Cutting Edge Health Care Delivery

Session Moderator: **Wiljeana Jackson Glover**, *Babson College*

HCM: Innovation Solution Sets: Components, Combinations, and Drivers in Low-Middle Income Settings

Author: **Wiljeana Jackson Glover**, *Babson College*

Author: **Rebecca Obounou**, *Massachusetts Institute of Technology*

Author: **Sabrina Jacques**, *Wentworth Institute of Technology*

Author: **Wilnick Richard**, *169686*

Author: **Ernest Barthélemy**, *U. of California, San Francisco*

Innovation is crucial for improving health outcomes in low and middle-income settings (LMIS) in the U.S. and abroad. There has been extensive research on how organizations implement individual innovations separately. There has been less research on how organizations implement sets of innovations, how they are combined, and the drivers for these innovation sets. Furthermore, a lack of supporting infrastructure and challenges that arise from organizational structure and environmental uncertainty in LMIS require a better understanding of a combined approach to innovation. This study introduces the concept of innovation solution sets. We explore the relationship between innovation solution sets, combination approaches as influenced by organizational structure, and innovation drivers through a multi-case study using qualitative and archival information from five healthcare organizations in Repiblik Ayiti (Haiti). We find that organizations tend to combine product/service, business model, and social innovations simultaneously in private organizations and sequentially in public-private partnerships. Drivers of simultaneous combination include limited external support, determined autonomy through external opposition, and financial need identification and the requisite knowledge and will to meet the need. Drivers of sequential combination include social need identification, community connections, and flexibility.

HCM: “We are all Vulnerable, we are all Fragile”: COVID-19 and Health Service Resilience in Colombia  

Author: **Simon Turner**, *U. de los Andes, Colombia*

One managerial narrative describes COVID-19 as a trigger for innovation in health system planning and delivery. Analysing 32 interviews with national stakeholders in Colombia’s health system, this paper argues that an “innovation” narrative provides a partial account of managerial responses to COVID-19. COVID-19 triggered positive and negative effects on adaptive resilience: as mirror for recognising problems predating the pandemic; as accelerator of service changes; as source of solidarity among professional groups; as workforce trauma; and as disruptor of adjacent improvement activity. The paper concludes that multi-level sources of adaptive resilience, and the costs of its practice, need to be recognised.

Author: **Doron Sagi**, *MSR- the Israel Center for Medical Simulation, Sheba Medical Center, Israel*

Author: **Ita Litmanovitz**, *Department of Neonatology Meir Medical Center, Sackler School of Medicine Tel Av*

Despite its increasing popularity over the past decade as an improved training model, literature evaluating Competency Based Medical Education (CBME) implementation processes is scarce. We used an action research methodology to observe and analyze the implementation processes of a CBME fellowship program in Neonatology wards in hospitals in Israel. Our data revealed that the challenges emerging during the implementation process can be framed as paradoxes and that CBME entails a new category of paradoxes beyond those previously reported in the literature (i.e., role-paradox). In addition, we developed a CBME implementation model that suggests a dynamic process including three paradox-driven circular courses; 1) a direct loop between CBME implementation and the exposure to paradoxes, 2) an indirect loop between exposure to paradoxes and the formation of a paradox mindset, that in turn further enhances CBME implementation, and 3) an indirect loop between the paradox mindset of the individual and the development of a ward level paradox climate. Propositions regarding the suggested model, and the associated individual and organizational level outcomes of the successful implementation of a CBME program are suggested.

Communication in HRM

Session Moderator: **Alexander Lammers**, *TU Dortmund U.*

HR: [Voluntary Internal Crisis Communication \(WITHDRAWN\)](#)  

Author: **Alexander Lammers**, *TU Dortmund U.*

During a crisis, the need for qualitative information within an organization increases significantly to support key management decisions. As crisis response mechanisms, employer-led communication bodies such as round table conferences, employee spokespersons or additional management lines are important for providing efficient knowledge flows among divisions and between employees and management. This empirical study investigates the relevance of the Global Financial Crisis of 2007/08 for the introduction and dissolution of employer-led committees. Using the German IAB Establishment Panel, I apply difference-in-differences regressions and provide empirical evidence how employers initiate or abolish communication committees (i) in negatively and positively affected establishments and (ii) in the pre-crisis, response, and post-crisis stage. The empirical findings show that negatively affected establishments are more likely to introduce employer-led communication bodies, however, only during the crisis. For positively affected establishments, I find no change in the probability of introduction. This study provides evidence that increasing uncertainty in times of crisis lead to the implementation of employer-led internal communication bodies as a mechanism of coordinated action. Most of the literature so far has focused on external communication, for example, to repair the organization's reputation during a crisis. This study, however, provides new evidence that internal crisis communications and knowledge flows are a less explored but important aspect to respond to a crisis.

HR: [Word-of-Mouth on Social Media: An Investigation of Valence Effects on Prehire Outcomes](#) 

Author: **Kang Yang Trevor Yu**, *Nanyang Technological U.*

Author: **Kim Huat Goh**, *Nanyang Technological U.*

Author: **Sitong YU**, *Nanyang Technological U.*

Electronic forms of word-of-mouth (eWOM) on social media have now become a primary source of employer information. Thus, there is a need to understand how organizations can best capitalize on such information to build employer brands and attract potential talent. To contribute to current knowledge in this area, we sought to investigate how eWOM valence (e.g. positive vs negative vs balanced) influences the evaluation of potential employers. Results from two studies utilizing experimental vignettes on potential job seekers indicate the following. First, balanced eWOM containing both positive and negative attributes was perceived to be most credible compared to eWOM that was either one-sidedly positive or negative. Second, eWOM valence had a positive effect on organizational attraction, whereas this effect was weaker and less pronounced for employer reputation. Third, the pattern of effects associated with eWOM valence differed across symbolic and instrumental images. eWOM valence had a stronger impact on reputation for symbolic compared to instrumental images. We discuss the implications of these findings for the managing of employer image and branding on social media in an increasingly digital world of job search.

HR: [The Role of Ethics-Focused Language in Overcoming Applicants' Stigmatization of Convict Hiring](#)  

Author: **Francisco Moreno**, *Louisiana State U.*

Author: **Michael Addison Johnson**, *Louisiana State U.*

Author: **Terrance L. Boyd**, *Louisiana State U.*

Those with a criminal background face substantial barriers in finding employment. Some estimates suggest that only a third of those who are released from prison find steady employment of any kind. This issue has strong relevance given that almost a third of people in countries like the United States possess a criminal record. We attempt to extend this literature by considering a third party perspective to former convict hiring. Drawing on stigma theory, we explore other applicant's reactions to company's who possess a hiring policy that supports the hiring of those with a criminal background, 'fair chance' hiring policies. Further, we integrate stigma theory with deontology theory to examine what types of ethical language may cause applicants to overcome potential stigmatization. By integrating the stigma and behavioral ethics literatures, we use the convict stigmatization context as an opportunity to re-evaluate workplace stigmatization more broadly. Two behavioral experiments show that when companies incorporate ethical justifications for their former convict hiring policies, it causes third-party applicants to overcome convict stigmatization. Implications for practice and the stigma literature more broadly are discussed.

Paper is Available to Meeting Registrants Only.

HR: [When Job Titles Turn into Promises: The Signaling Effects of Inflated Job Titles](#)   

Author: **Marie Freia Wunderlich**, *Aarhus U., Department of Management*

Job title inflation describes the practice of purposefully manipulating job titles with the goal of gaining benefits from it. Attention-grabbing job titles are increasing in the private and non-profit sector, such as the recent example of Employee Experience Managers in the field of Human Resource Management. Since empirical insights on the effects of inflated titles are scarce, organizations introduce such titles under great uncertainty. This study provides empirical insights on the effects of inflated job titles by drawing on a mixed-method research design and using the recent example of Employee Experience Managers. In Study 1, an interview study with 36 job titleholders, I was surprised to learn that inflated job titles result in high employee expectations that bear negative consequences when remaining unfulfilled. In study 2, a vignette study with 536 employees, I confirm the found effects. Taken together, the study shows that inflated job titles can affect job title receivers' expectations and level of satisfaction, offering meaningful implications for theory and practice.

Corporate Social Responsibility and HRM

Session Moderator: **Suman Choudhary**, *Indian Institute of Management, Udaipur*

HR: Where is the CSR-HRM Nexus? From Different CSR Practitioners' Experiences  

Author: **Hyemi Shin**, *School of Management, Royal Holloway, U. of London, UK*

Author: **Hae-jung Hong**, *NEOMA Business School*

Author: **David Collings**, *Dublin City U.*

As human and social sustainability issues have received increasing attention as grand challenges at a macro-level, corporations have addressed those issues through their corporate sustainability (CS) and corporate social responsibility (CSR) initiatives. In this context, we have observed the emergence of a dedicated CS and CSR function within corporations and, in turn, the emergence of a group of people who work for the organizational CS/CSR agenda—CSR practitioners. Despite a significant increase in research and practice connecting CS/CSR and human resource management (HRM)—the CSR-HRM nexus, we know little about how these emerging practitioners are recruited, developed, trained, and rewarded. Hence, our study sets out to explore CSR practitioners' perception of the HR practices supporting their roles, which can indicate the status of CSR in organizations. By applying the HR process lens in strategic HRM research, we explore CSR practitioners' perceptions of the HR practices towards their roles and career and how their perceptions influence behavioral and attitudinal outcomes. We adopt a qualitative research design, involving 68 in-situ interviews with CSR practitioners: in-house CSR managers and external CSR service consultants in South Korea. Through qualitative analysis, we compare how these two types of CSR practitioners perceive four core HR practices: career planning and development, recruitment, training, and compensation. We found CSR practitioners perceived an overall lack of HRM roles in this process and played as boundary spanners for the CSR-HRM nexus.

HR: I Fit Here! Social Responsibility Type and Wordings in Recruitment Affect Women's Pursuit Intentions

Author: **Suman Choudhary**, *Indian Institute of Management, Udaipur*

Author: **Niharika Garud**, *U. of Melbourne*

Author: **Kirti Mishra**, *Indian Institute of Management, Udaipur*

While varied efforts at workplaces have helped improve gender equality in recent years, most occupations still suffer from a stark underrepresentation of women in the workforce. In this research, we consider the possibility of the impact of women's self-stereotyping processes on their own job search, pursuit efforts, and application intentions during the recruitment process. We explore how different kinds of social responsibility activities of an employer can impact women's job pursuit intentions with the employer where self-stereotyping processes can kick in. Drawing on the lack of fit theory, we argue that the people and nature-oriented social responsibility efforts of an employee can be gender-stereotyped as feminine and masculine efforts respectively. We also explore employer authenticity to be an important signal during this process where job seekers evaluate a prospective employer and its actions to form a judgment. We test our hypotheses across two studies conducted in the field and the laboratory. Our results provide a nuanced understanding of women's perceptions of fit based on social responsibility type and recruitment material wordings.

HR: HRM Practices in Sustainability Reports of the World's Most Sustainable Corporations

Author: **Maija Viitasaari**, *U. of Vaasa*

Author: **Maria Järnlström**, *U. of Vaasa*

Author: **Essi Saru**, *U. of Turku, Finland*

This study investigates the bundles of sustainable human resource management (HRM) practices the most sustainable companies report having, the goals of those bundles, and how HR-related goals are measured. Drawing on ability–motivation–opportunity (AMO) and sustainable HRM theory, we predict that bundles of HRM practices are more important than single HRM practices in sustainable HRM. The sustainability reports of the most sustainable companies (N=40) indicate that the bundles of sustainable HRM practices target health and well-being, employee development, employee engagement, and diversity and inclusion. All the main goals include multiple different metrics, which aim for sustainability in HRM. Our findings also show that sustainability reporting regarding HRM is relatively homogeneous. The findings offer important contributions to research on the sustainable reporting practices of the world's largest companies by focusing more deeply on HRM aspects in reporting and HRM bundles targeting sustainable goals.

Paper is Available to Meeting Registrants Only.

HR: Sustainable Human Resource Management and Organizational Outcomes: A Dynamic Capability Perspective   

Author: **Bingqian Liang**, *SILC Business School, Shanghai U.*

Author: **Qinxuan Gu**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Author: **Dongqing Hu**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Drawing on dynamic capabilities perspective, this research examines the relationship between Sustainable Human Resource Management (HRM) and firm innovation performance and financial performance. We suggest that Sustainable HRM positively influences firm innovation performance and financial performance, and these effects are mediated by a dynamic capability, organizational resilience. Moreover, under higher level of environmental dynamism, the positive effects of Sustainable HRM on firm innovation performance and financial performance are stronger. In addition, environmental dynamism also moderates the indirect effect of Sustainable HRM on firm innovation performance/financial performance through organizational resilience. We tested the predictions in two empirical studies. In Study 1, we developed and validated our Sustainable HRM scale through a qualitative study and a series of quantitative studies. In Study 2, using data from a sample of 181 companies in China, we found support for our hypotheses. The theoretical and practical implications of our findings as well as limitations and future research directions are discussed.

Relational Perspectives In HRM

Session Moderator: **Jingfeng Yin**, *U. of Illinois at Chicago*

HR: How Are Newcomer Proactive Behaviors Received by Leaders and Peers? A Relational Perspective

Author: **Jingfeng Yin**, *U. of Illinois at Chicago*

Author: **Robert C Liden**, *U. of Illinois at Chicago*

Author: **Ying Wu**, *U. of Science and Technology of China*

Author: **Leigh Anne Liu**, *Georgia State U.*

Author: **Rui Guo**, *China U. of Geosciences (Wuhan), Wuhan, China*

Author: **Jibao Gu**, *U. of Science and Technology of China*

Although most studies have shown that newcomers benefit from proactive behaviors, such behaviors are not always viewed positively by others in the workplace, resulting in negative consequences for newcomers. Drawing on uncertainty reduction and social cognitive theories, we contend that newcomer proactive behaviors are viewed positively by competent leaders and peers but negatively by leaders and peers who are low in competence. Further, we argue that newcomer proactive behaviors impact leader and peer threat perceptions and subsequent relationships with them, which in turn influences newcomer turnover. We empirically tested our hypotheses in two three-wave multi-source studies, utilizing a sample of 665 newcomers (288 newcomers for Study 1 and 377 newcomers for Study 2), 232 leaders (100 leaders for Study 1 and 132 leaders for Study 2), and 2044 peers (1323 peers for Study 1 and 721 peers for Study 2). Supporting our hypotheses, when leaders and peers are high in competence, through impacting leader and peer threat perceptions, newcomer proactive behaviors resulted in higher quality exchange relationships with leaders (LMX) and stronger friendships with peers, respectively. These cascading effects reduce newcomer voluntary turnover. Implications for how newcomer proactive behaviors impact relationships in the workplace and turnover are discussed.

HR: Taking a Relational Stance: How Social Network Analysis Can Advance SHRM 

Author: **Yao Ma**, *U. of Neuchâtel*

Author: **Tina Miedtank**, *Erasmus U. Rotterdam*

Author: **Claudia D. Jonczyk**, *U. of Neuchâtel*

Human resource management (HRM) focuses traditionally on the human capital of employees and managers, including their knowledge, skills, abilities, and other personal characteristics, and how these are linked to organizational outcomes. Social network analysis (SNA) has begun to be adopted in the field of HRM as a useful means of revealing relational patterns and dynamics among employees, managers, and organizations which otherwise remain hidden but nevertheless have an impact on individual and organizational strategic HRM (SHRM) outcomes. Also, the roles played by other aspects of individual or dyadic relationships are only starting to emerge. Our article draws on a systematic review of the SNA literature. Our analysis of 113 articles takes stock of the insights for SHRM provided by a relational approach for the interplay between networks and 1) organizational performance, 2) knowledge sharing, innovation, and creativity, 3) diversity, equality, and inclusion in organizations, and 4) HR practices. We propose a research agenda at the interface of SHRM and network studies and develop suggestions about how these insights could inform future research agendas through 1) a focus on network dynamics, 2) the integration of different levels of analysis, and 3) the incorporation of a cognitive perception of networks in studies of SHRM.

HR: How Job Design Shapes Effective Communication for Relational Coordination in Remote Work

Author: **Christina Fuchs**, *U. of Salzburg*

Author: **Astrid Reichel**, *U. of Salzburg*

The theory of relational coordination proposes that frequent, timely, accurate and problem solving communication foster relationships of mutual respect, shared goals and shared knowledge, and vice versa, and that these dimensions support effective work coordination. With increasing numbers of employees working remotely, Advanced Communication Technologies (ACTs) play a crucial role for fostering communication necessary for relational coordination. Analysing data on user-ACT-interaction from semi-structured interviews, we find that the same material features of an ACT can lead to contrasting affordances or constraints, explaining employees' varying ability to maintain frequent, timely, accurate and problem solving communication. The HR practice of job design influences, which affordances or constraints users' perceive by shaping physical, task and relational characteristics of a job. Specifically, the early introduction of a comprehensive ACT that integrates various features into one technology, the existence of interdependent tasks that require frequent and ad hoc exchanges, the embeddedness in larger cross-departmental networks and a team context valuing face-to-face interactions foster the perception of affordances underlying effective communication.

HR: Saved by Society: The Compensatory Effects of Occupational Calling & Relational HRM for Nursing Work  

Author: **Pingshu Li**, *U. of Texas Rio Grande Valley*

Author: **Yuanmei Qu**, *Rowan U.*

Author: **Mengwei Li**, *U. of Kansas*

Author: **Pat Downes**, *U. of Kansas*

Author: **Guofeng Wang**, *U. of Electronic Science and Technology of China*

This study examines whether the pre-pandemic established human resources (HR) can help nursing units deal with the challenges posed from the COVID-19 outbreak. Specifically, we investigate a mediation mechanism through which relational HR practices and related positive affective climate built prior to the COVID-19 pandemic help elevate nursing unit performance and attitudes amid the pandemic. Moreover, we take a contingency perspective and further examine the compensatory effects of unit-level nurse occupational calling triggered from the COVID-19 outbreak on relational HR practices, as relational HR practices on unit outcomes via affective climate are more pronounced for nursing units with low occupational calling. In testing a sample composed of 432 nurses from 46 nursing units of two hospitals in China, we found a significant indirect effect of relational HR practices on unit nurse-patient relationship via positive affective climate. The positive indirect effects of relational HR practices on unit post-outbreak outcomes were more evident for nursing units with lower levels of calling. We conclude the paper with implication for research and practice.

HR: **Turnover in Hotels: The Role of Transformational Leadership, Organizational & Community Embeddedness**  

Author: **Albert Amankwaa**, *U. of Tasmania*
Author: **Pattanee Susomrith**, *Edith Cowan U.*
Author: **Pi-Shen Seet**, *Edith Cowan U.*

Research in the last two decades suggests that job embeddedness may reduce employee turnover. However, little is known about whether this is the case in the hotel industry despite its high turnover rates. Besides, most studies have been conducted in the US, where the job embeddedness construct was developed and tested, suggesting the need to test the job embeddedness-turnover link in other contexts to improve its theoretical accuracy and generalizability. Additionally, while appropriate leader behaviors may enhance follower job embeddedness, empirical studies are sparse. Drawing from the Conservation of Resources theory, this study examines how transformational leaders may address hotel employee turnover by exploring organizational and community embeddedness. Following a bibliometric review of job embeddedness literature over the last 20 years and hypotheses development, data was collected from 312 hotel employees across 12 hotels in Ghana as part of a PhD project in the hotel industry. Using structural equation modelling techniques to confirm the study constructs and test the research model, the study found that at all levels of community embeddedness: high, average, and low, there was full mediation effect of organizational embeddedness on the transformational leadership-turnover relationship. Further, both transformational leadership and community embeddedness were found to positively relate to organizational embeddedness, which in turn related negatively to turnover. However, community embeddedness was not found to moderate the proposed relationship between transformational leadership and organizational embeddedness. Theoretically, this paper contributes to the development of embeddedness and turnover theory by understanding the critical role leaders play in motivating and retaining staff. The practical implications of these findings are discussed with suggestions for the hotel industry to develop better systems and incentives to retain talent.

HR: **How and When Downsizing leads to Interpersonal Conflict among Survivors?**

Author: **Rahman Ullah**, *IAE Paris - Sorbonne Business School*
Author: **Florent Noel**, *IAE Paris - Sorbonne Business School*

This study introduces and empirically tests a theoretical model that explores how and when downsizing relates to interpersonal conflict among survivors by detailing the mediating role of workload and the moderating effect of organizational restructuring. Hypotheses were tested with the survey data collected from 462 white-collar employees. The results revealed that downsizing is positively related to interpersonal conflict (i.e., task, process, and relationship conflicts), and workload mediates the relationship of downsizing with task and process conflicts. Moreover, restructuring weakened the link between downsizing and workload, and the indirect relationship between downsizing and task and process conflicts via workload. This study pinpointed a key mechanism, workload, by which downsizing leads to interpersonal conflict, and the results highlighted that restructuring minimizes survivors' workload. Therefore, this study suggests that along with headcount reduction, organizations should bring changes in their structure and work processes to align them with the available workforce so that survivors' workload and interpersonal conflict could be minimized.

HR: **Employer Brand as a Strategic Weapon to Reduce Organizational Turnover in Family Business**  

Author: **Duong Tuan Nguyen**, *National Sun Yat-Sen U.*
Author: **Yi Ning Chiu**, *National Sun Yat-Sen U.*
Author: **Yenchu Lai**, *National Sun Yat-Sen U.*
Author: **Shyh-er Chen**, *National Sun Yat-Sen U.*

This study examines the impact of employer brand on organizational turnover in family firms with the family involvement in management. In this research, employer brand is operationalized by using two proxies including corporate governance evaluation ranking system (CGER) and the number of negative news about company's violations. Drawing on the resource-based view and employer brand equity perspective, we hypothesize that CGER positively while negative news negatively affect organizational turnover. Besides, the extent of family member presence in the board moderates the influence of employer brand on organizational turnover. Using longitudinal data from Taiwan Economic Journal over a 5-year period of more than 1,000 publicly family firms to test the proposed model, the findings indicated that CGER is marginally positively significant with organizational turnover while negative news significantly positively affects organizational turnover. Moreover, this study found that the low level of family presence in the board may enhance the negative impact of CGER on organizational turnover while the high level of family presence in the board mitigates the effect of negative news on organizational turnover. These findings enhance the literature on both employer brand in the organizational behavior field and the heterogeneity within the family business.

Author: **Nita Chhinzer**, *U. of Guelph*
Author: **Andrew Omazic**, *U. of Guelph*
Author: **Leila Stevens**, *U. of Guelph*

This research explores the differences between how organizations communicate downsizing messages to external receivers (e.g. consumers, shareholders, etc.) versus internal receivers (e.g. employees). This study uses a unique dataset of 145 mass layoff forms submitted to the Ontario Ministry of Labour, Training and Skills Development (OMLTSD) from 2013-2019, and the accompanying downsizing announcements made in the media. Linguistic Inquiry and Word Count (LIWC) text analysis software analyzed message formality, deception, confidence, emotional tone, and information quantity for downsizing announcements to both audiences. T-test analysis determines significant differences between these announcements. Downsizing messages communicated to internal receivers are more formal, confident, and succinct while downsizing messages communicated to external receivers are more deceptive and have a more negative emotional tone. This study uses an interdisciplinary approach (blending marketing and human resources management disciplines). In this study, the communications model is applied to organizational communication. Further, this is the first study to compare the same downsizing messages that were communicated to different audiences. Finally, this study uses a distinctly unique dataset to better explore and understand this complex topic.

Pay Policy and Performance-based Pay

Session Moderator: **Edoardo Della Torre**, *U. of Milan, Italy*

HR: [Warm Glow or Extra Charge? The Hidden Costs of Performance Related Pay for Employee Wellbeing](#) 

Author: **Meysam Salimi**, *U. of Trento*

Author: **Edoardo Della Torre**, *U. of Milan, Italy*

Despite a growing interest in performance-related pay (PRP) schemes for employee outcomes (i.e. productivity and performance), the hidden costs (i.e. psychological or emotional) of PRP for employees are still under-researched, and the existing evidence shows mixed results. To fill this gap, we draw on the microdata of 9,774 employees in large private firms in Europe to investigate the interplay between PRP and employee (mental) wellbeing (EW) and see how such relationship varies depending on the level of human capital possessed by employees. Our findings suggest that while individual PRP (i.e. piece-rate and productivity payments) negatively affects EW, collective PRP (i.e. group bonus and profit-sharing) is positively associated with EW. Interestingly, our results also reveal that the positive effect of collective PRP on EW is stronger for employees with lower levels of human capital, whereas the negative effect of individual PRP is alleviated for employees with higher levels of human capital.

HR: [An Experiment of Incentive and Sorting Effects of Pay-for-Performance on Creative Performance](#) 

Author: **Ji Hyun Kim**, *National U. of Singapore*

There is a longstanding debate about whether pay-for-performance (PFP) enhances or undermines creative performance. Traditional motivation and revised creativity theories suggest that PFP and intrinsic task interest can be combined additively to enhance creative performance, whereas cognitive evaluation theory (CET) and self-determination theory (SDT) posit the undermining effect of PFP. To resolve these conflicting predictions and provide a more comprehensive understanding of how and when PFP influences creative performance, the current study incorporated the incentive and sorting mechanisms of PFP, varying strengths of PFP, and task autonomy as a key moderator. A novel laboratory experiment was designed to better reflect real workplace contexts, using more work-like creative tasks, benchmarking the incentive rates many U.S. companies adopt, and allowing subjects to sort into different pay conditions. Results showed that, through both incentive and sorting mechanisms, high PFP intensity more strongly enhanced creative performance than low PFP intensity and fixed pay did. This positive effect of PFP was greater when task autonomy was higher. In addition, exploratory analyses revealed that risk aversion and creative self-efficacy did not moderate the relationship between PFP and creative performance, but significantly predicted the probability of sorting into PFP.

HR: [Intra- and Inter-Organizational Determinants of Firm's Pay Level Policy Change Over Time](#) 

Author: **Hanbo Shim**, *U. of Texas At Arlington*

Author: **Michael Sturman**, *Rutgers U.*

Author: **Mark Brown**, *Bradley U.*

In this study, we examine what determines the changes in the firm's pay level policy decisions over time. More specifically, we propose a new model of dynamic relationships between the firm's pay level and its internal and external determinants. Drawing from the performance feedback model in organizational learning research, we propose that the firm's pay level decision changes depending on the (1) changes in its own performance over time, (2) changes in performance of its competing firms, (3) changes in pay levels of the competing firms, and (4) changes in labor market condition, or specifically the minimum wage increase. In so doing, we seek to advance our understanding of what determines the pay level decisions of a firm over time with references not only internally to its own performance history, but also externally to the changes in performance outcomes and pay level decisions of competing firms as well as the changes in labor market. Analyzing the longitudinal sample of 218 public hospitals in the State of California over 13 years, we propose this study to investigate how the firm's pay level decision changes over time as the dynamic functions of the above key potential determinants.

HR: [Compensation Benchmarking, Compensation Convergence, and Executive Mobility: An Empirical Analysis](#)

Author: **Steffen Burkert**, *LMU Munich*

Author: **Robert Kase**, *U. of Ljubljana, SEB*

Author: **Marco Tonellato**, *LMU Munich*

Author: **Ingo Weller**, *LMU Munich*

Compensation benchmarking has become a common practice for determining executive compensation in companies. The key motive for compensation benchmarking is to identify an appropriate way of compensating executives, with the primary goal of human capital retention. In this study, we argue that compensation benchmarking leads to convergence in executive compensation by directing attention and informational cues following two mechanisms: a) direct peer influence through the selection of compensation peers, and b) indirect peer influence through exposure to the same compensation peers. Using an extensive panel of executive compensation data of publicly traded U.S. companies we show that compensation benchmarking leads to convergence in executive compensation levels and in turn reduces the likelihood of executive mobility to peer companies. We discuss theoretical and practical implications.

Departing from a vast body of research of work-related factors that deplete employees' energy through self-control processes the present symposium aims to advance our understanding of how work can enhance employees' energy. To do this we draw- and expand on self-determination theory (SDT) and particularly focus on basic needs satisfaction and associated autonomous self-regulation (as opposed to self-control) as psychological mechanisms that link work-and non-work-related factors and behaviors to employees' subjective vitality - a state of enhanced psychological energy. The four studies included in this symposium identify employees' work commute, the joint support of one's supervisor and colleagues, consistent displays of high servant leadership, and daily mindfulness as determinants of employees' satisfaction of their individual needs for autonomy, competence, and relatedness as well as of balanced need satisfaction, which in turn promote autonomous regulation and associated subjective vitality. Accordingly, these studies comprehensively map to and extend our understanding of the motivational process outlined in self-determination theory. First, by identifying a set of work-related factors that facilitate employees' energy, second by focusing on novel mechanisms in the form of balanced needs satisfaction and flow experiences as a form of autonomous regulation, and third by identifying boundary conditions such as preference for need satisfaction, colleague support, consistency of servant leadership, and trait autonomy that influence the proposed motivational processes outlined by SDT. Last but not least the symposium outlines how employees can turn work from a depleting into an energizing experience.

Organizations often rely on legislation for prompting and guidance to serve their diverse employees and set goals related to diversity, equity, and inclusion (DEI). Yet, developing research suggests that creating a culture of inclusion among workers with disabilities requires practices that go beyond the letter of the law, and are aimed directly toward enhancing employee integration and experiences of inclusion. This effort requires that organizations move beyond diversity alone by not only addressing a specific composition of people, but also an individual's incorporation into the organizational climate and culture. The proposed panel symposium will provide informed discussion regarding the tension between legal compliance and the inclusion experiences of employees with disabilities from a range of researchers and practitioners working in DEI at various career stages and in various geographic locations.

Contemporary Talent Management in the Context of Uncertainty

Talent Management in the Context of Uncertainty

Organizer: **Sasha Pustovit**, *Towson U.*
Organizer: **Ibraiz Tarique**, *Pace U. - Lubin School of Bus*
Discussant: **David Collings**, *Dublin City U.*
Presenter: **Fang Lee Cooke**, *Monash U., Australia*
Presenter: **Shaista Ehsan Khilji**, *George Washington U.*
Presenter: **Kristine Kuhn**, *Washington State U.*
Presenter: **Paula Olszewski-Kubilius**, *Northwestern U.*

Uncertainty has become ubiquitous in our work and business environment. The COVID-19 pandemic raised the uncertainty to unprecedented levels, upending our previously known ways of managing talent and throwing corporate decision makers for a loop, leading to losses of business and millions of jobs, and threatening the very survival of individuals and organizations (Barrero, Bloom & Davis, 2020; Schwartz, 2020). This panel symposium responds to calls for greater theorizing on workplace uncertainty in the context of contemporary talent management. Five prominent scholars whose expertise touches upon contemporary talent management issues across multiple levels of analysis will be a part of this conversation. Topics of discussion will include the recent changes in the institutional and technological space in China, talent management in the changing and dynamic gig economy, the post-pandemic talent management issues pertaining to inequalities and the racial awakening, and the work-related implications of early talent development. The goal of the discussion is to encourage thought and future research in this domain.

Self-Determination Theory Perspectives on Leadership and Management

Motivation Perspectives on Leadership

Participant: **Maree Roche**, *U. of Waikato*
Participant: **Yaniv Kanat-Maymon**, *Interdisciplinary Center (IDC) Herzliya*
Participant: **Amy Wei Tian**, *Curtin Business School*
Participant: **Marylene Gagne**, *Curtin Uni*

Self-determination theory (SDT; Deci & Ryan, 2000) has contributed to the advancement of knowledge on the topics of leadership and knowledge sharing. SDT proposes a multidimensional conceptualization of work motivation that comprises intrinsic motivation (i.e., doing something out of enjoyment), identified extrinsic motivation (i.e., doing something out of values), introjected extrinsic motivation (i.e., doing something to maintain self-esteem), and external extrinsic motivation (i.e., doing something to obtain a reward). A recent meta-analysis has shown that autonomous types of motivation (i.e., intrinsic and identified) account for more positive variance in work outcomes than controlled forms of motivation (i.e., introjected and external; Van den Broeck et al., 2021). SDT also proposes that the satisfaction of three basic psychological needs for competence, autonomy, and relatedness promote autonomous over controlled types of motivation, and are also associated with a host of positive work outcomes (see Van den Broeck et al., 2016 for a meta-analysis). SDT has informed research on leadership by showing that the effects of good and bad leadership on followers' performance and well-being can be importantly attributable to their impact on the satisfaction of the psychological needs for competence, autonomy, and relatedness of followers (Hetland et al., 2011; Kovajnic et al., 2012, 2013) and their impact on followers' work motivation (Bono & Judge, 2003; Eyal & Roth, 2011; Fernet et al., 2015; Gagné et al., 2020; Wang & Gagné, 2013). SDT has also informed research on knowledge sharing in organizations by showing that human resource practices that promote need satisfaction and autonomous types of motivation tend to promote knowledge sharing (Gagné, 2009; Gagné et al., 2019). To refine this knowledge further, the presenters will showcase new research on leadership and a literature review on algorithmic management informed by SDT. The first presentation addresses a gap in how leadership can have positive effects on follower well-being. Roche and colleagues present research, using data from New Zealand workers, examining whether and how leader's own need satisfaction trickles down to followers and influences their well-being. Their results show that when leaders have satisfied psychological needs (particularly of their relatedness need) their followers tend to notice that they are more supportive in their leadership style, which helps satisfy the psychological needs of the followers. Follower need satisfaction in turn is positively associated with follower well-being. The second presentation addresses whether followers' motivation influences the leadership behaviors of managers. There has not been much research on the possibility that autonomously motivated employees may trigger more transformational leadership behaviors in managers. Kanat-Maymon and colleagues present a longitudinal field study of Israeli workers that show multi-level cross-lagged associations between transformational and transactional leadership behaviors with autonomous and controlled work motivation. They found as usual that transformational leadership predicted change in autonomous motivation and that transactional leadership predicted changes in controlled motivation. More interesting is the finding that autonomous motivation predicted increases in transformational leadership, and that controlled motivation predicted changes in transactional leadership. The third presentation extends findings on the importance of need satisfaction, as well as the importance of attitudes and norms, to promote knowledge sharing (and discourage knowledge hiding) by examining the role of empowering leadership. Tian and colleagues, using prospective data from Australian workers, demonstrate that empowering leadership's influence on employee need satisfaction, attitudes, and norms explains significant variance in knowledge sharing and hiding behavior. The fourth presentation reviews research on algorithmic management from the lens of SDT. Gagné and colleagues outline the effects that algorithmic management functions that are rapidly replacing human managers, including task assignment and scheduling, behavior and performance monitoring and management, and reward and termination management, have on the satisfaction of workers' psychological needs, and what could be improved through future algorithmic system design and implementation.

Leadership and Workplace Relationships

Session Moderator: **Chin-Ju Tsai**, *U. of London*

IM: Exploring the Factors Associated with Cross-Cultural Leadership Behavior Adjustment  

Author: **Chin-Ju Tsai**, *U. of London*

The adjustment of leadership behaviors has been argued to be essential when working in different cultural settings; however, little is known about whether expatriate business leaders actually do adjust and about the factors that influence their adjustment. Building on the model of international adjustment developed by Black, Mendenhall, and Oddou (1991) and on the basis of relevant empirical findings, we hypothesized and tested such aspects by analyzing data drawn from 391 expatriate senior managers and 356 Chinese employees. The results of our hypotheses' testing show that our sample expatriate business leaders had significantly adjusted their leadership behaviors and that such adjustment was negatively associated with standardized international HRM strategies and positively associated with the control purposes of international assignments. The implications of our findings for research and practice are discussed.

IM: Shared Fairness Perceptions of Chinese Subordinates and German Supervisors   

Author: **Markus Pudelko**, *U. of Tuebingen*

Author: **Jörg Büechl**, *U. Aalen*

Enriching organizational justice literature with insights from cultural identity negotiation theory, our explorative, qualitative study develops an evidence-based model illuminating how culturally diverse subordinates and supervisors can achieve through their cross-cultural interactions shared fairness perceptions. Our analysis is based on a complex research design comprising in total 133 interviews in China and in Germany from Chinese subordinates of German supervisors, German subordinates of Chinese supervisors, Chinese supervisors of German subordinates and from German supervisors of Chinese subordinates. As a result of our empirically induced theorizing, we came to understand the centrality of inter-linked cultural identity negotiation processes. Only those subordinates and supervisors who were willing and able to engage in such processes, once they came into contact with the other respective party, succeeded in arriving at the approximation of previously more distinct fairness perceptions and ultimately to a partially shared understanding of fairness. In addition, we found various moderating factors influencing the cultural identity negotiation processes. From these factors cultural preservation, i.e., the degree to which the subordinates and supervisors cling to their original cultural identity, was by far the most important one.

IM: Shared Leadership in Global Virtual Teams: Tasks and Processes  

Author: **Audra I. Mockaitis**, *Maynooth U., Ireland*

Author: **Lena Zander**, *Uppsala U.*

Author: **Peter Zettinig**, *U. of Turku, Finland*

When teams share leadership they can draw on their members' expertise and skills more effectively to improve team performance. But global virtual team (GVT) members work across time zones in highly challenging multilingual and multicultural settings. In this study we examine whether shared leadership will lead to better team outcomes in GVTs. We differentiate between shared leadership tasks and shared leadership processes and examine the relationships between these and GVT satisfaction, performance and output. Using a sample of 55 global virtual teams with members from 28 countries, we find that the task component of shared leadership tasks is related to team satisfaction, and the process component of shared leadership is significantly related to team satisfaction and perceived team performance. Additionally, the extent to which a team shares leadership processes is significantly related to externally evaluated team outcomes, suggesting a need to take a closer look shared leadership from a process perspective. Implications for theory and practice are addressed.

Organizational Improvisation, Risks and CEOs

Session Moderator: **Pierre-Jean Hanard**, -

MC: **Internal or External CEO: Which Is Financially Sounder?** 

Author: **Rida Elias**, *American U. of Beirut*
Author: **Najoie Nasr**, *Haigazian U.*

CEO origin and CEO compensation and their impact on firm financial performance have gained equally significant traction amongst strategy scholars and management practitioners. Research is unequivocal about externally headhunted CEOs being compensated higher than internally promoted CEOs; however, results are mixed on whether externally headhunted CEOs generate higher financial performance than internally promoted executives do. In this paper, we find that while external CEOs total compensation is higher than their internally promoted counterparts, their basic salary is not. We also find that the CEO origin moderates the relationship between total compensation and firm's ROA in that internally promoted CEOs strengthen this positive relationship while externally headhunted CEOs weaken this relationship. Moreover, the firm size (small, medium, large) moderates the previous moderation. Firm size (small, medium, large) moderates the previous moderation relationship. The general moderated relationship is negative and significant for smaller and medium size, while it is positive but statistically insignificant for larger organizations. The effect of this moderated moderation relationship is stronger for internally promoted CEOs, while it is statistically insignificant for externally headhunted CEOs.

 MC: **A Multidimensional Matrix Model for the Study of Organisational Improvisation**

Author: **Javier Alfonso Rodríguez-Escobar**, *UEMC*
Author: **Raphael Lissillour**, *IPAG Business School*

Winner of the Management Consulting Division Outstanding Field Report Paper Award

The increasing significance of the concept of improvisation to understand how to better organize calls for more research on combinations of intuition, creativity, and bricolage. While prior studies have investigated the role of improvisation in organisations, there have been few, if any, studies that have systematically examined the relationship between intuition, creativity, and bricolage, three degrees of improvisation (minor, bounded and structural) and three levels of application (individual, interpersonal and organizational). In this research, we developed and explored a matrix model with these elements which lead to the identification of three organisational focuses, namely the constructivist, structuralist, and behavioural focus. The model was then applied to a proof-of-concept carried out over two years in the Chinese subsidiary of a German industrial group. Data from twelve semi structured interviews, three focus groups and internal documents have been triangulated. The study focuses on the post-implementation period of SAP and on the determinant factors that lead to different types of improvisations which were instrumental for the success of SAP in the organisation. We found that the improvisations performed in the post-implementation context of SAP have a clear correspondence with a constructivist organizational focus in terms of organizational coexistence and institutional legitimization. These findings are discussed in terms of their implications for the following: management tools to channel improvisations, organisational implication in terms of selection and development of the potential of workers according to their capacities and their attitudes toward the organisation's focus, strategic alignment between organisational focus, performance, and resource allocation.

MC: **Managing Tensions Between Agility and Bureaucracy in Organizational Risk Management Procedures** 

Author: **Jocelyne Boulos Eid**, *ISEOR, Magellan, IAE Lyon, U. Jean Moulin*
Author: **Laura Khachan**, *U. Paul Valery, Montpellier*
Author: **GEORGE NAIM EL RAHBANI**, *ISEOR, Magellan, IAE Lyon, U. Jean Moulin*

The Bank's working conditions are changing very fast and the regulatory environment is characterized by contradictory norms. Accordingly, the bank needs to adapt and to ensure compliance. The underlying hypothesis is that an innovative Management Consulting (MC) approach ensures the integration of the control departments and improves the management of norms: How does the Bank manage the proliferation of complex norms and move from a fragmented internal control system to an integrated and efficient system? In this paper, change management will be assessed and implemented in a bank. At the theoretical level, the study is based on the risk, control, Tetranormalization and the Socio-Economic Approach to Management theories. At the empirical level, it mobilizes an Intervention Research (IR) project carried out within a Bank in the Middle East. The results indicate that an agile and integrated control system is based on the principles of simulation, synchronization, decentralization and vigilance.

MC: **The Great Resignation: Applying the Lessons of Job Embeddedness to Reduce Employee Turnover** 

Author: **Chris J. Sablinski**, *U. of the Pacific*

The COVID-19 pandemic has devastated so many and has changed the lives of millions of workers around the world. The pandemic has made it difficult for organizations to meet goals and maintain performance due to record high levels of employee turnover. While management consulting firms continue to provide advice regarding how to mitigate and reduce the effects of dysfunctional voluntary turnover in this period known as the "Great Resignation," additional specificity is needed relative to what works best and when. Turnover scholars have noted that one of the best predictors of voluntary employee turnover job embeddedness (JE). For the last 20 years, this employee retention construct has been found to be a helpful tool for practitioners and scholars alike. Since the original conceptualization of the construct, JE scholars have explored different ways of measuring it as well as modeling antecedents, moderators, mediators and dependent outcomes. In this work, recommendations are offered regarding expanding and refining the JE measurement to account for a unique post-COVID workplace, implementing lessons learned about both on and off-the-job factors impacting turnover, and expanding how JE can be used more intentionally in applied settings. Management scholars and consultants in the space of mitigating employee turnover can benefit from additional attention to JE now and in the future.

Elitism, Meritocracy and Accessibility: Debate and Discussion

Session Moderator: **Micki Eisenman**, *Hebrew U. of Jerusalem*

MED: Reproducing the Myth of Meritocracy in a CEO Autobiography and Mitigating it in the Classroom

Author: **Micki Eisenman**, *Hebrew U. of Jerusalem*

Author: **Hamid Foroughi**, *Cardiff U.*

Inequality is widely regarded to be a persistent institution—thanks, in part, to a meritocratic discourse that perpetuates it. Based on this understanding, we analyze a particular subset of that discourse that is consumed by the business elite, to explore the mechanisms of reproduction that characterize it and discuss what management educators can do to mitigate this reproduction. Drawing on Jack Welch’s autobiography as a classic example of the CEO-autobiography genre and, more broadly, the discourse of the business elite, we explicate three mechanisms through which the genre enables the reproduction of a meritocratic ideology. We then propose three readily practicable pedagogical approaches that can mitigate these reproductive mechanisms. We encourage management educators to teach students to approach this book and the broader genre more critically, to diminish its reproductive impact and to do so in the context of taking personal responsibility for addressing Grand Challenges such as inequality.

MED: Improving Accessibility for All: Best Practices from Universal Design for Learning

Author: **Joy E. Beatty**, *Eastern Michigan U.*

Students with disabilities are a growing population contributing to the diversity of our campuses. Access to higher education is a foundation of the United Nations Convention on the Rights of Persons with Disabilities and the disability rights movement. However, students with disabilities experience a number of challenges in accessing course content. Universities and faculty can do more to support this population through curriculum design and adoption of Universal Design for Learning. Based on cognitive neuroscience and education theories, it prioritizes accessibility by promoting multiple means of engagement, representation, and action and expression so that students with a range of skills and limitations can participate equally. Management educators who adopt these practices are signaling disability awareness and modelling inclusion in their classrooms. Our business students will go on to manage and lead in organizations, shaping organizational frameworks and policies; the training we provide can contribute to broader positive social change. This article outlines the accommodation barriers experienced by students with disabilities, identifying philosophical tensions between accommodation and accessibility mindsets. It offers guidance for faculty to adopt a Universal Design for Learning philosophy in their classrooms, and for universities to develop a more accessible and welcoming environment for students with disabilities.

MED: Higher Aims Fulfilled: The Social Capital Academy as A Means for Advancing Underserved Students.

Author: **David Obstfeld**, *California State U., Fullerton*

Current research underscores how college education can reflect broader social inequality through the disproportionate flow of resources to elite universities and the advantaged students they serve. In contrast, under-resourced comprehensive universities disproportionately serve under-represented minority, first-generation, and working-class students. This paper argues for the comprehensive university as an institution uniquely positioned to reduce social inequality and the comprehensive university undergraduate business school (CUUBS) as the first test of a new approach to education. This paper advocates a substantive response to social inequality through 1) refocusing the business school on undergraduate education within the comprehensive university, rather than the MBA within well-funded elite business schools; 2) a strategic focus within the CUUBS on underserved students’ attainment of career-related jobs (CRJs) upon graduation; and 3) helping students to pursue CRJs via the development of a Social Capital Academy (SCA), a program offering sustained networks, social skills, and career engagement, alongside the traditional academy’s formal university coursework. The paper describes the benefits of the SCA for underserved students, its requirements and benefits for universities and business communities, and the possibilities for scaling the program to significantly address social inequality. Future applications of the SCA to STEM-related fields are briefly explored.

Session Type: **PDW Workshop**

Program Session: **1833** | Submission: **10417** | Sponsor(s): **(MED, OB)**

Session Format: **Virtual-only: Zoom “meeting” style**

Scheduled: **Tuesday, Aug 9 2022 10:00AM - 12:00PMPT (UTC-7)**

Exploring Effective Leadership Practices Through Popular Culture *Leadership/Popular Culture*

Organizer: **Michael Joseph Urick**, *St. Vincent College*

Presenter: **Sayedul Islam**, -

Presenter: **Gordon Bruce Schmidt**, *U. of Louisiana Monroe*

Presenter: **Aditya Simha**, *U. of Wisconsin, Whitewater*

The purpose of this PDW is to explore how to use popular culture (such as movies, tv shows, books, music, comics, and video games, etc.) in leadership development initiatives. The goal of such an approach is to make academically supported leadership theories more meaningful to participants in leadership development initiatives. In this approach, we suggest the use of leadership examples evident in popular culture as a starting point for more nuanced exploration of leadership theories. To do this, we have designed an interactive session similar to but updated from our session last year, focused on popular culture themes, which will encourage participants to fully explore leadership theories. With our hands-on approach, participants will identify theories and popular culture themes which will help to influence their own management and leadership activities. This PDW would be beneficial for academics and leadership development consultants alike. This will be the second year for such a PDW and, if accepted, we hope to make it an annual event given the success of last year’s session.

**Black Business & Management History:
Insights on Creating a Better World Together**
Black Business & Management History

Organizer: **Leon Prieto**, *Clayton State U.*
Panelist: **Simone Trixie Allison Phipps**, *Middle Georgia State U.*
Panelist: **Milorad Novicevic**, *U. of Mississippi*
Panelist: **Keith Hollingsworth**, *Morehouse College*
Panelist: **Kalu Osiri**, *U. of Nebraska, Lincoln*

This panel symposium seeks to encourage research about diverse and critical issues in Management History from an Africana perspective. Black Business and Management History is underrepresented in the literature, and there is a growing push to decolonize the business curriculum and explore insights on how we can reimagine capitalism to create a better world together. Therefore, this panel symposium's purpose is to engage a group of scholars in an interactive discussion to (1) encourage research on Black Business & Management History, (2) discuss the importance of decolonizing the Management curriculum, (3) explore pioneering Black business leaders who fought to create a better world (4) discuss Africana philosophies of management from a historical perspective.

Session Moderator: **Nobuyuki Chikudate**, *Hiroshima U.*

The diverse papers in this session tackle big topics of interest to MSR.

MSR: Pipe Dream or Hope Regeneration by Future Theories in Fukushima: Ten Years after 2011's Disasters

Author: **Nobuyuki Chikudate**, *Hiroshima U.*

This study reports a ten-year-long qualitative study on the resilience phenomena of communities that suffered after the catastrophic events including the M9 earthquake, tsunamis, and the dissemination of radioactive materials from Fukushima Dai-ichi Nuclear Power Plant in March 2011 in the northeastern (Tohoku) region of Japan, especially Fukushima. I focus on how survivors and evacuees restored their hope after devastating life-and-death situations, losing loved ones, and being surrounded by dangerous radiation. Furthermore, I analyze how they created future orientations in their “newly normal lives” after disasters.

MSR: Enabling and Managing Authentic Experiences: The High-Class Escort Sector in the Netherlands

Author: **Welmoed Van Hoogen**, *None*

Author: **Charles Thomas Tackney**, *Copenhagen Business School*

In this paper we explore how potentially authentic experiences are brought forth by experience providers on a managerial and individual employee level. We do so by researching the Dutch market sector of high-class, agency-based, female escorts, in which the Girlfriend Experience is offered to clients. Authenticity in the experience is treated as a criterion variable; it being a possible outcome of multiple specified predictors. The findings offer insights into which individual behaviours and managerial efforts need to be in place in market exchange relations to deliver a “commodified authentic experience,” thereby supporting responsible behaviour in the organization and enhancing our practical understanding of the employment sector. Within the Management, Spirituality, and Religion Interest Group domain, the basic philosophical categories we deploy offer a necessary and strategically useful complement to spiritual and religious terminology for “creating a better world together” in pluralistic societies.

MSR: The Economy of Communion Movement as Humanistic Management 

Author: **Andrew Gustafson**, *Creighton U.*

Author: **Celeste Harvey**, *College of St. Mary, Omaha*

In this essay we will demonstrate that the Economy of Communion movement is a very good example of Humanistic Management, as defined by Dominic Mele, and it provides a unique lens through which to conceive of humanistic management which is extraordinarily person-centered. We will show this by first providing some explanation and summary of the Economy of Communion philosophy, relying on scholars and also Pope Francis' 2017 talk on EOC delivered at the Vatican. Second, We will briefly outline some of the key features of Humanistic Management as outlined by Dominic Mele demonstrating some EOC features which exemplify the Humanistic Management approach as Mele describes it both with scholarly explanations of EOC and also through concrete lived examples of EOC entrepreneurs.

MSR: Unleashing the Missing Links of Religiosity and Food Consumption Management Behavior    

Author: **Shazia Nauman**, *Riphah International U.*

Author: **Hina Yaqub**, *Riphah International U.*

Globally, food waste reduction has become an interminable challenge, especially in the Muslim developing countries. Therefore, employing the theory of planned behavior (TPB), this research examined how religiosity influences consumers' food consumption management behavior by testing a serial mediation moderation model. We propose consumer attitude towards food waste and intention to reduce food waste as explanatory mechanisms in the religiosity–food consumption management behavior relationship, and personality trait–conscientiousness as a moderator between consumers' intention to reduce waste and food consumption management behavior. To test our proposed hypotheses, the data was collected from 304 Pakistani consumers. Results elaborate that religiosity is directly related to consumers' food consumption management behavior and indirectly related through consumer attitude towards food waste and consumer intention to reduce food. In addition, we found that consumers who have high conscientiousness are more engaged in food waste reduction than those who have low conscientiousness thus resulting in better consumption management behavior. The study has both theoretical and practical implications for policymakers.

Helping Behaviors and Forgiveness

Session Moderator: **Benjamin Alan Rogers**, *UNC-Chapel Hill*

OB: Forgiving, Fast and Slower: When Forgiveness Leads to Third-Party Moral Outrage 

Author: **Hsuan-Che Huang**, *Sauder School of Business, U. of British Columbia*
Author: **Daniel Skarlicki**, *U. of British Columbia*

Although forgiveness is deemed a virtue in social and organizational life, little is known about how third parties react to forgiveness. Drawing on deonance theory, we explore when third parties can judge the forgiver negatively—when it occurs too easily (i.e., too quick in time)—in the context of interpersonal mistreatment among co-workers. Across three studies (N = 624) (one within-subjects [preregistered] and two between-subjects design [one preregistered]), we find that fast (i.e., immediate) forgiveness leads to higher third-party moral outrage toward the forgiver than forgiveness provided more slowly (later in time 1 week to several months). This effect is mediated by third parties' perceptions of deservingness—that the transgressor did not deserve to be forgiven this early—and is more pronounced when the offense is more versus less severe. Study 2 results show that immediate forgiveness can lead third parties to view the forgiver as less likable, less competent, and even tend to avoid the forgiver compared to when the forgiveness occurs later. Study 3 reveals that third parties can demonstrate “moral hypocrisy” such that their negative reactions toward immediate forgiving are more lenient when they can personally benefit from such actions. We advance deonance theory by exploring how moral outrage can arise from expressing forgiveness, triggering negative impressions of the forgiver, and consider boundary conditions when this effect is weaker versus stronger. From a practical perspective, our research has the potential to inform how forgiveness can occur in ways that, at a minimum, do not erode its benefits.

OB: The Interactive Effects of Social Value Orientation, Message Framing and Context on Helping Behavior 

Author: **Tatiana Iwai**, *Inspere Institute of Education and Research*
Author: **Gustavo Tavares**, *Inspere Institute of Education and Research*

Helping at work, a form of organizational citizenship behavior, is highly positive for beneficiaries but it may come at a cost to helpers. In situations in which there is a conflict between what is best for oneself and the other, individual differences in social value orientation (SVO) – self-regarding versus other-regarding preferences – can influence cooperative choices. In this paper, we aim to explore under which conditions prosocial orientation is more or less likely to foster helping behavior. Building on the arousal:cost-reward model and self-discrepancy theory, we examine the moderating effects of help request framing and context on the relationship between SVO and helping behavior. In two studies using different approaches (a field experiment and a scenario-based experiment), we found convergent evidence that prosocial individuals are more likely to help than proselves when it is more costly to do so. Similarly, prosocial individuals help more when requests are framed in terms of benevolence but not when they are framed in terms of exchange. These findings suggest that prosocial orientation fosters helping when it is more challenging to do so – that is, when help seekers do not have much to offer in return as well as in costly situations.

OB: Third-Party Employees' Reactions to Witnessed Helping Received by Coworker 

Author: **Huan Cheng**, *Huazhong U. of Science and Technology*
Author: **Beijing Tan**, *Huazhong U. of Science and Technology*
Author: **Tianfei Yang**, *Wuhan U.*
Author: **Xia Jiang**, *Zhejiang Normal U.*

The effects of helping behaviors on recipients or helpers are well established. Yet we know little about how third parties respond to witnessed helping received by coworker. Drawing from relative deprivation theory, we conducted a daily, experience-sampling study across two work weeks to examine the third-party effect of helping. Results showed that witnessed helping received by coworker increased third-party employees' sense of relative deprivation, which in turn led to their instigated incivility and helping behavior later in the day. Furthermore, perceptions of organizational emotional culture of companionate love weakened the relation between relative deprivation and instigated incivility, while strengthened the relation between relative deprivation and helping behavior. We extend research on helping by showing its broader impact on third parties beyond direct beneficiaries and benefactors.

OB: The Growth Mindset at Work: Will Employees Help Others or Only Help Themselves?  

Author: **Benjamin Alan Rogers**, *UNC-Chapel Hill*
Author: **Jessica Siegel Christian**, *U. of North Carolina, Chapel Hill*
Author: **Remy E. Jennings**, *Florida State U.*
Author: **Klodiana Lanaj**, *U. of Florida*

Organizations want employees to grow and develop their professional skills. Towards this aim, companies like Microsoft are turning to growth mindset interventions that increase employees' belief in their developmental potential. But will embracing interventions that foster a strong self-development focus have unintended consequences and decrease employee efforts to help each other? We explore how growth mindset interventions impact other-oriented helping behavior using three experimental studies. A pilot study and Study 1 shows that a work-specific growth mindset intervention increases individuals' intention to help their colleagues and helping behavior when compared to a control intervention. Study 2, a within-person field experiment utilizing a daily experience sampling approach, reveals that on days when employees participate in a work-specific growth mindset intervention (as compared to control), they engage in more helping and subsequently perceive greater prosocial impact and meaning in life. Further, these effects were stronger for those higher in trait-level growth mindset. Our findings suggest that the self-focused benefits of the growth mindset do not come at the cost of other helping behaviors that organizations also desire. We discuss the implications of our findings and the future of the growth mindset at work.

Communication, Feedback, and Social Comparisons

Session Moderator: **Alina Gerlach**, *ETH-Zurich, Work & Organizational Psy*

OB: Feedback-Related Uncertainty as Possible Driver of Feedback Seeking and Role Ambiguity

Author: **Alina Gerlach**, *ETH-Zurich, Work & Organizational Psy*
Author: **Federico Magni**, *ETH Zürich*

As the positive effect of feedback seeking presumably relates to individuals' adaptation to uncertainty at work, it is important to better understand how feedback seeking and uncertainty interact dynamically. In the present study, we adopt a process perspective and study the reciprocal relationship between feedback seeking and role ambiguity - a contextual factor capturing uncertainty at work - longitudinally. Specifically, we propose that role ambiguity enhances the search for feedback, which in turn can decrease role ambiguity. We investigate feedback-related uncertainty as a mechanism driving the reciprocal relationship, and include two independent sources of feedback (supervisors, coworkers). We test our hypotheses using (random intercept) cross-lagged panel models in a sample of $N = 1'967$ employees who were surveyed weekly over six weeks. Our results reveal that role ambiguity and feedback seeking are not directly related but rather show an indirect link through feedback-related uncertainty. Theoretical implications of our findings are discussed in relation to previous research on role ambiguity and feedback seeking and the use of process perspectives in organizational psychology research, and practical relevance for the integration of proactivity at work under uncertainty are outlined.

Paper is Available to Meeting Registrants Only.

OB: The Consequences of Downward Social Comparisons on Social Media Following Workplace Ostracism

Author: **Ya Liu**, *Eli Broad School of Business, Michigan State U.*
Author: **Brent Scott**, *Michigan State U.*
Author: **Shuqi Li**, *Eli Broad School of Business, Michigan State U.*

Social comparison has become a ubiquitous phenomenon as social media platforms boomed in the past decades. Individuals can easily engage in social comparisons with the information on these platforms, which brings about the potential harm - anxiety and depression resulting from comparing with better-off others. Although such upward social comparisons and their negative consequences have attracted substantial attention from the public and academia, we expect that social media platforms also serve as an arena for downward social comparisons, through which individuals strive to improve their well-being. Drawing from social comparison theory, we endeavored to illustrate that downward social comparisons on social media "may be" an effective non-work approach for ostracized employees to cope with threats at work and improve well-being. Results from a four-wave field study revealed that workplace ostracism was positively associated with downward social comparisons on social media (i.e., Facebook), which in turn elicited feelings of compassion and schadenfreude. Compassion was associated with a decrease in depletion, whereas schadenfreude was associated with an increase in depletion. In addition, the effects of compassion and schadenfreude on depletion were stronger for women than men. In the supplemental analysis, we also demonstrated that depletion was positively associated with ostracism, providing support for a vicious cycle of workplace ostracism.

OB: Taxonomy of Communication and its Applications  

Author: **Ajay Kumar Goyal**, *National Institute of Mental Health and Neurosciences Bangalore*

The broad aim of this paper is conceptual development of communication in collectives of various types. Three objectives of this paper include 1. To develop and elaborate scheme of classification of communications based upon their signals and content; 2. To underline applications of this classification scheme to different types of groups in terms of developmental stage and composition; and 3. To map categories of communication that would be most effective across these group varying in stage of development and types of member composition; Finally, the theoretical and practical implication are discussed in detail, followed by directions for future research.

OB: Leading with the (Recently) Successful? Performance Visibility and the Evolution of Risk Taking

Author: **SOENKE EHRET**, -
Author: **Sonja Vogt**, *Faculty of Business and Economics (HEC Lausanne), U. of Lausanne*
Author: **Andreas Hefti**, *Uni zurich*
Author: **Charles Efferson**, *Faculty of Business and Economics (HEC Lausanne), U. of Lausanne*

It is claimed that by using delimited behavioral interventions, leaders can achieve strategic goals without actively leading. Yet leadership research has paid limited attention to the effectiveness of such behavioral techniques, despite the popularity of influencing individuals through nudges for example. We contribute towards filling this gap with a laboratory experiment. We study a prominent behavioral intervention to facilitate peer learning among followers, by leaders making successful or non-successful followers visible. Critically, our experiment provides a clear benchmark, where success is only due to luck and not due to skill. While prior research has provided mixed evidence whether individuals can discriminate between environmental and individual sources of success, our findings point to clear limitations. Even if learning from successful followers is obviously and transparently ineffective due to dominant environmental factors, the remaining followers do not adjust their choices. Absent a leader stepping in and interrupting the intervention, there is a persistent tendency to imitate lucky projects where nothing substantive can be learned. Our results suggest important take-aways for many rapidly changing business environments, where luck often dominates skill. In these contexts, passive leadership attempting to enlist peer learning can lead to more risk with no gain in expected returns. We discuss the wider implications of our findings for the possibility and limits of behavioral interventions used for passive leadership in general.

How Leaders Influence

Session Moderator: **Marina Konrad-Maerk**, *U. of Innsbruck*

OB: From Transformational to Agile Leadership: What Future Skills it Takes to Act as Agile Leaders

Author: **Marina Konrad-Maerk**, *U. of Innsbruck*

Author: **Anne Gfrerer**, *U. of Innsbruck*

Author: **Katja Hutter**, *U. of Innsbruck*

Agile leadership is “in vogue” in today’s fast changing and increasingly digitally connected world of work, yet many business leaders struggle to adapt their leadership skills accordingly. Using insights drawn from transformational leadership theory and a case study of the IT subsidiary of Deutsche Bahn, we present a guide for future management skills to create sustainable organizations for a better world. This article argues for the importance of transformational leadership traits, including empowerment, trust, openness, and coaching, in successful agile leadership. Furthermore, affective factors, namely mindfulness and empathy, are important future leadership competencies, especially in a digital work environment. In addition to these specific soft skills derived from transformational leadership theory, managers also need to be equipped with certain hard skills related to technological expertise as well as practical knowledge of agile methods. Finally, the paper addresses the competence to act in network structures as a key success factor for executives and recognize an ongoing paradigm shift from centralized to shared leadership and from the individual to the team perspective.

Paper is NOT Available. Please contact the author(s).

OB: License for Wrongdoing: Why Better Relationships with Leaders Lead to Employee Unethical Behavior 

Author: **Jih-Yu Mao**, *Southwestern U. of Finance and Economics*

Author: **Yujie Shi**, *Southwestern U. of Finance and Economics*

Author: **Xinyan Mu**, *Southwestern U. of Finance and Economics*

Relative leader-member exchange (RLMX), refers to the difference between one’s leader-member exchange and the average level within the team. High RLMX indicates a better-than-average quality of relationship with leader and can be regarded as ones’ advantages and entitlements. Drawing from social exchange theory and the literature on psychological licensing, we suggest that high RLMX is likely to facilitate employees’ psychological entitlement, leading to more unethical behavior. In addition, the indirect relationship is more salient in teams with higher political climate. The results of a two-wave, multi-source survey and a scenario experiment provide support for the hypotheses. The implications of these findings to both theory and practice are discussed.

Paper is NOT Available. Please contact the author(s).

OB: How Leader Appraisal Translates into Follower Appraisal: A Social Contagion Perspective   

Author: **Florian Rester**, *WHU - Otto Beisheim School of Management*

Author: **Marko Reimer**, *WHU - Otto Beisheim School of Management*

Author: **Daniel Schaupp**, *WHU - Otto Beisheim School of Management*

We develop and test an empirical model that investigates how a leader’s stressor appraisals are mirrored by her followers, and how this in turn influences their job satisfaction. We base our theoretical model on the challenge-hindrance model of stress and employ emotional contagion theory to show that stressor appraisals of workload can be contagious between leaders and followers. We furthermore predict that followers who have a well-functioning, close relationship with their leaders as measured by Leader-Member Exchange (LMX) experience more contagion of stressor appraisals than those who do not. Our results (n = 536 financial managers) largely support our hypotheses, albeit not in the direction we hypothesized. Structural equation models reveal that a leader’s challenge as well as hindrance appraisals are both amplifying followers’ hindrance appraisals and mitigating their challenge appraisals. Our results also illustrate that this effect is more pronounced in relationships characterized by high levels of LMX. Theoretical and practical implications of our study are discussed.

OB: A Synthetic Review of the Workplace Bullying, Abusive Supervision, and Mobbing Literatures 

Author: **Nam Gyu Ryu**, *UNSW Business School, Australia*

Author: **Will Felps**, *UNSW Business School, Australia*

Author: **Eliza Byington**, *U. Of Sydney*

Bullying at work is both widely prevalent and harmful for victims. This article aims to provide the most comprehensive and systemic analysis of workplace bullying research to date by drawing on scholarship from across the social sciences. The review begins by analyzing different definitions of workplace bullying and argues for an advantageous definition of the concept. Next, a bibliometric science map of 1,425 articles (link) on workplace bullying is provided. This map reveals four research clusters of workplace bullying articles which are empirically distinguishable by their citation patterns: 1) Abusive Supervision research, 2) Applied Psychology bullying research, 3) Management bullying research, and 4) bullying research in Healthcare Settings. We argue these four sub-literatures are unnecessarily siloed by disciplinary boundaries. As such, our review synthesizes common themes and conclusions reached by these four communities into an overarching intellectual framework. Then, drawing on the review, the article suggests that the field has two major limitations – 1) a lack of evidence that would convince “bottom line realists” to reduce workplace bullying, and 2) largely ignoring the question of why people have different perceptions of whether workplace bullying has occurred. Future research opportunities to address these limitations are discussed.

Task Performance and Well-being

Session Moderator: **Candice Wray**, *National Sun-Yat Sen U.*

OB: The Magnitude of Task Difficulty and its Effects on Appraisals and Task Performance

Author: **Renata Mellupe**, *U. of Southern Denmark*
Author: **Stephan Billinger**, *U. of Southern Denmark*
Author: **Farid Anvari**, *U. of Cologne*

There is theoretical and empirical rationale to expect that some stressors, depending on their magnitude, might have curvilinear effects on outcomes such as appraisals. Nevertheless, only a few studies attempted to vary the magnitude of stressors, such as task difficulty, to see the impact this has on outcomes. This preregistered study offers the first experimental test of the effects of the magnitude of task difficulty on challenge and hindrance appraisals and task performance in a cognitive task. Task difficulty was manipulated in the n-back task at four difficulty levels. In a sample of 369 participants, we found that increase in task difficulty led to increase in challenge appraisals. However, as task difficulty increased further, the associated increase in challenge appraisals became non-significant. The expected non-linear effects of task difficulty on challenge appraisals were not found. The effects of the magnitude of task difficulty on hindrance appraisals were positive and linear. Also, we found negative relationships between appraisals and task performance and support for the mediating role of the hindrance appraisals in the task difficulty-performance relationships. The results highlight the importance of considering the magnitude of stressors, such as task difficulty, and appraisals when attempting to explain how stressors affect performance.

OB: Prosocial Service Behaviours and Employee Well-being 

Author: **Candice Wray**, *National Sun-Yat Sen U.*
Author: **Chien-Chung Kao**, *National Sun Yat-Sen U.*
Author: **Guo-Hao Lyu**, *National Sun Yat-Sen U.*
Author: **Yu-Hsuan Wang**, *National Sun Yat-Sen U.*

This study investigates the dual effects of Prosocial service behaviour (PSB) on employee well-being and how these outcomes are influenced by a leader's punishment and reward behaviours. Drawing on the conservation of resources and self-determination theories, we propose that PSB consumes and provides resources through work-related rumination (i.e., affective rumination and problem-solving pondering). We conducted a longitudinal two-wave questionnaire study (N = 132) and tested hypotheses using a time-lagged model with latent variables. Results showed that when non-contingent punishment was low, PSB increased burnout through affective rumination. Moderated mediation analysis revealed that when the contingent reward is high, there was an increase in indirect effect of PSB on work enjoyment through problem-solving pondering. The direct effect of PSB on affective rumination was in the expected direction but was not significant. However, the direct effect of PSB on problem-solving pondering was significant. Our results indicate that PSB has positive and negative well-being outcomes under various leadership conditions.

Paper is Available to Meeting Registrants Only.

OB: Challenged to Win or Hindered Not to Lose? Social Functioning Outcomes of Workaholism  

Author: **Sunjin Pak**, *California State U., Bakersfield*
Author: **Sang-Hoon Lee**, *U. of Illinois at Urbana-Champaign*
Author: **Amit Kramer**, *U. of Illinois at Urbana-Champaign*

Research suggests that workaholism is related to multiple regulatory systems. However, the investigations into the underlying regulatory systems of workaholism have been stymied by a lack of theorizing that can provide a balanced perspective. Based on regulatory focus theory, we examine how different types of workaholism are manifested in response to challenge and hindrance stressors. Also, we investigate the associations between distinct types of workaholism and both positive (i.e., individual-directed citizenship behavior and work-to-family enrichment) and negative social functioning (i.e., personal aggression and work-to-family conflict). Results based on nationally representative data (total n = 706) supported the hypothesized model, suggesting that challenge and hindrance stressors, respectively, play an important role in manifesting distinct types of workaholism; promotion- and prevention-oriented workaholism related to positive and negative aspects of social functioning, respectively. By incorporating a multiple regulatory systems perspective that reveals a dual-type taxonomy of workaholism as a state, our study contributes to a deeper understanding of how different types of workaholism are manifested and related to social functioning outcomes. We discuss the implications and limitations of our research, along with future research directions on the promotion- and prevention-oriented workaholism scale (PPWS).

Author: **Merce Mach**, *U. of Barcelona*

The increasingly rely on information and communication technologies on work has blurred the work-nonwork boundaries and bring us to the new normal of extended work availability. This research establishes a two-wave process model to investigate the extended work availability-lack of detachment and outcomes linkage. We further applied conservation of resource theory and source of congruence principle to explores the buffering and reverse-buffering role supports from supervisor and family in alleviating the negative relationships above. By applying structural equation modelling, the results of our two-wave 6-month follow-up study (N=332) show that the extended work availability relates negatively to work engagement and positively to work and nonwork imbalance via lack of detachment. Furthermore, the supervisor support reverse buffer the negative relationship between extended work availability and lack of detachment, and the negative relationships between lack of detachment and work engagement, as well as the positive relationships between lack of detachment and work-nonwork imbalance. Family support, however, will buffer the positive relationship between lack of detachment and work-nonwork imbalance. These findings help to explain previous contradictory findings on the role of supervisor support adding also a theoretical perspective to explain them.

Socioeconomic status (SES), defined as one's social standing determined by the absolute level of material resources that one possesses (Tan, Kraus, Carpenter, & Adler, 2020), has spurred inquiry in the social sciences across time and disciplines. Despite the fact that SES has gathered ample attention from other disciplines, it remains underrepresented in the management literature (see Leana & Meuris, 2015 and Pitesa & Pillutla, 2019 for exceptions). This limits researchers' ability to explain employees' behaviors, as SES is a critical factor that influences individuals' attitudes and perceptions. To help advance the literature, our symposium features four papers that explore the influences of SES on different work- and non-work-related consequences—people's judgments of and reactions to rich versus poor people, lower-SES employees' experiences of cultural mismatch at work, and the impacts of upward-cross-class interactions. Taken together, these papers extend our understanding of the experiences of people from different SES backgrounds and generate new research directions for how the literature can move forward.

Algorithmic management has rapidly grown to play an influential role in managing workforces in large organizations. Platforms such as Uber, Upwork, and Deliveroo, are now able to coordinate and assign tasks of many workers, provide evaluation and feedback, and maximize the profit of organizations across different industries. While some have incorporated human input and interventions, many have the capacity to make fully automated decisions that are criticized as “human-out-of-the-loop systems”. Despite concerns, criticisms, and challenges, the future of work of algorithmic management is here. This symposium aims at exploring nascent attempts to view humans managed by algorithms (including both employees and managers) as more active, dynamic, and interactive actors of algorithmic management systems. In particular, this stream of research investigates the behaviors, reactions, and interactions of human actors in such systems. We address such questions as: How do app-workers’ experience at work, including emotional resources and self-regulation, fluctuate on a daily basis? How can we incorporate artificial intelligence (AI) in organizations without compromising employee decision-making and work motivation? How can gig workers exercise “voice” and “choice”, and eventually form a collective action against AI platforms? How do managers who formerly made promotion decisions react to those made by AI? How will they react if candidates selected by AI turn out to be underperformers?

Some of the presenters are based in Europe. We have been told that there is interest in our symposium by attendees in Taiwan. If possible, the 8 am - 12pm time slot would work best Thank you!

The first annual volume of Research in Organizational Change and Development (ROCD) was published by JAI Press in 1987. Since then, ROCD has provided a special platform for scholars and practitioners to share new research-based insights in the annually published research volumes as well as at Academy meetings. Due to COVID-restrictions the longstanding tradition of a yearly AOM ROCD presenter symposium was interrupted for 2020 and 2021. We now re-start and combine the contributions of volume 28, 29 and 30 authors as catalyst for a lively dialogue around thought-provoking and timely ideas in the realm of change research and practice. Chapter presentations will be grouped under five central questions that are directly connected with the 2022 AOM theme. These questions invite the exploration of the relational conditions, the inquiry methods, the role of technology, issues of identity and the necessary future research and theorizing that will position the field of organization change and development as an important player in “creating a better world together.” As an integral part of former Organization Development and Change (ODC) Division programs, we resume the tradition of volume authors engaging with participants in roundtable conversations. With the new format and the current pertinence of change-oriented questions, we envision a symposium that might also attract members of other divisions who are interested in researching, understanding, and impacting organizational and social change dynamics for world betterment.

The Human Aspect to Change: Emotions, Cultural Intelligence, and Mindfulness

Session Moderator: **Christopher James Lyddy**, *Providence College*

ODC: **Mindfulness as Resource: Emotional, Cognitive, and Motivational Paths to Burnout and Work Engagement**  

Author: **Christopher James Lyddy**, *Providence College*
Author: **Darren Jason Good**, *Pepperdine U.*
Author: **Catarina Ahlvik**, *Hanken School of Economics*

Dispositional mindfulness has been theorized as a personal resource in the Job Demands-Resources (JD-R) framework. However, this proposition has drawn minimal empirical investigation, masking if and how mindfulness influences burnout and work engagement. We develop and test a theoretical model for how mindfulness may benefit both burnout and work engagement by predicting job demands and job resources. Specifically, we theorize three mediating paths – emotional, cognitive, and motivational – between mindfulness and JD-R outcomes. In a cross-lagged two-wave field study of employees at four organizations, we found support for these relationships. More mindful individuals reported lower burnout and higher work engagement, relationships mediated through reported job demands (i.e., surface acting, workload) and job resources (i.e., task significance). These findings support the proposition that mindfulness acts as a personal resource that simultaneously benefits multiple outcomes. We conclude by discussing the research and practical implications of these results regarding mindfulness at work.

Paper is Available to Meeting Registrants Only.

 ODC: **“They Are One of Us” – Change Agents’ Emotion Management During Change Processes**

Author: **Minjie Gao**, *Imperial College Business School*

ODC Division Best Paper Based on a Dissertation
ODC Division Best Paper Finalist

Organizational changes are emotive events. Extant research has theorized the significance of emotions for such events. Missing from the existing scholarship is a deeper understanding of the mechanism through which those emotions are triggered and effectively and strategically managed. Drawing on data from an ethnographic study of change implementation in the English National Health Service, this study advances theory on emotion and organizational change in two ways. First, it complements existing research by suggesting that change recipients’ emotional response towards change can be triggered by their distinctive personal, organizational, and professional aspects. Second, it argues that change agents’ emotion management practice, based on professional embeddedness and proactive engagement, manifested by framing and tailoring, has important implications for managing emotions towards change. In particular, by illustrating change agents’ emotion identification and emotion management strategies, this paper highlights the role of professions in change management.

 ODC: **Three Types of Change in Cultural Intelligence Development**     

Author: **Valerie Alexandra**, *San Diego State U.*

ODC Division Best Paper Finalist

Increasing globalization and cultural diversity have accentuated the importance of developing cross-cultural competencies like cultural intelligence (CQ). Typically, scholars and professionals have viewed and operationalized CQ development as a quantitative change in mean CQ scores over time. This work argues that research and practice will benefit from expanding the operationalization of CQ development to include CQ reconceptualization and CQ measures’ recalibration because these types of change are also integral to the CQ development process. This work highlights that by not examining the presence of CQ reconceptualization and CQ measures’ recalibration before examining changes in mean CQ scores over time, scholars and practitioners could fail to recognize the presence of CQ development when it happens and create a threat to the substantive interpretation of findings leading to inconsistent and conflicting results. Methodologies for assessing different types of change in CQ development are discussed with implications for improving cross-cultural competence research and practice. The main contribution of this work lies in providing ways for improving the rigor of CQ development studies to enhance the quality of CQ development research and practice.

ODC: **Peer Coaching Groups to Bring Development for Everyone.**   

Author: **Roman Terekhin**, *Weatherhead School of Management, Case Western Reserve U.*

Peer coaching in groups (PCG), also called peer advisory groups or personal board of advisors by practitioners, has been praised as an effective tool for staff and leadership development. It is used by hundreds of business communities, such as Young Presidents’ Organization or Vistage; dozens of Fortune 500 companies, including Microsoft, Walmart, and Amazon; and prominent business schools. Since organizations’ approaches and settings vary widely, they could benefit from empirical data on the factors that make PCG effective for personal and professional development. However, there is scarce research on PCG in a business context, leaving practitioners without sufficient evidence-based answers. This empirical study employs critical incident interviews and thematic analysis to investigate the experiences of participants from 61 groups in 24 different PCG settings in a business context. The findings help to understand factors of engagement of peer coaches, relevant characteristics of matching peers in a group, nature of peer accountability, proper group size, and role of friendship in a peer growth group. A new research-based definition of PCG is provided. The results will facilitate further scholarly discussion in the field and better understanding among scholars and practitioners.

Complex Stakeholder Relationships in the Public Sector

Session Moderator: **Wenyao (Will) Zhao**, *U. of Waterloo*

This session brings together diverse perspectives on complex stakeholder relationships—spanning collaboration, regulation, contracting and investment—in the public sector.

PNP: Collaborative Policy Entrepreneurship on the Ground

Author: **Wenyao (Will) Zhao**, *U. of Waterloo*

Author: **Xiang Zhang**, *Fujian Normal U.*

Author: **Lina Ba**, *IORI, Wuhan Technology and Business U.; U. of Bath*

This paper introduces the concept of collaborative policy entrepreneurship – informally organized, innovative efforts around government policies to promote desired outcomes – to illuminate the ways in which lower-level bureaucrats and government employees collectively implement centralized policies that are considered “mission impossible” on the ground. Focusing on market regulation in China, this study explores how local market regulators and their immediate supervisors collaborate informally to circumvent pressures passed from above. This research reveals that, when implementing hard-to-implement policies, the “well-connectedness” and “well-resourcedness” of policy entrepreneurs as identified in existing policy entrepreneurship literature are afforded by the cross-hierarchical closeness between local agencies and their immediate higher-level agency. This paper expands the explanatory power of policy entrepreneurship to the novel locale of policy implementation. Our theorization and findings also complement and challenge the more rational views on the principal-agent relationship among organizational actors at different administrative levels.

Paper is NOT Available. Please contact the author(s).

PNP: NGOs and Environmental Governance in the Russian Federation: Perceptions of Firms and Regulators.

Author: **Jo Crotty**, *Edge Hill U.*

Author: **Sergej Ljubownikow**, *U. of Sheffield*

Against the backdrop of public awareness of the environmental challenges, this paper examines the potential for collaborative environmental governance in the Russian Federation. We examine regulators and firm perception of, and collaboration with, environmental Non-governmental Organisations (eNGOs) in three Russian regions. Our findings highlight that Russian firms rarely include eNGOs in their environment corporate social responsibility (eCSR) activities because they perceive them as ineffective, invisible, or irrelevant. Regulators do engage with eNGOs, but not as equal partners to form collaborative governance arrangements but utilise them merely as their subordinates and/or assistants.

Paper is Available to Meeting Registrants Only.

PNP: Cost Saving or Quality Shading? Exploring the Impact of Contracting Out on Organizational Outcomes

Author: **Obed Pasha**, *U. of North Carolina at Chapel Hill*

Author: **Teshanee Williams**, *North Carolina State U.*

The question of whether contractors provide better performance than direct public service delivery is critical to public administration theory and practice. While public choice theory expects contractors to offer higher service levels at lower cost, public administration literature largely remains skeptical of these claims. We contribute to this literature by studying the impact of contracting out on a variety of performance dimensions of local public transit industry by employing a two-way fixed-effects regression analysis on panel data of 415 local public transit agencies from 2008 to 2017. The findings suggest that contracting out decreases the effectiveness and quality of public transit services, with very little impact on efficiency and cost recovery. This research contributes to the literature and practice by offering evidence to support the quality shading hypothesis and demonstrating that contracting out can produce undesirable outcomes even in a context that provides clear and measurable performance indicators.

PNP: The State as a Small Shareholder: Small Equity, Huge Results

Author: **Wlamir Goncalves Xavier**, *Biola U.*

This article analyzes the effect of having the State as a non-controlling shareholder in Business Groups (BG) during times of institutional environment instability. The main argument is that small equity holdings by the government represent a way to establish a political connection, and the consequences include performance improvement in more than one dimension. Our final sample consisted of 1,502 observations of 285 Brazilian BGs, from 2001 to 2010. Findings suggest that the institutional environment significantly affects BGs performance and size, and that this effect notably moderated when the government is a minority shareholder.

Ethics in Organizations and Employee Performance

Session Moderator: **Muhammad Waheed Akhtar**, *COMSATS U. Islamabad, Sahiwal Campus*

SIM: Jumping Through Hoops: The Consequences of Perceived Organizational Obstruction

Author: **Muhammad Waheed Akhtar**, *COMSATS U. Islamabad, Sahiwal Campus*
Author: **Thomas Garavan**, *School of Business, National College of Ireland, Dublin, Republic of Ireland*
Author: **Muhammad Asrar-ul-Haq**, *COMSATS U. Islamabad, Sahiwal Campus*
Author: **Zainab Khatoon**, *COMSATS U. Islamabad, Sahiwal Campus*
Author: **Kashif Aslam**, *COMSATS Institute of Information Technology*

The study examines the intervening role of surface acting between perceived organizational obstruction and employee outcomes. We hypothesized that rejection sensitivity can weaken the relationship between perceived organizational obstruction and surface acting. In line with the social cognitive theory, the moderated-mediation model explains how perceived organizational obstruction affects employee outcomes through surface acting at the different levels of rejection sensitivity. Data is collected using a time-lagged design from 221 employees and peers working in the service sector. Results showed good support for the moderated-mediation model. Perceived organizational obstruction was found a significant predictor of employee outcomes via surface acting at the different levels of rejection sensitivity among employees. Future research directions have been discussed along with theoretical and practical implications.

SIM: Customer Mistreatment and Employee Performance in Call Centers: the Role of Brand Identification

Author: **Sarah Boujendar**, *U. of Toulouse I, Capitole*
Author: **Neil Conway**, *Royal Holloway, U. of London*

Customer mistreatment of employees is a major concern to service sector workers, particularly in call center organizations. This article contributes to our knowledge of customer mistreatment of employees and its effects on employee performance. Using the conservation of resources (COR) theory, we examined the daily relationship between customer mistreatment of employees in call centers and their daily performance as captured by the two indicators of daily productivity and employee sabotage. Further, we considered the moderating role of employee brand identification to mitigate the effect of customer mistreatment on employee performance. We collected data from 43 customer service employees for 10 consecutive working days at a call center in Morocco. Results showed that customer mistreatment of employees decreased employee performance. Employee identification with the company's brand moderated the effect of customer mistreatment on employee sabotage and employee productivity, such that customer mistreatment did not associate with employee performance for employees who identified with the brand, and customer mistreatment positively associated with employee sabotage and reduced productivity for employees with low brand identification.

SIM: Effects of Egalitarianism (Low SDO) on Workplace Vigilante Behavior: The Role of Moral Outrage

Author: **Varun Sharma**, *Doctoral Student at Indian Institute of Management Lucknow*
Author: **Nishant Uppal**, *Indian Institute of Management, Lucknow*

Workplace Vigilante Behavior refers to the monitoring of norm violation and delivering unauthorized punishment to the norm violators in the workplace. The current study attempted to uncover the antecedent of workplace vigilante behavior and proposes Egalitarianism (low SDO) as an antecedent to such behavior using Social Dominance Theory (SDT). The current study proposes that low SDO employees feel morally outraged which instigates them to display workplace vigilante behavior. Further, we also contend that low SDO employees feel more morally outraged when the norm violator is of high socioeconomic status (SES), which further motivates them to display workplace vigilante behavior. Thus, the current study proposes a moderated mediation model where moral outrage is the mediator and offender status (high SES) is the moderator. Using a two-wave survey design administered on 246 employees of public sector organization in India, the current study finds empirical support of its propositions. The results lend support to our proposed moderated mediation model and the theoretical contributions, practical implications along with limitations and future research avenues are discussed in the paper.

Entrepreneurial Strategy

Session Moderator: **Andrea Coali**, *Bocconi U.*

STR: Learning and Letting Go: Relatedness, Complexity, and the Advantage of Entrepreneurial Spinouts

Author: **Mo Chen**, *Robert H. Smith School of Business, U. of Maryland*
Author: **Aseem Kaul**, *U. of Minnesota*

In this study, we examine the comparative advantage of different types of firms in entering new markets. We distinguish between three types of entrants—diversifying entrants, entrepreneurial spinouts, and de novo startups—and use a simulation model to study the relative performance of these three entrant types in both the short- and the long-run as a function of the complexity of the new market and its relatedness to existing markets. We find that while diversifying entrants generally have superior initial performance, they are also limited in their ability to adapt to new markets, and only retain their advantage over time if they come from highly related markets and can realize strong economies of scope. Absent these conditions, entrepreneurial spinouts from moderately related markets dominate, especially if complexity is moderate to high, because they have both an adaptation advantage relative to diversifying entrants and a learning advantage relative to other startups. Our study thus offers a contingent theory of new entrant advantage, while highlighting the unique advantage of entrepreneurial spinouts in new markets.

STR: Understanding Probabilistic Reasoning in Strategy

Author: **Andrea Coali**, *Bocconi U.*
Author: **Alfonso Gambardella**, *Bocconi U.*
Author: **Elena Novelli**, *Bayes Business School*

Decision-making processes in the context of innovation and entrepreneurship are characterized by high uncertainty and prone to decision-making biases. In this paper we explore the implications of adopting what we call a scientific approach to decision making, based on probabilistic reasoning. We develop a structural model to disentangle and identify two separate but complementary effects of this approach. The estimation of our structural model, based on data from two randomized control trials (RCTs) involving early stage start-ups, shows that scientific entrepreneurs tend to be more conservative in assessing the value over their ideas, an effect that we call debiasing effect. It also shows that, conditional on their decision to remain operational, scientific entrepreneurs tend to perform better, an effect that we call learning effect. We finally show how the selection induced by the debiasing effect does not significantly increase the rate of false-negatives for treated firms compared to the control group. We discuss the implications for future research and entrepreneurial practice.

STR: When Do Startups Scale? Large-scale Evidence from Job Postings

Author: **Saerom Lee**, *The Wharton School, U. of Pennsylvania*
Author: **J. Daniel Kim**, *The Wharton School, U. of Pennsylvania*

Scaling at the right time is a critical challenge for high-growth startups, but little is known about this timing due to a lack of empirical measurement. As startups formally hire professional managers and sales personnel to accommodate for exponential growth in employees and customers, we propose that the timing of scaling can be measured using the first manager and sales job postings. Leveraging a dataset of online job postings, we show that startups, on average, begin scaling four years after founding. We also find that, despite potential first-mover advantages, early scalers are more likely to fail but not more likely to achieve an IPO or a large acquisition. We theorize that this increase in failure occurs because scaling early can curtail experimentation on product-market fit.

STR: Business Models and Strategy Configurations in Small and Medium Enterprises

Author: **Luigi Mosca**, *Imperial College London*
Author: **Diego Campagnolo**, *U. of Padova*
Author: **Martina Gianecchini**, *U. of Padova*

We adopt a configurational approach for exploring how Small and Medium Enterprises combine business models design themes and competitive strategies with each other. Analyzing a sample of 96 manufacturing firms, we identified four equifinal configurations leading to high performance and five equifinal configurations associated with low performance. Three out of four high performing configurations combine at least one of the four business models design themes and a competitive strategy, while the fourth configuration relies only on a firm's competitive strategy. Configurations of low performing SMEs, instead, rely on the absence of the differentiation strategy, while the niche market strategy can be present or absent according to the different combinations with the business model design themes. Our study contributes to research on business models and to debate about the relationship between business model and strategy.

Paper is Available to Meeting Registrants Only.

Author: **David K. Reetz**, *Technical U. of Munich*

Research suggests that to develop strategy under uncertainty firms need to overcome the incomplete knowledge problems they face by flexibly changing their initial strategies in response to increasing knowledge. However, we still lack understanding of the ex-ante design of strategies under uncertainty and the processes through which firms may generate knowledge in order to pursue their strategic intentions. We extend current theory about strategy under uncertainty through an inductive theory building study of the evolving strategy of a major technology startup—in the course of eight years since it set out to commercialize an innovative technology and to “accelerate the next industrial revolution.” We offer novel theoretical understanding of how strategic postures are enacted and theorize the previously unexamined process through which firms can transition between strategic postures. Our insights advance research on strategy making under uncertainty, suggesting that how firms change strategies depends on the strategic postures they adopt, as different postures rest on different approaches to knowledge generation. Strategic postures thus affect not only firms’ strategies but also the approaches through which such strategies are developed in the first place.

STR: **Learning How Others Learn: Target Firm Knowledge Spillover and Post-Acquisition Knowledge Leverage**  

Author: **Seungho Choi**, *Ewha Womans U.*

Author: **Sang-Joon Kim**, *Ewha Womans U.*

Author: **Seung-Hyun Lee**, *U. of Texas at Dallas*

If knowledge spillover benefits industry bystanders at the expense of the original innovators, why do firms still acquire the technology of target firms that are already widely utilized by others? In high-tech industries, being different is the very reason for survival that provides value and positional advantage to firms. However, it is also the same reason that increases heterogeneity among firms, which limits the ability of acquiring firms to leverage acquired knowledge. Under this circumstance, other firms successfully applying target knowledge provide acquiring firms with opportunities to observe how the focal technology can be utilized. Using technology acquisitions of U.S. firms in highly innovative industries, we find that knowledge spillovers from target firms before an acquisition enhance post-acquisition knowledge leverage activities for acquiring firms. Furthermore, acquiring firm's prior experience in utilizing acquired knowledge diminishes the value of the knowledge spillovers. In contrast, knowledge similarity between acquiring and recipient firms increases the value of the knowledge spillover to acquiring firms. These findings show that the pre-acquisition spillover activities of target firms can be considered as vicarious learning opportunities for acquiring firms to create new knowledge after an acquisition.

STR: **Parental Innovation Imprinting on CEO and Firm Knowledge Acquisition** 

Author: **Puya Kahhali**, *U. of California, Riverside - Anderson Graduate School of Management*

Author: **Alexandru Roman**, *CSUSB*

Author: **Haibo Liu**, *U. of California, Riverside*

In this paper we theorize that a firm's knowledge acquisition will be shaped by its CEO's experiences during his/her developmental years. Drawing on imprinting theory, we posit that CEOs whose parents had occupations requiring more innovation skills, will be more likely to engage in knowledge acquisitions compared to other CEOs. They acquire knowledge both externally - by acquiring other firms and internally - by investing more in research and development (R&D). Surprisingly, we find that these CEOs prefer incremental knowledge acquisition that is closely related to their firm's existing knowledge. We also expect the main effects to be stronger following better firm performance and to weaken with CEO age. We find support for our hypotheses within a dataset of Fortune 100 firms between 2000 and 2016.

STR: **Do Outside CEOs Change Firm Strategy More (or Less) Than Inside CEOs? The Case of Tech Redeployment**

Author: **Leonardo Mayer Kluppel**, *Ohio State U.*

Author: **Jaideep Anand**, *Ohio State U.*

Author: **Patel Gbedjemaiho**, *The Ohio State U. Fisher College of Business*

Do outside CEOs change firm strategy more (or less) than inside CEOs? This study aims to investigate how and under what conditions outside versus inside CEOs impact innovative strategic change. We begin by observing the fact that there is a commonly held belief in both popular press and research that outside CEOs act as change agents and drive new strategies in firms. Yet, the literature does not offer clear empirical results to support this belief. To close this gap, we compared the change in innovation direction observed in firms led by outside CEOs versus inside CEOs. We measured the change in R&D direction by calculating the angle between vectors representing the yearly patent portfolio in the technology space. This measure allows us to separate the amount of innovation from the innovation direction. Results from panel data on publicly traded firms in the United States from 1992 to 2017 suggest that outside CEOs are associated with fewer changes in firms' R&D strategic orientations than inside CEOs. These results show that strategic decision-making is context-specific and that it takes some time for outside CEOs to converge to inside CEOs' levels of innovative strategic change.

STR: **Hacking Through the Theoretical Thicket of R&D Research** 

Author: **Ambra Mazzelli**, *MIT Sloan School of Management*

Author: **Wei Yu**, *National U. of Singapore (NUS)*

Author: **Jipeng Fei**, *National U. of Singapore*

Author: **Pankaj C. Patel**, *Villanova U.*

Firm R&D spending has long played a prominent role in management research. However, concurrently with the profusion of scholarly work on firm R&D spending, researchers across a variety of streams have employed R&D spending to tap into markedly different constructs. This has resulted in a theoretical thicket. In this paper, we hack through this thicket by reviewing and comparing the predictive power of the research traditions on R&D spending as a variable of interest. We find R&D spending to be the most reflective of problemistic and slack search initiated and conducted by a dominant coalition of inside directors based on internal knowledge and information.

Women and Contemporary Challenges of Working in the Home

Session Moderator: **Aiman Nida**, *Indian Institute of Management, Calcutta*

GDO: **Intersectionality and Domestic Work: Gendered Impact of Covid-19 In India** 

Author: **Aiman Nida**, *Indian Institute of Management, Calcutta*
Author: **Randhir Kumar**, *Indian Institute of Management, Calcutta*

There is a dearth of empirical studies that documents the experiences of women, working in the informal sector, in dealing with Covid-19 induced hardships. There is a knowledge gap on how various informal sector workers survived the crisis and what role social security and social support played in bailing out the distressed workers. Using domestic workers of Lucknow as a case in point, this empirical research contributes to understanding how intersectionality plays a role in their ability to benefit from the (formal) social security and (informal) social support system. The study reveals four specific typologies of domestic workers viz – precarious subjugates, marginally penurious, enterprising dexterous, and networked ingenious, based on their differential ability to gain from formal social security and (informal) social support. The study found that rather than social support from close friends and relatives, the domestic workers relied more on the aid provided by the government and client households. Conceptually, this article integrates the formal social security and informal social support system to provide a holistic view of the ground realities of how women in informal sector survived the Covid-19 induced hardships.

GDO: **Is There an “Ideal Remote Worker”? The Gendered Implications of the Rise of Remote Work**   

Author: **Claire Daviss**, *Stanford U.*
Author: **Erin Macke**, *Stanford U.*
Author: **Emma Williams-Baron**, *Stanford U.*

Scholars have previously theorized that employers believe an “ideal worker” is completely committed to work, which conflicts with widely held cultural beliefs of “mothers” as primarily devoted to caregiving. These theories assume employers utilize traditional work arrangements, including an in-person setting. But the rapid expansion of remote work, often assumed to be a more flexible work arrangement, raises the question: is there an “ideal remote worker?” Using an online survey experiment, we explore evaluators’ gender and parental status preferences when assessing candidates for in-person or remote positions. We find that the effect of parental status on certain hiring outcomes is negative and similar in magnitude for women and men candidates for in-person positions. However, among candidates for remote positions, the effect of parental status is more negative for women than for men. The difference in parental status penalties across remote versus in-person positions is explained by participants’ consistent beliefs that mothers are less committed to work than nonmothers, combined with increased concern with invisible productivity in remote work. We conclude that while the rise of remote work may have appealing features for parents, business leaders will need to ensure that these benefits are equally accessible to women and men.

 GDO: **Consequences of the Unequal Division of Cognitive Labor on Women’s Work Outcomes During the Pandemic**

Author: **Anja Krstic**, *York U., Toronto*
Author: **Christianne Varty**, *Schulich School of Business, York U.*
Author: **Winnie Shen**, *Schulich School of Business, York U.*
Author: **Ivona Hideg**, *Schulich School of Business, York U.*
Author: **Janice Lam**, *Schulich School of Business, York U.*

The unequal division of unpaid labor between working women and their male partners remains a barrier to achieving workplace gender equality; women consistently bear responsibility for this “second shift” and suffer career consequences as a result. The COVID-19 pandemic has exacerbated these inequalities. In addition to managing their current work and household demands, women may be disproportionately engaged in a less visible form of labor – cognitive labor – during the pandemic, which constitutes a hidden “third shift” and may have consequences for women’s work outcomes. Integrating theories of gender roles and conservation of resources, we theorize that women (vs. men) are responsible for a greater proportion of cognitive labor within their households during the pandemic, leading to increased emotional exhaustion and undermining work outcomes. Data (N = 263) from our main study collected weekly for eight weeks near the beginning of the pandemic reveals that women (vs. men) reported engaging in a disproportionate amount of cognitive labor, which led to increased emotional exhaustion. In turn, emotional exhaustion was related to greater turnover intentions and undermined career resilience. Further, results of a follow-up study provide additional insights into daily experiences of cognitive labor. Our findings suggest that women’s heavy second and third shifts during the pandemic threaten to set back progress toward workplace gender equality.

GDO: **Gender and the Impact of the Transition to Work from Home**    

Author: **Qin Zhou**, *New Mexico State U.*
Author: **Carol Flinchbaugh**, *New Mexico State U.*

We examine the distinctiveness of female and male employees’ work-family conflict experiences as they transition to working from home (WFH) and how different experiences affect stress and job satisfaction divergently by surveying 264 employees who worked on-site before COVID-19 and were forced to transition to WFH due to the pandemic. Integrating boundary management theory, the COR theory and the job satisfaction literature, we tested gender differences in both WFC (work to family conflict) and FWC (family to work conflict) and the resulting effects on job satisfaction and stress after working from home. We find that both WFC and FWC decrease when employee worked from home, with WFC decreasing more. Besides, the surveyed employees report lower stress and higher job satisfaction when working from home. Female employees experience greater reduction in both WFC and FWC and more improvements in stress and job satisfaction than male employees. The changes in WFC and FWC after working from home have mediation effects on the relationship between gender and the changes in stress and job satisfaction. Our study provides a better understanding and prediction of the impact of working from home by focusing on exogenous transitions to WFH due to the pandemic, moving beyond self-selected samples in previous studies. Besides, our study contributes to the literatures on work-family interface and remote work by addressing the gender gap in the earlier research. Furthermore, our study has implications for organizational policies that alleviate the burden on employees, especially female employees.

 **IM: How Immigrant CEOs Influence Corporate Social Irresponsibility**  

Author: **Juan Bu**, *Indiana U. Bloomington*
Author: **Stephanie L. Wang**, *Indiana U., Bloomington*
Author: **Yejee Lee**, *Indiana U. Bloomington*
Author: **Dan Li**, *Indiana U.*

Drawing insights from the place attachment theory and the upper echelons perspective, this study establishes a link between CEO immigration background and the geography of firms' corporate social irresponsibility (CSI) incidents. We theorize that immigrant CEOs tend to develop a psychological bonding with their homeland countries, which consequently stimulates place-protective behaviors towards their homelands, leading to fewer CSI incidents in the CEOs' homeland countries than others. We then explore two boundary conditions—rootedness and reinforcement—that can further enhance immigrant CEOs' attachment to their homelands and moderate the relationship between CEO immigration background and the geography of their firms' CSI incidents. With a longitudinal dataset of S&P 500 firms during the period of 2007-2020, we find that a firm led by an immigrant CEO tends to have fewer CSI incidents in the CEO's homeland country compared to other countries, and such effect is stronger for CEOs who immigrated as an adult rather than as a child and when homeland countries become more important (i.e., having greater sales growth) to the companies. Our findings provide important extensions to the migration research, the upper echelons theory, and the CSI research.

IM: Linking Ethical Leadership to Extra-Role Behaviours: Insights from Temporal Organizations

Author: **Shoaib Shafique**, -

The study aims to explore the relationship between ethical leadership and employees' project citizenship behaviour (PCB) through the mediating role of communal orientation and moderating role of harmonious work passion. To test the hypothesized nexuses, time-lagged data were collected from 353 employees working in various project-based organizations. AMOS and Hayes' PROCESS macro were employed to analyze the proposed associations. Study findings provide empirical evidence for the direct and indirect association between ethical leadership and PCB via communal orientations. Results also indicate that employees' harmonious work passion further pronounces the relationship between ethical leadership and PCB. Despite the theoretical relevance of ethical leadership for improving employees' PCB, there is a surprising paucity of evidence about the ethical leadership-PCB link. Specifically, no study has examined the direct and indirect association between ethical leadership and project citizenship behavior. We contributed to filling this gap and bringing the contextual and dispositional antecedents of PCB to the fore.

 **IM: Exemplary Outsiders? Immigrant CEOs and Financial Misrepresentation**    

Author: **Michael Juergen Mueller**, *Copenhagen Business School*
Author: **Taco Reus**, *Erasmus U. Rotterdam*

We examine the role of CEOs' national origins on financial misrepresentation. Building on the economic theory of crime, we propose that, because immigrant CEOs are subject to more scrutiny and face more severe punishment in case of misconduct, immigrant CEOs will be less likely to misrepresent their firms' financial results. We find evidence for this proposition for a sample of US-headquartered Information and Communications Technology firms that went public between 2000 and 2015. Specifically, we find that firms with an immigrant CEO have a lower likelihood of financial misrepresentation than native-led firms, particularly when immigrant CEOs are also their firm's founders. Our paper contributes to research on corporate misconduct, immigrant entrepreneurship, and the broader discussion on the relationship between immigration and crime.

Strategic Entrepreneurship and Family Firms

Session Moderator: **Yonghoon Lee**, *Hong Kong U. of Science and Technology*

STR: Succession Concern and Acquisitions of Family Firms   

Author: **Jingyuan Li**, *Hong Kong U. of Science and Technology*
Author: **Yonghoon Lee**, *Hong Kong U. of Science and Technology*

Succession concern can substantially influence how family firms make strategic choices differently from nonfamily firms. However, identifying the effect of family succession concern is challenging because it is often confounded with the effect of other socioemotional goals or inherent characteristics of family firms. Leveraging the reform of one-child policy in China, which exogenously increased family owners' expected number of children, we investigate how the increase in succession needs affects family firms' acquisition activities. Using data on Chinese listed firms, we find with a difference-in-differences analysis that the policy reform significantly increased the number of acquisitions undertaken by family firms compared with non-family firms. The effect is stronger when the board chair belongs to the age cohort affected most by the one-child policy, and when firms are located in regions where the family planning was more strongly enforced. We also find that family firms with the owners' children already involved in the management are affected less than other family firms without the owners' children involved. Finally, we find that family firms undertook more unrelated acquisitions than other types of acquisitions after the policy reform, an arrangement that would help owners mitigate the sibling in-fight in family succession.

Paper is NOT Available. Please contact the author(s).

STR: Does Entrepreneurial Orientation Help or Hurt Lone-Founder Firms in Times of Crisis? 

Author: **Susanne Koster**, *Erasmus U. Rotterdam*

We investigate whether lone-founder firms respond differently to systemic economic crises than family-controlled firms and non-family firms. We theorize that lone founders self-identify as entrepreneurs and are prone to pursuing an entrepreneurial orientation more than the leaders of other types of firms during times of crisis. Using a global dataset of publicly listed firms, we find that lone-founder firms set themselves apart by reducing their R&D intensity less than the other firm types during systemic crisis years, even though they are impacted as severely by the crisis as the other types of firms. This effect, however, only holds for eponymous lone-founder firms, whose leadership's entrepreneurial self-identification with the firm is strongest. Stronger board vigilance by independent directors stimulates lone founders to preserve R&D intensity in times of crisis. We also find that lone-founder firms are more resilient after the crisis, but less resilient when these firms are eponymous, suggesting that the appetite for long-term risk-bearing investments of the latter can be excessive. These results demonstrate the conditions under which the entrepreneurial orientation of lone-founder firms helps or hurts in times of crisis.

Paper is NOT Available. Please contact the author(s).

STR: An Investigation into Digital Strategic Entrepreneurship by a pair of Family Business Groups

Author: **Abhisek Banerjee**, *Doctoral Student at IIM Calcutta*

How do established firms entrepreneurially leverage digital technologies for strategic renewal is an important scholarly question. This paper examines strategic entrepreneurship by two of the largest family business groups in India that have been undertaking many strategic entrepreneurial initiatives to leverage a suite of digital technologies to fundamentally reposition themselves in the emerging digital economy. It underscores strategic entrepreneurship as the primary means to achieve digital technology driven strategic renewal. It is observed that when an established firm undertakes digital strategic entrepreneurship, the strategic leadership of the firm has to simultaneously deal with two dominant logics, one rooted in legacy and the other embedded in emerging digital entity. A business group structure helps in dealing with simultaneous exploration and exploitation more effectively. The study advances a set of novel propositions on the entrepreneurial strategies of established firms that leverage digital technologies to undertake strategic entrepreneurship and contributes to the literatures of strategic entrepreneurship, digital entrepreneurship, strategic leadership and strategic renewal.

Technological Change Track: Change, Diffusion, and Adoption

Session Moderator: **Francesco Rullani**, *Cà Foscari U. of Venice*

TIM: A Method for Technology Diffusion Monitoring: AI Diffusion among S&P 500 Companies 

Author: **Tomasz Mucha**, *Aalto U., Department of Industrial Engineering and Management*

Author: **Timo Seppälä**, *Aalto U., Department of Industrial Engineering and Management*

Technology monitoring is fundamental to R&D planning, technology management, and strategic decision-making. Despite its importance, monitoring the diffusion of technologies at the commercial lifecycle stage relies on crude methods, such as “snapshot-in-time” surveys and keyword counts. These approaches are in stark contrast to novel and rapidly advancing methods for monitoring technologies at the precommercial lifecycle stages, such as fundamental scientific research and applied R&D. We address this imbalance by proposing a specialized method for monitoring the commercial diffusion of technology. The method recognizes phases in technology adoption by organizations and captures the temporal progression of the diffusion process. One of the central elements of the proposed method is the classification of text, which relies on qualitative content coding. Our approach to coding leverages the insights from innovation diffusion research and is sensitized specifically to detect phases in technology adoption by organizations. The approach is illustrated with the case of artificial intelligence diffusion among S&P 500 companies during the 2004–2019 period. Our main contribution is a new method for monitoring the commercial diffusion of technologies. It provides transparent, replicable, updatable, and granular results, which can complement survey-based technology monitoring.

TIM: An Agent Based Model Exploring the Relationship Between Technology Adoption and Consumer Acceptance

Author: **Lucy Margaret McGowan**, *U. of Missouri, Columbia*

The phenomenon of technical change is understood to spur economic development and growth (Schumpeter, 1939). The explanation for economic growth from technical change is often causally linked to market structure, providing an explanation of the phenomenon from a macro view only (Ruttan, 2000). However, through a careful reading of historic writing on technical change, a multi-level approach emerges that has never been rigorously formalized for testing and critique. In response to this, this paper explores the lower level of analysis of technical change through an agent-based model of technology adoption by firms. This agent-based model is used to support the development of theory about the relationship between technology adoption by firms and uncertainty from consumer demand.

TIM: “Surfing” Radical Technological Change. Knowledge Relatedness and Firm’s Inventive Impact 

Author: **Luca Mongelli**, *IESE Business School*

Author: **Francesco Rullani**, *Cà Foscari U. of Venice*

Radical technological changes often render obsolete most of the knowledge held by firms. What kind of knowledge then, allows firms to adapt in the presence of radical technological change? Research suggests that firms can adapt by deploying in-house knowledge within the domain that the technological change is based on. However, it is also conceivable that knowledge developed in other domains and/or acquired from external sources may assist adaptation in the face of such change. Research does not address this issue and is, therefore, silent about what is the best mode of knowledge recombination to adapt to radical technological change. To help resolve this issue, we apply an inductive empirical strategy and analyze patents granted within photography, in the context of the industry’s 30-year paradigm shift from chemical to digital technology (1974–2004). Our results show that leveraging prior own experience within the emerging knowledge domain has positive, but smaller, effects on firms’ inventive impact (measured as forward citations), than leveraging knowledge from related, and even unrelated domains (albeit to less extent). Moreover, when the leveraged knowledge is external, this improve inventive impact for all types of knowledge domains

TIM: 5G? No, Thanks! 4G is Just Fine - How to Foster the Technology Adoption of 5G   

Author: **Borbála Szedmák**, *Corvinus U. of Budapest*

Author: **Roland Z. Szabó**, *Széchenyi István U.*

Author: **Kamilla Korbuly**, *Corvinus U. of Budapest*

The telecommunication industry is especially exposed to technological development, as applying the latest technology is inevitable to provide high-quality service. However, the emergence of a new technology (5G) is not sufficient by itself to replace its predecessor (4G), it depends on the adoption, whether the technology will achieve success or disappear. Although 5G carries tremendous potential and having an enormous economic significance, it is surrounded by doubts of the society and a lack of B2C consumer interest. In accordance with the literature on technology acceptance and our empirical test, based on 504 B2C consumer responses, we propose a model, by summarizing factors that influence the adoption of 5G. Our results confirm that both the attributes of the technology (usefulness, enjoyment, trialability, and communicability) and personal factors (emotions, innovativeness, online entertainment habits, and being well-informed) affect the felt need of 5G, which determine the adoption intention.

Technology, Policy and Society Track: Government Incentives, Connections, and Ownership

Session Moderator: **Marek Giebel**, *Copenhagen Business School*

TIM: A Systematic Literature Review of State Ownership and Innovation

Author: **Mengyuan ZHU**, *U. of Technology Sydney*
Author: **Wen Helena Li**, *U. of Technology, Sydney*
Author: **Krithika Randhawa**, *U. of Technology, Sydney*
Author: **Yaowen Shan**, *U. of Technology Sydney*

Recently, there has been growing research interest in the effects of state ownership on innovation. However, the topic is still underexplored, and insights from existing literature are theoretically and empirically inconsistent. Therefore, we systematically review the previous literature to clarify existing arguments, provide a comprehensive understanding and guide future research. With a systematic literature review method, we provide descriptive analysis on prior studies (e.g., journals, publication years, methods, and sample countries), synthesize the two most critical theories (i.e., agency theory and institutional theory) to explain the effects of state ownership on innovation, and suggest an integrative framework of previous literature. Finally, we conclude by claiming three research gaps that should be further addressed: (1) lack of discussion on the heterogeneity among SOEs, (2) lack of discussion on SOEs' green innovation, and (3) lack of discussion on the variances of government impact.

TIM: Transparency and the Social Benefits of Government Funded Research

Author: **Marek Giebel**, *Copenhagen Business School*

I investigate the effect of increasing transparency on the social benefits of government funded research. For this purpose, I exploit two laws enacted in the United States related to government funding and improved information provision. Using these two information, I analyze how the change in information disclosure affects follow-on innovation of government-funded research. The results show an elevated degree of innovation building on federally funded patents after transparency increased due to additional information. I find that this effect could be attributed to a decrease in search costs and asymmetric information. Further results imply that patents funded by procurement contracts show a stronger increase in follow-on innovation compared to those funded by grants. Considering the actual amount awarded, I find a positive relationship and that patents from projects with a medium level of funding benefit in particular. These results imply a positive effect of more transparency on innovation.

Paper is NOT Available. Please contact the author(s).

TIM: Peer Effect of Government Awards: The Case of R&D Certifications in China

Author: **Daxin Sun**, *Shanghai Jiao Tong U.*

Prior research on the competitive dynamics and strategic imitation has emphasized how firms strategically respond to peer pressure by following their actions. While this stream of literature has mostly focused on firms' substantive engagement and similar behavior, no effort has identified the state incentive and extended it to the innovation field. Using the longitudinal dataset of Chinese publicly firms from 2001 to 2016, this paper first attempt to integrate the peer effect research, state sponsorship literature, and the literature on the political championships, studying how peer firms' R&D certifications shape the firms' innovation outcomes. Specifically, we argue that when peer firms receive more R&D certifications from government, firms will perceive more peer pressure and then are more likely to engage in innovation activities in order to attract attentions, resources, and favorable policies from policy makers and maintain their competitive advantages. Furthermore, we explore the contingency values of government growth target, political career incentive, and government innovation focus, to undertake how the political championships mechanism coordinates with market competition logic. Our work enriches the knowledge of peer effect and the innovation research by clarifying interplay between political and market competition.

TIM: An Asset or a Liability? Disentangling the Effect of Political Disconnection on Firm Innovation

Author: **Dayuan Li**, *Central South U.*
Author: **Fei Tang**, *Central South U.*

Existing studies have assessed whether political connections benefits or impedes business success, while study about the relationship of firm's political disconnection with firm innovation is almost devoid. We thus frame our study with attention-based view and adopt difference-in-difference (DID) method to empirically test the innovation effect of political disconnection. We further identify the mechanisms behind this relationship. With the dataset of privately-operated China's firms for 2008-2017, the results show that political disconnection significantly and positively affects firm innovation; the disconnected effect on firm innovation is more pronounced when firms' CEO and chairperson are the same person, or firms have concentrated ownership structure and older directors. These findings are robust to alternative measurement of variable, and we utilize both Heckman two-stage model and Placebo test to mitigate the endogeneity issues. This study sheds light on political disconnection and its effects on corporate strategies.

Technological Change Track: Environment and Technology Evolution - Exogenous and Endogenous Drivers

Session Moderator: **Aldona Kapacinskaite**, *Department of Management and Technology, Bocconi U.*

TIM: Solutions Looking for Problems: Idle Capacity, Repurposing and the Technological Landscape   

Author: **Aldona Kapacinskaite**, *Department of Management and Technology, Bocconi U.*

Prior research suggests that availability of complementary assets drives adoption of new technology. However, while firms may possess relevant complementary assets, they often fail to deploy them for new technology adoption. This study documents that the uptake of a new technology is more likely when necessary complementary assets are idle, and their redeployment costs are low. Empirically, I exploit an oil price decline in 2014 and study technology choices by firms in the wind power industry. Wind farms built by firms with oil and gas complementary assets following a steep oil price decline were more likely to adopt new technology, chiefly larger wind turbines, relative to other competitors. The effect is driven by wind farms located near existing oil and gas fields, suggesting that redeployment costs are an important driver of technology choice. This study contributes to technology management and resource redeployment literatures, documenting resource repurposing as a driver of technological change.

TIM: Building on Solid Ground: Foundational Knowledge and the Dynamics of Innovation

Author: **Wesley Greenblatt**, *MIT Sloan School of Management*

How do changes in knowledge uncertainty dynamically shape the rate and direction of innovation? I develop a novel typology of knowledge based on the degree of uncertainty and synthesis across individual pieces of knowledge. To empirically explore the role of foundational knowledge—integrative knowledge with low uncertainty—I study how 135 clinical practice guidelines published 1990-2011 by cardiology professional medical societies shape the use of the 14,390 underlying articles and associated research subfields they incorporate. Employing a difference-in-differences approach, I find articles cited by a clinical practice guideline have a marked increase in citations, acting to diffuse the underlying knowledge by bringing in new researchers, compared to control articles carefully matched on observables. Subfields included in the guideline have a large and sustained increase in the flow of articles into the field, which are more likely to be themselves highly cited. Rather than the aperture of subsequent innovation narrowing, subfields shift towards more disruptive, more intellectually distant, and more translational research, with only a small increase in incremental clinical research. In particular, this shift is larger for those subfields that are more technologically immature. As developing foundational knowledge requires the investment of resources and time, this shows how commitment can facilitate breakthrough innovation.

TIM: Firms as Landscape Shapers: Vying for Dominance through Shaping the Photovoltaic Cell Industry 

Author: **Charlotte Jacobs**, *Louisiana State U.*

Author: **Gwendolyn Kuo-fang Lee**, *U. of Florida*

The literature on the interaction between firm and environment lacks a systematic distinction between adaptation and shaping. A clear delineation of shaping can shed a new light on the cause and effect in the co-evolution of firms and their environment. Our study creates an empirical delineation based on the photovoltaic cell industry between 1976 and 2016. Using this delineation, we examine which firms are more likely to shape their business environment. Our analysis shows that the probability of shaping increases with the firm's intentional design efforts per the vision of the Mendelian executive that amplify knowledge recombination and customer expectations. These efforts, as antecedents of shaping, also predict comparatively the probabilities of shaping, adaptation and exit as responses to the emergence of a dominant design.

TIM: Impact of Portfolio Specialization and Activeness on Firm Survival: Evidence from Drone Industry

Author: **Indu Khurana**, *Hampden-Sydney College*

Author: **Dev K. Dutta**, *U. of New Hampshire*

This study examines the impact of a product portfolio strategy on firm survival in the global unmanned aerial vehicles (UAV) or drone industry, which serves as an emerging innovation ecosystem. Utilizing a sample of firms from across the world in the UAV industry, we find that firms operating with a product portfolio that is specialized as well as active face a lower hazard of exit compared to firms that operate with a portfolio that is either less specialized or less active. Our findings have important implications for firm strategy, positioning, and interaction with new technologies within an emerging innovation ecosystem.

**Technology Strategy and Competition Track: Thinking
Strategically about Network Effects**
Thinking Strategically about Network Effects

Organizer: **Joe N. Ploog**, *UCL School of Management*
Organizer: **Joost Rietveld**, *UCL School of Management*
Session Chair: **Joost Rietveld**, *UCL School of Management*
Discussant: **Melissa Schilling**, *New York U.*
Presenter: **Chiara Farronato**, *Harvard Business School*
Presenter: **Joe N. Ploog**, *UCL School of Management*
Presenter: **Tobias Kretschmer**, *LMU Munich*
Presenter: **Marshall Van Alstyne**, *Boston U.*

Many, highly valuable firms such as Alibaba, Alphabet, Amazon, Apple, Meta, and Tencent owe parts of their success to network effects. Therefore, it is unsurprising that scholars have been studying network effects and their implications for decades. However, we still know surprisingly little about (1) how to measure network effects, (2) the implications for firms trying to actively induce network effects, and (3) the competition under heterogeneous network effects. The goal of this symposium is to highlight research that deals with these issues. All four presenters illustrate novel ways to measure the strength of network effects and show how these network effects affect value creation and/or firm performance. Results show that network effects are by no means a panacea for firms as (1) they might be too weak to justify a costly merger, (2) they negatively affect firm performance when paired with incompatible strategies, (3) their strength critically depends on heterogeneous user characteristics, and (4) strong within-period network effects are not enough to achieve a dominant market position without consistently strong inter-period network effects. The four presentations will be followed by a discussion that aims to identify common themes and fruitful avenues for future research on network effects.

Technology and Competitive Strategy Track: Business Models and Innovation

Session Moderator: **Felix Poege**, *Boston U.*

TIM: Competition and Innovation: The Breakup of IG Farben 

Author: **Felix Poege**, *Boston U.*

The relationship between competition and innovation is hard to disentangle as exogenous variation in market structure is rare. Such a rare disruption is the 1952 breakup of Germany's leading chemical company, IG Farben. The Allies occupying Germany imposed the breakup because of IG Farben's importance for the German war economy instead of standard antitrust concerns. In technology areas where the breakup reduced concentration, patenting increased strongly, driven by domestic, non-IG Farben firms. An analysis of patent texts shows that in the short-run, the propensity to patent increases, but not in the long-run. The patenting activity of IG Farben's successors increased in comparison to a synthetic control and the successors' patenting specialized relative to the pre-breakup period. The results underscore the importance of competition in technology development for innovation.

Paper is Available to Meeting Registrants Only.

TIM: Business Model Innovation and Paradoxical Temporal Focus: Looking at the Past, the Future, or Both? 

Author: **Angel Sharma**, *UNSW Sydney*

Author: **Josh Keller**, *UNSW Sydney*

Author: **George A. Shinkle**, *UNSW Sydney*

We investigate the relationship between organizations' simultaneous temporal focus on both the past and the future and their business model innovation intensity, incorporating paradox theory as a conceptual lens. We use a novel computer-aided text analysis of letters to shareholders and earnings call transcripts of S&P 500 firms between 2004 and 2020. Our sample comprises of a wide range of firms that differ in terms of industry, size, age, among other characteristics that give us the necessary variance and confidence in our results. We find that simultaneously focusing on both the past and the future has a negative effect on business model innovation intensity. However, we also find that simultaneously focusing on both the past and the future has a positive effect on business model innovation among firms operating in highly dynamic environments. Our results suggest that in dynamic environments, tensions between using knowledge of the past and knowledge of the future are more salient and more difficult to unravel, thereby encouraging organizations to develop innovative business models that address both. We discuss the implications of our findings for research on business model innovation and temporality.

TIM: Revenue Model Innovations for Product-Service Systems: Overcoming the Service Paradox  

Author: **Sascha Michael Kellerhaus**, *Institute for Technology and Innovation Management at RWTH Aachen*

Author: **Sebastian Brenk**, *RWTH Aachen U.*

Industrial manufacturers aim to increase competitiveness by innovating their business model and offer product-service systems (PSS). However, firms often fail to exploit sufficient profits from PSS business model innovation (BMI). The role of revenue models to create and capture value from innovating revenue streams for PSS is often neglected in practice and theory. The innovation literature has a profound understanding of the PSS concept and its value proposition design. However, it lacks knowledge and insights on how revenue model innovation (RMI) impacts the success and competitiveness of a PSS business model. From a perspective of the resource-dependence theory (RDT), we assume that RMI is a source of competitive advantage by reducing uncertainty and increasing interdependencies between economic actors of a PSS. Our research applied a qualitative multiple case study with semi-structured interviews of leading PSS providers. We identified three dimensions of RMI-enabled customer value creation and provider value capture, reducing customer uncertainty and increasing dependence according to the RDT. Our research implies from the RDT perspective that PSS providers create a joint competitive advantage from RMI by giving additional value to their customers, which supports the power balance between both parties by a positive increase in interdependence. Our study contributes to the theoretical understanding of the role of RMI for PSS business model success. The study results will extend the theoretical knowledge about successful servitization through PSS and address its problem of exploiting revenues from the service business – the service paradox.

Paper is Available to Meeting Registrants Only.

TIM: Evolving towards Mobility-as-a-service: Drivers and Consequences of Car Subscription Service (WITHDRAWN)

Author: **Arash Sadeghi**, *U. of Leicester*

Author: **Taimaz Larimian**, *Loughborough U.*

This study investigates the emergence of car subscription services, as a new development in the area of Mobility-as-a-Service (MaaS). Our aim is to explore the drivers of emergence of car subscription services, analyse its impact on the incumbent manufacturers, and investigate the impact of Covid-19. We adopt a qualitative approach based on in-depth, semi-structured interviews with managers of two car subscription service providers: a leading car manufacturer and an IT start-up. We found three key behavioural and technological trends that drive the emergence and growth of car subscription services and highlighted the various opportunities and risks for the incumbent manufacturers.

People and Innovation Track: Scientists in Innovative Firms

Session Moderator: **Barthélemy Chollet**, *Grenoble Ecole de Management*

TIM: Publish or Procreate: The Effect of Motherhood on Academic Performance (WITHDRAWN)

Author: **Sofie Cairo**, *Copenhagen Business School*
Author: **Valentina Tartari**, *Copenhagen Business School*
Author: **Sofie Dalum**, *Copenhagen Business School*

Women are underrepresented in science and representation deficits are even greater for more senior positions and in STEM fields. The dominant explanation is that male and female scientists, even within the same field, publish at unequal rates. Prior studies on select fields suggest that the gender gap in academic productivity reflects differential effects of childbearing on men and women, as women face tensions between the two greedy institutions of family and academia. We study the full population of STEM academics in Denmark and investigate parenthood penalties on scientific productivity of mothers and fathers, who are active in research after the birth of their first child. We employ an event-study approach on annual research publications, an outcome especially relevant in the science domain, and rely on a unique combination of Danish registers and granular bibliometric data on publications from the database Scopus. We find that, on average, the first childbirth results in an annual penalty of 24 percent on scientific productivity of mothers in STEM fields relative to fathers in the first 5 years after birth. This reflects a drop in annual research publications of mothers relative to their own pre-birth productivity. Hence, unequal impacts of parenthood may be an important driver of gender inequality in Science.

TIM: Geographical Distance in Advice Networks and Individual Patenting Performance

Author: **Barthélemy Chollet**, *Grenoble Ecole de Management*
Author: **Karine Cécile Revet**, *Grenoble Ecole de Management*

R&D engineers rely on daily advice seeking to achieve their tasks and, accordingly, how their advice ties are arranged influences their individual performance. Among network dimensions, the role of geographical distance between advice providers and a focal advice seeker has rarely been investigated, despite extended literature on how geography affects knowledge circulation. To capture the effects of geographical distance in advice networks, we take a mixed method approach. We analyze the lived experience of R&D workers, as recounted in in-depth interviews, which results in a conceptual distinction between two types of advice seeking: surface and deep advice seeking. They differ in terms of their process, form of reciprocity, and expected contribution. Equipped with this dual conceptualization and prior literature on the geography of knowledge, we theorize that geographical distance benefits deep advice seeking but is detrimental to surface advice seeking. We find support for our hypotheses using a sample of 113 R&D workers from the French semi-conductor industry.

TIM: R&D Employee Tenure in MNC Subsidiaries: The Role of Institutional Distance and Experience (WITHDRAWN)

Author: **Dhruba Jyoti Borah**, *U. of Liverpool*
Author: **Silvia Massini**, *U. of Manchester*
Author: **Lucia Piscitello**, *Politecnico di Milano*

Long tenure of research and development (R&D) employees helps organisations to utilise employees' knowledge over a sustained time period and to strengthen their competitive advantage. It also allows organisations to benefit from the return on the investments made on training their R&D employees. Thus, it is important to identify the determinants of R&D employees' tenure and design appropriate R&D employee retention strategies. This paper analyses the factors that explain the tenure of R&D employees in the subsidiaries of multinational corporations (MNCs). Building on institutional theory, we claim that formal and informal institutional distance between MNCs' home and host country might lead to early departure from subsidiaries. We suggest that experience plays a moderating role at both the micro-level (i.e., at the individual employee level) and macro-level (i.e., at the MNC subsidiary level). We find support for our hypotheses mobilising an original database that combines patent data and the LinkedIn profiles of 988 R&D employees in 272 MNC subsidiaries in India.

Author: **Martin C. Goossen**, *Old Dominion U.*

Author: **Carla Rúa-Gomez**, *SKEMA Business School - U. Côte d'Azur*

Author: **Gianluca Carnabuci**, *ESMT Berlin*

Extant literature on social capital has demonstrated the positive effects of brokerage on employee productivity, particularly in knowledge-intensive and creative environments. Yet, little is known about the interactions between employee brokerage and employee mobility to competitors, another common theme in the strategic human capital literature. We posit that employees in brokerage positions face unique information and exposure and have different external opportunities than their peers in more constrained network positions. However, as brokerage is an inherently local network position, we further argue that the effect of mobility on employee productivity is substantially different for those in brokerage positions versus those in constrained networks. Moreover, the nature of these consequences is contingent on the breadth of expertise of employees. Using a large, longitudinal sample of inventors working for the world's major pharmaceutical firms, we find partial support for the interactive effects of brokerage, mobility, and productivity. The findings of this study contribute to the social capital literature on employee brokerage and to strategic human capital research on inventor mobility.

Digitalization Track: Digital Transformation and Digital Markets

Session Moderator: **Henry Lopez-Vega**, *Surrey Business School*

TIM: Digital Transformation: Implications of Novelty and Scope for Digital Technologies

Author: **Henry Lopez-Vega**, *Surrey Business School*

Author: **Jerker Moodysson**, *Jonkoping International Business School*

Digital technologies are vital for firms' activities in the digital age. This paper investigates digital technology groups and the implications of their technology novelty (incremental or radical) and breadth (one-sectoral or multi-sectoral) for digital transformation in manufacture intensive industries. Digital technology groups represent cohesive overlaps across individual technologies. Adopting a topic modelling research method of autonomous vehicle patents in firms operating in Sweden and a confirmatory survey with the inventors of those patents, this paper identified 26 digital technology groups transforming the autonomous vehicle sector. We find that digital technology groups are distributed across four technology paths: upgrading, spanning, transforming, and disrupting. Our findings suggest the ongoing digital transformation involves a creative accumulative response of incumbents and new entrants. This is developing new technologies outside existing capabilities and building on existing knowledge. This study bridges the previous literature on technological change and the characteristics digital technologies.

TIM: Contract Choice, Moral Hazard and Performance Evaluation Evidence from Online Labor Markets

Author: **Yifei Wang**, *U. of Maryland R.H. Smith School of Business*

Author: **Peng Huang**, *U. of Maryland R.H. Smith School of Business*

Due to the spatial and temporal separations between clients and freelancers, online labor markets (OLMs) are particularly susceptible to issues related to information asymmetry. Based on the economics of information, we hypothesize that contract format choice—i.e., between the fixed-priced (FP) contract and the time-and-materials (TM) contract—has important implications for preventing moral hazard during contract execution, and therefore will influence the client's perceived contractual performance upon project completion. We test the predictions by assembling a dataset of analytics projects completed by freelancers on Upwork, the largest online freelancing platform. We find that consistent with our hypothesis, freelancers under a TM contract on average receive significantly lower performance ratings by their clients compared to those under a FP contract. Interestingly, we also find that the expertise requirement of a project moderates the effect of contract choice on client satisfaction; specifically, the negative impact of TM contract is smaller (less negative) when a project requires expert-level skills. Our study offers useful insights into an important institutional determinant of contractual performance evaluation, which has profound implications for freelancers' reputation in OLMs.

TIM: Four Perspective on the Role of Physicality in Digital Innovation: A Systematic Literature Review

Author: **Lucas Goebeler**, *Copenhagen Business School - Department of Digitalization*

In times where ubiquitous, pervasive, and unbounded digital innovation are faced with the opportunities and challenges for digital innovation that have emerged during the pandemic, we observe that digital innovation research has focused on the distinct nature of the digital. In doing so the physical component has often been understudied. In order to address the emerging notion of physicality as an important aspect of digital innovation, this study conduct a systematic literature review of how physicality has been addressed in the digital innovation literature and what roles of physicality have been established. The study identifies four perspectives on physicality in innovation – physicality seen in social objects, physical objects, social activities, and physical activities – and the respective role of physicality as subject, bearer, context, and co-creation of digital innovation. In doing so this study furthers our understanding of physicality and helps to identify where and how physicality in digital innovation needs to be addressed.

Paper is Available to Meeting Registrants Only.

TIM: Understanding the Typologies of Customer Experience in Phygital Contexts: The Case of Webidoo Store

Author: **GIANLUCA PUSCEDDU**, *U. degli Studi di Cagliari*

Although research on respectively online and offline customer experiences (CXs) is long-established, scholarly attention in the context of phygital CXs is still in its infancy. The purpose of this empirical paper is to propose a first investigation regarding phygital CXs. The present study contributes to CX literature by investigating the typologies of CX in phygital contexts depending on the intensity of consumers' responses and reactions to stimuli, i.e., ordinary to extraordinary experiences. From a managerial perspective, this research helps business managers and owners go beyond the CX's subjectivity and contextuality, focusing on their controlled stimuli and touchpoints to trigger the intended CX. Keywords: Phygital customer experience; ordinary experience; extraordinary experience; physical store; Try & Buy; single-case study

Organizational Learning and Search Track: Learning Despite Uncertainty and Disruptions

Session Moderator: **Kaushik Bagchi**, *ESADE Business School / Ramon Llull U.*

TIM: Crossing the Valley of Death: The Effect of Organizational Form and Technology Age on Exploration

Author: **Kaushik Bagchi**, *ESADE Business School / Ramon Llull U.*

Author: **Ivanka Visnjic**, *ESADE Business School*

Author: **Julian M Birkinshaw**, *11393*

In this article, we study the effect of organizational form (i.e., universities, entrants, and incumbents), technology age, and prior failure in the technology class on the success in exploring new technology. Utilizing data from over 7000 biological drug discovery projects over a 30-year period, we model the likelihood that a drug discovery project will be carried over to a Phase 1 clinical trial. We find that, despite early and pioneering success, projects by universities and specialist biotech companies are less likely to succeed as technology ages, while the likelihood of big pharma projects succeeding increases. Moreover, prior failure in the technology class has a detrimental impact on the likelihood of success of projects originated by biotech companies and universities while big pharma's projects remain relatively undeterred by these failures. We argue that, contrary to the recent literature, these findings suggest that the exploration by large established organizations remains important to the innovation process and, consequently, they should remain active in exploration. In the article, we explain the mechanisms underpinning these empirical findings and clarify why our findings on the role of different organizational forms in exploration seemingly contradict the recent literature on innovation.

Paper is NOT Available. Please contact the author(s).

TIM: Spread The Seed to Win a Long Harvest 

Author: **Xirong Shen**, *McCombs School of Business, U. of Texas at Austin*

In an emerging technology sector, the generative value of inventions—its potential to spawn subsequent iterations and cumulative inventions—is crucial yet challenging to realize. This paper examines firm research publications as a novel mechanism for generative value creation in emerging technology sectors. Research publications, by broadcasting the firm's research and attracting a diverse set of external follow-up inventions, exposes the focal inventing firm to a pool of distant, unfamiliar knowledge. In the meantime, the theoretical knowledge contained in these publications guides the focal firm to learn from and build on the distant knowledge contained in external follow-up inventions efficiently. To test these arguments, I collected data on U.S. publicly-traded, AI-active firms from 1995 to 2015. I tracked the cumulative innovation activities around these firms' AI-related patents and the research publications associated with these patents. Analyses based on within-firm models show that, for a focal AI patent, same-firm publications not only increase the knowledge distance between the firm's original knowledge pool and the incoming external follow-up inventions, but also enhance the volume and private value of the firm's related, subsequent inventive efforts. This paper contributes to the literature on generative value of inventions, emerging technologies, and corporate publications.

Paper is Available to Meeting Registrants Only.

TIM: Exploration versus Exploitation: The Role of the Business Cycle 

Author: **Goretti Cabaleiro Cervino**, -

Author: **Pedro Mendi**, *U. of Navarra*

This paper studies how the interplay between the economic crisis, sector characteristics (dynamism) and firm-specific characteristics (firm size and geographic diversification) shapes firms' choice between exploration and exploitation in innovation strategies. With that purpose in mind, we analyze the PITEC database, a panel of Spanish firms in manufacturing and service industries from 2005 to 2013. Results show that: 1) demand reductions lower the probability of firms being characterized as exploratory; 2) the impact of demand fluctuations is stronger among firms in more dynamic industries; 3) the impact of demand drops is also stronger among small and medium companies than among large companies; and 4) geographically-diversified companies seem to be less affected by demand fluctuations in their choice between exploration and exploitation.

Paper is Available to Meeting Registrants Only.

TIM: Learning Amid Technological Disruption: Evidence from U.S. Inventors, 1836-1999

Author: **Christopher Esposito**, *U. Of Chicago*

Author: **Frank Van Der Wouden**, *U. of Hong Kong*

How do inventors in disruptive technological environments accumulate knowledge? When disruption erodes the value of inventors' knowledge, their time becomes one of their most precious resources. Inventors can learn by accumulating experience over time, but inventors operating in highly disruptive environments require faster alternatives. One alternative is collaboration, which allows inventors to aggregate knowledge quickly. To assess how disruption affects inventors' strategies for knowledge aggregation, we study how the benefits inventors received from experience and from collaboration in teams of co-inventors changed across historical periods and technological fields with different disruption rates. Our analysis uses novel datasets that track the careers and record the impact of the inventions of U.S.-based patent inventors that started their careers between 1836 and 1999. Our results show that the importance of prior patenting experience for the creation of high-impact inventions decreased in the early 20th century, while the importance of collaborating in large teams increased. Both shifts were greater for inventors that patented in more disruptive technological fields, indicating that technological disruption induced inventors to collaborate. Our results generate critical insights for individuals, teams, and organizations that compete in the disruptive contemporary knowledge economy.

Innovation Processes Track: Technology and Business Models

Session Moderator: **Weifeng Xu**, *School of Economics & Management, Tongji U.*

TIM: External Environment Uncertainty, Key Resources Acquisition and Corporate Technological Innovation 

Author: **Weifeng Xu**, *School of Economics & Management, Tongji U.*
Author: **Chang Liu**, *Jiangnan U.*

Building on the resource-based theory, we investigate the impact of external environmental uncertainty on firm technological innovation taking into consideration the mediating role of key resource acquisition among this relationship. A sample of Chinese A-share listed companies from 2008 to 2019 is employed to test the proposed research model. The results provide support for the argument that the external environmental uncertainty negatively relates to the input and output of technological innovation, in which the acquisition of key resources - capital resources and information resources plays a mediating effect. We also find that corporate social capital mitigates this negative impact. Further, technological innovation of high-tech industries is more sensitive to external environment uncertainty compared with non-high-tech industries. Our results not only theoretically extend previous research by providing a new perspective to explain the mechanism of external environment uncertainty affecting corporate technological innovation, but also provide practical guidance for firms on how to effectively conduct technological innovation activities in a highly uncertain external environment.

Paper is Available to Meeting Registrants Only.

TIM: Startup Cooperation Capability: How Established Companies Can Utilize Startups' Potential

Author: **Nele Oldenburg**, *Martin-Luther-U. Halle-Wittenberg*
Author: **Nicolas Zacharias**, *Martin Luther U. Halle*

Established company – startup cooperation increasingly moves into the focus of research. Yet, despite a growing body of literature as well as remarkable efforts of practitioners invested in startup cooperation, the high expectations are often not met. Bridging inter-organizational cooperation research and dynamic capability theory, this paper conceptualizes startup cooperation capability of established companies. Further, this study examines how startup cooperation capability can impact outreach success and coordination efficiency and consequently improve new product innovativeness. In addition, the moderating effects of resource availability as well as company formalization are investigated. To test the hypotheses, we analyze survey data from 195 startup cooperation managers working at established companies by applying covariance-based structural equation modelling. The results suggest that startup cooperation capability has a positive impact on outreach success, which in turn positively affects new product innovativeness. The relationship between startup cooperation capability and outreach success is strengthened by resource availability. On the other hand, startup cooperation capability is negatively associated with coordination efficiency. This effect is strengthened by the influence of company formalization.

Paper is Available to Meeting Registrants Only.

TIM: Creativity– business Model Innovation Relationship and Financial Performance of the Firm     

Author: **Imran Muhammad Ilyas**, *U. of Jyväskylä School of Business*

The study analyzes the creativity– business model innovation relationship and its impact on financial performance of the firm in the context of advertising industry where there are limited opportunities for process or product innovation. Using moderated mediation model, it is argued that creativity positively affect the business model innovation. Also, business model innovation improves the firm financial performance. Thus, business model innovation mediates the relationship between creativity and financial performance of the firm. Moreover, business group affiliation moderates the impact of business model innovation on firm performance. The results from panel dataset largely support the proposed model. The study contributes to the literature on creativity and business model innovation.

Paper is NOT Available. Please contact the author(s).

TIM: Institutional Ownership and the Nature of Corporate Innovation

Author: **Sampa Samila**, *IESE Business School*
Author: **Markus Simeth**, *Copenhagen Business School*
Author: **David Wehrheim**, *IESE Business School*

This paper analyzes whether institutional ownership affects the nature of corporate innovation. We consider the heterogeneity of firm innovation by differentiating upstream research from downstream development using novel indicators for scientific publications and patents. Our analysis shows that institutional owners have a negative impact on upstream research, whereas there is no effect on downstream development. Consistent with a short-term orientation of institutional owners, we further show that scientific research is associated with lower short-term operating performance but higher long-term firm value. These findings support the view that capital markets in general, and institutional owners in particular, can induce myopic firm behavior.

AI and Emerging Technologies Track: The Digital Firm and New Forms of Economic Organizing *The Digital Firm and New Forms of Organizing*

Session Chair: **Gianluigi Giustiziero**, *Frankfurt School of Finance & Management*

Session Chair: **Brian Wu**, *U. of Michigan*

Discussant: **Deepak Somaya**, *U. of Illinois at Urbana-Champaign*

Discussant: **Tobias Kretschmer**, *LMU Munich*

Participant: **Kathleen Eisenhardt**, *Stanford U.*

Participant: **Pinar Ozcan**, *Oxford U., Saïd Business School*

Participant: **Thorbjørn Knudsen**, *Frankfurt School of Finance & Management gGMBH*

Participant: **Ron Adner**, *Dartmouth College*

Participant: **Aija Elina Leiponen**, *Cornell U.*

The rapid growth of the digital economy, including ubiquitous internet access, smartphones, big data analytics, artificial intelligence, blockchain, and platforms has profoundly reshaped the way we conduct and organize business. As a result, the firms that participate heavily in the digital economy by either using a significant share of digital resources (e.g., software, algorithms, data) and/or by selling a significant share of digital products and services (e.g., platforms, software, media) have several distinctive organizational features, thus providing an interesting and important testing ground for the foundational theories of economic organization. The symposium will focus on the emerging patterns unique to digital firms for which advancing existing theories might indeed be imperative.

Ecosystems and Platforms Track: Emerging Ecosystems: Configuring and Reconfiguring Actors in an Ecosystem *Configuring and Reconfiguring Ecosystem Actors*

Discussant: **Kathleen Eisenhardt**, *Stanford U.*

Organizer: **Xavier Mundet**, *ETH Zürich*

Organizer: **Axel Zeijen**, *ETH Zürich*

Presenter: **Rahul Kapoor**, *The Wharton School, U. of Pennsylvania*

Presenter: **Pinar Ozcan**, *Oxford U., Saïd Business School*

This symposium brings together four studies of ecosystem actor (re-)configuration. In ecosystems, value creation and value capture strongly depend on the configuration of actors and the innovations they develop. This symposium focuses on the question of how such configurations emerge and change. The presenters approach this question from diverse viewpoints (from bottlenecks imposing strategic directions to endogenous shaping processes) and through a broad range of contexts and methods. Together, they help form a more complete understanding of the drivers and consequences of ecosystem structure.

CAR: **The Fast Track to the Top in European Listed Firms: The Role of the Human Capital Mix** 

Author: **Maria Laura Frigotto**, *U. of Trento*

Author: **Meysam Salimi**, *U. of Trento*

Author: **Massimiliano Votiero**, *UniTn (Italy)*, and *USI (Switzerland)*

Author: **Enrico Zaninotto**, *U. of Trento*

Drawing on human capital theory, this study contributes to the career literature by examining the role of 'human capital mix' in the speed of career advancement to a top management team (TMT) position, i.e. the so-called 'fast track'. More specifically, the study analyzes the impact of education, tenure (firm-specific experience) and career variety (inter-functional, inter-industry, inter-firm and international experience) on the career history of more than 9,000 chief executive officers (CEOs) and non-CEO senior executives from European listed firms. The results show that the human capital mix differs for CEOs and non-CEOs and that the typical positive relationship between education and a fast-track career holds only for non-CEOs. Moreover, while tenure promotes a CEO fast-track career, it slows non-CEO career advancement. The results also reveal that career variety delays the speed of career advancement for both CEOs and non-CEOs but may act as a double-edged sword. Indeed, for CEOs, the positive effect of tenure is strengthened when they have higher inter-firm experience or lower inter-functional experience; while for non-CEOs, the negative effect of tenure is alleviated when they have greater career variety. Overall, these results indicate that the impact of the composition of the human capital mix on a fast-track career depends on the type of managerial position considered.

CAR: **Career Orientations of Expatriates and Host Country Nationals in IDOs Prior and During Covid-19**

Author: **Rebecca Yusuf**, *Henley Business School, U. of Reading, United Kingdom*

Author: **Rita Fontinha**, *Henley Business School, U. of Reading, United Kingdom*

Author: **Washika Haak-Saheem**, *Henley Business School, U. of Reading*

International Development Organisations (IDOs) have a humanitarian nature and it is likely that their employees, both expatriates and host country nationals (HCNs), have career orientations that may differ from those in profit-driven organisations. This paper is theoretically based on calling literature to advance our understanding on career orientations of expatriates and host country nationals (HCNs), as this may influence their career trajectories. We explore this in the context of IDOs in Nigeria. Our research has a semi-longitudinal design, using qualitative data to explore changes that may have occurred in IDO workers' career orientations given the contextual challenges of the Covid-19 pandemic. Our study shows that calling-related career orientations have lost their relevance among both groups of employees amid the Covid-19 pandemic, with implications for their career trajectories. These results also have relevant implications for the management of international careers and assignments in the context of IDOs.

Paper is Available to Meeting Registrants Only.

CAR: **A Mixed-method Study of the Determinants of International Students' Employment in the Host Country**

Author: **Ni Liu**, *Georg-August-U. Göttingen*

Drawing from the theory of planned behavior, this study examine the determinants of the students' employment outcomes in the host country. We conducted a mixed-method approach comprising a three-wave longitudinal survey of 121 Chinese students in German universities and 43 interviews. Our results suggest that the international students' attitudes toward working abroad and perceived employability indirectly influence their employment outcome in the host country through the intention to work in the host country. In addition, we found moderating effects of career capitals on the relationship between the intention to work in the host country and employment outcome. Career capitals weaken the impact of intention to work in the host country on employment outcomes. To further understand the relationships, we conducted a qualitative interview-based study of 43 Chinese students in German universities. The findings elucidate that international students' attitudes and perceived pressure impact their decisions to work in the host country differently in the long and short run. These two studies provide implications for international mobility research.

CAR: **Does Worrying About Money Motivate Counterproductive Work Behavior Through Need Satisfaction?**   

Author: **Mahsa Abedini**, *Alma Mater Studiorum U. di Bologna*

Author: **I. M. Jawahar**, *Illinois State U.*

Author: **Melvyn Hamstra**, *IESEG School of Management*

This research examined the hypothesis that workers' financial worry predicts their counterproductive work behavior. Based on self-determination theory, we propose that psychological need satisfaction explains this relationship, and we position this volitional pathway as an alternative to a cognitive capacity pathway tested in prior research based on cognitive load theory. A time-lagged study with three measurement points conducted among 180 workers supported our model. The analysis, showed that financial worries predicted counterproductive work behavior via need satisfaction and not via cognitive capacity. Given the problematic implications of counterproductive behavior for the functioning of organizations, the findings point at worker financial concern as an important factor for (HR) management to put on their radar. Keywords: Financial worry; need satisfaction; cognitive capacity; counterproductive work behavior

AI and the Future of Work

Session Moderator: **Ekene Okwechime**, *Anglia Ruskin U.*

CTO: Creating a Brave New World : How AI Developers’ Imaginations of the Future Shape Their Work  

Author: **Emmanuelle Vaast**, *McGill U.*

Artificial Intelligence (AI) may change work, management, and societies in the future. This study questions how AI developers consider the potential consequences of their work. It proposes an imagined futures perspective to understand how AI developers imagine the futures associated with AI and how these imaginations shape their work and practices. It examines qualitatively the case of some AI developers and their work and find that they consider the future consequences of the AI they participate in developing as tangential – i.e., loosely connected to what they do - or integral – i.e., closely associated with what they do - to their work. These imaginations of the future are in tension, prompting some AI developers to work at connecting them as they adjust how they view the future and their work. This study adds to scholarship by revealing how AI development relies upon particular imaginations of the future, by illuminating how practitioners engage speculatively with the future, and by explaining the importance for Information Technology (IT) development of developers’ answers to what their work may do in the future.

CTO: Imagining the Future of Work When the Present is Disrupted  

Author: **Emmanuelle Vaast**, *McGill U.*

The future of work has long been an important topic of academic and managerial interest as well as of policy making. Yet, we still know little about how people who do the work consider its future. It is important to study this issue especially when the current situation is disrupted because imagining the future becomes especially crucial yet more challenging. This study asks how people imagine the future of their work when their present is deeply disrupted. It builds upon scholarship on the future of work and the role of digital technologies in bringing it about as well as on imagined futures. It examines longitudinally the case of an online community whose participants reacted to the COVID-19 pandemic that upended their current work situation and made their future more uncertain. This study contributes to scholarship on the future of work by highlighting the importance of people’s considerations not only of the future, but also of the ways in which their imagined future is connected to their current situation. It also adds to scholarship on online communities by revealing them as settings where people get to confront their current situation and collectively generate imaginations of the future.

CTO: Deploying Heuristics on Planning and Design in the Creation of Smart Cities

Author: **Ekene Okwechime**, *Anglia Ruskin U.*

Big data analytics provides support and insight in dealing with complex operational problems in cities. Heuristics can support problem solvers and decision makers address complex problems in various settings. In this paper, we argue that embedding big data with heuristics can enable users satisfaction on addressing complex problems. The research draws from Volkema’s (1983) heuristics on problem solving in planning and design: problem expansion and problem reduction. A multi-source approach – secondary data and in-depth semi-structured interviews and participant observations from two smart city initiatives in the United Kingdom – formed the core data collection. We develop an empirically driven qualitative heuristic on optimising big data for complex problem solving in the creation of smart cities. We argue that problem solving in cities can deploy big data to carry out problem expansion and problem reduction as means of making sense of problems and ultimately arriving at solutions.

Data Production and Anticipatory Work

Session Moderator: **Lauren Waardenburg, IESEG School of Management**

CTO: Juggling Street Work and Data Work: An Ethnography of Policing and Reporting Practices

Author: **Lauren Waardenburg, IESEG School of Management**
Author: **Anastasia Sergeeva, Vrije U. Amsterdam**
Author: **Marleen Huysman, Vrije U. Amsterdam**

Organizational research on data production often aims to unpack the nature and meaning of data and the work practices through which it is made. Yet, not much is known about how the growing need to produce data influences the performance of other, more situated work. Our three-year ethnographic study of the Dutch police unravels this issue and shows that police officers adopt three strategies to cope with anticipated data work in their situated practices: avoiding work, deviating from protocol, and capturing experiences. These strategies helped police officers to alleviate the burden of data production, but also influenced how they performed their situated work and what and how crimes were reported, which contrasted the aims of data-driven police work. Our findings have implications for existing research on data production and for studies on anticipatory work by arguing that data construction starts at the situated practices and by showing how anticipating the work needed to produce data influences how both situated and data work are performed.

CTO: Managing Integration of Design Paradigms in the Development of Smart Product and Service Systems

Author: **Mathias Larsson Carlander, Stockholm School of Economics**
Author: **Magnus Mahring, Stockholm School of Economics**
Author: **Martin Sköld, Stockholm School of Economics**

Firms developing smart and connected products and service systems face challenges related to coordination and integration of multiple design, technical and organizational arrangements. Specifically, the co-existence of and coordination between several different design paradigms become salient when embedded software, sensors, and connectivity are employed to connect the firm's products, services and operations with databases, application platforms and the firm's product cloud. This study aims to explore and theorize integration and coordination of design, development, and production paradigms in response to organizational tensions arising in this context. We do so through a case study of a large global incumbent firm developing complex mechanical products engaged in creating integrated product and service systems enabled by digital innovation processes. Specifically, we identify the change of work practices relating to IT and digital services resulting in the emergence of new forms of organizational and technical arrangements that diverge from established firm-wide organizational structures and technical design principles. This divergence is counteracted by bridging the gap between bounded product arrangements and new emerging unbounded digital services in the pursuit to form new organizing logics of smart and connected products and service systems.

CTO: In Pursuit of Data: Negotiating Data Tensions Between Data Scientists and Users of AI Tools

Author: **Elmira Van Den Broek, Vrije U. Amsterdam**
Author: **Natalia Levina, New York U.**
Author: **Anastasia Sergeeva, Vrije U. Amsterdam**

Carolyn Dexter Award Nominee

A key issue in building artificial intelligence (AI) tools is obtaining high-quality data for training and validating the tools' underlying algorithms. Drawing on three years of fieldwork at a Human Resources (HR) department that built an AI hiring tool, this study develops a new perspective for understanding the tensions that surface in the process of procuring data for AI tools. We show how these "data tensions" can be better understood by unpacking the divergent interests of data scientists and users that persist throughout the tool's development, implementation, and ongoing use. Our analysis of the tensions focused on the emergent practices of boundary spanners who stepped up to negotiate divergent interests and paved the way for the tool to be developed and adopted by the organization. We found that these practices did not only shape the data used to feed the AI tool but also inadvertently transformed existing organizational practices beyond the goal and scope of implementing a particular AI solution. We discuss the theoretical implications of these findings for studies of AI in organizations.

Research on Allyship & Mentorship

Session Moderator: **Charles Chu**, *Boston U. Questrom School of Business*

GDO: [Black Americans' Perspectives on Workplace Ally Prejudice Confrontations \(WITHDRAWN\)](#)  

Author: **Charles Chu**, *Boston U. Questrom School of Business*
Author: **Leslie Ashburn-Nardo**, *Indiana U. / Purdue U., Indianapolis*

Our research centers the underexamined perspective of Black Americans and investigates their perceptions and experience of a White ally who confronts a White perpetrator of workplace prejudice. In two experimental studies (N = 1,158), we found that Black participants reported higher levels of self-esteem after a White ally confronted a White perpetrator of racial prejudice compared to no confrontation. Additionally, we found that White ally confrontations that were perceived as more intrinsically motivated (i.e., driven by personal values) yielded greater benefits to Black perceivers' self-esteem than those that were perceived as more extrinsically motivated (i.e., driven by concerns about political correctness). We discuss implications for research on allyship and confrontation as well as practical considerations. Our results strongly suggest that advantaged group members cannot allow overt workplace prejudice to stand unchecked and should consider the motivations they convey in their actions.

 GDO: [What's In It for Me\(n\)? The Impact of Self-Interest on Men's Support for Gender Equality Initiatives](#)  

Author: **Vienne Wing-yan Lau**, *Snap Inc*

Best Paper Based on a Dissertation

William H. Newman Award Nominee

The present studies aim to investigate whether self-interest may be utilized to motivate men to support gender equality initiatives in the workplace. In Study 1, I tested whether framing a gender equality initiative as beneficial to self leads to more support from men compared to framing the initiative as beneficial to others only. I also examined the moderating effect of social dominance orientation (SDO) and the mediating effect of zero-sum gender beliefs (ZSGBs). In Study 2, I tested the moderating effect of champion gender with a 2 (Framing: Self-interest, No Self-interest) x 2 (Champion gender: Male, Female) factorial between-subject design. Together, the two studies revealed that a gender equality initiative framed as beneficial to men garnered more support than when it is framed as beneficial to women only and this effect was significantly moderated by SDO. However, having a male champion does not alleviate the negative impact SDO has on the relationship between self-interest and support for gender equality; this relationship was not mediated by ZSGBs either. Taken together, the current findings urge a paradigm shift from focusing on mitigating gender biases that affect women to emphasizing the positive changes that can be brought by a more inclusive approach to gender equality in the workplace.

Paper is Available to Meeting Registrants Only.

GDO: [How Gender Allyship Promotes Males' Relational Wellbeing at Work](#)  

Author: **Min Young Yoon**, *Rider U.*
Author: **Aparna Joshi**, *Penn State Smeal College of Business*
Author: **Carolyn Thi Dang**, *Pennsylvania State U.*

Across the social sciences there have been growing calls for understanding the causes and consequences of involvement of males in gender-parity initiatives. We develop a theory of ideologically motivated intergroup behavior that highlights privilege attentiveness as a critical psychological mechanism predicting male allyship. In addition, we examine whether the relational benefits of allyship could counterbalance the previously studied costs and risks of engaging in this behavior at work. Using a sample of 248 males in supervisory/managerial roles across various industries and occupations in the United States, Study 1 finds that male privilege attentiveness mediates the effects of male liberalism on male allyship intention. Using a second sample of 376 males in supervisory/managerial roles, Study 2 shows that compared to conservative males who were reluctant to engage in allyship, liberal males experienced greater relational benefits as a consequence of their allyship.

Paper is Available to Meeting Registrants Only.

GDO: [Does Humility of Mentors Matter for Self-Perceived Minority Mentees' Mental Wellbeing?](#)  

Author: **Jeewon Cho**, *Oregon State U.*
Author: **Sung Soo Kim**, *U. of Denver*
Author: **Prem Mathew**, *Oregon State U.*

With the ever-increasing efforts toward pursuing diversity, equity and inclusion (DEI) as fundamental societal values, higher education is making strides to embody the DEI paradigm. Much of the DEI initiatives in higher education, however, remains focused on the quantitative increase of students from historically underrepresented communities, rather than helping those students thrive in college after their arrival. In other words, these initiatives disproportionately seek to increase diversity of student populations rather than seek to ensure that the environment into which these students enter is inclusive. This imbalance in DEI initiatives is problematic given the dismal success rates in college of these underrepresented students, compared to those of students that are well-represented in higher education. To extend our understanding about how to provide a thriving college environment for minority students, and how to close this achievement gap, this study explores the role of peer mentors' expressed humility in maintaining self-perceived minority mentees' mental wellbeing over their first-year in college. Building on the conservation of resources theory, we articulate how a mentor's empathic, humble personality trait mitigates the negative relationship between the perceived minority status of mentees and their mental wellbeing throughout the first-year of college; a year that demands significant adjustment to a new environment for all students. Further, the current study presents work engagement of mentees as a psychological mechanism that explains the hypothesized mitigating role of expressed humility of mentors. We tested our research model using three-waved, multi-rater survey data collected from 124 mentee-mentor dyads in a year-long peer mentoring program at a large university. The results of the study underscore the crucial, buffering role of peer mentors against the psychological challenges that mentees with self-perceived minority status experience in adjusting and succeeding in new organizational environments. The implications for theory and practice are discussed.

Disconnectedness at Work: Conversations to Connect Theories and Empirics

Disconnectedness at Work

Organizer: **Hodar Lam**, *U. of Amsterdam*
Organizer: **Maral Darouei**, *Vrije U. Amsterdam, School of Business and Economics*
Discussant: **Marissa King**, *Yale U.*
Presenter: **Timo Walz**, *Maastricht U., School of Business & Economics*
Presenter: **Sut I Wong**, *BI Norwegian Business School*
Participant: **Tobias Dennerlein**, *IESE Business School*
Participant: **Lars Ithurbure**, *KLM Catering Services*

The increasing work digitization (exacerbated by the COVID-19 pandemic) has left many individuals feeling disconnected from others. Given the pervasive impact of disconnectedness for employees (e.g., poor health) and organizations (e.g., reduced productivity) alike, it is critical to investigate this topic in more depth. In the current symposium, we bring together scholars across the globe to explore when, why and how disconnectedness at work has negative consequences for employees as well as to critically reflect on and discuss current issues in research on disconnectedness. Drawing upon a variety of methodologies (e.g., scale development, cross-lagged survey) and different levels of analysis (individual and team), our presenters shed light on (a) how professional isolation relates to, and when it would reduce, experiences of role ambiguity, (b) how loneliness from remote work relates to employee exhaustion, (c) the need for a new, validated measurement instrument to properly capture loneliness at the workplace, and (d) how communication-based faultline in virtual teams affects team coordination. We conclude with an integrative summary that showcases key insights from the presentations and important research questions to address moving forward. Finally, we aim to provide practical insights into what both employees and organizations can do to minimize feelings of disconnectedness at work in today's digitalized workplace.

Categories, Status, and Audience Interpretations

Session Moderator: **Paul Gouvard**, *USI (Lugano)*

OMT: **The Effect of Categorical Typicality on Target Selection in Mergers and Acquisitions**

Author: **Paul Gouvard**, *USI (Lugano)*

Author: **Emanuele Luca Maria Bettinazzi**, *U. della Svizzera Italiana*

The use of shared categories reduces uncertainty in markets, thus facilitating exchanges. Acquisitions are typical contexts in which uncertainty plays a dominant role since prospective acquirers usually face a high risk of adverse selection. Yet, prior research did not study the effects of categories on M&A activity. This paper argues that the extent to which a firm fits a clear category (how typical it is) will affect how easy it is to use category-specific schemas to interpret information about the firm and, in turn, how easily it can be evaluated as a target for an acquisition, thus influencing the likelihood of it being acquired. Conversely, we submit that information about difficult-to-classify firms and/or those that do not fit with a single category (atypical firms) is more complex to interpret and that they are thus comparatively less likely to be acquired. We test our hypotheses on a sample of 9,061 US-listed firms from 1995 to 2018, which represent the whole population of listed firms net of missing data. Our measure of typicality is constructed starting from annual reports (forms 10-K) and using a new methodology to locate the firm in the semantic space based on the meaning of the words contained in its annual report. Results indicate that typical firms are more likely to be acquisition targets. The acquirer's experience in acquisitions and with the target's category negatively moderate this effect. Using a sample of 4,528,585 dyads, we also analyze the categorical typicality of the acquiring firm as a boundary condition of our main effect and find that a typical acquirer is more likely to acquire typical firms.

OMT: **How Situated and Constituted Frames Affect Investor Reactions to Firm Actions**

Author: **Srikanth Paruchuri**, *Texas A&MU*

Author: **Razvan Lungeanu**, *Northeastern U.*

We integrate two distinct literatures, on social approval assets and categories, to develop a more general theoretical framework of interpretive frames or lenses – modes of interpretation that filter available information – that introduces the notions of situated and constituted frames. Our theory highlights the conceptual differences that exists between situated frames, which are based on the industry categories to which firms belong, and constituted frames, which are based on types of behaviors firms exhibit. We then theorize and test whether and how the simultaneous use of such distinct frames impact investor reaction to firm actions. In a rigorous empirical test, we find that investors “wear” situated and constituted frames simultaneously, leading to interpretations of actions that are distinct and that cannot be explained by either of these two lenses alone. We conclude by highlighting the relevance of our research and findings for future research on interpretive frames, market actors’ evaluation of organizations, and social approval assets.

OMT: **What Does it Mean to be Optimally Distinct? How Organizations Configure Product Feature Dimensions**

Author: **Thijs Alexander Velema**, *National Taipei U.*

Author: **Andrew James Argue**, *National Sun-Yat Sen U.*

The optimal distinctiveness literature argues that products moderately different from category-based expectations conform for legitimacy and differentiate for novelty to out-compete rival products. However, most studies conceptualize optimal distinctiveness as a balance point along a single axis without considering how organizations configure multiple feature dimensions to position products. Distinguishing feature dimensions is important, because there are at least two distinct ways producers can configure feature dimensions for optimal distinctiveness: either by blending moderately differentiated feature dimensions or by combining tightly conforming and sharply differentiated feature dimensions. We study the video game industry to distinguish the game world and the game mechanics as the two key feature dimensions of games. With a dataset of 2,222 video games published on the 7th generation of game consoles, we demonstrate that games portraying a game world tightly conforming to the category schema through which gamers move with a set of game mechanics sharply differentiated from the category schema receive higher critical acclaim than rival games. Products can thus be positioned as optimally distinct not by blending moderately differentiated features, but rather by configuring high conformity and familiarity on some feature dimensions to legitimize sharp differentiation and novelty on other feature dimensions.

OMT: **Overcoming Categorical Imperative: Managing Audience Evaluation by Constructing a Narrative Identity**

Author: **Sang Won Han**, *Columbia U.*

Author: **Yoonjin Choi**, *London Business School*

Author: **Young-Kyu Kim**, *Korea U.*

Assuming a broad market identity that encompasses multiple categories can be beneficial, but it is difficult to do so as category spanning often leads to audience confusion. Previous studies addressing this challenge have mostly focused on identifying boundary conditions that allow category spanning rather than examining what actions firms can take to overcome categorical imperative. Focusing on the role of narratives, we argue that by constructing a broad narrative identity, firms can manage audience expectations and guide their audience in how they should be evaluated. We test our theory in the U.S. stock market, the same context used in Zuckerman (1999), and find that the breadth of firms’ narratives communicated in their 10-K business description moderates the relationship between coverage mismatch and stock price.

OMT: **One Person can Make a Difference: How the Mobile Individual Affects Status of Hiring Firms** ✈

Author: **Leonard Schmidt**, *PhD Candidate at National Sun Yat-Sen U., Taiwan*

Author: **Thijs Alexander Velema**, *National Taipei U.*

Author: **Shin-I Shih**, *National Sun Yat-Sen U.*

The present paper examines how executive mobility shapes organizational status. Whereas previous work established the status-enhancing effect of hiring from a higher-status source firm on the status of the destination firm, we theorize that this effect is contingent on human- and social capital characteristics of the hired personnel. Human capital characteristics are measured based on tenure, specialization, and elite-university degrees. Social capital is measured by number of board seats. We test our hypotheses in the context of U.S. American accounting, consulting, and law- firms, covering mobility events of directors between 2012 and 2018 with a dataset of 1,169 firm- year observations. Results show that hiring events representing longer tenures and board interlocks will strengthen the positive effect of hiring from above-status tiers and subsequently improve the hiring firm 's status. We contribute to our understanding of the mobility-status relationship by explaining differences in the perception of affiliations which influence, whether actors gain advantages from such affiliations.

The Corona pandemic has accelerated the growing trend for organizations to adopt so-called new ways of working, including practices such as conducting meetings and teachings through video conferencing, working from home, when commuting or in co-working spaces as well as hot desk arrangements, agile methods and holocratic structures. What seems to unite these empirical phenomena is the fact that they grant organizational members intentionally increasing discretion in terms of what to work on (autonomy to set priorities), when to work (temporal autonomy) and where to work (spatial autonomy). However, most of our received wisdom of organizational theories and concepts relies on the implicit premise of a 9-5-fixed-desk-clear-hierarchy work environment. As organizational scholars, we thus seem to be witnessing a substantive shift in our 'object of inquiry' that we have yet to fully understand empirically and to theorize conceptually much better. To increase our knowledge on new ways of working and its implications and effects on theory, we want to elaborate these aspects in three paper presentations on the following three conceptual foci: institutions, organizational identity, as well as power and politics. First of all, we see that new ways of working challenge existing institutions. The flexibilization and digitalization of work led to taken-for-granted assumptions being questioned, e.g. with regard to place, time, interactions and boundaries of work. Secondly, we realize that all of these new ways of working affect the mode and modalities of social interactions. Organizational identity as a social construct, though, rely substantively on social processes of meaning negotiations. Thirdly, we recognize that most of these new ways of working are technology enabled. New practices and technology are never innocent. Rather, they affect how power and politics are distributed and enacted in organizations. At the end of the symposium, similarities and differences of these three perspectives shall be further elaborated together with a discussant and the audience.

The Dynamics of Purpose in Organizations and Work

Session Moderator: **Rodolphe Durand**, *HEC Paris*

OMT: Collaboration in Purpose-driven Organizations

Author: **Rodolphe Durand**, *HEC Paris*
Author: **Chang Wa Huynh**, *HEC Paris*

Cooperation and coordination are two complementary aspects of collaboration that are essential for firms. As firms articulate a prosocial purpose and embed societal goals into their strategies, routines, and culture, new coordination challenges arise. In contrast, such challenges do not exist when firms only implement peripheral corporate social initiatives and did not need to extend their attention beyond cooperation, which relates to employees' motivation. In this paper, we highlight that prosocial purpose-driven firms should not care about their employees' prosociality, but they should also ensure that they manage to coordinate those employees. We found that legitimacy judgments mediate the positive impact of employees' prosociality on the level of collaboration a firm reaches. We also found that this mediating effect is stronger for prosocial purpose-driven firms relative to non prosocial purpose-driven firms.

OMT: Prosocial Venturing in Multicultural Societies: A New Theoretical Framework and Roadmap

Author: **Nkosana Mafico**, *U. of Edinburgh*
Author: **Anna Krzeminska**, *Macquarie Business School, Macquarie U.*
Author: **Charmine E. J. Hartel**, *Monash U., Australia*

Social entrepreneurs operate in challenging environments as the inherent nature of their ventures involves multiple divergent organizational categories. While the extant literature conceptualizes category membership as an organizational concern driven by characteristics of the organization, e.g., non-profit and for-profit, this paper expands upon the prior focus by highlighting that category membership is also an individual-level concern for social entrepreneurs. Specifically, social entrepreneurs in multicultural societies are often categorized based on their cultural background, which can help or hinder their capacity to access resources. Drawing on the cross-cultural psychology literature, this paper contributes to the literature on categories and hybrid organizations by highlighting the interplay between audience categorization processes at the individual and organizational levels. Specifically, we elucidate how audiences' assessments of social entrepreneurs' cultural backgrounds can inform their evaluations of prosocial ventures. We also highlight how dynamics in multicultural societies can create categorization incentives that reward and penalize social entrepreneurs for the frames they enact. Although these incentives may assist entrepreneurs in obtaining resources for their prosocial ventures, we illustrate that there are various long-term implications to consider.

OMT: Changing Tune: Exploring Processes and Tensions in the Transition from Movement to Business

Author: **Valerio Iannucci**, *Boston U. Questrom School of Business*
Author: **Paolo Aversa**, *City U. London*

The evolution of movement-based communities is drawing increasing attention among both scholars and practitioners. In their pursuit of scale and profits, movements tend to face the dual goals of drawing mainstream participation while preserving authenticity. Prior research tends to focus on uncoordinated initiatives led by multiple actors engaged with market logics, thus providing a gamut of offerings where different members of the community partake. Those movements that instead attempt to channel their entire communities into single business initiatives face the challenge to accommodate the different – sometimes conflicting – needs of their members. Yet, these challenges remain theoretically and empirically underexplored. Hence, we investigate the process by which community-based movements turn into single businesses by developing a qualitative, longitudinal (2014 – 2021) analysis of Rockin'1000 – also known as “The Biggest Rock Band in the World” – which originated as a movement of rock enthusiasts, and later morphed into a fully-fledged enterprise. By deploying a new perspective at the intersection of research on movements and value propositions, we conceptualize a generalizable, four-phase process. We show that each milestone throughout the transition becomes source of specific tensions, which alter movements' equilibrium, and triggers a process of members shakeout, which may result in the decline of the initiative if not adequately addressed.

OMT: The Purpose Trap: How Meaningful Work Leads to Burnout

Author: **Jonas Spengler**, *U. of Cambridge*
Author: **Thomas J. Roulet**, *U. of Cambridge*

Meaningful work may seem like a blessing, but it can also be a curse. While research has alerted to this so-called double-edged sword, we still lack understanding of the mechanisms and processes that underlie it, especially on a social and organizational level. This study sheds light on the dark sides of meaningfulness by examining the role of social context in burnout. Drawing on a two-phase, multi-month ethnography of NGOs in the ‘Jungle of Calais’, this study finds that, when the meaningfulness of work exceeds that of other activities, workers cut ties to unrelated social contexts and hence get trapped in the meaningful context. This process of total institutionalization in turn inhibits self-regulation practices that prove crucial for dealing with strain. Based on these findings, we develop a process model of the role of social context in burnout and discuss implications for the wider literatures on meaningfulness and total institutions.

Author: **Andrea Cavicchini**, *IESE Business School*

Which characteristics make companies differ in their stances toward the reduction of carbon emissions? Carbon neutrality entails a drastic technological and organizational change, and specific internal drivers may endorse its effectiveness. Recent literature proposes that organizational purpose can function to advance organizational efforts towards sustainability; however, not much is known about the condition through which this relationship can be effective. In this paper, I build on the open polity perspective on organizations and propose that organizational carbon emissions reduction may stem from interactions between the prevailing values and beliefs among the body politic of the firm. Specifically, I look at organizational purpose and political ideology as explanatory variables towards reducing carbon emissions. I gathered data from Glassdoor reviews to measure employees' perception about the organization's purpose and the Federal Election Commission (FEC), which provides individual contributions to political parties. My preliminary results show that organizational purpose and ideology (i.e., liberal vs. conservative firms) alone do not explain significant differences towards CO2 reductions. However, when mediated, I find that liberal organizations with high employee perception of organizational purpose explain substantial reductions in carbon emissions.

**A “Relating” Lens on Occupations and Professions:
Collaboration, Coproduction, and Brokerage**
A “Relating” Lens on Occupations and Professions

Discussant: **Julia DiBenigno**, *Yale School of Management*
Presenter: **Arvind Karunakaran**, *Stanford U.*
Presenter: **Nishani Bourmault**, *NEOMA Business School*
Presenter: **Danielle Elaine Bovenberg**, *UC Santa Barbara*
Presenter: **Rohin Borpujari**, *London Business School*

This symposium showcases research that adopts a “relating” lens (Anteby, Chan & DiBenigno, 2016) to the study of occupations and professions in organizations—focusing on how actors interact and engage in practices of occupational collaboration, coproduction, and brokerage to achieve collective outcomes. Such relational practices are of increasing interest to scholars because important organizational processes such as the coordination of complex work (DiBenigno & Kellogg, 2014; Karunakaran, 2021) and the implementation of reform (Kellogg, 2014; Huising, 2015) rely on occupational groups working together with other stakeholders in their ecosystems. Given this recognition, scholars have called for empirical work that advances our understanding of how occupations collaborate, coproduce and broker with other groups in order to achieve shared or complementary goals (Anteby, Chan & DiBenigno, 2016). Consequently, empirical research using this approach has begun to grow, but there has been little integration across studies to offer a broader understanding. This symposium aims to bring together new insights emerging from work that adopts a relational lens to diverse work settings—emergency response, anesthesiology, mergers and acquisitions, and scientific laboratory work. By integrating this set of studies, we hope to broaden our theoretical understanding of how occupational groups productively engage with other members of their ecosystems, and to identify areas of interest for further study by scholars of work and occupations.

Individual Networks and Performance: New Insights

Session Moderator: **Ekaterina Netchaeva**, *Bocconi U.*

OMT: [At Face Value: The Effect of Facial Traits on Social Networks and Job Performance Evaluations](#)

Author: **Ekaterina Netchaeva**, *Bocconi U.*

Author: **Alessandro Iorio**, *Bocconi U.*

Author: **Giuseppe Soda**, *Bocconi U.*

While the importance of network centrality has been extensively documented in past research, more work is needed on just how and why individuals achieve these positions within informal networks. In the current research, we argue that in addition to the previously identified benefit-assessing or calculative/rational process that individuals engage in to determine whom to turn to for information, individuals may also reach out to their colleagues following an automatic, rapid, and instinctive response. Specifically, we argue that the attributions that an information seeker (i.e., alter) makes of the facial characteristics of a possible information provider (i.e., ego) could contribute to amplifying or reducing ego's prominence in the knowledge sharing network, which further affects ego's subjective performance evaluations. In an organizational sample of 206 individuals, we test and find support for our mediation model specifying that the judgments of dominance and valence affect ego's indegree centrality, which further affect performance evaluations. We conclude by discussing the practical and theoretical implications of our results.

OMT: [The Network Structure of Cultural Elements and Organizational Creativity Evaluations](#) 

Author: **Hangjun Cho**, *INSEAD*

Author: **Frederic Clement Godart**, *INSEAD*

Author: **Charles Drago Galunic**, *INSEAD*

Producers in the creative industries thrive on the generation of novel and useful products, and as such they are constantly searching for ways to boost their ability to do so. We suggest that the conventional network approach to creativity that focuses on how producers are positioned amongst other producers can be advanced by examining how the cultural elements with which they work (i.e., the underlying ideas with which they create) relate to and are positioned amongst each other. The network structure of elements may contain some which are particularly effective in recombining with many other elements, providing an alternative mechanism for explaining high creativity. We show that robust cultural elements—i.e., that are connected with many other elements—increase producers' creativity. They also mitigate the possible disruption and creative discount associated with the hiring of a new key employee, in fact boosting rather than diminishing creative performance. We test our hypotheses using a recent dataset of high-fashion stylistic elements.

 OMT: [Strategic Broadcasting of Network Ties: Leveraging \(random\) Encounters as an Attention-Seeking Tool](#) 

Author: **Seungho (Andy) Back**, *U. of Toronto*

Finalist for the OMT Division Best Student Paper Award

It has been extensively investigated how network ties function as a signal. However, scholarly focus was mostly allocated to how network ties are interpreted by audiences and to what extent the interpretation affects performance in return. Departing from previous studies, I explore a largely unexplored and often casually assumed process: how are network ties broadcasted by social actors prior to their interpretation by audiences? Leveraging unique data on gaming (League of Legends) YouTubers where players are randomly matched with others, I investigate the effect of status on the selection of which ties to broadcast. This paper contributes to organizational research by theorizing the relationship between two effects of broadcasted network ties – endorsement and attention-grabbing – and discretion in network formation. I find that random network ties with higher status others are broadcasted to attract audience attention. However, the value of broadcasting ties with higher status others is greater for high-status than for low-status actors, which is at odds with the prediction of endorsement effects under full discretion, due to the amplified attention given to multiple high-status actors and the competitive pressure between high- and low-status actors. This paper aims to provide a novel perspective that network ties as signals can be conceived as a source of information which actors can strategically leverage.

OMT: [The Importance of Project Status for Career Success: A Network Perspective](#) 

Author: **Shihan Li**, *Heinz College - Carnegie Mellon U.*

Author: **David Krackhardt**, *Carnegie Mellon U.*

Author: **Nynke Niezink**, *Carnegie Mellon U. - Dietrich College of Humanities and Social Sciences*

In client-oriented project-based organizations, there is a mystique around “hotshot” projects and how they affect one's career. In this study, we investigate how the status of the projects that employees are assigned to affects their career success. While prior work tends to treat the status of a project primarily as a function of the status of its individual members, we argue that projects develop standing in an organization based on the challenge and complexity of the problem being solved for the client. Further, we theorize that the nature of complex projects leads to a network configuration that reveals which projects, in general, are of higher status. We deduce hypotheses regarding the predictors of project status and its impacts on individuals' career success. We test these hypotheses on a population of over 1000 IT specialists in a large international consulting firm tracked over a five-year period. We find that employees who are assigned to higher-status projects are rewarded, on average, with higher promotion opportunities within a six-month window. We further theorize that this career advantage is moderated by an employee's formal level: Since senior managers are attributed with more engagement and responsibility in dealing with the challenges presented by projects, they are rewarded more when working on high-status projects. This research has significant implications for individuals planning careers and for organizations attempting to improve their project assignment system.

Paradox In Organizations Dealing with Disruption and Conflict

Session Moderator: **Sudhanshu Maheshwari**, *Doctoral Scholar, Indian Institute of Management Ahmedabad*

OMT: Discursive Paradoxical Tension: Understanding and Managing Competing Discursive Logics

Author: **Sudhanshu Maheshwari**, *Doctoral Scholar, Indian Institute of Management Ahmedabad*
Author: **Ashneet Kaur**, *Doctoral Student at IIM Ahmedabad*

With the advent of Covid-19, the importance of communication has increased. However, the management may face the challenge of communicating effectively due to the presence of multiple paradoxes of communication. The paradoxical tension associated with competing discursive logics falls under the ambit of discursive paradox, defined as the dominant discourses that appear contradictory but tend to function simultaneously for the productive perusal of the organizational goals. Our study attempts to understand and manage the tensions emanating from the discursive paradox by exploring the dimensions of discursive paradoxical tensions. We contribute to understanding the relationship of discursive paradoxical tension with the existing four paradoxical tensions, i.e., belonging, learning, organizing, and performing. Further, the study proposes the resolution of discursive paradoxical tensions through a strategic response of adjustment to ensure the long-term sustainability of the organization. Finally, the research provides managerial implications of the study and future directions for researchers to examine the role of communication in the paradox realm.

OMT: Managing Paradox with Visuals: Persistence and Adaptation in an Airline's Crisis Response

Author: **Alicja Gajewska**, *The U. of Sydney Business School*
Author: **Stefan Meisiek**, *U. of Sydney Business School*
Author: **Rico Merkert**, *U. of Sydney Business School*
Author: **Eric Knight**, *Macquarie Business School, Macquarie U.*

Increasing volatility and disruptions, which organizations have to respond to, can contribute to salience of paradoxical tensions. Such can be addressed in proactive or defensive ways. Despite increasing interest in sociomateriality, little is known about its role in management of paradoxes, let alone in the context of a crisis. This paper adopts a video-ethnographic approach to study a materially managed paradox in an airline setting during the COVID-19 crisis. Specifically, a year-long set of meetings was analysed with a focus on a visual artefact used for management of airline operations. Our results show how material mediation with dynamically changing visual artefact contributes to management of adaptability and persistence paradox and how the malleable nature of the visual enabled responding to the disruption, as well as maintaining ongoing operations. Our study showcases the mediation through first splitting the crisis response from continuous issues of operating an airline, and later through merging the two. This paper extends understanding on how material mediation happens as material artifacts are changed, establishing two-way relationship between the discourse and materiality governed by multiple concepts identified as capturing honing, connecting and transcending and leading to different outcomes across the time. Our findings re-emphasize the importance of considering the two-way relationship between the discourse and materiality in management of paradoxes.

OMT: Managing Conflicting Institutional Demands in Organizations: A Framework for Future Research

Author: **Jiyao Chen**, *Oregon State U.*
Author: **Nusrat Farah**, *Southern Illinois U. Carbondale*

Over the past two decades, a growing body of research has examined how organizations manage conflicting institutional demands through either a dialectic or paradoxical perspective. While many strategies and solutions to resolve conflicting institutional demands have been proposed, the literature lacks a coherent framework and a deep understanding of the mechanisms through which organizational actors can effectively apply the various strategic solutions. To address these two shortcomings, we propose a typology as a new framework to systematically investigate the mechanisms embedded and the dynamics involved in the strategies of managing conflicting institutional demands. We then discuss a road map for future scholarly work to advance research on conflicting institutional demands.

OMT: Emotions from Contradictory Demands: Individual Coping Patterns and Differential Effects Over Time

Author: **Siri Nordland Boe-Lillegraven**, *Amsterdam Business School, U. of Amsterdam*
Author: **Christina Bidmon**, *Copernicus Institute of Sustainable Development, Utrecht U.*

Contemporary organizations tend to pursue multiple and contradictory demands. In consequence, individuals working in these organizations often have to oscillate between seemingly opposing tasks and thought worlds, a resource intensive activity associated with considerable personal strain. We theorize this kind of switching as giving rise to negative affect, which induces emotional work shaped by individuals' need to conserve their resources. We synthesize our theorizing in a model that explains how different emotional coping patterns lead to different consequences for individuals and the wider organization at specific moments in time and over time. We contribute to literature on how individuals grapple with multiple and contradictory demands in organizations, which to date has foregrounded rational over emotion-centered responses in dealing with tensions and paid little attention to explaining the interplay between individual and organizational resource depletion over time. Our theorizing is particularly relevant for understanding how individuals and organizations can establish a positive 'new normal' after major disruptions, as such situations often intensify tensions and leave organization members without much guidance on how to cope constructively.

Author: **Elmar Kutsch**, *Cranfield School of Management*
Author: **Ibrat Djabbarov**, *Cranfield School of Management*
Author: **Haytham Siala**, *Newcastle U. London*

We studied how actors in a high reliability seeking organization (HRO) respond to errors through mindful actions that are in tension. Scholars conceptualized mindfulness in HROs as a combination of awareness and action, however, prior research has primarily emphasized mindfulness as enriching awareness (Weick et al, 1999) with less attention to action. The element of rich awareness has produced important insights into how organizations can notice errors or prevent them from occurring. However, we know little about the role of mindfulness as action. By adopting a paradox lens and using the repertory grid technique, we elicited simultaneous opposites that actors navigate in their responses. In exploring individual actors' responses to two types of errors – near-miss and accidents – allowed us to elaborate how individuals configure their action repertoire. When enacting their responses, actors locate their actions in between multiple opposite poles that create tensions. Actors' sense of tension changes when errors are deemed near-miss or accidents thereby locating their actions between the simultaneous opposites differently. Finally, actors' repertoire of actions reflects their awareness of not only errors, as the extant literature suggested, but also their awareness of the social context and their place in this context.

Diversity in Recruitment

Session Moderator: **Joelle Evans**, *Bayes Business School (formerly Cass)*

OMT: **Stretching the Occupation: How Minority Employees Reconfigure Competencies, Tasks and Networks**

Author: **Joelle Evans**, *Bayes Business School (formerly Cass)*
Author: **Thierry Amslem**, *IE Business School, IE U.*
Author: **Celine Flipo**, *IESEG School of Management*

Occupational members have a well-known tendency to integrate candidates with similar educational and cultural background, thus playing a role in the reproduction of inequality. Even when employees from minority backgrounds are hired, their career outcomes are poorer than those of more privileged employees. It is thus crucial to better understand how employees from less privileged backgrounds can be better integrated within occupations. In this paper, we draw on a longitudinal qualitative study of the integration of employees within the different occupations of a large media group. We compared the candidates who were offered a permanent position and those who were not to unpack the practices that allowed for more successful integration. While all apprentices enacted multiple practical strategies to facilitate their integration, employees that extended the occupations' work domain by adding new tasks and competencies were more likely to be recruited into permanent positions. We highlight boundary conditions and offer theoretical implications for research on diversity and integration in the workplace.

OMT: **Not Paying for Diversity: Repugnant Concerns with Instrumental Approaches to Diversity Recruitment**

Author: **Summer Jackson**, *Harvard Business School*

In a 20-month ethnographic study, I examine how a technology firm, "ShopCo" (a pseudonym), considered 13 different hiring platforms to attract minority engineering talent. I find that when choosing to adopt hiring platforms focused on racial minority candidates, but not when choosing to adopt hiring platforms where the modal candidate on the platform is white, ShopCo decision-makers expressed distaste with the perceived (a) objectification, (b) exploitation, and (c) 'race-based targeting' of racial minorities. These repugnant market concerns influenced which types of platforms ShopCo adopted to recruit racial minorities. ShopCo eschewed hiring platforms that emphasized time, quantity, efficiency, opportunity, and compensation as benefits to candidates (an instrumental approach to candidate recruitment—typically used for white candidates) in favor of platforms that emphasized individuality, ethics, equity, authenticity, and commitment as benefits for candidates (a non-instrumental approach to candidate recruitment). I consider the implications of my findings—specifically, this new demand-side constraint of repugnant market concerns—for organizations looking to create more diverse, equitable, and inclusive workplaces.

OMT: **Gender Differences in the Use of Recommendation Letters in the Job Search Process**

Author: **Kira Choi**, *EMLYON Business School*

Who is more likely to use social contacts to search for jobs, and why is this the case? Despite substantial evidence that social contacts improve individuals' success in the process of job-seeking in various ways, previous studies show that individuals with more social capital are not more likely to use social contacts to search for jobs than those with less social capital. By using records of activities on an online hiring platform, this paper seeks to explore variations in job seekers' decisions to use recommendation letters and the implications of these decisions. Specifically, I propose that female applicants, who may face bias, and hence feel disadvantaged in the labour market, utilise recommendation letters more than male applicants. I also posit that when recommendation letters are used, their effect is more substantial for female applicants than for male applicants in terms of positively affecting their job search outcomes. The results of this study suggest that female applicants use recommendation letters as a mitigation strategy for their labour market disadvantage while also providing additional information; thus, signalling the applicants' qualities in the job search process.

OMT: **The Hidden Cost of Flat Hierarchies for Applicant Pool Diversity: Evidence from Experiments**

Author: **William Reuben Hurst**, *U. of Michigan, Ross School of Business*
Author: **Saerom Lee**, *The Wharton School, U. of Pennsylvania*
Author: **Justin Frake**, *Ross School of Business, U. of Michigan*

Winner of the OMT Division Best Paper Award

This paper investigates how an organization's formal hierarchy affects the gender composition of its applicant pool. One perspective based on theories of gendered organizations suggests that, because women may perceive "flat" organizational structures with few hierarchical levels as egalitarian alternatives to traditional tall hierarchies that reinforce male dominance, these flat structures may disproportionately attract female applicants and thus ameliorate workplace gender segregation and inequality. However, we argue that flat hierarchies may reduce the gender diversity in the applicant pool because, compared to men, women will perceive flat hierarchies to offer fewer career advancement opportunities, to be more difficult to fit into, and to saddle them with more work. Using a field experiment with 8,400 job candidates, we show that job postings featuring a flat hierarchy decrease female representation in the applicant pool by 25%. Our follow-up survey experiment with 9,000 subjects suggests that this decrease in female attraction corresponds with cross-gender differences in perceived career advancement opportunities, fit, and workload. These results imply that the growing trend of flat hierarchies could inadvertently exacerbate workplace inequality and gender segregation.

Despite increasing societal attention to the need for social change along multiple dimensions, including well-being, diversity, pay equity, and corporate responsibility, organizations have struggled to make substantial progress. Workplaces continue to be dominated by constrictive “ideal worker” norms, leadership spaces remain predominantly White and male, the gender pay gap has barely budged since the 1990s, and shareholders remain the primary stakeholder for most organizations. Why is it so difficult for organizations to accomplish the social change called for by leaders, scholars, advocates, and the general public alike? Across arenas of mental health, diversity, pay equity, and corporate responsibility, the papers in this symposium investigate the risks that organizations associate with social change, the responses that they craft to mitigate these risks, and the detrimental consequences that these responses have for social change in organizations. By adopting an expansive, interdisciplinary perspective at the crossroads of psychology, sociology, and management, this symposium provides insights not only into how social change efforts are thwarted on a case-by-case basis, but also into the dynamics that systematically reinforce the status quo in organizations.

Tackling society's grand challenges is an increasingly important topic that many organizational scholars have started to turn towards. In this context, one question that has lately garnered a lot of attention is how social innovation, can help to tackle such issues. While much of the prior literature on social innovation has focused on heroic social entrepreneurs engaged in "changing the world" or hybrid organizations managing the ongoing tension between business and charity, we see a growing interest in the role of environmental contexts in shaping the emergence, diffusion, and implications of social innovation endeavors. In response to this burgeoning interest, in this panel symposium, our aim is to drive forward a community perspective which may help to develop a more contextualized and nuanced understanding of social innovation across the globe.

Problematizing CSR and Environmental Reporting

Session Moderator: **Enying Zheng**, *Peking U.*

SIM: Institutionalizing CSR Reporting: Historical Webpages of Fortune 500 Companies, 1997-2009 →

Author: **Enying Zheng**, *Peking U.*
Author: **Wenjie Liao**, *Rochester Institute of Technology*
Author: **Yan Xing**, *U. of Illinois at Chicago*
Author: **Jiajia Zheng**, *Peking U.*

Both business history and management and organization scholarships have paid increasing attention to corporate social responsibility (CSR). However, the two remain largely isolated from each other, leaving the historical processes leading to the institutionalization of CSR reporting undertheorized. We bridge the gap by coding and analyzing a digital archive of 263 multinational enterprises' (MNEs) historical websites between 1997 and 2009. Combining in-depth case studies with quantitative summaries, we find that MNEs learned to define the CSR term and adjust their reporting behaviors gradually, from ad hoc mentioning of idiosyncratic themes to proliferating a whole package of themes. Accompanying this change was the rise and growth of global initiatives such as Global Compact and Global Reporting Initiatives. These findings not only illuminate a key period of the recent business history but also epitomize the dialectical relationship between business and society where business is both responsive to and responsible for societal changes.

SIM: Dimensions of CSR Disclosures: Are They Converging, Diverging, or Crossverging? → 📄

Author: **Rakesh B. Sambharya**, *Rutgers U., Camden*

Academics have debated whether corporate social responsibility (CSR) practices are global, regional, or crossverging in nature. Prior CSR literature has primarily focused on single-country and on predominantly developed country samples. Another issue has been the use of aggregate CSR to the neglect of different discrete dimensions of CSR such as environment, employees, anti-corruption, human rights, non-governmental organizations (NGOs), and health. In this paper we test whether these aforementioned aspects of CSR disclosures are converging (global), diverging (regional), or crossverging (hybrid) on a sample of 335 multinational enterprises (MNEs) from 31 countries from three regions of the world: Europe, Anglo-Saxon cluster, and Asia and the emerging markets. Using all six individual components of CSR as dependent variables, MANCOVA procedure indicated that there are regional differences. The overall findings of the study imply that on all six individual dimensions of CSR disclosures the divergence hypothesis was supported.

SIM: Private Politics, Dynamics of Negative Media Exposure and Firm Strategy

Author: **Fabian Mändli**, *U. of Lausanne, HEC Lausanne*
Author: **Estefania Amer**, *U. of Lausanne, HEC Lausanne*
Author: **Jean-Philippe Bonardi**, *U. of Lausanne, HEC Lausanne*

Negative media exposure and the damaging impact it can have on a firm's reputation is at the heart of the Private Politics and the Social Movements literatures. However, these literatures ignore the fact that media reports could have cumulative effects over time, leading to negative spirals that could create detrimental reputational effects, but also that firms might be able to prevent these spirals. In this paper, we develop a theory of dynamic media exposure, suggesting that negative news regarding a company's environmental records increase the likelihood of subsequent negative exposure of the same type, threatening a company's reputation beyond the short-run and potentially turning this firm into an environmental villain. However, we also show that companies can prevent such negative spirals by nurturing positive environmental news and issuing press releases about their environmental progress. We test our hypotheses with a unique 20-year panel-dataset of media articles on the 30 largest US-companies, and find support for our hypotheses. We discuss how these results broaden our understanding of company-media interactions, and what they imply also regarding sustainability concerns.

Business, Inequality and Value Chain Governance

Session Moderator: **Luciana Lucena De Lima**, *ESADE Business School-Ramon Llull U.*

SIM: Improving Gender Equality in GVCs: A Comparative Analysis of Interventions in Three Countries

Author: **Shengwen LI**, *Smith School of Business, Queen's U.*

Author: **Anthony Goerzen**, *Queen's U.*

Global value chain (GVC) governance has become an essential part of the international development agenda to promote the inclusion and integration of all GVC's participants at all levels that benefit from the upgrading process. Ensuring gender equality and inclusion at the community level has been overlooked in this agenda, despite the recognition and adaptation of SDG 5 gender equality by governments and businesses worldwide. Previous literature indicates community governance as a supplement GVC governance structure to private, social, and public governance can facilitate livelihood upgrading for rural communities. However, it remains unclear under which conditions both women and men can equally benefit from the livelihood upgrading. To address this gap, this study that draws from GVC governance literature, feminist theory, and institutional theory empirically examined the effect of third-party interventions launched in artisanal mining communities on gender equality and women's empowerment, particularly the furthest reaches of a GVC when local institutions are weak—using a novel dataset collected from local miners in the Democratic Republic of Congo, Uganda and Zimbabwe. We adopted ten indicators that reflect SDG 5 to investigate the pre-intervention conditions of five mining associations in three countries. Our study offers insights based on evidence-based recommendations for policymakers and practitioners who integrate SDG 5 into their global sustainability strategies. In the form of collective efforts from social and community actors, women and girls can benefit from integrating into the global economy, especially in the first mile of the GVC.

SIM: Local Experience of Global CSR in Cocoa Value Chain: Critical Perspective

Author: **Anna Mineeva**, *U. of Lyon, UJML3, iaelyon School of Management, Magellan*

This paper explores the implementation of corporate social responsibility (CSR) initiatives aimed at community development of Ivorian cocoa growing communities from the perspective of its intended beneficiaries. While the majority of studies on CSR in developing countries focus on the global dimension of CSR and its role within global governance arrangements, we seek to bring new empirical insights by shifting the focus to the receiving end of CSR and bringing to the fore the contextualised lived experience of local marginalised actors intended to benefit from the CSR initiatives. Drawing on unique qualitative empirical data and building on critical perspective on CSR, we reveal different types of tensions emerging at multiple levels. We contribute to the critical CSR research by developing a conceptual process model, which theorises the relationship between different types of tensions and shows how unresponded tensions lead to the abandon and failure of the CSR initiative.

SIM: Politics and Social Responsibility in the Bangladesh Ready-Made Garment Supply Chains

Author: **Enrico Fontana**, *Sasin Graduate Institute of Business Administration, Chulalongkorn U.*

Author: **Cedric Dawkins**, *Loyola U. Chicago*

Despite the debate on the political activity and social responsibility of transnational corporations, there is little evidence in the PCSR literature on the politics of powerful global and local economic actors and how they can influence the deliberative efforts of MSIs in raising labor standards in production countries. In this article, we take a Gramscian perspective and present a large qualitative study in the Bangladesh RMG supply chain based on the experience of suppliers in the years following the Rana Plaza collapse. While detailing the political activity of the international brands and local industry association as global and local 'hegemonies', we show how they use their social responsibility for workers' health and safety to advance market-driven choices and silencing opposition. Hence, we conceptualize 'glocal contestation' as the discursive political activity of global and local hegemonies in protecting their capacity to meet their social responsibility while contesting MSI stakeholder groups and each other. This article extends the PCSR literature on MSIs in global supply chains, finally delivering important insights on the future of MSIs and labor standards in global RMG supply chains.

SIM: The Family Business Paradox: How Family Business Groups Create Wealth and Inequality

Author: **Luciana Lucena De Lima**, *ESADE Business School-Ramon Llull U.*

Author: **María Jose Parada**, *ESADE Business School-Ramon Llull U.*

Wealth inequality is one of the most pervasive problems of our times. This article contends that family business groups deserve special examination because they create and control vast amounts of private wealth that are passed through inheritance to future generations. Despite their economic importance, little has been done to investigate to what extent family business groups contribute to wealth inequality. This study offers an economic and legal perspective of the topic and shows that family business groups reify existing power structures that sustain wealth concentration. This article shows that intergenerational transfers (capital and non-capital) and the use of the code of law are powerful mechanisms that help to explain why family business groups reinforce existing wealth inequality, a state of affairs that has persisted over time. However, this article also shows that family business groups can increase the distribution of wealth through philanthropy and ethical business practices that can dismantle class hierarchies and create opportunities for disadvantaged groups. Thus, this article concludes that family business groups play a paradoxical role. They create wealth inequality due to their societal and economic power, but they can also create opportunities for upward social mobility for underprivileged communities.

Inter-Partner Relationships at the Organizational Level

Session Moderator: **Xiaoshu Bei**, *U. of Colorado, Boulder*

STR: Employee Mobility Constraints and Strategic Alliances

Author: **Xiaoshu Bei**, *U. of Colorado, Boulder*

Author: **Jeffrey J. Reuer**, *U. of Colorado, Boulder*

Author: **Kun Zhang**, *HKUST Business School*

Employee mobility facilitates alliance formation due to critical information transmission. At the same time, employee mobility and alliances can be substitute means by which firms source external capabilities. We emphasize the interaction between these two relationships and ask how employee mobility constraints in labor markets affect firms' alliances. More specifically, we propose dynamic changes in alliance formation following legislative changes that constrain employee mobility (i.e., the inevitable disclosure doctrine (IDD)). In the immediate aftermath of these changes that constrain employee mobility, the substitution effect dominates, and firms form more alliances to access capabilities. In the long run, this effect is dampened due to a lack of supply of new hires that would otherwise foster technology partnerships. We further investigate factors that change the demand and supply conditions. Knowledge-intensive firms have more alliances in the aftermath and fewer alliances in the long run. Stronger noncompete enforceability shifts the timeframe so that firms do not have higher alliances even in the aftermath of IDD adoption. Our hypotheses are supported by empirical results from a sample of venture-backed startups in the biopharmaceutical industry.

STR: Arranged Marriage: Social Ties between Political Stakeholders and Interfirm Alliance Formation

Author: **Tao Wu**, *National U. of Singapore*

This study investigates whether socially connected political stakeholders internalize alliance strategies of firms under their respective jurisdictions into their own social exchanges and thus push for nonspontaneous interfirm alliances. To test my hypotheses, I take advantage of the rotation of top two officials (i.e., the governor and the secretary) at the province level in China. I structure a longitudinal dataset of firm-province pairs supplemented with officials' résumé information and the records of all new cross-province joint ventures established by each listed firm from 2009 to 2019. I found that a listed firm established more alliances with firms in a host province if its home province was socially connected with the host province via more ties between top officials. In addition, this positive effect was stronger: 1) if governors were involved in the interprovincial social ties; 2) if officials were in their last term in their position; or 3) if a focal firm had no political stakeholders from other governments. Notably, I ruled out the competing mechanism that such ties enabled, rather than coerced into, interfirm alliance formation.

STR: A Burden or a Buffer? The Impact of Firm Status on JV Dissolution after Misconduct

Author: **Lulu Shi**, *Xi'an Jiaotong U.*

Conflicting evidence exists regarding the response of JV partners to focal firm misconduct: some firms chose to avoid the risk of negative spillovers by ending the inter-partner relationship, while others are more likely to maintain the relationship. In this study, we analyze whether the status of focal firms, generated from alliance networks, may motivate such behavioral differences. Drawing on insights from the stigma anxiety and status literature, we hypothesize and find that firm status may have a curvilinear effect on JV dissolution following misconduct. We tested our hypotheses on a sample of firms in the computer industry from 2000 to 2018. Our results indicate that a low to a moderate level of focal firm status can be a burden for JV dissolution as it increases the visibility of misconduct; while a moderate to a high level of firm status serves as a buffer for JV dissolution as it increases the power of focal firms' resource control. These findings reveal the "double-edged sword" nature of firm status following misconduct. Furthermore, we propose that the effects of firm status will be moderated by the misconduct publicity and brokering position of focal firm.

STR: Knowledge Similarity and Structural Integration in Technology Acquisitions  

Author: **Seungho Choi**, *Ewha Womans U.*

Author: **Sang-Joon Kim**, *Ewha Womans U.*

We examine how the similarity between acquiring and target firm knowledge stocks influence the decision to structurally integrate the two firms following a technology acquisition. We find that the relationship between knowledge similarity and the likelihood of structural integration is U-shaped, such that acquiring firms integrate target firms when their knowledge stock has either low or high degree of similarity. When knowledge similarity is low, acquiring firms structurally integrate target firms to extend their knowledge base, whereas when knowledge similarity is high, acquiring firms structurally integrate target firms to deepen their knowledge base. However, such a tendency to structurally integrate a target firm when knowledge similarity is low or high is weaker when the two firms have a prior alliance relationship but stronger when the acquiring firm has greater general acquisition experience. Our findings suggest that the role of post-acquisition structural integration in managing acquired knowledge varies depending on the degree of knowledge similarity between acquiring and target firms.

Cognitive and Social Processes in Strategic Leadership: (Former) CEO Directors, Norms and Social Cog

Session Moderator: **Zhi Huang**, *U. of Kentucky*

STR: An Endogenous Agency Model of Sociocognitive Processes

Author: **Kris Mikel Hong**, *School of Economics and Management Tsinghua U.*
Author: **Zhi Huang**, *U. of Kentucky*
Author: **Zhenzhen Xie**, *School of Economics and Management Tsinghua U.*

While much of the agency literature focus on the utility-maximization differences between principals and agents, less is understood about how individual-level factors interact with these situational differences in perspective. We develop a sociocognitive theory of agency that explains the interaction between the individual's cognitive processing style and agency role. Integrating construal level theory with agency theory, we describe how agency roles provide differently ordered aspect hierarchies, through which individuals conceptualize decisions. As the aspect hierarchies of both principal and agent perspectives contain risk and return, the interplay with construal level determines which aspect is used to conceptualize the decision. We illustrate how traditionally labelled principals and agents both may exhibit varying degrees of risk taking based on how abstractly they think about decisions. Consequently, it is necessary to account for individual-level cognitive processing styles when explaining how interpersonal agency differences affect decision-making. By emphasizing the dynamic nature of decision conceptualization, we provide a framework for addressing agency conflicts based on influencing which aspects are used to evaluate decisions.

STR: Predecessor CEO Retention on the Board in the Context of Internal and External Complexity

Author: **Dung Thi Phuong Nguyen**, *Southern Taiwan U. of Science and Technology*
Author: **Cheng-Yu Lee**, *Southern Taiwan U. of Science and Technology*

Corporate governance scholars have long been interested in understanding a critical reality: some former CEOs do not fully leave office, but rather remain as board members. Departing from the inconclusive findings of the Janus face of predecessor CEO retention on the board (RPCB), this article revisits RCPB and their influences on successors and firm performance. This study analyzes a sample set of Taiwanese firms during the period of 2015-2019 by adopting the Heckman two-stage method. The empirical results indicate that RPCB is negatively related to post-succession performance. However, the unfavorable performance effects of RPCB are found to be reduced in the situations of high internal and external complexity, showing that the value of RPCB is situation-specific. Our findings complement the extant research by considering firm complexity and environmental complexity in seeking to illustrate why successors' needs for regular mentoring are heightened, and regarding which, the benefits become more substantial.

Paper is Available to Meeting Registrants Only.

STR: Norm Preservation View in The Director Labor Market

Author: **Eric Sung Soo Kim**, *Hanyang U.*
Author: **Ji-Hwan Lee**, *Korea Advanced Institute of Science and Technology (KAIST)*

Extant research on independent director careers argues that CEOs favor independent directors with social ties. This study departs from the corporate elite view of board studies, which asserts that all social relationships between the CEO and director will be mutually beneficial. This study addresses a critical construct coined as “norm preservation,” which suggests that the norm of social experiences between individuals preserve over time. In a norm preservation view, the critical question is, “what is the consequence of the former conforming or conflicting functional norms between the CEO and director to the director's tenure?” To test this idea, we collect a sample of 431 S&P 1000 firms with an independent director-firm-year of 37,056 observations between 2003 and 2012. Using conditional fixed-effects logistic estimation and Cox survival model, we find that the former team-based professional norm between the independent director and CEO is critical in the independent director's tenure.

Paper is Available to Meeting Registrants Only.

STR: Providing Exactly What You Need: The Value of Outside CEO Directors on Firm Strategic Change

Author: **Rui ZHANG**, *Hong Kong U. of Science and Technology*
Author: **Xinhao QIAO**, *Hong Kong U. of Science and Technology*

A company's board of directors often includes CEOs from other firms serving as independent directors, hereby called outside CEO directors. This study examines whether these outside CEO directors, as compared to other directors, have unique effect on firm strategic changes. Drawing on the resource dependency theory, social categorization theory and psychology literature, we argue outside CEO directors bring more desired resource to the focal firm and thus positively affect its strategic changes. We also propose that achieving the full potential of these unique resources hinges on the mutual understanding between the focal firm's CEO and outside CEO directors. We expect the language style similarity, professional experience similarity and demographic similarity to strengthen the mutual understanding process. These hypotheses are tested with data from a sample of S&P 1500 firms with 4,300 observations from year 2005 to 2018.

Bad Bosses: Abusive Supervision and Reconciliation

Session Moderator: **Nai Wen Chi**, *National Sun Yat-Sen U.*

CM: Superiority or Inferiority? Supervisor Narcissistic Personality and Abusive Supervision Behavior

Author: **Nai Wen Chi**, *National Sun Yat-Sen U.*

Author: **Yuanyu Chien**, *National Sun Yat-Sen U.*

In recent years, the negative impacts of abusive supervision has received extensive attention in the leadership literature. However, less studies were conducted to examine the causes of abusive supervision. The study was conducted to explore the relationship between supervisor narcissism trait and abusive supervision behaviors. In addition, we included supervisor perceived demand-ability fit and power distance orientation as the moderators to see if these factors can strengthen or weaken this relationship. In this study, we invite the employees and immediate supervisor to fill in matching questionnaires and collect information at different time points (two weeks apart), collecting a total of 65 valid questionnaires (including 65 supervisor questionnaires and 274 employee questionnaires). We using hierarchical regression analysis to test the proposed hypothesis. The results show that there is a positive relationship between the supervisor's superiority and abusive supervision, and this relationship is strengthened when supervisors are low in demand-ability job fit and power distance orientation. Based on the results of the study, theoretical and practical implications are discussed.

CM: The Role of Controlled Motivation in Transgressor Reconciliation Outcomes

Author: **Carlina Conrad**, *IE Business School*

Author: **Shike Li**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Author: **Kriti Jain**, *IE Business School*

Due to the inevitable nature of conflict and the human desire to maintain relationships, it is essential that we fully understand the path to reconciliation. However, the common social script of apology-forgiveness post conflict has mainly been studied from the victim's perspective while not much has been uncovered about transgressor reconciliation efforts post victim forgiveness. In this research we demonstrate that the transgressor motivation to apologize influences what motivation is attributed to victim forgiveness and as such also the inferred sincerity, ultimately influencing the transgressor restoration efforts. For all three studies we leverage the Self-Determination Framework to categorize the motivations on a spectrum of controlled to autonomous. In Study 1 utilizing a trust game, we explored the effect of the transgressor motivation to apologize on the transgressor restoration efforts after receiving forgiveness. Study 2 investigated how the motivation attributed to the forgiveness by the transgressor is influenced by the motivation to apologize and in turn influences the restoration efforts via a controlled vignette study. Lastly, in Study 3 we provide support for our full proposed model – the effect of the transgressor motivation to apologize on restoration efforts is serially mediated by the inferred motivation of forgiveness and perceived forgiveness sincerity. This study contributes to the emerging literature on the interdependent nature of the apology-forgiveness path to reconciliation and the importance of motivation within this process.

CM: Towards a New Conceptualization of Abusive Supervision

Author: **Changmeng Xu**, *U. of Miami*

To respond to the call of Fischer, Tian, Lee, and Hughes (2021) to rethink and reconceptualize the construct of abusive supervision, this paper draws on the literature on interpersonal mistreatment at work and abusive relationships and develops a new definition of abusive supervision. The new definition conceptualizes abusive supervision as supervisor behavior instead of subordinate's perception, includes physical behaviors, and proposes a two-by-two typology of abusive supervisory behaviors.

Paper is Available to Meeting Registrants Only.

CM: Forgive to Be Respected: Prestige Orientation and Strategic Expressions of Forgiveness

Author: **Jin Wook Chang**, *Korea U. Business School*

Author: **Christine Yejin Yoo**, *Korea U. Business School*

Forgiveness is largely touted as a desirable response to various interpersonal offenses in the workplace, and it potentially deters the escalation of conflict from such offenses. However, victims of offense are often reluctant to express forgiveness even when they are willing to condone the offender. In the present research, we propose that individuals who desire respect and esteem, those with a high prestige orientation, are likely to express forgiveness after an offense. We posit that prestige-oriented offense victims will express forgiveness because they will attend to the possibility of expressing forgiveness being seen as the forgivers' prosociality and virtue. In two studies, we demonstrate that victims of interpersonal offenses are more likely to express forgiveness more when their prestige orientation is high rather than when it is low. Furthermore, we also find that prestige-oriented offense victims express forgiveness when others are likely to witness and value their forgiveness expressions, more specifically, when task interdependence is high. Importantly, results indicate that even when prestige-oriented offense victims expressed forgiveness, they may not genuinely forgive the offender intrapersonally. Collectively, these findings suggest that victims of interpersonal offense, particularly those high in prestige orientation, might strategically use forgiveness expressions presumably as a means to manage their status.

Paper is NOT Available. Please contact the author(s).

Author: **Yueqiao Qiao**, *Xi'an Jiaotong U.*

Author: **Zhang Zhe**, *Xi'an Jiaotong U.*

Coworker bullying often transpires in workplaces and is likely to be witnessed by third-party employees. Existing research on observed coworker bullying has examined its negative effect on observers' well-being. However, observers can intervene in such circumstances. The authors draw on moral orientation theory to examine how observers react when they see their coworkers being bullied in the workplace. Based on moral orientation theory, hypotheses state that observers who have strong justice orientations will experience anger and respond with retribution toward perpetrators, while observers who have strong care orientations will experience sympathy and help victims. A laboratory experiment using facial expression analysis (N = 116) and a multisource, multiwave field study (N = 280) provide data supporting the hypotheses. The studies establish that justice or care moral orientation determine whether observers react to coworker bullying with retribution or helping behaviors.

Participant: **Scott I Tannenbaum**, *The Group for Org. Effectiveness*

Teams are complex systems in which multiple individual members, themselves containing multiple characteristics, are embedded (Arrow, McGrath, & Berdahl, 2000). Team research has historically been dominated by a focus on what is shared across these multiple components, such as aggregations of team member characteristics or perceptions of team processes operationalized through calculating agreement statistics and means. Instead, configurational perspectives on teams and their members recognize the complexity of teams by focusing on the uneven and disproportional effects of member characteristics or processes on team outcomes (Kozlowski & Klein, 2000). Understanding such effects is essential for building upon traditional approaches using shared team constructs to create new knowledge about how teams create synergy amid seemingly limitless potential for chaos and conflict. Moreover, adopting configurational perspectives on teams is increasingly tractable with advances in configurational methodologies (e.g., social networks, faultlines, latent profile analysis, qualitative comparative analysis, and attribute alignment). As such, this panel symposium will 1) generate awareness of configurational perspectives and methods used in team research, 2) share recent advances in the field, and 3) create an opportunity for researchers who are actively working in or interested in this area to collaborate. The format will include an introduction to the topic, brief presentations from the panelists, and an informal Q&A session involving the panelists, their collaborators, and the audience.

Subsidiary-HQ Relationships

Session Moderator: **Juan Wu**, *Zurich Hochschule für angewandte Wissenschaft*

IM: Cooperative or Competitive Relationship Within the MNE: A Parent Subsidiary Study  

Author: **Emilene Leite**, *Örebro U. School of Business*
Author: **Katarina Lagerström**, *Dept of Business Studies Uppsala U.*
Author: **Roger Schweizer**, *U. of Gothenburg*
Author: **Cecilia Pahlberg**, *Uppsala U.*

This study investigates how competition or cooperation are implemented strategically by the headquarters (HQ) to influence its subsidiaries' behavior. In specific, we center our attention on the strategies MNEs consider for different internal configurations of competition or cooperation. Our main argument is that competitive or cooperative relationships are socially constructed and to discuss this we combine literature-based conceptual arguments with empirical observations on headquarters-subsidiary relationships. Our study demonstrates that cooperation or competition (whether headquarter-led or subsidiary-led) are manifestations of reward systems, mandates, and position systems. These important strategic and structural influencing factors explain how technologies are developed and how responsibilities are distributed across the organization. Hence, organizing sometimes for competition or sometimes for cooperation is challenging, yet very helpful, to headquarters addressing innovation capability development, to facilitate knowledge transfer and learning as well as to advance technological innovation.

IM: The West Knows Better? The Evolution of Knowledge Transfer Between a Subsidiary and its Chinese HQ   

Author: **Juan Wu**, *Zurich Hochschule für angewandte Wissenschaft*
Author: **Daojuan Wang**, *Aalborg U. Business School*
Author: **Esther Kaiser**, *ZHAW Zurich U. of Applied Sciences*
Author: **Suzanne Ziegler**, *ZHAW Zurich U. of Applied Sciences*

Taking a longitudinal process view, the study investigates the dynamic evolution of knowledge transfer (KT) between a Chinese multinational enterprise and its acquired European subsidiary. Different from the common view held in the existing studies that reverse knowledge transfer (RKT) from western subsidiaries to Chinese parent is the only possible way, our findings reveal a gradual KT process with four distinctive phases - from the no-KT phase to RKT phase, to the bi-directional KT phase, and ultimately to the knowledge co-creation phase. Each step forward represents a managers' breaking of the old mindset. Our study sheds light on the high potential of bi-directional KT and knowledge co-creation that has not been well identified and enough discussed in the current literature. Furthermore, another interesting phenomenon is discovered - the whole KT process is initialized by the subsidiary whereby its strategic knowledge-creation role in the whole group and the light-touch integration approach applied by the parent firm provided ample space for its initiatives in KT. Finally, the study contributes to the research of internal knowledge transfer in specific and to the extant M&A literature in general.

IM: Drivers of Motivation in Headquarters-Subsidiary Capability Transfers within the MNC 

Author: **Olof Lindahl**, *Uppsala U.*
Author: **Muhammad Akash Bin Nasir**, *Dept of Business Studies Uppsala U.*
Author: **Henrik Dellestrand**, *Dept of Business Studies Uppsala U.*

Research on capability transfers in multinational corporations has since its start highlighted the motivation of the recipient as an important driver of successful transfers. However, while another key driver of transfer success, i.e., absorptive capacity, has attracted enough attention from research to become a field of its own, motivation has repeatedly been seen as a simple and straight-forward construct. So, while motivation has over again been identified as a main driver of transfer success, how it become such an important driver has received little attention. Consequently, we know little about what actually drives the motivation of recipients in transfers. Utilizing an inductive multiple-case study, we explore how the motivation of eight receiving units in the transfer of the same capability from headquarters to subsidiaries in a multinational corporation is influenced by various aspects of the transfer process. We contribute to the transfer literature by identifying how different aspects of the transfer process drive recipient motivation at different stages. The findings suggest that recipient motivation in transfers is not so much a static as a dynamic process, with important implications for theory and future research.

STR: [The Antecedents and Consequences of Resource Redeployment](#) 

Author: **Jiayue Ao**, *U. of Illinois at Urbana-Champaign*

Author: **Joseph T. Mahoney**, *U. of Illinois at Urbana-Champaign*

This paper integrates the state of academic research on resource redeployment. Based on a systematic review of literature published over the past fifty years, this paper synthesizes various research perspectives into a more comprehensive framework of resource redeployment, linking its antecedents and consequences. This paper also suggests linkages between academic research and managerial practice and offers suggestions for future directions.

STR: [The Performance Effects of Internal Resource Redeployment versus External Resource Sourcing](#) 

Author: **Teresa Antonia Dickler**, *IE Business School*

Author: **Dmitry Sharapov**, *Imperial College Business School*

The reconfiguration of strategically important resources through internal redeployment or sourcing from the external market is a vital aspect of corporate development. However, empirical studies that directly ascertain the relative performance of internal resource redeployment over acquiring/borrowing resources on the external market are lacking. We overcome the empirical challenges associated with comparing the effectiveness of both reconfiguration modes by examining the redeployment of human resources—professional soccer players in the English Football League Championship—following a significant injury to a key player. This approach further allows us to develop theory regarding the roles of important resource-level characteristics, including fungibility and similarity, and to circumvent endogeneity issues related to the resource reconfiguration-performance relationship. This study thereby extends existing theory and produces novel findings that illuminate the importance of resource-level characteristics as drivers of the relative performance advantages of different reconfiguration modes. We discuss implications for the literature on resource reconfiguration and strategic human capital.

STR: [How Resource Scaling Reshapes Strategic Human Capital Management](#)    

Author: **Thomaz Teodorovicz**, *Assistant Professor, Copenhagen Business School*

Author: **Carolina Policarpo Garcia**, *Competition and Markets Authority*

This paper studies how resource scaling - the simultaneous deployment of the same resource across a large set of organizational units - reshapes the strategic deployment of human capital resources. We advance that scaling up resources which facilitate firm growth may increase worker productivity while simultaneously reducing firm's reliance on human capital as a source of competitive advantage. This result emerges as organizations scale up resources that increase the returns of specializing workers on tasks which do not rely on unique worker-level. The study employs a multi-method approach to examine resource scaling in the context of private higher education in Brazil, where a group of corporations implemented strategies to scale up hybrid learning, standardized courseware, and professional management following waves of acquisitions. Using a unique dataset on ownership changes, labor contracts, and establishment characteristics, we conducted panel event-study estimations comparing acquired establishments to matched non-acquired establishments. The results provide evidence that only acquisitions coupled with resource scaling led to superior establishment performance, teaching productivity, faculty specialization in teaching, and sustainably higher levels of faculty turnover. In-depth qualitative interviews with deans and faculty suggested that faculty became more replaceable as they specialized in teaching rather than in activities perceived as more value-adding, such as research or course development. This paper advances the resource reconfiguration and strategic human capital literatures by showing that resource scaling can increase the productivity of human capital while specializing workers and decreasing the role of their human capital as a source of competitive advantage.

STR: [The Value of Corporate and Operational Flexibility Attained by Investments in New Subsidiaries](#)  

Author: **Jan Hendrik Fisch**, *WU Vienna*

Author: **Harald Pühr**, *U. of Innsbruck*

Diversified corporations can increase firm value by investments that enhance their flexibility in response to environmental developments. Specifically, strategy research stresses the corporate flexibility to redirect activities between product markets and the operational flexibility to reallocate activities across foreign locations. So far, however, studies have not analyzed how firms can benefit from both types of flexibility in combination. To this end, our study considers operational flexibility in the context of corporate flexibility and shows that these two types of flexibility are interrelated in a negative way. The study employs real options theory to analyze the switching option value of an investment in a new subsidiary. Moderated mediation analysis of 6,702 subsidiary investments by US firms supports the notion that the antecedents of corporate flexibility interfere with a firm's ability to leverage operational flexibility. Yet the results also identify compatibility of resources as a means to overcome these negative interactions and as a bridge between corporate and operational flexibility.

The trend of increasingly boundaryless careers means that individuals’ work lives are characterized by greater mobility across more jobs and organizations than ever before. This heightened intra- and inter-organizational mobility has important implications for both organizations and individuals. The papers we have brought together in this symposium address important questions regarding the implications boundaryless careers have for both individuals and organizations. These papers offer novel insights into how inter- and intra-organizational competition for human capital ultimately influences employee mobility within and between organizations, as well as how mobile employees experience their transitions between jobs and organizations as a function of their cumulative experiences and the organizational and job contexts they are entering.

CAR: The Role of Perceived Job Insecurity in Predicting Multiple Jobholding   

Author: **Claudia Rossetti**, *U. of Mannheim*
Author: **Himani Singh**, *U. of Mannheim*

Perceived job insecurity is often viewed as a work stressor that impacts cognitive, affective, and behavioral reactions on the job. Encouraged by the shift toward greater flexibility and gig work in modern times, individuals may decide to pursue multiple jobholding, i.e., start side jobs alongside a primary employed or self-employed position, to diversify risk and acquire additional resources to deal with perceived job insecurity. While acknowledging these benefits, this paper further argues that the resources provided to job insecure individuals by multiple jobholding, such as greater financial security, come at the expense of other resources, such as the investment of effort and time. Thereby, drawing from conservation of resources theory and relying on longitudinal data about 3,117 job spells for 807 unique German individuals from the German Socio-Economic Panel, we develop and test competing hypotheses about the relationship between individuals' perceptions of job insecurity and the decision to take on multiple jobs. Results from survival analyses indicate that higher levels of perceived job insecurity reduce the probability of taking on secondary jobs. These findings advance existing research on job insecurity and multiple jobholding and in the growing fields of sustainable careers and career inaction while informing a broad audience, including individuals, organizations, and policymakers.

CAR: Organizations at Crossroads: The Case of Multiple Job Holding Arrangements 

Author: **Chayanika Bhayana**, *Indian Institute of Management, Ahmedabad*
Author: **Neharika Vohra**, *Indian Institute of Management, Ahmedabad*

Careers Division Best Overall Paper Award Nominee

With the gaining popularity of non-standard work arrangements, employment and psychological contracts are undergoing changes. This study, specifically, looked at a form of alternative work arrangement – multiple job holding (MJH) – involving individuals engaged in independent work, gig work, part-time work, freelancing, or entrepreneurship, along with holding full-time employment, which challenges the traditional assumption of “sequential career transitions” by combining multiple work roles and identities at the same time. Through the case of MJH, we explore the role of organizations in contemporary careers, which are characterized by non-linearity, non-hierarchical and multi-directionality. Our analysis of semi-structured interviews with 25 multiple job holders and 15 organizational stakeholders revealed an ambivalence towards MJH arrangements. While the formal policies denied the existence of MJH arrangements within the organization, the informal culture and practices appeared to support and encourage parallel career opportunities for individuals. An unsaid conditional acceptance of MJH was observed, with the acknowledgment of its potential benefits in enriching individual careers and ultimately, their contribution to organizational goals. The findings highlight the need for organizations to adapt their policies to align with the changing psychological contracts of employees in contemporary career systems. We discuss the implications for career management by individuals and organizations.

CAR: Do Work Stressors Facilitate or Impede Job Crafting? The Role of Employee Regulatory Focus

Author: **Yufan Shang**, *Xi'an Jiaotong U.*
Author: **Ruonan ZHAO**, *Xi'an Jiaotong U.*
Author: **Malika Richards**, *Pennsylvania State U.*

We investigate the mechanism through which stressors influence job crafting. Based on regulatory focus theory, this study explores the mediating role of state regulatory focus between the challenge-hindrance stressors and job crafting, and the moderating influence of trait regulatory focus. We collected survey data in China from 578 employees working in finance, real estate, and IT industries. Results were analyzed using AMOS 24.0 and SPSS 22.0. The results reveal that challenge stressors have a positive effect on increasing structural job resources, increasing social job resources, and increasing challenging job demands via state promotion focus. Hindrance stressors have a positive effect on decreasing hindering job demands via state prevention focus. Trait promotion focus accentuates the influence of challenge-hindrance stressors on state regulatory focus, as well as the indirect effect of challenge-hindrance stressors on approach-avoidance job crafting respectively. However, trait prevention focus weakens the influence of challenge stressors on state promotion focus and the indirect effect of challenge stressors on approach job crafting. This study provides new insights on the relationship between stressors and job crafting by explaining the motivational mechanism and boundary conditions.

Author: **Mirko Antino**, *Instituto U. de Lisboa (ISCTE-IUL)*

Managing younger workers in organizations requires motivating them to engage in positive attitudes and behaviors and refrain from negative ones. Based on needs and motives theories, work design characteristics can act as motivational factors with younger workers. Exploring which of the work characteristics are necessary, as opposed to sufficient, to achieve desired levels of younger workers' positive and negative attitudes and behaviors, is of great importance for organizations considering their limited resources. Taking the Necessary Condition Analysis approach (necessary conditions are those whose absence guarantees the absence of the outcome) and collecting a sample of 165 employees under 40, five work design characteristics (i.e., autonomy, task significance, interdependence, peer support and supervisor support) were analyzed as possible necessary conditions for enabling daily positive (i.e., work engagement, crafting) and constraining daily negative (i.e., cynicism, and incivility) attitudes and behaviors. Based on our findings, task significance, supervisor and peer support are necessary conditions for work engagement among younger workers. To enable crafting among them, autonomy and supervisor support are necessary. Not only work design characteristics do not constrain negative outcomes, but interdependence (either received or initiated) even enables cynicism and incivility (for which also task significance is an enabler). This study contributes by conceptualizing work design characteristics as necessary motivational factors and empirically testing them using necessary condition analysis.

This symposium intends to present five studies investigating drivers and directions of employee mobility at the macro-level. The goal of this symposium is to connect macro-level patterns and micro-level mechanisms of employee mobility and foster a research conversation across disciplinary fields, including careers, human resource management, and organizational behavior. In addition, by bringing together diverse projects using large-scale longitudinal data, this symposium will allow researchers to discuss opportunities, challenges, and methodological concerns that arise when working with such data. Over the past decades, careers have transformed from those developing inside organizations and governed by organizational rules and norms to those unfolding within labor markets and characterized by the variety of job transitions and flexibility of work arrangements (Arthur & Rousseau, 1996; Osteman & Burton, 2005). These changes raised a number of questions and stimulated the development of several research streams. They led to the emergence of new conceptualizations of career (Guan et al., 2019; Sullivan & Baruch, 2009), including recent models of sustainable career (De Vos, Van Der Heijden, Akkermans, 2020). They made scholars to reevaluate the employee-employer relationship (Bonet, Cappelli, Hamori, 2013; Cappelli & Keller, 2013) and reinforced the problems of talent management and retention (Bidwell, 2017; Cappelli & Keller, 2014). Given the importance of fit between individual characteristics and broader organizational context (Ployhart et al., 2014; Weller et al., 2019), growing diversity of individual work experience also adds new challenges to the effective matching of workers to jobs. What binds employees and employers in the modern labor markets? What drives employee mobility? Why do people stay or leave, where do they go, and what if they come back? The papers comprising this symposium aim at answering these questions by looking at the longitudinal employment data from five different countries: France, Germany, South Korea, Spain, and Sweden. Testing the theory with such large-scale data facilitates the identification of the most general patterns of labor mobility that might stay unnoticed while analyzing examples from a single organization or survey data from a specific population. Combining studies conducted in a diverse set of countries adds richness to the topics discussed. Collectively, these papers demonstrate what we can learn about individual behavior from the macro-patterns of employee mobility.

ENT: Winning Hearts: How Do Emotions Energize Resource Acquisition for New Ventures?  

Author: **WANXIN WANG**, *Chinese U. of Hong Kong*
Author: **Rongrong Zhang**, *Chinese U. of Hong Kong*

Research on cultural entrepreneurship has highlighted entrepreneurial stories as powerful framing devices for new ventures to acquire resources. Prior research taking a cognitive approach shows that the effectiveness of stories depends on whether they resonate with audiences' beliefs and understandings. Lacking is a theorization of emotions as an essential element in entrepreneurial narratives. We analyze emotions expressed in pitches of equity crowdfunding in the U.K. and demonstrate that emotions matter in attracting funds. Moreover, we find that an emotional battery—the mix of positive and negative emotions—works better than positive or negative emotions alone. We highlight “emotional resonance with a crowd” as a key mechanism through which emotional batteries contribute to fundraising. We further uncover that while emotional batteries motivate less sophisticated, or the “crowd” audiences, they are less effective in attracting more sophisticated audiences. This research makes three important contributions: 1) showing how emotion and cognition are intertwined to shape audiences' investing decisions; 2) revealing the underlying mechanism of emotional batteries; and 3) advancing our understanding of audiences' heterogeneity in appreciating emotional-laden entrepreneurial stories.

ENT: Members' Prior Category Spanning, Sharing Ties, and Entrepreneurial Team Success in Crowdfunding  

Author: **Yumi Ko**, *Ewha Womans U.*
Author: **Myung-Ho Chung**, *Ewha Womans U.*

Entrepreneurial team members' prior experience is as critical as that of one main single entrepreneur with regard to the team's subsequent performance. Yet, current understanding of the prior experience in team members is still limited. In this paper, we explore the effects of serial entrepreneurial team members' prior experience (i.e., prior category spanning and prior sharing experience ties), specifically investigating their success records of each prior experience. Hypotheses are tested using a longitudinal 2-wave data sample of 1,457 serial entrepreneurial teams for ten-year period in Kickstarter, which is the most prominent crowdfunding platform. Results showed that prior sharing experience ties within team members positively predict entrepreneurial team success whereas their prior category spanning does not have any significant effects. However, in considering of the interaction effect with success experience, the prior category spanning, rather, turns significantly into positive, while the prior sharing experience does not appear to be statistically significant. Based on these findings, we discuss the implications for subsequent venturing.

ENT: Entrepreneur Entry Strategy and Startup Performance: The Attention Based View

Author: **Dalee Yoon**, *U. of Hawaii at Manoa*
Author: **Joon Mahn Lee**, *Korea U. Business School*
Author: **Luke Rhee**, *U. of California, Irvine*

Building on recent studies on entrepreneurs' entry strategy type and the attention-based view (ABV), our study examines the under-explored relationship between the entrepreneurial entry strategy and funding performance. In doing so, we emphasize a critical role of attention as an underlying mechanism of the entry strategy—funding performance relationship. We argue that depending on the entry strategy type (e.g., hybrid entrepreneur, multi-business entrepreneur, full-time entrepreneur), the amount of attention paid to entrepreneurial activities should be heterogeneous. Subsequently, we posit that the amount of attention is positively associated with funding performance, controlling for entrepreneurs' capabilities and project quality. We study our research question in the research context of crowdfunding, using Kickstarter platform data, and find results supporting our predictions.

ENT: Entrepreneurs' Use of Impression Management within LinkedIn Profiles 

Author: **Kevin Taylor**, *Stetson U.*
Author: **Jennifer Golden**, *Abilene Christian U.*
Author: **Kathryn Weaver**, *U. of Tampa*
Author: **Jessica Kerr**, *DePaul U.*
Author: **Mark Shore**, *DePaul U.*
Author: **Charles E Naquin**, *DePaul U.*

In the last decade, crowdfunding has emerged as a novel yet prevailing way for new ventures to acquire capital. Successful crowdfunding campaigns are often accompanied by social networking activity by the entrepreneur. However, an entrepreneur's ability to convey trustworthiness and generate investment interest on online social networking sites has only garnered minimal scholarly consideration. Hence, we explore how an entrepreneur can use impression management tactics online to increase investor interest. Using an experimental vignette design, we examine whether the use of smiling versus not smiling pictures and adjective enhanced headlines versus unadorned headlines on the LinkedIn platform influence both perceptions of trustworthiness and investment interest by crowdfunding investors. Results suggest that LinkedIn profile pictures with a smile (versus no smile) increase both perceptions of trustworthiness and investment interest. This study contributes to a better understanding of how impression management on social networking sites can affect online crowdfunding success.

ENT: **How Agile Practices Drive Entrepreneurial Orientation: The Roles of Digital Skills and Ambidexterity**  

Author: **Angelo Cavallo**, *Politecnico di Milano*

Author: **Davide Hahn**, *U. of Bergamo*

Author: **Mohammad Asarian**, *Ph.D. Candidate of Business Management, U. of Tehran*

While employees predisposed to entrepreneurship are crucial for creating entrepreneurial organizations, we do not know much about how employees develop their entrepreneurial orientation in incumbent organizations. To address this gap, drawing upon human capital theory, we hypothesize that the use of agile practices allows employees to develop digital skills, enabling them to increase their entrepreneurial orientation. We also hypothesize that individual ambidexterity positively moderates the relationship between digital skills and employees' entrepreneurial orientation. We test and find support for our hypotheses on a sample of 299 employees working for a large IT company. Our findings contribute to both research and practice on corporate entrepreneurship.

Paper is Available to Meeting Registrants Only.

ENT: **The Contingent Effects of Human Capital and Entrepreneurial Self-Efficacy on Entrepreneurial Entry** 

Author: **Mehmet Nasih Tag**, *Mersin U.*

Author: **Seçkin Dogan**, *Toros U.*

This paper develops and examines a multilevel framework that relates opportunity-based entrepreneurial entry to individual human capital, entrepreneurial self-efficacy, and power distance. Our main argument and the contribution of this paper is that power distance, i.e., the set of normative institutions of power relations, modifies the baseline effects of both human capital and self-efficacy as drivers of entrepreneurial entry. We analyze this multilevel framework by exploiting a large sample of a hierarchical dataset spanning 54 countries and the period from 2002 through 2015. Results based on the multilevel logit regression analysis show that at higher levels of power distance, individuals with greater levels of human capital and self-efficacy are more likely to be involved in opportunity-motivated entrepreneurship. Overall, our results suggest that the distribution of power and influence among members of a society plays a vital role in shaping and constraining opportunity-based entrepreneurial entry.

ENT: **Critical Mass in Group Proportionality as Remediation for Demographic Inequality**      

Author: **Valentina Assenova**, *The Wharton School, U. of Pennsylvania*

Author: **Ethan Mollick**, *The Wharton School, U. of Pennsylvania*

Companies led by women and ethnic minorities consistently receive less funding compared to those led by white men. A common remediation technique to reduce this demographic inequality has been to increase the representation of minority group members, though in some cases, this appears to exacerbate bias. Drawing on Critical Mass Theory, we examine whether and how shifts in group proportionality affect the emergence of a critical mass that remediates demographic inequality. We propose a nonlinear “Goldilocks” effect: demographic inequality dips for median levels of proportionality but increases as the proportion of an underrepresented group increases. We suggest that this effect arises because of homophily preferences in social interactions, which at low levels of proportionality favor the majority group, and at high levels of proportionality favor the minority group, but in the middle result in decreased salience of difference. We examine the evidence for the Goldilocks effect using data from 27,082 participants in a live-play simulation of fundraising in Silicon Valley, where players were randomly assigned to one of two roles: investors or founders of early-stage companies. We found that achieving critical mass in the underrepresented group remediated demographic inequality at median thresholds of proportionality but exacerbated it at higher thresholds.

 ENT: **Knowledge Similarity Among Founders and Joiners: Impact on Venture Scaleup in Fintech and Lawtech** 

Author: **Mari Sako**, *U. of Oxford*

Author: **Matthias Qian**, *U. of Oxford*

Author: **Mark Verhagen**, *U. of Oxford*

In what ways does knowledge similarity among co-founders contribute to venture scaleup? This paper addresses this question by taking account of knowledge domains among early employees and in founders' social networks. We build a theoretical framework to predict which knowledge combinations are likely to lead to venture growth at different stages. We test our theory using a database of 315 fintech and lawtech startups (with a total of 600 founders and 328 early joiners) in three locations (London, New York City, and San Francisco Bay Area) during the period 2009-2020. Our central finding is that venture growth is explained by knowledge-similar founding teams, founders' social ties to other founders whose knowledge domains are different from their own, and knowledge-dissimilar employees. Moreover, the positive impact of knowledge similarity in founding teams on venture growth is stronger for older ventures than young ventures, and for mature than nascent ecosystems. These findings highlight the importance of simultaneously studying knowledge domains in founding teams, their social networks, and early employees. Just as important is to analyze the impact of knowledge similarity at different stages in the entrepreneurial process from ideas generation, choice of strategy, and strategy implementation.

Incubators and Accelerators 3

Session Moderator: **Rhonda K. Reger**, *U. of North Texas*

Author: **Valentina Assenova**, *The Wharton School, U. of Pennsylvania*

Author: **Raphael H. Amit**, *U. of Pennsylvania*

Startup accelerators have emerged as important loci for organizational learning among early-stage startups. These organizations use a cohort structure of peers from which a focal startup can draw operational knowledge and experience, assimilate it, and apply it to commercial ends. We develop and test hypotheses about how cohort quality and geographic diversity affect the benefits of accelerators for cohort learning and post-acceleration startup growth. We use data from 23,364 startups that applied to 408 accelerator programs in 177 countries between 2013 and 2019 and find support for these hypotheses. Our results show that cohorts' quality and geographic diversity were associated with higher cohort learning benefits and higher post-acceleration growth for early-stage startups. We also find that these benefits varied by program, country, and region.

ENT: **Accelerator-Facilitated Mechanism For Delivering Entrepreneurial Learning**

Author: **Dickson Gregory**, *National U. of Singapore (NUS)*

A key emphasis of the Accelerator program is to equip start-ups with the necessary knowledge to manage new ventures. This process is known as entrepreneurial learning. In an Accelerator program, entrepreneurial learning is delivered through key activities such as structured lessons and mentoring sessions. However, it remains unclear how the Accelerator facilitates entrepreneurial learning during these activities in a time-bounded setting. Although existing pedagogy has highlighted certain key actions that would facilitate entrepreneurial learning, they mainly focus on setting guidelines and goals at the start of the lesson. There is thus a lack of understanding of the key actions stakeholders undertake throughout the lesson that could affect entrepreneurial learning. Our inductive, qualitative field study reveals firstly, that setting guidelines and goals may not be adequate as start-ups may deviate from them while going through the key activities and secondly, actions the Accelerator took to ensure the delivery of entrepreneurial learning. Through our findings, we extend the existing approach to the delivery of entrepreneurial learning, which has important implications for the Accelerator program and entrepreneurship pedagogy.

ENT: **Who Learns and What They Learn: Evidence from an Action-Based Entrepreneurship Training Program**   

Author: **Shashwatashish Pattnaik**, *Nord U. Business School*

Author: **Rhonda K. Reger**, *U. of North Texas*

Scholars highlight that learning outcomes of entrepreneurship training might not be homogeneous for all participants and call for studies on contextual factors that might affect such outcomes. We respond to the call and explore the role of two contextual factors, team dynamics and the learning environment, on two important learning outcomes that are precursors of entrepreneurial engagement – entrepreneurial readiness and knowledge readiness. Drawing from literature on psychological safety and status differences, we hypothesize the differences in learning outcomes of graduate students and faculty members who participated in action-based technology entrepreneurship program as part of the National Science Foundation's (NSF) I-Corps program. The findings suggest that positive team dynamics increase entrepreneurial readiness for both types of trainees, but increases knowledge readiness of only graduate students, suggesting differential importance of team-level factors. The findings for learning environment are more complex. While a negative learning environment was not significantly associated with entrepreneurial or knowledge readiness for either trainee type, a positive learning environment was a significant predictor of both entrepreneurial and knowledge readiness for faculty but was only a significant predictor for knowledge readiness among graduate students. This study contributes to the entrepreneurship training literature by showing the impact of team and broader contextual level factors on training efficacy. The findings have implications for both academic and corporate trainers who design action-learning programs.

ENT: **Local Knowledge Base and Entrepreneurial Opportunities in Regions: A Configurational Perspective**

Author: **Zeljko Tekic**, *Graduate School of Business, HSE U.*

Author: **Anja Tekic**, *HSE Graduate School of Business*

According to the central hypothesis of the knowledge spillover theory of entrepreneurship – the more knowledge is produced in a region, the more entrepreneurial opportunities are available in it. Recent research extended the theory further, showing that the level of entrepreneurial activities, depends on the configuration of the local knowledge base not only on its size. This paper is aimed at discovering which knowledge profiles are more (and which less) supportive of creating entrepreneurial opportunities. It is motivated by disagreements and conflicting evidence on fundamental matters across all three frequently used dimensions - the type of knowledge source that contributes to new knowledge within a region (i.e., universities or private incumbent firms); the presence/absence of a dominant source of new knowledge within a region (i.e., an anchor tenant); and the specialization/diversity of technological knowledge that is created within a region. We analyze data from 33 regions using statistics on patent filings between 2011 and 2015 and a number of created startups in these regions. Using fuzzy-set Qualitative Comparative Analysis (fsQCA) we confirm that a region's potential for knowledge spillovers, and, thus, entrepreneurial activities, depends on the configuration of the local knowledge base, specifying what configurations are antecedent to creating more entrepreneurial opportunities. Our analysis also shows low synergy from the simultaneous presence of knowledge created by universities and industry in a given area, as these two are, under some conditions, substituting each other in stimulating knowledge-intensive entrepreneurship at the local level. Third, we show that the specialization/diversity of technological knowledge that is created within a region does not play an important role in creating a high number of entrepreneurial opportunities. These findings bring a new perspective and contribute to settling down some of the lasting debates, opening opportunities for further research and rethinking policy measures.

ENT: **Entrepreneurship and its Economic Appeal in Times of Crisis: A Critical Analysis of Newspaper Texts**

Author: **Dillon Berjani**, *Vrije U. Amsterdam*

Author: **Eco Van Burg**, *Vrije U. Amsterdam, School of Business and Economics*

Author: **Karen Verduyn**, *Vrije U. Amsterdam*

Using textual analysis and discourse analysis, this paper reports on a study that critically examines the representation of entrepreneurship as an ideological solution in times of crisis in Kosovo - a generative context of a country transitioning from a centrally controlled economy to a neoliberalist system of welfare governance. Analyzing media texts published in two well-read newspapers between 2000-2003 and 2017-2020, we draw scholarly attention to how dominant narratives about entrepreneurship produced and reflected by media texts shape realities that people find acceptable and normal; consequently resulting in the concealment of counter-discourses, referring to narratives that attempt to challenge uncontested and established truths about entrepreneurship. In particular, we show how the augmented popularity of entrepreneurship and its attached expectations for economic growth remained free of critical evaluation in media reports yet received general acceptance. In contrast, the counter-discourse that detailed how entrepreneurship was exploited by a political 'elite', framing, and using entrepreneurship dominantly in a corrupt and self-serving way, remained disregarded, possibly because of its less popular appeal in the public sphere. Our paper extends critical entrepreneurship research in that it offers empirical work that exemplifies how dominant representation of entrepreneurship may be produced in times of crisis to reduce the impact of counter-discourses that aim to unveil less apparent imbalances in relation to entrepreneurship.

ENT: **Entrepreneurial Beliefs of Refugees: It's Not Where They're From, But Where They Go** 

Author: **Solomon Akele Abebe**, *Lund U., School of Economics and Management*

Author: **Matthias Fink**, *Johannes Kepler U. Linz*

Author: **Robert Breitenecker**, *Johannes Kepler U. Linz*

This paper investigates whether structuralist and culturalist approaches to migrant entrepreneurship can explain the early-stage entrepreneurship of recently arrived refugees. Specifically, we empirically test three hypotheses on how refugees' current geographical location and ethnic origin matter for their entrepreneurial beliefs, which provide the cognitive and affective foundations for entrepreneurial intentions and behaviour. The sample comprises 884 observations collected from working-age refugees from four different ethnic backgrounds recently relocated to four Austrian and seven Swedish cities. We find that the location where refugees resettle in the aftermath of their forced migration is relevant to refugee entrepreneurship, but their country of origin is not. Hence, the arguments made by advocates of structural theory are more applicable to understanding refugee entrepreneurship than arguments associated with cultural theory. We discuss implications for theory, policy and practice, and suggest avenues for future research.

ENT: **Reexamining the Central Tenets of BoP Models as a Dimension of Informality**   

Author: **Afsa Mukasa**, *U. of Strathclyde Business School*

Author: **Katerina Nicolopoulou**, *U. of Strathclyde*

Author: **Sreevas Sahasranamam**, *U. of Strathclyde*

We empirically re-examine the shifting dynamics of informal spaces in the Global South and challenge the relevance of BoP models towards development in these contexts: by specifically navigating the technological gap between urban indigenous micro-entrepreneurs and Multinational Enterprises (MNEs) using an ecosystem approach that is centered on activating meaningful entrepreneurship within local communities. We find that 71% of the micro-entrepreneurs are now registered & vibrant - but still unprotected and weary of tax thirsty regimes: what next? Discrepancies between those registered a) with the regulatory arm of government and b) via a myriad of technology-based platforms affect level of efficiency in monitoring and mapping of the informal sector: which in turn has a huge bearing on resource allocation and the success of targeted programs. Given the significantly higher representation of women in this particular context, the study delves into how the region is positioned to leverage a fast changing face of informality as underlined by gender (inequality). Beyond addressing the existential digital divide through effective policy formulation for instance by engaging more culturally aligned product designs to reduce the wide gap between micro-entrepreneurs and MNEs, we propose a) a new SDG and b) enhanced MNE contextual embeddedness via gender-led intermediaries. Ultimately the study is aimed at inclusive development post Covid19.

ENT: **The Mediating Role of Tacit Knowledge in Knowledge Recontextualisation by Returnee Entrepreneurs**  

Author: **Yen Tran**, *Edinburgh Business School - Heriot Watt U.*

Author: **Nhan Nguyen**, *Edinburgh Business School, Heriot Watt U.*

Author: **Margaret Fletcher**, *Adam Smith Business School, U. of Glasgow*

Recontextualising knowledge is the key to effective knowledge transfer across different business contexts. While knowledge recontextualization has been explored in intra-firm knowledge transfer within multinational enterprises, few studies have extended the concept of knowledge recontextualization to returnee mobility - an effective international knowledge transfer mechanism by returnee entrepreneurs. Using our own surveyed data of 91 Vietnamese returnee entrepreneurs, this study examines under what institutional conditions and individual characteristics returnee entrepreneurs can successfully recontextualize brought back international knowledge and enhance firm performance when operating in their home country. We found that the transfer of tacit knowledge plays an important mediating role to achieve the effective knowledge recontextualization. Keeping home embeddedness while living abroad is critical to help returnees fit back to home country while too much or too little host embeddedness can harm their knowledge recontextualization back to home market.

Social Entrepreneurship 5

Session Moderator: **Dan Wang**, *School of Management, Zhejiang U. of Technology*

ENT: When Passion Meets Expertise: The Effect of Social Entrepreneur Ambidextrous Orientation on Venture  

Author: **Sarah Kimakwa**, *California State U., Chico*
Author: **Michael A. Abebe**, *U. of Texas Rio Grande Valley*

Social entrepreneurs leading for-profit ventures often face the challenge of managing the tensions associated with the dual (social and economic) mission. While managing this tension effectively is considered essential for high performance, not all social entrepreneurs are equally capable to do so. To capture this discrepancy, we introduce a new construct (Social Entrepreneur Ambidextrous Orientation or SEAO) and empirically examine its impact on social venture performance. Drawing from dynamic managerial capability and organizational ambidexterity literatures, we propose that SEAO positively contributes to social venture performance. Furthermore, we argue that this relationship is stronger among firms with organic structure and operate in highly munificent industries. Our analysis of data from 246 U.S. social entrepreneurs provide support for our predictions. Implications for research and practice are discussed.

ENT: More Prosocial, More Ephemeral? Exploring the Formation of Social Entrepreneurs' Exit Intention

Author: **Jianing Dong**, *Xi'an Jiaotong-Liverpool U.*
Author: **Xiao Wang**, *Xi'an Jiaotong-Liverpool U.*
Author: **Xuanwei Cao**, -
Author: **David Higgins**, *Liverpool U.*

Why does social entrepreneurship tend to live shortly? A range of studies tried to answer this question, although very few delved into the “inner layer” (psychological status) to unveil the mechanism how social entrepreneurs decide to quit. Focusing on prosocial motivation of social entrepreneurs as well as its impacts on their work-related wellbeing and then their business exit intention, we conducted this empirical research. Based on data of 301 social entrepreneurs in China, we find that prosocial motivation decreased entrepreneurs' work-related wellbeing, which increased entrepreneurial exit intention. Furthermore, we find that the impact of prosocial motivation on work-related wellbeing largely is stronger for males. Our research contributes to the growing research and our knowledge on social entrepreneurship in terms of individual personality trait and how it impacts social entrepreneur's psychological status and thus intention of exiting the social business.

ENT: An Investigation on the Cognitive Process Leading to Social Entrepreneurial Opportunity Recognition 

Author: **Dan Wang**, *School of Management, Zhejiang U. of Technology*

Social entrepreneurial opportunity recognition is a critical step in social entrepreneurship. However, we know little about the cognitive process leading to social entrepreneurial opportunity recognition. This conceptual work examines direct experiences of social problems as a predictor of social entrepreneurial opportunity recognition. Building on construal level theory, we proposed that direct experiences of social problems enable individuals to form a more concrete representation of social problems, which in turn activates social entrepreneurial opportunity recognition. We further propose that business model schema richness moderates this indirect relationship. We contribute to the literature on social entrepreneurship and opportunity recognition in several ways.

ENT: Creating Social Ventures: How (Social) Motivations and Goals Drive Venture Idea Judgments (WITHDRAWN) 

Author: **Farsan Madjdi**, *GSB, U. of Cape Town*
Author: **Badri Zolfaghari**, *GSB, U. of Cape Town*

Research on the formation of prosocial ventures has attracted substantial interest in the field of social entrepreneurship for more than a decade. Yet, the understanding of how individuals use judgments as a meaning-making process for the assessment of opportunity-related information to create prosocial ventures remains relatively unexamined. The authors conducted an abductive, qualitative study with 34 first-time founders using verbal protocols and content analysis techniques. As a result, the study theorizes a model which reveals how the motivation and subjective goals of first-time founders influence their meaning-making processes during venture idea judgments. The discussion contributes to the social entrepreneurship literature by displaying the relevance of goal-related motivations in the creation of different types of ventures, namely for-profit and social purpose ventures. Finally, it also illustrates that the social identity of founders can be considered as an antecedent to social entrepreneurial intentions.

By incorporating both “entrepreneurial” and “ecosystem” elements, entrepreneurial ecosystems (EEs) are argued to constitute “organized attempts to establish environments that are conducive to increasing the success for newly established ventures” (Audretsch et al., 2019: 313). Interest in EEs by scholars, policymakers, and practitioners has grown rapidly in recent years given the impact that their complex interdependencies of various actors and activities has on the entry, growth, and exit of new ventures (Abootorabi, et al, 2021). However, continued progress in EE research is undermined by at least three challenges. First, there is widespread inconsistency in the use of the term EE. Second, scholars lament that too much attention has been given to the elements of the system itself, without proper attention to the evolution of and connections between these elements (Acs, et al, 2017). Third, given that “the current state of ecosystem research is fragmented and heterogeneous with regard to theoretical approaches” (Wurth et al., 2021: 5), “there exists no ‘theory’ of the ecosystem” (Audretsch et al., 2019: 316). In light of the challenges facing scholars interested in making a contribution to the EE literature, this symposium is intended to achieve two objectives by engaging a group of the leading voices in the EE field in a panel discussion. First, it seeks to provide insight into the panelists’ understandings of and perspectives on the current state of EE research in order to identify fruitful areas of inquiry going forward. Second, it seeks to tap into their experience as authors in order to share strategies and tactics about how to publish EE research in the very best management and entrepreneurship journals.

Family Business and Finance 2

Session Moderator: **Santiago Mingo**, *U. Adolfo Ibanez*

ENT: **Corporate Venture Capital Investment Strategy: The Unorthodox Approach of Family-Controlled Firms** 

Author: **Patricio Duran**, *U. of Richmond*
Author: **Santiago Mingo**, *U. Adolfo Ibanez*

Drawing on socioemotional wealth and agency theories, we develop hypotheses suggesting that large family-controlled firms (FCFs) are less prone to invest in corporate venture capital (CVC) than non-FCFs counterparts and, when they do, FCFs follow an unorthodox investment strategy. We argue that CVC investments threaten the family's socioemotional endowments, leading those FCFs that participate in CVC programs to make fewer but larger CVC investments to (1) enhance family control over the start-ups and (2) focus on less risky start-ups at later stages of their development. We also posit that the board composition in terms of independent directors plays a moderating role. We test our hypotheses using a sample of 256 firms listed on the U.S. stock market that come from three technologically intensive sectors. We collected detailed information about the CVC investments these corporations made between 2007 and 2018 and then combined it with ownership structure and corporate governance data. The empirical results are consistent with most of our hypotheses.

ENT: **Trust Fund Families: Elite Family Bureaucratization and the Persistence of Wealth Inequality**

Author: **Doron Shiffer-Sebba**, *Northwestern U.*

How do wealthy families sustain economic privilege across generations? A historic peak in wealth inequality in the United States has inspired research on how markets, tax rates, and political influence sustain elite wealth. However, such explanations tend to focus on economic elites as individual households, whereas the behaviors through which elite families sustain wealth across multiple generations are less understood. Using six months of ethnographic observations at an office that manages the wealth of top 0.1% wealthy families, as well as interviews with the office's clients and a wider sample of wealth managers, I argue that family bureaucratization is a central tool for intergenerational wealth preservation. Specifically, financial managers help wealthy families adopt the characteristics of a Weberian bureaucracy—norms, specialized training, and an organizational structure—in order to use legal entities such as trusts and foundation to sustain elite wealth not only within individual households but also across multiple generations. Wealth inequality should thus be understood not merely as a point-in-time disparity between households but as an enduring multigenerational structure that engages extended family members.

ENT: **Internationalization-Performance Relationship of Family Firms: The Moderating Role of Familyness**  

Author: **Arindam Mondal**, *XLRI-Xavier School of Management*
Author: **Somnath Lahiri**, *Illinois State U.*
Author: **Sougata Ray**, *Indian School of Business*

Despite the growth in family firm (FF) research we hardly know how internationalization (I) impacts performance (P) of FFs, and how the familyness within FFs shape their IP relationship. Drawing on IB and FF literatures, we theorize in this study how two important sources of heterogeneity—extent of family ownership and involvement of CEO (family versus professional; founder versus non-founder)—moderate FFs' IP relationship. Our empirical analysis of data from India suggests that FFs' IP relationship is negative, but the extent of family ownership and involvement of professional CEO and founder CEO positively influences this relationship. Our results also demonstrate that involvement of family CEO and non-founder CEO casts a negative moderating influence on FFs' IP relationship. Our results further provide evidence that FFs' IP relationship is positively moderated when family CEOs possess international experience. Our study contributes to the IB and FF literature in multiple ways.

ENT: **Share Pledging, Family Businesses, and Entrepreneurship in Emerging Economies** 

Author: **Nandil Bhatia**, *Columbia Business School*
Author: **Nupur Pavan Bang**, *Indian School of Business*
Author: **Ramachandran Kavil**, *Indian School of Business*

Entrepreneurial families often leverage internal capital and resource markets to incubate new entrepreneurial ventures in the challenging institutional environment of emerging economies. This article explores a relatively common but unexplored phenomenon of entrepreneurial financing by families in emerging economies – share pledging. To further understand the mechanisms behind pledging and why families pledge shares, we hypothesize that the ownership and governance attributes of the family firm should impact the family owner's propensity to pledge shares owing to the family's control and risk considerations. Through a sample of 1,444 Indian family firms, we find that a family's degree of ownership in the firm, involvement in the firm's leadership, and the presence of foreign institutional investors affect the family owner's cognitive predisposition towards pledging. Our study contributes to entrepreneurship literature by exploring an alternate value-creation institutionalized mechanism in a regulatory and social context that differs considerably from the traditional Anglo-Saxon setting.

Author: **Veronika Šlapáková Losová**, *Prague U. of Economics and Business*

Despite the importance of social impact in the field of social entrepreneurship, there is an ongoing debate among researchers regarding its conceptualization and measurement. Through a multiple-case study of 38 social enterprises and 11 impact investors in USA, Europe, and India, we study the social impact of social enterprises at individual, community, and societal levels of analysis. Drawing upon the work of Amartya Sen and the theoretical lens of Bourdieu we offer a holistic view on social impact as an aggregate of three mutually reinforcing factors: influence on the field, development of capabilities, and transformation of individuals' habitus. By combining these factors, we generate a typology of social enterprises, thus providing a contextualized explanation of social impact in the social entrepreneurship domain.

ENT: **Cultural Entrepreneurship In Legitimizing Social Innovation: Cultural Reconfiguration Of Sex-Tech**   

Author: **Neva Bojovic**, *Kedge Business School*

Author: **Raghu Garud**, *Pennsylvania State U.*

Author: **Mohammed Cheded**, *Lancaster U. Management School*

Recent scholarship draws attention to social innovation undertaken by entrepreneurs to improve the lives and wellbeing of marginalized populations. Within this context, women entrepreneurs, traditionally marginalized and working within cultural milieus that eschew innovative products by women for women, confront an uphill battle, especially when working with tainted cultural resources. However, as our inquiry of the initiatives undertaken by sex-tech women entrepreneurs unveils, these entrepreneurs can engage in cultural entrepreneurship to innovate and reconfigure the meanings associated with their products to legitimize them as social innovations. Data show entrepreneurs: (a) designing and commercializing embodied products to address unmet needs, (b) engaging in discursive practices to create a new language, and (c) engaging in social action while aligning with other social movements. These practices together led to a cultural reconfiguration, i.e., shifting the meaning of sex-tech products from immoral to a health and wellness devices, resulting in the legitimization of sex-tech as a social innovation and conversion of tainted cultural resources into valuable ones.

ENT: **Nascent Social Entrepreneurship, Startup Financial Support, and Societal Stereotypes**

Author: **Agnieszka Kwapisz**, *Montana State U.*

Author: **Diana Maria Hechavarría**, *U. of South Florida*

In nascent entrepreneurship, firm and owner characteristics are often the main factors that lenders use to evaluate potential borrowers. But the literature on social entrepreneurs' startup financing is limited, most likely due to the novelty and uniqueness of their efforts. Using the societal stereotypes perspective and a double hurdle estimation approach on a nationally representative sample of U.S. nascent entrepreneurs, we find that social entrepreneurs are less likely to receive and receive less financial support than their counterparts. However, we find evidence that social entrepreneurs with more startup experience and/or current ownership of other businesses are more likely to receive and receive larger amounts of financial support than their counterparts. This is not the case for money motivated entrepreneurs who are already seen as competent.

Paper is Available to Meeting Registrants Only.

ENT: **An Institutional Nexus Perspective of Social Entrepreneurship**   

Author: **Florian Koehne**, *Johannes Kepler U. Linz*

Author: **Benson Honig**, *McMaster U.*

Author: **Richard Woodward**, *U. of Edinburgh*

In this paper, we contribute to the nascent field of transnational social entrepreneurship by developing an institutional nexus perspective to predict how the different migration directions and human capital endowments of transnational entrepreneurs may facilitate or constrain their social entrepreneurship activities in different institutional contexts. The institutional nexus perspective links the previously developed institutional void and institutional support perspectives of social entrepreneurship by introducing transnational social entrepreneurs as bridging agents between different institutional environments. Since existing research on transnational and migrant entrepreneurship has neglected a number of important migration directions, theoretical development remains considerably limited, necessitating a better understanding of the role of context-spanning migration at the intersection of transnational and social entrepreneurship. In this paper, we address these shortcomings and provide a contextualized framework of transnational social entrepreneurship from the institutional nexus perspective. The paper concludes with a discussion of the implications of our work and provides suggestions for future research to test and advance the theory.

Session Moderator: **Adam K. Frost**, *Copenhagen Business School*

ENT: Entrepreneurial Strategies in Extractive Environments 

Author: **Adam K. Frost**, *Copenhagen Business School*

Entrepreneurs operating outside of developed markets often face heightened risks of expropriation. However, the strategies by which they can reduce said risk remained under-examined and undertheorized. This abductive study attempts to address this void through the analysis of a novel historical dataset—2734 cases of individuals who were prosecuted as “speculators and profiteers” in Maoist China. With this data, we show that, even in the most extreme of contexts, entrepreneurs can effectively reduce the severity of expropriation by either embedding themselves in political institutions or availing themselves of incongruencies in enforcement priorities across different levels of government. These findings have broader implications for understanding the relationship between entrepreneurs and the state, as well as strategic decision-making in emerging market and authoritarian contexts.

ENT: Employee Mobility as an External Enabler of High-Growth Entrepreneurship 

Author: **Daniel L. Bennett**, *U. of Louisville*

Author: **Michael Araki**, *U. of Louisville*

Author: **Gary Wagner**, *U. of Louisiana at Lafayette*

Non-compete agreements (NCA) are contracts between employers and employees that restrict the former from leaving their job to work for or start a competing firm. As such, NCAs reduce labor mobility, and ultimately entrepreneurship, by imposing transactions costs on employees who want to change jobs or start a new venture. We contribute to a nascent literature examining the economic consequences of NCAs by considering how weakening the enforceability of NCAs is an external enabler of high-growth entrepreneurship (HGE). We show that such institutional changes enable HGE through three mechanisms: compression, conservation, and resource expansion. We empirically test and find supporting evidence using a large nested panel dataset and novel econometric method, staggered difference-in-differences. The causal effect of reducing NCA enforceability is economically and statistically significant.

ENT: The Effect of Institutional Level on Embedded Agency Among Institutional Entrepreneurs

Author: **Chad David Coffman**, *U. of Missouri, Kansas City*

Author: **Alisa Sydow**, *ESCP Business School*

Author: **Sanwar A. Sunny**, *U. of Baltimore*

The paradox of embedded agency has received considerable attention since the rise of institutional entrepreneurship literature brought attention to the work of individuals to change the institutional environments within which they operate. However, we argue that the structural forces that determine the embeddedness of an actor vary considerably across Williamson’s four-level institutional hierarchy, which implies that the relationship between structure and agency is not paradoxical. We interviewed a sample of institutional entrepreneurs in the blockchain industry in Kenya and Nigeria and found that embeddedness varied depending on the institutional level at which changes were being made.

The knowledge spillover theory of entrepreneurship (KSTE) posits that knowledge created but underexploited in knowledge-creating organizations endogenously generate entrepreneurial opportunities through knowledge spillovers, such as employee venturing behaviors (EVBs). Although prior KSTE studies have examined the impact of a country’s entire knowledge stock on its total entrepreneurial activities, it remains unclear how national EVBs are influenced by knowledge creation and knowledge exploitation at the national level and how such influences vary across nations with differing entrepreneurial values (NEVs) that include innovative, proactive, and risk-taking values. By analyzing a multi-source dataset from 52 countries ranging from 2011 to 2017, this study reveals that knowledge creation positively influences knowledge exploitation at the national level with a diminishing marginal effect, while the latter negatively affects national EVBs. Additionally, knowledge creation has a U-shape relationship with EVBs at the national level, and this U-shape relationship is strengthened by national entrepreneurial values. This article is among the first to conduct a cross-country study on national EVBs by elaborating on the different driving effects of knowledge creation and knowledge exploitation and specifying national entrepreneurial values as important boundaries of these driving effects.

ENT: Your Path Lies Before You – A Review on Succession in Family Firms and a Way Ahead

Author: **Dustin Bauer**, *Friedrich-Alexander U. of Erlangen-Nürnberg*
Author: **Tobias Reif**, *Friedrich-Alexander U. of Erlangen-Nürnberg*
Author: **Sebastian Junge**, *U. of Erlangen-Nuremberg*

Within the last decades, research on family firm succession has grown significantly. The current publication landscape is characterized by a heterogenic succession understanding, resulting from various models, surrounding contexts, and numerous outcomes. We aim to identify core elements of succession within family businesses and to derive potential modes of conflation. To address our research questions, we conduct a systematic literature review on family firm succession. During our analysis, we identify two core research streams: succession candidates and process models. We reveal the distinction of family and non-family successors within four groups of antecedents, both being connected to resulting implications on performance and socioemotional wealth. Besides, we identify the continuous modification of succession process models, resulting in various understandings of the succession procedure. Through comparative analysis, we reveal the succession processes to consist of three universal phases. Based on our review, we propose a framework to integrate the successor implication antecedents as explanatory variables within succession processes. We suggest the antecedents to represent the central content parameters. They essentially provoke and shape the resulting gatekeeping events. We argue the interrelation of the three phases, their contents, and the gatekeepers to result in the emergence of successor implications.

ENT: To Build or Dissolve Bridges: Generational Disruptions and Legacy in Family Business

Author: **Audrey-Anne Cyr**, *HEC Montreal*
Author: **Trevor Lyle Israelsen**, *U. of Victoria (PhD Student)*
Author: **Rob Mitchell**, *Colorado State U.*

Family businesses are constantly faced with generational disruptions of all kinds. These generational disruptions can take the form of intra-family conflicts or succession, strategic divergences within the organization, or paradigm shifts at the societal level. They thus can involve family members, stakeholders of the organization or social movements with a broader scope. No matter what form they take or who they concern, generational disruptions can threaten the long-term prosperity of family businesses. This article theorizes the concept of generations and generational disruptions in order to better explain interactions between different types of generations in family businesses. We also explain how legacy (i.e., historical narratives, memory and artifacts) can either function as a bridge to override generational disruptions by creating an impression of continuity or proximity between past, present and future generations, or as an obstructor by creating a sense of discontinuity between generations. This article promises not only to advance explanations of intergenerational dynamics in family businesses, but also to better explain the complex, multifaceted role of legacy in perpetuating (or not) such businesses over time.

ENT: The Moderating Role of Socioemotional Wealth on Postsuccession Performance in SME Family Firms

Author: **Sabrina Schell**, *Bern U. of Applied Sciences*
Author: **Christoph Stock**, *U. of Siegen*
Author: **Laura Pütz**, *U. of Siegen*
Author: **Arndt Werner**, *U. of Siegen*

This study focuses on the moderating role of socioemotional wealth (SEW) within family-owned small and medium-sized enterprises (SMEs) by examining whether and to what extent a dynastic succession event influences postsuccession performance. Based on data drawn from 344 German family-owned SMEs and relying on a direct multidimensional scale to account for the heterogeneity in owning families' affective endowment, our key finding is that firms with high SEW after a succession event generate higher postsuccession performance than their counterparts with low SEW. Focusing on individual SEW dimensions, we find that the renewal of family bonds through dynastic succession and the identification of family members with the firm are the key drivers that affect postsuccession performance. In sum, our study identifies SEW – and its components – to be substantial factors determining whether a succession event will improve or undermine a family-owned SME's financial performance after succession. For practitioners, our study also provides valuable information on whether and how family-owned SMEs can draw on SEW as a strategic tool to ensure the firm's long-term success.

ENT: A Straw in The Wind: Media Opinion on the Family and Analyst Responses During Family Firm Succession

Author: **Yanlong Zhang**, *Peking U.*
Author: **Chi-Nien Chung**, *National U. of Singapore*
Author: **Yijie Min**, *Guanghua School of Management, Peking U.*

This study explores how business media opinion on family members affect analyst stock recommendations during family firms' intergenerational successions. Through field interviews and data analyses on a sample of Chinese publicly listed family firms, we find evidence suggesting that analysts tend to view the process from a system perspective and employ contextually embedded and relational specific cognitive schemas when understanding the performance implications of family dynamics. Our results show that positive media opinion on successors can increase analyst recommendations, but such effects may be attenuated by favorable media opinion about founders. This founders' shadow effect is less pronounced among father-daughter and founder-nonblood heirs than it is for father-son dyads. Moreover, favorable media opinion about successors siblings may increase analysts' worry about sibling rivalry and thus leads to lower recommendations. We discussed the theoretical and practical implications of our study to the institutional logics, securities analysts, and family firm literature.

Entrepreneurial Biases

Session Moderator: **Anely Bekbergenova**, *U. of Lausanne, HEC Lausanne*

ENT: Charisma: Closing the Venture Funding Gender Gap

Author: **Anely Bekbergenova**, *U. of Lausanne, HEC Lausanne*

Author: **Marianne Schmid Mast**, *U. of Lausanne, HEC Lausanne*

Author: **John Antonakis**, *Faculty of Business and Economics (HEC Lausanne), U. of Lausanne*

. This paper examines how changing verbal and nonverbal behavior in female entrepreneurs can alter their prospects of being invited to meetings with investors, raising funds, potentially reducing the venture funding gap. In a field study we examine how the use of charismatic tactics in the pitch influences the likelihood of succeeding in a startup competition. In an experimental study, we investigate how the implementation of verbal and nonverbal charismatic tactics (a distinct type of verbal and nonverbal behavior), influences the funding success of female and male entrepreneurs. We investigate the impact of verbal and nonverbal charisma, separately and jointly, on the raised investment pitches using virtual humans acting as entrepreneurs. The verbal content and nonverbal aspects (e.g., gestures, tone of voice) are identical for the female and male virtual humans. This enables us to examine pure gender perception effects while controlling for effects stemming from existing gender differences in verbal and nonverbal behavior. Our results show that charisma matters as the number of charismatic tactics corresponds to a higher likelihood of succeeding into the next round of an entrepreneurial competition. Furthermore, nonverbal charisma has a strong positive effect on funding for female and male entrepreneurs, nevertheless the lack of nonverbal charisma penalizes female entrepreneurs to a greater extent than male entrepreneurs.

ENT: Profit Expectations Informed by Data: A Noise Intolerance Theory on SMEs' Use of Data

Author: **Joeri Van Hugten**, *Vrije U. Amsterdam*

Author: **Wim Coreynen**, -

Author: **Johanna Vanderstraeten**, *U. of Antwerp*

Author: **Arjen Van Witteloostuijn**, *Vrije U. Amsterdam*

Data are hailed as solutions to the ambiguity and uncertainty of looking into the future. This paper investigates a cognitive constraint to entrepreneurs using their venture's data to inform their profit expectation. Specifically, we study how an entrepreneur's ambiguity intolerance and uncertainty intolerance affect how much their profit expectation differs from a prediction based on their venture's profit data. We develop theory on data informing expectations and the role of ambiguity and uncertainty intolerance. We test our hypotheses in a unique sample of 233 firms participating in a large-scale consulting project. We find that ambiguity intolerance and uncertainty intolerance each decrease the difference between expectation and prediction if that prediction's uncertainty is low. Uncertainty intolerance increases that difference if prediction uncertainty is high.

Paper is Available to Meeting Registrants Only.

ENT: Examining the Role of the Dark Side of CEO Personality in Decision-Making Approaches Within Russia 

Author: **Galina Shirokova**, *National Research U. Higher School of Economics*

Author: **Louisa Selivanovskikh**, *National Research U. Higher School of Economics*

Author: **Aleksandra Bordunos**, *National Research U. Higher School of Economics*

Author: **Michael H. Morris**, *U. of Notre Dame*

Prior studies have examined effectuation and causation as alternative behavioural logics used by entrepreneurs to manage uncertainty, noting a number of antecedents of the tendency to rely on a given logic at different levels (environmental, organizational, and individual) of analysis. This study aims to broaden the understanding of individual-level antecedents by examining the role of the so-called dark side of the CEO personality on decision-making processes within small and medium-sized enterprises (SMEs). Specifically, we focus on three personality characteristics: narcissism, psychopathy, and Machiavellianism. The impact of this dark triad on the behavioural logic employed by the entrepreneur is argued to be moderated by the general level of uncertainty experienced by the firm. A set of hypotheses regarding these relationships are tested with a random sample of CEOs in Russian SMEs. The findings suggest that CEOs scoring high in psychopathy tend to adopt a causal logic, while Machiavellians rely on an effectual logic. The level of uncertainty shapes these relationships by weakening the links between psychopathy and causation and Machiavellianism and effectuation. Implications are drawn for theory and practice.

Paper is Available to Meeting Registrants Only.

ENT: Flip the Tweet – The Two-Sided Coin of Entrepreneurial Empathy

Author: **Konstantin Kurz**, *Technische U. Darmstadt*

Author: **Carolin Bock**, *Technische U., Darmstadt*

Is empathy merely a good thing for entrepreneurs? In contrast to the hitherto predominantly positive view in entrepreneurship literature, psychology and management scholars have recently adopted a more critical perspective. Transferring their findings, we provide a novel "too-much-of-a-good-thing" perspective on entrepreneurial empathy. We test our model against a dataset of 4,725 real entrepreneurs and demonstrate that empathy influences opportunity recognition, evaluation and exploitation in an inverted U-shaped pattern. We also show that these exploited opportunities then lead to higher amounts of achieved financial resources. These findings provide strong evidence for considering entrepreneurial empathy an important but highly ambiguous success factor.

Participant: **Bogdan Prokopovych**, *U. of Massachusetts, Amherst*
Presenter: **David Gras**, *U. of Tennessee*
Presenter: **Ryan C. Bailey**, *U. of Oklahoma Price College of Business*

This presenter symposium engages scholars from a variety of perspectives to discuss, develop, and further build upon the key predictors of both failure and success within social entrepreneurship. The authors address timely and relevant topics, such as hybrid organizing, governance, institutional diversity, and enculturation processes as well as processes for increasing client engagement to reduce mission drift. Further, the authors discuss emerging topics within the social entrepreneurship literature including the hidden role of purpose, beneficiaries' role as value consumers, and potential non-receptivity toward social value through institutional avoidance.

Novel Directions in Emotions Research

Session Moderator: **Udayan Dhar**, *Weatherhead School of Management, Case Western Reserve U.*

MOC: **The Interplay of Emotionally Salient Work Experiences, the Ideal Self, and Vocational Outcomes**

Author: **Udayan Dhar**, *Weatherhead School of Management, Case Western Reserve U.*

Taking a positive identity development perspective, and by incorporating the role that developmental experiences play in constructing the self, this study shows that a diverse set of emotionally salient work-related experiences can affect the Ideal Self over time, which in turn has important vocational consequences. In Study 1, focus group interviews with management professionals (N=18), surveys of workers on the M-Turk platform (N= 155), and of university students with prior work experience (N= 207) were used to develop and validate a formative index of emotionally salient developmental work-related experiences. In Study 2, a sample of management professionals (N= 271) was used to test a hypothesized model of the impact of such experiences and of career stage on their Ideal Self's salience and clarity, and several vocational outcomes. The analysis showed that both emotionally salient developmental experiences and career stage are related to the development of a clear and salient Ideal Self, which predict career satisfaction, work effort, and engagement. Implications for theory and research in the fields of experience-based learning, career development, and professional identities are discussed.

MOC: **Down the Wrong Rabbit Hole: Methodological Traps in Researching Emotions in Post-Merger Integration**

Author: **Sandor Talas**, *U. of Queensland*

Author: **Andre Pekerti**, *U. of Queensland*

Author: **Neal M. Ashkanasy**, *U. of Queensland*

We call the attention of management scholars to the methodological traps inherent to data collected using self-reported emotions experienced in the context of merger integration. In a systematic review, we identified fifteen peer-reviewed empirical articles where authors discuss the impact of emotions in post-merger situations based on interview data. We found that authors of twelve studies appear to have been unaware of the problems of the interview method; or implicitly accepted the inherent and unavoidable distortions and biases of self-reported emotions over time. We argue that these distortions and biases represent threats to data validity and reliability. In support of this position, we cite literature suggesting it is difficult for researchers to reconstruct emotions experienced based on interviews conducted a few weeks after the events, so that results based on this method may not be valid. The authors of these articles all relied on data collected several months or years after merger events, and then sought to assess the impact of emotions at the time of the merger. As a consequence, conclusions based on these data may be unreliable. We conclude with recommendations for overcoming this potential source of invalid data in post-merger integration studies. Keywords: Emotions, interview, merger, change process, delayed recall

MOC: **Perception Asymmetry of Affect: How Do You Think We Feel?**

Author: **Brandon Lee Antwiler**, *U. of North Texas*

Author: **Virginie Lopez Kidwell**, *U. of North Texas*

Author: **Danielle Cooper**, *U. of North Texas*

In collective affect research, an assumption is often made that through processes such as emotional contagion and attraction-selection-attrition members will converge unto a shared group affective tone. While this assumption is not without warrant, a limitation of previous work on interpersonal emotional processes of individuals, individuals within dyadic relationships, or members within teams is the lack of examination into the varying perceptions individuals may form regarding these affective experiences. To examine the development and influence of these affective perceptions, we extend recent works from work group conflict literature to examine the influence of perception asymmetry when applied to affective interactions. Wherein, we describe a novel construct of Perception Asymmetry of Affect (PAA). PAA refers to the congruence (e.g.; low level of PAA) or incongruence (e.g.; high level) of perceptions of affective experiences between two or more individuals. This paper explores the following questions: 1) does perception asymmetry of affect exist; 2) if so, what causes perception asymmetry between individuals and their groups, within dyads, and within groups. This article contributes to literature on collective affect by offering a detailed framework for an understudied phenomenon of diverging or asymmetric perceptions.

MOC: **Crowding Out? The Joint Impact of Emotions on the Categorization Process**

Author: **Tian Wei**, *NEOMA Business School*

Author: **Fabio Fonti**, *NEOMA Business School*

Emotions drive managers' cognition—namely, their perception, interpretation, and memory—thus influencing their behaviors. The association between emotions and cognition takes multiple forms. First, both negative and positive emotions contribute to perception and learning about situations, thus making these two types of emotions functionally complementary to each other. Second, emotional experiences enhance episodic memories, allowing emotions to continuously affect cognitive functions by recalling previously stored information. Finally, managers' experiences of emotional shifts strengthen their ability to help firms implement appropriate strategic changes via categorization processes, allowing firms to maintain superior performance in the long term. Hence, our argument in this paper is that managers' emotions may affect their cognitive process of categorization. More specifically, we believe that the combination of managers' positive and negative emotions as well as their emotional shifts facilitate developing comprehensive analyses of the competitive environment, thus allowing managers to create categories of firms that effectively represent the changing environment they are confronting. These categories enable firms to perceive the necessity of strategic changes and the appropriate approaches to enacting such changes, thus helping firms adapt to environments and maintain superior performance in the long term. To explore these relationships, we leveraged a computer simulation to identify the causal effects of managers' emotions on their categorization activities. Simulation results imply that emotional experiences improve the categorization process by providing more reliable information foundations and enabling logical analyses. Such findings also bear managerial implications regarding how managers' emotions should be adjusted to improve managerial cognitive processes.

MOC: Continuity in Discontinuities: The Role of Cognitive and Emotional Reframing

Author: **Philip Gordon Stiles**, *U. of Cambridge*

Author: **Kishore Sengupta**, *Cambridge U.*

Author: **Stephen Cassidy**, *Industry*

We develop an understanding of discontinuous technology adoption by examining how employees cognitively and emotionally frame the transition between existing and new technologies. Framing is important since discontinuous technologies by their very nature deviate from prevailing logics and mindsets, but we know little about how employees both cognitively and emotionally frame transitions, particularly in competence-destroying contexts. We use an in-depth case study of a major technology company to look at the micro-processes of framing. We highlight a number of core pathways and mechanisms through which frame flexibility is enacted, primarily by leaders empowering self-managing teams, and the use of improvisation and creativity in managing the transition process. We contribute more generally to research on technological discontinuities by developing a process model of employee reframing of the transition between existing and new technologies.

Antecedents of Team Creativity and Innovation

Session Moderator: **XINYU HU**, *Renmin U. of China*

OB: **Ethical Leadership and Team Innovation: A Meta-Analytical Investigation**

Author: **Meng Zhang**, *Renmin U. of China*

Considerable research has demonstrated that ethical leadership is beneficial for team innovation. We offer an integrated view by identifying a potential dark side of ethical leadership and suggesting that ethical leadership can be a mixed blessing on team innovation. On the one hand, as team members perceive safeness to work with ethical leaders, they have a high level of psychological safety, which enhances team innovation. On the other hand, as team members are confined in the norms and constraints set by ethical leaders, ethical leadership is positively associated with norm conformity, which decreases their team innovation. The meta-analysis results of 25 studies provide support for our hypotheses. Results of meta-analytic structural equation modeling show that ethical leadership has a positive indirect effect on team innovation through enhancing psychological safety. In contrast, ethical leadership has a negative indirect effect on team innovation through enhancing norm conformity. Taken together, our findings reveal the benefits and perils of ethical leadership and the importance of examining its impacts on team innovation.

Paper is Available to Meeting Registrants Only.

OB: **Assessing Facets of Craftsmanship in the Context of Work**

Author: **Hui Sun**, *Macau U. of Science and Technology*
Author: **Qing Tian**, *Macau U. of Science and Technology*
Author: **Jingyi Bai**, *Macau U. of Science and Technology*

The craftsmanship literature lacks a multi-faceted construct and measure applicable in the work context. We address this gap by providing multidimensional employee craftsmanship and developing its measure. Data from four studies provided support for (a) a 4-factor construct of employee craftsmanship representing the sub-facets of ethical pursuit, striving to excel, love for work and work as a calling across samples; (b) an employee craftsmanship scale with good internal consistency and reliability; (c) positive relationship between employee craftsmanship and grit, incremental innovation and negative correlation between employee craftsmanship and unethical behavior. Overall, findings suggest that the Employee Craftsmanship Scale has good psychometric properties. It provides novel insights into the role of employee craftsmanship for work outcomes, like innovative and ethical behavior.

OB: **Creativity in Virtual Teams: The Role of Task Type and Foreign Language Use**  

Author: **Anja Loderer**, *U. of Trier*
Author: **Katrin Susanne Muehlfeld**, *U. of Trier*
Author: **Robert Wilken**, *ESCP Business School*

Creative teamwork frequently takes place in virtual teams. Both in domestic and cross-border work settings, these teams increasingly often comprise employees who have different native languages, prompting many teams to adopt a common team language, which is a non-native language for many members. Yet, the effects on different types of team creative tasks of working virtually and in a foreign language have remained under-explored. This study addresses how the use of modern synchronous technology affects creative performance in different task types, and how this effect differs depending on foreign or native language. Results are based on an experimental study with 95 dyadic virtual and face-to-face teams, randomly assigned to work in a foreign or native language. Virtual teams outperformed face-to-face teams on verbal creative tasks only when working in a foreign language. Face-to-face teams performed better on nonverbal creative tasks, independent of the language used. Further, tentative evidence suggests that the verbal creative performance of virtual compared to face-to-face teams benefits more from higher team foreign language proficiency but is also more adversely affected by team foreign language anxiety.

OB: **How Do Teams Create? A team Creativity Process Model**

Author: **XINYU HU**, *Renmin U. of China*

Creativity is one of the most impressive capabilities of human beings and is considered to be the fountainhead of human civilization. In today's workplace, it is common that creative work is the result of the cooperation and joint effort of a group of people. Although studies have found several antecedents of team creativity, the process of it is still a "black box". From a micro-dynamic perspective, this case study takes a detailed look at the nonlinear dynamics of team creativity. Using the case of The Beatles' Get Back project in 1969, which lasted for nearly a month, this research builds a team creativity process model showing the interacting nature of team creativity. This model includes creative sparking and creative crafting stages, describing the process that personal creative ideas become team resonance, and by interacting, the initial ideas are eventually crafted to become team creations.

Paradoxes and Paradoxical Leadership at Multiple Levels of Analysis.

Paradoxes and Leadership at Multiple Levels

Session Chair: **Steven Poelmans**, *U. of Antwerp/ Antwerp Management School*

Organizer: **Steven Op 't Roodt**, *PhD student at U. of Antwerp*

Presenter: **Tiffany Taylor**, *PhD student at U. of Antwerp*

Presenter: **Mohammed Chaara**, *U. of Antwerp/ Antwerp Management School*

Presenter: **Luis Rosés**, -

Presenter: **Duijnsveld Sabrina**, -

Discussant: **Wendy K. Smith**, *U. of Delaware*

In this presenter symposium, we introduce the Paradox Theory of Leadership, a leadership model for dealing with complexity and paradox in organizations. Four researchers from four different disciplines and cultures will present their research linking concepts at the individual level (vertical development, cultural intelligence), inter-individual level (paradoxical leadership and political skills), team level (team paradoxes and motivation), and the cross-cultural level (cultural paradoxical dimensions) with leadership paradoxes. In the first paper, Mo Chaara looks at the stages of vertical development in humans and A.I. that would allow dialectic cognition, necessary for paradoxical reasoning. Second, Tiffany Taylor presents her research of political skills in managers and how they relate with paradoxical leadership behaviors. Third, Lluís Rosés looks at the influence of multiple paradoxes in teams on team meetings behaviors and motivation. Fourth, Sabrina Duijnsveld (NL), analyzes cultural intelligence and paradoxical leadership as a way to navigate different cross-cultural dimensions when collaborating internationally. Finally, Wendy Smith, professor and widely cited author on organizational paradoxes will discuss the different presentations and open for interaction with the audience.

Presenter: **Hae-Lyeng Rose Kim**, *Robert H. Smith School of Business, U. of Maryland*

Power, defined as individuals' asymmetric control over valuable resources, is a central reality of organizational life. Decades of power research have offered us plenty of insights into how the powerful think, feel, and behave. However, researchers contend that this emphasis on high power may have resulted in an insufficient understanding of low-power individuals, and that taking a static view of power may have hampered the development of the literature. To help move the literature forward, our symposium contains two papers that focus explicitly on the effects of low power, one paper that investigates the causes of increasing power, and one paper that examines the effects of power fluctuations. Taken together, these papers extend our understanding and generate new research directions for how the power literature can move forward.

Organizer: **Kathrin Sele**, *Aalto U. School of Business*

The symposium discusses the value of practice theory in understanding and tackling grand challenges. It engages Martha Feldman and Brian Pentland as leading scholars from ‘Routine Dynamics’ research as well as Paula Jarzabkowski and Linda Rouleau as leading scholars from research on ‘Strategizing Activities and Practices’ to unpack the possible contributions that those two scientific communities can provide in the context of grand challenges. Subsequently, Kathleen Sutcliffe and Joel Gehman critically reflect on the value and drawbacks of practice theory in studying grand challenges. The symposium intends to stimulate research which applies practice theory to grand challenges.

Legitimacy and Stakeholder Engagement in Corporate Social Responsibility

Session Moderator: **Eduardo Hernandez**, *U. of Edinburgh business school*

SIM: Rethinking the Corporate Community Engagement Continuum

Author: **Eduardo Hernandez**, *U. of Edinburgh business school*
Author: **Sarah Ivory**, *U. of Edinburgh*

There is more than one-way business can engage with their local communities. Previous research has organised this diversity of interests, responses and impacts using both dichotomous and continuous typologies that mainly focus on corporate behaviours and actions. Although these typologies present a clear view about what firms have to do, little thought is given to understanding how firms engage with their social responsibilities and stakeholders in a more abstract level. It is clear that corporate community engagement involves a visible side of actions and techniques, but it is less clear which are the underlying assumptions firms implicitly or explicitly consider to develop these engagement methods. The purpose of this paper is to rethink the continuum of corporate community engagement in relation to the organisational contexts. In particular, by investigating the distinct but interrelated approaches to social responsibilities and stakeholder engagement firms might prioritise in transactional, transitional and transformational strategies. Acknowledging these approaches is relevant because they not only inform the community engagement strategy but the whole business strategy.

SIM: Gaining Legitimacy in Economic Downturn: Understanding Customer Evaluations of CSR Activities

Author: **Soydan Soylu**, *Middlesex U.*
Author: **Satkeen Azizzadeh**, *Middlesex U.*

Periods of extreme socio-economic uncertainty raise important questions about the role of corporations and their social responsibilities. Engaging in legitimate CSR becomes more essential during severe economic conditions to respond to stakeholder needs. Adopting Suchman's (1995) legitimacy theory, our purpose was to unveil the customer understandings of what is seen as "the right to do" in terms of CSR activities during economic downturn. We conducted 41 interviews in two rounds in the UK, one at the start of the Covid-19 pandemic, and one a year later. We propose a process model explaining which CSR activities are considered legitimate during economic downturn and how corporations gain legitimacy from customers for these initiatives. Proposed model contributes to CSR literature by guiding organizations during economic downturn in understanding the type(s) of legitimacy granted by customers for CSR practices. This model is invaluable for management during times of crises to re-contextualize their CSR activities.

SIM: Stakeholder Reintegration Following Moral Polysemy: A Nethnographic Case Study of LPP SA

Author: **Joanna Krasodomska**, *Cracow U. of Economics*
Author: **Ewelina Zarzycka**, *U. of Lodz*
Author: **Dorota Dobija**, *Kozminski U.*

The aim of this paper is to facilitate a deeper understanding of the reintegration process following a crisis caused by moral polysemy in an internet-mediated environment. This paper focuses on Polish textile company LPP SA. It uses an explorative and interpretive single case study as its research approach and netnography as its data gathering method. Content and buzz analysis of online discussions of LPP SA's crisis are employed to identify the influential stakeholders in the subsequent stages of the company's reintegration and the impact of the broader situational context on this process. Due to the ambiguity involved, we propose to conceptualize LPP SA's crisis, caused by an involuntary disclosure, as an instance of moral polysemy. We therefore identify three stages of the reintegration process (discovery, explanation, rehabilitation). The most influential stakeholders are members of the media and politicians, but stakeholder influence varies in different stages of the process. Previous reputational crises and CEO posturing play a role in such reintegration, and Facebook and Twitter are the main communication mediums. The main limitations of our study include the classification of individual internet users as a single group despite their diversity and our total reliance on online sources. This study contributes to the literature on reintegration and stakeholder communication and expands the theoretical model of internet-mediated crisis communication. It also adds to the literature on involuntary disclosure.

Author: **Petya Koleva**, *Emirates Aviation U.*

Author: **Yusuf M. Sidani**, *American U. of Beirut*

Author: **Maureen Meadows**, *Coventry U.*

The stakeholder salience typology (Mitchell, Agle & Wood, 1997) has been extensively examined by scholars ever since its introduction. Despite its valuable contribution to stakeholder management practice, the Mitchell et al.'s (1997) typology is often questioned for the exhaustiveness of its attributes – power, legitimacy and urgency. At the same time, scholarly understanding in terms of the typology's applicability in non-Western countries is extremely limited and academic research is lacking evidence if the contextual specifications, institutional factors, and social processes of non-Western countries have any impact on the formulation of stakeholder salience. The study examines this research problem from the perspective of 63 senior managers in three non-Western countries (Saudi Arabia, Oman and the United Arab Emirates). The findings suggest presence of particular contextual specifications, institutional factors, and social processes that result in transforming youth from a formerly silent stakeholder group to a stakeholder group with significant influence in shaping macro level policies and regulations but also meso level organizational practices, to extent where national policies and organizational agendas with focus on corporate social responsibility (CSR) revolve around them. As a result of completing the study, a couple of contributions are offered to the literature. First, with reference to the stakeholder salience literature the study offers a fourth attribute to Mitchel et al.'s (1997) typology that shapes power, legitimacy and urgency of stakeholder claims, namely context. Secondly, the study contributes to the institutional theory and CSR literature by shedding light on the institutional determinants that can shape organizational CSR agenda, particularly in terms of CSR engagement. Recommendations to policy makers and practitioners are also offered.

SIM: The Contingent Effects of Firm Response Tactics on Firm Legitimacy During a Secondary Boycott  
 Teaching-oriented  Practice-oriented  International-oriented  Theme-oriented  Research-oriented  Diversity-oriented
Author: **Ahmad Al Asady**, *North Dakota State U.*
Author: **Christopher Groening**, *Kent State U.*  Selected as a Best Paper

Firms are unable to address the issues behind secondary boycotts, unlike with primary boycotts. In a secondary boycott scenario, firms have a choice of tactics to mitigate the negative effects on firm revenue: distraction, where firms introduce new information to divert consumer attention away from the issue, and persuasive refutation, where firms directly address the issue. This paper argues that a tactic's effectiveness is based on the salience of the boycott to consumers and the amount of exposure that consumers have to the boycott. The results indicate that when boycott issue salience is high, distractor tactics produce higher revenue, but when repeated exposure is high, persuasive refutation tactics achieve higher revenue. When both issue salience and repeated exposure are high, distractor tactics produce higher revenue.

State and Nonmarket Strategy in China

Session Moderator: **Xiaolan Fu**, *U. of Oxford*

STR: Open Innovation and Resource Flexibility in Times of Crisis: The Roles of Firm Characteristics   

Author: **Xuechen Ding**, *U. of Oxford*

Author: **Xiaolan Fu**, *U. of Oxford*

Author: **Zhenning Yang**, *U. of International Business and Economics*

The covid-19 pandemic has been a global threat and a large number of firms suffered from this grand challenge. This study aims to investigate how firms survive crises by using different strategies and how these strategies influence firms' performance differently. From the perspective of dynamic capabilities and using survey data collected from 538 companies during the Covid-19 in China, we empirically tested the hypotheses via an ordered probit model. The results indicated that both resource flexibility and open innovation strategies have a positive effect on firm performance in times of crisis. The effect of resource flexibility and open innovation are more significant in firms with a higher level of internationalization. In addition, accounting for the ownership, we found strong evidence that resource flexibility has a more significant and positive effect on state-owned firms than private firms, while open innovation has a more significant and positive effect on private firms than SOEs. This study contributes to the literature in the organizational management area and international business and provides useful insights for managers who wish to maintain organizational resilience in times of global crisis.

STR: Doing Well Brings More Friends? The Relationship between Corporate Social Responsibility and Guanxi 

Author: **Chih-Yi Su**, *Guilin U. of Electronic Technology*

Author: **Wei-Wei Kong**, *Guilin U. of Electronic Technology*

Despite numerous studies that have discussed the effect of corporate social responsibility (CSR) on financial outcome, less is known about how CSR benefits social relations such as guanxi. In addition, the literature on guanxi mostly focuses on its impacts but not on how to build it, especially in Chinese society where guanxi plays a substantial role. Anchored in CSR and social capital literature, we present a conceptual model to examine the impact of CSR on guanxi (i.e., political guanxi and business guanxi), and we further focus on the moderating roles of environmental munificence to advance our understanding. From a sample of 1843 Chinese listed firms from 2010 to 2018, the empirical results showed that engaging in more CSR is beneficial for firms in gaining more political connections; however, rather than a high or low level of CSR, a moderate level can help firms develop more business guanxi. Moreover, we also found that a high level of CSR is more conducive to building political guanxi in a highly munificent environment. A moderate level of CSR, coupled with a low level of environmental munificence, is optimal for business guanxi building.

STR: Government Subsidies and Corporate Social Responsibility Performance— Evidence from Chinese Listed 

Author: **Yue Wang**, *the Economics and Management School of Wuhan U.*

Author: **Helin Sun**, *Central South U.*

In this study, we investigate whether government subsidies are a determinant of corporate social responsibility (CSR). Based on legitimacy theory, we explore the impact of government subsidies on CSR. We also explore how corporate state ownership and regional institutional development affect the impact of government subsidies on CSR. Using a sample of firms listed on the Shanghai and Shenzhen Stock Exchanges between 2009 and 2016, we find that government subsidies have a positive influence on CSR and that state ownership weakens the effect of government subsidies on CSR performance while regional institutional development strengthens this effect. We discuss the implications of our findings for legitimacy theory and CSR research.

Paper is Available to Meeting Registrants Only.

STR: Private Ownership, Government Policy, and Government-Initiated Corporate Social Responsibility

Author: **Yi Peng**, *Shanghai U. of Finance and Economics*

Author: **Xiaogang He**, *China Center for Chinese Family Business Research of SUN YAT-SEN U.*

Author: **Jingchen Xue**, *Shanghai U. of Finance and Economics*

Previous literature focuses on how state-owned enterprises (SOEs) and firms with political connections (“insiders”) engage in government-initiated corporate social responsibility (GCSR) activities, little emphasize whether and how private-owned enterprises (POEs) (“outsiders”) respond to GCSR. Drawing on the evidence from Chinese listed firms, we find that compared with SOEs, POEs have lower motivation to participate in GCSR, but this effect is weakened if the local government has strong poverty alleviation aspiration. Additional analysis shows that POEs can easily access government subsidies and bank loans after participating in GCSR. We posit that POEs' participation in GCSR may be the consequence of local governments' reverse budget constraints.

Presenter: **Min Yu**, *Arizona State U.*
Presenter: **James Garrett Matusik**, *U. of Georgia*

An understanding of hierarchy in teams is crucial to the understanding of social structures in collectives and societies. Hierarchy is a fundamental element of social life and a predictor of individual and collective behaviors. Status and power, two of the most studied hierarchical dimensions, have received considerable attention in the social science literature (Blader & Chen, 2012; Blau, 1964; Fiske, 2010; Kemper, 2006; Magee & Galinsky, 2008; Weber, 1964). However, existing research on hierarchy has focused largely on its individual-level effects (see Magee & Galinsky, 2008 and Li, Chen, & Blader, 2016 for reviews). Only recently have researchers turned their attention to examining social hierarchy in the team context (Bendersky & Hayes, 2012; Hays et al., 2021; Tarakci, Greer, & Groenen, 2016). Hierarchy in teams—one of the most proximal collectives for employees—influences how they behave and are perceived not only within the team, but also outside of the team (Ertug & Castellucci, 2013; Lahiri, Pahnke, Howard, & Boeker, 2017). This symposium aims to contribute to this emerging and important trend of studying status and power in the team context. We believe that our symposium will help generate new perspectives and important questions regarding hierarchy and teams. We hope that it will facilitate sophisticated theorizing and rigorous empirics for this line of research.

MNEs in Emerging Markets

Session Moderator: **Shuo Yang**, *Kent State U.*

IM: How History Matters: A Comparison of Indian and Chinese Business Groups' FDI in Africa

Author: **Shuo Yang**, *Kent State U.*

Author: **Shoug AlSharhan**, *Kent State U.*

We compare the patterns of Indian and Chinese companies' FDI in Africa to explain how colonial history matters in international business. FDI activities of the historically colonizing countries are well documented. However, a less understood area is how the prior history of being colonized impacts these countries' FDI activities. This gap in the literature is receiving greater attention as new emerging economies (i.e., India and China) are playing a more profound role in globalization. Specifically, colonial history and a series of historical incidents reshaped the institutional environment and organizational field where a unique set of isomorphic organizational actions emerged. We find that the patterns and focus of Indian and Chinese FDI in Africa reflect their colonial history as being colonized for their resource or consumer market, respectively. More importantly, this paper shows that given differences in history and institutional context, Indian and Chinese business groups exhibit distinct characteristics in their FDI motivations and strategies. Our study has important implications for MNE managers to overcome market imperfections in emerging markets.

IM: Lakou: An Exploration of Humanistic Management in Haiti

Author: **Howard Jean-Denis**, *Pepperdine U.*

ABSTRACT: The extant management literature has established that organizational culture relates to organizational outcomes (Schein, 1985; 2010). The purpose of this study is to investigate the role of humanistic approaches to management on firm performance for organizations in a developing market context. The extant literature has explored the role of humanism in the past, linking it to productivity, cohesion, and mutual respect within the organization (Mangaliso et al, 2018). Although empirical studies have been conducted, less is known about how humanism can have societal, and economic impacts particularly in emerging market contexts. Thus, a theoretical framework of humanism will be developed along with its interaction with challenges in local, developing markets, namely corruption. The theory presented will be tested through a qualitative study in the country of Haiti through semi-structured interviews and focus groups. The empirical results suggest that the humanistic approach of 'Lakou' has impact on business activity. The theoretical contribution is the formulation of the Lakou cultural construct and delineation of its impact on related organizational aspects in this emerging market context.

IM: An Analysis of the Institutional Development of the SSA Region and Strategic Implications for MNCs

Author: **Daniel Rottig**, *Florida Gulf Coast U.*

Research on emerging markets has proliferated considerably over the past two decades, yet there is no clear consensus in the fields of academia, business practice or public policy of what constitutes an emerging market. While early conceptualizations of emerging markets focus primarily on the level of economic development and the pace of economic growth to distinguish emerging from emerged markets, more recent work has attempted to employ a broader lens when examining these markets. Based on institutional theory, this study attempts to contribute to a more fine-grained analysis of what constitutes an emerging market by analyzing the formal and informal institutional development of countries in the emerging market context of the Sub-Saharan Africa (SSA) region and the specific industry context of oil exploring countries in the region. In so doing, this study aims to develop a preliminary framework of institutional clusters based on the formal and informal institutional quality of emerging markets, and discusses the strategic implications for multinational corporations (MNCs).

OB: Does Turnover Spread through Network Ties? Network Turnover Contagion as Resource Loss  

Author: **Eric Quintane**, *ESMT Berlin*

Author: **Sebastian Reiche**, *IESE Business School*

Does turnover travel through social networks and, if so, how? Extant literature suggests that turnover can spread from one departing employee to another through a social influence process. While this assumes the existence of social relations, we lack understanding of whether and how different types of relations affect the contagion process. We build on the turnover literature, which conceives social relations as resources individuals lose when their contacts leave, to distinguish between different types of social relations (instrumental, expressive, energy) and resource providers (peers, supervisors) and examine how their loss relates to turnover contagion. We draw on a unique network dataset of 1,432 employees in the Chinese subsidiary of a Dutch multinational including employees' date of voluntary departure (271 turnover events). We estimate models inspired from the Relational Event Framework to trace the spread of departures through social ties over time and account for the effect of each departure on the networks of remaining employees. Our results are consistent with considering turnover contagion as resource loss. However, they also suggest that contagion is triggered when losing access to specific resources from particular providers. We elaborate on our results to propose a theory of network turnover contagion.

OB: Leadership Potential is in the Eye of the Beholder: The Role of Networking Behavior and Motives

Author: **Brooke A. Gazdag**, *U. of Amsterdam*

Author: **Chia-Yen Chiu**, *U. of Adelaide*

Author: **Jenny M. Hoobler**, *NOVA School of Business and Economics*

When identifying potential leaders, observers interpret the behavior of others, attribute motives to the observed behavior, and make judgements about their leadership potential. Drawing on previous literature connecting leadership emergence and networking, we focus on observed networking behavior, we posit that individuals' networking behavior is particularly relevant to others' assessments of their leadership potential. The existing literature views networking behavior as connected to agentic motives (i.e., people engaging in networking behavior for personal achievement and advancement), and also positions agency as a prerequisite for "good leadership." This premium placed on agency neglects a contemporary shift in leadership where relational, more communal leaders are increasingly desired and expected. We test this line of reasoning by demonstrating that the communal aspects of networking and leadership drive the connection between networking behavior and the motives ascribed to that behavior. Through four empirical studies (total $n = 972$) we find that networking behavior is generally attributed both agentic and communal motives (Study 1), but that attributed communal motives, more so than agentic motives, are important predictors of individuals' leadership potential in the eyes of observers (Study 2a; Study 2b; Study 3).

OB: Does Networking Make People Feel "Dirty"? Reconsidering Evidence in Casciaro, Gino, Kouchaki, 2014 

Author: **Zoe Ziani-Francllet**, *ESSEC Business School*

In 2014, Casciaro, Gino, and Kouchaki (hereafter CGK) published an influential paper for our understanding of networking behaviors. Specifically, the authors offered experimental evidence that people view networking actions as morally impure, which leads them to feel physically dirty when networking, which ultimately heightens the mental accessibility of cleansing-related concepts. In the present paper, I challenge the theoretical premise and the empirical evidence presented in CGK. To that end, I present a well-powered pre-registered experiment aimed at 1) replicating CGK's main effect, 2) replicating the psychological mechanism that underpins CGK's finding (i.e., the Macbeth Effect), and 3) establishing a "maximum positive control" (Hilgard, 2021) for any effect of networking on people's desire for cleansing. This experiment reveals a null result on the effect documented by CGK ($d = .02$), a null result on the Macbeth effect ($d = .02$), and a maximum positive control effect that is much smaller than the original finding reported in CGK ($d = .51$ vs. $d = .98$). I finally discuss other incidental issues in CGK, and conclude that there is no evidence that people experience physical dirtiness when networking.

Paper is Available to Meeting Registrants Only.

OB: The Effects of Social Networks on Individual Unethical Behavior: A Multilevel Network Perspective

Author: **Jingfeng Yin**, *U. of Illinois at Chicago*
Author: **Robert C Liden**, *U. of Illinois at Chicago*
Author: **Ying Wu**, *U. of Science and Technology of China*
Author: **Leigh Anne Liu**, *Georgia State U.*
Author: **Rui Guo**, *China U. of Geosciences (Wuhan), Wuhan, China*
Author: **Jibao Gu**, *U. of Science and Technology of China*

Considering individual unethical behavior as an inherently social phenomenon, we adopt a social network perspective to understand how individuals' connections within a team are predictive of unethical behavior. Drawing on social network perspective, we apply a multilevel social network approach to examine how team network density and individual network centrality affect individual unethical behavior. Analyses of multilevel social network data collected from 1,216 employees in 86 teams in Study 1 demonstrate that individual network centrality and team network density have disparate effects on unethical behavior. At the individual level, centrality in positive networks (i.e., advice and friendship networks) significantly decreases, whereas centrality in negative networks (i.e., avoidance and conflict networks) increases individual unethical behavior. At the team level, density of both team positive and negative networks was positively related to individual unethical behavior. Supporting a cross-level moderating effect, the density of team negative networks weakens the beneficial effects of centrality in positive networks and strengthens the deleterious effects of centrality in negative networks on individual unethical behavior. In Study 2, we replicate and check the robustness of the results of Study 1. Implications of these results for future research and management practice are discussed.

OB: A Multiple Constituency Approach to the Effect of Social Network on Supervisors' Reputation

Author: **Jaeyun Jeong**, *Hanyang U.*

Author: **Moowon Rhee**, *Yonsei U.*

Author: **Young-Moo Park**, *Hongik U.*      

This paper uses data from the surveys for sales employees of five shopping malls to investigate how a supervisor's centrality in social networks with subordinates, peers, and high-ranking supervisors is related to the supervisor's reputation for relation and performance among subordinates, peers, and high-ranking supervisors. Social network ties with the subordinates consisted of five separate networks, each representing the set of friendship and advice relations among all subordinates of a given shopping mall. Those with the peers were based on the friendship and advice ties among all supervisors and the 15 high-ranking supervisors across the five shopping malls. Data on the supervisor's reputation for relations and performance was based on the perceptions of three different constituencies: subordinates, peers, and high-ranking supervisors. Results revealed that supervisors' centrality in advice and friendship networks was related to their reputation for relations and performance among different organizational constituencies.

CMS: **The Price of Gold: Mental Health and Wellbeing in High-Performance Sport**  

Author: **Todd Bridgman**, *Victoria U. of Wellington*
Author: **Benjamin Webster Walker**, *Victoria U. of Wellington*

The day after New Zealand celebrated its highest ever medal tally at an Olympic games, Olivia Podmore, a 24-year-old track cyclist who had missed selection for the New Zealand team, died in a suspected suicide hours after writing about the demands of high performance sport in a social media post. Podmore's death was the latest in a series of incidents affecting athlete mental health and wellbeing in New Zealand sports organisations, mirroring developments in other countries. This case explores what might have contributed to these problems: a population that takes great pride in national sporting accomplishments, a high performance sport system that prioritises Olympic medals over athlete wellbeing; and unequal power relationships between coaches and athletes that creates an environment where bullying can flourish. It concludes with actions that have been taken to create a fairer and healthier high-performance environment.

CMS: **DARK SIDE CASE: HR in the NHL – A Power Play between an Injured Player and Team Management** 

Author: **Andrea Hayman**, *U. of Waterloo*
Author: **Prescott C. Ensign**, *Lazaridis School of Business & Economics*

On the evening of March 7th, during the third period of a professional hockey game between the Buffalo Sabres and New York Islanders, Jack Eichel was hit from behind and driven head first into the bottom part of the ice rink's enclosure. A videotape of the game showed Eichel sitting on the bench wincing in pain and flexing his neck. Eichel underwent 12 weeks of physical therapy that the team's doctors recommended. Since that time he has been in dispute with the team's general manager and doctors over the next medical treatment for his injury. On September 18th it was announced that the 24 year old would check in for a pre-camp physical. By September 23rd the decision had been made - not fit to play. Eichel had failed his physical at training camp, stripping him of his captaincy and placing him on injured reserve. By late October, Eichel and Sabres general manager, Kevyn Adams, were still wrestling with the issue of his medical treatment.

CMS: **DARK SIDE CASE: Orange Shirt Day: Exploitation of Indigenous Peoples and Appropriation of Culture** 

Author: **Mayah Moosajee**, *Wilfrid Laurier U.*
Author: **Prescott C. Ensign**, *Lazaridis School of Business & Economics*

Dark Side Case Award is sponsored by Routledge

At just six years old, in 1973, Phyllis Webstad was filled with excitement to go to St. Joseph's Indian Residential School near Williams Lake, British Columbia. Living on Dog Creek Reserve – Stswecem'c Xgat'tem First Nation, her grandmother had intentionally saved up in order to gift her a shiny new orange shirt for her first day of school. It was never to be seen again. Since then, the colour orange had reminded her that her feelings did not matter, no one cared, and her worth was nothing. She recalled all the little children crying and no one responding. This feeling of worthlessness and insignificance had been ingrained in her from the first day at boarding school and affected her life ever since. Forty years later, on September 30, 2013, Phyllis spoke about her experience at St. Mary's Indian Residential School starting the Orange Shirt Day movement. To that day, the colour orange was associated with the stolen lives of Indigenous children who were forced into residential schools. However, for Indigenous communities it was a symbol of solidarity, healing, and allyship. Orange shirts were worn en masse for Canada's first National Day for Truth and Reconciliation, September 30, 2021, signifying emotions from sorrow to strength, unity, and defiance. The abundance of Orange Shirts worn by Canadians would have been marvelous and entirely welcome, except the Indigenous art and designs found on these t-shirts was intellectual property stolen from the originators/creators of it and used without permission for commercial gain. This was both infuriating and disturbing, but what could be done?

CMS: **Dark Side Case: Pure Evil: Protecting the Powerful at USA Gymnastics**  

Author: **Quinn Densmore**, *Mount Saint Vincent U.*
Author: **Michelle Farr**, *Mount Saint Vincent U.*
Author: **Sarah Fullerton**, *Mount Saint Vincent U.*
Author: **Valerie Vaz**, *Mount Saint Vincent U.*
Author: **Ellen Shaffner**, *Mount Saint Vincent U.*
Author: **Nicholous Mark Deal**, *Mount Saint Vincent U.*

This dark side case entry focuses on United States of America Gymnastics (USAG) and its failure to prevent or address the long-term sexual abuse of its athletes by Dr. Larry Nassar. This case focuses on the structural and systemic issues of power, privilege, and silence within the USAG organization, as well as the FBI and Michigan State University in order to understand how Nassar's abuse continued for so long. It is intended for undergraduate and graduate audiences, and explores what went wrong from a critical management perspective. It highlights issues related to gender, power, ethics, and reporting, and the way that organizational processes can serve to keep the serious violations of powerful members in organizations free from scrutiny. The case highlights the voices of survivors and as a teaching tool, points to the role and consequences of deeply-embedded structures of power in organizational life. The case includes a detailed teaching note and a number of external resources we feel can help facilitate an exploration of the important issues of this case in the classroom.

ENT: An External Enabler Approach to Entrepreneurial Firms' Employee Recruitment during COVID-19 

Author: **David Lucas**, *Syracuse U.*
Author: **Cristiano Bellavitis**, *Syracuse U. Whitman School of Management*

Disruptive environmental changes can disrupt every aspect of economic and social life while also enabling entrepreneurial firms in surprising ways. We synthesize the external enabler framework with literature on human resources to study how the COVID-19 pandemic shaped entrepreneurial firms' employee recruitment. We theorize how external enablers can have nuanced effects on the labor market, affecting factor market rivalry among firms as well as candidates' openness to recruitment. We test our theory on over 200,000 recruiting interactions between entrepreneurial firms and top-talent candidates using a proprietary dataset from a prominent digital network platform. We find that during the pandemic, entrepreneurial firms' overall recruitment activity declined significantly, while candidates' responsiveness to firms increased. Recruiting firms were thus enabled to hire more entrepreneurial employees during the pandemic.

ENT: We are Hiring: Growth Opportunities for New Firms and the Business Cycle  

Author: **Martin Murmann**, *U. of Zurich*
Author: **Udo Brixy**, -

Whether firms founded in economic crises have sufficient growth potential is an important question for both aspiring entrepreneurs and policy makers. However, existing research in entrepreneurship and economics offers conflicting answers and most studies either focus on aggregate cohort-level effects or selectively exclude small new businesses from their analyses. We argue theoretically and explore empirically that young firms of different ages and sizes respond highly heterogeneously to cyclical conditions. Using extensive linked employer–employee data on young German firms, we reveal that the average new firm finds it easier to hire its first employees when it is founded in a crisis. These firms achieve countercyclical growth through hires of career entrants who face difficulties starting their careers during the crisis. More specifically, hiring in very young and small-to-medium-sized young firms is countercyclical, whereas the same does not hold true for older and larger young firms. Firm-specific effects for young entrepreneurial businesses can hence strongly differ from effects previously presented in the literature.

ENT: Entrepreneurial Leadership as a Path to New Ventures Creation through Entrepreneurial Bricolage.

Author: **Mansoor Ahmed**, *G. D'Annunzio U. of Chieti-Pescara*
Author: **Lorenzo Lucianetti**, *U. di chieti e pescara*

Drawing on the effectuation theory, the research study provides evidence on the relationship between entrepreneurial leadership (EL), entrepreneurial passion for founding (EPF), entrepreneurial bricolage (EB) and project success (PS), in the freelancers' context. Specifically, the study aims to better understand whether freelancers, who behave like entrepreneurial leaders, can successfully complete the projects through entrepreneurial bricolage. Using survey data from freelancers who work on various online platforms, collected in two separate waves, with a time-lag of fourteen days, results show that entrepreneurial bricolage mediates the relationship between entrepreneurial leadership and project success and entrepreneurial passion for founding moderating this relationship. This study extends previous research by showing how entrepreneurial bricolage can work in online freelancing projects. The study's results further suggest that freelancers can successfully complete projects through entrepreneurial bricolage and consequently, start formally accepting those types of projects. The important implication for the online freelancing platforms is to provide special services to freelancers, who first want to test their skills on projects, which they never undertook before.

ENT: Revisiting The Entrepreneurial Leadership Construct: A Multidimensional And Multilevel Perspective   

Author: **Parisa Haim Faridian**, *San Diego State U., Fowler College of Business*

Abstract This study aims to examine the evolution of the paradigm of entrepreneurial leadership as a standalone construct from its infancy to its current state. To do so, I conduct a comprehensive review of the literature on entrepreneurial leadership that encompasses definitional dissensus, measurement and methodological issues, and theory development. The findings are captured in the form of a multi-faceted and integrative model of entrepreneurial leadership and a set of propositions. The underlying perspective suggests that conceptualization of entrepreneurial leadership should draw from three areas—(a) entrepreneurship, (b) leadership, and (c) strategy—at multiple levels of analysis. This study contributes to research on entrepreneurial leadership by unifying divergent tenants and clarifying the current conceptual ambiguity surrounding the construct. Further, it advances the emerging paradigm of entrepreneurial leadership as a stand-alone construct, as opposed to an intersection of various areas of research. Finally, I identify research gaps and directions for future research. Keywords: Entrepreneurial Leadership, New Ventures, Opportunity Recognition, Resource Mobilization, Value Creation.

ENT: **Modeling Entrepreneurial Orientation: Conceptualization and Measurement Issues**

Author: **Reza Yamini**, *U. of Jyväskylä*
Author: **Mikko Rönkkö**, *U. of Jyväskylä School of Business*

The primary purpose of this article is to argue the problems in both conceptualization and measurement of the Entrepreneurial Orientation (EO) construct. EO is one of the most important constructs in the field of entrepreneurship, thus, it is crucial to discuss problems of conceptualization and measurement of EO for further development in the field. First, we critically review the shortcomings of current EO conceptualization by asking what EO means. Second, we argue that both reflective and formative measurement models of EO are more or less problematic. Third, based on our discussion, we conclude with a recommendation that the dimensions should be analyzed separately instead of constraining the antecedents or consequences of the dimensions to be the same.

ENT: **The Role of the Human Voice in Entrepreneurship – A Conceptualization and Research Agenda**

Author: **Jan Fell**, *WU Vienna U. of Economics and Business*
Author: **Nikolaus Franke**, *WU Vienna*
Author: **Klaus Marhold**, *WU Vienna U. of Economics and Business*

Whether in investor pitches, business plan competitions, funding negotiations, team formations, or selling to customers – entrepreneurship stakeholders ubiquitously make use of their voice. Without the voice at their center, many of these entrepreneurial situations would be inconceivable. Research in diverse academic disciplines – ranging from psychology, linguistics, and communications to evolutionary biology – has revealed that the human voice itself and independently from the literal content elicits strong effects on the perceptions of listeners. Counterintuitively, however, and in sharp contrast to its potential relevance, the role of the human voice has thus far been neglected in entrepreneurship research. In the present paper, we introduce a conceptual model of the role of the voice in entrepreneurship. The discussion of our model informs a research agenda for future entrepreneurship studies integrating the voice as an important variable. We conclude with implications for practice and research in the field of entrepreneurship.

ENT: **The Role of University-Industry Contract Research Narratives in Determining Resourcefulness**

Author: **David Johnson**, *U. of Glasgow*
Author: **Mark Geiger**, *Duquesne U.*
Author: **Peter T. Gianiodis**, *Duquesne U.*

Narratives are an important facilitator of entrepreneurial resourcefulness. Specifically, entrepreneurial narratives are a conduit to persuade individuals to part with resources to support entrepreneurial action. We investigate the narrative discourse of university-industry contract research proposals. University-industry contract research depends on the individual academic's decision to contract with the venture. Of particular importance, is the speed at which the academic decides to contract with the venture, which we define as speed to decision. Ventures that can increase the speed to decision are able to gain access to valuable resources quicker, which supports their orchestration. Utilizing Linguistic Inquiry and Word Count (LIWC) software, we explore the narrative content of 3,420 industry-initiated contract research proposals submitted to Scottish Universities to understand how the narratives of contract research proposals determines the speed of contract research acceptance or rejection (i.e., the speed to decision). Our findings reveal that contract research proposals associated with entrepreneurial-orientated language (EOL) and specific cognitive-orientated language (COL) determines decision-making speed which, in turn, determines contract research proposal outcome/acceptance. Additionally, the interaction effects of EOL and COL within contract research proposals influences decision-making speed. Our research imparts important contributions to entrepreneurship theory, as well as having practice and policy implications.

Author: **Jens Schueler**, *U. of Bayreuth*

Author: **Alexander Kuesshauer**, *U. of Kaiserslautern, Germany*

Author: **Brian S. Anderson**, *U. of Kansas*

Author: **Matthias Baum**, *U. of Bayreuth*

Metric conjoint studies are a popular research design in the entrepreneurship domain to tap into the decision-making processes of individuals. For these studies, test-retest reliabilities of $r = 0.70$ or higher, are considered as the central and most important quality criteria that can make or break any study. Although the importance of this criterion is routinely highlighted in best-practice recommendations, we lack actual empirical evidence on its usefulness in the conjoint context i.e. the sensitivity of conjoint results upon varying test-retest reliabilities remains unclear. Therefore, drawing on a comprehensive review of metric conjoint studies published in the entrepreneurship literature, we conduct a Monte Carlo simulation to investigate how various test-retest reliabilities and modeling considerations affect regression outcomes in conjoint studies. Our simulations indicate a more cautious perspective towards test-retest reliabilities for metric conjoint designs and best practice recommendations are discussed.

Participant: **Nancy DiTomaso**, *Rutgers U.*
Participant: **Bernardo M. Ferdman**, *Ferdman Consulting*
Participant: **Naomi Samuel**, *Cornell U.*
Participant: **Efenus Henderson**, *HenderWorks, Inc*

Panelists from a range of disciplinary backgrounds and academic and practitioner perspectives will address the growing attention to systemic inequality worldwide and the increasing demands that are being brought to bear on business organizations to mitigate such inequalities. Reflecting on recent inflection points that have made inequality more salient and visible, such as the murder of George Floyd that heightened concern about social and racial justice, panelists will discuss various ways academics and practitioners can work with business organizations to both strengthen the companies' achievement of diversity, equity and inclusion goals and also help mitigate societal inequality. Panelist discussion will include the need to address issues of power and domination in the structure of intergroup relations that affect both every-day and long-term inequality in various contexts; strategies for business organizations to positively impact societal equality, for example by widening their base of stakeholders to include those representing the larger community and being more intentional about the organization's influence on, and interaction with, the larger society; innovative research, grounded in moral psychology, that addresses resistance to anti-racist programs in business organizations; and the importance of bridging the gaps between organizational practices in the traditionally separate areas of Corporate Social Responsibility and Diversity, Equity and Inclusion by influencing companies and firms to implement consistent standards related to equity both inside and outside the organization.

HRM and the Aging Workforce

Session Moderator: **Yiduo Shao**, *U. of Iowa*

HR: **Age and Work Engagement: Testing Mechanisms and the Roles of Age-related HR Practices** 

Author: **Yiduo Shao**, *U. of Iowa*

The aging population across the globe is driving substantial changes in workforce demographics. Accordingly, engaging the aging workforce becomes an important mission for organizations. However, empirical findings regarding the age-work engagement relationship remain elusive and theoretical explanations have been equivocal and disjointed, suggesting both age-related advantages and challenges in staying engaged at work. Additionally, it remains unclear how organizations may implement age-related HR practices to leverage the age-related advantages while mitigating the challenges. Guided by lifespan development theories and the workplace aging literature, I take a two-study, multi-method approach to address these research questions in my research. In Study 1 (a meta-analytic study), I examine multiple theory-based countervailing mechanisms (i.e., occupational future time perspective; the use of selection, optimization, and compensation [SOC] strategies; physical health; and age discrimination experience) that simultaneously link age to work engagement. In Study 2 (a field investigation), I propose and test a multilevel research model to probe how these mechanisms are shaped by age-specific HR practices (i.e., older worker-specific HR practices) and age-neutral HR practices (i.e., age-inclusive HR practices). Taken together, my research will further scholarly understanding of the complex and multifaceted nature of aging processes at work and provide implications for organizations to design age-wise HR practices in managing the aging workforce.

HR: **Can Specialized Attention from HR Backfire? The Role of Older Workers' HR Practices on Retention** 

Author: **Valeria Alterman**, *U. of Miami*

Author: **Junqi Shi**, *Zhejiang U.*

Recognizing the potential labor shortage associated with older workers' imminent labor exit, organizations are beginning to implement older worker-specific HR practices as a strategy to retain this source of human capital. Nevertheless, the impact of these HR practices on older workers remains unclear. Drawing on the instrumental-symbolic framework, this study examines the potential countervailing effects of older worker-specific HR practices on older worker retention via two distinct mechanisms (i.e., POS and stereotype consciousness). Specifically, older worker-specific HR practices have a positive effect on older worker retention because of POS, as well as a negative effect on older worker retention because of stereotype consciousness. Further, I use three types of operationalizations to capture distinct ways in which older workers may intend to exit their organizations (i.e., retirement, bridge employment with a different organization, and turnover). Moreover, I incorporate two moderators as potential boundary conditions of the relationships between older worker-specific HR practices and the two mediating mechanisms. Using 192 sets of employees (1 older worker, 1 HR executive or HR manager, and 1 colleague per organization), I found partial support for the hypothesized countervailing effects of older worker-specific HR practices on retention-related outcomes. Theoretical and practical implications of the findings are discussed.

Paper is Available to Meeting Registrants Only.

 HR: **The Strategic Importance of ADEA Compliance on Older Workers: Formal and Informal Practices** 

Author: **Valeria Alterman**, *U. of Miami*

Author: **Alexander Alonso**, *SHRM*

Despite the prominent use of the Age Discrimination in Employment Act (ADEA) of 1967 by employees to protect themselves from discrimination in terms of age, research has rarely examined the impact of the importance attached to legal compliance by organizations on outcomes related to older workers. We adopt the institutional logic perspective to better understand the relationship of strategic importance of ADEA compliance on two formal (i.e., accommodation and development practices) and one informal (i.e., age diversity climate) older worker-related organizational practices. Moreover, we extend our model to examine outcomes of the three organizational practices as related to the accumulation of older worker-specific human capital reservoir. To test our theoretical model, we analyze two-wave data from a random sample of active members of the Society of Human Resource Management (SHRM). We found that, organizations that attached high strategic importance to ADEA compliance were more likely to implement both formal and informal older worker-related organizational practices. We further found that development practices for older workers were positively related to knowledge transfer from older workers, and age diversity climate was negatively related to retention and recruitment difficulty of older workers, but positively related to knowledge transfer from older workers. Implications of these findings are discussed.

HR: **What Training? The Link between Older Workers and Innovation**  

Author: **Wen Wang**, *U. of Leicester*

Author: **Matthew Bamber**, *Schulich School of Business, York U.*

With sharply growing numbers of older workers (those aged 50 or over, the 50+) in the workplace, various challenges and opportunities have been identified. In this article, we examine the veracity of the emergent concerns about the deleterious effects on firm-level innovation with an aging workforce. Using survey (1,300 UK firms) data, we study innovation across three domains: new products, new processes, and new ways of marketing. The empirical findings show that the effect of an aging workforce on firm innovation is domain-specific. There is a small positive association between having an older workforce and a firm's product and process innovativeness. However, there is a significant and negative correlation between an aging workforce and new ways of marketing. Next, we explore the possible mitigating effects of investment in training including both on-the-job (i.e., routine, role/task specific, in-work training) and off-the-job training (i.e., training that takes place outside normal working hours) on the above relationships. The empirical outcomes show that both forms of training have a positive moderating effect in terms of products and processes innovation which is statistically significantly when older workers were offered off-the-job training. However, the moderating effects of both forms of training in firms with an aging workforce on new ways of marketing are insignificant.

IM: International Entrepreneurial Aspiration and Internationalisation Speed in an Emerging Economy 

Author: **Michael Gyensare**, *Edith Cowan U.*
Author: **Nadia Zahoor**, *U. of Strathclyde*
Author: **Priyanka Jain**, *Research Associate*

Guided by the theory of planned behaviour and resource dependency logic, we explored how international EO arising from international entrepreneurial aspiration triggers the speed of the internationalisation of SMEs in an emerging economy. Based on a moderated mediation model this study posits that international political network ties moderate the positive linkage between international EO and internationalisation speed and strengthen the positive indirect effect that exists between international entrepreneurial aspiration and internationalisation speed. Results of our study based on 299 SMEs supported our hypotheses. Implications of our results for SME owners/managers in an emerging economy context, as well as the limitations and directions for future research, are discussed.

IM: Cross-Border Effects of Institutional Carriers on Entrepreneurial Entry into a Nascent Industry  

Author: **Diana Jue-Rajasingh**, *U. of Michigan*

This article shows that institutional carriers, which are organizations that move elements of institutional infrastructure to different places, can affect entrepreneurial entry into a nascent industry in countries where institutional support for the industry is low. Through an analysis of 109 country-level industries for the innovative product of clean cookstoves between 2013 and 2018, it is found that entrepreneurial entry into the industry is predicted by the number of organizations that operated both in these countries and in countries where an infrastructure-building intermediary also operated. It is argued that the cross-border effects of the intermediary occur through the development of institutional carriers. These institutional carriers take part in a process of inter-organizational evangelism, as they are attracted to the industry-supporting institutional infrastructure established by the intermediary, grow in their acceptance of this institutional infrastructure, and extend elements of this institutional infrastructure to other places where they operate. Empirical analyses additionally show that the effectiveness of institutional carriers on entrepreneurial entry in the nascent industry depends on the carriers' size and activities, as well as the culture of the countries that receives these carriers. The findings of this research shed new light on institutional carriers and the intermediaries that develop them, and they carry implications for how the growth of industries promoting innovations – especially those that generate health, social, and/or environmental benefits – can be supported globally.

IM: Interactions Matter: Revisiting Intra- and Inter-Regional Diversification and MNE Performance

Author: **Jongmin Lee**, *Henley Business School, U. of Reading*

This study theorizes internationalization patterns of multinational enterprises (MNEs) considering the interaction of intra- and inter-regional diversification and explores how the levels of intra- and inter-regional diversification affect firm performance, respectively as well as collectively. We argue that the effects of intra- and inter-regional diversification are not linear but orthogonal and that intra- and inter-regional diversification moderates each other's effects on firm performance. This study finds that both intra- and inter-regional diversification has inverted U-shape relationships with MNE performance. However, the impact of inter-regional diversification on performance is much stronger than that of intra-regional diversification. The result also uncovers that MNEs with moderated levels of both intra- and inter-regional diversification outperform other MNEs with different internationalization patterns. This implies that better firm performance can be achieved through 'balanced' intra- and inter-regional diversification. Our findings conclude that it is not so much the degrees of intra- and inter-regional diversification as the internationalization patterns that matter to MNE performance.

Internationalizing from Emerging Markets

Session Moderator: **Ke Rong, Tsinghua U.**

IM: How Do Emerging Market Multinational Enterprises Build a Global Ecosystem: A Post-merger Integration  

Author: **Ke Rong, Tsinghua U.**

Author: **Zhengyao Kang, Tsinghua U.**

Author: **Wei Du, Tsinghua U.**

Author: **James Moore, GeoPartners Research Inc**

How do emerging market multinational enterprises (EMNEs) build global ecosystems through cross-border mergers and acquisitions? This research conducts case studies on Haier Group's post-merger integration processes of 4 overseas companies. This paper proposes a three-dimension theoretical framework to understand global ecosystem development: ecosystem structure, ecosystem stage, ecosystem element. This paper finds that, unlike the linear structure of global supply chains and value chains, the global ecosystem has a non-linear, multi-agent structure composed of value chains and resource pools. In the process of building a global ecosystem, a dynamic three-stage process of influence, integration, and evolution emerges. At different stages, the focal firm of the ecosystem has shown heterogeneous focus in terms of ecosystem vision, ecosystem system and ecosystem capability. The research findings integrate business ecosystem theory and cross-border M&A theory, which have practical implications for EMNEs to go global and establish a global ecosystem.

IM: Dual Embedding as EPO Strategy in Creatively Connecting Cultures to Support SME Internationalization    

Author: **Anjan Ghosh, Narxoz U.**

Author: **Sanat Kozhakhmet, Suleyman Demirel U., Kazakhstan**

Although small and medium enterprises (SME) from one country have dependencies on state sponsored export promotion organizations (EPO) for internationalization, EPOs are limited by bureaucracy and protocols to offer adequate support beyond a few generalized ones. Extant research on EPOs contribution in SME internationalization remains inconclusive. We examine how an EPO can identify and address performance challenges through a longitudinal study of the French Embassy's Trade Mission in Kazakhstan. Our analysis reveals how the French EPO navigated the challenge of cultural distance and structural rigidity through a strategy process of organizational transformation with dual embedding, negotiated reformulating and creative combining as constituents. The recursive process led to refining services toward improved SME internationalization. Our study extends EPO research to corporate entrepreneurship and strategy process.

Paper is Available to Meeting Registrants Only.

IM: Institutional Capabilities and Time to First Internationalization: A Study of Indian Firms

Author: **Christian Carl Schmitt, U. Of Sydney**

Author: **Vikas Kumar, The U. of Sydney Business School**

Author: **Anish Purkayastha, U. of Sydney Business School**

Institutions have been shown to be an important determinant for a firm's internationalisation strategy, yet the literature dealing with the role of institutional change is scarce. Both, host and home country institutional environment, as well as their evolution, shape a firm's internationalisation strategy, including their speed of first internationalization. To fully comprehend in how far such institutional change affect domestic firms' speed of internationalization, the focus of this paper lies on home country capability development that enables a quick internationalization after inception. We argue that firms develop institutional capabilities from home country institutional change and incorporate aspects of experiential and organizational learning to understand capability development. We link this home country capability development to the firm's ability to pursue a faster first internationalization.

Home and Host Country Impact on MNE Location Choice

Session Moderator: **Markus Liebmann, WU Vienna**

IM: Populism and FDI Location Choice

Author: **Markus Liebmann, WU Vienna**
Author: **Vera Kunczer, WU Vienna**

In this study, we investigate how populist governments influence the location choice of multinational enterprises (MNEs) in terms of foreign direct investment (FDI). We also examine how experience of MNEs acts as a contingency in this relationship. With a sample of 525,688 observations on FDIs from 2007 to 2019 we find that MNEs are less likely to invest in a country the more its government is considered populist. More internationally experienced firms that already have invested in the target country and that have experience with populist governments are less deterred from uncertainties of populist governments. Overall, our results highlight the specific uncertainties populist governments cause for MNEs' location choice and that experienced MNEs can better deal with them.

IM: Role of "Indianness" in International Location choice – The effect of religion and language

Author: **Rameshwar Arora, O. P. Jindal Global U., Sonipat, India**
Author: **Prashant Salwan, Indian Institute of Management, Indore**
Author: **Preeti Tiwari, T.A. Pai Management Institute**

Unlike other countries' firms that have undergone the path of liberalization since the 1990s, Indian Multinational Enterprises (MNEs) have registered exceptional cross-border activities. Originating from the institutional void, a large majority of successful Indian MNEs are generally part of a single business family's portfolio of businesses, commonly known as business groups (BGs). MNEs are embedded in their home country environment before their internationalization. Thus, acknowledging the role of home country institutions in shaping the culture of the organization, we adopt the concept of "Indianness" and unpack it in the form of linguistic and religious diversity which shapes the organizations in their formative years. This study aims to understand the impact of Indianness on the foreign location choice of the most deeply entrenched organizational forms, that is, the Indian BGs. Here we show that Indian firms prefer to internationalize to nations that are least distant linguistically and religiously and have a less diverse set of languages and more diverse religiously. Additionally, as the religious distance seems to dissuade the location choice in high distant nations, international experience gained by the same BGs' affiliate in the same or psychically similar host nations aids in choosing religiously distant nations. These results are contrary to the belief that high religious or linguistic distance dampens the prospects of foreign location choice. This study also highlights the role of prior experience in the same or psychically similar nations in aiding the reduction of the negative impacts of religious differences. This study brings to fore the importance of home country (informal)institutions or as we term them Indianness in the case of Indian MNEs internationalization.

Paper is NOT Available. Please contact the author(s).

IM: Home Country Image and Nonmarket Political Strategy Effects on Foreign Location Choice of EMNEs

Author: **Cinara Gambirage, FGV EBAPE**
Author: **Flavio Vasconcelos, Fundacao Getulio Vargas**
Author: **Ronaldo C. Parente, Florida International U.**
Author: **Jais on Caetano Da Silva, Fundaçao Getúlio Vargas/EBAPE**

While the literature has generated impressive insights on why emerging market multinationals enterprises (EMNEs) select certain foreign locations over others, we still lack an understanding of how the home country institutional image creates barriers to EMNEs' foreign location choices and the mechanisms through which EMNEs overcome this effect. In this study, we investigate how the home country institutional image affects EMNEs' foreign location choices and how EMNEs can use home country nonmarket political strategy to overcome the effect. We argue that EMNEs struggle with poor home country institutional images that are carried over in host countries and create barriers when EMNEs enter into developed or more institutionally distant markets from their home country. Specifically, we suggest that EMNEs are more likely to choose institutionally similar countries as their foreign direct investment (FDI) targets to help them offset the additional liability they carry. While nonmarket political strategy can serve as a response to such disadvantages, it will not completely nullify the home country institutional image effect. This strategy can provide proximity to nonmarket elements and help EMNEs overcome the barriers created by poor home country institutional image on foreign location choice. We test and find support for our theoretical framework using a longitudinal dataset from 2002 to 2017 of outward FDI (OFDI) by Brazilian firms.

Business Models in Foreign Markets

Session Moderator: **Murad A. Mithani**, *Rutgers U., Camden*

IM: The Contrast between Digital and Non-Digital Business Models in Foreign Markets   

Author: **Murad A. Mithani**, *Rutgers U., Camden*
Author: **Ipek Kocoglu**, *Kean U.*

Building on the literature on scaling and international business, the study posits that a digital business model accelerates growth by offering economies of scale beyond those possible through a traditional business model. This is important for services such as financial advice where face-to-face interaction is both critical as well as what limits the potential for growth. A matched sample of digital and non-digital foreign entrants in the U.S. financial advice industry found that while a digital business model accelerates foreign market growth, it is not suited to environments that demand diverse service offerings or those dominated by a few customers.

IM: Scaling Up Business Models Across Foreign Markets    

Author: **William Chongyang Zhou**, *UMass Lowell*
Author: **Li Sun**, *UMass Lowell*

This paper highlights the importance of business models to the international expansion of new ventures. Drawn upon up the activity-system perspective of business model and international entrepreneurship literature, we theorize that business model scalability affects the likelihood of foreign market entries. New ventures need to reconfigure business models to overcome foreign entry barriers. However, only the peripheral activities instead of the core activities of highly scalable business models need to be changed. On the contrary, less scalable business models need to modify core activities and reexamine the inter-complementarity within the activity systems, the strategic fit between activity systems and the environment, and the governance of the boundary-spanning activities with stakeholders. Therefore, new ventures with highly scalable business models are more likely to enter foreign markets. We also explore the boundary conditions and find that information infrastructure of the host country and venture capital support strengthen the relationship between business model scalability and foreign market entry likelihood, while venture age weakens it.

IM: Institutional Voids and Business Model Innovation in Africa: The Role of Nonmarket Market Strategy

Author: **Augustine Awuah Peprah**, *Southampton Business School, U.K*
Author: **Tahiru Azaaviele Liedong**, *School of Management, U. of Bath*

While business model innovation and nonmarket strategy have received extensive coverage in the international business literature, their inter-relationship has been overlooked. In this study, we investigate how multinational firms leverage nonmarket strategy to innovate their business models in institutionally challenging contexts. Using data from Jumia, Africa's largest e-commerce multinational firm, we identify the institutional voids that constrain e-commerce and unpack the process through which the firm innovated its business model accordingly. Importantly, we also show how Jumia used nonmarket strategy to shape its institutional environment to facilitate a successful deployment of its business model. Overall, this study shows that nonmarket strategy complements and paves the way for model innovation, especially in underdeveloped contexts where formal and informal institutional support is required to guarantee the viability of business models that are incompatible with existing institutional conditions.

IM: Country Risk Assessment: The Role of Social Trust

Author: **Namporn Thanetsunthorn**, *State U. of New York at Farmingdale*
Author: **Rattaphon Wuthisatian**, *Southern Oregon U.*

Research in international business recognizes social trust as one of the driving forces behind a country's economic growth, and current research in behavioral science further demonstrates that the decision to trust can largely explain the perception of risk and risk-taking behavior. To date, a possible connection between social trust and risk conditions at the country level still remains to be explored. This study aims to fill this research gap by examining the existence of a relationship between social trust and country risk, focusing particularly on financial uncertainty across countries. Using a panel data set consisting of both developing and developed countries over the period 1980-2014, the study conducts a series of empirical tests, and finds that social trust and country financial risk are indeed related: developing countries with a higher level of social trust appear to carry a greater degree of financial uncertainty, as measured by the risk of foreign debt, the risk of currency fluctuation, and the risk of current account deficit, respectively. However, this relationship does not seem to exist among developed countries. The findings offer managerial implications for international business regarding country risk assessments and foreign market entry strategies.

IM: Apps and downs: Cross-Country Variations in the Success of Contact-Tracing Technology

Author: **Anna Grosman**, *Loughborough U.*
Author: **Simon Porcher**, *Sorbonne Business School*
Author: **Jean-Loup Richet**, *IAE Paris - Sorbonne Business School*

With the COVID-19 pandemic, we have witnessed a plethora of policies deployed by the governments to curb the spread of the virus and simultaneously sustain the fledgling economies. One of the tactics deployed by the governments related to slowing down the spread of the virus by tracing the contacts of individuals who were in proximity with those people that have been tested positive for COVID-19. Countries showed uneven success. The variety in responses was not only related to the extent to which the countries were impacted by the pandemic, but also by the way in which the governments decided to intervene in the management of this crisis. Hence, in this article, we analyze the variation in contact tracing technologies across countries. We propose that the type and quality of government intervention drive the differences in the rates of diffusion and adoption of contact tracing apps across countries. We explain this as an outcome of the complex signaling problems and institutional drivers related to the nature of governments' intervention. We test our hypotheses on a unique, self-assembled dataset of contact tracing apps and their governments' characteristics across a large number of countries. The signaling mechanisms deployed by the governments seem to have varying effects on the success of contact tracing technologies, with trust and privacy being the major drivers in adoption by citizens of such technologies. We find that the success of tracking strategies is inversely related to the quality of institutions – state capitalist countries fared better than less interventionist, more liberal economies.

IM: Country of Origin Stereotypes in Financial Market: An Empirical Test

Author: **Abiodun Ige**, *U. of Detroit Mercy, CBA*
Author: **Marvin Washington**, *Portland State U.*

While much is known about Country-of-origin effects in product markets, less is known about the impact of a firm's country of origin in the financial markets. Our studies questions if there are COO effects in financial markets. Specifically, we use the Stereotype Content Model to examine COO effects of foreign firms seeking to raise capital in the US equity markets. We examine the impact of warmth and competence on foreign firm values (measured by Tobin's Q) as compared to local firm values on major equity exchanges in the United States. We hypothesize that favorable warmth and/or competence COO stereotypes will reduce foreign firm discounts on US stock markets. While we find evidence that the favorable warmth stereotype reduces the foreign firm discounts, the favorable competence stereotype was not associated with a lower foreign firm discount in our analysis. While these findings conflict with extant stereotypes in product markets studies, they align with other stereotype in intergroup process studies. We discuss the implications of our findings for future research and practices.

Workplace Deviance and Wrongdoing: Contemporary Directions

Session Moderator: **Jane Seppälä**, *Aalto U., Department of Industrial Engineering and Management*

MOC: Escalating Dynamics of Situationally Perceived Deviant Behaviors During Post-Merger Integration

Author: **Jane Seppälä**, *Aalto U., Department of Industrial Engineering and Management*
Author: **Timo Olavi Vuori**, *Aalto U.*

While negative emotions contributing to integration failure are well-recognized, the underlying mechanisms have not been fully detailed. We conducted a longitudinal case study at a large technology company that had recently acquired a peer, especially concentrating on the perceptions of one focal unit in a situation of internal competition. We found that one trigger for negative emotions was situated perceptions of deviance. Since deviance is situational, while the actor might be behaving acceptably by their own set of norms, another party may perceive the behavior as deviant. This is especially likely to occur in an integration context, where units with different organizational norms cooperate and compete. We contribute to PMI literature by demonstrating how situated perceptions of deviance can exacerbate integration challenges. Further, we contribute to the literature on deviant behaviors by recognizing how perceived deviance can lead to defensive behaviors fueled by emotional distress, experienced threat, and moral disengagement.

MOC: Damaged Goods in the Labor Market? How Performance Feedback Influences Employment of Wrongdoers 

Author: **Maxine Yu**, *Imperial College Business School*

Finalist for MOC Division Best Student-Led Paper Award

When studying the effect of performance feedback, previous studies have tended to assume that social aspirations and historical aspirations have similar effects. This study challenges this assumption and shows that these two types of aspirations have asymmetric effects on organizations' decisions on employing actors with misconduct records. Specifically, organizations with performance above social aspirations are less likely to employ high performers with misconduct records. In contrast, organizations with performance below social aspirations are more likely to employ high performers with misconduct records as a cheap and quick solution to their performance strains. Evidence from transfers of professional cyclists after their suspension due to doping accusations supports these arguments, which suggests that the underlying process of interpreting social aspirations and historical aspirations may be distinct in misconduct context.

MOC: Ethical Leadership and Supervisor Directed Deviance: Roles of Organizational Pride and Uncertainty      

Author: **Hassan Imam**, *Kyoto U.*

Drawing on attribution theory, this study examines the rarely addressed relationship of ethical leadership and supervisor-directed deviance and underlying psychological mechanism. In addition, I took organizational uncertainty as a context and a boundary condition to understand that how high uncertainty affects the relationship between ethical leadership and its generated organizational pride. Data of 323 employees and 194 supervisors was collected from the hospitality industry and analyzed through Mplus after achieving the model fit. The results indicated ethical leaders add to their subordinates' pride and also reduce supervisor-directed deviance. However, moderation results indicated that a high level of uncertainty in an organization reduces followers' pride irrespective they view their leaders are ethical. This study discusses several theoretical and practical implications for researchers and practitioners. First, this study advances attribution theory and discusses relational attributions, a new yet imperative perspective to predict and explain behaviors, in organizational behavior. Second, it highlighted that managers should know the gravity of uncertainty because high uncertainty potentially reduces employees' positive attitudes. A conclusion is drawn in the light of empirical findings.

Finalist for MOC Division Best Submission with Practical Implications for Organizations

“We are humans not robots !” This protest slogan denounces a working reality in which employees perceive that they are reduced to a mere tool or instrument at the service of the organization. Such an experience refers to organizational dehumanization. Researchers have recently indicated that organizational dehumanization may shape employee work behaviors. However, why, and for who, organizational dehumanization leads to maladaptive work behaviors remains unclear in this literature. Drawing upon social exchange theory, we first propose that employees who experience organizational dehumanization engage in negative reciprocity by first developing thoughts of revenge that, in turn, materialize into more organizational deviance and reduced in-role job performance. Building upon models of personality, we then argue that compliance mitigates the indirect effect of organizational dehumanization on workplace behaviors via thoughts of revenge. Overall, the combined results of an experimental study (based on the vignette procedure), a cross-sectional study and a three-wave study provide strong evidence for our hypothesized relationships. In showing this, our research suggests that organizational dehumanization promotes a negative exchange relationship between the employer and its employee. Furthermore, our paper conveys the idea that compliant employees may prefer conflict-avoidance strategies to conflict-assertion strategies.

Authenticity, Risk-taking, and Trust in Organizations

Session Moderator: **QICUI**, *Renmin U. of China*

OB: Your Authenticity Makes Me Feeling Trusted? It depends on My Power Distance 

Author: **QI CUI**, *Renmin U. of China*

Author: **Qiqi Wang**, *Wuhan U.*

Author: **Jun Liu**, *Renmin U. of China*

In this study, we aim to explain why and when authentic leadership promotes positive follower behaviors. Drawing on the social information processing theory and previous research about authentic leadership, we introduce a new mechanism (i.e., feeling trusted by leader) to explain why authentic leadership plays a positive role in follower outcomes. Furthermore, combining social information processing theory and leadership research, we theorize that power distance is especially relevant to research about leadership and identify it as a moderator between authentic leadership and feeling trusted by leader. Using a multi-wave and multi-source data, we tested this moderated mediation model. The results indicated that authentic leadership had an additional positive influence on follower outcomes (i.e., work effort and OCB towards leaders) through feeling trusted by leader (after controlling the mechanism of trust in leader). And power distance weakens the relationship between authentic leadership and feeling trusted by leader.

OB: Authentic Leadership and Subordinates' Well-Being: The Mediating Effect of Self-Compassion

Author: **Takaki Ohya**, *Kobe U.*

Author: **Yusuke Tsuchiya**, *Osaka Sangyo U.*

Author: **Hiroaki Matsushita**, *Kanto Gakuin U.*

With the increasing uncertainty in our lives, leadership styles to help people cope in stressful situations are in more demand. This study, therefore, examined the effect of authentic leadership on subordinates' well-being via self-compassion. Based on a two-wave survey of a sample of 269 Japanese company employees and hypothesis testing by structural equation modeling, we found that authentic leadership is positively related to subordinates' subjective well-being, and the positive aspect of self-compassion mediates this relationship. Thus, it may be effective for leaders to be authentic, accepting both positive and negative aspects of themselves so that employees learn to be compassionate toward themselves, which then enhances their subjective well-being. Implications for theory and practice are discussed.

OB: Authentic but Untrustworthy? Trust Moderates the Effects of Authentic leadership on Employees 

Author: **Wai Hung Thomas Ng**, *U. of Hong Kong*

Author: **Lorenzo Lucianetti**, *U. di chieti e pescara*

Author: **HAOYANG CHEN**, *U. of Hong Kong*

Author: **Yinuo Zou**, *U. of Hong Kong*

This study challenges the assumption that authentic leadership can always create positive employee outcomes. It proposes that the effects of authentic leadership on employee work engagement and performance depend on whether employees have strong trust. If leaders are seen as authentic (e.g., acting according to their core values) but untrustworthy (e.g., being self-centered or having malicious intentions), employees are unlikely to feel engaged in their jobs and to perform well. This is especially true for those who have a strong proactive personality because these individuals strive to create or maintain favorable conditions in the external environment, and are thus especially likely to react strongly to cues of trust. Empirical data collected from 204 employees and their supervisors provided support for the study premise: authentic leadership enhanced employee work engagement and performance only when trust in the leader was high. In addition, the above two-way interaction effect was more likely to occur for those who had a strong (vs. weak) proactive personality, illustrating a three-way interaction effect of authentic leadership, trust, and proactive personality on work engagement and performance. Thus, this study contributes to the literature by highlighting the important moderating roles of employee trust in changing the effects of authentic leadership on employees.

OB: Risk Taking in Organizations: Reducing the Conflict between Managers' and Organizational Interests

Author: **Stefanie Marx-Fleck**, *Goethe U. Frankfurt*

Author: **Florian M. Artinger**, *Max Planck Institute for Human Development*

Author: **Gerd Gigerenzer**, *Max Planck Institute for Human Development*

Author: **Rolf Van Dick**, *Goethe U.*

Author: **Sabrina Artinger**, -

Managers use the phrase CYA or cover your ass to refer to a decision where someone has not acted in the interest of the organization but rather to protect themselves from negative consequences should anything go wrong. Applying the model of determinants of risk behavior by Sitkin and Pablo (1992), we investigate how to reduce the personal risk that can give rise to CYA decisions, also referred to as defensive decisions. The results indicate that psychological safety and authentic leadership are effective tools. Such countermeasures are important as CYA decisions have the potential to have a negative impact on organizational performance.

OB: Why do Narcissists Become CEOs? An Analysis of Supply and Demand for Narcissistic CEOs

Author: **Jan Moritz Bredlich**, *WIN Lehrstuhl RWTH Aachen*

The selection of a new CEO is a decisive event for the future direction of a company and might set it up for success or failure. When selecting a CEO, candidates will be investigated based on multiple criteria such as outsider status and education to achieve the best fit for the company. However, little research has investigated why candidates with specific personality traits such as narcissism get selected. This study investigates the relationship between firm-level, predecessor CEO-level, and market-level factors as antecedents to the selection of a narcissistic CEO. We analyze a sample of 317 CEO successions of 237 companies listed in the S&P500 index between 2007 and 2017. Our results indicate a positive relationship between firm growth, firm size, and predecessor CEO narcissism levels, as well as a weak, negative relationship between predecessor CEO tenure and the narcissism level of the successor CEO. Our findings address the so far little researched domain of antecedents to CEO narcissism and emphasize the effects of firm-level and predecessor CEO-level factors as antecedents to the selection of a narcissistic CEO and consider market turbulence as a moderating effect of these relationships. We also provide practical implications for firm executives and directors.

OB: CEO Narcissism, Strategic Decision Speed and Firm Performance: The Role of Environment Uncertainty 

Author: **Ning Guo**, *Peking U.*

Author: **Sun Xiuli**, *Capital U. of Economics and Business*

Author: **Fan Yang**, *Guanghua School of Management, Peking U.*

Leader narcissism is considered both desirable and undesirable in literature, which signals the importance of unique mechanisms and contextual boundary conditions. Drawing upon the upper echelon theory and contingency perspective, our research investigated how and when CEO narcissism would influence firm-level new product performance and firm performance. Results from a four-source (archival data of firm performance, CEO, TMT members, CFO) and a two-wave survey showed that CEO narcissism had a significant positive relationship with strategic decision speed, which further benefited new product performance. Furthermore, the positive relationship between CEO narcissism and strategic decision speed and the further indirect effects were stronger when technology uncertainty is low versus high and when demand uncertainty is high versus low. We also found that strategic decision speed had an inverted U-shaped effect on firm performance, thus mediating the indirect effect of CEO narcissism on firm performance. Our findings indicate that CEO narcissism could benefit the firm concerning its impacts on decision-making speed and new product performance, especially under demand uncertainty conditions. Implications and limitations are discussed.

Paper is Available to Meeting Registrants Only.

OB: Measurement of Dark Triad CEO Personality and its Effect on Stakeholder-Specific Litigation Risk  

Author: **Benjamin Kuehl**, *Innovation and Entrepreneurship Group (WIN) – TIME Research Area, RWTH Aachen Un*

Author: **Malte Brettel**, *RWTH Aachen U.*

The measurement of the dark triad remains a challenge in organizational research. Existing self-reported measurement is biased and is challenging to apply in the upper echelon context. There is a lack of unobtrusive measurement for the comprehensive dark triad for CEOs. We develop an unobtrusive measurement of dark triad CEO personality based on speech data. We apply this new measure to test our hypotheses regarding the impact of dark triad CEOs on a firm's litigation risk in stakeholder-specific categories. Our results support our hypotheses that narcissistic CEOs decrease and psychopathic CEOs increase internal stakeholder lawsuits. The effects are inverted for external lawsuits. Through this novel measurement, our study contributes methodologically to a shift from the individual to the organizational level. Further, we contribute to a better understanding of the impact of the dark triad and its implications for different stakeholders.

OB: A Deep Dive Into Ceo Personality Literature: A Narrative Review 

Author: **Mahi Chauhan**, *Jamia Millia Islamia*

Author: **Uzma Faridi**, *U. of Delhi*

The last two decades have witnessed several theoretical and methodological innovations in the CEO personality literature. In light of this, this paper aims to review the current literature on CEO personality. We employ a narrative approach to integrate findings across the literature on CEO personality. Theoretically, our review highlights the positive and negative aspects associated with both positive personality traits (e.g., Big 5, SEO) and negative personality traits (e.g., narcissism). We also find several new unobtrusive measures in the literature for CEO personality. We end our review with directions for future research. This study highlights the need for a non-obtrusive CSE measurement. Finally, we stress the importance of creating a model that can be used to look at multiple CEO personality models at once.

Author: **Lukas Lanz**, *WHU Otto Beisheim School of Management*

Author: **Roman Briker**, *Maastricht U.*

Author: **Fabiola Heike Gerpott**, *WHU - Otto Beisheim School of Management*

OB Division AOM Meeting 2022 Best Paper Award

The role of artificial intelligence (AI) in organizations has fundamentally changed from performing routine tasks to supervising human employees. While prior studies focused on normative perceptions of AI supervisors, employees' reactions towards them remained largely unexplored. We draw from theories on AI aversion and appreciation to tackle the ambiguity within this field and investigate if and why employees might adhere to unethical instructions either from a human or an AI supervisor. In addition, we identify employee characteristics affecting this relationship. To inform this debate, we conducted three experiments (N = 1,381) and used two state-of-the-art machine learning algorithms (causal forest and transformers). We consistently find that employees adhere less to unethical instructions from an AI than a human supervisor. Further, individual characteristics such as the tendency to comply without dissent or age constitute important boundary conditions. Additionally, Study 1 identifies that the perceived mind of the supervisors serves as an explanatory mechanism (Pre-registered) Studies 2 and 3 further strengthen this notion. Our research generates insight into the 'black box' of human behavior toward AI supervisors and highlights organizational researchers can use machine learning methods as powerful tools to complement experimental research.

OB: Antecedents of Proactivity: The Effect of Ethical Climate Through Duty Orientation and Moral Potency ✈️

Author: **Kubilay Gok**, *Winona State U.*

Author: **Mayowa Babalola**, *Graduate School of Business, Nazarbayev U.*

Author: **Chandrashekhhar Lakshman**, *Florida Atlantic U.*

Author: **John J. Sumanth**, *Wake Forest U.*

Author: **Stijn Decoster**, *Zayed U.*

Author: **Linh Chi Vo**, *ESDES, U. Catholique de Lyon*

Although prior research has directly linked an organization's ethical climate to several positive organizational outcomes, surprisingly little research has examined why ethical climates have these effects or when they are more likely to occur. Drawing on social cognitive theory (SCT) as our overarching framework, we attempt to address this gap in the literature by developing and testing a model that indirectly links ethical climate to extra-role, proactive work behavior (i.e., taking charge and employee voice) via two distinct psychological mechanisms (i.e., duty orientation and moral potency). Based on results from an experiment and four field studies conducted in France, Turkey, the United States, and Vietnam, we demonstrate that an ethical climate indirectly influences employees' willingness to speak up and take charge through the dual mechanisms of duty orientation and moral potency. Additionally, we find that in the presence of an ethical climate, employees' duty orientation and moral potency are strengthened when individuals also possess high levels of moral attentiveness. Together, these findings suggest that an ethical climate can be an important antecedent of employees' proactive behavior by stimulating their sense of duty and enhancing their moral courage, particularly when employees are already highly attuned to moral issues. Keywords: Ethical climate, moral potency, duty orientation, moral attentiveness, employee voice, taking charge, cross-cultural

OB: Do Noble Ends Justify Unethical Means? How and When Visionary Leadership Promotes Unethical Behavior 🖥️

Author: **Martin Buss**, *U. of Potsdam*

Author: **Eric Kearney**, *U. of Potsdam*

While previous research has mostly focused on visionary leadership's positive effects, we argue that it can also cause followers to engage in unethical behavior to contribute to the vision's noble cause. By drawing on the social intuitionist model and the theory of motivated moral reasoning, we propose and empirically show in two experimental studies with a total of 854 participants that visionary leadership in both a gain-framing and a loss-framing can elicit moral elevation in followers, which in turn motivates them to engage in unethical behavior for a greater social good. We find that this effect is especially strong when the leader is perceived as warm and for followers who have a high dispositional tendency for perspective taking. Our work reveals a thus far neglected "dark side" of visionary leadership, identifies boundary conditions of these negative effects, and integrates the respective literatures on visionary leadership, moral emotions, and unethical behavior.

OB: Framework of Unethical Pro-Organizational Behavior: Consequences, Conditions, and Processes 🖥️

Author: **Sherzodbek Murodilla Ugli Dadaboyev**, *Kyungpook National U.*

Author: **Soyon Paek**, *Yonsei U. Wonju Campus*

Author: **Sungwon Choi**, *Yonsei U.*

Recently, workplace behaviors that are simultaneously pro-organizational and anti-social have attracted increased scholarly attention. Although prior research on such ubiquitous workplace behaviors has added insightful contributions to the literature, current research is limited to a few topics, such as predicting unethical pro-organizational behavior (UPB). Therefore, in this study, the authors address underdeveloped research areas by proposing a framework that explains the consequences of UPB. First, by reviewing the literature and integrating theories, this study proposes a holistic process model of UPB consequences. Second, the study further explores the mechanisms that explain the links between UPB and its outcomes. Third, it suggests potential variables within individuals and organizations that might influence the consequences of UPB. The article also contributes to the research on within-individual co-occurrence of unethical and ethical behaviors. Finally, the authors develop propositions, discuss the implications, and identify future research considerations.

ONE: Science Or Morality? The Effects of Frames on Stakeholder Dialogue, a Field Experiment

Author: **Lucrezia Nava**, *Cambridge Judge Business School*
Author: **David Reiner**, *Cambridge Judge Business School*
Author: **Celina Scott-Buechle**, *Stanford U.*

Achieving the ambitions set forth in international climate agreements requires stakeholder dialogue, which is often hindered by the adoption of different frames. While existing research focuses on the development and evolution of frames within stakeholder groups, we know little about how different frames influence perceptions and dialogue among stakeholders. The deployment of carbon dioxide removal (CDR), seen by some stakeholders as the ultimate solution while deeply contested by others, provides an interesting context for studying how different frames influence the process and outcome of dialogue. We conducted a series of five workshops with a quasi-experimental design, involving over 100 stakeholders from both the private sector and NGOs. Participants were primed to adopt either a logical/scientific or an emotional/moral frame in dialoguing about potential CDR-related policies. We find that dialogue reduces stakeholder polarization, especially when it is based on a logical/scientific frame, while it increases stakeholder skepticism toward CDR-supportive policies, especially when the adopted frame is aligned with the stakeholder group's value. Furthermore, when the adopted frame is aligned with the stakeholder group values, participants perceived other stakeholders as more reasonable and understanding. Understanding the frames of other stakeholders is therefore critical to encouraging a more open and constructive dialogue about climate solutions.

ONE: Investors Pushing for Sustainability: How Firms Assess the Authenticity of Investors' ESG Requests

Author: **Anne Kellers**, *U. of Zurich*
Author: **Julian Fritz Kölbl**, *U. of Zurich*
Author: **Falko Paetzold**, *EBS U. of Business and Law*

ONE Division Best Student Paper Award

This paper investigates how firms assess the authenticity of stakeholder requests. Stakeholder requests are not necessarily authentic, which presents a challenge for firms. Firms need to commit resources to a response while being uncertain whether the stakeholder will commit resources to reward or sanction the response in the future. In the context of environmental, social, and governance (ESG) investing, we perform an analysis of interviews on how firms evaluate the authenticity of investor's ESG requests. We find that firms evaluate the authenticity of ESG requests by examining investor's underlying resource commitments. We contribute to stakeholder salience theory by suggesting that authenticity is an additional factor for firms when deciding how and whether to respond to a stakeholder request. We also provide practical insights how ESG investors can become more authentic.

Paper is Available to Meeting Registrants Only.

ONE: Multi-stakeholder Initiatives and Firm Environmental Performance

Author: **Stefano Romito**, *U. of Milan*
Author: **Clodia Vurro**, *U. of Milan*
Author: **Stefano Pogutz**, *Bocconi U.*

This study theorized and empirically tested whether firms' decisions to join multi-stakeholder initiatives, targeting climate mitigation, lead to improved environmental performance. We focused on firms' participations in the Science Based Targets initiative, a multi-stakeholder initiative meant to support firms in setting greenhouse gas (GHG) emission reduction targets in line with the thresholds defined by the Paris Agreement in 2015. The study hypothesized that it would reduce their concerns about uncertainty and encourage investments in timeous internal climate-change activities. We used the coarsened exact matching methodology to create a matched sample of European and North American listed firms participating in the initiative and comparable, non-participating firms over a three-year period from 2015 to 2017. The results showed that firms' participation led to lower levels of GHG emissions compared to similar non-participating counterparts, especially when they committed to the initiative with the intention to follow the proposed indications.

ONE: The Participation of Higher Education Institutions in Sustainability Rankings

Author: **Noah Emanuel Brito Teles**, *UFPR*
Author: **Bárbara Galleli**, *UFPR*

This paper aims to understand the role of institutional pressures in the participation of Higher Education Institutions (HEIs) in global sustainability rankings. A qualitative research was carried out based on multiple case studies in six representative Brazilian HEIs in the IU GreenMetric sustainability rankings. Data were collected from interviews with key professionals and institutional documents. From the results, we observed that the main motivations and reasons for the participation of HEIs in the ranking are associated with institutional pressures, among which social expectation, involvement of senior management, reputation and benchmarking stand out. Other factors that instigated participation were also observed, such as institutional commitment to sustainability, environmental awareness, and the expectation of contributing to sustainable development. The findings of this research bring a new theoretical perspective to explain the participation of HEIs in sustainability rankings. Practical contributions involve a series of information regarding the motivations, benefits, facilitators, and barriers to the participation of institutions in the rankings that may be useful for the management of sustainability in HEIs.

Author: **Jean-Pierre Imbrogiano**, *Leuphana U. Lüneburg*

Author: **Bodo Steiner**, *U. of Helsinki*

Literature on sustainability governance of supply chains typically maintains that supplying organizations can be treated as a homogenous group, and that sustainable supply chain management (SSCM) entails a unanimous set of practices. In this paper, we expose the diversity of SSCM practices and explore how organizational sustainability identities (OSI) act as their drivers. Through a comparative qualitative inquiry comprising organizations from food and metal products supply chains, we find that OSI of SSCM-practicing organizations affect i) which types of suppliers are perceived as relevant to engage in SSCM, ii) what sustainability criteria are applied to suppliers, and iii) how they are managed in diverse ways to contribute to sustainability transitions. We present a model of OSI co-construction which shows how the diversity of SSCM practices unfolds through three process dimensions, namely OSI balancing, OSI translation, and OSI structuration. This model and the empirical insights obtained document and clarify the previously unexplored link between organizational identity and impacts through SSCM practices.

The Role of Shareholder Activism and Institutional Investors in the Climate Crisis (In-Person)

Session Moderator: **Truzaar Dordi**, *U. of Waterloo*

ONE: Role of Principles for Responsible Investment in Strengthening Institutional Investors and Its Influ

Author: **Kentaro Azuma**, *Ritsumeikan U.*
Author: **Akira Higashida**, *Meijo U.*

This research investigates the relationship between climate change disclosure and institutional investors from the perspective of the stakeholder salience theory (Mitchell1997) with particular focus on institutional investors' signing the Principles for Responsible Investment (PRI). Using dataset of 11,862 firm-year from Japan, the empirical results of this paper provide evidence for the following: First, institutional stakeholders' holding ratio has a positive influence on corporate climate change disclosure (power). Second, the the positive influence of the institutional investors is greater when at least 1% of the total share was held by PRI signed institutional investors (legitimacy). Third, the aforementioned relations gained statistical significance gradually during the period of the analysis (urgency). Thus, this research explores contemporary arena for stakeholder salience theory, and addresses the question of whether one of the PRI's goals pertaining to disclosure is realized.

ONE: Beyond “One-Size-Fits-All”: Organizing Collaborative Shareholder Engagements on Climate Change

Author: **Jean-Pascal Gond**, *City U. London*
Author: **Rieneke Slager**, *U. of Groningen*
Author: **Kevin Chuah**, *London Business School*
Author: **Mikael Homanen**, -

We study collaborative shareholder engagements on climate change issues coordinated by the United Nations-supported Principles for Responsible Investment (PRI). These engagements involve collaboration among coalitions of institutional investors seeking behind-the-scenes dialogue with target firms to encourage improved environmental sustainability practices. Whereas previous studies have focused on individual factors and their net effects on successful engagements, little is known about how these factors combine to simultaneously affect engagement outcomes. Drawing on a unique dataset of 553 climate change engagements coordinated by the PRI between 2008 and 2019, and combining a configurational approach—fuzzy-set Qualitative Comparative Analysis (fsQCA)—with a regression framework, we develop an emerging “tailor-to-target” theory of collaborative shareholder engagement. Our results show that successful investor coalitions combine different engagement levers into configurations (or “recipes”) tailored to fit the characteristics and environmental predispositions of the target firm. Our theory and evidence extend the stakeholder salience framework by highlighting the interactions among firm capacity, investor coalition attributes, and the focal engagement issue in successful engagement, while also contributing to studies of external corporate governance by moving beyond a “one-size-fits-all” approach. Our findings have key practical implications for investors, engagement organizations, and policymakers who seek to shape firms’ climate change behaviors through the adoption of environmentally sustainable practices.

ONE: Ten Financial Actors Can Accelerate a Transition Away from Fossil Fuels

Author: **Truzaar Dordi**, *U. of Waterloo*
Author: **Sebastian Gehricke**, *U. of Otago*
Author: **Alain Naef**, *Banque de France*
Author: **Olaf Weber**, *U. of Waterloo*

Investors have a central role to play in the sustainability transition, due to their inordinate influence on the governance of the fossil fuel extraction industry. Using network analyses, this paper links fossil fuel firms to equity owners, by distinguishing spatial, sensitivity, and ownership characteristics of top shareholders and establishing a ranked list of the most prevalent shareholders based on emissions potential and network centrality. Our study reveals that among the most prevalent owners, are government signatories of the Paris accord and prominent American investment managers. We conclude that a concentrated number of investors have the potential to influence the strategic direction and governance of these firms and should consequently be held accountable for financing the economic activities that contribute to climate instability. This paper directly contributes to the fragmented body of academic research on financial systems, supply-side climate solutions, and sustainability transitions.

OSCM: **Artificial intelligence/Machine Learning in Supply Management: Review, Application, Future Research**    

Author: **Jan Martin Spreitzenbarth**, *U. of Mannheim*
Author: **Heiner Stuckenschmidt**, *U. of Mannheim*
Author: **Christoph Bode**, *U. of Mannheim*

Artificial intelligence and machine learning are key technologies for procurement and their usage is still in its infancy. Only a few have successfully integrated these methods into their operations and across their supply chains that are recently starting to emerge. This review aims to assess the current state as well as provide guidance for management and future research. 286 related publications were identified based on a keyword search and consecutive snowball search. A classification framework was composed combining concepts from information technology and supply chain management to derive a structure for inclusion criteria leading to 48 ranked works that were interactively classified along the procurement process in eleven clusters and enriched with practical ideas. Their business value and ease of implementation were assessed by interviews to derive a research agenda through triangulation. Research seems to be ahead of practice where there are often proof of concepts only. However, recently many practical solutions are emerging by innovative organizations. Still, often there is close to no useable data, therefore it is crucial to start now to lay the foundation to profit in the future. Matching literature with the results of the expert interviews, the use case cluster cost analysis deserves higher research attention. Moreover, there seems to be a gap in the literature on the operational area of procurement. This research contributes to the understanding of artificial intelligence and machine learning in supply management from theory and practical insights.

OSCM: **Unleashing the Power of Big Data in Retail Supply Chains: The Partnership of Analytics and Managers** 

Author: **Rebekah Inez Brau**, *Brigham Young U.*
Author: **Nada R. Sanders**, *Northeastern U.*
Author: **John Aloysius**, *U. of Arkansas Sam M. Walton College of Business*
Author: **Donnie Williams**, *U. of Arkansas*

Analytics and artificial intelligence (AI) are fundamentally changing retail supply chains. Whereas analytics is heralded for its automation of decision processes, technological changes are ultimately impacting managerial roles. Our research addresses four primary issues. First, using grounded theory, we conduct in-depth interviews of 21 executives spanning the retail supply chain ecosystem to glean the current real-world application of analytics and AI. Our findings demonstrate that analytics is typically used to process large datasets and that managers regularly provide interpretation and context. Human judgment plays an increasingly greater role moving up the retail supply chain, away from the customer. Second, we identify elements of successful integration of analytics and human judgment when managers have knowledge not available to the model. Third, we use these elements to develop a framework for a successful integration process of technology and people. Fourth, we identify barriers to effective implementation of analytics systems due to managerial lack of trust in algorithms and shared data. Our paper offers guidance for effective value creation of analytics and AI via simultaneous attention to technology, people, and processes.

Paper is Available to Meeting Registrants Only.

OSCM: **Disseminating Strategic Orientation of Machine Learning Along the Supply Chain** 

Author: **Yi Tang**, *Tongji U., Shanghai, PR. China*
Author: **Yuan Li**, *Shanghai Jiao Tong U.*

This study explores why and how the focal firm disseminates its strategic orientation of machine learning (SOML) within its supply chain to affect the SOMLs of its suppliers and buyers, and how the operational efficiency (OE) of the focal firm and its supply chain partners moderates these relationships. Drawing upon inter-organizational learning theory and using data from 2351 publicly listed firms in China over the period 2013–2020, we construct a panel data set to test the effects of the focal firm's SOML on the SOMLs of its suppliers and buyers and the contingent effects of the focal firm's OE and partners' OE. Our results show that the focal firm's SOML can strengthen suppliers' SOML, but has an inverted U-shaped effect on buyers' SOML. Further, we find that the focal firm's OE can improve the effects of its own SOML on its suppliers' SOML, while its partners' OE hinders SOML dissemination from the focal firm to its suppliers and buyers. These results provide important theoretical contributions and managerial implications in regard to firms' machine learning strategy, supply chain management, and operations management.

OSCM: **Creating, Delivering and Capturing Value Through Digitally Enabled Advanced Services**  

Author: **Parikshit Naik**, *Aston Business School*
Author: **Andreas Schroeder**, *Aston Business School*
Author: **Ali Ziaee Bigdeli**, *Aston Business School*
Author: **Tim Baines**, *Aston Business School*

The purpose of the study is to investigate how the value mechanisms of advanced services business models interact with each other in their post-implementation stage. To better understand these interactions, the study adopts Teece's (2010) business model conceptualisation which integrates value creation, capture and delivery mechanisms in the form of an architecture. In particular, the study focuses on the architecture of the value mechanisms, identifying interdependencies between them to understand the dynamics of advanced services business models. A multiple-case research method was employed to investigate the advanced services business models and the interaction between the value mechanisms of four multinational manufacturers. The analysis identified different ways the value mechanisms continuously affect each other in their development, creating virtuous circles of interdependencies. The study and its findings contribute to advanced services research by showing the interactions and dynamics of business models in their post-implementation stage and illustrating the role of digitalisation in the context of advanced services business models. It provides a holistic understanding of advanced services business models and generates a number of theoretical and practical implications.

Social Enterprise and Entrepreneurial Activity

Session Moderator: **Mario Calderini**, *Politecnico di Milano*

This session examines various tensions faced by social enterprises, including the interactions between social and economic purposes and hybrid organizational identities.

PNP: Social Enterprises: Organizations for Transformative Innovation

Author: **Mario Calderini**, *Politecnico di Milano*
Author: **Magali Fia**, *U. of Bologna-Yunus Social Business Centre*
Author: **Francesco Gerli**, *Copenhagen Business School*

Transformative innovation policies aim at providing systemic solutions to socio-environmental challenges thanks to their “experimental”, “reflexive” and “inclusive” character. In this context, we contend that social enterprises could be catalysts for transformative innovation towards less developed territories and socially-marginalized groups. We argue that including social enterprises in transformative innovation policies mitigates negative effects of innovation-based growth, making policies more socially and territorially inclusive. Following a syncretic approach between the literature on transformative innovation policies and on social enterprises, this paper identifies key dimensions capturing the transformative innovation potential of these enterprises: from distributed territorial patterns, to a directional social inclusiveness, reflexivity in terms of participatory governance and goals’ monitoring capacity, and experimental character in terms of establishing partnerships with heterogeneous actors. We assess this capacity through an explorative cluster analysis on Italian social enterprises. The results show three distinct groups within the realm of context, suggesting a variety of entrepreneurial approaches going from fully to slightly transformative. The transformative readiness of social enterprises suggests that policymakers can advance piloting experiments and that actions supporting an appropriate innovation ecosystem for these organizations are required.

PNP: Social Mission Internalization: A Path to Achieve Social and Economic Goals in Social Enterprises

Author: **Marta Mas-Machuca**, *U. Internacional de Catalunya*
Author: **Anna Akhmedova**, *U. Internacional de Catalunya*
Author: **Frederic Marimon**, *U. Internacional de Catalunya*

Social enterprises (SEs) are hybrid organizations whose mission is to simultaneously seek economic viability and the achievement of positive social impact. Notably, these two ends of the social mission are considered conflicting. The process of internalization of goals or values consists in accepting certain external values, goals, attitudes or behaviors and transforming them into internal, one’s own. Thus, the objective of this study is to delve into the role of the social mission and the economic mission and the relationship between these two aims. Employing Structural Equation Modelling the study found that the role of IM is important and it influences employee mission engagement (EME) and that EME, in turn, positively impacts organizational outcomes (PSMA and POP). There is a full mediation of PSMA on POP, suggesting that by pursuing the social and economic mission is not contradictory, when social mission is put at the center and when it is truly internalized. In other words, achieving the social mission works for the good performance of social enterprises. In addition, internalization of the mission is relevant to avoid possible tensions between different social and economic objectives.

PNP: Penalty or Reward? The Role of Hybrid Identities in Social Enterprises’ Resource Acquisition

Author: **Chen Ji**, *Indiana U.- Lilly Family School of Philanthropy*
Author: **Sara Konrath**, *Indiana U.- Lilly Family School of Philanthropy*

Resource acquisition is essentially important for social enterprise’s resilience and success. Prior studies have explored the relationship between resource acquisition outcomes and social enterprise’s hybridity, however, ignored the heterogeneity of the funders in relative to it. This paper examines how hybrid identities, of both the social enterprises and financial resource providers, might be associated with the financial resource acquisition. In particular, we study how the social and financial identities jointly affect the possibilities of social enterprises in acquiring financial resource. Using a social enterprise database from 2013 to 2019, we find that philanthropic donors and equity investors have different attitudes toward hybridity. The possibility that equity investors support social enterprises is similar to their for-profit counterparts, while the possibility that philanthropic donors support social enterprises is lower compared to their nonprofit counterparts. We discuss the implication of these findings for social entrepreneurship research and practice, and the identity theory perspective.

PNP: A Tension Lens for Understanding Entrepreneurship-Related Activities in the University

Author: **Hong Qiu**, *Telfer School of Management, U. of Ottawa*
Author: **Samia Chreim**, *U. of Ottawa*
Author: **Mark Freel**, *Telfer School of Management, U. of Ottawa*

How do individuals drive entrepreneurship-related activities in the university? Using a tension lens, this paper explores how academic and non-academic staff who teach, practice and support entrepreneurship in two Canadian universities manage tensions associated with entrepreneurship-related activities, and how individuals’ tension management influences these activities in university settings. We draw on three theoretical perspectives (contingency, paradox, and dialectic) on tension and tension management, and on data obtained through interviews to analyze two tensions that individuals’ experience: the reward tension that manifests as misalignment between reward systems and individuals’ entrepreneurship-related activities; and the resource tension that demonstrates as a struggle to do more with less. Individuals’ decisions to search for new rewards or resources or to make the best use of existing policies and resources often depend on their employment status, the availability of assistants, and the type of entrepreneurship-related activities engaged.

Donors, Philanthropy and Grantmaking

Session Moderator: **Lars Friedrich**, *FAU Erlangen-Nürnberg*

This session explores donation and grantmaking behavior generally, and then zooms into the role of location in philanthropic decisions specifically.

PNP: **How to Increase Consumer Donation Behavior? A Literature Review and Comprehensive Framework**

Author: **Lars Friedrich**, *FAU Erlangen-Nürnberg*
Author: **Lukas Maier**, *FAU Erlangen-Nürnberg*
Author: **Kai-Ingo Voigt**, *Friedrich-Alexander U. of Erlangen-Nürnberg*

Donating by individuals has become central for today's society to work. The current research presents a systematic review of the academic literature from marketing and behavioral science that examines the most effective ways to encourage individual consumer donation behavior. In particular, by reviewing and synthesizing 107 empirical articles, we provide a comprehensive psychological framework for conceptualizing and encouraging donation behavior. The framework suggests that individuals are more inclined to engage in donation behavior when the message or context leverages the following psychological factors: social influence, habit formation, individual self, feelings and cognition, and tangibility (SHIFT framework). Based on the review, we identify several broad changes to promoting donation behavior in an increasingly digitized world and use these to develop novel theoretical propositions and directions for future research. Finally, we provide important insights for practitioners aiming to foster consumer donation behavior by showing how they can make use of our framework.

Paper is Available to Meeting Registrants Only.

PNP: **“He Who Has the Gold Makes the Rules”: Does Donor Control Crowd out Community Leadership?**

Author: **Viviana Chiu-Sik Wu**, *Assistant Professor at UMass Amherst*

Foundations increasingly value community leadership capacities for addressing public problems and catalyzing change in local communities. However, scholars have cautioned that the proliferation of donor-advised funds (DAFs) might undermine foundations' commitment to community leadership. While a burgeoning line of research has begun to examine the use and trends of DAFs, empirical analysis of the relationship between DAF sponsorship and community leadership remains underexplored. Drawing on the institutional logics perspective, this study discussed the logics of donor services and community leadership, and explored the extent to which foundations combined the two by exercising DAF sponsorship and community leadership simultaneously. Using an original dataset that combined annual report data and IRS 990 data of 253 community foundations, we found consistent evidence on the positive associations between DAF sponsorship and various community leadership aspects. These findings contribute to understanding the power dynamics between donors and foundations, showcasing a possible blending of the two logics in the community philanthropic field.

Paper is Available to Meeting Registrants Only.

PNP: **The Geography of Grantmaking—Does Location Matter? Neighborhood Effects and Foundation Philanthropy**

Author: **Heather MacIndoe**, *U. of Massachusetts, Boston*

The neighborhood effects scholarship in urban sociology demonstrates the importance of geographic location to many social outcomes previously thought to be solely determined by individual characteristics (e.g. educational attainment). This article applies the theory and methods of neighborhood effects research to the study of community-based nonprofit organizations. If neighborhood composition and processes matter for individuals, do they also influence organizational outcomes such as resource procurement? An analysis of foundation grantmaking in the city of Chicago reveals that nonprofits' ability to secure grants is influenced by both organizational and neighborhood characteristics. Larger, younger nonprofits with lower debt ratios, engagement in local networks and a previous record of foundation funding, are more likely to secure foundation support. While organizational factors matter, securing grants is also independently influenced by a nonprofit's neighborhood location. Nonprofits in neighborhoods with a lower percentage of households in poverty, higher nonprofit density, and evidence of government grant support are more likely to receive foundation grants. We find neighborhood effects for nonprofit organizations for the outcome of resource procurement, specifically securing foundation grants. The article considers implications of these findings for nonprofits and the populations they serve.

PNP: **Is Giving Local? Conceptualizing Why Place Still Matters in Philanthropy**

Author: **Richard Michael Clerkin**, *North Carolina State U.*
Author: **Laurie Paarlberg**, *Indiana U. / Purdue U., Indianapolis*
Author: **Robert Christensen**, *Brigham Young U.*
Author: **Rebecca Nesbit**, *U. of Georgia*

In this paper, we develop an organizing, multi-theoretical framework for exploring the relationship between place and philanthropy. While there are several theories that help us to understand charitable giving at the individual level (i.e. theories of altruism) and a robust discussion of the mechanisms that activate charitable giving (Bekkers and Wiepking 2011), scholars have not well-considered geographic place as an antecedent of these mechanisms. Our primary contribution is to highlight several current social science theories that are relevant for explaining how geographic place influences the eight mechanisms of individual giving (Bekkers and Wiepking 2011)—awareness of need, solicitation, altruism, values, reputation, psychological costs and benefits, costs and benefits, and efficacy.

Ethics, Responsibility and Employee Engagement

Session Moderator: **Florencio F. Portocarrero**, *Columbia Business School*

SIM: Employee Participation in CSR, Emotions, and Subsequent Engagement in Volunteering: Field Experiment   

Author: **Florencio F. Portocarrero**, *Columbia Business School*

Corporations around the world increasingly implement socially responsible programs and policies. However, much of the corporate social responsibility (CSR) literature: (1) has focused on the business case for CSR, and (2) has been unable to provide causal evidence of the effects of CSR on employee outcomes. Using a field experiment as part of the new-employee orientation process of 221 employees in a large bank, this study uses random assignment to evaluate whether participation in a CSR intervention influences employees' subsequent engagement in corporate volunteering activities. Three emotions in work-life (organizational pride, organizational gratitude, and workplace empathy) are hypothesized and tested as mediators of the effects on subsequent volunteering behavior. Compared to employees in the control condition, treated employees reported higher levels of organizational pride and workplace empathy, but not of organizational gratitude. Employees randomly assigned to the CSR treatment were more likely to become corporate volunteers and engaged more frequently in subsequent corporate volunteering initiatives than employees in the control condition. Workplace empathy (not organizational pride or gratitude) explains the effects of the CSR activity on employees' subsequent likelihood and frequency of volunteering. This study offers contributions to the CSR, corporate volunteering, and emotions in organizational life literatures.

SIM: Upholding Values while Enacting Dissonant Practices: Emotional Enticing in a Charitable Hospital  

Author: **Yidi Guo**, *School of Economics and Management Tsinghua U.*

Author: **Quy Nguyen Huy**, *INSEAD*

Today, many organizations, especially those tackling societal grand challenges, espouse inclusive prosocial values that ambitiously englobe the welfare of vast communities. However, pragmatic concerns often force such organizations to enact values-dissonant practices, which may cause organizational members' disengagement. This study explores how organizational members could maintain work engagement and perceive their organization as upholding inclusive prosocial values when performing values-dissonant practices is inevitable. We conducted an inductive study of a charitable hospital in India espousing the values of “serving all people with love.” We found that the organization and its members engaged in a process we call “emotional enticing.” In this process, the organization translates its values into selective, specific, bounded practices, which nudge its members to elicit the emotions of pride, hope, elevation, and bounded sympathy. These emotions entice organizational members to enhance work engagement and perceive that the organization upholds the espoused organizational values. Our research offers fresh insights into reconciling the tensions between espoused and enacted organizational values with emotion-laden processes.

Paper is Available to Meeting Registrants Only.

SIM: Identifiable Victim or Victor? How Drawing Employees' Attention to Prosocial Impact can Backfire    

Author: **Angelique Slade Shantz**, *U. of Alberta School of Management*

Author: **Geoffrey Kistruck**, *Schulich School of Business*

Author: **Isaac Smith**, *Brigham Young U.*

Many organizations try to boost employee effort and morale through “prosocial leveraging”—that is, drawing increased attention to the beneficiaries of the organization's social impact. Research suggests that exposing employees to more salient narratives about the beneficiaries of their work can generate heightened feelings of compassion and spur greater prosocial motivation to work harder. However, often implicit in this approach is that employees are in an advantaged position, relative to those they are helping, and that drawing increased attention to beneficiaries reflects a downward social comparison. Yet this is not always the case, and in this research, we question the efficacy of drawing attention to beneficiaries that may reflect an upward social comparison. We address this question via an initial generative field experiment, followed by a confirmatory lab experiment. Our results collectively contribute to: (1) literature on organizations that leverage their prosociality by raising the possibility that drawing increased attention to an organization's social impact could backfire; (2) literature on prosocial motivation by augmenting it with a social comparison lens, and; (3) theory on the identifiable victim effect, showing that providing greater detail about those in need does not always increase positive emotional responses.

Author: **Sijing Wei**, *Creighton U.*

Author: **Yiding Wang**, *U. of Oklahoma*

Author: **Valentina Ge**, *Creighton U.*

As corporate scandals continue to dominate the news cycle, the value of a company's ethical reputation has become a focal point for management researchers. We seek to join this conversation and extend the research centered on a firm's ethical reputation. We accomplish this by shifting our focus away from its impact on external stakeholders (e.g., customers, investors, potential job applicants) to its impact on internal stakeholders (e.g., employees). To this end, we rely on signaling theory to explain why a firm's ethical reputation matters to its employees in effort to bridge the macro-micro research gap. Specifically, we integrate one macro-level proprietary dataset (i.e., Ethisphere) and one micro-level proprietary dataset (i.e., Glassdoor) to propose and demonstrate that a firm's ethical reputation (i.e., macro-level construct) positively impacts multiple aspects of employee career success, such as career opportunities and work-life balance (i.e., micro-level constructs). Given our signaling theory framework, we also identify and explain when two industry-level characteristics operate as boundary conditions that distort a firm's ethical reputation signaling properties. Subsequently, we also demonstrate that high levels of industry competition and industry regulation mitigate the impact of a firm's ethical reputation on career opportunities and work-life balance. Theoretical and practical implications are discussed.

Paper is Available to Meeting Registrants Only.

Author: **Selim Cakir**, *U. of Bristol*

Author: **Jamie Wardman**, *Nottingham U. Business School*

Author: **Alexander Trautrim**, *U. of Nottingham*

Drawing on social exchange theory, this paper theorizes and tests a model linking ethical leadership with workplace communication of health and safety risks by employees – termed 'safety voice' – regarding the dangers posed by COVID-19. Our study, conducted with 511 employees from UK companies, revealed that ethical leadership encourages safety voice through increasing the perceived health risk of COVID-19 and reducing ambiguity associated with making ethical decisions in the workplace. Our findings thereby underscore the importance of good ethical conduct by leaders for ensuring health and safety risks are managed and communicated effectively within organizations during crises. We discuss the theoretical and practical implications of our study, and highlight further opportunities for future research to address the ethical dimensions of leadership and organizational risk management and communication.

STR: Market Conditions and the Labor Productivity Advantage of Business Groups

Author: **Pablo Doucet**, *U. of Salamanca*
Author: **Ignacio Requejo**, *U. of Salamanca*
Author: **Isabel Suarez-Gonzalez**, *Salamanca U.*

Using a large sample of firms from 208 subnational regions across 21 European countries, we investigate if labor market conditions affect the potential value of internal labor markets in business groups—i.e., set of firms under common ownership and control. Building on the “institutional voids” perspective on business groups and the strategic human capital literature, we theorize that slack labor market conditions facilitate and enhance the value of labor reallocations within these interfirm networks by inhibiting trade in human capital outside them. In these environments, we find that firms with internal labor market access—i.e., with an increasing number of sister companies in the same region-industry—show relatively higher labor productivity. Further, our findings suggest that the labor market frictions arising from both slack labor market conditions and employment protection regulations synergize to enhance the benefits of internal labor markets.

Paper is Available to Meeting Registrants Only.

STR: Onshore Hiring and Restructuring: A Panel Study on Offshoring Companies' Performance ✈

Author: **Alina Grecu**, *Copenhagen Business School*
Author: **Wolfgang Sofka**, *Copenhagen Business School*

Firms engage in offshoring activities for various reasons, ultimately to increase competitive advantage. By integrating human capital theories in the strategy-performance models, we propose that hiring decisions regarding sources of human capital affect performance post-offshoring. To test our hypothesis, we use a 2009-2014 panel dataset with 8,172 company-year observations and 1,362 exactly matched Danish companies - 681 offshoring and 681 non-offshoring companies - containing financial-, mobility-, and offshoring information. We find that focusing on more internal hiring helps offshoring companies to perform better post-offshoring, whereas hiring from external sources decreases onshore performance. In the offshoring sub-sample of firms, we find that these effects are particularly salient for companies that offshore core activities or to distant-to-home locations. This is in line with our argument that firm-specific human becomes even more valuable post-offshoring, and that internal hiring can boost onshore performance. The paper contributes to the international business and human capital literature and aims to make managers aware of the need for an internal talent pipeline when engaging in offshoring.

Paper is NOT Available. Please contact the author(s).

STR: How Fungibility of General Human Capital Resource can Impact Recombination of Human Capital Resource

Author: **Dongwook Kim**, *U. of Pittsburgh*

By analyzing the human capital data from the video game industry, this research shows that firms in the creative industry recombining different types of human capital resources will result in differences in firm performance. This unique industry allows us to observe the internal recombination of FHCR and GHCR between different subsidiaries of the firm. We find that the fungibility of GHCR can have a significant impact on how firms recombine human capital resources. We also find that how firms reconfigure new business units, internal or acquisition, also has an impact on the recombination of human capital resources. By differentiating the firm-specificity and fungibility of human capital resources, this study sheds light on how GHCR vs. FHCR are recombined within the firm.

STR: Corporate Defection and Outlying Control on Resource Reallocation 🌐 📄

Author: **Camille DOCHE**, *HEC Paris*
Author: **Olivier Chatain**, *HEC Paris*
Author: **Emilie Feldman**, *U. of Pennsylvania*

We study the determinants of the spawning of new entities by an organization when members control significant productive assets and have the agency to leave with these. Cooperatives, a highly prevalent organizational form worldwide in almost all industries, are particularly prone to such corporate defection. Building on the entrepreneurial spin-offs and the corporate divestiture literatures, we pay equal attention to the members' incentive to leave with their assets as well as the organization's interest in retaining, redeploying, or letting go these assets. Interestingly, cooperatives only have an outlying control over these assets: they can influence the retention of these assets within their scope despite not having the legal control over these. Our empirical context is a winemaking cooperative where cooperative-, individual-, and asset-level data enable us to analyze member defection, democratic governance in the organization, and resource redeployment. We find that economics drivers push members to defect while their operating as an incorporated entity accelerates this process. Nevertheless, both democratic governance and resources redeployment processes can help in retaining members within the cooperative. These findings contribute to expand our understanding on cooperatives and also provide further insights on the functioning of traditional corporations such as multi-business firms.

Mergers and Acquisitions Strategy

Session Moderator: **Josh Feng**, *U. of Utah, David Eccles School of Business*

STR: Consolidation in Prescription Drug Markets: Impact on Pricing and Access

Author: **Josh Feng**, *U. of Utah, David Eccles School of Business*

Author: **Thomas Hwang**, *Harvard Medical School*

Author: **Yunjuan Liu**, *U. of North Carolina at Chapel Hill*

Author: **Luca Maini**, *U. of North Carolina, Chapel Hill*

We examine the impact of M&A activity between drug manufacturers on drug prices and patient access. We start by collecting detailed information on acquisitions involving companies that sell on-patent branded drugs, covering the 2007–2019 period. We find that approximately one-third of branded drugs are acquired by a different company during their patent terms, but only a few “overlap” acquisitions consolidate ownership of drugs in the same therapeutic area. Next, we use a two-way fixed-effects approach to measure how prices and patient access respond to mergers. We find that all newly acquired drugs experience price growth following acquisitions. However, only those acquired by larger companies see an increase in their effective net price. Drugs involved in overlap acquisitions only see higher price growth if the acquisition was small enough to escape regulatory scrutiny, suggesting that antitrust agencies are imposing effective constraints on potentially anti-competitive agreements.

STR: Organic and Acquisitive Growth: Replicating and Extending Lockett, Wiklund, Davidsson, Girma (2011)

Author: **Alessandro Lucini Paioni**, *Politecnico di Milano School of Management*

Author: **Panos Desyllas**, *School of Management, U. of Bath*

Author: **Orietta Marsili**, *U. of Bath*

Author: **Elena Cefis**, *U. of Bergamo*

We replicate and extend the work from Lockett, Wiklund, Davidsson, and Girma (2011), investigating how organic and acquisitive growth strategies influence future organic growth rates. Analysing a panel of Dutch firms over the period 2011–2016, we confirm Lockett et al.’s finding that past organic growth exerts a restraining effect on current organic growth. Unlike the original paper, we also find that acquisitive growth hinders rather than sustains subsequent organic growth. We therefore extend Lockett et al.’s framework by explicitly accounting for how the relatedness and complementarity of acquisitions moderate this effect. We observe that this negative effect is less pronounced when acquisitive growth is less related and complementary. Finally, we refine the identification strategy further developing the empirical analysis.

STR: The Effect of Acquisitions on Environmental Performance: Evaluating the Role of Primary Stakeholders

Author: **Franziska Hittmair**, *NOVA School of Business and Economics*

Author: **Youtha Cuypers**, *NOVA School of Business and Economics*

This study examines how acquisitions influence corporate environmental performance by integrating theoretical notions from organizational learning and stakeholder literature. We posit that firms can improve environmental performance following acquisitions by learning from their targets. However, this depends on the environmental knowledge and capabilities of the target relative to those of the acquiring firm. We further suggest that change in environmental performance following acquisitions does not only depend on the target firms, but also on the acquirers’ primary stakeholder groups. We test our hypotheses by analyzing longitudinal data on 380 acquisitions of public, US-based acquirers. We find that acquirers with a strong orientation towards customers, employees and suppliers are more likely to learn from their acquisition targets. Furthermore, we show that the reaction of shareholders to acquisition announcements also determines the extent to which firms improve environmental performance following acquisitions. Our results underline the importance of primary stakeholders in achieving environmental performance improvements following strategic actions. With this research, we contribute to literature on M&As by going beyond the implications of acquisitions on financial firm value. We further contribute to stakeholder literature by providing insights on the role of primary stakeholders for organizational learning.

STR: Explaining the Length of the Due Diligence Process in Technology Acquisitions

Author: **Xavier Castaner**, *U. of Lausanne*

Author: **Panos Desyllas**, *School of Management, U. of Bath*

Author: **Huma Javaid**, *U. of Manchester*

Author: **Orietta Marsili**, *U. of Bath*

Drawing on information economics, the theory of the firm and the organizational learning literature, we theorize about the probability of length of the due diligence process. In particular, we examine to what extent uncertainty regarding the value of a target’s resources and differences between the acquiring and target firms lengthen the acquirer’s due diligence effort. Given that we focus on the (target) technological resources we investigate the role of technological uncertainty and absorptive capacity proxying them by the number of pending patent applications of target firms and the technological distance between the two firms’ patent portfolio, respectively. Further, we argue that business relatedness (similarity) reduces the understanding gap. Using a longitudinal data on completed and non-completed technology acquisitions in the UK, we find a significantly positive effect of targets’ pending patent applications on due diligence length that is amplified by technological distance but reduced by business relatedness. Our study contributes to the M&A literature by revealing that higher information gap and uncertainty prolong the due diligence process of the acquirers in the hope of effectively evaluating prospective target firms.

Building Shared Organizational Practices, Behavior and Culture

Session Moderator: **Piyush Gulati**, *INSEAD*

 **STR: Breaking Down Remote Silos: How Worker Characteristics Affect Remote Interactions in OSS Communities**  

Author: **Piyush Gulati**, *INSEAD*

Remote work creates communication silos within organizations. Overcoming these silos is an important problem for organizations to solve as it is rarely feasible to perfectly organize interdependencies within them. In this paper, we focus on the individual level and ask: what worker-level characteristics are associated with a higher frequency of cross-silo distant interactions? We explore answers by leveraging open-source software (OSS) communities as the context. OSS communities are standards of all-remote globally-dispersed organizations, where a mix of unpaid volunteers and paid firm-sponsored employees undertake software development. Based on a problemistic-search decision model, we argue that volunteers undertake a higher degree of exploratory remote interactions as they are motivated by an individual-level need for recognition and knowledge. Moreover, the lower the accomplishment of their goals, relative to social aspirations, the higher the level of exploration they are likely to undertake. On the contrary, for firm-sponsored contributors, the presence of firm-level commercial motives and pecuniary benefits is expected to lower returns to exploration. We test and find supportive evidence for our theory using email metadata and text from the Linux-kernel project that spans 3,734 contributors, 25 timezones, and 130 months of software development work from January 2010 to October 2020. For practitioners, the findings of this paper have implications for how they recruit and incentivize workers.

 **STR: Beyond the Agreement: Dilemmas in Contracting for the Transfer of Management Practices**

Author: **Fernando Deodato Domingos**, *U. of Oxford*

Author: **Sandro Cabral**, *Inspere Institute of Education and Research*

Author: **Sergio Giovanetti Lazzarini**, *Ivey Business School*

Author: **Ricardo Paes-de-Barros**, *Inspere Institute of Education and Research*

Contracting for the transfer of practices can be problematic because recipients might diffuse the received practices to organizational units beyond the original agreement. We highlight the crucial role of managers as diffusers of practices at the interorganizational boundary and suggest that they have incentives to exert asymmetrical effort on nontargeted units to increase aggregate organizational performance. We examine this dilemma in the context of a nonprofit partner transferring management practices to public schools with the support of civil servants (boundary managers). We gauge the ability of managers to diffuse practices and find that increased diffusion ability benefits the nontargeted units, leading to a severe underestimation of the transferring-side partner contribution. We discuss how our study advances the analysis of interorganizational contracting.

STR: Organizational Culture as Barriers to Employee Mobility: Evidence from Employer Reviews & Job Posts

Author: **Sukti Ghosh**, *INSEAD*

Author: **Viktorie Sevchenko**, *INSEAD*

Author: **Arianna Marchetti**, *London Business School*

What firm level strategies can firms adopt for reducing employee mobility? While firms make large investments in their corporate cultures, their effects on the labor force are not yet completely understood. We argue that strong cultures act as a retention mechanism by facilitating shared understanding of the task environment, enhancing employees' sense of homophily and ability to coordinate and reducing the portability of their task related firm specific skills. We test these predictions on a subsample analysis of 6,208 firms based in Illinois and Michigan. We measure labor-related variables from 1,265,760 job vacancies posted by those firms, and their cultural strength from 203,093 employees' text reviews about the companies. We find that, following a regulatory shock that increases employee mobility in Illinois, strong cultures post fewer jobs and offer lower salaries than weak ones, compared to Michigan. We propose heterogeneity in cultural distributional properties as a novel retention mechanism to explain cross-firm variation in human capital strategies.

STR: Meeting the Need for Scale: Soft Governance in Dual-Purpose Organizations 

Author: **Anna Szerb**, *INSEAD*

Author: **Ilze Kivleniece**, *INSEAD*

Author: **Vikas A. Aggarwal**, *INSEAD*

We develop a theory of scaling dual-purpose organizations—i.e., organizations that have a social impact-focused mission delivered through the simultaneous pursuit of both prosocial objectives and financial viability. We argue that effectively scaling such organizations requires a fundamentally different set of underlying processes than in organizations pursuing only profit-oriented goals. Specifically, we argue that misalignments between individual-level preferences and organization-level goals, stemming from the organization's dual-purpose nature, create a unique set of impediments to achieving scale. Our central contribution in this regard is to theorize around the role of what we call "soft governance" in enabling the scaling of such organizations. Building on a conceptual microfoundational model of the processes linking individual-level preferences to organization-level goals in dual-purpose organizations, we show that: (1) goal misalignment between individuals and the organization creates impediments to scaling dual-purpose organizations; (2) these impediments cannot be resolved with formal governance alone; and (3) the interaction between soft governance and formal governance mechanisms mitigates individual-organization goal conflicts that constrain the ability of such organizations to scale.

Stakeholder Models for Value Creation and Allocation *Stakeholder Models for Value Creation*

Discussant: **Rodolphe Durand**, *HEC Paris*
Discussant: **Peter G. Klein**, *Baylor U.*
Organizer: **Julien Jourdan**, *HEC Paris*
Organizer: **Anita McGahan**, *U. of Toronto*
Presenter: **Jiao Luo**, *U. of Minnesota*
Presenter: **Lite Nartey**, *INSEAD*
Presenter: **Pushpika Vishwanathan**, *U. of Amsterdam*

Scholars of strategic management, entrepreneurship, and organization theory have recently sought to integrate theories that emphasize stakeholder interests with those on value creation and capture. In this Symposium, we propose to advance research on this integration through the presentation of scholarly papers by four authors, each of whom will present recent findings developed with co-authors on this topic. The papers will be discussed formally by two leading scholars in this domain. The purpose of the symposium is to support scholarly dialogue among participants, with the discussants, and in a question-and-answer session with attendees. We envision that this dialogue will advance frontier approaches to modeling how stakeholder contributions and claims can be discerned analytically. This advancement will enhance linkages between stakeholder theory and conceptualizations of value creation and of the distribution of value among claimants.

Dear attendees: We are excited that you are joining the symposium. No invitation is required, and there is no required preparation. Thank you for your interest. Best wishes, the organizers.

Gender-based Harassment and Violence

Session Moderator: **Sohee Kim**, *U. of Illinois at Urbana-Champaign*

GDO: **The Multiple Levels of Violence Against Women in the University Context** 

Author: **Aline Dos Santos Barbosa**, *U. Estácio de Sá*
Author: **Marcello Romani-Dias**, *Positivo U.*
Author: **Tania Veludo-de-Oliveira**, *Fundacao Getulio Vargas*

Failure to prevent violence against women and respond to women who experience it is unscrupulous. Based on this idea, our article was guided by the need indicated in the literature for research on the multiple levels that comprise the context of violence against women. This violence is more likely to occur in certain contexts, among which the university environment stands out due to the violence that occurs in fraternities, among athletic teams, and at parties, and competitions. Based on in-depth interviews with women and men, song lyrics, student diaries, videos, and private institutional documents, we examined the main catalysts of violence against women in the university context. We identified that (i) the actions and omissions of the educational institution, (ii) the taste for violence, the perception of self-efficacy, the socioeconomic origin, and the influence of the aggressors' group of friends, and (iii) the apparent dichotomy between women's vulnerability and women's strength are among the main antecedents of violence against women. Among the contribution of the discussions presented in our article, we highlight the importance of adopting a multilevel view so that we can better understand and fight against this violence, the existence of which is not restricted to the university context.

GDO: **Understanding Bystander Intervention: A Cost–Reward Perspective**  

Author: **Yijue Liang**, *George Mason U.*
Author: **YoungAh Park**, *U. of Illinois at Urbana-Champaign*

Previous research has suggested bystanders are more likely to intervene in sexual harassment when they find intervention more rewarding and less costly, but scholarly understanding is lacking about whether this cost–reward calculation process varies across bystanders, and how distinctive intervention modes are related to actual cost and reward. To answer these questions, this research draws on a cost–reward perspective and the just world theory to investigate how cost and reward are evaluated and then indicated by actual intervention. Based on data from 485 employees who have observed sexual harassment at least once since the #MeToo movement, the results show that compared to individuals with a weaker belief in a just world, persons with a stronger belief tend to anticipate a lower intervention reward when observing more frequent sexual harassment and a lower intervention cost when observing less frequent sexual harassment. Both evaluated intervention cost and reward can explain bystanders' direct and indirect intervention behaviors, which in turn are related to the actual intervention cost (i.e., negative reactions from harassers) and reward (i.e., positive reactions from targets and third parties). These results showcase the importance of considering bystanders' cost–reward calculation when encouraging bystander intervention behaviors to combat sexual harassment.

GDO: **Ethical Leadership Promotes Sexual Harassment Intervention: Gender and Moral Identity as Moderators** 

Author: **Sohee Kim**, *U. of Illinois at Urbana-Champaign*
Author: **YoungAh Park**, *U. of Illinois at Urbana-Champaign*

Sexual harassment is a prevalent and persistent problem in the workplace. Although encouraging observers' intervention could be an effective way to reduce sexual harassment incidents at work, research on bystander intervention in workplace sexual harassment is lacking. This study focuses on how and when leaders can promote observers' intervention in their coworkers' sexual harassment. Specifically, Bandura's social cognitive theory of morality is used to examine the possibility that ethical leadership is positively associated with intervention intention, via employees' perceived responsibility to intervene. In addition, employees' gender and moral identity are proposed to moderate the indirect relationship between ethical leadership and intervention intention via perceived responsibility. To test the hypotheses, a scenario-based online survey was conducted at two time points (n = 281). The path modeling results supported the mediation hypothesis—that is, perceived responsibility mediated the positive association between ethical leadership and intervention intention. This indirect effect was significant only for men but not for women. Contrary to the hypothesis, the moderation effect of moral identity was not supported. Theoretical and practical implications are discussed, along with the limitations and future research directions.

Diversity Perspectives on Work and Family

Session Moderator: **Senhu Wang**, *National U. of Singapore*

GDO: **Work Time Control and Allostatic Load Biomarkers: Differences Between and Within Genders**     

Author: **Senhu Wang**, *National U. of Singapore*
Author: **Lambert Zixin Li**, *Stanford U.*
Author: **Zhuofei Lu**, *U. of Manchester*

Work time control has been linked to self-reported health outcomes. The study tests whether schedule control is associated with the allostatic load biomarkers of chronic stress and health risks in the blood samples of a national working population, and whether the relationship is moderated by workers' gender role attitude. A representative sample of 3,677 British adults answered a cross-sectional survey on their work time control and provided blood samples in a nurse assessment. Allostatic load was constructed using the number of risk factors among 12 biomarkers across the cardiovascular, metabolic, and immune systems. The associations between work time control and allostatic load were tested for men and women with negative binomial models adjusting for demographic and socioeconomic covariates. Gender role attitude was then tested as a moderator. We found that control over work hours is associated with lower or better allostatic load in women but not in men. The association is stronger among women who hold a more traditional gender role attitude towards the division of household labor. In conclusion, women, especially those with traditional gender role attitude, benefit most from work time control. Future research could use allostatic load biomarkers to measure the quality of working life and public health policies should promote healthier psychosocial work conditions to improve workers' quality of life.

Paper is NOT Available. Please contact the author(s).

 GDO: **Fathers' Work-Family Conflicts and Children's Work Earnings: A 17-year Dyadic Lifespan Analysis**   

Author: **Shen-Yang Lin**, *Leeds U.*
Author: **Giles Hirst**, *Australian National U.*
Author: **Ying (Lena) Wang**, *School of Management, RMIT U.*
Author: **Jeremy F. Dawson**, *U. of Sheffield*

This study investigated when, how and why fathers' work-family conflict (WFC) influences their adult offspring earnings. Building on conservation of resource theory and crossover theory, we propose a moderated mediation model, arguing that for fathers with higher social interaction infrequency (as opposed to lower), fathers' WFC will have a stronger indirect effect on children's earnings 17 years later via the sequential mechanisms of vitality and children's hope of success. The model was supported by 17 years of dyadic father-child data (N = 592) from the Household, Income and Labor Dynamics in Australia (HILDA) Survey. Theoretical and practical implications, as well as future research directions, are discussed.

GDO: **Gender Discrimination in South Korea: Exploring the Role of Leadership, Gender, and Family Cultures**    

Author: **Taha Hameduddin**, *U. of Kentucky*
Author: **Dahye Kim**, *National U. of Singapore*

Increasing gender equity and representation of minority groups has long been recognized as a core condition of achieving social equity. This is especially because gender inequality, manifested through adverse treatment such as discrimination, imposes large costs on employees, employers, and societies. In this context, it is not surprising that organizations large and small have been engaged in diversity management efforts as a way to increase organizational equity. However, diversity itself may not always lead to equitable outcomes, especially if it is not accompanied with changes to organizational cultures, norms, and leadership. The focus of this paper is on the determinants gender discrimination. Using a unique panel dataset of managers from South Korea, we examine whether and how workgroup gender context, leadership, supervisory behaviors, and family supportive cultures predictor gender discrimination. The findings shed light on the importance of gender representation at different levels of the organization, and cultural change as ways to mitigate gender based discrimination.

Effectively Managing Health Care Operations

Session Moderator: **Jeff Larson**, *U. of Arizona*

HCM: **EHR Implementation and Task Allocation Within Hospital Care Units: A Natural Experiment**   

Author: **Alex James Wilson**, *U. of Minnesota*
Author: **John Joseph**, *U. of California, Irvine*
Author: **Jay (Jinwon) Park**, *U. of California, Irvine*
Author: **Daniel Chow**, *U. of California, Irvine*

This study examines the relationship between information processing and organization design. In particular, we examine the causal effects of the implementation of a healthcare information technology (HIT) system on the delegation and dispersion of tasks among care units within hospitals. While this relationship has been examined previously, a definitive answer has not been forthcoming largely because of the difficulty in identifying the causal effects of greater information access. We also consider that information processing and hence organization design choices will be sensitive to the ability to establish mutual understanding among interacting care unit members. We focus on the mutual understanding developed through experience working together. We also find that rather than general experience, it is prior dyadic experience between particular doctors and nurses which amplifies this effect. We find that this is especially true for doctors trained at high status institutions. Our study contributes to theories of information processing, organizational learning, and organization design.

Paper is Available to Meeting Registrants Only.

HCM: **Physicians Make the Best CEOs: Resource Utilization Before and During the COVID-19 Pandemic** 

Author: **Alan Belasen**, *SUNY Empire State College*
Author: **Ariel R. Belasen**, *Southern Illinois U., Edwardsville*
Author: **Zhilan Feng**, *Clarkson U.*

Prior studies have shown that physician-led hospitals have several advantages over non-physician-led hospitals. This study seeks to test whether this continues to hold true during the COVID-19 Pandemic. We find that among top-rated hospitals, those that are physician-led achieve higher patient satisfaction ratings through patient-focused care and are more likely to have higher utilization rates. Two outcomes are an increase in patient willingness to recommend the hospital and an increase in Medicare reimbursements. While the COVID-19 Pandemic generated greater demand for inpatient beds, physician-led hospitals improved their hospitals' operating efficiency as compared with those led by non-physician leaders, but CEO tenure did not have any effects on hospital utilization. Recruiting and retaining physicians to lead hospitals, especially during catastrophic times, is a strategy that makes sense. Implications for theory and practice and directions for future research are also provided.

HCM: **How Staff Experience Information Communication During a Crisis: Evidence from Health Care Delivery**

Author: **Tuna Cem Hayirli**, *Harvard Business School*
Author: **Nicholas Stark**, *U. of California, San Francisco*
Author: **James Hardy**, *U. of California, San Francisco*
Author: **Christopher Peabody**, *U. of California, San Francisco*
Author: **Michaela Kerrissey**, *Harvard U.*

Communicating information effectively is a vital means for reducing uncertainty during crises, but how leaders should inform organizational members amid chaos is far from straightforward. Using a sequential qualitative to quantitative mixed-methods study design, we explored frontline clinician experience with information dissemination strategies during the COVID-19 pandemic, and investigated the qualities that make communicated information more desirable to those tasked with navigating the fog of uncertainty. We conducted semi-structured interviews with 55 emergency department personnel, and found that uncertainty, lack of safety, and poor teamwork experience were major challenges for ED staff during the COVID-19 crisis. Participants described feeling overwhelmed by the great deal of information sent to them, confused about conflicting messages, and frustrated that they were unable to find the information they needed. These challenges were ameliorated by the emergence of contextual experts who focused on simultaneously democratizing and centralizing information. Qualitative findings helped generate survey measures, which were distributed to a broader sample. Exploratory factor analysis revealed three factors of theoretical value (information flow, consistency, and accessibility), which helped triangulate qualitative findings. Our study indicates that while uncertainty and fear during crises lead to an increased desire for information among staff, the manner in which that information is delivered is vital.

Paper is Available to Meeting Registrants Only.

Author: **Aishwaryya Deore**, *PhD student in accounting*

Author: **Ranjani Krishnan**, *MSU*

Author: **Anand Nair**, *Michigan State U.*

This study examines whether quality penalties aimed at reducing readmissions improve continuity of health care. In particular, we investigate if the quality penalty policy impacts continuity of care for services that were targeted by the policy through what we refer to as primary spillover effects. We also investigate the secondary spillover effects of the quality penalty policy on continuity of care for related ailments that were not targeted by the policy. The empirical analyses use patient level data for the years 2004-2014 and reveal improvements in continuity of care from primary and secondary spillover effects. We identify several processual and structural factors that contribute to improvements in the continuity of care. Our results suggest that improvements to the continuity of care can be achieved by mandating and incentivizing quality performance on select services. We discuss the implications of our findings on improving continuity of care.

Understanding the Health Care Workforce

Session Moderator: **Sara Singer**, *Stanford U.*

HCM: Not All Roads Lead to Rome: Bridging HRM, Strategic Leadership and Knowledge Transfer in Healthcare 

Author: **Andres Salas-Vallina**, *U. de València*
Author: **Juani Swart**, *U. of Bath*

The efficiency and service quality of healthcare organizations is driven by effective knowledge transfer between healthcare professionals. Specialized medical units are complex organizations where professionals with different profiles need to work together closely and in a coordinated fashion. A deeper understanding of knowledge transfer antecedents could shed light on how medical units deliver effective service quality. In this study, we draw on the Ability, Motivation and Opportunity (AMO) framework and self-determination (SDT) theory, which is still in its infancy in public management. In a sample of 508 medical specialists, we examine whether and how HR practices based on the AMO framework (training, opportunities for development, participation in decision-making, and communication) positively impact on knowledge transfer. The results show that strategic leadership mediates the effect of AMO HR practices on knowledge transfer only when it fosters resilience among medical specialists.

HCM: Profit or Purpose: What Increases Medical Doctors' Job Satisfaction?

Author: **Youngkyun Chang**, *Sogang U.*
Author: **Sanghee Han**, *Sogang U.*
Author: **Won Yong Oh**, *U. of Nevada Las Vegas*

This study integrates two competing views to examine whether medical doctors are satisfied with their jobs when they perceive their hospitals as being oriented toward profit (a hedonic view) or purpose (a eudaimonic view). Using a sample of 127 doctors from 70 hospitals, this study tests these competing views. The results show that doctors who perceive their hospitals as purpose-driven are likely to experience job satisfaction, and this pattern still holds even if they also perceive their hospitals emphasizing profits. However, when the two orientations are perceived simultaneously, only the purpose-driven orientation results in job satisfaction via a sense of meaningfulness. Thus, this study offers comprehensive evidence that while medical doctors are likely to be satisfied with their jobs when they work at either purpose-driven or profit-driven hospitals, only purpose-driven hospitals give doctors a sense of meaningfulness. Theoretical contributions and practical implications are discussed.

Paper is Available to Meeting Registrants Only.

HCM: Professional Certification and Earnings of Health Care Workers in Low Social Closure Occupations 

Author: **Janette Dill**, *U. of Minnesota - Twin Cities*
Author: **Jennifer Craft Morgan**, *Georgia State U.*
Author: **Jane Van Heuvelen**, *U. of Minnesota Twin Cities*

There has been rapid growth in professional certifications in the health care sector, but little is known about the rewards to workers for attaining professional certifications, especially in low social closure occupations where the barriers to entry (e.g., higher education, degrees, licensure) are relatively limited. In this study, we focus on the attainment and rewards for professional certifications in four health care occupations – personal care aides, medical transcriptionists, medical assistants, and community health workers – where certification is generally not required by state or federal regulation but may be attractive to employers. Using the Current Population Survey (IPUMS CPS) between 2015 and 2020, we find that workers of color are less likely to attain a certification, while women are more likely than men to earn professional certifications. However, men experience the largest increase in weekly earnings (11.3%) when they have a professional certification as compared to those without, while women experience lower gains from professional certification (3.8%). Black and Hispanic workers experience modest rewards for certification (weekly earnings that are 1.2% and 5% higher, respectively) that are lower than the rewards gained by white workers (6% higher weekly earnings). Our findings suggest that professional certifications may have modest benefits for workers, but professional certifications often come with significant costs for individuals. Strategies for reducing inequality in the return to credentials and for improving job quality in the care sector are discussed.

HCM: **Going by the Book: Rule-Following in Primary Care Teams** 

Author: **Lucy Chen**, *Harvard U.*

Author: **Maximilian Julius Pany**, *Harvard Business School*

Author: **Bethany Sheridan**, -

Author: **Robert S. Huckman**, *Harvard U.*

Coordinated rule following is often important for ensuring consistent performance by execution-oriented teams in high-reliability industries. In health care, clinical practice guidelines codify best practices as rules for providers to follow. We examine primary care teams that manage new-onset type II diabetes, where diagnosis is based on an abnormally elevated hemoglobin A1c lab value. Using nationwide electronic health record data that include more than 12 million visits by over 1 million patients from 2013 to 2018, we apply a regression discontinuity design—with hemoglobin A1c as the running variable—and a difference-in-discontinuity strategy to compare providers' rule-following responses to the diabetes diagnosis threshold across different team characteristics, including size, concentration, predominant provider type, and familiarity. We measure team performance on rule following and clinical outcomes, including diabetes diagnosis, prescribing of medications, diabetes monitoring, and guideline-concordant disease control. We find that teams that are larger and those with effort more diffusely distributed across members are more responsive to the diabetes diagnosis threshold than are solo providers. We find no meaningful differences in team performance based on whether the predominant provider is a physician or a nurse practitioner, nor do we see an impact of team familiarity. Health care managers can consider organizing large or diffuse teams—where each member contributes meaningfully but not exhaustively—to promote rule following and manage chronic diseases more effectively.

HCM: **Being “Low on the Totem Pole”: What Makes Work Worthwhile for Medical Assistants in Primary Care (WITHDRAWN)**  

Author: **Alden Lai**, *New York U.*

Author: **Bram Fleuren**, *Maastricht U.*

Author: **Jennifer Larkin**, *Tower Health Medical Group*

Author: **Lynda Gruenewald-Schmitz**, *Embrace Leadership Consulting*

Author: **Christina T. Yuan**, *Johns Hopkins U. School of Medicine*

Primary care is undergoing a transformation to become increasingly team-based and multidisciplinary. The medical assistant (MA) is considered a core occupation in the primary care workforce, yet existing studies suggest problematic rates and costs of MA turnover. We investigated what MAs perceive their occupation to be like, and what they value in it to understand how to promote sustainable employability, a concept that is concerned with an employee's ability to function and remain in their job in the long-term. We used a case of a large, integrated health system in the U.S. that practices team-based care and has an MA career development program. We conducted semi-structured interviews with 16 MAs in this system and performed an inductive analysis, which revealed four themes on what MAs value at work: (a) using clinical competence, (b) being a multiskilled resource for clinic operations, (c) building meaningful relationships with patients and coworkers, and (d) being recognized for occupational contributions. Additionally, MAs perceived scope-of-practice regulations as limiting their use of clinical competence. They also perceived task similarity with nurses in the primary care setting and expressed a relative lack of performance recognition. Our results show that some of the practice changes that enable transformation in primary care may hinder MAs' ability to attain their work values. This study highlights how extant theorizing on sustainable employability assumes a high bar for intrinsic work values, but are limited when applied to low-wage workers in team-based environments. Consequently, managerial efforts to effectively employ and retain MAs should consider proactive communications on scope-of-practice regulations, work redesign to emphasize clinical competence, and the establishment of greater recognition and respect among MAs and nurses.

HCM: **Models of NP Integration into the Workflow of Primary Care Practices: A Systematic Review**

Author: **Lena Stevens**, *The Ohio State U. College of Public Health*

Author: **Jennifer Hefner**, *Ohio State U.*

Background Nurse practitioners (NPs) have been proposed as one solution to the U.S. primary care physician shortage, leading to a body of research on the appropriate scope of work for the new professional role of an NP within primary care practices. Yet, among studies of NP integration into patient care workflows, there is a lack of consistency in the terminology used to describe models of care. This work aims to provide more clarity around ill-defined and overlapping terms around NP integration into primary care and therefore advance the conversation around NP integration into the workflow of primary care practices. Methods A systematic review of articles on NP-physician interprofessional relationships and models of care was conducted to develop an inclusive overview of the academic literature on this topic. Results A total of 42 papers fit the inclusion criteria. The terms most frequently used to describe NP integration were collaboration, team-based approaches, and comanagement. Most papers used a combination of terms to describe a specific type of NP integration. Only 28 presented a thorough description of NP-physician interactions. Guided by theory, papers were categorized based on power structure (hierarchical vs. complementary) and processes of primary care provision (collaborative vs. siloed), leading to the identification of four distinct models of NP integration – complementary/collaborative, complementary/hierarchical, siloed/collaborative, and siloed/hierarchical. The most common categorization was complementary/collaborative. Conclusion This research highlights the lack of differentiation between terms currently used to describe NP integration into primary care and presents new labels that describe distinct models of care.

Newcomers and Socialization

Session Moderator: **Srinivas J**, *IIM Visakhapatnam, India*

HR: Colleagues, Friends, and Both: How Different Social Networks Affect Processes of Newcomer Adjustment 

Author: **Hao-Yun Zou**, *School of Management, Huazhong U. of Science and Technology*

Author: **Zitong Sheng**, *Curtin U.*

Author: **Xuejing Song**, *Huazhong U. of Science and Technology*

Newcomer adjustment literature maintains that newcomers should be strategic and purposeful to build social networks (e.g., information, friendship) to facilitate their adjustment to the new job. However, the literature ignores the overlap between information and friendship networks and how the overlapping network helps newcomers to adjust. Based on social network research and the literature on newcomer adjustment, we propose that different social networks (i.e., information, friendship, and overlapping) will affect newcomer learning, assimilation, and role-making, respectively. Four waves of data collected from a sample of 178 organizational newcomers were used to test our hypotheses. Results suggest that the number of strong information ties positively predicted role clarity and subsequent task performance (i.e., the learning process); the number of weak friendship ties negatively predicted organizational identification and subsequent job satisfaction (i.e., the assimilation process); the number of “close comrades” (i.e., those ties that strong information connections overlapped with strong friendship connections) positively, whereas the number of “indifferent workmates” (i.e., those ties that strong information connections overlapped with weak friendship connections) negatively predicted job-change negotiation and subsequent authentic self-expression (i.e., the role-making process). Overall, this study shows that different social networks have implications for different adjustment processes for newcomers, and highlights the importance of the overlapping networks for newcomer role-making.

HR: Newcomer Turnover, Replacement, and Firm Performance

Author: **Youngsang Kim**, *Sungkyunkwan U.*

Author: **Hyesook Chung**, *Cornell U.*

Author: **Yong Geun Kim**, *POSTECH, Corporate Citizenship Research Institute*

Author: **Janghyun (Jason) Chun**, *Mercer Korea*

This study examines whether collective turnover rates relate to firm performance and how turnover properties such as newcomer turnover proportion of total turnover events and replacement of turnover through external hiring and internal mobility jointly influence the effect of collective turnover rates on firm performance. Using a dataset of 240 firms with 1,440 firm-year observations over 2006-2016, we find that firms with higher collective turnover rates generally have lower firm performance, but the negative effect of collective turnover is strengthened when firms have more newcomer departures of total turnover events (newcomer turnover proportion). Furthermore, our findings indicate that internal mobility utilizing existing employees buffers the disruptive effect of newcomer turnover proportion on firm performance, and the use of internal mobility is more effective at reducing the negative effect of newcomer turnover than external hiring. Our study contributes to the literature on collective turnover, suggesting that the disruptive effects of collective turnover rates are contingent upon who are leaving and the type of human capital flow.

HR: Is Organizational Socialization Moving Towards Digital Socialization? - A Perspective 

Author: **Srinivas J**, *IIM Visakhapatnam, India*

Author: **Sita Vanka**, *U. of Hyderabad*

In an Organizational context, sharing knowledge builds innovation sparked through socialization. It is a necessity in a VUCA world, supported by the availability of digital technology aids; individual networks to socialize and gain visibility/acceptance in organizations. More so in project-based organizations, the concern for most organizations is to capture the learning of individuals/teams, stay competitive, and codify knowledge in a digital format. Socialization content is thus individually focused but concentrates on what is learned during socialization. Chao et al. (1994) proposed six key learning dimensions that characterize the socialization process. The socialization literature has been criticized for being primarily descriptive; lacking empirical testing; methodologically weak and inadequate; theoretically and conceptually fragmented to the point that it is poorly understood (Feldman, 1976; Fisher, 1986) having the least amount of research (Wanous & Colella, 1989) and socialization for the knowledge society (Karpov, 2016). The pandemic, however, has brought the issue to the center stage of organizations, with both the organizations and the employees across the world experimenting with ideas to continue the socialization efforts through digital means. India and Indian IT organizations is no exception to this fact. This study is an attempt to examine knowledge acquisition and organizational socialization in the Indian IT Industry. Six organizational socialization content areas proposed by Chao et al. (1994) were studied among 393 employees in 6 metro cities, which are IT hubs in India. Employees believed in continuous learning using digital means, were career savvy and profession-oriented. Organizations demonstrated their willingness to encourage and support their socialization, knowledge acquisition, and sharing, thus paving the way for digital socialization. Digital socialization is seen as an emerging phenomenon in organizational socialization. Similarly, the six socialization content areas correlated positively with language followed by organizational goals and values for socialization in the Indian context, thus leading to the concept of digital socialization where new digital content, new digital processes, and tools emerge out of the digital interactions.

HR: Overqualification in Socialization Context: a Social Capital Perspective

Author: **Wuyang Chen**, *Department of Management and Marketing, The Hong Kong Polytechnic U.*

Author: **Amy Y. Ou**, *Department of Management & Marketing, Faculty of Business, Hong Kong Polytechnic*

Author: **Qin Su**, *Sun Yat-Sen U.*

Author: **Lynda Song**, *Leeds U. Business School*

The relationship between overqualification and performance exists puzzle, and the social influence of overqualification on employees, especially during the socialization process, received less attention. Taking into account the perspective of social capital and the theory of status inconsistency, we proposed a moderated mediation model linking objective overqualification to performance. Based on the archival data of a single real estate agency company in mainland China, we delineated the trajectory of social capital accumulation process by 4690 newcomers, and identified how objective overqualification affected degree centrality change and subsequent job performance. The results of this study suggested that objective overqualification adversely affected in-degree centrality increase and subsequent job performance. Experience strengthened this negative effect. We discussed the theoretical and practical implications of this research.

In this symposium, we demonstrate the detrimental role leadership has played throughout the COVID-19 pandemic. The three studies address the predictors (e.g., charisma, romance in leadership, perception of crisis) of effective leadership measured as follower perceptions and safety behaviors. In addition we compare leadership effectiveness cross-culturally. This research addresses calls for research on leadership during this novel pandemic. The findings within this symposium offer insight for effective leadership practices for future crises.

HR: Improving Gig Worker Performance and Retention on Staffing Platforms

Author: **Agnes Bäker**, *Vrije U. Amsterdam, School of Business and Economics*
Author: **Martin Natter**, *U. of Zurich*

Gig work, with its short-term nature, has reduced employers' interest in investing in workers' productive capacity. In contrast, online staffing platforms as intermediaries matching workers and employers have an interest in developing (and retaining) a high-performing worker base. We propose three easily implementable and low-cost measures that online staffing platforms can incorporate into their matching algorithms to improve on-site gig worker performance and retention on the platform. Testing these measures in a sample of 4,025 worker-gig matches of a major European staffing platform, we find that the combined effect of these measures can increase worker performance by 55.6 percentage points.

HR: Better Explaining the Benefits Why AI?

Author: **Alina Köchling**, *Heinrich-Heine U. of Dusseldorf*
Author: **Marius Wehner**, *Heinrich-Heine U. of Dusseldorf*

Algorithm-based selection tools are increasingly finding their way into a company's selection processes to increase efficiency. However, previous studies point to adverse applicants' reactions. Despite the increasing popularity of algorithm-based selection tools, knowledge about what actions can be taken by companies to increase AI acceptance is still in its infancy, even though multiple studies show that the usage of technology-mediated selection tools causes negative applicants' reactions. Therefore, this study aims to investigate the applicant's perception when algorithm-based selection tools are used and then thoroughly identify actions to efficiently implement and use these tools without triggering negative applicant reactions. Using a scenario-based-between-subject design with employees (N=200), systematically varying the information on the company website about the reason why the company uses AI. We found that the usage of AI in selection decreases the perceived fairness, personableness perception and increases the emotional creepiness. Moreover, we found that transparency about the reasons why the company uses AI in the selection process in video form seems equal to a human evaluation in terms of fairness, creepiness, and personableness perception. In turn, fairness and personableness perception mediate the association between an algorithm-based selection process and organizational attractiveness and the intention to further proceed with the selection process.

HR: A Systematic Review of the Use of Technology in the After-Action Review (or Debrief)  

Author: **Nathanael Keiser**, *U.S. Army Research Institute for the Behavioral and Social Sciences*

The after-action review (AAR), also termed debrief, is a special type of work meeting that commonly encompasses some form of technology because of the contexts in which it is most frequently applied (i.e., for action teams in simulated task environments). However, technology is largely treated as a tangential consideration in the extant AAR literature, which serves as the impetus for the present study. Based on a systematic review of 73 empirical articles, a variety of nuances were identified about (1) where in the AAR administration or process technology is used, and the (2) users, (3) type, and (4) use of that technology. Technology is indeed common to AARs, but largely relegated to either aid in the task performance episode that precedes the AAR (91%) or in the provision of task feedback (61%). More broadly, the findings from the present review reflect the inherent complexity of determining how best to use technology in AARs with little extant guidance. Researchers have responded to this complexity often by relying on a single type of technology to provide trainees with feedback (i.e., a video review) and on expert facilitators to dictate how the objective data collected via technology is provided to trainees. The present review provides the basis for subsequent conceptual development and empirical research to help explain the effect of technology on the effectiveness of AARs.

HR: Training Transfer during COVID-19 Pandemic: A Study of Technology Adoption in the Training Programs   

Author: **Anjali Bansal**, *Indian Institute of Management, Lucknow*
Author: **Tanvi Panchal**, *MICA, Ahmedabad*

Over the years, the idea of training has advanced with technology and gained massive momentum during the COVID-19 pandemic. During this pandemic, the organizations were compelled to integrate technology with almost every function and transform their business operations to remain competitive. This crisis made organizations expend significant efforts on the competency mapping of their employees to successfully meet the ever-dynamic demands of this pandemic. The COVID crisis required organizations to provide their employees with adequate digital skills to cope with the technological adoptions, which happened across the functions. However, COVID posed serious mental and physical challenges on people, making it hard for them to learn the intended skills, and thus, failing to internalize the training programs and thus, absence of training transfer. We used the grounded theory approach and collected data through qualitative interviews of HR professionals who belonged to multinational organizations majorly impacted by the pandemic and needed transformational measures to meet the situation. We propose a research framework that focuses on strategically arrived training need assessment supported by the availability of digital infrastructure to ensure successful transfer of implemented training programs. Further, training transfer was found to be reflected in the five different aspects of productivity, those are- self-directed groups, empowered employees, virtual collaborations, high-performance work systems, and knowledge-based HRM capacity. This research has major implications for HR professionals responsible for training, and for line managers who are accountable for training-led productivity.

Presenter: **Jonathan Edward Booth**, *London School of Economics and Political Science*

The nature of work is changing rapidly and global trends such as demographic changes, exponential technological growth and changes in individual value systems have accelerated a shift with regards to how, where and when work is organized. Whilst an abundance of research has explored the implications of modern work from economic and sociological perspectives and discussed the consequences for organizations, relatively little is known about how the changing notion of work impacts workers and teams. This symposium addresses this gap by bringing together leading scholars who will shed light on how workers experience changes in work and how this influences their careers, their attitudes and their wellbeing. Using the presentations as a starting point, the aim of the symposium is to discuss common patterns, but also interesting differences in order to identify how individuals benefit from modern work, whilst highlighting potential challenges and drawbacks.

Pay Transparency and Pay Comparisons

Session Moderator: **Felix Böling**, *LMU Munich School of Management*

HR: [The Effectiveness of Pay Transparency Laws](#) 

Author: **Felix Bölling**, *LMU Munich School of Management*

Governments around the globe have introduced various types of pay transparency laws with the aim of reducing the gender pay gap. Due to the heterogeneity of legislation and scattered academic evidence, it is difficult to draw general conclusions for policy and research. This article aims to answer whether and which pay transparency laws are effective in reducing the gender pay gap. Using a systematic review, it first provides a complete collection of pay transparency laws in the US and Europe. The laws are characterized in terms of whether they influence 1) pay communication transparency 2) pay outcome transparency, or 3) pay processes transparency. Second, the article systematically reviews the empirical literature evaluating pay transparency interventions and maps these studies to the conceptual framework. The empirical research shows that pay transparency laws can be effective in reducing the gender pay gap. However, effectiveness depends on the type of pay transparency. Evidence on the underlying mechanisms is discussed. In addition, the article identifies laws that have not yet been researched and highlights laws that should be studied with particular urgency from a theoretical perspective.

HR: [The Effect of Pay Transparency on Employee Integrity: Taking Social Mindfulness into Account](#) 

Author: **Ilanit SimanTov-Nachlieli**, *Tel Aviv U.*

Author: **Peter Bamberger**, *Tel Aviv U.*

Extending prior research on the role of injustice perceptions and negative emotions in explaining the positive effect of pay transparency on pay-disadvantaged employees' unethical behavior, we examine a more automatic process – (decreased) social mindfulness – as further explaining this effect. Two simulation-based experiments using gig-workers, high in psychological involvement and realism, supported the mediating role of social mindfulness. Specifically, Study 1, manipulating employees' pay to be lower relative to that of virtual teammates, provided casual evidence for the positive indirect effect of pay transparency (vs. secrecy) on employees' unethical behavior towards unrelated peers (i.e., not one of their teammates) through (lower) social mindfulness. Study 2, a pre-registered experiment also using gig-workers, replicated this indirect effect with respect to behavior targeted against both related- (individuals observably paid more) and unrelated-peers (i.e., no knowledge of their pay), and found that it persisted even when taking the negative emotions resulting from injustice perceptions into account. Interestingly, Study 2 also indicated that the negative impact of pay transparency on social mindfulness and subsequent unethical behavior, is significantly more pronounced among individuals with average and high (rather than low) social value orientation. Theoretical and practical implications are discussed.

HR: [Works Council-Management Relations, Pay Transparency and Sorting](#) 

Author: **Lena Göbel**, *LMU Munich*

A growing number of econometric studies found that works councils shape personnel policies of organizations for the benefit of employees. They focus on the existence of a works council, remaining silent about the different facets of works council-management relations. Expanding industrial relation literature and pay transparency research, I study how cooperative works council-management relations influence pay transparency and –secrecy practices and in turn, sorting related outcomes. I combine survey data from plants and works councils and find that cooperative works council-management relations are positively related to employer attractiveness and negatively to turnover via increased pay transparency. I discuss the results and outline their theoretical and practical implications.

HR: [Pay Comparisons: A Semi-Systematic Literature Review](#)

Author: **Ellen Rebecka Kackur**, *BI Norwegian Business School*

There has been a growing body of literature on the effects of pay comparisons over the last two decades. This literature review provides a comprehensive overview of this field, and categorizes the empirical research with regard to antecedents (direction) and consequences (reaction) of pay comparisons and equity perceptions on an individual level. A literature search in Web of Science resulted in the selection of 62 empirical articles published between 2000 and 2020 that focused on pay comparisons and relative pay among employees. This overview shows that pay comparisons and perceptions of pay equity are associated with a variety of employee outcomes, both attitudinal (e.g. pay satisfaction) and behavioral (e.g. performance and turnover). However, the findings of these streams of research are inconclusive. This review aims at merging a dispersed field through the theoretical lenses of equity theory and social comparison theory, and finally provides an integrated theoretical framework for how to define and conduct research on this topic. In conclusion, this paper aims at describing the state-of-the-art of research on pay comparisons, bridging theoretical lenses used in this research, and serving as a foundation for future directions within the field.

Micro-level research on corporate social responsibility (CSR) is slowly, but surely, infiltrating organizational behavior (OB) and human resources (HR) research. However, there is still much to uncover about the micro-foundations of CSR. In this symposium, we seek to advance this line of research by addressing a few neglected perspectives on CSR. The first two papers in this session address antecedents to CSR perceptions and CSR engagement. Illuminating such antecedents is arguably the first step to advancing the micro-foundations of CSR to understand how, and why, employees perceive and engage in CSR initiatives. Next, a humanitarian perspective to CSR (i.e., one that considers the beneficiaries of CSR initiatives), is adopted to investigate whether the intended beneficiaries are truly benefiting from such practices. Without knowing the effectiveness of their CSR initiatives, organizations may be wasting valuable resources while beneficiaries feel cheated. The last two papers in this session examine the “dark side” of CSR. Although CSR is traditionally thought to benefit organizations and employees, increasing cynicism and skepticism about such practices may cause even the most well-intentioned organization to experience backfire effects. Taken altogether, each of the presentations in this symposium adds a unique perspective to extend our understanding of the micro-foundations of CSR.

**Broadening the Social Context for Creativity: New Forms of
“Together” to Create a Better World**
Broadening the Social Context for Creativity

Organizer: **Nora Y. Madjar**, *U. of Connecticut*
Organizer: **Kim Jaussi**, *Binghamton U.-State U. of New York*

The purpose of this symposium is to bring together emerging empirical research that examine different aspects of the broader social context highlighting both their impact on different stages of the creative process as well as the consequences of creativity for the social context and employee well-being. We present five papers that investigate (a) how volunteering during crisis may influence creativity at work, (b) how work-family enhancement can influence creativity, (c) how support from an external organization may be necessary to foster creativity and innovation, (d) how the social context may promote the communication of creative ideas, and (e) how engagement in creativity may impact the work-family interface as well as psychological well-being. The presentations also cover the different roles of effective leadership and internal support in interaction with these broader aspects of the context. Therefore, this symposium demonstrates how, together, we can make a better world through creativity.

Participant: **Jessica Mariah Rivin**, *U. of Colorado, Boulder*
Participant: **Stefanie Johnson**, *U. of Colorado, Boulder*
Discussant: **Alicia A. Grandey**, *Pennsylvania State U.*

This symposium showcases four papers that draw on a diverse array of methods to investigate various circumstances in which a person's social identities (organizational, professional, occupational, and gender) are made salient and influence their experiences of work. Through these papers, we shed light on both identity-specific outcomes (e.g., changes in identification levels, feelings of identity threat and affirmation) and non-identity-specific outcomes (e.g., employee work contributions) that can stem from these experiences. Taken together, our four papers and discussion strive to enrich and generate future research on identity-implicating experiences, as well as deliver actionable insights for managers.

Home Country Impact and Liability of Foreignness

Session Moderator: **Guus Hendriks**, *U. of Amsterdam*

IM: Outward FDI and Domestic Employment Growth: A Penrosean Coordination Challenges Framework

Author: **Guus Hendriks**, *U. of Amsterdam*
Author: **Vera Kunczer**, *WU Vienna*

Research to date has only rarely studied firm-specific reasons that influence how multinational enterprises grow employment in their home country after they make a foreign direct investment (FDI). We apply a Penrosean perspective to understand post-investment coordination challenges and develop novel theory about the domestic employment effects of the FDI's relative size. Specifically, we argue that MNEs' home-country employment growth is greater for relatively larger projects because of constraints in human resources who can attend to an increased amount of coordination challenges. Further, we suggest that MNEs' establishment-mode choice, their regional orientation, and their degree of state ownership co-shape that relationship. We find support for our hypotheses analyzing 409 projects by MNEs from 13 countries.

IM: Dealing with Hostility from Host Country Nationals: The Case of African Missionaries in France

Author: **François Grima**, *UPEC*
Author: **Isaac Houngue**, *UPEC*
Author: **Lionel PRUDHOMME**, *IGS*

This paper aims to identify the forms of hostility that host country nationals direct at expatriates and to explore how the latter deal with the stress they experience as a result. Drawing on 35 interviews with African missionaries living in France, we find that hostility from host country nationals is intense and wide-ranging in nature and that it is present in both private and professional domains. This concerns everyone the expatriates work with, from parishioners to their hierarchical superiors. To deal with this hostility, the missionaries develop adjustment strategies that seek to tackle the source of the problem – unless they feel their chances of success are slim. Our findings contribute to the literature by demonstrating the existence of hostility among peers. They also show that, for these expatriates, who are unusual in that they are celibate and their missions are short, agency is facilitated by support from other expatriates but hindered by an overemphasis on cultural distance.

Paper is Available to Meeting Registrants Only.

IM: An Integration of Premium and Liability of Foreignness

Author: **Hao Ma**, *National School of Development at Peking U.*
Author: **Xuanli Xie**, *Peking U.*

Liability of foreignness, an important concern in the international management literature, has been documented as a major factor affecting an MNE's entry decisions, operations, and performance within a host country. The positive side of an MNE's foreignness, i.e., foreignness as assets, benefits, or advantages, however, is also getting increasing attentions in the literature. Against such a backdrop, this article attempts to formally advance the construct of premium of foreignness, juxtapose it with liability of foreignness, and propose the simultaneous consideration of both premium and liability when studying MNEs operating abroad. Specifically, it dissects the premium of foreignness at three levels, i.e., the host country's attitude toward all MNEs' foreignness per se, the overall status and respectability of an MNE's home country, and the MNE's home country's global competitiveness in a particular industry. The premium of foreignness is different from firm-specific advantages of MNEs, the advantages arising from their multinationality and global presence, or host-country specific advantages. To an MNE in a particular host country, premium and liability of foreignness could both exist at the same time, and they jointly determine the MNE's entry and operation as well as its performance in that country. An integrative typology of such joint effects is advanced along with a series of theoretical propositions which are expected to help enhance our understanding of the overall effect of MNEs' foreignness.

CSR and Subsidiary-HQ Relationships

Session Moderator: **Cheng Li**, *Ivey Business School*

IM: What Factors Drive MNEs' CSR Practices? An Analysis of Subsidiary and Supplier Reputation Risk   

Author: **Cheng Li**, *Ivey Business School*

Author: **Alvaro Cuervo-Cazurra**, *Northeastern U.*

We analyze the drivers of corporate social responsibility (CSR) adoption in multinational firms. Building on internalization theory and the view of the multinational as a network, we argue that the reputation risk within the multinational's portfolio of subsidiaries and suppliers determines its adoption of CSR. Specifically, we propose that multinationals facing higher internal (subsidiary) and external (supplier) reputation risk are likely to adopt more CSR practices, thereby preventing stakeholder backlash and protecting reputational advantages. We also propose that these relationships differ for state-owned firms, because they are created to promote social agendas like employment, public goods, and development. Hence, we argue that state-owned multinationals, in comparison to private ones, have a stronger CSR response to risk in their suppliers and subsidiaries. We find robust support for these ideas in an unbalanced sample of 726 multinationals from 40 home countries during 2008-2018.

Paper is Available to Meeting Registrants Only.

IM: MNEs, Heterogeneity in Corporate Social Responsibility, and Subsidiary Employment in Host Countries   

Author: **Eunsuk Hong**, *SOAS U. of London*

Author: **Jae C. Jung**, *U. of Missouri, Kansas City*

Author: **In Hyeock Ian Lee**, *Loyola U. Chicago*

Building on the theories of CSR and MNEs, this study investigates the relationships between multinational enterprises' (MNEs') corporate social responsibility (CSR) commitment and subsidiary employment in host countries. This study theorizes that MNEs' CSR impacts on overseas subsidiary employment vary by CSR types (social versus environmental); those impacts may be contingent on the MNEs' firm-level motivations of outbound foreign direct investment (FDI), host country-specific institutions, and geographic orientations in the triad. The empirical findings from a sample of Japanese MNEs' 11,086 subsidiary-year cases over the period of 2002–2013 are three-fold: (1) it supports the positive relationships between each of social and environmental commitment and subsidiary employment of Japanese MNEs in host countries; (2) the positive effect of social commitment on the subsidiary employment of Japanese MNEs becomes stronger in host countries governed by informal institutions or within the home region of the Japanese MNEs in the triad; and (3) the positive influence of environmental commitment on the subsidiary employment levels is elevated under the Japanese MNEs' production-seeking outbound FDI motivation or in foreign countries governed by formal institutions. The study concludes with theoretical, empirical, and practical implications to the IB literature.

Paper is Available to Meeting Registrants Only.

IM: Sustainability in Multinational Companies: The Alignment Between Subsidiaries and Headquarters

Author: **Stefano Franco**, *Luiss Guido Carli U.*

Author: **Alfredo Valentino**, *ESCE International Business School*

Author: **Matteo Caroli**, *Luiss Guido Carli U.*

Based on institutional theory, this paper aims at understanding what is the impact of multinational companies' (MNCs) internal and external institutional environments on the alignment between subsidiaries and headquarter intentions about Corporate Sustainability (CS). With a quantitative study focusing on the hotel industry, with primary data collected in 19 countries, we assess the impact that internal and external institutional pressures have on the alignment. In doing so, we contribute to the debate about the transfer of sustainability practices within MNCs, highlighting organizational and environmental conditions that ease the spread of sustainability within multinational organizations, and the effective value that their CS policies have on the effective implementation of such practices.

Workplaces and Their Consequences

Session Moderator: **Federico Magni**, *ETH Zürich*

OB: From WorkSpaces to WorkPlaces: A Multilevel Model of Place Crafting 

Author: **Radostina Krassimirova Purvanova**, *Drake U.*
Author: **Alanah Mitchell**, *Drake U.*

Past studies of the impact of work space on work outcomes have generated mixed results in the organizational space literature. We apply a new perspective grounded in theorizing on place rather than space, and explore the notion that organizations are best positioned to influence employees when they transform their workspaces into workplaces. Through an ethnographic case study, we uncover a process of place crafting—a multi-level collaboration to transform the office space into place, initiated by the organization, taken up by employees, and sustained by a partnership between the organization and employees—that engenders employee place attachment. The model we develop shows that space and place are involved in a symbiotic relationship – space provides structure and social fabric for place to emerge, and place breathes life, humanity, and meaning into space. We discuss potential challenges, and practical applications, of the place crafting process.

OB: New Normal, but Good Normal? Testing the Effect of a Hybrid Way of Working on Employee Effectiveness

Author: **Sophia Zimmermann**, *U. of Konstanz*

The COVID-19 pandemic has made telecommuting the “new normal”. Employees can now move rather freely between work locations, from the office to home, back again, or even to another location to perform their work. This increased flexibility in the location of work raises the question of whether employees’ weekly work effectiveness varies when they telecommute to varying extents throughout the week. Applying the conceptual framework of conservation of resources theory, the current study addresses this critical issue by developing and testing a conceptual model that highlights how employees’ effectiveness waxes and wanes in response to their extent of telecommuting during a workweek. Furthermore, I explore the moderating role of self-goal setting in this process. Results from a panel study of German employees conducted over 1.5 years provide support for a curvilinear within-person relationship between the extent of telecommuting and employees’ effectiveness in terms of work performance and work engagement in the shape of a “U”. I discuss the implications of these results for the literature on telecommuting. Furthermore, these findings also have important implications for practitioners who face the challenge to shape a post-pandemic future of work in which a hybrid way of working is possibly here to stay.

OB: Managing Boundaries while Working Remotely: The Interactive Effect of Temporal and Physical Tactics   

Author: **Federico Magni**, *ETH Zürich*
Author: **Ganqi Tang**, *U. of Fribourg*
Author: **Beatrice Manzoni**, *Bocconi U.*
Author: **Leonardo Caporarello**, *SDA Bocconi and Bocconi U.*

Remote working threatens workers’ affective wellbeing and productivity by increasing the likelihood and impact of work-life boundary violations, as suggested by boundary theory. To understand how the usage of temporal and physical boundary management tactics impacts workers’ daily wellbeing and productivity when working remotely, we collected multi-wave survey and daily experience sampling data on 134 university professors during the early stages of Covid-19. The results of our multilevel analyses showed that temporal tactics were positively related to affective wellbeing and productivity, whereas physical tactics were not. Surprisingly, the interactive effect of tactics was not synergistic, but rather physical tactics weakened the positive link of temporal tactics with affective wellbeing and productivity. We discuss how our study extends boundary theory and work-life interfaces research and provides insights into managerial practices.

Paper is Available to Meeting Registrants Only.

OB: Self-Efficacy in Coworking-Spaces: An Analysis of the Sense of Community and Permeability 

Author: **Till Marius Gantert**, *U. of Bayreuth*
Author: **Mahmood Aslam**, *U. of Bayreuth*
Author: **Maximilian Deist**, *U. of Bayreuth*

Coworking spaces enable coworker from different professional backgrounds to work together. Initial empirical findings suggest that coworking spaces provide a sense of community among professionals without a common professional affiliation. Our study is based on surveys of 208 users and 29 coworking space providers and by using structural equation modelling, we empirically analyze the relationship between the perceived sense of community, perceptions of its permeability, and the self-efficacy of its users. Additionally, we test the moderating effect of user-provider alignment in perceptions of sense of community on user self-efficacy. In this paper, we contribute to the seemingly contradictory notions of community and permeability in coworking spaces and how misaligned perceptions between users and providers lead to diminishing self-efficacy.

Change Characterization via Social Media, Art, and Messaging

Session Moderator: **Donna Ogle**, *Rockford U.*

ODC: **Lost in Translation? A Social Media Characterization of Organization Development** 

Author: **Donna Ogle**, *Rockford U.*

Author: **Ram Tenkasi**, *Benedictine U.*

Author: **William Brock**, *Colorado Christian U.*

Social media is increasingly becoming a dominant venue for communicating and exchanging knowledge in several academic disciplines. One question of recent interest is to what extent characterizations of a discipline on social media hold true to its traditional characterizations. Are they congruent or incongruent? Are they sufficiently broad or insufficiently narrow? In this study we set out to examine the characterization of OD, particularly its construal in the Twitter domain, a prominent social media platform, and how similar or dissimilar this construal is compared to more traditional characterizations of OD. An analysis of over 5.7 million tweets scraped from Twitter during the period May 1, 2018 to June 26, 2018 indicates that the Twitter based construal of OD shares very limited characteristics with traditional characterizations of OD drawn from both contemporary and historical OD literature. It extends the call for a broader cadre of OD scholars and practitioners to participate in research and practice in the arena of social media both as a novel platform and as a way of enriching OD's characterization and prominence in this knowledge forum.

Paper is NOT Available. Please contact the author(s).

 ODC: **Change Communication, Construal Level and Reactions to Organizational Change**   

Author: **Xi Chen**, *U. of Nottingham, China*

ODC Division Best Paper Finalist

Change communication delivered collectively plays an essential role in helping recipients make sense of and adapt to change. Based on construal level research, we theorize that the construal level of change messaging (that is, how abstract or concrete change messaging is) determines how effectively people can bridge distances. We suggest that when change is frame-breaking, more abstract change messaging provides a strategic worldview and thus reduces uncertainty and elicits more favorable attitudes toward change than concrete messaging. When change is more incremental, concrete change messaging facilitates behavioral change. Two field experiments manipulating the construal level (i.e., abstractness or concreteness) of collective change communication demonstrate support for our hypotheses. In particular, more abstract change communication increases the favorability of attitudes about frame-breaking organizational change relative to more concrete communication, and employees' perception of the positive impact of change mediates this relationship. Conversely, for incremental change, more concrete change communication facilitates behavioral change more than abstract communication, and by increasing the perceived feasibility of change. Implications for research on the communication of change, collective-level interventions shaping recipient sensemaking about change, and the application of construal level theory to organizational change contexts are discussed.

Paper is Available to Meeting Registrants Only.

ODC: **Organizational Theater and Change: Rethinking Qualitative Inquiry Through Stanislavski's System**

Author: **Gediminas Baublys**, *Vilnius U.*

The paper contributes to the heterogeneous organization research field by deepening the understanding of the complex organizational transformation phenomenon and aims to evoke resonance in the diverse audience about the quality of the findings and the current stagnant state of the research. The extensive data of the concept analysis and a study of the actor's training system developed by Konstantin Stanislavski are combined through arts-informed qualitative research methodology to gain new theoretical insights. Presented dramaturgical way of interpreting and sensemaking of the organizational development and strategic change is relevant as it steps towards the new understanding of qualitative inquiry in organizational transformation research. Conceptual adaptation of underlying constructs of the actor's training and acting techniques described in the books "An Actor Prepares" and "Building a Character" deepens the discussion of the subjectivity of organizational research and why the arts-informed qualitative research perspective has the potential to advance the understanding of organizations.

**Action Research Lab: Foundations for
Creating a Better World Together**
Action Research

Participant: **Danielle Zandee**, *Nyenrode Business U.*
Participant: **A.B. Rami Shani**, *California Polytechnic State U.*

Action research offers a powerful perspective for the co-creation of a better world, because it engages people in collaborative inquiry that combines meaningful action and knowledge creation around issues of high mutual concern (Bradbury, 2015). As research with clear practical relevance, it bridges the theory-practice gap by simultaneously generating impactful action and innovative knowledge. Indeed, one of the premises of this PDW is that action research plays an important role in addressing today’s pressing issues by developing new knowledge and new forms of knowing for organizational and societal change. It, by definition, does so through inquiry together with, rather than on or for, those who are impacted. The PDW is directed to doctoral students, their supervisors, and others who have an interest in undertaking action research out of a desire to address ‘red and hot’ global and organizational challenges. While individuals and groups bring distinct knowledge, insights and experiences to a joint change initiative, the collaborative inquiry effort-by-design establishes the platform for deeper level understanding and robust, collective action (Shani & Coghlan, 2021). Participants in this PDW session will be invited to focus on their own action research experiences, ambitions, and questions. These will serve as reference point for a shared exploration of action research orientations and principles, design choices and potentials to create thought/action repertoires for world betterment. Participants will leave with an increased awareness of how to undertake and/or supervise action research as a mode of pragmatic scholarship while increasing participants’ and organizations’ capabilities to learn and change.

Organizational Culture Dynamics

Session Moderator: **Soomin Sophie Cho**, *Columbia Business School*

OMT: **The Effects of Cultural Diversity on Entrepreneurial Strategy: Emotional and Cognitive Perspectives** 

Author: **Soomin Sophie Cho**, *Columbia Business School*

Finalist for the OMT Division Best Paper on Entrepreneurship Award

What drives differences in strategic choices in entrepreneurial ventures? The entrepreneurship literature has shown that technology ventures often rely on information they acquire from sources such as mentors and investors to make strategic decisions about new products or ideas. While the entrepreneurship research has found much theoretical and empirical support for the importance of collecting information for venture strategies, research is largely silent on how ventures process information for strategic choices. After gathering information, ventures vary in how they make sense of information, which can be carried out through coordination and cooperation among their members, in order to reach decisions on their strategies collectively. To shed light on this process, I examine whether the diversity of emotional and cognitive organizational culture in the formative years of a venture drives differences in information processing for its strategic choices of exploration and exploitation. I test these ideas by applying natural language processing tools to the employee review and news release data on young technology ventures. Results reveal that ventures with a higher level of diversity in emotional culture in the founding stage of the venture tend to choose more explorative strategies. In contrast, ventures with a higher level of diversity in cognitive culture are likely to pursue more ambidexterity by balancing exploration and exploitation. I discuss implications for this research on entrepreneurial strategy and organizational culture.

OMT: **“Managed Culture”: Why Frontline Workers are Less Satisfied with Culture than Professionals**

Author: **Victoria Zhang**, *Massachusetts Institute of Technology*

A growing research consensus establishes that the culture and values of firms are critical for driving performance. Culture matters because it brings diverse perspectives together into a shared purpose. However, there is strong ethnographic evidence that individuals assess organizational cultures differently, with working-class employees placing greater weight on “security” and “morality” and elites putting more weight on “status” and “opportunities” at their firms. How does class influence cultural interpretation within firms? Using longitudinal data from a platform that amalgamates reviews at companies, we investigate the extent to which the “cultural topics” lauded by employees higher up on the job ladder are decried by those lower down on the job ladder. Elite workers tend to think more highly of the culture and values at firms than working-class employees. While elites focus on dynamism, innovation, and merit, working-class employees talk about pay and a firm’s loyalty to their workers. Differences in cultural topics identified explains 30 percent of the variation in culture and values assessments, while differences in interpretation of the same cultural topics explains 25 percent of the variation. This study provides evidence for the role of class and cultural interpretation on satisfaction with culture and values within firms. A difference-in-difference analysis suggests that as companies begin to enact cultural change, elites appreciate the culture more. “Managing culture” necessitates understanding how cultures will be assessed and interpreted differently by individuals with different class backgrounds.

Paper is Available to Meeting Registrants Only.

OMT: **The Cultural Underpinnings of Organizational Identity Shaped by External Identity Referents**

Author: **Tirza Gapp**, *Cambridge Judge Business School*

Author: **Jennifer Howard-Grenville**, *Cambridge Judge Business School*

In this qualitative study, we examine how an organization that permanently sits between two or more other organizations - salient identity referents - constructs its own identity. Drawing on a processual lens on identity, we find that the organization 'caught in the middle' constructs its identity by drawing on various forms of identity work: identity borrowing, identity referencing and identity affirmation. We find that these processes of identity work are underpinned by cultural mechanisms in that the enactment of cultural practices feeds into organization members' understandings of and claims about their organization's identity. Our work thus contributes to our understanding of the links between organizational culture and identity. We also shed light on how an organization positioned 'between' salient identity referents constructs its own identity through continually enacted processes. Further, we find that central cultural practices may be customized, adding to organizational differentiation.

OMT: **Impact of Masculine Organizational Culture on Performance: A Machine Learning Approach** 

Author: **Soomin Sophie Cho**, *Columbia Business School*

Author: **Sang Won Han**, *Columbia U.*

Author: **Yoonjin Choi**, *London Business School*

Organizations have long strived for gender equality to ensure that both female and male organizational members feel equally valued. While gender research has extensively studied the impact of surface-level approaches to foster gender equality such as organizing gender-related initiatives and equal opportunities, research has largely under-explored the consequences of a deeper-level root of gender inequality: whether organizational culture exhibits masculinity. The scant literature on masculine culture has generally focused on observing numerically male-dominated occupations or specific attributes of masculinity, thereby stopping short of understanding the role of masculine culture more comprehensively in organizations regardless of their numeric gender representation. In order to address this shortcoming, we systematically examine masculine organizational culture, which we define as shared norms, values, and beliefs with over-emphasis on prototypically masculine attributes and under-emphasis on prototypically feminine attributes, in large organizations over multiple industries longitudinally, by employing employee review data from Glassdoor. We computationally develop a novel measure of masculine culture of organizations by applying word embedding techniques to the employee review data, in order to capture how closely the reviews represent masculine culture. The results show that masculine organizational culture negatively influences organizational performance, and an organization's innovation intensity moderates this relationship. The findings highlight the importance of probing inside culture of organizations in order to foster gender equality for better performance outcomes in organizations.

Paper is NOT Available. Please contact the author(s).

OMT: **Evolutionary Foundations for Organizational Culture**

Author: **Francisco Brahm**, *London Business School*

Author: **Joaquin Poblete**, *Pontifical Catholic U. of Chile*

Many research approaches exist in the literature to make sense of organizational culture. Some measure the content of culture quantitatively—for example, the degree of innovativeness (v/s tradition)—and seek to generate practitioner-relevant typologies; others focus on a single mechanism/aspect of culture, such as knowledge/communication, norms, shared beliefs, and frames/cognition in order to build a theory of culture; further, others move away from culture-as-a-constraint to propose culture-as-a-repository-of-tools that flexibly enables agents' performance. The flipside of this burgeoning diversity, however, is a lack of consilience and common ground. In this paper we provide a formal model that may serve as an integrative framework for the field. The model is based on cultural evolution theory, whose wide scope is suited for integration efforts. The model consists of a changing environment, where agents acquire adaptive knowledge either via traditionalistic or innovative learning, agents may exert cooperative effort, and the organization's leaders have two levers at its disposal: strength of prosocial norms and accuracy of the shared beliefs about the organization-environment interaction. The view that the model provides is that organizational culture evolves via a process of learning, that its function is adaptation to the environment, and that it does so in two fundamental ways, by external adaptation—enabled by shared beliefs and innovative learning behavior—and by internal integration—enabled by the strength of prosocial norms, cooperative effort, and traditionalistic learning behavior. The model yields several specific predictions which we map to previous empirical findings. The view of culture that emerges from our model is highly consistent with the (qualitative) canon established by Schein (2010, "Organizational culture and leadership") and we discuss the model can provide a common theoretical foundation to the main cultural typologies of the literature.

Boards and Strategic Decisions

Session Moderator: **Paolo Boccardelli**, *Luiss Guido Carli U.*

STR: Environmental dynamism, Digital Expertise of the Board and Strategic Change of the Firms 

Author: **Chiara Acciarini**, *U. of Rome La Sapienza*
Author: **Paolo Boccardelli**, *Luiss Guido Carli U.*

With the advent of recent environmental dynamics, firms are forced to change their strategies to survive. We examine the relationship between such environmental dynamism and method and scope of strategic change in a sample of 2527 listed US firms. Furthermore, since managers play a pivotal role in shaping the firm strategy, we also examine the professional background of the board by investigating the relationship between digital expertise and strategic change of the firms. Using resource dependence theory (RDT), we argue that internal factors of the firms can respond to the conditions of the external environment by determining the strategic change. Relying on dynamic managerial capabilities perspective, we conjecture that board expertise can impinge on the decision to change strategy. Our findings indicate that environmental dynamism and digital expertise of the board increase the strategic change, assessed through method and scope. However, such effect is likely to be attenuated by the digital expertise of the board. Our study advances research on strategic change by jointly using RDT and dynamic managerial capabilities theories and by shedding light on the determinants of strategic change. We then discuss the managerial and policy implications of our findings.

STR: Board Faultlines and CEO Compensation: The Effect of CEO Subgroup Inclusion

Author: **Charlotte Antoons**, *LouRIM, UCLouvain*
Author: **Alana Vandebek**, *KU Leuven*

To handle growing complexity, board committees have become increasingly important in today's business environment. Specialized committees allow boards to build up expertise, and such domain-specific expertise in turn should facilitate effective decision-making. However, the dynamics created by committee membership may also have adverse effects on the board's ability to fulfil its monitoring role. In this study, we argue that committee membership can give rise to the emergence of faultlines and the creation of subgroups in the board, and examine how this affects CEO compensation decisions. Using data from S&P 900 firms, we find that the effect of board faultlines on CEO compensation is contingent upon the subgroup to which the CEO belongs. Specifically, if the CEO belong to the same subgroup as members of the compensation committee, strong faultlines have a positive and significant effect on residual CEO compensation. At the same time, if the CEO is not included in the same subgroup, faultlines are negatively associated with abnormal CEO pay. Furthermore, our results also points to the dynamic nature of faultline effects by investigating the moderating effect of CEO tenure. Our results highlight the importance of considering potential decision making biases that may result from the existence of subgroups within the board.

STR: The Role of the Board in Unrelated Diversifications: Evidence from an Acquisition Wave in China 

Author: **Yunke WU**, *Peking U. Guanghua School of Management*

Unrelated diversifications are generally more viable in underdeveloped institutional environments because internal markets within the diversified firm can substitute the inefficient external ones. Using a sample of 498 major acquisitions undertaken during an acquisition wave by Chinese listed firms, we find acquiring a target firm in an entirely different industry can cause more severe goodwill impairment losses in the following two to four years, which indicates that acquirer managers tend to overestimate the synergistic gains they could realize in unrelated diversifications. Moreover, a capable board of directors can provide information advantages through outside directorship ties, structural hole position in the interlock network, and specialized committees, thus limit managers to make value-destroying diversification decisions. Further analysis suggests investors tend to prefer such unrelated acquisitions during the acquisition wave, indicating that shareholder expectations drive managers to diversify. By examining the role of boards as information conduits and advice-providers in limiting the cost of diversification in an underdeveloped institutional environment, this study contributes to the literature on diversification, acquisition and corporate governance.

Resource Redeployment

Session Moderator: **Alicia Barroso**, *U. Carlos III de Madrid*

STR: [Costs of Resource Redeployment Strategy under Learning Effects for Diversified Firms](#) 

Author: **Alicia Barroso**, *U. Carlos III de Madrid*

Author: **Marco S. Giarratana**, *IE Business School, IE U.*

Author: **Samira Reis**, *U. Carlos III de Madrid*

Diversified firms may benefit from fungible resources because they can give firms flexibility to adapt to changing environmental conditions. However, the benefits of fungible resources could be limited by costs associated with their reallocation, and also by the opportunity costs of excess fungible resource capacity without a use. In this article, we use two types of learning mechanisms to identify the two different cost impacts on performance: learning by diversifying at the organization level and learning by resource usage at the level of a specific resource. Using data from the Brazilian film industry from 1995 to 2017, we find that the performance of diversified firms with non-scale-free fungible resources increases the higher level of learning by diversifying. Conversely, the higher the level of learning by resource usage, the lower the performance of diversified firms with these resources.

STR: [Redeployment of Rigs Across Fields in the Oil-drilling Industry](#) 

Author: **Arkadiy V. Sakhartov**, *U. of Illinois at Urbana-Champaign*

Author: **Toby Li**, *Texas A&MU.*

Author: **Jeffrey J. Reuer**, *U. of Colorado, Boulder*

Author: **Ashton Lewis Hawk**, *U. of Colorado, Boulder*

Resource redeployment is the withdrawal of resources from their original use and allocation to another use. Such redeployment has been elaborated conceptually and studied empirically. While resource redeployment has been studied exclusively in multi-business firms, single-business firms can also redeploy resources. Moreover, empirical studies have measured resource redeployment only indirectly, thus casting doubt on the extent to which managers use it and on its antecedents. Therefore, this study theoretically examines resource redeployment in single-business firms, and then empirically demonstrates resource redeployment and its determinants. To elaborate resource redeployment theoretically, this study builds a formal model of resource redeployment in a single-business firm. The model derives that redeployment is positively affected by the inducement, which is the current performance advantage of the new use over the original use, and by uncertainty in that performance. Resource redeployment is also negatively affected by the redeployment cost. In addition, uncertainty negatively moderates the effect of the inducement. To test these predictions, this study uses a unique dataset covering oil wells drilled in Texas. The to-be-redeployed resource in this context is the rig that is possessed by a driller, which can withdraw the rig from one field and reallocate it to another field. Performance is captured by the revenue on drilling contracts in each field. The redeployment cost is operationalized based on the geographical distance over which the rig needs to be transported. The empirical tests robustly confirm the four theoretical predictions.

STR: [Managing Multi-Unit Firms in Uncertain Environments: The Role of Trusted Managers](#) 

Author: **Ulya Tsolmon**, *Washington U. in St. Louis*

Author: **Andrea Pataconi**, *Norwich Business School*

This study examines how multi-unit firms manage uncertainty across heterogeneous units through the internal redeployment of trusted managers—those whom the owners trust to act in the firm's best interests—to units where agency costs are high. Using a novel data set of over 30,000 internal managerial redeployments in multi-unit firms in 15 European countries, we find that diversified and partly owned units are more likely to be allocated trusted managers, especially in regions where institutions are weak. We also find that firms are more likely to send trusted managers in response to exogenous shocks that increase uncertainty, especially where institutions are weak. We discuss the implications of our findings on how a corporate strategy lens can enrich the strategic human capital allocation literature.

Paper is Available to Meeting Registrants Only.

STR: [Employee Redeployment in Diversified Firms](#) 

Author: **Julia Bodner**, *Copenhagen Business School*

This paper examines the link between product market diversification and employee redeployment. Prior work finds that firms can redeploy resources to react to inducements and performance advantages but may thereby compromise potential synergies. This paper argues that expected synergies are an additional mechanism for employee redeployment and depend on the origin and the destination of the redeployed employees. Using employer-employee data on Finnish multiunit firms, I find that employee redeployment across subsidiaries increases with firm diversification. In line with the argument that diversified firms may seek to increase their parenting advantage by redirecting resources from parent firms to subsidiaries, firm diversification is also positively linked with employee redeployment from parent units towards subsidiaries. The study contributes to the resource reconfiguration and diversification literature by examining and offering large-scale empirical insights into the corporate parent role and expected synergies in employee redeployment decisions.

Entrepreneurship, Sustainability and Value Creation

Session Moderator: **James McGlinch**, *The Wharton School, U. of Pennsylvania*

STR: How Much is Enough? A Contingent Perspective on Slack and Joint Value Production in Megaprojects

Author: **Yongcheng Fu**, *College of Management and Economics, Tianjin U.*

Author: **Nuno Gil**, *U. of Manchester*

This study develops a contingent perspective on the relationship between financial slack and joint value production in megaprojects. We hold constant the essence of a governance arrangement by which decision rights over the use of the project resources are shared to encourage cooperation from nonmarket stakeholders. To mitigate the reputational costs of a budget overrun, the project is endowed with unallocated funds. We propose the slack is beneficial, but only up to a point. Hence, up to a lower threshold, more slack enables to increase both the project economic value as well as the social gains to be appropriated by the stakeholders. Above this point, more slack diminishes the project value produced jointly, but not the total value co-produced in that a further increase in social gains outweighs a loss in project value. Yet, above an upper threshold, more slack gets superfluous because it has no effect on the balance between continuing to cooperate vs. renegeing on the commitment to cooperate. Further, we examine how the slack thresholds vary in function of the stakeholders' bargaining power and the perceived value of the social gains. We review the logic of our arguments by examining the role of contingencies in sustaining non-hierarchical groups set up to plan a railway for the UK, and conclude by connecting to other explanations of megaproject behavior.

STR: Chapter 11 versus Private Workout: Value-Based Responses to Corporate Distress   

Author: **James McGlinch**, *The Wharton School, U. of Pennsylvania*

In this study, I utilize emerging perspectives in value creation and appropriation to examine how a corporation's ability to cultivate ex ante relational capital with more powerful versus less powerful stakeholders impacts the relative attractiveness of the two most common strategic responses to corporate distress – Chapter 11 bankruptcy and private renegotiations (workouts). By drawing upon prior conceptualizations of workouts as the less expensive and more efficient alternative to Chapter 11, I find through propensity score matching and regression analysis on a matched sample of 243 bankruptcies and workouts that greater ex ante relational capital with more powerful stakeholders is associated with a greater likelihood of reorganizing through workouts compared to Chapter 11, while possessing greater relational capital with less powerful stakeholders is associated with a greater likelihood of reorganizing through Chapter 11 compared to workouts. However, investors, whose support is critical to private workout success, don't differentiate between the value of relational capital cultivated with more and less powerful stakeholders unless information asymmetry is high.

STR: Appropriating Relational Value from Collaborative Networks for Sustainability  

Author: **Lori Divito De Paauw**, *Amsterdam U. of Applied Sciences*

Author: **Jason Good**, *EGADE Business School, Tecnológico de Monterrey*

Author: **Jakomijn Van Wijk**, *Maastricht School of Management*

Author: **Iteke Van Hille**, *Amsterdam U. of Applied Sciences*

Author: **Tuanh Lam**, *Amsterdam U. of Applied Sciences*

Author: **Richard Martina**, *Hogeschool van Amsterdam*

Author: **Ingrid Wakkee**, *IngrdW*

Our study elucidates relational value creation and appropriation in collaborative networks for sustainability (CNFS) that focus on grand societal challenges and include a multiplicity and diversity of actors. Using a relational view lens, we conducted a longitudinal, multiple case, field study of collaborative networks for sustainability in the circular textile and fashion industry, unpacking the interplay between value creation from relational interdependence, relational-specific assets and material output and the multilevel appropriation of that value. Our findings show that value appropriation is contingent on the perception of relational use value and cascades through individual, organizational and network levels. The ability of actors to capture cascading value on different levels has a direct influence on the sustained continuity of value creation and to achieving the shared societal goals of CNFS. We developed a model of value appropriation in CNFS to illustrate the cascading flow of value at micro (individual), meso (organizational) and macro (network) levels. Our study makes novel contributions to the literatures on strategic alliances, cross-sector partnerships, and open innovation networks.

STR: Documenting Workforce Rents: Exploring the Veracity of the New Stakeholder Perspective in Strategy 

Author: **Jeroen Neckebrouck**, *IESE Business School*

Author: **David Kryscynski**, *U. of Michigan, Ross School of Business*

The new stakeholder theory perspective in strategy suggests that stakeholders may capture significant shares of the firm's economic profits in the form of rents, but this work is primarily theoretical. In this paper we examine the extent to which we should be empirically concerned with this possibility. We focus on workforce rents as a special case of the broader class of stakeholder rents, and leverage unique longitudinal employment and financial data from the population of all Belgian firms from 1996 through 2016 to develop a novel empirical proxy for workforce rents. We find that one standard deviation in our workforce rents proxy amounts to 66 percent of the mean accounting profits in our sample suggesting that there may be substantive variance in workforce rents across firms. Further, we find that workforces in some firms actually capture the majority of the economic value the firm creates and illustrate that the relationship between economic value creation and workforce rents may be nonlinear. Collectively, these findings lend empirical credence to the theoretical issues raised by the new stakeholder perspective in strategy and suggest a need to reconsider some classic empirical findings in strategy with a more robust accounting for stakeholder rents.

This symposium offers insights on the role of constraints in creativity and innovation processes within and beyond organizational boundaries. The presenters will share theoretical and empirical investigations of how constraints, such as time pressure, access to resources, and societal challenges affect and shape innovation processes. The research presented in this symposium will involve data collected from various research contexts, such as open innovation to solve societal problems caused by the COVID-19 pandemic in Germany and to develop medical devices to address the ventilator shortage problem around the world, teams competing in an internal innovation competition, creative teams working in the Hollywood animation industry, and creating a new culinary paradigm in fine-dining.

Technological Change Track: Frontier Technology - Qualitative Approach

Session Moderator: **BINGCHENG YANG**, *Guizhou U. of Finance and Economics*

TIM: Understanding the Factors Influencing Adoption of Robo-advisor: Integration Model of TAM and TTF     

Author: **BINGCHENG YANG**, *Guizhou U. of Finance and Economics*
Author: **HONGYAN YU**, *Sun Yat-Sen U.*
Author: **JIANLAN CHEN**, *Sun Yat-Sen U.*

Robo-advisor services are being used more and more widely in the field of financial investment. However, research into their adoption and use has rarely considered from the customer perspective. This study proposes a unified model that integrates the technology acceptance model (TAM) and the task-technology fit (TTF) model to investigate intention to use Robo-advisor services. The samples in this study included 316 clients with experience using Robo-advisor services. LISREL 8.80 is used to conduct SEM and to verify the research hypothesis. The results show that: (1) perceived usefulness, perceived ease of use and perceived risk have an impact on the attitude of customers towards using Robo-advisor services; (2) technical characteristics and task characteristics significantly predict task-technology fit; (3) task-technology fit serves as an important predictor of attitudes towards using Robo-advisor services; (4) the relative advantages and information transparency of Robo-advisor services significantly affect the perceived usefulness and perceived risk respectively; (5) the quality of information does not significantly affect the perceived usefulness and perceived risk unexpectedly. This paper contributes to the consumer research of Robo-advisor services and provide management implications for Robo-advisor and fin-tech.

Paper is Available to Meeting Registrants Only.

TIM: On the Knife Edge: How Vegan Food as an Eco-innovation Crosses the Chasm 

Author: **Ozgur Dedeheyir**, *Queensland U. of Technology*
Author: **Carla Riverola**, *Griffith Business School, Griffith U.*
Author: **Stephen Harrington**, *Queensland U. of Technology*
Author: **Santiago Velasquez**, *RMIT U. Vietnam*
Author: **Michelle Smidt**, *Queensland U. of Technology*

This paper aims to explain how vegan food – an eco-innovation – can transition across a large divide separating the early market from the main market of adopters. We focus on the persuasion stage of the innovation-decision process, and the product attributes that motivate the adoption of vegan food products by vegan (early market) as well as non-vegan (main market) consumers. Our in-depth conversations with 32 (16 vegan and 16 non-vegan) consumers at restaurants/café in Brisbane (Australia) and Barcelona (Spain) reveal that while product taste and ethical and lifestyle compatibility persuade vegan consumers' adoption decision, it is the price, lifestyle compatibility, and – counterintuitively – product novelty that persuade non-vegans in the main market. Based on these findings we make tentative propositions for the larger eco-innovation domain, on how firms can develop value propositions ultimately for two different consumer groups – the early market and main market.

Paper is Available to Meeting Registrants Only.

TIM: Influence of Technological Changes on Evolution Trajectories: Evidence from Creative Industries 

Author: **Pranav Dharmani**, *Indian Institute of Management Rohtak*
Author: **Satyasiba Das**, *Indian Institute of Management Raipur*

The study explores the trajectory choice of firms and role of technology in characterizing each trajectory. In one of the seminal works, McGahan (2004) enlisted four evolutionary trajectories: progressive, creative, intermediating, and radical. Its central message is that an industry follows any one of the four trajectories at a given time. These trajectories are defined based on the degree of changes or threats to core activities and assets of the industry. The technological changes affect the core activities and assets of the firms. Using the concept, the study documents firms' trajectory choice to provide a clear explanation of the role of technology in the evolution of the industry. It explains how technology has been changing various core activities and assets along with the resultant effects on primary activities of the value chain. Based on 53 semi-structured interviews of senior executives of creative industries, the research observes significant intra-industry variation in evolutionary trajectories followed by the firms. It also reports changes in all five primary activities of the value chain. Quality, reach, production, visualization, and efficiency are a few of the various aspects which got affected due to these changes.

Technology and Competitive Strategy Track: Institutional Contexts and R&D Strategy

Session Moderator: **Anke Piepenbrink**, *Rennes School of Business*

TIM: Limping, Leaving, and Leading: The Catch-up of Chinese Firms in a Standard Developing Organization

Author: **Anke Piepenbrink**, *Rennes School of Business*
Author: **Jae-Yun Ho**, *Yonsei U.*

While standardization in the telecommunications industry typically occurs during early phases in the R&D process, research-intensive activities are at late phases of the catch-up process, requiring different strategies for latecomer firms to catch up in standardization. The third-generation (3G) technology of cellular telecommunication provided a window of opportunity for Chinese firms to catch up. While China's homegrown 3G standard with the catch-up of its sponsor firm Datang with the support of the Chinese government has received much attention in the media and academia, little is known about the catch-up of Chinese firms in the international standardization body. This article studies the catch-up of 32 Chinese organizations in the Third Generation Partnership Project (3GPP) from 1999 to 2020. While it finds successful catch-up on the country level, the picture on the firm level is more nuanced regarding entry timing, level, and strategies of catch-up. One common pattern is the catch-up process along the hierarchy of activities from attendance, contribution in technical documents, coordination, and leadership positions. However, firms also differ in their strategies, which depend on their time of entry and international operation.

Paper is Available to Meeting Registrants Only.

TIM: Do MNEs Benefit More from Foreign or Local Competition for their Emerging Market Innovation? →

Author: **Tianjiao Xia**, *U. of East Anglia*
Author: **Xiaohui Liu**, *Loughborough U.*

How do the innovation-related benefits of competition vary across foreign and local competition? Inspired by a blend of perspectives and arguments from the competition, innovation and strategic change literature, we explore which type of competition benefits advanced economy MNEs (AEMNEs) emerging market (EM) innovation performance most, when and in what pace and rhythm. We predict that local competition contributes more to AEMNEs EM innovation performance and this positive effect is strengthened by increased competition from foreign peers and at a faster pace. We also expect that competition irregularity reinforces the innovation performance-enhancing effect of local competition but diminishes that of foreign competition. We test these predictions using a sample of AEMNEs operating in the Chinese high-tech industries. Results from our multi-level analysis provide strong support for our arguments. Our findings have important implications for research on AEMNE EM innovation performance variations resulting from the heterogeneity in the sources of competitive forces and their temporal structure.

TIM: R&D Offshoring and its Effects on the Patenting Activity of Chinese Firms

Author: **Jojo Jacob**, *Grenoble Ecole de Management*
Author: **Isabel-Maria Bodas-Freitas**, *Grenoble Ecole de Management*
Author: **Lili Wang**, *UNU-MERIT/Maastricht U.*
Author: **Zibiao Li**, *Hebei U. of Technology*

Involvement in R&D offshoring can result in loss in the ability of the offshoring firms to innovate. To prevent this, firms can design strategies to foster technology transfer by enhancing possibilities to re-adapt and re-invent the foreign-developed technologies. This paper examines the effect of two different modes of governance of R&D offshoring –market and hierarchies - on the patenting activity of indigenous firms, as well as how strategies for enhancing re-adaptation, innovation around and re-invention moderates those effects. We examine this issue empirically using data from 2011 to 2014 for a sample of 312 firms, classified as 'high and new-tech enterprises' located in the Hebei Province of China. Results suggest that governing R&D offshoring through market influence positively firms' patenting activity, while vertically integrating R&D offshoring through the establishment of R&D labs in industrialized countries has a negative effect. Collaboration with domestic universities and public research organizations seem to stimulate the reinvention of foreign-developed technologies, accessed either through market or hierarchies, and in this way it enhances the effect of R&D offshoring on firms' patenting activity. On the contrary, employment of foreign staff seems to substitute the effect of R&D offshoring, especially of the vertical integration mode, suggesting that foreign staff may foster knowledge transfer and adaptation but not necessarily re-invention or innovation around the foreign-developed technologies. Our study extends the debate of R&D offshoring to domestic independent firms and suggests boundary conditions for reaping the benefits from R&D offshoring.

Paper is Available to Meeting Registrants Only.

Author: **Taija Tuulia Turunen**, *Aalto U. School of Business*

Author: **Pekka Töytäri**, *Aalto U.*

This study explores the institutional foundations of business models by comparing business models of two groups of actors. By conducting an empirical multi-case study, the study finds that business model innovation is directed and constrained by the adopted business logic of beliefs, rules, norms, and practices about proper and legitimate ways of conducting intercompany exchange. The results explicate the institutional foundation of business models, demonstrate the role of business model as an artefact and carrier in institutional and business model change, and suggest a novel mechanism of temporal consolidation to settle the dichotomy between alternative and mutually exclusive business models.

People and Innovation Track: Who Innovates - Innovative Firms' Human Capital Resources

Session Moderator: **Louisa Selivanovskikh**, *National Research U. Higher School of Economics*

TIM: Managerial and Worker Human Capital, Firm Innovation Capability, and Performance of Russian SMEs 

Author: **Louisa Selivanovskikh**, *National Research U. Higher School of Economics*

This study aims to examine the mediating role of firm innovation capabilities as a strategic choice for Russian small and medium-sized enterprises (SMEs), which translates their entrepreneurial talent stocks into enhanced firm performance. The results of a survey conducted on 366 CEOs and business founders indicate that innovation capabilities are the intermediate variable between firm human capital and SME performance. Further parallel mediation regression analysis demonstrates that human capital is positively and significantly related to all innovation capability dimensions (client-, marketing-, and technology-focused); however, the mediation effect is significant only in the case of client-focused innovation capability – SMEs' ability to provide clients with services that offer unique benefits, solve clients' problems in innovative ways, and seek out novel ways to tackle problems. These findings suggest that SMEs operating in turbulent transition economy environments can be more innovative and achieve the best performance using intangible, highly valuable and rare talent resources.

TIM: Nobel Laureates and the Role of the Industry in the Emergence of New Scientific Breakthroughs 

Author: **Quentin Plantec**, *Toulouse School of Management*

Author: **Benoit Weil**, *MINES ParisTech, PSL U., Centre for Management Science, i3 UMR CNRS*

Author: **Pascal Le Masson**, *Mines ParisTech*

Since the 1980s, many companies recognized for their major scientific breakthroughs (e.g., IBM, AT&T, etc.), cut their investments in fundamental research activities. In parallel, academics from public research organizations (PRO) and universities engaged more extensively with the industry through research collaborations. The conditions, determinants, and effects of academic engagement have been deeply analyzed. But, the extent to which major scientific breakthroughs of the last century have emerged either from (1) academics and researchers with no interaction with the industry or (2) from scientists interacting with the industry - either as engaged academics belonging to PRO or universities or as corporate scientists – are yet to be more systematically documented. To fill this gap, we explored the extent to which scientists from the quasi-complete cohort of Nobel laureates in Physics, Medicine, and Chemistry were interacting with the industry before their breakthrough discoveries. We designed a unique dataset of their ties with the industry based on affiliations review of 84,423 academic papers and applicant review of 5,207 patent families. First, we showed that one-fifth of the studied cohort of laureates was interacting with the industry before their breakthrough discovery. More importantly, this share is still increasing, mainly through academic engagement, while the share of awarded corporate scientists has remained stable since 1970. Second, we were able to analyze the effects of those interactions with the industry on the post-discovery period by comparing interacting and non-interacting with industry laureates' follow-on research works. While some scientific discoveries were partly made possible thanks to Nobel laureates' industrial partners, those laureates' follow-on knowledge works were not bound to their initial sets of partners. They experienced similar knowledge diffusion-to-industry rates than other laureates but higher academic production rates and diffusion-to-academia rates. Finally, we claim that the extent to which scientific new knowledge still emerges in relation to industrial contexts in modern science has been under-evaluated and opens rooms for further research.

TIM: Consequences of Lab Closures: Understanding Worker Mobility and Technological Trajectory 

Author: **Raphael Martins**, *New York U.*

What are the consequences of R&D lab closures for inventor employer and geographical mobility, and for inventor productivity? This paper investigates this question in the context of the pharmaceutical industry, after firms decide to no longer have an R&D presence in a region and thus close their lab there. After analyzing a hand-collected sample of displaced inventors in the US in the last twenty years and examining employer and geographical mobility outcomes, I find that inventors that were more productive pre-closure are more likely to change both firm and region, as well as more likely to remain in the same technological trajectory. I also find that inventors that change labs within the same firm are the worst performers ex-post.

TIM: Do Scientists Move When Unconstrained? Trade Secrets Protection and Skilled Workforce Mobility 

Author: **Ruth Samson**, *U. of Luxembourg*

This paper explores scientists mobility behaviour when the trade secrets protection regime favours employees while triggering the risk of knowledge leakage to employers in the technology-intensive industry. Using a unique, comprehensive career dataset of scientists that links US inventors to tech employers between 1985 and 2019, we find that establishing an employee-friendly trade secrets protection regime negatively affects scientists mobility likelihood. These findings align with the theorising on the increased scientists' intrinsic motivation to perform in response to the reinforced possibilities of frictionlessly applying the acquired technological know-how elsewhere. We augment the research on intrinsic motivation, the strategic beauty of imperfect intellectual property protection, and the patent-based firm specificity measure of human capital in the technology-intensive industry.

TIM: Hook, Line, and Sinker: Influence of Tweeting on Retail Footfall

Author: **Harsha Kamatham**, *U. of Manitoba*

Author: **Devendra Kale**, *U. of Rhode Island*

Author: **Anin Rupp**, *Chiang Mai U.*

Existing literature has documented the impact of the emotional quotient in firm tweets by capturing its effect on stock returns. Since investors can also be viewed as consumers, can tweets be powerful enough to influence them to visit the firms' retail locations? Using proprietary data on firm tweets and retail level foot traffic, we find evidence consistent with this behavior. Specifically, we find that firm tweets have a strong positive influence on retail store footfall on the subsequent day. Additionally, we document that this footfall effect dissipates the further away it is from the tweeting date. In robustness tests, we show that our results are not driven by unobserved correlated omitted characteristics, industry characteristics, endogenous spurious correlation, or the impact of the year 2020. Our paper contributes to the existing literature by documenting the influence of social media on retail footfall.

TIM: Imagining Digital Data: Policing and Social Media Intelligence 

Author: **Julie Udam**, *Copenhagen Business School Department of Management, Society and Communication*

Author: **Hans Krause Hansen**, *Copenhagen Business School*

Our assumptions, beliefs and expectations about digital data shape how we use them to govern organizations and societal affairs. In this article, we conceptualise the role of digital data through the concept of digital imaginaries. Building on studies of policing and digital media, we develop a framework for examining the use of digital imaginaries in contemporary policing efforts. We draw on documentary research on Europol and demonstrate how digital imaginaries are put to work in transnational policing. We identify the articulation of two main digital imaginaries: (i) an imaginary of agency, and (ii) an imaginary of prophetic data. We show how such digital imaginaries operate as tools that can be wielded for good or for evil, and we discuss their underlying assumptions around human agency as well as the politics of platform technology and temporality in policing.

TIM: Socio-instrumental Use of Enterprise Social Media and Employee Agility: Role of Promotion-Focus and

Author: **Abdul Hameed Pitafi**, *Sir Syed U. of Engineering and Technology Karachi*

Author: **Sheena Pitafi**, *Huazhong U. of Science and Technology*

Given the international popularity of enterprise social media (ESM) technology, this study considers the impact of ESM usage on employee agility through task characteristics. Applying regulatory focus theory (RFT), this research also explores the moderation impact of promotion-focus and prevention-focus in connecting ESM usage and task characteristics. The suggested assumptions were tested on the PROCESS MACRO tool, using 318 samples collected from various Chinese companies. The outcome indicates that task complexity and interdependence mediate the link between ESM usage and employee agility. Promotion-focus strengthens the association between ESM usage and task characteristics, but prevention-focus weakens this linkage. In addition, the study also found that promotion-focus moderates the indirect connection between ESM usage and employee agility through task characteristics. In contrast, prevention focus weakens the indirect link between ESM usage and employee agility through task characteristics. This study debates the theoretical and practical implications and offers valuable insights.

TIM: Beyond the Privacy Paradox: Asking for Unnecessary Privacy-sensitive Permissions in Mobile Apps 

Author: **Siping Ren**, *JADS, Joint Graduate School of Tilburg U. and Eindhoven U. of Tech*

Author: **Ksenia Podoyntsyna**, *JADS, Joint Graduate School of Tilburg U. and Eindhoven U. of Tech.*

Author: **Chris Snijders**, *Eindhoven U. of Technology*

Protecting privacy and personal data is one of the fundamental rights of people, as is stipulated and regulated in many countries. This study zooms into mobile applications in Google Play, uses the advanced structural topic modeling technique to classify the necessity of the permissions, and analyze the relationship between unnecessary privacy-sensitive permissions and app acceptance. After a series of analyses, we consistently arrive at a surprising and disturbing finding: a positive relationship between unnecessary privacy-sensitive permissions and app acceptance. Such a finding goes beyond the privacy paradox, a phenomenon where the users claim to value privacy greatly yet give it up for a relatively small amount. We further explore three theoretical explanations for this finding: the following the crowd effect, the trading effect and the signaling effect, all of which are supported in our split-sample analyses, since the positive relationship goes away for the apps with a few installations, the paid apps, and the apps with bad reviews respectively. It is noteworthy that in these analyses the relationship never becomes negative as what we would have expected.

Organizational Learning and Search Track: Institutional Influences and Innovation

Session Moderator: **Ram Mudambi**, *Temple U.*

TIM: Innovation Intermediaries: Literature Review, Synthesis, and Conceptual Framework

Author: **Elie Abi Saad**, *École des Hautes Études Commerciales de Montréal - HEC Montreal*

Innovation intermediaries are increasingly becoming an essential component of regional innovation ecosystems. Despite their rapid proliferation, they are often treated as peripheral actors in the literature with little regards to the way they emerge, change, improve and/or evolve overtime. In this paper, I systematically review the literature on innovation intermediaries with a particular emphasis on (1) the roles they assume, (2) the challenges they face, (3) and the value they provide. The results of this review reveal that, at the moment, we still lack a comprehensive account that allows for benchmarking the performance of innovation intermediaries in general, and their operating dynamics in particular. Building on the theory of social capital and adopting an intermediation-as-process approach, I identify three key innovation intermediation processes—legitimation, coordination, and generative appropriation—that explain the way these organizations create and capture value from their active involvement in the innovation process. I argue that reinforcing these three interrelated processes help drive the evolution and survival of innovation intermediaries as separate autonomous entities.

TIM: Institutional Harmonization and International Connectivity in Innovation  

Author: **Atilla Onuklu**, *Bilkent U.*

Author: **Ram Mudambi**, *Temple U.*

Author: **Theodore L. Hill**, *Fox School of Business, Temple U.*

Author: **Izzet Sidki Darendeli**, *California State U., East Bay*

In this paper, we study the relationship between harmonization in formal institutions and international connectivity in innovation. First, building on institutional theory, we proxy formal institutional harmonization with regulative harmonization. Second, we apply the framework offered by IB and economic geography to inquire into the nature and antecedents of connectivity. Viewing these two processes as an interaction between the institutional and technological spaces, we investigate the role of MNEs as pipelines for knowledge connectivity. Utilizing Turkey's candidacy for the EU, we apply principal component analysis and linear aggregation methods, and use textual analysis to track Turkey's history of institutional upgrade. We also utilize USPTO patent data and geographical information to analyze the international connectivity of co-inventor teams. We find support for the relationship between formal institutional harmonization and international connectivity in innovation. Our findings also indicate MNEs' asymmetrical mediative role contingent on both their origins and type of formal institution. Our study contributes to the literature by opening the black box of connectivity and presenting institutional fundamentals as antecedents of international connectedness and empirically showing the role of MNEs as pipelines in knowledge linkages that is conditional on the origin of the MNE and the type of regulations.

TIM: How R&D Subsidy Influences High-tech SMEs' Learning from Universities 

Author: **Yuchen Gao**, *School of Public Policy and management Tsinghua U.*

Author: **Yimei Hu**, *AAUBS, Aalborg U.*

Author: **Peichao Dai**, *School of Public Policy and management Tsinghua U.*

Author: **Rongjia Zhang**, *School of Public Policy and management Tsinghua U.*

This study explores how public research and development (R&D) subsidy influence high-tech small and medium-sized enterprises' (SMEs) learning from universities. Two mediating paths, namely R&D collaborations with universities and recruiting highly-educated human resources, are also tested. We employ an exclusive panel data came from a survey of high-tech firms in Jiangsu Province, China, from 2010 to 2014. We find that R&D subsidies can promote high-tech SMEs' scientific and technological knowledge learning from universities, and we further find that recruiting highly-educated R&D human resources has partial mediating effect. When subsidy-receiving SMEs are located at science parks, the effects of R&D subsidies on SMEs' learning from universities are strengthened. Our findings contribute to innovation policy studies and innovation systems research. Several important policy implications are also obtained based on this study.

Paper is Available to Meeting Registrants Only.

TIM: Short-selling Pressure and Technological Exploration of Firms: A Randomized Policy Experiment 

Author: **Eunkwang Seo**, *Oklahoma State U.*

Author: **Hyo Kang**, *USC Marshall School of Business*

Author: **Jingoo Kang**, *Nanyang Technological U.*

This study examines how the short-selling pressure affects firms' technological exploration. Short-sellers who make a profit from downward stock price movements reduce innovating firms' incentives and ability to explore new technological areas by spreading negative information and limiting their ability to acquire skilled human capital. We exploit a randomized policy experiment on short selling. In 2005, the US SEC randomly selected one-third of Russell 3000 firms and made it significantly easier to short-sell their stocks by removing the uptick rule. The results from the difference-in-differences estimation show that the increased short-selling pressure significantly deterred the tread firms' technological exploration. We further test two important mechanisms that could change the incentives and the ability to explore new technologies. First, the negative effect of short-selling pressure on exploration is weakened when the executives hold the stock options (incentive channel). Second, the negative effect is mediated by the firm's decreased hiring of skilled human capital from other firms that limits learning-by-hiring (ability channel). This study contributes to the literature by demonstrating that the financial market frictions have a far-reaching impact on the technological exploration of firms and the roles of managerial incentives and human capital acquisitions.

Ecosystems and Platforms Track: Platform Interventions and Complementary Outcomes

Session Moderator: **Sruthi Monica Thatchenkery**, *Vanderbilt U.*

TIM: Antitrust Intervention in Platform Ecosystems and Implications for Complementary Firms 

Author: **Sruthi Monica Thatchenkery**, *Vanderbilt U.*
Author: **Riitta Katila**, *Stanford U.*

Building on research on competition and innovation, we show that weakening a dominant platform through antitrust intervention can drive increases in complementors' innovation yet also dampens their profits. Using data on enterprise infrastructure software from 1998 to 2004 and a difference-in-differences design, we examine the relation between the U.S. antitrust intervention against Microsoft (dominant platform) and subsequent innovation and profitability by infrastructure applications firms (complementors). The data show that innovation—particularly of low power complementors—is increased when the dominant platform is restrained. However, profitability is reduced. Our results contribute to understanding links between competition and innovation in platform ecosystems, and the opportunities and threats related to dominant platforms that often occupy privileged positions in digital ecosystems.

Paper is NOT Available. Please contact the author(s).

TIM: Platform Fragmentation and Complementary Innovation 

Author: **Grace Gu**, *USC Marshall School of Business*
Author: **Zhuoxin Li**, *Boston College*

Complementor innovation is an essential form of value co-creation in open platform ecosystems. However, the increasing platform fragmentation, i.e., divided users in the ecosystem adopting different versions of the platform technologies, has significantly hindered complementor innovation. Reducing platform fragmentation is a complex coordination problem involving several parties in the ecosystem, thus it is unclear whether and how a platform's efforts to fight fragmentation would affect complementor innovation. Focusing on recent efforts by Google to address Android fragmentation, we find that while the platform investment does not immediately reduce Android fragmentation, app developers respond to the platform's action by significantly increasing their innovation efforts in updating apps shortly after platform investment. This forward-looking behavior is likely due to developers' anticipation of lowered innovation cost in the future, as the impact of platform investment is greater for developers with more variable cost structure such as a larger and more diverse user base, less development experience and lack of economies of scale (i.e., with a smaller portfolio of apps). The effect is also greater for developers in more competitive markets where gaining user base can be costly due to market competition. Our research highlights the role of platform commitment to improve platform infrastructure in complementor innovation, and provides implications for platform investment and intervention.

TIM: Do Non-monetary Virtual Gifts Enhance or Diminish Voluntary Paid Gifts on a Live Streaming Platform? 

Author: **Pearl Yu**, *New York U.*
Author: **Raveesh Mayya**, *NYU Stern School of Business*
Author: **Anindya Ghose**, *NYU Stern*

This project empirically investigates the impact of a live streaming platform's viewer-engagement improvement efforts on viewers' voluntary paid gift giving outcomes. Live streaming platforms employed various strategies such as gamifying viewing and community engagement to increase viewer side engagement. A common gamification strategy is to grant platform 'coins' that viewers can exchange for VIP passes or non-monetary gifts that can be given to streamers during live-streams. Given that live streaming platforms utilize Pay-What-You-Want (PWYW) pricing mechanism, it is unclear if increased access to non-monetary gifts substitutes or augments viewers' voluntary monetary gift sending behavior. To answer this question, we work with a major live streaming platform in Asia and analyze individual-level virtual gift sending records between May and December of 2019. The analyses reveal that encouraging non-monetary gift sending behavior increases viewers' monetary gift sending behavior by 105.24%. Mechanism analyses suggest that free gifts facilitate habit-forming, resulting in an enhancement rather than a substitution of monetary gift sending. Furthermore, we also provide evidence of attention-seeking gifting behaviors. Consistent with the proposed mechanisms, our heterogeneity analyses suggest that streamers with a previously lesser popularity benefit more from the policy. Our research contributes to the live streaming and platform policy literature and offers guidance to live streaming practitioners in engagement feature designs.

Author: **Tim Meyer**, *LMU Munich School of Management*

Author: **Anna Kerkhof**, *ifo Institute*

Author: **Carmelo Cennamo**, *Copenhagen Business School*

Smaller firms are usually expected to benefit the most from having their products listed on platforms, as platforms can make their products easier to find and provide these firms with access to a broader set of customers than they could access on their own. While this logic might hold if firms compete for the best match between their products and customer preferences, it is unclear if smaller firms are indeed able to benefit from access to more potential customers if they compete for the attention of users. In many settings, such as social media or news aggregators, platforms act as attention brokers that attract attention and redistribute it to these firms. As the products of smaller firms will be competing for attention with those of larger competitors on the same platform, it is unclear if they will be able to capture a significant share of the demand they potentially have access to. We study this question in the context of news aggregators. Using data on 140 local German news outlets, we analyze which local news outlets benefit from being listed on news aggregators. We exploit a legal dispute leading to the removal of a subgroup of German local news outlets from news aggregators to identify the effect. Our results show that being listed on news aggregators is only beneficial for local news outlets that are sufficiently large in size to be recognized by potential readers on the aggregator and sufficiently broad in their scope and focus to cover multiple content categories that readers might be interested in. These findings hold relevant implications that run somewhat contrary to common expectations – larger firms tend to be the winners in the attention economy, suggesting the need for platform curation to empower smaller firms.

Innovation Processes Track: Creativity and Co-creation

Session Moderator: **Alex Schlüter**, *EBS U. of Business and Law*

TIM: The Dark Side of Co-Creation: Origins and Effects of Toxicity in Video Game Development

Author: **Alex Schlüter**, *EBS U. of Business and Law*
Author: **Matthias Waldkirch**, *EBS Business School*
Author: **Katrin Burmeister-Lamp**, *EBS U. of Business and Law*
Author: **Jan Auernhammer**, *Engineering Dept., Stanford U.*

While co-creation processes offer novel perspectives on product development, opening up this process also entails a dark side – unconstructive and even toxic feedback, which has received surprisingly little attention so far. In this paper, we examine the antecedents and consequences of toxicity in the context of early video games. We base our findings on a quantitative analysis of 276 early access games, showing that game, community, and developer factors are crucial drivers and inhibitors of toxicity. Our findings highlight that particularly the willingness and professionalism of co-creation can help reduce toxicity. Further, we confirm the negative impact of toxicity by showing that developers experiencing toxicity reduce their game update frequency. So doing, our study contributes to research on innovation management highlighting the dark side of co-creation, extends insights on cyberbullying by showing evidence and consequences of developer-oriented toxicity, and provide insights in how to curb toxicity.

Paper is Available to Meeting Registrants Only.

TIM: The Marginal Effect of External Technologies on Innovation Time

Author: **Yeolan Lee**, *U. of Alabama, Huntsville*
Author: **Eric Fong**, *U. of Alabama, Huntsville*

Many firms acquire external components for innovation in markets for technologies, which impacts innovation search time. This paper builds theory about how innovation search time changes as a firm acquires an increasing number of external components for the innovation activity. It further examines how complexity moderates the relationships between the number of external components and innovation search time. Using a sample of 276 pharmaceutical product development projects, we found that complexity is an important moderator. Our results show that under low complexity there is an inverted U-shaped relationship between the number of external components and innovation search time. In contrast, under high complexity, there is a U-shaped relationship between the number of external components and innovation search time. Our results provide implications regarding the marginal effect of external technologies on innovation search time under varying degrees of complexity.

Paper is NOT Available. Please contact the author(s).

TIM: Value Chain Traceability and Innovation in the Biomedical Industry

Author: **Gregory Theyel**, *California State U., East Bay*

This paper investigates how value chain traceability is being adopted by biomedical companies and its effects on process and product innovation. Value chain traceability is the ability to follow the flow of material and information from raw materials to processed components to production to customer experience. While prior research highlights how traceability can improve product safety and security, delivery, regulatory compliance, and sustainability, there has been little inquiry into how traceability can facilitate innovation. This research uses qualitative interview data from company executives and managers at 20 companies in the biomedical industry. Process innovation is common among most companies adopting traceability, and traceability can lead to product innovation from material substitution, process improvements, and product reconfiguration. A systems approach to value chain traceability can facilitate search for process and product innovation, and material and processed component traceability can be improved if there is optimized supplier selection, information sharing, and shared value. This research improves understanding about how companies are adopting traceability and how they can develop value chain traceability leading to process and product innovation.

TIM: Cognitive Frames and Digital Transformation of Manufacturing Firms

Author: **Yang Liu**, *Zhejiang U.*
Author: **Jiuyu Dong**, *Zhejiang U.*
Author: **Ying Ying**, *ZHEJIANG U. OF FINANCE AND ECONOMICS*

Despite increasing scholarly attention on digital transformation, there is only limited micro-level insights on how cognitive frames, the managerial mental maps and thought structures that can shape interpretation, affect digital transformation of manufacturing firms. Based upon three manufacturing cases in China, we find that paradoxical frame will lead to compartmental digital transformation through distributed decision-making processes, while dialectic frame will lead to holistic co-evolution digital transformation through integrative decision-making processes. These findings will not only contribute to the understandings of digital transformation by providing underlying micro cognitive processes of digital transformation but also the indirect mechanisms on cognitive frames towards firm strategy.

AI and Emerging Technologies Track: Artificial Intelligence and Ethics

Artificial Intelligence and Ethics

Organizer: **Stephen Michael Impink**, *NYU Stern*
Session Chair: **Kirsten Edrie Martin**, *U. of Notre Dame*

This symposium provides four papers that take perspectives on ethical issues that have emerged due to the increased usage of AI within organizations. The first paper provides an overview of algorithmic fairness and bias, and argues the importance of managerial oversight to ensure outcomes are not negatively impacted by the use of AI in decision-making. The subsequent two papers delve further into the usage of AI by managers in hiring and other forms of decision-making, providing some evidence that “managers-in-the-loop” may not be enough to eliminate bias. Lastly, given that AI may not be effectively used by people within the organization, this symposium explores how to alter AI product development to make resulting products more ethical. These papers raise important themes from nascent literature on understanding the ethical limitations of AI and managers in a firm using AI and raising awareness of the risks associated with using “big data” in AI product development, training, and usage.

CAR: The Impact of Career Shocks on Career Development: A Moderated and Mediated Model  

Author: **Zulqurnain Ali**, *IRC for Finance and Digital Economy, KFUPM Business School, King Fahd Uni. Pet M*

Organizations are dynamic bodies, and such dynamism is reflected in the development of critical occasions. These occasions, either positive or negative, can impact workers. However, there is little discourse about their importance and effect on workers which delays improvement in the insight of organizational practices. The present study addresses this gap using affective events theory to advance our understanding of how career shocks, as affective events, influence employees' career development. Using a time-lag approach, this research examines the impact of positive and negative career shocks on individuals' career development through career attitude, accounting for the moderating influence of self-efficacy. The present research contributes to our understanding of a) testing the relationship between career shocks and career development, b) identifying the moderating role of self-efficacy, and c) investigating the mediation mechanism of career attitude in the linkage between career shocks and development. Finally, the study implications are presented.

CAR: Struck or Protected by Career Shocks During the Pandemic?: A Dualistic Passion Perspective

Author: **Victor Chen**, *Tulane U.*

Author: **Danielle Cooper**, *U. of North Texas*

Author: **Miguel Caldas**, *U. of Texas at Tyler*

Author: **Babara Wooldridge**, *U. of Texas at Tyler*

Negative career shocks spark sensemaking and can provoke feelings of powerlessness and hopelessness. During the COVID-19 pandemic, many individuals have faced such jarring work events; however, we need a better understanding of how different individuals may have been emotionally affected by these changes. We extend the dualistic theory of passion to explain these responses. We suggest that obsessive passion (OP) creates a rigid engagement with work activities in which work consumes one's identity and conflicts with other important activities, creating a sense of hopelessness. Under fear of job loss and workload reduction during covid, the effect of OP on hopelessness intensifies. In comparison, harmonious passion (HP) creates flexible task engagement in which work becomes a balanced part of one's identity and supports basic needs of autonomy, competence, relatedness, supporting a more positive outlook. Under fear of job loss, but not workload reduction, HP provides an even greater buffer against hopelessness. Our application of the dualistic model of passion and results has important implications for theory, practice, and future research.

CAR: Why Freelancing? A Qualitative Study to Reveal the Sources of Freelancers' Career Shocks

Author: **Jérôme Sulbout**, *U. of Liege*

Author: **Francois Pichault**, *U. of Liege*

Workers face unexpected career events that lead them to reflect on their career paths and potential career changes. One of such changes could be to turn to the world of freelancing. But what are the sources of these career shocks that has led them to this career transition? Using the career narratives of 31 freelancers analysed through a thematic analysis, the authors highlight that individuals face a number of unexpected events related to one major disrupting event which lead to the transition. As a major contribution, the findings reveal that traditional workers deal with major career shocks of multiple sources that lead workers to the career path thinking and to their transition into freelancers: organisational, network-related, individual, market-related, family-related, environmental. The discussion section is composed of two major parts. First, the findings are discussed in light of the career shock theory, and the sustainable career theory. Second, the authors show that workers may be forced to turn to freelancing, thereby challenging the most important and agentic career theories of the 21st century: freelancers may be driven by inner volition, but also strongly pushed by contingent factors in their career transition and construction.

CAR: The Combined Effects of Career Plateau and Career Competencies on Marketability and Career Outcomes 

Author: **Usman Raja**, *Brock U.*

Author: **Saima Naseer**, *Brock U.*

Author: **Sehrish Khan**, *International Islamic U., Islamabad, Pakistan*

Utilizing the assumptions of social cognitive career theory, the current study unveils the harmful effects of career plateau on other career-related variables (i.e., organizational mobility preference, career goal disengagement, and career insecurity) via perceived marketability types. Moreover, we also examine how these indirect effects are conditional on employees' career competencies in a moderated mediation model. Employing a multi-wave research design, we collected temporally segregated data from a sample of employees (n = 292) in Pakistan's service sector. The results support the indirect effects of career plateau on career outcomes through perceived marketability types. In addition, our findings support the view that the indirect effects of career plateau on career outcomes are more potent for employees with low career competencies. By untangling the mechanisms and boundary conditions through which career plateau affects employees' career outcomes, our study provides unique insights into the vocational and careers literature.

CAR: Prosocial Motivation, Career Commitment, and Turnover Intentions: The Sequential Mediating Model

Author: **Joohan Lee**, *Troy U.*

Author: **Huong Le**, *Centre Queensland U., Australia*

Author: **Connie Shao-mei Zheng**, *U. of South Australia*

Author: **Neena Gopalan**, *Associate Professor*

Drawing on the social exchange theory, we develop and examine a process model about the effects of prosocial motivation on career commitment and turnover intentions via the sequential mediators of social support and career networking. Data were collected from a sample of full-time employees in a time-lagged research design with three time points (N1 = 360, N2 = 320, and N3 = 261). The results confirm that, through the sequential mediating roles of social support and career networking, prosocial motivation positively affects career commitment, while negatively influencing turnover intentions. This study contributes to the literature on motivation, career, and turnover intentions by shedding light on the underlying process in how committed prosocially motivated employees are to their career and job. We conclude with theoretical and practical implications.

CAR: Sovereign Workplace Learning: A Process Model to Integrate Self-regulated and Informal Learning

Author: **Julian Decius**, *U. of Bremen*

Author: **Lorenz Decius**, *U. of Bremen*

In a rapidly changing organizational world of work, sovereign workplace learning (i.e., work-related learning that takes place autonomously and independently of formal structures in organizations, putting the learner in charge of the learning process) is playing an increasingly important role in contrast to formal training. Our conceptual article identifies self-regulated learning and informal learning as the two key learning forms of sovereign workplace learning, which have rarely been considered together due to existing research thresholds between educational and management research. To overcome the fragmentation in literature and to reduce existing conceptual overlaps, we develop an integrative process model of sovereign workplace learning that includes a self-regulated learning pathway and an informal learning pathway. We base the model on a learning-specific planned behavior perspective and distinguish the stages stimulus, intention, and spontaneity of learning. Our article provides conceptual clarification and enables a new interdisciplinary perspective on sovereign workplace learning. We also set a future research agenda that includes issues of boundary conditions, antecedents, outcomes, operationalizations and interventions to foster sovereign workplace learning. Implications of the model for theory and practice—with special focus on promoting conditions conducive to learning in organizations—are discussed.

CAR: Psychological Contract Discrepancies, Turnover Intentions and Safety Compliance in the Military

Author: **Johannes Marcelus Kraak**, *Kedge Business School*

Author: **Yannick Griep**, *Radboud U., Netherlands*

Author: **Pierre Barbaroux**, *École de l'air et de l'espace*

Author: **Chandrashekar Lakshman**, *Florida Atlantic U.*

NATO members have been coping with low motivation and morale. Such environments typically have high turnover intentions and neglect behavior. However, safety behavior is paramount for military organizations and neglect behavior can have serious consequences. Social exchanges are often cited as the main reason for these phenomena. We therefore examine turnover intentions and safety compliance behavior of 1709 airmen from a European NATO Air Force by focusing on different psychological contract dimensions. We use polynomial regression and response surface analysis. Results show that higher absolute levels of PC fulfillment are related to lower levels of turnover intentions and higher levels of safety compliance behavior. Furthermore, perceptions of PC over-fulfillment are negatively associated with turnover intentions whereas safety compliance is unaffected by positive (over-fulfillment) and negative (under-fulfillment) PC discrepancies along all PC dimensions. We discuss implications for the psychological contract literature, make suggestions for future research, and provide practical implications.

Participant: **Thomas Rigotti**, *Johannes Gutenberg-U. Mainz*

This symposium brings together several complementary approaches to examine the work-family interface including episodic, dyadic, and daily lenses. The four presentations focus on using daily diary methods to capture the dynamics involved in employees' work-family lives. The papers examine important outcomes such as work-family time allocation, energetic well-being, work self-esteem, and work-family conflict/enrichment. From four unique perspectives, this group of papers investigates employees' daily work-family situations through different theoretical angles including decision making, crossover, appraisal, and job demands-resources theory.

**Antecedents and Consequences of Entrepreneurial Careers:
Integrate Micro and Macro Perspectives**
Antecedent & Consequence of Entrepreneurial Career

Organizer: **Siran Zhan**, *U. of New South Wales*
Presenter: **Leigh Mellish**, *UNSW Sydney*
Presenter: **SHELTER SELORMTEYI**, *Copenhagen Business School*
Presenter: **Liwen Zhang**, *U. of Macau*
Presenter: **Theodor Lucian Vladasel**, *U. Pompeu Fabra and Barcelona GSE*
Discussant: **Scott Seibert**, *Rutgers U., School of Management and Labor Relations*
Discussant: **Aleksandra Joanna Kacperczyk**, *London Business School*

This symposium focuses on the antecedents and consequences of an entrepreneurial career. Underlying this focus is the view that entrepreneurship is a career step along a career path as opposed to a final destination (Burton et al., 2016). Four studies in this symposium examine key issues relevant to different stages of an entrepreneurial career, including the pre-entry learning processes that shape entrepreneurial entry decisions and the type of venture founded, the impact of entrepreneurial experience on entrepreneurs' personality and skillsets, and former entrepreneurs' behaviors (e.g., turnover) and performance implications (e.g., innovation) in post-entrepreneurship wage employment. Implications for theory and practice will be discussed. Following the paper presentations, Scott Seibert and Aleksandra (Olenka) Kacperczyk, two distinguished experts on entrepreneurship and careers representing different theoretical traditions (micro and macro, respectively), will serve as our discussants to offer theoretical and practical suggestions, identify promising research opportunities, and stimulate an interactive group discussion.

Presenter: **Woohee Choi**, *Ohio State U.*
Discussant: **Deepak Somaya**, *U. of Illinois at Urbana-Champaign*

Research on mobility highlights human capital flow related to turnover, recruitment, and movement from source to destination firms. This symposium features four papers that examine mobility into, out of, and across firms. The first two papers highlight employee inflow, looking at the role of HR practices and prior organizational status in affecting recruitment and employee performance. The next two papers address employee outflow, investigating the effects of the internal mobility of leaders as well as how organizations can manage external mobility and build a competitive advantage by maintaining relationships with alumni. Taken together, the papers reflect the importance of understanding precursors and outcomes of mobility. Successfully understanding employee movement within and across firms can help organizational researchers and management professionals learn more about navigating career transitions and managing human capital flow.

Conflict in the Gig Economy: Platforms and Scandals

Session Moderator: **Michael Maffie**, *Pennsylvania State U.*

CM: Invisible Hands: The Roots of Conflict in the Gig Economy

Author: **Michael Maffie**, *Pennsylvania State U.*

Much of the conflict in the online gig economy centers on the relationship between market risk and organizational control. Yet despite extensive scholarship on platform control, the literature assumes that platform companies distribute risk uniformly across workers. In this article, the author explores how platform companies can capture and deploy market risk across workers as a vehicle of organizational control. Drawing on original qualitative and quantitative data, the author illustrates how platform companies’ “invisible hands” manipulate workers’ market exposure. For workers who follow the company’s desired behaviors, they are pulled “inward”, protected from market risk, while those who do not follow these behaviors are pushed to the periphery, increasing their market exposure. This article develops the mechanisms that link market risk to platform control and provide new insight into the roots of conflict in the ‘gig’ economy.

CM: The Psychological Processes and Consequences of Playing the Role of Producer versus Consumer

Author: **Jae Yun Kim**, *Asper School of business, U. of Manitoba*

In advanced capitalist societies, it is necessary for people to play the role of producer and consumer. That is, whether they like doing it or not, many people spend much time and energy each day directly or indirectly producing commodities (e.g., goods, services) for sale as producers (workers), and purchasing and using up commodities produced by others (e.g., workers, companies) as consumers. We propose that these two economic roles, the backbone of the capitalist economy, embody distinct logics and orientations, and thus prescribe different mindsets and behaviors for the participating agent. Drawing on research from various fields, including management, marketing, sociology, and psychology, we suggest that production is extrinsic-oriented (focused on pleasing others) and embraces “ethic of labor” (e.g., perseverance, duties), whereas consumption is intrinsic-oriented (focused on pleasing self) and embraces “aesthetic of play” (e.g., self-indulgence, comfort) (Baudrillard, 1975; Humphreys & Grayson, 2008). We then consider how these different logics and orientations might relate to and shape people’s attitudes and behaviors in domains of social power, motivation, well-being, social identity, and self-construal. Finally, we explore the implications of this framework for the study of justice. By exploring the psychological processes and consequences of people playing the role of producer versus consumer, the present paper seeks to extend the existing work that has paid relatively little attention to the psychological aspects of the two economic roles. More generally, by exploring this relatively understudied topic, the present paper aims to serve as a guidepost for future research.

CM: Transaction Platform Governance and Conflicts: A Configuration Approach

Author: **Habib Ashrafal Islam**, *Old Dominion U.*

Author: **Matthew Farrell**, *Old Dominion U.*

Author: **Anil Nair**, *Old Dominion U.*

Author: **Jing Zhang**, *Old Dominion U.*

Transaction platforms, such as Amazon and Uber, are emerging as central players in many segments of the global economy. Extant research has primarily focused on the impact of network effects on platform growth and rivalry, and very little scholarly work has studied governance systems of platforms. Building on property rights theory, we propose that governance rules influence conflicts between platforms and seller partners. We test our proposition in the online auction and mail-order (SIC: 5961) industry. We first identify the sets of rules that platforms use in seller selection and engagement based on configuration theory. Next, utilizing fsQCA methodology, we identify multiple configurations of governance rules that lead to low platform-seller conflict. We also find that divergent configurations are contingent upon platform strategies. Theoretical and empirical implications of the study on platform governance and property rights are discussed.

CM: When to Attenuate Social Disapproval of Stigma by Association? Empirical Evidence from Metoo movement

Author: **Heyang Sun**, *Chinese U. of Hong Kong*

Author: **Yiqian Lu**, *Chinese U. of Hong Kong*

This study extends the research on organization stigma by developing a new perspective on the response timing of a firm towards an associated peer’s event-stigma in the social media era premised on social disapproval theory. Event stigma can be spread by association, and firms affected by a peer’s stigma also face serious social disapproval, calling for an appropriate response strategy. Past studies suggest that the firm should have a slower and deliberate response to attenuate social disapproval due to social media’s greater velocity, emotionality, and communality characteristics. Meanwhile, we empirically demonstrate that social media also brings incredible information volume, which can crowd out constituents’ limited attention to a focal firm’s response, decreasing the effectiveness of response in the social disapproval attenuation process. Therefore, based on these two mechanisms, there is an inverted U-shaped relationship between the response time of the firm with stigma by association and its financial performance. We further confirm that the turning point of this curvilinear relationship depends on the strength of association and response accommodativeness. Using data on 188 Hollywood movies associated with the Weinstein scandal and the #MeToo movement, we find the results support these hypotheses.

Managing negative situations is a critical task for managers and organizations, especially since doing so effectively is imperative for “creating a better world” (Academy of Management, 2021). However, there are numerous obstacles that can challenge managers. Our symposium gathers an international panel of scholars from Austria, Belgium, Canada, Finland, Germany, New Zealand, Portugal, The Netherlands, and the United States that leverages diverse perspectives and methodologies to (a) assess what influences managers’ decisions to pursue punishment (vs. procedural justice) when they handle ambiguous allegations of harm, (b) how managerial inaction can be detrimental for employees and managers, (c) how procedural justice issues can influence managers conducting layoffs, (d) how anticipatory moral emotions affect managerial behaviors in “necessary evil” tasks, and (e) how managers can effectively deliver bad news. Following the paper presentations, Dr. Robert Bies will conclude the symposium with an engaging interactive discussion that highlights key insights and future research directions. By showcasing theoretical and practical insights into how managers and organizations can more effectively manage negative situations, we aim to fulfill the Academy of Management’s objective to “create a better world” through responsible management.

Digital Platforms and Value Creation

Session Moderator: **Jordan Duran**, *UNC Charlotte*

CTO: [Content Monetization on Social Media Platforms](#) 

Author: **Hua (Jonathan) Ye**, *U. of Oklahoma*

One thing social media platform owners want to do is increase the value of the content on their platform, to better engage their users. There are two kinds of platform content value – content quantity value, where having more content naturally makes a social media platform more attractive, and community engagement value, where the “attractiveness” of the content draws in and retains users. Substantial research suggests the introduction of financial incentives is one viable strategy. However, what are effective mechanisms for delivering financial incentives remains unknown. One financial incentive mechanism recently introduced to social media platforms is paid Q&A, where people answer specific questions from other users in exchange for a market-determined fee. Does paid Q&A improve platform content value? We study this question in a natural experiment on Weibo Q&A, which introduced a paid Q&A feature into its user content mix. We find that while paid Q&A reduced the quantity of free content, overall, the total amount of content increased. Furthermore, the community engagement value of content as measured by number of likes and forwards increased. This suggests that the introduction of paid Q&A incentivizes users to generate content that genuinely increases the platform content value. Our findings add to the literature by studying how financial incentive systems change behavior in a real social media platform with an existing incentive mix, and by identifying social media platform design features that increase user engagement.

Paper is NOT Available. Please contact the author(s).

CTO: [Relational Work and Monetization in the Creator Economy](#)

Author: **Jordan Duran**, *UNC Charlotte*

Author: **Anne Kathrin Kronberg**, *UNC Charlotte*

The digital content creation economy supports a significant number of freelance artists, creatives, and knowledge workers. These content creators earn income from revenue sharing arrangements with the digital platforms that host and distribute the products of their work. In these relationships, the monetization policies and tools afforded from the platform are central to how content creators generate value, yet the role that monetization plays in shaping the content production process is not understood. This paper investigates the role of monetization in digital platform work by focusing on how a platform’s monetization features and policies organize the work of content creation. Findings are based on a qualitative analysis of 30 interviews with content creators who earn a living from monetizing content on Twitch. We argue that platform monetization tools and policies materially enable relational practices with audiences. In these relational practices, creators obscure, reframe, and gamify monetary contributions in social terms. Creators also recognize doing these practices as normative and avoid engaging in practices perceived as non-relational. Based on these findings, we argue that monetization can be understood as a material entanglement of relational work and platform features, and offer some future directions for research.

CTO: [Orchestrating the Performance of Equity Crowdfunding Platforms](#)  

Author: **Saul Estrin**, *LSE*

Author: **Susanna Khavul**, *SJSU/LSE*

Author: **Alexander Kritikos**, *DIW Berlin*

Author: **Jonas Loher**, *Ifm-Bonn*

We model the behavior and performance of equity crowdfunding platforms in providing finance to entrepreneurs. We characterize the equity crowdfunding process in terms of a relationship between the number of investors and the amount of money raised. This framing permits analysis of sources of heterogeneity by considering variation in the average amount supplied by investors in each pitch, for example due to diversity in the architecture of platforms or differences in institutional arrangements and policies between countries. We use a proprietary dataset collected from the most prominent platforms in Germany, USA and UK, 2011-2019. We find that the underlying equilibrium relationship between the number of investors and the amount of money raised for entrepreneurs is loglinear, with a coefficient less than one. Hence, the underlying relationship is concave to the origin. This finding has important policy implications. We go on to identify significant variation in the average amount invested by platform and across countries, pointing to the impact of institutional and organizational specificities. These variations affect both the intercept and the slope of the curve.

Paper is Available to Meeting Registrants Only.

CTO: [Value Creation through Machine Learning Using Data Network Effects](#)

Author: **Ricardo Costa Climent**, *Uppsala U.*

Author: **Darek Haftor**, *Uppsala U.*

Author: **Jenny Eriksson Lundström**, *Uppsala U.*

The recently proposed theory of data network effects aims to account for how user value is created from the use of machine learning technology. The theory recognises the unique learning ability of machine learning, which uses large data sets for predictions and decision making. This paper offers a critical assessment of that theory, unearthing some of its strengths and limitations. The latter are transformed into a set of interrelated research questions that jointly constitute the proposed research programme into how to use machine learning technology in order to create and capture value. The paper contributes to the literature with an articulation of some novel knowledge gaps.

Entrepreneurial Cognition 6

Session Moderator: **Sean Maddison Dwyer**, *Baylor U.*

ENT: Personal Mission Drift: Exploring Purpose in Life in Entrepreneurial Venturing

Author: **Sean Maddison Dwyer**, *Baylor U.*

Author: **Kendall Artz**, *Baylor U.*

Purpose in life is considered one of the most central components of entrepreneurial well-being and one of the most powerful driving forces of human behavior. Entrepreneurship researchers, however, have been slow to acknowledge the role of this meaningful construct in the entrepreneurship literature. Accordingly, this study sets forth a theoretical framework that explains the relationship between purpose in life and entrepreneurial action. We explain that purpose in life is not only a driver of entrepreneurial action but also a conducive means of cultivating purpose in life. Drawing on theoretical insights from psychology research, we explain how the entrepreneurial process naturally cultivates the four building blocks of purpose in life, which include commitment, personal meaningfulness, goal-directedness, and beyond-the-self. We propose that whether entrepreneurship cultivates purpose in life for individuals depends upon the degree of coherence between the entrepreneurs' intended social purposes (ISP) for engaging in entrepreneurship and the activities and outcomes of the venture over time. When in coherence, entrepreneurship can be a powerful, self-reinforcing mechanism for sustaining purpose in life, which can have significant psychological benefits for the entrepreneur. For entrepreneurs that fail to maintain such coherence, however, the ventures may lock into previously unintended paths that gradually erode the psychological health and well-being of the entrepreneur. It is in this vein that entrepreneurship is a double-edged sword, protecting purpose in life for those that can retain coherence and impairing purpose in life for those that do not.

ENT: The Curvilinear Effect of Entrepreneurship Education on Entrepreneurial Intentions 

Author: **Giang Truong Hoang**, *Victoria U. Australia*

Author: **Tuan Trong Luu**, *Swinburne Business School, Swinburne U. of Technology*

Entrepreneurship education has drawn attention from policy makers and scholars because of its potential influence on students' entrepreneurial intentions. However, the effectiveness of entrepreneurship education on entrepreneurial intentions remains inconsistent and controversial. Grounded in the social cognitive theory, we examined a potential curvilinear effect of entrepreneurship education on entrepreneurial intentions while also investigated the mediating role of entrepreneurial passion and the moderating role of resilience on this curvilinear effect. Two studies were carried out to test these ideas. In Study 1, data collected from 554 technology students from Vietnamese universities revealed that entrepreneurship education exhibited a U-shaped relationship with entrepreneurial intentions. Study 2 replicated and extended results from Study 1 by utilizing a sample of 721 business students from Vietnamese universities. The findings of Study 2 demonstrated that entrepreneurial passion mediated the curvilinear effect from entrepreneurship education to entrepreneurial intentions. Moreover, the association between entrepreneurial passion and entrepreneurial intentions was found to be strengthened by resilience. Our results offered significant implications for both theory and practice.

ENT: A Literature Review of Perspective taking Research Relevant for Entrepreneurship

Author: **Shelby Meek**, *Kennesaw State U.*

Perspective taking enhances an entrepreneur's ability to recognize better market opportunities in terms of desirability, feasibility, alignment, and creativity. Although the perspective taking construct is well-established in organizational psychology literature, entrepreneurship scholars have yet to realize its full potential. To this end, this paper offers a literature review and synthesis of perspective taking research relevant to entrepreneurship to elucidate perspective taking's role as a mechanism for entrepreneurial learning. This paper identified 25 articles in which perspective taking plays a central role, and the relevance for entrepreneurship is clearly apparent. Additionally, this review is informed by another 26 articles covering the broader topics of perspective taking within psychology, cognition, and entrepreneurial learning. This review describes the various roles of perspective taking in existing scholarship, including its antecedents, consequences, mediators, and moderators, and concludes with suggestions for additional research avenues. Taken together, this literature review shows that perspective taking, and the learning that it evokes, play a valuable and necessary role across the spectrum of entrepreneurship research.

ENT: The Effect of Performance on Entrepreneurial Intention: a Field Experimental Study

Author: **Hui Jiang**, *school of management, USTC*

Most empirical researches have focused on direct entrepreneurial experience and entrepreneurial intention. Actually, direct entrepreneurial experience is situational, in which performance would play a role as a socially mediated factor. Drawing on Social Cognitive Career Theory, this study investigated the relationship between performance and changes in entrepreneurial intention, as well as the mediating role of changes in entrepreneurial outcome expectation and the moderating effect of locus of control. A field experiment study is designed and conducted among 128 Chinese college students. As predicted, the results show that performance has a positive impact on changes in entrepreneurial outcome expectation and entrepreneurial intention. Specifically, positive (negative) performance leads to increasing (decreasing) in entrepreneurial outcome expectation and entrepreneurial intention through changes in entrepreneurial outcome expectation. The mediating effect is strengthened for the internals (vs. the externals). The theoretical and practical implications are discussed.

Session Moderator: **Simon Hensellek**, *TU Dortmund U.*

ENT: Craft Reconfiguration: Rediscovering Traditional Craft Despite Modernizing Forces

Author: **Dillon Berjani**, *Vrije U. Amsterdam*

Using an inductive research design, the current study provides an exploration of how traditional craft can be reconfigured through entrepreneurial action, revealing unique processes by which craft persists as a source of meaningful jobs and income, despite modernizing forces. Whereas prior assessments primarily explore how modernization reconfigures traditional craft, the focus in this article is on entrepreneurship's role in challenging cultural remnants attached to craft while maintaining traditional elements in contemporary craft. The findings indicate that craft can be recontextualized, revitalized, and repurposed through entrepreneurial action, such that it then can be rediscovered and adapted to contemporary market demands. First, craft is recontextualized, from a culturally anchored tradition mainly performed at home to a commercially embedded practice performed in organizational settings. Second, craft is revitalized through modern approaches to production, equipment, and design that turn craft into something more accepted in the broader economy and enable it to compete with industrialized products. Third, craft is repurposed, from a practice performed for family and friends to artistry that addresses market needs, shifting from marginalization to a far more commercial practice. These findings offer theoretical contributions to emerging efforts to rediscovering craft, in that they reveal the unique processes by which craft, even if pushed to the margins, can persist as a vital source of economic and social prosperity in the marginalized communities that rely on it.

ENT: Contextualizing Entrepreneurship. Linking Context to Research Strategies in a Process Perspective

Author: **Attilia Ruzzene**, *U. of Bergamo*

Author: **Paolo Di Toma**, *U. of Modena and Reggio Emilia*

In entrepreneurship, attention to context has been steadily on the surge. Nonetheless, most empirical research remains stuck in a view of context as "static, prior and external to the entrepreneurship being studied". This paper develops an alternative conceptualization of context and its relationship to the entrepreneurial phenomenon; and presents three research strategies underexploited in entrepreneurship studies and coherent with this conceptualization. Specifically, we contrast what we regard as the dominant view of context in the field, context as a force field, to an alternative conceptualization that sees context as a process field. Furthermore, we discuss three research strategies, namely the extended case method, process tracing, and visual analysis, that enable contextualization by looking at phenomena of interest as embedded in a field of spatio-temporally situated processes. We conclude by outlining the epistemic gains that can be reaped through a processual approach to contextualization

ENT: From Data to Theory: The Use of the Grounded Theory Methodology in Entrepreneurship Research 

Author: **Simon Hensellek**, *TU Dortmund U.*

Author: **Giuseppe Natale**, *TU Dortmund U.*

Author: **Manuel Wiesche**, *TU Dortmund U.*

The grounded theory methodology (GTM) has been labeled the epitome of qualitative research because it represents one of the main approaches for building theory in entrepreneurship research. However, studies vary greatly in their application of GTM and its procedures. The purpose of this article is to scrutinize the use of GTM in entrepreneurship research. To this end, we analyzed 135 GTM-based articles across 15 major entrepreneurship and management journals. This paper extends entrepreneurship research by empirically examining the use of GTM, finding content-related and methodological developments in this realm. We discuss the importance of GTM for the past and future development of entrepreneurship research.

ENT: Social Support and Resource-Scarcity in Entrepreneurship  

Author: **Birgit Muskat**, *Australian National U.*

Author: **Ofer Zwikael**, *Australian National U.*

Author: **Pia Maria Arenius**, *RMIT U.*

Author: **Ana Longolongo 'Ae Valu Kolokihakaufisi**, -

Social support is highly effective for successful entrepreneurial activities. However, it remains unclear which resources remain accessible in times of crisis in an already resource-scarce environment; and how social support networks enable or even hinder entrepreneurs in accessing these resources. We study the response of entrepreneurs to crisis and the role of social support in providing access to existential resources. We use qualitative methodology and interview data from the South Pacific Island Nation of Tonga, a context defined by constant disruptions of climate change, resource scarcity, and now the Covid-19 crisis. Findings show that 1) land and access to land are the 'last available' resources to create new entrepreneurial activity; 2) women entrepreneurs rely on instrumental social support to access land, and 3) in times of crisis social support can be revoked and vanishes over time. With these findings, we advance the social support literature and shed light on the possible dark side that comes from the reliance on social networks for resource access. Further, we re-emphasize the role of land in entrepreneurs' response to crises in a resource-scarce environment and that being 'landless' creates a key institutional barrier for women in times of recovery.

ENT: **Market, Social, or Both? Measuring Social Innovation Through Trademarks** 

Author: **Mirko Hirschmann**, *Trier U.*

Author: **Joern Hendrich Block**, *U. of Trier*

Author: **Gorgi Krlev**, *ESCP Business School*

Social innovation in market-oriented social enterprises (SEs) contributes to both social and financial value creation. In order to develop and evaluate policy programs that promote social innovation to address societal challenges, it is therefore critical to understand how to identify social innovation. However, while the literature on commercial innovation is well advanced, research lacks empirical evidence on the measurement of social innovation. This study addresses this gap by investigating how trademarks and its diverse intellectual property right (IPR) characteristics serve to measure social innovation by SEs. Based on a sample of 925 SEs from Germany, we apply a textual analysis of their corporate websites to assess four dimensions of social innovation (i.e., innovation, social impact, financial, and scalability). In total, we analyze more than 35,000 subpages of SE-websites to construct our dependent variables. Our results show that the number of SEs' registered trademarks relate to all dimensions of social innovation. In addition, we find that certain trademark characteristics predict the dimensions of social innovation in different ways. We provide implications for both policy-makers and social entrepreneurs.

ENT: **State, Market or Society: Configurational Effects of Institutional Logics on Social Entrepreneurship**

Author: **Juelin Yin**, *Sun Yat-Sen U.*

Author: **Jiaxin Zhao**, *School of Business, Sun Yat-sen U.*

Author: **Yunzhou Du**, *Southeast U.*

Although prior research of social entrepreneurship has been focused on the influences of isolated institutional logics factors, little is known about how different institutional logics factors produce joint effects on social entrepreneurship participation. Based on the configuration theory, this study investigates how government logics, market logics, and social logics work together effectively to promote social entrepreneurship participation. Using data from the Global Entrepreneurship Monitor (GEM) survey, we apply the fuzzy-set qualitative comparative analysis (fsQCA) to investigate the driving mechanisms for achieving high/not-high prevalence rates of social entrepreneurship among 38 countries. The results suggest that high prevalence rates of social entrepreneurship are achieved through the interaction of multiple institutional logics, rather than by any single factor. Three different configurations can explain the presence of high prevalence rates of social entrepreneurship: the social-logic dominant-driven path, the market-logic dominant-driven path, the market-society dual-logics-dominant path. Further, we also find that the pathways for the absence of high prevalence rates of SE are not simply the negation of conditions for the presence of high prevalence rates of SE. Our findings not only contribute to the institutional logics literature and link to the stream of social entrepreneurship, but also inspire policy makers to effectively improve entrepreneurial environment.

ENT: **Why Some Entrepreneurial Firms Seldom Invest in Corporate Social Responsibility**  

Author: **Yalan Xu**, *South China U. of Technology*

Author: **Xufei Ma**, *School of Economics and Management Tsinghua U.*

Author: **David Ahlstrom**, *Chinese U. of Hong Kong*

Despite the rich literature on corporate social responsibility (CSR), prior studies have ignored a group of emerging and important entities: entrepreneurial firms. This paper aims to fill this gap by addressing the research question: why some entrepreneurial firms seldom invest in CSR. Employing real options logic, we examine the influence of uncertainties in the external environment and internal flexibilities of entrepreneurial firms on decisions of CSR investments. We propose that uncertainties in the external market will positively affect the decision of CSR practice. Given the specific characteristics of an entrepreneurial firm, we propose that there is a U-shaped relationship between firm slack resources and decisions of CSR investment, which is further moderated by the firm's R&D investment decision and ownership structure. The hypotheses received strong support by using a longitudinal sample of 1,250 Chinese entrepreneurial firms during the period of 2010 to 2017.

ENT: **Toilet Dreams in India: A Guard-Contester Framework of Entrepreneurial Strategies in Grand Challenges**      

Author: **Aparna Venugopal**, *U. of Liverpool Management School*

Author: **Paribhasha Sharma**, *Associate Professor O P Jindal Global U.*

We examine how entrepreneurs implement sanitation solutions in a complex, uncertain and evaluative context, namely India. We examine the existing theories on addressing grand challenges, review past studies on the Indian sanitation concern and turn to Foucault and Heidegger on guidelines to study the black boxes of power, time and agency in the Indian context. We adopt an inductive multiple case study design and gathered data via 30 semi-structured interviews, between 2018 and 2021 from the founders and stakeholders of 13 enterprises that offer toilet innovations across 12 Indian States. We contribute to entrepreneurship and strategy in practice literature by theorizing how entrepreneurs guard, contest, circumvent, and compartmentalize existing social structures to provide equitable sanitation solutions; this being an important problem that has received scant attention from the enterprise and strategy in practice literatures. Our framework of the entrepreneurial strategies serves as a guide on practical strategies for entrepreneurs who are addressing grand challenges and researchers who are examining the complex situated intersections of enterprise and strategy in practice. We challenge the theoretical distinctions between guards and contesters in communities that have deeply embedded power hierarchies.

In 2015 the UN adopted a resolution called “Transforming Our World: the 2030 Agenda for Sustainable Development” comprising 17 sustainable development goals (SDGs) ranging from “no poverty” to “responsible consumption and production.” This panel of global experts will show the range of entrepreneurial and intrapreneurial activities being done across meta, macro, meso, and micro levels to meet the SDGs. Examples will talk about meta level actors such as the UN, ILO and ISO, macro level activities in MNCs and NGO’s, meso and micro activities among indigenous peoples using historic models of sustainable life and among social and solidarity economy organizations leveraging ICT to create new partnerships around the world. The session will leave time for attendees to ask questions of these experts to help them in their future research, teaching, networking and engaged action.

Entrepreneurial Cognition 1

Session Moderator: **Alex Kier**, *Washington State U.*

ENT: **Examining the Nexus Between Entrepreneurial Imagination and Venture Innovativeness** 

Author: **Smita Srivastava**, *Wichita State U.*

Author: **Alex Kier**, *Washington State U.*

The new venture creation process begins when entrepreneurs come to imagine their venture ideas, yet we lack a comprehensive understanding of the imagination-innovation nexus for entrepreneurial ventures. In this research, we take a dynamic approach and combine entrepreneurial imaginativeness perspective with schema theory to argue that entrepreneurial imaginativeness will influence venture innovativeness and this relationship is likely to be contingent on the founder's knowledge depth and breadth. Using a two-step process and combining data from a survey of 98 entrepreneurs and secondary sources, we show that entrepreneurial imaginativeness enhances venture innovativeness and the founder's knowledge component has a differential effect on this relationship. More specifically, we hypothesize that knowledge depth constraints the effect of imaginativeness on venture innovativeness, while knowledge breadth enhances the effect of imaginativeness on venture innovativeness.

ENT: **Effectual and causal decision-making logics: Development and validation of a scenario-based measure (WITHDRAWN)**

Author: **Sonia-Cristina Codreanu**, *King's College London*

Author: **Gorkan Ahmetoglu**, *U. College London*

Author: **Ute Stephan**, *King's College London*

Effectuation theory has gained prominence as a framework for understanding entrepreneurial decision-making logics. However, the measurement of effectuation remains controversial, as existing measures suffer from important limitations hindering empirical research. Across several empirical studies, we develop a scenario-based measure of effectuation, examine its content validity, explore and then confirm the dimensionality of the measure, and provide evidence of convergent and discriminant validity. Our measure shows evidence of strong reliability and validity. We contribute a new measure for effectuation research that operationalizes effectuation as a decision logic of the individual entrepreneur, clarify the ontological nature of the effectuation construct, and extend its nomological net.

ENT: **The Two Faces of CEO Narcissism and Affordable Loss: The Rivalry-Versus-Admiration Perspective**

Author: **Zhe Shen**, *U. of Manitoba*

Author: **Wenlong Yuan**, *Asper School of business, U. of Manitoba*

Effectuation approach, defined as both process and principles guiding decision-making logic at the firm level, has attracted entrepreneurship scholars' attention for two decades. The majority of research focuses on effectuation approach as a whole, and few studies have explored related subconstructs, such as affordable loss. However, there is a scanty of empirical examinations on single principle, which benefits an in-depth understanding of effectuation approach. Hence, based on the rivalry-versus-admiration perspective, this study investigates the relationship between CEO narcissism and affordable loss. On the one hand, the influence of individual personality differences on effectuation principles has been addressed and verified by empirical support. A firm's affordable loss behaviors indicate the cognitive mechanism underlying effectuation principles. On the other hand, this study discusses the boundary of effectuation approach by including two powerful moderators, namely, perceived uncertainty and slack resources. Using data collected from 126 Chinese enterprises, our results indicate that under low perceived uncertainty and high organizational slack, CEOs high in narcissistic admiration are more likely to take on affordable loss investments, while narcissistic rivalry CEOs prefer to reduce affordable loss activities to secure their status—assertions that fully support our hypotheses. Management implications and future directions are interpreted in the discussion.

 ENT: **Are Sociable Founders More Likely to Share the Founder Role?**

Author: **Tatiana Zabara**, *U. of Fribourg, Switzerland*

Author: **Emmanuelle Fauchart**, *U. of Fribourg, Switzerland*

New ventures vary tremendously in their design and approach to opportunities. In particular, they vary systematically in the extent to which the founder, or lead founder, decides to be a solo entrepreneur, undertaking the full scope of the founder role, or rather decides to share the role with cofounders. In this paper, we argue that a lead founder's personal identity is a key antecedent to the choice of adopting a broad or rather narrow founder role, as the choice of founder role scope shares meanings with one's more fundamental personal dispositions. In order to test this hypothesis, we have examined a sample of 170 high tech new ventures founded in Flanders between 2006 and 2011, and studied how lead founders' aspects of their personal identities, here their 'sociability', 'structuring', and 'explorative' dispositions, affect the likelihood of (1) sharing the founder role, hence starting alone or with others, and conditional on sharing the role, (2) retaining a broad or narrow lead founder role (hence specializing into a narrow set of tasks). We find general support for our hypotheses, suggesting that personal identity affects the scope of the founder role chosen by the lead founder. Specifically, our theorizing suggests that personal identity infuses key initial choices that delineate the lead founder role and conditions how the founder role is conceived and performed.

ENT: **Regulatory Focus, Ambidextrous Learning and Opportunity Recognition in New Product Development**  

Author: **Xiangming Tao**, *SPRU, U. of Sussex*

Author: **Catherine L. Wang**, *Brunel U. London*

Author: **Paul John Alexander Robson**, *Royal Holloway, U. of London*

This study focuses on individual managers' ambidextrous learning and examines its psychological antecedents and consequences in the new product development (NPD) context. Specifically, drawing on the regulatory focus theory, this study examines the relationship between the regulatory focus (i.e., promotion focus and prevention focus), ambidextrous learning, and NPD opportunity recognition. Based on survey data of 225 NPD project managers in high-tech small and medium-sized enterprises in China, we find that NPD project managers' promotion focus and prevention focus, acting as an enabler and a deterrent respectively, affect their ambidextrous learning, which in turn facilitates opportunity recognition in the NPD process. Further analyses reveal that ambidextrous learning mediates the effects of promotion and prevention focus on NPD opportunity recognition. Our findings offer new insights on the individual ambidexterity regarding the unique role of ambidextrous learning, manifested as actionable managerial capability, and also practical implications on how NPD project managers can self-regulate their behaviour for the benefit of NPD.

ENT: **Meaningfully Different? How Visual Semantics Help New Ventures Achieve Optimal Distinctiveness**

Author: **Stephanie Weiss**, *U. of Siegen*

Author: **Klemens Knöferle**, *BI Norwegian Business School*

Author: **Alexander Vossen**, *U. of Siegen*

We examine how new ventures in online B2C marketplaces use visuals, such as product videos and images, in their strife for optimal distinctiveness, that is, being as different as conformingly possible. Building on research on cultural entrepreneurship as well as sensory marketing and perception, our work shows that visuals help new ventures orchestrate their distinct organizational identity, that is, appearing either more conforming or different to evaluating audiences than they truly are. We use machine learning approaches from image label recognition and natural language processing on videos and images of 1,157 entrepreneurial products offered on Amazon Launchpad to analyze the effect of the visual semantics—the meaning contained in visuals—on product performance. We find that visual semantics matter most for conforming new ventures' product performance, albeit with a juxtaposing effect: While visuals should adhere to consumer expectations in terms of semantic fit, that is, the type of meaning they convey, they should deviate in terms of semantic richness, that is, the extent of meaning conveyed. By offering a multifaceted perceptual perspective on the way a distinct organizational identity is visually conveyed to audiences, our work has important implications for research on optimal distinctiveness. For managers, our work demonstrates clear guidelines for designing and using semantics in product videos and images to appear more or less unique to consumer audiences in online B2C marketplaces.

ENT: **Sensitivity to Experimental Feedback and the Trade-Off Between Product and Segment Performance**  

Author: **Daniel Albert**, *Drexel U.*

How can entrepreneurs develop a high performing product in uncertain markets? The entrepreneurship literature suggests to continuously experiment with prototypes to learn from performance feedback. However, there is a lack of guidance about how feedback from experimentation should be used in order to find high performing product designs. To answer this question, we develop a formal simulation model and explore how entrepreneurs' "sensitivity to feedback", that is, how much weight is given to new information, shapes the search for a high performing product design. Our study reveals that feedback sensitivity constitutes a strategic trade-off between optimizing a specific product design and the discovery of higher performing product design segments. We provide implications for entrepreneurial decision making and the academic entrepreneurship and learning literature.

ENT: **Hype, Uncertainty, and Lock-in: The Dynamics of New Venture Adoption of Emerging Technologies** 

Author: **Lien De Cuyper**, *Amsterdam Business School, U. of Amsterdam*

Author: **Camilla Curnis**, -

We draw on an inductive, qualitative study of a Swiss start-up that adopted blockchain technology to develop a model of new venture adoption of hyped, emerging technologies. Our model encompasses three phases during which distinct aspects of the hyped technology are highlighted and different dynamics play out: (1) technology idealization, (2) technology realization, and (3) technology disassociation. We find that emerging technologies surrounded by hype are often first adopted symbolically, and only later structurally embedded in the venture. Interestingly, we also shed light on what happens when the technology fails to live up to the hype. We find that the emerging technology continues to be used due to technology lock-in, while being symbolically decoupled from the venture's identity and image.

Self-employment 2

Session Moderator: **Mateja Andric**, *U. of St. Gallen, Switzerland*

 ENT: **Socio-Historical Shifts in Life Stage at Entrepreneurial Entry and Their Performance Implications** 

Author: **Mateja Andric**, *U. of St. Gallen, Switzerland*

Author: **Isabella Hatak**, *U. of St. Gallen*

Author: **Wei-Jun Hsueh**, *Jonkoping International Business School*

Author: **Thomas Markus Zellweger**, *U. of St. Gallen*

Entrepreneurs are no longer who and what they used to be, and this has implications for entrepreneurial performance. Drawing on life course theory and results from cohort analyses of U.S. self-employment data from the 1979 and 1997 cohorts of the National Longitudinal Survey of Youth, we propose that shifting age norms have resulted in individuals today entering entrepreneurship at a younger age, and with less prior work experience than in the past. Also, individuals today are more frequently unmarried and childless at the time of entering entrepreneurship. We conjecture that these socio-historical shifts in life stage at entrepreneurial entry bear largely negative implications for entrepreneurial performance. Moreover, we argue for gender differences in the effect of parenthood on entrepreneurial performance, which we suggest have decreased over time due to the decline of traditional gender roles. Our cohort analyses support these theoretical conjectures.

ENT: **The Impact of COVID-19 Pandemic on Entrepreneurship: Evidence from the Kauffman Microdata**

Author: **DAEHYUN KIM**, *KAIST College of Business*

Author: **Taekyun Kim**, *Korea Advanced Institute of Science and Technology (KAIST)*

Author: **Wonjoon Kim**, *KAIST*

The widespread of the coronavirus has caused unprecedented contractions in small and entrepreneurial firms. With the overall rate of rebound of entrepreneurial ventures with the CARES act, little evidence has emerged about the effects of the pandemic on the new business formation. From the analysis based on Current Population Survey data, we do not find whether the new entrepreneurship rate increased. However, we find that the rate of new business creation by the unemployed, particularly African American, increased, but the rate of new business creation by the employed decreased since the COVID-19 pandemic. Importantly, these findings are particularly dominant in states that are severely affected by COVID-19. Thus, we reveal that the impacts on entrepreneurship during the pandemic vary across employment status and races.

 ENT: **What Makes Entrepreneurship Counter-cyclical? Evidence from a Shutdown of Start-up Subsidies (WITHDRAWN)**

Author: **Marianna Marino**, *ICN Business School and Bureau d'Économie Théorique*

Author: **Francesca Melillo**, *SKEMA Business School, U. Côte d'Azur, GREDEG*

Author: **Pierpaolo Parrotta**, *IESEG School of Management*

Author: **Nina Smith**, *Aarhus BSS, Aarhus U.*

This paper examines how the presence of institutional incentives towards entrepreneurship influences the relation between business cycle and entrepreneurship. We advance that by subsidizing entrepreneurship a significant fraction of non-entrepreneurial types is drawn into self-employment with important consequences. Exploiting a change in Danish policy that abolishes a start-up subsidy scheme to the unemployed, we compare the entrepreneurial population in two extended periods before and after. We find that during the subsidy period, entrepreneurship increases and turns countercyclical. These effects are amplified for women. However, further evidence suggests that counter-cyclical founders entered during the subsidy period experience worse long-term earnings when they re-enter the wage sector.

ENT: **Backing the Right Jockey? Founder Traits and Early-Stage Funding in Digital Entrepreneurship** 

Author: **Hemang C. Subramanian**, *Florida International U.*

Author: **Vijayaraghavan Venkataraman**, *Indian Institute of Management, Bangalore*

Author: **Haoqiang Jiang**, *Northern Kentucky U.*

In digital ecosystems, startups operate in a dynamic business and technology environment, where the effect of founder backgrounds and personality traits are more relevant at the early stage of capital infusion. Using theories of human capital and signaling, we study whether and how human capital signals of education, professional experience and personality traits of the founders influence early-stage venture capital (VC) investment in digital startups. We argue that in the digital sector, founders are expected to demonstrate agility through the practice of strategic flexibility in order to build a sustainable competitive advantage. Our empirical analysis uses micro-level data about firms, early-stage investment and entrepreneurs in addition to transcribed investor interviews about digital startups from USA, India, Russia, Brazil, China, and Israel between 2012 and 2018. We conclude that founders with many years of professional experience and with fewer career-changes attract higher investments at the early-stage compared to other founders. Similarly, digital startups with founders who were educated in foreign countries and with educational degrees from premier institutes attracted higher early-stage investment. We classify founders based on human capital signals and discover heterogeneity among these groups with respect to investment in different countries.

ENT: Female CEOs and IPO Underpricing in China: The Moderating Effects of VC and State-Backing 

Author: **Yu Liu**, *U. of Texas at Dallas*
Author: **Haemin Dennis Park**, *U. of Texas at Dallas*
Author: **S. Ramakrishna Velamuri**, *Mahindra U. School of Management*

Female entrepreneurs and CEOs generally face greater challenges in securing funding to exploit entrepreneurial opportunities, yet contextual factors under which such challenges are more likely to arise are less understood. We explore how CEO gender affects IPO underpricing in China. We find that firms led by female CEOs incur greater IPO underpricing, but this effect is moderated by their financial backers. Specifically, the positive relationship between female CEOs and IPO underpricing is attenuated when a newly public firm is backed by venture capitalists, whereas such a relationship is exacerbated when a newly public firm is in part state-owned. Using a dataset of 934 IPOs in China in Small and Medium-Enterprise (SME) and ChinNext stock exchanges between 2009 and 2015, our results corroborate these findings.

ENT: Does Gender Matter? Women Entrepreneurs' Influence In Venture Capital Syndicate Formation

Author: **Lei Zhang**, *U. of South Florida*

Prior research suggests that women entrepreneurs are at disadvantage when seeking external funding. It is unknown if such disadvantage also exists in their selection of venture capital (VC) syndicate partners. In this paper, we propose that the gender impact can be on both sides. Women entrepreneurs' ventures are more likely to be invested by syndicates of VC partners who have older funds and who are geographically distant from each other; but they are also more likely to obtain syndicated investments from VC firms who have better track records. Using a unique dataset of Internet-specific ventures that received VC investments, we found general support to our hypotheses. By examining gender influence on syndicate composition, this paper makes important contributions to our understanding of gender equality and entrepreneur-investor relationships.

ENT: Does Gender Matter? Cognitive Biases, and Entrepreneurial Funding

Author: **Anushka Iyengar Daunt**, *U. of Pittsburgh*
Author: **Lingling Pan**, *U. of Pittsburgh*

Entrepreneurs use and exhibit cognitive biases in the creation and presentation of their nascent ventures to investors. We examine how an entrepreneur's display of three cognitive biases (overconfidence, the illusion of control, and generalizing from small numbers) impacts investor funding. We explore the relationship between the display of these biases, the amount of funding an entrepreneur receives, and the entrepreneur's gender. The results of our mixed-method study, using content analysis and experimental data, suggest that the entrepreneur's display of cognitive biases can influence the amount of funding an entrepreneur receives. Moreover, this study finds that the relationship is moderated by the entrepreneur's gender.

ENT: How do Different Religions Influence Women's Entrepreneurial Choices? The Role of Gender Identity

Author: **Mary Yewande Otitoju**, *U. of Nottingham Ningbo, China*
Author: **Xi Chen**, *U. of Nottingham, China*
Author: **Haibo Zhou**, *U. of Nottingham, China*

Gender discrimination and inequality have become some of the most salient issues in today's global economy. Research shows that women at work are negatively affected by gender-based stereotypes that categorize women as inferior to men. Such values typically underpinned by patriarchal ideologies are argued to explain the gender wage gap evident across various societies, as well as women's aversion to employment. Yet, such values have yet been used to explain the effect of religion on women's entrepreneurial choice. In this paper, we argue that the major world religions influence women's entrepreneurial choice by constructing their gender identities to uphold the conventional patriarchal values that categorize men as providers and women as their dependent. With a dataset of 30,084 women, we found that women's perceived gender identity mediates the effect of religions on their choices between entrepreneurship, regular employment, and housewives. Therefore, identity theory provides an explanation of how religions influence women's entrepreneurial choices.

Family Business and Individual Differences 2

Session Moderator: **Fabian Bernhard**, *EDHEC Business School*

ENT: **Experimental Studies on the Impressions created by Next Gens' Display of Pride in Family Businesses**   

Author: **Fabian Bernhard**, *EDHEC Business School*

While most research on family businesses praises the benefits of feeling proud of the family firm, showing such pride can easily be perceived in a negative light by nonfamily stakeholders. When displayed by next generation family members who have (yet) contributed little to the success of the family firm, the expressed emotion of pride can be associated with arrogance and entitlement, a potential harm to their reputation and a trigger of outsiders' envy. Especially family businesses whose reputation is linked with the impressions their members create may be interested in the effects by displayed pride. The present study tests the impression family members' pride can make on nonfamily outsiders. Differentiating between authentic and hubristic forms of pride, we examine, by means of an experimental study design, the conditions under which expressing pride creates positive or negative impressions. Results from a Western context (Study 1, N1=342) show that displaying authentic opposed to hubristic pride is more beneficial to a next generation member's image as an achieving, innovative, likable, and less arrogant person. The results replicate largely in a sample with Asian participants (Study 2, N2=98). In general, the effects were stronger for women's display of pride, and in the Asian context. We discuss implications for current theorizing on socio-emotional wealth and illustrate how the display of the emotion of pride can benefit or harm founders and later generations.

ENT: **Sister act: A Gender Perspective on Family Succession**    

Author: **Mohamed Ashraf Genedy**, *Jönköping International Business School*

Author: **Lucia Naldi**, *Jonkoping International Business School*

Author: **Karin Maria Kristina Hellestedt**, *Jonkoping International Business School*

Author: **Mattias Nordqvist**, *Stockholm School of Economics*

Building on a socio-emotional wealth lens and gender role theory, we examine gender inequality between siblings in the appointment to the CEO position in family businesses. We also study the impact on firm performance of the appointment of a daughter or a son when they take over the CEO position. Our empirical findings support the argument that daughters are less likely than sons to be appointed to the CEO position. However, this effect is weaker in family firms where the mother holds the CEO position. The difference-in-difference approach shows that family firms where a daughter takes over as CEO outperform family firms where a son takes over. Our findings reveal an important but hitherto not studied gendered dimension of the succession in family firms—sons are favored, but daughters do better. This way our study offers a more nuanced view of the implications of within family CEO succession in family businesses which is important for both research and practice.

ENT: **Employee Innovative Work Behavior: A Missing Piece in Understanding Family Firm Innovation**  

Author: **Isabel C. Botero**, *U. of Louisville*

Author: **Juliana Binhote**, *U. of Louisville*

Author: **Tomasz Fediuk**, *Family Business Strong, LLC*

Although researchers have highlighted the importance of innovation for the continuity of a family firm, most of this work is centered on understanding business factors or leadership factors that influence the organization's innovation process. One area that has received less attention is the role of the nonfamily employee and their behaviors in facilitating innovation within family firms. This conceptual paper discusses the importance of employee innovative work behaviors and the factors that can facilitate and hinder these behaviors within the family firm. We build on literature from the family business, organizational behavior, and leadership to develop a theoretical model to explain how leadership and culture influence employee innovative behaviors. We also outline how communication actions within the organization can also play a role in determining employees' innovative behaviors. Implications and contributions of the model are discussed.

ENT: **Implicit Theories of Family Firm Ownership and Heterogeneity of Family Firm Risk Taking**

Author: **Michael C. Withers**, *Texas A&M U.*

Author: **Luis R. Gomez-Mejia**, *Arizona State U.*

Author: **Geoffrey Martin**, *Melbourne Business School*

A firm's proactive risk taking is essential to sustaining a firm. Ownership structure is an important variable that purportedly determines risk taking. In relation to the most common ownership form around the world, existing literature suggests that family firms take less risk than non-family firms. However, family firms may differ in their risk preferences. To understand the drivers of family firm heterogeneity in risk taking, we leverage research on implicit theories to propose that family owners' entity and incremental implicit theory orientations may influence risk taking. We then further consider several some key internal and external contingencies likely to influence the extent to which some family firms are likely to pursue risk taking based on their implicit theories.

Session Moderator: **Jonah Zankl**, *Cambridge Judge Business School*

ENT: [Towards Understanding the Process of Entrepreneurial Exit from Sustainability-Oriented Businesses](#) 

Author: **Subhan Shahid**, *Grenoble Ecole de Management*

The study explores the procedural mechanism of entrepreneurial exit for sustainable entrepreneurs and their post-exit consequences. Drawing upon human capital perspective and institutional theory, we analyzed the configurations of these two frameworks in shaping exit decisions. Using semi-structured interviews to collect primary data from twenty-seven sustainable entrepreneurs, who had exited their businesses, we analyzed the exit process through a grounded theory approach. We found that sustainable entrepreneurs with superior human capital are better positioned to overcome institutional barriers than novice and young entrepreneurs. Furthermore, enhanced human capital also facilitates sustainable entrepreneurs to classify their entrepreneurial experience as the source of learning and personal development. The findings provide several interesting aspects to pursue entrepreneurial exit research for sustainable entrepreneurs who pledge to maintain a triple bottom line approach. Keywords: Sustainable entrepreneurs, entrepreneurial exit, human capital, institutional environment, entrepreneurial learning, qualitative methods.

ENT: [Addressing the Unicorn in the Room: Toward a New Normal of Responsible Entrepreneurship](#)

Author: **Jonah Zankl**, *Cambridge Judge Business School*

Author: **Matthew Grimes**, *Cambridge Judge Business School*

While entrepreneurial disruption has proven a source of previously unimaginable abundance by way of reforming legacy institutions, it is also frequently characterized by the displacement of existing professions, industries, and livelihoods. Prior research has often assumed that such reform and displacement are inevitable and inseparable aspects of entrepreneurial disruption. In this study, however, we argue that the institutional foundations which have led to the current configuration of the field of startup activity and the global emphasis on “unicorn startups” might be reoriented toward a “new normal” focused on responsible venture creation, wherein the reformative aspects of disruption are prioritized while displacement is controlled. We conclude by discussing paradoxes that must be managed as societies move toward an embrace of responsible entrepreneurship, while proposing several governance reforms needed to address such paradoxes. The resulting conceptual model advances a new theory of responsible entrepreneurship that challenges existing assumptions of entrepreneurial disruption while establishing the possibility of a “new normal.” Moreover, these insights contribute to existing scholarship on responsible and social innovation and bridge research on paradox and institutional change.

ENT: [Going Green and Innovation in Entrepreneurial Firms: An Exploratory Study](#)  

Author: **Bach Nguyen**, *Aston Business School*

Author: **Nhung Vu**, *Loughborough U.*

This paper explores the relationship between firms going green and innovation. We examine two datasets: a cross-sectional dataset of more than 22,000 small businesses in 41 countries in 2020 and a panel dataset of almost 2,800 small businesses in Vietnam over the period 2011-2015. We find that firms going green are more innovative than firms not going green. Also, firms going green due to extrinsic pressure (requirements from customers and governments) are equally as innovative as firms going green due to intrinsic motivation (self-motivated). The channels that link going green to firm innovation include long-term vision, better operational practices, and efficient organisational communication. Finally, while market dynamism weakens the relationship between intrinsic motivation for going green and firm innovation, it strengthens the relationship between extrinsic motivation for going green and firm innovation. Our findings are robust in thousands of regressions that control for variable operationalisations, model specifications, estimators, endogeneity, and contexts.

ENT: [Go Green and Entrepreneurial Growth Aspirations: Evidence from Multi-country Small Businesses](#) 

Author: **Xiaolong Shui**, *U. of Bristol*

Author: **Bach Nguyen**, *Aston Business School*

To account for the changing nature of entrepreneurial growth aspiration (EGA), we shift our focus from individual-level factors (e.g., human, and social capital) to firm-level strategic factors. We theorise that go green, as one of the emerging strategic orientations, can positively influence EGA for small businesses. The positive association between go green and EGA is positively mediated by strategic engagements in (a) innovation and (b) signalling (i.e., environmental certification). In addition, we establish that such positive association is stronger in economies where there are lower levels of environmental institutional pressures. The empirical analysis of 28,000 small businesses in 41 economies is largely consistent with our predictions. We further report that the indirect mechanism of environmental certification is more important than that of innovation in go green-EGA link.

Presenter: **Sumita Sarma**, *California State U., Bakersfield*
Presenter: **Rosanna Garcia**, *Worcester Polytechnic Institute*

This symposium highlights the diversity of research examining the intersection of sustainable and social entrepreneurship. It examines the forces of convergence and divergence within these two distinct research streams. In particular, the authors consider areas where there are opportunities to advance the field by building upon the depth and breadth of research to resolve three pressing needs in the literature: contextuality, scalability, and stakeholder management. By addressing these challenges, these papers provide specific paths forward to advance the field. The papers in the symposium broaden our understanding of factors that have come to shape the practice of sustainable entrepreneurship and opportunities for new venture creation to generate social impact.

Subsidiary Role Within the MNE

Session Moderator: **Catherine Magelssen**, *London Business School*

IM: Boundary Conditions of Subsidiary Reverse Knowledge Transfer Benefiting the MNE Parent

Author: **Chun-Ping Yeh**, *National Taiwan U. of Science and Technology*
Author: **HSIAO-CHING CHOU**, *National Taiwan U. of Science and Technology*

The subsidiary reverse knowledge transfer (RKT) has recently drawn much attention in the IB research. Despite prior efforts on exploring the determinants of the subsidiary RKT from diverse perspectives, the subsidiary RKT benefit to the MNE parent in contingency with heterogeneity of subsidiary entrepreneurial initiatives, the MNE parent's discretion over the subsidiary resource use, and the knowledge transfer mechanism are rarely examined in a holistic approach. Drawing on the organizational learning perspective and resource dependence theory to develop our hypotheses, and testing them with a unique sample of 2277 observations of 1831 Taiwan MNEs collected from 2013 to 2017, we found that (1) the RKT both of subsidiary exploitative and explorative initiatives are beneficiary to the MNE parent, and the benefit derived from the exploitative initiative is stronger than the explorative one; (2) the knowledge transfer conduit of bureaucratic routine is more detrimental to the RKT benefit of subsidiary explorative initiative; and (3) the MNE parent's higher resource discretion enhances the RKT benefit of subsidiary explorative initiative. Our findings provide academic contributions to the IB literature and managerial implications for managing the subsidiary RKT.

IM: Headquarters Attention, Social Networks and Managerial Careers (WITHDRAWN)

Author: **Francesco Ciabuschi**, *Uppsala U.*
Author: **Philip Kappen**, *Uppsala U.*
Author: **Diego Stea**, *Copenhagen Business School*

Integrating insights from the literature on headquarters attention in the multinational corporation and the social capital of brokering and closed networks, we argue that the career performance of subsidiary managers depends on whether the manager's individual social network is complementary with the level of headquarters attention received by the subsidiary in which the manager is located. By so doing, we expound on an "attention paradox," in which we contend that that the same condition of operating in a subsidiary receiving a given level of headquarters attention could in principle facilitate as well as hamper the career performance of the individual managing that subsidiary. Our theory moves beyond the conventional view that links headquarters attention to unidirectional effects on performance, and offers a non-deterministic perspective that suggests that similar levels of attention may lead to opposite outcomes for the individual manager depending on the structural properties of the manager's network.

IM: Strategy or Gluttony? The Allocation of Ownership Rights to Strategic Assets within the Firm → 📄

Author: **Catherine Magelssen**, *London Business School*

The creation and appropriation of value from strategic assets are at the heart of strategy. Despite extensive research on how and where value is created within multinational enterprises (MNEs), and the performance benefits from strategic assets, relatively little is known about the allocation of ownership rights within firms to strategic assets. Although MNEs can exploit international differences and allocate strategic asset ownership rights to income shielding locations, it often comes at the cost of shifting control and responsibility from value-creating subsidiaries. This study examines firms' trade-offs in allocating ownership rights to strategic assets using a hand-collected confidential dataset on 102 MNEs on the types and locations of their strategic assets. The findings indicate that MNEs select locations based on tax and their need for coordination and regional expertise. We find evidence that MNEs are significantly likely to locate ownership of their strategic assets in regional hubs of expertise. However, MNEs with codifiable strategic assets are more likely to have ownership separated from value-creating activities and located in tax havens. The results also provide insight into when firms are not likely to engage in tax avoidance. When strategic assets are more difficult to monitor and control, firms are less likely to separate ownership from value-creating activities. As such, these findings imply that tax competition is not simply a "race to the bottom" in that there are factors that inhibit firms from fully capitalizing on tax policies. From a policy perspective, this research provides insight into the policies that can attract MNE location choice. The results suggest that, for policymakers, creating a hub of expertise might be a powerful tool for attracting MNE strategic assets.

Creativity and Curiosity: Multiple Levels of Analysis

Session Moderator: **Barbara Slavich**, *IESEG School of Management, LEM-CNRS 9221*

MOC: **Hungry Minds: Generating a State of Permanent Organizational Curiosity** 

Author: **Barbara Slavich**, *IESEG School of Management, LEM-CNRS 9221*
Author: **Pilar Opazo**, *MIT Sloan School of Management*
Author: **Ignasi Capdevila**, *Associate Professor*

This paper examines how to create a state of curiosity in an organization and what is the relationship between creativity and curiosity. We identify four processes that enable organizational members to transform individual curiosity into a collective and continual state of curiosity for the organization: framing, translating, externalizing and stretching. Based on the analysis of a highly innovative organization in the gastronomy industry, we find that the curiosity processes identified interact with creative processes by being antecedents of creativity (i.e., framing and translating allow ideas generation and experiments to take place) but also facilitating the evaluation of creative outcomes (externalizing and stretching) for further improvements. The processes identified also allow to link different types of curiosity and to move from diversive to specific curiosity; from epistemic to perceptual curiosity; and to bridge individual traits and collective states curiosity, thus contributing to our understanding of organizational curiosity.

 MOC: **Managerial Rejection of Creative Ideas from External Sources and Interventions**  

Author: **Rebekah Sung Eun Hong**, *U. of Maryland, College Park*
Author: **Vijaya Venkataramani**, *U. of Maryland*

Finalist for MOC Division Best Student-Led Paper Award

Although organizations desire highly novel ideas for innovation, they often fail to recognize and absorb such ideas from external sources due to the not-invented-here bias (NIH), a profound attitudinal bias against knowledge considered to be external. Drawing from the corporate immune systems theory and theories of risk and risk perception, we show that managers tend to reject novel ideas when they originate from sources external (but not internal) to their organization because of perceptions of riskiness. In three different lab studies, we demonstrate this bias against external ideas as well as identify potential ways to mitigate it.

MOC: **To Be or Not To Be a Commodity: Commodification of Self and its Implications for Creativity**    

Author: **Shiyu Yang**, *U. of Illinois at Urbana-Champaign*
Author: **Jack Anthony Goncalo**, *U. of Illinois at Urbana-Champaign*

The contemporary time is witnessing the rise of a market society (Fourcade & Healy, 2007). Echoing this observation, organizational theorists have documented the increasing popularity and the expanding jurisdiction of the market logic (Thomton, & Ocasio, 2008). One manifestation of the growing force of the market is that languages originally used for describing economic transactions have been normalized in everyday communications in and around organizations, such as "you are an 'asset'" and "human 'capital' management". These linguistic examples illustrate that given the organizational emphasis on economic goals (e.g., efficiency and profitability), individuals in organizations are often subordinated to the same market rationalities and viewed as economically useful products or resources (Cheney & Carroll, 1997). The current research aims to understand how the perception and treatment of individuals as products or objects of monetary value (i.e., commodification of self) (Cohen, 1988; Radin, 1996; Strasser, 2003) may affect individual creativity. A survey study with a sample of working professionals revealed a negative correlation between job creativity and felt commodification at work (Study 1). Moving beyond this initial correlational data, Studies 2 to 5 use experimental designs to causally test the implications of commodification for creativity. Results suggest that organizations that commodify their members are perceived as not valuing creativity (Study 2). Members of such organizations tend to withhold rather than share their own creative ideas (Study 3). Feeling commodified by one's employer hinders individual creativity (Study 4). Activating a creative identity tends to lower perceived Person-Organization fit with organizations that commodify their members (Study 5). Lastly, drawing upon the antithetical nature of the relationship between commodification and creativity, we tested the prediction that engaging in creative activities may serve as an antidote to commodification by reaffirming one's individuality (Study 6). Taken together, the results of the studies suggest that organizations that commodify its members may be inadvertently turning away creative employees, suppressing the creativity of the employees they hire, and marginalizing employees who seek to be creative.

Author: **Nicoleta Meslec**, *Tilburg U.*

Socio-cognitive theory posits individuals as both actors of cognitive processes and recipients of social context's determinative influences. The present research adopts this theory, seldom used at the team level of analysis, to propose a model in which team member's composition on a socio-cognitive characteristic influences the development of teams' socio-cognitive states, further having an impact on team performance. Accordingly, we draw on this theory as a framework to understand the impact of team members' self-beliefs, specifically their creative self-efficacy, on two team states i.e. transactive memory systems and team identification, that guide team performance on multifaceted tasks. We test the predictions in a longitudinal study with seventy-eight teams. By incorporating tenets of socio-cognitive theory, this research generates novel insights, thereby contributing to the teams' literature. Simultaneously, it contributes to socio-cognitive research, incorporating it at a level of analysis that has not been the focus of this research stream.

Crafting Individualized Roles

Session Moderator: **Tom Junker**, *Erasmus U. Rotterdam*

OB: **A Person-Centered Approach to the Study of Employees' Individual Needs in Relation to I-Deals** 

Author: **Annika Pestotnik**, *Heinrich-Heine U. of Dusseldorf*
Author: **Sarah Altmann**, *Heinrich-Heine U. of Dusseldorf*

Whereas extant research has shown that idiosyncratic deals (i-deals) affect a wide array of employee attitudes and behaviors, comparatively little is known about individual-level antecedents of i-deals. In particular, the question of what drives employees to negotiate i-deals remains largely unclear. Our study addresses this research gap by investigating the role of individual needs for i-deal negotiation. We adopt a person-centered approach, which considers the interplay of different individual needs, such as the need for achievement, the need for power, the need for affiliation, and the need for autonomy. Using latent profile analysis, we identify six profiles of employees' individual needs, which show qualitative and quantitative differences. Above that, we explore how personality traits relate to profile membership and test differences in i-deal negotiation among the profiles. Several different types of i-deals, namely development i-deals, task i-deals, scheduling flexibility i-deals, location flexibility i-deals, and financial i-deals are included in the analysis. Our results show that personality traits are closely related to profiles of employees' individual needs, which in turn predict the negotiation of different types of i-deals.

Paper is NOT Available. Please contact the author(s).

OB: **Different Effects of Job Crafting Towards Strengths and Job Crafting Towards Development** 

Author: **Fangfang Zhang**, *Curtin U., Perth*
Author: **Bin Wang**, *School of Management, Shanghai U.*
Author: **Yijing Liao**, *Shanghai U.*
Author: **Jing Qian**, *Beijing Normal U.*
Author: **Sharon Parker**, *Centre for Transformative Work Design / Curtin U.*

Job crafting research has predominantly focused on the changes made by the crafter to the job but neglected personal motives and goals underlying the crafting. The motives and goals are important as job crafting that looks similar in terms of behavior could lead to different outcomes. The aim of this study is to investigate how job crafting towards strengths (JC-strengths) and job crafting towards development (JC-development) lead to distinct performance outcomes, and factors that affect the two job crafting strategies. Drawing on the exploitation and exploration theory, we expected a positive relationship of JC-strengths with task performance and JC-development with creative performance. We further proposed that job autonomy will be positively related to both JC-strengths and JC-development. Moreover, the relationship between job autonomy and JC-strengths will be strengthened by pay for performance, while the relationship between job autonomy and JC-development will be weakened by pay for performance. With the use of 10-day daily survey data from 115 employees, we found distinct effects of JC-strengths and JC-development on task performance and creative performance as expected. Job autonomy was positively related to JC-strengths and this relationship was strengthened by pay for performance. However, we did not find a significant role of job autonomy and pay for performance in influencing JC-development.

OB: **Understanding the Negotiation and Performance Effects of Idiosyncratic Deals** 

Author: **Samuel Aryee**, *U. of Surrey*
Author: **Li-Yun Sun**, *Macau U. of Science and Technology*
Author: **Hsin-Hua Hsiung**, *National Taiwan U.*

A growing body of research has sought to illuminate our understanding of the negotiation and implementation of idiosyncratic deals (i-deals) as an adaptive HR response to the changing needs and expectations of employees. Contributing to this research stream, this study uses multi-source and multi-wave data obtained from customer contact employees and their supervisors from manufacturing and service organizations in China to examine a cross-level model of the antecedents and outcomes of i-deals. Results of multilevel path analysis reveal that both employee approach motive and supervisor interpersonal competence relate to i-deals. However, high-commitment HR system moderates the relationship between supervisor interpersonal competence (but not employee approach motive) and i-deals such that this relationship is stronger when high-commitment HR system is high but not low. Additionally, i-deals relate to service creativity but indirectly through personal learning suggesting a potential human capital (relative to the predominantly motivational) explanation of the performance implications of i-deals.

Paper is Available to Meeting Registrants Only.

OB: **Don't Be Frustrated, Be Curious: The Role of Daily Information Gaps at Work** 

Author: **Vera M. Schweitzer**, *WHU – Otto Beisheim School of Management*
Author: **Jakob Stollberger**, *VU Amsterdam*

We integrate the information gap theory of specific curiosity with the challenge-hindrance-stressor framework to argue that work-related information gaps act as a double-edged sword by eliciting both specific curiosity as well as frustration in employees. We further consider employees' information gap-related self-efficacy as a moderator that influences whether information gaps are perceived as a challenge that compounds curiosity or a hindrance that feeds frustration. We largely find support for our hypothesized model across two diary studies. In Study 1 (74 full-time employees, 270 data points), we validated a work-related information gap scale and demonstrated a positive relationship with employees' specific curiosity. In Study 2 (107 full-time employees, 719 data points), information gaps were positively associated with specific curiosity and frustration, which in turn had differential effects on work engagement. Information gap-related self-efficacy buffered the negative relationship between information gaps and frustration but had no impact on specific curiosity.

Author: **Tom Junker**, *Erasmus U. Rotterdam*

Author: **Arnold Bakker**, *Erasmus U. Rotterdam*

Author: **DAJA Derks Theunissen**, *Erasmus school of Social and Behavioural Sciences*

This overview article integrates recent empirical research on agile work practices (AWPs) with more established findings on work design and employee proactivity. Through this integration, we develop a new understanding and multilevel model of organizational agility. The proposed model seeks to explain the implications of agility at various levels of organizations (i.e., employee-, team-, and leader-level). Specifically, we theorize that the well-being and productivity benefits of AWPs depend on the relationships of these practices with job demands, job resources, and their effects on proactive work behavior. Our integrative multilevel model addresses recent calls for research on (1) system-level antecedents of work design and (2) contextual antecedents of proactive behavior. Our model suggests that organizational agility does not emerge automatically with the implementation of agile methods such as Scrum or Kanban. In contrast, we propose that organizations must focus on improving their routines, work design, and employee proactivity, in order to enable true agility.

OB: **Leader Apology Types as Trust Signals for Follower Forgiveness and Leader Effectiveness Ratings**  

Author: **Madelynn R. D. Stackhouse**, *U. of North Carolina, Greensboro*
Author: **Kristina Kelley**, *U. of North Carolina at Greensboro*

Despite evidence that apologies from leaders are associated with positive outcomes for victims, apologies are not always effective at restoring a workplace relationship after a transgression. Four studies examined whether and why different forms of leader apologies influence follower forgiveness and perceptions of leader effectiveness. We hypothesized that victims who received sincere (“complete”) leader apologies would be more forgiving and rate their leaders as more effective compared to different forms of leader apologies (i.e., amends, remorse, responsibility). We further theorized that this effect would occur because sincere leader apologies signal to victims that apologizing leader is trustworthy. An experimental study of CEO apologies following a corporate transgression (Study 1), a hypothetical scenario in which a leader committed a transgression (Study 2), a retrospective recall study with undergraduates (Study 3a) and employed adults (Study 3b), and a hypothetical study that manipulated leader trust (Study 4) supported these predictions. Specifically, the results showed that sincere leader apologies were more effective than other types of apologies at garnering victim forgiveness and ratings of leader effectiveness, and this direct relationship is mediated by leader trust. This research has implications for theory about forgiveness, followership, and management practice.

OB: **Informal Control, Effective Voice and Perceptions of Work Reward Fairness in a Worker Co-operative**  

Author: **James Coutinho**, *Swinburne Business School, Swinburne U. of Technology*
Author: **Elisa Bellotti**, *U. of Manchester*
Author: **Stephen P. Borgatti**, *U. of Kentucky*

Worker co-operatives aim to produce a fairer distribution of work rewards than exists in conventional firms. Workers collectively own the firm and participate democratically in decisions, so should be able control rewards. However, direct participation in decisions is inefficient in larger firms. To balance democracy with efficiency, larger co-operatives combine a formal hierarchy with worker voice in decisions via elected representatives. This move is associated with the emergence of unequal informal organizational control and reward differentials. In this paper we ask how informal organization shapes control processes and worker perceptions of reward fairness in a representative democratic co-operative. We present a mixed-methods case study of a retail firm facing financial crisis which had reduced pay and benefits for workers. In this context, workers who maintained informal friendships with elected representatives on the firm’s governing board had a more effective voice in rewards than workers without such relationships. Effective voice in turn led workers to perceive their rewards as fairer. Fairness perceptions had important consequences for the co-operative spirit – the shared perception that all organization members were working towards common goals without opportunism. We explore the implications of our findings for maintaining democracy and promoting co-operative survival in times of crisis.

OB: **Empowering Leadership and Organizational Justice in the New Normal** 

Author: **SIJIA ZHAO**, *East China Normal U.*
Author: **Ting Liu**, *Kyoto U.*
Author: **Yaxi Shen**, *Australian National U.*
Author: **Tomoki Sekiguchi**, *Kyoto U.*
Author: **Darren B.**, *U. of Northern British Columbia*

Although prior works have primarily focused on positive outcomes resulting from empowering leadership in normal workplace environments, scant research in this realm has examined whether empowering leadership is actually associated with more desirable outcomes in new-normal workplaces (i.e., online and hybrid work environments). We draw from theories of control and media richness to explore how empowering leadership in new working environments influences perceptions of fairness among employees with varying degrees of media richness. We also investigate how media richness and employees’ digital literacy moderate this relationship. Specifically, we theorize that empowering leadership increases perceived fairness among employees, which is curvilinearly moderated by media richness. We further theorize that employees’ digital literacy changes the curvilinear moderating effect. In Study 1, with a between-subjects experimental design, we show that video conferencing had the highest moderating effect on the empowering leadership and fairness perception than face-to-face, SNS, phone call, or email communication. Study 2, a three-wave longitudinal survey study during the COVID-19 lockdown period, supported our three-way interaction model’s curvilinear moderating effect. These findings enable us to identify a novel mechanism of how virtual work plays a role in the relationship between empowering leadership and perceived organizational justice.

OB: Is Intra-Team Political Behavior a Good Thing? It May Depend on Team Learning

Author: **Zhijun Chen**, *Shanghai U. of Finance and Economics*

Author: **Guojian Long**, *College of Business, Shanghai U. of Finance and Economics*

Political behavior has been discussed for nearly a hundred years. Although political behavior has been explored in-depth in previous research, sufficient attention has not been paid to team-level politics. Moreover, whether political behavior is beneficial in a team context remains an unanswered question. This paper examines the influence of intra-team political behavior on individual task performance and voice. Based on transactive memory theory, this study explores the potential boundary role of team learning in the above relationship. Furthermore, the authors propose that intra-team competitive climate and leader-member exchange mediate the moderating effect of team learning. A multi-source field study was conducted to examine the hypotheses. Results showed that team learning moderated the relationship between intra-team political behavior and individual task performance, voice, and leader-member exchange. Furthermore, the interactive effect between team learning and intra-team political behavior on task performance was mediated by intra-team competitive climate. Finally, the results of this study provide a basis for critical thinking for organizations and managers seeking to develop their understanding of organizational politics.

We're All Political Animals: Insights on Navigating Ideological Divisions at Work and in Daily Life *Insights on Navigating Ideological Divisions*

Organizer: **Brittany Solomon**, *U. of Notre Dame*
Discussant: **Adam Waytz**, *Northwestern Kellogg School of Management*
Presenter: **Brittany Solomon**, *U. of Notre Dame*
Presenter: **Juliana Schroeder**, *U. of California, Berkeley*
Presenter: **Michael Rosenblum**, *NYU Stern School of Business*
Presenter: **Jeffrey Martin Lees**, *Princeton U.*

Whether explicitly or implicitly, organizations often convey that taboo topics, like politics, should be avoided. But politics inevitably seeps into the workplace because ideological views are difficult to suppress and easy to infer. Quite notably, partisanship is one of the strongest identity markers that unites—or polarizes—people today. People tend to self-segregate into ideological echo chambers in their personal lives. But the workplace constitutes one conspicuous context that still requires people with diverse ideological views to regularly communicate and collaborate. And while people are reluctant to admit prejudice based on social-category differences, they freely report and exhibit out-party dislike and hostility. We contend that political (just like demographic) differences can be problematic if organizations do not learn to understand and embrace them, and that ignoring or suppressing such differences is a misguided strategy. The presentations in this symposium build on the reality of affective (political) polarization that increasingly characterizes today's society but is largely overlooked in management research. Examining a range of a micro-level, dyadic phenomena, this body of empirical research aims to spotlight the interpersonal—especially relatable—side of political ideology among ordinary people at work and in daily life. Together, the four presentations illuminate the theoretical and practical importance of conducting research on a range of political topics despite—and perhaps especially in light of—their controversial nature.

Participant: **Russell Eric Johnson**, *Eli Broad School of Business, Michigan State U.*

This symposium presents cutting-edge research on workers' daily goal process—what facilitates or interrupts daily goal pursuit and the downstream consequences, as well as the potential individual-level and daily-level contingencies. Decades of research have highlighted the importance of goal-setting and goal content, but the dynamic nature of daily goal processes is not fully understood yet. Therefore, this symposium presents four studies that examine daily goal processes from various perspectives and suggest ways to facilitate successful goal achievements. Building on multiple theoretical perspectives, these four studies advance our understanding of what creates obstacles of daily goal attainment, the outcomes of goal interruptions or failure, and possible remedies.

Strategy Sensemaking and Meaning Making

Session Moderator: **Daniel Gaeckle**, *U. of Stuttgart*

SAP: **Making and Breaking the Future in the Presence: The Atmospheric Practices in a Future-Making Lab** 

Author: **Anna-Lisa Schneider**, *U. Bundeswehr, Munich*
Author: **Verena Bader**, *Bundeswehr U. Munich*
Author: **Stephan Kaiser**, *U. der Bundeswehr München*

In this paper, we explore atmospheric practices in future-making labs. We link future-making with the conceptual perspective of the atmosphere. Based on an ethnographic study of a city's civic engagement process, we show how atmospheric practices and future-making influence each other in labs. While at the beginning of the civic engagement process, the atmospheric practices were both enablers and barriers for future-making, they became enablers increasingly over time. By aligning material artifacts with the abilities of people, a future-making atmosphere evolved, enabling actors to become future-makers. In analyzing atmospheric practices around future-making in labs, these findings contribute to the literature on the atmosphere, future-making, and labs.

SAP: **Practice View to Strategic Sensemaking: Loan Officers and Loan Default in a Microfinance Institution**   

Author: **Rose Ntondumu Bote**, *Grenoble Ecole de Management*
Author: **Corine Genet**, *Grenoble Ecole de Management*

Loan default is the greatest crisis plaguing microfinance institutions and is the root of severe consequences calling to question the legitimacy of the institution as a financial solution to the poor. Due to the severity of loan default, any actions geared at addressing the problem becomes a strategic activity for the organization. This paper looks at the actions of loan officers as operational agents at the interphase between clients and the organization. These workers receive no direct strategic directives on dealing with loan default and must individually make sense of and navigate loan default in their daily practices. This work builds on the typology of Sensemaking developed by Sandberg and Tsoukas (2020) to develop a typology of sensemaking depicting routine activities laced with persistent tensions and breakdown. Findings show that operational agents engage in social and regulation sensemaking depicting the dual competing goals. Social sensemaking stems from desperate loans given to clients in dire need, which are inevitably defaulted from which loan officers react by escalating commitment. On the other hand, regulation sensemaking stems from volition loans rooted in manipulation of guidelines and favoritism by loan officers. Borrowers respond with bad faith causing default provoking guard rail implementations to preempt future defaults. This work contributes to the literature on social enterprises by establishing operational tensions as strategic problems necessitating a strategic response. This paper advocates for front line workers and their routine activities as strategic in their rights. It also contributes to the literature on sensemaking by adopting a practice view and extending the typology of sensemaking developed by Sanberg and Tsoukas (2020) showing the possibility of hybrid sensemaking in organizations plagued by persistent tensions in routine activities.

SAP: **How Do Actors Reflect on Unfamiliar Routine Patterns? An Ethnographic Study of Collective Reflection**

Author: **Daniel Gaeckle**, *U. of Stuttgart*
Author: **Christian Alexander Mahringer**, *Heidelberg Academy of Sciences and Humanities*
Author: **Birgit Elisabeth Renzl**, *U. of Stuttgart*

This paper examines how actors engage in collective reflection although actors do not share the same degree of familiarity of the organizational routines on which they reflect. We build on a twelve-month ethnographic study of a high-performance computing organization and examine how two teams that usually performed different routines regularly meet to reflect on and solve problems that occurred in performing their routines. Our analysis identifies four different processes through which certain actors make problems intelligible to others that are not familiar with the routine in which those problems emerged. Our work intends to contribute to routine dynamics research, and more specifically the role of collective reflection, familiarity, and routine ecologies.

Paper is Available to Meeting Registrants Only.

Author: **Anniina Rantakari**, *U. of Oulu*

Author: **Jenni Myllykoski**, *U. of Oulu Business School*

In this paper, we examine how organizational actors build and sustain extreme performance in their daily practices. We draw on in-depth empirical material collected from a professional Finnish ice-hockey organization that has been able to be exceptionally successful both in terms of 'the game' and 'the money' to examine the practices of creating strategic performance. To do this, we draw from recent developments on sensemaking as not a singular phenomenon, but instead comprising four types: immanent, involved-deliberate, detached-deliberate, and representational sensemaking. In our analysis, we focus on sensemaking process taking place in three levels: How to become an exceptional hockey-player; How to become an exceptional team; How to become an exceptionally performing organization. Combining our findings to the idea of practical coping as guided by habitus our study reveals exceptional strategic performance was created by three shifts in focus when making sense and enacting strategic performance. These were shift in temporal focus, shift between body and mind, and shift between individual, organizational, and societal roles. With this study we contribute and address recent calls to better understand the relation between everyday strategizing practices and their organizational outcomes.

Theorizing Strategy as Practice in New Ways

Session Moderator: **Ashley Hockensmith**, *U. of Massachusetts, Amherst*

SAP: Reconceptualizing Customer Capital: A Strategy as Practice Approach

Author: **Ashley Hockensmith**, *U. of Massachusetts, Amherst*
Author: **Matthew CB Lyle**, *U. of Colorado, Colorado Springs*
Author: **Bruce Skaggs**, *U. of Massachusetts, Amherst*

Customer capital is a critical source of value for knowledge intensive service firms (KISFs). However, we lack a precise understanding of the nature of the customer-specific knowledge that undergirds customer capital and how specifically that knowledge confers value to KISFs. In this paper, we adopt a strategy as practice (SAP) approach to reconceptualize customer capital. Specifically, we delineate four modes of customer-knowing KISFs may cultivate, each of which confers value to the focal firm vis-à-vis informing local (i.e. account) and / or global (i.e., firm) strategizing. Further, using Whittington's (2006) practice-praxis-practitioners framework, we elaborate a typology of customer capital. Our theorizing constitutes an initial step towards theorizing a more dynamic, multi-dimensional understanding of customer capital. Theoretical and practical implications are discussed.

SAP: Strategic Governance of Mobility Ecosystems – A Practice-Based Perspective

Author: **Tobias Heussler**, *Wiesbaden Business School, UAS Wiesbaden*
Author: **Christof Backhaus**, *Edinburgh Napier U.*

Set up in the right way, ecosystems are promising to partners, consumers, and society at large. In practice, however, establishing an ecosystem is oftentimes complicated, particularly when contributing partners offer competing services. Building on a set of qualitative interviews conducted with practitioners involved in existing or new ecosystems in the mobility sector, our research provides a practice-based assessment of strategically relevant managerial issues related to platform ecosystems. We identify six areas of governance that are particularly relevant for an ecosystem to function effectively, namely strategic direction, revenue sharing, ownership rights, investment and finance, additional value provided to the customer, and the competitive relationship between partners. Suggesting that ecosystems are more complex to manage than previously believed, the study provides a framework for strategizing ecosystem governance, outlining constitutional elements that have to be clarified when setting up a mobility ecosystem.

SAP: Rhythms of Strategy

Author: **Omid Omidvar**, *Aston Business School*
Author: **Gary Thomas Burke**, *Aston U.*
Author: **Igor Pyrko**, *U. of Bristol*

SAP Pushing the Boundary Award

In this article, we argue that strategy research can be reinvigorated by attending to Henry Lefebvre's rhythmanalysis. Through Rhythmanalysis, Lefebvre brings together spatiality and temporality and shows how rhythms are critical for both social and natural. We use the insights offered by Lefebvre to examine how strategy can be and should be understood. We offer some conceptual clarity around the rhythmic nature of strategy, the ontological implications of following rhythms for strategy research and explain what methodological implication rhythmanalysis introduces for SAP. We also introduce and develop the concept of 'orga-nature' to argue how the intersection between the natural and organizational are to be understood and what these mean for modern businesses.

Social Responsibility Challenges of the COVID-19 Crisis

Session Moderator: **Virginia Woods Gerde**, *Furman U.*

SIM: Stakeholder Salience: Corporate Responses During a Public Health Crisis

Author: **Ru-Shiun Liou**, *U. of Tampa*
Author: **Rekha Rao-Nicholson**, *U. of Essex Business School*
Author: **Yanyan Shang**, *U. of Tampa*

Prior research provided great insights for crisis management, especially in the cases of accidental crises and preventable crises which are largely within the organization's control. The COVID-19 pandemic is a public health crisis in which corporates are likely to be perceived as victims. With weak crisis responsibility from the organization, we find that the managerial attention is shifted to increase corporate social responsibility (CSR) which is rarely discussed in the crisis management literature. The purpose of this study is to apply the stakeholder salience theory and explore the factors that contribute to corporate COVID-19 responses during the public health crisis of the COVID-19 pandemic. Built upon the stakeholder salience framework, we propose and test the hypotheses that are derived from societal stakeholders' power, legitimacy, and urgent claims during the pandemic by utilizing a sample of large public firms in the U.S. We reveal several corporate responses that address multiple stakeholders' interests, including customers, shareholders, community, suppliers, and employees. Specifically, corporations with a larger number of employees, representing power, and larger social media followers, representing legitimacy, tend to adopt more corporate responses that address various stakeholders' concerns. However, the extent of the COVID-19 impact on the industries, representing urgency, presents opposite effects of stakeholder salience on corporate responses. In the highly impacted industries, there is an increased influence of social media followers on the customer-related corporate responses; on the other hand, in the same highly impacted industries, there is a decreased influence of employees on the employee-related corporate responses.

SIM: Just in Time for COVID-19? An Examination of Managerial Action in the Mismanagement of a Pandemic

Author: **Steve Michael Loren**, *U. of Massachusetts, Boston*

The covid-19 pandemic has presented to management scholars stark evidence of organizational dysfunction contributing to significant societal harm. Examining the role of managers within organizations has gained new urgency in the wake of a pandemic, exposing taken-for-granted managerial practices that have exacerbated social inequality and contributed to employee suffering and displacement. The present study takes a narrative process approach to examine the enactment of prominent management practices during the pandemic period. Through a narrativization of texts that exemplify the taken for granted management practices of just in time inventory, just in time scheduling, arbitrage pricing, expansion of limited liability, and algorithmic management, this study distills general insights into the deeper structures that can exacerbate harm to the most vulnerable during times of crisis. The less ubiquitous practice of compassionate management is also examined as a counterpoint demonstrating how pandemic circumstances have hindered its realization as a potential ameliorative force.

Paper is Available to Meeting Registrants Only.

SIM: Organizational Resilience and Exogenous Shocks

Author: **Virginia Woods Gerde**, *Furman U.*
Author: **Jonathan Handy**, *Western Kentucky U.*
Author: **Manisha Singal**, *Virginia Tech*
Author: **Richard E. Wokutch**, *Virginia Tech*

Periodically major crisis events (e.g., September 11th 2001 crisis and the COVID-19 pandemic) disrupt the business environment and place businesses in precarious positions. Some industries, however, seem more resilient than others and recover more robustly. In this study, we examine the role of consumer discretionary expenditures and stakeholder relations to better understand the antecedents of organizational resilience. Overall, and as expected, we find that firms in industries like the hospitality and tourism sector that face high elasticity of demand and greater consumer discretionary expenditures, are less resilient than other sectors. However, greater stakeholder relations, as assessed by positive corporate social performance (CSP), is associated with increased resilience during the first year after the shock. Although the impact of the greater stakeholder relations is not seen after the first year, the incremental gains in stock price and sales can be significant, supporting the argument for better CSP to improve organizational resiliency.

SIM: Green Responsibility and the Black Swan: How Corporate Environmental Practices Shape Organizational

Author: **Xiongkai Tan**, *U. of Groningen*
Author: **Hong Zhao**, -
Author: **Yimei Hu**, *AAUBS, Aalborg U.*

How to foster organizational resilience has become a growing concern for companies in the rapidly changing business environment. The ongoing COVID-19 is a test of the resilience of companies. We explore the impact of Environmental Corporate Social Responsibility (ECSR) on organizational resilience and its boundary conditions in the context of COVID-19, and test our theory by empirically analyzing the sales change of firms in 26 developing economies. We find that there is an inverted U-shaped relationship between environmental practices and organizational resilience, and the dependence on overseas markets and the organization's internal justice play a moderating role. The study makes a pioneering attempt to bridge the CSR literature and organizational resilience literature, and provides practical implications on firms can foster resilience through social-environmental practices.

Author: **Hien Nguyen**, *London South Bank U.*

Author: **Hang Do**, *U. of Southampton*

Author: **Laura Costanzo**, *U. of Southampton*

This study aims to investigate the interplays between Corporate Social Responsibility (CSR) and Corporate Social Responsibility (CSI) to achieve CSR goals during the pandemic. We sought to achieve our research aim by interviewing 34 firm owners/managers across different industries in Vietnam. Our findings reveal that, under a very constrained context caused by a major crisis such as COVID-19, firms pursue CSR goals focused on maintaining firm survival, employee and customer benefits, and community safety during the pandemic. In doing so, firms equally have no choice but to accept engagement with some CSI actions that undermine business profitability, employees' benefits, the environment and society. Thus, the study reveals a positive angle of the CSI concept, counterbalancing the 'doing bad' current positioning in the scholarly discourse. Additionally, we suggest that organizations should thoroughly assess the impacts caused by a major macro-crisis and prioritize critical groups of stakeholders such as the employees, customers and the community at large in order to support their long-term sustainability alongside ad-hoc governmental policy that supports economic recovery. Therefore, businesses may consider embracing the positive side of CSI in the pursuit of CSR goals due to a macro-institutional change. This may ultimately result in better CSR and CSI communication and actions, which can help firms to gain or maintain legitimacy.

Antecedents to Strategic Change: From Firm Performance to CEO Characteristics

Session Moderator: **Peiyao Chen**, *Louisiana State U., Baton Rouge*

STR: CEO Regulatory Focus, Earnings Management, and Analyst Recommendations 

Author: **Peiyao Chen**, *Louisiana State U., Baton Rouge*
Author: **Ruixiang Song**, *Auburn U.*

Drawing on regulatory focus theory and impression management literature, we examine the influences of CEO regulatory focus on earnings management. Furthermore, we show how the analyst recommendations differentially moderate the relationship between CEO promotion and prevention foci and earnings management. Based on U.S. public firms from 2003 to 2019, our findings indicate that CEO promotion focus is positively related to the magnitude of income-increasing earnings management, and CEO prevention focus is negatively related to the magnitude of income-increasing earnings management. In the context of positive analyst recommendations, the positive relationship between CEO promotion focus and income-increasing earnings management is strengthened, and the negative relationship between CEO prevention focus and income-increasing earnings management is weakened.

STR: New CEOs and Strategic Change: Impacts of outsidersness, regulatory focus, and insider successor type

Author: **Seunghye Lee**, *Sogang U.*
Author: **Yangmin Kim**, *Sogang U.*

Despite a consensus that poor pre-succession firm performance triggers new CEOs to make strategic changes following successions, it has been suggested that not all new CEOs in poorly performing firms are equally open-minded about initiating strategic changes. We examine how CEOs' characteristics and pre-succession firm performance interact to influence whether they maintain the status quo or make changes in strategy after successions. Building on strategic leadership and psychological trait literature, we focus on three dimensions of CEO characteristics: outsidersness, regulatory focus, and insider successor type. The hypotheses are examined by using data of 393 CEO succession events in large US companies for the years from 2005 to 2016. Our findings show that: (1) the negative relationship between pre-succession firm performance and strategic change is strengthened when new CEOs have high degrees of outsidersness; (2) the negative relationship is weakened when new CEOs has a strong prevention focus; and (3) the negative relationship is stronger when insider successors are contenders rather than followers. Overall, the results support our arguments that the familiar dichotomy between insider and outsider is to neglect important differences among both outsiders and insiders. The findings also suggest that CEO prevention focus may serve an indicator of preference for the strategic status quo.

STR: Is CEO Narcissism Beneficial or Detrimental for Firm Performance? Insights from a Meta-Analysis 

Author: **Priscilla Sarai Kraft**, *WHU Otto Beisheim School of Management*

Although upper echelon research on CEO narcissism has rapidly grown in the past decade, the influence of narcissistic CEOs on firm performance is subject to a controversial discussion in the literature. To help resolving this debate, this study proposes that the distinct views and equivocal empirical findings in prior research might stem from important yet overlooked risky strategic decisions made by narcissistic CEOs that help to explain their distinct effects on firm performance. Building on 68 studies, results from meta-analytical structural equation modeling (MASEM) reveal that whether narcissistic CEOs are beneficial or detrimental for firm performance depends on the risky strategic actions they pursue. The results uncover that narcissistic CEOs may have beneficial effects on firm performance through stimulating innovation. However, these positive effects are likely to be offset by the negative strategic actions of those CEOs, such as spurring leveraged financial capital structures. Interestingly, the results further highlight that, while the upsides of narcissistic CEOs for firm performance through stimulating innovation increase in high managerial discretion contexts, their greater leeway enhances their downsides even more, so that they do not only offset the benefits of narcissistic CEOs, but rather ultimately lead to detrimental effects for firm performance. This study thus helps to advance the discussion about narcissistic CEOs by theorizing and empirically demonstrating that the relationship between CEO narcissism and performance is more complex than previously depicted and requires a more nuanced investigation of the underlying mechanisms – research which has, so far, been conducted in parallel research streams.

STR: Exploration, Exploitation, and Failure Correction Speed: A problem Formulation Perspective 

Author: **Taiyuan Wang**, *China Europe International Business School (CEIBS)*
Author: **Sae Young Lee**, *China Europe International Business School (CEIBS)*

Product failures present a great risk to the responsible organization, its customers, and other stakeholders, but to a certain degree, may be unavoidable for boundedly rational organizations. As a result, an important strategic challenge for organizations is to effectively and quickly correct product failures. Drawing on the problem formulation perspective, we introduce and develop the concept of remedial comprehensiveness, which we suggest would play a key enabling role in product failure correction. We theorize that exploration tendencies increase the inputs of problem formulation, whereas exploitation is expected to increase the impediments, suggesting the former facilitates remedial comprehensiveness, and in turn, product failure correction. Analyses of 8,250 medical device recalls in the U.S. provide an overall support for our theory.

Participant: **Anindya Ghosh**, *Tilburg U.*
Participant: **Shiva Agarwal**, *U. of Texas at Austin*
Participant: **Rahul Kapoor**, *The Wharton School, U. of Pennsylvania*

In this symposium, we bring together the four papers that examine the origin and impact of what defines ecosystem rules. While recent work actively recognizes ecosystems as a ubiquitous architecture of economic activities, the literature often assumes ecosystem alignment structure as given. Less understood is how the common rules of ecosystems that define alignment structure emerge and how they drive differences in firms' market position in an ecosystem. The four papers discuss what structural and institutional conditions drive asymmetric power distribution in interdependency, and how firms shape and materialize technological interdependence to their advantages. Employing diverse theoretical perspectives and methodologies, the papers in this symposium address an interesting set of questions to advance our understanding of ecosystem alignment structure. The symposium should be of interest to scholars of strategic management and technology innovation management.

CTO: Celebrities are Just Like Us: Self-Esteem Moderates on Attitudes Toward Advertising With Celebrities  

Author: **Antonio Benedito De Oliveira Junior**, *FEI - Centro U. FEI*

Celebrity endorsement is a popular advertising strategy for promoting products. We argue that understanding consumer self-esteem is essential to determine the most advantageous conditions to feature celebrities in advertisements. Building on celebrity endorsement, self-esteem, and social identification with celebrities, we propose that consumers' self-esteem (low vs. high) differentially affects their responses to celebrities' type (proximal vs. distal). In four experiments, we demonstrate that low self-esteem people have a more favorable attitude towards advertisements that portray proximal celebrities rather than distal celebrities or products. In contrast, people with high self-esteem prefer advertisements that show distal celebrities rather than proximal celebrities or products. Moreover, the consumer's social identification with a celebrity had a mediating effect. We call the moderating effect of self-esteem on attitudes towards advertising with celebrities in the celebrity endorsement transfer model "proximal celebrity and distal celebrity". In addition, there was a greater purchase intention in advertisements that portray proximal celebrities for low self-esteem people and distal celebrities for people with high self-esteem. This work extends the literature on self-esteem and celebrities, and it can assist managers and practitioners in choosing the celebrity that best fits their product and target audience.

CTO: Action-Oriented Narratives. How Creativity Emerges in Online Crowd Discussions  

Author: **Claudio Biscaro**, *Johannes Kepler U. Linz*
Author: **Ann Majchrzak**, *U. of Southern California*
Author: **Arvind Malhotra**, *U. of North Carolina, Chapel Hill*

Using the concept of action-oriented narratives, we explain how creativity arise during an open innovation crowdsourcing event where the sole interaction amongst the crowd participants occurs through their online written contributions. In teams, creativity arises from narratives that offer a comprehensive problem representation, that provide a new framing of the problem, or that articulate constraints and cause-effect relationships. Such narratives help team members find common ground and new distinctions, which are then leveraged to elaborate innovative solutions. In contrast, our qualitative study of problem-centered discussions in a crowdsourcing event discovers that the narratives aimed at developing comprehensive problem representations, reframing the problem, or targeting problem constraints are more likely to lead to non-creative solutions. Creativity, instead, arises from narratives that are narrow, highlighting only one perspective of the problem, that reframe the initial problem while emphasizing the actors responsible for the implementation of change, and that outnumber constraints with a range of useful resources that could be brought to bear in many solutions. These characteristics make the action-oriented narratives, which allow problem solvers to suggest creative solutions that are robust enough to withstand eventual contingencies, without the effort of reaching consensus on the problem representation or finding common ground.

CTO: How Task Description Transforms Clients' Expectation-Disconfirmation in Crowdsourcing

Author: **Chaofan Yang**, *Wuhan U., School of Information Management*
Author: **Bingqing XIONG**, *U. of Science and Technology of China, City U. of Hong Kong*
Author: **Eric.T.K. Lim**, *UNSW Sydney*
Author: **Yongqiang Sun**, *Wuhan U., School of Information Management*
Author: **Chee-wee Tan**, *Copenhagen Business School*

The rapid growth of crowdsourcing platforms grants clients unprecedented opportunities to procure services digitally. Clients typically solicit solutions by preparing a task description that outlines their requirements for desired products and participating vendors. Vendors then respond with bidding proposals that elaborate on their qualifications and work plans. Subsequently, clients select the preferred proposal and the selected vendor delivers the product. In the crowdsourcing context, task description has been identified as an essential feature. Prior research has concentrated on the effect of description clarity and description richness, yet inconsistent findings have been found. Moreover, scarce literature has examined the mechanism underlying how clients should formulate task descriptions to improve the bidding process and obtain satisfactory outcomes. To fill in these gaps, we drew on expectation-disconfirmation theory (EDT) to advance a multi-stage model: Specifically, task description, convergence of vendors' proposals, selected proposal, and clients' follow-up evaluation of final work were conceptualized as explicit expectations, process-based performance, outcome-based disconfirmation, and client satisfaction. Results demonstrated an inverted U-shaped effect of description clarity on process-based performance, with reward budget acted as a moderator. Process-based performance imposed a negative effect on outcome-based disconfirmation, which was in turn positively related to client satisfaction. It is a significant finding since we contextualize the EDT to envision a more complete crowdsourcing process. Additionally, this study reconciles the mixed conclusions by revealing the curvilinear effect of description clarity on process-based performance as well as the moderating role of reward budget.

Author: **Pankaj Kumar**, *Virginia Tech*

Much work in the crowdsourcing contest domain has typically focused on competition—in so doing assuming that all contestants (individual or teams) independently possess the knowledge to solve a given task. However, studies elsewhere have demonstrated that even in the presence of competitive pressures, collaborative behavior and the ensuing knowledge exchange matter for performance outcomes. This paper attempts to fill this gap in the crowdsourcing literature by examining the antecedents of collaborative expressions, a subset of and a more subtle form of collaborative behavior apt for online contests and having the potential to influence contest-level collaborations. Collaborative expressions refer to the voluntary self-expressions of solvers (individuals or teams) related to discussions, knowledge sharing, and feedback-seeking publicly during an ongoing contest (e.g., public code-sharing in a live contest). We propose that time elapsed in a contest has a negative influence on the number of collaborative expressions because a solver is less likely to receive suitable feedback from its competing peers as the contest nears its end. Furthermore, we examine the contingent effects of the number of contestants over time within a contest, operating via either ‘incentive effects’ or ‘parallel path effects.’ We test hypotheses using a panel dataset of 83 data science contests conducted on Kaggle.com from 2015 to 2018. Consistent with our hypotheses, we find that as more time elapses in a crowdsourcing contest, collaborative expressions by contestants decline. Furthermore, we find that the number of competitors weakens the negative baseline association between time elapsed in the contest and collaborative expressions, indicating the presence of a parallel path effect. Taken together, our findings offer significant implications for research and the practice of managing crowdsourcing contests.

Risk and The Meaning of Emerging Digital Technologies

Session Moderator: **Haoyue Gu**, *Ivey Business School*

CTO: Meaning Innovation with Digital Technology in the Case of Electric Vehicles: A Design Perspective

Author: **Haoyue Gu**, *Ivey Business School*
Author: **Yasser Rahrovani**, *Ivey Business School*
Author: **Robert Austin**, *Ivey Business School*

Digital technology is an important enabler of product design and innovation. Many IS researchers have studied the role of digital technology in innovating product's functions and aesthetics. Relatively few, however, have studied the role of digital technology when product innovation includes changes in product meaning. Product meaning refers to emotional, psychological, and sociocultural reasons for buying a product. Despite the importance of innovation in meaning, the role of digital technology in meaning innovation is undertheorized. Thus, taking a design perspective, we draw on design and management theories to understand how designers use digital technology to influence product meaning. We use comparative case studies in two electric vehicle (EV) companies to theorize mechanisms of meaning innovation with digital technology: (1) Looking beyond vs leveraging digital technology to propose innovative meaning; (2) rejecting vs taking user feedback in the process of re-proposing meaning. By applying these mechanisms in product development, companies can better seize valuable opportunities such as developing longer product life cycles from meaning innovation with digital technology.

CTO: Wicked Problems in Digitisation of Learning Modalities

Author: **Ajeet Narain Mathur**, *ISPSO*

This paper takes the Spencerian question “What knowledge is of Most Worth?” as its point of departure to discuss the future of learning with regard to unresolved wicked problems that pose challenges to digitisation of learning modalities. There are problems that originate from the juxtaposition of digital media and classical content. There are issues requiring just apportionment of intellectual property rights between designers, creators, developers and deliverers of content, that are unresolved. The interpretation of what constitutes ‘fair use’ is subject to doctrinal variations across national jurisdictions because its enforcement involves a combination of policy, technology and law. The limits to tactile learning substitutability need understanding, accepting or transcending because knowing and connecting in real time and space involves unconscious connections of consciousness that can get diluted in disembodied transfers of images and sounds. The uncertainty and ambiguity that each of these wicked problems introduces, when combined, adds manifold to the complexity, chaos and vulnerabilities associated with design and delivery from digital learning platforms for the future of learning .

CTO: Computational Text Analysis for Studying the Evolution of Meaning of Categories

Author: **Semi Min**, *New York U.*

Over the decades, organization scholars have studied the formation of the meaning using various theoretical concepts. Analyzing meanings, however, pose methodological challenges as meanings are dynamically formed through a complicated process, which requires the analysis of large-scale historical data. Recent advances in computational text analysis of large digitized corpora have provided an opportunity to improve our understanding of the evolution of meanings. In this study, I will focus on a stream of research that can expect a significant benefit from computational text analytics: category perspective. This article suggests a framework to carry out the research on the evolution of the meaning of a category using computational methods. Specifically, I propose a new computationally-supported grounded theory development method that combines manual approaches for the interpretations with computational text analysis. This method aims to scale traditional theory-building methods, incorporating more complexity without losing nuance to enrich extant theories. Using the case of blockchain, this paper illustrates how this technique can be applied to study the evolution of the meaning of emergent technology categories in society.

CTO: Information Security Risk Perception and Firm Behaviour

Author: **Hilal Pataci**, *Rensselaer Polytechnic Institute*
Author: **T Ravichandran**, *Rensselaer Polytechnic Institute*

The escalating information security threats and their economic and other impacts have made firms pay careful attention to potential risks they face and the actions they can take to mitigate such risks. In this paper, we explore if and how the information security risk perceptions of firms shape their boundary changing behaviors. We argue that organizations have risk transfer, risk avoidance, risk reduction, risk acceptance options, and combine these options in their attempts to reduce the perceived effects of information security risks. Organizations through risk hedging could transfer some of the information security risks to third parties, while boundary changing behaviors could alter the potential vulnerabilities of a firm and hence decisions to alter firm boundaries are likely to be shaped by risk perceptions. We further posit that this effect will be shaped by the firm compulsions to avoid, reduce, or take risk. Using data collected for 2015-2018 years from S&P 500 firms by fine-tuning state-of-art transformer-based NLP models with domain specific data and causal extraction techniques to measure organizations' information security risk perceptions, we find that organizations' information security risk perception is positively associated with their information security risk hedging behavior, and less-risky boundary changing actions.

Author: **Alka Gupta**, *Bernard M. and Ruth R. Bass Center for Leadership Studies*
Author: **Maw-Der Foo**, *Nanyang Technological U.*
Author: **Vishal K. Gupta**, *U. of Alabama*
Author: **Safal Batra**, *Indian Institute of Management, Kashipur*

Research on the role of affect in the entrepreneurial process has surged over time, resulting in a vibrant field of inquiry. To advance scholarship in this area, we conduct an inductive analysis of 162 published articles, critically analyzing the state of research on affect in entrepreneurship. We develop an organizing framework to capture three major conversations in existing research—*affect valence* (feelings), *discrete emotions*, and *emotional competences*—and encompass several outcomes studied within each conversation. We find that limited work has been done to explore the antecedents of affect (both feelings and discrete emotions), anticipated affect deserves greater consideration, and affective influence of stakeholders on entrepreneurs remains overlooked. Research on negative affect and emotional competences also remains scarce in the entrepreneurship literature. Future inquiry would do well to take a multilevel approach to affect, explore affective phenomena over time, and cast light on the role of emotional competence in the entrepreneurial process. We also spotlight crucial empirical advancements, including big data and artificial intelligence, for affect research going forward.

Author: **Candido Vieira Borges**, *U. Federal de Goiás*
Author: **Edmilson Lima**, *U. Nove de Julho*
Author: **Jefferson La Falce**, *FUMEC U. MG*

This research aimed to identify threats experienced by women entrepreneurs, in order to understand how they react and to analyze the behaviors that allow them to overcome these threats for the survival of their businesses. The research is qualitative, exploratory in nature, and semi-structured interviews were used for data collection. Sixty-five entrepreneurs in the Network of Women Entrepreneurs in Brazil participated in the study. Lexicographic analysis and content analysis were used with the use of software Atlas-ti. Identification of four types of threats: a) Conflict of Social Roles; b) Affective Threats; c) Threats from Patriarchy; and, d) Threats to business. The overcoming behaviors were: a) Resilience, b) Use of the Masculine Vigor Network, and, c) Communication with Negotiation. The results showed the potential and strength of women in overcoming adverse, hostile, and embarrassing conditions to keep themselves engaged in the continuity of their businesses. The typology of threats and the behaviors to overcome them consider causes and impacts of the family, economic, and social environments. The results contribute epistemologically and open perspectives to initiatives to support female entrepreneurs, such as the development of public policies.

ENT: **How Do Empathy Cues Affect Knowledge Acquisition in the Online Communities of Entrepreneurs?**

Author: **Tao Wang**, *Simon Fraser U.*
Author: **Pek-hooi Soh**, *Simon Fraser U.*

Do entrepreneurs in online communities gain more knowledge from their peers when they present their inquiries with more empathy cues such as emotional distress and personal profile? While empathy cues can evoke one's empathy and motivate prosocial helping behaviour, they also signal the high expectation of the knowledge seeker and the high cognitive cost of the knowledge provider to fulfil the expectation. Given the self-disclosure of intimate information in the communications process, we adopt the social penetration theory to examine the cost and utility of knowledge sharing in the online communities of entrepreneurs. We hypothesize that online inquiries embedded with more empathy cues will likely receive fewer but overall above-average quality responses and that the provider's empathy is the mediating mechanism that dissipates the cognitive costs and improves the reply efforts in response to empathy cues. We found evidence to support our hypotheses by analyzing 30,269 message threads posted over a 55-month period from a public online community of entrepreneurs. Our study offers new insights into the theories of entrepreneurs' knowledge acquisition, empathy, and social exchange in online communities.

ENT: **Early Exposure Makes the Entrepreneur: How Economics Education in School Influences Entrepreneurship**  

Author: **Andranik Tumasjan**, *Johannes Gutenberg-U. Mainz*
Author: **Lukas Mergele**, *ifo Institute*
Author: **Ines Rueter**, *Johannes Gutenberg U. Mainz*
Author: **Larissa Zierow**, *ifo Institute*
Author: **Ismail Ismail**, *U. of Munich*

Many countries that seek to boost their economy share the goal of promoting entrepreneurship. Whereas there is ample research on the predictors of entrepreneurship during adulthood, we know little about how pre-adulthood experience influences entrepreneurship later in life. Using a natural experiment, this paper examines whether introducing economics classes in school enhances entrepreneurial behavior in adulthood. Our difference-in-differences approach exploits curricula reforms across German states that introduced compulsory economics education classes in secondary schools. Using information on school and labor market careers for more than 10,000 individuals from 1984 to 2019, we find that the reform increases students' entrepreneurial activities by three percentage points. Examining gender differences, we find that economics classes equally benefit female and male students. Our results advance our understanding of how pre-adulthood experiences shape individuals' entrepreneurial behavior.

This symposium aims to connect emerging research on imagined futures and possibilities with historical and institutional approaches to field and industry emergence. To start a conversation about the social structures of the possible, we mobilize three distinct sets of cognate concepts and theory-method packages that have so far been used in relative isolation in management: First, the concepts of interstitial spaces, early moments, and experimental spaces; second the historically-informed notion of “paths not taken” and counterfactual analysis; and third, recent methodological developments such as topic modeling, socio-cultural network analysis, and qualitative comparative analysis.

Discussant: **Denis A. Gregoire**, *HEC Montreal*
Discussant: **Santi Furnari**, *City, U. of London*

The jobs of organizational decision-makers are particularly complex, and complex organizational tasks are likely to require complex cognitions too. The Qualitative Comparative Analysis (QCA) – a configurational methodology – offers great potential to investigate such complex forms of cognitions, where multiple mechanisms contribute simultaneously to an outcome in question. To date, however, research that investigates managerial and organizational cognition through configurational lenses is scarce because prior studies have tended to explain complex phenomena by means of a linear logic that each time focuses on a single superior mechanism, in isolation of other mechanisms. The papers presented in this symposium aim at illustrating how the configurational approach works in several lines of research associated to managerial and organizational cognition. The symposium discussion ultimately not only aims at shedding light on the multi-dimensional nature of cognition involved in complex phenomena, but also advances the use of a relatively a novel, underutilized methodological approach to study the impact of configurations of cognitive mechanisms in managerial and organizational phenomena.

Some of the symposium's presenters will be in Seattle, others need to present from remote from Europe. So, a hybrid interactive mode with a suitable time (Seattle before noon / Europe afternoon or evening) would be highly appreciated. Many thanks for consideration.

Labor markets around the world have been disrupted on a historically unprecedented scale due to COVID-19. The WalletHub Coronavirus and Labor Day Survey found that one in three Americans are worried about job security (WalletHub, 2020). Job insecurity plays a role in influencing employee daily work activities as well as long-term career outcomes. Given the increasing prevalence of job insecurity in today's workplace, job insecurity is no longer an individual level phenomenon but a shared perception among the work unit. In the current symposium, we explore new forms of job insecurity (i.e., daily job insecurity, job insecurity climate) in the pandemic situation and the short- and long-term effects of job insecurity (i.e., daily work outcomes and career advancement outcomes). With four empirical studies, we provide a coherent discussion on the roles of time and team in job insecurity influence. We hope the discussion will shed light on new directions for the job insecurity research.

Proactivity, Self-regulation, and Employee Outcomes

Session Moderator: **Liyuan Li**, *School of Economics and Management Tsinghua U.*

OB: A New Perspective on Wise Proactivity: Configural Effect of Proactivity Process

Author: **Liyuan Li**, *School of Economics and Management Tsinghua U.*
Author: **Xiangyu Gao**, *School of Economics and Management Tsinghua U.*
Author: **Xiaoming Zheng**, *Tsinghua U.*

Proactivity literature has come to realize that employee proactivity is a process including a set of actions rather than a one-off action (e.g., Bindl et al., 2012; Parker et al., 2010). We provide a new perspective about when is proactivity wise by examining configural effect of four elements of proactivity process (envisioning, planning, enacting and reflecting, Bindl et al., 2012). Specifically, we explore what configurations of high or low level of such four elements be sufficient to employees' high or low performance and well-being (i.e., high or low burnout and role overload). Further, we include contextual factors (environmental uncertainty and leader trust) by examining the configural effect of proactivity process and such contextual factors, to broaden our understanding about the effect of proactivity process configurations. Using fuzzy set qualitative comparative analysis (fsQCA) across two studies, we find 11 original configurations. Further, we identify 4 primary and robust configurations from them by combining fsQCA and regression analysis. The primary and important results we find are: (1) high enacting alone is not sufficient for producing high performance; (2) when the other three elements are low, no matter the envisioning is high or low will lead to low performance; (3) no proactivity process configurations could lead to low burnout or low role overload, but leader trust could well buffer the burnout and role overload caused by proactivity process. Our research contribute to proactivity literature by providing a new process perspective to better understand the effect of proactivity, revealing a synergistic effect of proactivity process configurations and going beyond the traditional regression analysis. Besides, our research first explore the effect of proactivity process empirically, and find a new point to examine action regulation process.

OB: How to Sustain Proactivity? The Dynamic Relationship Between Job Performance and Job Crafting

Author: **Zhongda Wu**, *Peking U., School of Psychological and Cognitive Sciences*
Author: **Yu Ma**, *Peking U., School of Psychological and Cognitive Sciences*
Author: **Changqin Lu**, *Peking U., School of Psychological and Cognitive Sciences*

In increasingly uncertain workplaces, organizations expect employees to proactively initiate change and sustain their efforts in proactivity. Nevertheless, it is challenging for employees to sustain proactivity and little is known about how to sustain their proactive efforts. Drawing on the theory of self-regulation, we seek to advance the understanding towards temporal changes of proactivity (i.e., job crafting), via a novel perspective of dynamic performance-driven process. Conducting a field study with six waves of multi-source data (N = 338), we found that job performance trajectory acted as an important predictor of job crafting trajectory, controlling for the initial level of job performance and proactive personality. Moreover, job self-efficacy change acted as an essential mediating mechanism underlying this relationship. Further, employees' attachment to the organization (i.e., intention to stay) moderated the effect of job performance trajectory on job crafting trajectory via job self-efficacy change, such that the mediating effect of self-efficacy change was stronger when employees were more attached to their organizations. Our study shed new light on understanding the dynamics of both performance and proactivity.

OB: The Cost of Dress to Impress: The Effect of Dress Labor on Self-regulation and Work Engagement

Author: **Christy Zhou Koval**, *Eli Broad School of Business, Michigan State U.*
Author: **Rachel Hahn**, *Eli Broad School of Business, Michigan State U.*
Author: **Henry Robin Young**, *Eli Broad School of Business, Michigan State U.*

Making daily decisions regarding what to wear to work is a ubiquitous activity for most employees. Yet, surprisingly little research has examined the psychological consequences of getting dressed for work. Integrating research on boundary theory and self-regulation, we propose that the act of getting dressed for work functions as role transition between non-work and work roles, and the physical and mental effort associated with dressing for work—what we label as dress labor—can impair self-regulation. In a field study of employees using experience sampling methodology, we find that dress labor at the beginning of a workday positively predicts self-regulatory depletion later during the day, which in turn leads to reduced work engagement. We further find that the negative effect of dress labor is exacerbated for individuals who use attire to manage impression but attenuated for those who experience high levels of authenticity at work. Taken together, our research highlights that the seemingly routine act of getting dressed for work has a meaningful impact on individuals' experiences at work and illustrates a dark side to the notion of “dress to impress.”

OB: Yes, I Made It! Proactivity Effectiveness Alleviates the Psychological Costs of Proactive Behavior

Author: **Francesco Cangiano**, *U. of Exeter Business School*
Author: **March L. To**, *U. of Western Australia*
Author: **Libby Sander**, *Bond U.*

Proactivity is an important work behavior commonly encouraged by organizations. However, a growing number of studies suggest that being proactive can have negative psychological costs for employees. In this diary study, we contribute to this emerging discussion by examining the contingencies that enhance or attenuate the effect of proactivity on resource depletion. Specifically, we identify proactivity effectiveness and competitive climate as two crucial factors determining whether proactivity leads to a state of depletion at the end of the workday. Hypotheses were tested in a sample of 105 employees of a multinational construction company, who completed a general survey and two daily surveys over the course of a working week. Multilevel analyses showed that proactive behavior on a workday resulted in lower depletion at the end of the workday when proactive efforts were perceived as effective, particularly among employees perceiving a low-competitive climate. Our work offers a contingency model that explains when and why being proactive is (not) depleting, contributing a more nuanced understanding of the impacts of proactivity on employees' well-being.

OMT: **How Do Employee Incentives Work? A Systematic Review with Implications for Research and Practice**  

Author: **Theresa Christina Kaiser**, *TUM School of Management, Technical U. of Munich*
Author: **Alwine Mohnen**, *TUM School of Management, Technische U. München*

For decades, many organizations have offered various types of incentives to their employees hoping to influence them in a way that they do and be their best in supporting the organizations to accomplish their goals and thereby sometimes even make a larger impact and help to create a better world. Intensive research efforts from various streams have investigated the mechanisms of these employee incentives and found support for complementary, partly substituting, and sometimes even conflicting theories, models, and concepts. By systematically reviewing over 300 empirical research papers in top journals from 1953 to 2021 and comparing, organizing, and aggregating over 90 identified theories, models, and concepts into a framework, our main contribution lays in a comprehensive overview and synthesis into the six incentive mechanisms: interest aligning, motivating, satisfying, identifying & retaining, informing & developing, and health-promoting. Based on this, we make several recommendations to advance research, including the need to consider that incentives work in more than one way and the encouragement to advance research jointly across research streams, as well as provide practical guidance.

 OMT: **Feeding the Algorithmic Beast: How Temporary Jurisdictional Contests Support AI Development (WITHDRAWN)**  

Author: **Bryan Spencer**, *Frankfurt School of Finance & Management*

We know little about how artificial intelligence (AI) is reshaping work and professions. Organizational scholars studying how technologies change work and professions often focus on the use of technologies in the workplace. However, AI's influence begins with development prior to use. Existing research elides the complexities of how the development of AI is influencing work and professions. In a 13-month ethnographic field study of an elite teaching hospital in China, “Southern Eye Hospital,” I study how AI development led medical trainees to make claims to tasks and authority that they did not normally possess in order to complete their projects, a move that was at odds with the traditional hierarchy of the hospital. I examine how trainees managed the observability of their interactions as they worked with patients in a carefully scripted way meant to evade detection by senior doctors. These performances, which I call “scripted secondments,” reconceptualize jurisdictional change as temporary, covert claims to tasks that enable trainees to accomplish their goals without causing conflict with senior doctors. By examining how change unfolds within the hierarchy of a profession, I contribute to an understanding of relationality in jurisdictional change and highlights the hidden costs of “feeding the algorithmic beast.”

OMT: **Pragmatically Reconceptualizing Organization Design Through Inquiry**

Author: **Frithjof E. Wegener**, *Warwick Business School*

In this paper I draw on pragmatist philosophy to critique conceptualizations of organization design, which tend to adopt “scientific” perspectives of design. These perspectives highlight design as artefacts, planned change, and representation. Building on a growing pragmatist stream within both organization studies and design studies, I instead argue for a pragmatist approach to organization design, building on ideas of emergence, imagination, co-inquiry, and performativity in pragmatism. I examine how a pragmatic philosophical lens can contribute to reconceptualize organization design by problematizing existing paradigmatic assumptions. My starting point is an exploration of the existing paradigmatic assumptions underlying key texts on organization design, problematizing these through design studies and pragmatism, before outlining novel paradigmatic assumptions and associated research questions for organizational design—in doing so, I combine pragmatist perspectives on organizing, designing and organization design. I conclude by proposing a future research agenda for pragmatist organization design.

 OMT: **Muddying the Waters: Threat of Human Capital Loss and the Strategic Reduction of Employee Visibility**

Author: **Keun Woo Jeong**, *London Business School*

Retaining high-value human capital has been emphasized as an important foundation of competitive advantage. Previous studies have primarily focused on the strategies that raise the mobility constraints of the employees by either making employees' knowledge less appropriable by the competitors or by reducing the employee's motivation of mobility through pecuniary and non-pecuniary incentives. While most of the studies focus on employee-level strategies that constrain the employee's pursuit of outside options, surprisingly little research focuses on the strategies that involve constraining the outside options provided by the competitors in the first place. In this study, we show that firms strategically reduce the employees' outside options by limiting competitors' ability to observe value created by an employee. Specifically, we propose that employers will strategically reduce their employee visibility in the external labor market when faced with the threat of human capital loss to competitors. We test our predictions using data from the mutual fund industry between 1991 and 2007 and an exogenous state-level variation in the intensity of non-compete agreements, which indicate barriers to inter-firm mobility. We find strong support for our predictions in our difference-in-difference estimators exploiting state-level non-compete abandonments and adoptions. Our study contributes to theories of retention and strategic human capital, more broadly.

Leadership and Organization Theory

Session Moderator: **Jianyun Tang**, *Memorial U. of Newfoundland*

OMT: **Institutionalized Leadership: Toward a Realistic Theory of Leader Effectiveness**

Author: **Jianyun Tang**, *Memorial U. of Newfoundland*
Author: **Mary M. Crossan**, *Western U.*

We reconcile the idealistic and Machiavellian views of leader effectiveness and thereby develop a more realistic theory based on the concepts of decoupling and context integrity. In particular, we propose that strategic leaders, especially effective ones, while usually following the prevailing leadership norms in appearance at least (i.e., displaying positive leadership qualities), likely at least sometimes deviate in actuality (i.e., engaging in illegitimate behaviors)—that is, decoupling between the prevailing leadership norms and the actual leader behaviors. Furthermore, the extent of decoupling is relatively less in high-integrity contexts than in low-integrity contexts. The theory developed suggests a notion of institutionalized leadership, with profound implications for leadership research and practice.

OMT: **A Multilevel Study of Leader Political Skill and Followers' Identity**

Author: **Beenish Qamar**, *National Textile U. Faisalabad*
Author: **Sharjeel Saleem**, *Government College U. Faisalabad*

After the introduction of the political theory of leadership, scholars began investigating the influence of leader political skill (LPS) on various follower outcomes. However, the work that has already been published on LPS has ignored some important perspectives, such as the follower self-concept-based perspective, the multilevel nature of LPS, and the impact of cross-level effects. Thus, this study using matched reports from 70 leaders and 345 of their followers across 36 branches of 18 banks in Pakistan, investigated and found that the follower self-conceptions mediated the relationships of individual-focused LPS and group-focused LPS with follower empowerment, leader-based self-esteem, follower engagement, team cohesiveness, team goal commitment and team engagement at their corresponding levels. Mplus 7 was used to analyze the hypothesized relationships and the results also revealed some important cross-level effects. Implications for theory and practice are discussed and future research directions are also outlined.

OMT: **Enacting Leadership Legitimacy Under Terms of very Limited Formal Authority**

Author: **Thomas Schumacher**, *U. of St. Gallen*
Author: **Marc Krautzberger**, *U. of Edinburgh business school*

This article presents a model of how leadership practices in an inter-organisational context of very limited formal authority continually create and recreate leadership legitimacy. We draw on a longitudinal case study in a German banking cooperative, identify six collaborative leadership practices and use a practice lens to explain leadership legitimacy as a stepwise accomplishment. Our study offers new insights into the sources of leadership legitimacy. Moreover, based on our insights, we suggest a new understanding of leadership that advances the understanding of leadership as practice even beyond the cooperative sector.

Paradox Theory Deep-Dive: Times, Emotions, and Daily Manifestations

Session Moderator: **Carolin Johanna Waldner**, *Heinrich-Heine U. of Dusseldorf*

Author: **Carolin Johanna Waldner**, *Heinrich-Heine U. of Dusseldorf*

Author: **Stephanie Schrage**, *Hamburg U. of Technology*

Author: **Andreas Rasche**, *Copenhagen Business School*

Despite significant advances afforded by recent insights into the coexistence of multiple paradoxes, we still know little about the precise ways in which multiple intertwined or knotted paradoxes relate to one another. In particular, scholars have not yet studied how differences in the perceived intensity of paradoxes influence the development of paradox knots. We draw on a longitudinal qualitative case study of a German development NGO operating in Uganda to elucidate and elaborate upon the knotted nature of two paradoxes faced by this NGO, namely a means-end paradox and an identity elasticity paradox. Our analysis shows how the intensity of these two knotted paradoxes developed inversely, with the NGO's response to the means-end paradox amplifying the identity elasticity paradox and its response to the identity elasticity paradox mitigating the means-end paradox. Based on these findings, we extend the literature on paradox knots in two ways. First, we show how knotted paradoxes can be asymmetrically aligned, with each alternately amplifying or mitigating the intensity of the other over time. Second, we show that paradox knots need to be understood as temporary and unstable phenomena that can both emerge and decline – or “fade in” and “fade out” – in their effects.

OMT: Coping with Paradoxical Tensions: From Negative Emotion to Virtuous Cycles

Author: **Anne-Sophie Thelisson**, *UCLy - ESDES - Lyon Catholic U.*

Author: **Diana Santistevan**, *EM Normandie*

Author: **Linh Chi Vo**, *ESDES, U. Catholique de Lyon*

Emotions shape how individuals respond to paradoxical tensions. Extant research implies that positive emotions link to active or more positive means of resolving tensions, while negative emotions often lead to defence mechanisms and thus, more negative organizational outcomes. However, there is some evidence contradicting this assumption. Little is known about how and why some negative emotions lead to active responses. This study addresses this issue by studying how positive and negative emotions interact with cognitive reflections to shape active responses. Our results contribute to the literature by providing insight on how the cognitive reflections of taking responsibility for managing team, taking responsibility for coping with tensions, and reflections on one's own ability to cope with paradoxical tensions can potentially shift vicious defensive cycles into virtuous ones.

Paper is Available to Meeting Registrants Only.

OMT: Paradox from a Buddhist Perspective  

Author: **Hee-Chan Song**, *Sasin Graduate Institute of Business Administration, Chulalongkorn U.*

Given the intellectual intersection of paradox theory and Eastern thought, many organizational researchers have explored the concept of paradox through the lens of Eastern philosophy. However, how this philosophy actually manifests itself in people's daily lives largely remains unexplored. Through five years of fieldwork across 32 Korean Buddhist temples that confronted the visceral tension between the need for financial resources and the religious values that disavow money, this study investigates how paradox manifests in the lives of Buddhist monks. Through a deep immersion into their lives, I revealed six cognitive tactics that Buddhist monks use to address the tension they experience. Additionally, I examined how meditation contributes to their identification of the nature of this tension. The findings contribute to paradox theory in several ways. First, it theorizes the monks' fundamental worldview of tension by integrating the perspectives of Buddhist philosophy, paradox theory, and mindfulness. Second, it offers an alternative perspective to the recent debate on the ontology of paradox. Altogether, this study raises the important question of whether the organizational phenomenon or mechanism that organizational researchers believe to be paradox is indeed paradox.

OMT: Salience and Time: The Existential Ground of Organizational Paradox

Author: **Ferran Torres**, *U. Ramon Llull, ESADE Business School*

The experience of organizational paradox, interdependent contradictions persisting over time, has been studied from cognitive, psychological, and discursive perspectives. In all these cases, experience is described in terms of the actual presence of paradox. However, the existential ground of organizational paradox lying beyond its presence remains undertheorized. I mobilize Heidegger's existential analytic to unpack the experience of organizational paradox that is revealed in our modes of being, which, in turn, temporalize the experience. First, I explore the intimate relationship between paradox and tension by unpacking how we encounter them in the world. Then, I explain the meaning of to be experiencing paradox by showing the role played by the modes of the actual and the possible. Finally, I unpack the temporality of organizational paradox. The existential understanding of paradox uncovers how tensions and paradoxes gain their paralyzing and productive nature, and they reveal distinct ways in which the potential of paradox is disclosed.

Advancing Individual Network Dynamics: Brokers, Boundary Spanners, and Bottlenecks

Session Moderator: **Olli-Pekka Kauppila**, *NEOMA Business School*

OMT: Brokers in Action: How Shaping Others' Relationships Influences One's Own Network Position

Author: **Olli-Pekka Kauppila**, *NEOMA Business School*
Author: **Lorenzo Bizzi**, *California State U., Fullerton*
Author: **David Obstfeld**, *California State U., Fullerton*

Social network research has traditionally highlighted the advantages of brokerage positions in social networks. More recently, an emerging microfoundational perspective has shifted the focus from structures to brokering behaviors to explain how individuals activate network structures and develop structural opportunities. To address the focal question of how individuals “do” brokerage, the present study examines how different approaches to shape relationships between other actors become reflected in one’s own network position and social network activation. Specifically, addressing the diverging perspectives in brokerage theory, we examine whether and how individuals’ competitive (*tertius gaudens*) and collaborative (*tertius iungens*) brokering behaviors influence network positions. Across three studies—a two-wave panel study, a network survey, and an experimental study—our results reveal a pattern that emphasizes the value of collaborative activities in brokerage processes. Our findings also demonstrate how one’s network context might regulate the functioning of these processes. We discuss the implications of our results for organizational social network research.

OMT: Overcoming the Challenges of Bottlenecking: Individuals' Desire for Reducing Their Dependencies

Author: **Seong Won Yang**, *U. of Kentucky*

In a field social network study of 141 employees in an international organization, I examined individuals’ future desires to either collaborate more intensely with existing network partners or seek out new partners based on the latent value of these social ties – the potential social capital that will be generated from strengthening or building a tie in terms of reducing their formal workflow dependencies on others. Employees tended to desire more intense collaboration with a constraining existing tie (i.e., a bottleneck in their existing workflow network) when they trusted the person, suggesting they believed that the partner would provide high-quality work inputs in a reliable manner once a stronger relationship was built, thus increasing the tie’s latent relational value. Building new ties was more likely to happen when it would reduce one’s workflow dependencies by detouring around the constraining person and closing disadvantageous structural holes, suggesting those new potential ties had greater latent structural value as they allow the focal individual to reach out to other workers further upstream in the workflow network. When comparing the intentions to use both approaches, the bypassing, structural approach was more prevalent than the tie strengthening approach for reducing workflow dependencies, in spite of the inherent additional costs of searching and building a new tie. The study illustrates how informal networks are used intentionally to ameliorate the deficiencies of the formal organizational workflow network and suggests the relative prominence of the latent structural value of ties as compared to their relational value.

OMT: The Effects of Piqued Curiosity on Boundary-Spanning Networking in Organizations

Author: **Tiziana Casciaro**, *U. of Toronto*
Author: **Francesca Gino**, *Harvard U.*
Author: **Bill McEvily**, *U. of Toronto*
Author: **Evelyn Ying Zhang**, *Frankfurt School of Finance & Management*

Integrating the differentiated knowledge, skills, and experiences of its members is critical to the effective functioning of an organization. Hence, interactions spanning across formal organizational and informal social boundaries are a principal focus of organizational scholarship. Research has substantiated not only the range of important outcomes deriving from, but also the formidable barriers to engaging in boundary-spanning networking. We argue that a chief impediment to boundary-spanning networking is the lack of motivation on the part of individuals to cultivate such interactions. Against this backdrop, we theorize that curiosity—which can be piqued by cues in the organizational environment—heightens individuals’ motivation to network across boundaries in organizations by promoting the drive to learn novel ideas, solutions, and opportunities. We designed and conducted a randomized-control-trial field experiment involving over 2,200 middle-managers in a North American financial services organization to test our predictions, and an additional field experiment to substantiate the underlying causal mechanisms. Findings support our claims and illuminate the psychological foundations to boundary-spanning networking. Our results open new avenues for research, both on how curiosity affects networking and shapes network structure in organizations, and on how organizations induce curiosity as the intrinsic drive to learn in its members.

Author: **Tina Azad**, *U. of Witten/Herdecke*

Author: **Guido Moellering**, *Witten/Herdecke U.*

In this study, we examine the trust transferring practices of network managers dealing with the challenges brought by the uncertain context of innovation networks. With a qualitative inquiry of 23 network managers and 20 network members, we investigate how network managers deal with three kinds of uncertainty challenges by relying on trust transfer to support knowledge sharing and collaboration. Our findings show that third parties mainly face contextual, expectational, and relational uncertainty challenges. Next to the dyadic ties between the managers and respective members, we identify referring, encountering, and mobilizing networking tools as essential trust transferring practices network managers use to deal with the uncertainty challenges. This study opens new avenues for indirect trust building as part of triad or collective trust, the concept of third-party facilitated trust transfer, and the recursive interplay between trust and perceived uncertainty challenges.

Decision Making in Organizations: Attention and Judgement

Session Moderator: **Alex Wright**, *U. of Sheffield Management School*

OMT: Judging: Management and Hannah Arendt's Consideration of Judgment

Author: **Alex Wright**, *U. of Sheffield Management School*

Present in all interested human activity, judgment is something that organization and management theory (OMT) has largely neglected, often conflating it with decision making. A fresh philosophically-informed perspective on judgment is offered. Specifically, Hannah Arendt's discussion of judging is outlined, investigated and drawn from to offer a new way of thinking about and considering judgment and its role in OMT. An Arendtian-inspired understanding of judging sees it as a practical, ever-unfolding and affective communicative process that allows for general perspectives to be taken on specific issues. The importance of judgment to managers and leaders is readily accepted, but how it is performed and what difference it makes to how organizing unfolds, is less commonly discussed. It is argued that when actors are interested in something they are judging. To say one must not judge is akin to saying one should be disinterested. Two specific aspects of Arendt's work on judgment are highlighted: the role of opinion and *sensus communis*—which presents judging as a relational undertaking. This article aims to stimulate new thinking around judgment and new considerations of its role in how organizing and organization are accomplished.

OMT: **Reacting to Failure and Orchestrating Success: How Organizational Performance Shocks Move Attention**

Author: **Martin Schulz**, *U. of British Columbia*

Author: **Erik Robert Strauss**, *U. of Witten/Herdecke*

Author: **Leona Wiegmann**, *Monash Business School*

Organizational performance shocks – i.e., unexpected performance variations – can present challenges for organizations. Paying attention to performance shocks – before and after they happen – is important for organizational adaptation and responsiveness. Organizations should allocate attention to information sources which can signal incipient shocks and help to shape or avoid them, and to sources which can help understanding and managing occurred shocks. But do organizations reallocate their attention before and after performance shocks? We study the relationship between performance shocks and organizational attention allocation empirically with longitudinal data about information source use of knowledge workers of a large corporation. Our results indicate that performance shocks affect attention shifts of the knowledge workers, but positive and negative shocks have different effects. Positive shocks induce attention switches before they happen, but not afterwards. Negative shocks induce attention switches after they happen but not before. The results support our interpretation that allocating attention to relevant information sources and misallocating attention to irrelevant sources can shape performance shocks and attention shifts.

Paper is Available to Meeting Registrants Only.

OMT: **Towards a View of Organizational Attention as Practice**

Author: **Davide Nicolini**, *U. of Warwick*

Author: **Jeanne Mengis**, *U. of Lugano*

In this paper, we examine how a practice-theoretical perspective can complement, integrate, and expand work conducted with the tradition of the Attention-Based View of the firm (ABV), the idea that organizations should be understood as collective mechanisms for directing, regulating, and distributing attention. We argue that a practice-theoretical approach can expand the ABV in at least three ways. First, it allows theorizing the situated nature of attention, showing that a pragmatic field of attention is inherent in all practices and their nexuses. Therefore, the scholarly inquiry should focus on the practices for paying and attracting attention and the attentional effects of practices. Second, it enriches the idea of distributed attention, suggesting that many more – and more heterogeneous entities are involved in attentional processes than previously thought. Third, it provides a conceptual apparatus to shed new light on the competitive processes that preside on strategy makers' situational attention, recovering the phenomenon's integral political nature

Recent literature has shown how Multiple Team Membership (MTM) has important effects for managing human capital at different levels of analysis. Yet, despite increasing scholarly attention over the last years, we still have very limited theoretical and empirical understanding of the inherent complexities, challenges, and paradoxes of being on multiple teams at work and of the ways in which MTM influences individuals', as well as teams', and organizations' processes and outcomes. Inspired by the Positive Organizational Scholarship perspective, with this symposium, we aim at opening up this black box and shedding light on such complexity by giving answers to a pressing question: how can we design and manage an organizational MTM system that promotes both performance and a positive organizational environment? We address this question by presenting five papers looking at the interplay between MTM, performance, and individual and collective wellbeing at multiple levels of analysis and using multiple methods.

Motivating Socially Responsible Corporate Strategy and Implementation

Session Moderator: **Robert A. Rodrigues**, *Saint Mary's College of California*

SIM: Corporate Social Responsibility Strategy and Implementation: An Integrative Approach   

Author: **Robert A. Rodrigues**, *Saint Mary's College of California*

Despite numerous studies on Corporate Social Responsibility (CSR), there is a lack of definitional clarity, identifiable boundaries, and accurate measurement instruments for CSR programs and their implications for firm strategy and performance. This may be due to the problem of using CSR programs with different purposes and emphasis without knowing their different resource requirements and effects on the organization. This paper argues that it is essential for an organization's CSR program to establish a shared value with relevant stakeholders, proposes a typology of CSR programs, and posits conditions for program implementation. A bibliometric analysis enhanced with VOSviewer mapping identifies a trend in CSR literature shifting from firm level topics such as strategy, disclosure, and financial performance to micro-CSR topics including responsible leadership, employee engagement, and nuanced implementation approaches. The shift suggests greater emphasis on stakeholder orientation, shared value, and granular CSR strategies are needed for effective CSR programs. The typology and associated propositions aim to advance theoretical and management insights for CSR programs based on a firm's relevant stakeholders, blend of internal authenticity and external legitimacy, and a firm's resources and capabilities. Keywords: strategic CSR, authenticity, legitimacy, responsible leadership, stakeholder theory, shared value, and social capital

SIM: It's Not All About the Money: Why and How Firms Enact CSR Activities in Developing Countries   

Author: **Christian Hauser**, *Swiss Institute for Entrepreneurship*

Author: **Jose Godínez**, *U. of Massachusetts, Lowell*

Existing research in corporate social responsibility (CSR) is mainly developed on two assumptions. First, firms expect an economic return from CSR. Second, firms follow progressive CSR, ensuring economic gains, following laws and regulations, conducting business in an ethical manner, and finally philanthropy. Nevertheless, insights following this approach were obtained by mainly analyzing firms in locations where laws are present and fairly enforced. In our analysis, we suggest that firms have different reasons and methods to pursue CSR. Our results show that firms operating in locations with a weak formal institutional environment participate voluntarily in CSR activities depending on their perspective—whether a firm's CSR activities are cost- or investment-oriented—and focus—whether a firm's CSR activities are value creating or value distributing.

SIM: Thin on the Ground: A behavioural Explanation for MNEs' Entry into the Base of the Pyramid Markets   

Author: **Sarada Devi Vsb Gadepalli**, *Alliance Manchester Business School, U. of Manchester*

Author: **Aneesh Banerjee**, *City U. London*

Research indicates that the Covid-19 pandemic can nullify decades' worth of progress made on several developmental objectives including poverty alleviation. For the first time since the 2008 financial crisis, the GINI coefficient: an index for income inequality, worsened by 6 percent for developing countries and another 70 million people are likely to be pushed into extreme poverty. This impending developmental crisis, calls for renewed research and managerial focus on market-based approaches to poverty alleviation. Building on prior research, we argue that the decision of Multinational Enterprises (MNEs) to enter Base of the Pyramid (BoP) markets can have positive externalities for development and poverty alleviation. But only a small number of MNEs are able to overcome several external and internal challenges associated with BoP markets. Using a behavioural lens, we propose and highlight the importance of internally generated resources in facilitating innovations and BoP market entry. While constraints due to structures and processes remain, slack resources allows room for experimentation and even bypass some of these processes and demonstrate the power of the ideas, before formally following the structured innovation and entry processes. We empirically test this explanation with a unique dataset of innovations and BoP market entry. We conclude by drawing insights for research in BoP markets as well as managers and policymakers to incentivise MNEs to participate in regional development.

Session Moderator: **Sebastian Cortes-Mejia**, *Hope College*

SIM: Short-Term Financial Consequences of Top Managers Negative Personal Behaviors

Author: **Sebastian Cortes-Mejia**, *Hope College*

Author: **Ishta Minefee**, *U. of Illinois at Urbana-Champaign*

Author: **Samuel M DeMarie**, *Iowa State U.*

Negative personal behaviors that happen outside of top managers' professional roles are becoming more frequently reported in the media and are having an impact on firms. Nevertheless, this phenomenon is underexplored, with little theoretical development, and mixed empirical findings. We rely on signaling theory to suggest that top managers, as reliable decision-makers of the firm, with their negative personal behaviors disclose information that investors find valuable about the quality and intent of the management of the firm. Furthermore, we use managerial and organizational reputation as moderators that partially explain variations on the reaction of the investors. Using a sample of 126 negative behaviors of managers from publicly traded firms in North America, we found that those behaviors that are more proximal to the job of the top manager have a higher impact on the short-term financial performance, while this relationship is moderated by managerial reputation, but not by organizational reputation. We discuss important implications of the findings for practice and theory.

SIM: A Dynamic Relationship Between CEO Social Class Origin, Career Experience, and Employee Treatment  

Author: **Aten Zaandam**, *Kent State U.*

Author: **Livia Markoczy**, *U. of Texas at Dallas*

We argue that CEOs from higher social classes tend to treat employees in a transactional manner compared to CEOs from lower social classes who relationally treat employees. We attribute this difference to agentic vs. contextual beliefs that individuals from different social classes adopt due to the circumstances of their upbringing. We further argue that elite education, career hardship, entry into a distressed labor market, and an insider career trajectory erode agentic thinking, strengthen communal thinking and thus moderate the relationship between CEO social class origin and employee treatment. We rely on a survey sample from 135 CEOs from S&P 1500 firms and 403 firm-year observations to test our predictions for 2007 to 2020 for supportive employee treatment. We additionally test callous employee treatment with 87 firm-year observations during the Covid-19 event period of 2020. We find our hypotheses supported.

SIM: Gender in Firm-Level Bribery: Differences in Anomie Pressure Perception of Women Owners and Managers  

Author: **Sondos Gamal Abdelgawad**, *IE Business School*

Author: **Alona Martiarena**, *IE Business School, IE U.*

Author: **Maya Kumar**, *IE Business School*

We examine the role of gender in the perception of anomie pressure and how this perception may vary by the position women occupy within firms to explain firm-level bribery supply. Connecting anomie theory to gender inequality research, our arguments deepen our understanding of the role of gender disadvantages and conformity to social and gender norms in the perception of women owners and managers of anomie pressure that encourages bribery. We argue that women-owned businesses are more likely to conform to prevailing anomie pressure and supply bribes while women managers are less likely to do so. Using a rich dataset that combines micro firm-level data from the World Bank Enterprise Survey (WBES) and country-level data from the World Bank (World Development Indicators) and United Nations (the Inter-Parliamentary Union survey), our findings show that women-owned firms are more likely to supply bribes and that women managers tend to mitigate this relationship. Our evidence offers theoretical and practical implications for bribery research that move beyond prevailing assumptions about women's presence as a condition to reduce bribery to consider the connection between gender, prevailing bribery norms, and compliance.

Paper is NOT Available. Please contact the author(s).

SIM: Turning Bright to Dark: CEO Charisma, Dark Triad Traits, and Corporate Social Irresponsibility

Author: **Tessa Recendes**, *Penn State Smeal College of Business*

Author: **Vilmos F. Misangyi**, *Pennsylvania State U.*

Author: **Nawon Oh**, *Penn State Smeal College of Business*

Many of the numerous corporate scandals and business failures over the past few decades seem to have occurred under the leadership of charismatic CEOs: apparently, charisma has a "dark side". Yet, the extant academic literature on CEO charisma has been silent to date on the potential dark side of CEO charisma—prior theory and research has taken an explicitly "bright" view of the phenomenon that presumes that CEOs use their charismatic power to lead in an empowering manner that aligns and commits their stakeholders toward their organizations' missions and values, and to presumably beneficial organizational and social outcomes. The very limited past research that has considered this issue has been conceptual in nature and has largely attributed the dark side of CEO charisma to leaders' followership and/or the context. Therefore, we lack a systematic understanding of the characteristics of leaders that result in charismatic CEOs using their charismatic power in dark and harmful ways. We draw upon and integrate past notions of personalized leadership and research on dark personality traits to suggest that the dark triad (DT) traits—Narcissism, Machiavellianism, and Psychopathy—equip charismatic CEOs with the disinhibited, domineering, exploitative, and leader-focused orientation needed to turn charisma from bright to dark. In particular, we hypothesize that firms run by dark charismatic CEOs—i.e., those CEOs high in charisma and DT traits—will be associated with corporate socially irresponsible activities, both toward internal (employees) and external (customers) stakeholders, in ways that differ from charismatic CEOs. We develop and test our hypotheses on a sample of Fortune 500 CEOs using a video-metric approach to assessing each CEO's charisma and DT traits. Given our highly supportive findings, we call for future research on CEO charisma to delve more deeply into the dark side of charisma.

Ideology, Immigration, and Nonmarket Strategy

Session Moderator: **Haram Seo**, *Texas A&M U., Mays Business School*

 **STR: Where We Are From Matters: Assessing the Impact of Immigrants on Facility Environmental Performance**     

Author: **Narae Lee**, *Singapore Management U.*

This study examines the impact of immigrant populations on firm environmental performance. Leveraging a longitudinal dataset of more than 11,000 manufacturing facilities in the US in which I match the Environmental Protection Agency’s (EPA) facility toxic emissions data with the location’s census immigration data, I document the negative impact of local immigrant populations on a facility’s environmental performance, which strengthens as heterogeneity among immigrant increases. I argue that this is because a more heterogeneous community is less cohesive and hence less capable of organizing effective pressures against pollution. Further, I show that because co-nationality links create unique bonds between the facility and local immigrants, the negative relationship declines as more immigrants originate from the same home country as a facility’s parent firm. These results are robust to the use of an instrumental variable approach and a wide variety of alternative specifications and subsamples. These findings suggest that local community pressures may be limited in driving better environmental outcomes.

STR: The Value of Corporate Political Donations: Evidence from the Capitol Riot 

Author: **Christopher Poliquin**, *UCLA Anderson School of Management*
Author: **Young Hou**, *Harvard U.*

Corporate political action committees donate about \$300 million to federal political candidates each election cycle, but research offers mixed evidence on the value of these contributions. We estimate the value of firms’ campaign contributions by studying the decision of 159 S&P 500 companies to stop donations following a riot in the U.S. Capitol building. Average cumulative abnormal returns over the two days following firms’ announcements to halt donations were -0.6 percent. There is no significant relationship between the magnitude of abnormal returns and (a) the amount of political contributions, (b) the intensity of regulation in a firm’s industry, (c) the firm’s lobbying expenditures, or (d) the firm’s score on governance and political accountability indexes. Analysis of campaign donations following the riot shows that firms mostly honored their pledge to stop donations, at least for the first quarter of 2021. Together, the results suggest campaign donations by corporate political action committees have small effects on firm value.

 **STR: Competitive Dynamics of Corporate Activism: Asymmetric Responses from Ideological Ally and Opponent**

Author: **Haram Seo**, *Texas A&M U., Mays Business School*

This paper investigates how corporate advocacy can produce unexpected consequences by triggering mobilization from opposing ideological interests. Recent research on corporate political ideologies suggests that ideological firms—firms whose organizational members are ideologically engaged—are the main and early participants in advocacy issues of contentious nature. However, what remains underexplored is whether and how the actions of ideological firms affect other firms in the population, especially the possibility that actions of ideological firms can be met by strong ideological opposition from their competitors, which can strategically differentiate themselves in doing so and gain competitive advantage. Using uniquely detailed records of U.S. corporate foundations’ philanthropic giving to 4,021 advocacy nonprofits from 2003 to 2015, we find strong evidence that ideological firms’ giving encourages a stronger response of giving from their ideological opponents than from their ideological allies in the issue area of their choice. We also find that such asymmetry in the response between ideological opponents and allies is moderated by firm-level, issue-level and market-level contingencies, such that the asymmetry is stronger among ideologically homogeneous firms, in issues that involve higher contention, and when firms face strong labor market competition. These results advance our understanding on the dynamics of ideological competition at play in the market of advocacy giving, and suggest that, without accounting for the structure of ideological competition, ideological firms’ advocacy actions may backfire, leading to increased conflict and polarization.

STR: National Political Ideology and Corporate Social Responsibility: An Institutional Theory Perspective 

Author: **Leah Alley**, *Virginia Commonwealth U.*

Political context has only recently begun to receive attention as a key institutional factor affecting firms’ strategic decisions. The present study examines how the financial implications of corporate social responsibility (CSR) can vary as a function of broader national political ideologies. Drawing on institutional theory and research on the reputational effects of CSR, I test a series of models that examine the interaction between different kinds of CSR activities and the dominant national political ideology. While I propose that CSR will be more beneficial to firm financial performance under a left-leaning national ideology because left-leaning ideologies align with the values captured in CSR, results of fixed effects panel regression models reveal that this relationship is more complex. Future research should examine how the reputational perceptions of strategic CSR activities by different stakeholder groups are influenced by changing national political conditions.

What Can Management Scholars and Economists Teach Each Other About Interorganizational Governance?

Interorganizational Governance

Participant: **Nicholas Argyres**, *Washington U. in St. Louis*
Participant: **Fabrice Lumineau**, *HKU Business School, The U. of Hong Kong*
Participant: **Giorgio Zanarone**, *U. Pompeu Fabra*
Participant: **Janet E.L. Bercovitz**, *U. of Colorado, Boulder*
Participant: **Bill McEvily**, *U. of Toronto*
Participant: **Brian Silverman**, *U. of Toronto*
Participant: **Todd Zenger**, *U. of Utah, David Eccles School of Business*
Participant: **Robert Gibbons**, *Massachusetts Institute of Technology*

Management scholars and economists have a common interest in the governance of interorganizational relationships. However, the literatures on the subject in each field are largely siloed. While the management literature has drawn on transaction cost economics, it has not drawn on the economics literature on relational contracts. Similarly, the economics literature has largely ignored the management literature on interorganizational relationships. While such silos are of course common, this symposium is an effort at cross fertilization. It brings together prominent scholars from management and economics who are familiar with literatures in both areas, and are interested in exploring ways in which scholars in the two areas can learn from the other.

Code-Switching in the Workplace: The Strategies, Challenges, and Practical Implications

Code-Switching in the Workplace

Organizer: **Rose Brown**, *Cornell U.*
Presenter: **Rose Brown**, *Cornell U.*
Discussant: **Patricia Faison Hewlin**, *McGill U.*
Presenter: **Darin Johnson**, *U. of Pennsylvania*
Presenter: **Jaylon Sherrell**, *Harvard Business School*
Presenter: **Patrick Plummer**, *Howard U.*

In recent decades diversity in organizations has dramatically increased. This movement is due to changing demographics in the workforce, societal and political shifts that promote equal rights and opportunities, and trends in globalization that increase connections among people from different parts of the world. The increase in diversity has profoundly affected how people in organizations interact. Without question, the most fundamental aspect of these interactions involves communication, which forms the backbone of interpersonal exchanges in and around the workplace. Communication drives business and is a critical aspect of organizational effectiveness (Snyder & Morris, 1984). It is critical to note that people from diverse backgrounds bring different approaches to communication into organizations. When people with varying communication styles interact, we often see dynamic patterns of mutual adaptation that can vary on multiple dimensions. These patterns form the basis of the concept of code-switching. Undoubtedly, not only does communication drive business, code-switching drives business. The papers presented in the symposium come from different perspectives of how code-switching exists and impacts people in the workplace and they collectively extend literature theoretically and empirically. By improving our understanding of code-switching, these papers increase awareness with regards to issues of diversity, equity, and inclusion, and provide insight into what skills business organizations and managers of the future need. With this research, in alignment with the theme, "creating a better world together," the authors seek to provide a new awareness for organizations and managers and scholars of management. Furthermore, the authors believe the insight provided here will provide an additional opportunity for managers and businesses to consider resetting organizational practices that enable the creation of new future organizational arrangements. The authors believe code-switching awareness and skills can be our bridge to efficiency, productivity, and overall workplace inclusion.

IM: Governance Stickiness: Understanding Governance Designs in Emerging Economies  

Author: **Ryan Federo**, *U. de les Illes Balears*
Author: **Tobias Parente**, *ESEGE*

Many firms in emerging economies adopt governance designs that include several barriers of board monitoring. Scholars argue that these barriers are attributed to powerful shareholders who want to control corporate decisions and/or relatively weak minority shareholder protection from regulatory frameworks. Alternatively, we propose that governance designs can also be explained by governance stickiness, which we define as the difficulty of firms to transfer or adopt specific corporate governance practices due to high governance costs. We theorize that governance stickiness involves the interplay of a firm's capacity and willingness to bear the high costs of adopting specific governance designs. Building on the neo-configurational perspective, we test our proposition by inductively exploring the governance designs reflected in the bundles of board monitoring barriers of publicly listed Brazilian firms. Our findings uncover a typology of governance designs that correspond to particular levels of governance stickiness. Our research advances knowledge of strategic corporate governance by bridging the literatures of governance designs and costs.

IM: The Traveling Headquarters: The New Phenomenon of Temporary Headquarters Relocations   

Author: **Jan Schmitt**, *Amsterdam Business School, U. of Amsterdam*

William H. Newman Award Nominee

Many headquarters (HQs) of multinational corporations (MNCs) that have substantial growth outside their home country or region face the problem that they have a limited understanding of their distant business and thus struggle in their value-adding parenting role. The existing solutions to this wide-spread problem, such as building up sophisticated control methods with expatriates, creating additional organizational layers with intermediary HQs, or creating a more diverse top management team, often give rise to new challenges that impair firm performance. In this study, I provide a new perspective on how HQs can deal with shifting market growth to distant host regions and also fulfil their value-adding parenting role to those subsidiaries. By drawing on the unique case of Starwood Hotels Inc., I elaborate a process analysis of how this specific organization temporarily relocated the HQ from the US to Shanghai and Dubai to improve its HQ's value-added and contribute to the firm's success in those new growth markets. In particular, I shed light on the process and the multi-level outcomes of this highly innovative undertaking. With my findings, I contribute to literature on HQs and their location choices, new organizational design approaches in MNCs, and strategic organizational change.

IM: Home is Where My Friends Are: Legitimation of the Location for Corporate Headquarters 

Author: **Marleen Wierenga**, *Nijmegen School of Management*
Author: **Olga Lavrusheva**, *Aalto U., School of Business*
Author: **Iiris Saittakari**, *Aalto U. School of Business*
Author: **Perttu Kahari**, *Aalto U. School of Business*

The relocation of corporate headquarters (CHQ) is understood as a process in which top management follows the most attractive location attributes. By studying how the media (de)legitimize the choice of the location of an MNC's CHQ, we demonstrate the complexity of the relocation process. We explore the dismantling of the dual corporate structure of Unilever and consequently the relocation of its CHQ, first to Rotterdam but then to London. Taking a CDA approach, we collected a database of media documents on the relocation events from the Dutch and British media, and press releases from Unilever. Our study contributes by theorizing the relocation process from decision to implementation. Second, the study shows that legitimation of the location choice is important for the successful completion of relocation.

IM: Cross-Country Variations in Sovereign Wealth Funds' Characteristics  

Author: **Anna Grosman**, *Loughborough U.*

In this exploratory study, we analyze the drivers of the variation in sovereign wealth funds' characteristics across countries. Sovereign wealth funds have emerged as an important instrument for governments to invest and manage excess funds, which despite serving similar needs, vary significantly across countries. We integrate agency theory with the varieties of capitalism framework to propose that the country's governance characteristics affect sovereign wealth funds' multi-level agency problem, i.e., politicians acting as intermediaries between the citizens who are the nominal owners and the funds' managers, and drive the cross-country variations in the characteristics of sovereign wealth funds. More specifically, we argue that the home country's type and quality of government and the origin of the wealth drive cross-country variations in the transparency and growth of the sovereign wealth funds, leading to a classification of countries by type of SWF. We provide public policy suggestions for addressing these agency problems and improving sovereign wealth fund behavior.

IM: Negative Offshoring Sentiments – An Exploratory Study Using Twitter Data

Author: **Alina Grecu**, *Copenhagen Business School*

Offshoring (i.e. relocation of existing business activities and jobs from one country to another) is a central topic in international business research, but also a polarizing topic in the society. As the public is an important actor when companies make decisions to internationalize, it is indeed critical to understand the public sentiment about offshoring. To address this, I rely on Twitter data and text analytics tools. I find that offshoring sentiments are rather negative, which is associated with higher levels of tweet popularity, but also that the extent to which a tweet is negative is related to other language characteristics. Namely, a higher degree of focus on past and social issues in the used language are associated with increased levels of negative emotions. However, the more cognitive processes are present in the written text, the lower the degree of negative emotions. With populism on the rise, this study addresses the public sentiment implications of company offshoring decisions and contributes to international business research, but has implications also for politicians and managers.

IM: Reciprocal Subcontracting in Global Factories: A Penrosean Growth Perspective

Author: **Michael Murphree**, *U. of South Carolina*
Author: **John Anderson**, *U. of Northern Iowa*
Author: **Peter J. Buckley**, *U. of Leeds*

It is commonly assumed contract manufacturers must grow to achieve minimum viable scale. This study of Chinese contract manufacturers in global factories for plastics reveals how “reciprocal subcontracting” enables small firms to sustain competitiveness. Taking the Penrosean growth perspective, we test two theoretical tenets of growth: managerial opportunity recognition and development of internal production capacity. While lead firms largely conform to established theory, small contract manufacturers achieve “borrowed growth” which is external to the firm and ever-shifting within a fluid network of firms. This externalization of production capacity growth supports our call for theoretical extension to the Penrosean growth perspective.

IM: Managing MNE Geographic Overstretching: Regional Integration of FDI Locations Along the Value Chain

Author: **Che Tang**, *U. of St. Gallen*
Author: **Winfried Ruigrok**, *U. of St. Gallen*

Research suggests that many MNEs face the challenge of geographical overstretching – defined as international expansion beyond what a company’s dynamic capabilities allow. This issue is especially challenging for companies pursuing global economies of scale while being locally responsive. This paper argues that the regional integration of FDI locations can alleviate the negative performance effect of certain international expansion. The analysis of global automotive industry from 2003 to 2019 shows that regional integration of FDI locations across the value chain helps MNEs to reduce the negative performance effect of inter-regional diversification. By contrast, regional integration of upstream investments or downstream investments has no such benefit and can even hinder organizational performance. The present research enriches our understanding of MNE geographic scope and regional strategy interface, by delineating the role of regional integration of investment locations in inter- and intra-regional diversification.

Institutional Complexity

Session Moderator: **Gislaine Cristina Dos Santos Teixeira**, *FGV São Paulo School of Business*

IM: Internationalization of Business Schools and their Strategic Response to Institutional Complexity

Author: **Gislaine Cristina Dos Santos Teixeira**, *FGV São Paulo School of Business*
Author: **Jorge M. T. Carneiro**, *FGV EAESP Sao Paulo School of Business Administration*
Author: **William Newbury**, *Florida International U.*

Higher education institutions, and business schools, in particular, need to address diverse, and often ambiguous demands and expectations of multiple stakeholders. Most prior higher education internationalization studies implicitly assumed that cross-border normative and cognitive pressures would lead to isomorphic behavior, causing schools to pursue similar strategies. However, we suggest that schools' strategic responses to institutionally complex sets of demands will vary since organizations have agency and different schools may sense complexity differently (e.g., as either threat or opportunity). We employed fuzzy set qualitative comparative analysis (fsQCA) in a sample of 31 business schools (20 from the USA and 11 from Brazil) to better understand the multiple combinations among organizational resources, choices, and experiences as conditions associated with the integration of international initiatives. We found that if institutional complexity, exacerbated by internationalization pressures if neutrally or positively framed, it contributes to the integration (or infusion) of internationalization initiatives regarding teaching, research, and service. Conversely, when negatively framed, institutional complexity may result in dispersed (or diffused) internationalization efforts. These findings highlight that business schools are not "hostages" of their environment but rather engage in discretionary choices and strategically respond to institutional complexity, advancing a more nuanced strategic management view.

IM: Institutional Pressures, Complexity and Restructuring Intensity

Author: **Michael Herbert Wolfesberger**, *WU Vienna*
Author: **Thomas Lindner**, *U. of Innsbruck*
Author: **Jonas F. Puck**, *WU Vienna*

We investigate companies' restructuring intensity in response to changes in political risk and examine how complexity in the foreign investment portfolio influences this undertaking. We base our analysis in and combine institutional and information processing theory to explicate our hypotheses. We first argue that bigger changes in political risk in companies' subsidiary portfolios lead to more radical restructuring moves. We then propose that complexity constrains restructuring activities to more incremental changes due to the companies' bounded rationality. Complexity in the portfolio hinders firms in understanding the performance consequences of restructuring the portfolio as well as interpreting the impact of the political risk changes. We test our hypotheses on a sample of 17,712 restructuring observations and track ownership changes in firms' affiliates on an annual basis. We find support for our main hypotheses; changes in political risk lead to more radical restructuring moves, while complexity constrains restructuring directly as well as indirectly by negatively moderating the positive effect of political risk changes.

IM: Explaining the Persistence of Informal Institutions

Author: **Dana B. Minbaeva**, *King's College London*
Author: **Maral Muratbekova-Touron**, *ESCP Business School*
Author: **Alena Ledeneva**, *U. College London*
Author: **Sven Horak**, *St. John's U.*

In order to tackle the puzzle of the persistence of informal institutions in the face of formal institutions, we unpack the "black box" of informal institutions and theorize about the role of informal networks in channeling continuity and change in informal institutions. Specifically, we argue that when informal institutions are enacted by informal networks that are "relatively affective" and "relatively closed," their persistence is higher than the persistence of informal institutions that are enacted by "relatively open" and "relatively instrumental" networks.

Distance, Performance and Entry Modes

Session Moderator: **Jinsil Kim**, *College of New Jersey*

IM: Learning About Entry Mode, Institutional Distance, and Cross-Border M&As in China →

Author: **Jinsil Kim**, *College of New Jersey*
Author: **HoWook Shin**, *California State U., Long Beach*

Drawing on the learning perspective, we examine the validity of the repetitive momentum perspective vis-à-vis the conventional internationalization process (IP) model in the setting of MNCs' entry into China. We argue that the accumulation of experience and knowledge regarding a certain entry mode such as cross-border merger and acquisition (M&A) or international alliance may lead an MNC to keep investing in the same mode. We also argue that institutional distance, which increases the necessity and difficulty of experiential learning, strengthens this repetitive momentum. Analyses based on a sample of 1,561 MNCs from 40 different countries entering China through M&As from 2003 to 2013 provide considerable support to our predictions.

IM: Cultural Distance Effects on MNC Performance: A Macro and Meso Approach → 📖

Author: **Hilla Peretz**, *ORT Braude College*
Author: **Yitzhak Fried**, *Texas Tech U.*
Author: **Ariel Levi**, *Wayne State U.*

In this study we examined the effect of triad cultural distance (national, organizational and professional) between MNC headquarters (HQs) and subsidiaries on employees' work attitudes and objective organizational performance indicators. To so do, we collected data from over 1,500 employees from 58 subsidiaries of 8 MNCs, located in 18 countries. Multilevel analyses supported the hypothesized curvilinear relationship between cultural distance and work attitudes (job satisfaction and commitment) and objective performance outcomes (absenteeism and profits). Specifically, we found that lower levels of cultural distance between HQ and subsidiaries' national, organizational, and professional culture yielded better results in terms of work attitudes and organizational performance indicators, compared to no distance at all, but higher levels of distance dramatically reduced the outcomes. We discuss the theoretical and practical contribution of these curvilinear relationships.

Paper is Available to Meeting Registrants Only.

IM: Cultural Difference or Similarity, Selection of Targets and Post- Acquisition Performance → 📖

Author: **Ningxin Wang**, *Tilburg U.*
Author: **Anouk Sentjens**, *Tilburg U.*

This paper examines how difference as well as similarity in Individualism-Collectiveness cultural background between the acquirer and target affects the acquirer's post-acquisition performance during internationalization. Besides examining how distance in individualism will affect acquirer's post-acquisition performance, two groups will be compared to find out whether the heterogenous types of similarity in Individualism-Collectiveness will affect the post-acquisition performance differently. The first study of the analysis of 681 cross-border deals reveals that a bigger difference in individualism is indeed negatively associated with post-acquisition performance; and this negative association will be tampered if there is a national status difference between the acquirer and the target. The second study of the analysis of 867 cross-border deals tests how similarity in Individualism-Collectiveness influences acquirer's post-acquisition performance. This test further reveals that when the acquirer and the target both come from collectivistic cultures, the post-acquisition performance will be better compared to the situation where both firms come from individualistic nations. These findings enrich the current literature that has focused on the difference of cultural background of acquisition by revealing effects of different types of cultural similarity on acquisition performance, meanwhile offer interesting implications for corporate managers when search for potential acquisition targets.

Global Challenges to Corporate Sustainability

Session Moderator: **Diego Alfonso Vazquez**, *Portsmouth Business School*

IM: Extrapolating the Links Between the MNE's Activities and UN SDGs In Developing Countries  

Author: **Diego Alfonso Vazquez**, *Portsmouth Business School*
Author: **Rekha Rao-Nicholson**, *U. of Essex Business School*
Author: **Natalia Yakovleva**, *Kedge Business School*
Author: **Ticiana Braga De Vincenzi**, *U. of Sao Paulo (Polytechnic School)*
Author: **Samuel Bonsu**, *GIMPA*
Author: **Roberta Souza Piao**, *U. of Sao Paulo (Polytechnic School)*

In this study, we focus on SDGs 10 and 12, namely, reducing inequalities and sustainable consumption and production, and analyze the MNEs' operationalization of waste management strategies with formal and informal waste pickers in Brazil. The findings suggest that whilst institutional voids impede MNEs from implementing SDGs, uncertainty in the institutional context can enable opportunities to modify the weak institutions and support the advancement of SDGs. Furthermore, MNEs are observed as institutional entrepreneurs and engage in transgression of existing rules via three steps - delineating institutional boundaries, strategizing for implementation of SDGs, and adopting transgressions both within HQ-subsubsidiary structures and host countries (stretching and buffering).

IM: Conflicting and Complementing Logics: Examining Sustainability Practices Across Economies   

Author: **Ivana Milosevic**, *College of Charleston*
Author: **Erin Bass**, *U. of Nebraska, Omaha*
Author: **Benjamin Schulte**, *Helmut Schmidt U.*

The role institutional environments play in sustainability practices across countries is well documented in the international business literature. However, how multiple and occasionally conflicting institutional logics shape sustainability practices at the individual-level is underexplored, especially across countries. To enhance our understanding of this process, we investigate how individuals in two high-hazard organizations in the energy sectors in the Republic of Serbia and Canada practice sustainability. Our findings illustrate that in both contexts, individuals "pull down" structural elements of high-hazard logics into their daily sustainability practice, thereby relating their practices to the well-being of others as well as aligning them to their salient identities. However, our findings also illustrate how multiple, often conflicting, logics interact to shape this process distinctively across two countries. In Serbia, individuals pull-down and combine elements of high-hazard and legacy state logics to construct community logic and align their practice to it. In Canada, individuals do so to construct professional logics and align their practice to it. Based on our comparative case analysis of a developed economy and an economy in transition, we create a general model, as well country-specific models, depicting how individuals navigate multiple institutional logics to engage in sustainability practices.

IM: Extra-economic Value Creation for Corporate Sustainability

Author: **Chiara Andreoli**, *Copenhagen Business School*

Recognizing the attention in academia and industry dedicated to the value created by firms beyond profit, this paper analyzes the themes that constitute the extra-economic value creation for Corporate Sustainability literature. With a systematic literature review methodology and a thematic analysis, I illustrate the common themes in articles discussing social, ethical, environmental, collaborative, shared, and sustainable value creation. Usually, each value concept is reviewed singularly in the literature. In this paper, I instead analyze the most discussed topics across articles and highlight the primary connections, differences, and similarities among value categories. This review sets out that the extra-economic value creation concept, as an umbrella for a number of phenomena, is discussed around three main categories: antecedents, means, and outcomes of extra-economic value creation. Then, I delineate how future research can advance the literature by filling the gaps and providing new perspectives. I conclude by highlighting the main findings and limitations of the study.

Tax Havens and MNEs

Session Moderator: **Chris Michael Jones**, *Aston U.*

IM: Tax Havens and Emerging Market Multinationals: The rRle of Property Rights and Economic Freedom

Author: **Chris Michael Jones**, *Aston U.*
Author: **Yama Temouri**, *Khalifa U., Abu Dhabi, UAE*
Author: **Jun Du**, *Aston Business School*
Author: **Karim Kirollos**, *U. of Warwick*

This paper investigates the relationship between home country institutional quality and EMNEs investing in tax havens. We develop a conceptual framework that adapts the institutional escapism framework, whereby EMNEs expand globally to escape institutional hazards in the home country together with the institutional leverage framework, whereby EMNEs can leverage the home institutions as a competitive advantage. This allows us to conceptually derive and explain the curvilinear (U-shaped) relationship between institutional differences and reforms over time and how this impacts on EMNE strategy towards tax havens. Based on a large cross-country firm level dataset, our empirical results confirm the curvilinear relationship, such that EMNEs from weaker institutional environments are more likely to own tax haven subsidiaries. However, as the emerging country improves its institutional environment, the likelihood of investing in tax haven declines before it increases again at a time when the emerging country has achieved a developmental stage similar to developed countries. Based on our results, we draw several managerial and policy related implications.

IM: With the Cats Away, Do Mice Come Out to Play? Institutional Pressure and Tax Havens

Author: **Johan Rewilak**, *Aston U.*
Author: **Giulio Nardella**, *ESCP Business School*
Author: **Chris Michael Jones**, *Aston U.*
Author: **Yama Temouri**, *Khalifa U., Abu Dhabi, UAE*

Institutions are expected to play a critical role in deterring corporate social irresponsibility, such as when firms use and abuse tax havens. However, research concerning how formal and informal institutional pressure deters international business misconduct, remains underdeveloped. Combining the institutional complexity perspective and behavioral theory, we attend to this gap by examining how changes in the resourcing of formal institutional bureaus - such as those tasked with tax investigation - as well as shifting informal institutional pressure - namely media scrutiny - influence firm decisions to internationalize into tax havens. Utilizing a unique and granular dataset of tax haven subsidiaries between 2008-18, we theorize that organizations are deterred to internationalize into tax havens following enhanced formal institutional pressure, with informal institutions generally exerting relatively weaker pressures on firms. In turn, managerial discretion, as well as the degree of firm influence, act to moderate the relationship between institutional pressures and internationalization into tax havens. Among our central contributions, this study advances theory on the role played by specific formal and informal institutions in the 'dark side' of international business activities.

IM: FDI and Tax haven: A network analysis of productivity effects ➔ 🖨️ 🖱️

Author: **Soni K. Jha**, *Fox School of Business, Temple U.*
Author: **Snehal Awate**, *Indian School of Business*

Multinational Enterprises (MNEs) often use tax havens to benefit from the tax arbitrage opportunities. However, these activities distort the global financial markets and erode national corporate tax bases. These outcomes may adversely impact the level of economic activity and the productivity of the MNEs' home countries. More recently, MNEs have been increasing the dispersion of their tax haven activities to either obscure their tax arbitrage activities or because other tax havens offer different risks/opportunities. However, the home-host bilateral view used to examine the impact of tax havens assumes all such ties are homogenous and fails to capture the effect of this dispersion. By adopting a multilateral perspective and using longitudinal data of over 200 UN member countries between 2001-2012, we capture the differential impact of increasing centrality and prominence of the home country and host country in the offshore OFDI and IFDI network. We argue that increasing the centrality of the host country increases the financial efficiency of its MNEs and positively impacts its productivity. However, such activities appear motivated by capital gains rather than knowledge generation. In contrast, since MNEs use tax havens to park funds and minimize taxes, increasing the centrality of the home country negatively impacts its productivity. Moreover, we find that controlling for financial development attenuates the capital efficiency gains for both home and host country from their ties to tax havens and turns the relationship between ties to tax havens and productivity of home and host country unambiguously negative. We find support for these arguments.

Firm Environmental Performance (In-Person)

Session Moderator: **Dante Ignacio Leyva-de La Hiz**, *Montpellier Business School*

ONE: Environmental Responsibility, Corporate Financial Performance and Sustainable Growth

Author: **Veenu Shankar**, *Doctoal Scholar at Indian Institute of Technology, Delhi*

Various scholars have endeavored to study the relationship between environmental responsibility and sustainable growth; however, no consistent conclusion can be traced in the existing literature. According to the concept given by Aragon in 2004, we bifurcated the horizon of environmental responsibility in two categories (Ara?on-Correa, Matías-Reche, & Senise-Barrio, 2004). ERB and ERD. ERB explores the breadth of environmental responsibility such as ISO certifications & environmental legal standards, and ERD deals with the process of blending environmental strategies into other departments. A sample of 36 automobile companies from the Asia-Pacific region was selected to validate our suggested hypotheses through multiple regression analysis. The rationale behind selecting the automobile sector was the sector's carbon emissions. The data was extracted from Bloomberg as this data source presents a wide array of financial, environmental, social, and governance concerns. The study confirms an inverted U-shaped relation between ERB & sustainable growth and points out the mediating role of financial performance.

ONE: Assessing the Delicate Balance Between Firms' Digitalization and Environmental Performance

Author: **Gozal Ahmadova**, *ESADE Business School*

Author: **Blanca Delgado-Marquez**, *U. of Granada*

Author: **Luis Enrique Pedauga**, *U. of León*

Author: **Dante Ignacio Leyva-de La Hiz**, *Montpellier Business School*

The current epidemic period has heightened the need of digital transformation. This shift has been viewed as a panacea in the past, with the argument that increased digitalization will result in improved environmental performance. However, as the digitization process progresses, we recognize that it may have some environmental consequences that must be considered. We investigate the complex relationship between home country digitization and business environmental performance in this regard. More specifically, we believe that, at first, home country digitalization has a positive impact on environmental performance (e.g., improved energy efficiency and resource management), but that it eventually reaches a tipping point where an excessive level of digitalization causes a "rebound effect", resulting in increased resource use and pollution. For the period 2014-2019, our panel data of 5,015 enterprises from 47 countries in ten sectors verifies our projections. Furthermore, the panel smooth transition regression model (PSTR) reveals that the institutional framework level of countries has a moderating effect on the association between digital transformation and environmental performance. Our findings demonstrate that the negative effects of home country digitalization take a long time to manifest in nations with a better institutional structure.

ONE: The Influence of an Organization's Digital Orientation on its Environmental Performance

Author: **Lukas Theis**, *U. of Muenster*

Author: **Colin Schulz**, *WWU Münster*

In recent years, the severe effects of climate change have become an increasingly important issue within society and have brought company's impact on the environment under public scrutiny. Thus, companies' methods to improve their environmental performance have become a relevant topic in recent literature. Our study aims to extend current research and, based on the natural-resource-based view theory, examines the relationship between an organization's strategic digital orientation and its environmental performance. Using a unique cross-industry panel of 515 S&P 500 companies from 2009 to 2019, we find support for the positive relationship between digital orientation and environmental performance. Furthermore, in line with contingency theory, we provide evidence that technological turbulence strengthens this relationship. Our study contributes to both strategic management and climate change literature by establishing the connection between digital orientation and environmental performance as well as its boundary condition. We extend existing knowledge concerning the recently introduced concept of digital orientation and offer valuable insights for practitioners seeking to leverage their digital orientation to better position their firm in the financial market.

ONE: Keeping Up with the Teslas: Technology Spillovers, Firm Capabilities, and Environmental Performance

Author: **Horacio Enrique Rousseau**, *Florida State U.*

Author: **Daniel Ferres**, *U. de Montevideo*

Author: **Francisco Marcet**, *U. de Chile*

Author: **Pascual Berrone**, *IESE Business School*

This study explores how technology spillovers –unintentional flows of knowledge stemming from the R&D efforts of technologically close firms– influence a firm's environmental performance. This issue is critical because research is unclear on i) whether firms may learn from peers' innovation to become more sustainable, and, if so, ii) which type of firms are more likely to incorporate technology spillovers to raise their environmental performance. On the one hand, firms with greater innovative and financial capabilities can better exploit and recombine peers' knowledge to enhance their environmental position. On the other hand, firms with weaker capabilities are particularly exposed to environmental shifts that further threaten their position, thus compelling managers to take advantage of spillovers. We address this puzzle by providing evidence of the impact of technology spillovers on different firm-level environmental performance metrics in firms with varying levels of innovative and financial capabilities. Our evidence shows that technology spillovers increase the environmental performance of firms. Yet the effect of technology spillovers is greater on firms with weaker innovative (e.g., low R&D stock, high inertia) and financial (e.g., low liquidity, growth potential) capabilities. We discuss the implications for research on environmental performance and innovation and show how our research informs current debates around technology policy.

Author: **Zhengyan Li**, *U. of Michigan, Ross School of Business*

Author: **Thomas Peyton Lyon**, *U. of Michigan*

Sibling units within multi-unit firms are closely connected with each other, and the connections have important implications for their responses to institutional pressure. In this article, we study the implications by examining how a unit's capacity to comply with environmental regulation is affected by penalties on its sibling units. Theory suggests that a unit can learn from the experience of its siblings, which would lead its environmental capacity to increase. Such learning can be decomposed into inter-organization learning, which would occur among both sibling units and non-sibling units (regardless of corporate affiliations), and intra-organization learning, which is the additional learning that happens only because of their sibling status. A unit's capacity also may decrease if its corporate parent redeploys non-scalable compliance resources away from or shift production to the unit following penalties on its siblings. We test the four mechanisms in the context of the Clean Air Act. With a facility-level panel dataset from 2005 to 2017, our general difference-in-differences based analyses show that a facility is more likely to violate the Clean Air Act in the following year if its same-state-same-industry sibling facilities are targeted by environmental penalties. However, its production level does not change following penalties on its siblings and its probability of violation is not affected by penalties on non-sibling facilities in the same state. The combined results support compliance resource redeployment as the dominating mechanism and contradict the predictions of inter-organization learning, intra-organization learning, and production shifting. The findings contribute to institutional theory regarding how organizations respond to external pressure and add nuanced insights into corporate parenting advantage of multi-unit firms in dealing with institutional pressure.

ONE: Occupations, Natural Commons and Polycentric Organizing: Social-symbolic Work in the Anthropocene  

Author: **Laura Albareda**, *LUT U., School of Business and Management*
Author: **Oana Branzei**, *Ivey Business School*

We study social-symbolic work to understand institutional change in the Anthropocene. The social-symbolic perspective emphasizes the role of multiple and heterogeneous agents engage in a wide range of purposeful and reflective efforts to create, maintain, adapt or transform institutions- This connects institutional change to cope with significant transformation of natural commons occupations. supporting institutional change to address grand environmental challenges. Studying the transformation of inland lake fisheries traditional and novel scientific occupations in Finland in the last decade, we build a model of polycentric organizing and social-symbolic work, that addresses two co-evolving trajectories of occupations that show the acceleration of social-symbolic work to trigger a historical shift. First, the current state of natural commons which focuses on local ecological problems and traditional knowledge. Second, the ideal state of natural commons that focuses on ecological health and the interconnection of lakes with large ecosystems and planetary boundaries and science. We contribute to social-symbolic work theory and institutional change extending to collective action institutions and polycentric organizing.

ONE: Radical Flank Revisited: Regulatory Accountability and the Effectiveness of Environmental Activism  

Author: **Jake B. Grandy**, *U. of Arkansas*
Author: **Shon R. Hiatt**, *U. of Southern California*

Although scholarship has highlighted how stakeholders activists influence business outcomes, few studies have examined how simultaneous, different tactics interact to impact firms. Critical to understanding this interaction is the radical flank effect, which asserts that the moderate and radical elements of social movement tactics can interact to either enhance or diminish a movement's ability to accomplish its goals. However, research is unclear about when and whether the radical flank effect enhances or diminishes movement influence and says little about factors that may influence the direction of the effect. To address these limitations, we explore one such factor—the degree to which the regulatory agencies that oversee businesses in regulated markets are accountable for their decision making. Drawing on management and political sociology studies, we argue that shifting the degree to which regulators are accountable to the public can alter the radical flank effect on business outcomes in regulated markets. We analyze stakeholder activist opposition to U.S. hydroelectric power facilities from 1987–2019. The results show that high accountability to the public enhances the radical flank effect, thereby enhancing stakeholders' activists' influence, whereas low accountability reverses the radical flank effect, thereby diminishing stakeholders' activists' impact on business outcomes. Post-hoc analyses illustrate that firm engagement with regulators who are accountable to the public can mitigate social activists' ability to impede business licensing in the presence of the positive radical flank.

ONE: Can You Combat Environmental Racism Without Talking About Race? Language in Environmental Justice  

Author: **Catherine Owsik**, *U. of Virginia*

Environmental racism is when people with power impose projects that pollute and degrade the environment disproportionately onto people of color and people with low incomes (Bullard, 1993). These cases are often challenged by collective movements, known as environmental justice (EJ). Prior research has shown that one of the biggest challenges to EJ stems from a deliberate effort by American politicians to make EJ a race-neutral, rather than a race-conscious, concept (Fields, 2015; Harrison, 2015). In this paper I examine the use of race-conscious language in EJ campaigns by applying novel quantitative methods, like text analysis and Bayesian statistics. Using a database of crowdsourced EJ cases (N=137), I find that over a third of American EJ campaigns use race-neutral language. These cases, however, do not seem to have a higher-than-average use of social-class-related language. I also find that people may consider the concerns of Black communities to be mutually exclusive to Indigenous concerns, and vice versa. I discuss the implications for EJ and environmentalism and propose future work.

ONE: Activists or Opportunists? How Environmental Entrepreneurs Differ From Conventional Ones  

Author: **Yasmin Olivia Schwegler**, *U. of Lausanne, HEC Lausanne*
Author: **Jeffrey S. Petty**, *U. of Lausanne, HEC Lausanne*

In light of the grand environmental challenges of our time, a change in how business is done seems necessary. Despite being a potential solution for the world's most pressing issues, environmental entrepreneurship remains fairly unexplored, there is no agreement on its definition, and it is unclear how the concept differs from conventional entrepreneurship. Our exploratory multi-case study empirically validates the theoretical assumption of the differences between conventional and environmental entrepreneurs. We find that all entrepreneurs can be clustered on a continuum between opportunist and activist, conventional entrepreneurs being on the opportunist side and environmental entrepreneurs being rather on the activist side, but more dispersed across the continuum. A key difference between the two types is that opportunists serve existing market needs, while activists aim at educating their customers, or even society. These findings contribute to the delineation of the concept of environmental entrepreneurship, especially regarding what sets it apart from conventional entrepreneurship. Our outcomes thus advance the research dialogue about environmental entrepreneurship and suggest several avenues for further research.

OSCM: **Product Malleability Perception: A Psychological Determinant of Requirements Instability**  

Author: **Shobhit Mathur**, *IITB-Monash Research Academy*
Author: **Niranjan T. Tarikere**, *Indian Institute of Technology, Bombay*
Author: **Kristian Rotaru**, *Monash Business School*

In customized product development projects that produce intangible products such as software, the decision-makers perceive the product as malleable or easy to change. However, implementing requirement changes during the execution of any large project often causes rework and cost overruns resulting in significant risks to the project's success. Prior literature provides only extraneous explanations, such as environmental uncertainty, for high requirements instability in customized intangible product development projects. In this conceptual paper, we explicate the cognitive effects of an intrinsic product attribute, i.e., product tangibility, on the decision maker's disposition to approve project requirements changes. We conceptualize our process model from the perspective of the theory of planned behavior and introduce the construct of product malleability perception as an actionable mediator between product intangibility and requirements instability in customized product development projects. As more organizations transition into the digitalization of work, insights from our conceptual model can serve as a basis for better control of requirements instability in projects and thus bring successful outcomes for project stakeholders.

OSCM: **Advancing Temporal Organizing: The Case for a Practising School in Project-Based Organizing**    

Author: **Elena P. Antonacopoulou**, *Ivey Business School*
Author: **Neil Turner**, *Cranfield School of Management*
Author: **Omar Altabbaa**, *U. of Leeds*
Author: **Roula Michaelides**, *Manchester Metropolitan U.*
Author: **Andrew Schuster**, *PricewaterhouseCoopers*

Navigating complexity remains one of the key pragmatic challenges that call for temporal organizing as a response. Whilst project-based organizing is established as an approach integral to deploying temporal organizing we still know little about the lived experiences of project managers as they enact it. It, therefore, merits academic study and attention to analyze further how project-based organizing is practised and why it is practiced in unique ways that offer insights into the practical judgements that underpin project managers' action choices. We present findings from a study investigating the lived experience of 43 project managers from key sectors in countries around the globe. We use the empirical findings of this qualitative study to show how project managers embody and not only enact the dynamics of temporary organizing in the ways they navigate project complexities and form their judgements on an ongoing basis. This process of practising is marked by leaps of faith that can mark new measures of project success beyond the traditional parameters of project completion on time and budget. This paper makes a compelling case for a new school of thought in advancing temporal organizing that we will call the 'Practising School', which informs our understanding of the dynamics of project-based organizing and offers insights into how practitioners navigate the ongoing project complexities inherent in project-based organizing. We pave the way for advancing a practice-based perspective for studying projectification and extend current conceptualizations of temporal organizing.

OSCM: **It's About Time: A Systematic Review of the Study of Time in Project Management**  

Author: **Syed Shah**, *Macquarie U.*
Author: **Denise Mary Jepsen**, *Macquarie Business School, Macquarie U.*
Author: **Sarah Banks**, *Macquarie U.*

Time is one of the most important aspects of project management practice. Timely delivery of projects is one of the main success criteria for projects. Every year nearly half of all projects that start then fail to complete on time or miss their initial deadlines. Many project underperformances and failures are associated with time-related issues. Despite its acknowledged importance in project management practice, time-related phenomena are not often at the forefront of project management research. This paper takes stock of time-related research in project management discipline. We report how time is conceived and applied in project management research. First, we review time-related scholarship appearing in all issues of three leading project management journals. Then we review scholarship on time-related phenomena in project management published outside of three journals. Analysis of 165 articles reveals time-related research in project management is scarce and scattered, addressed in background or supporting positions rather than focal point of investigation. We identify gaps in seven themes of temporal research and present a research agenda for each to bring time-related phenomena to the forefront of project management research, which will prove beneficial in project management practice. We propose a shift in focus to studying time-related phenomena in project management to address some of the costly time-related issues.

Paper is Available to Meeting Registrants Only.

OSCM: **Product Recalls, Past Innovations, & R&D Intensity: An Empirical Examination of Interrelationships** 

Author: **Gopesh Anand**, *U. of Illinois at Urbana-Champaign*
Author: **Ujjal Mukherjee**, *U. of Illinois at Urbana-Champaign*

Past research has supported the idea of increases in research and development (R&D) efforts in the face of failures (Eggers and Kaul 2018, Greve 2003). We follow this research and propose that firms' past experiences with recalls intensify subsequent R&D efforts. Further, we propose that firms' past R&D efforts and stocks of innovation outcomes accentuate intensification of subsequent innovation efforts attributed to firm recall experience. This is based mainly on the idea that prior innovation knowledge provides a better understanding of emerging conditions leading to more proactive R&D efforts (Tsai 2001). Our research questions are: (1) do firms' recalls intensify subsequent R&D efforts, and (2) do firms' past innovation efforts and stocks of innovation outcomes accentuate the intensification of subsequent R&D efforts associated with recalls? Based on analysis of longitudinal data on product recalls in medical device and pharmaceutical industries supplemented by data from the United States Patent and Trademark Office (USPTO) and Wharton Research Data Services (WRDS), we find empirical evidence for R&D efforts attributed to past product recalls. We also find that past innovation efforts and stocks of innovations support subsequent R&D efforts attributed to past product recalls.

Issues in Nonprofit Governance

Session Moderator: **Nara Yoon**, *James Madison U.*

This panel explores issues in nonprofit governance, including the roles of board members and managers in impacting the internal and external health of nonprofit organizations and their stakeholders.

PNP: How Much Does the Nonprofit Board Governance Matter? Role of Interlocking Directorates in CEO Pay

Author: **Nara Yoon**, *James Madison U.*

Carlo Masini Award for Innovative Scholarship in the Fields of Public and Nonprofit Management

This article examines the link between executive compensation and board governance composition characteristics in nonprofit organizations. Drawn from a panel of nonprofits in three Upstate New York cities from 1998 to 2014, the analysis shows that chief executive officers (CEOs) compensation is significantly and positively related to interlocking directorships of CEOs and boards of directors. The results reveal that CEOs enjoy more compensation when he or she serves on the boards in other nonprofit organizations, and when the nonprofits are served by busy boards where a majority of members in the boardroom serve on boards of multiple nonprofits. The analysis further shows that financial rewards offered to executives are contingent upon monitoring effectiveness of the board of directors measured as gender diversity in the boardroom. These findings suggest that board composition plays a critical role in executive compensation setting. Implications for practice and future research are discussed.

Paper is Available to Meeting Registrants Only.

PNP: Cognitively Rising to the Challenge of Nonprofit Governance

Author: **Jennifer Amanda Jones**, *U. of Florida*

Many nonprofit organizations address complex problems which have no definitive problem formulation and no easily identifiable solution. Constructive developmental theory (CDT) can explain why some board members focus on symptoms and others on the more complex task of identifying and responding to root causes. Through a series of Subject-Object interviews, this exploratory qualitative study (n=14) found that variations in individual cognitive complexity of board members exist between domains (nonprofit governance and paid work) and affect nonprofit board governance. The study identified three groups: stretch thinking (participants approached governance with more complex thinking than they approached work); protection thinking (participants approached governance with less complex thinking than they approached work), and consolidation thinking (participants approached governance and work with equal complexity). These categories are a framework for analyzing variation in board members' cognitive complexity. Factors associated with this variation are also presented. Theoretical and practical implications are considered.

PNP: Individual Outcomes of Managerial Networking: A Job Demands-Resources Perspective

Author: **Lorenz Schönherr**, *U. der Bundeswehr München*

Author: **Julia Stephanie Thaler**, *U. der Bundeswehr München*

Previous research has shown that public and nonprofit managers enhance their organization's performance through external networking. However, compared to the extensive literature dedicated to the positive effects of managerial networking on organizational outcomes, little is known about whether and how networking affects the managers themselves. Against this background, our study investigates individual-level consequences of managerial networking. Drawing from the job demands-resources model, conservation of resources theory, and social capital theory, we propose that external networking may be a double-edged sword for managers. Results from a survey among 129 managing directors of the German Red Cross suggest that managers with the ability to develop external networks are motivated by the support they perceive from external actors and therefore show higher levels of job performance. Simultaneously, our findings indicate that building extensive external networks may be a costly activity. More precisely, we found that external interactions deplete managers' energetic resources, which leads to higher levels of emotional exhaustion. Aside from these psychological processes, we identified a purely instrumental process that operates in parallel. Accordingly, managers with networking ability gain access to resources, which pays dividends for their job performance. Based on these findings, we derive implications for both networking theory and management practice.

Applying the Institutional Logics Framework

Session Moderator: **Magdalena Potz**, *Aix Marseille U. - IMPGT - CERGAM*

The diverse papers in this panel all use an institutional logic framework to examine different phenomena and at different levels of analysis--on topics ranging from policy implementation to affordable housing. Together, the papers demonstrate the flexibility and applicability of the institutional logics framework, while also adding new dimensions and considerations to this theoretical frame.

PNP: **Coping with Competing Institutional Logics During Policy Implementation: Evidence from China** 

Author: **Manlin Xiao**, *Hong Kong Polytechnic U.*

Author: **Xueyong Zhan**, *Hong Kong Polytechnic U.*

Author: **Arnaud Cudennec**, *Hong Kong Polytechnic U.*

The policy implementation literature has paid increasing attention to street-level bureaucrats' coping behaviors. However, the literature is remarkably silent on the institutional antecedents of coping behaviors. This paper sets out to assess the effect of competing institutional logics on individual coping behaviors. It focuses on the environmental protection logic and economic growth logic during the environmental policy implementation in the Chinese context. Based on the analysis of interview and archival data, we found that environmental protection logic increases street-level bureaucrats' workload and responsibility, and the economic growth logic makes enforcement officials lack power, resources and incentives. These contradictions generate unclear responsibilities in different bureaus and increasing tasks, limited resources and greater pressure for enforcement officials with fewer rewards, leading to the coping behaviors of street-level bureaucrats.

Paper is NOT Available. Please contact the author(s).

PNP: **Designing Local Public Organizations for the Introduction of an Institutional Logic of Co-creation** 

Author: **Magdalena Potz**, *Aix Marseille U. - IMPGT - CERGAM*

Author: **Sarah Serval**, *Aix-Marseille U.*

Author: **Anais Saint Jonsson**, *Aix Marseille U. - IMPGT - CERGAM*

Author: **Bruno Tiberghien**, *Aix Marseille U. - IMPGT - CERGAM*

This paper provides new insights to introduce a conflicting institutional logic with an anticipatory approach. The aim is to identify the most suitable strategy and the organizational design in order to best prepare the introduction of a new institutional logic with as little conflicts as possible. To do so, we led an experiment research method hand in hand with public managers in order to identify potential sources of conflict, levers that can be used, and changes to conduct. We studied a specific organisational field marked by institutional complexity: a local public organization with a heavily bureaucratic functioning, and the introduction of an institutional logic of co-creation (ILCC) to build local public policies. Findings shed light on sources of conflict situated on multiple levels: the micro-level of individuals, the organization's position in the field, as well as the nature of the institutional logics themselves. Finally, the most suitable strategy is based on the design of a progressive, stratification-like introduction process for an ILCC to prevent conflicts with existing institutional logics.

Paper is Available to Meeting Registrants Only.

PNP: **Institutional Complexity in the Affordable Housing Industry: Investigating Logics, Sector, and Roles**

Author: **Dustin Read**, *Clemson U.*

Author: **Donna Sedgwick**, *Virginia Tech*

For-profit and nonprofit companies develop, own, and manage a vast majority of the affordable housing stock in the United States. Despite participating in many of the same activities, it is unclear from a theoretical standpoint whether individuals employed in each of these sectors conceptualize the work of their companies in the same way. This is a theoretically ambiguous question because the academic literature suggests that the institutional complexity of the affordable housing organizational field affects all of the relevant stakeholders, but it is unclear how sector and professional role shapes how the tensions between social welfare and commercial logics are perceived, enacted, and managed. This research examines the impact of these complex institutional logics using data derived from semi-structured interviews with affordable housing developers, asset managers, property managers, and resident service coordinators. Results indicate that institutional logics are important not only because they influence the priorities of affordable housing professionals, but also the strategies and tactics they support to legitimize their companies in evermore competitive market environments.

PNP: **Working in Universities Through Covid-19: An Interpretation Using the Lens of Institutional Logics** 

Author: **Fiona Denney**, *Brunel Business School*

In higher education institutions, as in other organisations, the Covid-19 pandemic has significantly affected the ways in which individuals work and resulted in the loss of pre-existing boundaries between work life and domestic life. UK universities are a multi-billion pound-sterling contributor to the UK economy and in 2020 the sector-representative body, Universities UK, made a request to the UK government for £2.2 billion to help to mitigate the impact of the Covid-19 pandemic. In spite of the dramatic impact on the lives of university staff, however, there has been little attempt made in the existing literature to try to understand their experiences, motivations and actions of working in academia through this unprecedented time. This paper reports the emerging findings of an initial tranche of interviews with 28 individuals working across 23 different UK universities and uses an institutional logics perspective to understand their experiences in the context of what was happening at the time. The findings indicate the continued importance of market, professional and managerialism logics but highlights the dominance of a hitherto-unidentified logic, the 'students first' logic. The findings also demonstrate the ways in which individuals negotiated the competing logics of family and professional and meshed them together in a unique covid-specific hybrid and identifies a complex interplay of the logics.

Methods for International Business Research

Session Moderator: **Michael Gibbert**, *U. della Svizzera Italiana*

RM: Going Complex or Going Easy? Research Questions in International Business

Author: **Angelo Maria Solarino**, *Durham U. Business School*
Author: **Elizabeth L. Rose**, *Indian Institute of Management Udaipur*
Author: **Cristian Luise**, *U. of Leeds*

Academic research is intended to address important ideas that can yield strong theoretical contributions. In this paper, we analyze how theory has been framed and operationalized in international business research, and offer suggestions about how authors might better frame research questions that are both important and offer strong theoretical contributions. To achieve this, we considered a sample of 513 quantitative articles published in JIBS and IBR during 2005-2015, investigating two key aspects of the papers' research questions: their complexity and how the research questions were translated into testable hypotheses. We assess how these two dimensions were received by three research audiences – business/management, interdisciplinary, and practice-oriented – and discuss the implications of our findings for academic research.

RM: Flexible Pattern Matching Approach – Advancing Theorizing and Qualitative Rigor in IB Studies

Author: **Yixin Qiu**, *U. of Bayreuth*

Along with the development of the international business (IB) field, a huge range of research methods has evolved and been integrated into IB studies as building blocks. Even though qualitative methods are promising in studying multinational contexts to reveal more in-depth information and richer contextualization, the number of qualitative IB studies remains modest partly because of the challenges involved. In this paper, we discuss the flexible pattern matching approach (FPMA) as an option to a rigorous cross-cultural data analysis and theorizing from multi-cultural and context heavy data in qualitative IB studies. This paper presents the logic of the FPMA and its strength in studying multinational contexts. We outline a six-step roadmap for theorizing with FPMA in IB studies. We also discuss the limitation and future research agenda.

RM: Time in Qualitative International Business Research (WITHDRAWN)

Author: **Bareerah Hafeez Hoorani**, *Nijmegen School of Management*
Author: **Emmanuella Plakoyiannaki**, *WU Vienna U. of Economics and Business*
Author: **Michael Gibbert**, *U. della Svizzera Italiana*

Qualitative research play an important role for theory building, and so does time. In fact, time is central for understanding many International Business (IB) related phenomena. In spite of this methodological understanding on the role of time in theorizing for qualitative research is limited. To address this lacuna, in this paper we analyze articles published in Journal of International Business Studies, Journal of World Business as well as the Academy of Management Journal and Journal of Management Studies from 1999 until 2020. We find four temporal theorizing styles, namely temporal variation, temporal accumulation, temporal evolution, and temporal story. Our discussion on these pluralistic styles of temporal theorizing will allow us to contribute to a better understanding on how time can be leveraged in IB for theorizing in qualitative research.

RM: Road to Africanizing Management Theory Development

Author: **Hamid H. Kazeroony**, *NWUS. Africa*
Author: **Yvonne Du Plessis**, *North West U.*

Abstract The purpose of the study: This phenomenon-based theorization aims to move towards a plausible theoretical reasoning by generating and evaluating explanations that render the Africanization of management theory development (AMTD) understandable. Study approach: We will use sensemaking in discussing decolonization, indigenous culture research methods, and cultural groups who use the African Ubuntu principles and values as a stable object in creating proximity for advancing the scholarly conversation about AMTD, offering one type of Africanizing theory development. The Discussions: The current conversations about Africanizing management theory development (AMTD) have offered us three common threads, being that of decolonization, indigenous culture research, and similar Ubuntu principles and values across Africa, which provide a possible pathway to Africanizing management theory. The Implications: By establishing some common attributes in Africanized management theories, the article could contribute to operationalizing new organizational dynamics and management guidelines suited for African management development by applying sensemaking.

Exploring New Avenues in Performance Feedback Theory

Session Moderator: **Yu Liu**, *U. of Texas at Dallas*

STR: **Enter New Territory at the Last Minute?: Performance Feedback, Deadline Proximity, and VC Investment**

Author: **Yu Liu**, *U. of Texas at Dallas*
Author: **Yun Dong Yeo**, *UT Dallas*
Author: **Haemin Dennis Park**, *U. of Texas at Dallas*

We explore how a firm's performance feedback and deadline proximity jointly affect its risk-taking behaviors. Using the context of venture capital (VC) investments in target ventures in unfamiliar sectors as an indication of risk-taking behavior, we find that VC firms with positive attainment discrepancy to their social aspirations are less likely to invest in targets in an unfamiliar sector, whereas those with negative attainment discrepancy are more likely to invest in such targets. However, the effects of VC firms' positive/negative attainment discrepancy on new market entry become stronger when VC funds are near maturity. Our empirical study using a population of VC investments in the U.S. between 1990 and 2018 corroborate these findings.

STR: **Is Corporate Sexual Equality a Strategic Choice? Analyzing How Performance Feedback Influences CSE**

Author: **Serhan Kotiloglu**, *California State U., San Marcos*
Author: **Aaron McDonald**, *California State U., San Marcos*

Prior research on corporate social responsibility (CSR) shows that socially responsible organizational actions contribute to profitability and value creation. Recently, organizational performance feedback theory has been used to explain the motivations behind CSR, suggesting that organizations use relative performance comparisons to make decisions on socially responsible actions. Organizational performance below aspirations increases CSR, showing that firms rely on CSR to increase value creation and mend performance shortfalls. In this paper, we analyze the outcomes of organizational performance feedback on a specific and controversial form of CSR: corporate social equality (CSE), which captures how a firm treats its lesbian, gay, bisexual, and transgender (LGBT) stakeholders. CSE has the potential to mend performance shortfalls by increasing firm reputation, human capital, innovation, and stakeholder relations. However, CSE can also trigger backlash from certain stakeholders, drive up costs, damage corporate image and further decrease performance. Using the Human Rights Campaign (HRC) Corporate Equality Index (CEI) of 309 US firms between 2012-2020, we find that performance below aspirations decreases CSE, suggesting that organizations avoid CSE in response to performance shortfalls, likely to avoid costs and backlash. We also find that slack is an important boundary condition; low performing organizations with slack resources choose to increase CSE to mend performance shortfalls. We draw important implications for the research on performance feedback, CSR, corporate social equality, and LGBT inclusion in organizations.

STR: **Performance Below Historical Aspirations, Team Size and Member Contribution Dispersion**

Author: **Alexandru Roman**, *CSUSB*
Author: **Aaron Hill**, *U. of Florida*

We study how negative performance deviations from historical aspirations influence team size and dispersion of team member contributions. Drawing on performance feedback theory we posit that organizational performance below historical aspirations in the most recent period will raise doubt in team members' abilities. This will consequently trigger a search for talent which will result in larger teams. Doubt in members' abilities will also lead to a less equitable contribution dispersion, with fewer team members entrusted with a larger contribution share toward team output. We also expect that these relationships will be weaker for more talented teams. Empirical analyses based on data from the English Premier League are consistent with our theoretical expectations. The fixed effects specification of our models and several supplemental analyses, including instrumental variable estimation, confirm the robustness of our findings.

STR: **How Celebrity CEOs and Firm Performance Influence Competitor CEOs' Risk-Taking**

Author: **Samyul Cho**, *Oregon State U.*
Author: **Yohan Choi**, *Southern Illinois U., Edwardsville*

This study draws on prospect theory and social comparison theory to explore how a peer CEO winning a prestigious CEO award and firm performance relative to aspirations influence competitor CEOs' risk-taking behavior. We find that when a peer CEO wins a prestigious CEO award, competitor CEOs increase their R&D intensity in the post-award period. Moreover, the proclivity becomes stronger when their firm performance relative to aspirations is both good and poor. We also find that managerial discretion strengthens the moderating effects of an award-winning peer on the relationship between firm performance relative to aspirations and R&D intensity. These findings contribute to the literature by suggesting how social judgment of peers influences competitor CEOs' risky strategic actions.

The Role of CEOs in Organizational Decision-making

Session Moderator: **Michelle Weck**, *U. of Groningen*

STR: **How Social Media Posts and Stakeholder Characteristics Lead to CEO Infamy**  

Author: **Daniela Aliberti**, *U. Cattolica del Sacro Cuore*

Author: **Timothy David Hubbard**, *U. of Notre Dame*

CEO celebrity and infamy are inextricably linked social evaluations based on high media visibility and non-conforming behaviors. Their difference lies in the valence of constituent groups' evaluations of those behaviors, being either positive or negative. While racism has become an urgent and contentious matter for US society, no research has yet focused on how constituents build their evaluations after CEOs express positive, negative, or even uncivil attitudes via social media. In this study, we aim to uncover what happens when a celebrity CEO engages in a behavior that is enhancing, neglecting, or even appearing as uncivil as related to the topic of D&I and racism. To do so, we look at public statements made by celebrity CEOs via Twitter, and at how the personal inclinations of constituents on the topic of racial diversity inform, and overturn their evaluations. We show constituents with a higher preference for whites have higher infamy evaluations when CEOs tweet about D&I-enhancing initiatives, but lower infamy evaluations when reacting to tweets that neglect these initiatives. Moreover, we show that uncivil tweets—containing offensive language towards some racial groups—lead to uniform increases in CEO infamy.

STR: **Feeling Good Being Different? CEO Regulatory Focus and Strategy Uniqueness.**

Author: **Michelle Weck**, *U. of Groningen*

Author: **Dennis Veltrop**, *U. of Groningen*

CEOs are faced with a uniqueness paradox when pursuing strategic uniqueness. The root of the dilemma lies in creating economic value through uniqueness, which is achieved by engaging in unique activities that may also hurt firm legitimacy. In seeking to understand how CEO regulatory focus impacts firm strategy uniqueness we highlight an important, but to date overlooked, distinction between leading (first-mover) and lagging (falling behind) strategy uniqueness. These are fundamentally different and have different antecedents. Furthermore, consistent with notion of regulatory fit we argue why CEO long-term compensation impacts the relationship between CEO regulatory foci with leading and lagging strategy uniqueness. Using more than 24000 quarterly earning calls we capture CEO regulatory focus and test the impact of CEO regulatory focus in a sample of S&P 500 firms over the period 2010 and 2020. Implications of our findings for both theory and practice are discussed.

STR: **Business Groups, Hierarchies and Risk Preferences: How Family CEOs Respond to Performance Shortfalls**  

Author: **Luke Rhee**, *U. of California, Irvine*

Despite their global presence, family business groups have not gained much attention from scholars concerning the behavioral theory of the firm (BTOF). As a hierarchical organization, family business groups as a whole are managed by the group chairperson while his or her family members sometimes run individual member firms as subunits and become family CEOs. Prior studies in the BTOF have revealed that subunits in a hierarchical organization take a risk in response to their performance below aspiration levels and, in doing so, may have assumed that subunit managers have a non-family relationship with top managers. But this assumption limits the application of the BTOF to family CEOs because they are bound to the group chairperson by kinship. We fill this gap by examining how member firms run by family CEOs respond to their underperformance. We develop a novel theory that family CEOs are concerned about how their firm's underperformance might spill over and hurt their family's socioemotional wealth and so their firm becomes risk averse in the face of the performance shortfalls. We test this argument using matched samples of member firms managed by family CEOs and professional CEOs in Korean business groups. We also find that underperforming firms become more risk averse when their CEO is the chairperson's direct descendants, rather than non-direct family members, and the chairperson pays attention to regulation policies challenging the family-dominant governance structure. This study makes a number of theoretical contributions to research in the BTOF and research on family businesses.

STR: **Complex Versus Flexible: CEO Cognition and Strategic Change in the Context of Advancing Tenure** 

Author: **Philipp Benedikt Becker**, *WU Vienna*

Author: **Patricia Klarner**, *WU Vienna U. of Economics and Business*

We examine the effect of CEO tenure on the relationship between CEO cognition and strategic change. We focus on two fundamental cognitive map properties: cognitive complexity and cognitive flexibility. Our new methodological approach combines a topic modeling algorithm, trained on over 600 million words, with network analysis, to measure the complexity of CEO cognitive maps as well as their degree of flexibility over time. Our panel data analysis of 355 S&P 500 companies shows that the effect of cognitive complexity on strategic change becomes increasingly negative as the CEO's tenure progresses. Conversely, the effect of cognitive flexibility on strategic change becomes increasingly positive over the course of the CEO's tenure. Our study contributes to the behavioral strategy and strategic leadership literature by revealing how advancing tenure alters the relationship between CEO cognition and strategic action.

STR: Sitting It Out: Overcoming Illegitimacy Through Practices of Cultural Entrepreneurship at Uber

Author: **Xian Xu**, *TUM School of Management, Technische U. München*

Cultural entrepreneurs utilize a variety of institutional strategies to influence key stakeholders in order to attain legitimacy. In this study, I suggest that there may be circumstances under which cultural entrepreneurs cannot foresee how to spend their resources effectively and efficiently to do so. In such settings, I argue how they may utilize previously underexplored practices of cultural entrepreneurship to buy time until they have gained sufficient clarity which influencing strategy may actually be effective to attain legitimacy. Empirically, I examine the ongoing case of how the sharing economy firm Uber endures phases of illegitimacy and conflict with key stakeholders about how its drivers should be classified. I find that Uber utilizes various enabling and supporting measures of cultural entrepreneurship to 'sit out' phases of illegitimacy, allowing it both to learn about which influencing strategies are more efficacious in various settings and stalling regulators until it identifies a path toward attaining a classification of Uber drivers that the company viewed as favorable.

STR: Breaking Silence: Corporate Voices in Polarized Political Discourse

Author: **Anna Eileen McKean**, *Northwestern U.*

Corporate participation in the public political sphere has drastically increased over the last decade, calling attention to the power and influence of corporate voices. To better understand this phenomenon, this paper focuses on corporations participating in the discussion of racism and inequality within the United States. This paper looks at firms' discursive practices around race in June 2020 in response to George Floyd's death. Using mixed methods, the paper examines the sequence of statements made by firms and how the content of these statements varied by company and with time. Findings indicate that early adopters use strategies to convey sincerity. Additionally, influence from stakeholders, ownership status, and previous participation in progressive activism have an effect on both the timing of firms' responses, as well as the content of their statements. The paper provides a construct through which to examine whether a firm is being genuine in its sociopolitical efforts.

STR: Spillover Effects of Peripheral Activity Visibility: Tests of the Reputation Development Process

Author: **Adam J. Vanhove**, *James Madison U.*

Author: **Kristin Sowden**, *James Madison U.*

Author: **Tiffany Brutus**, *James Madison U.*

Despite increased interest in organizational reputation, there is a lack of research on the reputation development process. We test a model in which the visibility of organizations' peripheral activities spills over into the perceived quality of organizations' core activities which, in turn, positively influences the economic outcome of price premiums. Moreover, we test whether the visibility of organizations' peripheral activities positive influence on the perceived quality of organizations' core activities comes at the cost of decreasing organizational access among key stakeholders, and whether decreased access among these stakeholders also influences price premiums. Using institutional-level time-lagged data from NCAA Division I institutions, we conducted growth modeling and bootstrap mediation analyses to test the effects of college athletics revenue (peripheral activity visibility) on admission rates (core activity perceived quality) and Black student enrollment (key stakeholder access) the following academic year, and student cohort mean earnings (economic outcome) six years after that. Results show that, over time, Black students have been displaced from institutions generating more athletic revenue to institutions generating less athletic revenue. Mediation results show a direct positive effect for college athletics revenue (Time 0) on mean earnings among cohorts of former students (Time 2) and indirect effects through higher admission standards and smaller proportions of Black students in those same cohorts of students when they were admitted at Time 1.

STR: Firm LGBT-Friendliness and Investor Reaction to Pulse Nightclub Shooting

Author: **Xiwen Zhao**, *U. of Kentucky*

Author: **Zhi Huang**, *U. of Kentucky*

Author: **Daniel S. Halgin**, *U. of Kentucky*

Firm LGBT-friendliness reflects the attitudes of firms toward their LGBT employees, consumers, and investors. While existing literature has largely documented the positive audience reactions to that such as those from investors (Shan, Fu, & Zheng, 2017) and employees (Hossain, Atif, Ahmed, & Mia, 2020), our study argues that firm LGBT-friendliness can be both celebrity and infamy. Negative audience reactions exist and are significant during LGBT-related exogenous social events. Specifically, we choose the Pulse Nightclub Shooting as an example. The event study results show that investor reactions to firms with high-level and low-level LGBT-friendliness are more positive than reactions to firms with medium-level LGBT-friendliness in the event. The moderating effects of firm size and Twitter announcement are examined. The findings cast new light on understanding firm practices based on social values and social events.

Discussant: **Erkko Autio**, *Imperial College Business School*

The past five years have seen a surge of interest among strategy and organizations scholars in “grand challenges”, which are massive social and environmental problems whose scale and complexity necessitate coordination across diverse stakeholders, yet whose intractable nature renders that collaboration fundamentally challenging. This growing body research has made great strides in illuminating the coordination challenges that grand challenges pose. Yet, less is known about the processes and mechanisms that shape how and when collaborative responses to grand challenges unfold. The goal of this symposium is to advance our collective understanding of these processes. We do so by showcasing cutting-edge unpublished work from top scholars who are publishing in the areas of stakeholder theory, ecosystems, and strategy-as-practice. These papers draw on multiple empirical settings (i.e., healthcare, disaster response, corporate philanthropy, and sustainability) and diverse research methods to explore a set of closely-related, under-researched, and important questions: how do individuals and organizations perceive grand challenges, how do these (divergent) perceptions shape strategic action and resource allocation, and how does institutional context shape the dynamics and efficacy of coordination? Collectively, these papers advance our understanding not only of grand challenges, but also contribute more broadly to research and theory on managerial cognition, ecosystems, industry emergence, and corporate social responsibility. Following the four presentations, two expert discussants will discuss the four studies, as well as the broader research agenda and the theoretical issues they highlight.

No invitation required. Come join an engaging session on ecosystems, stakeholders, and the grand challenges that face our world today!

Conceptions of Self and Control

Session Moderator: **Amon Barros**, *FGV EAESP Sao Paulo School of Business Administration*

Author: **Manan Tusharkumar Pathak**, *Indian Institute of Management Indore*

Author: **Ranjeet Nambudiri**, *Indian Institute of Management, Indore*

Author: **Nobin Thomas**, *Indian Institute of Management, Indore*

We discuss the liberalist project in organizing the poor into self-help groups in India by mobilizing concepts from the works of Slavoj Žižek. We indicate liberalist co-optation by discussing the history and evolution of the self-help groups along with the politics associated thereby. We argue that the self-help groups promote a number of liberalist 'fantasies', and serve as 'lichettes', whereby the freedom to act in ways that can change the existing situation on part of the organizing of the people is constrained, even as a false sense of the same is created. Such a liberalist effort represents Third Way "post politics" which puts forth 'new' issues for the very sustenance of the 'old' systems it claims to reject. Yet, we find that the self-help groups originally possessed potential for radical change, and suggest them as being characterized by a "dynamic tension" between emancipatory and exploitative forces, with the dominance of the latter. Building on Žižekian concepts, we discuss ways in which self-help groups can effect true change, countervailing the liberalist forces. We end the paper by outlining an agenda for future research about self-help groups that can build upon this critical discussion.

Author: **Michal Izak**, *U. of Roehampton Business School*

Author: **Stefanie Reissner**, *Newcastle U. Business School*

Author: **Alan McKinlay**, *Newcastle U. Business School*

In this paper we develop an understanding of how flexible working, a specific system of management, produces workers amenable to being managed and controlled from a distance, and willing to assume responsibility for managing themselves. While the extant research typically associates flexible working with positive outcomes leading to employees' increased autonomy or, contrarily, deplors harnessing individual autonomy for organizational benefit, it rarely explores the ways through which freedom may manifest itself as management-of-the-self. Moreover, the extant research has yet to explain the mechanism translating employee agency into self-control in the context of flexible working. Drawing on the classic works by Foucault on subjectification as well as by Miller and Rose on governmentality, we show that flexible working may exemplify a system of government espousing a dearth of knowledge and void of control, thus creating conditions of possibility conducive to assuming a desired subject position – an ideal flexible worker – in a free, but calculated manner. Through our ethnographically-inspired abductive analysis of an empirical case study set in a British local authority (MoCo), we contribute to the theorization of those mechanisms that explain flexible workers' willingness to be managed to the point where it reveals itself as unsolicited self-sacrifice.

Author: **Jannes Zwaenepoel**, *Hasselt U.*

Author: **Patrizia Zanoni**, *Hasselt U. & Utrecht U.*

This study investigates the effects of algorithmic systems on the governmentality of job seekers' activation. Drawing on algorithmic governmentality theory, which conceptualizes algorithmic systems as forming the basis for a new form of biopolitical governmentality, we examine the case of algorithmic technology introduced at the Belgian Public Employment Service VDAB. Our analysis highlights how activation shifts from an interpersonal practice of counselors towards the organizational process of data collection, management and processing of extensive numerical data. This fragments individual job seekers into 'data doubles', digital profiles based on predefined indicators, and reconfigures them as 'dividuals' to be dynamically evaluated against other comparable job seekers. This study advances the debate on the use of algorithmic technologies by the state by shifting the analytical focus from the reorganization of counselors' work towards the governmentality of the population.

Best Critical Paper on International Business is sponsored by the journal Critical Perspectives on International Business

This paper investigates how Amazon manages a diverse workforce in one of its warehouses in Poland. Drawing on critical theory of borders, which emphasizes the key role of bordering in labor governmentality, our analysis identifies four organizational practices through which socio-demographic categories (e.g. gender, age, ability, etc.) traditionally segmenting labor are purposely and effectively dismantled: a non-selective hiring, the algorithmic management of the workforce, social norms of inter-personal politeness between anonymous workers, and casualized employment for all workers. Through these practices, Amazon creates an unprecedented equality within labor, to the advantage of workers belonging to historically subordinate groups in the labor market and society. However, once undifferentiated, workers can more effectively be made to compete, allowing capital to enforce precarious employment conditions onto all. This equalization-with-precarization of the workforce through the un-bordering of socio-demographic categories further rests on multiple other borders at the infra-individual, organizational, national and European Union levels. The paper contributes to the critical diversity literature by showing how, in the 'post-diversity' workplace, workers' equality serves the enforcement of universal precarity.

MC: **People Management and Standardization. The Case of Small bBusinesses (SBs)** 

Author: **Laurent Cappelletti**, *LIRSA-Cnam Paris*
Author: **Jean-Michel Plane**, *U. Paul Valery, Montpellier*
Author: **Florence Noguera**, *U. Paul Valery, Montpellier*

The introduction of a standardization of human resource management (HRM) in a small private sector business (SB) is certainly challenging from a managerial point of view but certainly risky from a human point of view if certain precautions are not taken. And yet, in order to improve the efficiency of their organization and customer satisfaction, more and more small companies are adopting such an approach. Is normalizing HRM, at a time of debate on the development of managerial agility, not anachronistic? At a time when there are many standardised companies, the article examines the problem of introducing standardization in the context of SBs through the implementation of an ISO 9001-type quality approach in French notarial offices. This text is based on a vast research-intervention programme carried out at 250 notarial offices between 2004 and 2019, using a sample of 420 notaries and 1754 employees.

MC: **How to Improve the Contribution of Support Services to a Hospital's Performance**

Author: **Sophie Claire Le Lédan**, *ISEOR, Magellan, IAE Lyon, U. Jean Moulin*

Winner of the University-Enterprise Cooperation Award (UEC)

Working together is the daily challenge faced by all hospital staff, despite the great diversity of their professions and the complexity of their organizations. Behind the healthcare staff, support services are active to provide the right service at the right time and in the right place. The contribution of support services to the implementation of hospital strategy is studied here thanks to the socio-economic intervention research conducted in a French hospital during a doctoral research project. The results show the preponderant place of communication, coordination and cooperation in achieving the desired synergy. The calculation of hidden costs highlights a significant room for manoeuvre to improve the performance of hospitals through the improvement of communication-coordination-concertation systems.

MC: **Inter-Municipal Cooperation: Insights From a Case Study in Chile Using SEAM Intervention**  

Author: **Edgar Rebolledo-Toro**, *Catholic U. of Temuco*
Author: **María Angeles Rastrollo-Horrillo**, *U. of Málaga*

The literature has not yet focused on efficiency analysis as an important factor in Inter-Municipal Cooperation and the effects on its operation, nor has it addressed certain internal factors that would appear to play a crucial role in achieving cost reductions. We identified organizational dysfunctions and hidden costs in an Association of Municipalities in Chile based on a longitudinal case study (2020-2021) and research-intervention. Using Socio-Economic Approach to Management (SEAM), we introduce the instrumental role of management consulting into inter-municipal cooperation studies to implement organizational efficiency diagnosis and hypothesize that the internal dysfunctionality of inter-municipal cooperation and the effectiveness of its governance are directly linked.

MC: **A Case study on Organizational Dysfunctions and Hidden cost in a PCB manufacturing company in China** 

Author: **Tony Huang**, *ENPC, UCMT, AT&S (China)*
Author: **Bin Bai**, *Linköping U.*

Winner of the Information Age Publishing Outstanding Doctoral Student Paper Award

The author proposed the specific case studies on the feasibility of the digital transformation implementation with the related technologies on the solution to the operational over-costs in the company, and then find out the specific problems that existed on the staffs' communication in the crossed-departments, and explore the further correlation between the digital transformation and the solutions to the operational costs and the inefficient crossed-departments' communication in the PCB (Printed Circuit Board) manufacturing company. The studies were conducted with the relevance of the theories "Organizational Dysfunctions" and "Hidden Costs". Meanwhile, he implemented two research methods, which are respectively Correlational Research in quantitative and Semi-Structured Interviewing in qualitative in this study. The paper reveals the significance of digital transformation on the solution to operational over-costs and the inefficient crossed-departments communication through the identification from the analytical results of correlational research, and semi-structured interviews, where the analysis was conducted based on the data in the forms of company records (financial statements), and documentations (interviewing contents). Moreover, it indicates the strong correlation with the research implementation on the theory of Organizational Dysfunctions and Hidden Costs as well.

OB: Probing Leader Inquiry: The Differential Effect of Asking for Advice versus Help on Leader Humility

Author: **Julia Rieg**, *Kühne Logistics U.*

Author: **Niels Van Quaquebeke**, *Kühne Logistics U.*

Author: **Prisca Brosi**, *KLU Hamburg*

Given the frequently attested potency of perceived leader humility for leadership effectiveness, the present research investigates a key behavioural antecedent of humble leadership in more depth: leaders' question asking (also referred to as inquiry). In the present paper, we provide a critical nuance to research that suggests that leader inquiry generally leads to a humility premium. Specifically, we argue that two forms of seemingly very similar inquiry, namely seeking advice and help, differentially influence perceptions of leaders' humility and thereby ultimately leadership effectiveness. We explain the differential influence via perceptions of leaders' other- and self-orientation that are inherent in the different forms of inquiry. An experimental vignette methodology and a two-wave field survey provide support for our theorising. On a practical note, our results therefore indicate that leaders are well advised to frame inquiries in practice as advice rather than help seeking.

OB: When is Authoritarian Treatment Less Harmful to Employee Trust? From A Social Contextual Leadership 

Author: **Ali Ahmad**, *Hainan U.*

Author: **Kaili Zhang**, *East China U. of Science and Technology*

Author: **Ningyu Tang**, *Shanghai Jiao Tong U.*

Author: **Kui Yin**, *U. of Science and Technology Beijing*

Authoritarian leadership (AL) can harm the social exchange relationship between leaders and followers. However, it matters a lot how followers interpret a leader's treatment. Drawing on implicit leadership theory and the contextual leadership perspective, we examined three discrete social contexts in which coworkers experienced authoritarianism, manager authoritarian behavior, and a supportive organizational climate, affecting employees' expectations toward leader authoritarianism to influence their reactions toward AL. Using a dataset of 311 employees in 99 teams in Study 1, results showed that when coworkers experienced high authoritarianism from their supervisor, and when managers demonstrate high authoritarian behavior, an authoritarian supervisor is less detrimental to employees' affective trust, which is less harmful to their task and organization performance. In Study 2, using a sample of 3,058 employees from 19 companies, we demonstrated how a supportive organizational climate affects employees' reactions to AL. Using multilevel path modeling, we found that an authoritarian supervisor is more harmful to employees' affective trust and their organizational performance when there is a high-level supportive climate. Our study contributes to the leadership literature by showing how the discrete work context affects employees' leadership expectations and reactions to leader treatment.

OB: Daily Motivational Demands and Employee Performance: The Role of Appraisals and Empowering Leadership 

Author: **Peikai Li**, *Ghent U.*

Author: **Maria Peeters**, *Maria C.W. Peeters*

Author: **Toon Taris**, *Utrecht U., Department of Social, Health, & Organizational Psychology*

Many of today's jobs require employees to "set their own goals, decide how hard they work to achieve that goal, and decide when the task is complete" (i.e., motivational demands; Taris & Hu, 2020). However, when and how such motivational demands influence employee outcomes remains unclear. Building on transactional stress theory, we develop a dual-pathway model in which motivational demands have unique relationships with employee outcomes (task performance, creativity, and exhaustion) through two independent pathways: challenge and hindrance appraisals. And empowering leadership as a job resource will moderate the relationship between motivational demands and its appraisals. We conducted a 10-day diary study in China to test our hypotheses (105 participants with 949 daily observations). Multilevel analysis revealed that motivational demands positively related to creativity and task performance both directly and indirectly (through challenge appraisal), whereas it was negatively linked to exhaustion both directly and indirectly (through hindrance appraisal). Results also suggest that day-level appraisals had lagged effects on employee outcomes. In addition, we found that empowering leadership moderated the relationship between motivational demands and appraisals. Theoretical and practical implications are discussed.

OB: Don't Observe Me, Interact With Me! How Appraisals of Remote Monitoring Influence Voice and Silence    

Author: **Alexander Hamrick**, *Auburn U.*

Author: **Sana Zafar**, *Auburn U.*

Author: **Michael Wesson**, *Auburn U.*

A significant percentage of the global workforce is now working from home, thus prompting managers and organizations to adopt remote monitoring practices geared towards monitoring a remote workforce. However, it is unclear how these remote monitoring practices impact employees and their behaviors. Our research provides an initial investigation into this topic. Specifically, we integrate the challenge-hindrance framework with the behavioral activation system (BAS) and behavioral inhibition system (BIS) perspectives to predict that the two types of remote monitoring (interactional and observational) will be appraised as stressful work demands that will differentially influence employees' voice and silence behaviors. More precisely, we predict that interactional remote monitoring will be appraised as a challenge, which will subsequently increase employees' voice, whereas observational remote monitoring will be appraised as a hindrance, which will subsequently increase employees' silence. Additionally, we argue that the complexity of one's job will intensify the relationships on the interactional monitoring path and diminish the relationships on the observational monitoring path. Results from three waves of online survey data captured from remote workers mostly support our predictions. Implications for theory, research, and practice are provided.

Status and Reputation Research

Session Moderator: **Jung-Hoon Han**, *U. of Missouri*

OMT: **The Effects of Past Transgressors' Status and Categorical Proximity on Scandalization of Misconduct**

Author: **Jung-Hoon Han**, *U. of Missouri*
Author: **Tim G. Pollock**, *U. of Tennessee, Knoxville*
Author: **Scott Graffin**, *U. of Georgia*

While transgressors' status has long been considered a key antecedent to scandals, we have a limited understanding of how others' status bounds the relationship. We examine how past transgressors' status inside and outside an industry affects the scandalization of a focal firm's misconduct. We argue that past transgressions by high-status firms within the industry lead journalists to scrutinize the misconduct more, amplifying the effect of the focal firm's status by highlighting its commonalities with past transgressors. In contrast, the status of past transgressors from outside the industry attenuates the effect of firm status on scandalization by directing media attention outside the industry, thereby limiting the depth of information that can be inferred from the firm's status. We focus on the media coverage data breaches receive, and find that past transgressors' status and their categorical proximity to current transgressors serve as important boundary conditions for the effect of status in scandals. This study deepens our understanding of how status and categorical proximity influence scandalization.

OMT: **When Jay-Z Comes to Town: Status Spillovers Through Objects**

Author: **Matt Cummins**, *ESSEC Business School*
Author: **Jiying Cao**, *Stony Brook U.-State U. of New York*

Research typically ascribes social status directly to an individual anthropomorphized entity, whether a human or an organization. Multiple literatures have described how objects such as prizes, luxury goods, and workplace resources, can become imbued with status that is conferred on their human owners. Two areas remain unclear from these various theoretical fragments: what aspects of objects might make them relevant for status, and how relations among objects themselves might lead to status spillovers between individuals. We present theory addressing both of these areas, predicting that feature-based similarities among objects provide a conduit for positive status spillovers between individuals. We investigate our predictions with a study of an NFT ('Non-Fungible Token') portrait marketplace, tracing two mechanisms by which positive status spillovers could occur. We find that both appear to be viable routes for a positive status spillover. Future studies will further test and explore the theory we articulate. We seek to contribute to the sociological understanding of status systems, and discuss implications for management practice.

OMT: **When We Unite, Not Divide: Status Homophily, Status Group, and Group Performance in the Korean Film**

Author: **Youchung Kwon**, *Yonsei U.*
Author: **Bo Kyung Kim**, *Yonsei U.*

This study sheds light on status conflicts as a mechanism behind the negative effect of status homophily on group performance. In a short-term project group without a well-established local status hierarchy, status homophily among group members may cause status conflicts and reduce group performance. However, we argue that the intensity of status conflicts may vary by the average status of group members, that is, status group. A middle-status group, composed of middle-status members on average, focus on both global and local status attainments, so they may suffer less from status conflicts than high- and low-status groups whose members mainly focus on local status attainments. We test our hypotheses in the South Korean film industry from 2004 to 2017. The statistical results suggest that status homophily among actor/actress was negatively correlated with commercial performance, but this negative effect was the weakest for films with middle-status performers.

Paper is NOT Available. Please contact the author(s).

OMT: **Overcoming the Risks of High Status: Relational Work Practices of Influencer-Evaluators**

Author: **Youjin Jenna Song**, *Columbia Business School*

Past research has shown that high-status actors face increased perceptions of inauthenticity (Hahl and Zuckerman, 2014). Given that inauthenticity has also been associated with audience devaluation (e.g. Frake, 2017), there is an increased risk of status loss for high-status actors. Then why do some high-status actors manage to maintain status over time while others subsequently lose status? I argue that relational work (Zelizer, 2012) that exhibits consistent commitments on the part of high-status actors can help them decrease the likelihood of status loss by shaping audience relationships and expectations. Using data from 1,167 YouTube channels that evaluate books, I find that high-status influencer evaluators who engage in relational work practices that demonstrate a commitment to content with informational value for their audiences and to their larger community are less likely to experience subsequent status loss. Using interaction models and qualitative analyses from influencer-evaluator interviews and observations, I discuss the mechanisms through which relational work protect high-status actors from status loss. This study not only sheds light on how evaluators are evaluated, but also introduces the novel empirical setting of social media influencer-evaluators.

Author: **Janet Xu**, *Harvard U.*

Many universities and companies use diversity scholarships and pipeline programs to achieve recruiting goals and engage in diversity-related impression management. In contrast to more explicitly race-targeted affirmative action measures, these contemporary diversity initiatives tend to emphasize merit and conceptualize “contributions to diversity” in a broad, race-neutral manner. This paper investigates the reputational effects of diversity scholarships for recent college graduates seeking entry-level jobs. Using a national audit study, I compare the rate at which employers call back applicants with diversity scholarships, applicants with other types of merit scholarships, and applicants with no scholarships at all. I also examine how the scholarship signals differ when applicant names have a Black racial cue versus a White racial cue. I find that while diversity scholarships and non-diversity merit scholarships provide similar reputational benefits for putatively White applicants, Black diversity scholarship winners are called back by employers at a similar rate as Black applicants without scholarships. The reputational boost of the non-diversity scholarship is also smaller for Black applicants than it is for White applicants. The findings contribute to our understanding of how organizational diversity policies shape inequality and illustrate the importance of examining individual-level effects of diversity practices in addition to organizational-level outcomes.

Sustainability Performance in International Business

Session Moderator: **Sushil S. Chaurasia**, *U. of New Brunswick*

SIM: CSR Contracting, Materiality, and Their Effects on Financial and Non-financial Performance

Author: **Etienne Develay**, *Nottingham Business School, Nottingham Trent U.*
Author: **Stephanie Giamporcaro**, *Nottingham Trent U.*
Author: **Yan Wang**, *Nottingham Business School, Nottingham Trent U.*

Although the recent corporate governance initiative of tying environmental, social, and governance (ESG) targets to executive compensation is gaining popularity in developed economies, difficulties have been reported in their identification and selection due to a heterogeneity of stakeholder interests. Drawing on the agency and stakeholder theories, we apply the concept of materiality for the design of ESG targets in executive compensation and tests its effects on corporate financial and non-financial performance. By focusing on a unique sample of S&P 1,500 companies from 2011 to 2019, we find that material CSR contracting has a negative effect on market-based financial performance and a positive one on environmental performance. These results are robust to endogeneity and further tests suggest that this approach provide greater effects than simply adding general ESG targets in executive compensation. These findings imply a trade-off between corporate financial performance and corporate non-financial performance in the short-term which raises questions about the primary motivations of corporations and the soundness of shareholder-oriented materiality frameworks.

SIM: The Effect of Sustainability Tension and Sustainability Synergy on Cooperative Performance

Author: **Sushil S. Chaurasia**, *U. of New Brunswick*
Author: **Dhirendra Shukla**, *U. of New Brunswick*
Author: **Aparna Venugopal**, *U. of Liverpool Management School*
Author: **Manoj Motiani**, *Indian Institute of Management, Indore*
Author: **Kapil Khandeparkar**, *Goa Institute of Management*

Interacting with value chain partners on sustainability is a multi-faceted issue, as its implementation frequently results in the formation of different identity conflicts and synergies. Individuals performing multiple job roles are pulled between many personal and corporate aspirations, as a generic product adds to the sales and net income whereas a sustainability offering contributes to the environment and society. In Study 1, 321 SME employees were asked to identify with a sustainability and non-sustainability offering they sell to their channel partner to understand how multiple identities (sustainability tension and sustainability synergy) within employees' impact channel cooperative performance. As the key cognitive and motivational process through which tension/synergy identities can enact channel member's behavior, we also examined the role of self-efficacy and perspective-taking. With two experimental studies, the causal inference was supplemented to strengthen the findings from field investigation. The results found independent effects of sustainability conflict and sustainability synergy on self-efficacy, perspective-taking and cooperative performance. Perspective-taking does not act as a mediator, whereas self-efficacy does. We observed that the negative effect of sustainability tension is reduced when self-efficacy is high, and the positive effect of sustainability synergy is reduced with low self-efficacy. The research explains the impact of multiple (conflicting and synergizing) identities within individual employees on cooperative performance in channels during interpersonal interactions.

SIM: Impact of CEO Tenure on Eco-innovation: Evidence from China

Author: **Muhammad Jameel Hussain**, *Xi'an Jiaotong U.*

In this study, we examine the impact of CEO tenure on eco-innovation. The findings show that the CEO tenure has a significant positive impact on eco-innovation in Chinese listed firms. These findings are consistent with our expectation that as CEOs are no longer stale in the saddle, as their tenure increase, they gain more experience, knowledge, and human capital and make strategic decisions. Moreover, the relationship is more pronounced among state-owned enterprises and polluting firms. In addition, we find that CEO tenure also has a significant positive impact on environmental improvement, management, and eco-innovation quality.

Panelist: **Margarethe F Wiersema**, *U. of California, Irvine*
Panelist: **Edward J. Zajac**, *Northwestern U.*

Given the recent rise in conversations on social issues such as diversity, equity, and inclusion, in this symposium we first seek to focus on questions that ask how internal and external governance mechanisms can affect the composition (e.g., in terms of gender, race/ethnicity) of top management teams and boards – that is, who gets appointed to the leadership. In addition, echoing prior calls that much more needs to be done to understand the causes rather than the consequences of managerial characteristics if we seek to further our insights into how such characteristics eventually become manifested in firm outcomes, we also intend to have a discussion on how corporate governance mechanisms can shape the often-studied individual attributes (e.g., values, cognitions, even personalities) of top executives.

Competition is prevalent in organizations. For example, people often compete against their colleagues for status and recognition in the workplace or for opportunities for advancement. Workers also compete against others to get hired into organizations in the first place. It is thus both practically and theoretically important to understand the interpersonal consequences of competition—broadly construed—in organizations. We present five empirical papers that examine understudied or poorly understood areas of research related to organizational competition and provide novel insights into the consequences of competition on important organizational outcomes such as hiring, group decision making, organizational fit perceptions, and negotiation outcomes. The first paper draws on theories from the realm of the psychological consequences of competition and optimal distinctiveness to shed light on instances when workers are more likely to join groups in which their salient identities will be underrepresented. The second paper significantly extends rivalry theory by integrating it with other theories of motivation and performance and uncovers two key moderators of the effects of rivalry on performance. The third paper examines how feelings of (in)authenticity shape the experiences and behaviors of individuals following a status gain. The fourth paper draws on theories of regulatory focus and attribution to examine the impact that being an alternate choice has on newcomer socialization behaviors and outcomes, such as feedback seeking and performance. The fifth paper expands upon the conflict expression theoretical framework, evidencing why status claims may backfire and how challengers can manage the defender's perceptions of the status negotiation. Together, we hope the papers in this symposium provide important insights into the consequences of competition in organizations and provide actionable insights for managers, while also spurring future research by academics.

IM: Vertical Political Fragmentation & Firm Market Entry: An Examination of Maquiladora Entry in Mexico

Author: **Arkangel Miguel Cordero**, *U. of Texas At San Antonio*
Author: **Wesley Sine**, *Cornell U.*

This study advances scholarly understanding of how political fragmentation, the situation wherein public officials from different political parties control different government jurisdictions, affects firm market entry. Although the extant literature suggests that political fragmentation creates favorable environments for firm market entry, empirical studies show mixed results, potentially because the extant literature has not differentiated between the effects of different types of fragmentation. We address this conundrum by distinguishing theoretically between the effects of what we term horizontal fragmentation (which occurs between jurisdictions at the same level in the government hierarchy) and vertical fragmentation (which occurs between jurisdictions at different levels) and underscore that existing research has focused on the effects of the former while overlooking the effects of the latter. We examine the entry of 6,000 foreign manufacturing firms (maquiladoras) into 2,057 cities in Mexico between 1990 and 2006 and find that vertical political fragmentation has a negative effect on firm market entry by fostering adverse business environments. Implications for international business studies and business and government research are discussed.

IM: A Process-Perspective on International Market Exit: A Qualitative Meta-Analysis

Author: **Tim Peeters**, *U. of Antwerp*
Author: **Sascha Albers**, *U. of Antwerp/ Antwerp Management School*
Author: **Johanna Vanderstraeten**, *U. of Antwerp*

A firm's international operations are often failure-prone. It is not unusual for a firm to reduce or reorganize its international operations, for example by exiting foreign markets. The dominant view on international market exit (IME) sees it as an isolated event, rather than as an inherent part of the firm's international strategy, and is dominated by a headquarters-centric perspective, ignoring the MNE's subsidiaries, often even relegating them to mere bystanders. Based on a qualitative meta-analysis of 29 case studies of international market exits, we propose four common IME-process models: 'Local Struggle', 'Lonely Drift', 'Engaged Interference', and 'Programmed Decline', which can be categorized along the two dimensions of 'Strategic Response', and 'Locus of control'. Our study makes two main contribution to the literature. First, we offer a process view of IME, differentiating the current unitary IME conceptualization of IME along four different IME-process types. Second, we identify and further substantiate the role of the subsidiary in IME.

Paper is Available to Meeting Registrants Only.

IM: Earliness of First Foreign Entry and Rapidness of Post-entry Process

Author: **Hirokazu Kano**, *Oita U.*

The phenomenon of early and rapid internationalization has been receiving increasing attention from scholars. However, in the extant research on international entrepreneurship (IE), it remains unclear how the earliness of first foreign entry relates to the rapidness of the post-entry process. Drawing Penrose's theory of firm growth, we attempt to explain the effect of early internationalization on post-entry speed in terms of managerial learning and its imperfect fungibility. While early initiation of foreign entry imposes managerial constraints in the short term and slows the post-entry process, it enables entrepreneurs to quickly start managerial learning, which in turn accelerates the post-entry process in long term. Based on this premise, we hypothesize that accumulating operational experience has a U-shaped influence on the post-entry speed of early internationalizing firms. Furthermore, this study proposes that the effect of managerial learning takes place only in specific regions where the entrepreneur acquires operational experience. The results of our longitudinal 19-year (2000–2018) study on 91 Japanese firms that initiated internationalization from an early age provide evidence for our hypotheses.

Self-disclosure

Session Moderator: **Xiaoli Tang**, *Washington U. in St. Louis, Olin Business School*

STR: Self-Regulation with Conflicting Stakeholders

Author: **Xiaoli Tang**, *Washington U. in St. Louis, Olin Business School*

Author: **Daniel Walter Efenbein**, *Washington U. in St. Louis*

Author: **Tatenda Marume Geoffrey Pasipanodya**, *Washington U. in St. Louis, Olin Business School*

We study self-regulation, a non-market strategy firms use to reduce pressure from activists, in the context of the payment transparency movement in extractive industries. This movement seeks to reduce corruption by promoting disclosure of oil companies' payments to host governments but often generates a tension between activists that desire transparency and host governments that oppose it. We show that firms are more likely to join the Extractive Industries Transparency Initiative (EITI), a multi-stakeholder initiative promoting transparency, if they invest in countries where conflict between activists and governments is less intense and if they have stronger bargaining power. We find that when legislatures mandated transparency, EITI-member firms became more competitive. We also find local perceptions of corruption fell in areas close to EITI-member firms' operations.

STR: The Effect of Selective Disclosure on Employee Evaluations

Author: **Navya Pandit**, *Department of Management and Technology, Bocconi U.*

Author: **Anne Jacqueminet**, *Bocconi U.*

Author: **Christiane Bode**, *Imperial College Business School*

In response to simultaneous pressures for greater environmental performance and transparency, firms may selectively disclose information on their environmental footprint, a form of greenwashing. Companies employ this strategy primarily to manage the impressions of external audiences in the hope that they do not uncover the reality. We argue that in contrast to external audiences, employees due to being internal members of the firm, possess superior information about the firm making it difficult for such strategies to be successful. In this work, we investigate how selective disclosure affects internal audiences, specifically employee evaluations. We utilize exogenous variation in firm incentives to selectively disclose environmental impacts provided by the swinging of traditionally democratic election states in the 2016 US presidential elections as the basis of our empirical strategy. Our analyses suggest that selective disclosure negatively affects a firm's employee ratings, because employees react unfavourably to lack of transparency and that this negative impact is independent from external audiences detecting the firm's selective disclosure. These results produce important implications as they uncover hidden human capital costs associated with selective environmental disclosure.

STR: When the Music Stops: Examining the Timing of Firm Response Following Awareness of Product Defects

Author: **David M. Gomulya**, *Singapore Management U.*

Author: **Huizhi Yu**, *Washington State U.*

Author: **Amrita Lahiri**, *Washington State U.*

Considering the hazard posed by defective products, we know relatively little about how firms determine when to recall products once they are known to have defects. Yet, theoretically, examining this issue opens opportunities to examine strategic aspects of signaling dynamics pertaining to when such negative signals are released to the public. Drawing on two competing perspectives: threat rigidity and stealing the thunder, this study examines the contingencies that determine when firms choose to recall a product following their awareness of a defect. We find that firms are more likely to recall product earlier when the defect is more severe. Moreover, this relationship is moderated by firm age and firm size, showing that older and larger firms tend to announce product recall earlier. Our study demonstrates that stealing the thunder i.e., pre-empting bad news by announcing it quickly, dominates firms' behaviors in the circumstances of product recall, over alternative theoretical perspectives such as threat rigidity.

STR: Conference Call or Social Media? An Analysis of Information Disclosure Choices in M&A

Author: **Zhe Xing**, *Santa Clara U.*

Author: **Mengying Yang**, *Peking U. Guanghua School of Management*

Author: **Weiliang Zhang**, *U. of Illinois at Urbana-Champaign*

Author: **Xiwei Yi**, *Peking U.*

Firms involved in mergers and acquisitions make important strategic decisions about information disclosure. How acquirers disclose information about the acquisition and whether such information disclosure varies according to targeted audiences remains unanswered. In this study, we examine two important tools acquirers use to communicate the acquisition with the firm's shareholders and stakeholders, namely, M&A conference calls and Twitter M&A news. Using a sample of acquisitions conducted by S&P 1500 firms from 2008 to 2016, we find that acquirers are more likely to hold M&A conference calls to communicate with shareholders when they have higher shareholder reactions prior to the announcement of the acquisition, while they are more likely to use Twitter to communicate with the stakeholders when they have a high stakeholder orientation. These two effects are influenced by the attitude of information intermediaries but in different ways. It strengthens the positive relationship between the shareholder reaction and conference calls as a communication channel. However, it weakens the positive effect of the stakeholder orientation on the use of Twitter as a communication channel.

TIM: Family Firms' Propensity to Innovate in Automation: Insights from the SEW Framework

Author: **Mariasole Bannò**, *U. of Brescia*

Author: **Giorgia Maria D'Allura**, *U. of Catania*

Author: **Emilia Filippi**, *U. of Trento*

Author: **Sandro Trento**, *U. of Trento*

This paper examines whether, according to socio-emotional wealth (SEW), family firms (FFs) differ from non-family firms (non-FFs) in terms of the propensity to innovate in automation. We make a regression analysis based on a sample of 4,150 Italian firms. Drawing on the SEW framework, the analysis revealed that FFs are less prone to innovate in automation compared to non-FFs due to three SEW endowments: the family's feeling to care for employees, the inner pride related to family and firm reputation, and the inner feeling to be socially responsible.

TIM: Fit for Something New - An Examination of Regulatory Fit as Driver of Consumer Adoption Behavior

Author: **Nina Gospodinova**, *Saarland U.*

Author: **Slawka Jordanow**, *Saarland U.*

Author: **Benedikt Schnellbacher**, *Saarland U.*

Author: **Sven Heidenreich**, *Saarland U.*

Author: **Niels Brettar**, *Saarland U.*

While existing literature shows that a consumer's regulatory focus has an impact on innovation adoption, investigations regarding the effect of regulatory fit in this context are rather scarce. Furthermore, prior investigations are predominantly limited to consideration of either the chronic regulatory focus (CRF) or the temporary regulatory focus (TRF) and have rarely considered the interaction of both. This article aims to fill this gap by conducting two studies. In the first study, we examine whether a regulatory fit (non-fit) between consumer's CRF and the product-related focus has an impact on consumer's adoption intention. Within the second study, we observe whether inducing a TRF would enhance or attenuate the effects found in study 1 respectively. Results show that adoption intention are higher for consumers in regulatory fit compared to non-fit conditions. Furthermore, our findings indicate that inducing a TRF is only promising in regulatory non-fit conditions.

TIM: Normalization of Process Virtualization in Technology Driven Remote Working Practices 

Author: **Kalyan Prasad Agrawal**, *Chandragupt Institute of Management Patna*

Author: **Ashis K Pani**, *XLRI Xavier School of Management*

In recent times businesses have started gearing up with the managers and their respective teams to embrace remote working practices. With special focus on technology enabled work-from-home (WFH) process, this research has offered a setting for advancing understanding of the context driven technology-enabled virtualization of remote working practices followed by its implementation and then normalization. Drawing upon the process virtualization theory (PVT) for evaluating context dependent behavior of determinants quantitatively and normalization process theory (NPT) for understanding the normalisation of new technology-driven remote work practices under such contexts, current study is investigating the context resistant static and context driven dynamic factors that impact the technology-enabled virtualization of processes in employee's WFH process followed by its implementation and then normalization, through multiple surveys conducted on managers and business executives from leading business organisations. Results show that sensory requirements, relationship requirements and control requirements turned out as context-driven dynamic factors and enablers to the technology-enabled virtualization of WFH process; and relative normalisation of this work transformation was sustained through flexible co-construction, legitimation, contextual integration and good leadership.

TIM: Technology Adaptation and IoT: The Role of Actors in Technological Innovation Systems 

Author: **Christopher Ball**, *Forschungszentrum Jülich*

Author: **Daniel Degischer**, *Management Center Innsbruck*

Sustainability and its impact is one of the dominant contemporary societal debates of our times. "Internet of things" (IoT) technology has the potential to establish a more efficient and effective resource usage in many domains and is, therefore, considered a "game-changer" towards a greener future. However, in several domains its adaptation still lacks behind its potential. Within innovation systems, actors act as key drivers of IoT implementation play an important role but are, yet, an under researched area. Consequently, we investigate actor preferences and identify adaptation hurdles in the energy sector. By applying a multi-actor-multi-criteria methodology we find that while governments, grid operators, and public organizations favour fast implementation, households and low-tech firms prefer incremental implementation. Eventually, we make suggestions for future research and how to address the implementation hurdles. These results suggest that governments need to focus on addressing behaviour shift of specific actors to reach higher IoT implantation speed.

TIM: Information Disclosure in the Presence of Competition: Evidence from the Pharmaceutical Industry 

Author: **Jennifer Kao**, *UCLA Anderson School of Management*

This paper studies how competition impacts firms' voluntary disclosure of product quality information. Our empirical context is the pharmaceutical industry, where firms must decide whether to disclose drug quality information that is acquired in clinical trials. Leveraging variation in clinical trial sponsorship and a difference-in-differences design, we show that firms in competitive markets are less likely to publicly disclose clinical trial results. In exploring mechanisms, we find evidence for a decline in product quality as driving these findings. These results suggest that market structure plays an important role in shaping the production and provision of product quality information.

TIM: Market Size and Research: Evidence from the Pharmaceutical Industry 

Author: **Dennis Byrski**, *Max Planck Institute for Innovation and Competition*
Author: **Fabian Gaessler**, *Max Planck Institute for Innovation and Competition*
Author: **Matthew J. Higgins**, *U. of Utah, David Eccles School of Business*

Prior literature has established a link between changes in market size and pharmaceutical innovation; whether a link exists with scientific research remains an open question. If upstream research is not responsive to these changes, the kinds of scientific discoveries that flow into future drug development could be disconnected from downstream demand. We explore this question by exploiting the effects of quasi-experimental variation in market size introduced by Medicare Part D. We find no causal relationship between market size and biomedical research in the decade following the implementation of Medicare Part D. While many factors have been shown to motivate scientists to conduct research, this result suggests that changes in market size provide no such incentive. We do find, however, limited support for a response by corporate scientists conducting applied research. Implications for pharmaceutical innovation policy are discussed.

 **TIM: Contract Development & Manufacturing Organizations and Out-Licensing Decisions**  

Author: **Solon Moreira**, *Fox School of Business, Temple U.*
Author: **Thomas M. Kluefer**, *IESE Business School*

The relationship between specialized complementary assets and R&D strategy is foundational to explain how firms benefit from their technological innovations. Prior research has shown that when firms lack the required assets, they are more likely turn to the market for technology to profit from R&D investments. The result is a division of labor between smaller R&D intensive firms and larger industry players. In this paper, we extend this view by documenting the emergence of a new type of industry actor that allows firms to contract specialized assets on a per use basis. In particular, we examine how the emergence of Contract Development & Manufacturing Organizations (CDMOs) in the biopharmaceutical industry has allowed firms to contract, as opposed to internalize, complementary assets. We argue that the emergence of these organizations has direct implications on firms' R&D strategies and the size of the market for technology. In line with our expectation, we find that as CDMOs have expanded their service offerings, the number of out-licensing deals among biopharmaceutical firms has declined. In so doing the study provides a novel perspective on how complementary assets can be accessed by firms and how this shapes how firms interact in the market for technology.

 **TIM: Sharpen Your Sword: The Reaction of Branded Pharmaceutical Firms to the Threat of Generic Entry**

Author: **Annamaria Conti**, *U. of Lausanne*
Author: **Leonardo Ortega**, *Georgia Institute of Technology*
Author: **Elie J. Sung**, *HEC Paris*

Pharmaceutical firms produce patents related to existing drugs even after approval by the US Food and Drug Administration (FDA). We investigate the reasons behind this strategy and relate them to generic entry threats. Estimating difference-in-differences models saturated with fixed effects, we show that the threat of generic entry via Paragraph IV challenges induces pharmaceutical firms to increase the number of produced patents they add to an FDA-approved drug application. This strategy is aimed at fencing the firms' existing drugs as we find no evidence that firms generate new drugs or modifications to the existing drugs after a Paragraph IV challenge. Additionally, we provide evidence showing that the added patents help pharmaceutical firms to delay generic entry when there is litigation. Consistent with patents being a double-edged sword, which protects drugs but reveals information to competitors, we find that listing all patents at the filing of a drug application is not as effective against generic entry as adding them later on.

AI and Emerging Technologies Track: Organizational Effects of AI

Session Moderator: **Sebastian Gregor Bouschery**, *RWTH Aachen U.*

TIM: Artificial Intelligence as an Actor in Innovation Teams: An Assessment of the GPT-3 Language Model

Author: **Sebastian Gregor Bouschery**, *RWTH Aachen U.*

Author: **Vera Blazevic**, *Radboud U. Nijmegen*

Author: **Deborah Roberts**, *U. of York*

Author: **Frank T. Piller**, *RWTH Aachen U.*

Transformer-based language models are a new type of machine learning model that have shown great promise for many applications, including knowledge extraction and generation. In this paper, we explore the potential of transformer-based language models for innovation processes and identify some example use cases. We discuss the benefits of using transformer-based language models in hybrid intelligence teams and outline some limitations of the technology. Finally, we propose several research questions that could help further our understanding of transformer-based language model's role in innovation processes. (Note: Contributing to the idea of this paper, the abstract was entirely created by the GPT-3 algorithm.)

TIM: When Does AI Pay Off? AI-Adoption Intensity, Complementary Investments, and R&D Strategy 

Author: **Yong Suk Lee**, *U. of Notre Dame*

Author: **Taekyun Kim**, *Korea Advanced Institute of Science and Technology (KAIST)*

Author: **Sukwoong Choi**, *MIT Sloan School of Management*

Author: **Wonjoon Kim**, *KAIST*

This paper examines how high-tech venture performance varies with AI-adoption intensity. We find that firm revenue increases only after sufficient investment in AI, and the benefits of AI adoption are greater at firms that also invest in complementary technologies and pursue internal R&D strategy. Specifically, AI adoption at low levels does not suggest significant revenue growth, but, as the intensity of AI adoption increases revenue growth occurs. We find that such performance gains from adoption are larger among firms that invest in complementary technologies such as cloud computing and database systems. Moreover, the positive relationship between AI adoption intensity and revenue growth is stronger among firms that pursue a more exclusive R&D strategy specific to the venture.

Paper is Available to Meeting Registrants Only.

TIM: Artificial Intelligence Systems: the Influence on Human Entrepreneurial Creativity

Author: **Nathan Sorin**, *SKEMA Business School*

Author: **Margherita Pagani**, *SKEMA Business School - U. Côte d'Azur*

This article explores the influence of artificial intelligence (AI) systems on the generation of new venture ideas, answering a direct call from entrepreneurship scholars (Chalmers, MacKenzie, & Carter, 2021). A conceptual framework is built to unearth the underlying mechanisms, drawing on cognitive theories of creativity. The conceptual framework is tested experimentally with 90 participants. Findings show that the use of AI during new venture idea generation is a double-edged sword. Humans can enhance their cognitive flexibility, which leads to generate more high-quality ideas (number of creative, novel and useful ideas) at the expense of average novelty of ideas. Practical implications, academic contributions and future research opportunities are discussed.

Paper is Available to Meeting Registrants Only.

TIM: How to Put the AI in Sustainability - An Empirical Qualitative Study on AI and Sustainability 

Author: **Marcel Aksoy**, *Saarland U.*

Author: **Benedikt Schnellbacher**, *Saarland U.*

Author: **Alex Schöneisaffen**, *Saarland U.*

Both the widespread diffusion of artificial intelligence (AI) and the quest for sustainable development are transforming businesses and society. Businesses are increasingly stepping forward to address grand challenges associated with sustainability, but are faced with complex challenges inside and outside their organizational boundaries. AI appears particularly suited to address these problems as it not only enables businesses to make better predictions but also reduces the costs of predictions. Unfortunately, the intersection of AI and sustainability still exhibits a lack in theory building and empirical investigation. Hence, this study conducted interviews with 21 experts from AI and sustainability to examine the phenomenon, antecedents and effects of utilizing AI for sustainability. As a result, the study presents four themes consisting of patterns that delineate firm activities for managing the use of AI for sustainability. Moreover, it introduces the concept of ambidexterity by demonstrating that the identified activities can be differentiated based on whether they are marked by exploitation, exploration, or ambidexterity. Thus, we contribute to the literature by providing a new theoretical angle to scrutinize AI and sustainability. The findings lay the ground for future quantitative empirical studies and serve practitioners in managing the nexus of the digital and sustainable transformation.

AI and Emerging Technologies Track: Societal Impacts of Emerging Technologies

Session Moderator: **Katja Einola**, *Hanken School of Economics*

TIM: AI, Privacy Breaches and Ethical Transgressions: An Integrative Theoretical Framework

Author: **Ashneet Kaur**, *Doctoral Student at IIM Ahmedabad*
Author: **Sudhanshu Maheshwari**, *Doctoral Scholar, Indian Institute of Management Ahmedabad*
Author: **Neha Tripathi**, *Assistant Professor Indian Institute of Management Ahmedabad*

Despite the surge of Artificial Intelligence (AI) in management, the role of rapidly advancing AI on privacy breaches and ethical transgressions is elusive in the extant literature. In the present paper, we propose a theoretical framework integrating attributes of privacy breaches and transgressions in various types of AI tools, applications, and interventions. The proposed model illuminates on transgressions in three types of artificial intelligence: mechanical AI, thinking AI and feeling AI, considering varying levels of severity of impact on privacy. Building from the lens of the psychological contract, the theoretical framework explains the adoption of AI: acceptance, equivocation, reluctance, or rejection in operational, justice, and governance transgressions within each type of AI. By highlighting the challenges embedded in the adoption of AI and a need to safeguard privacy in organizations, our theory provides research and managerial insights, the future scope of scientific scholarship, and a roadmap to the contemporary business ecosystem to seek an in-depth understanding of intertwined aspects of AI, privacy breaches and transgressions

TIM: A Critical Inquiry into an Anthropomorphized Robot Entering the Workplace

Author: **Katja Einola**, *Stockholm School of Economics*
Author: **Violetta Khoreva**, *Hanken School of Economics*
Author: **Janne Tienari**, *Hanken School of Economics*

In this study, we analyse the entry of an anthropomorphized software automation robot into the workplace in a media consultancy company, a technology pioneer in its industry. Applying an affect lens, we explore how organizational members experience the entry of the AI-based robot and seek to understand the reasons behind its fortunes and misfortunes. We go beyond depicting ‘enthusiastic feelings of the management’ and ‘frustration of employees’ and highlight what consequences anthropomorphising AI may have on interaction between humans and machines, and ultimately on success of these technology projects. Understanding human-robot interaction and its consequences is not simply about distinctions between positive and negative affect. It is about distinctions rendered within ongoing interventions into affective organizational life. Our study has implications for understanding the contemporary technologized global economy that often neglects and downplays the role humans must play in what has been described the Second Machine Age.

Paper is Available to Meeting Registrants Only.

TIM: Are Robots/AI Viewed as More of a Workforce Threat in Unequal Societies?

Author: **Mindy Krischer Shoss**, *U. of Central Florida*
Author: **Katherine E. Ciarlante**, *U. of Central Florida*

Although advanced technologies (i.e., AI, robots) are often discussed as drivers of societal inequality, our research examines whether people tend to view technology as a greater threat to jobs in more unequal societies. Building from research that inequality heightens concerns about status hierarchies and future resource attainment, we anticipated that people in more unequal societies would tend to view AI/robots as greater threats to the workforce (e.g., AI/robots as job destroyers). Utilizing the Eurobarometer 87.1 dataset, we found that country inequality, as conceptualized via the Gini Index, the coefficient of human inequality, and people’s subjective perceptions of current and future inequality in their country, was positively associated with perceptions of AI/robots as threats to jobs. This was the case even when controlling for people’s perceptions of technological threat to their own personal job, technology skills and interests, and demographics. These findings advance theory on inequality and suggest that the broader context—both objective and perceived—may play a role in how people view disruption associated with AI/robots at work.

TIM: Leveraging New Technology for Creating a Better World? Towards a Typology of Blockchain Ventures

Author: **Chloe Ipert**, *ESCP Business School*

Blockchain technology, an institutional innovation, explored in depth in the information system literature, has been a growing research area over the past years. Even though it opens new opportunities for entrepreneurs, the entrepreneurship literature does not provide a theory or model of blockchain entrepreneurship. We know that blockchain drives the emergence of unprecedented types of ventures, with varying degrees of decentralization, both from the financing and governance perspectives. However, there is no consistency regarding the definitions and labels used to refer to blockchain ventures. This paper clarifies the definitions of blockchain-related ventures as well as presents a typology distinguishing four ideal types. It shows that entrepreneurs willing to leverage blockchain technology do not necessarily need to decentralize their governance or financing processes.

Organizational Learning and Search Track: Ambidexterity, Paradox and Innovation

Session Moderator: **Markus Wabnegg**, *Danube-U. Krems*

Author: **Fen Zhang**, *Xi'an Jiaotong U.*

Author: **Xiaotian Yang**, *Graduate School of Commerce, Waseda U.*

Author: **Jia Liu**, *U. of Portsmouth*

This study investigates an unexplored issue: how firms make boundedly rational decisions in response to above-aspiration performance when configuring exploration and exploitation in an alliance portfolio. We employ behavioral heuristics to explore the role of above-aspiration performance and the influence of a CEO's cognitive bias towards overconfidence. We also argue that the role of a CEO's overconfidence in an alliance strategy depends on the degree of attention s/he pays to the latter, and how the attention allocation process is influenced by environmental factors. Three hypotheses are tested using a sample of U.S. high technology firms during 1992-2015. Our results establish that above-aspiration performance motivates firms to engage in exploration rather than exploitation alliances when configuring an alliance portfolio, and that a CEO's overconfidence strengthens this relationship. The moderating effect of a CEO's overconfidence decreases with environmental munificence and dynamism. Our study contributes to the literature on the behavioral theory of the firm by adopting a consistent capacity-based logic to examine a firm's response to above-aspiration performance, and makes an additional contribution to the alliance portfolio literature by deconstructing the alliance portfolio configuration in terms of exploration versus exploitation alliances as a product of bounded rationality.

TIM: Innovation Performance Measure Tension and Absorptive Capacity

Author: **Christian Garaus**, *U. of Natural Resources and Life Sciences, Vienna*

Author: **Arthur Posch**, *U. of Bern*

Author: **Markus Wabnegg**, *Danube-U. Krems*

In pursuit of innovation, most firms rely on a diverse set of performance measures. While this helps them manage their various innovation efforts, the inherent tension between very distinct measures may also come at a cost. In this study, we argue that a strong tension between radical and incremental innovation performance measures undermines employees' ability to effectively search and integrate knowledge from outside the organization's boundaries, thus reducing a firm's absorptive capacity. Firms may, however, overcome this problem through cultural controls. More specifically, we argue that encouraging paradoxical thinking among employees helps them cope with the contradictory nature of performance measure tension, thereby improving both their search and integration strategies for new knowledge. We test our hypotheses using survey data from 131 companies in innovation-dependent industries and find support for our predictions. A supplementary analysis provides evidence that the mechanisms we present also have significant performance implications for firms.

Paper is Available to Meeting Registrants Only.

TIM: CEO Family-to-work Enrichment, Information Search, and Organizational Ambidexterity

Author: **Qian Wang**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Author: **Lei Fan**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Author: **Luqun Xie**, *Shanghai Jiao Tong U.*

How do CEOs' personal experiences outside the work domain affect organizational ambidexterity? Our study explores the underlying mechanisms through CEO family-to-work enrichment (FWE), the degree to which family experiences improve the quality of work and affect organizational ambidexterity. We demonstrate that CEOs who experience a higher level of FWE prefer to carry out distant and persistent information search activities. Consequently, the firm is more successful in achieving organizational ambidexterity. We find strong empirical support for our hypothesis with a two-round sample of 136 CEOs from China. This study provides several theoretical and managerial implications.

Paper is Available to Meeting Registrants Only.

TIM: Organizing Ambidexterity to Foster Technological Transition Process

Author: **Aruana Rosa Souza Luz**, *Unisinos Business School (Unisinos U.)*

Author: **Ivan Garrido**, *UNISINOS U.*

Author: **Kadigia Faccin**, *Unisinos Business School (Unisinos U.)*

Ambidexterity supports firms during periods of technological transition cycles (TTCs), enabling them to achieve excellence in the management of new technologies, crucial for new markets entrance, and traditional ones, useful for maintaining the firm in markets they already play. Although this literature has been extensively studied, few studies have deepened on how a firm has organized ambidextrous to foster the technological transition process. We conducted a single case study with a process-based approach in a knowledge-intensive firm that underwent three TTCs in less than seven years. It was found that the firm proactively and reactively engaged in new TTCs. There was a reduction in transition cycles as the firm gained experience by incorporating new technologies and maturity of ambidextrous management. This work shows how a firm has organized itself regarding structures, incentives, and context to adapt to the changing environment, elucidating changes required to adapt.

Ecosystems and Platforms Track: Users as Drivers of Ecosystem Success

Session Moderator: **Kimmo Karhu**, *Aalto U. School of Science*

TIM: Platform Externalities

Author: **Kimmo Karhu**, *Aalto U. School of Science*

Author: **Mikko Heiskala**, *Aalto U., Department of Industrial Engineering and Management*

Author: **Paavo Ritala**, *LUT School of Business and Management*

Author: **Llewellyn D W Thomas**, *IESE Business School*

Network effects have been theorized as the defining growth mechanism in platform markets. The increase in the number of platform participants (N) fuels a virtuous cycle of growth—a network effect. However, beyond this superficial view, what are the causal mechanisms for increasing value in platform markets? To answer this question, we change the level of analysis to the externality level and propose the new construct of the platform externality with three specific contributions. First, we expose three causal factors—value unit heterogeneity, value unit perception, and value unit superadditivity—which affect platform externality. Second, using these factors, we identify four types of platform externalities—quantity, variety, utility, and accumulation—and clarify the roles of network connectivity and complementarity. Third, we highlight the negative counterparts for platform externalities, which typically self-correct growth in platform markets. Our explicit theorization calls for delineating platform strategy theories that rely on network effects to recognize distinct positive and negative platform externalities. Further, our theorization opens new research avenues for mathematical modelling of dynamics in platform markets.

TIM: What Drives the Shift Towards Sharing Economy? A Holistic Approach   

Author: **Francesco Cappa**, *Luiss Guido Carli U.*

Author: **Lorenzo Ardito**, *Politecnico di Bari*

Author: **Antonio Messeni Petruzzelli**, *Politecnico di Bari*

Author: **Enzo Peruffo**, *Luiss Guido Carli U.*

The advances in information technology and the increasing digitalization of the general public favored the growth of the sharing economy, which indicates multisided web-based platforms for online transactions between individuals to share idle resources. Recent studies started investigating what drives the satisfaction of sharing economy-based products, and defining the boundaries and taxonomies of the phenomenon. However, so far, the drivers of the customer shift towards this new model of economy have been overlooked. With the aim of filling this gap, we contend that a holistic approach, which comprehends the three parts involved in sharing economy transactions, namely user motivations, web-based platforms and the type of asset exchanged, is needed. Analyzing survey responses from European citizens about sharing economy, our findings provide empirical evidence of the positive effects on the shift towards sharing economy brought about by individuals' intrinsic motivations, quality of the platform, and human-asset based typology of outcomes provided. In doing so, we advance the overall scientific understanding of what drives the adoption of sharing economy and we provide managers and policymakers indications about the factors they may be leveraged to further favor the spread of this phenomenon.

TIM: How Problem-solving in User-complemented Innovation Ecosystems Enables the Diffusion of Complements (WITHDRAWN)  

Author: **Jörg Claussen**, *LMU Munich & Copenhagen Business School*

Author: **Maria Anna Halbinger**, *City U. of New York, Baruch College*

Author: **Alejandro Hermida Carrillo**, -

Users often provide complements in innovation ecosystems, but their active role as complementors has so far received limited attention. We argue that users often solve technical problems, thereby enabling diffusion of complements due to generalized exchange patterns. In our empirical context of ecosystems around 3D printers, we find that receiving a solution to a product-related problem enables the diffusion of complementary innovative designs, product assistance, and documentation of product use. We also find that solving of problems by users is especially impactful in initial stages of a technology-based ecosystem and, to some degree, also in open-source systems. By applying a user innovation lens on ecosystems, we highlight, that users play a more prominent role in technology-based ecosystems than previously assumed.

TIM: Under the Radar: User Anonymity in the Design of Organizational Platforms 

Author: **Maren Alana Mickeler**, *LMU Munich*

Author: **Pooyan Khashabi**, *ESSEC Business School*

Author: **Marco Kleine**, *Max Planck Institute for Innovation and Competition*

Author: **Tobias Kretschmer**, *LMU Munich*

Organizational exchange platforms enable efficient allocation and exchange of members' resources like information, advice or help within organizations. Yet, employee engagement remains a challenge for the success of these platforms. Focusing on the resource seeker-side, we argue that individuals' seeking behavior is influenced by (a) intangible, psychological costs, and (b) tangible, economic considerations, and suggest that both types of costs are linked to the provision of information on seekers' identity. By conducting a lab experiment, we alter participants' costs when seeking resources on a platform. We find that both type of costs reduce individuals' seeking behavior. While men are chiefly discouraged by economic consequences, females place relatively more emphasis on psychological costs. Our results highlight the facilitating role of user anonymity on platform engagement.

Innovation Processes Track: Design and Disruption

Session Moderator: **Elizabeth Hood**, *Boston College*

TIM: The Disruption that Never Was: A Socio-Cognitive Perspective on Technology Substitution

Author: **Elizabeth Hood**, *Boston College*
Author: **Stine Grodal**, *Northeastern U.*

Technology disruption is a central topic in management theory. For a new product to disrupt an existing product consumers need to view these products as substitutes. However, despite the centrality of product substitution in technology disruption there is scant knowledge of how perceptions of product similarity shapes technology disruption. Indeed, in most studies, product substitution is either black-boxed or it is inferred retrospectively when one product replaces the other in the market, causing a disruption. We conducted an inductive qualitative study of e-cigarettes which experts, such as producers and financial analysts, predicted would displace cigarettes. However, this disruption never occurred, instead e-cigarettes became popular with another user group. We suggest that differences in how experts and users judge the similarity of the old and the new technology spur differences in determining whether the product is a good substitute or not. We found that while experts relied on their expertise to judge similarity between existing and new technology along technological aspects, users judged similarity of the existing and the new technology according to their cultural knowledge and social embeddedness. This paper extends theories of technology disruption by introducing a socio-cognitive perspective of technology disruption, which emphasizes that similarity judgements by multiple market stakeholders as an important element in whether disruption will occur or not.

Paper is Available to Meeting Registrants Only.

TIM: Towards a Theory of Informal Disruption

Author: **Tom Neuhauser**, *U. of Toulouse I, Capitole*

What are the implications of disruption originating with firms using illegal practices, to which we refer as *informal firms*? Disruptive innovation has been an important subject for strategic management and innovation scholars since the development of the theory by Clay Christensen. Academics and practitioners discuss digital piracy as a disruptive force, yet it is not part of the disruption theory. We aim to better understand informal disruption, defined as the process during which entrepreneurs develop new value propositions based on technological changes, business model innovations, and regulation avoidance, taking advantage of institutional voids and incongruence. Our analysis suggests that informal disruption constrains adaptation response of incumbents. Yet they can leverage political power through non-market responses. We discuss implications of studying informal disruption for disruptive innovation, incumbent adaptation, and informal economy research.

TIM: Interdisciplinary Perspectives and Identity: Avenues for Holistic Socio-technical Innovation

Author: **Aniko Kahlert**, *ETH Zürich*
Author: **Gudela Grote**, *ETH Zürich*

Technology changes human work in dramatic ways, but rarely is technology development conducted with prospective work design in mind. Interdisciplinary collaboration helps to foster more holistic perspectives on technological innovation which may also benefit work design. To examine this supposition, we conducted a field study in a large interdisciplinary research center for digital fabrication in architecture, engineering, and construction. Based on two rounds of interviews 1.5 years apart (N=32), we traced the development of researchers' design mindsets and examined drivers for this development, finding that the experience of interdisciplinary collaboration challenged professional identities and broadened mindsets to become more holistic and impact-aware. However, we also found that work design was mentioned only when explicitly prompted for even by interviewees with high impact awareness. The broadening of design mindsets may be considered an important first step towards more integral socio-technical innovation, which needs to be taken further by introducing specific measures such as those the interviewees proposed themselves, e.g., including an "integrator" in each project team. We discuss the theoretical and practical implications of our findings and emphasize the need to support technology developers both with integrative design methods and with team-based interventions to enhance interdisciplinary mindsets and team reflexivity.

Paper is Available to Meeting Registrants Only.

TIM: Capturing Value by Design

Author: **Sam C. MacAulay**, *U. of Queensland*
Author: **Dmitry Sharapov**, *Imperial College Business School*

There is growing recognition that firms make design decisions during the innovation process that can isolate valuable knowledge from imitation. Our paper builds on this work using comparative case studies to abductively investigate how innovators strategically use design to capture value from innovation. Qualitative analysis is used to identify four distinct paths to rent generation via deterring, delaying, detecting and/or damaging a counterparty attempting imitation. By linking the impact of design decisions to imitation and then on to rent generation, we provide new evidence that design can operate as an isolating mechanism enabling value to be captured from innovation. This finding helps expand the strategy literature's traditional focus on legal, economic, and social isolating mechanisms to encompass design and sheds light on new tools for innovation strategy.

Participant: **Erin McDonnell**, *U. of Notre Dame*

Corruption is one of the most pervasive threats to business environments and human rights around the world. Despite its prevalence and impact, management scholarship has yet to develop a mature field of research on the subject. The rapidly growing body of management research on organizational misconduct has begun to address corruption, but this growing sub-field is in need of both conceptual clarification as well as greater attention to the international organizational contexts where it is particularly problematic. This panel is designed to meet three goals: 1) demonstrate how scholarship on corruption makes distinct contributions to the large and growing literature on organizational misconduct; 2) demonstrate that to accurately characterize corruption dynamics, generate relevant theory, and design effective interventions, analyses are well-served by focusing attention on within and across organizational variation with deep attention to context; 3) build a more cohesive community of established and rising scholars whose research practice on corruption and organizational misconduct is characterized by deep engagement with organizational spaces, appropriately situated in their local field settings. We will address these issues with a combination of a panel discussion by experts and a facilitated Q&A session between panelists and the audience. Our panel includes presentations from organizational theorists who actively study corruption and organizational misconduct in both Western and non-Western contexts.

CAR: The Impact of Subjective Career Success on Organizational and Occupational Turnover Intentions

Author: **Surendra Babu Talluri**, *Indian Institute of Management, Lucknow*
Author: **Nishant Uppal**, *Indian Institute of Management, Lucknow*

Despite a plethora of research on turnover intentions, we know little about the impact of subjective career aspects (e.g., authenticity, recognition, and meaningful work) on turnover intentions. Drawing upon turnover theory, we argue that subjective career success negatively influences organizational and occupational turnover intentions. This negative effect will be stronger in the presence of career competencies and high perceived employability. To test these relationships, we conducted two field studies using a time-lagged research design. We collected data from a sample of full-time working professionals in different organizations located in India (T1: N = 303; T2: N = 235) and a sample of working professionals with occupational investments in a new profession (T1: N = 260; T2: N = 221). Results of both studies indicated that the negative impact of subjective career success on turnover intentions was strongest when the perceived employability and career competencies were high. In Study 1, we found these relationships significant for organizational turnover intentions. Through Study 2, we found significant results for occupational turnover intentions due to their occupational investments in a new profession. We discuss the contributions of the findings to the turnover theory with career-related antecedents.

CAR: Macro Factors and Career Success: A Systematic Review and Future Research Agenda

Author: **Huainan Wang**, *Southampton Business School, U. of Southampton*
Author: **Minna Beigi**, *Southampton Business School, U. of Southampton*
Author: **Yehuda Baruch**, *Southampton Business School, U. of Southampton*

While many review and meta-analysis studies have integrated the micro factors and organisational factors associated with career success, studies investigating the role of macro factors in career success are yet to be reviewed. This paper presents a systematic review of fifty-eight studies that examine the links between macro factors and career success published from 1970 to 2021. Our review presents seven macro factors associated with career success; these are national culture, region, national economy, national labour market, national education system, national welfare regime, and historical events. Furthermore, adopting a career ecosystem theoretical framework, we develop an integrative model that identifies three pathways – predicting, moderating, and shaping – underlying the relationship between macro factors and career success. On the basis of these findings, our review offers implications for policymakers, multinational companies, and general career actors. We also propose a future research agenda.

Paper is Available to Meeting Registrants Only.

CAR: The Double-edged Sword Effect of Overtime Work on Employee Career Success: The Role of Team Overtime  

Author: **Meng Xi**, *Nanjing U.*
Author: **Yueyue Liu**, *Nanjing U.*

Despite the increasing use of overtime in organizations, the investigation into whether overtime contributes to or hinders employees' career success remains unanswered. Drawing on human capital theory and conservation of resources theory, this study offers a model that postulates that employee overtime relates positively to employee career success through increasing employee in-role performance, but that overtime also hinders employee career success through damaging employee subjective wellbeing. In addition, team-level overtime moderates the indirect effect of employee overtime on career success via in-role job performance as well as subjective wellbeing. We tested our hypotheses in Study 1 with a four-month time-lagged survey from 613 employees nested in 95 teams nested in 25 Chinese firms, and Study 2 with a three-wave longitudinal study from 280 employees in a Western cultural context. Taking together, our research provides support for a double-edged sword effect of employee overtime on career success, and illustrates the importance of team-level overtime.

 **CAR: Career Transitions and Career Success from a Lifespan Perspective: A 15 Year Longitudinal Study**

Author: **Bryndis Steindorsdottir**, *BI Norwegian Business School*
Author: **Karin Sanders**, *UNSW Business School, Australia*
Author: **Jan Ketil Arnulf**, *BI Norwegian Business School*
Author: **Anders Dysvik**, *BI Norwegian Business School*

In the current study, we draw on the conservation of resource theory (COR) to examine how engaging in upward and horizontal career transitions contribute to both objective and subjective career success among a longitudinal sample, covering the first 10-15 years of their career. Further, by adopting the socioemotional-selective theory (SST), we investigate how upward and horizontal career transitions contribute differently (or in the same way) to career success from a lifespan perspective. Using a latent growth curve analysis, the results showed that increases in upward and horizontal career transitions over time was positively related to increases in objective career success and subjective career success. As expected, the positive impact of horizontal transitions on objective career success was stronger for younger individuals. Contrary to our expectations, upward transitions had a stronger impact on older individuals objective career success. We found no age effects for subjective career success. This study helps to further our understanding of how different types of career movements contribute to career success and the types of transitions that are important for individuals of different ages.

The purpose of this symposium is to illustrate factors resided on a personal and contextual level that effect the sustainability of a career in the nursing profession. Based on a systematic literature review, a quantitative and two qualitative empirical examinations, the papers refer to the individual level, the work-family intersection, the team and organizational context as well as the institutional context. The opening paper, Proactive Personality, Recovery Experiences, Stress and Turnover Intention of Registered Nurses, will provide insights about workplace demands and the role of proactive behavior on perceived stress of registered nurses based on a quantitative survey. The second paper, a qualitative study entitled "Who is On-Call to Take Care of my Kids?": The Country and Occupation Contexts Enabling Informal Childcare and Nursing Careers, will explore the way in which nurses with little children manage their work-family balance. The third paper will be a qualitative study on Organizational Resources for Sustainable Careers in Nursing. The final paper Uniformity along the Way: A Scoping Review on basic Structures of Nursing Education in OECD Countries illustrates similarities and differences in nursing education based on a literature review. Altogether, the four papers aim to address a rich variety of individual and contextual layers for sustainable careers in nursing, and after the presentations our discussant is going to reflect on those and will come up with ideas for connecting the insights.

Participant: **Anita Williams Woolley**, *Carnegie Mellon U.*

In this symposium, we adopt a multi-method approach to examine how individuals perceive and navigate formal (e.g., organizational) and informal (e.g. identity-based) hierarchies. Across five talks employing field studies, lab experiments, and online studies, we discuss how a group norm of deference influences reactions to dominant actors, how individuals' ability to perceive informal status hierarchies impacts team performance, how hierarchical rank differently influences men and women's perceptions of inequality, how positional insecurity creates a gender difference in leadership behaviors, and how racial minorities attenuate identity-based hierarchies. The papers in this symposium seek to broaden our understanding of how individuals with varying social characteristics navigate both formal and informal hierarchies.

Entrepreneurial Ecosystems 4

Session Moderator: **Jan Harima**, *U. of Bremen, Germany*

ENT: Orchestration in Entrepreneurial Ecosystems: Insights into Form and Content 

Author: **Juliana Bonomi Santos**, *FGV EAESP*

Author: **Aline Rodrigues Fernandes**, *U. Federal do Espírito Santo*

Author: **Lais Moltene**, *Fundação Getulio Vargas - EAESP*

Author: **Raul Beal Partyka**, *FGV EAESP*

In this paper, we argue that the governance of entrepreneurial ecosystems involves an orchestration effort in which influential actors take the necessary measures to steer partners and promote ecosystem-level returns without using formal authority. We then review the literature on orchestration to understand how actors organize to collectively orchestrate entrepreneurial ecosystems and explore the activities they should perform to promote ecosystems-level output. We propose a theoretical framework to represent the form and content of entrepreneurial ecosystems orchestration. In relation to form, we discuss when ecosystems have a single or multiple orchestrators and explore their roles, reflecting carefully on the notion of shared orchestration. We then explore the content of orchestration by highlighting the activities orchestrators should execute (i.e. content of orchestration) to steer entrepreneurial ecosystems. We classify them as Horizontal orchestration activities to differentiate them from the practices to orchestrate activities related to the entrepreneurial process in the network. We contribute to the literature on entrepreneurial ecosystems governance by providing an additional means to understand how to steer actors in entrepreneurial ecosystems through relational governance mechanisms. Such knowledge can also offer insights for policy makers interested in creating incentives for entrepreneurial ecosystems as well as help actors understand best practices to stimulate the development of such ecosystems.

ENT: Linking Actor Roles with Role Readiness and Actor Engagement In An Entrepreneurial Service Context

Author: **Anees Wajid**, *Hazara U.*

Author: **Muhammad Mustafa Raziq**, *National U. of Sciences and Technology (NUST)*

Purpose – Service dominant logic literature suggests actor engagement (AE) as a micro-foundation of value co-creation in a service Eco-system. It is conceptualized as actor disposition (AD) and engagement properties. However, there is little knowledge with regard to the aspects that can be considered as actors' dispositions for engagement in the value co-creation process. We draw on role theory and offer a conceptualization of actor engagement through proposing 'actor role readiness' (ARR) as a disposition of actors engagement at the service Eco-system micro-level. Methodology – Following a longitudinal design, we conduct interviews from 20 respondents over eight months in three phases (group interviews, post-training, post-funding). We analyze the respondents' engagement in an entrepreneurial service context. Specifically, we look at aspects such as actor roles, value co-creation, and engagement properties. We employ thematic analysis. Findings – Results show that actor roles through actor role readiness are incorporated into the actor engagement process to co-create value. We identify five actor roles and their corresponding role readiness dimensions. Based on these we offer four propositions through which we position generic actor roles within the value co-creation process. Furthermore, we identify actor role readiness as influencing engagement properties and leading to value in context outcomes at the service Eco-system micro-level. Originality/value – We fill some gaps in literature with regard to actor engagement and value co-creation. Through incorporating generic actor role theory into the actor engagement concept, we propose how actor role readiness and engagement properties lead to value in context at the micro level.

ENT: Necessary Support or Unexpected Inhibitor: Government-led Initiatives in Entrepreneurial Ecosystems 

Author: **Jan Harima**, *U. of Bremen, Germany*

Author: **Daniel Sunghwan Cho**, *Portsmouth Business School*

Recently, entrepreneurial ecosystems have become a trending topic for entrepreneurship scholars and regional policymakers worldwide. Aiming at developing their regional economies, politicians are keen to building a thriving entrepreneurial ecosystem. While there is a consensus that policymakers play essential roles in early evolutionary stages of entrepreneurial ecosystems, the literature on entrepreneurial ecosystems offers limited knowledge about how government-led ecosystem-building initiatives influence the emergence and long-term development of entrepreneurial ecosystems. To address this research gap, this study conceptualizes entrepreneurial ecosystems as meta-organizations and explores how ecosystem-building initiatives by public organizations influence power dynamics within the ecosystem and how it changes the meta-organizational strategic aims and evolutionary path of the system. By analyzing two entrepreneurial ecosystems, this study reveals how activities of government agencies in entrepreneurial ecosystems shape their governance structure and impact their evolution.

ENT: Towards the Regional Aspects of Institutional Trust and Entrepreneurial Ecosystems

Author: **Olena Khlystova**, *Henley Business School, U. of Reading*

Author: **Yelena Kalyuzhnova**, *Henley Business School, U. of Reading*

Institutional trust is considered to be vital for social and economic activity and is also crucial in reducing uncertainty for entrepreneurs and society. To shed light on the role of institutional trust and determine the extent to which entrepreneurial activity is productive or destructive, this paper analyses the impact of six distinct urban EEs using the contexts of the transition economies of Eastern Europe, Caucasus, and Central Asia. This paper posits that the paucity of formal institutions and lack of institutional trust in the context of transition countries may inhibit productive entrepreneurship and affect entrepreneurs' decision-making. Using a mixed-method approach, this study pursues the research question: what role does institutional trust play in the relationship between formal institutions and productive entrepreneurship in the entrepreneurial ecosystems of transition economies? Our dataset includes 657 respondents (ecosystem stakeholders) from six city-level entrepreneurial ecosystems in the transition economies of Georgia, Ukraine, and Kazakhstan, as well as 51 semi-structured interviews from EE representative stakeholders to examine the validity of our findings. Our results suggest that institutional trust and formal institutions should be considered as complementary for a better understanding of their impact on productive entrepreneurship.

ENT: Entrepreneurial Creativity from a Practice-based Perspective

Author: **Ehsan Samimi**, *Freie U. Berlin*

Author: **Joerg Sydow**, *Freie U. Berlin*

Novel ideas in the business world are often linked to entrepreneurship via entrepreneurial opportunities, no matter whether conceptualized from the discovery or the creation point of view. Notwithstanding the close link between creativity and entrepreneurial processes, only a few studies scrutinize this nexus, and particularly the role of context in shaping and changing these processes. Adopting the practice-based perspective, we focus on the journey of novel and potentially useful ideas in the business context and elucidate how different components of the entrepreneurial ecosystem as context affect generating, elaborating, championing and implementing of these ideas. Following a longitudinal multiple-case study in the Berlin entrepreneurial ecosystem, we studied 6 startups in this ecosystem for 18 months. The result unveils the micro-foundations that connect entrepreneurs and different components of the ecosystem and sheds light on how the entrepreneurial ecosystem contributes to entrepreneurial actions in general and different phase of creating and implementing novel ideas in particular.

ENT: When the River Runs Dry: Entrepreneurial Imprinting as a Source of Missed Exit Opportunities

Author: **Sean Maddison Dwyer**, *Baylor U.*

Author: **Matthew Steven Wood**, *U. of Oklahoma*

Why is it that entrepreneurs miss entrepreneurial exit opportunities? Drawing on entrepreneurial imprinting and path dependency research, we develop theory to explain the dynamics of how venture characteristics formed early in venture development that are conducive for pursuing initial entrepreneurial opportunities (i.e., new product or service introductions) later become maladaptive as entrepreneurs pursue entrepreneurial exit opportunities. Our theoretical framework delineates the evolutionary process by which venture characteristics form through entrepreneurial imprinting across three levels of analysis (i.e., environment, individual, venture) and influence the ability of entrepreneurs to pursue entrepreneurial opportunities. We demonstrate our theory by providing three common examples of imprinted venture characteristics (i.e., frugality, disinhibition, perfectionism) that help entrepreneurs overcome barriers to entrepreneurial entry early on but can eventually shift to become barriers to entrepreneurial exit during later stages of entrepreneurship. In doing so, we highlight a conundrum entrepreneurs face in the entrepreneurial process in which the elements for success early on are markedly different than the elements necessary for success later. In this study, we contribute to growing streams of entrepreneurial exit and entrepreneurial imprinting research by providing theoretical insight concerning why certain entrepreneurs miss the exit ramp.

ENT: The Effect of Adhering to a Healthy Lifestyle on the Venture Creation Process

Author: **Ipek Koparan**, *Bentley U.*

Author: **Linda F. Edelman**, *Bentley U.*

Author: **Tatiana S. Manolova**, *Bentley U.*

Author: **Clifton Chow**, *Bentley U.*

Launching a venture consumes a great deal of cognitive resources and energy. Individuals who exhaust such resources during the venture creation process may not be able to successfully launch a venture. This paper investigates the factors that help prospective entrepreneurs effectively utilize their cognitive resources, fuel the necessary energy, and persevere in the process to successfully launch a venture. We argue that a healthy lifestyle that is multidimensionally defined by a healthy diet, regular exercising, moderate alcohol consumption, and no smoking fuels the cognitive energy that would-be-entrepreneurs are in need of during an exhaustive venture creation process. We propose that individuals with higher adherence to a healthy lifestyle are more likely to launch an entrepreneurial venture due to healthy life choices' positive effect on entrepreneurial cognition in the form of a better functioning brain and higher positive well-being. We test the proposed relationships by using a comprehensive archival dataset from the European Prospective Investigation into Cancer in Norfolk (EPIC-Norfolk study). We find that there is a positive relationship between healthy lifestyle and venture creation, fully mediated by entrepreneurial cognitive resources, specifically well-being. Yet, interestingly, we find that a superior executive function can become a barrier to business initiation, probably because prospective entrepreneurs with higher executive function can more clearly see and comprehensively assess the high risks and/or uncertainties involved in venture creation and, ultimately, give up the pursuit of their entrepreneurial ideas. Paradoxically, higher executive function may be a curse for prospective entrepreneurs, especially the ones who might have been very successful had they run their own business. We discuss the implications of our findings.

Paper is Available to Meeting Registrants Only.

ENT: Entrepreneurial Persistence of the Underprivileged through Informal Sector During the Pandemic

Author: **Maribel Guerrero**, *Global Center for Technology Transfer, ASU; Facultad de Economía y Negocios, UDD*

Author: **Tomasz Marek Mickiewicz**, *Aston Business School*

We consider how new firm creation responded to the pandemic. While the pandemic led to overall decrease in entrepreneurial activity, underprivileged social groups continued to engage in entrepreneurship, and particularly in informal sector entrepreneurship. Furthermore, marginalised but closely knitted social groups, like the indigenous population, seem in a good position to engage in informal entrepreneurship at a time of urgent need. We test these intuitions utilising individual Global Entrepreneurship Monitor data from Chile that include evaluation of the government policy response. Among others, we find that crisis brought a reversal of patterns of correlation between prior income and propensity to engage in entrepreneurship.

ENT: **Older Entrepreneurs and Different Types of Entrepreneurship**   

Author: **Farzana Chowdhury**, *Durham U. Business School*

We test whether an individual's age influences their perception of time, which affects the decision to undertake different types of entrepreneurial activity, and whether access to resources such as knowledge, skills, and finances moderates this effect. Using a sample of 194,937 entrepreneurs, we find that formal education and entrepreneurial education play an important but different role for entrepreneurs in various age groups. For example, middle-aged (45-64) and older individuals in the upper-income household are more likely to undertake both social and market-driven entrepreneurship, while younger entrepreneurs (25-44) belonging to the upper-income household are more likely to engage in market-driven entrepreneurship. While entrepreneurial experience is vital for both types of entrepreneurship, age negates the positive influence on entrepreneurship.

Paper is NOT Available. Please contact the author(s).

ENT: **How Do Entrepreneurs Engage in 'Body Work' to Accomplish Entrepreneurship in Pre-organised Settings?** 

Author: **Inge R. Hill**, *Royal Agricultural U.*

The article investigates how entrepreneurs engage in 'body work' to accomplish entrepreneurship. By doing so, the paper positions the body as the principal force for venture creation, exposing the inextricably interconnected nature of all entrepreneurship and 'body work'. Research employing ethnographic methods (interviews, observations, active workshop participations) for a UK creative industry organisation Z demonstrates how the pre-existing organisational social structures and physical structure (buildings, pathways, gates/walls) shape entrepreneurship via 'body work'. Rooted in a process-relational viewpoint, this research demonstrates how artisan entrepreneurs organise essential business activities through and with the body. The research zooms in on two practices: selling and not-talking about adapting to the organisation's materiality through dramaturgically "doing body work". Through exposing the overlooked body work of individual entrepreneurs the research captures organising of continuous venture development that brings the organisation Z alive. This research contributes to debates on the material turn in entrepreneurship, inspired by existing debates in organization studies.

ENT: **New Wine Calls For New Wineskins: Entrepreneurship in Times of Crisis** 

Author: **Yoowo Lee**, *Seoul National U.*

Author: **Jayoung Kim**, *Seoul National U.*

Author: **ANGELA KARR**, *Seoul National U.*

Author: **Sunghyuck Mah**, *Seoul National U.*

Prior literature has largely focused on the resilience of entrepreneurship in times of crisis, while paying little attention to the roles of individuals, organizations, and communities in driving transformation. The recent COVID-19 pandemic presents a timely setting to further investigate the relationship between entrepreneurship and crises. This paper applies field theory in order to answer the following questions: (1) What characteristics of a crisis trigger entrepreneurship? In what ways does a crisis foster entrepreneurship?; (2) What are the factors that influence the creation and survival of new firms in times of crisis?; and (3) What are the regional characteristics that exist where entrepreneurship is active in times of crisis? After conducting a comprehensive literature review, we found that mere resiliency or a return to the status quo does not guarantee future success. Rather, it is the entrepreneurial actors who possess the skills and power necessary to transform existing fields and foster creative destruction, innovation, and community development. Only then can faster recovery, economic welfare, social welfare, and sustainable value creation be generated. This study contributes to entrepreneurship and crisis related literature by examining how entrepreneurs, firms, and communities can achieve sustainable growth, even in the midst of a crisis.

ENT: **The Configuration Effect on the Formation of Market Ambidexterity in New Ventures**  

Author: **Wei Li**, *Chongqing U. of Technology*

Author: **Keke Sun**, *Chongqing U. of Technology*

Author: **Zhuzhu Feng**, *Sichuan U.*

Market ambidexterity is an important means for new ventures to make use of existing market and cultivate potential market to cope with the growth paradox, but the research on its formation mechanism still needs to be deepened. This paper explores the formation mechanism of market ambidexterity in new ventures from the perspective of entrepreneurial teams, and uses qualitative comparative analysis method to analyze the configuration effects on the formation of market ambidexterity in new ventures from the perspective of matching transactive memory systems (TMS) of entrepreneurial teams with internal and external environment factors. This study found that there is no single core condition that can drive the formation of high market ambidexterity, and TMS needs to match the internal and external environmental factors; Under different conditions of policy uncertainty and technological turbulence, there are two paths to drive the formation of high market balanced ambidexterity, and three paths to drive the formation of high market combined ambidexterity. These conclusions provide management implications for new ventures to use TMS of entrepreneurial teams in different internal and external environments to drive the formation of market ambidexterity.

ENT: **Exploring the Formation of Student Entrepreneurial Capability in Universities** 

Author: **Sirirat Sae Lim**, *National Yang Ming Chiao Tung U.*
Author: **Ya-Chu Hsu**, *National Yang Ming Chiao Tung U.*

Studies have shown that entrepreneurial mindsets and specific entrepreneurial skills can be learned at universities. However, most literature approaches entrepreneurial capabilities from a firm-level perspective. Few studies have explored entrepreneurial capabilities formation in students at the university level. We address this gap by investigating how an entrepreneurial educational ecosystem nurtures students' entrepreneurial capabilities. We use semi-structured, in-depth interviews as our research method. We found five entrepreneurial capabilities that student entrepreneurs acquired from the university ecosystem and considered them essential. We propose a framework and explain how these capabilities are formed in the ecosystem. Our findings shed light on the formation of student entrepreneurial capabilities formation. Our findings can also provide insights for policymakers and universities to promote student entrepreneurship.

ENT: **Entrepreneurial University in the Emerging Country: An Exploratory Study in CAMES Area**  

Author: **Houssou Ulvick**, *ICN ARTEM Business School*
Author: **Mahamadou Biga Diameidou**, *ICN ARTEM Business School*
Author: **Klaus Peter Schulz**, *ICN ARTEM Business School*
Author: **Benoit Gailly**, *LOURIM, Louvain School of Management*

The entrepreneurial university is recognized as an organization capable of maintaining an active link with the actors of its environment and of impacting socio-economic development. However, while it should be noted that the entrepreneurial university concept has been developed from the experience of advanced economies in the West, there is a lack of theoretical considerations and empirical evidence on whether the entrepreneurial university model is applicable in the contexts of less developed countries. Building on the understanding that the evolution of an ideal entrepreneurial university model is facilitated by certain institutional logics in advanced economies, this paper takes the case of CAMES area in Africa (19 emerging countries) as an example to explore the entrepreneurial practices supported by the regulatory framework documents. It also looks at the practices in the field in order to identify those that are most common compared to the models found in the literature. Our study presents new possibilities of understanding for entrepreneurial university from Africa contexts. It shows that despite the absence of certain key factors characteristic of the entrepreneurial university in the regulatory and institutional documents, the actors have informal practices that contribute to some extent to the purpose of the entrepreneurial university. The conclusion reinforces the need to see entrepreneurial university through the lens of less developed countries' contexts, highlighting opportunities for future studies.

ENT: **Knowledge Transfer Linkages, Research Quality, and the Early Performance of Academic Spin-offs** 

Author: **Maximilian Göthner**, *U. of Twente*
Author: **Matthias Menter**, *Friedrich Schiller U. Jena*

The purpose of this study is to examine whether, and under which conditions, knowledge transfer from a public research organization (PRO) determines the early performance of academic spin-offs. Distinguishing between three different types of knowledge transfer linkages between a parent PRO and its spin-off firms (i.e., formal, informal, combinatory), we study the parent PRO's research quality at the time of spin-off creation as a moderator of the knowledge transfer-performance link. The analysis is based on a sample of 133 companies spun off from German universities and public research institutes. The data reveal that formal, informal, and combinatory knowledge transfer positively predict the early performance of academic spin-offs. Performance effects of informal and combinatory knowledge transfer further depend on the research quality of the parent PRO.

ENT: **Academic Entrepreneurship As a Discovery Process: Evaluating and Exploiting Opportunities**

Author: **Metin Onal Vural**, *CUNEF*

We adopt an entrepreneurship perspective and explore the dynamics by which scientific research is converted into technological opportunities, and how such opportunities can positively impact society. Scientific knowledge is not automatically converted into innovations; in most cases this is a long, uncertain and resource demanding process involving many actors. Building on the literature in science commercialization we propose a process model that entails how access to and discovery of opportunities is affected by social psychological and social structural factors and how economic enablers and entrepreneurial ecosystem surrounding the opportunity determine whether and to what extent the opportunity can be successfully enacted. In doing so, we contribute to the discussion in science commercialization by unifying social psychological, social structural and environmental perspectives. We discuss the policy implications of our model for universities, government agencies and key stakeholders involved in the entrepreneurial ecosystem.

ENT: When New Ventures Grow Up: Organizational Change in Growing New Ventures

Author: **Sylvia Hubner**, *Free U. of Bozen-Bolzano*

This study sheds light on organizational change during new ventures' shift into scaling. In particular, we investigate organizational change in new venture development, when transitioning from a start-up to a professionally managed firm. We draw on the literature on new venture development and scaling, as well as on literature on organizational change. Based on an explorative case study of a tech-focused new venture, we identify triggers of organizational change specific to the new venture context, and three types of organizational responses that characterize the new venture's organizational development: pragmatic solutions with unclear responsibility, over-engineering, and monitored experimentation. The organizational response mechanisms demonstrate that new ventures experiment with organizational structures and routines during their organizational development.

ENT: Entrepreneurs: Gender and Gendered Institutions Effects in Open Innovation

Author: **Rui Torres de Oliveira**, *Queensland U. of Technology*

Author: **Martie-Louise Verreynne**, *U. of Queensland*

Author: **Marta Indulska**, *U. of Queensland*

Author: **Sandra Figueira**, *Grenoble Ecole de Management*

Author: **Muhammad Asif Tanveer**, *Queensland U. of Technology*

The open innovation framework is particularly important for entrepreneurs but related studies have not adequately explored the impact of institutions and important social constructs – e.g. gender or family embeddedness - on firm performance. Yet, these constructs may influence outcomes. To contribute to unraveling this unknown, we analyze survey responses from 198 male and 188 female entrepreneurs in technology parks across China and found that gender played a significant role in how OI practices related to firm performance, with women-led firms engaged in OI outperforming those led by men. This relationship strengthened as perceived institutional quality improved, yet it dissipated when women entrepreneurs were embedded in firms with family involvement. We posit that these performance outcomes result from the genders' different perceptions of institutional quality and gendered institutions, as family is in China. Our study uses gender and gendered institutions to enrich the literature of OI and entrepreneurship. In so doing, we show that gender and gendered institutions influence entrepreneurs' perceptions of institutional quality and therefore play an important role in the performance outcomes of firms engaging in OI activities in a given institutional environment.

ENT: Crowd-Based Feedback and Early-Stage Entrepreneurship Performance: Evidence from a Digital Platform

Author: **Aurelien Quignon**, *Centre for Research in Economics and Management, U. of Luxembourg*

The ability to identify early-stage venture potential, which has traditionally relied on experts, is challenging due to the uncertainty of new ideas. However, an alternative judgment from a large number of evaluators can effectively identify promising ventures. This paper empirically studies whether crowd-based information generates informative feedback for entrepreneurs as well as seed investors. Using data on about 701 early-stage founders of new ventures examined by 2,600 evaluators, I estimate the effects of crowd-based ratings on survival and securing seed funds. I find that the rating from the crowd is uncorrelated with subsequent financing events from seed investors but increases a venture's probability of continuation by 3.1 percentage points. This effect becomes stronger as the number of evaluators increases. This highlights that the aggregation of judgments offers information for nascent founders of ventures.

ENT: How Information Search Powers the Relationship Between Business Planning and New Venture Performance

Author: **Maud Pindard-Lejarraga**, *IE Business School, IE U.*

Author: **Matthias Alfred Tietz**, *U. of St. Gallen Institute of Management in Asia*

Author: **Jose Lejarraga**, *IE Business School, IE U.*

We explore when and how business plans improve venture performance by focusing on two mechanisms: the informational, based on the intrinsic value derived from gathering valuable information, and the institutional, based on the ceremonial value of business plans to signal objectives and expectations to stakeholders. We empirically isolate the mediating role of information search and show that planning affects performance beyond the informational mechanisms, and analyze the role of plan formality, suggesting that the institutional mechanism plays out only in the case of formal business plans. We connect our findings within the debate among promoters and opponents of business planning.

ENT: Perceived Organizational Support and Transition Intentions in Hybrid Entrepreneurs

Author: **Joaquín Cestino**, *Jonkoping International Business School*
Author: **Ravinath Herath**, *Jonkoping International Business School*
Author: **Emanuel Woodhouse Schmit**, *Jonkoping International Business School*

Hybrid entrepreneurship, owning and managing ventures while being employed for wages, is the most common form of entrepreneurship today. The emerging entrepreneurship literature attending this phenomenon, however, has mostly focused on the venture side of these entrepreneurs. In this study, we explore how the wage-job and venture sides of hybrid entrepreneurs interact in shaping transition intentions. Following eight hybrid entrepreneurs as they oscillate between transitioning to fulltime or remaining hybrid, we induct a model that explains how and why perceived organizational support influence transition intentions. Our findings identify mechanisms critical to understanding the role of perceived organizational support in transition intentions in hybrid entrepreneurs.

ENT: Entrepreneurship as Pathway into and out of Poverty? Evidence from Spain

Author: **Susana Correia Santos**, *Rowan U.*
Author: **Sílvia Fernandes Costa**, *U. of Groningen*
Author: **Michael H. Morris**, *U. of Notre Dame*

Entrepreneurship is widely argued to be an important solution to poverty. While there is a growing volume of work on poverty and entrepreneurial action in developing nations, empirical work in developed countries is more scarce. Drawing on the entrepreneurial intentions and motivations literature together with personal values theory, we explore changes in the economic status and job status of 83 individuals from low-income contexts in Spain. Based on a series of multiple correspondence analysis and cluster analyses of data collected in two periods in time, three profiles of entrepreneurial intentions, motivations, and personal values associated with pathways into and out of poverty through entrepreneurship are identified. Implications are drawn for theory, practice and public policy.

ENT: The Role of Firm Size in Shaping Job Satisfaction Among Joiners and Entrepreneurs

Author: **Yerim Sim**, *U. of Wisconsin-Madison*

Entrepreneurial ventures are growth-oriented firms and face the unique challenges that growth presents. Given the performance implications of venture growth in size, entrepreneurship scholars have used firm size as an indicator of entrepreneurial success. However, the existing studies on venture scale and growth provide limited insights into individual-level outcomes. To advance our understanding of the role that firm size can have in an entrepreneurial work setting, we examine the impacts of venture size on job satisfaction among joiners and entrepreneurs. Using data from more than 8,000 U.S. scientists and engineers, we find that both joiners and entrepreneurs report lower levels of job satisfaction when they work in a young and large firm compared to when they work in a young and small firm. Evidence suggests that although individuals are likely to be more satisfied with the pecuniary benefits that a large firm can provide, they may report lower levels of satisfaction with the non-pecuniary attributes, such as a sense of independence and level of responsibility. By demonstrating the potential costs of venture expansion, this study highlights the value of studying the consequences of venture development at the individual level.

ENT: The Emergence of Entrepreneurial Identity among Entrepreneurship Students

Author: **Amr Kebbi**, *McMaster U.*

Entrepreneurial identity shapes thoughts and actions of entrepreneurs during the process of opportunity recognition and new-venture creation. Entrepreneurship education is expected to facilitate the emergence of entrepreneurial identity among students. In our research we examine the nature, emergence, and evolution of an entrepreneurial identity among students and graduates of an entrepreneurship Bachelor of Commerce program in Toronto, Canada. After interviewing more than 49 students and alumni, we used both identity and social identity theories to conclude that entrepreneurial identity is a self-perceived identity that individuals acquire after they reject aspects of their current roles in order to create new ones. Entrepreneurship education helps students discover their entrepreneurial identity to a various degree. Once they discover their entrepreneurial identity, students are empowered, specifically rebellious ones that are considered “unfitting” with respect to their institutional roles.

Entrepreneurial Cognition 3

Session Moderator: **Jintong Tang**, *Saint Louis U.*

ENT: **Experiments On Entrepreneurial Opportunity Evaluation Decisions: An Institutional Logics Approach**    

Author: **Niharika Garud**, *U. of Melbourne*
Author: **Rakesh Kumar Pati**, *Deakin U.*
Author: **Christopher Sutter**, *Miami U. Ohio*
Author: **Tim R. Holcomb**, *Miami U.*

Calls for scholarship to explore effects of institutional logics on individual behaviors and their micro-processes have gone stronger. It is becoming increasingly crucial to understand how institutional logics influence behaviors and decisions, including business entrepreneurs and their decisions, impacting job creation and startups globally. This research uses an experimental approach to explore how the dominant institutional logics - market logic and family logic - influence entrepreneurial decision-making and actions. Our empirical findings support prior studies and found significant effects of institutional logics on entrepreneurial decisions and actions. In contrast to developed economies, we found that family logic plays a dominant role in influencing entrepreneurial decisions in emerging economies. We also identify various features of the decision context that will make the effect of institutional logic more or less salient. We contribute to the literature of institutional logics and entrepreneurship by exploring micro-processes of institutional logics through socializing and contextualizing entrepreneurial decisions in emerging markets.

ENT: **Community & Aftershock: New Venture Founding in the Wake of Natural Disasters with a High Death Toll** 

Author: **Arkangel Miguel Cordero**, *U. of Texas At San Antonio*

Management scholars, in both Organization Theory (OT) and Organizational Behavior (OB), have recently started to examine how natural disasters affect new venture founding, and rightly so. According to the United Nation's Security Council, natural disasters will pose the single most important threat to social stability in the upcoming decades. Given the importance of entrepreneurship to social stability (e.g., by providing employment for large swaths of the population), understanding how natural disasters affect entrepreneurial activity can shed light into the broader socioeconomic consequences of these natural phenomena. However, the existing literature offers competing theoretical perspectives and empirical results regarding the effect of natural disasters on new venture creation. This study advances the management literature on the topic by examining, the under-researched question of, how disaster-induced human losses affect new venture founding, while empirically controlling for the other major type of losses caused by these natural phenomena, i.e., material losses, which have been the focus of most existing work. In doing so, this study underscores the need for a nuanced theoretical perspective on the impact of natural disasters on entrepreneurship. Specifically, we build on the extant social psychology literature to theorize that disaster-induced fatalities will have a negative effect on new venture founding in a community afflicted by such an event, but that community collective-level social capital can help alleviate this effect. We test and find empirical support for our theory in the context of all new venture foundings in the U.S. between 1991 and 2018.

ENT: **Speaking of Opportunities: The Effect of Language on Entrepreneurial Alertness** 

Author: **Jintong Tang**, *Saint Louis U.*
Author: **Jun Yang**, *School of management, Zhejiang U.*
Author: **Wenping Ye**, *school of management, Jinan U.*
Author: **Shaji Khan**, *U. of Missouri at Saint Louis*

Although entrepreneurial alertness is foundational in applied entrepreneurship studies, entrepreneurship scholars have rarely considered institutional factors that shape entrepreneurial alertness. We investigate the underlying mechanisms of entrepreneurial alertness with respect to one of the most salient, yet underexplored, aspects of informal institutions: the future-time-reference (FTR) in linguistic structures. Drawing upon imprinting theory, we theorize that entrepreneurs' early language imprint persistently affects their alertness, and that both individual and environmental contextual factors may alter this effect. We test our model with two studies. Study 1 employs a multi-source database with 107,830 observations across 56 countries and Study 2 surveys 618 entrepreneurs in four countries. Our findings indicate that entrepreneurs in institutions with strong-FTR languages exhibit higher level of alertness. Further, this effect is intensified for older entrepreneurs, yet weakened for entrepreneurs with higher level of education or entrepreneurs who experience higher level of globalization in their home country. Our study contributes to a better understanding of language imprinting on entrepreneurial alertness.

 ENT: **Entrepreneurial imaginativeness: A Janusian-Cognition Lens on the Role of Multicultural Experience** 

Author: **Robert J. Pidduck**, *Old Dominion U.*
Author: **Daniel Richard Clark**, *Ivey Business School*
Author: **Yejun Zhang**, *U. of Texas Rio Grande Valley*

A burgeoning stream of research is emerging on the importance of entrepreneurial imaginativeness in the new venture development process. Empirical studies so far have focused predominantly on its ideation-based outcomes—the number and quality of ideas produced. Knowledge remains scant, however, on its antecedent mechanisms and mediating role in nascent venturing. Drawing from a novel Janusian-thinking lens, we integrate another growing research stream in entrepreneurship—multicultural experience—to probe how the creative, social, and practical cognitive schemas underpinning entrepreneurial imaginativeness can be cultivated through dimensions of perhaps the most distinctive form of cultural exposure: living abroad. We find evidence across two studies that depth and breadth of living abroad experiences relate to imaginativeness facets differentially, which in turn, can help us understand the extent to which entrepreneurs attempt to launch ventures

Family Business and Venturing 1

Session Moderator: **Roland E. Kidwell**, *Florida Atlantic U.*

ENT: Family New Venture Creation: The Impact of External Enablement Characteristics 

Author: **Jiyoung Kim**, *Jonkoping International Business School*

Author: **Daniel Pittino**, *Jönköping International Business School*

Author: **Francesco Chirico**, *Jonkoping International Business School*

Author: **Per Davidsson**, *Jonkoping International Business School*

This research investigates the impact of potentials drawn from the external environment, so-called enablement on the creation of a family new venture. Based on the framework of External Enabler and family capital theory, we posit that three characteristics of enablement (i.e., opacity, agency-intensity, and controllability) affect entrepreneurs' decision to involve family members in new venture creation. We decompose 1,552 decision policies nested within a sample of potential entrepreneurs. Research findings suggest that entrepreneurs' willingness to involve their family members in new venture creation increases as the agency-intensity of enablement decreases and the controllability of enablement increases. We further find that entrepreneurs' prior start-up experience moderate these relationships by enhancing the positive effect of low agency-intensity and mitigating the positive effect of high controllability. We discuss both theoretical and practical implications.

Paper is Available to Meeting Registrants Only.

ENT: Ubiquitous Munificence or Heterogeneous Deemsters? The Family Legitimacy Threshold  

Author: **Arielle M. Newman**, *Syracuse U. Whitman School of Management*

Author: **Lisa Mali Jones Christensen**, *Brigham Young U.*

Author: **Seth Jenson**, *Oxford U., Saïd Business School*

Family stakeholders in nascent enterprises are regularly assumed to be, along with friends and 'fools', taken-for-granted supporters of early entrepreneurial efforts. By applying family systems theory to extant legitimacy research, this paper explicitly identifies the family as a key legitimacy-granting stakeholder in the entrepreneurial ecosystem. As such, the family evaluates entrepreneurs based on expected roles within the family system. In considering family legitimacy directly, we also contribute to legitimacy theory by qualifying foundational assumptions about entrepreneurial agency and legitimator response. Further, we argue that the simplification of the relationship between nascent entrepreneurs and family has persisted, in part, due to a confluence of economic gender norms and a persistent gender data gap in entrepreneurship research.

Paper is Available to Meeting Registrants Only.

ENT: Founding Family Firms in Rural Regions: Implications for Economic Growth 

Author: **Kevin C. Cox**, *Florida Atlantic U.*

Author: **Jason Lortie**, *Florida GulfCoast U.*

Author: **Cole Crider**, *Florida GulfCoast U.*

Author: **David Ross Marshall**, *U. of Dayton*

Author: **Roland E. Kidwell**, *Florida Atlantic U.*

This research investigates the impact that founding family firms in rural communities has on longer term economic growth within those communities. Prior research has clearly established the many benefits that family businesses can have for communities and we build upon that prior research to unearth a deeper and more nuanced explanation about how those benefits emerge, in what contexts, and other factors that are likely to play a role. Specifically, we look at the impact of founding family firms in more rural communities as well the role that familiness and firm size are likely to have in influencing the relationship between family firms and economic growth.

Paper is Available to Meeting Registrants Only.

ENT: Entrepreneurial Forms: a Continuum for NGFM 

Author: **Estefania Hernandez**, *School of Management, U. de los Andes*

Author: **Luz Elena Orozco**, *U. de los Andes, Colombia*

Purpose - The purpose of this research is to study the entrepreneurial trajectory of next generation family members (NGFM) as a basis for differentiating the contexts that drive the emergence of various entrepreneurial forms in family firms. The research question is: how the FF context influences the emergence of different entrepreneurial forms. **Design/method/approach** - To answer the research question, we conducted qualitative research focused on the Grounded Theory method that aims to build a theory upon empirical evidence. We collected data from 22 semi-structured interviews that asked NGFM about the history of their FF and their role within it. **Findings** - We propose a model that is a continuum of entrepreneurial forms and consists of internal new venture, family entrepreneurial portfolio, and independent new venture. The NGFM were classified under those 3 categories depending on their entrepreneurial activity and the organizational arrangement that the entrepreneurship took place in the economy. Also, there is a fourth form called the follower role which correspond to the reference point form non-entrepreneurship, it dictates the dynamics that FF have to overcome so that it can be entrepreneurial. Each FF and NGFM is able to engage in more than one entrepreneurial form simultaneously or consecutively, the background that influence the development of one or another entrepreneurial form is determined by the FF and the family dynamics. The proposed model is a continuum since the trajectory of NGFM is also an entrepreneurial learning path that have an adaptative character over time. The variables used for the analysis were: family unit, impact intention scope, creation of need, inclusiveness of decisions, paternalistic culture and informal team building. The most relevant insight about these variables is that the uniqueness of entrepreneurial forms is given by the combination of them in different levels of intensity among cases, this allowed us to address the complexity of the cases and a broader comprehension of each entrepreneurial form. **Research implications** - While it has a limited number of entrepreneurial forms included in the model it invites to analyse the dynamics that precede entrepreneurship in FF, especially in an individual manner addressing the complexity of the family and firm interactions. **Practical implications** - Insights from this research are useful for family firms to shape their dynamics in order to enable the formation of determined entrepreneurial forms. Also, it is important for education in entrepreneurship and family firms since it transcends the classic view of family as the only background of family firms and offer a more comprehensive view of FF backgrounds and entrepreneurial forms emergence. **Originality and value** - this paper highlights the importance of analysing the dynamics that precede entrepreneurial forms, and mainly to do it in a detailed way, avoiding generalizations about family firms and providing a continuum model with the whole overview. **Keywords** - Entrepreneurship, Family Business, Entrepreneurial forms

Gender and Diversity in Entrepreneurship 3

Session Moderator: **Tomke Jerena Augustin**, *Asper School of business, U. of Manitoba*

ENT: **Incubators and Accelerators as Illusionary Leaders for Equality in Entrepreneurial Ecosystems**   

Author: **Tomke Jerena Augustin**, *Asper School of business, U. of Manitoba*
Author: **Suzanne Marie Gagnon**, *Asper School of business, U. of Manitoba*
Author: **Wendy Cukier**, *Ryerson U.*

A small but growing body of research investigates issues pertaining equity, diversity and inclusion (EDI) in entrepreneurial ecosystems (EEs). While studies in the broader entrepreneurship literature suggest that barriers for women and underrepresented groups exist profoundly at the early stages of new venture creation, there is limited understanding as to how ecosystem actors and interactions contribute to these. We present findings from a critical discourse analysis of the websites of 176 Canadian business incubators and accelerators (BIAs) that show the effects of a power struggle of these organizations to cater to multiple stakeholders on EDI in the EE. Specifically, we find that BIAs create discursive practices that position them as what we label illusionary ecosystem leaders. While using language to show leadership in addressing entrepreneurs and external stakeholders, they largely follow institutional pressures present in the EE, making their leadership illusionary. We develop a theoretical model of the impact on systemic inequalities of the discursive practices, contribute to the literature on EDI and leadership in EEs, and discuss implications for management.

Paper is Available to Meeting Registrants Only.

ENT: **Enabling Women Entrepreneurs in a Rural Context through Mentoring** 

Author: **Alison Theaker**, *U. of Bath, UK*

The number of women-owned enterprises has grown substantially in recent decades, yet women still lag behind men in the creation of new enterprises. Mentoring is a form of support that is often suggested as relevant to women entrepreneurs. It is flexible and bespoke to the mentee, and also provides a role model. However, its role for women entrepreneurs in a developed rural economy has not been specifically addressed. The exact components of a successful mentoring relationship have not been determined, nor how this links to business success on the part of female entrepreneurs. A qualitative study of women entrepreneurs was undertaken in the UK, in Devon. A sample of mentors was also interviewed in order to gain a more complete view of the mentoring relationship. Data was analysed using thematic analysis. Most expressed the view that mentoring was "vital". The most significant form of mentoring was found to be peer mentoring, from women's business networks and from professional associations and online networks. This form of mentoring has been neglected in the literature. Bearing in mind the small sample size, the findings indicate a more targeted approach to mentoring programmes should be taken. Peer mentoring has not been explored in depth.

ENT: **Gender Impact on Entrepreneurial Success: A Meta-Analytical Structural Equations Analysis**  

Author: **Leila Soleimani**, *Assistant Professor at U. of Scranton*
Author: **Chad Saunders**, *Haskayne School of Business, U. of Calgary*
Author: **Hadi Fariborzi**, *Mount Royal U.*

Drawing on the social feminism theory and liberal feminism theory, this meta-analysis studied the effects of gender on different performance measures (financial performance, growth, survival, and satisfaction) for new ventures through the mediatory effect of hours worked, human capital levels (education level and experience level), social capital, and debt. The results, based on a meta-analysis of 69 studies with a total sample size of 51,985 new ventures, show that male entrepreneurs invest more hours in their business and have higher level of experience. Moreover, male gender was positively related to financial performance and growth directly and indirectly by influencing hours worked and experience level. Results show that female entrepreneurs are more satisfied with their businesses than male entrepreneurs, and finally our results could not establish an effect for gender on the survival of new ventures.

ENT: Do External Successors Contribute to SMEs Financial Performance?

Author: **Dorian Boumedjaoud** -

Author: **Karim Messeghem**, *U. of Montpellier*

In developed countries, the aging of the population is increasingly significant and, in most cases, SME owners need to pass the baton to retire. Literature in entrepreneurship argues that SMEs are often transferred to external successors because they make changes in the firms' strategies by implementing fresh initiatives. However, scholars fall short into explaining what are these initiatives, and what are the consequences in terms of financial performance. In this research, we intend to fill this gap by explaining how external successor personal traits (such as creativity) and cognitive abilities (such as entrepreneurial alertness) contribute reaching superior financial performance. Our findings underline that the relationship between creativity and financial performance is sequentially mediated by the three dimensions of entrepreneurial alertness (i.e., information scanning, information association, and opportunity evaluation). These results provide new insights by underlining that creative personalities and inclination towards new business opportunities contribute regenerating the transferred SME by improving financial performance.

Paper is Available to Meeting Registrants Only.

ENT: The Role of Fear of Missing Out and Experience in SME's Intentions to Adopt New Technologies 

Author: **Johannes Gartner**, *Lund U., School of Economics and Management*

Author: **Matthias Fink**, *Johannes Kepler U. Linz*

Author: **Daniela Maresch**, *Grenoble Ecole de Management*

Corporate decision makers form their intention to adopt a new technology for their venture based on their perception of the technology's usefulness and ease of use. However, the formation of the intention to implement a new technology might be influenced by the fear of missing out (FOMO). FOMO can make decision makers fear to lose their relatedness with fellow managers because they fail to adopt a popular new manufacturing technology. Due to this fear, their decision to adopt a new manufacturing technology might not only be based on rational considerations. We draw on and extend the technology acceptance model to explain the potential bias caused by FOMO, and express the expectation that this bias is contingent on the level of decision makers' prior experience with the new technology in other contexts. Moderated ordinary least squares (OLS) regressions on 514 observations collected from a representative sample of decision makers of Austrian small and medium-sized enterprises show that FOMO is positively related to the intention to adopt a new technology. Moreover, we find that the positive relationship between FOMO and the intention to adopt a new technology is mitigated by the prior experience the decision maker has with that new technology. We contribute as follows. First, we highlight the relevance of the FOMO bias in technology acceptance, adding to the growing research stream on the role of emotions in adopting novel technologies. Second, we show how experience can provide an effective counterweight to the FOMO bias for many decision makers. Third, we extend the scope of technology acceptance models by illustrating their applicability to novel manufacturing technologies.

ENT: Bank's Effectiveness as a Credit Provider for SMEs During Economic or Financial Downturns 

Author: **Shadi Zahran**, *Hult International Business School*

The purpose of this research is to contribute forward to resolving a thoughtful tension for many developing economies on small and medium-sized enterprises (SMEs) and entrepreneur businesses' credit accessibility and discontinuity during economic or financial downturns. This work is motivated by the global financial crisis (GFC) in 2008 and the COVID-19 pandemic which have created a shortage of financial credits and have tested the ability of banks to respond to crises. Our work is focused on Gulf Cooperation Council countries (GCC). Through our integrative literature review, we found that some factors more influential on credit providing to this segment than others mainly; the lack of reliable financial information, length of relationship with the main bank, and credit rationing with significant interaction and impact among them, our research will focus on those factors. This research considers the regulators' intervention with the dilemma and possible trade-offs between the objective of maintaining a robust financial system through intensified regulations and the real impact on the economic growth which becomes more critical during challenging times.

Paper is Available to Meeting Registrants Only.

ENT: Dynamic Environments and SMEs' Disruptive Innovation: The Roles of Bricolage and Managerial Ties 

Author: **Feng Zhang**, *South China U. of Technology*

Author: **Bin Yang**, *South China U. of Technology*

Author: **Lei Zhu**, *Guangdong U. of Finance & Economics*

While previous literature has suggested that dynamic environments of emerging economies encourage firms to identify and exploit opportunities of disruptive innovation, it has not adequately explained how and under what conditions environmental dynamism facilitates disruptive innovation. To fill the gaps, this study proposes a research model that investigates the effect of environmental dynamism on disruptive innovation, the mediating role of bricolage, and the moderating effects of managerial ties. Using data from a sample of 338 paired Chinese SMEs, the analyses show that: (1) while both are conducive to disruptive innovation, market dynamism plays a stronger role than technological dynamism; (2) bricolage partially mediates the impact of market dynamism while fully mediating the impact of technological dynamism on disruptive innovation; (3) political ties reduce the impact of market dynamism on bricolage while increasing the impact of technological dynamism; and (4) business ties positively increase the impact of market dynamism on bricolage while decreasing the impact of technological dynamism. Finally, the implications of the findings for theory, practice, and future research have been discussed.

ENT: Resource Orchestration and Opportunity Beliefs in Multi-Stakeholder Initiatives for Sustainability

Author: **Richard Martina**, *Hogeschool van Amsterdam*

Author: **Ingrid Wakkee**, *IngrdW*

Author: **Lori Divito De Paauw**, *Amsterdam U. of Applied Sciences*

Our world is increasingly faced with wicked environmental sustainability challenges, requiring entrepreneurs to work in multi-stakeholder initiatives (MSIs) to address these challenges. Network orchestration is essential for these MSIs to realize their sustainability goals and make an impact. The concept of opportunity beliefs is central in understanding the actions taken by these entrepreneurs. However, the current theorization of opportunity beliefs formation is individual-centric. Furthermore, there is little understanding of how orchestration influences the opportunity beliefs formation in multi-stakeholder teams. We build on the framework of McMullen and Shepherd (2016), who presented a two-stage model of how third-person opportunity beliefs transform into first-person opportunity beliefs. We advance two contributions by using a single case study and applying the Gioia method to code and analyze the data. First is a two-stage model consisting of the formation of joint first-person opportunity beliefs that suggests that value-aligning and informing resource orchestration activities are essential in this process. Second, we advance the idea that the resource orchestration activities have both enabling and adversely constraining effects impairing the formation of joint first-person opportunity beliefs under conditions of organizational pressure.

ENT: Emotions in New Venture teams (NVTs): The Valuation Effects of NVTs' Affects in Crowdfunded Projects

Author: **Paul Momtaz**, *UCLA Anderson School of Management*

This study relates New Venture Teams' (NVTs') emotional displays to firm valuations in blockchain-based crowdfunding (i.e., Initial Coin Offerings, ICOs). Tracking 2,520 NVT members in 165 ventures over the course of their crowdfunding campaigns, I exploit the neurological link between the central nervous system and facial muscle contraction-relaxation patterns to identify NVT members' affective traits from their facial expressions. The results suggest that the level of NVTs' negative affects is associated with lower ICO firm valuations, while within-NVT "emotional diversity" has a value-increasing effect. Intuitively, negative affects are associated with traits, such as relative risk intolerance and analytical perfectionism, which may be prejudicial in dynamic entrepreneurial markets, but could be valuable if balanced by opposite traits in emotionally diverse NVTs. The results for positive affects are diametrically opposed, albeit non-significant. Overall, this study extends the focus of the affective entrepreneurship literature to the NVT level, introduces the concept of emotional diversity, and explores the role of emotions in entrepreneurial finance.

ENT: Birds of a Feather Struggle Together? The Perils of Racial Homogeneity to Entrepreneur Performance

Author: **Mauricio Mercado**, *Iowa State U.*

Several studies suggest minority business owners face higher barriers relative to their majority counterparts and this may be why they stagnate or fail. However, such arguments are limited in that they emphasize the macro and micro limitations of minority entrepreneurs, ignoring the meso-level elements affecting minority businesses. The tendency of entrepreneurial ventures to operate in teams, be distinctively endogenous compared to organizational teams, along with the importance of team composition to its performance, suggests that the plight of minority entrepreneurs can be explained by the interaction of minority status with the different team formation and functioning stages an entrepreneurial team goes through. In this paper, we study the minority team composition-emergence-performance relationship, leveraging the homophily perspective and entrepreneurial team cognition literature. Using these frameworks, we argue that racial homogeneity can have both positive and negative effects on startup performance, and the direction of such effect is contingent on the team development stage. In making these arguments, we contribute to the minority entrepreneurship literature, entrepreneurial teams research, and team learning processes space.

ENT: Thriving Against All Odds – How Start-up Teams Cope with Radical Uncertainty 

Author: **Yasmine Yahyaoui**, *U. of Bayreuth*

Author: **Steffen Farny**, *Leuphana U. Lüneburg*

Author: **Eva Alexandra Jakob**, *U. of Bayreuth*

Author: **Holger Steinmetz**, *U. of Paderborn*

Uncertainty is one of the most known characteristics of entrepreneurial endeavors, continuously threatening start-up teams' performance and well-being. However, knowledge on how start-up teams deal with radical uncertainty is limited. Drawing on conservation of resources theory and regulatory focus theory, we examine how start-up teams entrepreneurially cope with radical uncertainty in the context of the COVID-19 pandemic. In a convergent parallel mixed method design, we analyze 12 waves of survey data and four waves of interviews collected in 35 start-up teams in Germany. Our analysis of temporal development of predictors (quantitative results) and entrepreneurs' views (qualitative analysis) explains the coping mechanisms to reduce performance impairment and compassion fatigue. Our study contributes to research on start-up teams, well-being, and uncertainty in entrepreneurship.

Panelist: **Rachel Atkins**, *NYU Stern*

Session Chair: **Linda C. Edouard**, *Rutgers Business School*

Technological innovation is an important driver of value creation for firms, economies, and society. Research, however, is beginning to suggest that its potential might not be fully realized due to a lack of diversity in the skilled individuals involved (Nager, Hart, Ezell, & Atkinson, 2016; Fechner & Shapanka, 2018; Sampson, 2020). This panel brings together leading scholars for a discussion on inclusive innovation in the domain of technology entrepreneurship. It discusses some current research and initiatives that lend insight to some of the unique experiences, challenges, and trends among underrepresented groups (URGs) in technology entrepreneurship.

GDO: **Gender-Intersectional Regimes: How Gender & Nationality Shape Peace Initiatives in Israel-Palestine**  

Author: **Ambreen Ben-Shmuel**, *Department of Sociology, The Hebrew U.*
Author: **Michal Frenkel**, *Hebrew U. of Jerusalem*

Building on research that considers women's roles an essential part of peacebuilding, this paper argues that a gender-national intersectionality perspective is needed to better understand the field of peace organizing. Exploring this in the context of intractable conflict in Israel-Palestine allows us to see how the intersection of gender and nationality uniquely affects women in peacebuilding. Relying on observations of group dynamics in a single organization and interviews with actors involved, we found that Palestinian women are the most marginalized in their participation, culture is used as a source of power in the way differences are conceptualized, and these aspects are embedded in gendered and gendering organizational practices that reproduce asymmetric gender-national power relations. These findings contribute to the theorization of the matrix of domination and how it is translated into peace organizing in both interactional and organizational practices, affecting possibilities of participation in dialogue groups and peacebuilding.

 GDO: **Relational Inequalities in UK Surgery: Gender, Race and Closure**    

Author: **Carol Woodhams**, *U. of Surrey*
Author: **Ira Parnerkar**, *Queen Mary U. of London*
Author: **Donald Tomaskovic-Devey**, *U. of Massachusetts, Amherst*

We examine intersectional gender/race patterns in the career progression of a national cohort of surgical trainees. Surgery, the highest status medical specialty, has been unusually resistant to the incorporation of women and minorities. Drawing on a dataset of careers of UK National Health Service surgeons (n=3,402) and a longitudinal analysis of gender and race/ethnic inequalities, we examine the factors that condition exiting from surgical training programs and for those who survive, promotion into the role of consulting surgeon. We find that white men are less likely to exit surgical specialties and more likely to be promoted to senior consulting roles. There is an intersectional pattern of inequalities with white men on top, followed by white women and Indian men, and all others having much higher rates of exit and lower rates of promotion. Using a relational organizational inequality framework, we explore the processes and contexts that generate these inequalities. We find that white men and women receive higher returns to long hours investment in surgical training, but also that white male advantages shrink in larger more formalized hospitals. All inequalities are higher in workplaces and subspecialties with a higher proportion of white men.

GDO: **The Lived Experience of Freedom of Entrepreneurs with Disabilities**   

Author: **Anna Hidegh**, *Corvinus U. of Budapest*
Author: **Carmen Svastics**, *Eotvos Lorant U. of Budapest*
Author: **Zsuzsanna Gyori**, *Budapest Business School*
Author: **Sara Csillag**, *Budapest Business School*

This article aims to provide an analysis of the lived experiences of entrepreneurs with disabilities inspired by the critical theory of freedom, using the notions of negative, positive and social freedom as a theoretical lens. Based on thirty semi-structured interviews. The findings indicate that the experience of freedom for EWD is ambiguous in various ways: (1) Engaging in the discourse of entrepreneurship offers a subversive discursive toolkit to debunk the constraints established by the discourse of ableism, enabling both negative and positive freedom. (2) This reflexive discursive stance against ableism enables EWD to resist the instrumentality of entrepreneurialism and maintain positive freedom. (3) Individualism being at the heart of entrepreneurship results in othering and undermines social freedom. Thus, while entrepreneurship offers greater individual freedom in both a negative and a positive sense for people with disabilities (PWD), it nevertheless fails to promote collective social change.

The Formation and Perception of Authenticity and its Organizational Outcomes

Authenticity and its Organizational Outcomes

Organizer: **Erica Bailey**, *Columbia Business School*

Discussant: **Dana Carney**, -

Presenter: **Carl Blaine Horton**, *Columbia U.*

Presenter: **Zaijia Liu**, *Columbia U.*

Presenter: **Laura Rees**, *Oregon State U.*

Presenter: **Erica Bailey**, *Columbia Business School*

Presenter: **Alex Bryant Van Zant**, *Rutgers Business School*

Given the benefits of authenticity for individuals and their organizations, the goal of this symposium is to explore how authenticity is constructed, maintained, and perceived in organizations. In addition, we examine the consequences and outcomes associated with authenticity for organizations, individuals, and leaders. In our first presentation, we consider how individuals experience authenticity within their organizations. Specifically, Horton and colleagues examine the psychological outcomes of a physical decision that we make each day—what to wear. They examine the relationship between authenticity and power as predictors of the important organizational outcome of workplace engagement. Across two multi-day experiments, participants generally reported feeling more authentic when they wore casual attire, relative to professional attire or a mixed strategy. In addition, this casual attire prompted greater workplace engagement. Thus, this paper examines how attire can impact psychological outcomes, and the unique ways attire impacts power and authenticity. In the following two presentations, we consider the relationship between physical expressions, specifically facial expressions, and authenticity. First, Liu finds that emotion expression variability in leaders is an important predictor of perceived authenticity. Specifically, in six studies she describes the benefits of emotion expression variability in leadership using naturalistic and experimental settings. Greater emotion expression variability is associated with greater authenticity judgments which increased leadership effectiveness. Second, Rees considers how sensitivity to being judged impacts the judgment of others' authentic or inauthentic expressions. In two studies, she finds that when perceivers believe that being respected by others is important, i.e., they are socially sensitive, they are more likely to be influenced by the perceptions of another person's authenticity. First, she finds that those higher on sensitivity indicate that they pay more attention to interpersonal cues than those less sensitive. They also judge hypothetical coworkers smiling (in)authentically as more(less) authentic, warm, competent, and like a good coworker. She also finds that priming judges to expect (in)authentic expressions influences judgments even when the actual expression does not differ. In the final two presentations, we turn towards expressions of authenticity. First, Bailey and colleagues explore how social judgments about authenticity can stem from, and prompt greater social status. They investigate how being perceived as authentic results in greater respect and admiration. They find that the reverse is also true, such that individuals of higher status are assumed to be more authentic. These findings speak to the reciprocal relationship between perceptions of authenticity and societal value associated with competence and expertise. In the final presentation of the session, Van Zant explores how inauthenticity via self-promotion underlies the pervasive organizational issue of overconfidence. In three studies, he finds that the prevalence of overconfident advice is not due to a failure to hold advisors accountable for their overconfidence. Rather, actors engage in strategic self-promotion when they deliberately attempt to project competence to an audience. Following the presentations, the discussant, Dana Carney, will discuss what makes authenticity distinct from related concepts such as deception, and the implications of authenticity for theory and practice. Taken together, these presentations consider the antecedents and formation of authenticity within an organization through physical expressions of attire and emotions. This set of papers also considers the important outcomes associated with authenticity, examining work engagement, leadership effectiveness, respect, and admiration.

Patient Safety in the Ever Changing Health Care Organization

Session Moderator: **Cheryl Rathert**, *Saint Louis U.*

HCM: Managing Safety in Perioperative Settings: Challenges and Strategies of Meso-Level Nurse Leaders

Author: **Joanna Veazey Brooks**, *U. of Kansas Medical Center*

Author: **Heather Nelson-Brantley**, *U. of Kansas School of Nursing*

Background: Perioperative nursing units have been described as one of the most challenging practice environments, characterized by a distinct hierarchical culture and a rapid pace. These dynamics create challenges for creating a culture of safety, and meso-level leaders must operate in the space between the micro-level of direct patient care and the macro-level administrative priorities. Yet, little is known about the strategies meso-level nurse leaders (MLNLs) use to facilitate a culture of safety in perioperative settings. Objective: Guided by complexity leadership theory, we sought to understand the strategies MLNLs used to facilitate a culture of safety in perioperative settings. Methods: A qualitative descriptive study was designed and semi-structured interviews were conducted. Inductive thematic analysis was used to analyze content from the interviews several techniques (audit trail, reflexivity, peer debriefing) were used to ensure rigor of the methods. Findings: Seventeen MLNLs completed an interview and analysis identified 4 strategies, or skills that MLNLs reported using to navigate the specific combination of pressures as meso-leaders in perioperative environments: (1) Recognizing the unique perioperative management environment (2) Learning not to take negative interactions personally; (3) Developing "super meso-level nurse leader" skills; and (4) Appealing to policies and patient safety. Conclusion: Our study also shows how clear organizational policies and procedures can serve as a vital tool for MLNLs who are trying to enforce behavior, especially of those over whom they have no technical authority. Clear and enforced policies can be used as powerful shields—moving attention away from a feeling of individual "policing" and toward a more impersonal discussion about shared patient safety goals, and ultimately support MLNLs in challenging perioperative work environments.

HCM: The Impact of Change in Clinical Leader Behavior on Safety Climate during the COVID-19 Pandemic

Author: **Phatcharasiri Ratcharak**, *U. of Greenwich, Business School*

Aiming to advance the knowledge of clinical leadership during crisis, this longitudinal study investigated the impact of change in leadership behavior among clinical leads on safety climate perceived by clinical workers during the COVID-19 pandemic. The data was collected from clinical leads and their direct reports in public hospitals at different time points over a period of one year. Using random coefficient modelling to analyze the data over time, the change in leadership behavior was detected among clinical leads. The results suggest that clinical leads tended to adopt consideration in their leadership behavior to enhance safety climate among their clinical workers in normal times. However, after the pandemic emerged, clinical leads increasingly adopted initiating structure in their leadership behaviors to ensure safety practice over the time of crisis. The findings provided empirical evidence to support the idea that being an effective leader rests on balancing between consideration and initiating structure behaviors. Based on the study results, practical implications were suggested on how to move leadership practices in healthcare toward the new normal.

HCM: Hybrid Work: Doctor & Nurse Participation in the Reduction of Healthcare-acquired Infections

Author: **Fabio Rojas**, *Indiana U.*

Author: **Shibashis Mukherjee**, *Indian Institute of Management, Bangalore*

Author: **Rishideep Roy**, *Indian Institute of Management Bangalore*

Author: **Clayton Thomas**, *Iowa State U.*

Contemporary healthcare is often characterized by overlapping frameworks or "logics" that share goals of organizational efficiency and quality but differ in their explanations of how to achieve them. We argue that performance improves when workers approach tasks in a way that combines these logics. Using data from a nationally representative survey of infection preventionists working at 193 unique acute care hospitals in the US, we show that nurses are involved in the biomedical and administrative elements of infection control, while doctors are not involved in both elements. Nurse support for infection control lowers infection rates, while doctor support has no effect. We estimate that nurse support for infection control reduces hospital costs by 40%, an annual savings of \$120 million. We attribute this reduction in cost to nurses' blending of biomedical and organizational knowledge. An implication from this research is that healthcare costs and quality are tied to collaborations that hybridize logics.

Training and Development

Session Moderator: **C. Allen Gorman**, *U. of Alabama, Birmingham*

HR: Nothing but a “g” Thing? Toward an Integrative Model of Frame-of-Reference Training Effectiveness

Author: **C. Allen Gorman**, *U. of Alabama, Birmingham*

Author: **John Patrick Meriac**, *U. of Missouri, St. Louis*

Rater training is important for improving the quality of human resource decisions. However, there is little research that has examined the influence of trainee individual differences on rater training effectiveness. Borrowing from self-regulation theory and executive function literature, we developed an individual differences model of rater training effectiveness across three studies. In Study 1, we found support for a partially mediated model in which learning goal orientation, internal locus of control, and promotion focus influenced rater training motivation through general self-efficacy. In Study 2, we extended the model to include cognitive ability. Study 3 further extended the model to include rater training criteria, and we found that rater training motivation did not predict declarative knowledge, rating validity, or rating accuracy, but cognitive ability predicted all three outcomes. Overall, the results suggest that although individual differences in attitudes are relevant to understanding rater training motivation, cognitive ability may be much more important for understanding rater training effectiveness. Implications for rater training theory and practice are discussed.

HR: The Successful Adoption of E-Training: A Review and Conceptual Framework

Author: **Jiahui Tan**, *Monash U.*

Author: **Cherrie J. Zhu**, *Monash U.*

Author: **Mingqiong Mike Zhang**, *Monash Business School*

Drawing on the behavioral perspective, this paper integrates two stages of E-training (pre- and post-adoption stages) and introduces a conceptual framework for the successful adoption of E-training based on the review of relevant literature. The framework includes four levels of antecedents (individual, organization, technology and social) and resulting consequences of E-training adoption. It also highlights the interaction between the pre- and post-adoption stages of E-training. The conceptual framework lays a foundation for future empirical studies to investigate the successful E-training adoption.

HR: What Happens After Training? Complex Linkage Between Learning During Training and Training Transfer

Author: **Sainath Srikant Karthik Bhuvanagiri**, *Indian Institute of Management, Indore*

Author: **CHANDRASEKHAR BHUVANAGIRI**, *ICFAI Business School, IFHE, Hyderabad*

Research on training so far has investigated the impact of different factors on training transfer. However, there remains a gap in understanding what happens to the learning acquired during training. Based on a multi-source, temporal study spanning over six months, we examined the effect of learning during training on training transfer. Besides, we examined the path between learning and training transfer through post-training motivation. We further examined the boundary effect of employees' proactive personality and the support they receive from their supervisors. Our study is one of the early studies that examined the direct, indirect, and conditional effects of learning during training on the transfer of training in their work areas. Implications of the study to academia and practitioners were discussed.

Paper is Available to Meeting Registrants Only.

HR: Impact of Trainer-Trainee Interaction on Trainee Learning in a Work-Related Training Context

Author: **CHANDRASEKHAR BHUVANAGIRI**, *ICFAI Business School, IFHE, Hyderabad*

Author: **Sainath Srikant Karthik Bhuvanagiri**, *Indian Institute of Management, Indore*

In order to sustain a competitive advantage, organizations invest their time, effort, and resources to develop their workforce through training. It is argued that training leads to the learning of the workforce and thus, contributes to the human capital of the organization. The literature on learning during training has focused mostly on either the trainees' characteristics or the trainer's characteristics. For example, prior research demonstrated that trainees' ability and motivation are crucial for the effectiveness of training. On the other hand, trainers' ability was found to facilitate trainees' learning. Though studies have noted that the characteristics of both the trainee and the trainer are important predictors of trainees' learning, studies linking the characteristics of both the trainer and the trainee on trainees' learning are relatively scarce. This is important as training is a dyadic process. The present study is based on the 'Ability Motivation Opportunity' framework, the 'Attribution Model of Training' which highlighted the importance of ability, and motivation in ensuring training effectiveness. In the present study, we examined the influence of ability, and motivation of both the trainer and the trainee on trainees' learning in a training program. The study was conducted among the employees of a large public sector organization that is spread across the country and is in the process of transformation from an age-old traditional organization to a technologically advanced organization. For the success of this digital transformation, training of its employees on technological skills assumes a very crucial role. 1458 trainees (village branch heads) and 94 trainers participated in our study. We captured respondents' ability, and motivation as our main study variables, and personality traits, beliefs, degree of choice, degree of familiarity, peer-interaction, and demographics as control variables. The findings of the study supported our hypotheses. Implications of the study were discussed.

We presents four studies to examine the individual, group, and family predictors of workplace ostracism. Using advanced survey research methods (experience sampling method, multi-level survey, and three-wave time-lagged design), the authors tested predictors of workplace ostracism, such as employees' task proactivity, group cognitive diversity and group time pressure, and (lack of) family supportive supervision and family-to-work conflict. The authors also showed that employees responded to supervisor ostracism with emotion faking, which was related to more burnout and less felt authenticity.

New Advances in Self-Determination Theory Applied to Work *Self-Determination Theory Applied to Work*

Participant: **Karin S. Moser**, *LSBU Business School, London / UK*

Participant: **Marylene Gagne**, *Curtin Uni*

Participant: **Sarah-Genevieve Trepanier**, *U. Du Quebec a Trois-Rivieres*

Participant: **Rebecca Hewett**, *Rotterdam School of Management, Erasmus U.*

Self-determination theory (SDT; Deci & Ryan, 1985) has contributed to the advancement of knowledge on the topics of leadership and knowledge sharing. SDT proposes a multidimensional conceptualization of work motivation that comprises intrinsic motivation (i.e., doing something out of enjoyment), identified extrinsic motivation (i.e., doing something out of values), introjected extrinsic motivation (i.e., doing something to maintain self-esteem), and external extrinsic motivation (i.e., doing something to obtain a reward). A recent meta-analysis has shown that autonomous types of motivation (i.e., intrinsic and identified) account for more positive variance in work outcomes than controlled forms of motivation (i.e., introjected and external; Van den Broeck et al., 2021). SDT also proposes that the satisfaction of three basic psychological needs for competence, autonomy, and relatedness promote autonomous over controlled types of motivation, and are also associated with a host of positive work outcomes (see Van den Broeck et al., 2016 for a meta-analysis). The four presentations that are part of this symposium aim to deepen knowledge of work motivation. Two of the presentations present research dealing with the effects of monetary rewards on performance and knowledge sharing, while the third links research on work motivation with research on coping when shocks happen. The fourth presentation re-examines the factorial structure of a work motivation measure based on self-determination theory. Together, these four presentations push researchers to “think again” about some well-accepted findings. The first presentation revisits the effects of rewards on motivation and performance. Luxton and colleagues tested competing hypotheses based on SDT and expectancy theory to see if instrumentality or autonomy is more important to performance, and how rewards affect them. They found that pay-for-performance does increase instrumentality perceptions and decrease feelings of autonomy. However, pay system had no direct or indirect effect on performance. Based on past research showing that monetary rewards discourage knowledge sharing (Brock et al., 2005; Cockrell & Stone, 2010; Zhao et al., 2016), the second presentation focuses on the relative importance of verbal versus monetary rewards on promoting knowledge sharing. Moser present the results of three experiments showing that while praise increases knowledge sharing, monetary rewards decreases it. These results concur with previous research showing that verbal rewards increase feelings of competence and do not decrease feelings of autonomy, while monetary rewards decrease feelings of autonomy (Deci et al., 1999; Kuvaas et al., 2020). The third presentation examines how motivational resources help employees cope with shocks (such as a pandemic). Hewett and Emery show, in a sample of scuba divers, that initial work motivation influenced the coping mechanisms they used to cope with job loss during the pandemic. They found that having more autonomous forms of motivation was related to better coping styles than having more controlled forms of motivation, resulting in better well-being outcomes. The fourth presentation revisits the factor structure of the Multidimensional Work Motivation Scale (Gagné et al., 2015). Trépanier and colleagues tested and refined the factor structure of this popular work motivation measure, eliminating three items. They give future researchers avenues to further ameliorate the measure in a way that is consistent with the theory.

HRM and Innovation and Creativity

Session Moderator: **Yunsung Lee**, *KAIST College of Business*

HR: **The Relationships Between High-Performance Work Systems, Collective Well-being, and Innovation**  

Author: **Yunsung Lee**, *KAIST College of Business*

Are human resource management practices truly effective for improving firm-level innovation? and how are they related to employees' well-being? The current study explores the relationship between high-performance work systems (HPWS), collective well-being, and innovation. By using a national population survey of 368 Korean firms, I found a significant indirect effect of HPWS on firm-level innovation through collective well-being. As a result, HPWS is an essential mechanism to improve firm-level innovation by fostering work environments where employees are valued and cared; therefore, they tend to put extra effort into firm-level innovation. Furthermore, I found significant moderating roles of organizational cultures that clan rather than market cultures increased the positive effects of HPWS on collective well-being and firm-level innovation. This empirical result suggests the importance of strategic fit between firm-level strategy and cultures to construct social and economic relationships between firms and employees.

HR: **Social Responsibility, Talent Management Architectures and Innovation**  

Author: **Alison Glaister**, *U. of York*

Author: **Smitha Nair**, *Amrita School of Business*

Author: **Ekrem Tatoglu**, *Gulf U. for Science and Technology*

Author: **Mehmet Demirbag**, *U. of Essex*

The paper examines the configurational alignment of processes stemming from the pursuit of organisations' socially relevant objectives, the processes that support innovation and the moderating role of the talent management architecture. Using the resource-based view and dynamic capabilities, the paper highlights the requirements of processes that can respond to the paradoxical tensions between altruism and instrumentality in organisations. Through a survey of 238 firms located in Turkey, we find that both socially relevant objectives and TMA helps foster a range of processes that support innovation. Further, TMA strengthens the conflicting socially responsible objectives and innovation processes, but TMA necessarily incorporates measures that reward as well as punish

HR: **The Interaction of Creativity Encouragement and Standardized Work Practices in Hospitality Industry**  

Author: **Meiqin Jiang**, *College of Economic and Management, Huazhong Agricultural U*

Author: **Pengcheng Zhang**, *Huazhong U. of Science and Technology*

Author: **Chenglin Gui**, -

Author: **Mingwei Liu**, *School of Management, Huazhong U. of Science and Technology*

Aligning with the stress perspective, we propose a moderated mediation model to illustrate the effects of leader encouragement of creativity on employee work outcomes, namely, creativity and service quality in the hospitality industry. We argue that leader encouragement of creativity has contradicting effects on employee creativity and service quality through its effects on employee creativity pressure when employees are under standardized work practices. We collected 175 supervisor-employee dyads in the hospitality industry in China at two points and from multi-sources. Applying bootstrapping technique in SPSS 25 to test our proposed moderated mediation model, the findings suggest that leader encouragement of creativity has a negative indirect effect on employee creativity and service quality via creative pressure when employees work under standardized work practices. Theoretical and practical implications specific to leader encouragement of creativity for employee creativity and service quality in hospitality industry are discussed.

Paper is Available to Meeting Registrants Only.

HR: **How Does Control HRM Impact Creativity? A Curvilinear Moderated Mediation Model**

Author: **Yiqi Wu**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Author: **Qinxuan Gu**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Drawing on social information processing theory and activation theory, this study theorizes a curvilinear moderated mediation model that links perceived control human resource management (HRM) and employee creativity. Using multisource data from 814 employees and 157 supervisors, we find that perceived control HRM has an inverted U-shaped relationship with employees' work vigor and this relationship is moderated by perceived commitment HRM. Employees are more vigorous at work when perceived commitment HRM is high and perceived control HRM is moderate. Furthermore, the indirect effect of perceived control HRM and employee creativity through work vigor depends on perceived commitment HRM. Theoretical and practical implications are discussed.

Gratitude In the Workplace: Moving Toward New Frontiers *Gratitude In the Workplace*

Session Chair: **Ussama Ahmad Khan**, *U. of Washington, Seattle*

Session Chair: **Lauren Rachel Locklear**, *Texas Tech U.*

Discussant: **Allison S. Gabriel**, *U. of Arizona*

Presenter: **Ryan Fehr**, *U. of Washington, Seattle*

Presenter: **Jiaqing Sun**, *The London School of Economics and Political Science*

Presenter: **Ayana N. Young**, *U. of North Carolina, Chapel Hill*

A growing body of organizational research has begun to explore the role played by gratitude in employees' attitudes, perceptions, relationships, and behaviors. However, the literature remains limited in important ways. For instance, the literature has largely focused on gratitude within dyads, and has assumed that all gratitude expressions are equal regardless of the source or motivation behind these expressions. Our symposium aims to contribute to the organizational literature by addressing these limitations. The collection of papers we have assembled discuss how gratitude manifests in organizations and how third-party coworkers perceive the authenticity and effectiveness of gratitude expression. These papers adopt a multi-method approach to studying gratitude in a range of diverse organizational contexts. Taken together, this set of papers has implications for important organizational outcomes such as leadership, employee psychological empowerment, prosocial behaviors, and task performance.

Current Research on Bottom-line Mentality and Future Directions *Current & Future Research on Bottom-Line Mentality*

Organizer: **Nazifa Zaman**, *Rutgers U., School of Management and Labor Relations*
Organizer: **Cheng-Huan Liu**, *Rutgers U., School of Management and Labor Relations*
Discussant: **Rebecca Lee Greenbaum**, *Rutgers U., New Brunswick*
Presenter: **Mayowa Babalola**, *Graduate School of Business, Nazarbayev U.*
Presenter: **Matt Quade**, *Baylor U.*
Presenter: **Mobina Farasat**, *National U. of Computer and Emerging Sciences*

Since the construct of bottom-line mentality was introduced by Greenbaum et al. in 2012, a considerable body of research has developed, with prior research demonstrating both negative (e.g., unethical behavior, Babalola et al., 2020; relationship issues with coworkers, Greenbaum et al., 2012) and positive outcomes of bottom-line mentality (e.g., enhanced performance, Babalola et al., 2020; thriving at work, Babalola et al., 2020), but much more research is needed. This symposium presents current research that aims to advance a nuanced understanding of bottom-line mentality and to provide insights for future research. Given research support on the mixed utility of bottom-line mentalities, and the fact that this mentality may be relatively common in some organizational settings (Pfeffer, 2016), this set of papers draw from diverse theoretical perspectives to identify and understand the factors that may contribute to bottom-line mentality and its outcomes. These papers provide implications for organizations to leverage conditions that trigger the benefits and reduce the drawbacks of EBLMs in the workplace. The final systemic review paper discusses where bottom-line mentality literature stands and where it can go from here.

Professional Identity Development and Management: New Directions

Session Moderator: **Jeffrey Bednar**, *Brigham Young U.*

MOC: Working Hard, Teaching Well: Learners Attain Better Outcomes from “Strivers” than from “Naturals”

Author: **Nuria Tolsa-Caballero**, *U. of Michigan, Ross School of Business*

Author: **Chia-Jung Tsay**, *U. of Wisconsin-Madison*

When students believe their instructors' domain mastery is primarily the product of effort (“strivers”) rather than natural talent (“naturals”), students attain superior learning outcomes. Through archival data from the largest publicly available teaching evaluation database, “Rate My Professors,” a pre-registered experiment, meta-analyses of 12 additional studies, and 3 supplementary studies, we find that having a role model of hard work rather than innate ability as an instructor increases the relative value learners place on hard work with respect to natural talent and their self-efficacy, leading them to attain better learning outcomes. Our work demystifies natural talent. Despite the awe that natural talent prompts, “strivers” may be more inspiring than “naturals,” leading people to thrive. Highlighting the hard work underlying instructors' achievement may help others learn more and, ultimately, contribute to efficiency gains in education spending through improved educational outcomes.

MOC: How will I Lead in This Organization? How Individuals Situate Preexisting Leader Identity Content 

Author: **Jeffrey Bednar**, *Brigham Young U.*

Author: **Benjamin Martell Galvin**, *Brigham Young U.*

Author: **Archie Lee Bates**, *United States Military Academy*

Finalist for MOC Division Best Paper Award

Based on qualitative data collected at the United States Military Academy (West Point), this research uses a qualitative grounded theory approach to contribute important theoretical insights to our understanding of how leaders construct leader identities in organizations (c.f., Ashforth & Schinoff, 2016). Our theoretical model moves beyond existing research on leader identity construction- which largely treats individuals as blank slates as they construct leader identities- by highlighting the critical role of preexisting leader identity content that individuals bring with them to new organizations. Our model suggests that as organizations utilize sensebreaking and sensegiving to help socialize and guide members towards their preferred prototype of leadership, individuals must figure out how to situate their preexisting leader identities in relation to that prototype. In this process, individuals may discard certain aspects of their preexisting leader identity and/or ignore certain aspects of the organization's preferred prototype of leadership, resulting in one of four situated leader identity types: Pretender, Adopter, Maverick, or Rogue. Our model uncovers important outcomes associated with these four types of situated leader identities and illustrates how one's situated leader identity might evolve over time as leaders engage with and learn from new experiences they encounter.

MOC: Dancing with Myself: Model of Professional Identity Development via Intrapersonal Vicarious Learning

Author: **Bianca Crivellini Eger**, *HEC Paris*

Author: **Daniel Newark**, *HEC Paris*

In this paper, we introduce a process model of professional identity development through intrapersonal vicarious learning. Building on an ethnography of working professionals in Milan, Italy who also perform as drag queens, we describe how an individual's Alter Ego or Secondary Self can facilitate the exploration of desirable professional identity attributes that are then transferred to their Primary Work Self. Central to this process is the adoption of a cognitive attitude of compartmentalization. Rather than seeing their Alter Ego as a side of their Primary Self, these individuals see it instead as a separate, Second Self. This subjective perception of separateness reduces and postpones pressures to make sense of, find consistency in, or integrate the Second Self's thoughts, behaviors, and self-conceptions vis-a-vis the Primary Self. In turn, this reduced pressure for coherence and integration grants the individual more freedom to explore a variety of experiences, behaviors, and interpretations that may otherwise be avoided or curtailed were they immediately seen as needing to correspond to, or be incorporated into, the Primary Self. Once these novel identity attributes emerge and develop, our process model describes how they are ultimately modified and transferred to the Primary Self through a process we refer to as intrapersonal vicarious learning.

MOC: Identity Construction in Emerging Occupations: How Muslim Chaplains Bricolage Occupational Identity    

Author: **Muhammad Amir Hamza Khan**, *Boston College*

Finalist for MOC Division Best Paper on Diversity and Cognition Award

Focusing on the experiences of Muslim Campus Chaplains, I build a model of how members of emerging occupations construct an occupational identity. In established occupations, individuals form an occupational identity through years of extensive training, standardized education, licensing/credentialing and informal socialization into the occupation. Members of emerging occupations do not have this luxury and are generally thrust into the occupation without holding a strong occupational identity. I show that identity bricolage is a process where members of emerging occupations construct an occupational identity with the identity resources they have readily available. They can do this through identity narrowing or identity expansion. Identity narrowing refers to members of emerging occupations defining their occupational identity exclusively on the basis of an identity that they already hold. This could be a lingering occupational identity, a coveted personal identity or even their desired self. Identity expansion refers to members of an emerging occupation constructing an occupational identity by drawing upon the identities of important stakeholders around them as a result of which they also experience self-expansion. Students are the main stakeholder for Muslim Chaplain and they draw upon the multiple identities of their students to construct a syncretic occupational identity. This also impacts their own identities grow and has implications for the Muslim Chaplains well-being at work. Occupational identity helps guide occupational members behavior in organizations and a strong occupational identity is a predictor for occupational success. Understanding how members of emerging occupations construct their occupational identity is crucial to appreciate how they may become successful in their occupations. Members of emerging occupations are increasingly important to organizations and their success so this could have implications for organizations as well. I conclude this work by discussing implications for theory and practice.

Breach, Disruption, and Recovery

Session Moderator: **Samuel Mortimer**, *The Wharton School, U. of Pennsylvania*

OB: **The Construction of Breach: Transgression and Voice in Japanese Shrine Festivals** 

Author: **Samuel Mortimer**, *The Wharton School, U. of Pennsylvania*

I present a theory of how behavior within organizations comes to be labeled as misconduct at the organizational level. Rather than focusing on individual judgment and decision-making, I conceptualize the labeling of misconduct as an organizational performance—less a courtroom than a courtroom drama. I argue that these performances play a critical role in how organizations can reduce negative deviance without at the same time discouraging positive deviance. I illustrate this using a case study of Japanese shrine festivals. Drawing from ethnohistorical literature, I argue that the processes through which participants identify and attribute responsibility for misconduct play a crucial role in encouraging the expression of voice, a form of positive deviance, during these festivals.

OB: **How Organizational Transgressions Can Prompt Prosocial and Deviant Behavior in Employees via Guilt** 

Author: **Megan Herrewynen**, *Ted Rogers School of Management, Toronto Metropolitan U.*

Author: **Annika Hillebrandt**, *Ted Rogers School of Management, Toronto Metropolitan U.*

Despite efforts to reduce ethical misconduct by organizations, many organizations occasionally act unethically. Understanding the outcomes of such organizational transgressions is important, as this can facilitate organizational recovery and prevent future transgressions. However, whereas scholars have identified numerous detrimental outcomes of organizational transgressions for organizations, we have a poor understanding of how transgressions at the organizational level can impact employees. Drawing on attribution theories of emotion, we argue that employees can experience vicarious guilt in response to an organizational transgression. Guilt, in turn, may prompt employees to engage in prosocial behaviors targeted at external parties as well as deviant behaviors targeted at the organization. Our hypotheses were supported across three studies: a critical incident recall experiment with a diverse sample of full-time employees, an interactive scenario-based experiment with a student sample, and a two-wave survey with members of a single organization. Theoretically, our studies provide insight into individual-level responses to organizational transgressions, advance our understanding of vicarious guilt in organizational settings, and identify antecedents of prosocial and deviant employee behaviors. Practically, we provide insights that are important for the development of interventions aimed at helping organizations and employees recover from transgressions.

OB: **Harm or Harmony? Error Cover-up Behaviors At Work** 

Author: **Zihan Liu**, *U. of Houston*

Author: **Xueqi Wen**, *Tongji U.*

Author: **Feng Qiu**, *U. of Massachusetts, Amherst*

Author: **Xingyu Wang**, *School of Hotel and Tourism Management, Hong Kong Polytechnic U.*

Author: **Mingyun Huai**, *Tongji U.*

Instances constantly occur in the workplace wherein one notices errors made by coworkers and chooses not to report to others but rather handle them in a secluded way. However, research on employee errors has not examined employee cover-up of coworkers' errors. We identified proactive and passive error cover-up as two dimensions of error cover-up behavior and defined proactive error cover-up as one intentionally handling a coworker's error without calling attention from others and passive error cover-up as one purposefully disregarding a coworker's error. Using three studies, we found that (1) employee high-quality relationships with other team members (TMX) is positively related to proactive error cover-up; (2) psychological safety is negatively related to passive error cover-up; (3) proactive error cover-up is positively related to team performance while passive error cover-up is negatively related to team performance. Our findings contribute to a better comprehension of employee cover-up of peer errors.

OB: **Social Disruption and Equilibrium Reconstruction: A Media-based Perspective**

Author: **Jo K. Oh**, *U. of Connecticut*

Author: **Zhenyu Liao**, *Northeastern U.*

Author: **You Jin Kim**, *City U. of Hong Kong*

Author: **Wonbin Sohn**, *U. of Texas at Austin*

Despite the essential role of the media in shaping the individual and collective sense-making during times of social disruption, little is known about the nuanced processes of how the media affects the emergence of a course of cognitive, emotional, and behavioral responses taken by employees. We integrate media dependency theory with appraisal theories of emotions to propose a multi-phase process model, which provides a fine-grained delineation of how the media influences each of the different phases in which employees cognitively process, emotionally experience, and behaviorally respond to social disruptions, and ultimately adapt to a new social equilibrium. In doing so, we articulate why and how individuals' psychological and behavioral responses may vary across situations and time. Our theoretical framework not only introduces a media perspective to organizational research, but more so, it advances Alexander's societalization framework (2018, 2019) by conceptualizing the micro-psychological processes in which individual employees, the constituents of teams, organizations, and society at large undergo in adjusting to the aftermath of social disruptions.

Panelist: **Jessica Beth Rodell**, *U. of Georgia*

Since first being studied in management about half a century ago, the research on help has expanded to include multiple sub-domains (e.g., OCBs, reciprocity, volunteering, advice seeking), hundreds of publications, best-selling books, and tens of thousands of citations attributed to this work. Taken together, this past effort begs the question: what does the future of help at work look like? Our symposium includes four expert panelists working on the front lines as academics and practitioners examining and facilitating this phenomenon, and asks them to address specific questions about the Future of Help at Work. The questions are designed to inform both research and practice on this topic, as well as addressing the theme for this year's conference, Creating a Better World Together.

In today's changing world of work, an increasing group of individuals are actively taking charge of their careers inside or outside of organizations (Ashford et al., 2018; Parker & Collins, 2010). For these individuals, identity is a key resource that provides a structure to see and interpret the business context and to behave in it (Leary and Tangney, 2012; Markus, 1977). This symposium addresses identity for two specific groups that are currently receiving considerable attention in literature: organizational leaders and gig workers.

This research brings together a systematic literature review, topic modelling, and qualitative analysis in a novel, mixed method approach to synthesize research on workplace wellness interventions and offer directions for future research. First, we conducted a systematic literature review to create a collection, or corpus, of 5,674 research publications on wellness intervention research. Next, topic modelling, a quantitative machine learning technique that identifies key topics, was deployed to extract and investigate trends within the corpus. Finally, abstracts were qualitatively coded according to a framework that examined the trends across: 1) which journal outlets and disciplines are publishing workplace wellness intervention research; 2) the different types of wellness interventions that are studied in workplaces; 3) dependent variables measured as outcomes of wellness interventions, and any reported mechanisms or program theory linking the intervention to the outcomes; 4) the methodologies utilized by researchers and their corresponding rigour; and 5) the context the research takes place within. Interestingly, despite the growing recognition that wellness is a multi-dimensional concept, 'wellness' is increasingly operationalized using primarily psychological outcomes. Other trends depicted a lack of consistency in research design, program theory, and results making it difficult to specify how or why a program is beneficial for a specific population and setting and the extent to which results were reliable.

ODC: **Toward a Typology of Co-emergence of New Firms and New Sectors** 

Author: **Jackson Kinyanjui Wanjiku**, *Halmstad U.*
Author: **Romeo Turcan**, *Aalborg U. Business School*
Author: **Svante Andersson**, *Halmstad U.*

In this paper we aim to explore the phenomenon of emergence in uncertain contexts. Specifically, we focus on co-emergence of new firms and sectors. It is an area high importance to practitioners and policy makers, but at the same, less researched and understood. We analyzed, synthesized, and theorized this intersection across 16 inter-disciplinary research contexts. Constant theorizing and iteration identified strong and weak emergence as key properties of emergence that can explain most of the co-emergence between new ventures and sectors. We employed typology construction by reduction to develop the typology of co-emergence by cross-tabulating weak and strong emergence of new sectors and ventures. This led to identification of four types of co-emergence: benign, supervenient, radical and nominal. These four types are the focus of the paper. Implications for academia, practice and policy conclude the paper.

ODC: **Unraveling Contingent Mirroring Dynamics within Firms – Insights from a Multinational Conglomerate**

Author: **Christopher Chochoiek**, *EBS U.*
Author: **Tobias Gutmann**, *EBS Business School*
Author: **Christoph Fuchs**, *EBS U.*

Existing literature on the mirroring hypothesis and its dynamics has yielded inconsistent findings as it relies on persistently static, fragmented, and industry-scope dominated considerations. In contrast, this study takes on a processual perspective on the management of mirroring relationships within a multinational conglomerate in response to changing contingency factors. Building upon an embedded multiple case study, we derive a set of propositions that account for the dynamics and interrelations of mirroring and its respective contingencies. We highlight two dedicated phases of change – frame-breaking and incremental modularization – that are influenced by the sense of urgency to adapt and adopt architectural changes as explanation for consecutive deviation types of mirroring.

ODC: **A Semantic Lens on Smart Working: Unpacking the Theoretical Construct**

Author: **Emanuele Castriotta**, *U. of Cagliari*
Author: **Andrea Tomo**, *U. of Napoli Federico II, Italy*
Author: **Maria Chiara Di Guardo**, *U. of Cagliari*
Author: **Gianluigi Mangia**, *U. degli Studi di Napoli Federico II*

The paper provides a semantic lens on the concept of Smart Working by unpacking its theoretical construct on the basis of the terms scholars have used over the last 30 years of research. Based on a co-words analysis, we detect nine distinctive dimensions of SW (Work dematerialization, HRM practices, Dispersed organization, Work enhancement, Business opportunity, Digital spaces, Inclusivity work, Individual mindfulness, Organizational boundaries) and four promising macro-areas (“Organizational and technological dimension”, “Networking”, “Individual psycho-physical wellness”, and “Social interaction”) that might be of support to scholars interested in deepening specific issues of SW and to practitioners and professionals involved in the definition of organizational policies in the current context. We therefore unveil the relationships among the dimensions and the most frequently addressed terms used in association with the concept of SW, and an overall holistic picture of the SW phenomenon and latent future research areas.

Author: **Wim Gijssels**, *Maastricht U.*

Both management scholars and practitioners agree that organizations need to continuously learn as a response to ongoing changes in the business environment, and that an organizational learning culture (OLC) is critical in this endeavor. Yet, creating an OLC is a time- and resource-intensive endeavor, whose return on investment is not certain; evidence on the OLC-performance link is scattered across a range of academic domains, industries, cultural contexts, and measurements. Building on the resource-based view of the firm and the competing values framework, this study synthesizes extant evidence on the link between OLC and organizational performance, innovation, and performance-related work attitudes. Meta-analyses of 86 studies and 223 effect sizes with a cumulative $N = 43,232$ reveal that OLC is positively related to all outcomes, explaining 12% of variance in organizational performance, 20% of innovation, 24% of job satisfaction, 22% of organizational commitment, and 8% of turnover intentions, statistically significant effect sizes that are characterized by high levels of heterogeneity. These findings provide coherent evidence on the value of investing in an OLC, resulting in managerial and research implications.

Given their complex, company-specific and history-dependent nature, organizational capabilities are generally considered as the foundation of a firm's long-term strategy and as major source of competitive advantage. While the strategic significance of firm capabilities is uncontested, we still have an incomplete understanding how they emerge, develop, and change over time. In particular, given discontinuously shifting environments, the question of how incumbent firms reconfigure their capabilities in response to such changes and successfully move from one capability configuration to another, is of great significance. It is the aim of this symposium to push the discussion and advance the theoretical understanding in this realm. Topics such as capability rigidity, learning barriers, capability integration and redeployment as well as dynamic capabilities will be covered. The symposium will bring together different capability scholars and provide a platform for a productive discussion of how to push the field forward.

Artificial intelligence (AI) and automation have been generating increased attention from scholars concerned with the impact of technologies on firms and society. We propose a set of four papers that will stimulate discussion about the antecedents of AI's innovation and diffusion and the subsequent implications for workers, firms, and public welfare. Our goal is to increase our collective understanding of how we can prepare ourselves at the individual, organizational, and societal levels to benefit from and capitalize on the widespread diffusion of AI and automation, while at the same time being attentive to the potential negative consequences of AI technologies. Therefore, our symposium aligns well with this year's annual meeting theme of creating a better world together.

Deception is pervasive in negotiations, organizations, and everyday life and profoundly influences individuals, their relationships, and societies. How is deception different from other forms of (un)ethical behavior? What makes people more or less likely to use it? And how does it influence deceivers and their targets? In this symposium, we consider these questions as we present our theoretical and empirical research on deception. Our papers offer important insights into deception in negotiations, organizations, and everyday life and provide a theoretical foundation for future research on this important topic. From a practical perspective, our papers also suggest tactics that negotiators, managers, and regulators can use to curtail the use of deception.

Non-market Strategies II

Session Moderator: **Zeren Li, Yale U.**

IM: **Subsidies for Sale: Post-government Career Concerns, Revolving-Door Channels, and Public Resource**  

Author: **Zeren Li, Yale U.**

While the existing literature focuses on how revolving-door officials deliver favorable government treatment to firms after leaving public office, this paper shows that public officials distort public resource allocation for private-sector job opportunities while still in office. To test this theory, I construct a new dataset that links over XXX corporate subsidy programs approved by multiple levels of governments with revolving-door officials who joined publicly listed Chinese firms between 2007 and 2019. I show that forward-looking officials provide sizable benefits favorable subsidies to their future employers. To verify the exchange of favors, I document that firms repay public officials who have provided favorable subsidies by hiring and paying them enormous amounts of cash compensation. Finally, I find that the reputation cost is the mechanism through which this quid pro quo relationship is sustained.

IM: **Ethics, Economics, Institutions - The Three Logics of Multinational Corporations' Moral Dilemmas**    

Author: **Laura Kirste, Friedrich-Alexander U. of Erlangen-Nürnberg**

Author: **Dirk Holtbruegge, U. of Erlangen-Nürnberg**

In this article, we argue that multinational corporations are subject to multiple moral dilemmas that result from three different imperatives - institutional pressures, economic rationality, and internal principles. Grounding our work in institutional theory and moral philosophy, we develop a conceptual model of moral dilemmas in multinational corporations and offer eight subsequent resolution strategies. We contribute to international business research by conceptualizing internationalization decisions as moral reasoning and integrating approaches from international business and ethics. Our model allows multinational corporations to evaluate internationalization decisions under institutional friction based on economic and moral reasoning and to draw conclusions on the implications of these resolution strategies.

“Crises, Shocks, and Downsizing, Oh My”: Their Impact on Practice of Change

Session Moderator: **Bart De Keyser**, *U. of Antwerp*

ODC: **Chronicle of a Crisis Foretold: Slowing Down our Understanding of Crisis in Organizational Life**  

Author: **Bart De Keyser**, *U. of Antwerp*

Author: **Koen Vandenbempt**, *U. of Antwerp*

Although researchers have increasingly explored the notion of crises happening in organizational life, it remains commonplace to interpret such situations as sudden and unexpected. This paper questions whether such conceptualization actually is in line with the day-to-day reality that many organizations face. Drawing on the detailed case of synthetics in the diamond industry, this paper showcases how researchers' current approach to the concept of crisis may put too much stress on the sudden and exceptional at the expense of the more gradual and mundane. By arguing to 'slow down' our understanding of what constitutes a crisis, this paper works to reorganize the fields on risk, resilience, and crisis management – helping organizations to become better aware of the gradually developing risk that seemingly trivial phenomena might pose, and proactively tailor their flexibility as well as crisis approach accordingly.

ODC: **Organisational Risk Management Strategies**

Author: **Anže Burger**, *Faculty of Social Sciences (U. of Ljubljana, Slovenia)*

Author: **Iris Koleša**, *Faculty of Social Sciences (U. of Ljubljana, Slovenia)*

Author: **Andreja Jaklic**, *U. of Ljubljana*

The Covid-19 pandemic has reiterated the importance of flexibility, adaptability, reactivity and proactivity in business for successful (immediate as well as long-term) risk management during systemic crises that often involve environmental, industry, firm-specific and individual-level uncertainties simultaneously. This exploratory study provides a typology of strategies that firms employ in order to cope with or avoid the negative consequences of crises and capitalize on the opportunities they present. Using empirical evidence on firms' responses to the pandemic from two surveys conducted among international businesses after the first wave of the 2020 Covid-19 outbreak and combining cluster and regression analyses we identify four groups of businesses based on the different strategies they use to confront the economic downturn. We label these as (1) defensive, (2) wait-and-see, (3) omnibus, and (4) innovation-oriented firms. The results show that firm size, firm age, labour productivity, profitability, export intensity and global orientation all influence the strategies used by firms when responding to crises. The firms' crisis management-related strategic orientations also have implications for firm performance in the short and long run. The wait-and-see and innovation-oriented strategies raise the probability of stable revenue during crises, whereas the omnibus strategy also implies future growth of firm revenue. The study has theoretical and practical implications for planning, designing, monitoring, and implementing crisis management strategies in business that lead to stable or improved performance.

ODC: **Strategic Responses of SMEs to Crisis Environment: The Role of Organizational Identity** 

Author: **Lev Alushkin**, *National Research U. Higher School of Economics, St. Petersburg*

Author: **Emilia Karpinskaia**, *National Research U. Higher School of Economics*

Author: **Virginia Bodolica**, *American U. of Sharjah*

Global socio-economic shocks, such as the COVID-19 pandemic, create a stiff environment that endangers the existence of SMEs. In this study, the concept of organizational identity is used as a possible explanatory factor of the strategic choice made by SMEs to respond to crisis. We employ a longitudinal multiple case study design to extract rich data from interviews conducted during twenty-month period with nine Russian SMEs in order to identify whether varying types of organizational identity serve as facilitators or deterrents of organizational adaptation. Our qualitative findings suggest that: a) firms with utilitarian organizational identity choose proactive strategic responses; b) companies with normative organizational identity implement reactive strategic responses; c) enterprises with dual organizational identity adopt a sequential approach to strategic responses. Furthermore, the underlying mechanism behind these relationships anchors in the different types of intellectual capital.

Paper is Available to Meeting Registrants Only.

ODC: **The Impact of Industry-level Downsizing Prevalence on Organization-Level Layoff Implementation** 

Author: **Nita Chhinzer**, *U. of Guelph*

This research examines the impact of downsizing prevalence among referent firms in the industry on organizational downsizing activity. The study posits that organizations operating in industries with high downsizing prevalence assume a cost-containment approach, while organizations operating in industries with low downsizing prevalence draw upon social exchange theory when operationalizing layoffs. Accordingly, organization-level layoff implementation considerations (i.e. severity, frequency, alternatives, explanations, and advanced notice) for organizations operating in high versus low downsizing prevalence are compared, using a comprehensive population of all mass layoffs events in Ontario, Canada from March 2013 to May 2019 (n=418). The findings identify that the industry level downsizing prevalence impacts the layoff severity, use of alternatives and types of explanations provided.

Session Moderator: **Timo Sohl**, *U. Pompeu Fabra*

STR: Diversifying Entry, Resource Relatedness, and Redeployability: Evidence from a Natural Experiment   

Author: **Timo Sohl**, *U. Pompeu Fabra*

Author: **Timothy B. Folta**, *U. of Connecticut*

The topic of related diversification is of fundamental interest to strategy research. However, the understanding of how the potential for resource redeployment might encourage related diversification is limited. This paper explores the impact of the 2006 German real estate transfer tax (RETT) reform, which led to higher RETT rates but retained the exemption from RETT for corporate restructurings. We propose that firms might have reacted strategically to the threat of higher transfer taxes by combining closely related businesses into a portfolio, providing an efficient substitute market for reallocating property assets in the event of business-specific shocks. Consistent with a dynamic perspective on relatedness, difference-in-differences analyses of the European retail market show that the probability of entry into closely related businesses increased significantly for firms that were affected by the reform, relative to control firms. This finding contributes to the literature that links firm boundary choices to inter-temporal economies of scope and offers new insights into the real effects of transfer tax policies.

STR: Hand(l)ing the Reins of Corporate Resources: Evidence from Acquisitions 

Author: **Shivaram Devarakonda**, *Tilburg U.*

Author: **Martin C. Goossen**, *Old Dominion U.*

Author: **Louis Mulotte**, *Tilburg U.*

The allocation of control over resources is a common topic in corporate strategy research. Though firms could keep control at the corporate-level and guarantee their availability to the entire corporation, delegating control to individual business units increases incentives to exploit resources more efficiently. We employ transaction cost theory to understand the trade-offs faced in control allocation decisions and particularly focus on technological resources, specifically patents, as a unique yet evermore important type of resource. Assuming that delegated control to business units is more efficient, we propose that corporations will main central control when such delegated control over technological resources is more likely to result in inter-unit haggling issues or coordination problems. These effects should be stronger for technologically diverse firms as resources have broader applicability and such events are more likely to occur. We find partial support for these postulations in a sample of acquisitions where control over acquired resources needs to be allocated. These findings contribute to the literature on resource allocation, acquisition integration, and R&D structures.

STR: Endorsement Signals and Resource Attraction in New Markets: Lessons from the Emergence of ICOs

Author: **Cristiano Bellavitis**, *Syracuse U. Whitman School of Management*

Author: **Daniel P Forbes**, *U. of Minnesota*

Author: **Tom R. Vanacker**, *Ghent U. and U. of Exeter*

Past research shows that new firms can facilitate resource attraction by securing endorsements from prominent third parties. In new markets, however, it is often unclear which endorsers—and, therefore, which endorsement signals—are credible. We sought to understand how the effectiveness of various endorsement signals might change as new markets develop. To do so, we study the emergence of the global market for Initial Coin Offerings (ICOs), in which new firms raise money by selling “tokens”. Drawing on a sociocognitive approach to signaling, we propose that in the very early stages of a market, signal receivers rely on endorsement signals that resemble signals they know from other, more established markets. Over time, however, we expect that signal receivers will better assess signal credibility and focus more (less) on those signals for which they receive positive (negative) information. Our findings are generally consistent with these expectations; however, changes in signal effectiveness are especially pronounced for the endorsement signals of weakly-vetted third parties, whereas the signals of more strongly-vetted third parties exhibit stable, positive effects. Taken together, our findings shed light on signaling in new markets by showing how different signals may become more or less effective over time.

STR: Technological Diversification and Organisational Performance – A Meta-Analysis  

Author: **Michael Gusenbauer**, *U. of Innsbruck School of Management*

Author: **Michael Mayer**, *U. of Bath*

Author: **Julia Hautz**, *U. of Innsbruck*

Author: **Kurt Matzler**, *U. of Innsbruck*

Author: **René Ceipek**, *Kearney*

The level of technological diversification is a key determinant of organisations’ ability to respond to change and to shape innovation. Over the last years, an increasing body of knowledge has investigated the antecedents, contingencies and performance consequences of technological diversification. While most research finds increased diversification is associated with higher organisational performance, the conditions under which such effects are particularly pronounced are less clear. This meta-analysis synthesises 110 independent samples that collectively cover observations of 133,814 organisations between 1950 to 2018. Our results show that the technological diversification-performance relationship is positive, yet significantly moderated by the type of technological diversification and the macro-environment the organisation operates in.

Behavioral Antecedents of Mergers and Acquisitions

Session Moderator: **Turanay Caner**, *North Carolina State U.*

STR: The Politics of Acquisitions: An Upper Echelons Perspective

Author: **Bowen Lou**, *Lancaster U. Management School*
Author: **Neil Gareth Shepherd**, *Aston Business School*
Author: **Andreas Strobl**, *Lancaster U. Management School*
Author: **Florian Bauer**, *Lancaster U.*

Acquisitions are among the most complex, exacting, intractable, and high stakes decisions faced by Top Management Teams (TMTs). Consequently, they are inherently political in nature—provoking conflicting viewpoints and power struggles among executives. While political behavior is a central construct in organizational theory, and despite widespread acknowledgement of its inevitable presence in Mergers and Acquisitions (M&A) decision making, there is a shortage of theory and evidence concerning its antecedents and consequences. Consequently, to address this gap, we draw upon the upper echelons literature to develop and test a theoretical model of political behavior in M&A decision making. Focusing on the psychological context surrounding the TMT, we theorize that TMT cognitive diversity fuels political behavior which in turn undermines acquisition performance. Critically, we also theorize that TMT cohesion serves as the central generative mechanism enabling acquirers to counteract the effects of TMT cognitive diversity and thereby dampen damaging political behavior. We test our theoretical model using a field sample of 109 acquisitions in the UK, utilizing direct psychometric measures validated with objective secondary performance data. The results support our theory, and TMT cognitive diversity leads to political behavior during M&A decision making. TMT cohesion reduces political behavior, it also interacts with cognitive diversity, and contrary to our theory, cognitive diversity appears to weaken the benefits of cohesion. Based on these findings, we discuss the important theoretical and practical implications.

STR: The Economic Sentiment, Performance Relative to Aspirations, and Firms' Acquisition Behavior

Author: **Turanay Caner**, *North Carolina State U.*
Author: **Beverly B. Tyler**, *Virginia Tech*

Prior management literature based on the behavioral theory of the firm has not yet examined the relationship between positive economic sentiment and firms' acquisition behavior. Furthermore, it has not revealed how performance relative to aspirations—both positive and negative—moderate this relationship. Drawing on behavioral research from economics, finance, and management, we propose that increases in positive economic sentiment increase firms' acquisitions by containing relevant domain information on the increasing favorability of the economic conditions for making acquisitions, providing firms with external information that complements the internal information they use to make acquisition decisions, and revealing to them external collective wisdom regarding the markets' disposition toward acquisitions. We also posit that the effect of positive economic sentiment on firms' acquisition behavior is contingent on firms' performance relative to their aspirations. We find evidence to support most of our hypotheses by studying 1,148 firms in 253 industries with 13,192 acquisitions during the 1980 to 2015 period. We contribute to the behavioral management literature by showing that positive economic sentiment is a predictor of firms' acquisition behavior and that firms' performance relative to aspirations is an important boundary condition in this relationship.

STR: Behavioral Signal Sets in Acquisition Announcements and the Market: An Impression Management View

Author: **Jonas Röttger**, *Radboud U., Netherlands*
Author: **Hendrik Leeendert Aalbers**, *Radboud U. Nijmegen*
Author: **Koen Heimeriks**, *Warwick Business School*
Author: **Saeed Khanagha**, *Vrije U. Amsterdam*

Acquisition disclosures provide for market signaling. Building on signaling theory, we investigate how organizational impression management (OIM) influences the stock market's uptake of such strategic announcements. In an acquisition context, we argue that not only the deal itself but also the way it is conveyed to the market holds performance implications. Specifically, we investigate the interaction between CEO overconfidence as a prominent CEO characteristic and disclosure tone as a linguistic organizational impression management tactic. We argue that CEO overconfidence represents an influential signal to investors if contextualized by the CEO's acquisition experience, the combination of which provides a source of credibility for the market interpretation of organizational impression management. We test our assumptions on a sample of 1010 deals conducted by S&P500 acquirers between 2014-2020. We find the market particularly receptive to behavioral signals that convey information about the risk level associated with the strategic announcement. In conformity with our predictions, behavioral signaling by itself represent ambiguous information that only becomes influential if contextualized by other signals, such as the CEO's acquisition experience and disclosure tone. Our study holds contributions to signaling theory and linguistic OIM as we show that CEO acquisition experience and disclosure of acquisition announcements both influence how the stock market perceives and evaluates acquisitions.

STR: The Impact of New CEO Regulatory Mode on Post-succession Acquisition Frequency

Author: **Li Hongkun**, *Shanghai International Studies U.*

Integrating upper echelons theory and regulatory mode literature, this study examines how the new CEOs' regulatory mode influences the frequency of post-succession acquisitions. Based on a sample of 334 new CEOs from S&P 500 firms from 2001 to 2018, we find that new CEO's locomotion mode is positively related to the frequency of post-succession acquisitions, while new CEO's assessment mode is negatively related to the frequency of post-succession acquisitions. Those relationship is moderated by CEO duality. By showing that CEO regulatory mode manifests in strategic change, we contribute to research on upper echelon theory, time in strategic change, regulatory mode theory, and literature on firm acquisitions.

CEOs and Uncertainty: Theorizing and Evidence from Crisis

Session Moderator: **Michael Araki**, *U. of Louisville*

STR: Short Term Fluctuations in the CEO Effect: Evidence from the 2008 Financial Crisis   

Author: **Moustafa Haj Youssef**, *Liverpool Business School, John Moore's U.*

Author: **Ingo Kleindienst**, *Aarhus BSS, Aarhus U.*

Author: **Mostafa Harakeh**, *Adnan Kassab School of Business, Lebanese American U., Beirut, Lebanon*

Author: **Mei Yu**, *Coventry Business School, Coventry U.*

(How) Do external shocks affect the CEO effect? Studies that have debated the CEO effect have initially focused on how much influence CEOs in general—as opposed to industry and firm—have on firm performance. More recently, studies have shifted focus from ‘how much’ to ‘when’, scrutinizing environmental determinants under which the CEO effect is more or less pronounced. Typically relying on large panel datasets, previous studies have reported an average CEO effect over the entire sample period. In doing so, these studies have forgone the possibility to investigate fluctuations in the CEO effect over time. In this study, we focus on short-term fluctuations of the CEO effect caused by an external shock in the firm’s economic activity. In particular, we use the 2008 global financial crisis to investigate how the CEO effect changed from the pre-crisis period, over the crisis period, to the post-crisis period. Using mixed effect modeling with crossed and nested factors, we find that the CEO effect significantly drops from the pre-crisis to the crisis period, but increases again to pre-crisis levels in the post-crisis period. The results hold under several robustness checks.

STR: A Conceptual Framework to Integrate Uncertainty and Creativity into Corporate Governance 

Author: **Michael Araki**, *U. of Louisville*

Author: **Henrique Castro Martins**, *Pontifical Catholic U. of Rio de Janeiro (PUC-Rio)*

Corporate governance research makes claims about the nature of ‘ideal’ arrangements using Agency Theory. However, traditional corporate governance mechanisms designed to curb agency problems may undermine firm growth because they are mostly backward-looking and inherently problematic when facing uncertainty. In fact, they may restrain or disincentivize managerial creativeness and alertness, which can be instrumental to maximize firm value. Our goal is to advance a conceptual framework that integrates into corporate governance elements literature factors that are key for creativity but which have been overlooked in corporate governance. Drawing on a combination of creativity and entrepreneurship literatures, we discuss two parameters—unlikelihood and opacity—which serve as the basis to propose four different types of entrepreneurial projects. Additionally, we provide an in-depth analysis of the optimal corporate governance configurations for each project types. Our framework can inform the design of better tailored governance mechanisms that are specific to a firm’s environment and its projects.

STR: Dancing With Crisis: CEO's Perception, Financial Alignment, and Strategic Change 

Author: **Yikai Tian**, *U. of Groningen, Faculty of Economics and Business*

Author: **Xiya Luo**, *Vrije U. Amsterdam, School of Business and Economics*

Although executives’ psychological attributes have been extensively studied in the strategy literature, we lack insights into the role of CEOs’ perception towards firms’ prospects under specific crises and their impact in this field. This study investigates how such CEOs’ perceptions influence firm strategic change by linking and extending the upper echelons theory and the behavioral agency model. We also examine the moderating role of CEOs’ financial alignment with shareholders. By using S&P 100 firms in 2020, which is the year when an unanticipated pandemic crisis outbreaks, this study finds that CEOs with a higher degree of optimism will not implement more strategic changes. Besides, our empirical evidence confirms that incentive alignment that works well in normal times does not necessarily guarantee its function in times of external crisis, indicating that a higher financial alignment will not motivate CEOs to implement more strategic changes.

The Role of Information and Uncertainty in Corporate Strategy

Session Moderator: **Hamzeh Obeid**, *KU Leuven*

STR: News-Induced Target Undervaluation and Acquirer's Long-Term Orientation in M&A Target Selection

Author: **Anindya Ghosh**, *Tilburg U.*
Author: **Marco Testoni**, *Tilburg U.*

News sentiment alters investors' perceptions of companies and their stock prices, which can affect managerial decisions. We analyze such influence on firms' decisions in the context of mergers and acquisitions. We theorize how news sentiment about potential targets may affect target selection and test our hypotheses using a novel instrument based on the disturbance to news coverage due to exogenous events. Our findings show that reduction in positive news sentiment diminishes a potential target's stock price and increases the probability that it is selected by the acquirer, uncovering potential inefficiencies in the market for corporate control. Further, acquirers with long-term orientation are less sensitive to these news-induced price distortions when selecting their target. We also find that when these distortions encourage myopic acquirers to select an undervalued but suboptimal target from a synergistic point of view, the long-run performance of the acquisition drops.

STR: Acquisitions Among VC-Backed Entrepreneurial Ventures: Venture Capitalists As Intermediaries (WITHDRAWN)

Author: **Hamzeh Obeid**, *KU Leuven*
Author: **Bart Leten**, *KU Leuven*

This study focuses on the informational dynamics governing relationship formation among entrepreneurial ventures backed by venture capital. Of particular interest is the role which intermediary VC firms play by channeling information among their portfolio companies, decreasing thus information asymmetries and increasing the likelihood of relationships as a result. This study investigates this effect in context of acquisitions using a matched sample of acquirer and target VC-backed entrepreneurial ventures in the years between 1995 and 2015. We first establish a baseline hypothesis regarding the likelihood of acquisitions between ventures that share a common VC investor, which we expect is greater than in those that do not share a common VC investor. The study then proceeds to scrutinize the intermediary VCs in arguing that their idiosyncratic profiles control the efficacy and willingness to act as intermediation, focusing specifically on acquisitions as outcomes. We investigate three attributes of intermediary VC firms in particular: The first is their expressed commitment towards investees, which we argue and find will lead to a greater likelihood of acquisitions among the intermediaries' portfolio companies. Then we investigate their diversification of investments across industries, which we find decreases this likelihood. Third, we find that acquisitions are similarly less likely when the intermediary VC firms are more reputable.

Paper is NOT Available. Please contact the author(s).

STR: Supplier Switching, Buyer-Specific Behavioral Uncertainty, and Value Appropriation 

Author: **John Mawdsley**, *HEC Paris*

Our study combines theoretical insights from competitive strategy and transaction cost economics to examine how the price of an exchange changes when a buyer switches its exchange contract to a new supplier. Developing a bargaining power perspective, we posit that transaction costs linked to behavioral uncertainty affect a buyer's ability to leverage supply-side market competition to appropriate higher exchange value. In the context of US audit services, we first test theoretically derived hypotheses for price of the initial audit engagement following supplier switching. We then perform a battery of analyses that examine both the intertemporal dimensions of the buyer-auditor relationship and market segmentation effects across two major auditor groups. Our empirical findings provide correlational evidence consistent with the proposition that supply-side competition bestows a buyer with a bargaining advantage when negotiating exchange price with a new supplier. However, buyer-specific behavioral uncertainty is associated with a reduction in the buyer's advantage, allowing the supplier to charge a higher price. We also offer evidence of intertemporal and market segmentation effects that allow us to quantify the dynamism in price-bargaining as competitive conditions and behavioral uncertainty evolve over time. Together, our results provide insights into how transaction costs associated with behavioral uncertainty interact with competitive forces to influence relative bargaining power, and in turn, exchange price.

Paper is Available to Meeting Registrants Only.

Author: **Xia Han**, *Dongwu Business School, Soochow U. China*

Author: **Tony Tong**, *U. of Colorado, Boulder*

Author: **Liang Chen**, *U. of Melbourne*

Strategy research has long highlighted relation-specific assets as a key source of relational rents. We instead reveal a potential dark side of relation-specific investment by examining how such investment by suppliers may turn into a source of adjustment costs for customer firms, thwarting customers' responses to uncertainty shocks that afflict their suppliers. Using a matched sample of customer-supplier relationships, our difference-in-differences estimation shows that customer firms significantly reduce sourcing from a supplier that is exposed to a terrorist attack. However, such strategic responses are impeded, when the supplier has made greater investment specific to the customer, compared to other existing suppliers or potential suppliers. Our study provides new insights in linking together relation-specific assets and adjustment costs, two important topics of strategy research.

Social Innovation

Session Moderator: **Adnan Ali**, *PhD Student at Xi'an Jiaotong U.*

STR: Entrepreneurial Leadership and Green Innovation: An Upper Echelons Theory Perspective

Author: **Adnan Ali**, PhD Student at Xi'an Jiaotong U.

Author: **Xu Jiang**, Xi'an Jiaotong U.

Author: **Afzaal Ali**, International Islamic U., Islamabad, Pakistan

Author: **Qadeer Abdul**, Xi'an Jiaotong U. School of Management

Author: **Adadu Michael Ushie**, Xi'an Jiaotong U. School of Management

Despite the dominant discourses on the important role of entrepreneurial leadership in firms' behavior, related theoretical and empirical studies are still lacking. To fill this research gap, we draw on upper echelons theory to develop a moderated mediation model in which we investigate how and under what conditions entrepreneurial leadership affects the adoption of green innovation. This theoretical model is tested using a dataset of 248 Chinese firms (built on a total of 496 responses). Our findings support the positive impact of entrepreneurial leadership on green innovation and the mediating role of cross-functional coordination within firm boundaries. The moderated mediation path analysis shows that environmental dynamism fortifies the indirect influence of entrepreneurial leadership on green innovation via cross-functional coordination. Overall, this study adds to corporate entrepreneurship and environmental management scholarship by providing novel insights into the key role of entrepreneurial leadership in embracing green innovation.

STR: The Impact of Entrepreneurial Prison Training on Reducing Recidivism

Author: **Robert Hill**, U. of North Carolina, Chapel Hill

Author: **Isin Guler**, U. of North Carolina, Chapel Hill

Approximately 2.3 million Americans were in prison in 2016, costing the US \$80 billion a year (English, 2016). 36% of former prisoners are re-incarcerated within three years of release, leading to a cycle of social and economic challenges (Durose, Cooper & Snyder, 2014). As evidenced by the many organizations seeking to reduce recidivism, helping those in prison to become productive members of society represents one of the "Grand Challenges" of our day (Davis et al., 2014; George et al., 2016). In this paper, we seek to be the first to causally identify the impact of entrepreneurship training on recidivism. To answer this question, we have obtained a unique data set that contains all inmates from 2009 to 2016 that were accepted into a leading prison entrepreneurial training program in the US, including those that did not receive training due to parole or medical reasons. This enables a direct comparison of trained inmates against a counterfactual of similar others due to the quasi-random allocation of the non-trained to reasons unrelated to motivation or ability to receive training. Given the significant challenges facing society due to Mass Incarceration, understanding whether these types of programs cause reductions in recidivism has the potential to shape policy while increasing the rate of entrepreneurial entry. Additionally, by uncovering more about the impact of training on the incarcerated, we highlight the potential for entrepreneurship to be used to aid in wellbeing and development among disadvantaged populations. We aim to provide a novel example of the way that entrepreneurship can be used as a lever to address Grand Challenges of our day.

STR: Using Recommender Systems for Predicting Social Evaluations

Author: **Majid Majzoubi**, Schulich School of Business, York U.

In this paper, we show how a family of machine learning algorithms—namely, recommender systems—could be used to predict social evaluations regarding a firm. Such predictions could, in turn, be used for formulating firm strategy. We specifically describe how recommender systems could be implemented and used in the context of security analysts' investment recommendations of public firms. We argue that firms could use the predictions yielded from recommender systems to formulate positioning strategies that result in higher investment recommendations. In addition to making a theoretical contribution to research on strategic positioning, our study provides a prescriptive and practical methodology that utilizes the predictive power of machine learning algorithms to recommend an optimal positioning strategy.

STR: Strategies for Achieving High Performance in R&D for Neglected Diseases: A Configurational Approach

Author: **Eric C. Mota**, Wichita State U.

Author: **Sandro Cabral**, Inesper Institute of Education and Research

Public laboratories pursue scientific and technological advances where private actors lack knowledge, funds, and incentives to invest. Focusing on "neglected diseases"—those which primarily affect people in poor countries—we study how funding sources and research team characteristics affect the R&D performance within a major public lab. We employ a configurational approach to analyze 195 research projects conducted in a public lab in Brazil, a country in which neglected diseases make up the majority of the disease burden. Our findings reveal three configurations to high performance and a set of pivotal choices in project funding capable of leveraging the performance of research projects. From these findings we devise strategies for achieving high performance in research on neglected diseases. We offer a midrange theory of R&D performance in the context of public labs which has implications for the design and maintenance of national innovation systems. Our results also inform literatures on the organization of science and funding for public health, and provide actionable insights for managers and policy makers.

In recent years, there has been an increase in using novel methodologies in strategy and organizations, such as topic modeling and sentiment analysis, a combination of case studies with machine learning, and novel processes to use with observational data such as pre-registration, to name a few. However, young scholars still have many questions and concerns regarding the methods, e.g., choosing the appropriate data and methodologies, the right assessment and metrics for each method, and the tradeoffs between the novel methodologies such as machine learning w with more conventional econometrics models. This symposium includes but is not limited to the following topics: 1- Using traditional econometrics method with ML-generated metrics, 2- Appropriate assessment of machine learning models, 3- Novel practices to use observational data to prevent p-value hacking, 4- The tradeoffs between different methods, 5- Challenges in publishing with novel methods, 6- Novelty in data sources.

Online Communities and Social Movements

Session Moderator: **Alexander Staub**, *WU Vienna U. of Economics and Business*

CTO: **The Impact of Symbolic Award Introductions on Contribution Behavior in Online Communities**

Author: **Alexander Staub**, *WU Vienna U. of Economics and Business*
Author: **Christopher Ulrich Lettl**, *WU Vienna U. of Economics and Business*
Author: **Tom Grad**, *Copenhagen Business School*

Online communities frequently suffer from the under-contribution of knowledge in terms of both quantity as well as quality. A common method to incentivize contribution behavior by members is the use of non-monetary rewards, more specifically performance contingent symbolic awards. However, a nuanced understanding of how performance contingent symbolic awards affect existing community members that differ in their experience, and by extension propensity to contribute, is currently lacking. In this paper we exploit a natural experiment, analyzing a user-week panel data set of 166,000 observations, spanning 48 weeks and over 3000 community members, and show a negative effect of award introduction on contribution quantity and an insignificant effect on contribution quality on average. Moreover, we are able to show how accounting for heterogeneous user characteristics in terms of within-community experience, govern the effect of award introduction and knowledge accumulation. In particular, we find that low experience members significantly reduce their contribution quality while not changing their contribution amount, and high experience members reduce their contribution quantity without decreasing their contribution quality. Thus, this research contributes to the theory on new forms of organizing, in addition to advancing the literature on symbolic awards and online public goods contributions.

CTO: **We Did Start the Fire: r/wallstreetbets, 'Flash movements' and the Gamestop Short-Squeeze**

Author: **Peter Kalum Schou**, *BI Norwegian Business School*
Author: **Eliane Bucher**, *BI Norwegian Business School*
Author: **Matthias Waldkirch**, *EBS Business School*
Author: **Eduard Grünwald**, *RWTH Aachen U.*

In January 2021, Wall Street suddenly faced a challenge from an online community, r/wallstreetbets, which organized a large group of small investors in betting against Wall Street hedge funds. In an instant, the online community took on a social movement nature that brought them comparisons to Occupy Wall Street. While scholars are gaining a growing insight into the life of social movements in online communities, current theory does not explain how a movement can suddenly arise in online communities, leaving us with little knowledge to explain how such action - which had critical social impact - arises. To fill this gap, we studied the Wallstreetbets movement relying on a mixed-methods research design, combining an unsupervised topic model with in-depth qualitative coding. Based on this method, we conceptualize Wallstreetbets as a 'flash movement', a movement that arises swiftly without former planning or design, through the imbrication of social activities with affordances and constraints of online communities. Our study contributes to (1) the recent interest in spontaneous action in social movements; (2) how social media affordances and constraints affect social movements, and (3) methodologies for studying digital social movements.

CTO: **How Value Homophily Between Ideators and Commenter Influences Ideators' Subsequent Online Engagement**

Author: **Yiqian Lu**, *Chinese U. of Hong Kong*
Author: **Heyang Sun**, *Chinese U. of Hong Kong*

This study examines the motivation of user engagement in online innovation communities from a new perspective of the value homophily between the ideators and commenters instead of focusing on the interaction behavior as past research did. Specifically, this study highlights how value homophily inferred from ideators and commenters' shared knowledge background in the online community assists them to identify credible learning sources and learn from them and how this process influences their further engagement behavior. We propose that value homophily between ideators and commenters implies that the commenter is a credible learning source, which effectively promotes the ideator to absorb and integrate the focal comment into subsequent engagement behaviors. Besides, this study further examines the moderation effect of past experience of public recognition and failure. The findings suggest that ideators' past failures like low social support positively moderate the main effects by adjusting the ideator's perception of the credibility of the commenter resulting in an increasing salience of value homophily between them. While commenters' past recognition will not strengthen the main effect if they share no knowledge background with the ideators. Using a sample of 168074 observations from an online innovation community from 2011 to 2020, the findings support our theoretical predictions.

Women on Boards: Tokenism and Turnover

Session Moderator: **Sneh Bhardwaj**, *Federation U. Australia*

GDO: **Can Tokenism Drive Women Directors' Behaviour on Corporate Boards?**  

Author: **Sneh Bhardwaj**, *Federation U. Australia*

This study aims to determine if and how tokenism drives gender minorities' behaviour on corporate boards and whether attaining critical mass makes any difference to women's board behaviours. To assess these propositions, semi-structured interviews were conducted with 13 women Indian directors; NVivo software was used to code data and the data analysis process followed an inductive interpretative approach. The findings show women director's response to token treatment and their board behaviour are determined largely by their own choices, personal value system rather than their numerical minority which plays only a minor role in this space. Most women directors reported acting courageously in board proceedings and making vital board contributions and that having another woman/women colleague/s does not make any difference to their board behaviours. A few who faced gender-based biases in the boardroom thwarted such attempts or otherwise resigned from their directorship. The study results present a new explanation and enhanced understanding of women directors' token board presence and the ensuing debate about their board behaviour. The research has implications for governments attempting to increase women's board presence through affirmative actions, and companies aiming at improving the diversity component in their board composition.

Paper is Available to Meeting Registrants Only.

GDO: **When Tokens Matter: A Critical Perspective on Tokenism and Women on Corporate Boards** 

Author: **Tanusree Jain**, *Copenhagen Business School Department of Management, Society and Communication*

Author: **Deirdre Ahern**, *Trinity College Dublin*

Author: **Harry J. Van Buren**, *U. of Tennessee at Chattanooga*

This essay challenges the existing understanding of tokens and tokenism within the particular context of women on corporate boards. We argue that extant tokenism scholarship adopts a reductive logic that equates tokens with tokenism and assumes numerical underrepresentation of women as an implied signal of lack of power, thereby failing to fully reflect the differential power of tokens as prospective agents of both personal and inter-group change. Integrating perspectives from social psychology, we offer a more nuanced understanding of tokens by proposing four categories of tokens: (1) the marginalized token; (2) the passive token; (3) the queen bee token; and (4) the changemaker token. These theorized categories aim to capture how women board members can differentially navigate group dynamics within the collective, contextualized on organizational norms and culture and responses of the dominant gender group, consequently affecting the prevalence of tokenism on corporate boards. Our essay has relevance for gender discourse and management research.

GDO: **The More the Merrier? Exploring the Effect of Boards of Directors' Gender Composition on Gender Pay**  

Author: **Gurdeep Singh Raina**, *Washington State U.*

Author: **Leah Sheppard**, *Washington State U.*

This study examines the relationship between the gender composition of boards of directors (BOD) and the gender pay gap in top management teams (TMT), and the extent to which this relationship is qualified by CEO gender. We draw on social identity, tokenism, and critical mass theories to hypothesize our main and moderated effects. Using observations of 2,715 U.S. firms over a 14-year period, 2005–2018, we find an inverted U-shaped relationship between board gender composition and gender pay gap found in the TMT, i.e., an increasing proportion of women on the board, in the range of about 30 percent, enhances the gender pay gap. Once this critical mass is reached, however, the gender pay gap in the TMT will be significantly reduced thereafter. Additionally, we find that female CEOs substantially favor the increase in compensation for female TMT members.

GDO: **Falling Over the Glass Cliff? The Effect of the COVID-19 Pandemic on Women Directors' Board Turnover**    

Author: **Katarzyna Burzynska**, *Radboud U. Nijmegen*

Author: **Martha Gabriela Contreras**, *Radboud U. Nijmegen*

Mounting evidence suggests that women have left the labor market at unprecedented rates during the COVID-19 pandemic. We seek to contribute to the ongoing debates on the gendered effects of the COVID-19 pandemic by exploring the labor market effects of gender in corporate leadership positions. While the challenges women face to rise above the glass ceiling are well-documented, factors determining their departure are less well understood. The global pandemic offers an opportunity to evaluate the effects of gendered expectations and diversity considerations during a crisis on the likelihood of women director turnover. Using a sample of 15,768 unique outside directors sitting at the boards of 4,249 public firms in 32 European countries between 2019 and 2020, we find that director turnover in general has significantly increased during the COVID-19 pandemic and women directors are as likely as men directors to leave their board positions during the COVID-19 pandemic. These findings also hold across different country-level contextual factors. Our findings suggest that beyond the glass ceiling women's behavior is more similar to their men counterparts than women in general. We discuss the implications of our findings for future research on corporate leadership positions and gender differences in the boardroom.

MC: **The integration of SEAM in the Lebanese Banking Sector to Survive the Crisis and Realize the Change**

Author: **Layal Omran**, *Balamand U. - Lebanon & Jean Moulin Lyon 3 U. - France*
Author: **Françoise Goter-Grivot**, *ISEOR, Magellan, IAE Lyon, U. Jean Moulin*

Lebanon is a small country characterized by its rich history and diversified culture with a very important geographical location on the Mediterranean Sea. An economic crisis started to emerge in 2019 that harshly affected all sectors especially the banking industry, renowned for its solid ground and good reputation. Lebanese banks are now in the middle of a clash where downsizing, merging and even liquidating are all expected acts to take place. Severe changes hit around what makes it conditional for banks to emerge to a new era which is not defined yet. This paper introduces the Socio-Economic Approach to Management in one of the most important banks in Lebanon to highlight the important role of employees in realizing the change needed to survive the crisis. A Horivert intervention took place in Byblos Bank SAL at the North Regional pole to extract employees' dysfunctions during time of crisis and give the bank a chance to get through. The intervention aims to reduce dysfunctions and invest in employees' potential to achieve the business integral quality.

MC: **An Intervention Study to Improve Efficiency and Performance in Multinational Enterprise: An Iraqi Co**

Author: **Jaafar Al Wazni**, *U. of Balamand, U. Lyon 3, and ISEOR Research Center*

There is a necessity for multi-national enterprise (MNEs) operating in Iraq to give greater interest in understanding the relationship between entrepreneurship and business culture with dimensions of cultural differences in the international work environment. Despite an abundance of research, still there is a gap in understanding the underlying management and entrepreneurial behavior of companies associated with the different cultural mechanisms among nations in the literature. This study contributes to the debate through a new perspective of analysis based on qualimetrics theory (SEAM). Specifically, this research analyzes the role that SEAM plays in improve the (MNEs) performance and profitability through identifying the underlying causes (dysfunctions) of performance and then suggest solutions for those dysfunctions. The data will be taken directly during the diagnostic phase through direct interviews with actors inside company X, a Turkish company operating in the oil and gas sector in Iraq, after which the expert's opinion and suggested solutions, implementation and evaluation will be given during the project phase.

 MC: **A Case Study of Digital Innovation Organization Readiness: Hidden Cost for Ambidexterity Performance**   

Author: **Yanfei Zhang**, *UCMT, ParisTech Ecole Des Ponts Business School, Hikvison (China)*

William H. Newman Award Nominee

Cross-department communication barriers will lead to low efficiency and poor-quality work, which is common in most organizations in China. This will bring hidden costs to the organization and even impact long-term performance. In the digital transformation age, organization ambidexterity is more important than ever to obtain short-term and long-term benefits. This case study suggests to combine the ambidextrous and hidden costs theory for outlining a collaborative network communication model (CNCM), in order to investigate the effect between the cross-department communication operation structure and organizational performance. This case study provided data collection by three data sources: 40 interviews of managers and employees, company records, observations over three months. The findings of the field study of this case are that cross-department communication operation structure has an effect on organizational performance and digital innovation. It also suggests that CNCM positively influences organizational exploration and exploitation ability. It can also alleviate cross-department communication obstacles, low efficiency, and poor-quality work.

Support in Organizations

Session Moderator: **Kyoung Yong Kim**, *Villanova U.*

OB: Social Distancing Initiatives and POS: It's the Intended Beneficiary that Counts   

Author: **Kyoung Yong Kim**, *Villanova U.*
Author: **Jake Messersmith**, *U. of Nebraska, Lincoln*
Author: **Robert Eisenberger**, *U. of Houston-Main Campus*

Leveraging data on organizational social distancing initiatives (SDIs) this paper examines the link between SDI implementation and perceived organizational support (POS). We suggest that SDIs, involving various ways to separate employees to keep them safe, have the important secondary benefit of increasing employees' perception that the organization cares about their well-being and values their contributions. Further, the paper introduces the intended beneficiary heuristic to help explain why and when employment practices induce POS. We argue that such favorable treatment as SDIs increase POS most when employees attribute them to the organization's concern for the welfare of employees. Results of two studies, a cross-sectional study with 126 employees in the United States and a longitudinal study with 103 employees in South Korea, indicate that SDIs increased employees' POS, which in turn enhanced their job satisfaction (Studies 1 and 2), affective organizational commitment, and organizational citizenship behavior (Study 2). The results also show that these relationships were enhanced when employees perceived SDIs to be implemented to protect their welfare rather than as a means of protecting the organization.

OB: Workplace Loneliness: A Comprehensive Review and Meta-Analysis 

Author: **Lisa Lynn Brady**, *Southeastern Louisiana U.*
Author: **Sarah Wright**, *U. of Canterbury*
Author: **Alisha Gupta**, *Virginia Commonwealth U.*
Author: **Youjeong Huh**, *Stonehill College*

COVID-19 contributed to greater transparency regarding a stigmatized yet increasingly important topic for managers and organizations: workplace loneliness. However, the academic literature on the topic of workplace loneliness is quite nascent and lacks an established nomological network to guide research. The present manuscript reports the results from an initial meta-analytic review of the factors associated with workplace loneliness among employed individuals. This research provides the first quantitative review of these effects based on empirical research from a variety of disciplines, including management, psychology, education, and public health. The results of these meta-analyses reveal nontrivial positive relationships between workplace loneliness and negative work-related experiences and attitudes, including burnout, job stress, and turnover intentions. Similarly, workplace loneliness is significantly negatively associated with positive work-related experiences and attitudes, including engagement, organizational commitment, performance, and creativity. Notably, workplace loneliness is not significantly associated with age, gender, or level of education. These meta-analytic results have implications for current theoretical models of workplace loneliness, as well as important practical implications for the development of organizational policies and procedures that effectively address and reduce workplace loneliness.

OB: Thriving in Times of COVID-19: Through Transformational Leadership and Coworkers' Support   

Author: **Marijn Exterkate**, *U. of Twente*
Author: **Desiree Van Dun**, *U. of Twente*
Author: **Ridwan Saptoto**, *Ph.D Student*

Since many employees are struggling during the COVID-19 pandemic, we investigated how transformational leadership (TFL) could still enable employee thriving at work, in particular employee vitality and learning. Positive affect (PA) and negative affect (NA) were included as mediators, and coworkers' support as a moderator. Our mixed-methods research design utilized a survey (N = 259) and an open question (N = 219) among Dutch employees. The hypotheses were tested using stepwise regression, Hayes' PROCESS macro, and Sobel tests, as well as structural equation modeling. The qualitative data were content analyzed. We found that the direct supervisors' TFL is related to employee thriving through reducing NA. Interestingly, coworkers' support moderated the relationship between TFL and NA but not the relationship between TFL and PA. Reduced social interaction and connection to the organization were identified as drawbacks of forced remote work, while the respondents still perceived a degree of organizational support. Our findings extend the social exchange and broaden-and-build theories to a virtual setting by showing how both leaders' TFL and coworkers' support can provide solace to employees during forced remote work. Team leaders are thus encouraged to display TFL, also during virtual interactions with their members, as well as establish a supportive (remote) work environment for employees. Coworkers could mitigate employee NA further by initiating social interactions, also when their colleagues are not in the office.

OB: The Silence of the Professionals

Author: **Henrik Maria Bienstein**, *Katholische U. Eichstätt-Ingolstadt*

Author: **Björn Schäfer**, *Free U. of Bozen-Bolzano*

Author: **Vinzenz Ulrich Krause**, *2804*

Author: **Max Josef Ringlstetter**, *Katholische U. Eichstätt-Ingolstadt*

Silence research has increased over the last decades, still, until today, almost no efforts to scrutinize one of the allegedly most exposed industries – professional service firms – have been undertaken. In this paper, we examine the phenomenon of silence in the organizational context of these firms. We derive connections between antecedents for a climate of silence and the constituent characteristics of professional service firms from theory. After conducting 29 expert interviews in a consulting, and an auditing firm, we can demonstrate that various antecedents for silence are prevalent in professional service firms and that withholding information, problems, or concerns is widespread within the organization. Furthermore, we find that employee motives not to speak up differ in their expression from previous studies in the research area of silence. Quiescent and especially opportunistic intentions play a meaningful role and are driven by the desire for advancement in the competitive up-or-out career model, which is distinctive to professional service firms. We are the first to show that professional service firms are susceptible to silence due to their culture and organizational circumstances. Furthermore, we contribute to the research on silence by demonstrating that the underlying motives that lead to different types of silence vary according to organizational characteristics.

SIM: And If We (Ever) Achieved Our Goal? Challenges of Winding Down a Social Partnership

Author: **Lea Stadler**, *Grenoble Ecole de Management*

Cross-sector partnership (CSP) scholars agree on the beneficial role that a clear collaborative goal plays especially in the early stages of the partnering life cycle. For example, it may help direct and align diverse partners, stabilize their relationships, and help mobilize partnership support. But given CSPs' dynamic nature, it is unlikely that the CSP goal and its implications remain stable along the partnership journey. To forge a comprehensive understanding of governance via goals in CSPs, we explore how the role and implications of an (initially) clear CSP goal evolve along the partnering life cycle. Based on an inductive analysis of a disease-elimination CSP that, after more than 30 years of operations, was close to achieving its goal and prepared for winding down, we illustrate how the CSP goal evolved from initially facilitating the partnering process to becoming increasingly complex and ultimately challenging the aspired winding down of the CSP. We delineate the mechanisms underlying such goal complexification, which brings to the fore the limitations of conceptualizing CSPs as goal-centric, temporary structures without acknowledging their growing embeddedness in complex social systems.

SIM: A Tale of Two Signals: Partner CSR, CSiR and Alliance Formation

Author: **Qiwen YU**, *Lee Kong Chian School of Business, Singapore Management U.*

Author: **Heli Wang**, *Singapore Management U.*

Author: **Ilya Cuypers**, *Singapore Management U.*

This study examines how a potential partner's socially responsible performance (CSR) and socially irresponsible performance (CSiR) play distinct signaling roles in influencing the likelihood of alliance formation. We argue that a firm will interpret the positive signal of partner CSR as an indication of partner trustworthiness, increasing its willingness to collaborate. In contrast, the negative signal of partner CSiR will raise a firm's fear of potential contaminant costs, which motivates it to refrain from alliance formation. We also identify three key boundary conditions that shape the role of partner CSR and partner CSiR. Using alliance and CSR data from U.S. high-tech industries from 1995 to 2016, we find that either a high-CSR or low-CSiR partner has a higher likelihood of alliance formation. Furthermore, when the prior alliance is present or when alliance partners operate in the same industry or location, the relationship between partner CSR and alliance formation is weaker but the relationship between partner CSiR and alliance formation becomes stronger.

SIM: Problematising stakeholder engagement: Insights from multi-stakeholder network

Author: **Annika Blomberg**, *Tampere U.*

Author: **Anna Heikkinen**, *Tampere U.*

Author: **Johanna Kujala**, *Tampere U.*

This paper problematizes the overall positivity of stakeholder engagement literature and analyses its grey area. We discuss the bright and the dark side of stakeholder engagement and identify the grey area in between these two sides. Based on a qualitative content analysis of 26 interviews collected from circular economy stakeholders in Finland, we identify three sources of the grey area of stakeholder engagement: the individual stakeholder, stakeholder relationships and the institutional context. According to our analysis, the grey area consists of challenges caused by individual resistance and individual inability, collaboration challenges, complexity caused by the diversity of perspectives, unpredictability caused by the political and legislative context and insecurity caused by environmental unpredictability. We argue that particularly in the context of a multi-stakeholder network, the grey area is a natural and unavoidable part of stakeholder engagement and thus, should also be explicitly recognized and discussed in the literature.

SIM: The Legitimacy of Bottom-up Governance: The Role of Multi-Stakeholder GVC Partnerships in Ethiopia

Author: **Sarah Castaldi**, *Copenhagen Business School*

Author: **Rieneke Slager**, *U. of Groningen*

Author: **Tine Walravens**, *Copenhagen Business School*

Multi-stakeholder initiatives (MSIs) have emerged as forms of collaborative, horizontal governance aimed at advancing the sustainable development of global value chains (GVC). Despite their recent popularity and good intentions, legitimacy deficits emerged, preventing more significant improvements in terms of sustainability. Consequently, academics and policy makers have called for more civil society organization (CSO) involvement in GVC governance. This article applies a grounded theory approach to a single, deviant case study: an EU-funded, CSO-led GVC MSI, consisting of public, private, and civil society organizations both in Europe and Ethiopia, which aims to promote a sustainable cotton and garment value chain of Ethiopian cotton to European consumers. To analyze the case, we conducted 69 in-depth semi-structured interviews. Our findings show the interplay between politically and socially driven legitimacy concerns in the context of CSO-led MSIs. Specifically, our results contrast the bottom-up nature of CSO-led MSIs against Ethiopia's hierarchical, top-down structures deeply ingrained in local institutions. This global-local mismatch creates social legitimacy challenges for the project, which in return, contributes to both input and output legitimacy deficits. This is mainly visible from the lack of local ownership by 'powerful' project partners, whose presence in the project is paramount for social legitimacy, but whose specific interests also impede output legitimacy at the highest level. Overall, while CSO-led MSIs are confronted with similar legitimacy challenges than either traditional (global) or local MSIs, it is their strong footing in the local market that allows them to create value for stakeholders at the bottom (i.e., workers).

Author: **Sarah Jastram**, *Hamburg School of Business Administration*

Author: **Alkis Otto**, *Hamburg School of Business Administration*

Author: **Tatjana Minulla**, *Hamburg School of Business Administration*

In the current literature, institutional adoption of Corporate Social Responsibility (CSR) governance standards is mainly understood in a binary sense (adoption versus no adoption), and existing research has hitherto focused on inducements as well as on barriers of related organizational change. However, little is known about often invisible internal adoption patterns relating to institutional entrepreneurship in the field of CSR. At the same time, additional information about these processes is relevant in order to systematically assess the outcomes of institutional entrepreneurship and to differentiate between substantive versus symbolic implementation. In this paper, we contribute a comparative intraorganizational differentiation of institutional adoption processes in the field of CSR, and we distinguish between broad and narrow organizational institutional adoption across different management functions relating to institutions of a similar type. Our study is based on a quantitative survey among members of the United Nations Global Compact Network Germany, as well as on qualitative interviews. We analyze different institutional adoption patterns and derive ten theoretical predictors of diverse institutional adoption choices and thereby inform the literatures on institutional entrepreneurship, CSR governance, and Multi-Stakeholder Initiatives. Besides our theoretical contributions, our findings serve as a source of information for practitioners engaged in CSR governance as they provide new insights into the managerial perception and assessment of different CSR standards and initiatives.

Political CSR and CSR Politics

Session Moderator: **Tahiru Azaaviele Liedong**, *School of Management, U. of Bath*

SIM: Corporate Activism as PCSR Communication

Author: **Anne Vestergaard**, *Copenhagen Business School*

Author: **Julie Udam**, *Copenhagen Business School Department of Management, Society and Communication*

Nike's campaign featuring the NFL player who kneeled during the national anthem to protest against police violence and racism has very quickly become almost iconic of a new type of politicized corporate campaigns which have evoked a renewed interest in exploring business engagement in political messages. In recent years, we are increasingly seeing corporations take a public stance on social, political, and environmental issues. It is an activism that aims at influencing political, industrial, commercial or cultural agendas and takes place in social arenas such as the media instead of parliamentary institutions. This paper approaches corporate activism as a manifestation of the logic described as PCSR. It draws on advertising spots as an example of corporate activism in the media to illustrate the ways in which corporations adopt responsibilities of societal critique from social movements. On the basis of this, it argues that a new version of a politics of the self emerges. This is a commercial politics of the self to be fulfilled through consumer loyalty to the company, which decouples values from formal structures of governance and, instead, construe their realization as an individualized consumer responsibility. This may not remove the potential of corporate activism for social change. Corporate activism both entails the potential for politicization of the corporate sphere and the risk of depoliticization of the political sphere.

SIM: Family Firm CEO Succession and Political Corporate Social Responsibility Involvement

Author: **Hengyuan Zhang**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Author: **Chengcheng Xia**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Author: **Lina Zhu**, *East China U. of Science and Technology*

Scholars have pointed to various political impacts of corporate social responsibility (CSR) and the rising importance of political CSR. Given the sparse research of the link between leadership and political CSR in the existing literature, we focus on the motivations of political CSR in family firms amid the leadership transition. From the institutional perspective, we project that nonfamily CEO successors who carry forward business logic tend to participate in political CSR to increase legitimacy; however, family CEO successors who inherit family logic are less likely to undertake political CSR. Based on the longitudinal data from China's targeted poverty alleviation and listed family firms, we find a higher likelihood of nonfamily CEO successors involved in political CSR than family ones. We also find that firm-hold political capital weakens the relationship between family (vs. nonfamily) CEO successors and political CSR, while financial outperformance strengthens the relationship. The findings respond to the call for the further exploration of leadership factors and political CSR, and contributes to the family succession and political CSR literature.

SIM: Nonmarket Strategy Integration: How Corporate Social Responsibility Becomes a Political Strategy

Author: **Tahiru Azaaviele Liedong**, *School of Management, U. of Bath*

Using social exchange theory, this paper explores how CSR is used as a political strategy. The findings reveal that when CSR is politicized, it involves the design and implementation of politically charged CSR initiatives that entail firm-polity negotiated exchanges. Firms exchange social interventions for political influence in ways that allow politicians take the credit to boost their re-election. To do this, the choice of target politician hinges on political vulnerability, the selection of CSR initiatives is based on CSR orientation and CSR benefit personalization, the location of CSR is linked to politicians' electoral constituencies, and the timing of CSR is affected by election cycles. Overall, this paper provides new insights into how CSR is used in indirect social exchanges in political markets, shows that CSR can be CPA, and thus extends nonmarket strategy integration from its focus on CSR's complementarity with CPA to its instrumentality in CPA. The findings have important theoretical and practical implications.

Panelist: **Magali Delmas**, *U. of California, Los Angeles*

Are the increasingly politicized firms the new norm? Should firms choose to be political or economic actors, or both? Are our theories equipped to guide firms that are increasingly becoming political actors? How does the changing nature of the firm impact our theories and what does it mean to be a profit seeking (let alone profit maximizing) entity? What are the implications for domestic versus international firms? Are multinational firms becoming more politicized compared to the regional firms? This panel will debate whether the current trend of firm actively engaging on political platforms and expressing preferences by taking sides is the new normal.

Organizer: **Joseph Porac**, *New York U.*

Participant: **Juan Alcacer**, *Harvard U.*

Participant: **Olga Khessina**, *U. of Illinois at Urbana-Champaign*

Participant: **Jeho Lee**, *Seoul National U.*

Participant: **Hart E. Posen**, *U. of Wisconsin, Madison*

The main idea behind this symposium is premised on a series of core observations in social and organizational life: (1) social entities form clusters; (2) clusters result in segregation; (3) segregated clusters are reconnected by bridging ties. This clustering-segregating-reconnecting dynamics is the common mechanism underlying a wide range of empirical phenomena ranging from racial segregation to firm-level geographic clustering and small-world networks. Rather than examining these three dynamics separately, we bring them together and look for a common thread among them to acquire a holistic understanding of the segregating-integrating mechanisms. In this symposium, we bring together scholars who study a variety of empirical phenomena yet share a common interest in illuminating these forces. Each presenter will present and discuss their own cutting research on either clustering or reconnection in a diverse set of contexts: organizational coalitions, firm agglomeration, geographic clusters, racial segregation, and inventor networks. In the end, we highlight a future research direction for understanding the segregating-clustering-reconnecting dynamics from a holistic perspective.

Discussant: **Marcel Bogers**, *Eindhoven U. of Technology*

Decentralized, distributed systems of innovation and production are becoming ever more economically and strategically important. This has prompted a surge of interest among strategy and organizations scholars, with rich bodies of work emerging around open innovation, platforms, ecosystems, the sharing economy, user innovation, and more. One recent, yet understudied manifestation of this broader trend is the maker movement, which refers to collaborative communities of amateur and professional fabricators and tinkerers that have emerged over the past two decades. The goal of this symposium is to explore the technologies and practices associated with this community from a processual perspective, specifically in the context of healthcare innovation. We do so by showcasing cutting-edge unpublished work from top scholars publishing in the areas of technology, organizational learning, and entrepreneurship. These papers adopt different theoretical perspectives and levels of analysis to explore a set of closely-related, under-researched, and important questions: How can teams use “democratizing” technologies to identify new opportunities, and how can emergent organizations enact those ideas to create value? How do distributed, collaborative network structures emerge, and how does knowledge flow through them over time? Collectively, these papers draw insights from user innovation and the maker movement context to advance research and theory on entrepreneurship, legitimacy, ecosystems, and organizational emergence. Following the four papers, an expert discussant will synthesize emergent insights, and we will conclude with an exercise in “democratized innovation” of our own, using a group exercise to crowdsource a collective future research agenda.

No invitation required! Join us for an engaging set of papers on decentralized innovation in healthcare. Following the papers, we'll have time to crowd-source a research agenda of our own, working in groups to connect with like minds and spark potential collaborations.

There has been growing scholarly interest in the role and responsibility of firms in addressing societal problems. Prior work has shown that there can exist an economic case for firms' pursuit of social objectives and that firms possess capabilities that make them better suited to address certain societal issues compared to other organizational forms. However, even though companies are increasingly tackling societal grand challenges, corporate involvement in addressing social problems does not necessarily achieve the desired social outcomes. Realities like tensions between stakeholders of different power or tradeoffs between the pursuit of financial and social objectives can lead to social-oriented efforts that are temporary or that are decoupled from on-the-ground impacts. This symposium takes the position that there is great potential for for-profit firms to further social goals. However, we also posit that there is still much to learn about how companies can do good better. We focus on firms operating in weak institutional contexts, which create problems of economic and human development while also making it more difficult for companies to address them. Through their presentations, our scholars characterize firm-level efforts to address social problems in low- and middle-income economies, theorize the mechanisms for why firms' efforts do not necessarily achieve desired social outcomes, and ascertain strategies for the improvement of firms' participation in creating better outcomes, from the perspectives of both managers and policymakers.

New Directions in Research on Organizational Identity

Session Moderator: **Peter Foreman**, *Illinois State U.*

MOC: Moral Outrage and Public Shaming on Social Media: Role of Organizational Affiliation and Identification 

Author: **Pingshu Li**, *U. of Texas Rio Grande Valley*

Author: **Lynn A. McFarland**, *Darla Moore School of Business, U. of South Carolina*

Author: **Jennifer L. Welbourne**, *U. of Texas Rio Grande Valley*

With increasing public shaming incidents on social media that involve organizations and their members, its mechanisms in association with organizations are still not well known. We draw research attention to this phenomenon by spotlighting the role of the transgressor's organizational affiliation and organizational members' own organizational identification. Across two experimental studies, we first investigate an important mediation mechanism through which moral convictions triggered by social media posts lead to moral outrage and ensuing public shaming intentions. Using intergroup emotions theory as a theoretical guide, we further examine the role of organizational affiliation and identification. Specifically, we found that when the inter-organizational relationship is salient, organizational members with higher identification are likely to experience more outrage toward a transgressor from a different organization rather than their own organization. Moreover, we found that organizational members demonstrate less outrage when comments on the post are primarily made by those from a rival organization. We discuss the contributions of these findings to management theory and practice.

MOC: Foiled! How Being Targeted as an Identity Contrast Can Affect the Organization and How Others See It

Author: **Donald A. Lange**, *Arizona State U.*

Author: **Beth Schinoff**, *Boston College*

Author: **Blake E. Ashforth**, *Arizona State U.*

We build on the idea that identity is inherently relational and comparative to note that, as of yet, little is known about how an organization and its members experience being targeted for disidentification by another entity (i.e., as an identity contrast). We develop theory from the targeted organization's point of view, and in doing so, offer novel insights on the dynamic interplay between protagonist (the organization doing the disidentifying) and foil (the organization being disidentified with). We consider the competitive context in which the two organizations coexist to address why the protagonist might engage in disidentification, and therefore why specific firms might find themselves targeted as foils. We then distinguish a typology of disidentification, and theorize from that typology why being targeted as a foil can range from meaningless to meaningful, and why sometimes being targeted can be the catalyst for the foil's own identity work or image work.

MOC: An Identity Work Framework for Community Stakeholder Engagement in Infrastructure Development 

Author: **David Oliver**, *U. Of Sydney*

Author: **Suresh Cuganesan**, *U. Of Sydney*

Author: **Kon Shing Kenneth Chung**, *U. Of Sydney*

Traditional stakeholder management approaches to community engagement during infrastructure development have frequently resulted in conflict, community resistance and often failure. In this paper we propose an identity-based stakeholder engagement framework to help infrastructure teams reconceptualize community stakeholders' interpretation of infrastructure development from identity threat to opportunity. We present three core goals to enable this to occur: creating identity security, cueing alternative social identities, and extending identity temporalities. We offer empirical illustrations and practical advice on how these goals might be achieved, as well as an agenda for future research.

Paper is NOT Available. Please contact the author(s).

MOC: Identification in Hybrid Organizations: Identity Congruence, Commitment and Exit/Voice/Loyalty

Author: **Peter Foreman**, *Illinois State U.*

Members' relationships to hybrid identity organizations are relatively understudied, especially in terms of the effects of multiple organizational identity elements on individual outcomes. This study draws on theory in organizational identity and identification to examine how multiple identities affect member commitment, and subsequently exit, voice, and loyalty. Specifically, we take the concept of identity congruence (Brickson, 2012; Foreman & Whetten, 2002) and employ it as a measure of identification, whereby members compare perceptions of their organization's current identity with an expected identity. The resultant degree of congruence acts like a person-organization fit measure, such that greater gaps result in lower attachment to the organization, with consequences for other outcomes – in particular the Exit-Voice-Loyalty framework derived from Hirschman (1970). We examine these relationships within the context of agricultural cooperatives: a hybrid identity organization (Albert & Whetten, 1985) embodying both normative and utilitarian identities. We test a model whereby commitment mediates the effects of identity congruence on exit, voice, and loyalty. Our analyses indicate that both types of identity congruence affect commitment and have significant indirect effects on all three outcomes. Moreover, the utilitarian form of identity congruence has a stronger influence than the normative one.

STR: Is the Glass Half Full, Half Empty or Both? TMT Optimism Diversity and New Product Introduction

Author: **Wan-Chien Lien**, *National Yunlin U. of Science and Technology*
Author: **Jianhong Chen**, *U. of New Hampshire*
Author: **Michael Kukenberger**, *U. of New Hampshire*
Author: **Ho Kwong Kwan**, *China Europe International Business School (CEIBS)*
Author: **Jeffrey Edward Sohl**, *U. of New Hampshire*

Executive optimism (or pessimism) about the business environment has broad and vital strategic implications. Departing from previous research centered mainly on CEOs, we developed a model explaining when and how TMT optimism shapes new product introduction. We examined the TMT optimism diversity and argued that CEO visionary leadership plays the critical moderating role, in which TMT optimism diversity is positively related to TMT behavioral integrate and ultimately to the new product introduction when CEO has high visionary leadership, whereas it yielded negative effect when CEO has low visionary leadership. Results based on multi-wave and multi-sources data from 83 Chinese small and medium enterprises support the model and associated hypotheses. Our study offers a nuanced theoretical account of the strategic implications of TMT optimism.

STR: Top Management Team Incentives and Business Model Innovation

Author: **Eduard Esau**, *Gottfried Wilhelm Leibniz U.*
Author: **Erk Peter Piening**, *Leibniz U. Hannover*

Firms are forced to adapt to an increasingly changing business environment that often requires not only product and process innovation, but also business model innovation (BMI) activities. Whether or not a firm reconfigures its business model is typically decided by the top management team (TMT). However, as previous BMI research has neglected the role of the TMT in BMI, we know little about when and why a TMT engages in BMI activities. In this study, we focus on the compensation schemes of TMT members as a motivating factor to take risks and facilitate BMI. Adopting a behavioral agency model (BAM) perspective, we develop a research model that examines the relationship between TMT long-term incentives and a firm's BMI intensity. Here, we consider the moderating roles of termination protection and long-term incentive dispersion in the TMT. In addition, we take into account the general pay dispersion in the total compensation among the top management as a trigger of tournaments. To test the proposed model, we use a unique panel dataset comprising 6,428 observations of publicly listed U.S. firms between 2006 and 2018. Our study contributes to a better understanding of how and when top management incentives trigger BMI activities and adds to both the compensation and BAM literature by providing further insights on how compensation schemes affect a group of agents in an high-risk and interdependent work context such as BMI.

STR: The Impact of Top Management Team Composition on Product Recall Risk

Author: **Julian Schulte**, *U. of Münster*
Author: **Karl Lucas Kleine-Stegemann**, *Westfälische Wilhelms-U. Münster*

Removing faulty products from the market can have major financial and non-financial damages for firms. Nevertheless, it is still unknown how firms can prevent such product recalls. Drawing on the upper echelons theory, stating that firm outcomes are reflections of its top executives, our study examines the impact of top management team composition on the risk of a firm having a product recall for medical devices. Analyzing a large longitudinal dataset of S&P 500 firms, our results indicate that firms have a reduced risk to have a product recall if they have a senior executive that is responsible for operations, i.e., chief operations officer (COO), and increased risk if they have a senior executive responsible for innovation, i.e., chief technology officer (CTO). In addition, we show that the risk of a product recall decreases even further when the COO has a long tenure with the firm. Our findings contribute to theory and practice in several ways: Theoretically, we advance the product recall literature by giving insights about the importance of top management team composition for the likelihood for firms to experience product recalls. Furthermore, we contribute to upper echelons research by showing that functional managers can influence non-financial outcomes. For practitioners, we advance the understanding of the reasons for product recalls and possible prevention strategies.

STR: Curse or Blessing? The Use of Subjective Performance Evaluation in the Digital Era

Author: **Sebastian Firk**, *U. of Groningen*
Author: **Yannik Gehrke**, *U. of Goettingen*
Author: **Max Holst**, *U. of Goettingen*

Subjective performance evaluation (SPE) in executive compensation raises concerns among investors due to a potential lack of pay-for-performance. However, while these concerns are reasonable, subjective performance evaluation can also supplement the incompleteness of objective performance measures and thereby improve incentive contracting. Based on this reasoning, we believe that SPE is essential for the progress of digital innovation where conventional performance measures typically fail to provide accurate information. Our results empirically verify that the adoption of SPE indeed encourages executives to engage in digital innovation. Moreover, we find that this positive association depends on CEOs' perception of director's ability and willingness to deviate from objective results when making subjective evaluations. Thus, our results are valuable for investors, firms, and compensation consultants thinking about SPE and struggling with digital innovation.

Dynamics of Resource Acquisition and Deployment

Session Moderator: **Henrich Greve**, *INSEAD*

STR: [Turning Sorrow into Treasured Gold: Airline Complexity and Responses to the Covid Pandemic](#)  

Author: **Henrich Greve**, *INSEAD*

Author: **Cyndi Man Zhang**, *Singapore Management U.*

When firms face sudden and unusual crises, decision-makers need to quickly respond, and these responses have short-term costs and benefits but can also have long-term consequences that alter the strategy. A question of long-standing interest is whether firms with complex assets and production structures will respond slowly because the complexity delays understanding of the best response and reduces ability to implement it. The airline industry responses to the Covid pandemic are ideal for testing this proposition because the industry experienced rapid and sizable reductions in demand, and airlines differ significantly in complexity along easily measurable dimensions. The analysis demonstrates how airline decisions to store, retire, or sell aircraft differed in response to increased state policy stringency as a function of their complexity.

STR: [Betting on Strategic Initiatives!? Human Capital and Insider Trading](#) 

Author: **Nauman Asghar**, *HEC Paris*

Author: **Russell Coff**, *Wisconsin School of Business*

Author: **John Mawdsley**, *HEC Paris*

Author: **Philipp Meyer-Doyle**, *INSEAD*

We explore how the human capital (generalist or specialist) of managers is associated with their insider trading behavior and the performance of their trades. Examining insider trading associated with a firm's announcement of new product introductions, which are an important class of firm strategic initiatives, we find that generalist board members engage in greater levels of insider trading before the new product announcements than specialists, and this effect is stronger when generalists have deep direct knowledge of the firm. Yet, while generalists earn positive abnormal returns, on average, from their insider trading, these positive abnormal returns are lower than those earned by their specialist peers, suggesting insider trading may be associated with human capital-related tradeoffs. Importantly, however, deep direct knowledge about the focal firm, which we theorize offers advantages for managers for applying their general knowledge to the firm's strategic initiatives and a stronger positive trading signal to investors, enables generalists to increase their abnormal returns, and thus improve their insider trading performance. Overall, our study contributes to the literatures on strategic human capital, insider trading, and strategic initiatives and innovation in strategy.

STR: [Not All Enemies Are Created Equal: How Does Competitive Rivalry Shape the Strategic Factor Market? \(WITHDRAWN\)](#) 

Author: **Zhefei Li**, *Fudan U. School of Management*

Author: **David M. Gomulya**, *Singapore Management U.*

Author: **Heli Wang**, *Singapore Management U.*

Prior studies in Strategic Factor Market (SFM) have looked at how product market competition may affect the value of resources being traded and the focus so far has been on competition among bidders (i.e., potential buyers). Yet, competitive rivalry may also exist between bidders and sellers as both sides may operate in the same market and need similar resources. Resource exchange between seller and rival buyers may potentially impact their relative competitive positions, which is another factor that could affect the likelihood of resource transaction in the SFM but has been largely overlooked in the literature. In this study, we first test the effect of competition between seller and buyer on the likelihood of SFM transaction, and then examine the conditions under which such a transaction is more or less likely to materialize. Our results help to advance the product factor market rivalry literature in the SFM theory.

Paper is NOT Available. Please contact the author(s).

 STR: [Super- and Sub-additivity in Resource Portfolios](#) 

Author: **Jaideep Anand**, *Ohio State U.*

Author: **Sungho Kim**, *Southern Illinois U.*

Growth strategies can result in multiple or overlapping resources of the same kind within a firm. The value of the firm depends on the interaction between such overlapping resources and the outcome of resource combinations. Prior research has often emphasized additivity or super-additivity in resource combinations—the value of combined resources is equal to or larger than the sum of the values of the individual resources. Fungibility and scale-free properties are integral to the argument of super-additivity in the corporate strategy literature and resource-based view. This study offers a new mechanism underlying sub-additivity, i.e., the value of combined resources is smaller than the sum of the values of the individual resources, and shows how fungibility and scale-free property can, under certain conditions, substantially diminish the value in resource combinations. Using a computational modeling approach, we show that super- and sub-additive interactions coexist in resource combinations, and which effect is dominant depends on other factors that determine the value of resources at resource, firm-dyad, and industry levels. Our study identifies boundary conditions for super-additivity or sub-additivity to occur in resource combinations. We discuss implications for the resource-based view, internally competing resources, and corporate strategies.

Governance Bodies and Activism

Session Moderator: **Eugene See**, *Coastal Carolina U.*

STR: The Impact of Dual Activists on Firm Strategic Change 

Author: **Eugene See**, *Coastal Carolina U.*

Author: **Bruce Skaggs**, *U. of Massachusetts, Amherst*

The prevalence of shareholder activism has resulted in the placement of activist appointed directors onto the boards of firms. Extant work examining this phenomenon has taken a rational approach in examining how such directors bring about change, but have assumed for the behavioral implications associated with their placement on boards. Building on theory involving alignment and legitimacy at the team level, this paper adopts a behavioral approach in theorizing how the placement of activist shareholders themselves as directors onto the boards of firms brings about firm change. It finds that such “dual activists” lead to less firm change. Further, it finds support for the effects of demographic similarity between such activists and incumbent directors in causing for change.

STR: Investor Reactions to Corporate Misconduct: The Moderating Role of Firm Reputation 

Author: **Lu Ye**, *U. of Melbourne*

Author: **Helen Wei Hu**, *U. of Melbourne*

Corporate misconduct research has observed negative market reactions following misconduct. Drawing on signaling theory, this study considers misconduct as a negative signal and links misconduct severity to market reactions. We argue that severity level decides signal strength and increases market reaction magnitude. However, it is unclear why different firms are punished to varying degrees for similar misconduct. We therefore demonstrate how perceptual biases distort investors’ perceived severity and describe how the effect of severity is moderated by firm reputational signals, including moral, technical, and leadership capital. This study is supported by an empirical analysis of 344 Chinese listed firms that engaged in financial misconduct during 2009–2019. Accordingly, we facilitate a more fine-grained understanding of the relationship between corporate misconduct and market reactions.

Paper is Available to Meeting Registrants Only.

STR: The Ownership Commitment of Institutional Investors 

Author: **Mallory Elise Flowers**, *U. of Rhode Island*

Author: **Alina Georgiana Andrei**, *RSM Erasmus U.*

Institutional owners have become so large that diversifying away from systemic risks is increasingly difficult. This growth has forced them to reconsider their motivations and (environmental and social) impact, resulting in active ownership forms not yet understood in corporate governance research. We revisit our knowledge of institutional investors’ behavior and investigate why they invest beyond financial reasons. We explain this apparent over-investment by institutional investors as ownership commitment, building on the organizational commitment and corporate governance literatures. Our theorizing develops a suite of hypotheses predicting when an investor will increase existing commitments beyond financial motivations. Empirically, we test these hypotheses using a large and novel dataset of owner-firm dyads observed from 2006 to 2019. Our results demonstrate that ownership commitment is higher for active owners, particularly when the investor and target share social values. Our study contributes to the literature on corporate governance, organizational commitment, and corporate responsibility by providing new insights on the ownership commitments of institutional investors.

STR: Barking up the Wrong Tree: Effects of Governance Systems on Psychological and Behavioral Outcomes  

Author: **Ben Wilhelm**, *ODC*

Author: **Nastaran Simarasi**, *California State Polytechnic U., Pomona*

Author: **Frederik Riar**, *U. of Bern*

Author: **Franz Kellermanns**, *U. of North Carolina, Charlotte*

Organizational citizenship behavior is a highly sought-after outcome. We integrate insight from the psychological ownership perspective and agency theory to examine how the juxtaposition of informal mechanisms (i.e., ownership feelings toward an organization) and formal mechanisms (i.e., employee share ownership, agency monitoring, and peer monitoring) influences employees’ organizational citizenship behaviors. Our empirical results show that psychological ownership has a positive effect on organizational citizenship behavior. Contrary to the common belief that informal and formal mechanisms complement each other, we find that the positive influence of psychological ownership on organizational citizenship behavior is more pronounced when employee share ownership and agency monitoring is low compared to high. Implications for theory and future research are discussed.

STR: The Role of Activist Hedge Funds’ Hostile Tactics on Governance Actions of Target Firms

Author: **Haeyoung Koo**, *City U. of Hong Kong*

Author: **Margarethe F Wiersema**, *U. of California, Irvine*

Hedge fund activism is becoming an integral part of publicly traded firms, and our paper adopts a behavioral lens to examine how specific tactics employed by activist hedge funds may alter the actions of target firms. Our study draws on the theory of threat rigidity to argue that the hostility of activist hedge funds’ tactics may impede the information processing ability of executives and influence their responses. Using a sample of 763 activist hedge fund campaigns from 2002 to 2015, we find that target firms are more likely to engage in a governance action when the activist hedge fund uses more hostile tactics. Further, our findings indicate that the prior activism experience and financial performance of target firms moderate the main effects.

Macro Topics in Health Organization and Management

Session Moderator: **Robert J Weech-Maldonado**, *U. of Alabama, Birmingham*

HCM: The Exploration of Nursing Home COVID-19 Incidence Rates in Socially Deprived Communities

Author: **Robert J Weech-Maldonado**, *U. of Alabama, Birmingham*
Author: **Justin Lord**, *Louisiana State U. Shreveport*
Author: **Ganisher K. Davlyatov**, *U. of Oklahoma Health Sciences Center*
Author: **Akbar Ghiasi**, *U. of the Incarnate Word*
Author: **Gregory N. Orewa**, *U. of Alabama, Birmingham*

Health inequities vary along social and economic gradients. The COVID-19 pandemic and nursing home infections have highlighted this fact. Using the Centers for Medicare and Medicaid Services' Nursing Home COVID-19 Public File, Brown University's LTCFocus, Robert Graham Center's Social Deprivation Index, and CMS Nursing Home Payroll Based Journal Staffing Data. We examined the relationship between community resource scarcity, as conceptualized by the Social Deprivation Index (SD) and COVID-19 incidence rates in nursing homes. After controlling for interstate differences, organizational enabling factors, as well as, facility-level resident and community-level characteristics, nursing homes located in communities with medium levels of social deprivation had 4.4% more COVID-19 infection rates (Incidence Rate Ratio [IRR] = 1.04; $p < 0.05$) and communities with high levels of social deprivation had 7.5% higher COVID-19 infection rates (Incidence Rate Ratio [IRR] = 1.07; $p < 0.01$) as compared to nursing facilities located in areas of low social deprivation. From a policy perspective, nursing homes, that are located in socially deprived communities, may need additional resources, such as, funding for staffing and personal protective equipment in the face of the pandemic. The COVID-19 pandemic has sharpened the focus on healthcare disparities and societal inequalities in the delivery of long-term care.

Paper is Available to Meeting Registrants Only.

HCM: Physician Management Companies, Private Equity Investment, and Commercial Healthcare Prices (WITHDRAWN)

Author: **Ambar La Forgia**, *Columbia U.*
Author: **Amelia Bond**, *Weill Cornell Medical College*
Author: **Robert Tyler Braun**, *Weill Cornell Medical College*
Author: **Leah Yao**, *Weill Cornell Medical College*
Author: **Klaus Kjaer**, *Weill Cornell Medical College*
Author: **Larry Casalino**, *Weill Cornell Medical College*

Financial institutions have fueled the corporatization of medicine by investing in and acquiring health care organizations. In particular, private equity (PE) firms have invested heavily in physician management companies (PMCs). A PMC is a for-profit entity that manages the back-end administrative functions of medical practices, such as insurance contracting and billing. Many PMCs also employ practitioners and contract with hospitals to provide professional staffing and management services. This type of PMC is especially common in anesthesia: the eight largest anesthesia-focused PMCs employ nearly 22% of all anesthesia practitioners in the U.S. In this paper, we create a novel dataset that combines commercial claims from the Health Care Cost Institute with data on PMC facility contracts for anesthesia staffing services to study 1) how prices paid to anesthesia practitioners change after a facility contracts with a PMC and 2) whether there are differences between PMCs with and without PE investment. Using difference-in-differences methods, we find that allowed amounts increase by 16.5% post-PMC contract, with significant differences by PE status: PMCs without PE investment increase allowed amounts by 12.9%, while PE-backed PMCs increase allowed amounts by 26.0%. We find similar patterns for unit prices (allowed amounts standardized by procedure type and length), suggesting that price increases are the result of higher prices paid per service and not service length or intensity. In additional analyses, we explore why PMCs may command higher prices, including the threat of moving practitioners out of network.

Paper is NOT Available. Please contact the author(s).

HCM: The Impact of COVID-19 on Hospitals Financial Performance: Evidence from California Hospitals

Author: **Mengying He**, *California State U., Los Angeles*
Author: **Mahshid Jessri**, *California State U., Los Angeles*
Author: **Hanze Zhang**, *amgen*

Goal: On March 19, 2020, the Governor of California, Gavin Newsom announced a statewide "shelter-in-place", issued an executive order for hospitals to pause performing elective procedures, and requested state hospitals to increase inpatient bed supply to provide sufficient space to treat Covid-19 patients. These orders were lifted one month later on April 22, 2020. However, these changes and the ongoing effect of Covid-19 may have both immediate and long-term impacts on hospitals' revenue and expenses. The purpose of this paper is to explore the impact of the Covid-19 pandemic on California hospital financial performance based on the structure-conduct-performance (SCP) framework and resource-based view (RBV) of the firm. Methods: A linear mixed-effects model was used to capture the effect of Covid-19 on financial performance over time (from 2017 Quarter 1 to 2020 Quarter 4) of the repeated measurements for each hospital, with the interaction from resources and ownership. Principal Findings: Covid-19 had a negative impact on hospital operating margin (OM) ($b = -.03$, $p < .05$), but not for the total margin (TM). We found a negative moderating role of total capital expenditure ($b = -.00$, $p < .10$) on hospital TM, but not for OM. We observed a positive moderating effect of for-profit hospitals for both OM ($b = .04$, $p < .01$) and TM ($b = .02$, $p < .10$) when compared to not-for-profit hospitals. Practical Applications: Hospital managers need to understand the impact of Covid-19 on hospital financial performance and find out the ways in helping hospitals recover from the pandemic and prepare for future pandemics or emergencies.

Paper is Available to Meeting Registrants Only.

Author: **Robin Peeters**, *Maastricht U.*

Author: **Daan Westra**, *Maastricht U.*

Author: **Arno J A Van Raak**, *Maastricht U.*

Author: **Dirk Ruwaard**, *Maastricht U.*

Inter-organizational networks are considered a mode of organization to address the grand challenges in health care. It is therefore crucial that they are effective. While network effectiveness is a heavily theorized, multi-dimensional concept, little is known about how network stakeholders give meaning to it in practice. In this longitudinal case study, we explored the perceptions of network stakeholders towards network effectiveness using 32 interviews with internal (i.e. network members) and external (i.e. organizations in the institutional environment) stakeholders, of which 11 were follow-up interviews, 28 hours of observations, and 1.272 pages of documents. Our results show that stakeholders engage in networks to achieve a common goals and primarily see measurable outcomes as effectiveness. However, an inability to measure outcomes and their temporal dimension legitimize a focus on the collaborative process itself for stakeholders. They furthermore experience various normative and coercive pressures to continue engaging in networks. Networks thus seem to constitute both rational and institutionalized behavior of stakeholders. When participating in networks, stakeholders should thus continuously reflect on why a network exists and assess their contribution to the network goals. Future research should seek to unravel how both rational and institutionalized behavior influence networks and their effectiveness.

Author: **Seongwon Choi**, *Trinity U.*

Author: **Kristine Ria Hearld**, *U. of Alabama, Birmingham*

Author: **Nancy Borkowski**, *U. of Alabama, Birmingham*

Over the last twenty years, the United States has experienced significant changes in public opinion in support for LGBTQ (lesbian, gay, bisexual, transgender, and queer) people and issues. While at the national level high polling numbers suggest support for LGBTQ rights, U.S. states differ substantially in state level policies and protections against sexual orientation discrimination (American Civil Liberties Union [ACLU], 2021). Despite state level public opinion and political climate towards LGBTQ persons, there is often wide variation in LGBTQ legal protections and socio-political climates among municipalities within a state (Buchanan, 2019). Approximately, 35% of hospitals in the United States do not have LGBTQ non-discrimination policies nor have LGBTQ-inclusive practices and policies in place (Healthcare Equality Index, 2020). As a result, many LGBTQ persons are hesitant to disclose their sexual orientation to their health care providers and may avoid receiving healthcare due to concerns of discrimination or cost of care (Casey, et al., 2019). These barriers to care can lead to worse health outcomes for the LGBTQ population and being often overlooked in health disparities improvement efforts (IOM, 2011). This study extends the research of DiLeo et al. (2020) by examining additional market factors, specifically, states' LGBTQ population and public policies at both the state and municipality levels that may influence a hospital's voluntary pursuit of Health Equity Index (HEI) Leader status. The main finding of this study is that LGBT population and governmental public policies may influence a hospital voluntarily pursuing HEI Leader status but they may not be as influential as originally anticipated. Additional research is needed to better understand market factors that support hospitals voluntarily pursuing HEI Leader status. It may be that the hospital's characteristics such as location (urban vs. rural), teaching status, and ownership, are more influential than market factors.

ONE: The Influence of Regulatory Context on EO, Proactiveness, & Environmental Practice Adoption  

Author: **Beverly B. Tyler**, *Virginia Tech*

Author: **Brooke A. Lahnenman**, *Montana State U.*

Author: **Daniele Cerrato**, *U. Cattolica del Sacro Cuore*

Author: **Allan Fernando Discua Cruz**, *Lancaster U. Management School*

Author: **Karin Beukel**, *U. of Copenhagen*

Author: **Nathalie Spielmann**, *NEOMA Business School*

Author: **Marco Minciullo**, *U. Cattolica del Sacro Cuore*

There is some research promising that entrepreneurial orientation (EO), and in particular its proactiveness dimension, positively influence sustainability decisions in firms, however we know little about how these characteristics more specifically relate to an SME's choice to adopt environmental practices. Furthermore, research has called for deeper examination into how the external regulatory context influences SMEs' decisions to adopt environmental practices. Combining tenets of EO, proactiveness, regulatory context, and sustainability, we hypothesize that SMEs higher in proactiveness, relative to risk-taking and innovativeness, will focus their attention on opportunities related to environmental practices that lower costs and increase competitive differentiation. We further propose regulatory pressure positively moderates the relationships between firms' EO and proactiveness and the adoption of environmental practices, as SMEs high in EO and proactiveness will be motivated to adopt a wider range of environmental practices than those necessary to meet compliance thresholds to achieve and maintain competitive advantage relative to other firms subject to the same regulatory pressure. We test and find support for our hypotheses using wine industry survey data, enriching our understanding of internal and external influences on SMEs' sustainability strategies and providing new directions for future research.

ONE: Does Media Coverage Influence Firm Green Innovation? The Moderating Role of Regional Environment (WITHDRAWN)

Author: **Zan Chen**, *Zhejiang U.*

Author: **Jun Jin**, *Zhejiang U.*

Author: **Meng Li**, *Zhejiang U.*

In the context of the digital era, the value of news media on guiding novel green production and consumption is increasingly recognized in recent years. Despite the media coverage that has been investigated in the literature of firm behaviors, it was still poorly studied in the topic of green innovation. To address this gap, we use a sample of Chinese listed industrial firms from 2015-2019 to empirically test the relationship between the media coverage and green innovation of firms. The results indicate that the level of regional digitalization and environmental governance both positively strengthen the positive effect of media coverage on green innovation. Furthermore, by dividing the tone of media coverage, we find that it is positive reports that play a more important role in promoting green innovation. These findings enrich the literature on green innovation by introducing informal institutional factors as well as the regional perspective of factors and provide

ONE: Dynamic Capabilities for Sustainability: Developing an Integrative Typology 

Author: **Daniela Ortiz**, *FHWien der WKW U. of Applied Sciences for Management and Communication*

Author: **Neli Ovcharova**, *FHWien der WKW U. of Applied Sciences for Management and Communication*

We perform a systematic literature review to synthesize the current state of knowledge about dynamic capabilities for sustainability (DCsS). Moreover, we substantiate and extend the DCsS construct by developing a typology which integrates the distinct conceptualization of DCsS applied in the literature. Based on the results of the content analysis of extant literature, we identify two dimensions that lie at the basis of the various definitions of DCsS: the type of sustainability-oriented innovation, and the level of stakeholder integration activities pursued by firms to implement their sustainability innovation strategies. The subsequent categorization of the literature according to these two dimensions resulted in the identification of five main types of DCsS: (1) DCsS for Compliant Optimization; (2) DCsS for Integrative Innovation; (3) DCsS for Compliant Supply Chain Adaptation; (4) DCsS for Supply Chain Transformation; and (5) DCsS for Systemic Evolution. We then align each type of DCsS with its predominant microfoundations, antecedents, and consequences described in the literature. By this, and building up on other similar organizing frameworks, we contribute to a more holistic understanding of the construct, which will support future researchers in their choice of measurement models.

Partnerships, NGOs and Community Engagement (In-Person)

Session Moderator: **Andra Riandita**, *U. of Stavanger Business School*

ONE: Sustainability-oriented Textile/fashion Partnerships: Mechanisms and Levels of Change  

Author: **Tulin Dzhengiz**, *Aalto U. School of Business*

Author: **Andra Riandita**, *U. of Stavanger Business School*

Author: **Anders Brostrom**, *KTH Royal Institute of Technology, Dept of Industrial Economics and Management*

Firms engage in partnerships to address various sustainability issues such as greenhouse gas emissions, cleaner production, labour rights or working conditions in their operations and throughout their supply chains. These partnerships utilise various mechanisms that can be seen as enablers of change, including product development, process enhancements, policy-related initiatives and awareness-raising campaigns. Through these mechanisms, partnerships can seek to achieve change at the firm, industry, supply chain and societal levels. This paper studies the relationship between these mechanisms and firms' targeted level of change in textiles/fashion. We analyse 444 sustainability partnerships using a mixed-method approach. We find that partnerships targeting these broader levels focus more on social sustainability issues in this industry. Those targeting society-level partnerships involve cross-sector partners. Our study adds to the conversations about sustainability-oriented partnerships by demonstrating how mechanism-change dynamics can be contextual and industry-specific.

Paper is Available to Meeting Registrants Only.

ONE: Community Involvement In The Hybrid Organization: A Study Of Community Forest Enterprises in Canada

Author: **Meike Siegner**, *Ryerson U.*

Author: **Robert Kozak**, *U. of British Columbia*

Effectively involving local communities in decision-making is an important facet of all organizations which aim to be socially responsible, but it is particularly relevant for social enterprises (SEs) which espouse community empowerment as one of their central goals. The extant literature, however, provides little in the way of guidance for SEs to ensure local participation in strategic and operational matters. This qualitative study illustrates mechanisms by which SEs can involve local people in organizational decisions in the context of six Canadian community forest enterprises (CFEs). CFEs have evolved as a result of the movement to decentralize decision-making with respect to the sustainable utilization of natural resources. This article provides insights on the importance of managerial capabilities in navigating participatory activities in the SE. We propose an enriched SE tension management framework, that includes a key dimension that has yet to receive much attention: the distinction between a focus on 'outcomes' versus a focus on 'process' in the attainment of plural goals. As such, the article makes important contributions to unpacking the empowerment element underlying organizational activities that aim to provide marginalized rural and Indigenous communities with roles in shaping local paths towards greater sustainability.

ONE: Meta-Organizing for Sustainability: A Comparative Analysis of NGO and Industry-Driven Efforts

Author: **Jose Carlos Marques**, *Telfer School of Management, U. of Ottawa*

Continued proliferation and competition amongst sustainability standard-setting organizations in most global industries and issue areas has generated considerable interest in understanding the mechanisms that may lead to standards harmonization. Drawing on the collective action and meta-organization literatures, this study sheds light on the organization of sustainability meta-governance, underscoring differences in objectives, organizational structures and mechanisms for dealing with collective action dilemmas. By means of 41 interviews and 439 archival documents, we employ a comparative case study approach to examine how eight different industry meta-governors deal with these key issues and how these differ from NGO-based approaches. Findings reveal that NGO and industry-based meta-regulators hold opposing conceptions of harmonization and develop considerably dissimilar mechanisms for bringing these about. While NGO meta-governors' pluralistic, legitimacy-based approaches have been referred to as "creating a market for standards", we suggest that industry meta-governors' centralized approach, characterized by industry concentration and supply chain governance, is best described as "standards commoditization". We outline implications of this study for both practice and future research.

Sourcing & Upstream Supply Management

Session Moderator: **John Gray**, *Ohio State U.*

OSCM: [Sub-Supplier Management - Towards a Process Framework](#)   

Author: **Joerg S. Hofstetter**, *Kedge Business School*

The multi-tier nature of supply chains (Mena et al., 2013), extending the boundaries beyond the direct supplier level upstream to sub-suppliers (Carter et al., 2015), receives increasing attention in the literature. While the conversations address particularly supply chain transparency and the identification of risk or malpractices, much less attention is given on the range of activities companies perform to manage sub-suppliers - and what management of sub-suppliers actually means. Sub-suppliers characterize by their organizational distance to the buying organization: buyers lack a contract with sub-suppliers as they are contracted only by suppliers (or other sub-suppliers) which act as middleman (Grimm et al., 2016). In such settings, selecting or knowing sub-suppliers, monitoring their performance and influencing them requires processes that are different to those applied when dealing with direct suppliers. Business experience in managing sub-suppliers is largely limited to resolving immediate problems, in particular actual crises, or sectoral / collective approaches. Academic literature on managing sub-suppliers is scarce and scattered. This paper is based on fourteen case studies and six workshops with industry experts. It proposes a sub-supplier management framework, and suggests a set of business processes for sub-supplier management. This process framework may serve as a basis for future research in managing sub-suppliers.

OSCM: [Supplier Selection in Highly Uncertain Environments: The Fuzzy Stratified Best-Worst Method](#)  

Author: **Mehdi Rajabi Asadabadi**, *The U. of Sydney*

The literature suggests the application of multi-criteria decision-making (MCDM) methods for supplier selection. MCDM methods commonly require decision makers to assign weightings of importance to the decision-making criteria based on which the available suppliers are ranked. Such rankings, however, may not sufficiently support the supplier selection process. This is because the selected supplier will be used for a relatively long period of time. The decision criteria, therefore, need to have weightings that take into consideration uncertainty that is related to the future in which the supplier will still be used (especially in the current challenging world after COVID-19). This research gap is important because the current literature may guide authorities to select a supplier which may suit their current situation but may not be the best option in the near future. This may result in the need to change their supplier in the near future or tolerate the consequences of a wrong selection. To address this gap, this paper suggests the application of an MCDM technique, namely the stratified MCDM (SMCDM) in combination with fuzzy logic and the best-worst method (BWM). Therefore, while this paper addresses the supplier selection problem in an uncertain environment, it also proposes a novel decision-making framework to support decision making in uncertain environments.

OSCM: [Supply Base Geographical Complexity and Quality Risks: Evidence From the Chinese Automobile Industry](#)

Author: **Huashan Li**, *U. of Melbourne*

Author: **Hari Bapuji**, *U. of Melbourne*

Author: **Srinivas Talluri**, *Michigan State U.*

Author: **Prakash Jagat Singh**, *U. of Melbourne*

Supply base geographical complexity has important implications for supply chain risk and performance, but less is known about its relationship with product quality risks. Drawing on the transaction cost economics and social network theory, we argue that supply base geographical complexity increases monitoring and coordination challenges, thus leading to higher product quality risks. However, vertical integration and high network centrality can mitigate this impact by facilitating trust and information sharing. We test our hypotheses using Chinese automobile industry data collected from multiple sources and find that supply base geographical complexity is positively related to automobile quality risks, but this relationship is weakened by the network centrality asymmetry between a buyer and its suppliers. This study extends our understanding of the antecedents of product quality risks and the interaction of supply network structural characteristics.

OSCM: [Proposal Evaluation and Contract Performance](#) 

Author: **Beverly Osborn**, *The Ohio State U. Fisher College of Business*

Author: **John Gray**, *Ohio State U.*

It is believed by many academics and practitioners that supplier and vendor selection decisions are often too focused on price, and that this excessive price focus can contribute to subpar performance in the subsequent engagement. Testing this belief is complicated by various challenges, including measuring post-award overall performance and finding variance in decision-making approaches on spend with similar characteristics. We use a novel approach, employing longitudinal U.S. federal government purchasing data, to deal with these issues. We match transactions on spend and stakeholder characteristics to focus our analysis only on comparable, non-trivial decisions. We use whether the chosen bidder was recontracted, given that the opportunity existed, as our measure of overall performance. We find that excessive price focus does lead to worse performance when there is no explicit incentive for or against focusing on price. Interestingly, we find no effect of price-based decision making on performance when selecting based primarily on price requires explicit written justification. Taken together, we infer that price-based bias occurs even when it is not incentivized, but can be muted by making it difficult to select primarily based on price.

Partnerships for Sustainability

Session Moderator: **Catherine Erica Alexina McDonald**, *U. of St. Gallen*

SIM: Collaborating for Community Regeneration: Facilitating Partnerships in, through, and for Place

Author: **Jennifer Brenton**, *Memorial U. of Newfoundland*

Cross-sector partnerships (CSP) are increasingly recognized as essential for addressing our world's mounting sustainability challenges. However, place is often considered merely as a contextual backdrop for these partnerships in CSP research. In this study, we focus on the ways in which place, including the natural, built, and cultural dimensions of geographic locations, is actively leveraged to facilitate cross-sector collaboration. Employing a qualitative and engaged research approach, we helped organize and studied two workshops held in small communities on the east coast of Canada whose goal was to build a cross-sector network of community leaders focused on revitalizing communities suffering from the collapse of their primary industry, the cod fishery. We show how the staging of place fostered deeper connections among participants by reducing barriers to participation, intensifying contact with others, and enabling participants to share local knowledge. In turn, connecting through place prompted participants to recognize a shared purpose and sense of belonging, two key elements for building cross-sector collaboration.

SIM: Extending the Continuum of Corporate Diplomacy: Insights for Effective Implementation of the SDGs 

Author: **Catherine Erica Alexina McDonald**, *U. of St. Gallen*

Denoting several of the “grand challenges” of our times, the Sustainable Development Goals (SDGs) provide a framework for addressing large scale issues through collaborative action. Yet to date, progress on the SDGs has been limited, with effective mechanisms for implementation lacking. In this paper, I argue that corporate diplomacy can act as a tool to support more effective multinational enterprise (MNE) participation and implementation of the SDGs, however, must be reconsidered from a holistic perspective in order to facilitate meaningful change. This paper builds off the continuum of corporate diplomacy proposed by Michelle Westermann-Behaylo, Kathleen Rehbein and Timothy Fort, by proposing three possible extensions of proactive corporate diplomacy. By extending existing conceptions of corporate diplomacy to incorporate theoretical perspectives from business and human rights as well as political corporate social responsibility scholarship, this paper aims to contribute to the literature on grand challenges by providing new approaches to improve collaboration.

SIM: Mining-Dependence & Triple Helix in Brazil: Analysis of the Entrepreneurial University

Author: **Frederico Dornellas Martins Quintão**, *Pontifical Catholic U. of Minas Gerais*

Author: **João Paulo Moreira Silva**, *Pontifical Catholic U. of Minas Gerais*

Author: **Armindo Dos Santos De Sousa Teodosio**, *Pontifical Catholic U. of Minas Gerais*

Extractivism is one of the main economic sources in the country. However, this activity produces socio-environmental liabilities in the host territories, making well-being and work alternatives unfeasible. As a way of circumventing the impacts, intersectoral partnerships are formed to overcome “Mining-Dependency”. To better understand this phenomenon, a single case study was carried out in order to understand the territorial development projects between university, city hall and mineral extractive industry, located in Itabira - MG. The city of Itabira is the birthplace of a large mining company and records a deadline for the depletion of its mineral reserves for the year 2028. Through documentary research and semi-structured interviews, it was possible to recognize the alignment of the population's reality with the development project. Preliminary results indicate that the project of economic dynamization led by the university is erratic, still benefiting the local economy in a superficial way and not integrated with the desires of the local community. Projects aimed at fostering entrepreneurship and innovation have not shown preeminence. In this way, new research may arise when rethinking the role of the Triple Helix in territories impacted by extractivism, including civil society as an actor of the Fourth Helix.

SIM: Fostering Deliberation for Sustainable Organising: The Role of Brokers in MSIs

Author: **Julia Grimm**, *Jönköping International Business School*

Author: **Rebecca Christin Ruehle**, *Vrije U. Amsterdam, School of Business and Economics*

Within multi-stakeholder initiatives (short: MSIs), companies aim to set regulations for themselves that they want to collectively and voluntarily follow to improve social and environmental issues in the absence of globally binding rules. This paper explores how a shift from strategic to communicative action is possible within MSIs to allow for sustainable organising. To understand the role that brokers play in this process, we draw on two complementary MSIs—the German Partnership for Sustainable Textiles (short: TP) and the Fossil Free Sweden Initiative (short: FFS). An analysis of these cases reveals that a commitment to substantive collaboration in the absence of external pressure is only possible if deliberation is reached between different stakeholder groups. Furthermore, it shows us that this shift from strategic action (commitment due to external pressure) to communicative action (commitment due to deliberation) is tied to individuals within the process. Our study provides in-depth insights into the literature on brokerage processes within MSIs, as well as to the Habermasian stream of literature on MSIs within organisation theory.

Antecedents and Consequences of Attention

Session Moderator: **Ann-Kathrin Schill**, *U. of Passau*

 **STR: Analyst Flattery, CEO Narcissism, and CEO Communication Specificity** 

Author: **Ann-Kathrin Schill**, *U. of Passau*
Author: **Angelo Boutalidakis**, *U. of Passau*
Author: **Friederike Hawighorst**, *U. of Passau*
Author: **Lorenz Graf-Vlachy**, *TU Dortmund U.*
Author: **Andreas Sebastian König**, *U. of Passau*

We study how securities analysts' use of flattery toward a CEO affects the degree to which that CEO communicates with higher specificity, rather than vaguely. CEO communication specificity is important for analysts as it substantially facilitates their work. However, CEOs might have little incentive to communicate with high specificity as it narrows CEOs' strategic discretion. We argue that flattery—a ubiquitous social influencing behavior—enables analysts to render CEOs more likely to overcome their preference for vague communication because it invokes norms of reciprocity in the CEO and enhances the CEO's self-esteem. Ultimately, the more an analyst flatters a CEO, the greater that CEO's communication specificity. Moreover, integrating CEO narcissism research, we argue that analyst flattery provides “narcissistic supply” such that the positive effect of analyst flattery on CEO communication specificity increases to the extent of the focal CEO's narcissism. Data from 2,159 dyads of analyst questions and CEO answers in quarterly earnings calls of U.S. hard- and software as well as pharmaceutical firms preliminarily support our hypotheses. Our theorizing and findings introduce a novel outside-in perspective of social influencing mechanisms—particularly flattery—at the executives/capital-markets interface. It also answers strategic leadership scholars' calls to illuminate the “relational black box” of CEOs' interactions with external stakeholders.

 **STR: Language Sentiments and Attentional Engagement: Quasi-Experimental Evidence from “Twin Tweets”**  

Author: **Ningzi Li**, *U. Of Chicago*
Author: **Tony Tong**, *U. of Colorado, Boulder*

Although the attention-based view emphasizes that organizations can use language in public communication to engage attention, the effects of language are often confounded by contextual factors. To isolate the effects of language on attention, we exploit a novel quasi-experiment where pairs of tweets are posted by the same organization on the same topic within a short time. Our analysis focuses on how using sentiment vocabularies affects two aspects of attentional engagement. We find that within a tweet pair, the tweet using more positive vocabularies receives greater selective attention (likes), and the tweet using more negative vocabularies receives greater selective attention and intensive attention (retweets). Whereas increased use of positive vocabularies attracts greater selective attention than intensive attention, increased use of negative vocabularies attracts greater intensive attention than selective attention.

STR: Performance Feedback and Strategic Change: The Effects of Analyst Coverage and Forecast Dispersion

Author: **Quang Anh Le**, *Southern Taiwan U. of Science and Technology*
Author: **Cheng-Yu Lee**, *Southern Taiwan U. of Science and Technology*
Author: **Hsueh Liang Wu**, *National Taiwan U.*

This study employs the behavioral theory of the firm and the attention-based view to examine the connection between performance feedback and strategic change in the external monitoring mechanism extracted from stock analysts. Based on a sample of Taiwanese electronic firms from 2001 to 2020, we first found that firms tend to search for alternative strategic options when facing below-aspiration performance. Next, analyst coverage and forecast dispersion, as sources for revising the attention structure of decision-makers, become the contingencies for explaining this connection. However, we also found that firms avoid strategic change when experiencing above-aspiration performance and the contingent roles become neutralized in this scenario.

STR: Executive Attention Breadth and Rival Competitive Action: A Rivalrous View of Executive Attention 

Author: **Tianxu Chen**, *West Virginia U.*
Author: **Lingling Pan**, *U. of Pittsburgh*
Author: **Gerry M McNamara**, *Michigan State U.*

Drawing on the attention-based view and the awareness-motivation-capability framework in competitive dynamics, this study provides a theoretical framework linking a focal firm's public display of wide executive attention breadth to a rival's subsequent volume of competitive actions. We argue that a wide executive attention breadth at the focal firm may motivate the rival into more aggressive attacks. We also argue that the focal firm's level of managerial discretion will moderate the impact of its executive attention breadth on a rival's competitive actions. Based on a unique sample of competitor dyads from duopoly industries composed of S&P 1,500 firms, we found a positive association between a focal firm's executive attention breadth and a rival's subsequent volume of competitive actions. We also found that when the focal firm had high media coverage, an indicator of reduced managerial discretion, the impact of its executive attention breadth on the rival's action volume became stronger; whereas, when the focal firm had high market dominance, an indicator of increased managerial discretion, the impact of its executive attention breadth on the rival's action volume became weaker.

Innovation and Digital Transformation: The role of the CEO and Owners

Session Moderator: **Heejin Woo**, *California State U., Fullerton*

STR: Post-IPO VC Ownership Effect on Innovation-Enhancing Investment of Newly Public Firms

Author: **Heejin Woo**, *California State U., Fullerton*
Author: **Sukwoong Choi**, *MIT Sloan School of Management*
Author: **Taekyun Kim**, *Korea Advanced Institute of Science and Technology (KAIST)*

Although the existing literature has discussed the effects of VC firms on investee ventures before and at the time of an IPO, less is known about how they influence the strategic decisions of newly public firms after the IPO. Conventional wisdom is that VC investors exit from a venture investment through an IPO. However, we find that VC investors hold a significant amount of shares for years after an IPO. This study examines how VC investors affect a firm after an IPO. Building on the literature on governance through ownership, we argue that post-IPO VC shareholders encourage innovation-enhancing investments of newly public firms and that post-IPO VC ownership positively affects the market value of newly public firms. Our underlying logic is that outcomes created by innovation-enhancing investments of newly public firms can be beneficial to not only themselves but also VC shareholders for VC reputation, network externality, and knowledge acquisition. Consistent with our arguments, our empirical study shows that post-IPO VC ownership is positively related to R&D intensity, CAPEX investment, and Tobin's Q of newly public firms and that these relationships are amplified when a lead VC is located close to the firm, when a VC investor sits on the board, and when investees are in technology-intensive industries. This study expands the scope of the VC effect on investee ventures beyond an IPO.

STR: Walking a Tightrope: CEO Emphasis on Digital Transformation and CEO Dismissal

Author: **Sebastian Firk**, *U. of Groningen*
Author: **Jan Christoph Hennig**, *Groningen U. (RuG)*
Author: **Hauke Meyer**, *U. of Goettingen*
Author: **Michael Wolff**, *U. of Goettingen*

While CEOs' commitment is crucial to the success of digital transformation, surveys show that CEOs of incumbent firms underemphasize the urgency and challenges of digital transformation. We suggest that career penalties may discourage CEOs from emphasizing digital transformation. We argue that this is driven by governance actors' attribute substitution, the tendency to unconsciously substitute difficult questions with easier ones. To test these arguments, we apply a semi-supervised machine learning approach to conference calls and create a novel measure for CEOs' emphasis on digital transformation. We find that CEOs that emphasize digital transformation have a higher probability to be dismissed if financial performance suffers. We find that this relation is stronger if actors within the firm's governance context possess less digital and more financial expertise, and are busier. Further, we find that firms with CEOs sensitive to career concerns introduce fewer digital products and that this effect is mediated by CEOs' emphasis on digital transformation. These results suggest that the biased evaluation of CEOs that emphasize digital transformation may impede the transformation of incumbent firms.

STR: The Darkside of Corporate Venture Capital: A Theoretical Framework

Author: **Francesco Di Lorenzo**, *Copenhagen Business School*
Author: **Thomas Roende**, *Copenhagen Business School*

This paper develops a theoretical model where a startup seeks financing from an investor in order to develop an idea into a commercial project. Investors that possess valuable complementary assets can contribute the most to the success of the startup but also have the strongest incentives to misappropriate the idea. The startup chooses not to contract with these investors when (i) IPRs and other protection mechanisms are weak, and (ii) the initial upfront investment is limited relative to the value of the project. Large private benefits to the investor, e.g., in the form of learning benefits, decrease the misappropriation incentives and result in better matches between startups and investors.

Paper is Available to Meeting Registrants Only.

STR: Let's Get Personal: How CEO Personality Effects Organizational Innovation via Corporate Venturing

Author: **Kathrin Teupe**, *U. of Muenster*
Author: **Colin Schulz**, *WWU Münster*

We develop theory to explain the relationship between CEO personality and inter- and intraorganizational learning mechanisms with a focus on corporate venture capital (CVC). We provide an integrated perspective and consider CVC investments as individual innovation practice and relative to research and development (R&D) efforts. Using a novel linguistic tool to measure the personality traits of 1,360 CEOs of S&P 500 firms, we find that CEO conscientiousness and CEO neuroticism are negatively, and CEO openness positively associated with CVC engagement. Regarding the trade-off decision between inter- and intraorganizational learning mechanisms, we find that CEO conscientiousness and CEO openness each have a positive effect on CVC relative to R&D. Our results extend upper echelons research by not only highlighting the importance of CEO personality in driving organizational innovation, but also indicating how CEO personality either enhances or inhibits interorganizational learning in both absolute and relative terms.

Strategies for Value Creation

Session Moderator: **Ming-Chang Huang**, *National Yunlin U. of Science and Technology*

STR: The Impact of Boundary Conditions on the Relationship Between Value Creation and Appropriation 

Author: **Ming-Chang Huang**, *National Yunlin U. of Science and Technology*
Author: **Ya-Ping Chiu**, *Chung Yuan Christian U.*
Author: **Ping-Hsin Lin**, *National Yunlin U. of Science and Technology*
Author: **Ting-Chuan Lin**, *National Yunlin U. of Science and Technology*
Author: **Jane Tung**, 5888

Value creation and value appropriation are two crucial issues in strategy, marketing, and supply chain management. Although value creation and value appropriation are two sides of the same coin, most prior studies focus on one or the other. Some empirical works examine value creation and value appropriation simultaneously, but the results remain mixed. This investigation contributes to the current literature by answering the following questions: Does more value creation lead to more value appropriation? Why can a supplier appropriate more value than others in a buyer-supplier relationship? The empirical results from 150 publicly listed firms that play the role of suppliers indicated that suppliers can benefit from their value creation. Partnership, the spillover effect of collaboration, and suppliers' bargaining power can strengthen the positive relationship between value creation and value appropriation. Our findings and conclusions can have significant implications for research on value creation and value appropriation.

STR: Invention Value, Inventive Capability and the Large Firm Advantage

Author: **Ashish Arora**, *Duke U.*
Author: **Wesley Cohen**, *Duke U.*
Author: **Honggi Lee**, *U. of New Hampshire*
Author: **Divya Sebastian**, *Fuqua School of Business, Duke U.*

Do large firms produce more valuable inventions, and if so, why? After confirming that large firms indeed produce more valuable inventions, we consider two possible sources: a superior ability to invent, or a superior ability to extract value from their inventions. We develop a simple model that discriminates between the two explanations. Using a sample of 3,110 public corporations, and measures of both patent quality and patent value, we find that, while average invention value rises with size, average invention quality declines, suggesting, per our model, that the large firm advantage is not due to superior inventive capability, but due to the superior ability to extract value that comes with greater commercialization capabilities.

Paper is Available to Meeting Registrants Only.

STR: Managing Corporate Distress: The Surplus Assumption of Stakeholder Value-Based Strategy   

Author: **James McGlinch**, *The Wharton School, U. of Pennsylvania*

In this study, I examine the surplus assumption embedded within current studies on stakeholder value-based strategy and whether a corporation's stakeholder management can precipitate or negate corporate distress. By defining corporate distress as a condition of challenged legitimacy arising from the failure to satisfy the minimum appropriation demands of powerful stakeholders, I create a perspective for managing corporate distress that is complementary to existing studies on organizational decline, corporate failure, and financial distress, yet extends their findings to better capture why corporations with similar financial and economic characteristics may have differing probabilities of experiencing corporate distress. Specifically, using panel regression, difference-in-difference, and machine learning statistical methods on a sample of 8,256 publicly traded corporations, I find cultivating ex ante relational capital with a corporation's more powerful stakeholders, as measured by stakeholder sentiment across 26 distinct environmental, social, and governance (ESG) issues, is associated with a lower probability of entering corporate distress, particularly when environmental uncertainty is high.

STR: Fast or Slow? A Meta-Analysis on the Performance Implications of Organizational Speed 

Author: **Kalin D. Kolev**, *Marquette U.*
Author: **Bernadine J. Dykes**, -
Author: **Margaret Hughes-Morgan**, *Marquette U.*

While organizational speed has been viewed as an essential component of firms' ability to achieve a competitive advantage and generate strong financial performance, empirical results have been rather mixed. These inconclusive findings raise the question whether speed can benefit or undermine performance. To address this question, we conduct a meta-analysis of the relationship between organizational speed and firm performance. We find that speed does indeed have a positive and statistically significant impact on firm performance, especially when speed is measured based on managerial perceptions. We also find that speed is particularly beneficial for small firms. Furthermore, we distinguish between three dimensions of organizational speed – decision speed, execution speed, and response speed – and provide evidence that only execution speed and response speed improve firm performance. Our findings provide guidance to both academic researchers and managers alike as to which dimensions of organizational speed will improve firm outcomes.

Employee Mobility

Session Moderator: **Xuege (Cathy) Lu**, *Cornell U./U. of Minnesota*

STR: **Understanding Barriers-to-Hire in Corporate Renewal** 

Author: **Xuege (Cathy) Lu**, *Cornell U./U. of Minnesota*

I develop a theory to explain why talent acquisition for corporate renewal can be costly for firms. I argue that to attract people who can grow firms in new or different directions, firms may need to offer higher wages to (1) compensate for their industry affiliation as a categorical constraint and (2) overcome frictions associated with hiring across industries. Analyses of more than 14 million online job posts support my theory of talent acquisition for corporate sustainability: firms in environmentally sensitive (or “brown”) industries are found to offer higher wages for sustainability-related (or “green”) jobs than firms in other industries for almost identical jobs; this wage premium decreases with the rising demand for green jobs within a given brown industry over time, and when ideological conflicts or career-related risks are mitigated. Supplemental analyses using survey data, employee online reviews, and field-level placement records render further support for the mechanisms. These findings bring an intriguing paradox to light: despite firms in brown industries having the most urgent need to adopt sustainable practices, hiring people capable of delivering such changes is a real challenge. Although firm-specific efforts that alleviate jobseekers’ ideological and career-related concerns may lower the barriers-to-hire, firms do pay more to hire people for corporate renewal, especially when constrained by the way firms are perceived under the existing market structure.

STR: **An Exploration into the Antecedents of Non-Compete Use**

Author: **Cassandra Torgnes**, *NHH Norwegian School of Economics*

Author: **Eirik Sjøholm Knudsen**, *NHH Norwegian School of Economics*

Author: **Rujuta Vaidya**, *NHH Norwegian School of Economics*

The extant literature on non-competes largely focuses on measuring the effects of non-competes enforcement policies. There is little research on the antecedents and details of actual non-competes use, i.e. what are the characteristics or driving forces that make some firms use non-competes while others do not and how exactly are firms using non-competes. Without sufficient knowledge of the antecedents and details of actual non-competes use, it is difficult to specify models predicting outcomes of non-competes use and non-competes enforcement policy. We use original survey data on non-competes use with 2,001 firms matched with government registry data containing a wealth of socio-economic data on the surveyed firms and their 50,051 employees to analyse the antecedents and relative characteristics of both users and non-users of non-competes.

STR: **The Challenges of Within-Firm Mobility with Geographic Relocations: Learning-By-Hiring, Internally?** 

Author: **YOON Thomas HYOUNGWON**, *PhD Candidate at Bocconi U.*

Strategic human capital research suggests that within-firm mobility is more effective in enabling knowledge transfer and collaborations than between-firm mobility. However, geographic relocations that are often associated with mobility may reduce the comparative benefits of within-firm mobility. Thus, I investigate how within-firm geographic mobility can negatively affect mobile individuals’ performance and potential exit. Our analyses of individual-level mobility and patent collaboration data from major U.S. technology firms suggest that within-firm mobility, vis-à-vis between-firm mobility, is associated with a reduction in performance and an increase in the exit when associated with geographic relocations. Sub-group analyses further explicate how these two types of mobility can differentially affect the focal individuals depending on their pre-mobility productivity, suggesting a need for careful deployments of internal transfers for (un)productive individuals.

Paper is NOT Available. Please contact the author(s).

 STR: **Human Capital Complementarities and Employee Mobility**

Author: **Agnes Guenther**, *U. of Utah, David Eccles School of Business*

The loss of human capital through employee mobility is a major concern of firms. Most work on employee mobility investigates the mobility of employees independent co-workers, although it is known that employees can develop human capital complementary to that of co-workers. Using employer-employee matched data on R&D workers in acquisition targets, we investigate how the human capital available in the target affects R&D workers’ post-acquisition mobility. We argue that the organizational design—specifically the diversity of human capital—can create HC complementarities. These complementarities as well as characteristics of employees’ expertise, their tenure, and differences in expertise between firms affect who leaves post-acquisition. Thus, who leaves post-acquisition can be, at least partially, explained by the characteristics of the target’s human capital prior to acquisition. Implications for the literature on human capital and acquisitions are discussed.

STR: Co-mobility, Emergence, and New Firm Performance

Author: **Elise Lee**, *U. of Oxford*

This paper addresses the endogenous nature of employees sorting into a group of similar others. Many studies have focused heavily on successful ventures using ex post metrics of early-stage firms to then, in turn, explain the existence of differences in organizational growth. In this paper, we measure the new firm performance outcomes as a function of the heterogeneity and the dynamics of (co-)mobile employees. Our results show that the nature of employee co-mobility provides an important initial condition for understanding the emergence and success of new organizations. Moreover, we find that firms attracting others become an intermediate self-selection of the survival of new organizations. By looking at the ex ante factors that contribute to the performance of new organizations, we make a contribution to understanding entrepreneurial (co-)mobility and its strategic implications.

STR: The Silver Spoon Gets Tarnished: An Assessment of the Effects of Parent Support on Employee Ventures

Author: **Marco Antonio Rocha Galo**, *ESSEC Business School*

Author: **Ha Hoang**, *ESSEC Business School*

This paper explores the benefits and limitations of collaborative relationships between employee ventures and their parent firms. Using multiple waves of a nationally representative survey of French startups, we track a matched group of 9,891 employee spin-outs over their first five years of operation. We show that, in their early years, the employee ventures founded with the parents' support have better survival rates, higher revenue, and more employees than similar non-supported spin-outs. However, we find that the performance advantage of the former diminishes with time, a result consistent with the development of relational inertia. Specifically, we show that the effects of receiving parents' support on the employee ventures' revenue and employment growth provide no additional benefits from the spin-outs' third and fifth years, respectively. We further uncover that, throughout their development, parent-supported spin-outs require fewer investments in tangible assets and incur lower debt than their non-supported counterparts. However, they engage in significantly fewer commercial activities such as prospecting clients, changing prices, and launching direct marketing campaigns.

STR: What Allows a Star to Shine?

Author: **Nathan Betancourt**, *Amsterdam Business School, U. of Amsterdam*

Author: **Michiel Pieter Tempelaar**, *Amsterdam Business School, U. of Amsterdam*

Star scientists are an important source of novel knowledge and, consequently, highly sought after by organizations. Because novel ideas rarely originate in a single person's mind, contemporary research views their creation as a social phenomenon; stars generate novelty by (re)combining the different information, perspectives, and experiences that exist within their social and organizational context. Inspired by recent work that connects stars' work environment to their productivity, this manuscript employs an aspirational and information-processing capability lens to uncover variance among star scientists in their capability to integrate diverse information and translate this knowledge into novelty. For the aspirational lens, we distinguish between rising and established stars. For the information-processing capability lens, we differentiate between specialist and generalist star scientists. We use participation in the Manhattan Project, a large-scale research project that created the atomic bomb, as a quasi-natural experiment to uncover how stars are influenced by the diversity in backgrounds in their teams. We show that diversity has an overall impact on the novelty of star scientists' knowledge output. However, rising stars are more influenced by diversity than established stars, and generalists are more influenced than specialists in their novel knowledge output.

Paper is Available to Meeting Registrants Only.

STR: Can Multiple Goal Conflicts Affect the Innovative Behaviour of Employees?

Author: **Alexander Schmidt**, *Rotterdam School of Management, Erasmus U.*

Author: **Saeedeh Ahmadi**, *Amsterdam Business School, U. of Amsterdam*

Author: **Tom Mom**, *Erasmus U. Rotterdam*

This study investigates how multiple simultaneously pursued conflicting goals impact the levels of exploration and exploitation behaviour of the employees. Multiple goal theory is silent on predicting the outcomes of multiple goal conflicts on individuals exploration and exploitation behaviour when more than two goals are followed concurrently through different hierarchical levels in large firms. We use a multilevel survey to examine the relationship between four different operational goals (safety, availability, environment, innovation) that employees have to persecute coinstantaneous and the individuals innovative behaviour in a large energy company. Theories of paradox mindset and top management team alignment were included to moderate the relationships at individual level and team level. We found that goal conflicts negatively impact employees exploitation behaviour and that paradox mindset reduces goal conflicts on exploration behaviour. We extend current theories on multiple goals by showing how multiple goal conflicts shape individuals innovative behaviour under different organizational levels. In addition, theory on employees antecedents for individuals exploration and exploitation behaviour is also advanced by illustrating new insights by goal setting considerations.

Complementary Assets – A New Look

Complementary Assets – A New Look

Discussant: **Francisco Polidoro**, *U. of Texas at Austin*

Presenter: **Anparasani Mahalingam**, *U. of Utah, David Eccles School of Business*

Presenter: **Cameron Miller**, *Syracuse U.*

Presenter: **Daniel Rock**, *The Wharton School, U. of Pennsylvania*

Presenter: **Dongil Daniel Keum**, *Columbia Business School*

This symposium aims to highlight potential new research directions on complementary assets research. In the seminal study, Teece (1986) proposes the importance of complementary assets in capturing value from innovation. The significance of this foundational idea has inspired an extraordinary breadth of scholarly work that spans across multiple disciplines. At the same time, somewhat paradoxically, due to its immense success, complementary assets have become a theory that often remains in the background for many recent studies. The field has now reached an opportune time to review diverse streams of work, take stock of latest advances, and reflect on its future.

Digital Platforms, Virtual Organizing, and Societal Challenges

Session Moderator: **Sandeep Seshadrinath**, *School of Information Systems and Technology Management, UNSW Sydney*

CTO: **Tenure and Wage Trajectories in Online Gig Platforms: A Study of Marginalized Workers in India**    

Author: **Sandeep Seshadrinath**, *School of Information Systems and Technology Management, UNSW Sydney*

Author: **Chewei Liu**, *Indiana U. - Kelley School of Business*

Author: **Sunil Mithas**, *U. of South Florida*

How does participation in online gig platforms (OGPs) influence tenure and wages of marginalized workers in emerging economies such as India? Do all workers fare equally in such platforms, or there are important distinctions that shape experiences and outcomes of workers depending on market segments? We leverage rich archival data from a gig platform that operates mostly in the last mile logistics space in business-to-business segment in India to answer these important questions. The gig platform in this study employs a very large fraction of marginalized drivers with low levels of education, socio-economic status, and background. Our analyses of 13,594 number of drivers who registered on this platform from January 2018 to December 2019 documents three findings. First, we find that the gig economy platform in India achieved significant success to reduce churn and retain drivers, compared to the reported churn rates reported in developed economies. In our setting, roughly 20% of drivers stay active with the platform after twelve months, significantly higher than the 3% figure reported for Uber in the U.S. Second, we make a distinction among enterprise, and non-enterprise drivers. We find that enterprise drivers earn in aggregate 21.8% more than non-enterprise drivers per month. Our disaggregated analyses for such earning differences suggest that enterprise drivers have 2.39 more trips than non-enterprise drivers per month, but enterprise drivers earn 11 rupees less per hour than non-enterprise drivers. Finally, our findings suggest that enterprise drivers are 11.0% less likely to stay in this platform for more than six months than non-enterprise drivers. The Cox survival model indicates that enterprise drivers are 47.9% likely to leave this platform in April 2020 than non-enterprise drivers. We propose several explanations for the interesting and counterintuitive finding that enterprise workers who are likely to earn more in aggregate are less likely to stay on the platform using interviews of drivers. In particular, we propose time flexibility, task flexibility, and informational affordances as likely explanations. Our study provides important insights on wages and tenure of drivers in gig-economy platforms in emerging markets such as India that have a very different social context than developed markets, and we discuss implications for further research and practice.

CTO: **Disrupting for Good: The Paradoxical Logics of Fintech as an Emerging Field for Financial Inclusion**   

Author: **Isam Faik**, *Ivey Business School*

The emergence of new institutional fields from the digital transformation of mature fields presents unique opportunities for positive societal changes, but also risks of significant societal challenges resulting from the lack of clarity and stability in the emerging field logic. In this paper, we investigate the paradoxical nature of societal change in emerging fields by drawing on a study of the rise of Fintech as a field for the financial inclusion of marginalized communities. We identify three stages in the evolution of fields emerging from digital transformation: technology penetration, technology incubation, and technology transformation. We show how FinTech as an emerging field followed a paradox trajectory, a sequence of paradoxical tensions across the different stages and their defining institutional logics. This trajectory defined the field's evolution over time, as well as its potential to become a stable space for financial inclusion.

CTO: **'DNA' of Virtual Organizing: Towards a New Construct to Theorize with Digital Trace Data**

Author: **Thomas Grisold**, *U. of Liechtenstein*

Author: **Youngjin Yoo**, *Case Western Reserve U.*

Author: **Michael Gau**, *U. of Liechtenstein*

We introduce a new theoretical construct to empirically measure and analyze the dynamics of actions and events in virtual organizing through digital trace data: DNA of virtual organizing. The new construct captures the actions and events that form the basic building blocks of all possible and actual paths in virtual organizing. By possible paths, we refer to all ways to get work done in a given context. By actual paths, we refer to all ways that have been enacted to get work done in the past. DNA of virtual organizing reconciles two seemingly opposing poles in digital-trace data-driven process theorizing: it not only empirically measures the idiosyncratic dynamics of virtual organizing, but also allows for comparing and generalizing findings across cases and data sets. We illustrate how we can apply DNA of virtual organizing with actual data we obtained from GitHub, the largest virtual organizing platform for software development. We showcase different scenarios where we measure and compare the DNA of virtual organizing at the level of projects and developers.

CTO: **Intellectual Structure of Social Credit System Research: A Bibliometric Analysis** 

Author: **Zhiwen Zheng**, *Australian National U.*

Author: **Babita Bhatt**, *ANU College of Business and Economics*

With the development of digital analytics, big data provides many conveniences in governments, businesses, and individual lives; but it also causes many ethical considerations around the datafication. The Chinese Social Credit System (SCS), a big data-enabled system aiming to promote the culture of sincerity by tracking performance of individuals and businesses, provides an interesting context to study these ethical considerations. The SCS has emerged as a significant topic of interdisciplinary research in recent years. In this article, we provide a bibliometric analysis and a systematic literature review to understand the current intellectual structure of this interdisciplinary phenomenon through identifying article categories, key themes, theoretical debates, and its impacts. Our research contributes to the SCS and data justice literature by providing future research dimensions. Additionally, by providing a comprehensive understanding of the SCS, we also make a practical contribution to the field.

Corporate Social Responsibility and Stakeholder Activism

Session Moderator: **Maurice Jerel Murphy**, *U. of Southern California*

SIM: The New Kid in Town: Investigating Virtual Stakeholder Mobilizations 

Author: **Roya Derakhshan**, *Bocconi U.*

Author: **Tim Rowley**, *U. of Toronto*

Stakeholder mobilizations are long identified by their structured formal organization, considerable resource requirement, strong collective identity and centralized leadership that aligns and coordinates the movement. These characteristics do not apply to the emergent phenomenon of virtual stakeholder mobilizations; the actions conducted by individuals who target a plight through social media and other virtual platforms only, and thus our models need to be updated to capture the current ways stakeholders take action to protect their interests and to recognize new stakeholder types emerging as consequences of technology advances not available when many stakeholder models were developed. We contend that the logic underpinning virtual mobilizations is fundamentally different, as social media platforms take the place of brick and mortar organizations in such movements. The distinguishing characteristics of virtual mobilizations include the ascension of self-expression, replacing the collective identity, as well as their low level of resource requirement, eliminating the free-rider dilemma. We also propose that in comparison to their traditional peers, virtual mobilizations are faster and can appear with larger turnouts, but have limitations in tackling dynamic and complex issues and have a shorter longevity. We finally suggest that several dynamic mobilization types may appear along the continuum made by traditional and virtual stakeholder mobilizations. The plurality and dynamism of the mobilizations reduced the predictability of their characteristics and salience and opens the gates to new horizons for future studies.

SIM: The Effect of Insider versus Outsider Activism on Corporate Targets' Market Performance 

Author: **Hui ZHANG**, *City U. of Hong Kong*

Although outsider activists are the main participants of social protests, the large scale protests initiated by insider activists in recent years have attracted the public eyes and induced us to wonder whether insider activists, with higher risk and more significant cost to initiate and participate in social protests, are able to achieve more social movement outcomes than outsider activists. While factors influencing social movement outcomes have received ample attention from the perspectives of structure and agency, we still lack a good understanding of the impact of activist identity on social movement outcomes. This research builds a theoretical model to explain the links between activist identity and social movement economic outcomes by employing and extending the political process mode, a particular theory to explain social movement emergence and outcomes. Hypotheses developed from the model predict that protests initiated by insiders are more destructive to corporate targets' market performance than outsider protests and that the destructiveness advantage of insider protests would be alleviated if corporate targets enjoy higher status but strengthened if targeted firms focus on service business. Results from a sample of social protests targeting U.S. public corporations reported by the New York Times between 2001 and 2021 provide support for the predictions. This research contributes to social movement outcomes by exploring the diverse impact of different types of activists and examining and extending the mobilizing structures of the political process model. This research also extends literature about insider activism by studying the economic outcomes of insider external activism.

SIM: The Art of Blending Stakeholders: Bootlegger & Baptist Coalitions in Corporate Constituency-Building 

Author: **Maurice Jerel Murphy**, *U. of Southern California*

Author: **Edward T. Walker**, *U. of California, Los Angeles*

Author: **Nan Jia**, *U. of Southern California*

Constituency-building is an important yet underappreciated corporate political strategy. In contrast to conventional strategies, such as lobbying and campaign contributions involving direct interactions with policymakers, constituency-building expands the scope of conflict by mobilizing stakeholders to pressure policymakers. Although prior studies of constituency-building have highlighted how enlisting stakeholders in political battles creates unique opportunities and risks, what has often been overlooked is the importance of blending "strange bedfellows" of economically- and morally-motivated constituents, sometimes called bootlegger-and-Baptist coalitions. Drawing on theories developed in political science, regulatory economics, and corporate political strategy, we advance a theoretical framework to examine (a) the motivations of policymakers and stakeholders, which constitute the theoretical basis for constituency-building strategies; (b) the tradeoffs of creating blended coalitions consisting of parties who have distinct motives for moral legitimacy or economic interest; and (c) how blended coalitions may take distinct overt, covert, or tacit forms. We also differentiate between campaigns that take place at the firm- versus industry-level. We develop propositions to advance theory development on constituency-building, linked to stakeholder mobilization and social movement approaches. We offer wide-ranging real-world examples to provide guidance to empirical research.

SIM: Transformations in Shareholder Activism: Past, Present and Future

Author: **Carine Girard**, *Audencia Business School*

Author: **Jennifer Goodman**, *Audencia Business School*

Author: **Céline Louche**, *Audencia Business School*

Shareholder activism, the use of ownership rights to exert influence on investee companies, is not new but it is an ever-changing, evolving phenomenon which has made its way into mainstream investment approaches as a powerful means of inciting changes in companies. In this paper, we review not only the past and present of shareholder activism, going back to its origins and mapping the development of both financial and socially motivated activism, but go further to identify future trends and challenges facing the field. Drawing on interviews with international experts from key organizations in the activism universe, we tease out the newest issues, actors and tactics to give a forward looking account of 'where next' for shareholder activism. We identify four new trends: the beneficiary revolution, refining collaboration, a holistic approach and technological innovation, which stand out as significant shapers of the future direction of shareholder activism. Our analysis of these empirical trends, combined with recent research and practical examples raise some key challenges on the horizon which demand further attention both in research and practice: the diversity of demand, democratization, temporality and an increasing polarization between leaders and laggards. These findings have implications not only from a practical investment or management perspective but also for future research in identifying and analyzing potentially unintended consequences of these new trends.

Responsible Innovation and Stakeholder Accountability

Session Moderator: **Eva Alexandra Jakob**, *U. of Bayreuth*

SIM: Managing Responsible Innovation Process – the Case of Six Start-ups in Digital Health

Author: **Raj Thapa**, *U.Stavanger*

Author: **Tatiana Iakovleva**, *U. of Stavanger*

Digital innovations hold the promise of increasing productivity and offering better outcomes, higher quality and reliability for users. However, harnessing these potential opportunities depends on how well firms can manage innovation to overcome stakeholders', users' and public concerns and address their needs and expectations. Responsible innovation (RI) is suggested as a way to govern innovation development to ensure socially desirable innovation solutions. Its principles suggest a broader stakeholder inclusion during the decision-making process, anticipation of societal needs and reflection of concerns (Owen et al., 2013; von Schomberg, 2013). However, there is a lack of empirical studies examining whether the principles of RI can be applied to a firm's innovation development process. This research explores the innovation process in firms in the digital health and welfare sector to address the following research question: Can the responsible innovation approach be instrumental for the governance of the innovation process in firms? This work aims to answer this research question through longitudinal case studies of six digital start-ups in the healthcare and welfare sectors during 2016–2019. We followed innovation development in these firms, observing the pivotal moments and the emergence of new need–solution pairs through the lenses of four RI constructs—inclusion, anticipation, reflexivity and responsiveness. This paper's key contribution is analysing the usefulness of RI governance for digital innovations. We found that continuous relationships between the innovation agents (the firm) and the stakeholders (distributed agencies) contribute to creating a pool of need–solution pairing, which allows for desirable innovation outcomes

Paper is Available to Meeting Registrants Only.

SIM: Privacy Concern and User's Reactions in AI Context: Mediating Effects of Institutional Factors (WITHDRAWN) ✈

Author: **SHUXIN ZHONG**, *Tianjin U.*

Artificial Intelligence (AI) is becoming a significant technology innovation and presents a great threat and risk of personal privacy information protection, such as big data and machine learning. AI technology enriches the content and increases the tension of users' information privacy concerns. Hence, this study provides a dynamic process that co-evolution of privacy concerns, business ethics, and technology innovation. In addition, employing an empirical study, our study demonstrates the relationship between privacy concerns and users' reactions and the role of institutional factors under the AI context. Specifically, privacy concerns have negative effects on users' reactions (purchase intention, self-information disclosure, and using facial-recognition intention), and two institutional factors (perceived institutional environment and perceived legal enforcement efficiency) play mediating effects on the relationship between privacy concern and user's reactions. The research provides a co-evolution perspective to explain the privacy concerns and broadens the privacy research in the new context.

Paper is NOT Available. Please contact the author(s).

SIM: Corporate Digital Responsibility Needed? Digitalization Meets Corporate Social Responsibility

Author: **Eva Alexandra Jakob**, *U. of Bayreuth*

Author: **Sabrina Plaß**, *U. of Paderborn*

Digitalization is a technological evolution and a social phenomenon that offers tremendous potential but also uncertainties for companies and stakeholders. Practice and research increasingly propose that a new concept called Corporate Digital Responsibility (CDR) is needed to elaborate how corporates may take responsibility to avoid negative and promote positive outcomes in the process of digitalization. In this paper, we take a step back and ask, 'How does digitalization influence Corporate Social Responsibility (CSR)?' Drawing on the most prominent theoretical perspective in CSR research – the stakeholder perspective, we argue that CDR is a redundant concept that dismisses the chance to ground the crucial debate on responsible digitalization on already developed theoretical and empirical knowledge. Instead, we propose that digitalization changes stakeholder relationships in at least three important ways that should be incorporated into the furthering CSR and connected strategies in a digital age: (a) the ratio between the information and proximity related to stakeholders, (b) the roles of the company and stakeholders, and (c) decision-making power in the relationship. Those changes in the stakeholder relationships are fundamental, however, we argue that they do not necessitate a new concept of CDR. Rather, the changing stakeholder relationships open new avenues for future research systematically proposed in this paper.

Paper is Available to Meeting Registrants Only.

SIM: The People Versus The Algorithm: Stakeholders and AI Accountability 🗨

Author: **Jbid Arsenyan**, *Rennes School of Business*

Author: **Julia Roloff**, *Rennes School of Business*

As artificial intelligence (AI) applications are used for a wide range of tasks, the question about who is responsible for detecting and remediating problems caused by AI applications remains disputed. We argue that responsibility attributions proposed by management scholars fail to enable a practical solution as two aspects are overlooked: the difficulty to design a complex algorithm that does not produce adverse outcomes, and the conflict of interest inherited in some AI applications by design as proprietors and users employ the application for different purposes. In this conceptual paper, we argue that effective accountability can only be delivered through solutions that enable stakeholders to employ their collective intelligence effectively in compiling problem reports and analyze problem patterns. This allows stakeholders, including governments, to hold providers of AI applications accountable, and ensure that appropriate corrections are carried out in a timely manner.

OSS, Project Governance and Team Resilience

Session Moderator: **Poonacha K. Medappa**, *Tilburg School of Economics and Management (TiSEM), Tilburg U.*

CTO: To “Survive” or to “Innovate”? Decision Rights Configurations in Open Source Projects

Author: **Poonacha K. Medappa**, *Tilburg School of Economics and Management (TiSEM), Tilburg U.*
Author: **Shirish C. Srivastava**, *HEC Paris*

Despite the widespread use of open source software (OSS) development, the governance of OSS projects continues to remain a challenge for both individuals and organizations. Grounding our work in the decision rights (DR) perspective, we posit that the OSS project governance involves two tradeoffs - between (a) formal and informal and (b) centralized and decentralized configurations of DR in OSS projects. Further, we theorize the mechanisms through which these DR configurations can have varying impacts on two OSS project outcomes, survival and creativity. Using data from 6,563 OSS projects hosted on GitHub and applying robust analytical and machine learning techniques, we find that decentralization of the DR, measured by the number of core contributors in the project, has a negative influence on the project’s survival but a positive influence on the project’s creativity. Formalization of the DR, measured through organizational ownership of the OSS project, moderates these relationships by enhancing the probability of OSS project survival and attenuating project creativity. Through this research, we show that the DR perspective offers a useful lens for theorizing the existence of different OSS project governance configurations for different desired outcomes. By examining these configurations, we advance the understanding of OSS project governance mechanisms and offer practitioners valuable insights for effectively managing OSS projects.

CTO: Assertions of Data Transparency: Organized Immaturity After GDPR

Author: **Frederik Schade**, *Copenhagen Business School*

If organized immaturity presents a key problematic of private sector digitalization, transparency is increasingly proposed as its antidote. Transparency, it is often claimed, enables the reorganization of maturity by allowing individuals insight into and control of the ways companies collect and leverage personal data about them. However, studies of the state of “data transparency” in Europe after the en-actment of GDPR suggest that new transparency measures may be as misleading as they are informa-tive. What, then, is the relationship between transparency and organized immaturity? In this conceptual paper, I combine speech act and decoupling theory to argue that the assertiveness of decoupled trans-parency may produce both individual maturity and immaturity. Interestingly, this entails that even de-ceptive transparency might become an engine for reorganizing maturity – although not without risk. Theorizing these relations, however, allows for outlining implications for actors engaged in data pro-tection to increase transparency’s potential for reorganizing maturity.

CTO: Does Routine Order Variation and Bot Usage Spur Resilience in Open Source Communities?

Author: **Veeresh Thummadi**, *Cork U. Business School*

Resilience is important for Open Source Software Development (OSSD) teams to overcome software development challenges that commonly occur in the platforms as a result of unexpected events such as natural disasters, cyber-attacks, pandemics etc., As OSSD teams primarily rely on voluntary contributions, any type of disruptions to the routines of open source workers can lead to loss of productivity and cause delays in open software production and release cycles. Currently we do not have sufficient understanding about how OSSD teams bounce back from a disruption and become resilient. To understand the effects of disruption we chose a popular open source community, called Kubernetes, to understand the resilience process in OSSD teams. We collected data from an exemplar event of COVID-19 pandemic to understand how Kubernetes community became resilient after the unprecedented announcement of the global pandemic by World Health Organization (WHO). Overall, we collected over .4 million records corresponding to the activities of 65 Kubernetes teams from March 2020 to May 2020. We use organizational routine lens to understand how routine order variation (the way in which the activities’ order varies) and bot usage can have effects on resilience in open source communities. The results highlight the importance of order variation and bot usage for OSSD teams’ resilience and provide implications for open source project management practises during crisis situations.

Algorithms, Crowds, and Service Platforms

Session Moderator: **Nastaran Hajiheydari**, *U. of Sheffield*

CTO: **How Crowdworkers Engage in the Age of Algorithms? An Empirical Study of On-Demand Service Platforms** 

Author: **Nastaran Hajiheydari**, *U. of Sheffield*
Author: **Mohammad Soltani Delgosha**, *U. of Birmingham*

The service industry is experiencing fundamental transformation caused by technological revolutions, namely the emergence of the digital platform and the increasing replacement of managerial functions by algorithms. In this novel service ecosystem— characterised by on-demand fulfilment, algorithmic governance and network effect – crowdworkers play an essential role in providing contingent services for final customers. Since crowdworkers’ work-related positive affect is crucial for sustainable service delivery in platform contexts, this study aims to identify the antecedents of their engagement behaviour. We grounded our theoretical framework in conservation of resources theory and the job demands-resources heuristic model to investigate how the interplay of personal and job resources, as well as job-related demands, could predict crowdworkers’ engagement. We then empirically tested our proposed model among 565 crowdworker respondents. Our results shed light on the engagement behaviour of crowdworkers and highlight the moderator effect of algorithmic justice. Empirical findings also offer pragmatic guidelines for acquiring and retaining a large base of energetic, diligent and engaged service providers that is essential for success and survival in the highly competitive platform market.

CTO: **A Theoretical Framework of Algorithmic Orchestration of Open Innovation on Digital Platforms** 

Author: **Yukun Yang**, *southern U. of science and technology*
Author: **Likoebe Maruping**, *Georgia State U.*

Advances in digital infrastructure and increased accessibility to a broader swath of society has promoted open innovation on digital platforms at the largest scale in our history. While the increased participation of society in helping to solve a broad range of problems is something to be celebrated, we should also recognize that this scaling-up has introduced several challenges that require us as a discipline to revisit how we envision the orchestration of open innovation. These challenges pertain to the social mechanisms that are traditionally leveraged to orchestrate open innovation and inherent human biases that can be counterproductive to bringing problems and ideal solutions together. In this research, we advance a theoretical framework that gives primacy to the role of algorithms in orchestrating open innovation on digital platforms at large scale. Owing to their superiority in processing vast amounts of data and recognizing patterns at large scale, we see algorithms as playing an important complementary role alongside human participants in the open innovation process. We conclude by outlining an initial research agenda.

CTO: **The Platform Precarity of Online Food-delivery Work in China’s Platform Economy**   

Author: **HUI HUANG**, *King’s College London*

This article investigates the labour conditions of Chinese food-delivery drivers in the platform economy. Drawing from one-year of ethnographic fieldwork as a driver in a giant food-delivery platform in Shanghai, China, this article identifies three key forces producing precarity in the platform labour regime. First, the platform capitalism circumvents its employer responsibilities for drivers by outsourcing the labour services of food-delivery to third-party labour companies. Second, predatory algorithmic management is leveraged by the platform capitalism to control the labour process for labour exploitation and intensification. Third, the institutional deprivation of citizenship rights of the rural migrants converts drivers into urban denizens with vulnerable socio-economic labour environment. Building on these findings, this article argues that the peculiar intersection of bogus triangular employment relations, predatory algorithmic control, and the subservient citizenship of rural migrants, renders ‘platform precarity’ in China.

CTO: **Crowd Dynamics and Co-Creation Practices In Robotics Innovation: An Interpretive Study Of Facilities**  

Author: **Gianluigi Viscusi**, *Imperial College Business School*

This paper aims to investigate the characteristics and organizing forms of facilities where the design and testing of robotics innovation happen. In particular, the paper addresses a gap in the state-of-the-art literature, which has not fully investigated the connection between those facilities, the different types of crowds involved in the design and testing of robotics innovation, and the values embedded in their outputs. To this end, this article presents a qualitative research based on two interpretive case studies of facilities and education initiatives in Italy and Switzerland. The article aims to provide a further understanding of the role of crowds in innovation, especially focusing on robotics, and to contribute to the stream of research connecting open innovation and resource-based view (RBV), by questioning how facilities for co-creation, specifically in robotics, inform the values that make both the testing sites and their outputs valuable resources. Also, the article adds its results to the corpus of studies on the collaboration between universities and firms, by highlighting organizational factors and trajectories that may eventually lead to the creation of innovation ecosystems and infrastructures.

CAR: Developmental I-Deals, Boundaryless Career Beliefs, and Career Capital Construction Behavior 

Author: **Wai Hung Thomas Ng**, *U. of Hong Kong*

Author: **Yinuo Zou**, *U. of Hong Kong*

Author: **HAOYANG CHEN**, *U. of Hong Kong*

Developmental idiosyncratic deals (i-deals) are learning-oriented employment arrangements tailored to employees' preferences and needs. This study examined a new pathway by which developmental i-deals affect employees' career capital construction behavior. Guided by boundaryless career theory, we proposed that developmental i-deals enhance employees' boundaryless career beliefs, which facilitate their human, social, and innovation capital construction behavior. To extend boundaryless career theory and show that control beliefs are salient in establishing a boundaryless career, we examined three different roles that internal locus of control plays in the proposed process: (a) internals are more likely than externals to seek developmental i-deals, (b) internals are more likely than externals to experience the positive effects of developmental i-deals on boundaryless career beliefs, and (c) internal locus of control promotes perceived job alternatives, which further strengthen the first-order moderating effect of internal locus of control. Data collected from 209 college-graduate employees at three points over eight months supported the proposed moderated mediation effects. The findings advance the current i-deal research by showing how developmental i-deals facilitate an employee's career capital construction behavior (via strengthened boundaryless career beliefs), especially for those with stronger control beliefs, such as internals.

CAR: The Role of Career Adaptability and Cultural Intelligence and its Implications for Migrant Workers  

Author: **Anna Carmella Ocampo**, *EMLV Paris*

Author: **Lu Wang**, *Australian National U.*

Author: **Robert Lu Tang**, *De La Salle-College of Saint Benilde*

The steady upsurge of international labor migration has raised new and important questions for career scholars: how do migrant workers adjust to their new roles and environment and what accounts for their successful adjustment? In the research reported here, we invoke the fundamental principles of Career Construction Theory (Savickas, 2013) to examine whether the interactive influence of career adaptability and cultural intelligence can facilitate migrant workers' adjustment to work and life in a foreign environment. We also examined the subsequent influence of adjustment on work (i.e., job performance and retention) and psychological health (i.e., life satisfaction) outcomes. This proposed moderated mediation model was tested with two time-lagged and multi-source field samples. Study 1 showed that migrant workers' career adaptability promotes work and general adjustment, which in turn enhances their job performance, retention intentions, and life satisfaction. Study 2 demonstrated that the indirect effects of career adaptability on work and psychological health outcomes via work and general adjustment were stronger for migrant workers with high, rather than low, levels of cultural intelligence. Implications for research and practice are discussed along with the study limitations and opportunities for future research.

CAR: A Multi-study Investigation on Antecedents of Career Adaptability with Period Effects of COVID-19 

Author: **Zhen Wang**, *Renmin U. of China*

Author: **Yixin Tian**, *Renmin U. of China*

Author: **Fu Yang**, *Southwestern U. of Finance and Economics*

Drawing on COR theory, we cast psychological capital as a novel underlying mechanism to explain why proactive students acquire career adaptability. We also propose that parental verbal encouragement, in the form of external resource for proactive students, influences their psychological capital and, thus, career adaptability with period effects of COVID-19. We tested the resource-based model across three studies, which agreed on and established the indirect relationship between proactive personality and career adaptability via psychological capital. Study 1 sampled 233 participants before COVID-19 and showed that when proactive students experience more parental verbal encouragement, they possess more psychological capital and further obtain more career adaptability. Data were collected from 329 students during COVID-19 in Study 2, in which the moderating effect of parental verbal encouragement is not significant. In the three-wave study 3 of 358 samples surveyed at post-onset COVID-19, the positive relationship between proactive personality and career adaptability via psychological capital is attenuated when parental verbal encouragement is high. These findings deepen the resource perspective in extending antecedents of career adaptability and contribute to a more complete and balanced theorization of the influence of parental verbal encouragement.

CAR: Protean Career Orientation and P-J Fit: The Effects of Job Crafting and Organizational Support 

Author: **Zhen Wang**, *Renmin U. of China*

Author: **Yuyan Zhang**, *School of Labor and Human Resources, Renmin U. of China*

Author: **Qiuping Jin**, *Renmin U. of China*

Drawing on the literature on protean career orientation (PCO) and job crafting, this paper aims to investigate the relationship between PCO and person-job fit, along with the mediating role of job crafting and the moderating role of perceived organizational support. In total, 208 employees completed the two-wave questionnaires. Results show that PCO is positively associated with person-job fit through job crafting. Furthermore, perceived organizational support moderates the relationship between PCO and job crafting, as well as the mediation effect of job crafting between PCO and person-job fit. We further discuss the theoretical and practical implications of our findings.

CAR: Organizational Embeddedness and Insomnia: Examining Multiple Moderators

Author: **Wai Hung Thomas Ng**, *U. of Hong Kong*

Author: **HAOYANG CHEN**, *U. of Hong Kong*

Author: **Yinuo Zou**, *U. of Hong Kong*

Previous studies have documented many positive outcomes of organizational embeddedness (OE), although recent studies also show that it can have negative effects on employees, especially in their personal lives. Identifying the boundary conditions for the occurrence of positive and negative effects of OE is important to clarify its motivational pathways. This study first replicated the positive relationship between OE, work-family conflict, and insomnia identified in previous studies. Next, it examined four moderators that served to alter this mediation relationship. Matched data collected from 226 dual-earner couples in China supported the predicted two- and three-way interaction effects and the moderated mediation effects. That is, OE was related to greater work-family conflict when individualism was high (a two-way interaction effect) and when individualism was high while traditionalism was low (a three-way interaction effect). In addition, work-family conflict was related to greater insomnia when the spouse's OE was high (a two-way interaction effect) and when spousal OE was high while employee community embeddedness was low (a three-way interaction effect). Thus, the current study suggests that both individual differences and other forms of embeddedness jointly determine whether OE negatively affects employees' personal lives.

CAR: When Do Employees Speak Up? The Role of Career Empowerment and Bystanders' Intervention Behavior

Author: **Bilal Ahmad**, *Superior U. Lahore - Pakistan*

Author: **Nadia Nasir**, *Superior U.*

Author: **Saba Iftikhar**, *U. of the Punjab*

This study inquires how career empowerment predicts promotive and prohibitive voice behavior and that how career security intervenes in this relationship. The moderating role of direct and indirect intervention behavior of bystanders is also tested between career security and voice behavior. A three-wave time-lagged data were collected from 267 non-managerial front-line banking employees to test the proposed model. Structural equation modeling (SEM) statistical technique was used for data analyses. The results showed that career empowerment significantly predicts (directly and indirectly) both promotive and prohibitive voice behavior. Further, the direct intervention behavior of bystanders significantly moderated the relationship between career security and both types of voice behavior (promotive and prohibitive). Theoretical and practical implications of the study are discussed.

CAR: Calibrating the Kaleidoscope of Career: The Impact of Family-to-work Conflict on Surface Acting

Author: **Yan-Nie Liao**, *School of Management, U. of Science and Technology of China*

Author: **Lan Wang**, *Peking U.*

Along with the advent of communication technology and the changing nature of families and careers, employees are increasingly interrupted by family events at the workplace. How do these events influence their emotions and interactions with coworkers? Building on the conservation of resources theory, we developed a model explicating how family-to-work conflict increased employees' negative emotions, which in turn facilitated their surface acting toward coworkers. We further proposed that the kaleidoscope career (i.e., authenticity, balance, and challenge) moderated this mediation relationship such that when employees had a kaleidoscope of career with higher authenticity, lower balance, and lower challenge, family-to-work conflict had a weaker impact on surface acting toward coworkers via negative emotions. Data from an experience sampling study with 116 employees across ten days ($n = 892$) and a follow-up experiment with 594 employees provided strong support for our hypotheses. This study offers theoretical and empirical implications on career, work-family conflict, and emotional labor literatures.

CAR: Organizational Antecedents of Work Passion and its Role on Employee Outcomes

Author: **Jennifer Lajom**, *Edith Cowan U.*

Author: **Laramie Tolentino**, *Macquarie U.*

Author: **Hataya Sibunruang**, *U. of Waikato*

Author: **Patrick Raymund Matutina Garcia**, *Macquarie U.*

Author: **Peter Lemuel Teruel Cayayan**, *De La Salle-College of Saint Benilde*

Using self-determination theory and the dualistic model of passion, we gain an informed understanding of the different ways in which passion can be cultivated in the workplace, further affecting employee outcomes. Accordingly, we expect that perceived organizational support (POS) would be a conducive context for harmonious passion, while organizational time demands (OTD) rather encourage obsessive passion. Utilizing a time-lag survey study consisting of 194 matched employee-coworker dyads in the Philippines, we found empirical support for the following proposed relationships: (a) harmonious passion mediates the relationship between POS and outcomes, such as job satisfaction, psychological well-being and helping behavior; and (b) obsessive passion mediates the relationship OTD and psychological well-being. Our findings provide important implications for research on work passion.

Careers in the Rough PDW 
Careers in the Rough PDW

Organizer: **Janine Bosak**, *Dublin City U.*
Organizer: **Jeffrey Yip**, *Simon Fraser U.*
Organizer: **Marijke Verbruggen**, *KU Leuven*
Organizer: **Stefanie Gustafsson**, *U. of Bath*

Careers in the Rough is a workshop consisting of accomplished scholars mentoring PhD students and/or junior scholars who submit careers papers that are in the formative stages. Research in the careers domain includes topics such as: people's lifelong succession of work experiences, the structure of opportunity to work, the relationship between careers and other aspects of life, individual career development, career management strategies, relationships between human resource systems and careers, career outcomes (e.g., success, plateauing, discouragement, derailment), life cycle interactions with work, race, culture, and gender effects on careers, labor force diversity, internal labor market structures and functions, cross-cultural careers, and effects of demographic and social changes on work. Participants are asked to provide a manuscript that is close to submission for a refereed journal. They can also write up to 250 words on a challenge they want help addressing. Each participant will receive detailed feedback regarding the positive aspects of their work, as well as helpful input regarding how it can be improved from two accomplished scholars. This PDW will thus foster the design and development of good careers research into valuable careers publications.

PhDs students and junior scholars who want to participate in this PDW need to submit their papers by Sunday, 26th of June to Janine Bosak (Janine.bosak@dcu.ie). Please include "CAR Careers in the Rough" in the subject line of your email. Mentees will be informed about their assigned mentors the week starting July 11th at the latest. Upon receiving this email, the mentees should schedule a mentoring session with their mentors which should ideally take place (virtually or in-person) during the AOM Conference in Seattle, or, if this is not possible, virtually another time in either August or September 2022.

Digital Disruption of Retail Business Models

CTO: F-commerce and Impulsive Buying: A Mediated-Moderated Study from a Social Commerce Perspective

Author: **Mudassir Husnain**, *U. of Education Lahore, Pakistan*
Author: **Qingyu Zhang**, *College of Management, Shenzhen U.*
Author: **Muhammad Usman**, *U. of Education Lahore*
Author: **Muhammad Waheed Akhtar**, *COMSATS U. Islamabad*
Author: **Qamar Abbas**, *U. of Education Lahore*
Author: **Muhammad Akram**, *U. of Lahore*

Purpose: Utilizing Social Impact Theory, this study explores browsing via F-commerce as a source of social interactions and enjoyment while stimulating consumer impulse buying behavior. Moreover, a mediating role of perceived trust and perceived usefulness to enrich the relationship between browsing and impulse buying is studied in two cross-national cultures. Finally, a moderating role of serendipitous information and deal proneness is aimed to study the relationships. Method: Using a cross-lagged temporal approach, survey-based data is collected from F-commerce users in developing context i.e. Pakistan (N=684). The data is analyzed by means of Structural Equation Modeling (SEM). Findings: The results demonstrate that browsing has positive impact on F-impulse buying as well as on perceived trust and perceived usefulness which in turn influences F-impulse purchase. Moreover, findings confirm the moderating role of deal proneness and serendipitous information in the hypothesized relationships. Implications: Managers in such markets should focus on e-tracking where consumers share and gather information related to their products and services. Placing serendipitous information on Facebook brand pages via brand evangelist might offer additional advantages to F-commerce marketers. By providing different online deals and discounts on products managers may motivate consumers to buy impulsively. Originality: Present study is of equal importance to academia and practitioners within emerging context as this study enriches the F-commerce literature by uncovering new areas, scrutinizes factors that influence F-impulsive purchase and the variations in the impact of these processes across serendipity and deal proneness.

Paper is Available to Meeting Registrants Only.

CTO: Ad-Blockers and Limited Ad-Blocking

Author: **Mohammad Zia**, *Chapman U.*
Author: **Utpender Subramanian**, *U. of Texas at Dallas*

Ad-blockers began as user-oriented initiatives that enabled consumers to block all ads on websites. Yet, many ad-blockers now enable website publishers to display some ads, a strategic practice we refer to as limited ad-blocking (LAB). Conflicting perspectives exist about how LAB may affect consumers, publishers as well as the provision of Internet content. In this paper, we examine an ad-blocker's LAB policy and its ramifications. We show that even a user-oriented (user-welfare-maximizing) ad-blocker may employ LAB because it can stimulate publisher content provision; however, LAB may be employed only when the costs consumers face to adopt or use the ad-blocker are neither too low nor too high. Moreover, while conventional wisdom views ad-blocking as inherently a zero-sum game, we show that when consumers face ad-blocking costs it can be transformed into a "win-win" by a user-oriented or profit-oriented ad-blocker employing LAB, and lead to higher consumer welfare, publisher profit and better Internet content than without the ad-blocker. Interestingly, the ad-blocker may be more widely used when it employs LAB than when it blocks all ads. Furthermore, even a user-oriented ad-blocker may charge users a fee because raising consumers' ad-blocking costs can counterintuitively benefit ad-blocker users at the expense of non-users.

CTO: Is there a Social Impact Paradox in Cross-Channel Communication? A Management Perspective

Author: **Armando Schär**, *U. of Applied Sciences of the Grisons*
Author: **Caroline Dalmus**, *U. of Applied Sciences of the Grisons*
Author: **Katarina Stanoevska-Slabeva**, *U. of St. Gallen*

Customers use multiple channels to inform themselves about products and services before making a buying decision. As companies provide information on their owned platforms, their customers experience a multi-channel journey on their way to the company website. While companies try to nudge potential customers into consuming provided information, potential effects of previous customers' experiences (such as social media browsing) on the effect of digital nudges (i.e. social norms) and the perception of such guidance are not thoroughly investigated yet. First studies imply that customers react differently to nudges depending on their previous channel experience. This paper contributes by focusing on digital nudging during the pre-purchase phase of the customer journey. The potential effect of social norm nudges on information search intentions and the influence of previous social media usage are investigated. Two online experiments examined previous social media usage as a potential moderator of the social norms nudge efficacy as well as the influence of previous social media usage on the perception of social norms nudges. Results show that previous social media usage influences perception as well as the efficacy of a social norms nudge on a company website in certain circumstances. Although social norms do not always significantly affect user behavior, users that consumed social media before seeing a social norms nudge, have an altered perception of these nudges. Choice architects implementing digital nudges are challenged to carefully consider such effects when applying nudges on their user interfaces.

Corporate Entrepreneurship and Tech Transfer

ENT: Understanding Contemporary New Venture Units: A Multimodal Discourse Analysis

Author: **Eve-Michelle Basu**, *Uppsala U.*
Author: **Maria Hoff Rudhult**, *Uppsala U.*
Author: **Gundula Lücke**, *Uppsala U.*

New venture units (NVUs) are semi-autonomous units that accommodate entrepreneurial activity within large, established corporations. Over the past 40 years, NVUs have gone through multiple cycles of waxing and waning popularity and evolved considerably. Today, NVUs are once again gaining traction in the corporate world, though they are now typically referred to as corporate innovation ‘garages’ or ‘labs’. Extant research has explored previous generations of NVUs and the managerial challenges associated with them. However, little is known about contemporary NVUs. In this study, we address this lacuna in the literature and explore how NVUs are expected to contribute to corporate entrepreneurship today with a particular focus on the what, why and how of these units. We approach these questions by exploring corporations’ social knowledge about contemporary NVUs that is articulated and instantiated in multimodal discourse. Drawing on a novel methodology, we systematically analyze the verbal and visual elements of multimodal texts presenting, describing and introducing NVUs on corporate websites to uncover prevailing situated and shared ideas and understandings about NVUs that are encoded in words, images and the interplay of both.

ENT: CVC as a Booster for the Financial Performance of New Ventures? The Moderating Role of Experience

Author: **Ivan Reh Tretiakov**, *Chair for Technology & Management, TU Dortmund U.*
Author: **Corinna Vera Hedwig Schmidt**, *Chair for Technology & Management, TU Dortmund U.*
Author: **Tessa Christina Flatten**, *TU Dortmund U.*

New venture financing and the resulting cooperation between investors and new ventures is one key issue of entrepreneurship research. Corporate venture capital (CVC), as one of the financing and cooperation forms, gained significant relevance within the last years. CVC is a minority equity investment of established firms in new ventures. Scholars increasingly investigate the relationship between CVC-investor involvement in the business of new ventures and the resulting outcomes. However, only a few scholars analyze the impact on the financial performance of new ventures and come to contradictory results. Addressing this contradiction is crucial for new ventures, since they have limited resources and rely on guidance regarding their partner choice to secure their survival and success. Moreover, research requires a better understanding of the effect of contextual factors – which were mostly neglected in prior studies – to provide transparency for new ventures on how to optimize the effect of CVC. We analyze a panel dataset of 11,895 new ventures over the time-period between 1990-2019. We find a positive relationship between the involvement of CVC-investors and the financial performance of new ventures. This positive relationship is strengthened by a high-level of investor experience as well as a low-level of experience within new ventures.

Paper is Available to Meeting Registrants Only.

ENT: Entrepreneurial Constructivist: Start-ups from Opportunities to RBV in Market Uncertainties

Author: **Shilong Jia**, *Peking U., College of Engineering*

Opportunities and RBV make significant contributions to entrepreneurship by interpreting their relationships with success of start-ups. However, at least two questions remain contentious in current studies, one in feature descriptions of entrepreneurial behavior in start-ups related to opportunities and resources under distinct market uncertainties, and the other one in the impact of the transition zone between opportunities and resources on entrepreneurship. Hence, this paper attempts to answer these questions from a perspective of constructivist, the purpose of this paper is threefold: (i) discuss relevance of start-ups in distinct market uncertainties, (ii) argue entrepreneurial constructivist and its theoretical composition in each market uncertainty, and (iii) delineate an entrepreneurial patching for complementary hybrid markets. Central to the contribution of this paper is the notion that entrepreneurial constructivist plays a vital role by various theoretical methods under distinct market uncertainties and implies that endogenous, autonomous and active learning and doing may be the key to entrepreneurial success of start-ups.

ENT: How Open Innovation Mediates Absorptive Capacity: Evidence from Japanese Firms

Author: **Naohiro Sawada**, *Aoyama Gakuin U.*

Except for a few studies, prior research has not investigated the contingency fit between open innovation and absorptive capacity. To study the effects of these concepts in detail, this work classifies open innovation into academic and business collaboration, while also classifying absorptive capacity into potential and realized absorptive capacity. Then, we show our hypotheses for the above four concepts. This study uses questionnaires and archival data from Japanese firms and shows that potential absorptive capacity is positively correlated with innovation performance when a firm conducts academic collaboration but that realized absorptive capacity is negatively correlated with innovation performance under the same conditions. In contrast, potential absorptive capacity is negatively correlated with innovation performance when a firm conducts business collaboration, especially with suppliers, but realized absorptive capacity is positively correlated with innovation performance under the same conditions. This study shows that the consideration of a combination of patterns among these concepts may be important for enhancing innovation performance and highlights the possibilities and limitations of these concepts.

Emotions, Intention, Motivation 6

ENT: **Emotion in Entrepreneurship Education: Passion in the Practice of Artistic Entrepreneurship**    

Author: **Alexandre Leite Ávila**, UFBA - Federal U. of Bahia

Author: **Eduardo Davel**, U. Federal da Bahia

Author: **Sara R. S. T. A. Elias**, U. of Victoria

Although emotions have been recognized as fundamental for entrepreneurship and educational practices in general, the role of emotions in entrepreneurship education (EE) remain overlooked in entrepreneurship scholarship, particularly in the field of EE in the arts, where entrepreneurs are driven by their passion and strong emotional connections to their artistic projects. In this article, we discuss how emotion, and in particular passion, impacts entrepreneurship educational practices in the context of artistic entrepreneurship. Our 24-month inductive practice-based study, which used different sources of information (documents produced by the participants, direct observation, videos and semi-structured interviews) resulted in the identification of two dynamics of passion (transforming and contagious) and four tensions through which passion impacts EE (identifying/unidentifying, aggregating/disaggregating, driving/blocking and strengthening/weakening). We conclude that our results can enrich studies in EE from different paths: Discussing the relations between impacts of passion and other widely discussed constructs, broadening the understanding of passion as a dynamic and sociocultural emotion and highlighting the role of pedagogical practices in this context. Additionally, we broaden current understandings of the importance of passion for EE in the arts field. We emphasize that our study offers an opportunity for entrepreneurship researchers and educators to reflect on a more current and comprehensive educational practice, in which emotion is considered a fundamental and transformative dimension.

ENT: **Opportunity Identification Training and the Form of First-person Opportunity Belief** 

Author: **Yingzhu Fu**, Nanyang Technological U.

Author: **Marilyn Ang Uy**, Nanyang Technological U.

Author: **Wai Fong Boh**, Nanyang Technological U.

In this research, we argue that opportunity identification training is a training of self-regulated learning, and investigate the impact of training on forming first-person opportunity beliefs. Drawing on the theory of self-regulated learning, we suggest that feedback seeking behavior is a central mechanism through which training takes effects, and individuals' metacognition and engagement are important moderators affecting the training outcomes. We conducted a two-stage field experiment with 152 working professionals aspiring to become entrepreneurs and found support for our predictions. Our findings shed new light on research about entrepreneurship training, and research about opportunity identification processes.

Paper is Available to Meeting Registrants Only.

ENT: **A Path-Centric Theory of Entrepreneurship Training Transfer to Explain Long-Term Self-Employment**

Author: **Michael Marcus Gielnik**, Leuphana U. Lüneburg

Author: **Blagoy Blagoev**, Technische U. Dresden

Author: **Lemayon Lemilia Melyoki**, U. of Dar es Salaam

We develop a path-centric theory of entrepreneurship training, which addresses the question of how entrepreneurship training exerts long-term effects on business creation. Specifically, the theory suggests that entrepreneurship training is an event that triggers the elements of a positive feedback loop in terms of entrepreneurial motivation and entrepreneurial action. The elements reinforce each other with increasing returns, resulting in a stabilized action pattern that facilitates business creation. We apply the theory to explain how entrepreneurship training can be effective in reducing unemployment among university graduates in East Africa by forming a path leading to self-employment. Randomized controlled trials with a baseline (T0: N = 1,156), a short-term (T1: N = 872), and a long-term follow-up measurement (T2: N = 622) provided support for the theory. Our study contributes to the literature by presenting a theory that focuses on post-training processes in terms of a motivational self-reinforcing effect to explain the long-term effectiveness of entrepreneurship training. Furthermore, your study addresses a grand challenge in management and entrepreneurship research by demonstrating how entrepreneurship training can reduce unemployment among young adults in low- and middle-income countries.

ENT: **Behind Every Superman there is a Clark Kent: Patience as a Strength in the Entrepreneurial Process**   

Author: **Sonali Gupta**, IIM Indore

Entrepreneurs act under uncertain conditions and resource constraints to bring new products or services to life. While examining what characteristics and behaviors help entrepreneurs traverse the challenging period between idea conception and venture sustainability, the academic and popular discourse has emphasized fiery traits and behaviors like risk-taking, perseverance and passion. Patience, the propensity to wait calmly in the face of frustration and adversity, has largely been unnoticed. An inductive, longitudinal study of nine nascent entrepreneurs in the early stages of venture building finds that patience is an important trait that could partly explain why some entrepreneurs stay the course while others give up. The article contributes to the study of nascent entrepreneurship and entrepreneurial action by lending empirical evidence to the existence of 'Entrepreneurial Patience' as a trait that can influence the venture creation process.

Entrepreneurial Cognition 5

ENT: Re-arranging the Old Business Model – How Networking Fosters Entrepreneurial Learning

Author: **Thomas Schardt**, *Johannes Gutenberg-U. Mainz*

In this study, we seek to provide insights into how entrepreneurs might improve their business model innovation capability as a key expression or form of entrepreneurial learning by examining their networking activities. Using a comprehensive dataset of 207 entrepreneurs, we specifically explore how the knowledge heterogeneity of their personal network influences entrepreneur's capability to adapt existing business models. Our results demonstrate that network knowledge heterogeneity indeed has a positive relationship with business model innovation capability. Moreover, this relationship is moderated by entrepreneurs exchange about failures in their personal network. For example, we found that this relationship is stronger for entrepreneurs exchanging about failures with a low level (high level) when their network knowledge heterogeneity in their personal network is low to mean (mean to high).

ENT: The Question of Why? – How Attributions and Consequences of a Failure Influence Learning

Author: **Thomas Schardt**, *Johannes Gutenberg-U. Mainz*

In this study, we seek to provide insights into how cognitive and perceptual processes influence entrepreneurial learning from failure. Using a comprehensive dataset of 207 entrepreneurs, we specifically explore how the combination of internal and controllable attributions foster learning and how the perceived consequences and the category of a failure affect this relationship. Our results demonstrate that entrepreneurs attributing the causes of a failure to internal and controllable factors indeed show higher levels of learning from failure in the aftermath. Whereas the moderating role of the failure consequences in this relationship is more nuanced than we thought. Additionally, whether a failure is of operational or strategic nature seems to not influence the link between an internal and controllable attribution and learning from failure.

ENT: The Entrepreneur as Internal Change Agent: A Cognitive Perspective

Author: **Murray Taylor**, *Macquarie U.*

Author: **Robert Graham Jack**, *Macquarie U.*

Author: **Susan Freeman**, *Academy of Management*

Our study aims to clarify the role of the entrepreneur in developing cognitive redefinition by purposefully changing attitudes towards a change - in essence, acting as a change agent for their firm. By adopting this position, the entrepreneur plays a central role in reassuring their firm that it will survive change. Our qualitative study shows the critical events that trigger the initial cognitive behaviour of founders in the international expansion of their management consulting firms highlighting how survival anxiety - the feeling that if we do not change, we will fail to meet our needs or fail to achieve some goals or ideals that we have set for ourselves - must dominate.

ENT: It is a Matter of Time: Conflicts in Entrepreneurial Student Teams

Author: **Iselin Kristine Mauseth Steira**, *Nord U. Business School*

Author: **Sigrid Westad Brandshaug**, -

This study explores how the time frame influence conflicts in entrepreneurial student teams. To date, most research focuses on the effects of conflict on student teams' performance and individual students' coping strategies when facing conflicts, however, a more coherent understanding of factors influencing student team conflict is needed. Following the importance of considering teams' time frame to understand how teams interact, we posit that the duration of the teamwork plays a central role in how conflicts occur, develop, and are managed in student entrepreneurial teams. Thus, we examine differences in conflict processes of short-term and long-term teams in entrepreneurship education, and how the teams' time frame influences these conflict processes. Using a multiple case study design based on ten entrepreneurial student teams, we develop a model to describe the variations in entrepreneurial student teams' conflict processes based on their time frame and captures the interplay between the nature of conflicts, how conflicts are managed and developed within entrepreneurial student teams. We thereby contribute to the literature on entrepreneurial student teams, entrepreneurship education, as well as to the literature on team conflicts and team conflict management.

Entrepreneurial Ecosystems 3

ENT: The Interplay Between Spatial Characteristics and Digital Technologies on Successful VBI Creation

Author: **Miguel Angelo Saavedra**, *U. of New England*
Author: **Bernice Kotey**, -

Business incubators are support structures that aim to increase new venture success. Available digital technologies have motivated business incubator managers to explore new ways in which they can effectively support nascent entrepreneurs online. This has increased in importance due to the COVID-19 pandemic. While many business incubators have incorporated digital strategies to support nascent entrepreneurs online, some others have used digital infrastructures and digital platforms to emerge and operate as fully virtual. Given the recent surge of virtual business incubators (VBIs) and the important contribution they make to regional and rural communities, little is known about why and how they are created and how they maintain their operations over time. This paper contributes to our understanding of the interplay between spatial characteristics and digital technologies alongside with incubatees' perceptions, needs and wants for successful VBI creation and development. The findings empirically captured the motives of the VBI founder based on geographical barriers in rural entrepreneurial ecosystems in Australia and how a digital platform was used to address many of the geographical barriers and challenges faced by rural female entrepreneurs. Our study paves the way for future research on VBIs and external enablers of venture creation and development.

ENT: How Entrepreneurial Ecosystem Attributes Influence New Venture Employer Attractiveness

Author: **Christoph Ewald**, *Johannes Gutenberg-U. Mainz*
Author: **Andranik Tumasjan**, *Johannes Gutenberg-U. Mainz*

Recruiting a qualified and committed workforce is important for new venture success and survival. However, while there is scant but emerging research on the new venture attributes that make new ventures attractive for potential applicants, little is known about how environmental factors influence new venture employer attractiveness. To address this gap, we develop and test a model explicating how entrepreneurial ecosystems influence new venture employer attractiveness. Using a metric conjoint experiment, we study 3,340 employer attractiveness judgments made by 215 job seekers. We conceptualize entrepreneurial ecosystems in terms of six attributes and find that they positively impact employer attractiveness. Moreover, we theorize and find that potential applicant's career motives partly moderate the importance of these attributes. Our findings advance the literature on new venture employer attractiveness by identifying ecosystem characteristics as important environmental attributes predicting new venture employer attractiveness.

ENT: A Meta-Analysis of Entrepreneurial Ecosystems and their Effects on Entrepreneurial Activity

Author: **Martin Queissner**, *Ruhr-U. Bochum*
Author: **Lennard Stolz**, *Leibniz U. Hannover*
Author: **Matthias Weiss**, *Ruhr-U. Bochum*

This meta-analysis examines which ecosystem elements influence entrepreneurial activity on which spatial level. An extensive literature research was applied to identify quantitative studies covering entrepreneurial activity (544 studies; 2,589,134 observations), as well as information on the spatial level of analysis, type of entrepreneurship measured, variable sources, and publication metrics. To synthesize the findings, the variables are grouped according to Stam's (2015) framework of entrepreneurial ecosystems. The results show that there are large differences between individual ecosystem elements in terms of their empirical relevance and that this varies greatly depending on the spatial level of investigation. On the micro-level (e.g., cities) leadership has the highest effect size, on the meso-level (e.g., federal states) it is formal institutions, and on the macro-level (countries) it is support services/ intermediaries. Differentiated by type of entrepreneurial activity, formal institutions influence high-growth and innovative entrepreneurship most, followed by culture, and demand. Our results remain robust after using different methods for variable grouping, applying meta-analysis regression analysis, and controlling for country and publication specifics as well as for grouping errors. Based on the findings, theoretical implications for entrepreneurial ecosystem theory and future research opportunities are discussed.

ENT: Environmental Uncertainty, Entrepreneurial Governance, and Entrepreneurial Outcome

Author: **Weiliang Zhang**, *U. of Illinois at Urbana-Champaign*

Uncertainty is a central construct in the entrepreneurship literature. However, the relationship between environmental uncertainty and entrepreneurial outcome is still underexplored. As the real world becomes increasingly discordant, understanding how environmental uncertainty affects entrepreneurial outcome and how startups can mitigate uncertainty has attracted much attention from both entrepreneurship scholars and entrepreneurs. Aiming to fill this gap, this paper studies two research questions: (1) how different kinds of environmental uncertainty affect entrepreneurial outcomes differently? (2) how entrepreneurial governance helps startups mitigate or embrace environmental uncertainty? Integrating theories from management and economics literature, I propose that macroeconomic uncertainty and economic policy uncertainty negatively affect entrepreneurial outcome, while political uncertainty positively affects entrepreneurial outcome. Informal institutions such as clan culture can mitigate the negative effects of economic policy uncertainty and amplify the positive effects of political uncertainty. Moreover, firms with fewer shareholders, with institutional shareholders, or without majority-hold shareholders will also be less negatively affected by economic policy uncertainty. Utilizing a novel dataset of over 9 million Chinese firms registered during 2005–2014 and over 246,000 normative documents published by Chinese provincial governments from 2005 to 2018, I found support for my propositions.

ENT: **Hispanic-Owned Businesses: The (Dis)Advantages of Being a Family Firm & Accessing Growth Financing**  

Author: **Josh Daspit**, *Texas State U.*

Author: **Miruna Radu-Lefebvre**, *Audencia*

Author: **Corey Fox**, *Texas State U.*

Author: **Paul Sanchez Ruiz**, *DePaul U. Kellstadt Graduate School of Management*

Author: **Zonghui Li**, *Jacksonville U.*

Hispanic-owned businesses in the United States are not growing at the same rate as their non-Hispanic counterparts. While prior studies note that Hispanic-owned businesses face challenges in accessing financial capital during startup, less is known about if and when such obstacles exist as these firms grow. Using legitimacy theory and stigma-specific logic, we suggest that when Hispanic-owned firms seek to grow, in general, they lack access to financial capital. Nonetheless, not all Hispanic-owned businesses are the same. Given this, we suggest that Hispanic-owned family firms experience unique benefits and limitations, compared to similar nonfamily firms, when seeking financial capital for growth. Specifically, we theorize that Hispanic-owned family firms benefit from enhanced legitimacy and reduced stigma, increasing the likelihood of securing bank loans and personal savings for firm growth. However, we further theorize that among Hispanic-owned family firms, those operated by copreneurs are less likely to secure the same funding sources for growth. These findings are confirmed using a large, national dataset of firms in the United States. The results advance knowledge related to the growth limitations faced by Hispanic-owned businesses and demonstrate the (dis)advantages experienced by Hispanic-owned family firms when financing their growth.

ENT: **Restructuring Strategies in Family Firm Portfolios**

Author: **Marina Palm**, *WHU – Otto Beisheim School of Management*

Author: **Nadine Kammerlander**, *WHU - Otto Beisheim School of Management*

How do owners of family firm portfolios restructure poorly performing firms? Drawing upon the socio-emotional wealth perspective and escalation commitment literature, we suggest that family firm owners initially retain poorly performing portfolio firms to safeguard firm-level SEW and restructure these portfolio firms by investing and reshuffling. Yet, when the existence of their remaining firm portfolio and thus portfolio-level SEW is threatened by retaining portfolio firms, family firm owners divest preferably via sale as an ongoing concern and if unsuccessful, via liquidation. Based on these findings, this study contributes to the literature on SEW, restructuring and especially divestment research in the context of portfolio entrepreneurship.

ENT: **Adoption of Artificial Intelligence: A Mixed Methods Study on Network Ties and Family Influence** 

Author: **Jonas Soluk**, *Stockholm School of Economics*

Author: **Ivan Miroschnychenko**, *IMD Business School*

Author: **Satish Nambisan**, *Weatherhead School of Management, Case Western Reserve U.*

Artificial intelligence (AI) technologies have gained in significance for all types of firms, including family-influenced firms. However, despite their idiosyncratic motives, little is known about the issues family-influenced firms face in adopting complex and knowledge intensive technologies, such as AI. Peculiar characteristics of AI technologies—specifically, autonomy, learning, and inscrutability—present both opportunities and challenges to family-influenced firms. To explore how family-influenced firms approach AI technologies, we adopt a social capital perspective and combine inductive qualitative and deductive quantitative research into a mixed methods design. In the first step, we conducted a multiple case study of eight case firms consisting of rich data from 112 interviews and additional archival documents. Building on within-case and cross-case pattern analysis, we reveal opposing implications of external social capital and (internal) family social capital on the adoption of AI. While external network ties with suppliers, customers, and competitors help overcome the challenges due to the unique aspects of AI technologies, family influence exacerbate those challenges. In the second step, we sought to test the conceptual framework that we developed with our multiple case study. Based on large-scale data from 1,444 firms, we find empirical support that increasing levels of external social capital with regard to suppliers, customers, and competitors drive AI adoption. Moreover, we find that family influence has a negative moderating effect on the relationships between supplier, customer, and competitor ties on the one hand and AI adoption on the other hand. Our study contributes toward a nuanced understanding of the idiosyncratic challenges of AI adoption faced by family-influenced firms, the role of both external and family social capital in this regard, and how and why AI-related characteristics cause owning families to exacerbate the AI adoption-related challenges.

ENT: **Turning Adversity into Action: Resource Allocation Strategies and Digital Innovation in Family Firms**

Author: **Jonas Soluk**, *Stockholm School of Economics*

Few external shocks have had as severe an impact on organisations as COVID-19. To date, research on how management can respond to such a far-reaching trigger event is lacking. Due to their economic relevance, family firms, which are typically resource-constrained and rely on idiosyncratic resource allocation behaviour, are of particular interest in this regard. Based on an inductive, multicase study of German family firms and building on rich longitudinal insights from more than 100 semistructured interviews and secondary data, we develop a novel framework explaining how an external shock such as the COVID-19 pandemic can trigger a change in family firms' motives. Linking certain adapted motives of family firms (i.e., survival, utilisation, and opportunism) with their resource allocation behaviour during the crisis (in terms of resource preservation, resource recombination, and reliance on social boundary resources), we reveal how digital innovation (digital process innovation, digital product innovation, and digital business model innovation) originates as a result of a process of entrepreneurial action.

ENT: The Crossover of Psychosocial Resources Among Copreneurs: An actor-partner interdependence model 

Author: **Laramie Tolentino**, *Macquarie U.*

Author: **Aeson Luiz Dela Cruz**, *Macquarie U.*

Author: **Francesco Chirico**, *Jonkoping International Business School*

Author: **Patrick Raymund Matutina Garcia**, *Macquarie U.*

Copreneurs, couples who jointly own and operate their business, are considered the smallest unit of a family business. Research on copreneurs has mainly focused on strategies they employ to manage work and family life. Less is known about the specific psychosocial resources that influence copreneurial success and how members of the dyad influence each other's outcomes. Based on crossover and conservation of resources theories, this study examines how cognitive empathy serves as a resource that increases the recipient partner's wellbeing and performance outcomes. The study further investigated the mediating role of psychological capital in the crossover process. Data from 140 copreneurs in Australia were analyzed using an actor-partner interdependence mediation model (APIMeM). Results showed that female cognitive empathy was positively related to male psychological wellbeing and job performance. Furthermore, psychological capital mediated the positive crossover effect of cognitive empathy on outcomes. Both female and male cognitive empathy indirectly enhanced their partner's wellbeing and job performance by increasing their partner's psychological capital. Female cognitive empathy enhanced male firm performance satisfaction via increased male psychological capital. Implications for research and practice are discussed.

ENT: The Antecedents of Family Firms' Resilience to Covid Crisis in Hospitality and Tourism

Author: **Esra Memili**, *U. of North Carolina, Greensboro*

Author: **Hanqing Chevy Fang**, *U. of Missouri / Rolla*

Author: **Burcu Koc**, *Pamukkale U.*

Hospitality and Tourism (H&T) is one of the most affected industries during the Covid pandemic crisis across the globe. Since family firms dominate this particular industry, we examine the specific antecedents of resilience in family business. By drawing upon Miller and Le Breton-Miller's (2005 & 2021) conceptualization of family firms' priorities ("4C"s encompassing continuity, community, connections, and command) and the organizational psychology literature with a focus on the psychological capital, we develop a mediation model of how family firm psychological capital (FFPsyCap) and image affect resilience capability and risk taking, in turn influencing resilience in H&T. We test the model on a sample of 200 H&T family firms. Our study demonstrates that intangible forces can be differentially leveraged to build resilience capability and take risk, that can lead to resilience in H&T family firms. Implications for future research and practice are also discussed.

ENT: Family CEO Duality, Temporal Conditions and Research and Development Investment Intensity in Family 

Author: **Hsing-Er Lin**, *National Sun Yat-Sen U.*

Author: **Andy Yu**, *U. of Wisconsin-Whitewater*

Author: **Jeffrey Stambaugh**, *Midwestern State U.*

Author: **Chiung-wen Tsao**, *National U. of Tainan*

Author: **Rebecca Jen-Hui Wang**, *Lehigh U.*

Author: **I-Chieh Hsu**, *National Changhua U. of Education*

Findings on family firms' research and development (R&D) investment intensity remain mixed, with few studies articulating the critical role of a power balance between CEOs and executive boards. In this research, we extend the stewardship and the conservation of resources (COR) theories and posit that family CEO duality (i.e., the family CEO serves as the chairman of the board) negatively relates to a family firm's R&D investment. We further propose that such a relationship depends on two temporal conditions: firm age and CEO succession. We tested our model with a longitudinal dataset comprising 528 public family firms (2008-2016) and found a negative relationship between duality and R&D investment intensity. We also found that firm age mitigates such a negative relationship. That is, an old family firm with duality intensifies R&D more than a young firm. However, a family firm with a dual CEO invests less in R&D in the situation of post-CEO succession than pre-CEO succession.

ENT: Escalation of Commitment in Response to a Threat: How Family Factors Matter

Author: **Celina Smith**, *EMLYON Business School*

Author: **Vittoria Magrelli**, *Free U. Bozen, Bolzano*

Author: **Alfredo De Massis**, *Free U. of Bozen-Bolzano (Italy) and Lancaster U. (UK)*

We advance current knowledge of escalation of commitment - a phenomenon in which actors persist with a losing course of action - by examining the influence of cross level factors and their interaction. We seek to understand distinctive family factors and underlying mechanisms that can lead to escalation and do so by exploring escalation of commitment in response to a threat within a highly pervasive, yet often overlooked organizational form: family firms. We adopt a qualitative approach to investigate a family firm's two-year campaign to win financial support to relocate away from the proposed site of the London 2012 Olympic Games. Our findings suggest that the interaction of four factors - family personification, family proximity, family business resilience and family business tradition - can render family firms vulnerable to escalation behaviors, offering important contributions to both escalation of commitment and family business literatures.

Gender and Diversity 8

ENT: **Necessity-based Female Entrepreneurship and Job Creation: The Moderating Effect of Legitimacy**

Author: **Wei Deng**, *Northwestern Polytechnical U.*
Author: **Qiaozhuan Liang**, *Xi'an Jiaotong U.*

By revealing the joint moderating effect of legitimacy in the private and business spheres on the relationship between necessity-based female entrepreneurship (NBFE) and new job creation, this study identifies the boundary conditions that NBFE can produce a positive outcome. Based on the institutional logic perspective, the legitimacy of female entrepreneurs is subdivided into legitimacy in the private sphere under family logic and legitimacy in the business sphere under market logic. The findings show that NBFE positively affects new job creation under high legitimacy in the private sphere, and this positive impact will be the strongest if further combined with high legitimacy in the business sphere. This paper deepens the understanding of legitimacy as a multidimensional construct and breaks through the previous understanding that necessity-based entrepreneurship produces “inferior performance.” This study provides practical implications for female entrepreneurs to effectively coordinate “caregiver” and “entrepreneur” roles and create more jobs.

ENT: **“My Crafts Define My Audience”:** Understanding Dialogues of Indian Women Crafter- Entrepreneurs

Author: **Moumita Roy**, *XLRI-Xavier School of Management*

This paper contributes to the organization of craft in developing countries wherein craft work is a negotiated construction of self, hand labor, timelessness and of meanings. As clients are more inclined towards customization, this work found the existence of traditional and D.I.Y women crafter entrepreneurs, using the platform of social media to display their crafts which in turn constitutes the ways of 'doing' work within the digitalized contexts. This investigation is conducted by employing netnography and participant observation on Indian women entrepreneurs engaged in homecraft, to capture the ongoing interactions between the crafters and her clients. Findings highlight on the interplay of the actors and practices using craft as an approach to work, while also grappling with ambiguities and uncertainties posed by the context of social media. Moreover, the study's important implications focus on the performativity, an inclusive 'socio-cultural practice' used by women crafters' to combat resource scarcity, competition from other players, face nonwork pressures and find meaning in work, thus enhancing our understanding on organizing craft.

ENT: **How Gender Moderates the Mechanism across Social Experience, Self-referent Beliefs, and SE Intention**

Author: **Eun-Jeong Ko**, *Fairleigh Dickinson U.*
Author: **Jiyun Kang**, *Purdue U.*

This study aims to understand how social experience influences social entrepreneurial (SE) intentions through different types of self-referent beliefs, and how gender affects this mechanism. To test our conceptual model, we conducted an online survey and recruited respondents via Amazon's Mechanical Turk (MTurk). Our analysis is based on 743 responses. We used structural equation modeling to test the main hypotheses, conducted decomposition tests using the bootstrapping method to test mediation effects through self-referent beliefs, and executed multi-group analyses to examine gender-moderated mediation effects. The results confirm that social experience significantly influences all three types of self-referent beliefs (entrepreneurial self-efficacy, SE self-efficacy, and self-esteem). Furthermore, the mediating relationship across social experience, self-referent beliefs, and SE intentions is moderated by gender, as the relationship is stronger for women than for men. A clear gender gap exists in the relationships between the perceptual variables and attitudes towards social entrepreneurship. This study reveals gender differences in the mediating mechanism across social experience, self-referent beliefs, and SE intentions. This study also provides a practical suggestion to reduce the perceptual gender gap by showing that social experience more effectively enhances self-referent beliefs (self-efficacy and self-esteem) for women. Our findings support and extend Milliken's (1987) framing of three distinct types of uncertainty to explain how individuals form SE intentions.

ENT: **Individual Entrepreneurial Orientation: What Are The Characteristics And How Do They Evolve?**

Author: **Anke Steinmeyer**, *Bond Business School, Bond U., Australia*
Author: **Justin B. Craig**, *Bond Business School, Bond U., Australia*

The purpose of this paper is to deepen the understanding of how entrepreneurs interpret the five dimensions of entrepreneurial orientation (i.e., autonomy, proactiveness, innovativeness, competitiveness, and risk-taking). We employed a qualitative study interviewing self-selected committed single venture entrepreneurs (n=17) and habitual entrepreneurs (n=15) in Australia. Our results indicate that the EO dimensions manifest differently, and their characteristics change over time while our participants' attitudes towards the firm's financial and non-financial goals evolved as well.

ENT: Developing Dynamic Capabilities for Business Model Innovation in Start-ups: The Role of the Board

Author: **Paolo Di Toma**, *U. of Modena and Reggio Emilia*

Corporate governance research suggests that Boards of Directors can play a key driving role in promoting entrepreneurship and innovation. This role is especially crucial in start-ups or entrepreneurial firms that need to constantly renew their know-how and adapt their business model in order to find their place in the competitive environment. This research addresses how the Board behaves to nurture and drive business model innovation in a start-up. Basing on a dynamic capability perspective, this study investigates how, within a Board, Directors can adopt modes of interaction and dialogue that foster the renewal and development of know-how to innovate the business model. It also examines how such modes of interaction and dialogue can facilitate collaboration with partners in its ecosystem to transform the resources needed to innovate the business model and its implementation. It also focuses how Boards need to reconfigure their role when performing their tasks. The research is carried out by a single case study approach and investigates a young start-up company involved in the design of high tech innovative medical devices. Emerging findings show how a new combinative capability is generated by dynamically shaping the ecosystem and managing relationships with the actors involved.

ENT: Entrepreneurial Bricolage and Innovation: The Moderating Role of Knowledge

Author: **Chin-Hua Huang**, *Hungkuang U.*

Author: **Hui Tu**, *Hungkuang U.*

Innovation is crucial for firm growth but difficult to achieve, especially for resource-constrained firms. The extant literature suggests entrepreneurial bricolage entrepreneurial bricolage is an adequate action for firms in a resource-constrained environment. Most studies argue that resource-constrained firms engaging in bricolage achieve innovation; however, some studies raise limitations and downsides of entrepreneurial bricolage. Scant empirical evidence of entrepreneurial bricolage's impact has resulted in mixed findings with no conclusive findings. The study proposes a contingency framework to clarify the impact of entrepreneurial bricolage on innovation exploratory and exploitative by examination of moderating role of knowledge diversity referring to research on entrepreneurship and innovation management. Our analysis of 172 CCI firms in Taiwan reveals resource-constrained firms utilizing entrepreneurial bricolage simultaneously pursue exploratory and exploitative innovation with two different conditions of high knowledge diversity. More specifically, knowledge diversity has a positive moderating effect on the influence of entrepreneurial bricolage on exploratory innovation, but it has negative moderating effect on the influence of entrepreneurial bricolage on exploitative innovation. In addition, this study finds that entrepreneurial bricolage can help resource-constrained firms in generating new knowledge to explore and exploit opportunities from the available resources, but this can succeed only to a certain extent.

Paper is Available to Meeting Registrants Only.

ENT: Entrepreneurship and Employment at Startups for People with Disabilities

Author: **Danny Chung**, *California State U., Chico*

Author: **Naryoung Yu**, *Ivey Business School*

Around the world, people with disabilities (PWDs) face discrimination in the labor market. In this paper, we examine whether entrepreneurship and wage employment at startups provide PWDs with attractive alternatives to pursuing wage employment at large and incumbent firms. Using the economic theory of occupational choice, we hypothesize that the existence of labor market discrimination will push PWDs into pursuing entrepreneurship or joining startups as wage employees, and that the wage penalty that PWDs face will be smaller in these occupations compared to wage employment at large and incumbent firms. Using data from the National Survey of College Graduates, we find that while PWDs are more likely to pursue entrepreneurship or join startups, the main reason for doing so is likely to be to enjoy the non-pecuniary benefits of pursuing entrepreneurship (or working for a startup) as opposed to the pecuniary benefits.

ENT: Entrepreneurial Continuance & COVID-19: The Role of Relational Embeddedness & Institutional Support

Author: **Tenghao Zhang**, *Edith Cowan U.*

Author: **Pi-Shen Seet**, *Edith Cowan U.*

Author: **Janice Redmond**, *Edith Cowan U.*

Author: **Jalleh Sharafizad**, *Edith Cowan U.*

Building on the Theory of Planned Behavior (TPB), this paper investigates how relational embeddedness and Perceived External Institutional Support (PEIS) influence entrepreneurs' intention to keep ventures afloat during the COVID-19 pandemic (i.e., Intention for Entrepreneurial Continuance or IEC). We surveyed 295 entrepreneurs of small business owners in China in December 2020 and analyzed the data using structural equation modelling. Relational embeddedness and PEIS both significantly influenced IEC through the mediating effects of the three TPB determinants (attitude, subjective norms and perceived behavioral control). While subjective norms did not directly influence intention, they could still affect intention by influencing attitude. Entrepreneurs' post-pandemic recovery prospects during the pandemic also did not moderate the three TPB determinants or IEC. The study contributes to research on entrepreneurial resilience by providing a more nuanced perspective of how entrepreneurs make decisions to continue or exit their ventures during periods of external shock and disruption. Besides the TPB factors being important in ensuring that small businesses continue to survive, this paper also adds to research on social capital by demonstrating the strong predictive power of relational embeddedness, which significantly determined entrepreneurs' continuance intention through the TPB mediators. It also provides evidence that institutional support serves as a salient antecedent of the TPB determinants and continuance intention. Moreover, it finds that internal migrant entrepreneurs face greater entrepreneurial barriers to keep their businesses going during

ENT: Choreographing Space for Living One's Calling: Lessons from COVID-19

Author: **Emilio Costales**, *Royal Holloway, U. of London*
Author: **Anica Zeyen**, *Royal Holloway, U. of London*
Author: **Oana Branzei**, *Ivey Business School*

How do social entrepreneurs engage with space during unprecedented spatial disruptions to continue living their callings? This is the question we explore in this study, drawing on a unique set of longitudinal data gathered using a multi-method analysis of seventeen social entrepreneurs in the midst of the COVID-19 pandemic. We followed participants from March 2020 to February 2021 as they responded to repeated spatial restrictions in the form of the COVID-19 lockdowns. We induce the concept of displaced calling as a uniquely spatial disruption to exercising one's calling. Our data indicates that callings tethered to prosocial causes became overactive in response to COVID-19 despite being externally displaced by widespread spatial restrictions. Our findings suggest that social entrepreneurs, once externally nudged, rapidly adapt to internally displace their own callings to accommodate its growth in response to changing social needs. We present a grounded process model of displaced calling and spatial mechanisms by which social entrepreneurs repeatedly revise and reclaim their callings. In doing so, we contribute to literature on disrupted callings by extending the intersection of callings and prosociality as an inherently spatial interface for studying work as meaning in post-pandemic organizing.

ENT: Should a Social Enterprise Publicly "Toot its Virtuous Horn"? An Artificial Intelligence Approach

Author: **Evelize Mann**, *Waikato Management School*
Author: **Amanda Jasmine Williamson**, *Waikato Management School*
Author: **Heitor Murilo Gomes**, *U. of Waikato - AI Institute*
Author: **Stuart Dillon**, *Waikato Management School*
Author: **Albert Bifet**, *U. of Waikato - AI Institute*

Social enterprises are receiving increasing recognition as businesses that address global challenges for a better and more sustainable future. However, social enterprises can struggle to communicate their values to obtain long-term viability. Little is known about measuring an enterprise's promotion of social values, which we call socially-oriented language, nor when such language helps or harms social enterprise performance. In this research, we draw on Artificial Intelligence techniques, in particular natural language processing techniques (NLP), to measure socially-oriented language on the basis of textual data. Furthermore, we explore the relationship between levels of socially-oriented language and business performance. Our findings suggested that social enterprises under-promote their social values compared to traditional firms, and they do not gain performance advantages when they do. This research breaks important ground in social enterprises and social entrepreneurship research by providing novel insights into sustainability issues in organizational identity and its communication with business performance. Moreover, it provides scholars with a method for measuring socially-oriented language that traditional approaches cannot measure.

ENT: Social Entrepreneurial Intention: Examining the Impacts of Social and Institutional Support

Author: **Corey Fox**, *Texas State U.*
Author: **Phillip Davis**, *Texas State U.*

This study explores the relationship between perceptions of support for social venturing activities and social entrepreneurial intention. Drawing on the theory of planned behavior, we theorize that perceptions of various external support structures will influence social entrepreneurial intention. More specifically, we expect that perceived social support and perceived institutional support will be positive influences on an individual's social entrepreneurial intention. To test our assertions, we surveyed 291 working adults in the United States. In contrast with prior research on social entrepreneurial intention, the results did not support a direct effect between either measure of support and social entrepreneurial intention. However, results did support a clear interactive effect, which suggests that social entrepreneurial intention is contingent on the presence of high levels of both types of support. We discuss the implications of the results for theory and practice before concluding with the study limitations and avenues for future research.

ENT: Hybrid Organizations and Innovation

Author: **Byungku Lee**, *U. of La Verne*

This study examines the effect of hybridity on the innovation performance of social ventures that pursue social and financial missions simultaneously. This study proposes that organizational value orientation and profit reinvestment influence the innovation performance of a social venture in such a way that their influences on innovation performance are strongest when they are balanced between social and financial missions. However, dynamics exist in relationships among organizational value orientation, profit reinvestment, and innovation performance: Although a balanced value orientation would maximize its direct impact on innovation, it might fail to do so when profit reinvestment mediates the relationship between organizational value orientation and innovation performance. Analyses of 4,170 social ventures across 36 countries reveal significant relationships confirming the predictions of this study. The results of this study suggest the dynamics of the relationship between hybridity and innovation in the context of social entrepreneurship.

ENT: Exploring Perceived Differences of Social Entrepreneurs, For-Profit Entrepreneurs, and NPO-Leaders

Author: **Philipp Kruse**, *Dresden U. of Technology*
Author: **Florian Rosing**, *U. Koblenz Landau*

Social enterprises (SEs) strive for the fulfillment of a social mission based on an elaborated income strategy. Consequently, they are largely conceptualized as hybrid enterprises combining logics of traditional non-profit organizations (NPOs) and for-profit enterprises (FPEs). This is sound on the organizational level, however, it remains unclear to which extent the perception of SE-leaders on the personal level mirrors this hybridity as previous studies' scope is limited to (i) a comparison of only two of the three organizational forms and (ii) leader self-reports. Therefore, in the current study, we examine perceived personality traits, work-related values, leadership styles, and leader attributes of SE-leaders compared to FPE- and NPO-leaders. Using a vignette-based, comprehensive experimental design with a sample of business students (N = 170), we found that whereas notable differences in personality and leadership comparing SE- and FPE-leaders exist, SE- and NPO-leaders were perceived as not different. Based on our findings, theoretical and practical implications are discussed.

ENT: Assessing Business Modelling Practices for Sustainability: The Lean Startup Case.

Author: **Alberto Peralta**, *U. of Alcalá & Abu Dhabi U.*
Author: **Andreas Pyka**, *U. of Hohenheim*

Lean Startup (LS) has been overlooked as a method to model businesses for sustainability. To theoretically assess such LS capacity, we conceptually devolve one assessment tool or meta-model. The meta-model validates the ability of any eco-innovation practice to address the business-society-nature interface, the eco-innovation dimensions, and two sets of dichotomies that new business models face. Further, we confirm the theoretical adequacy of LS to innovative business models for sustainability based on its embedded view and non-linear way of integrating valueholders' needs for speed and urgency. Finally, four propositions for studying LS as a sustainable business modelling practice is offered.

ENT: How Does Causal Decision-making Influence Triple-Bottom-Line Performance? An Empirical Study

Author: **Georg Schaal**, *Innovation and Entrepreneurship Group (WIN) – TIME Research Area, RWTH Aachen Un*
Author: **Sebastian Kruse**, *WIN Lehrstuhl RWTH Aachen*

What are the success factors of sustainable entrepreneurs to operate businesses with a high triple-bottom-line (3BL) performance? This study examines how the decision-making behavior among entrepreneurs with an intention for sustainability influences the 3BL performance of their businesses. Our empirical study with 489 ventures in the DACH region shows that entrepreneurial intention for sustainability has a direct and indirect effect on 3BL. The indirect effect on 3BL is mediated by causal behavior. Further, we find that causal decision-making logic strengthens green and financial performance but has no effect on social performance. Our findings contribute to understanding antecedents of 3BL performance and the conceptual understanding of decision-making in the sustainable entrepreneurship literature.

ENT: When Positive Community Spread Is the New Normal: A Multilevel Theory of Community Entrepreneurship

Author: **Natalie Slawinski**, *U. of Victoria*
Author: **Rebecca Franklin**, *Memorial U. of Newfoundland*

Our global economic system has contributed to growing prosperity for some communities, while disrupting the economic and social well-being of others. Both rural and urban communities face depletion as businesses relocate in search of higher profits elsewhere. We draw on a growing body of work from entrepreneurship and organizations research, along with insights from psychology, geography, and sustainable community development, to develop a multilevel model of community entrepreneurship that examines the processes by which community entrepreneurs and place-based enterprises, as key actors, reverse the downward spiral of depletion. We develop the concept of entrepreneurial energy – which we define as an ongoing dynamic vitality directed toward value creation and transformative change – as a central mechanism that enables these actors to work with community members to overcome significant barriers and transform depleted places. Our multilevel process model provides a pathway towards a new positive reality in which empowered, resilient communities are sites for addressing global challenges and fostering human and ecological well-being. In doing so, we draw researchers' attention to the importance of studying community entrepreneurship as a collaborative, bottom-up process, involving individual, organizational and community actors, while deepening our understanding of how to develop resilient communities in an age of disruption.

Identity Work at Work: Stigma and Stereotype Threat

GDO: **Trapping: An Identity Work Strategy of a Non White Male Migrant to be Visible in the Workplace** 

Author: **Kishan Kariippanon**, *U. of Wollongong*
Author: **Mario Fernando**, *U. of Wollongong*
Author: **Shamika Almeida**, *U. of Wollongong*

We give voice to a unique individual migrant identity story of extraordinary resilience. In this special issue we analyse an identity work strategy which is so far not accounted for in the identity work literature. This paper aims to uncover the identity work of our first author, a non-white male migrant who is a multi-discipline qualified and a tenured public health academic in his early forties but also a product of post-colonial globalisation and thus an artefact of considerable identity work. The evolution of his identity started with his original identity as a Tamil Malaysian boy. We narrate his story of a seemingly never-ending struggle to 'breathe', stay afloat, and achieve visibility in the workplace through a collaborative, reflective autoethnographic process. The array of multi-location identity work across the globe, from trying to find a voice as a third-generation migrant in his own birth country, Malaysia, in the Russian medical society as an aspiring paediatrician, and a first-generation skilled migrant in Australia made our first author a unique case of identity work. The identity work discovered here is of particular significance to this special issue due to the micro, meso and macro-level implications.

GDO: **Trashing or Rather Thrashing out the Gender Binary? Trans Employees' Gender Performance at Work**    

Author: **Enrico Fontana**, *Sasin Graduate Institute of Business Administration, Chulalongkorn U.*
Author: **Thomas Köllen**, *U. of Bern*
Author: **Prapasson Sirivichai**, *Chulalongkorn U.*

This article analyzes 32 individual interviews and 5 focus group interviews with trans-persons and trans-experts, and focuses on how openly trans individuals, who are successful in their careers and who do not work in especially 'trans-friendly' business sectors, perform their gender at work in Thailand. As non-passing trans-persons they do not meet the idealized cis-gendered standard of Butler's heterosexual matrix. We show, however, that in order to make themselves 'intelligible', and with this, employable and promotable, another matrix applies: this we call the trans-matrix. This demonstrates that successful trans-women tend to adjust their way of 'doing transgender' to an ultra-feminine standard, whilst the gender performance of successful trans-men tends towards more of an ultra-masculine standard. While trans-femininity is primarily performed on the level of appearance for trans-women, trans-masculinity is, for trans-men, rather performed on the level of behavior. Although the rigid gender binary is the main obstacle to their struggle for equal recognition, compensating for any deficiency with regard to non-conformance with the cis-gender ideal of the heterosexual matrix by performing in accordance with the ideals of the trans-matrix (that is, performing extreme positions of the gender binary) contributes more to stabilizing the binary, rather than undermining or challenging it.

Paper is Available to Meeting Registrants Only.

GDO: **Bodies at Home? Religious Women Spaces and the Emergence of Intersectional Liminal Identities** 

Author: **Michal Frenkel**, *Hebrew U. of Jerusalem*
Author: **Varda Wasserman**, *The Open U. of Israel*

The paper examines the inequality regime of ultra-orthodox colleges in Israel and the ways female students interpret and experience the gender segregation within the colleges and develop their identities around it. We demonstrate how the gender segregation constitutes three types of liminality – spatial, social and epistemic – that allow ultra-orthodox women to move continuously between a familiar, religious environment to a secular foreign one. In this protected environment, they feel protected and are able to develop new identities relevant to the secular labor market while maintaining or even enhancing the traditional, religious one. The liminal space of the college reinforces their sense of entitlement for a professional place of their own and serves as a bridge that helps them to cope with the secular world.

GDO: **From Ghettos to Corporate Sanctums: A Caste Lens on Leadership**  

Author: **Pardeep Singh Attri**, *Central European U.*
Author: **S.M Ramya**, *Indian Institute of Technology, Madras*

Previous research on leadership diversity has generated rich insights on the benefits of diversity to organizations, but the challenges in achieving such diversity, particularly in understudied contexts are relatively less known. In this paper, we examine the challenges faced by low-caste managers in India, compared to others, in reaching leadership positions in their careers. Our qualitative study of senior managers revealed that family background, availability of role models, and formative opportunities influence the differential approaches that individuals from marginalized and privileged groups bring to their corporate careers. Further, low-caste managers find lower opportunities for advancement, fewer mentors, and experience difficulties in developing and leveraging professional and social networks, even when they attempt to hide their caste identity. These findings have important implications to research on leadership diversity and inequality, as well as to the unique challenges organizations face in achieving diversity along caste lines.

Paper is NOT Available. Please contact the author(s).

Negative group labels (i.e., slurs) have historically been used as a tool to reinforce stigma and help enforce the lower status of stigmatized groups. One strategy that has emerged to cope with negative group labels (e.g., chink, slut) and their associated stigma is self-labeling, a stigmatized group member's intentional use of a negative group label to refer to themselves (i.e., "I am X"). While previous research has focused on the benefits of self-labeling, or increasing group power and reducing label negativity, we reveal the social costs for individuals who use the strategy, such as reduced likeability and promotability, by introducing a related label-coping strategy, that of label-rejection (i.e., "I am not X") and comparing its effects to those of the self-labeling strategy. In four studies, participants were presented with scenarios in which stigmatized group members used either self-labeling or label-rejection. We found that while self-labeling is more effective than label-rejection in decreasing majority group members' perceptions of the negativity of the label, the self-labeler was seen as less likeable and less promotable than the label-rejecter, an effect that generalizes across women and racial minorities and across different scenarios (Study 1-3). We also found that this social cost was mediated through threatened affect, which led to greater oversensitivity attributions to self-labelers (Study 4). Lastly, we found that the social cost associated with self-labeling was diminished when the strategy was used in a reactive vs. in a spontaneous context (Study 5). These results suggest that stigmatized groups' use of self-labeling to attenuate stigma is potentially accompanied by negative social consequences for individuals, even as it contributes to reducing the power of the label itself.

Women's Leadership During Crises

GDO: **Unpacking the Female Exceptionalism Effect in External Crisis Leadership**   

Author: **Alex Bolinger**, *Idaho State U.*

Author: **McKenzie Rees**, *Brigham Young U.*

Author: **Sheli Sillito**, *Brigham Young U.*

Author: **Mark Bolinger**, *Appalachian State U.*

Recently, commentators in both academic literature and the popular press have highlighted the unique effectiveness of female leaders in attracting support during times of crisis. These observations about the relative success of female leaders contrast with extant work on gender and crisis leadership, which suggests that women are more likely to experience adverse outcomes when elevated to leadership positions in the midst of organizational crises (e.g., the glass cliff phenomenon). To reconcile this discrepancy, we theorize a “female exceptionalism effect” in crises that originate from external sources (e.g., wide-scale health and economic crises that originate beyond the control of any single organization) rather than internal (i.e., within-organization) sources. Drawing on national-level field data, we find that U.S. states led by women during an especially vivid and recent external crisis, the COVID-19 pandemic, had better health behavior compliance from constituents (i.e., mask-wearing and vaccinations) and economic outcomes (i.e., employment rates) than states led by men (Study 1). Additionally, female leaders were significantly more likely to signal both their warmth and competence in linguistic analysis of press conference transcripts (Study 2). Finally, drawing on experimental data, we find that the advantage of female leaders in generating follower support is mediated by perceptions that women are warmer, more competent, and more suitable as leaders than men in external crises (Study 3). We discuss the implications of our findings for the crisis leadership literature, as they highlight a rare female advantage from societal double standards.

Paper is Available to Meeting Registrants Only.

GDO: **Do Female Leaders Take More Risks in the Face of Life-threatening Crises?**   

Author: **Ipek Kocoglu**, *Kean U.*

Building on evolutionary psychology, we argue that leaders not only perceive life-threatening and non-life-threatening crises differently, but firms led by female leaders exhibit contrasting risk taking tendencies during a crisis than firms led by male leaders. These implications increase with the threat of loss, suggesting a stronger effect for leaders with higher compensation. We tested our argument by examining US firms' risk taking after the 9/11 terrorist attacks and the 2007-08 financial crisis. Consistent with our theoretical model, we found that while the terrorist attack increased risk taking for firms led by a female CEO, the financial crisis increased risk taking for firms led by a male CEO. Our findings explain that evolutionary cognitive adaptations are central to leaders' responsiveness to threats. Contrary to conventional wisdom, we show that female leaders do not always avoid risks. When exposed to extreme threats, female leaders take higher risks than their male counterparts.

GDO: **Is Women's Leadership Really Associated with Fewer Covid-19 Deaths?**  

Author: **William Obenauer**, *U. of Maine*

Recent research regarding the COVID-19 pandemic has claimed to find a relationship between the sex of a state governor and COVID-19 deaths in that state. Specifically, this research has reported that states with female governors have lower instances of COVID-19 deaths and that executive orders given by female governors have been more effective at reducing COVID-19 deaths than those given by male governors. Such findings have the potential to influence our understanding of the causes behind phenomenon such as the glass cliff, which address the disproportionate emergence of females in precarious leadership positions, as compared to the emergence of females in less precarious positions. We argue, however, that the theoretical implications of such findings are bound by limitations of the analyses from which they are derived. In response to a call for more consistent use of replication in the *Journal of Applied Psychology*, we conduct a series of direct and conceptual replications of this prior work, finding little evidence that a governor's sex serves as a reliable predictor of COVID-19 deaths. Consequently, unlike prior research, we argue that insight gleaned through data from the COVID-19 pandemic has not provided reason for us to alter our understanding as to the causal factors that contribute to the emergence of the glass cliff.

Author: **Mary Triana**, *Owen Graduate School of Management Vanderbilt U.*

Author: **Orlando C. Richard**, *UMass Amherst*

Author: **Seo-Young Byun**, *Ball State U.*

Author: **Kendall Cox Park**, *Vanderbilt U.*

Author: **Dora Delgado**, *Northside Independent School District*

The COVID-19 pandemic has created unprecedented challenges for employees and leaders. The pandemic has resulted in millions of deaths world-wide and changed the way people live and work. Until this public health crisis is controlled, employers and human resource managers will not be able to return to anything resembling a normal pre-pandemic work situation. Based on a sample of 56 countries, the present study examines two factors – leader (i.e., head of state) gender and national collectivism – to explain how some leaders have been able to manage the pandemic with less death than others during the COVID-19 pandemic. Countries with female presidents respond differently to the pandemic than those led by male presidents, resulting in fewer deaths. The results shed light on the person-environment fit between president gender and country collectivistic culture by demonstrating that male presidents leading more individualistic countries suffer from the highest levels of COVID-19 death. Supplemental qualitative analyses on transcripts of speeches delivered by world leaders show that presidents of more collectivistic countries use more health-related words than presidents of more individualistic countries when addressing the public, which suggests that health-related issues are a primary concern for these collectivistic nations. Based on data related to presidents' handling of COVID-19 also show that media sentiment was more favorable for women leaders compared to men leaders. Also, consistent with our prediction, men leading more individualistic countries had the least positive media attention.

Leadership for Diversity and Inclusion

 **GDO: Inclusive Leadership and Employee Outcomes: A Meta-Analytic Test of Multiple Theories**   

Author: **Xiaoyu Li**, *Renmin U. of China*

With increasing conflicts and discrimination in organizations and the society at large, both scholars and practitioners have becoming increasingly interested in the role of inclusive leadership in the workplace. Inclusive leaders manage diversity effectively, thus individuals have equal access to decision-making, resources and opportunities, which benefits employee performance. However, research to date has been inconclusive as to the strength of inclusive leadership effectiveness and mediating mechanisms. To clarify the state of the literature, we provide a comprehensive meta-analysis of inclusive leadership on the basis of data from 184 independent studies. We found evidence for the positive relationships between inclusive leadership and task performance, voice, and innovative behavior. We further examined and compared the three competing mediators (psychological safety, leader-member exchange, and leader identification) of these relationships. This is the first meta-analysis of inclusive leadership to our knowledge, which summarizes existing studies and provides directions for future research.

GDO: A Systematic Narrative Review of Servant Leadership Through the Lens of Gender and Race-Ethnicity 

Author: **Helen Chung**, *Seattle Pacific U.*

Author: **Donghun Lee**, *Seattle Pacific U.*

Author: **Brie Felanagle**, *Seattle Pacific U.*

Individuals' social identities implicitly inform the experience and enactment of servant leadership. Whereas the broad field of leadership is wrestling with the dynamics of power and identity, a gap exists in the servant leadership field. This systematic narrative review examines gender and race-ethnicity in the servant leadership literature from 2009 to 2021. Specifically, we explore how gender and race-ethnicity influence the perceptions and experiences of servant leadership for both followers and leaders. Our review yielded 89 relevant studies across journal articles and dissertations, from which we offer several broad conclusions. Our findings on race-ethnicity as both resource and constraint for leaders of color converge with what has been seen within leadership studies in general; research on the demographic factors of race and ethnicity lags in comparison to the broad field of literature; and more novel theoretical frameworks for the study of gender and race-ethnicity are emerging, particularly in dissertations. Our study contributes a more detailed picture of how demographic characteristics are treated in the servant leadership literature, thus expanding our current understanding of servant leadership phenomena.

Paper is Available to Meeting Registrants Only.

GDO: Contextual Factors Influencing Effects of Leader Characteristics on Leadership Outcomes 

Author: **Theano Lianidou**, *Richmond, The American International U. in London*

Author: **Wei Zheng**, *Stevens Institute of Technology*

Existing literature has well documented that various leader diffuse status characteristics such as gender, race, disability, obesity, etc., although irrelevant to the task at hand, influence leadership outcomes such as leader emergence, perceived leader effectiveness, and follower job satisfaction. However, the contexts in which these characteristics become status indicators and influence leadership outcomes remain under-explored. To advance knowledge on the contextual factors that influence the degree to which leader characteristics become more status-indicating and hence relevant to leadership outcomes, we draw upon status-related theories, such as status characteristics theory and social dominance theory, and develop propositions about such contextual factors. By doing so, we aim to help researchers systematically examine moderators of the relationships between a leader's diffuse status characteristics and leadership outcomes. We also aim to help leaders and aspiring leaders and organizations which seek to improve diversity in their leadership by presenting a broad range of factors that can be leveraged to mitigate the negative effects of leader diffuse status characteristics on perceived leader effectiveness and other leadership outcomes.

Gender Equality Policy Implementation

GDO: Gender Equality Policy Implementation – Managerial Fad or Fade? 

Author: **Aviv Kidron**, *Max Stern Yezreel Valley College*

Author: **Hila Chalutz Ben-Gal**, *Afeke Tel Aviv College of Engineering*

Gender equality policy in organizations is an important and extensively researched topic. In recent years, scholars have studied the implementation aspects of gender equality policy. It has been accepted that the scope and effects of gender equality policy implementation fail at times. However, despite extensive evaluations, the specific reasons for gender equality policy implementation failure have rarely been considered. This is an important oversight, given the significance of policy implementation in the organizational domain, to ensure ongoing gender equality policy adaptation and execution. Moreover, previous research has largely focused on various procedural domains, and it is unclear whether these domains will remain valid in the context of gender equality implementation or whether various organizational antecedents may have implications for true gender equality policy implementation. The purpose of this paper is to identify specific barriers—organizational and individual—that impede gender equality policy implementation. We draw upon thirty-three semistructured interviews conducted in the second largest public service organization in Israel. Our findings point to the conclusion that despite massive regulations to promote gender equality, meaningful implementation has not occurred. We identify key organizational and individual barriers and propose practical steps to speed up gender equality policy implementation in the public service sector. The research calls for an enrichment of the literature on the implementation of gender equality policies, incorporating individual and organizational barriers to practices and policies.

GDO: Gender Pay Equality Reporting in Germany and Poland: An Econometric Investigation

Author: **Ihar Sahakiants**, *CBS International Business School*

Author: **Maria Aluchna**, *Warsaw School of Economics*

Author: **Bogumil Kaminski**, *Warsaw School of Economics*

This study investigates the impact of EU Directive 2014/95/EU concerning the disclosure of non-financial information on gender pay equality reporting in Germany and Poland. Mainly building on neo-institutional theory, we formulate several hypotheses related to the positive association between the quality of disclosure related to gender equality, as an explained variable and environmental and organizational-level explanatory variables, such as the enactment of NFRD-related laws in both countries, the age of investigated enterprises since an IPO, and company size, controlled for industry affiliation and financial performance. The results of the panel analysis based on a random effects ordered logit regression show that the effect of the Directive is significant for both countries, albeit greater in the case of Poland, while the findings concerning the remaining variables are mixed. We discuss the related results by considering the institutional environments in both countries, and we additionally outline the implications of our study for both theory and practice. Keywords: Gender pay equality, Non-financial reporting, Directive 2014/95/EU, Germany, Poland, Institutional isomorphism

GDO: Remaining Form the Socialist Past: Gender Inequality Maintained   

Author: **Henriett Primecz**, *Johannes Kepler U. Linz*

It has shown that gendered violence is rooted in gender inequality. The Istanbul Convention aims to reduce violence against women and address gender inequality as the main causes of gendered violence. Hungary signed, but has not ratified it. This article deconstructs the Parliamentary Decree which gives the reason for the lack of ratification, and the analysis revealed that the unprocessed socialist legacy is the genuine reason for Hungary's rejection the Convention. Gender equality, which was part of the political agenda in the socialist past, is refused, and the gender approach has been replaced by a biological determinism of sexes.

Including persons with a disability within workplaces serves as an important return on investment for organizations as well as societies. The Valuable 500 initiative which originated from the World Economic Forum's New Economy and Society Platform in 2019 is focused on building prosperous as well as inclusive economies and societies. Their work suggests that employing persons with a disability can increase revenue by 28%, double organizational net income, and propel profit margins by 30%. Alternatively, the cost of excluding persons with disabilities can represent up to 7% of GDP within some countries (World Economic Forum, 2021). Recognizing the importance of such inclusion, several governments have enacted legislations, and numerous organizations have attempted to nudge employment as well as promote positive treatment of employees with disabilities. Joining this global conversation, the papers in this symposium showcase how state intervention may help workplace entry of persons with a disability (Kruse et al; Nittrouer et al), how organizational support systems may increase employee well-being (Keating et al), how organizational diversity statements may influence disability discrimination lawsuits (Chalise et al), and yet how employees continue to face barriers within workplaces (Samosh et al), attesting to much work that is needed in this area of inclusion. Our discussants (Bruyere and Colella) will bring together these ideas to suggest directions for future research as well as takeaways for managers, organizations, and policymakers.

Examining Gender Stereotypes in Learning Materials *Gender Stereotypes*

Participant: **Seongwon Choi**, *Trinity U.*
Participant: **Randy Cochran**, *U. of North Carolina Wilmington*
Participant: **Reena Joseph Kelly**, *U. of New Haven*
Participant: **William Opoku-Agyeman**, *U. of North Carolina, Wilmington*

This Professional Development Workshop (PDW) will focus on identifying gender inequities in the classroom learning materials, raising awareness, and developing potential strategies to address these disparities. Gender inequity is a pervasive phenomenon in healthcare management and the inequities are more prevalent in healthcare executive leadership. Gender inequity is a systematic issue and as educators, we need to be aware of potential sources that introduce gender stereotypes to learners that affect their perceptions of healthcare management professions. Course materials, especially textbooks used in healthcare management courses, could potentially be one source of pervasive gender stereotypes resulting in gender inequities in the healthcare management field. This PDW seeks to address common examples of gender stereotypes embedded in our learning materials (with an emphasis on textbooks) and explores best practices on how to mitigate the impact of these stereotypes in the classroom. The PDW will start with a brief discussion of common types of gender stereotypes in textbooks, followed by a short reflection. Next, we will conduct small group (breakout room) sessions to discuss prepared questions to prompt discussion on mitigating these gender stereotypes and promoting gender equity in learning as well as inclusion in the classroom. Lastly, we will have a large group discussion that includes report-out, brief discussion, and Q&A.

Ethics and HRM

HR: Demystifying Benevolence: Why and When Chinese Employees are Willing to Undertake Illegitimate Task

Author: **Shen Ye**, *U. of Electronic Science and Technology of China*
Author: **Lu Chen**, *U. of Electronic Science and Technology of China*

Drawing on the social exchange theory, we examine whether, how and when benevolent leadership stimulates subordinates' willingness to undertake illegitimate tasks in the Chinese context. A pilot study was conducted to test the internal consistency reliability of the adapted willingness to undertake illegitimate tasks scale. A scenario experimental study (Study 1) and a multiple source, time-lagged field study (Study 2) were conducted to test our hypotheses. Consistent findings were accumulated for the indirect relationship between benevolent leadership and subordinates' willingness to undertake illegitimate tasks through felt obligation (both Study 1 and 2). Moreover, the results of study 2 showed that disintegration avoidance orientation amplified the positive effects of benevolent leadership on felt obligation, whereas job insecurity amplified the positive effects of felt obligation on subordinates' willingness to undertake illegitimate tasks. Moreover, disintegration avoidance orientation and job insecurity respectively strengthened the mediating role of felt obligation on subordinates' willingness to undertake illegitimate tasks.

HR: Employee Ethics Training: Literature Review and Integrative Perspective

Author: **Oleksandr Tkachenko**, *U. of New Mexico*
Author: **Amir Hedayati**, *U. of New Mexico*

Employee ethics training programs are increasingly prevalent in today's workplace. Despite the recognized need for such programs in organizations, our understanding of employee-focused ethics training programs and their effectiveness is limited. By conducting a literature review of peer-reviewed empirical studies on employee ethics training, we shed light on the state of the existing literature with a focus on the research characteristics of the identified studies. We also propose an integrative perspective on ethics training programs in organizations. The integrative framework outlines four types of ethics training along two key dimensions: orientation and contextualization. The study concludes by providing suggestions for future research.

HR: The Ethical Implications of Big Data in Human Resource Management 

Author: **Laxmikant Manroop**, *Eastern Michigan U.*
Author: **Amina Malik**, *Trent U.*
Author: **Morgan Milner**, *Eastern Michigan U.*

This article draws from extant research on data analytics to examine the ethical implications of big data in human resource management (HRM) practices, specifically in the areas of recruitment and selection, training and development, performance management, compensation, and employee retention. The article commenced with a characterization of big data applications in HRM processes and practices, highlighting their benefits and significant value for the management of the workforce to enhance organizational efficiency. It also shows how BDA could compromise employee identity through institutional surveillance and other algorithmic data-manipulation techniques. These practices, we note, violate fundamental ethical practices thus putting employees at great risk. Our theorizing draws attention and awareness to the ethical challenges surrounding the employment experiences and the intersection of these personal experiences with institutional pressures. This allows for a critical (re)examination of unethical management practices surrounding BDA and envisions radical alternatives around issues of enhanced measurement and monitoring of the workforce. This, we argue, will create tension and to some extent mistrust in the management-employee relationship.

HR: Ethics-Oriented HRM Systems, Moral Attentiveness, and Workplace Deviance: A Multilevel Investigation

Author: **Khuram Shahzad**, *U. of management and technology, Pakistan*
Author: **Ying Hong**, *Fordham U.*
Author: **Alan Muller**, *U. of Groningen*
Author: **Marco DeSisto**, *RMIT U., Australia*
Author: **Farheen Rizvi**, *U. of Management and Technology*

Deviant workplace behavior (DWB) causes enormous costs to organizations, which has sparked considerable interest among researchers and practitioners in identifying factors that may prevent such behavior. Drawing on the theory of moral development, we examine the role of ethics-oriented human resource management (HRM) systems in mitigating DWB as well as the mediating and moderating mechanisms of this relationship. Based on 232 employee-supervisor matched responses generated through a multi-source and multi-wave survey of 84 small and medium enterprises (SMEs) in Pakistan, our multilevel analysis found that ethics-oriented HRM systems relate negatively to employee's DWB via the mediation of perceptual and reflective moral attentiveness. This indirect relationship is further moderated by two societal-inequality induced factors – employee gender and income level – such that the indirect effects of ethics-oriented HRM system on DWB through perceptual and reflective moral attentiveness were stronger among women and low-income employees.

The dark side of leadership continues to be of interest to academics and practitioners alike. Specifically, scholarship about the negative impact of destructive leadership on individuals, groups, and organizations abound in the management literature. While extant work focused largely on the damaging costs of specific forms of destructive leadership (e.g., abusive supervision), there exist other forms and expressions of destructive leadership that warrant scholarly attention. In this symposium, we offer fresh conceptualizations of destructive leadership alongside the application of novel theoretical perspectives and innovative research methodologies to further advance destructive leadership research. Our symposium aims to expand our understanding of destructive leadership through a collection of five papers that offer the following contributions: (1) introducing and examining different forms and conceptualizations of destructive leadership (i.e., leader dominance and legitimacy, micromanagement, narcissistic servant leadership), (2) examining contextual and individual boundary conditions surrounding destructive leadership, and 3) offering a new measure (i.e., micromanagement) and novel research methodologies (e.g., machine learning) for future studies to consider. Collectively, the five papers in our symposium set the stage for continuing scholarship on destructive leadership by championing contemporary conceptualizations, measures, and methodologies.

Despite its prevalence in the modern workplace, organizational dehumanization is an intrinsically negative phenomenon that entails a wide range of deleterious consequences, for both employees and organizations. While an increasing number of theoretical and empirical studies have started to examine this construct, its nomological network remains for the most part underdeveloped. In this symposium, we seek to stimulate scholarly interest by offering a refined and more complete understanding of organizational dehumanization. To this end, we present four papers that offer theoretical and empirical insights on the detrimental consequences, underlying mechanisms, boundary conditions, and measurement of organizational dehumanization. Collectively, the papers presented in this symposium set the stage for further scholarship on organizational dehumanization and the development of policies that may help mitigate its harmful effects, thereby helping to build a more humanitarian workplace.

Fifteen years ago, big international acceleration programs (IAP) started to emerge in the US (e.g., Y Combinator in 2005, Techstars in 2006) yet the main early-stage funds and seed accelerators in Latin America —such as 500 Startups or Start-Up Chile— were born in 2010. These Latin American IAP have had a profound effect on entrepreneurs' mobility, migration of startups, raising the country brand, the connection within and between ecosystems, the entrepreneurial culture in the local ecosystem, regulation, and entrepreneurial and migration policy. Simultaneously, in the last decade, we have seen the rise of many Latin American unicorns, and other very successful companies in the retail, edutech, and fintech sectors, accelerating the economic development in these emerging economies. Yet a new era has arrived. The COVID-19 pandemic created a new scenario for the internationalization of startups. Resilient, antifragile, and crises-proof growth became new approaches to the development of entrepreneurial ecosystems. The process of internationalization became slower and more expensive. However, due to the digitalization of platforms and access to global markets, more startup founders are thinking of scaling abroad. This has created the need for digital and customized soft-landing programs that help founders find the right entry mode to the foreign market. This PDW connects four studies that will show the diversity of benefits gained by the local entrepreneurs, “expatpreneurs”, entrepreneurial policy, and the overall entrepreneurial ecosystem.

Institutions, Corporate Political Strategy and FDI

IM: A Social Media Analytics Approach to Researching Corruption in International Business  

Author: **Maximilian Stallkamp**, *Virginia Tech*

Corruption is an important international business phenomenon, yet empirical research – especially at the firm level – remains rare, in part due to data limitations. I argue that the combination of modern data analytics tools and social media data has great potential for advancing empirical research on corruption. Using web scraping tools and the Twitter API through a combination of Python and R, I compile a sample of 168 firms involved in bribery schemes in 83 countries and collect nearly 1 million tweets related to these firms' corrupt activities. I illustrate how such data can help scholars examine previously under-researched aspects of corruption, such as the role of country-level institutions in moderating public reactions to revelations of corruption.

IM: Corruption Controls in MNCs and Financial Benefits from Foreign Bribery in Forty-Four Host Countries   

Author: **Leyla Orudzheva**, *Texas A&M U. Central Texas*

Author: **Manjula S. Salimath**, *U. of North Texas*

Author: **Robert Pavur**, *U. of North Texas*

While corruption is a widely studied phenomenon, little is known about the conditions under which it can be controlled in multinational companies (MNCs). This paper probes the deeper structure of corruption, i.e. the financial opportunity to engage in it. More specifically, we examine how the financial benefits of corruption opportunity (BCO) varies with the enactment of various internal and external corporate corruption controls. To avoid biases associated with perceptual measures of corruption, we study real life bribery transactions based on a sample of publicly traded MNCs caught for violations of the United States Foreign Corrupt Practice Act (FCPA). Findings from forty-four host countries reveal that a) regulatory sanctioning in host countries, and bureaucratic controls at a firm level are negatively related to BCO, b) positive social sanctioning is positively related to BCO, and b) vigilance controls help strengthen negative effect of bureaucratic control and positive social sanctioning control on BCO. This study represents a first known attempt to empirically examine the impact of corruption controls on financial benefits of corruption and advances understanding of the multidimensionality of corporate corruption control in MNCs. Keywords: corporate corruption, corruption control, vigilance control, foreign bribery

Paper is Available to Meeting Registrants Only.

IM: Cross-Domain Competition: Integration of Competitive Strategy and Corporate Political Strategy

Author: **Xiaoyan Sun**, *National School of Development at Peking U.*

Author: **Hao Ma**, *National School of Development at Peking U.*

While competitive actions focus on a firm's competitive advantage and performance in the competitive domain, corporate political activities deal primarily with the firm's relationship with the government in the political domain to improve both its legitimacy and competitive advantage. Will an attack by a rival multinational enterprise in the competitive domain trigger a response in the political domain? What are the rationales and determinants of such a cross-parry between the two domains? Building on the literature of multimarket competition and corporate political activities, we examine the joint deployment of competitive strategy and political strategy and advance a theory of cross-domain competition between multinational enterprises. Specifically, we systematically examine the determinants of the attacked multinational enterprise's choice of responses to an attack in the competitive domain (i.e., no response, response in the competitive domain only, response in the political domain only, or responses in both domains simultaneously), focusing on the differentials between the attacking MNE and attacked MNE in each domain and the differentials in their cross-domain coordination, also taking into account the impact of the types and characteristics of the attacks as well as the concerns and expectations of the third-party players such as other rivals and stakeholders. Our integrative account of cross-domain competition will help enhance our understanding of how a multinational enterprise simultaneously manages its competitive actions and political actions against the same rivals and contribute to the integration of competitive strategy and corporate political strategy.

IM: Highlighting the Role of AI on FDI: An Evidence Drawing Upon the Emerging Institution Perspective

Author: **Yifei Pan**, *Peking U. Guanghua School of Management*

Author: **Xuchang Chen**, *Peking U.*

Author: **Ting Xiao**, *Peking U.*

Author: **Jun Xia**, *U. of Texas at Dallas*

Although artificial intelligence (AI), the leading technology in this digital era, has become an important driver for business investments, little is known about its underlying theoretical mechanisms and functioning boundaries. Drawing on the institution-based view, we argue that AI development creates an emerging institution, serving as a centripetal force to attract foreign firm investment (FDI). Accordingly, we predict that host-country AI development attracts a firm's FDI in the form of subsidiary establishment. We highlight home-subnational AI development and a firm's state ownership as important boundary conditions under which the relationship is stronger and weaker, respectively. We construct a novel dataset reflecting rich AI development information, drawing upon a sample of 1,524 Chinese public firms engaged in outward FDI activities in 26 host countries from 2015 to 2017. We find evidence for our predictions. Our results provide valuable implications for the literature on international digital economy and AI research.

Foreign Entry Decisions

IM: Aid, State-Ownership, and the Location Decision of Chinese MNEs in Africa

Author: **Xuanjin Chen**, *School of Economics and Management Southwest Jiaotong U.*
Author: **Zhenzhen Xie**, *School of Economics and Management Tsinghua U.*

With the hybrid nature of government agencies and market players, state-owned enterprises (SOEs) tend to play multiple roles when they conduct FDI in host countries that receive aid from their home country. Bridging the literature that studies the impact of aid on FDI with the research on SOEs, we propose that SOEs are more likely to make FDI in aid recipient countries than privately-owned enterprises (POEs) from the same country. In addition, SOEs' FDI in recipient countries not only mediates the positive impact of aid on POEs' FDI in recipient countries, but also strengthens the impact as a moderator. Empirical research based on data of 3,758 Chinese FDI projects in Africa during 2001-2015 delivered support to the above arguments. The findings of this study extend the research on the relationship between aid and FDI, as well as the SOE literature.

IM: Does Distance Determine the Location Choice of I-business Firms?

Author: **Chinmay Pattnaik**, *U. Of Sydney*
Author: **Hea Sun Lee**, *The U. of Sydney Business School*

This study examines the role of cross-national distance on the location choice of I-business firms in their international expansion. While technology enables faster international expansion of I-business firms, unfamiliarity with and uncertainty of distant host countries may still affect their location choice. We examine the impact of cross-national distances based on CAGE framework (i.e., cultural, administrative, geographic and economic) on the location choice of I-business firms. We further identify two firm-level contingencies of I-business firms (i.e., direct network externalities and engagement in business-to-business transactions) that condition the effect of cross-national distances on the location choice decision. Using a global data set of 185 I-business firms, we find that cultural, administrative and geographic distances negatively impact the location choice. While I-business firms with direct externality strengthen the negative relationship between distance and location choice, business-to-business (B2B) firms weaken them. Our study demonstrates the continuing role of distances on the internationalization of I-business firms.

Paper is Available to Meeting Registrants Only.

IM: CEO Overconfidence and MNCs' Foreign Entry

Author: **Takumi Shimizu**, *Keio U. Japan*
Author: **Akie Iriyama**, *Waseda U.*

Upper echelon theory (UET) has been a widely researched theory in management research, explaining that a firm's strategic actions are driven by the psychological traits of its top executives. However, there still have been few studies that link UET to strategic actions of multinational companies (MNCs) in the context of international business (IB). In this paper, we apply UET to IB and examine how CEO overconfidence influences MNCs' decision to enter a foreign country. We also investigate contextual factors (geographic distance and host country experiences) which affect the relationship between CEO overconfidence and MNCs' foreign entry. By creating and analyzing the unique longitudinal dataset of Japanese MNCs, we contribute to unpacking theoretical mechanisms of CEOs' overconfidence in their MNC's foreign entry decisions. We extend UET to the context of IB and shed new light on explaining MNC strategic actions.

Knowledge Management Across Borders

IM: IPR Regime Incongruence and R&D Internationalization Speed of EMNEs: An Institution-Based View (WITHDRAWN)

Author: **Yi Yang**, *Shanghai Jiao Tong U.*
Author: **Longwei Tian**, *Tongji U., Shanghai, PR. China*
Author: **Yuan Li**, *Shanghai Jiao Tong U.*

Emerging economy multinational enterprises (EMNEs), as latecomers to catch-up, start to internationalize their research and development (R&D) activities urgently in recent years. However, IB researchers have paid much attention to advanced economy multinational enterprises' (AMNE) R&D investment to emerging economies, but relatively little attention to EMNEs' R&D investment to advanced economies. Building on institution-based view, we study how the incongruence of intellectual property right (IPR) regime between home and host countries affect EMNEs' R&D internationalization. Further, we explore the moderating effects of EMNEs' social networks on the relationship between IPR regime incongruence and R&D internationalization. We test these ideas using 372 foreign R&D subsidiary establishment from 199 EMNEs in China during 2007-2017. Our research sheds new light on MNE's R&D internationalization.

Paper is NOT Available. Please contact the author(s).

IM: Opening the Black Box of Knowledge Management in International PSFs: Knowledge Types and Processes

Author: **Ciara O'Higgins**, *Deusto Business School*
Author: **Nekane Aramburu Goya**, *Deusto Business School*
Author: **Tatiana Andreeva**, *Maynooth U.*

International professional service firms (PSFs) are often hailed as exemplars of transnational firms, although little is actually known about how they leverage their knowledge across borders. In this study, we build on the knowledge-based view to explore how different international PSFs manage their knowledge and seek to understand how different knowledge types and knowledge processes affect their international management. To do this, we adopt a comparative case study approach to examine data collected from seven international PSFs with varying degrees of professionalisation. Our findings revealed a complex array of knowledge types and knowledge processes and that lead different international PSFs to internationalise for different motives, face different barriers and opt for different modes of internationalisation. This study contributes to expanding existing knowledge on the management of international PSFs and extending the knowledge-based view of multinational enterprises by building a framework of knowledge types and knowledge processes to explore the organisational arrangements of international PSFs.

Paper is Available to Meeting Registrants Only.

IM: Strategic-Asset-Seeking FDI and Firm Innovation: An Institutional Perspective Highlighting IPRs

Author: **Ting Xiao**, *Peking U.*
Author: **Xuchang Chen**, *Peking U.*
Author: **Yifei Pan**, *Peking U. Guanghua School of Management*
Author: **Jun Xia**, *U. of Texas at Dallas*

A burgeoning stream of inquiry has drawn attention to the reverse spillover effect of outward foreign direct investment (OFDI) on performances of emerging market firms (EMFs) in home countries. However, we know little regarding how institutional conditions across host and home countries alter such an effect and thus have an incomplete picture of this relationship. In this study, we integrate insights from the reverse spillover perspective and the institution-based view to examine the influence of an important but underexplored type of OFDI—strategic-asset-seeking (SAS) OFDI—on firm innovation performance. We highlight intellectual property right (IPR) protections as institutions and distinguish them at different levels across environments—both at the host-country level and the home-subnational level—as boundary conditions of the reverse spillover effect. Using a sample of Chinese publicly listed firms, we find that home-subnational IPR protection strengthens the reverse spillover effect of OFDI and innovation performance, whereas host-country IPR protection weakens the effect. In addition, we show that an EMF's R&D subsidies amplify such contrasting moderating effects, further enhancing the distinct mechanisms underlying IPR regimes between home and host countries.

Managing People Across Borders

IM: Understanding the Evolution of International Human Resource Management Research

Author: **Joonghak Lee**, *U. of Reading*
Author: **Chungil Chae**, *Pennsylvania State U.*
Author: **Rita Fontinha**, *Henley Business School, U. of Reading, United Kingdom*
Author: **Jongmin Lee**, *Henley Business School, U. of Reading*

This paper aims to depict the evolution of international human resource management (IHRM) research by mapping the semantic structure of the literature over the last 25 years. We conduct a bibliometric analysis of 1,507 articles published in the field of IHRM at the keyword, thematic, and network levels. Our analysis reveals that IHRM research has a complex semantic structure that is socially constructed. We also identify the evolution of main research trends across three time windows and branch out key themes for each time window. This study employs the bibliographic coupling analysis to provide an accurate systematic interpretation of IHRM literature to identify the main research patterns in the field of IHRM and to interpret the core themes that contributed to the evolution of IHRM research.

Paper is Available to Meeting Registrants Only.

IM: The Hidden Ways of Layered Resistance to Dominant HRM Transfer (WITHDRAWN)

Author: **Joey L. Soehardjo**, *Hitotsubashi U.*

While resistance to human resource management (HRM) practice transfers from multinationals has been widely researched in economically advanced countries, emerging economies are generally assumed to be institutionally more welcoming. This paper contributes to debates on international HRM diffusion both by highlighting hitherto neglected arenas of host-country resistance and identifying the multiple levels at which this plays out. Specifically, this paper examines the transfer of Japanese multinational corporations' HRM practices into Indonesia. The study reveals that alongside apparently consensual micro-level (organization) relations between home- and host-country management, important political power games are occurring at the meso-level (subnational). These games involve competing notions of 'best practice' with host-country actors more powerful than deterministic models of diffusion would predict. The study shows how local actors seek to defend elements of the established Indonesian business system, while Japanese actors bypass host-country regulations by mobilizing corporate business associations. The findings extend current understanding of cross-border management practice transfer, highlighting contestation and negotiation at the meso-level.

IM: A Science Mapping of Cultural Intelligence (CQ) Research

Author: **Andrea Caputo**, *U. of Trento & U. of Lincoln*
Author: **Mariya Kargina**, *U. di Roma Tor Vergata*

This paper presents the science map of the research produced around cultural intelligence (CQ) from management scholars. To systematize knowledge about CQ, a bibliometric analysis of 513 articles retrieved from the Web of Science Core Collection database has been made via the bibliometrix package in R, covering a range of studies from 2002 until 2020. The analyses present results concerning the performance of CQ research published in scientific journals, the geography of CQ research, and the identification of the main articles and thematic areas of research. Future research directions are drawn from the state of the art of cultural intelligence research.

IM: The Role of National Identity Salience for Drawbacks of Boundary Spanning Across National Cultures

Author: **Andreas Stefan Hundschell**, *LMU Munich*

Research on boundary spanning has highlighted its detrimental effect for boundary spanners themselves. However, in particular, the underlying mechanism through which employees' boundary spanning affects their role overload remains largely unexplored. Building upon identity theory, we investigate the role of employees' national identity salience in explaining the relationship between boundary spanning across national cultures and role overload. For this purpose, we conducted an experience sampling study and applied multilevel modeling to test our hypothesized moderated mediation model based on 561 observations from 104 individuals working in multinational contexts. Our findings show that the detrimental effect of boundary spanning across national cultures on role overload is mediated by employees' national identity salience. Furthermore, our results reveal that this indirect effect is contingent on the boundary spanners' national identity plurality such that this effect is more detrimental for individuals with high national identity plurality than for individuals with low national identity plurality. These findings have valuable implications for both boundary-spanning and multiculturalism research.

Performance Drivers and Effects

IM: The Impact of Local Networks on Subsidiary Performance

Author: **Tung-Lung Chang**, *Long Island U.*
Author: **CHUN-CHIEN LIN**, *National Chin-Yi U. of Technology, Taiwan*
Author: **Yu-Chen Chang**, *National Chung Hsing U.*

This study investigates how institutional voids attenuate the impact of business network characteristics of foreign subsidiaries on sales performance by examining: first, we decomposed the network range/strength into three dimensions in terms of technology, marketing, and supply chain to investigate the full picture with in-depth analysis; and second, by exerting each component of network range/strength with the regulative, cognitive, and normative institutional void scenario separately, our empirical results echo the recent call of conflicting findings may create the theoretical advances. Based on a sample of 274 Taiwanese manufacturing multinational corporations (MNCs) making foreign direct investments (FDI) in emerging markets. Our findings reveal that the same cognitive and normative institutional voids in the host country, which enhance the impact of marketing network range/strength can reduce the impact of supply chain network range/strength on sales performance of Taiwanese subsidiaries in China.

IM: Why Venture Capital Firms Internationalize: Performance Effects on Cross-Border Investments →

Author: **Harald Kollmann**, *WU Vienna U. of Economics and Business*

The venture capital (VC) industry, which has traditionally been considered a local business, becomes increasingly internationalized with cross-border investments accounting for 31 percent in 2020. This attracted scholars from multiple disciplines, who have placed a strong focus on foreignness-related performance consequences. In our study we adopt a novel perspective on VC firms' motives to venture abroad, investigating the reverse performance relationship. Grounded in performance feedback theory, we hypothesize VC firms' financial performance shortfalls below aspiration levels trigger a process of problematic search. This search leads to an increased likelihood of cross-border investments and greater distance between VC firm and investee countries, both in terms of psychic and geographic distance. We find strong support for our hypotheses and conclude underperforming VC firms are pushed out of their home markets into more distant host markets. Our study complements the scarce research on the effects of performance feedback on firm internationalization and extends it to the VC industry. In addition, we contribute to the growing body of knowledge on international VC and provide stakeholders along the venture capital financing process with insights into their business partners' motives to venture abroad.

IM: Political Strategy and Performance Tradeoffs for SMEs in an Emerging Economy 🌐 → 📄

Author: **Vladislav Maksimov**, *U. of North Carolina, Greensboro*
Author: **Yadong Luo**, *U. of Miami*
Author: **Jinyun Sun**, *Fudan U.*

We examine how unique features of institutional transition shape the adoption and performance implications of political strategy by small and medium-sized enterprises (SMEs). We focus on three inherent tradeoffs – hazardous versus developmental governmental actions, developing business networks versus relying on personal ties, and legitimacy building versus favoritism. To pursue opportunities during institutional transition, SMEs need to adopt an ambidextrous political strategy, where they engage in both compliance and influence. Yet, SMEs that have a larger size, need to rely less on personal ties, or can benefit from developmental government actions enjoy even higher performance. Empirical analysis of 310 SMEs from China confirms these expectations. These findings have important implications to political strategy by SMEs, the institution-based view of business strategy, and emerging economy SMEs.

Resources in International Operations

IM: Resource Complementarity vs. Absorptive Capacity: The Governance of International Scientific Teams

Author: **Silvia Satiko Onoyama Mori**, *UnB, Embrapa*
Author: **Carlos Denner**, *U. of Brasilia*
Author: **Francisco Reifschneider**, *Embrapa*
Author: **Isabela Neves Ferraz**, *U. of Brasilia*

This article explains and demonstrates how formal (contracts) and relational governance mechanisms influence the relationship between resource complementarity and absorptive capacity to enhance the performance of R&D international cooperation projects. We proposed a theoretical model regarding the moderating effects of customized contracts and relational mechanisms of governance (trust, shared objectives, and communication) on the relationships between resource complementarity (human, organizational, physical, and financial resources) and absorptive capacity (potential and achieved). The model was tested empirically through structural equation modeling, by using the maximum likelihood method for estimating the parameters. The sample consisted of 231 R&D projects of international cooperation in agricultural sciences, involving Brazilian and international institutions. In the presence of less customized contracts, the exchange of complementary resources extends the teams' absorptive capacity. We also found that there is a need of well-established relational mechanisms for resource complementarity to affect the absorptive capacity. In the joint action of governance mechanisms, less customized contracts of R&D projects increase the exchange of complementary resources, besides enhancing trust, aligning the goals of team members, and fostering progress in the communication with external partners. The results provide important information for managers and leaders of research programs and projects, regarding the use of governance mechanisms to enhance teams' absorptive capacity through complementary resources. The study increases knowledge on the interaction of formal and relational mechanisms to enhance absorptive capacity, which has been little explored in previous research.

IM: Domestic Factor Market Competition and Firm Risk-Taking: Evidence from the US Oil and Gas Industry

Author: **Yun Dong Yeo**, *UT Dallas*
Author: **Seung-Hyun Lee**, *U. of Texas at Dallas*
Author: **Pil-Seng Lee**, *U. of Texas at Dallas*

We explore how U.S. upstream oil and gas firms respond to domestic factor market competition that is centered on the finite proved reserves with their investment behaviors in domestic as well as in foreign countries. Our research delivers one clear message: firms engage in investment activities that enable them to avoid direct factor market competition. Within the domestic country, we conjecture that firms facing competition will increase their investment in riskier activities in pursuit of resources. Beyond the domestic country, firms are likely to escape competition by looking for opportunities abroad; yet they selectively do so by entering low-risk countries in search for resources. Once they enter low-risk countries, firms further engage in less international risk-taking activities. Empirical analyses testing our hypotheses corroborate our ideas.

IM: Skilled Foreign Employees' Linguistic, Social, and Economic Capital in Organizations

Author: **Jinju Xie**, *Hiroshima U.*
Author: **Vesa Peltokorpi**, *Hiroshima U.*

While language proficiency is shown to be a source of power and career capital in multinational corporations, less is known why and how contextual language capability is related to social and economic capital development of skilled foreign employees (SFEs) in organizations. This study applies the theory of practice (Bourdieu, 1973, 1991) and interviews with 142 SFEs in a range of domestic corporations that operate in domestic and international settings in Japan to examine the interrelated nature of linguistic, economic, and social capital. Our analysis shows that SFEs' lack of context-specific linguistic capital (e.g., accent and intonation) lowered their power and career opportunities, and prevented them from accumulating social capital (e.g., networks with local stakeholders) and economic capital (e.g., job promotion). Due to the reproductive relationships between these capital types, low linguistic capital explains the sustained disadvantaged positions of SFEs in domestic organizations. This study by focusing on the contextual aspect of language contributes to international business research on language and suggests new avenues of language research.

IM: Organization Capital and Firm Internationalization

Author: **Arpit Raswant**, *Deakin U.*
Author: **Ahasan Habib**, *U. Of Sydney*
Author: **Florian Bauer**, *Lancaster U.*
Author: **Md Shahiduzzaman**, *U. of Queensland*

As a critical source of sustainable competitive advantage, organization capital constitutes an orchestrating mechanism for tangible and intangible resources and is of particular value in complex strategic endeavors. Our research examines the role of organization capital in firm internationalization through cross-border M&As (CBM&A) and value creation. We draw on longitudinal data from listed US firms spanning 20 years of mergers and acquisitions (M&As) activity between 1996 and 2015 and find that firms with higher organization capital are more likely to internationalize through CBM&As because of freed up resources to recognize opportunities. We further find that firms with higher organization capital sustain performance and significantly create value for investors in the short and long run because of a better understanding of capturing value from rare strategic events. Our results offer novel and robust insights on value creation in international markets through organization capital.

SME Internationalization

IM: **How to Improve Marketing Capability and Export Performance of Emerging Market SMEs in Crises?**

Author: **Nadia Zahoor**, *U. of Strathclyde*

Author: **Yong Kyu Lew**, *Hankuk U. of Foreign Studies*

This paper examines how and to what extent strategic flexibility of international strategic partnerships (ISPs) affects export performance of emerging market small and medium-sized enterprises (EMSMEs) via international marketing capability in crises. Also, it investigates whether these EMSMEs' adoption of digital technology strengthens the impact of strategic flexibility of ISPs on international marketing capability. We developed a conceptual model based on the international partnership and dynamic capability perspectives on strategic flexibility. The study empirically examines the mediation and moderation effects between strategic flexibility of ISPs, international marketing capability, export performance, and adoption of digital technology. We test the model using 129 Pakistani EMSMEs with hierarchical regression analyses. The findings suggest that strategic flexibility of ISPs positively impacts on export performance of EMSMEs in crises. Moreover, we found that international marketing significantly mediates the relationship between strategic flexibility of ISPs and export performance of EMSMEs. Also, the adoption of digital technologies significantly moderates the association between strategic flexibility of ISPs positively and international marketing capability. We take strategic flexibility of ISPs in the context of the emerging market and how EMSMEs enhance export performance in a time of crisis, which extends the prior EMSMEs international marketing strategy and crisis management literature. The result demonstrates that strategic flexibility of ISPs is a vital dynamic capability to enhance export performance of EMSMEs via international marketing capability and adoption of digital technologies.

IM: **How Do SMEs Survive Institutional Voids? The Role of Innovation (WITHDRAWN)**

Author: **Aditya Milind Ketkar**, *Ohio State U.*

Author: **Mona V Makhija**, *Ohio State U.*

Author: **Kiran Awate**, *Virginia Tech*

Economies fall short to varying degrees in providing the institutions necessary to support market mechanisms. These limitations, known as institutional voids, are generally thought to reduce the effectiveness and performance of firms operating in such environments. To explain how firms deal with institutional voids, scholars have pointed to various strategies such as corporate social responsibility (CSR), internalization, information substitution, institutional borrowing, and signaling. These resource-intensive strategies are utilized primarily by very large firms. SMEs have limited resources that reduce their degrees of freedom for enacting such complex strategies. Given the significant contribution of SMEs to worldwide businesses, employment as well as national income, particularly to the emerging economies, it is important to understand their strategies in overcoming institutional voids. We suggest that SMEs will be more likely to undertake innovation to deal with institutional obstacles. Findings highlight the importance of innovation for SMEs even in environments thought to have less developed innovation-supporting systems. The connections we demonstrate between SMEs, institutional voids and innovation are new to the literature.

IM: **Towards De-internationalisation of Entrepreneurial SMEs: Exploring Internal and External Factors**

Author: **Vahid Jafari Sadeghi**, *Aston Business School*

Author: **Hannan Amoozad Mahdiraji**, *U. of Leicester*

Author: **Demetris Vrontis**, *U. of Nicosia-Online*

Author: **Leo Dana**, *Dalhousie U.*

In recent years, the global business environment has witnessed a wave of de-internationalisation among not only multinationals but also small and medium-sized enterprises (SMEs). This disengagement of cross-border activities is deemed to be driven by various firm-specific determinants as well as external factors. Building on the premise of dynamic capabilities view and institutional theory, this paper is set to disentangle the extent to which internal and external factors drive SMEs towards de-internationalisation. To address our research objectives, we take advantage of a hybrid multi-layer decision-making-mathematical modelling approach. Our key findings reveal two distinct frameworks reflecting the general interrelationship amongst internals and externals. Also, the subordinate level explores the unique compositions leading to different de-internationalisation modes. In this vein, our findings highlight two categories of factors namely reducing and terminating factors, which drive SMEs into respectively partial and full de-internationalisation.

IM: **Internationalization of SMEs: The Effect of Unfair Experience in the Home Country**

Author: **Kyungjoong Kim**, *Rutgers Business School*

Author: **Se Ho Cho**, *North Carolina A&T State U.*

This study identifies a new motive which drives SMEs to go abroad. We investigate the impact of unfair experiences with large domestic partners on the internationalization of SMEs along with the moderating effects of industry competition and foreign networks. Using the survey data from Annual Survey of Korea Venture Firms (2014~2018), we find some support for the explanatory role of unfair experience and moderating roles of industry competition and foreign network on SMEs' internationalization. The findings suggest that SMEs with unfair experiences in the home country are more likely to internationalize, and foreign networks may catalyze the internationalization of SMEs. However, industry competition may discourage the international expansion of SMEs because they need to focus more on defending their positions in the home country than expanding their business internationally.

Societal Challenges    

IM: Poverty Alleviation of Multinational Enterprises: Symbolic Or Substantial? 

Author: **Hao Yu**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*
Author: **Chengcheng Xia**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*
Author: **Longwei Tian**, *Tongji U., Shanghai, PR. China*
Author: **Yuan Li**, *Shanghai Jiao Tong U.*

The current study focuses on multinational enterprises (MNEs) poverty alleviation programs. By adopting the attention-based view (ABV), we suggest that the poverty of subsidiary's host country affects MNE's choice of alleviation: symbolic or substantial. Findings show that the poverty of subsidiary host country has a positive effect on MNE's substantive poverty alleviation. Moreover, MNE's industrial concentration, CEO famine experience in childhood, and Confucian cultures of MNE's location will moderate this relationship. Panel data of Chinese MNEs in 2016–2019 are used to test the theories. Findings present implications for poverty alleviation and ABV.

IM: The Curvilinear Impacts of Social Challenge Stressors on Hong Kong and US Nurses' Job Satisfaction

Author: **Yu-Ping Chen**, *John Molson School of Business, Concordia U.*
Author: **Janice R Joplin**, *Southern Illinois U., Edwardsville*
Author: **Sandy Chan**, *Hong Kong Baptist U.*
Author: **Richard Posthuma**, *UTEP*

Drawing on the challenge-hindrance stressor framework and the transactional theory of stress, we examined the curvilinear effects of two emic social challenge stressors (guanxi and participative decision-making; PDM) and the moderating effect of an etic social hindrance stressor (perceived organizational politics; POPs) on Hong Kong and U.S. nurses' job satisfaction. Based on the responses from 355 Hong Kong nurses and 116 U.S. nurses, we found that while guanxi only has an inverted U-shaped relation on Hong Kong nurses' job satisfaction, PDM has an inverted U-shaped relation on both Hong Kong and U.S. nurses' job satisfaction. We also found that Hong Kong nurses experienced the highest job satisfaction when their guanxi and POPs are both high. Implications for theory and practice are also discussed.

IM: Corporate Social Inclusion Practices Across Nations: Organizational and Institutional Enablers    

Author: **Vladislav Maksimov**, *U. of North Carolina, Greensboro*
Author: **Can Ouyang**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*
Author: **Stephanie L. Wang**, *Indiana U., Bloomington*

We develop a theoretical framework to explain the enablers of corporate social inclusion practices across nations. Building on the egoism-altruism distinction in the social psychology literature, we distinguish between egoistic and altruistic corporate social inclusion practices and theorize their differences in enabling mechanisms. Specifically, we argue that while managerial diversity and cross-sector connections, as two organizational enablers, positively contribute to both social inclusion practices, their effects are more potent on egoistic corporate social inclusion practices in comparison to altruistic ones. Furthermore, home government social welfare provision, as an institutional enabler, substitutes organizational enablers in developing egoistic corporate social inclusion practices but augments the influence of organizational enablers on altruistic corporate social practices. We find support for our arguments by analyzing social inclusion practices by 760 high-tech firms in 48 countries from 2005-2016.

Growth or Fixed? The Role of Implicit Mindset in Leadership Development *Implicit Mindsets and Leadership Behaviors*

Facilitator: **Jamie L. Gairo**, *Jamie Gairo Consulting*

In this workshop, practitioners will learn about the latest research in implicit mindsets and leadership behaviors. A particular focus will be placed on my research project that examined leaders' language and descriptions about interactions with employees to see linguistic markers of implicit mindsets. This session will cover a brief overview of this research and then a deep dive into the results as they are directly applicable to the field of leadership development. In this session, we will discuss the following: (a) how to assess implicit mindset, (b) how to interpret the results, and (c), how to incorporate the results into a customized leadership program. Following this session, participants will have assessed their own implicit mindset, created the outline for a development plan, and be ready to apply this information with their clients.

This professional development workshop is designed to assist authors in preparing their management education and learning manuscripts for publication. The submitted manuscript can be in any stage of completion, but must have sufficient content for review and comment. Management education and learning manuscripts submitted, but not accepted in the 2022 Academy of Management's Management Education and Development Division conference program, may be submitted since the manuscript title will not appear in the program. Manuscripts will be grouped with similar management education and learning manuscripts with each author expected to review the manuscripts prior to the workshop. A journal editor or experienced researcher will review each manuscript, provide feedback to participants and will facilitate a discussion of all participants' manuscripts at their assigned table. This workshop is co-sponsored by the Organization Management Journal, Management Learning, the Journal of Management Education, and the Academy of Management Learning & Education.

Affect, Mood and Emotion in the Workplace: Novel Insights

MOC: The Enriching Effects of Spouse's Emotion Regulation Ability on Employee's Leader-Member Exchange

Author: **Anna Carmella Ocampo**, *EMLV Paris*
Author: **Lu Wang**, *Australian National U.*
Author: **Jun Gu**, *Macquarie Business School, Macquarie U.*
Author: **Hang Zhao**, *UNSW and KPMG*
Author: **Markus Groth**, *UNSW Sydney*
Author: **Herman Tse**, *Monash U.*

Although work and family lives are increasingly intertwined in modern life, our understanding of how spouse's emotional abilities can permeate employee's work life remains limited. Integrating Work-Home Resources Model with emotional intelligence literatures, we investigate how spouse's emotion regulation ability (ERA) facilitates employees' leader-member exchange (LMX) across three mixed-methods studies. Study 1 employed an exploratory qualitative empirical study to identify the work-related benefits of spouse's ERA. Study 2 used data from independent spouse-employee-supervisor triads measured at two separate time points to demonstrate that the indirect effect of spouse's ERA on LMX via employees' personal resources (i.e., psychological capital and emotion management knowledge) was conditional at higher, as opposed to lower, spouse's family role overload. Study 3 replicated experimentally the interactive effects of spouse's ERA and family role overload on employees' personal resources, which in turn shape LMX quality. Collectively, our findings extend theoretical insights and empirical evidence to the important and complex role of affect in LMX development from the lens of family-to-work enrichment process.

Paper is Available to Meeting Registrants Only.

MOC: Being Busy, Feeling Poor: The Scale Development and Function Validation of Perceived Time Poverty

Author: **Xingshan Zheng**, *Shanghai Jiao Tong U.*
Author: **Qi Zhang**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*
Author: **Xinxin Li**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*
Author: **Bingqing Wu**, *U. of Wisconsin Parkside*

The advancement of the study of time poverty in the field of organizational behavior has been stymied by the lack of a validated time poverty measure. We proposed a new way of seeing freely disposable time by introducing the concept of perceived time poverty, distinguishing it from related concepts, and conducting two phases to develop a scale and test our theoretical model of the effects of perceived time poverty. Our study aimed to develop and validate a nomological network of perceived time poverty based on the definition of time poverty in organizations. Specifically, we conducted phase 1 to develop a measure for PTP and demonstrate its psychometric properties. We conducted phase 2 to test the nomological network of self-reported time poverty using three time-lagged surveys. Together, these studies provide evidence of the psychometric validity of the new scale developed for assessing employee perceived time poverty using self-reports. We discuss the implications of the new scale developed to study time poverty in organizations, and future research directions using the new scale are offered.

MOC: Adding Insult to Injury: The Interactive Effect of Internal and External Stressor on Employee Service

Author: **Jing Jiang**, *Beijing International Studies U.*
Author: **Yanan Dong**, *School of Economics and Management, Beihang U.*

Drawing on the stressors-emotion model, the present study examines how customer mistreatment behavior (internal stressor) and team performance pressure (external stressor) work together to influence employees' proactive customer service performance. We propose that customer mistreatment results in employees' emotional exhaustion, and in turn reduces proactive customer service performance. In addition, team performance pressure interacts with customer mistreatment behavior to influence employees' emotional exhaustion, such that team performance pressure strengthens the dysfunctional effect of customer mistreatment behavior on employees' emotional exhaustion. To mitigate this negative effect, we introduce leader positive affective presence as another moderator that attenuates the negative effect of employees' emotional exhaustion on their proactive customer service performance. Based on time-lagged data collected from 220 employees and 54 branch leaders from a large catering group in China, the results generally supported our hypotheses. The findings advance our knowledge of how internal and external stressors influence employees' proactive behaviors and provide insights for organizational managers.

Antecedents and Outcomes of Individual Motives and Cognitions

MOC: **Linking Leader-Member Exchange Ambivalence and Presenteeism: A Moderated Mediation Model**   

Author: **Yejun Zhang**, *U. of Texas Rio Grande Valley*
Author: **Min Wan**, *Texas State U.*
Author: **Honglei Wang**, *Northeast Agricultural U.*

Presenteeism, referring to attending work while ill, has become a prevalent phenomenon in recent years. Although previous research has identified a range of predictors of presenteeism, it remains less known about its potential social antecedent. Drawing on self-consistency theory, this study examined the mediating role of organization-based self-esteem between leader-member exchange ambivalence and presenteeism as well as the moderating role of supervisor's organizational embodiment. To test the proposed model, we collected data in a sample of 370 employees across three waves in time. The results supported the indirect effect of leader-member change ambivalence on presenteeism via organization-based self-esteem and this indirect effect was only significant when supervisor's organizational embodiment was high. We discussed the theoretical and practical implications as well as future research directions. We hope our findings can stimulate more future research on the social perspective of presenteeism.

Paper is Available to Meeting Registrants Only.

MOC: **The Effects of Daily Ritual Behaviors at Work on Daily Flow Experience and Task Performance**

Author: **Tzu-Ting Lin**, *National Chengchi U.*
Author: **Nai-Wen Chi**, *National Sun Yat-Sen U.*

Although the benefits of performing ritual behaviors have been recognized in various fields, it remains unclear whether, why, and when employees can promote their daily task performance via engaging in ritual behaviors at work. To fill these theoretical gaps, we conducted two studies to develop a new scale to measure employees' enactment of ritual behaviors at work and test the psychological processes linking daily ritual behaviors at work and task performance and the boundary condition of this association. In Study 1, we first collected the critical incidents from 151 full-time employees to develop a new measure of ritual behaviors at work. Then we performed exploratory and confirmatory factor analyses to examine the validity of our new measure using the second sample (total N = 646). In Study 2, we tested our theoretical model by employing the experience sampling method and collected daily data twice from 195 employees across five consecutive workdays, resulting in 912 matched daily responses. Consistent with the bottom-up and top-down processing of rituals and self-determination theory, the results indicated that daily ritual behaviors at work increase daily flow experience, enhancing subsequent task performance. Importantly, employees' job autonomy can further amplify the positive effect of daily ritual behaviors on daily flow experience. Future researchers can use our measure to capture employees' ritual behaviors at work and test its effects on other work-related outcomes to expand our understanding of rituals at work.

Paper is Available to Meeting Registrants Only.

MOC: **A Contingency Approach to the Impacts of Impression Management on Individual Performance**

Author: **Min-Jeong Kim**, *Chonnam National U.*

Due to today's business environment in which the task interdependence and team-based work is increasing, organizational members are experiencing a high level of social interaction in their organizational life. Therefore, it is necessary to understand the effects of impression management tactics used by employees in their interaction and the contingencies that strengthen their effectiveness. In this background, this study investigates the effects of impression management tactics such as ingratiation and self-promotion on individual performance. Then, it also tends to shed light on the contingencies that individual personality influences on the effectiveness of these tactics. Based on trait activation theory, it is hypothesized that extraversion and openness to experience strengthen the relationship between ingratiation and performance, while agreeableness weakens the influence of self-promotion on performance. I collected research data from a survey with 22 employees in a Korean organization. As a result, self-promotion was found to have a positive effect on individual performance evaluated by a supervisor, whereas the effect of ingratiation was not significant. Predictions on moderating effects were all supported.

Paper is NOT Available. Please contact the author(s).

MOC: **How SES Background Relates to Employee Overqualification, Information Seeking and Knowledge Hiding** 

Author: **Jia Hui Lim**, *Hong Kong Baptist U.*
Author: **Bingjie Yu**, *Hong Kong Baptist U.*

The influence of one's socioeconomic status (SES) background on employee outcomes is increasingly recognized. Drawing on sociological and psychological research on SES and relative deprivation theory (RDT), we examine when and why SES background influence perceptions of overqualification and downstream behavioral reactions in the workplace. In a time-lagged, multisource field study involving 400 employees and 400 coworkers, we find that employees with higher SES backgrounds experience higher level of perceived overqualification, thus increasing both knowledge hiding and information seeking behaviors. Furthermore, relational mobility moderates the indirect effects, such that the positive effect on knowledge hiding is weakened and the positive effect on information seeking is strengthened when relational mobility is high versus when it is low. Our theory and findings highlight that SES background can have long-term impact on workplace behaviors and offer a more comprehensive view of how people's behaviors to manage perceived overqualification may be strategic instead of plainly reactionary.

Author: **Haeseen Park**, *Bowling Green State U.*

Author: **Bradford S. Bell**, *Cornell U.*

Author: **Eunhee Kim**, *Cornell U.*

This study aims to advance our knowledge of goal orientation by developing a comprehensive theory on the impact of goal orientation on individual learning. Building on the 2×2 framework of goal orientation, we theorize how each type of goal orientation is associated with basic and strategic learning outcomes through the adoption of different learning strategies and how a task characteristic (i.e., task complexity) shapes the effects. The results of a simulation-based laboratory experiment with 400 participants provide considerable support for our theory. Overall, this study extends the literature on goal orientation and learning by suggesting multiple pathways of the effects of goal orientation on learning outcomes as well as their boundary condition.

Judgment and Decision-Making Research: Exploring Multiple Levels of Analysis

MOC: [Maintaining Trust When De-Escalating Commitment: Precommitment Alleviates Reputational Concerns](#)   

Author: **Ariella Kristal**, *Harvard Business School*
Author: **Charles Adam Dorison**, -
Author: **Francesca Gino**, *Harvard Business School*

Escalation of commitment costs businesses and taxpayers billions of dollars. Management research has consistently found that even in cases where future prospects look dire, decision makers routinely escalate commitment to failing courses of action. We draw on psychological research on self-presentation to argue that reputational considerations are a key driver of such escalation: leaders who de-escalate may fear, and in fact be, distrusted. In four pre-registered experiments with managers (N= 2,661), we demonstrate an effective way to de-escalate while maintaining trust: pre-specifying conditions for de-escalation (i.e., precommitment). In the presence of precommitment, third-party observers perceive de-escalators as having more integrity and are more likely to trust them in a behavioral economic game, compared to the absence of precommitment (Studies 1 and 2). Decision-makers themselves recognize how precommitment changes their reputational incentives: in the presence of this precommitment, managers are not only more likely to de-escalate (Study 3), but also anticipate that they will be perceived as being more trustworthy (Studies 3 and 4). This work contributes evidence to the underexplored idea that self-presentation motives influence escalation of commitment, and also provides a practical and costless solution leaders can implement. By harnessing precommitment, leaders can maintain trust when deciding to de-escalate.

MOC: [Linking Types of Ethical Problems with Analysis and Intuition Effectiveness](#) 

Author: **Christian Julmi**, *U. of Hagen*

Scholars have recently begun to question the long undisputed assumption that intuition is inferior to analysis in ethical decision making. However, we still lack approaches to determine whether analysis or intuition is a better strategy for a given ethical problem. The article develops a typology of ethical problems depending on their uncertainty and equivocality and links the derived types with analysis and intuition effectiveness. The typology considers four types of ethical problems: compliance problems (low uncertainty, low equivocality), professional ethics problems (high uncertainty, low equivocality), conformity problems (low uncertainty, high equivocality) and ethical dilemmas (high uncertainty, high equivocality). The article argues that compliance and professional ethics problems are best solved analytically, whereas intuition is assumed to be the better choice for conformity problems and ethical dilemmas. Moreover, the article shows that it is not sufficient to contrast intuition with analysis alone. Regarding the former, creative forms of intuition should be distinguished from pure pattern recognition in terms of their problem-related effectiveness.

MOC: [Mitigating Information Ambiguity through TSM and Reflexivity for Team Judgment Performance](#)

Author: **Catherine DeJardin**, *Maastricht U., School of Business & Economics*
Author: **Roger Meuwissen**, *Maastricht U., School of Business & Economics*
Author: **Wim Gijsselaers**, *Maastricht U.*
Author: **Therese Grohnert**, *Maastricht U., School of Business & Economics*

Part of the work of hierarchical temporary teams found in Professional Service Firms (PSF), is to form judgments based on ambiguous information. In this study, we propose that teams that hold a similar understanding of their client's situation, in other words, have similar team situation models (TSM), achieve stronger team judgment performance. In addition, we investigate whether a reflexivity intervention helps teams cope with information ambiguity. To test our hypotheses, we collected data from 94 ad-hoc, hierarchical teams of financial auditors from a Big 4 firm, participating in a 2x2 experiment of a judgment task, varying information ambiguity and participation in the reflexivity intervention. We examined two types of TSMs relevant to the context. On the one hand, we looked at the teams' similarity of perception of the relevant information (TSMinfo) and on the other, the similarity of perception of the judgment complexity (TSMjdm). Our results show that (1) information ambiguity is not directly related to team performance, (2) teams facing high information ambiguity have stronger TSMinfo, (3) teams achieve higher judgment performance with more similar TSMinfo and more dissimilar TSMjdm and (4) reflexivity helps the formation of TSMinfo when information ambiguity is moderate but hurts when it is high.

MOC: [How Early-Career and Experienced Researchers Construe Academic Wrongoings: A Repertory Grid Study](#)  

Author: **Annick Van Rossem**, *U. Katholieke U. Leuven*

The present paper investigates how early-career and experienced researchers construe or mentally represent academic wrongoings. Particularly, early-career researchers are believed to be at risk of committing academic wrongoings and have a crucial role in forming future research environments. Instead of employing self-reported survey data, a cognitive mapping methodology called the repertory grid technique (RGT) (Kelly, 1955) is applied to dig further into the underlying phenomena. Academic research integrity is a topic where clear definitions of safe behavior and misbehavior, the latter especially covering Questionable Researched Practices (QRPs) are lacking. This lack of clarity leads to misunderstandings amongst researchers about what is (not) allowed. Hence the need for studies exploring researchers' real construal or mental models of academic wrongoings. 63 researchers (early-career and experienced researchers) from major Belgian universities were interviewed using the repertory grid technique. Results indicate that there is a shift going on in researchers' perception of QRPs. Both early-career and experienced researchers consider honorary authorship, duplicate publication, failing to present data that contradicts one's research, and overlooking others' misbehaviors not as really "damaging" academic wrongoings. Especially early-career researchers construed honorary authorship and overlooking others' misbehaviors as innocent. These misbehaviors tend to be considered 'normal misbehavior' which might undermine academic integrity and the trust in academic research. Knowing what is considered as 'normal misbehavior' is pertinent with a view to fostering research integrity. Hence this study is helpful for defining academic integrity enablers. Practical suggestions are given to remove the laxity about 'normal misbehavior'.

MOC: **RICH with Product Innovation** 

Author: **Kevin C. Cox**, *Florida Atlantic U.*

Author: **Stephen E. Lanivich**, *U. of Memphis*

Author: **Francis Donbesuur**, *Loughborough U., School of Business and Economics*

Author: **Shlomo Yedidia Tarba**, *U. of Birmingham*

Accomplishing successful new product innovation is essential for the growth, sustainability, and success of firms because it represents an important and valuable dynamic capability which can result in a competitive advantage. However, new product innovation is characterized by high stakes, risks, and uncertainty. This research develops a cognitive framework aimed at providing a nuanced understanding of cognitive factors that are linked both directly and indirectly to new product innovation performance. The model developed and tested here posits that a resource-induced coping heuristic mindset can promote innovative behavior, which, in turn, can aid new product innovation. Additionally, we found these relationships are moderated by cognitive adaptability and entrepreneur curiosity.

Leader Behavior and Cognition: Overconfidence, Charisma, Engagement, and Empowerment

MOC: Daring to be Digital: The Role of CEO Overconfidence in the Digitalization of SMEs during COVID-19   

Author: **Irina Maria Karthaus**, *Chair of Innovation Management, TU Dortmund U.*
Author: **Steffen Stresse**, *TU Dortmund U.*

Digitalization has important advantages for firms, for instance with respect to innovation and financial performance. These advantages are particularly relevant for SMEs. Nevertheless, SMEs lag behind larger firms regarding digitalization. This is troublesome because the COVID-19 pandemic worked as accelerator for digitalization, which suggests that firms that do not adapt will face competitive disadvantages. We propose that CEO overconfidence relates positively to digitalization in SMEs. We conduct two research studies. In study 1, we find evidence in favor of a positive relation between CEO overconfidence and digitalization. In study 2, we investigate the relation during the COVID-19 pandemic. Our results indicate that the positive relation persists during economic crises such as the COVID-19 pandemic. Moreover, we find that the relation between CEO overconfidence and digitalization is stronger in industries with low environmental dynamism. Our study offers two main contributions. First, we advance the upper echelons perspective by explaining how CEO overconfidence relates to digitalization. Second, we contribute by integrating the dynamic capabilities framework into the upper echelons perspective in the context of dynamic environments.

MOC: Leadership Under Threat: Charismatic Rhetoric, Follower Perceptions, and Selection Outcomes 

Author: **Tais Barreto**, *Nova Southeastern U.*
Author: **Ethlyn Anne Williams**, *Florida Atlantic U.*
Author: **Randi L. Sims**, *Nova Southeastern U.*
Author: **Rajnandini Pillai**, *California State U., San Marcos*
Author: **Kate Marie McCombs**, *Brock School of Business, Samford U.*
Author: **Kevin B. Lowe**, *U. Of Sydney*

Although research recognizes the influence of charismatic leadership and charismatic rhetoric, their practice in differing contexts and the moderating role of narcissism is understudied. Using a mixed-methods approach, we explore the effects of different crises on the way a narcissistic leader employs charismatic rhetoric and subsequently the way his charismatic leadership is viewed by followers as they make decisions about leader selection during a national crisis. In Study 1, we investigate how former President Donald Trump responded to threats to his personal and position power during times of crisis. Content analysis of Trump's speeches revealed differences in his use of charismatic rhetoric across various periods of his presidency, including times of stability and times of crisis. Study 1 suggests that during times of crisis, charismatic rhetoric became more self-focused rather than group-focused when compared to times of stability. Our findings suggest that crises may impact a leader's use of charismatic rhetoric. In Study 2, we explore how followers responded to Trump's perceived charisma. Three matched waves of data examined responses about perceived charisma, the importance placed on the COVID-19 pandemic crisis, and the choice of a leader. Our findings from Study 2 suggest that crisis influenced perceptions of charisma and leader selection, with leader narcissism playing a moderating role. Overall, our findings have implications for understanding the role of crisis in charismatic rhetoric and how narcissism and leader charisma influence followers' selection decisions.

MOC: Alliance Engagement Speed and the Impact of Alliance Portfolio Size on Firm Performance

Author: **Tais Barreto**, *Nova Southeastern U.*

Previous research investigating the effect of alliance portfolio size on firm performance has provided mixed findings. From an organizational learning and Behavioral Theory of the Firm perspective, this study investigates the speed of alliance engagement as a moderator of this relationship. We hypothesize a curvilinear effect of portfolio size on firm performance. Moreover, we hypothesize that the speed of alliance engagement within the portfolio moderates this relationship so that the negative effects of size on performance appear in relatively smaller portfolios when firms exhibit high speed. While this hypothesis is not supported, our findings suggest that the relationship between portfolio size and firm performance is highly dependent on speed.

MOC: **You Raise Me Up and I Reciprocate: Linking Empowering Leadership to OCB and UPB** 

Author: **Honglei Wang**, *Northeast Agricultural U.*
Author: **Yejun Zhang**, *U. of Texas Rio Grande Valley*
Author: **Sarah E. Henry**, *U. of Oklahoma*

Although empowering leadership is generally thought to be beneficial to employees and organizations, an emerging stream of work shows its potential negative impact. Drawing upon social exchange theory, we propose an integrated model that simultaneously examines the benefits and costs of empowering leadership. Specifically, we propose that team-level empowering leadership can lead to both organizational citizenship behavior (OCB) and unethical pro-organizational behavior (UPB). We also examine the mediating role of employee workplace status and the moderating role of felt obligation in these processes. In data obtained from 301 employees and 57 leaders across multiple time points, we found that team-level empowering leadership would lead to employee OCB and UPB through workplace status. However, the positive indirect impact of team-level empowering leadership on OCB was significant only when employees' felt obligation was high, and the indirect effect of team-level empowering leadership on UPB was positive and significant only when employees' felt obligation was low. We discuss the theoretical and practical implications of these findings, as well as future research directions.

 MOC: **Breaking Down Innovation: The Influence of CEO Overconfidence on New Product and Process Development**   

Author: **Irina Maria Karthaus**, *Chair of Innovation Management, TU Dortmund U.*

Firms with overconfident CEOs engage more in innovation and have more innovative success compared to firms with rational CEOs. However, the relation between CEO overconfidence and different types of innovation is unclear. It is important to differentiate between product and process innovation because both have distinct characteristics and are associated with different strategies. Building on the upper echelons perspective, we develop and empirically investigate theory on how CEO overconfidence relates to product and to process innovation. We find evidence that CEO overconfidence relates more strongly to product than to process innovation. With regard to environmental characteristics, our research shows that the relation between CEO overconfidence and product innovation is stronger in industries with low R&D intensity. Our study offers multiple contributions. First, we contribute to the literature on teaching-oriented and practice-oriented learning between types of innovation, specifically product and process innovation, and regarding the implications of industry R&D intensity. Second, we advance the upper echelons perspective by comparing how CEO overconfidence relates to product and process innovation. Third, we transfer research on overconfidence and innovation to SME environments and identify CEO overconfidence as antecedent of SME innovation.

Cognition and Aggression

OB: Schadenfreude or Empathy? The Double Edged Sword Effect of Coworker Incivility on Observer Behavior

Author: **Shuwen Li**, *Tongji U.*
Author: **Limin Guo**, *School of Economics & Management, Tongji U.*
Author: **Zhifei Zhang**, *Tongji U., Shanghai, PR. China*

Most existing researches explore the influence mechanism of workplace incivility from the perspective of target, ignoring the roles and behaviors of observers as the third-party force in workplace incivility. This study provides a new direction for the theoretical study of workplace incivility from the perspective of observer. In this study, we propose a moderated mediation model to clarify the double edged sword mechanism of coworker incivility on observer behavior, and tested it using three-wave data from a sample of 467 supervisor-subordinate dyads in mainland China. We found that coworker incivility urges observer to implement negative gossip by enhancing schadenfreude, or to perform helping behavior by enhancing other-suffering moral emotion. However, whether observers take negative gossip or helping behavior depends on gender similarity with target. Coworker incivility can better promote observers to implement negative gossip when the observer and target have different genders. Our findings provide novel insights into how and why observers take different behaviors facing coworker incivility.

OB: Not All Evil Comes to harm: A Cost-Benefit Lens on the Bright Side of the Dark Triad

Author: **Susan Reh**, *U. of Exeter Business School*
Author: **Andreas Wihler**, *U. of Exeter Business School*
Author: **Francesco Cangiano**, *U. of Exeter Business School*

Employees high on the dark triad traits narcissism, psychopathy, or Machiavellianism tend to incur social costs for organizations. Recently, however, an increasing number of studies suggests that these toxic traits may also have positive consequences such as higher job performance or leadership effectiveness. Moreover, the degree to which dark triad traits lead to negative outcomes also depends on moderators that buffer their detrimental consequences and their dosage (i.e., curvilinear effects). We therefore propose a novel framework, the dark-triad-cost-benefit (DTCB) framework, that integrates the previously used theories, providing structure for an area that so far has been fragmented. Based on the assumption that dark traits and boundary conditions elicit both costs and benefits, the proposed framework summarizes and explains the differential effects of dark traits and their sub-facets as a function of the respective cost-benefit ratio. Consequently, we review studies that a) link the dark triad traits to positive outcomes or b) introduce boundary conditions that buffer negative effects or enhance their positive effects. Our review and comprehensive DTCB-framework contribute to the understanding of the positive effects of dark triad traits and open avenues for future research investigating how they unfold, and how boundary conditions and dosages influence work outcomes.

OB: Revenge with a (Positive) Twist: Examining Constructive Responses to Workplace Injustice

Author: **Huda Masood**, *Sam Houston State Uni*
Author: **Leonard Karakowsky**, *York U.*
Author: **Mark Podolsky**, *York U.*

For many years, the research has shown an active interest in identifying the ways in which targets of workplace mistreatment or injustice respond to such treatment. Fundamentally, the literature has created several compelling portraits of the wronged employee, most of which demonstrate a limited capacity for the employee to rise above the injustice. While forgiveness has been touted as a constructive response, less charitable characterizations of the targets suggest they commonly fall victim to a range of dysfunctional behaviors including enacting destructive revenge. In this research paper, we used the grounded theory approach to revisit and expand the notion of revenge or retaliation to include behaviors that can be considered as constructive in response to perceived workplace injustice. Specially, we conducted interviews with 27 individuals (66% women, 33% men, 0% non-binary) employed in various industries and ranks to explore the manner in which they enacted positive responses to unjust treatment in the workplace. Through analytical plurality, our study sheds some light on the manner in which employees may find ways to engage in acts of defiance that are productive and entail no risk to their reputation. We refer to this pattern of behavior as constructive retaliation.

OB: Work Engagement as Remedy of Unethical Pro-Organizational Behavior

Author: **Julia Fulmore**, *U. of Dallas*
Author: **Anthony Fulmore Sr.**, *Texas A&M U. Central Texas*
Author: **Dalila Salazar**, *Louisiana State U. – Shreveport*

Unethical behavior within organizations is a very prevalent and costly problem. This study investigates employees' unethical pro-organizational behavior (UPB), which is unethical behavior with the intention to help the organization. Leveraging social exchange theory and social exchange theory, this research evaluates the direct relationship between organizational commitment and unethical pro-organizational behavior (UPB) and the indirect relationship through employee work engagement. The theoretical model was tested using Structural Equation Modeling based on a sample of 499 U.S. service sector employees. Results indicate that while affective commitment can motivate employees to engage in UPB, if the commitment is channeled into work engagement, it can reduce employees' motivation to engage in UPB. As such, the findings extend on the UPB literature, while providing practitioners with a clearer understanding of the importance of monitoring organizational commitment alongside work engagement.

Contradictions and Paradoxes in Creativity

OB: Autonomous vs. Dependent Help and Creativity: The Role of Intrinsic Motivation and Goal Orientation

Author: **Ziyi Li**, *School of Management, Huazhong U. of Science and Technology*
Author: **Lirong Long**, *Huazhong U. of Science and Technology*
Author: **Yong Zhang**, *Chongqing U.*

Although creativity is sometimes viewed as a solitary activity, more commonly, employees benefit from coworker help. However, helping literature suggests that unintended negative consequences may happen to the intended beneficiaries. This study focuses on two kinds of coworker help (i. e., autonomous help and dependent help) and their effects on employee creativity. Using a sample of 237 employees working across a wide range of jobs and industries in central and eastern China, we found that: autonomous help positively whereas dependent help negatively impacted creativity; intrinsic motivation served as a mediator between coworker help and creativity; learning goal orientation strengthened the positive effect of autonomous help on intrinsic motivation, and thus creativity; performance-prove goal orientation strengthened the negative effect of dependent help on intrinsic motivation, and thus creativity.

OB: (In)Congruences of Giving-Receiving Helping and Innovative Behavior: A lens of COR theory

Author: **Xiaojing Shao**, *Harbin Institute of Technology*
Author: **Zhenduo Zhang**, *Dalian U. of Technology*
Author: **Jie Zhong**, *Harbin Institute of Technology*

Although helping behavior at work has been widely concerned, previous findings may overestimate the benefits of giving helping behavior for helpers because of the overlook of its prerequisites. In the present research, our model considered giving helping behavior and receiving helping behavior simultaneously. Specifically, we investigated the impact of the (in)congruence of giving and receiving helping behavior on relational job crafting of helper based on conservation of resources (COR) theory, and then explored the mediating role of relational job crafting and psychological meaningfulness between (in)congruence of giving and receiving helping behavior and innovative behavior of helper. We used a two-wave and leader-subordinate questionnaire survey design. Our results revealed that when giving-receiving congruence of helping behavior, compared to those in low-low congruent dyads, high-high congruent dyads had a positive effect relational job crafting of helper. The results further revealed that the higher the congruence, the more significant the positive effect on relational job crafting. In addition, we found that relational job crafting and psychological meaningfulness sequentially mediated the positive impacts of helping behavior congruence on helper's innovative behavior. Finally, the present research from a new perspective discusses the implications for both theories and practices.

OB: Of Great Work and Untalented Person: The “Effort Paradox” in Creativity Evaluation

Author: **Yiyong Zhou**, *Institute of Psychology, Chinese Academy of Sciences*
Author: **Xinwen Bai**, *Institute of Psychology, Chinese Academy of Sciences*

One typical fallacy in creativity literature is to equate people's creativity with the creative outcomes they made. We challenge it and propose a paradox of creativity evaluation, a novel phenomenon in which evaluators appreciate product with a high-level of effort, yet underestimate its creators. Results from Studies 1 and 2 provide convergent evidence for the existence of “Effort paradox”. An effort-based implicit theory framework is developed with the core premise that the rating targets (creator vs. creation) with effort cues shape people's belief about the nature of creativity and lead to an opposite evaluation. Specifically, when the rating target is creation, evaluators will hold a value belief and thus give higher creativity scores on creation with high level of effort; while when rating creator, an ability belief is activated and guides evaluators to appreciate less effortful creator. Both qualitative and quantitative evidence was found, by respectively coding (Study 2) and manipulating (Study 3) the value and ability belief as mediators, for the support of a mediated moderation model. These findings provide a novel framework to shed light on how and why the “Effort paradox” emerges, and suggest practical solutions to help decision-makers to spot novel ideas and creators.

Paper is Available to Meeting Registrants Only.

OB: The Contradicting Effect of Intergroup Relations on Creativity Recognition of Creators and Creations

Author: **Shuting Qi**, *Institute of Psychology, Chinese Academy of Sciences*
Author: **Xinwen Bai**, *Institute of Psychology, Chinese Academy of Sciences*
Author: **Lin Lin**, *Central U. of Finance & Economics, China*

The current study addresses the paradox of creativity recognition, a novel phenomenon in which evaluators appreciate the potential of in-group creators, yet undervalue their creative ideas. Based on construal level theory and social identity theory, we propose that the different perspectives of intergroup relations (i.e., social distance and group identity) are activated by the creations and creators respectively. Four studies aim to reveal the cause of such a novel phenomenon. Our results show that the effects of intergroup relations are contradictory in the creativity recognition of creators and their creations (Study 1). When the target is the creation, the evaluators form a high-level construal to evaluate outsiders' ideas and spot higher creativity from ideas of outsiders than those of insiders (Studies 2 and 4). By contrast, when the target is the creator, they perceive in-group creators to be more creative than out-group counterparts because of intergroup bias (i.e., perceived out-group threat or in-group liking) (Studies 3 and 4). The opposing effects are counteracted when both creators and their creations are evaluated simultaneously (Study 4). We provide a theoretical framework to describe how and why the paradox emerges.

Leadership, Teams, and Creativity

OB: Authentic Leadership Fostering Team Radical Creativity: Mediating Role of Cognitive Integration

Author: **Yuqi Huang**, 13174

Author: **Chunyan Yuan**, School of Management, Huazhong U. of Science and Technology

Previous studies on the relationship between authentic leadership (AL) and creativity have mainly focused on the individual level, few studies have paid attention to the relationship between AL and team creativity, especially team radical creativity. In addition, some scholars call for more attention to the mechanisms of AL. This study has attempted to explore the mechanism between AL and team radical creativity, especially to explore the mediating role of team cognitive integration and the moderating role of team power structure based on social information processing theory. Data from 45 teams shows that AL is positively related to team cognitive integration. Team cognitive integration mediates the relationship between AL and team radical creativity and team power structure moderates the relationship between AL and team cognitive integration. Finally, both theoretical and practical contributions of this research are discussed.

OB: Double-edged Effect of Leader Narcissism on Team Radical Creativity

Author: **Xuan Zhou**, Nanjing U. of Science and Technology

Author: **Kong Zhou**, Nanjing U. of Science and Technology

Given the vital role of team radical creativity in organizations, this study examined a moderated mediation model between leader narcissism and team radical creativity. Drawing on self-regulatory strategies of leader narcissism, we theorized that leader narcissism would have a negatively indirect effect on team radical creativity via leader voice response and team information elaboration, and have a positively indirect effect on team radical creativity via leader novel information searching and team novel information searching. In addition, organizational valuing of creativity would moderate the relationship between leader narcissism and leader voice response as well as the relationship between leader narcissism and leader novel information searching. Using a four-stage field survey from 94 team leader responses and 540 team member responses, we found that leader narcissism was negatively related to leader voice response, which was positively related to team information elaboration and team radical creativity. In addition, leader narcissism is positively related to leader novel information searching, which was positively related to team novel information searching and team radical creativity. Finally, leader perceived OVC moderates the negative relationship between leader narcissism and leader voice response, and narcissistic leaders would have less voice response in organizations with lower OVC (vs. higher); leader perceived OVC also moderates the indirect effect of leader narcissism negatively influencing team radical creativity through leader voice response and team information elaboration, such that this indirect relationship is weaker when OVC is higher (vs. lower).

OB: Informal Structure and Team Innovation: A Multiple Case Study in University Research Teams

Author: **Linna Xu**, Beihang U.

Author: **Zhixue Zhang**, Peking U.

Author: **Yang Bai**, Guanghua School of Management, Peking U.

Although the hierarchical structure adopted by most Chinese organizations and teams is advocated to hinder innovation, the innovation of Chinese organizations has been growing in the past 40 years. This paradox is also reflected in research teams in organizations. This study aims to resolve this issue from the perspective of team structure. We posit that the prescribed formal structure is only a basic factor that determines team innovation, whereas the emerging informal structure of the team may differ from the formal structure and have a stronger effect on innovation. We adopted participative observations in team meetings of 12 scientific research teams in a Chinese university. Results show that neither teams with high or low levels of hierarchy, but teams with moderately hierarchical informal structure are the most innovative ones. Specifically, in high innovative teams, members at the highest level undertake the functions of negative evaluation, task management, and team meeting administration, and members at lower levels but with some research experience undertake functions of giving suggestions and sharing knowledge and information.

Paper is NOT Available. Please contact the author(s).

OB: Team Leaders as Cognition Orchestrators - Improving Creativity by Reducing Cognitive Biases

Author: **Mac Nguyen**, Gustavson School of Business, U. of Victoria

This paper articulates an idea of team leaders as cognition orchestrators – those who orchestrate and facilitate multicultural teams' interactions during the creative process – as a novel approach to understanding how multicultural team leaders leverage teams' diverse cognition-based resources to enhance creative performance. I theorize that team leaders can create and maintain a team climate – a social fabric facilitating effective knowledge generation – to foster the creative performance of culturally diverse teams through mitigating members' cognitive biases. I identify seven types of cognitive biases relevant to team creativity, namely projection bias, egocentric empathy gap, focusing illusion, confirmation bias, endowment effect, and authority bias (or the rule "respect and obey others"). This paper further puts forward a set of propositions to address these biases towards improving team creative performance. Through this paper, while responding to the call for more research on the positive side of cultural diversity, I shed more light on leaders as agents of changes in team processes through mitigating cognition biases. Crossing the management discipline, this work is also the first attempt to introduce a design-driven approach (using a non-human actor for interaction and communication) towards resolving the intercultural encounters in multicultural teams.

Predictors and Outcomes of Voice Behavior

OB: **How and When Supervisor Feedback Influences Employee Voice: An Energy Perspective** 

Author: **Fangliang Zhang**, *Renmin U. of China*
Author: **Ruixin Zeng**, *School of Business, Renmin U. of China*
Author: **Yanfang Xu**, *Renmin U. of China*

Although scholars have attempted to explore supervisor feedback as an antecedent of voice, the underlying mechanism remains under-explored. The current research addresses this critical issue from the perspective of conservation of resources (COR) theory by delineating how and when supervisor feedback influences employee voice through an energy mechanism. Using dyadic data collected from 671 employees and their 218 direct supervisors in a retailer company, we found that supervisor favorable feedback increases employees' relational energy, which in turn, promotes employee voice. On the contrary, supervisor unfavorable feedback decreases employees' relational energy and thus inhibits employee voice. Furthermore, we found that leader-member exchange (LMX) quality works as an important boundary condition for the relationship between supervisor favorable feedback and voice via relational energy. These findings highlight the role of energy in the relationship between supervisor feedback and employee voice and offer managerial implications for supervisors to optimize their feedback on employees.

OB: **How and When are Frequent Voicers Treated Badly? Employee Voice Behavior and Coworker Victimization**  

Author: **Melody J. Zhang**, *Department of Management and Marketing, The Hong Kong Polytechnic U.*
Author: **Chu-Ding Ling**, *Renmin U. of China*
Author: **Catherine K. Lam**, *City U. of Hong Kong*
Author: **Chak Fu Lam**, *City U. of Hong Kong*

While employee's voice behaviors substantially contribute to their workgroups and organizations, research has indicated that it also involves social costs for those express voice – being negatively viewed and victimized by their coworkers in the same team. Drawing on the person perception perspective and idiosyncratic credits theory, we develop a theoretical model outlining how and when those who speak up experience coworker victimization. Results of survey data from a round-robin design (N = 532 dyads with 195 members in 56 work teams) indicates that frequent voice behavior tends to be perceived as displays of hubris by coworkers and therefore would likely be sanctioned through coworkers' victimization; this happens especially in teams low in voice density and for voicers in more peripheral positions of advice network.

Paper is NOT Available. Please contact the author(s).

OB: **The Effect of Perceived Organizational Politics on Employee Voice: A Resource Perspective** 

Author: **Yanzhe Zhou**, *School of Labor and Human Resources, Renmin U. of China*
Author: **Jianmin Sun**, *School of Labor and Human Resources, Renmin U. of China*

Previous research generally assumes that employees' perceptions of organizational politics decrease their voice behaviors. However, it is premature and inaccurate to conclude that the relationship is exclusively negative because these studies did not fully capture the nature of employee voice. Adopting an expansive view of voice behavior, this study takes the foci of voice into consideration and, through the lens of conservation of resources, proposes that perceptions of organizational politics has distinct indirect effects on two kinds of voice behaviors (organization-targeted and self-targeted voice) via ego depletion. Moreover, perceived managerial openness serves as a moderator in such indirect effects and specifically moderates the relationship between depletion and voice behaviors. Our hypotheses were supported by results from three-wave time-lagged survey data from 406 employees. Implications for theory and practice are discussed.

Paper is NOT Available. Please contact the author(s).

OB: **Feeling Heard: How Managerial Responses to Voice Can Increase Perceptions of Listening**  

Author: **Kylie Rochford**, *U. of Utah, David Eccles School of Business*
Author: **Diane Bergeron**, *Center for Creative Leadership*
Author: **Melissa Cooper**, *Weatherhead School of Management, CWRU*
Author: **Alexander Romney**, *Utah State U.*

When employees speak up, they are doing so with the hope that their voice will lead to constructive organizational change. When this does not happen, the danger is that employees will not feel listened to and, consequently, will be less likely to speak up in the future. In this paper, we use a social exchange framework and draw on listening as a relational process to examine the effect of managerial action in response to employee voice on employee's holistic perceptions of whether they felt listened to. We then address the issue of how managers should respond to employee voice when taking action is not an option. Across several types of studies, we find that taking action in response to employee voice is a robust predictor of whether employees feel listened to, which, in turn, predicts future employee voice intentions. We identify and find support for three post-interaction behaviors that managers can use to mitigate the negative effects of inaction: providing the voicer with an explanation; reinforcing the positive social impact of the voice act itself; and reinforcing the voicer's social worth. In situations where action in response to voice is not an option, our findings suggest that all three of these behaviors increase the voicer's perception that they were listened to, and in turn, increase future employee voice intentions. Theoretical and practical implications are discussed.

Predictors and Outcomes of Emotions

OB: Work-Induced Family Separation and Employee Performance: A Family Loneliness Perspective

Author: **Xueling Fan**, *Nanjing U. School of business*
 Author: **Xiaoyue Wu**, *Nanjing U. School of business*

Although extant research has examined loneliness in organizational context, little is known about employees' loneliness that stems from deficiencies in their family relationships but is salient at workplace. This research identifies family loneliness as another type of loneliness experienced at workplace and investigates its work-related trigger and its workplace consequences. Drawing on the regulatory loop model of loneliness, we posit that work-induced family separation may generate family loneliness, which subsequently undermines employees' job performance but promotes helping behavior. We further propose that effects of family loneliness on job performance and helping behavior are contingent on employees' family relationship goal. Specifically, family relationship goal strengthens the negative effect of family loneliness on job performance but weakens the positive effect of family loneliness on helping behavior. Using data from a Chinese sample involving 255 employees and a Western sample involving 221 employees, we found general supports for our hypotheses. We discuss the implications of our research for theory and practice.

OB: Hardening Heart? Empathic Concern Decline and Consequences on Emotional Labor during Socialization

Author: **Wei Wu**, *Hong Kong Polytechnic U.*
 Author: **Wu Liu**, *Hong Kong Polytechnic U.*
 Author: **Wen Wu**, *Beijing Jiaotong U.*
 Author: **Yuhuan Xia**, *Beijing Jiaotong U.*

We examine changes in newcomers' emotional labor process during their first year to answer the research question how and why newcomers experience changes in emotional labor. Integrating emotional labor literature with socialization literature, we argue that the changes in newcomers' empathic concern influences changes in their perception of requirement of display positive emotions and thus changes in emotion regulation strategies over time. Results from a 12-wave longitudinal study with a sample of 322 new nurses revealed that newcomers' empathic concern, perceptions of requirement to display positive emotions, deep acting and expression of naturally felt emotions decreased overtime, but surface acting increased overtime. Emotional training could effectively slow down the decrease in empathic concern, perception of requirement to display positive emotions, deep acting and expression of naturally felt emotions. In all, these results increase our understanding of how newcomers process emotional labor, and help organizations realize the potential to manage newcomers' emotional labor.

OB: Lifted Up or Feet on the Ground? Leader Emotional Balancing, Developmental Feedback, and Learning

Author: **SiYan Guo**, *Robert H. Smith School of Business, U. of Maryland*
 Author: **Myeong-gu Seo**, *U. of Maryland*
 Author: **Robin Mengxi Yang**, *School of Economics and Management, U. of Chinese Academy of Sciences*
 Author: **Chaoying Tang**, -

In this paper, we extend the developmental feedback (DFB) concept to include two dimensions – gap identification and gap elimination. We focus on affective mechanisms underlying the DFB – learning relationship and identify trade-offs in each of the DFB dimensions. We argue that while gap elimination elicits employee positive affect (PA) that facilitates learning via increased learning self-efficacy, it undermines learning via PA and decreased learning need recognition. Gap identification induces negative affect (NA) that works in the opposite way. Emotional balancing, or the utilization of both affect improving and affect worsening behaviors, is proposed to attenuate the negative mechanisms. We conducted a three-wave, multi-source field study to test our theoretical model. Findings largely support our proposed model. Results indicate that gap identification elicits employee NA while gap elimination elicits PA. Gap identification has a positive effect on learning via employee learning need recognition, yet a negative effect on learning via employee NA and learning self-efficacy. We also find that gap elimination positively affects learning via PA and enhanced learning self-efficacy. Furthermore, we find support for the beneficial effects of emotional balancing, which significantly moderates the outcomes of PA and NA. Our results demonstrate that receiving DFB is a highly emotional experience that creates a tension between being lifted up and keeping feet on the ground, leaders can use emotional balancing to counter employee affect's harming effect on learning.

OB: Necessary Evil but Necessary Guilt? How Managers' Occupational Calling Influences Their Felt Guilt

Author: **Amber Yun Ping Lee**, *National U. of Tainan*

Author: **Chia-Yen Chiu**, *U. of Adelaide*

Author: **Jia-Chi Huang**, *National Chengchi U.*

Despite the accumulated evidence showing that an individual's occupational calling can bring positive work outcomes, recent studies have cautioned that people with a high occupational calling may also experience negative emotions. Relying on the perspective of moral dissonance, we argue that when managers make tough decisions (i.e., "necessary evil"), during a difficult time, their high perceived occupational calling could exacerbate their felt guilt as they usually view their jobs more meaningfully and thus possess a higher moral standard for themselves at work. We conduct a vignette experiment by describing a difficult decision-making situation under the COVID-19 pandemic in Taiwan. Through randomly assigning 271 respondents into two calling conditions (high vs low), the results show that people in the high calling condition had significantly higher perceived work meaningfulness. However, their high work meaningfulness was also positively associated with their felt guilt after making a tough decision that potentially hurt their employees. We also found that those with lower levels of self-efficacy were more vulnerable to experiencing guilt when doing necessary evil in exchange for fulfilling their calling and perceiving work meaningfulness. Our research should help HR professionals and practitioners understand how to help managers with callings avoid ham and truly leverage the positive benefits of calling.

Envy at Work

OB: The Need to Belong: Relational Coping Strategies in the Face of Coworker Envy

Author: **Timea David**, *Institute of International Business, National Cheng Kung U.*
 Author: **Hsi-An Shih**, *National Cheng Kung U.*

We develop and test a theoretical framework delineating employees' relational coping strategies in the face of coworker envy. Drawing upon belongingness theory, we explicate why and how the perception of being envied prompts employees to engage in social reconnection behaviors inside and outside of their work teams. We propose that in-group versus out-group targeted relational coping strategies are linked to different foci of proactive behaviors. In particular, prosocial helping in the face of coworker envy increases team-oriented proactive behaviors, whereas network extension leads to career-oriented proactivity. We further posit that perceptions of social integration in the team influence envied employees' choice of relational coping strategy and subsequent proactive behaviors. We tested this model through a multi-source survey and found that envied employees who perceive their teams to be more integrated are more likely to display prosocial helping behaviors, which ultimately increase their team-oriented proactivity, whereas employees within less integrated teams tend to engage in network extension activities, which enhance their career-oriented proactivity.

OB: The Dark Side of Competitive Psychological Climate: Exploring the Role of Workplace Envy

Author: **Muhammad Hamid Murtza**, *The Islamia U. of Bahawalpur Pakistan*
 Author: **Muhammad Imran Rasheed**, *The Islamia U. of Bahawalpur Pakistan*

Workers compete for organizational resources as scarcity of resources has always been an issue in organizations. Since all workers cannot get equal pay raises, promotions, and other incentives, therefore, they develop feelings of competition among them at the workplace which may further lead to negative outcomes such as envy. Drawing on social comparison theory our study intends to explain the role of psychological competitive climate at the workplace. We utilized an exploratory qualitative research approach and surveyed through semi-structured interviews of 12 professionals working in the star hotels in Pakistan. Our findings reveal that there is a huge psychological competitive climate in the hotel industry in Pakistan. The psychological competitive climate leads to workplace envy which further results in low employee performance. We further found the role of personality traits in affecting employees' envious feelings. The study highlights key research implications and sets future agenda for research in the hospitality industry.

OB: Envy: How Variability in Leader-Member Exchange Relationships Impacts Group and Individual Processes

Author: **Amy Bartels**, *U. of Nebraska, Lincoln*
 Author: **Troy Smith**, *U. of Nebraska, Lincoln*
 Author: **Wu Wei**, *Wuhan U.*
 Author: **Chris Reina**, *Virginia Commonwealth U.*

When employees are placed in groups at work, those groups provide a natural comparison point for the employees particularly with regard to the relationship each group member holds with the group leader (i.e., LMX quality). This phenomenon has been examined within the literature both at the individual- (relative LMX; RLMX) and group-level (LMX differentiation; LMXD). However, our understanding is underdeveloped due to the limited integration of social comparison theory to the phenomenon. To address this limitation, we develop theory on the group-level social comparison process to complement our understanding of the individual-level social comparison process. We also highlight a key affective mechanism that emanates from social comparisons – benign envy. As such comparisons occur, employees are envious of their (or their group's) diminished position and motivated to improve their status (or their group's) and perform better at work. Using a sample of 480 individuals nested within 90 groups, we find a parallel effect at both levels. Specifically, we find a positive indirect effect from RLMX to individual performance through individual benign envy and from LMXD to group performance through group benign envy. We also find that higher levels of leader prototypicality weaken the positive indirect effect from LMXD to group performance.

OB: How and When Envious Newcomers Form Their Developmental Networks in New Organizations

Author: **Ruolian Fang**, *U. of Western Australia*
 Author: **Zhen Zhang**, *Southern Methodist U.*
 Author: **Daniel McAllister**, *National U. of Singapore (NUS)*

Drawing upon social functional theories of emotion, we develop and test a theoretical model of how and when newcomer envy—the envy that newcomers experience as a consequence of their social comparisons with coworkers—can further or thwart their efforts to form developmental networks with desirable features. We theorized and found that envious newcomers who perceive themselves as similar to coworkers are more likely to undermine coworkers, a dysfunctional behavioral response that thwarts their efforts to develop developmental networks with diverse and high-status contacts. In contrast, envious newcomers who perceive themselves as dissimilar to coworkers are more likely to build relationships with high-level organizational members, which helps them to form developmental networks with the desirable features. Our study advances scholarship on workplace envy with our balanced and nuanced approach to answer questions on when envy is expressed in a functional or dysfunctional way and how the behavioral transmutations explain the role of envy in the formation of developmental networks. It provides empirical insights into one's emotions and actions as predictors of one's developmental network formation and contributes to the further understanding of the origins of social networks in organizations. Additionally, it extends research on organizational newcomers that has not yet explored newcomers' complex emotions (e.g., envy) and negative behaviors (e.g., undermining coworkers) as well as their implications.

Author: **Xing Liu**, *Wayne State U.*

Author: **Elizabeth C. Ravlin**, *Darla Moore School of Business, U. of South Carolina*

We examine the importance of team cultural intelligence (CQ) in multicultural teams that have two common characteristics—teams tasked with creative performance that have culturally different newcomers. Team CQ is conceptualized as a shared cognitive system of cultural capabilities among longer tenured, incumbent members on the team. We argue that this set of team-level cultural cognitive capabilities influences team creativity as mediated by team information elaboration. We incorporate the role of motivation and suggest that team learning goal orientation will enhance the effect of team CQ on team outcomes. At the individual level, we explain how newcomers' CQ may impact newcomer creativity via their information seeking behaviors. This model suggests that more attention to how team CQ is conceptualized, what motivations are contextually important, and how teams with culturally distinct newcomers incorporate these new members in team processes will be important themes in future CQ research.

While it is easy to come up with a rough or vague idea about a research topic, it is not easy to refine, implement, and publish the idea. Every one of us needs help from others, particularly those who have successful publishing experience. However, many of us lack access to colleagues with relevant expertise or hesitate to ask for feedback from experts in relevant domains. Sometimes we are not even sure what kinds of expertise we would need to move the idea forward. In the OB Research Incubator, participants are paired with renowned scholars who have successful publishing experience and can help participants move their ideas forward. Participants also have an opportunity to connect with other OB scholars who share similar research interests. This PDW is open for any member of the OB Division who would like to seek and exchange advice or feedback on research projects in any stage prior to publishing. Prior to participation in this PDW, participants must submit a summary (5-6 pages, double spaced) of their research idea to obtain a registration code.

Pre-approval of a research proposal is required for registration. Research proposals (as per the OB Listserv announcement and requirements) must be submitted to Dr. Brittany Solomon at bsolomon+@nd.edu by June 26, 2022.

HR Practices, Voice, and Engagement

OB: Perceived LGBT-supportive HR System and LGBT Employees' Voice: The Psychological Ownership View 

Author: **Yi-Ting Lin**, *Department of Business Administration, National Chung Hsing U., Taiwan*
Author: **Jo-Tieh Chang**, *Department of Business Administration, National Chung Hsing U., Taiwan*

Voice behaviors of invisible sexual minorities, such as lesbian, gay, bisexual, transgender, and individuals whose gender expressions fall outside of heterosexual norms (LGBT), have received scant attention in prior research. Based on the psychological ownership (PO) perspective, the current study investigates the relationships among perceived LGBT-supportive HR system, LGBT employees' PO, and their voice. Moreover, grounded on the situational strength and leadership literature, this study examines the boundary conditions of the perceived strength of an LGBT-supportive HR system and leader inclusiveness of the relationship between perceived LGBT-supportive HR system and LGBT employees' voice. Data collected from LGBT employees in three waves show that PO can mediate the influence of perceived LGBT-supportive HR system on LGBT employees' voice. In addition, the perceived strength of an LGBT-supportive HR system moderates the relationship between perceived LGBT-supportive HR system and PO in the first stage, while leader inclusiveness moderates the PO–voice relationship in the second stage. Overall, the perceived strength of an LGBT-supportive HR system and leader inclusiveness together strengthen the PO mechanism. Theoretical and managerial implications are also discussed.

OB: From Perceived Personal Reputation to Voice Behaviors: Speaking Up Because You Can vs. Have to? 

Author: **Émilie Lapointe**, *BI Norwegian Business School*
Author: **Christian Vandenberghe**, *HEC Montreal*
Author: **Gary Schwarz**, *Queen Mary U. of London*

This study seeks to understand how employees' perception of their personal reputation influences voice behaviors. Drawing upon research on self-regulation, we contend that personal reputation has a dual nature. Individuals who perceive they hold a favorable reputation may feel they (a) can influence their work environment (i.e., sense of power) and (b) have to bring about favorable work outcomes (i.e., outcome responsibility). We further contend that these two psychological states uniquely mediate the relations between personal reputation and constructive, supportive, destructive, and defensive voice behaviors. We conducted two studies to examine these predictions. Study 1 is an experimental scenario study which examines the relations between perceived personal reputation and sense of power and outcome responsibility, respectively. Results show that perceived personal reputation is significantly and positively related to both sense of power and outcome responsibility. Study 2 is a three-wave field study, which explores the indirect relations between perceived personal reputation and constructive, supportive, destructive, and defensive voice behaviors. Results confirm Study 1 findings. They also show that sense of power and outcome responsibility separately mediate the relations between perceived personal reputation and specific forms of voice behaviors. Theoretical implications and future research directions are discussed.

OB: Do HRM Practices Affect Employees' Psychological Contract Profiles? An Empirical Investigation

Author: **Leyuan Xie**, *U. of Alberta*
Author: **Andrew Luchak**, *U. of Alberta*

The purpose of the current study is to explore the relationship between human resource management (HRM) practices and employees' psychological contract profiles and the effect of psychological contract profiles on employees' job performance and work engagement. In doing so, we examined four aspects of HRM practices (job participation and involvement, staffing, training, and rewards) in determining psychological contract profile membership. Using a sample of 302 working adults collected for an online survey in the U.S., we identified three distinct psychological contract profiles, namely, transaction dominant, relation dominant, and a hybrid contract profile among survey participants. Results from latent profile analysis showed that reward-oriented HRM practices increased the likelihood of being classified into a relation dominant psychological contract profile. We also found significant interaction effect between staffing and reward-oriented HRM practices and organizational trust in predicting classification into a relation dominant psychological contract profile. Our analysis indicated that employees in hybrid profiles underperformed those having a dominant contract type, either transaction or relation dominant. We discussed the implications and limitations of our study and suggested future research avenues.

Author: **Zhi Liu**, *Guanghua School of Management, Peking U.*

Author: **Hui Wang**, *Peking U.*

Author: **Xu Huang**, *Hong Kong Baptist U.*

Author: **Ning Guo**, *Peking U.*

Being envied in the workplace can make the target feel good for being superior to peers in certain aspects but can also make the target feel bad for not being liked by peers. These paradoxical feelings can have different effects on the envied employees' behaviors, especially public behaviors that are observable to the peers. Based on the agency-communion framework, our research investigated how and when being envied affects one's public voice. Field data from a service company found that being envied enhanced self-esteem in the agency domain (i.e. organizational-based self-esteem), which in turn increased public voice. This positive indirect effect was stronger when competitive climate was higher rather than lower. Meanwhile, being envied increased self-esteem threat in the communion domain (i.e. social self-esteem threat), which in turn inhibited public voice. This negative indirect effect was stronger when task interdependence was higher rather than lower. These findings suggest that, depending on the team contexts, employees' perception of being envied can either facilitate or impede their public voice by either enhancing their self-esteem in the agency domain or threatening their self-esteem in the communion domain, respectively. The theoretical and practical implications are discussed.

Sleep and Work

OB: **A Spillover Model of Dreams and Work Behavior**  

Author: **Casher Belinda**, *U. of North Carolina at Chapel Hill*
Author: **Michael Christian**, *U. of North Carolina, Chapel Hill*

Sleep and employee behavior are linked. While the dominant explanations for this link involve physiology and cognitive resources, we offer a different perspective. We suggest that dreams, or psychological experiences during sleep, spill over to affect employee behavior. This spillover effect, we argue, results from the interplay between dreaming, meaning creation, and emotion. Taking a morning-of perspective, we theorize that recalling and ascribing meaning to dream experiences elicits awe—an epistemic emotion produced by appraisals of vastness and a need for cognitive accommodation. In turn, because awe reduces individuals' focus on themselves and their concerns, we argue that experiencing awe upon awakening increases employee resilience, and ultimately goal progress, throughout the workday. However, because awe entails a felt need to expand one's existing ways of knowing, employees may vary in their receptivity to awe. We therefore argue that the link between awe and resilience hinges on trait epistemic curiosity, or employees' inherent desire to seek and acquire new knowledge. Across three studies—including a morning-of field study, a single-day morning-afternoon study, and a preregistered two-week experience sampling study—we find that ascribing positive meaning to dreams elicits awe, which in turn promotes resilience, and ultimately goal progress, throughout the workday.

OB: **Leader's Deep Acting and Daytime Sleepiness Predicts Abusive Supervision** 

Author: **Amanda Hundseth**, *U. of Saskatchewan*
Author: **Mikaila Ortynsky**, *Memorial U. of Newfoundland*
Author: **Erica Carleton**, *U. of Regina*
Author: **Megan Marie Walsh**, *U. of Saskatchewan*

In this study we examine how leaders' deep acting and daytime sleepiness level predicts abusive supervision leadership behaviors. We integrate action theory and Mullins, Cortina, Drake, and Dalal's (2014) physiology and daytime sleepiness at work framework to conceptualize deep acting as a unique job demand of leadership, hence leading to increased levels of daytime sleepiness. We hypothesize that deep acting has a direct effect on leaders' abusive supervision behavior and an indirect effect on abusive supervision via increased levels of daytime sleepiness. Results from a three-wave paired leader-follower survey supported our hypotheses. This research contributes to several areas of research, namely leaders' well-being, consequences of daytime sleepiness, and antecedents of abusive supervision. Practical implications and directions for future research are discussed.

Paper is Available to Meeting Registrants Only.

OB: **Be Prepared: How Psychological Reattachment Buffers the Effect of a Bad Night's Sleep**

Author: **Ricarda Schlepner**, *U. of Vienna*
Author: **Jana Kühnel**, *U. of Vienna*
Author: **Klaus Melchers**, *Ulm U.*

Psychological reattachment refers to the process of mentally tuning into one's work before initiating work in the morning. In the current diary study, we investigated a) the relationship between good sleep at night and psychological reattachment to work in the morning and b) the effects of sleep at night and psychological reattachment on work engagement and proactivity during the day. Furthermore, we considered two competing ideas regarding how sleep at night and psychological reattachment might be related. The first idea assumes an energetic process in which psychological reattachment might benefit from a good night's sleep by serving as a mediator in the relationship between sleep quality and work engagement and proactivity. The second idea assumes a cognitive, self-regulatory process in which psychological reattachment is independent of resource-replenishing sleep and instead serves as a moderator of the relationship between daily sleep quality and work engagement and proactivity. We conducted a daily diary study comprising two online surveys completed on 10 consecutive workdays. We collected data from 171 employees on 1,186 days. The results indicated that on days with both good sleep quality and high psychological reattachment, work engagement and proactivity were both higher. Daily psychological reattachment did not mediate the relationship between daily sleep quality and work engagement but buffered the negative effects of a poor night's sleep, supporting the second of our competing ideas. Thus, organizations should encourage and train their employees to psychologically reattach to their work in the morning.

Paper is Available to Meeting Registrants Only.

OB: **Examining How Leadership Role Occupancy Influences Both Leaders' and Spouses' Sleep Loss and Obesity**

Author: **Shen-Yang Lin**, *Leeds U.*
Author: **Wendong Li**, *Chinese U. of Hong Kong*
Author: **Giles Hirst**, *Australian National U.*

Drawing on work-family crossover research, the leadership role occupancy literature and self-regulation theory, we investigated not only how leadership role occupancy may affect job occupants' obesity but also how its influences may crossover to shape their spouses' obesity. Adopting a programmatic approach with three panel datasets from the US, UK, and Australia, we found that occupying a leadership role was positively related to job demands, which in turn was positively related to job occupants' loss of sleep and obesity. Moreover, the crossover influences of job demand were also revealed: they were positively associated with spouses' loss of sleep and obesity. Our research enriches leadership role occupancy research by offering a new crossover perspective and contributes to work-family research by highlighting the importance of holding a leadership position as an antecedent of the crossover effect of job demands.

Consequences of Work Arrangements**OB: Getting Under the Skin? Work-Family Interface's Effects on Personality Change & Reciprocal Relations**

Author: **Wendong Li**, *Chinese U. of Hong Kong*
 Author: **Jiexin Wang**, *Shenzhen Audencia Business School*
 Author: **Hong Zhang**, *Chinese U. of Hong Kong*
 Author: **Xin Zhang**, *Chinese U. of Hong Kong*
 Author: **Kaili Yu**, *Chinese U. of Hong Kong*
 Author: **Tammy D. Allen**, *U. of South Florida*

Heavily influenced by the classic dispositional perspective of personality, the work-family literature has predominantly assumed that personality traits cause work-family experiences, not vice versa. The burgeoning literature on personality development, however, suggests that work and life experiences may foster personality adaptation throughout one's whole adulthood (Tasselli, Kilduff, & Landis, 2018). Drawing upon the neo-socioanalytic model of personality (Roberts & Nickel, 2017; Roberts & Wood, 2006), we built a theoretical model and investigated what, how, and why work-family experiences may spur personality development and more important, change-related reciprocal relationships between personality traits and work-family experiences in recursive cycles. Findings from two three-wave longitudinal studies revealed that work-to-family conflict, family-to-work conflict, work-to-family facilitation, and family-to-work facilitation mostly had lagged influences on changes of conscientiousness, extraversion, and neuroticism and the influences were generally channeled through changes of anxiety. Personality traits also exerted lagged influences on changes of work-family experiences, with some influences deteriorating over time. Change-related reciprocal relationships were recorded mainly between neuroticism and extraversion and work-family experiences, suggesting recursive cycles. Our findings offer important implications for organizations and employees to better manage their work and family experiences and career development.

OB: The Role of Boundary in Deterring Burnout Among Perfectionists in the Work-Family Interface

Author: **Lichi Liu**, *National Taiwan University*
 Author: **Chung Jen Chien**, *College of Management, Yuan Ze U.*
 Author: **Yu Fan Lee**, *Jung Ts Real Estate Agency*

The purpose of this study is to investigate the role of the boundary and its effects on the perfectionism-burnout relationship in the work-family interface. Previous studies on perfectionism have mostly focused on a single domain, and little research has tapped into work-family interactions. Additionally, in regard to perfectionism-burnout research, much attention has been placed on the resources consumed to burn out (e.g., motivation and perceived stress). However, we seek to study the situational component for activating the stress-related process. That is, we adopt boundary characteristics—forming distance between roles—to secure personal well-being from going through stress patterns. Drawing on conservation of resources and boundary theory, we argue that perfectionists with weaker boundaries have a higher risk of burnout than employees with stronger boundaries because they have difficulty maintaining their focus on a single domain. Further, we attempt to unveil the mechanism between perfectionism and burnout by the serial mediators (i.e., work telepressure and work-family conflict). We propose in particular a mediated moderation model, hypothesizing that perfectionism with a weaker boundary can be a predictor for work telepressure, work-family conflict, and burnout, serially. Our findings suggest that the hypotheses are all supported. The present study verifies that the role of a boundary as a protector can substantially secure the well-being of employees.

OB: Investigating Why And When COVID-19 Triggered Psychological Distress Relates to Work Behaviors

Author: **Tahia Alam**, *Southern Illinois U. Carbondale*
 Author: **Min Z. Carter**, *Southern Illinois U. Carbondale*
 Author: **Omid Disfani**, *Southern Illinois U. Carbondale*

The COVID-19 (C-19) pandemic promulgated psychological distress among employees across the United States, necessitating the examination of its consequential negative impact on employees' engagement and work behaviors. Drawing upon conservation of resources (COR) and scarcity theory (ST), this research develops a theoretical model that demonstrates how employees' psychological distress triggered by the C-19 pandemic (C-19PD) sways their task performance and organizational citizenship behavior (OCB) via work engagement. Additionally, we also investigated the moderating roles of optimism and telecommuting intensity. In a sample of 275 employees from four public universities in the U.S., we found support for the mediation effect of work engagement and the moderating effect of optimism. Theoretical and practical implications and future research are also discussed.

Author: **Alexandra Henderson**, *Zayed U.*

Author: **So Young Jeong**, *Zayed U.*

Author: **Kristin Horan**, *U. of Central Florida*

This study examines the role of managerial and institutional trust in mitigating the detrimental effect of stressors during the COVID-19 pandemic. Drawing on conservation of resources (COR) theory (Hobfoll, 1989), we posited that trust in management and state government would mitigate the negative effects of individual-level (changes in work and family role overload) and state-level (infection rates and population density) stressors related to the COVID-19 pandemic. Using multisource, multilevel data from the United States, including a sample of Americans still working during the first wave of infections (N = 437), we found that changes in individual-level stressors (work and family role overload) were positively associated with changes in stress; however, these effects were mitigated among those with high trust in state government. Results indicated that state-level COVID-19 stressors (infection rates and population density) did not have a direct effect on changes in stress; however, the effect of population density on changes in stress was mitigated among those with high trust in management. This study highlights a potential mechanism – trust – through which organization leaders and government officials can mitigate the harmful effects of the COVID-19 pandemic, and perhaps other large-scale adverse events, on workers. This study also demonstrates the cross over effects of trust, such that managers can protect workers from community stressors, while government officials can protect workers from work and family stressors. Theoretical and practical implications, future directions, and limitations are discussed.

Sense-making at Work

OB: How Positive Feedback Seeking Benefits Promotability: Roles of RBSE and Flexible Role Orientation

Author: **PAN FAN**, *Xi'an Jiaotong U. School of Management*
Author: **Yun Bai**, *Huazhong U. of Science and Technology*
Author: **Tingting Chen**, *Lingnan U.*

This study extends career advancement literature by investigating how employees take an agentic approach to enhance career success. Drawing on the agentic perspective of social cognitive theory, we theorize how and when positive feedback seeking from the social environment promotes supervisor-rated promotability. Specifically, role breadth self-efficacy (RBSE) is a mediating process that links seeking positive feedback to supervisor-rated promotability. In addition, we propose flexible role orientation substitutes for the positive effect of positive feedback seeking on RBSE and the subsequent supervisor-rated promotability. Results based on a two-wave, multisource survey design provide support for our hypotheses. We discuss the theoretical and practical implications of how and when employees can proactively pursue their career advancement.

OB: Fear of Embrace? Employees' Diverging Appraisals of Automation, and Consequences for Job Attitudes

Author: **Anna Godollei**, *U. of Waterloo*
Author: **James W. Beck**, *U. of Waterloo*

In the coming decades, technological advancements will continue to increase automation in the workplace. The impact of automation on individual workers will be varied; in some cases, automation may harm (e.g., job loss), and in other cases benefit (e.g., enhanced performance) employees. We argue that employees' anticipation of automation will shape their current work-related attitudes, such as their job engagement and turnover intentions, and thus their likelihood of manifesting these outcomes. We present two complementary studies, a survey (Study 1) and an experiment (Study 2), showing that employees have varying appraisals of the impact of automation on their well-being, both fearful (automation-related job insecurity), and optimistic (automation-related performance optimism). Across both studies, we found that automation-related job insecurity is detrimental to job attitudes, but that this effect is mitigated for people who feel a great deal of control at work. We also found that automation-related performance optimism is positively related to job engagement, and that this effect is stronger for people who feel a great deal of control at work – however we did not replicate these findings in the Study 2. The theoretical and practical implications of this research are discussed.

OB: Cultivating a Conflict-Positive Workplace: How Context Moderates the Effectiveness of Mindfulness

Author: **Neetu Choudhary**, *U. of Melbourne*
Author: **Carol Gill**, *Melbourne Business School*

The effectiveness of mindfulness has been established, however, the conditions under which mindfulness is most effective has received limited attention, leaving a theoretical gap in understanding how mindfulness interacts with its context. This has prompted an unresolved debate amongst scholars about whether mindfulness is a universal panacea or has a differentiated effect based on context. To investigate how context may play a role, we developed and tested a multi-level model on how task and relationship conflict influences the relationship between mindfulness, emotional exhaustion, and team member well-being in self-managed teams, which are an increasingly common and complex way of organizing work that is more likely to generate team conflict. The results from this time-lagged, multi-source, survey study involving 274 team members in 54 project teams support the proposition that the effectiveness of mindfulness is influenced by context. Mindfulness is a universal panacea in that it increases affective well-being by reducing emotional exhaustion. However, it also has a differentiated effect in that these relationships are most pronounced under conditions of high relationship and/or task conflict. We conclude that mindfulness is most effective in contexts that elicit negative thoughts, feelings, and behaviors, thus expanding the theory on mindfulness.

OB: An Image of What I Want to Achieve: How Personal Visions Motivate Goal Pursuit

Author: **Falk Julian Voigt**, *TUM School of Management, Technical U. of Munich*
Author: **Marius Jais**, *TUM School of Management, Technical U. of Munich*
Author: **Hugo M. Kehr**, *TUM School of Management, Technical U. of Munich*

A growing body of research emphasizes the importance of personal visions. Yet, so far, empirical research on personal visions is limited and only little is known on how personal visions lead to increased motivation and more successful goal pursuit. We argue that personal visions with their high level of mental imagery are motivationally effective because a) they evoke positive affect, b) vision-evoked positive affect spills over to personal goals derived from them, c) affectively charged personal goals benefit from increased commitment, and d) increased commitment contributes to high goal progress. In a first experiment (N = 128) we found that personal visions and vision-derived goals were more positively associated with positive affect compared to a control group with superordinate goals low in mental imagery. In a second experiment with 323 participants, we replicated our results and further showed that personal visions were positively related to goal progress via vision-evoked positive affect, positive anticipatory affect towards expected goal attainment, and goal commitment. Together the studies suggest that personal visions exert their motivational effects by affectively charging activities related to them. From a practical perspective, our studies highlight the importance of visions as an effective tool in the motivation of work-related behaviors.

Mindfulness at Work

OB: The Roles of Mindfulness in the Relationships between Media Multitasking and Various Outcomes

Author: **Wan-Jing April Chang**, *National Tsing Hua U.*

Despite a growing body of research on workplace mindfulness, information on the mechanism underlying the relationship between at-work media multitasking and its psychological (happiness, emotional exhaustion), physical (general health, sleep quality), and behavioral (job performance, innovative work behavior) consequences, as well as the boundary conditions of these links, is limited. Considering the importance of mental health in the workplace, this study adopted the stressor-detachment model to investigate (1) the effect of media multitasking on various consequences, (2) the mediating effect of state mindfulness at work on the relationship between media multitasking and various consequences, and (3) the moderating effect of trait mindfulness at work on the relationship between media multitasking and various consequences. This study used an experience sampling method (ESM) to collect data from 97 full-time employees. Participants received five survey links every workday via mobile devices for two weeks. Hierarchical linear modeling and structural equation modeling were employed to test the hypotheses. The results showed a significant mediating effect of state mindfulness on the relationship between media multitasking and happiness, emotional exhaustion, general health, job performance, and innovative work behaviors. Furthermore, trait mindfulness significantly moderated the relationships between media multitasking and happiness, job performance, and innovative work behaviors. The study discussed theoretical and practical implications, limitations, and future research directions.

OB: Leader Mindfulness and Employee Explicit vs. Tacit Knowledge Sharing: Based on Signaling Theory Lens

Author: **Beini Liu**, *Beijing Technology and Business U.*
Author: **Minya Xu**, *Guanghua School of Management, Peking U.*
Author: **Ziyi Jia**, *Beijing Technology and Business U.*

Drawing on signaling theory, this study investigates the mediating effects of prosocial and image preservation motivations in the relationship between leader mindfulness and employee explicit and tacit knowledge sharing. To test our conceptual model, we conducted a three-wave field study with 332 dyads full-time employees and their immediate supervisors. Results supported the mediating effects of prosocial motivation in accounting for the relationship between leader mindfulness and employee explicit and tacit knowledge sharing. While image preservation motivation only mediated the positive effect of leader mindfulness on employee explicit knowledge sharing. Our study is among the first to examine how leader mindfulness predicts employee explicit and tacit knowledge sharing. We discuss implications for theorizing on mindfulness, leadership, knowledge management, and motivation, as well as practical implications.

OB: Strengthening Servant Leadership with Leader Mindfulness Training

Author: **Laura Ilona Urrila**, *U. of Vaasa*
Author: **Nathan Eva**, *Monash Business School*

Recent research proposes mindfulness training as a viable method to strengthen other-orientation by enhancing awareness of oneself and others. In this study, we focus on how mindfulness training helps develop servant leaders, an other-oriented approach to leadership, by drawing from pre-intervention inquiry and post-intervention interviews with 62 organizational leaders who participated in an eight-week mindfulness intervention. Leaders reported engaging in newly acquired servant leader behaviors while integrating mindfulness into their leadership work which benefited themselves (personal growth and self-care), their followers (relationship building, follower development and wellbeing, and their teams (culture). This study advances the literature on mindfulness and servant leadership in three ways. First, by building a theoretical bridge between mindfulness-based leader development and servant leadership by demonstrating how these literatures can strengthen each other and be used to develop more holistic leaders. Second, by challenging traditional leader development by identifying how mindfulness knowledge and learnings can be integrated to grow the leader holistically, instead of providing training in specific skills. Third, by providing a conceptual framework that illustrates how mindfulness training develops servant leaders by strengthening leaders' ability to support and develop their followers.

OB: Linking Leader Mindfulness to Team Performance and Helping Behaviors: A Dual-path Model

Author: **Mengyi Zhang**, *School of Economics and Management Tsinghua U.*
Author: **Dan Ni**, *School of Business, Sun Yat-sen U.*

Although leader mindfulness has attracted large interest from industry and academia, little attention has been paid to explaining what impacts of leader mindfulness on team outcomes, and how does it occur. Integrating the mindfulness literature and the Input-Process-Output (IPO) model, we proposed a dual-mediating-process model that links leader mindfulness to team outcomes (i.e., team performance and helping behaviors), in which team cooperation acts as the task-based team process and team communication serves as the interpersonal-based team process. The model was tested with the three-wave data from 47 teams in South China. The results supported our hypotheses. We discuss the theoretical and practical implications of these findings.

OB: Make an Environmental Impact Beyond the Organizational Boundary through Green Leisure Crafting

Author: **I-Shuo Chen**, *Anglia Ruskin U.*
 Author: **Szu-Hsin Wu**, *U. of Dundee*

In this research, we aimed to investigate whether green transformational leadership and green training may contribute to employees' green leisure crafting, thereby improving their green behaviors in private life. We also investigated whether employees' green value may amplify the impact of green leisure crafting on their green behaviors. The hypotheses are underpinned by self-determination theory and supply-value fit. Using a two-wave research design and studying a group of working individuals from a variety of industries in Taiwan (N=374), we found that green leisure crafting fully mediated the relationships between green transformational leadership and green training and green behaviors in private life and that green value strengthened the positive effect of green leisure crafting on green behaviors. Theoretical contributions, pragmatic implications, and future research avenues are discussed at the end of this research.

OB: Rescripting Sustainable Development Goals: Goal Emplotments in Sub-Saharan African Communities

Author: **Xiao Chen**, *U. of Prince Edward Island*
 Author: **Dennis G. Willms**, *Salama SHIELD Foundation*
 Author: **Donald Wagner**, *U. of Prince Edward Island*

The United Nations (UN) has formulated seventeen Sustainable Development Goals (SDGs) to end poverty by 2030. Goal setting can be effective under certain boundary conditions (moderators) – at the individual level and organizational level. And yet, goal-setting theory is not well understood in the global development context, where: (1) goals are understood differently, (2) goal conditions are unmet, and (3) apparent disconnects exist between the grand, measurable goals from the West and everyday life on the ground in Africa – the Rest. We contend that the SDGs, and their interpretation and execution on the ground, does not appreciate the realities of Sub-Saharan Africa. This paper aims to conceptualize development goals within the diverse landscape and world-views of Sub-Saharan Africa. We develop a novel theory of goal emplotments that characterizes the interaction between the West and the Rest, where non-governmental organizations (NGOs), local community leaders, and beneficiaries react and respond to the SDG mandate. We explore the dominant UN-initiated policy-makers' narratives, and contrast them with those of front-line NGO personnel mediating the West and the Rest. In so doing, we aim to extend goal-setting theory into the African development context, exposing a conflicted agenda of goal setting and implementation barriers and constraints. Theoretical and practical implications are discussed.

OB: The Theory of Profitable Humanization: The Coming of Employeeholder and Human-Centric Organizations

Author: **Vikas Rai Bhatnagar**, *Lal Bahadur Shastri Institute of Management, New Delhi, India*

The current turbulent times have compelled firms to focus on employee safety and well-being and the requirement for creating humanized organizations has never been as pressing as now. Concurrently, the quest for having a single measure for a firm's performance continues, and the debate whether a shareholder or stakeholder interest should take primacy continues to intensify. To humanize organizations, the goal of theorizing employees as an end and not a means to an end has been challenging. This article fills in a much-needed gap in the literature by theorizing employees as an end and not a means to an end and developing a theory of profitable humanization. The theory employs a dualistic ontology, narrative style of theory development, makes use of the systemic economic conceptualization of a human being, draws from the theoretical physics concept of hyperspace, and Aristotelian concept of happiness to suggest employee happiness as a multi-dimensional construct that can serve as a single measure for assessing a firm's performance. As creating wealth, community service, and caring for the environment are essential for people's happiness, having the single measure of employee happiness reconciles many conflicting approaches, including the shareholder and stakeholder debate. The theory of profitable humanization introduces the concept of employeeholder and contributes to humanizing organizations—a compelling requirement in the current turbulent times.

OB: Economic Volatility Moderates the Relationship Between Social Impact at Work and Job Satisfaction

Author: **Ayse YEMISCIGIL**, *Harvard Kennedy School*
 Author: **Nattavudh Powdthavee**, *Warwick Business School*
 Author: **Ashley Whillans**, *Harvard Business School*

People derive satisfaction from working in jobs that enable them to make a positive impact in society, but often they forego financial rewards to pursue social impact at work. Drawing from theories that predict the prioritization of financial needs and values under financial volatility, we test whether macroeconomic volatility reduces the importance of social impact at work for job satisfaction while increasing the importance of pay. Using nationally representative data from 36 countries (N = 12,183), we find that social impact at work is a weaker predictor of job satisfaction in countries with higher economic volatility. In contrast, having a higher paying job is a stronger predictor of job satisfaction in countries with greater economic volatility. Differences in GDP across countries have similar moderating effects for social impact but not for high pay. These results are robust when controlling for occupation and country fixed effects and eight job characteristics measuring intrinsic, extrinsic, and relational factors. Our findings suggest that although social impact and financial rewards are both important predictors of job satisfaction, the strength of these relationships vary significantly and systematically across different economic and international contexts.

OB: **Promoting Flourishing Workplaces through Workplace Caring: Human Caring Theory**

Author: **April Rowsey**, *Union U.*

For organizations to survive and thrive in the new normal, a better understanding is necessary of the relational mechanisms and practices present in the work environment that either inhibit or encourage employee flourishing in the workplace. This paper seeks to develop a more thorough understanding of practice and process of caring as a means of personalizing the work environment and offsetting the challenges of employee fatigue, burnout, and turnover. It further examines how theory and practice from the discipline of nursing can contribute to a more robust conceptualization and operationalization of the caring construct in the work environment and, thus, promote positive outcomes in the workplace. Additionally, this work identifies several interesting directions for future workplace care research.

OB: **The Clandestine Cost of Feeling Like a Fake: Imposter Phenomenon and Workplace Presenteeism**

Author: **Terri McGarry**, *None*
Author: **Madeleine Stevens**, *39122*
Author: **Jane Eme-Power**, *None*

The imposter phenomenon is reported to affect up to 70% of working professionals at some point in their careers. Despite this, the concept remains largely under-researched in organisational contexts. Our study expands the literature in this area by positioning the imposter phenomenon as an antecedent to presenteeism. Research suggests that imposter thoughts can be detrimental to individual wellbeing. We argue that idiosyncrasies associated with the imposter phenomenon may give rise to the growing trend of presenting for work while unwell, and therefore pose a threat to organisational productivity. Drawing on the Job Demands-Resource (JD-R) theory we position imposter thoughts as a job demand that triggers a health event leading to increased presenteeism. In doing so, we contribute to knowledge by extending the definition of what is considered a job demand. We present an adapted model to explain the proposed relationship between the imposter phenomenon and presenteeism and examine the effects of workplace social support as a job resource that counters the health process. We test this theory by conducting a cross-sectional survey (n=92) and perform regression, mediation, and moderation analysis. Our results support the hypothesised relationship between imposter thoughts and presenteeism, and we find that those who experience imposter thoughts to a greater extent are significantly more likely to experience higher levels of emotional exhaustion. We offer a fresh perspective on the JD-R theory by positioning the imposter phenomenon as a job demand. Our findings highlight the adverse effects on both the individual and the organisation. In presenting a direct link between the imposter phenomenon and presenteeism, our research bears the costly implications, providing insights for HR practitioners to develop strategies to reduce presenteeism and drive the well-being agenda.

OB: **The Journey to Strong Sustainability Starts With Understanding Organizational Culture**

Author: **James Demastus**, *U. of Deusto*
Author: **Nancy E. Landrum**, *Independent Scholar / Researcher*
Author: **Brian Ohsowski**, *Loyola U. Chicago*

Organizations and researchers have embraced corporate sustainability but the desired impacts of doing so are unrealized. This “Big Disconnect” stems from a business-as-usual integration of weak sustainability rather than an embracing of strong sustainability. This paper approaches this problem by asking if organizational culture, is a component of corporate sustainability strength. Documents from 197 organizations were text mined with standardized keywords to determine corporate sustainability strength on Landrum’s Stages of Corporate Sustainability and organizational culture profile on the Competing Value Framework. Expectedly, organizations with a proclivity towards Hierarchy, and Market typologies were proponents of weak corporate sustainability. Surprisingly, Clan-oriented organizations were found to reduce weak sustainability while Adhocracy types had no relationship to corporate sustainability strength. These findings demonstrate that organizational culture should be managed in practice and research to connect organizations to strong sustainability.

Author: **Eva Straus**, *U. of Vienna*

Author: **Anja Van Den Broeck**, *KU Leuven*

Author: **Jeffrey R. Edwards**, *U. of North Carolina*

Author: **Christian Korunka**, *U. of Vienna*

Theories on value congruence assumes that positive outcomes result from matching individual and organizational values. However, these theories rarely address whether the relationship between value congruence and outcomes depends on the content of values involved. Integrating the self-determination theory (SDT), we argue that the outcomes of congruence between employee and organizational values depends on the content of values under consideration and investigate the impact of the congruence of intrinsic values (e.g., contributing to society, affiliation) versus the congruence of extrinsic values (e.g., financial success) on positive and negative work behavior, well-being, and commitment. Our results in a heterogeneous sample of employees show that a congruence of values is not crucial for positive job outcomes but that the values' content matters. More specifically, polynomial regression analyses disclose that OCB, engagement, and affective commitment are high when organizations support intrinsic values, independently of a person's individual aspirations. Extrinsic value congruence is even associated with deviant behavior. Our findings have important implications for future research and organizations.

Power, Empathy, and Virtue

OB: Self-Control Signals and Affords Power

Author: **Shuang Wu**, *Rady School of Management, U. of California San Diego*
Author: **Pamela K. Smith**, *U. of California, San Diego*

Do we perceive as more powerful and prefer to give power to the self-indulgent or the self-disciplined? Previous research (e.g., Chou, 2018; van Kleef, Homan, Finkenauer, Gündemir, & Stankou, 2011) suggests that signals of disinhibition can lead to power. The popular press is also full of stories that connect power to impulsivity. Across four studies involving different types of target individuals, we found that individuals who exhibited high self-control were seen as more powerful, and given more power, than low self-control individuals. This result held whether a choice that exhibited self-control was made quickly or slowly, and even when exhibiting high self-control involved behaving in a way that was less socially desirable. Though self-control had similar effects on power perception and conferral, these two effects appear driven by different dimensions of person perception. Perceived assertiveness and competence consistently mediated the effect of self-control on power perception, whereas perceived morality and competence mediated the effect of self-control on power conferral. The current research contributes to a better understanding of how power is perceived and accrued.

OB: How Crying Fabricated Tears Negatively Impacts Women More Than Men: The Role of Anger and Empathy

Author: **Daphna Motro**, *Hofstra U.*
Author: **Andrea Pittarello**, *Virginia Tech*

Across two studies (n = 429), we examine how observers react to people who cry genuine tears versus fabricated tears (also known as “fake tears” or “crocodile tears”) during performance feedback evaluations. In doing so we shed light on an area of deceptive emotional expression that has yet to receive full attention in organizations. Using role congruity theory as a framework, we find that observers are angrier and less empathetic towards women who cry fabricated tears compared to men who cry fabricated tears. This emotional reaction then spills over to negatively affect downstream variables such as assessments of leadership capability and helping behavior. These findings suggest that crying fabricated tears during performance feedback evaluations can backfire for women. However, the type of tears (fabricated vs. genuine) had no effect for male criers. Theoretical and practical implications are discussed.

OB: Virtues-Centered Moral Identity: An Empirical Evaluation of Its Role in Virtuous Leadership

Author: **Gordon Wang**, *George Brown College*
Author: **Rick D. Hackett**, *McMaster U.*

Competing perspectives concerning ethical leadership reflect a range of theoretical viewpoints. Some focus on rules, principles, duties, and obligations to act; others highlight the consequences of actions. We build on a model grounded in virtue ethics - in which the role of leader character is underscored, as is self-cultivation of the moral virtues, reflected by the importance one ascribes to moral identity that is virtues centered. Using a sample of 131 leader-follower dyads, followers' judgements of their leader's virtuous leadership positively predicted the self-rated virtues-centered moral identity of their leaders, as well as their own (self-rated) virtues-centered moral identity. Leaders' self-rated virtues-centered moral identity also positively predicted followers' evaluations of their leaders' moral behavior, as well as leaders' self-rated happiness. Finally, followers' self-rated virtues-centered moral identity linked positively with their moral behavior (leader rated), and to their self-rated happiness.

OB: Understanding Employees' Responses to Psychological Contract Breach During a Crisis

Author: **Meng Zhong**, *Xi'an Jiaotong U.*
Author: **Haoying Xu**, *U. of Illinois at Chicago*
Author: **Sandy J. Wayne**, *U. of Illinois at Chicago*
Author: **Eric J. Michel**, *Northern Illinois U.*

Despite considerable research on the psychological contract (PC) breach, there exists limited research explicating how employees react to instances of PC breach in times of crisis and what organizations can do to mitigate the detrimental effects of PC breach on the employee-organization relationship during a crisis. Drawing on the risk management theory of corporate social responsibility (CSR, Godfrey, 2005), we argue that CSR effort enacted by an organization provides creates an effect much like insurance and tempers negative employee reactions to PC breach during a crisis. We manipulated CSR and PC breach during an organizational crisis in a scenario-based experiment of 108 working adults (Study 1). Findings suggest subjects in the high CSR conditions are more likely to make external attributions for PC breach, thus placing responsibility for the broken promises outside the company's control. Then, we surveyed 394 employees from diverse industries in the context of COVID-19 crisis (Study 2). Results suggest perceived CSR moderated the indirect effect of PC breach on employees' reconciliation with organization via external attributions, such that the effect was stronger when employees perceived a high level of CSR.

Facilitating Employee Well-being

OB: Future Past Tense and Storytelling: Can Victims of Supervisory Abuse Envision Brighter Futures?

Author: **Huda Masood**, *Sam Houston State Uni*
Author: **Marlee Eden Mercer**, *York U.*
Author: **Leonard Karakowsky**, *York U.*

Abusive supervision has been a persistent issue for workers across the world. An important area of interest for organizational behavior researchers is to understand the past, present, and future of supervisory abuse. The current research examines the utility of different forms of sensemaking through storytelling that allows the victims of supervisory abuse to extract meaning from the episode of abuse. By conducting semi-structured, in-depth interviews with (N=30) victims of supervisory abuse, we identified ways by which sensemaking allows victims to derive meanings from the experiences of abuse. To our surprise, both retrospective and prospective sensemaking allow individuals to reframe the experiences of abuse. Four broader themes (namely: reasoning, attributions, psychological capital, and self-realization) were extracted from the thematic analysis of our qualitative dataset. This suggested sensemaking to be a powerful tool to shift the victims' narrative to a more powerful one. Managerial implications and limitations are discussed.

Paper is NOT Available. Please contact the author(s).

OB: Grating on My Nerves: An Exploration of Pet Peeves and Their Effects on Employee Interactions

Author: **Nathan Tong**, *ESSCA School of Management*
Author: **Marcia Lensges**, *Xavier U.*
Author: **Joshua Knapp**, *U. of Wisconsin, Whitewater*

We use an inductive study to investigate how people define and characterize pet peeves and examine the impact people's pet peeves have on the way they interact and relate to each other in the workplace. We also explore how these impacts affect individual and organizational outcomes. Through our analysis of interview data using grounded theory, we offer a more complete definition of pet peeves than previous scholars have proposed, in addition to detailing characteristics associated with pet peeves. We then offer a model of how people process pet peeves, demonstrating that there is an initial uncontrollable and involuntary reaction that can be physical, cognitive, or affective. This is followed by a consideration of moderators including the existing relationship with the offender, elements of the setting, personal agency, and one's personal characteristics, all of which affect how people choose to physically or cognitively respond to their pet peeves being triggered. Finally, we show how people's responses to pet peeves negatively impact employees' interactions and relationships and, ultimately, their organizations.

OB: How Strong Cultures Influence Employee Well-being: An Organizational Nostalgia Approach

Author: **Shota Kawasaki**, *Nanyang Business School*
Author: **Xi Zou**, *Nanyang Business School*
Author: **Tim Wildschut**, *U. of Southampton*
Author: **Constantine Sedikides**, *U. of Southampton*

Although scholars and practitioners have long praised the role of building a strong culture in firm success, it is unclear how a strong culture matters to individual employees. We introduce a novel construct to study cultural strength at the individual level (i.e., perceived cultural strength), which is related to but independent from cultural strength at the group level. We propose that individual employees' perceived cultural strength gives rise to organizational nostalgia, subsequently increasing well-being at work (i.e., job satisfaction, organizational commitment). We additionally propose that telecommuting frequency (i.e., the extent to which employees work remotely) moderates the association between organizational nostalgia and employee well-being. Findings from two studies supported our theoretical proposals. The findings advance the literatures on organizational culture, organizational nostalgia, and telecommuting.

Paper is Available to Meeting Registrants Only.

OB: Leveraging Soft Skills to Navigate Today's Workplaces and Manage Conflict

Author: **Shannon Fletcher**, *Northwest U.*
Author: **Kristen Thornton**, *Zillow Group, Inc*

Organizations have had to rapidly adjust where they work and how they work due to the pandemic. According to Pew Research Center, 71% of adults, who can perform their work responsibilities from home, are now working remotely. This shift coincides with research indicating that soft skills are also being valued more compared to hard skills during the hiring process (Jones et al., 2016; Kasten, 2014). The purpose of the current study is twofold. First, we seek to discover which soft skills are most relevant to today's workplace by replicating Robles' (2012) study of soft skills. The current study found that while many of the soft skills valued as most important for work remained similar to ten years ago, Courtesy, Professionalism, and Integrity were mentioned less frequently, and some new sub-categories emerged, including leadership, creativity, conflict management, influential, stress management, curiosity, situational awareness, and vision. Second, we seek to expand our 2021 qualitative study that investigated behaviors that contribute to a thriving work environment. The extension to this research specifically focuses on three emergent healthy behaviors: Suppress the Noise, Engage the Mess, and Play. All three of these behaviors demonstrate a connection to managing conflict effectively. One discovery is that while Engage the Mess and Suppress the Noise rarely identify the importance of Play to navigate conflict, the reverse is so often true. Play can help individuals find commonality and release tension, but may not be recognized until the tension breaks and resolution is found.

OB: Does Power Difference Always Escalate to Power Struggle? Two Studies with Performance Implications

Author: **Nadia Y. Yu**, *NEOMA Business School*
Author: **Riki Takeuchi**, *U. of Texas at Dallas*
Author: **Ruixue Zhang**, *Hong Kong U. of Science and Technology*

We integrated theories of inequality, stratification, status characteristics and system justification to investigate how informal power difference within a work group contributes to power struggle, which further compromise group performance in the organization. Past research has already demonstrated that high level of formal power difference is more likely to induce intragroup power struggle that further compromises group performance. We argued and observed that informal power difference has similar yet nuanced effects on intragroup power struggle and group performance. Using two independent samples of 147 work groups from multiple enterprises in China, we found that informal power difference is positively related to intragroup power struggles, and it has U-shaped relationship with group performance. Besides the inverted U-shaped (U-shaped) relationship between informal power difference and intragroup power struggle (group performance) is more likely to be salient when informal power distribution is illegitimate. Under these circumstances, there is a significant and negative indirect relationship between informal power difference and group performance via intragroup power struggle. However, when informal power distribution is legitimate, it is less likely that informal power difference and/or intragroup power struggle would affect group performance via intragroup power struggle. We concluded with discussion of the theoretical and practical implications for future research.

OB: A Game of Reciprocity? The Effect of Leader-Follower Moqi Congruence on Task Performance

Author: **Qi Zhang**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*
Author: **Xingshan Zheng**, *Shanghai Jiao Tong U.*
Author: **Yao Yao**, *Telfer School of Management, U. of Ottawa*
Author: **Francisca N.M. Dube**, *Xi'an Jiaotong-Liverpool U.*

Building on person-supervisor fit theory, this paper examines the effect leader-follower congruence in moqi (tacit understanding between two parties) on task performance by task coordination based on the perspective of nonverbal communication styles symmetry. With data collected from 174 leader-follower dyads in 41 project teams in Shanghai of China, we use polynomial regression and response surface plots to test our hypotheses on the effect of leader-follower moqi congruence on task performance. Leader-follower moqi congruence had a positive effect on task performance, mediated by coordination. The type of leader-follower moqi congruence (high-high or low-low) affected the quality of coordination. The effect of leader-follower moqi congruence on task performance (via coordination) was weaker when leader-member exchange was low than when it was high. This study adds specificity in identifying why leader-follower moqi can improve task coordination and task performance.

Paper is Available to Meeting Registrants Only.

OB: The First Decisive Minutes: How Initial Interaction Patterns Matter for Solving Complex Problems

Author: **Eisabeth Andvik**, *BI Norwegian Business School*
Author: **Therese Egeland Sverdrup**, *NHH Norwegian School of Economics*
Author: **Vidar Schei**, *NHH Norwegian School of Economics*

Although interprofessional teams are increasingly relied on to solve the rising challenges of complex and ambiguous problems, prior research has demonstrated that these teams are fraught with interactional problems that impede their effectiveness. While previous studies have emphasized the importance of initial team interactions, the distinctive characteristics of the resulting interaction patterns and how they influence team processes and outcomes remain unclear. This ethnographic study observed 22 interprofessional clinical consultations and investigated the initial team interactions that occurred during them. We found that early patterns in relational tones and cognitive approaches were critical in determining the subsequent processes and outcomes. From the distinct initial interaction characteristics, we built a typology of four initial interaction archetypes: Settlers, cuddlers, mensas, and adventurers. Our results illuminate how these archetypes strongly relate to team processes and performance outcomes. We conclude by explaining how our study extends the literature on team development, team interaction patterns, and complex problem solving in interprofessional teams.

Paper is Available to Meeting Registrants Only.

OB: The Interdependent Systems Theory of Collective Performance: An Integrative Theory of Teamwork

Author: **Daniel Jacob Griffin**, *Michigan State U.*
Author: **Ajay Somaraju**, *Michigan State U.*
Author: **Jeffrey Olenick**, *Old Dominion U.*
Author: **Rachael Pyram**, *Michigan State U.*
Author: **Rick DeShon**, *Michigan State U.*

Understanding the determinants of collective performance represents a central concern for fields from psychology and sociology, to management and engineering. However, the complexities of collective performance have inhibited the development of models capable of explaining collective performance. Existing collective performance models rely on static, between-teams representations focused on specific antecedent variables (e.g., conflict). Addressing this limitation, we build on foundational teams theory, system dynamics, and interdependence theory to derive the interdependent systems theory (IST) of collective performance. The resulting integration presents a strong unifying framework for understanding the characteristics and determinants of team performance. The IST augments theory by presenting a clear definition of collective performance and elucidating the role of interdependence in determining collective performance's nature. We present the IST in both narrative and formal forms and use the formalized model to simulate key team performance phenomena described in the literature. The IST integrates and expands our understanding of collective performance and provides a tool for enhancing and testing existing theory.

Paradox in Organizations

OB: Solving Paradox: Conflux Effects of Empowering and Directive Leadership on Change-Oriented Behaviors (WITHDRAWN)

Author: **Natalia Lorinkova**, *ESADE Business School / Ramon Llull U.*
Author: **Radoslina Krassimirova Purvanova**, *Drake U.*
Author: **Kathryn M. Bartol**, *U. of Maryland*

We focus on the opposing leadership styles of empowerment and direction, and ask whether leaders should choose a single style (either empowerment or direction), or combine opposing styles (both empowerment and direction) to enhance employee change-oriented behaviors, such as adaptivity and creativity. Building on the newly developed meta-paradoxical leadership theory (Pearce et al., 2019), we suggest that either approach works as long as leaders engage in either/or leadership (choosing either empowerment or direction) or in both/and leadership (combining both empowerment and direction) with a high degree of intensity. We test our hypotheses in a series of three studies (study 1: 869 employees at a higher education institution in Ireland; study 2: 346 employees at an IT company in Pakistan; study 3: 450 undergraduate students in the U.S.A.). Consistent with predictions, we find that employee adaptivity and creativity are positively impacted when leaders use high levels of empowering leadership or high levels of directive leadership (i.e., an either/or approach), as well as when leaders use high levels of empowering-and-directive leadership (i.e., a both/and approach). Conversely, we find that adaptivity and creativity are minimized when leaders engage in mid-levels of either/or or both/and leadership. These results suggest that leaders should demonstrate a clear, prominent leadership style: whether a particular leadership behavior (empowerment; direction), or a combination of leadership behaviors (empowerment-and-direction). Additionally, we show that employee creative self-efficacy links the empowering/directive leadership conflux to employee change-oriented behaviors.

OB: Paradoxical Leadership and Team Adaptivity: A Perspective of the Motivated Information Processing (WITHDRAWN)

Author: **Wu Wei**, *Wuhan U.*
Author: **Ying Zhou**, -

Concerning the ever-increasing demand for teams' capacity of adapting to the changes in work systems, we recommend paradoxical leadership to foster team adaptivity. Drawing on the motivated information processing in groups theory, we propose a model of how paradoxical leadership enhances team adaptivity. We tested our model using data collected from a three-wave survey of 83 teams in China. Results supported our hypothesis that paradoxical leadership has an indirect positive effect on team adaptivity through team perspective taking and through decision comprehensiveness, respectively. In addition, team perspective taking and decision comprehensiveness sequentially mediate the relationship between paradoxical leadership and team adaptivity. Theoretical and practical implications are discussed.

OB: The Support-Undermining Paradox of Follower Proactive Work Behaviors

Author: **Jian Peng**, *Guangzhou U.*
Author: **Xiao Chen**, *Guangdong U. of Foreign Studies*
Author: **Qi Nie**, -

This research proposes a support-undermining paradox regarding leaders' responses to their followers' proactive work behaviors, which depends on leader proactive implicit followership theories (proactive IFTs). According to follower categorization theory, followers displaying highly proactive work behaviors may be categorized as ideal followers and thus receive leader social support when their leaders hold high levels of proactive IFTs, but they may be categorized as non-ideal followers and thus be subject to leader social undermining when their leaders hold low levels of proactive IFTs. Moreover, we identify leaders' perceived benefit and threat as two cognitive mechanisms and leaders' liking and hostility as two affective mechanisms that account for the above relationships. In one survey study (N = 449 leader-follower dyads), our predictions are supported. When leaders' proactive IFTs are high, followers' proactive work behaviors elicit their leaders' perceived benefit and liking, which in turn increase their leaders' social support. However, when leaders' proactive IFTs are low, followers' proactive work behaviors elicit their leaders' perceived threat and hostility, which in turn increase their leaders' social undermining. This research advances our knowledge about when and why proactive followers are supported or undermined by their leaders, and practically, it inspires followers to engage in proactive work behaviors wisely.

OB: The Paradoxical Effect on Performance

Author: **Liat Eldor**, *U. of penns*

Although leadership is often described in an appealing light, a leadership role comes with some costs that can be particularly problematic to some leaders. We advance our understanding of the understudied ambivalence to lead concept defined as a leader's experience of simultaneously having both positive and negative orientations toward his/her leadership role. We develop a process model showing that ambivalence to lead serves as a flexibility-enhanced stimuli that causes leaders to engage with paradoxical behavior, which in turn increases their effectiveness in people management. We further argue that these positive effects can be enhanced by cultivating a culture of inclusion in organizations. The findings provide substantial support for our thesis by demonstrating a process model in which ambivalence to lead enhances paradoxical leader behavior, which in turn increases effectiveness in people management. We further find that, when culture for inclusion is higher in the organization, the indirect effect of ambivalence to lead on performance outcomes (through paradoxical leader behavior) is stronger.

Author: **Jingtao Zhu**, *Rotterdam School of Management, Erasmus U.*

Author: **Rebecca Hewett**, *Rotterdam School of Management, Erasmus U.*

Leaders are under increasing pressure to recognize, attend to, and ultimately reconcile paradoxes in organizations. This creates the need to balance and simultaneously pursue priorities that reflect different values. While the extant literature suggests that it can be beneficial for leaders to pursue paradoxical objectives, our paper highlights an underappreciated challenge: when leaders are paradoxical, they may send conflicting signals about what they value. When observed by followers, these conflicting signals can lead to the perception that the leader is low in behavioral integrity, causing followers to experience conflict in their own values in the workplace. Furthermore, we propose that these negative implications are mitigated when leaders reduce their own values conflict. Our predictions are supported by two complimentary empirical studies. The first study features a multi-level field study with a sample from executive MBA students, and the second is a survey study featuring multi-wave, multi-level data from a retail company.

Trust in Organizations

OB: Exploration of Team Trust Emergence Process from a Multilevel Perspective

Author: **Jin Won Park**, *Ithaca College*

Although there has been significant advancement in trust research, previous research on trust in teams has frequently ignored the multilevel, dynamic, emergent nature of trust. Especially, trust within a team at the team level (i.e., team trust) has mostly been surveyed from a static, single-level viewpoint. However, team trust, by definition, is a shared property emerged from a lower level. As team trust is derived from a process through which individuals' trust become to be shared, team trust needs to be elaborated from a processual, multilevel perspective. To meet these needs, this paper presents and elucidates a comprehensive process of team trust emergence from a multilevel perspective.

OB: Necessary but not Sufficient: Assurance Mechanisms for Enhancing Trust in AI-enabled Job Screening

Author: **Steve Lockey**, *U. of Queensland*
Author: **Nicole Gillespie**, *U. of Queensland*
Author: **Caitlin Curtis**, *U. of Queensland*
Author: **William Bingley**, *U. of Queensland*
Author: **Peter Worthy**, *U. of Queensland*
Author: **Alexander Haslam**, *U. of Queensland*
Author: **Niklas Steffens**, *U. of Queensland*
Author: **Alina Bialkowski**, *U. of Queensland*
Author: **Ryan Ko**, *U. of Queensland*
Author: **Janet Wiles**, *U. of Queensland*

The use of algorithms and artificial intelligence (AI) in recruitment is now commonplace, yet research indicates candidates are wary of their use. This paper takes an institution-based trust perspective to investigate whether assurance mechanisms can enhance trust and acceptance of AI use in job applicant screening. Two experiments provide preliminary evidence for this proposition. In Study 1 (N = 267), we found that assurance in the form of governance by an ethical review board (compared to no information about review), enhanced candidate trust and acceptance of an AI applicant screening tool. Study 1 findings were broadly replicated in Study 2 (N = 653) which further showed that a combination of ethical review and direct human oversight of AI output enhanced trust and acceptance, but direct human oversight alone did not. However, low mean values of trust and acceptance suggest that even with assurance mechanisms in place, candidates were still sceptical. Qualitative findings indicate that human oversight and the use of AI tools to support human decisionmaking is important for people to trust AI use in recruitment and selection. Taken together, findings suggest that assurance mechanisms are necessary but not sufficient to garner trust and acceptance of AI use in recruitment.

OB: The Role of Personality in the Perception of a Trustee's Trustworthiness: An Empirical Examination

Author: **Carl Richard Hossiep**, *U. of Muenster*
Author: **Philine Schmees**, *U. of Muenster*
Author: **Gerhard Schewe**, *U. of Muenster*

While previous research has shown that trust in leaders is strongly influenced by the personality of the trustor, the relationship between a trustee's personality and interpersonal trust perceived by the trustor is almost entirely unexplored. This study addresses this research gap by analyzing how a trustee's personality and leadership behavior impact his/her perceived trustworthiness. For this investigation, the HEXACO model of personality, effective leadership behavior and the integrative model of trust are combined for the first time. Based on original survey data of 258 participants, multivariate regressions and structural equation modeling is conducted. The study contributes to the research field by identifying that a leader's personality and leadership behavior explain how a trustor perceives trustworthiness. The results emphasize that personality also partially impacts the leader's observed trustworthiness. While the perception that a leader is honest, humble and agreeable leads to higher perceived trustworthiness, leaders seen as very emotional are less likely to be evaluated as trustworthy. The results also show that leadership behavior partially impacts perceived trustworthiness. In addition, the supervisor's personality, especially honesty and humility, favors the perception of the person as an effective manager. Moreover, results show that when leaders are seen as trustworthy, this partially lowers the employee's perceptions of work stress.

OB: Effects of Virtual Work on Trust: Role of Monitoring Norms and Age

Author: **Naina Gupta**, *Nanyang Technological U.*

Interpersonal trust is critical for collaboration, and particularly so in virtual work settings. Research, in both co-located and virtual work settings, has identified many behaviors initiated by trustors to help them gather trustworthiness information and, in turn, develop trust in trustees. However, we know less about how the context affects trust development. In this study, we examine the effects of a key contextual factor – team monitoring norms, and of age on team members' trust of their virtual teammates. We draw on research on virtuality, control, trust and generational differences to develop our predictions and test them in a study of 292 members of virtual teams. We find that when monitoring norms are strong, virtuality negatively affects a team member's interpersonal trust; when monitoring norms are weak, virtuality positively affects team member's interpersonal trust. This increased trust with weak monitoring norms, is stronger for older rather than younger virtual team members.

Mindsets and their Consequences

OB: A Scarcity Mindset Reduces Salary Goals through Lowering Employment Self-Efficacy

Author: **Theodore Charles Masters-Waage**, *Singapore Management U.*
Author: **Eva Peters**, *Singapore Management U.*
Author: **Charis Loo**, *Boston U.*
Author: **Jochen Matthias Reb**, *Singapore Management U.*

Beyond the substantial economic consequences of scarcity, a scarcity mindset – the mere belief that resources are scarce – has been found to negatively impact cognitive functioning and decision making. In this paper, we build on these insights by theorizing a novel motivational pathway through which scarcity impacts organizational life, specifically job seekers. Drawing from research on the psychology of scarcity, along with theories of self-efficacy and goal setting, we hypothesize that a scarcity mindset reduces employment self-efficacy, which in turn leads job seekers to set lower salary goals. We find support for our theoretical model across four studies, using diverse operationalizations of a scarcity mindset. Study 1 manipulated a scarcity mindset in a context outside of job search (i.e., general resource scarcity) and found an effect on salary goals. Study 2 manipulated a scarcity mindset within a job-relevant context (i.e., job availability) and showed that participants in the scarcity mindset condition made significantly lower (around \$3,500 on average) salary counteroffers in a fictitious job negotiation. Study 3 provided further replication and found that employment self-efficacy mediated this effect. Finally, Study 4 revealed that in a sample of job seekers in the US, a scarcity mindset (arising from the experience of scarcity in childhood) was negatively related to salary goals, again mediated by employment self-efficacy. Overall, we find substantial evidence for a psychological effect of scarcity on job seekers and encourage future research to further investigate the organizational effects of scarcity and develop “wise interventions” to counteract this deleterious mindset.

OB: The Emotional Dynamics Of Failure Sharing Under Fixed And Growth Mindsets

Author: **Jonas Dahl**, *Stockholm School of Economics*
Author: **Per H. Hedberg**, *Stockholm School of Economics*
Author: **Andreas Werr**, *Stockholm School of Economics*

Failure sharing represents potential for error management cultures and organizational learning but may be resisted by the individuals involved. Previous research suggests that one qualifying factor is the perceived benefits and costs for the individuals doing the sharing. In the current paper, based on theories of self-conscious emotions, we propose that there is also emotional impact on the failure sharing process, where the experience of shame and guilt impacts both failure-sharing tendencies and perceptions of the benefits and costs associated with failure sharing. In addition, based on mindset theory, we propose that fixed organizational and individual mindsets contribute to arousing shame and guilt in a failure situation. Two correlational online studies largely supported the hypotheses. The emotional effects on failure sharing were also found to be partly mediated by the benefit/cost perceptions. These findings contribute to the literature on error management, failure sharing, and organizational mindsets.

OB: The Baby Boomer – Gen Z Work Ethic Divide

Author: **Erik Eddy**, *Siena College*
Author: **Charles F. Seifert**, *Siena College*
Author: **Cheryl Buff**, *Siena College*
Author: **Raymond K. Van Ness**, *U. at Albany, State U. of New York*

This study examines the work ethic differences between baby boomers and Gen Z (Centennials). The Multidimensional Work Ethic Profile (MWEP) is used to operationalize seven dimensions of work ethic. Findings indicate that the level of work ethic varies by generation. Specifically, the work ethic of baby boomer respondents is greater than the work ethic for Gen Z respondents across nearly all MWEP dimensions. This may have important implications for corporate managers, who are typically baby boomers, as they hire and manage new employees, who are typically centennials.

OB: Too Much of a Good Thing? The Effect of Growth Mindsets during Personnel Selection

Author: **Lauren A. Keating**, *EMLYON Business School*
Author: **Peter Heslin**, *UNSW Sydney*
Author: **Amirali Minbashian**, *UNSW Business School, Australia*

Given that considering general mental ability (GMA) improves the quality of selection decisions, the present studies examined whether mindsets influence willingness to incorporate such data when predicting job candidates' future job performance. We hypothesized and found that prevailing (Study 1) and induced (Study 2) growth mindsets are associated with giving less weight to GMA than training when predicting prospective employees' future performance. Against the backdrop of hundreds of studies lauding the merits of growth mindsets, the present results suggest the imperative for the mindsets literature to adopt a more contingent conception of when holding a growth mindset may be (dys)functional.

Personality: Developing Construct Clarity

OB: Next Steps in Personality Research: Developing Construct Clarity

Author: **Laura Parks-Leduc**, *James Madison U.*
Author: **Russell P. Guay**, *U. of Northern Iowa*

In this paper we propose that management theory and research would benefit from utilizing both a clearer definition and a broader framework for understanding personality. We present a management-oriented integrated model of personality, drawing from similar models in the psychology literature. We review and define constructs in the model and we clarify distinctions between components. We review how the various components relate to motivated behavior, and we argue that by incorporating more characteristics of the individual in our conceptualization of personality, we will improve prediction of work behaviors and outcomes, thus making personality research more relevant to practitioners.

OB: A Meta-Analytic Investigation of the Use of the Equity Sensitivity Construct in Management Research

Author: **Youngduk Lee**, *U. of Hong Kong*
Author: **Christopher M. Berry**, *Indiana U. - Kelley School of Business*

Despite its introduction more than thirty years ago, equity sensitivity has been sparingly used as an individual differences construct in organizational research. This may be due to concerns about equity sensitivity's overlap with other established individual differences. Thus, we take stock of whether equity sensitivity only contributes to construct proliferation or whether this relatively underutilized construct deserves more attention and use. Meta-analytic results showed that the relationships of equity sensitivity with some other individual differences constructs were quite strong, but did not approach unity (e.g., correlates $-.57$ with honesty-humility, $.50$ with Machiavellianism). The criterion-related validity of equity sensitivity is comparable to, or even greater than, that of other established individual differences variables ($\rho = -.35$ for organizational citizenship behavior; $\rho = .32$ for counterproductive work behavior; $\rho = -.19$ for task performance; $\rho = -.28$ for job satisfaction; $\rho = -.30$ for affective commitment). Importantly, equity sensitivity accounts for a significant portion of the variance in organizational citizenship behavior, task performance, job satisfaction, and affective commitment beyond other established individual differences variables. Ultimately, given its nomological network, equity sensitivity appears to be a negative personality trait. Especially given its incremental validity, we call for more research on this promising construct.

Paper is NOT Available. Please contact the author(s).

OB: Agreeableness and its Consequences: A Quantitative Review of Meta-Analytic Findings

Author: **Michael P. Wilmot**, *U. of Arkansas Sam M. Walton College of Business*
Author: **Deniz S. Ones**, *U. of Minnesota*

Agreeableness impacts people and real-world outcomes. In the most comprehensive quantitative review to date, we summarize results from 133 meta-analyses reporting effects for 275 variables, which represent $N > 1.8$ million participants from $k > 3,600$ studies. Arranging variables by their content and type, we use an organizational framework of 16 conceptual categories that presents a detailed account of Agreeableness' external relations. Overall, the trait has effects in a desirable direction for 93% of variables (grand mean $\rho = .16$). Using these empirical findings, in tandem with existing theory, we synthesize 8 general themes that describe the characteristic functioning of Agreeableness: Self-transcendence, contentment, relational investment, teamworking, work investment, lower results emphasis, social norm orientation, and social integration. Accordingly, Agreeableness is a human capital characteristic that is critical to creating a better world together. We close by discussing potential boundary conditions of findings, contributions and limitations, and future research directions.

OB: It's All About We: Leader Collective Narcissism and Intra- and Inter-Team Behavior

Author: **Jack Ting-Ju Chiang**, *Peking U.*
Author: **Haiyang Liu**, *The London School of Economics and Political Science*
Author: **Zheng Wang**, *Shandong U.*
Author: **Yihao Liu**, *U. of Illinois at Urbana-Champaign*

In this paper, we examine how leaders' collective narcissism can have divergent effects on leaders' actions toward their own teams and other teams within their organization, as well as the downstream implications of both the intra-team and inter-team dynamics. Specifically, we hypothesize that leaders' collective narcissism will be associated with their increased intra-team helping behavior but will also be associated with their increased inter-team ostracism. Then, we propose that leaders' intra-team helping behavior will have beneficial implications for intra-team collaboration and relationship conflict, whereas leaders' inter-team ostracism will have deleterious implications for inter-team collaboration and relationship conflict. Finally, we argue that these effects will be more pronounced for lower power leaders. Data from a multisource, three-wave survey of 168 leaders and 748 subordinates were collected to test the proposed model. Overall, the results suggest that collective narcissism plays a meaningful role in how leaders act toward and influence their own teams and other teams within their organizations.

Motivation and its Outcomes

OB: Self-Enhancement Motives, Feedback Seeking, and Creativity

Author: **Sophia Miri Yoo**, *Seoul National U.*
Author: **Yoonju Cho**, -
Author: **Seohyun Kwon**, *Seoul National U.*
Author: **Bongsoon Cho**, *Sogang U.*
Author: **Seokhwa Yun**, *Seoul National U.*

This study examined the positive aspect of impression management and its effects on feedback seeking and creativity. While scholars have recognized that assertive impression management may facilitate employees' feedback seeking, the feedback seeking literature has largely focused on defensive impression management and has not tested the possibility. Using survey data from 264 supervisor-subordinate dyads in Korea, we investigated the linkage between self-enhancement motives, feedback inquiry, and creativity. Results suggested that self-enhancement motives increase feedback inquiry and indirectly promote creativity through feedback inquiry. Also, supervisor close monitoring and coworker knowledge sharing moderated the indirect relationship between self-enhancement motive, feedback inquiry, and creativity. The potential positive effects of impression management motives and boundary conditions are discussed.

OB: Is Daily Workplace Anxiety Adaptive? A Regulatory Model of Email Activity, Goal Progress, Performance

Author: **Bonnie Cheng**, *U. of Hong Kong*
Author: **Yaxian Zhou**, *U. of Hong Kong*
Author: **Fangyuan Chen**, *Department of Management and Marketing, The Hong Kong Polytechnic U.*

Despite workplace anxiety being a common experience of daily work life, past research has primarily examined its effects at the between-person level of analysis, documenting detrimental effects of state or trait anxiety. This research considers the experience of day-to-day workplace anxiety, and how employees manage their work performance on days they experience workplace anxiety. Drawing on workplace anxiety and affect-as-information frameworks, we consider an adaptive regulatory process model of daily workplace anxiety, where workplace anxiety initiates work e-mail activity, a self-regulatory behavior underlying an engagement function of workplace anxiety. Work e-mail activity facilitates work goal progress, which enhances performance. Utilizing a multi-level, time-lagged experience sampling field study across 10 workdays (Level 1 N = 809; Level 2 N = 96), we demonstrate support for our theorized model. On days when employees experience workplace anxiety, their performance (in-role and extra-role) is enhanced through behavioral regulatory activity manifested in work e-mail activity, which promotes work goal progress. This serial indirect effect is strengthened for employees with higher (vs. lower) work e-mail centrality. Further, these results hold alongside tests of a maladaptive response to workplace anxiety via non-work e-mail activity that disengages employees from work. This research points to the adaptive function of day-to-day workplace anxiety, suggesting that employees are active, rather than passive, drivers of their experiences of daily workplace anxiety.

OB: Re-Thinking the Structure and Process of Goal Alignment for Modern Teams

Author: **Esther Sackett**, *Santa Clara U.*
Author: **Eli Awtrey**, *U. of Cincinnati*
Author: **Matthew A. Cronin**, *George Mason U.*

Today's knowledge workers frequently navigate multiple teams, multiple projects, matrix structures, permeable work-life boundaries, and other features that necessitate the management of multiple goals simultaneously. As such, we argue that the question to ask when trying to understand the impact of goals on team effectiveness is not "do all members share the team goals?" but rather, "how do the team goals fit into the entire system of goals, comprised of all members' goal portfolios?" In this paper, we develop theory to reconceptualize goal alignment in a way that can accommodate the complexity of modern teamwork. Our theory enriches traditional notions of goal alignment by 1) taking an open systems view that considers the context in which team goals reside, 2) clarifying that goal alignment is not just a function of the goals themselves but also the resources that are allocated in pursuit of those goals, and 3) distinguishing the structure of goal alignment from the process of goal alignment. To make our theory usable, we introduce a novel way to understand and measure the structure and process of goal alignment based on linear algebra: a formal theory of Motivational Vectors.

OB: **How and When Does Performance-Prove Goal Orientation Promote Creativity** 

Author: **Hua Li**, *Xi'an Jiaotong U.*

Author: **Qi Shen**, *Xi'an Jiaotong U.*

Author: **Chang-Jun Li**, *Economics and Management School, Wuhan U.*

Author: **Ze Sheng Wei**, *Xi'an Jiaotong U. School of Management*

Author: **Lijun Liu**, *INNER MONGOLIA MENGNIU DAIRY (GROUP) CO., LTD*

Research has suggested that performance-prove goal orientation inhibits creativity because it incurs individuals to engage in dysfunctional interpersonal regulation towards coworkers and supervisors. Taking a different perspective, we propose that performance-prove goal orientation may promote creativity through facilitating a serially functional self-regulatory process of motivation and cognition. Drawing on achievement goal theory and the motivated information processing perspective, we propose that performance-prove goal orientation drives a particular approach motivational state—motivation to win—which enhances cognitive flexibility and further benefits creativity. We expect this serial self-regulatory process to be stronger among employees with high time management skill. Our Study 1, a field survey study with a four-wave and multi-source design, not only provided empirical evidence for the serial mediating effect of motivation to win and cognitive flexibility between performance-prove goal orientation and creativity, but also demonstrated that time management skill strengthened the positive relationship between performance-prove goal orientation and motivation to win. Our Study 2, a scenario-based experiment, constructively replicated the positive effect of performance-prove goal orientation on motivation to win as well as the moderating effect of time management skill. Overall, our research reveals how and when performance-prove goal orientation is likely to boost creativity. Theoretical and practical contributions are discussed.

A Temporal Perspective in Organizations

OB: Clarifying the Causes and Consequences of Multiple Team Membership: A Temporal Perspective  

Author: **Hendrik Johan Van De Brake**, *U. of Groningen*

Author: **Gerben S. Van Der Vegt**, *U. of Groningen*

Author: **Peter Essens**, *U. of Groningen, Faculty of Economics and Business*

Many knowledge workers are members of multiple teams, and researchers have examined how this affects their job satisfaction and emotional exhaustion. We suggest that progress in this research area has been hampered by a lack of clarity about what multiple team membership (MTM) is and how to conceptualize it. Prevailing conceptualizations of MTM have focused on the number of teams an individual is a member of (MTM number). We identify the number of times an individual switches between different team contexts (MTM simultaneity) as an additional MTM dimension that may better capture MTM's potential downsides. Our analysis of 1,265 knowledge workers involved in 5,274 project teams shows that MTM number and MTM simultaneity have opposing effects on job satisfaction and emotional exhaustion, especially when multiteamers are unfamiliar with the members of their teams. We also find that individuals' organizational tenure and polychronic personality are differentially related to MTM number and MTM simultaneity. The theoretical implications and results of this study can help clarify the benefits and detriments of MTM and advance the growing literature in this area.

OB: The Unintended Consequences of Temporal Leadership: The Effects of Temporal Leadership on Silence 

Author: **Yu Zhu**, *Jinan U.*

Author: **Wenjuan Mei**, *Jinan U.*

Author: **Meilan Nong**, *Jinan U.*

Author: **Yanfei Wang**, *South China U. of Technology*

Existing research has generally viewed that team temporal leadership has positive impacts on employees, but ignores its potential drawbacks. Drawing upon social information processing theory, we developed a model to explore possible negative impacts on employees. Across a multi-wave and multi-source survey, we found that team temporal leadership induces employee work alienation, thus leading to employee silence. Furthermore, shared temporal cognitions moderate both the relationship between team temporal leadership and work alienation and the indirect effect of team temporal leadership on employee silence via work alienation. Taken together, this study reveals the potential dark side of team temporal leadership and provides a more comprehensive and dialectical research perspective for team temporal leadership literature. Finally, we discuss our theoretical contributions and practical implications.

OB: A Temporal Collapse of Sensemaking in Hospitals During the Early Covid-19 Pandemic 

Author: **Charlotte Foerster**, *U. of Technology Chemnitz*

Author: **Nina Fuereder**, *Johannes Kepler U. Linz*

Health care institutions and hospitals in particular have been under pressure for years, climaxing in the COVID-19 crisis. Highlighted by the current pandemic, it is obvious that hospitals must be more resilient than ever to handle this and future pandemics. Derived from our inductive analysis approach, we point to the importance of leaders' sensemaking when it comes to organizational resilience. More specifically, we show how leaders' sensemaking evolved and, in most cases, temporally collapsed during the early COVID-19 pandemic. Along this line, we not only show how various factors influencing the leaders' sensemaking process led to the downplay, or in some particular cases to the awareness, of the unfolding threat but also how past experiences with former epidemic viruses and the actual development of the pandemic shaped hospital leaders' sensemaking. Finally, we demonstrate how a temporal collapse of hospital leaders led to a lack of anticipation, delayed preparations to cope with the pandemic, a lack of adaptation from early experiences, and thus to reduced organizational resilience.

OB: The Impact of Perceived Temporal Leadership on Work Engagement, and Performance Improvement

Author: **Hsi-Fang Lai**, *National Defense U.*

Management scholars are increasingly concerned with temporal leadership, especially the impact of temporal leadership on performance. However, much less research concerns the mediated mechanism between temporal leadership and job performance. Thus, the purpose of this research was to explore whether supervisors' temporal leadership influences their subordinates' performance improvement through work engagement based on conservation of resources theory. A total of 83 Taiwan military personnel completed a diary questionnaire for 10 consecutive days (total N = 661). The results of multilevel modeling revealed that supervisors' daily temporal leadership was positively related to subordinates' daily work engagement, which in turn was positively related to their daily performance improvement. In addition, we found that subordinates' competence will moderate the relationship between supervisors' daily temporal leadership and subordinates' daily work engagement such that the relationship will be more positive when subordinates' competence is high rather than low; hence, it is positively related to performance improvement. Finally, the findings' theoretical and practical implications for temporal leadership were discussed.

OB: A Comparative Perspective on Future Orientation  

Author: **Anastasia Gracheva**, *The Wharton School, U. of Pennsylvania*

Author: **Aleksandra Gracheva**, *Columbia U.*

The paper offers a comparative perspective on future orientation as a core cultural dimension. Based on the survey of 647 young people in the United States, Japan, France, and Russia, and using GLOBE research methodology, we explore cross-generational and cross-cultural similarities and differences in youth future orientation. When compared to that of adults, it reveals a consistency in young people's higher future orientation behavior scores and lower values scores, as well as visible distinctions in youth future orientation depending on the cultural context. The results contribute to multi-disciplinary research of youth future orientation and to policy decision-making.

Reciprocal Work and Family Enrichment

OB: The Spillover Effects of Visionary Leadership on Employees' Work-Family Interface

Author: **Huiying Zhang**, *Guangdong U. of Foreign Studies*
 Author: **Haibo Wang**, *Guangdong U. of Foreign Studies*
 Author: **Jun Xie**, *Guangdong U. of Foreign Studies*

While a growing body of studies have revealed the beneficial effects of visionary leadership on employee work-related outcomes, little is known about its spillover effects on their nonwork domains. Drawing upon the work-family resource theory, we investigate the spillover effect of visionary leadership on employees' work-to-family conflict. Utilizing the three-wave data from 268 employees, the results indicate that visionary leadership is positively related to employees' relational energy, which in turn reduces their work-to-family conflict. Furthermore, perceived COVID-19 crisis disruption was found to accentuate the negative indirect relationship between visionary leadership and employees' work-to-family conflict. Our research contributes to a more comprehensive understanding of the potential positive effects of visionary leadership beyond the work domain through relational energy, and the accentuating effect of crisis disruption on work-family interface.

OB: Engage in Family Engage at Work: The Spillover Effect of Parental Involvement Among Burnout Parents

Author: **Wang Zhuojun**, *Institute of Psychology, Chinese Academy of Sciences*
 Author: **Xinwen Bai**, *Institute of Psychology, Chinese Academy of Sciences*

For employees with school-age child(ren), managing demands at work and demands at home, and their children's education becomes unavoidable, especially during the COVID-19 pandemic. While most existing research of the work-family interface literature has focused on the negative effect of general or perceptual home demand on employees, less attention is paid to concrete family events including parental involvement in children's education. Therefore, the current study aims to investigate how working employees' parental involvement in children's education at home influences their work-family interface. Drawing on conservation of resource theory (COR), we propose that parents could obtain flourishing experiences from their involvement in children's education at home, which in turn translates into better engagement at work. Results of a two-wave survey of 206 full-time employees with at least one school-aged child lent support for our hypotheses that parental involvement enhanced flourishing experience at home, and subsequently improved work engagement and creative process engagement at work. However, the positive effect of parental involvement on flourishing, and its indirect effect on engagement at work as well, was significant only for those with high rather than a low level of parental burnout. Finally, we discuss theoretical contributions of present research.

OB: Positive Source Attribution: Unpacking the Effect of Work-to-Family Enrichment on Work Engagement

Author: **NianNian Dong**, *U. of Science and Technology Beijing*
 Author: **Mian Zhang**, *Tsinghua U.*
 Author: **Sharon Foley**, *Independent Scholar, Philadelphia, PA*

Guided by the perspective of positive source attribution, this study examines the mediating role of work-to-family esteem, and the joint moderating effect of family motivation and gender in the relationship between work-to-family enrichment and work engagement using a mixed-method design. In study 1, we used a scenario-based experiment (N = 60), finding that work-to-family enrichment was positively related to work engagement, and work-to-family esteem mediated this relationship. Then, in Study 2, we collected survey data from 171 HR managers and professionals and their spouses, replicating the positive impact of work-to-family enrichment on work engagement and the mediating effect of work-to-family esteem. We also found that family motivation and gender play a joint moderating effect on the relationship between work-to-family enrichment and work-to-family esteem. The mediating effect of work-to-family esteem exists for men with high family motivation and women with low family motivation. Theoretical and practical implications are discussed.

OB: Making the Invisible Visible - Exploration of Supervisor Family Supportive Behaviours in Remote Work

Author: **Heini Pensar**, *U. of Vaasa*
 Author: **Hilpi Kangas**, *U. of Vaasa*

The aim of the study is to investigate how the leader can support employees' work-nonwork balance through family supportive supervisor behaviors (FSSB) in a remote work context. Remote work increases physical distance between people, transferring the interpersonal communication and interaction into virtual context, which decreases supervisors' visible behavior to employees. We still know little about the mechanisms that influence the way employees perceive FSSB, especially in situations where employees and leaders are physically apart. In order to build a thorough understanding of these mechanisms, semi-structured interviews were conducted with 89 remote workers from six large corporates from variety of industries. Our thematic analysis reveals that FSSB is strengthened (or weakened) through supervisor accessibility, communicated trust, verbal investment, psychological security and supervisor-employee attunement. The findings contribute to work-family literature by unravelling new mechanisms that through supervisor's support influence individual's balance construct, and on FSSB research by examining how supervisors enact family-supportive behaviors within the context of remote work. As a practical implication we suggest formal structures for work-nonwork support to be put in place in order to even facilitate more the informal support which is needed to create a discussion around work-family matters.

Leadership Measurements

OB: Beyond Bias: Counterfactually Interpretable Items As Criterion for Correct Leadership Research

Author: **Thomas Fischer**, *U. of Geneva*

Since decades, scholars know that measuring behaviors with questionnaires can be biased and inaccurate. Going beyond such a well-established insight, I challenge the use of leadership questionnaires even more fundamentally. Items such as “Conducts his/her life in an ethical manner” (Brown et al., 2005; p. 125) or “Blames me to save himself/herself embarrassment” (Tepper, 2000; p. 190) are partially behavioral, reflect the construct space of the corresponding leadership style, yet do not have a behavioral counterfactual. Consequently, questionnaires that use such items cannot make causal claims, irrespective of psychometric properties and deployed statistical methods. I outline that the lack of behavioral counterfactuals to supposedly behavioral questionnaire items is a widespread problem in leadership research and that such a lack of counterfactuals leads to questionable research findings. Further, I identify three types of counterfactually non-interpretable items: interpretative, double-barreled, and non-behavioral ones (and combinations thereof). Future research can avoid these three types of problematic items by formulating unpaired items that describe leadership behaviors instead of evaluating them or attributing underlying intentions. In this way, the manuscript does not only identify a central problem in questionnaire-based leadership research but also suggests how to overcome this problem.

OB: Developmental Leadership: Scale Development and Validation

Author: **An-Chih Wang**, *China Europe International Business School (CEIBS)*

Author: **Yi-Chieh Lin**, *National Sun Yat-Sen U.*

Author: **Yanyu Chen**, *National Sun Yat-Sen U.*

Author: **Sheng-Bin Wang**, *National Sun Yat-Sen U.*

Based on the theoretical framework of Chinese developmental leadership, this study develops a scale for this leadership style and verifies its construct validity. The study finds that Chinese developmental leadership is a two-factor second-order latent construct, and its two sub-dimensions (en and wei) are positively correlated to each other in specific contexts. This makes Chinese developmental leadership a more functional type of paternalistic leadership. Furthermore, the data from 73 dyadic leader-subordinate samples of Chinese mainland employees reveals that Chinese developmental leadership positively relates to subordinate in-role and extra-role performance.

OB: Leader Identification and Disidentification: Constructs, Measurements, and Nomological Network

Author: **ChungJen Chien**, *College of Management, Yuan Ze U.*

Over several decades, identification has emerged as a significant topic in organizational research, with most studies' concentrating on organizational identification and disidentification. Nevertheless, interpersonal interaction is a more direct experience for individuals and, as such, a topic worthy of investigation. Leader identification and disidentification are common themes in the organizational field, but there is limited research on identification in terms of dyadic relationships. To bridge this theoretical gap, this research addresses three important theoretical issues of leader identification and disidentification. First, this research clarifies the definition and contents of leader identification and disidentification. Second, based on theoretical definitions, this research develops a leader identification and disidentification scale. Third, this research confirms the psychometric properties and nomological network of a leader identification and disidentification scale. Finally, this research concludes with the theoretical and empirical implications as well as directions for future research.

Leadership Interactions

OB: The Beauty of Ambiguity: Implications of Leader Indirect Communication on Team Effectiveness

Author: **Yating Gao**, *Peking U. Guanghua School of Management*
Author: **Jack Ting-Ju Chiang**, *Peking U.*
Author: **Li Guo**, *U. of International Business and Economics*
Author: **Yihan Song**, *Department of Strategic Management, Hanyang U. Graduate School*

Communication is essential to leadership. Despite the benefits of an indirect communication style being broadly recognized in social psychology and political science literature, little is known about the impact of a leader's indirect communication style at the workplace. The current research raises the questions of when and how leader indirect communication would exert positive influences on team-focused processes and effectiveness. Drawing on uncertainty reduction theory, we propose that for teams with higher team-member exchange quality, leader indirect communication is more likely to create team reflexivity, which in turn enhance team performance and team creativity. Using a multi-wave and multi-source survey from 87 teams, we find support for this hypothesized model. We discuss the theoretical implications of our findings, in particular regarding leader indirect communication as an emerging topic in leadership research.

Paper is Available to Meeting Registrants Only.

OB: The Necessary Role of Leader-Member Exchange on Employee Outcomes

Author: **Ingvild Andersen**, *BI Norwegian Business School*

Utilizing a different paradigm, necessity logic (Dul, 2016) across two samples of leader-employee dyads (N1=127, N2=131), I test the extent to which the leader-member exchange (LMX) is a necessary condition for employees' outcomes at work (i.e., work effort, work quality, job engagement and OCBO). At the individual level, empirical support is found for the necessary role of employee's perception of the social LMX relationship on OCBO and work engagement. But especially, empirical support is found for the necessary role of leader's perception of the social LMX relationship on work effort, work quality, OCBO and work engagement. At the dyadic level, findings indicate that leader and employee's dissimilar perceptions of the social and economic LMX relationship is necessary for low work quality.

OB: Maybe It Is Who You Know: Social Networks and Leader-Member Exchange Differentiation (WITHDRAWN)

Author: **Jacob Whitney**, *U. of Oklahoma*
Author: **Sarah E. Henry**, *U. of Oklahoma*
Author: **Bret Bradley**, *U. of Oklahoma*

Existing literature on leader-member exchange differentiation (LMXD) offers a meaningful view into the multilevel outcomes associated with this phenomenon. However, despite the rapid growth of literature on LMXD, scholars lack a complete understanding of its antecedents or the processes that cause leaders to differentiate among members of a workgroup. We address this issue by using social capital theory to propose that leaders perceive their followers' social networks as potential resources to grow their own social capital. Because each follower has unique social networks, we propose that leaders differentiate LMX among followers depending on which followers provide them with access to the most social resources. In this conceptual paper, we posit that leaders attribute status to followers depending on the structure of their social networks and their position within those networks, and that key contingencies such as a team's psychological safety climate or a leader's ambition influence the relationship between social network characteristics and LMXD. Overall, our conceptual paper provides a unique multilevel perspective of LMXD and provides important insights for both researchers and practitioners alike.

OB: Psychological Contracts and Leadership: A Meta-analytic Investigation of Contextual Predictors

Author: **Sabine Raeder**, *U. of Oslo*
Author: **Fredrik R. Lamoey**, *U. of Oslo*

Psychological contracts have been established as an important predictor of employee attitudes, behavior, and health, but the potential antecedents of psychological contracts are not yet fully understood. Leadership is one of the contextual antecedents with a sufficiently large body of research that is suited for a meta-analysis. A meta-analysis of 93 investigations tested the relationship between leadership and psychological contracts. The results showed an overall clear positive relationship of both constructs. Specifically, several forms of leadership were found to be negatively correlated with breach and positively correlated with fulfillment. Relationships with relational and transactional contracts were not supported because of the small number of studies. The results indicate that many studies involve leader-member exchange (LMX) or breach. Future research should conduct more studies with other leadership themes, particularly emerging leadership theories, and with a focus on psychological contract contents.

Daily Experiences at Work

OB: Daily Lunch Break Profiles and Work-Related Outcomes for Working Mothers

Author: **Bonnie Cheng**, *U. of Hong Kong*

Author: **Jun Xu**, *Xi'an Jiaotong U.*

Author: **Kan Ouyang**, *Shanghai U. of Finance and Economics*

Author: **Amy Y. Ou**, *Department of Management & Marketing, Faculty of Business, Hong Kong Polytechnic*

Author: **Daniel McAllister**, *National U. of Singapore (NUS)*

OB Division AOM Meeting 2022 Outstanding Practical Implications in Management, sponsored by Mercer Workforce Sciences Institute

Working mothers face tremendous pressures at home and at work, yet research has not examined how daily factors may affect resource generation that can enhance work outcomes for this segment of the population. We examine how working mothers use their lunch breaks, the longest within-workday break, and the impact of these choices on generating resources and enhancing productivity at work. Using a person-centered approach, we conduct an experience sampling study of 168 fulltime working mothers to observe how various combinations of lunch break activities generate post-lunch self-efficacy and subsequent end-of-workday work engagement and performance gains. Four distinct profiles of lunch break activities are identified: typical, socializing, multitasking, and working lunches. Each profile has unique within-person proximal and distal outcomes. Further, at the person level, self-efficacy impacts working mothers' career outcomes in terms of reward recommendations, with career commitment strengthening this effect. This research provides a foundation for understanding the impact of working mothers' within-workday lunch break activity choices and underscores the importance of using lunch breaks wisely.

OB: A Daily Study on How Work-Related ICT Use After Hours Influences Work Procrastination Behavior

Author: **Quan Li**, *Nankai U.*

Author: **Zhuolin She**, *Renmin U. of China*

Although studies have shown that work-related information communication technology (WICT) use after hours may result in adverse effects within workdays, little is known about whether and how it affects employees' next-day work behaviors. Based on ego depletion theory, we examined the effect of WICT use after hours on next-day work procrastination behavior and investigated its underlying mechanism and boundary conditions. To examine the hypotheses, we conducted a daily survey of 95 Master of Public Administration (MPA) students over 10 workdays in China. The results showed that WICT use after hours increased next-day work procrastination behavior through next-morning ego depletion. Moreover, conscientiousness moderated the relationship between morning ego depletion and work procrastination behavior, such that morning ego depletion was positively associated with work procrastination behavior only for employees with low levels of conscientiousness. Theoretical contributions and managerial implications are further discussed.

OB: Wearing Your Worth at Work: The Consequences of Employees' Daily Clothing Choices

Author: **Joseph Kim**, *West Chester U.*

Author: **Brian C. Holtz**, *Temple U.*

Author: **Ryan M. Vogel**, *Fox School of Business, Temple U.*

Do the clothes worn to work impact employees' thoughts and behaviors? Despite the universal necessity of wearing clothes and the fact that employees make decisions about this daily, organizational scholars have not yet addressed this question. We integrated sociometer and enclothed cognition theories to propose that aspects of clothing—their aesthetics, normality, and uniqueness—hold abstract meanings that have implications for employees' self-esteem and subsequent task and relational behaviors (i.e., goal progress, social avoidance). We further probed this effect by suggesting it would be strengthened on days when employees had more frequent interactions with others in the workplace. Results of a 10-day study of 85 employees from four organizations generally supported our predictions, showing that daily clothing aesthetics and uniqueness had effects on state self-esteem and downstream behavioral consequences. The effects of daily clothing normality emerged under the condition of greater interactions with others (interaction frequency also strengthened the effects of clothing aesthetics). Our manuscript contributes to both major theories from which we draw and further offers theoretical and practical contributions to the literature on organizational clothing.

Leadership and Followership

OB: Parachuting the Freefall: Leader-Member Exchange Trajectory and Newcomer Socialization 

Author: **Ran Li**, *Hitotsubashi U.*

Author: **Xiji Zhu**, *Central U. of Finance and Economics*

Developing a high quality leader-member exchange with the supervisor plays an important role in a newcomer's interpersonal socialization. Yet, previous literature has been limited by a static perspective where "snapshots" rather than dynamics of such socialization are studied. Combining the prospect theory and the regulatory focus theory, with a four-wave survey, our research investigates the influence of LMX change on newcomers' socialization, its mechanism and boundary conditions. Instead of treating newcomers as ones who can only be socialized passively according to their fitness to the organization, our study takes them as proactive actors who will adjust to the socialization process with different regulatory focus (promotion focus and prevention focus). Additionally, based on the prospect theory, newcomers' effort on socialization may vary in accordance to their perception on the trends of their LMX changes and their judgement of its future development. Therefore, we have also proposed a moderating effect of LMX change direction on the relationship between LMX change and socialization outcomes through regulatory focus. In general, our study provides a more comprehensive understanding on the dynamics of newcomer socialization.

OB: Why and When Differentiated Empowering Leadership Hurts Team Performance 

Author: **Soojung Han**, *California State U., Los Angeles*

Author: **Crystal M. Harold**, *Fox School of Business, Temple U.*

Author: **Biyun Hu**, *Shanghai International Studies U.*

Author: **Lauren D'Innocenzo**, *Drexel U.*

Author: **Soojin Lee**, *Chonnam National U.*

The empowering leadership literature supports that empowering can result in a host of positive outcomes for work teams. These findings, however, largely assume that leaders uniformly empower their followers and have not considered the potential consequences that occur when leaders differentially empower members of the same team. In the present study, we develop a theoretical model to delineate why and when differentiated empowering leadership affects two types of team performance: team task performance and creative performance. Drawing from social comparison theory (Festinger, 1954), we position differentiated empowering leadership as adversely affecting team information sharing and subsequent team task and creative performance. Moreover, we propose the indirect effect of differentiated empowering leadership on team performance via team knowledge sharing is conditional on tenure diversity. To test our proposed model, we conducted a three-wave field study with a sample of 74 teams and their team leaders from 17 firms in South Korea. The results suggest that differentiated empowering leadership negatively affects team task and creative performance through a negative effect on team information sharing. The negative indirect effect of differentiated empowering leadership on team performance was stronger in teams where tenure diversity was low, compared to when it was high.

OB: Navigate Employees' CSR Perceptions and Leadership Roles: An Individual-level Study

Author: **Sadia Ehtisham**, *Queensland U. of Technology*

Author: **Farheen Javed**, *PhD student at Murdoch U., Australia*

Author: **Sadia Ishaque**, *AirU*

Author: **Malka Liaquat**, *Women U., Pakistan*

Author: **Sadaf Amjad**, *Bahauddin Zakariya U., Multan*

This study evaluates the mediational role of employee perceived corporate social responsibility (CSR) between two leadership styles and employee outcomes. Data was collected from 348 front-line employees of hotels in Pakistan. Structural equation modeling was used to test the data in AMOS. Results reveal that employees' perception of organizations' CSR is shaped by its leader's moral conduct and helps to enhance their commitment and engagement towards the organization. Findings reveal that partial mediation yields better results than full mediation and CSR mediates the relation between ethical, participative leadership and employees' outcomes that leads toward higher engagement and commitment. The study is unique in its nature by investigating employees' perceived CSR as a mediator to explore the underlying mechanism between leadership roles and employees' outcomes. The study holds valuable implications for managers and organizations especially for enhancing employee engagement and commitment.

OB: Trust and Followership: A Qualitative Study 

Author: **Yike Wu**, *ZHEJIANG U. OF FINANCE AND ECONOMICS*

Author: **Xueting Jiang**, *New York Institute of Technology*

Followers are active agents in the leadership processes. Although previous researchers have investigated the effects of leaders' behaviors upon followers' behaviors, there is relatively short of studies on why followers vary in their followership at workplace. Based on an in-depth qualitative study of 27 employees and 13 managers, we found that the followership granted by followers to their leaders is subject to the trust they build with their leaders. We, then, uncover four types of followership and their connection with followers' cognition-based trust and/or affect-based trust upon leaders. Also, we illustrate that followers' perceived authenticity of leaders matter to leader-follower relationships. Our findings provide some insights into the nature of followership and help explain voluntariness and involuntariness of followers in their followership.

Individual and Organizational Well-being

OB: Organizational Resilience and Collective Emotion Regulation: A Qualitative Biographical Analysis

Author: **Kijan Vakilzadeh**, *U. of Kassel*
 Author: **Peter Eberl**, *U. of Kassel*

In our paper, we explore the role of emotions for organizational resilience in the context of extreme situations. In situations when organizations have to cope with adversity it is commonly acknowledged that emotions on the side of organizational members come into play. However, little is known about how detrimental emotions are collectively regulated in adverse and especially in extreme contexts. Through an in-depth biographical study of an elite paratrooper unit that served during the Second World War, we explore how these emotion regulations take place on a collective level. Our analysis suggests that three regulating behaviors are particularly important, namely situational relativization, role modeling, and compassion. From a practical point of view, we conclude that organizations can anticipate the emotional strain of their members and enhance their resilience by enabling principal preconditions for emotion regulation, such as “confidence” and “shared identity”.

OB: Keeping the Faith in Times of Fear: COVID-19 and Its Effect on Employee’s Job Engagement

Author: **Ambreen Sarwar**, *Virtual U. of Pakistan*
 Author: **Muhammad Kashif Imran**, *The Islamia U. of Bahawalpur, Pakistan*
 Author: **MARIA RASHEED**, *U. of Lahore*
 Author: **Muhammad Zaheer**, *Virtual U. of Pakistan*

The aim of this research is to shed light on the effects of fear of COVID-19 on stress and work engagement of employees working in the hospitality industry of Pakistan. The hypotheses are underpinned in terror management and conservation of resources theory. A time lagged survey was designed for data collection, in which 255 employees participated. SPSS and SmartPLS were utilized for data analysis. The results demonstrated that fear of COVID-19 elevate the stress level of employees resulting in poor work engagement. However, the more is the element of religiosity in the employees, the lesser would be the effect of fear on their mental health and job engagement. Our study also provides evidence for the presence of moderated mediation i.e. the indirect effect of fear of COVID-19 on work engagement through stress is weakened in the presence of religiousness. During the days of a pandemic, fear of contamination poses a credible threat to well-being of employees. Organizations might consider religiousness as a resource for employees in countering their stress. During wide-spread fear, terror and damaging influence of COVID-19 on economies and organizations worldwide, this study has implications for policy makers, researchers, practitioners and academics.

OB: Coaching Efficacy in Predicting Athlete Satisfaction: A Self-other Agreement Model

Author: **Chun-Han Chao**, *Binghamton U.-State U. of New York*
 Author: **San-Fu Kao**, *National Tsing Hua U., Hsinchu, Taiwan*
 Author: **Chou-Yu Tsai**, *Binghamton U.-State U. of New York*

Coaching efficacy represents the extent to which coaches have abilities to influence the learning and performance of their athletes. Research on coaching efficacy has increased dramatically over the past two decades and identified that coaching efficacy (coach self-rating) is significantly higher than coaching effectiveness (athlete other-rating). This incongruence has called for further investigations. To address this issue, we aim to compare the source of rating (coach or athlete) on coach abilities in predicting athlete outcomes (i.e., satisfaction). Drawing on the self-other agreement model, we assert that coaching efficacy from an athlete’s perspective may have better predictive validity of athlete outcomes as self-ratings (coaching efficacy) often time may be inflated by self-enhancement bias. We used 380 competitive college basketball players and 38 coaches and demonstrated that athlete other-rating coaching efficacy is more reliable than coach self-rating coaching efficacy in predicting athlete satisfaction. My findings are in line with the literature that views leader-follower interaction as a process of social construction, and followers’ perspectives on leaders can identify the way they want to be influenced.

OB: The Influence of Narcissistic Supervision on Employees’ Subjective Well-being

Author: **Wenxing Liu**, *Zhongnan U. of Economics and Law*
 Author: **Yanghao Zhu**, *Zhongnan U. of Economics and Law*
 Author: **Qiuyun Guo**, *Taiyuan Institute of Technology*
 Author: **Mingwei Liu**, *School of Management, Huazhong U. of Science and Technology*
 Author: **Dongmei Zhao**, *Zhongnan U. of Economics and Law*
 Author: **Peipei Shu**, *Zhongnan U. of Economics and Law*

Employees’ subjective well-being becomes a particular important issue in modern organizations and scholars are interesting in investigating how to promote and maintain individuals’ well-being. Then, this study, integrated the model of human growth at work and the dominance complementarity theory, examines the negative effect of narcissistic supervision on employees’ subjective well-being and explores the underlying mechanisms and boundary conditions. The hypotheses were tested by a scenario-based experiment and a field study. As hypothesized, narcissistic supervision had a negative effect on employees’ thriving at work, and in turn employees’ low level of SWB. In addition, employees’ core self-evaluations moderated those relationships such that when employees were in high core self-evaluations, they would not experience a low degree of thriving at work and were not likely to be well-being.

Attributions and Fit

OB: Where do Narrative Thinkers Fit In? Perceptions of Narrative Cognition Within Vocation and Seniority

Author: **John Jamison**, *Marymount U.*

Narrative cognition has been lauded as an instrument for crafting big ideas, strategy, theorizing, change, and identity. But narrative cognition has also been associated with oversimplification, overconfidence, and obscurity. The contrasting analytical cognitive style is, to many, the preferred style for organizational management. Who then would want to actually hire these narrative thinkers with their big ideas and big stories? This paper examines the perceived fit of narrative thinkers for jobs in various vocations and levels of seniority. In an experimental study, participants reported a good perception of fit between analytical cognition and jobs in STEM vocations and junior roles. Participants had less decisive perceptions about interpersonal vocations and senior roles where narrative thinkers would be expected to excel. These findings shed new light on the application of narrative theory in management research and the experience of individual workers who tend towards a narrative or analytical cognitive style.

OB: A Cross-cultural Study on Psychological Mechanisms of Achievement Attribution

Author: **Congcong Zhang**, *Cornell U.*

Author: **Yu Yuan**, *Cornell U.*

Author: **Lu Wei**, -

Author: **Yunya Song**, -

Existing studies found that people tend to attribute success to internal strengths whereas failure to situational factors, exhibiting a self-serving bias. This pattern has been frequently observed in Westerners but mixed in East Asian contexts. This study explored what mechanisms can explain inconsistent attributional behaviors across cultures. Specifically, we examined (a) how social desirability of explicit and implicit self-enhancement and complexity of self-concept (dialectic self and self-construals) affect attributional decisions, and (b) whether modesty and face-saving are mediators to explain the intricacies of attribution decisions. College students from the U.S., Mainland China, and Hong Kong participated in an experiment for cross-cultural comparisons. Results suggested that (a) differences in explicit self-enhancement motivations, dialectic self, and interdependent self-construals caused variations in attribution decisions, (b) modesty and self-face concern were two competing mediators affecting these decisions, and (c) the salience of these proposed mechanisms varies across cultures. Directions for future research and management implications are discussed.

Paper is Available to Meeting Registrants Only.

OB: Emotion–Behavior–Reflection Theory

Author: **David Joseph Keating**, *U. of Mississippi*

In this manuscript, we propose a theory that builds on previous appraisal theories (e.g., Cognitive-Motivational-Relational Theory, Affective Events Theory) by incorporating self-reflective emotions. In our theory, a meaningful interaction with a coworker elicits a primary emotion that leads to emotion-driven behaviors, employees reflect on both the emotion that was experienced and the behaviors enacted. Reflecting on the behaviors enacted elicits self-conscious emotions. Reflecting on the emotion that was experienced elicits meta-emotions (i.e., emotions about one's own emotions). These self-reflective emotions provide information that employees can use to strategically guide behaviors, and to regulate emotions, during future interactions with the coworker. We further theorize that it is these self-reflective emotions that are aggregated to form evaluative judgements (i.e., perceptions of relationship quality). This occurs through a dynamic process that transpires over the course of the coworker relationship.

Paper is Available to Meeting Registrants Only.

OB: Core Self-Evaluation Buffers or Amplifies the Nightmare of Injustice? Role of Contingent Self-esteem

Author: **Feng Gao**, *School of Business, Renmin U. of China*

Author: **Yuqing Sun**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

In response to the call to investigate the mixed findings about the moderating role of core self-evaluations (CSE) on ego threats, we draw on the contingency perspective of self-esteem to propose leader-contingent self-esteem (LCSE) as the boundary condition. Across a multi-wave field study and an online vignette experiment, the empirical results consistently corroborated our theorizing that when employees' self-esteem was highly contingent on leader's approval or recognition (i.e., high LCSE), CSE enacted an amplifying effect that causes employees under conditions of leader injustice to experience more ego depletion. In contrast, when employees' self-esteem was less contingent on the leader (i.e., low LCSE), CSE exhibited a buffering effect that allows employees under leader injustice to experience less ego depletion. In addition, Study 2 found that this ego depletion effect further leads to deviant behaviors in employees. Implications for literatures on CSE, self-esteem and injustice were discussed.

This 13th annual symposium at AoM showcases new intuition research pertinent to the development or training of intuition in different management contexts and organizational processes, as required by current and future workforce. It highlights the relevance of intuition in the digital age and suggests how digital technology can be used for its development. The contribution by Fellenhofer and Renold investigates how intuition could be trained in conjunction with analysis by means of digital tools, such as virtual reality. Sadler-Smith discusses different types of intuition likely to be required in the digital age and proposes type-specific training methods. Bas and Dörfler make a distinction between training needs for the sensing and sensemaking aspects of intuiting under uncertainty. Murayama et al. explain how Japanese companies develop their employees' intuitive skills as part of the 'souji' management practice. Robinson proposes how to develop collective intuition through collective mindfulness utilizing 'deep games.' Dias et al. highlight factors pertinent to intuition training for social entrepreneurs who face tension between commercial and social considerations. Coleiro and Baldacchino outline a training program, tailored to specific needs of various entrepreneurs. Finally, Yeung and Sinclair propose how to use the focusing method to enhance intuitive decision making.

Pls. post your questions in session chat, which will be monitored during the conference.

How Can We Train Diverse Cognitive Skills of Tomorrow's Managers with new Technologies?

**Change & Strategic Implementation: OD Approaches, Design
Thinking, Middle Managers, and Uncertainty**

Author: **Makoto Nagaishi**, *Chukyo U.*

This study responds to Hastings and Schwarz's (2021) theoretical propositions for an integrative approach to combine diagnostic and dialogic change processes with a particular focus on the culture's impacts on change practitioners' mindsets. The author uses Japanese multinational corporations (MNCs) as a case in point and shows that the change practitioners try to keep a delicate balance in change processes. They choose diagnostic interventions to foster the predictability of the whole picture for sustaining the organization's psychological safety. Meanwhile, they host a dialogic space to activate the member's prudent risk-taking. What was found from the author's case study was the important role of change practitioners to build a collaboration capability by oscillating planned and emergent change processes. The study concludes that diagnostic and dialogic approaches can be adequately blended not only in methods but also at the mindset level.

While the adoption of design thinking practice to foster organizational innovation requires improving practice-fit with the organization, studies exploring the role design professionals may play in this process remain rare. We draw on championing and practice adoption literature to empirically investigate how design professionals champion the adoption of design thinking practice within their organization. Based on 66 semi-structured interviews among design professionals working in a variety of positions in large engineering company, our findings reveal that design professionals championed for the adoption of their professional practice through five practices: by consolidating their professional practice within innovation projects, by advancing and by regulating the replication of the practice across innovation projects, and by culturally legitimating and by sheltering the practice within the organization. While all design professionals championed their practice, design managers focused on the latter three of these practices. Our emergent conceptual model shows that professionals may champion their professional practice not only within and across innovation projects, but also across organizational structures and management levels. The study suggests that collective and coordinated engagement of professionals operating at different hierarchical levels in the organization could be a significant force in fostering adoption of a professional practice in organizations.

Author: **Steve Werner**, *U. of Houston*

Strategy implementation is a critical component of firm performance and middle managers have primary responsibility over strategy implementation processes. Unfortunately, researchers and practitioners know surprisingly little about how middle managers influence strategy implementation effectiveness. As a result, our understanding of why some firms are more successful than others remains incomplete. To shed light on this important issue, we theorize and test the relationship between middle manager leadership and strategy implementation effectiveness as well as work team coordination, a potential mediator of the relationship that has been found to be an important element of strategy implementation success. Using a sample of 44 work teams within an organization undergoing a large-scale strategic change, our results show that middle managers' transformational and instrumental leadership styles directly impact strategy implementation effectiveness and that middle managers' transformational leadership also has an indirect effect on strategy implementation effectiveness through work team coordination.

Author: **Angelika Lau**, *U. of Duisburg-Essen*

Author: **Sophia Aguirre Reid**, *U. Duisburg-Essen*

The purpose of this paper is to obtain deeper insights into employees' adaptive performance — a key competence of modern workers that can enable organizations to deal with the prevailing uncertainty of the future. In this context, a moderated mediation model was developed to investigate the extended link between employee's adaptive performance and autonomy in terms of work method autonomy, work scheduling autonomy, and work criteria autonomy. Based on data from 1,142 teleworking employees of an internationally operating company, structural equation modeling was used. Results confirm that the positive relation between employees' autonomy in terms of work method autonomy, work scheduling autonomy, and work criteria autonomy and employees' adaptive performance is mediated by job crafting—strength. Work criteria autonomy showed the strongest effect. Further, demands-ability fit was found to mediate the relation between job crafting—strength and adaptive performance. Although nonwork-interrupting work behavior was found to partly moderate the link between the different autonomy dimensions and job crafting—strength, it showed a positive and significant influence regarding the relation of work criteria autonomy, a negative and significant influence regarding work scheduling autonomy, and no significant influence regarding work method autonomy.

Ever-important Change Topics: Resistance, Resilience, Readiness and Justice

ODC: **Pay or Nudge Employees Into Change? An Experiment on the Effect of Nudging for Organizational Change**

Author: **Kim Böhm**, *U. of Duisburg-Essen*
Author: **Marvin Müller**, *U. of Duisburg-Essen*
Author: **Erich Renz**, *U. of Regensburg*

Organizational change often fails due to employees' resistance to change resulting in unforeseen expenses, delays, or other disruptions in organizations. In our experiment, we compare behavioral interventions—a pro-change default rule and a pro-change recommendation—with a costly pay raise to foster supportive behavior. We support the effectiveness of a default nudge in enhancing change-related success. Our results indicate that a recommendation nudge has no significant effect in change-related scenarios. In addition, we find that a pay raise has a positive effect that is likely to be triggered by positive reciprocity. If this pay raise fails to materialize, we report supporting evidence for negative reciprocity. We compare the effect sizes for these nudges and the pay raise and provide insights for the relative cost-effectiveness of such nudges compared to a pay raise for organizational change. We conclude with managerial implications.

ODC: **Still Challenging “Resistance to Change”**

Author: **Eric B. Dent**, *Florida Gulf Coast U.*
Author: **Harry Knoche**, *Florida Gulf Coast U.*

This study revisits and updates “Challenging ‘Resistance to Change’” (Dent & Goldberg, 1999a), one of the most-cited Journal of Applied Behavioral Sciences articles. The latter found that the history of the term “resistance to change” was perplexing, leaving as a legacy a mental model that doesn't best match the reality of true change dynamics. Dent and Goldberg contended that the term “resistance to change” should be replaced by more accurate change constructs. More than 20 years later, this current study found some improvement in how “resistance to change” is treated in popular textbooks. The empirical research in this century is also far more sophisticated in terms of the possibility of change actually being embraced more than resisted, studies in many more countries, and hypotheses including moderating and mediating variables. More than a decade ago, Oreg, Vakola, and Armenakis (2011) found that a meta-study was hampered by the vast number of variables and approaches to the study of change. If anything, that situation has been exacerbated since they wrote. In general, though, the mental model of “resistance to change” lives on in a more pervasive way than Dent and Goldberg would have hoped.

ODC: **CEO Temporal Orientation, Top Management Team Diversity, and Organizational Resilience**

Author: **Maximilian Weis**, *WU Vienna*
Author: **Patricia Klarner**, *WU Vienna U. of Economics and Business*

How do CEOs influence organizational resilience in times of crisis? Combining resilience and upper echelons research, we argue that CEOs prepare for and adjust to unexpected events in their environment based on their temporal orientation. We argue that CEOs' long-term orientation fosters organizational resilience during crises, which is reflected in their firms' lower severity of loss and time to recovery. We suggest that this relationship is moderated by TMT diversity. Studying 745 CEOs of S&P500 firms during the financial crisis and the COVID-19 pandemic, we find that firms led by long-term oriented CEOs face less severe economic losses but take longer time to recover from adversity. Yet, these firms recover more quickly when long-term oriented CEOs can draw on a diverse TMT. Our paper contributes to the research on organizational resilience by uncovering its microfoundations. We also contribute to the upper echelons research by unveiling CEOs' role in preparing for and adjusting to adversity. Lastly, we contribute to team research by showing how TMT functional diversity affects longer-run effects.

ODC: **The Multilevel Linkage Between Organizational Communication and Readiness for Change**

Author: **Phong Thanh Nguyen**, *UNSW Sydney*
Author: **Alannah Rafferty**, *Griffith U.*
Author: **Gavin M. Schwarz**, *UNSW Sydney*
Author: **Amirali Minbashian**, *UNSW Business School, Australia*

While change scholars have primarily studied readiness for change (RFC) as an individual attribute, in this paper, we examine RFC as a collective attribute and study collective RFC at two levels, namely, individual perceptions of collective RFC at the individual level and collective RFC at the group level. In addition, we identify organizational communication as a key antecedent. Our study contributes to the change research field by examining managerial (formal and informal) communication efforts and communication strength as a more nuanced conceptualization of organizational communication in explaining RFC across individuals and groups. Results from an experimental (N = 463 undergraduate students) and field study (N = 402 employees, 48 workgroups) reveal that formal and informal communication efforts explained individual perceptions of collective RFC. Notably, communication strength was positively associated with both individual perceptions of collective RFC and collective RFC. Our study offers several implications for theory and practice regarding the multilevel relationship between organizational communication and change attitudes.

ODC: **Organizational Justice Perceptions of Inclusive Talent Management Practices on Employee Work Effort**

Author: **Thomas Kramer**, *Penn State Mont Alto*

Multiple studies have evaluated the individual and organization-level outcomes of talent management but have largely neglected the outcomes for those not selected for inclusion. Latent moderated structural equation modeling was used to assess a theoretical model that hypothesized a moderated mediation effect of organizational justice on the relationship between inclusive talent management practices and work effort. As hypothesized, more inclusive talent management practices led to increased perceptions of distributive justice. Distributive justice was found to mediate the relationship between inclusive talent management practices and work effort. Procedural justice was found to moderate the relationship between distributive justice and work effort such that distributive justice had a greater effect on work effort when perceptions of procedural justice were low.

Categories and Categorization: Qualitative Research

OMT: Consequences of Umbrella Category Swaps: The Case of Esports

Author: **Norbert Steigenberger**, *Umeå School of Business and Economics, Umeå U.*
Author: **Tobias Michael Scholz**, *U. of Siegen*

What happens when organizations in a particular organizational category attempt to swap umbrella category? Studying the attempt of the esports organizational category to switch from the umbrella category “gaming” to the umbrella category “sport,” we outline that such umbrella swaps have important material components, where the attempt to switch umbrella category coincides with the “loaning” of artifacts (in our case, material infrastructure and spatial setup) from the desired umbrella category while downplaying artifacts associated with the undesired category. The consequence is a change in the material identity of the focal category, that persists even after attempts to swap umbrella category have failed.

OMT: Place and Status Recategorization

Author: **Melodie Cartel**, *UNSW Business School, Australia*
Author: **Eva Boxenbaum**, *Copenhagen Business School*
Author: **Sylvain Colombero**, *Grenoble Ecole de Management*

This paper contributes to the emerging literature on status recategorization by analysing the extreme case of reinforced concrete from 1885 to 1930. Status recategorization refers to the change in a category’s status within a social hierarchy. It occurs when new—more appealing—associations form around a low status category. We find that, over the period studied, buildings encoded, emotionalized, and energized new associations around reinforced concrete, leading architects to assign the material a higher status. Drawing on these findings, we conceptualize an embodied mode of status recategorization in which the ability of audiences to process new associations around a category is a function of bodily experience. We make two contributions to the category literature. First, we distinguish between discursive associations and associations encoded in the physical environment. Second, we show that emotions and emotional energy mediate audiences’ interpretations of new associations that are encoded in the physical environment. Negative emotional responses to new associations trigger status maintenance, while positive emotional responses and emotional energy trigger status change.

OMT: Emergence of a Values-Based Category: The Case of Ayurvedic Pharmaceuticals

Author: **Anupama Kondayya**, *Indian Institute of Management, Bangalore*
Author: **Abhoy Kumar Ojha**, *Indian Institute of Management, Bangalore*

Scholars have theorized about four mechanisms of category formation, namely proof, consensus, truce and fiat. Of these, the mechanism of fiat is underexplored. Fiat is exercised most often by the state, which is expressed through a complex of policy regimes, that are influenced by power and politics. We study the influence of state policies, power and politics on category emergence in the context of Ayurvedic pharmaceuticals in colonial India. Adopting a qualitative approach and using historical archival data, we find that the overt exercise of state power makes interests and values of marginalized groups salient, triggering emotional as well as rational responses towards preserving those interests and values. In our study, the responses and rationalizations led to the emergence of a new category, Ayurvedic pharmaceuticals, while maintaining legitimacy for the group. Based on the findings of the study, we offer a model of category formation influenced by power, politics and policies, demonstrate the emergence of a values-based category driven by Weber’s substantive rationality, extend the idea of categories as political devices, and show how categories can act as expressions of social identities.

Methodological Innovations in Organization Theory

OMT: Advancing Theory with Rigorous Problematizing Reviews: Giving-up Labels-Centric Literature Samples

Author: **Anne Sophie Barbe**, *Aalto U., Department of Management Studies*
Author: **Frédéric Bally**, *Grenoble Ecole de Management*
Author: **Thibault Daudigeos**, *Grenoble Ecole de Management*
Author: **Hussler Caroline**, *U. of Lyon, UJML3, iaelyon School of Management, Magellan*

Problematizing reviews seem doomed to be suspected of a lack of academic rigor because their advocates remain reluctant to use systematic sampling methodologies. Their reluctance is based on the premise that systematic reviews only cover pieces of research citing the name(s) of the construct(s) commonly used to study a phenomenon, what prevents any problematization of such construct(s). To envisage how to systematically sample existing literature without falling into such a sampling trap, we introduce a three-dimensional definition of constructs (label, intension, extension). Thanks to this framework, we first show that extension-centric samples outweigh the pitfalls that advocates of problematizing reviews associate with systematic methodologies relying on labels-centric samples. Second, we explain that this alternative sampling strategy enables reviews authors to excavate how the empirical objects being part of the extension of the phenomenon focal to the review are categorized by the theoretical schools that study them. Three ideal-typical of such categorizations emerge from our analysis—integrated, in halos or in Russian dolls—and we show that all of them are venues for problematization. This article contributes to the discussion of how to advance theory with review articles by theoretically developing a systematic sampling methodology enabling rigorous problematizing reviews.

OMT: From One to Many: A Taxonomy of Abductive Inferences in Organization Science

Author: **Rolf Bruehl**, *ESCP Business School*
Author: **Christoph Seckler**, *ESCP Business School*

This article extends the discussion on abduction in organization science, which typically focuses on one type of abduction, to encompass multiple types. Using a logical approach, this article introduces a generalized abduction scheme. We then distinguish four basic types of abductive inferences based on this scheme. The four types can be differentiated according to their primary inference process (selective vs. creative) and primary knowledge outcome (explanatory vs. instrumental). The article contributes to the discussion on abduction in organization science research in three ways. First, the introduction and application of the generalized logical scheme allows us to make the premises of an abductive inference explicit which helps to scrutinize the overall inference made. Second, differentiating between selective and creative abductive inferences is important because they should be evaluated according to different criteria. Third, introducing instrumental abductive inferences to the organization science literature may help to strengthen the inferences of design science research.

OMT: Computational Text Analysis for the Evolution of Meaning of Categories

Author: **Semi Min**, *New York U.*

Over the decades, organization scholars have studied the formation of the meaning using various theoretical concepts. Analyzing meanings, however, pose methodological challenges as meanings are dynamically formed through a complicated process, which requires the analysis of large-scale historical data. Recent advances in computational text analysis of large digitized corpora have provided an opportunity to improve our understanding of the evolution of meanings. In this study, I will focus on a stream of research that can expect a significant benefit from computational text analytics: category perspective. This article suggests a framework to carry out the research on the evolution of the meaning of a category using computational methods. Specifically, I propose a new computationally-supported grounded theory development method that combines manual approaches for the interpretations with computational text analysis. This method aims to scale traditional theory-building methods, incorporating more complexity without losing nuance to enrich extant theories. Using the case of blockchain, this paper illustrates how this technique can be applied to study the evolution of the meaning of emergent technology categories in society.

Creativity and Innovation in Cultural Industries

OMT: **Bowing to Five Pecks of Rice? The Impact of Profit Expectancy on Artistic Creativity**  

Author: **Ke Nie**, *UC San Diego*

Do independent and amateur producers in cultural industries curtail their creativity when they have higher expectations of economic returns? Previous studies on the “creative/commerce” pair of the cultural industries did not provide a clear answer. This paper tries to answer this question by studying the case of Chinesemusic.com, a music streaming platform that launched a monetization program, allowing musicians to directly profit from their songs on the platform. I collect 16,320 songs from the platform released before and after the launch of the monetization program and, using computational tools developed in the field of Music Information Retrieval, I propose a novel approach to measure the creativity of the songs based on their sound. The results suggest that whilst more independent and amateur musicians were attracted by the monetization program, their songs became less and less creative afterward with a more significant shift among the former. The findings indicate that independent and amateur producers will proactively make compromises in their creative activities when they are given resources for a more promising career in the business.

OMT: **Status and Cultural Capital of Bollywood Dynasties** 

Author: **Sumeet Malik**, *IESE Business School*

Author: **Chandrika Rathee**, *IE Business School*

Author: **Julien Jourdan**, *HEC Paris*

Author: **Luis R. Gomez-Mejia**, *Arizona State U.*

The most common organizational form globally and historically, family businesses, are driven by the dynastic motive - to pass on the owners' status and wealth to the next generation. However, our understanding of the descendants' fate remains severely limited. Some evidence suggests that investors discount the family's next generations as nepotism and unwillingness to professionalize. Further, family owners tend to be conservative and eschew uncertainty. On the other hand, family players have dominated creative and cultural industries for generations that have considerable uncertainty about the producers and the final product. We suggest that the dynastic players use status and cultural capital handed down through the generations to navigate markets. We show that the dynastic roots of producers and superstars in Bollywood (Hindi movie industry) play a pivotal role in offering atypical films and enhancing box-office performance. However, the legacy also induces anxiety, lest dynastic players may be denigrated in the social hierarchy. Dynastic producers are conservative when working with superstars who may steal their thunder of novelty, and superstars with dynastic roots are constrained by the audience expectations set by their ancestors. We discuss the implications of our study on family firm and social evaluations theories.

OMT: **Resilience in Creative Craft Production: The Case of Country Music Songwriters in Nashville**

Author: **Katrin Marika Smolka**, *Warwick Business School*

Author: **Pursey Heugens**, *Erasmus U. Rotterdam*

A common thread in contemporary studies on craft is that the crafts are under pressure and that systems of craft production are fragile. While this imagery is true in many contexts, examples of craft persistence and resilience are also abound. In this study of a highly resilient creative crafts collective – Nashville's country music songwriters – we find that the origins of craft persistence in this context lie in positive symbiosis between interlocking systems of craft and industrial production. Interviews with 56 songwriters reveal that the elements of this symbiosis involve the maintenance of institutions of shared value, brokers fostering linkages between the artistic and commercial spheres, and socialization practices favoring the perennial influx of new craft workers. We incorporate these elements in a grounded theoretical model spanning multiple levels of analysis – from micro-momentary craft practices to ecosystem design features – explaining craft resilience. Our work advances current theorizing on craft by drawing greater attention to the contextual preconditions allowing crafts to persist in fully industrialized and commercialized settings.

Innovation and Decision Making in Entrepreneurial Contexts

OMT: **Intuition, Equivocality and Decision Making Effectiveness** 

Author: **Christian Julmi**, *U. of Hagen*

While scholars have recently proposed that intuition may be superior to analysis in tasks of high equivocality, it remains theoretically unclear when and whether one should decide intuitively when both uncertainty and equivocality are considered. To address this research gap, the article introduces a framework that links intuition and analysis effectiveness with uncertainty and equivocality. This framework allows to draw inferences from the nature of the decision task to the appropriateness of intuition and analysis. To this end, the article does not only distinguish between analysis and intuition, but also between reproductive and productive decision making. We assume that an increase in equivocality leads to an increase in intuition effectiveness, whereas an increase in uncertainty should lead to an increase in the effectiveness of productive decision making. To demonstrate the value of the framework, the article discusses its implications for research on strategic and entrepreneurial decision making.

OMT: **Frugal Innovation and Firm Performance** 

Author: **Mir Dost**, *Faculty of Business, Sohar U., Oman*

Author: **Davoud Nikbin**, *Faculty of Business, Sohar U., Oman*

Author: **Naveed Akhtar Qureshi**, *Sukkur IBA U., Pakistan*

Much ink and energy have been devoted to understanding innovation that is cheap, functional and sustainable (frugal); however, its impact on a firm's performance remains unclear. To address the gap, this research investigates the ambidextrous influence of frugal innovation (FI) on the firm's financial and environmental performance; and moderating role of proactive orientation. To test the hypothesized relationships, the author nested the data from managers/directors of firms from emerging markets. Data were analyzed by employing regression analysis and structural equation modelling techniques. The results revealed a significantly positive influence of FI on the firm's environmental financial performance. The moderating role of proactive orientation strengthened the effects of FI on environmental performance, weakened the effects of FI on financial performance. The article also discusses theoretical and managerial implications.

Paper is Available to Meeting Registrants Only.

OMT: **Cultural Entrepreneurship in Social Innovation: Co-creation in Circular Economy Ventures**    

Author: **Heli Helanummi-Cole**, *U. of Southampton*

Author: **Kaisa Henttonen**, *U. of Eastern Finland*

Author: **Ville-Veikko Piispanen**, *U. of Eastern Finland*

We study circular economy ventures in Finland to develop a model of how social innovators use cultural entrepreneurship, symbolic and ideational resources, such as stories, categories, and concepts, to engage stakeholders in social innovation co-creation. Social innovators, whose creative work focuses on complex, deep-rooted social problems, regularly struggle in engaging customers and other stakeholders in innovation co-creation, risking the lasting impact of their innovations. The initial findings of our study, which draw on an inductive analysis of 31 circular economy venture founder interviews and an original venture archive, reveal a range of cultural entrepreneurship that the ventures use in shaping their customers' engagement in different stages of social innovation co-creation and concentrating either on social problems or solutions. These findings contribute to the literature in cultural entrepreneurship and social innovation by demonstrating how cultural entrepreneurship allows social innovators to bridge institutional boundaries between them and the innovation stakeholders by orienting stakeholders' collaborative efforts on different aspects of social innovation and demarcating co-creation areas that allow conflicts of interests to be subdued.

Introduction to Social Network Analysis *Introduction to SNA*

Organizer: **Daniel S. Halgin**, *U. of Kentucky*

Organizer: **Prasad Balkundi**, *U. at Buffalo, The State U. of New York*

Presenter: **Jessica Rae Methot**, *Rutgers U., School of Management and Labor Relations*

Presenter: **Richard DeJordy**, *California State U., Fresno*

Presenter: **Yong Kim**, *Texas A&MU.*

Social network analysis is a field of study that focuses on social relations among a set of actors—people, teams, and organizations—rather than focus on the attributes of the actors. Network researchers have developed a set of distinctive theoretical perspectives and methodological techniques for collecting data, statistical analysis, and visual representation. This PDW's goals are to: • Introduce members of the Academy of Management to social network theory and analysis • Discuss both micro and macro management research based in social network theory • Introduce participants to UCINET and other social network analysis tools • Guide participants on how to learn more about social network analysis

Executives' Political Appointments and Geographic Origins (Asynchronous)

ONE: Top Executives' Political Appointments and Environmental Performance of Firms    

Author: **Haifeng Tian**, *Northeastern U.*
Author: **S. Y. Zhu**, *BASIS*

We examine the effect of top executives' political appointments on the environmental performance of firms. Building on resource dependence theory, we first suggest that a board chair's political appointment protects the firm from environmental regulations, motivating the chair to sacrifice environmental performance for economic gains. We then apply the Confucian social model to explain that a chair's political appointment can reflect the chair's prosocial motives, motivating the chair to increase the firm's environmental performance. We further theorize that if political appointment mainly reflects a chair's motive to obtain protection from regulatory agencies, a chair's power within a firm shall not moderate the effect of the chair's political appointment. In contrast, if political appointment mainly reflects the chair's prosocial motives, the chair's power within a firm shall significantly strengthen the effect of the chair's political appointment. Using a large-scale and longitudinal data of privately-controlled firms that are publicly traded in China, we find considerable support for the resource dependence mechanism but not for the Confucian social model: a chair's political appointment reduces a firm's environmental performance, measured by a comprehensive index of environmental outcomes and by green patents, and chair power does not moderate the effect of political appointment.

ONE: CEO Geographic Origin and Corporate Environmental Irresponsibility   

Author: **Lei Du**, *Central South U.*
Author: **S. Y. Zhu**, *BASIS*
Author: **Shenggang Ren**, *Central South U.*

Although research on place attachment and place identification shows that place of origin greatly influences people's cognitions, emotions, and behaviors, strategic management scholars have paid limited attention to how CEO place of origin influences strategic decision making. Building upon theories and studies about place attachment and place identification, we explain why Chinese CEOs are especially likely to have strong home province attachment and home province identification. We then predict that a Chinese firm's corporate environmental irresponsibility (CEIR) in its headquarters province will be reduced if the province is the CEO's home province. In addition, we propose that the negative effect of CEO home province on CEIR will be stronger when the CEO's home province has better scenic quality but weaker when the CEO's home province has more pollution. Moreover, we predict that the negative effect of CEO home province on CEIR will be strengthened by the CEO's board and political appointments in the home province. Using longitudinal data (2008-2018) covering 637 Chinese public firms in 18 high-pollution industries, we find strong support for our hypotheses. Our findings are robust to alternative measures of key variables, units of analysis, methods of estimation, and the potential presence of omitted variables.

ONE: Agricultural Origins of Corporate Pro-environmental Behavior  

Author: **Qian LI**, *Shanghai International Studies U.*
Author: **Jianan Wang**, *School of Business and Management, Shanghai International Studies U.*

Environmental protection, as a topic of continuous social concern, has put forward higher requirements on enterprises. Using the rice theory, we develop an agricultural perspective on the relationship between geographical distribution of rice cultivation and corporate pro-environmental behavior. Based on the data of listed companies from 2010 to 2019 in China, our results indicate that rice culture in the external environment which the company embedded in has a positive association with corporate reactive pro-environmental behavior, while rice culture in the internal values which CEO provided with is positively related to the corporate proactive pro-environmental behavior. Additional analyses suggest that mandatory green development policy and spontaneous migration are two moderators through which rice culture affects corporate pro-environmental behavior. This study not only sheds light on the agricultural drivers behind corporate pro-environmental behavior and extends the theoretical understanding of how macro cultural factors influence corporate strategic decisions, but also offers implications for government and enterprises to better supervise and improve green management.

Sustainable Leaders, Managers and Workplace Behavior (Asynchronous)

ONE: From Passive to Active: The Positive Spillover of Work-Required Green Behavior on Green Advocacy  

Author: **Zhang Shujie**, *Shandong U., China*
Author: **Shuang Ren**, *Deakin U.*
Author: **Guiyao Tang**, *Shandong U.*

Drawing on self-perception theory, we hypothesize that taking up work-required green behavior can lead to the adoption of green advocacy in the future in a positive spillover. Further, we propose that pro-environmental self-identity mediates the influence of work-required green behavior on green advocacy and the strength of such effect is contingent upon employees' moral identity. To test our hypothesized model, we collected three-wave data from 297 employees from a large manufacturing firm in China. Our results confirmed the positive relationship between work-required green behavior and green advocacy, and verified the mediating role of pro-environmental self-identity in this relationship. On the moderating role of moral identity, we found that the mediating effect of pro-environmental self-identity is stronger when moral identity is high rather than low. Our results answer calls to examine the spillover of passive green behavior to proactive green behavior at the employee level and advance workplace green behavior research by identifying a novel psychological path. By demonstrating the moderating role of moral identity, we extend knowledge about the mixed impact of past green behavior and moral identity to stimulate green behavior in the future.

ONE: "Either You Need Me, or I'm Leaving!" How Sustainability Managers Influence the Legitimacy Process  

Author: **Cynthia Friedrich**, *Technische U. Kaiserslautern*
Author: **Katharina Stefanie Spraul**, *Technische U. Kaiserslautern*

Legitimacy is an important prerequisite for any occupational group and the result of a complex social process. This holds especially true in contested contexts such as sustainability transformation within organizations. However, legitimacy research has so far almost exclusively referred to organizations and strategies for achieving legitimacy have been studied separately from this process. We address this gap by examining the legitimacy strategies of 30 sustainability managers from corporate and public organizations using semi-structured interviews. We embed our empirical findings in a model which builds on the legitimacy process and incorporates eight effect mechanisms reflecting the different legitimacy dimensions. In doing so, we consider the process as well as the perception perspective of legitimacy and show that the strategies used to achieve legitimacy affect different parts of the legitimacy process depending on the underlying effect mechanism. For researchers, this insight opens possibilities for more specific inquiry with respect to the effectiveness of legitimacy strategies. For those representing new occupations in search of legitimacy, the findings point to potential areas of application for legitimacy strategies.

ONE: Taking Sustainability Initiatives for Organizational Performance: A Serial Mediation Model  

Author: **Ozlem Ayaz Arda**, *Lecturer at Brunel Business School, Brunel U. London*
Author: **Ainurul Afizah Rosli**, *Brunel Business School*

Despite its growing research popularity, corporate sustainability (CS) has received relatively little attention in terms of explaining its underlying dimensions, the so-called triple bottom line (TBL): environmental, social, and financial performance. Relying on the systems thinking view, this paper offers a comprehensive approach that enhances our understanding of these isolated TBL dimensions. Based on a sample of Turkish firms from various industries, a serial mediation model was formed, and structural equation modelling is undertaken to understand the relationships among the dimensions of CS-TBL. Thus, we holistically examine whether environmental proactivity and operational effectiveness mediate the relationship between corporate social performance and organizational performance. The collective role of both environmental proactiveness and operational effectiveness is also examined on reaching the organizational performance via taking societal initiatives. Our findings indicate that all three aspects of sustainability have mutually supportive relationships as demonstrated by positive mediating mechanisms between corporate social performance and organizational performance. The mediation results correspond with the systems thinking view (STV). They indicate that organizations need to rely on various methods to integrate and manage isolated parts of the TBL in achieving CS while building up three areas of the triple bottom line which boosts organizational performance.

Social Impact and Legitimacy in Social Enterprises

SIM: Social Impact of Social Enterprises: A Systematic Review 

Author: **Georgios Polychronopoulos**, *Prague U. of Economics and Business*

Author: **Martin Lukeš**, *Prague U. of Economics and Business*

Social impact is a highly valued concept of social entrepreneurship. However, there is a continuous scholarly debate on what social impact is and how it should be measured. Through a systematic review, we assess the construct clarity of social impact, examining its definitions, scope conditions, semantic relationship to constructs, and coherence. Our findings suggest that social impact lacks construct clarity. Building upon Gallie's theory of essentially contested concepts, we show that social impact can be regarded as an essentially contested concept and suggest a conceptualization of social impact as a cluster concept. Turning to Mandelbrot's theory of fractals and the property of multi-similarity, we conjecture that essentially contested concepts further consist of essentially contested sub-components in the field of social entrepreneurship. Drawing on several disciplines, this review resolves existing tensions on the concept of social impact and facilitates future research on assessing social impact

SIM: Profit and Purpose – An Unlikely Friendship?

Author: **Christina Lara Kannegiesser**, *U. of Mannheim*

Author: **Laura Marie Edinger-Schons**, *U. of Mannheim, Business School*

While recent scholarly and practitioner debates are touting social enterprises as a potential solution to grand challenges, few studies have so far investigated how stakeholders perceive such hybrid ventures that combine a social mission with profit orientation. The authors develop a conceptual framework proposing that individuals generally evaluate organizations with a social mission as more legitimate than those which lack such a purpose beyond profits. Yet, drawing from recent research on "tainted altruism", i.e., research which reported stakeholder backlashes for organizations with a social mission that seek profits, the framework suggests that individuals perceive social enterprises with high profit payout levels as greedy, which lowers their overall legitimacy perceptions. Furthermore, the framework proposes that the tainted altruism effect will depend on the founder's gender in a way that female founders will be penalized more strongly than male founders for seeking profits while pursuing a higher purpose. The authors test the conceptual framework using a vignette experiment, finding that the proposed effects do occur, but only for a subset of respondents with high levels of socially responsible consumption involvement. Results contribute to research on social enterprises, theories on the purpose of business, and gender stereotypes in social entrepreneurship.

SIM: Corporate Social Responsibility and Financial Performance in Social Enterprises

Author: **Diane-Gabrielle Tremblay**, *U. du Québec, TÉLUQ*

Author: **Mahinda Wijesiri**, *U. of Quebec*

Author: **Peter Wanke**, *COPPEAD Graduate School of Business, UFRJ, Rio de Janeiro*

There is a distinct lack of research into the relationship between the socially responsible practices and financial performance in the social enterprises. This study fills this gap by investigating this link in hybrid organizations using a sample of microfinance institutions (MFIs) in Latin America. Drawing on data for 807 MFIs in Latin American countries, we find that improving the financial performance of MFIs results in availability of slack resources that can increase MFIs ability to invest in socially responsible activities. The overall findings show that the causality of direction between corporate social responsibility (CSR) and financial performance runs from financial performance to CSR. The overall findings show that the causality of direction between corporate social responsibility (CSR) and financial performance runs from financial performance to CSR. Artificial Neural Networks (ANNs) were used to provide a robustness check for endogenous effects between the two dynamics.

SIM: Social Aspirations in Early-Stage Enterprises. A Typology of Role Models and Influence Mechanisms

Author: **Alessia Argiolas**, *U. Cattolica del Sacro Cuore*

Author: **Laura Maria Ferri**, *Catholic U. of the Sacred Heart, Milan*

Role models are widely acknowledged, both in theory and in the practice, as important for influencing nascent entrepreneurs' intentions and goals. Yet research about their role for social entrepreneurship has been scarce. This explorative study based on a cohort of 29 entrepreneurs in an accelerator program in Nairobi represents a first step to fill this gap. Relying on Role Model theory and Social Network theory the study analyses the advice exchange among the entrepreneurs during the program and provides a typology of role models for social impact goals and aspirations and it suggests two mechanisms (aspirational and instrumental) through which entrepreneurs learnt from role models about developing social goals and introducing them organically in their organization goal structure.

SIM: Transforming Cities: How Organizations Navigate Resistance to Urban Revitalization  

Author: **Francesca Capo**, *U. of Milano Bicocca*

Author: **Antonino Vaccaro**, *IESE Business School*

Author: **Pascual Berrone**, *IESE Business School*

Prosocial organizations represent key actors in the quest to promote positive changes, foster social impact and revitalize cities. Notwithstanding their importance in tackling the increasing challenges (i.e. pollution, inequality) threatening our society, their work may be jeopardized by the presence of multiple form of resistance. Scant research attention has been devoted to understand how prosocial organizations may navigate these resistances. We address this gap by engaging into a qualitative investigation of a Sicilian cultural center. We found this prosocial organization could navigate different instances of resistance by enacting mechanisms that leveraged on idiosyncratic characteristics of space. Our study contributes to literature about prosocial organizations, stakeholder engagement and urban transformation, while also complementing research investigating the role of space in management.

Discussant: **Anne M. O'Leary-Kelly**, *U. of Arkansas*

Intimate partner aggression (IPA), a prevailing global health and social issue (United Nations [UN], 2020) have undeniable spillover effects at work. The criticality of examining how IPA affects work lives has become even more relevant given mounting reports of increased victimization in the current pandemic era. While empirical research on work-related IPA (WIPA) continues to accumulate, the application of theory in WIPA research has generally been limited. Advocating for more theory-driven scholarship, this symposium aims to present compelling works that applied a variety of theoretical perspectives in the study of WIPA. We offer three papers that applied strong theoretical perspectives (e.g., conservation of resources theory and work-home resources perspective, appraisal theory of emotions, and stigma theory) that enrich our understanding of WIPA. These studies also consist of both field and archival data collected in an extensive range of research designs (e.g., a cross-sectional nationally representative survey, longitudinal/time-lagged). Moreover, these studies were undertaken in different countries (e.g., USA and the Philippines) – welcoming the opportunity for discussion about cross-national differences in intimate partner aggression. These three papers set the stage for more theory-driven scholarship, thereby contributing to building a stronger body of scholarship on WIPA.

Regulatory Risk and Enforcement

STR: Peer Responses to Environmental Regulatory Sanctions: Local versus Distant Search

Author: **Boshuo Li**, *U. of Miami*

Author: **Wei Shi**, *U. of Miami*

Author: **Ioannis Ioannou**, *London Business School*

Regulators impose sanctions on firms that violate environmental laws or regulations not only to punish the violators but also to warn non-sanctioned firms that environmental misbehaviors may be penalized. Accordingly, non-sanctioned firms are motivated to respond to such sanction threats. Combining problemistic search and threat rigidity theories, we propose that rising environmental regulatory sanctions on industry peers can propel non-sanctioned firms to focus on local search and refrain from distant search, resulting in an increase in environmental lobbying, a direct and immediate strategic action that we consider as an outcome of local search, and a decrease in green innovation, an indirect and long-term strategic action that we consider as an outcome of distant search. We also propose that such effects are stronger when non-sanctioned firms find peer sanctions a more salient threat, reflected by higher media exposure of non-sanctioned firms' environmental misbehaviors. Using a U.S. sample of 5,893 firm-year observations, we find support for our arguments. This study reconciles problemistic search and threat rigidity theories by highlighting the heterogeneous influence of external threats on local search and distant search and showcases the spillover effect of regulatory sanctions on peer firms.

STR: Strategic Consequences of Democratic Backsliding: The Trump Effect on Firm Regulatory Risk

Author: **Yifan Wei**, *Asper School of business, U. of Manitoba*

Author: **Jinyuan Song**, *George Mason U.*

Author: **Timothy Werner**, *U. of Texas at Austin*

Author: **Nan Jia**, *U. of Southern California*

We demonstrate that democratic backsliding – the gradual erosion of political institutions in advanced democracies as a result of rising populism – generates regulatory risks for firms. Populist regimes undermine apolitical regulatory norms and practices by selectively targeting their opponents. Using a sample of all publicly traded U.S. firms over the 2009-2019 period, we find that, after the shock election of Donald Trump to the American presidency, firms with more business ties in China – a clear subject of Trump's populist rhetoric – faced greater regulatory scrutiny from the U.S. Securities and Exchange Commission. This effect was even more pronounced for firms operating in technologically intensive industries, which were also targeted by Trump, and for firms that were politically positioned closer to the Democratic Party.

STR: Escaping the Commons Dilemma: Enforcement and Collective Performance in Socio-Ecological Systems

Author: **Marc Legrand**, *HEC Paris*

Author: **Bertrand V. Quelin**, *HEC Paris*

We develop a model of institutional emergence in a socio-ecological system (SES) to analyze the long-term impact of rule enforcement in collective action on the process of finding sustainable institutions to govern common pool resources. We argue that enforcing the rules increase the likelihood of finding an appropriate institution and decreases the duration of the emergence process. Using the SES framework and the literature on collective action, we propose an agent-based model (ABM) in which appropriators collectively design an institution to escape the tragedy of the commons through adaptation, while being subject to monitoring and sanctioning. We find that enforcement has a positive impact on the efficiency of the emergence process, moderated by the cost of enforcement. We offer further theoretical and empirical implications.

Paper is Available to Meeting Registrants Only.

STR: Hybrid Logics and Organization: A Framework to Identify Conflicts Between Institutional Logics

Author: **Eric C. Mota**, *Wichita State U.*

Hybrid organizations are arenas of conflict when they combine elements from different institutional logics. These conflicts, however, are largely unknown, or at best vaguely explained. We propose a framework to identify conflicts in hybrid organizations. We introduce this framework and apply it to unveil conflicts in organizations that combine commercial and public-sector logics. We show that combining these logics gives rise to three conflicts—managerial locus of attention, redeployment of idle resources, and regulatory oversight. Then, we analyze the impact of these conflicts on different dimensions of governance. Our application results in sets of practices capable of mitigating the impacts of conflicts, preserving organizational efficiency and public interest. We generalize the use of this framework to compare other institutional logics. Our work strengthens the analytical properties of research in institutional logics and provides actionable insights to manage hybrid organizations.

CEO Temporality and Changes in the Executive Team

STR: Strategic Renewal of Hollywood Movies Through Narrative Transformation 

Author: **Avimanyu Datta**, *Illinois State U.*

Author: **Smita Srivastava**, *Wichita State U.*

Author: **Arvin Sahaym**, *Washington State U.*

The question of how the change in the core team influences strategic renewal process has long concerned strategy researchers. We draw on strategic renewal literature and combine it with narrative transformation perspective from cognitive psychology to study how and when a core crew influences Hollywood movie franchises' strategic renewal process. We argue that in the context of the motion picture industry, where the revenue cycle is short, the changes in core crew can trigger strategic renewal via narrative transformation, a non-linear storytelling process, thereby affecting movie franchises' financial performance. Using hand-collected longitudinal data for a sample of 1,120 movies nested among 337 franchises produced between 1948 and 2019 (over 71 years) we find that sequels or prequels made by updated core crews motivate narrative-based strategic renewal and hence attract audiences, generating superior revenue. We contribute to the literature on change in the upper echelon, specifically core crew and narrative-based strategic renewal.

STR: CEO Succession and TMT Changes – The Role of CEO's Temporal Depth

Author: **Maximilian Weis**, *WU Vienna*

Author: **Patricia Klarner**, *WU Vienna U. of Economics and Business*

Why do some new CEOs change their TMT more than others? Prior research has predominantly focused on strategic and performance outcomes of CEO succession, paying little attention to top management team (TMT) changes following succession. We fill this void by shedding light on the quantitative and qualitative nature of TMT changes following CEO succession. Specifically, we examine the role of new CEOs' temporal depth, a central cognitive feature which captures the temporal distance that individuals consider when thinking about past and future events on changing their TMT. We propose that new CEOs with a longer temporal depth will initiate fewer TMT changes after taking office, and increase their teams' diversity. Studying CEO appointments in S&P 500 firms between 2004 and 2020, and by applying a novel machine learning approach to measure CEO temporal depth, we find evidence that new CEOs change the TMT in line with their temporal disposition. Our paper contributes to CEO succession research by introducing temporal depth as an important disposition of new CEOs, which influences TMT changes. We also contribute to TMT turnover research by investigating the quantitative and qualitative nature of TMT changes. We enrich research on temporality in strategic management, which has mainly studied the strategic consequences of executives' temporal dispositions, by shedding light on the role of CEO temporal depth in TMT changes. Finally, we advance methodological approaches in strategic management research by introducing a novel natural language processing approach.

STR: Temporal Focus, CEO Succession and Firm Performance During an Industry Discontinuity

Author: **Alexander Janotte**, *U. of St. Gallen*

The replacement of the chief executive starts a new chapter in the history of a firm. To offer a more nuanced understanding of the succession-performance relationship, we introduce CEO temporal focus as an important individual-level contingency. Acknowledging the temporal heterogeneity of outgoing and incoming CEOs, we argue that a shift in CEO temporal focus towards a present-oriented successor promotes adaptation, while keeping disruption at moderate levels. A shift towards a future-oriented successor, however, strengthens disruption, preventing the successor from reaping potential adaptation benefits. Based on a unique sample of private banks in Switzerland and Liechtenstein, we find that a shift towards present focus enhances, whereas a shift towards future focus decreases post-succession performance. Our findings extend the multi-level contingency framework of CEO succession and provide novel insights into the role of subjective temporality during a major industry-level discontinuity.

Paper is NOT Available. Please contact the author(s).

STR: When Are Minority Executives Fired? Examining Four Factors Using Sport Coaches and Survival Analysis  

Author: **David B. Wangrow**, *Marquette U.*

Author: **Margaret Hughes-Morgan**, *Marquette U.*

Society's motivation to eliminate racial and ethnic disparities has directed attention towards many areas, including executive leadership. Prior studies examining the dismissal of minority executives offer equivocal findings – likely because prior research has not examined whether organizational and strategic factors have different effects on White and non-White executives' dismissal. To address this, we develop a sample of college basketball coaches over 17 years as a proxy for executives and utilize Cox Proportional Hazard models to analyze the relationships of four factors with White and non-White coach dismissal. Our findings provide new insights regarding dismissal for executives of color. First, executives of color who lead organizations with less investment or weaker competitive peers are more likely to be dismissed than their White counterparts. Second, executives of color with little or no prestige developed during their tenure are more likely to be dismissed than White executives with similarly low levels of prestige. Lastly, strategic change is associated with a greater likelihood of executives of color being dismissed, but a decreased likelihood of dismissal for White executives. These findings provide further support for glass ceiling and glass cliff explanations of dismissal, but also suggest potential institutional explanations of minority executive dismissal.

Strategic Leadership: The Role of Top Managers' Characteristics

STR: Dare To Be Different: CEO International Experience and Strategic Deviance

Author: **Melanie Ward**, *U. of South Carolina, Darla Moore School of Business*

Extant literature on CEO international experience largely supports the positive relationship between CEO international experience on firm performance and internationalization; however, less is known about the decisions CEOs make that could lead to such outcomes. As international experience reflects not only cultural intelligence, but also correlates with traits like openness to experience, the impact of international experience may extend beyond strategic decisions that are directly tied to capabilities in a foreign context (e.g., foreign direct investments). In other words, CEOs with international experience may feel more comfortable making decisions that deviate from industry practices regardless if they relate to a cross-cultural decision. Integrating the ability, motivation, and opportunity framework with managerial discretion and drawing upon upper echelon's theory, I propose that CEO international experience has a positive relationship with strategic deviance. Specifically, CEO international experience reflects the ability and motivation to be distinct while environmental uncertainty and the international experience of the board provide the opportunity to pursue deviant decisions.

STR: Female CEOs, R&D and Risk Perceptions: Mitigating Gender Bias in Long-Term Stock Market Performance

Author: **Yanglinfeng Zheng**, *School of Economics and Management Tsinghua U.*

Author: **Kris Mikel Hong**, *School of Economics and Management Tsinghua U.*

Author: **Wei Chi**, *Tsinghua U.*

Author: **Wei Shen**, *Arizona State U.*

Recent research shows that despite having reached the corporate heights, female corporate leaders are still subject to gender bias. We contribute to this growing vein of literature by examining how female CEOs, as strategic leaders, can actively mitigate gender bias. We theorize that due to role incongruity perceptions, firms led by female CEOs are given lower long-term market valuations by investors. Yet we also propose that female CEOs may have the ability to actively influence investor perceptions through the firm's strategic actions. Given R&D's link to the male-type characteristic of risk-taking, we hypothesize that increasing R&D levels mitigates the effect of gender bias on firm valuation. Using a sample of public firms listed in China 2012 to 2019, we find that increased R&D weakens the negative relationship between female CEOs and the firm's Tobin's Q. We also find that female CEO power and top management team support positively interact with female CEO self-presentation strategy. We argue that these findings indicate that while investor gender bias may be a prevalent phenomenon, female CEOs are able to actively mitigate this bias through a self-presentation strategy.

Paper is Available to Meeting Registrants Only.

STR: Does Managerial Human Capital Shape Investment Strategy?

Author: **Huafang Liu**, *Kean U.*

We build a model investigating how managerial human capital affects a firm's optimal choice of external investment vs. internal investment strategy. At the heart of the model is the idea that managers with more general skills have better outside opportunities and hence can command greater compensation from their employer. We show that this greater compensation will optimally take the form of stronger incentives, which in turn lead to higher managerial effort. In this case, it becomes optimal for the firm to engage in activities in which managerial effort is most valuable. To the extent that the success of external investment through acquisitions is more directly dependant on managerial effort than internal investment which is relatively more dependent other internal factors; then we should observe a positive effect of general skills on firms' tendency to adopt external investment strategy. Moreover, this relationship should be more pronounced the greater the agency concerns and associated strength of incentives. Empirical analysis using U.S. data provides consistent support for the above model predictions. To address endogeneity concerns, we use variation in enforceability of non-compete agreements as an instrument for general managerial skills. The IV regressions suggests a causal and positive impact of general skills on external investment strategy.

STR: Promoting Nonfamily Managers' Felt Inclusion in Family Business: Role of Owner Paternalism

Author: **Chi Zhang**, *Tongji U.*

Author: **Liang Jian**, *Tongji U.*

Author: **Xu Zhang**, *Tongji U.*

Nonfamily managers play a vital role in family businesses. However, they often feel like "second-class citizens" within the firm, which hampers their work achievements. Therefore, it is important to explore ways to reduce the sense of marginalization of nonfamily managers. In the study, we propose that owner paternalism can enhance nonfamily managers' perceived inclusion. Further, with a higher level of felt inclusion, nonfamily managers become more engaged in their work and create more value for the family business. Survey data were collected from 183 matching data of owners and nonfamily managers in China. The hypotheses were largely supported: (1) owner paternalism was positively related to nonfamily managers' work engagement and job performance through felt inclusion; (2) Nonfamily managers' power distance orientation positively moderated the relationship between owner paternalism and the non-family manager's felt inclusion, as well as the serial indirect relationship between owner paternalism and nonfamily managers' job outcomes through felt inclusion and job engagement. Both theoretical and practical implications were discussed.

Paper is Available to Meeting Registrants Only.

Author: **Seung-Hwan Jeong**, *U. of Georgia*

Author: **Saehee Kang**, *Florida State U.*

Author: **Kris Byron**, *Georgia State U.*

We offer a different and novel perspective on the ‘business case’ for female representation in the upper echelons. Consistent with previous research, we find a positive firm performance effect of female representation in top management, but we present a new explanation for why such effects exist that center around the interface between female executives and their subordinates (middle managers and frontline employees). We theorize that female executives can promote subordinates’ autonomous strategic behaviors as well as activate underutilized female employees’ human capital, both of which are connected to improved subsequent firm performance. We find support for both explanations using a unique large scale panel dataset from South Korea that allows us to open the black box in the interface between the upper and lower echelons of firms.

Perspectives on the Behavioral Theory of the Firm

STR: **The Mixed Gamble of Competitive Aggressiveness in Family Firms**

Author: **Jaeyoung Cho**, *U. of Wollongong in Dubai*

This study develops a mixed gamble perspective of competitive aggressiveness that explains how family-controlled firms frame and evaluate the difficult trade-offs in pursuing competitive aggressiveness that entails potential gains and losses in financial wealth (FW) and socioemotional wealth (SEW). An analysis of 570 listed Korean firms from 1998 to 2017 reveals that family firm owners are reluctant to pursue competitive aggressiveness because of aversion to loss in and risk to their SEW and uncertain FW gains. Under vulnerable conditions, however, family owners are more willing to undertake an aggressive series of competitive actions because FW and SEW could disappear entirely if the firm does not survive.

Paper is Available to Meeting Registrants Only.

STR: **An Integrated View on Sustained Competitive Advantage**

Author: **Egor Krivosheya**, *Moscow School of Management Skolkovo*
Author: **Ekaterina Semerikova**, *Moscow School of Management Skolkovo*

Existing views on sustained competitive advantage (SCA) remained largely fragmented. Currently, dominant theories focus largely on the internal supply-side value creation mechanisms, while alternative views addressing such challenges have developed independently. As a result, some of the prescriptions of these theories become misleading, especially in the discordant world characterized by constant environment changes. Acknowledging the progress made by existing theories of SCA (e.g., model dynamics and importance of internal resources) and integrating the insights from various corners of strategic management literature (e.g., business models, managerial cognition), we offer a novel theory of SCA. Using it, we show that SCA is a function of strategic, microfounded, adaptive, relevant, and timely (SMART) responses to external environment changes and internal business model innovation.

Paper is Available to Meeting Registrants Only.

STR: **The Effects of Analyst Coverage on Innovation Strategy: A Cognitive Perspective**

Author: **Shinhye Gloria Ahn**, *Seoul National U.*
Author: **Theresa Cho**, *Seoul National U.*

In this study, we investigate the effects of organizational cognition on organizational innovation, along with the role of security analysts as the primary information intermediaries in the financial market. Using a 19-year panel data of global biopharmaceutical firms, we found that heightened coverage by security analysts tended to increase managerial attention on exploitation (as opposed to exploration); in turn, this cognitive shift increased the quantity and reduced the level of novelty of the R&D activities. Such relationships became strengthened when the security analysts that cover the firms had higher reputation. These results provide novel insight on the interplay among managerial cognition, financial market pressure, and firm-level innovation process.

Paper is NOT Available. Please contact the author(s).

STR: **Taking Stock of the Behavioral Theory of the Firm While Looking to the Future: A Bibliometric Review**

Author: **Jing Xiao**, *School of Management, Huazhong U. of Science and Technology*
Author: **Zhi Yang**, *School of Management, Huazhong U. of Science and Technology*
Author: **Zhi Chen**, *School of Management, Huazhong U. of Science and Technology*

Although the Behavioral Theory of the Firm (BTOF) has drawn increasing attention in organizational studies, there lacks an overall picture of its development status. Using bibliometric methods, we conducted a comprehensive review of 510 articles on BTOF in different dimensions: research methodologies and contexts, the audiences of the BTOF studies, related organization theories, contributing articles, themes, and their dynamic changes. We analyzed the most co-cited articles and the most boundary-spanning studies and identified 13 research themes related to BTOF. The BTOF has been an emerging organization theory with significant implications in innovation, organizational risk-taking, etc. The assumptions, concepts, and mechanisms in BTOF have influenced a wide range of theories in organizational studies, such as organizational learning, evolutionary economics, and institutional theory. Academic interest in the Asian context, especially in the East Asian context, has increased significantly since 2014. Regression methods have attracted great attention, while the mixed-methods approach or exploratory methods are under-utilized in the BTOF literature. The results also suggest that research on adaptive aspirations, organizational slack, R&D investment, and selective attention to multiple goals seems to have much potential in the future.

Author: **Qining Jia**, *Xi'an Jiaotong U. School of Management*
Author: **Zelong Wei**, *Xi'an Jiaotong U.*

Our study explores the double-edge sword of competitor big data analytics for firm performance through dominant logics conflict and market insight in the holistic cognitive paradigm. The empirical analysis of 334 Chinese firms generally supports our argument, showing that competitor big data analytics affect dominant logics conflict negatively and thus enhance performance, however, it has an inverted U-shaped relation with market insight and performance. Besides, holistic thinking weakens the positive role of competitor big data analytics on dominant logics conflict, nevertheless, it is beneficial to strengthen its positive effect on market insight and weaken its negative effect.

STR: **Respond or Forbear? How Stakeholders Influence Rivalry in a Non-Financial Context**

Author: **Waqas Nawaz**, *Smith School of Business, Queen's U.*

Why and how firms decide to aggressively respond or strategically forbear rival's attack? Scholars of competitive dynamics typically answered such a question from firm or market perspective, using financial rationality. They ignored the ability of stakeholders to influence competition between rivals in a non-financial context. Responding to the call of Chen and Miller (2015), this study explores stakeholders' role in rivals' competition over environmental sustainability issues. Specifically, I survey environmental action/response dyads of Coca-Cola and Pepsico over a period of 15 years (2006-2020). The goal is to build a theory around how external stakeholders' interests and perceptions affect focal firm's motivation to aggressively respond or strategically forbear rival's attack. This study inductively develops a new typology for rival's actions based on stakeholders' perception of these actions. In this sense, if rival's action compels stakeholders to make unfavorable inferences about focal firm, aggressive response becomes inevitable, even if the response is financially infeasible. But if rival's action fails to impress stakeholders, focal firm remains unmotivated to respond. Contributing to the AMC framework, results suggests that some rival-actions motivate focal firm to respond aggressively (influential actions) than others (skeptical and controversial actions), which is determined by stakeholders' perception of those actions.

STR: **Multi-Factor-Market Contact: From Forbearance to Vengeance and Homogeneity**

Author: **Reha Karadag**, *U. of Minnesota Duluth*

Multimarket contact is an important consideration in the analysis of firm competitive behavior. However, the role multi-factor-market contact—contact across multiple factor markets—plays in factor market rivalry has largely been overlooked. To explore the relationships among multi-factor-market contact, factor market competition, and firm competitive behavior, I combine arguments from the existing competitive dynamics and resource-based view literatures. To empirically capture these relationships net of the potentially confounding effects of product market competition, I test my hypotheses in the upstream oil and gas industry, where firms compete for scarce resources to produce commodities. Analyzing panel data that comprise over one million firm-month observations from 5,445 upstream oil and gas companies, I find evidence that multi-factor-market contact makes rivals act less intensely but also respond more aggressively. Further, factor market competition engenders action heterogeneity, but multi-factor-market contact weakens this effect toward homogeneity.

STR: **Tough Bargains: When Cooperation is More Competitive than Competition**

Author: **Joachim Henkel**, *Technical U. of Munich*

Economic agents frequently take long-term actions, regarding for instance investments in cost reduction or R&D, before engaging in more short-term interactions, e.g. through price setting. Those short-term interactions may be noncooperative as for example competition on a consumer market, or cooperative and based on negotiations. This raises the question of how long-term actions that prepare for subsequent cooperation differ from those that precede noncooperative interaction. Can it happen that agents prepare more aggressively for cooperation than for competition, and thus destroy some of the value they create through cooperation by preparing for it? If so, under what conditions? To address these questions, I analyze two-stage duopoly games in which agents move noncooperatively in Stage 1, followed by either noncooperative or cooperative moves in Stage 2. In the latter case, a bifurcated game, agents bargain in Stage 2 over how to divide the joint payoff. I show that Stage-1 actions can be more competitive in preparation for cooperation than in preparation for noncooperative interaction, in the sense of deviating more from the benchmark of collusion in both stages, and derive conditions for this to be the case. For instance, in preparation for a merger competing firms invest more in cost reduction than when preparing for price competition. Such increased investments can be wasteful for the duopolists and for society. My results also suggest that economic actors should pay attention to the pre-negotiation phase when arranging cooperation talks.

Digitalization Track: Antecedents and Outcomes of Digitalization

TIM: How Can Firm Internationalization Performance be Enhanced through Digitalization?

Author: **Jianghua Zhou**, *Beijing Normal U.*
Author: **Ning Gu**, *Beijing Normal U.*
Author: **Si Zhang**, *Associate Professor, U. of Chinese Academy of Sciences*

Based on an empirical study using a panel data of Chinese listed firms, we explore the fundamental mechanisms by which firms convert the edge derived from digitalization into internationalization performance. We find that firms' digital investment effectively facilitates the establishment of international strategic alliances (ISAs) through which firms yield better internationalization performance. These effects become stronger when firms are more digitally conscious. Our study highlights the significance of firms' digitization in shaping international performance and reveals specific mechanisms involved. Important organizational contingency has also been identified.

Paper is Available to Meeting Registrants Only.

TIM: Optimal Distinctiveness of Digitalization and Innovation Performance

Author: **Yihui Xiao**, *School of Business, Renmin U. of China*
Author: **Ruixin Zeng**, *School of Business, Renmin U. of China*

Although scholars have tried to explain the relationship between digitalization and innovation, results are mixed from different perspectives. Building on the optimal distinctiveness theory, we explore how and when firms' distinctiveness of digitalization affects innovation performance. We theorize that there is an inverted U-shaped relationship between the distinctiveness of digitalization and firms' innovation performance, which can be strengthened by government subsidies and weakened by firms' negative aspiration performance gap. We test the hypotheses using a panel dataset of 1871 listed firms in the manufacturing industry in China from 2011 to 2020. The empirical results support our hypotheses. Our study contributes to the research on optimal distinctiveness theory and innovation performance.

TIM: Antecedents of Individual Innovative Behavior in the Digital Era

Author: **Burcu Kor**, *Hogeschool van Amsterdam*
Author: **Daniel Rodriguez Fernandez**, *Amsterdam U. of Applied Sciences*
Author: **Elfin Acarturk**, *Amsterdam U. of Applied Sciences*

In the digital era, an innovative capability is viewed as core to the competitiveness of a firm. Firms can increase their innovative capability by taking advantage of individual innovative behavior. Thus, it is crucial to find out which individual and/or contextual factors promote individual innovative behavior at work. In response to promoting individual innovative behavior innovation, perceived entrepreneurial orientation of firms, perceived innovative climate, digital maturity and self-leadership may motivate individuals to engage in innovative behavior in the workplace. Therefore, this research seeks to gain a better understanding of how perceived entrepreneurial orientation of firms, perceived innovative climate, digital maturity, and self-leadership influence individual innovative behavior in the banking sector. A questionnaire survey was conducted and 125 valid replies were received. The results of this study indicate that employees working in the banking industry, which have a high digital maturity, are more likely to engage in innovative behavior when firms support entrepreneurial orientated strategies, an innovative climate, and when employees adopt self-leadership skills.

TIM: Consumer Concerns of Personal Data and Privacy: A Systematic Review

Author: **Roger Luz Da Rocha**, *COPPEAD Graduate School of Business, UFRJ, Rio de Janeiro*
Author: **Paula Chimenti**, *COPPEAD Graduate School of Business, UFRJ, Rio de Janeiro*

This article provides an overview of extant literature addressing consumer privacy in the digital context over the last decade. The number of cyber-attacks, data leakages, and invasive uses of technological devices has considerably increased in recent years, leading to an increase in consumers' concerns about their personal information. The objective of the present research was to develop an analysis of the existing literature on consumer privacy, highlighting the state recent research dealing with consumers' perceptions of threats and risks to their privacy in the digital context. The study developed a sensitivity continuum regarding types of personal consumer data, as well as data use concerns. The results revealed that some data was considered more sensitive than other data; that is, there was a perception of sensitivity and importance attributed by consumers to some data. This fact speaks to the concept of the privacy paradox, in which users voluntarily renounce their data in exchange for services, products, and benefits. Finally, managerial implications about information security, as well as the perceived meanings of privacy. Keywords: privacy; data privacy; consumer privacy; consumer perception; privacy concerns; literature review

**Organizational Learning and Ecosystems Track: Ecosystems, Partners
and Networks**

TIM: Networks of Knowledge Providers and Channels of Intra-firm Knowledge Transfer 

Author: **Tomoyuki Shimbo**, *Kanto Gakuin U.*

Author: **Motohiro Nakauchi**, *Aoyama Gakuin U.*

Recent studies have paid attention to inventors' networks and showed that their structural positions affected knowledge transfer within a firm. Although prior studies on knowledge acquirers have noted the importance of networks spanning structural holes in innovation, their effects are not consistent in prior studies on knowledge providers. Also, the latter ones have not considered how the effects of providers' networks differ in the contexts of intra-unit and inter-unit knowledge transfer. We examined how providers' intra-firm networks affect intra-unit and inter-unit knowledge transfer. The results highlighted three points, as follows. First, knowledge of a provider spanning large structural holes is likely to be used by inventors in the same unit. Second, provider centrality and intra-unit knowledge transfer have an inverse U-shaped relationship. Third, the knowledge of a central provider is likely to be used by inventors in different units. These results imply that the effects of providers' networks depend on the channels of knowledge transfer.

TIM: Ecosystem Uncertainty and Technology Reemergence: H1N1 Pandemic and Ayurveda Reemergence   

Author: **Mayank Aggarwal**, *Indian Institute of Management, Ahmedabad*

Ecosystems play a crucial role in technology evolution due to their ability to structure interactions between various actors, help them manage uncertainty and ensure alignment between them. But can the ecosystem also aid in the reemergence of old technology? Can an increase in the ecosystem-level uncertainty change the nature of interaction within the ecosystems and lead to technology reemergence? To answer these questions, we study how the H1N1 pandemic impacted the Indian dermatology ecosystem and its implications for traditional medication demand. We present a multi-agent model with strategic interactions between physicians and patients and show how this ecosystem-level shock changed the nature of interaction and consequently empowered patients. Based on our model, we argue that increased ecosystem uncertainty leads to increased patient information and hence physicians are likely to prescribe drugs considered safe by patients. We also argue that this benefits traditional medicine firms due to their association with the traditional medicine system and associated authenticity. We empirically test our hypothesis using the difference in difference design and find that prescriptions for Ayurveda medicines in dermatology increased post-pandemic. This increase is more pronounced for traditional manufacturers than modern medicine manufacturers, supporting our arguments that authenticity plays a significant role in technology reemergence. Our work contributes to the literature on ecosystems and how a shock to ecosystems can help older technologies to reemerge. This work also contributes to the broader literature on technology evolution and technology reemergence by bringing in how external environment changes can drive technology reemergence.

TIM: Choosing The Right Partners: The Perspective of the External Investors in the IPO Market

Author: **Chiung-Yi Hwang**, *National Yang Ming Chiao Tung U.*

This study aims to understand the external investors' trade-offs between their expectations for newly public firms of novel innovation and their concerns of potential losses caused by information asymmetry, and how their trade-off decisions vary as their perception of newly public firms' value generated by their alliances portfolios changes. This study uses 128 newly public firms in the high-tech industries in the United States as a sample. The results highlight that the information asymmetry between corporate insiders and external investors in the IPO market affects investors' perceived value of younger ventures' organizational learning and their alliance strategies, which in turn affects the fundraising of IPOs. By doing so, this research contributes to the organizational learning theory by including information asymmetry theory into consideration and extends the understanding of the relationships between alliance strategies and organizational learning of firms by incorporating the viewpoint of external investors.

Paper is Available to Meeting Registrants Only.

TIM: Inter-Firm Modularity and the Emergence of New Platform Layers 

Author: **Richard Tee**, *U. of Surrey*

Though collaborative standardization efforts have long been observed, we have much less insight into how firms can jointly manage a platform-based standard. Our study focuses on one such effort (Symbian), which at its peak had two thirds global share of smartphones. We study the venture's early stages and focus on the collaboration in terms of governance and technological architecture. Specifically, we consider the question how interfirm modularity affected the architectural layers that comprised the jointly standardized platform. We show how, as the collaboration shifted to inter-firm modularity at the architectural and governance level, this drove a gradual process of architectural innovation. In particular, it shifted the platform layer beyond the control of the collaboration, increasing competitive dynamics and complicating effective platform leadership. By showing the dynamics of inter-firm modularization of a jointly controlled industry platform, we contribute to existing literature on platforms, modularity, and architectural innovation.

Technology Strategy and Competition Track: Data Driven Innovation

TIM: Construction Mechanism of Data-driven New Retail Business Model Loop: A Case Study of Hema

Author: **Fengquan Wang**, *Chongqing U.*
Author: **Jihai Jiang**, *Chongqing U.*
Author: **Chunhua Cai**, *Chongqing U. of Technology*

As the development driving force and new production factor in the era of digital economy, data plays an important role in new retail business model innovation that begins to show the characteristic of closed loop, a term we define as data-driven new retail business model loop, however, we know little about this process and the mechanism behind. In this paper, grounded in an in-depth case study of Hema, a fresh new retail enterprise in China, we systematically explore the construction mechanism of data-driven new retail business model loop through data network effects theory. The findings reveal that the construction of data-driven new retail business model loop includes three phases, namely start, expansion, and reinforcement, they are manifested in the dynamic cycle of “experience optimization of all touchpoints ? value network expansion ? competitive advantage realization”, with the boosting logic of data network effects behind. Specifically, according to the data network effects theory, start, expansion, and reinforcement three phases can be respectively refined as “scene matching”, “connection synergy”, and “value-adding efficiency”, the boosting logic of data network effects theory behind the construction of data-driven new retail business model loop can be realized through the dynamic cycle of “scene matching ? connection synergy ? value-adding efficiency”. The final theoretical model built in this paper can not only contribute to the existing research gaps on the loop innovation of data-driven business model and new retail business model, but also expand data network effects by its theoretical boundary and research context.

TIM: Artificial Intelligence Innovation and Privacy Law: The Moderating Role of Culture

Author: **Mustapha Belkhouja**, *Grenoble Ecole de Management*
Author: **Hyungseok Yoon**, *U. of Leeds*

With the advent of artificial intelligence (AI) centred around a logic of commercial surveillance and data capitalism, scholars are increasingly being called upon to consider the implications of privacy law. We respond by exploring the relationship between privacy law and AI innovation and how that relationship between privacy law and AI innovation varies across countries with different culture. Employing a unique dataset of AI patents, we perform a difference-in-differences analysis by exploiting the introduction of General Data Protection Regulation (GDPR). Our results show that compared with the GDPR-unaffected countries, the GDPR-affected countries exhibited a lower AI innovation rate after the GDPR introduction. Further, we find this negative effect is weaker in GDPR-affected countries that have higher levels of individualism, masculinity, and power distance, but stronger with higher levels of uncertainty avoidance. The main contribution of our study is introducing the role of privacy law and its contingencies vis à vis national culture that constitute drivers of AI innovation.

TIM: How Can IT Outsourcing Projects Benefit From Big Data Availability?

Author: **Zelong Wei**, *Xi'an Jiaotong U.*
Author: **Qining Jia**, *Xi'an Jiaotong U. School of Management*
Author: **Lulu Sun**, *Xi'an Jiaotong U.*
Author: **Wengao Huang**, *Xi'an Jiaotong U. School of Management*

Despite the increasing importance of big data, the issue that how firms can benefit from big data availability is lack of research attention. Addressing this gap, this paper investigates the effect of big data availability on IT outsourcing project performance and also how the effect varies with a vendor's project leadership and an outsourcer's control. Based on absorptive capacity theory, we developed hypotheses and examined them with data from 284 IT outsourcing projects. The results show that big data availability has a positive effect on IT outsourcing project performance. Furthermore, a vendor's transactional leadership weakens while transformational leadership strengthens the effect of big data availability. An outsourcer's behavior-based control weakens while outcome-based control strengthens the positive effect. This paper contributes to existing literature by showing how big data availability can enhance IT outsourcing project performance with different vendors' project leadership and outsourcers' control mechanism.

TIM: Crowdfunding Platforms as a Bellwether for Product Market Success 

Author: **Heeseung Lee**, *Hong Kong Baptist U.*

Author: **Likoebe Maruping**, *Georgia State U.*

The information systems (IS) literature has developed a cumulative literature on the factors underlying successful crowdfunding campaigns. Leading a successful crowdfunding campaign is not an end in itself, but a means to get a product to market. An emerging literature is beginning to explore a shift in the broader role of crowdfunding platforms from capital raising to aggregating market demand information for product innovations. However, our understanding of this role is incomplete in consequential ways. We leverage two views of crowdfunders as evaluators of new venture product innovations—one that views them as aggregators of demand information and another that views them as a novelty-seeking segment of the broader market. Based on evidence from Kickstarter and Amazon data we find a significant informational link between crowdfunding patterns and broader product market success. Product novelty is a boundary condition that can attenuate this link. The findings shed light on an emerging and broader role for crowdfunding platforms.

Paper is NOT Available. Please contact the author(s).

TIM: Nourishing Your Obscurity: Sourcing Competitors' Knowledge, Market-expansion Intent and Firm Innovation 

Author: **Chris Yao**, *Durham U. Business School*

Author: **Christos Dimitris Tsinopoulos**, *Durham U.*

Author: **Ji Yan**, *Durham U. Business School*

Author: **Qiaozhe Guo**, *Nanjing U. of Aeronautics and Astronautics*

Despite increasing research attention given to sourcing knowledge in supplier chains to develop new products and processes, few studies have examined whether and when a firm can source competitors' knowledge to innovate. In a competitive context, high levels of knowledge sourcing can be perceived by competitors as a threat, especially when the firm has greater intent to expand its market shares. Nevertheless, having no or weak market-expansion intent may hinder a firm from effectively practicing knowledge sourcing. We draw upon an absorptive capacity view and competitive dynamics perspective and offer a contingent view of the sourcing of competitors' knowledge (SCK). Using a panel dataset of Spanish manufacturing and service firms from 2006–2016, we find that a decreasingly positive relationship exists between SCK and firm innovation, and that market-expansion intent (MEI) positively moderates this relationship. Moreover, we find that the greatest innovation return is achieved at the confluence of middle levels of SCK and high levels of MEI. Our findings suggest that managers practicing SCK to innovate should be cautious about its costs and appropriately adapt the use to their MEI.

Paper is Available to Meeting Registrants Only.

TIM: The Human Side of Open Innovation Adoption in SMEs: A Configurational Approach

Author: **Giacomo Marzi**, *U. of Trieste, Italy*

Author: **Mohammad Fakhur Manesh**, *U. of Rome Tor Vergata*

Author: **Andrea Caputo**, *U. of Trento & U. of Lincoln*

Author: **Massimiliano Pellegrini**, *U. of Rome Tor Vergata*

Author: **Bozidar Vlacic**, *Católica Porto Business School and CEGE, U. Católica Portuguesa*

SMEs' willingness to adopt Open Innovation largely depends on managerial cognitive configurations. The present study inquires a scarcely explored aspect of Open Innovation, namely the human side of Open Innovation. As a result, we study the cognitive configurations leading toward willingness or unwillingness of OI adoption, specifically focusing on the cognitive side of the decision-makers. In doing so, we explore the role of Rational and Intuitive cognition, together with the NIH and NHS syndromes. Also, we study the effect of perceived barriers and perceived benefits that are able to affect the decisional outcome of managers in deciding to adopt, or not, Open Innovation. The present is grounded in a survey among 442 qualified and experienced managers working in SMEs. Results of a fsQCA analysis outlines different decisional profiles associated with willingness and unwillingness to adopt OI.

Paper is Available to Meeting Registrants Only.

TIM: Agile Work Organisation: Conceptual Framework, Structured Review, and Research Agenda

Author: **Michael Greineder**, *U. of St. Gallen*

Author: **Oliver Mäenpää**, -

The demand for fast, flexible, and novel paradigms of work organization has increased in recent years due to ever-increasing environmental uncertainty and rapid change. This phenomenon, which we refer to as “agile work organization”, is distinct from both agile methods with agile practices and strategic organizational concepts. With the increasing importance of agile work organization in practice, a separate literature area has developed. The purpose of this review article on agile work organization is to provide conceptual development, summarize the literature, and establish a research agenda. In the review reported in this paper, we systematically analyzed and critically reviewed the previously published literature in this area (46 papers). We found useful findings and insights into a new and relevant work organizational phenomenon. At the same time, we found conflicting definitions and conceptualizations, as well as research efforts that are not well integrated. The paper supports future research on agile work organization by improving conceptualization, consolidating findings, and identifying important areas for future research.

People and Innovation Track: Sustainability, Government and Innovation

TIM: How to Foster Radical Innovation in FinTechs? The Roles of Leadership Experience and Regulations    

Author: **Marko Kraljev**, *Chair for Technology & Management, TU Dortmund U.*

Research agrees that exploratory activities (experimentation with new alternatives) lead to radical innovations. Nevertheless, we still lack knowledge of what leads new ventures to pursue exploratory activities. A peculiarity of these ventures is that not only the management but also investors build the leadership that influences strategic actions like exploratory activities. Surprisingly, there is no sufficient empirical evidence if the experience of managers and investors influences the relative exploration orientation. This is of special relevance for financial technology ventures (FinTechs) that are currently striving for radical innovations. Moreover, environmental factors affect the leadership's impact on the strategic orientation. Especially for FinTechs, regulatory freedom is a crucial environmental factor that is largely overlooked by empirical research. We use a panel dataset of 1,228 FinTechs from 2013-2019 in eight countries and find that management and investor experience have a positive relationship with the relative exploration orientation. Regulatory freedom positively moderates the relationship between management experience and the relative exploration orientation. We add to theory and research on technology and innovation by introducing new antecedents of relative exploration orientation, expanding upper echelons theory research to investors, and investigating the moderating role of regulatory freedom in new ventures' entrepreneurial behavior.

TIM: Role of Carrier Technology as Innovation Engine: Does Regulation Weaken the Association?     

Author: **Shashi Kant Srivastava**, *Indian Institute of Management Sirmour, Sirmour, Himachal Pradesh, India*

Our research analyzes the role of regulation on innovation. To do so, we bring the carrier technology concept to investigate the impact of regulation on its evident association to innovations. Further, we split innovation into carrier technology-dependent and generic (carrier technology-independent). We performed our analysis using a data set of 140 countries for over three years. Additionally, we support our analysis with an instrumental variable (IV) estimator using the nation's IQ as an instrument. Our empirical findings support a negative impact of regulation on the relationship of carrier technology to carrier technology-dependent innovation; however, we do not find the direct influence on generic innovation, suggesting the varied impact of regulation on innovation. In the end, we describe how our findings equip us with a vision to understand the somewhat neglected but crucial role of regulation, technology, and innovations in development economics.

Paper is Available to Meeting Registrants Only.

TIM: Motivated to Fight Climate Change? How TMT Regulatory Focus Shapes Green Innovation in Family Firms   

Author: **Alexander Hering**, *Chair of Innovation Management, TU Dortmund U.*

Facing trends of environmental regulations and environmental consciousness, firms need to engage in green innovation. Particularly important for family firms, green innovation helps firms to achieve sustainable competitive advantage, fostering long-term firm survival. Yet, we still lack theoretical evidence on how motivational characteristics of the top management team (TMT) (i.e., regulatory focus) relate to green innovation. Drawing on upper echelons and regulatory focus theory, we examine the relationship between TMT regulatory focus and green innovation. We further posit that family involvement and technological turbulence moderate this relationship. Analyzing a longitudinal panel dataset with 910 firm-year observations of 116 S&P 500 family firms between 2005 and 2018, we find that TMT promotion and prevention focus are positively associated with green innovation. Family involvement positively moderates the relationship between TMT promotion focus and green innovation but does not moderate the relationship between TMT prevention focus and green innovation. In addition, technological turbulence positively (negatively) moderates the relationship between TMT promotion (prevention) focus and green innovation. This study expands research on upper echelons and regulatory focus theory by showing that psychological characteristics of TMTs (i.e., regulatory focus) determine firm-level outcomes (i.e., green innovation) in family firms, linking regulatory focus theory to the TMT.

TIM: Echoes of the Past: State Ownership Imprints on Innovation

Author: **Ruxi Wang**, *Renmin U. of China*

Author: **Yuwei Qi**, *Renmin U. of China*

Author: **Chunling Zhu**, *Renmin U. of China*

The imprint literature has concentrated on the influence of entrepreneurs and political leaders in the start-up phase of organizations on long-term corporate strategy, but little attention has been paid to the enduring impact of the initial shareholders as an important group. We developed a framework in which state ownership imprint, which was left in the start-up stage of the focal firm, have a long-lasting impact on its subsequent innovation strategy through two culture and value mechanism, the bluntness to market competition and the preference for risk aversion. Using a panel data analysis on 925 Chinese private firms from 2008 to 2020, we found that the state ownership imprint decreases the innovation performance of the firms. We further propose that the institutional development in which the firm is embedded weakens the inhibitory effect of the state ownership imprint on innovation by weakening the firm's bluntness to market competition, while the religious cultural environment reinforces the relationship between state ownership imprint and innovation by strengthening firms' risk-averse preferences. Our study contributes to the innovation literature and imprint theory.

Author: **Alejandra Parrao**, *Pontificia U. Católica de Chile*

Author: **Tomas Reyes**, *Pontificia U. Católica de Chile*

Author: **Alfonso Cruz-Novoa**, *Pontificia U. Católica de Chile*

Author: **Kristel Schön**, *Pontificia U. Católica de Chile*

The relationship between innovation and employment dynamics of firms has been an appealing topic to researchers and policymakers during the last decades. In that context, this paper investigates the impact of innovation persistence on firms' employment. Following the approach of Bianchini & Pellegrino (2019), we analyze how innovation persistence is related to employment growth rates and employment growth sustainability in an emerging market country like Chile. We also study the moderator effect that firm size has on the relationship between innovation persistence and employment. For our empirical analysis, we use survival analysis and a GMM estimator for assessing this relationship in a 10-year panel database of firms based on innovation surveys, measuring innovation persistence through the hazard rate of innovation spells. Our results show that innovation persistence is positively related to employment and that firm size plays a negative moderating role in the relationship between persistent innovation and both employment growth rates and employment growth sustainability.

People, Technological Change and Organizational Learning Track: Understanding the Innovation Process

TIM: Academics as Independent Directors: Do They Contribute to Environmental Innovation

Author: **Shijun Mu**, *Queen Mary U. of London*
Author: **Shang Chen**, *Queen Mary U. of London*
Author: **Lutao Ning**, *Queen Mary U. of London*

Building on agency theory and the literature on independent directors, this research investigates the effects of independent directors with academic backgrounds on environmental innovation. We make the argument that the independent academic directors as an internal mechanism, can make contributions to corporate environmental technological innovation performance through monitoring, advising, and networking functions. We further suggest the positive effects of independent academic directors are contingent on financial constraints. Our findings report that the positive effects are amplified when firms have severe financial distress. Using a sample of Chinese listed companies, we find supportive evidence to our hypotheses.

Paper is Available to Meeting Registrants Only.

TIM: On the Nature of Over Featuring in the New Product Development Process

Author: **Giacomo Marzi**, *U. of Trieste, Italy*

The tendency to develop new products and services beyond what is required by market, users, plans, and the resources in the organization ranks at top 10 of risks of new product development (NPD) failures. However, scholars and practitioners devoted limited attention to it. Many terms are used to outline the excesses in product development, such as Feature Creep, Feature Fatigue, Overdesign, Overspecification, Over-requirement, Scope Creep, and Gold-Plating, among the others. Excessive development configures in various forms that can be grouped inside the name of "Over Featuring" (OVF). Nevertheless, a terminological and conceptual confusion exist inside the realm of OVF together with a lack of theoretical development, and a limited investigation of the causes, the drivers, and the performance effects of BPs. The present paper presents an overview of OVF phenomenon, the evolution of the concept over time, together with an integrative review of findings emerged from the available empirical studies about OVF on the NPD projects. In doing so, a theoretical and conceptual development of OVF is proposed to clarify and advance such a multifaced phenomenon. OVF is also explored inside the most common NPD frameworks, namely Stage-Gate and Agile.

Paper is Available to Meeting Registrants Only.

TIM: Breakthrough Innovation: A Bibliometric Analysis of the literature and Proposed Framework

Author: **Avimanyu Datta**, *Illinois State U.*

A surfeit of definitions for innovation types has resulted in the equivocal way breakthrough innovation is defined and used in the academic literature. The term breakthrough is often synonymously used with radical, disruptive, discontinuous, or stated results of radical innovations built to destroy past competencies. Such misperception may lead to several problems. First, it confuses breakthrough with competence destroying innovations, radical innovations, and product innovations. Second, if a breakthrough is equated with radical or competence destroying innovations, or new product launches, we assume that firms risk disbanding their existing technologies. Such activities without a clear path have shortcomings such as integration costs and information overload, leading to inconclusive results and the high complication of combining dissimilar innovations. Lastly, we do not know how these innovations relate to each other with a lack of comprehensive understanding. We analyze the extant literature using bibliometric method and propose a Configuration-Application-Performance framework that provides an evaluative assessment of types of innovations and their thematic linkages. This framework allows us to resolve some myths on how innovation has been conceptualized and operationalized. It also helps future researchers understand breakthroughs from an innovation performance perspective.

TIM: Integrating the Past: A Study of Trajectory Integration and Recombinatory Depth

Author: **Joseph Monroe**, *Stockholm School of Economics*
Author: **Holmer Kok**, *Stockholm School of Economics*

In this study, we aim to provide a more comprehensive account of the role of interdependence in knowledge recombination for technological invention. By integrating theory from both knowledge recombination and technological trajectory literatures, we characterize a dimension of knowledge recombination termed recombinatory depth. Following the use of NK models from evolutionary genetics, we import the concept of adaptive walks from evolutionary genetics to communicate our argument. If an inventor integrates knowledge across many sequentially-dependent antecedent technologies in the same trajectory, design improvements can be produced without negative effects on recombinatory search (much like in adaptive walks). We conceptualize this dimension as recombinatory depth and operationalize it using patent data from the European Patent Office's PATSTAT database. An analysis of technological impact shows that high recombinatory depth has a strong positive relationship on technological impact. Moreover, we find that this first relationship is positively moderated by technological diversity, suggesting that high recombinatory depth helps to integrate distant and diverse technological trajectories. This paper is under development and further work is needed to analyze and develop our results.

TIM: Managing the Paradoxical Role of Control in Innovation Teams: A Leadership Perspective

Author: **Felipe Bethencourt**, *Amsterdam Business School, U. of Amsterdam*

Author: **Andreas Alexiou**, *Tilburg School of Economics and Management (TiSEM), Tilburg U.*

Self-managed teams facilitate the necessary organizational flexibility and rapid product innovation for organizations to meet the increasing rate of change in their market conditions. However, recent evidence shows that achieving this goal is not so straight forward. Self-managed teams need to carefully balance autonomy and control to maximize their innovation output. This study adopts a multi-level perspective and investigates how concertive control mechanisms affect team innovation through the experience of paradoxical tensions (team level) and the moderating role of the managers' paradox mindset (unit level). We collected survey data from 149 self-managed teams and their managers, all part of a multinational FinTech firm operating in various sites around the world. We then performed a mediated moderation analysis to verify our hypotheses.

Paper is Available to Meeting Registrants Only.

**The Innovator's Brain: Implications for Management
Education**
Innovator's Brain

Participant: **Ted Ladd**, *Hult International Business School*

How does the brain learn to innovate? Based on new research in neuroscience, the Thousand Brain theory proposes that the cells in your brain make models of objects and concepts called reference frames. When new information arrives into the brain, these cells “vote” in order to determine if the new information fits the existing model or requires a new model. In this session, the theory’s author, Jeff Hawkins, will explain how the brain processes concepts like “opportunity” and “innovation”. These explanations have surprising implications for the way that educators teach students to innovate so that our pedagogy aligns with the way that our students’ brains function. During the session, Jeff will apply his theory of the brain to his own history as the inventor of the PalmPilot and the Treo, the world’s first handheld computer and first smartphone.

Jeff Hawkins is a Silicon Valley entrepreneur who invented the PalmPilot and launched mobile computing. For the last 20 years, he has been researching how the cells in your brain function. His surprising conclusions, described in academic papers and a more approachable book, *Thousand Brains*, have implications for how we teach management. This video shows an interview where he merged these two parts of his history: what were the cells in his brain doing as he was innovating?

How to Write a Really Great Case

How to Write a Really Great Case

Presenter: **Karen MacMillan**, *Wilfrid Laurier U.*
Presenter: **Brent D. Beal**, *U. of Texas at Tyler*
Presenter: **Meredith J. Woodwark**, *Wilfrid Laurier U.*
Presenter: **Karin Schnarr**, *Wilfrid Laurier U.*

Educators who can write effective cases have the power to: fill in worrisome voids in a teaching plan; engage students with relevant, current material; gain a competitive edge by tailoring executive education programs; develop research ideas with practitioners; and, increasingly, receive publishing credit applicable to tenure decisions. Royalty payments can also make writing best-selling cases lucrative. This dynamic, interactive session will offer practical advice on how to tackle each step of the case writing process, including: determining what kind of case to write; finding leads in the field; collecting data; writing a well-liked case and teaching note; getting the case released and tested; and publishing the case.

The Live Case Method Made Easy  
Live Cases 101

Presenter: **Meredith J. Woodwark**, *Wilfrid Laurier U.*
Presenter: **Karin Schnarr**, *Wilfrid Laurier U.*
Presenter: **Brent D. Beal**, *U. of Texas at Tyler*

This session will introduce case writers to the concept of live cases, clearly describe how they differ from traditional case writing, provide a step-by-step guide to creating a live case, and suggest how they are most effectively used in a classroom. Our session will cover both live cases based solely on secondary data as well as those based on proprietary data provided by a live case partner company. Writing live cases with companies provides opportunities for live case writers to tailor the case to mimic real world examples, better preparing business students for scenarios they could face upon entering the workforce. Importantly, we will outline how live cases can be done remotely via Zoom.

HIPs and HEEs: Measuring Impact in a Business School
HIPs and HEEs-Measuring Impact

Presenter: **Dianne D. Murphy**, *U. of Wisconsin, Green Bay*
Presenter: **Heather Kaminski**, *U. of Wisconsin - Green Bay*
Presenter: **Kathryn Marten**, *U. of Wisconsin - Green Bay*

High-Impact Practices (HIPs) and High Engagement Experiences (HEEs) are presented in an assessment process which measures and classifies courses according to the HIPs Spectrum. Data is then presented as to how impactful HIPs and HEEs are for student retention and performance in a regional comprehensive university business school. This session may be of interest to those who are curious about a HIPs assessment process and the associated impact results of that assessment, particularly across subgroups of students (i.e., socioeconomic status, race, first generation, etc.). Practical implications for curriculum and the classroom will be discussed.

**Creating and Using Filmed Case Studies for
Business Education**
Filmed Case Studies for Business Education

Participant: **David Stolin**, *TBS Education*

Case studies have been used in business education for over a century. In recent decades, multi-media case studies have become popular, typically involving documentary footage and/or protagonist interviews. This session will focus on the latest development: dramatized and filmed business case studies that aim to give learners a window on the events as they happen. We will draw on several such case studies, different in approach and subject matter, and made by different teams of educators and film professionals. Our presentation will involve i) an overview of the benefits and pitfalls of such case studies; ii) the business academics who co-developed them speaking about the creation process and about the teaching approach; iii) and a moderated discussion about the future of this novel educational tool.

Bridging Temporal Modalities for Sustained Student Engagement

Bridging Temporal Modalities

Participant: **Heather Swenddal**, *Nichols College*

Higher education pivoted to remote instruction during the COVID-19 pandemic, prompting widespread use of online teaching modalities. Some professors recorded their lectures for asynchronous viewing; others delivered them synchronously via Zoom. Yet in both scenarios, student engagement posed challenges. How could professors be certain that students were grasping course concepts—or even engaging with the material at all? One approach to this engagement challenge is to bridge synchronous and asynchronous teaching modalities, using a modified version of the “flipped classroom” approach. In the flipped classroom model, students study learning materials before class, and in class they engage in interactive activities that help them to apply and build upon their knowledge. The flipped classroom approach is useful for pandemic-era online instruction because it incorporates asynchronous learning and can facilitate rich, interactive synchronous engagement. This session shares the presenter’s use of the flipped classroom approach in online undergraduate management courses. In the asynchronous portion of a teaching week, students complete assigned readings, watch mini-lectures, and share thoughts and questions about the material on the class discussion board. At the beginning of the synchronous class meeting, students read each other’s discussion-board responses and “like” ones that resonate with them, resulting in a crowd-sourced selection of student-generated discussion content. The professor then uses the live class session to clarify matters of confusion, consolidate students’ learning, and help students apply and enhance their individual understanding. This approach effectively bridges asynchronous and synchronous class components, fueling a cycle of sustained student engagement.

Student Project Case Writing: A How-To Guide

Student Project Case Writing: A How-To Guide

Participant: **Brent D. Beal**, *U. of Texas at Tyler*
Participant: **Karen MacMillan**, *Wilfrid Laurier U.*
Participant: **Karin Schnarr**, *Wilfrid Laurier U.*
Participant: **Meredith J. Woodwark**, *Wilfrid Laurier U.*

In this session, we will examine how to use case writing as a pedagogical tool to increase student engagement and learning. Case writing as a student assignment asks students to move from a mostly passive analyst role to take on a variety of roles – researcher, interviewer, writer, and, ultimately, teacher. We will address each component of the student case-writing process including: preparing students for case writing, customizing the assignment to fit class learning objectives, requiring incremental work, addressing unique challenges associated with case writing as a student project, facilitating peer critique, providing feedback on incremental assignments, grading finished cases, managing student teams, and assessing publication options.

How Changes in Real Organizational Behavior - Affect Classroom Teaching of Organizational Behavior *Real Organizational Behavior*

Presenter: **Timothy Baldwin**, *Indiana U., Bloomington*

Any casual observer of organizational life today would conclude that the essential nature of jobs and organizations is substantively changing. The OB learning and teaching questions that stem from these workplace changes are profound and have important implications for the topics we cover and the learning content we employ. In this session we will discuss a variety of examples and illustrations of emerging realities in contemporary organizations including: - The Gig Economy & Mobile Workplace - Not long ago having a job generally meant going to one physical location each day and working in a full time capacity for one organization. But the emergence of what has been labeled the “Gig Economy” is changing all that. Firms such as Uber and Lyft and Airbnb have created a new form of employment relationship. Increasing numbers of workers, including skilled professionals, are driving the growth of the gig economy. Decision Making Utilizing “Big data” - Decision making using artificial intelligence, big data and “people analytics” is gaining traction in organizations today. The ability to develop an analytical competence in people practices will likely differentiate the most successful organizations going forward. Attraction & Nurturing of Diverse Workforces / Social Responsibility - Diversity has long been seen as a potentially valuable business asset but today the social pressure to be a leader in that domain is intense. Organizations are grappling with a host of diversity and social responsibility challenges and the implications for OB / HR teaching are varied and many. With respect to diversity & inclusion, business as usual is clearly not an option for contemporary firms. The critical implication of these emerging trends is to caution us all to be careful about talking about jobs and organizations the way they really are today – and not the way they once were. Enhanced OB competence can only come from an awareness and understanding of the world as it really is, and not an outmoded view of organizational life.
